This letter was received by the genial, boy-loving editor of "Peck's Sun," George W. Peck, whose answer is a masterpiece of humor and good sense:

"Well, boy," writes the genial correspondent, "you have a good deal to learn. There is nothing that would be better for you than to get a place in a milliner's shop, where you could wear a shirt waist, and ribbons in your hair, and go to picnics. If you are going to learn a trade, you have got to begin at the bottom and do the dirty work. You cannot go to work in a bank, and sit in the president's office and cut off coupons the first week, but you will have to sweep out the bank and pick up the cigar stubs the clerks leave, and work up from the cuspidor to the bank vault, and all this will take time. You seem the kind of a boy who, if you took a position in a grocery store, would want to put up nothing but granulated sugar, and raisins, and candy, and trade with pretty girls, but you would have to carry firkins of butter around, and knock the tops off, and dig into the butter with a wooden spud and get out some for a customer, and probably get frowny butter on your sleeves, and you would have to dig pickles out of a sour barrel and get vinegar on you, and if any customer asked for molasses, you would want the proprietor to go and draw it, but you would have to do it, and be mighty careful and get the dead flies out of the quart measure before you opened up, or you might lose a customer for the old man. If you thought you were going to have an easy time in

the grocery, you would make the mistake of your life, for you would have to roll barrels of sugar in the basement, and cut cheese, and sort out rotten cabbages, and sprout potatoes in the cellar, and grind coffee. You act as if, if you went to work in a livery stable, you would want to sit in the office, or drive for the crowned heads, but you would have to wash off horses and wash and grease buggies, and maybe drive the hearse to cheap funerals. You could not drive the omnibus the first day, and that is the ambition of all boys. If you went to work in a meat market, you would want to do nothing but weigh out sirloin steaks that the boss had cut off, and you would probably handle them with gloves, or with a fork; but you would find that you would have to turn the sausage machine, and fry out the scraps, and make yourself useful and greasy. If you were in a meat market, and a poor woman came in to buy a pound of pork, you would take the first piece on top of the brine and insist that she should take it, but she would insist that you roll up your sleeve and dig away down to the depths of the barrel of brine, into the rock salt on the bottom, to find the piece she wanted, and if you had a raw place on your hand it would smart so you would want to be mustered out of the meat market and draw a pension. Oh, you will never find an easy place to work, where you can keep well dressed and clean, until you learn your trade.

"Many boys see the typesetters in a country printing-office sitting on stools, doing nice clean work, and they want to learn the printing trade right off. The first day, they put you to distributing 'pl,' and you think you have struck a snap, but the next day you get the second degree and have to wash the rollers, and wash the forms, carry dirty water down three flights of stairs and carry clean water up, and you do the rolling; and when you are ready to go home the second night, there is ink on your white shirt and clear up to your hair, and when you get home your mother will not own you. You want to quit the printing business right off. You supposed it was all setting type and editing the paper, but you will find

that you have got an apprenticeship of years of dirty work before you, and to be a success you have got to enjoy it, and forget that sometime another boy will take the ink degree, and you will be advanced. If you have it in you, and take the various degrees in the employment you seek, you will some day become the grand master, and you can have your hands clean. The Sun's advice to you, boy, would be to pick out some trade that you think you are fitted for, put on some old clothes, and tell them that you want to begin at the bottom and learn it clear to the top, and then don't you ever miss a note or shirk anything, and when you are graduated, you are in a position to teach others. There is no trade that you can learn that will let you remain at the top, and keep you clean and make you easy, except that of inheriting a fortune, but that trade is already overrun and there are few openings. Learn something, and learn it well, and when you are at the head of the business, with some gray in your hair, you can enjoy thinking of the days you were dirty and disgusted."

It is no small tribute to be chosen as a friend by a boy.

It is never too late to be what you might have been.—George Eliot.

There is nothing on earth so wonderful as the budding soul of a little child.—Lucy Larcom.

Every child has a divine right to the privileges, opportunities and training of a good home.

"I want to say, if you are to do any thing for young men you must do it when you are young. By and by you will grow away from them. I believe, down deep in my soul, if young men are to be reached, there are none who can do it so well as young men."—Moody.

The Barefoot Boy.

Contradictions, denials, appearances and everything else to the contrary, the happiest of all animated creatures, hardly excepting the cherubim and seraphim of paradise, is the barefooted boy—and of this we speak advisedly, having at one time belonged to that class ourselves, and fully entitled to wear a past-master's jewel and regalia, which in this instance consists of a set of toes each having a square front like a miniature brick, together with a lamentable absence of that horn-like covering which ought to be a part of every well formed toe.

But the very unhappiest of all creatures is the boy whose mamma does not permit him to go in his bare feet, but who arrays him in knickerbockers, long black stockings and nicely polished tan shoes, and then tells him he may go out and play with the boys. Just think of that boy's state of mind when he observes how his companions are attired, or rather their lack of apparel. How they fairly skim over the ground with nothing to impede their progress, and how they edge away from him in a disdainful manner! There's no use talking—bare feet induce happiness, and that is one reason why we have some little faith in the Kneipp cure.—Pittsburg Daily News.

Boys' Belongings.

There are numerous possessions that are very dear to a boy's heart—his bats and balls, his fishing tackle, his tennis racket, his tops and marbles, his—well, who can name all the possessions that are dear to a boy's heart?

When the boy has no place in particular in which to bestow his belongings, says a writer in *The Ladies' World*, he is apt to pre-empt quarters wherever it suits his convenience, often to the no small disturbance of orderly house-keeping.

Now give the boy a chance to be orderly and see if he won't live up to his opportunities. It will be much better

for the habits he is forming and considerably better for the one who is trying to keep her house orderly.

Make the boy a locker, where he can keep all his possessions, and locate it in the laundry, the back hall or in some other place so that he won't have to tear through the house every time he wants one or another of his playthings.

The shape shown in the illustration may be suggestive only, for the locker should be arranged to hold the particular articles which the particular boy has in his possession, and only the possessor of the boy in question can possibly know what these may be.

A Country Boy's Education in 1845.

FRANK H. SWEET.

It was in 1841, and the death of the father had thrown the family upon their own resources. One of the older brothers remained on the farm, and some of the small children stayed with him. But this boy wanted an education, and the isolated farm offered few opportunities. Down near the coast, twenty-five or thirty miles away, his oldest brother had rented a farm which included the spot now occupied by Narragansett Pier. The boy went to him to do chores for his schooling.

The farm carried a good deal of stock, and was very bleak and cold in winter. The boy rose, as he had been accustomed to, long before light, and hurried

vigorously about his chores. He had twenty cows and several pairs of oxen to look after, two cows to milk, and pigs, turkeys and chickens almost without count to feed. Besides these, sixteen more head of cattle had been taken from a neighbor to keep during the winter, and were pastured on the lower side of the farm, half a mile away. The care of these also were included as part of the boy's chores. Hurry as he would, he never could get them finished in time to reach the little schoolhouse by nine o'clock. Then he was obliged to leave at afternoon recess to begin his night's chores.

At this time he was fourteen years old, and his only clothing consisted of calico shirt, thin trousers and a blue "swallow-tail," which an uncle had bought in Providence for fifty cents, brought home wrapped around a purchase of codfish, and which, proving too small for his own boy, had been turned over to this one. With the tails cut off it made a very serviceable jacket.

Naturally on a large farm like this there was plenty of work for everybody. Perhaps on account of this, or possibly because the woman of the house was unaccustomed to bother with boys, or it may be the boy himself was too modest to make his wants known, at any rate it was six weeks before he changed his shirt, and in other matters he was looked after in about the same manner.

But in spite of all this, and the many chores, he made rapid progress with his studies. Then his brother died, and he went back near his old home in West Greenwich, where he worked the next summer and winter for board and clothes and such schooling as he could get. But here the teacher was very inefficient; indeed the boy found that in some studies he knew more than the teacher. So the next year, when he was sixteen, he hired out to an uncle for seven months at the rate of nine dollars a month, working, however, only two weeks in a month, alternating the other two with a neighbor, who agreed to hire him for the same period at the rate of ten dollars a month. At the end of his services he drew his entire wages, sixty eight dollars and twenty-five cents, not having spent any of it in the meantime. From this sum he expended a few dollars for clothing, and with the remainder went to a village where there was a good school. A boarding place was found at seventy-five cents per week, and here he remained, putting the same energy and determination into his books that he had done into his farm work. Outside of the clothing and his board, all his money went into schooling, and when it was gone he was considered the first scholar in the school.

But this finished his regular education. Other duties more imperative called him from his books, and thereafter he was only able to return to them at the rare intervals which his new labors permitted.

THE MANUAL ALPHABET USED BY THE DEAF AND DUMB.

The Boys of the Thompson's Island Farm School and Their Flower Gardens.

MAX BENNETT THRASHER

The boys' flower gardens form one of the features in the life of the pupils of the Farm School, on Thompson's Island, in Boston Harbor, and always attract the attention of visitors at the school.

The Farm School is a home training school for boys. It is one of the oldest establishments of the kind in the country, having been founded in 1815. For the first twenty years of its existence the school owned and occupied the historic old Governor Phipps house, at the North End, in Boston, near the old North Church, in the tower of which Paul Revere's signal lanterns were hung. In 1832 Thompson's Island was purchased, and suitable buildings having been erected, the school was moved into its present location.

Thompson's Island has an area of one hundred and sixty-seven acres, all of which is available for tillage or pasture.

work in the gardens. They spade up the ground and get rotted manure from the farm for fertilizer. The beds are all bordered with large smooth cobble stones which the boys bring from the beach. Some of the boys get to be so expert in setting these stones evenly and firmly that they have all they can do for a time in the spring "stoning" the beds, as the work is called.

The school provides a generous supply of seeds. Each boy is first allowed to select four kinds of seeds. This gives each a chance to indulge his individual preference for favorite flowers. The first choice usually falls on sweet peas, pansies and asters. After this choice is made the seeds left over are divided equally. Friends of the boys frequently send them seeds and bring them bulbs and plants, so that there is great variety in the gardens. Each boy does just exactly what he wishes with his plot of ground. There are only two restrictions—that the garden be kept clear of weeds, and watered every day when it does not rain. A hydrant in the garden furnishes a convenient supply of water. Any boy who fails to water his garden loses his "swim" the next day. Like all

THE BOYS' FLOWER GARDENS—GARDEN HALL.

IN WHICH IS THE GYMNASIUM, CARPENTER SHOP, BLACKSMITH SHOP, PRINTING OFFICE, AND MANUAL TRAINING DEPARTMENT.

The school owns and occupies the entire island, and the boys work upon the farm, under careful direction, obtaining in this way not only healthful exercise but also practical training in the work which many of them follow in after life.

There are one hundred pupils at the school all of the time, and they range in ages from ten to about sixteen years. A large plot of ground in one of the most beautiful situations on the island is set aside for the flower gardens. A high hedge of many years' growth extends on two sides of this plot, to protect the plants from the strong ocean winds. From all sides beautiful views of the harbor are to be had. Far out to seaward the ocean swells curl in white foam against the horizon as they strike on the rocky islands called "The Brewsters." On the opposite side, across Dorchester Bay, rise Dorchester Heights, on which were planted the Revolutionary cannon, which drove the British out of Boston. In plain sight and less than a mile away is the main ship channel, up and down which the boys can watch all the ocean commerce of Boston pass.

The garden plot contains over a hundred small gardens, enough so that each boy can have one and still enough be left for the instructors and for the school as a whole. Each boy can retain the same garden from year to year, if he wishes, so long as he remains at the school, and thus have the benefit of any shrubs or perennials which he has cultivated. Each boy's name is printed upon a T shaped sign stuck into the ground to mark his garden.

Just as soon as the ground dries off in the spring the boys will be found at

boys, the pupils at the Farm School delight in going into the water, and the location of the school on an island affords the best of facilities for sea bathing. Every day from early June until late September, the entire hundred go down to the beach, and, under the care of some of the instructors, splash about in the water to their hearts' content. It is this treat which a boy forfeits if he fails to water his garden, and as a result few gardens go dry.

Each year ten dollars are given in prizes of four dollars, three dollars, two dollars and one dollar to the four boys who have had the best gardens. This means not the most showy garden at the time the prizes are awarded, but the gardens which have been given the best care all through the summer. The stimulus which the prizes afford, however, causes only a very small part of the interest which the boys take in the gardens. Even the very smallest boys quickly learn to cultivate flowers because they love them. Not only do they learn something of an art which frequently may be turned to good account later in life, but they become susceptible to one of the most refining influences which can affect the life of any one. All through the summer the flower gardens are the favorite part of the campus. Great quantities of flowers are cut. There is no time after early spring that each one of the tables in the boys' dining room does not have a fresh bouquet of flowers upon it, while the rest of the rooms in the home are made attractive in the same way, and quantities of flowers are always ready to be given to friends who visit the school.

The Tracy School of Courses in History, Mathematics, Correspondence -- matrics, English Literature, Grammar, Geography, Latin, Drawing, Harmony, History of Music. All teaching done by specialists. THE SPRAGUE PUBLISHING CO.,
DETROIT, MICH.

ing question, he immediately had recourse to an inexhaustible fountain of advice, an experienced and friendly professional printer.

In this way the amateur printer can easily dissipate considerable of the prejudice that exists. It is a comparatively easy matter to find some professional printer who will give the amateur the advice and assistance he needs, whether it is in the matter of purchasing material, the treatment of rollers, the care of the press, the buying of stock, or prices to be charged; and if the amateur carefully follows this advice the professional will have no further cause for complaint.

Long before I became an apprentice I had solved the mysteries of typesetting, and some day I may give the readers of THE AMERICAN BOY a description of my first printing outfit. I sought advice. I remember one incident particularly. For some reason or other I could not take a proof of a job I had set, and upon explaining my trouble to a printer friend I learned for the first time the necessity of wetting the paper.

A number of years later, when I had served my apprenticeship and was entitled to the privilege of calling myself a professional or journeyman printer, I discovered in my immediate neighborhood two boys who had a good press but a poor assortment of type. I advised them in this particular, and not only did I assist them in bettering their work, but prices on printing were rarely made without first consulting me. I am sure no professional printer could entertain any serious objection against these boys; they did not interfere with trade by doing inferior work or by cutting prices.

One evening when I was returning from work one of the boys met me at my gate. Their press was acting badly and they were late in turning out some work. Upon investigation I found that they had permitted some stiff ink to dry on the ink disk and were trying to print the job without washing up the press. In a few minutes I had them going nicely. Had they continued on the work without seeking advice the job would have been a botch job indeed, but they found out that the next best thing to having experience was making use of the experience of others.

"Young America."

One of the most notable amateur publications is "Young America," published by Klinkner Brothers, Dyersville, Ia. Its contents consist of stories, biographies, essays, sketches and editorials on miscellaneous subjects as well as questions of amateur journalism and the politics of the amateur journalists' associations. It is not so much in the subject-matter of its contents, however, that it is notable as in the bright, lively, natural way in which it is written. The ideas of the editor, Anton F. Klinkner, are unique in themselves, and he has a most unique way of expressing them. H. V. Klinkner is the business manager. "Young America" is also unique in its form, being only one ordinary newspaper column in width and seven and a half inches in length. "Young America" enjoys the distinction of being the only avowedly humorous amateur paper published, and the editor does all the work, the typesetting, printing and mailing, as well as the editing. The publishers believe that they have a larger list of paid subscribers than any other amateur paper published, and there is much to justify the assertion. Anton F. Klinkner was born at Cascade, Iowa, in 1880, and began learning the printing business as soon as he left school. After a few months in the office of a country weekly he bought a small printing outfit for himself and started "Young America" March 1, 1897, so that the paper has been run three years now, which is a very good record for an amateur paper and is evidence that the venture is profitable as well as entertaining to its managers. Henry V. Klinkner is two years older

than his brother. They have certainly attained a very satisfactory degree of success in their work, for after three years in business they now have a well-equipped job printing office, prepared to

ANTON F. KLINKNER,
EDITOR YOUNG AMERICA.

do all kinds of printing. A very large proportion of their business is work done for other amateurs, for whom they print papers, letter-heads, cards, etc., where the other amateurs have no printing outfits of their own and simply edit the papers that they issue. They also conduct a novelty business by mail, having built up their list of customers principally by advertising their goods in "Young America" and other amateur papers.

25 Fine white envelopes neatly printed with your return card, postpaid, 10c. W. Howie, Printer, Beebe Plain, Vt.

Y.

THEODORE B. THIELE,
PRESIDENT NATIONAL AMATEUR PRESS ASSOCIATION.

We have received two copies of "The Pirate," published by Theodore B. Thiele, 722 Monroe street, South Evanston, Ill. Mr. Thiele is president of the N. A. P. A., and the excellence of his magazine is certainly strong evidence that the honor was fittingly bestowed when he was selected for that office. We have not seen a better edited amateur publication.

"The Lucky Dog," edited by T. Burr Thrift, Bellefontaine, O., has just made its appearance. We presume it is its intention to chase "The Black Cat" in the race for popularity. The editor deserves to be congratulated on the number before us, both from an editorial standpoint and also on account of the excellent appearance of his magazine.

Raymond N. Cary, of Dowagiac, Mich., formerly publisher of "The Stork," has started "The Mirror" as a weekly newspaper. Leon R. Lyle and Harry C. Mosher are associated with him in the editorship of the paper. It should succeed.

The Amateur Printer and the Professional.

SAMUEL J. STEINBERG.

Ever since the natural progress of printing so cheapened printing material that it became possible for boys to own their own press and type, the professional printers have never neglected an opportunity to express their contempt for the boy printer.

This condition is not entirely without justification. The printer argues, rightfully enough, that with the exception of visiting cards, no one has printing done unless he actually needs it, and that when the work is given to the amateur printer, the professional printer is deprived of just so much work. It might be well to say that it is not competition but unfair competition that the printer fears.

This prejudice, however, for the amateur has been of little avail and I have no doubt that the number of printing outfits occupying space in bedrooms, stable lofts or cellars is greater than ever before.

It would seem that the professional printer by this time ought to be able to realize the situation and instead of continually grumbling because of the cutting of prices and the inferior work of the amateur, he should endeavor to remedy the matter by assisting and advising him whenever he can.

It is a mistaken opinion of the professional that all amateurs are necessarily inexperienced and price-cutters. I have in mind now a printer who was an amateur printer in every sense of the word. His supply of type embraced few varieties, but was choice in its assortment; his press was a hand press; his office shared a room with a bed; yet the quality of the work he turned out was the best, and the prices charged were always good. This printer never learned the trade by working in a printing office. He obtained his knowledge in various ways. Besides having a natural aptitude for the work, he read the journals devoted to printing, and whenever his common sense and the columns of these papers failed to solve some intricate and puzz-

THE BOY PHOTOGRAPHER

Edited by JUDSON GREENELL

THE AMERICAN BOY offers twelve prizes of Two Dollars each for the best Amateur Photograph received during the twelve months in the year, one prize for each month, the competition to be based upon the originality of the subject and the perfection of the photograph. The contest is open to subscribers only. Photographs will be returned if stamps are sent for the purpose. All photographs entered in the contest and not prize winners will be subject to our use unless otherwise directed by the sender, and one dollar will be paid for each photograph that may be used, the prize photographs in any event to be our own, without further payment than the payment of the prizes. Write on the back of the photograph its title, with a description of the picture, and the full name and address of the contestant.

Photographic Notes.

Keep the bottles containing your various chemicals tightly corked, and, if possible, well filled. This will prevent the action of the oxygen in the air corroding them.

An English photographer recently took eight miles of films with him to the seat of war in South Africa. His cinematograph, with the necessary batteries and accessories, weighed the best part of a ton.

It has been found that with certain kinds of light the dark room need no more be dark. It can even be brilliantly lighted. One of the colors recommended for the lantern is composed of a solution of eosin and metanil yellow.

Word comes from Paris that there will be no restriction on hand cameras at the Exposition. But if one takes along a tripod, a small charge will be made for each picture taken. To photograph an exhibit, permission must be obtained of the exhibitor.

If your camera has "stops," always take portraits with full openings. This will give the face a roundness that is lost with a small stop. Too much detail is not advisable in a portrait, and the effect of a small stop is to preserve all the details.

When on a journey it is well to have with you some black court plaster to mend any hole that may appear in the bellows of the camera; black sealing wax for holes in the woodwork; and a little bottle of fish glue in case any of the woodwork becomes loose or damaged!

There are now a number of reliable "reducers" on the market, so that amateurs need not any longer be bothered with over developed plates. They can be found in all reliable photographic supply houses, and one has only to follow the directions that accompany them.

A new way to dry a negative quick is to immerse it in a mixture of formaline one part, and water nine parts, leaving it in for five minutes. Then plunge it into hot water and set it up to dry, and in a few moments it will be ready to print from. The best way to dry a plate quick is to put it in front of a revolving electric fan.

It will save many a plate if the amateur will, when he starts out to take a picture, have in his mind just the kind of view he wants. Is he after a herd of cows taking a noontime siesta in a shaded brook? Or a noble tree in a field, under which farm animals are enjoying the shade? Or a yacht skimming over the surface of some lake? Think out where these scenes may be found, and give your attention exclusively to them. It may be possible that not a picture will be obtained on the first, or even the second trip, but such a course of action if persistently pursued, will finally bring its just reward.

Improving a Thin Negative.

It often happens that a negative is too thin to print well. This may arise from it being under timed or under developed. Such a plate is never as good a one as if the timing had been correct, or the developing just right; but it can be improved by the following manipulation:

There is on the market, to be found in every photographic supply house, a solution called "Agfa." Take an ounce of this and mix it with ten ounces of water. Drop your plate in the solution and watch it. The intensification begins at once, the high lights becoming thicker, and the details in the shadows appearing. Often in two minutes the plate will be sufficiently strengthened to become a good printer. Do not leave it in too long, or the plate will assume a whitish grey color, and be too hard to print. Ten minutes is the limit in which a plate can remain in the solution.

Wash your plate as you would after having it in the fixing bath—say half an hour—and then dry.

Buying a Camera.

It is not possible to give the best advice as to the buying of a camera without knowing just what kind of pictures one is most inclined to take. A \$5 camera can be procured that will take fair pictures, but not the best, unless the purchaser is lucky enough to get hold of an exceptionally good lens. There are many makes on the market. One will lean to a "Premo," and another amateur might advise a "Poco," or some other make. For a cheap magazine camera, the "Adlake" gives good satisfaction.

With a magazine camera there is no use for a focusing cloth, as the place usually occupied by the ground glass is taken up with the magazine. This prevents careful work. You have to guess how the picture will look. But it also has this advantage: It teaches you to rely on your own eyesight outside the camera, instead of bobbing your head under the cloth whenever you want to see just how the picture will look. This is not always necessary. Indeed, with a little experience it can in some measure be done away with. Put your eyes about on a level with the lens, and, remembering the angle the lens covers, take a swift glance over the view. Thus you can get a correct idea of just what will appear on the plate.

A camera with a universal focus will be easier to handle than one with a focusing scale, the front of which has to be pushed in or shoved out, according to whether the subject to be photographed is distant or near. But it has this disadvantage: It gives the foreground undue prominence in comparison with the rest of the view.

If you want the camera mainly for street scenes, a box camera will attract less attention than one with a drop front. It is a little larger, but it has its compensation in being safer to carry.

By all means buy a camera that uses plates, unless you want it for a traveling companion. Plates cost only one-half as much as films, and you do not have to wait until the entire strip is used before developing. Besides, the plates are easier to handle and to preserve than films. The only objection to plates is their weight. The magazine camera holding twelve or eighteen plates is a little heavy, to be sure, as compared to one using a roll of films, but for home work its advantages very much outweigh its defects.

Buy a camera that will hold at least three double plate holders. You are thus provided with six plates, which is enough for a day's work—probably more than you can use to the best advantage. Six pictures of the unique, the beautiful and

THE BROWNIE CAMERA CLUB.

Every boy and girl under sixteen years of age should join the BROWNIE CAMERA CLUB. Fifty Kodaks valued at over \$500.00, will be given to members of the club as prizes for the best pictures made with the Brownie Cameras. No initiation fees or dues if you own a Brownie. Ask your dealer or write us for a Brownie Camera Club Constitution.

Rochester, N. Y., Apr. 22, 1900.

Eastman Kodak Co., Rochester, N. Y.

Gentlemen—I wish to join "The Brownie Camera Club of America." I went to Washington not long ago and took my "Brownie" with me. It takes fine pictures, as good as any I have seen with larger cameras.

Wishing the club hearty success, I remain your friend,

J. FRANKLIN PUTNAM.

Send a dollar to your local Kodak dealer for a Brownie Camera. If there is no Kodak dealer in your town, send us a dollar and we will ship the camera promptly.

EASTMAN KODAK CO.

Rochester, N. Y.

the striking is better than a hundred of the commonplace.

Satisfactory portrait work is out of the question with a cheap camera. Better leave this branch of the art alone until thoroughly familiar with outdoor work.

Exposing and Developing.

If half the space that has been taken to telling how to expose a plate had been devoted to telling how to develop it, the number of spoiled plates in the world of amateur photography would be much fewer.

The most important step after the exposure of a plate is the developing. And here, within quite a wide range, the mistakes of exposing may be corrected.

Let the amateur go into his dark closet provided with several trays. Trays are cheap, and one or two extra involves no financial burden.

Drop the plate into the normal developer. If it flashes up quickly it is over exposed. If the image appears too slowly all over, it is under exposed.

If when placed in the normal developer, the plate comes up very slowly, it should be immediately placed in the diluted developer, otherwise the developer will fog the plate.

As correctness of exposure is a matter of guesswork any way, it would do no harm to begin every plate with the diluted developer.

Answers to Correspondents.

Willie Lockwood—There are no cameras specially made for "detective" work, and used only by detectives.

Jans Vanhorton—Be particular to hold your camera horizontally, for if you do not, the resulting picture will be as topsy turvy as the camera was when the exposure was made.

Silas Johnson—You fogged your plate at the very beginning of the developing by putting it in a too strong solution.

Sam Holcomb—Don't buy such an old-fashioned camera as you mention. It has not the conveniences of the up-to-date camera.

Harvey Secor—By your talk you have evidently passed beyond the first stages of the amateur, and need something better than a universal focus camera.

Henry Hamilton—You will get the moonlight effect by pointing your camera directly toward the sun, when it has just gone behind a cloud.

THE SNOW HOUSE. BY FOREST S. HARVEY, ST ALBANS, VT. SECOND PRIZE PHOTO.

R. Wherle—If the plate was properly exposed, there would something appear on the negative, providing it was properly developed.

John S. Stevens—The negative you send shows that your plate holder leaks light all around the edge.

Niels J. Hansen—It looks as if the plate had been fogged in the first place, and in the second the developer was not flowed evenly over the plate at the beginning of the developing.

Carl Elkhoff—Lantern slides can be made by contact. The operation is very simple. Place the plate and negative together, films next to each other.

Oscar L. Owen—You cannot take a snap shot in an ordinary dwelling, and hardly in an extraordinary one, as respects light.

Photographic Hints.

Landscapes can best be taken in the morning. In the afternoon there is apt to be dust in the air, and at noon the shadows are too dense.

"Imogen" is the latest developer put upon the market. It is said to have many excellent qualities, but if the amateur is having good luck with his old "standby," whatever it is, let him stick to it.

Many amateurs are apt to make a mistake by purchasing too light a tripod. The result is that the camera is not held sufficiently rigid to take a time picture good and clear if there is any wind.

One large plate manufacturing concern in the east has cut the price of plates in two. This is a hint that amateurs should take advantage of and save money.

When a dealer offers "a camera for twenty-five cents with a box of plates thrown in," the purchaser is not buying the camera but the plates, which are the most valuable of the two—for that price.

One of the latest cameras on the market takes tintypes. The plates are not sensitive enough with which to make snap shots, but a three-second exposure produces excellent results.

"Goin' at this rate, I'll not get a-fishin' till Christmas."

"Ah! I have an idea. I'll just tie a bunch of this long grass on the end of my fish pole and see how that'll do for a coaxer."

"Talk about yer lightnin' express; just get yer eye on this."

The life history of the common or warty toad is exceedingly interesting. The marvelous changes passed through in growing from an egg to a toad are so rapid that they may all be seen during a single spring term of school. Toads are found nearly everywhere in the world; it is easy, therefore, to get abundant material for study. This animal is such a good friend to the farmer, the gardener, the fruit grower, the florist and the stock raiser that every man and woman, every boy and girl ought to know something about it, and thus learn to appreciate their lowly helper.

It was William Harvey, the discoverer of the circulation of the blood, who first clearly stated to the world the fact that every animal comes from an egg. This is as true of the toad as of a chicken. The toad lives on the land and often a long way from any pond or stream, but the first part of its life is spent in the water; and so it is in the water that the eggs must be looked for.

To find the eggs one should visit the natural or artificial ponds so common along streams. Ponds from springs or even artificial reservoirs or the basins around fountains may also contain the eggs. The time for finding the eggs depends on the season. The toad observes the season, not the almanac. In ordinary years the best time is from the middle of April to the first of May. One is often guided to the right place by noticing the direction from which the song or call of the toad comes. It may be said in passing that toad choirs are composed solely of male voices. The call is more or less like that of tree toads. In general it sounds like whistling, and at the same time pronouncing deep in the throat hu-rr-r-r-r-r-. If one watches a toad while it makes its call, he can soon learn to distinguish the sound from others somewhat similar. It will be found that different toads have slightly different voices, and the same one can vary the tone considerably, so that it is not so easy after all to distinguish the many batrachian solos and choruses on a spring or summer evening. It will be noticed that the toad does not open its mouth when it sings, but there is a great, expandible, vocal sack or resonator under the mouth and throat (see the left hand toad in the plate).

The eggs are laid in long strings or ropes which are nearly always tangled and wound round the water plants or sticks on the bottom of the pond near the shore. If the eggs have been freshly laid or if there has been no rain to stir up the mud and the water is clear, the egg ropes will look like glass tubes con-

IN BOYS & THE ANIMAL KINGDOM

taining a string of jet black beads. After a rain the eggs are obscured by the fine mud that settles on the transparent jelly surrounding them.

Take enough of the egg string to include fifty or one hundred eggs, and place it in a glass fruit dish or a basin with clean water from the pond where the eggs were found. Note the color and the exact shape. If the eggs are newly laid they will be nearly perfect spheres.

Frogs, salamanders and tree toads lay their eggs in the same places and at about the same time as the toad we are to study. Only the toad lays its eggs in strings so one can be sure he has the right kind. The others lay their eggs in bunches or singly on the plant, so they need never be mistaken for the ones sought.

The eggs which are taken for study should be kept in a light place, but not very long in the hot sun, for that would heat the water too much and kill the eggs.

It takes only a short time for the eggs to hatch. In warm weather two or three days are usually sufficient. As the changes are so very rapid, the eggs ought to be carefully looked at two or three times a day to make sure that all the principal changes are seen. If a pocket lens or a reading glass is to be had it will add to the interest, as more of the details can be observed. But good sharp eyes are sufficient if no lens is available.

Watch and see how long it is before the developing embryos commence to move. Note their change in form. As they elongate they move more vigorously, till on the second or third day they wriggle out of the jelly surrounding them. This is hatching, and they are now free in the water and can swim about. It is curious to see them hang themselves up on the old egg string or on the edge of the dish. They do this by means of a peculiar v-shaped organ on their heads.

How different the little creatures are, which have just hatched, from the grown up toad which laid the eggs. The difference is about as great as that between a caterpillar and a butterfly.

We do not call the young of the frog, the toad, and the tree toad, caterpillars, but tadpoles or polliwogs. The toad tadpoles are blacker than any of the others.

The tadpoles will live for some time in clear water with apparently nothing to eat. This is because the mother toad put into each egg some food, just as a hen puts a large supply of food within the egg shell to give the chicken a good start in life. But when the food that the mother supplied is used up, the little tadpoles would die if they could not find some food for themselves. They must grow a great deal before they can turn into toads, and just like children and other young animals, to grow they must have plenty of food.

To feed the tadpoles it is necessary to

imitate nature as closely as possible. To do this a visit to the pond where the eggs were found will give the clue. Many plants are present, and the bottom will be seen to slope gradually from the shore. The food of the tadpole is the minute plant life on the stones, the surface of the mud, or on the outside of the larger plants. Make an artificial pond in a small milk pan or a large basin or earthen-ware dish. Put some of the mud and stones and small plants in the dish, arranging all to imitate the pond, that is, so it will be shallow on one side and deeper on the other. Take a small pail of clear water from the pond to the school house and pour it into the dish to complete the artificial pond. The next morning when all the mud has settled and the water is clear, put thirty or forty of the little tadpoles which hatched from the egg string, into the artificial pond. Keep this in the light, but not very long at any one time in the sun.

One must not attempt to raise too many tadpoles in the artificial pond or there will not be enough food, and all will be half starved. While there may be thousands of tadpoles in the natural pond, it will be readily seen that, compared with the amount of water present, there are really rather few.

Every week or oftener, a little of the mud and perhaps a small stone covered with the growth of microscopic plants, and some water should be taken from the pond to the artificial pond. The water will supply the place of that which has evaporated, and the mud and the stone will carry a new supply of food.

The growth and changes in form should be looked for every day. Then it is very interesting to see what the tadpoles do, how they eat, and any signs of breathing.

All the changes from an egg to a little toad (see the picture), are passed through in about two months, so that by the first of June the tadpoles will be found to have made great progress. The progress will be not only in size, but in form and action.

One of these actions should be watched with especial care, for it means a great deal. At first the little tadpoles remain under water all the time, and do not seem to know or care that there is a great world above the water. But as they grow larger and larger, they rush up to the surface once in awhile and then dive down again as if their lives depended on it. The older they grow the oftener do they come to the surface. What is the meaning of this? It took scientific men a long time to find out just why this was done. The real reason is that the tadpole is getting lungs, and getting ready to breathe the free air above the water when it turns into a toad and lives on the land. At first the little tadpoles breathe the air dissolved in the water just as a fish does. This makes it plain why an artificial pond should have a broad surface exposed to the air. If one should use a narrow and deep vessel

HOW TO TRAIN ANIMALS

This book written by an experienced animal trainer, tells you how to teach your dog to leap, walk erect, dance, jump rope, sit, lie down, beg, sneeze, stand on his head, etc. It also tells how to train horses, mules, cats, hogs, goats, monkeys, rats, mice, frogs, toads and birds to perform the most remarkable feats of intelligence. Handsomely illustrated. Price only 10 cents. Interesting catalog free. Boys write at once. **JOE. U. STEELE**, 2218 Beech Ave., Baltimore, Md

"DID THE DINNER-BELL RING?" PETS AND ANIMALS

IN ORDER to speedily introduce **PETS AND ANIMALS** into thousands of new homes, we will send it for three months, post-paid to any address in the United States, Canada or Mexico, for only 10 cents. The regular subscription price is 50 cents a year.

THREE MONTHS FOR TEN CENTS.

PETS AND ANIMALS proposes to give to its readers a better understanding of the animal world - to form a sympathetic bond between human and brute creatures. The scope of its purely practical side is wide, as it gives much valuable information in the way of hints on the care of domestic animals and pets, in sickness and health, their housing, training, etc. Of deeper and wider significance however, is the influence of the publication as an educational force - as a teacher of the doctrine that all thoughtfulness, kindness and mercy extended to dumb creatures adds nobility and breadth to the mind of the person who performs the service. 19 Gotwald Bldg., Springfield, O.

like a fruit jar, only a small amount of air could be taken up by the water and the tadpoles would be half suffocated.

As the tadpoles grow older their lungs develop more and more and they go oftener to the surface to get the air directly from the limitless supply above the water. They are getting used to breathing as they will have to when they live wholly in the air.

From the first to the middle of June the tadpoles should be watched with especial care, for wonderful things are happening. Both the fore and hind legs will appear, if they have not already. The head will change in form and so will the body; the color will become much lighter, and, but for the tail, the tadpole will begin to look quite like its mother.

If you keep an especially sharp look out do you think you will see the tail drop off? No, toad nature is too economical for that. The tail will not drop off, but it will be seen to get shorter and shorter every day; it is not dropping off but is being carried into the tadpole. The tail is perfect at every stage; it simply disappears. How does this happen? This is another thing that it took scientific men a long time to find out. It is now known that within the body there are many living particles that wander about as if to see that everything is in order. They are called wandering cells, white blood corpuscles, phagocytes and several other names. These wander into the tail at the right time and take it up particle by particle. The wandering cells carry the particles of tail into the body of the tadpole, where they can be made use of as any other good food would be. This taking in of the tail is done so carefully that the skin is never broken, but covers up the outside perfectly all the time. Is not this a better way to get rid of a tail than to cut it off?

Now when the legs are grown out, and the tail is getting shorter, the little tadpole likes to put its nose out of the water into the air; and sometimes it crawls half way out. When the tail gets quite short, often a mere stub, it will crawl out entirely and stay for some time in the air. It now looks really like a toad, except that it is nearly smooth instead of being warty like its mother, and is only about as large as the end of one's little finger.

Finally the time comes when the tadpole, now transformed into a toad, must leave the water for the land.

What queer feelings the little toad must have when the soft, smooth bottom of the pond and the pretty plants, and the water that supported it so nicely are all to be left behind for the hard, rough, dry land. But the little toad must take the step. It is no longer a tadpole, or half tadpole and half toad. It cannot again dive into the cool, soft water when the air and the sunshine dry and scorch it. As countless generations of little toads have done before, it pushes boldly out over the land and away from the water.

If one visits the natural pond at about this season (last half of June, first of July), he is likely to see many of the little fellows hopping away from the water. And so vigorously do they hop along that in a few days they may be as far as a mile from the pond where they were hatched. After a warm shower they are particularly active, and are then most commonly seen. Many think they rained down. "They were not seen before the rain, so they must have rained down." Is that good reasoning?

While the little toad is very brave in its way, it is also careful, and during the hot and sunny part of the day stays in the shade of the grass or leaves or in some other moist and shady place. If it were foolish as well as brave it might be filled with vanity and stay out in the sun till it dried up.

In the water the tadpole eats vegetable matter, but when it becomes a toad and gets on the land it will touch nothing but animal food, and that must be so fresh that it is alive and moving. This food consists of every creeping, crawling or flying thing that is small enough to be swallowed. While it will not touch a piece of fresh meat, woe to snail, insect or worm that comes within its reach.

It is by the destruction of insects and worms that the toad helps men so greatly. The insects and worms eat the grain, the fruits and the flowers. They bite and sting the animals and give men

no end of trouble. The toad is not partial, but takes any live thing that gets near it, whether it is caterpillar, fly, spider, centipede or thousand-legged worm; and it does not stop even there, but will gobble up a hornet or a yellow jacket without the least hesitation.

It is astonishing to see the certainty with which a toad can catch these flying or crawling things. The way the toad does this may be observed by watching one out of doors some summer evening or after a shower; but it is more satisfactory to have a nearer view. Put a large toad into a box or into a glass dish with some moist sand on the bottom, and put the dish in a cool shady place so that the toad will not become overheated. In a little while, if one is gentle, the toad will see that it is not going to be hurt, and then if flies and other insects are put into the dish and the top covered with mosquito netting one can watch the process of capture. It is very quickly accomplished, and one must look sharply. The toad's tongue is fastened at the front part of its mouth, not back in the throat, as with men, dogs, cats and most animals. It is so nicely arranged that it can be extended for quite a distance. On it is a sticky secretion, and when, quick as a flash, the tongue is thrown out or extended, if it touches the insect, the insect is caught as if by sticky fly paper, and is taken into the mouth.

Think how many insects and worms a toad could destroy in a single summer. Practically every insect and worm de-

THE TOAD FROM THE EGG TO THE ADULT.

stroyed adds to the produce of the garden and the farm, or takes away one cause of discomfort to men and animals. One observer reports that a single toad disposed of twenty-four caterpillars in ten minutes, and another ate thirty-five celery worms within three hours. He estimates that a good-sized toad will destroy nearly ten thousand insects and worms in a single summer.

There are two very interesting things that happen in the life of many of the lower animals; they happen to the toad also. These are moulting, or change of skin, and hibernation or winter sleep. Every boy and girl ought to know about these, and then, if on the lookout, they will sometime be seen.

Probably everybody who lives in the country has seen a snake's skin without any snake in it. It is often very perfect. When the outside skin or cuticle of a snake or a toad gets old and dry or too tight for it, a new covering grows underneath, and the old one is shed. This is a very interesting performance, but the toad usually does it in a retired place, so it is not often seen. Those who have seen it say that a long crack or tear appears along the back and in front. The toad keeps moving and wriggling to loosen the old cuticle. This peels the cuticle off the sides. Now to get it off the legs and feet, the toad puts its leg under its arm, or front leg, and in that way pulls off the old skin as if it were a stocking. But when the front legs are to be stripped, the mouth is used as is

sometimes done by people in pulling off their gloves. Do you think it uses its teeth for this purpose? You might look in a toad's mouth sometimes and then you would know.

It is said that when the skin is finally pulled off the toad swallows it. This is probably true in some cases, at least it is worth while keeping watch for. After a toad has shed his old skin, he looks a great deal brighter and cleaner than before, as if he had just got a new suit of clothes. If you see one with a particularly bright skin you will now know what it means.

The toad is a cold-blooded animal. This means that the temperature of its blood is nearly like that of the surrounding air. Men, horses, cows, dogs, etc., are said to be warm blooded, for their blood is warm and of about the same temperature whether the surrounding air is cold or hot.

When the air is too cool the toad gets stupid and inactive. In September and October, a few toads may be seen on warm days or evenings, but the number seen becomes smaller and smaller; and finally as the cold November weather comes on, none are seen. Where are they? The toad seems to know that winter is coming, that the insects and worms will disappear so that no food can be found. It must go into a kind of death-like sleep in which it hardly moves or breathes. A toad is sensible enough to know that it will not do to go into this profound sleep except in some safe and protected place. If it were to freeze and thaw with every change in the weather it would not wake up in the spring.

The wonderful foresight which instinct gives it, makes the toad select some comparatively soft earth in a protected place where it can bury itself. The earth chosen is moist, but not wet. If it were dry, the toad would dry up before spring. It is not uncommon for farmers and gardeners to plough them up late in the fall or early in the spring. Also in digging cellars at about these times, they are found occasionally.

It is very interesting to see a toad bury itself. If one is found hibernating in the fall, or if one is found very early in the spring on some cold day after a warm spell, the process can very easily be seen. Put some loose earth in a box or a glass dish and put the toad on the top of the earth. It will be found that the toad digs backwards, not forwards. It digs with its hind legs and body, and pushes itself backward into the hole with the front legs. The earth caves in as the animal backs into the ground so that no sign is left on the outside. Once in far enough to escape the freezing and thawing of winter the toad moves around till there is a little chamber slightly larger than its body; then it draws its legs up close, shuts its eyes, puts its head down between or on its hands, and goes to sleep and sleeps for five months or more.

When the warm days of spring come it wakes up, crawls out of bed and begins to take interest in life again. It looks around for insects and worms, and acts as if it had had only a comfortable nap.

The little toad that you saw hatch from an egg into a tadpole and then turn to a toad, would hibernate for two or three winters, and by that time it would be quite a large toad. After it had grown up and had awakened from its winter sleep some spring, it would have a great longing to get back to the pond where it began life as an egg years before. Once there it would lay a great number of eggs, perhaps a thousand or two for a new generation of toads. And this would complete its life cycle.

While the toad completes its life cycle when it returns to the water and lays eggs for a new generation, it may live many years afterward and lay eggs many times, perhaps every year.

Many insects, some fish and other animals die after laying their eggs. For such animals the completion of the life cycle ends the life history also. But unless the toad meets with some accident it goes back to its land home after laying the eggs, and may live in the same garden or door yard for many years, as many as eight years and perhaps longer.

If one reads in old books and listens to the fairy tales and other stories common everywhere, he will hear many

wonderful things about the toad, but most of the things are wholly untrue.

One of the erroneous notions is that the toad is deadly poison. Another is that it is possessed of marvelous healing virtues, and still another, that hidden away in the heads of some of the oldest ones, are the priceless toad-stones, jewels of inestimable value.

Probably every boy and girl living in the country has heard that if one takes a toad in his hands, or if a toad touches him anywhere he will "catch the warts." This is not so at all, as has been proved over and over again. If a toad is handled gently and petted a little, it soon learns not to be afraid, and seems to enjoy the kindness and attention. If a toad is hurt or roughly handled, a whitish, acrid substance is poured out of the largest warts. This might smart a little if it got into the mouth, as dogs find out when they try biting a toad. It cannot be very bad, however, or the hawks, owls, crows and snakes that eat the toad would give up the practice. The toad is really one of the most harmless creatures in the world, and has never been known to hurt a man or a child.

A boy might possibly have some warts on his hands after handling a toad; so might he after handling a jack-knife or looking at a steam engine; but the toad does not give the warts any more than the knife or the engine.

Occasionally one reads or hears a story about a toad found in a cavity in a solid rock. When the rock is broken open, it is said that the toad wakes up and hops around as if it had been asleep only half an hour. Just think for a moment what it would mean to find a live toad within a cavity in a solid rock. It must have been there for thousands, if not for millions of years without food or air. The toad does not like a long fast, but can stand it for a year or so without food if it is in a moist place and supplied with air. It regularly sleeps four or five months every winter, but never in a place devoid of air. If the air were cut off the toad would soon die. Some careful experiments were made by French scientific men, and the stories told about toads living indefinitely without air or food were utterly disproved.

It is not difficult to see that one working in a quarry might honestly think that he had found a toad in a rock. Toads are not very uncommon in quarries. If a stone were broken open and a cavity found in it, and then a toad were seen hopping away, one might jump at the conclusion that the toad came out of the cavity in the rock. Is not this something like the belief that the little toads rain down from the clouds because they are most commonly seen after a shower?

Nice That Waltz.

There is a little animal in Japan—a black and white mouse with pink eyes—that waltzes. It begins to dance as soon as it is able to move about, and keeps it up during the greater part of its life. If two of these little animals be put together they join in the mad whirl, waltzing about so fast that it is impossible to tell head from tail. It is said that if the floor of their cage is not smooth they will actually wear out their feet. What queer things some animals do! They act just like men and women.

RASTUS "BUNTED" THE BALL.

RYAN "DIED" ON FIRST BASE.

MCCARTY CAUGHT A SWIFT "FLY."

The American Boy Ball Club.

Some Milwaukee (Wis.) boys have organized themselves into a ball club which they have named "The American Boys," in honor of THE AMERICAN BOY. They are said to be a very strong team of boy ball players. Up to May 9, they had won seven games out of eight played. Charles Eckstein is manager. The members are W. Sippert and C. Schreiber, catchers; K. Huegin, Henry Thielecke, M. Hoyer and F. Petroskey, pitchers; W. Kolman, shortstop; W. Casper, first base; C. Schmidt-kuntz, second base; W. Giljohann, third base; H. Abrams, center field; Emil Prinz, right field; S. Reckmeyer, left field.

The average age of the boys is twelve years.

Playing War.

M. C. Otto, in "Men."

A new form of recreation and sport, used for the first time at the Milwaukee boys' Y. M. C. A. camp, is called "War." It is adapted to all ages and classes of boys, and may be played by any number. With care it need not be at all rough, calls the "savage virtues," and which, while it brings into play what Robinson savage or civilized, are essential, and ought to be cultivated by Junior Departments,—viz.: courage, endurance, self-control, and loyalty to the gang or crowd.

The boys are divided into two companies of equal number. A young man, bearing the title of general, is put in charge of each. Every ten boys are in command of a captain, naturally one of the larger boys. All are supplied with four rounds of ammunition.

One column marches off headed by the general and the flag, captains in charge of squads. Scouts are deployed and a few boys remain in the rear to watch the enemy. A suitable place having been found, the column takes its stand, throws out a line of pickets and holds a council of war to decide upon a plan of defense.

Meanwhile the other company gets itself in marching order. A reasonable time having elapsed and the enemy's position having been ascertained through scouts, amid cheers and general excitement, the second company goes to battle. Upon arriving in sight of the fortified company, a council of war decides the plan of attack.

At a given signal the attacking party gives battle, and with the exception of an occasional truce to allow for rest, the war continues until the stronghold is captured or the attacking company is driven from the field.

Drum and signal corps and other military features may be added.

RULES.

1. The first company must plant its banner where it is clearly visible to the

attacking party, and the capturing of this spot shall constitute victory. Under no circumstances shall the banner be removed during battle, by either side.

2. Ammunition shall consist of bags, four by four inches, filled with rice. (Bags made of denim, ticking or canvas are best.)

3. Anyone hit in the head or in the body above the belt, shall be "killed."

4. Anyone hit below the belt or on the arm, shall be "wounded."

5. Bags may be caught with the hands, but if they should re-bounce and hit any part of the body, the same rules apply as in case of bags coming direct.

6. No one is to intentionally kill a soldier already wounded.

7. Killed or wounded must leave the field at once.

8. A hospital should be established on each side, before battle begins. This placed in charge of a responsible party, who shall act as referee in case some of the killed or wounded refuse to obey rules.

9. The killed remain in the hospital during the entire battle. The wounded are lined up as they arrive, until a number equal to one-fifth of the company has been wounded, when the first man goes out again, and so on.

10. Prisoners are treated as the killed. They may, however, be exchanged, in which case they again enter the ranks.

Hall Tennis—A New Indoor Game.

An Experiment Will Show That There is More Fun in a Toy Balloon and a Piece of Cord Than One Would Imagine.

All that is required is a cord and a toy balloon. Fasten the cord to opposite walls or ends of the hall and have the cord about the height of the shoulder. Now use the toy balloon as the tennis ball and the right hand as the racquet. The balloon may be struck twice so as to get it in good position before the serve over the line. The game then consists in returning the balloon as long as possible. A failure to return constitutes the gain of one point for the opponent, and four points make a game. Now the whole thing seems very simple, but, as Professor Boys, a distinguished lecturer before the Royal Institution, says, in speaking of the game, "Try it and see." The game is the invention of the well-known scientist, Professor Oliver Lodge of Liverpool, who, by the way, reserves no rights in the matter; and many London children, from eight to eighty, are taking to the game since its introduction by Professor Boys. Its simplicity and cheapness should recommend it to many, and only a fair trial will reveal the possibilities for exercise indoors. Much depends on the way the balloon is struck. A stroke on the under side will send the balloon spinning upward above your opponent's head and a stroke sending the balloon so that the under side will just touch the string sends the balloon curl-

ing downward out of the reach of the opponent and back to its starting place. If the balloon does not pass over the string the point is lost to the one who gives the stroke. Of course, there are also many other artful ways of striking the balloon so as to send it out of your opponent's reach, and, altogether, to quote Professor Boys again, "one can get very warm in a very short time." There is more fun in a toy balloon and a piece of cord than one would imagine.

CAUGHT UP But we are pleased to say that when this appears we will be in shape to fill all orders as soon as received. 300 Varieties good clean foreign stamps, post free for 27 CENTS ECHO STAMP CO., Box 897, WATERTOWN, N. Y.

In the perforation gauge, you will notice that there are fourteen divisions, each of the width of twenty millimetres. Arranged in these are bisected dots. By placing one set of these dots at a time under the stamp, the perforation of which you wish to gauge, you will at last find one set of dots which coincides exactly with the punched holes or indentations. This shows that there are the same number of dots in that division as there are perforations to the space of twenty millimetres on your stamp, and the number which is placed above each division of the gauge will save the collector the trouble of counting them. It sometimes happens that the perforation at the vertical sides of a stamp is different to that at the horizontal. For instance, the vertical sides may gauge 15, while the horizontal ones are perforated 13. In recording these compound perforations, the number stated first is the perforation of the top and bottom, and the second that of the sides. Thus the instance just cited would be compound perforation 13x15.

In the early times of our hobby it was generally thought that the perforation did not belong to the stamp, and that all it was necessary to preserve of the labels was that part actually covered with the design. Such, however, is a great fallacy, and many hundreds of really good stamps have been reduced to the ranks of common or worthless ones through its agency. For an example of stamps which are alike in tint and design yet differ in perforation, take the 9d. brown (overprinted on 10d.) New South Wales, 1871-83. The

following table shows the prices catalogued for each perforated specimen:
Perforation. Value. Unused. Used. S. D. S. D.
12 5.0
12 1/2 2.6 2.0
11 3.6
10 7.6
12 x 11 2.6 2.6
11 x 12 1.0 1.0
11 x 10 10.0

If, therefore, you cut off the perforation of one of these stamps it would be impossible to distinguish between the different issues, and the stamp priced 10s. would be on a level with that at 1s. In the production of postage stamps, Engraving, Lithography and Typography are among the processes which have been used. In the first mentioned, as is generally known, the design is on the printing plate in recess. In lithography the design is drawn in lithographic ink on special paper, and is therefrom transferred to the lithographic stone. Typography is the name which is applied to printing in the ordinary way from printer's type or surface blocks. It is of assistance in classifying stamps to be able to distinguish between an engraved and a lithographed specimen. Lithographed stamps are nearly always of such poor and unfinished appearance that they cannot easily be mistaken for engraved ones, the designs of which appear to stand out and in reality do stand out from the background of paper. (To be continued.)

THE BOY COIN COLLECTOR

The first coin made for America was of brass, and had as its device a hog on one side and a ship on the other, with the inscription, "Sommer Islands." Thousands of these coins were struck in England in memory of Sir George Sommers, and though they bear no date, it is certain they were coined in 1616. They bore a striking resemblance to the coins issued by the Etrurian City, Populonia, about 500 B. C., and if their existence had not been known prior to the first discovery of the Etrurian coins they might have been catalogued as a copy. The first American coin is now worth from \$100 to \$300, and has a history worth repeating. In the month of May, 1609, a fleet of nine ships sailed from England for Virginia, but on reaching the thirtieth degree of north latitude were overtaken by a heavy storm, and one became separated from the others. On board the hapless vessel were Sir Thomas Gates, Sir George Sommers and Captain Newport. The ship sprung a leak, but the men on board were not of the kind to yield unresistingly. They fought a magnificent battle, and kept the vessel from sinking until land was reached. They ran in on the rocks, wedging the vessel tight, and loading their goods into boats, made for the shore. The party numbered one hundred and fifty persons. The island they found themselves on (now part of the Bermudas), was uninhabited, but was then, as now, one of the healthiest, richest and pleasantest islands in the Atlantic ocean. A large number of black hogs infested the island, but it was apparent that they were not in their natural abode,

having swam ashore from the wreck of a Spanish ship. A considerable number of the party were content to remain upon the island, but the majority ruled that two ships should be built and an attempt made to reach their original destination. However, it was not until May 10, 1610, that it was possible for them to sail for Virginia, where they ultimately arrived safely. There the story was told; and the great number of hogs and the many desirable products of the Bermudas induced Lord Lemar to fit out an expedition to secure the delicacies for Virginia. Sir George Sommers volunteered to go and was placed in command. The party embarked on the 19th of June, and after a somewhat stormy voyage landed where the town of St. George now stands. Shortly after his arrival, Sir George Sommers died of diarrhoeal complaint brought on by eating too much pork. The Bermudas were thenceforth known as "Sommers Islands." A permanent colony was soon established with Sir Thomas Smith, treasurer, and Master Richard Moore, governor; these officers having arrived at the island in 1612, accompanied by sixty men. In 1616 Master Daniel Tucker was appointed governor of the new colony, but when he arrived at Sommers Island, the first American coin had made its appearance. Although nearly three centuries have passed, there are still many specimens of what was America's earliest currency, in existence, and thrice blessed is that collector who can say: "I have one." EDITORIAL COMMENT. It would be a mistake to state that the Sommers Island coins were the first American coins, or the first struck for use in America. That they were the first issued for use in the English colonies of America is true, but at least seventy years previous to this, a mint of coinage was established in the City of Mexico, and that at this mint

coins in silver were struck during the reigns of Charles and Joanna, Phillip II. and III., and all before the time of the Sommers Island coins. Again these Spanish-Mexican coins should have precedence as the first American coins from the fact that they were actually coined in America. The account of the Sommers Island coins as given by our contributor is substantially correct. The exact date of issue, and the number issued must, however, remain a matter of doubt. How they could ever have been likened to the ancient coins of Populonia we cannot conjecture, as there is no similarity in striking, design or inscription between the two. It is well to note also in passing, that there were two varieties of these coins, a large and a small one. The

large one, illustrated in the cut, has XII. in the field of the obverse, and inscription, "Sommer Islands." The smaller one has the Roman numeral VI. and inscription, "Sommer Islands." It is supposed that they passed for twelve pence and six pence respectively. Probably less than a dozen of these pieces are known today. Copies of the larger piece have been issued by some enterprising (?) dealer and must not be confounded with the originals. The Numismatic Sphinx. Howard Shattuck, Clinton, Wis.—An octagonal gold quarter of 1872 is worth \$2.00. Maurice W. Peck, Greene, N. Y.—Your dime of 1827 or 1837, which seems so poor that you cannot give correct date, is only worth face value. Joe. Gallagher, Racine, Wis.—The 1853 quarters with arrow points each side of date, and rays about the eagle have no premium. There is a variety of this date without arrow points and rays that is scarce and brings about \$5.00. Robert Gluck, Mansfield, O.—States that he has an 1840 dime not bearing the inscription "United States of America" on either obverse or reverse. We know of no such piece struck in this year by this country for circulation. Our correspondent must be mistaken in the

country, the date, or the inscription, perhaps, has been worn off. "Uneda, Chicago, Ill."—(1) An English half penny, 1807, is worth 10 cents. (2) A United States half-cent of 1825 is worth 15 cents. (3) A 50 centime silver of Louis Philippe (1830-48), France, is valued at 20 cents. These are prices for the coins in good condition.

Knotty Curiosities.

An interesting and valuable acquisition to a cabinet of curiosities is a collection of knots, curiously formed limbs, twigs and roots of trees and bushes.

Curiously twisted and curled knots and gnarls of the oak when removed from the trunk, stripped of the rough bark and lightly sandpapered, are the acme of oddity.

Be very careful in smoothing up the specimen to use a very fine "sanded" paper, so as not to scratch too deeply; also be just as careful not to rub it too long or hard, and thus remove the creases, curls or curves of the wood.

When the smoothing up process is finished, apply two coats of varnish, and let it thoroughly set and dry; you then have a "relievo" of polished oak rivaling in all the best efforts of the best carvers in Christendom.

A visit to a sawmill in your vicinity will almost always furnish you with abundance of this material.

A crippled limb, peculiarly twisted twig or root, or any odd, fantastic freak of vegetation in this line treated in the manner above described, lends a peculiar charm to an interesting curio. Often these freaks of nature resemble some form or object, and are hence doubly interesting and the most sought after.

These wooden abnormalities are sometimes used in ornamentation, and the results are pleasing.

If you have a cabinet in which to store and exhibit your curiosities, it can be appropriately adorned with these knots. The sides can be paneled and "rosetted" with polished knots and intertwined with curly roots in many conceits and ideas, while the exposed edges of the shelves in front can be woven with polished limbs. Picture frames and wooden boxes may be ornamented in the same manner.

Knots to be used in ornamenting should be sandpapered down smooth and square on the back before they are varnished. Fasten them on with good glue. Limbs and roots may be tacked on.

A good, well sealed and well marked specimen is often most attractive if left in its original state, the bark, of course, being removed.

THE BOY CURIO COLLECTOR

NOTICE.

When you have what a boy asks for or wish to trade with a boy whose name appears in these columns, write the boy himself; don't write us.

Boys' Exchange.

Sumner A. Davis, Jermyn, Pa.—I will give ten stamps from Roman States for an Indian arrow-head.

W. P. Kelly, 135 Sheridan avenue, Detroit, Mich.—I will exchange foreign stamps for coins, Indian arrows or relics.

Guy E. Boynton, box 5, Northampton, Mass.—I will exchange birch, butternut, oak and elm woods for woods of other climes.

Harry B. Lehmyer, 922 North Gilmor street, Baltimore, Md.—I have a Confederate minie ball and a Union cartridge from Gettysburg which I will exchange for two Indian arrow-heads or two bullets from any other battlefield.

David Bennett, Nordhoff, Cal.—I will exchange orange, olive and lemon leaves or gypsum for specimens of minerals.

Harry Lindquist, Iron Mountain, Mich.—I will exchange twenty-five United States stamps, all different, for an Indian arrow-head.

Ralph E. Morrison, 36 Concord square, Boston, Mass.—I have a relic of the big Boston fire of 1872 which I will exchange for any good rare coin or coins.

Clarence Wright, 819 Court street, Port Huron, Mich.—I have foreign stamps, and shells and stones from the Great Lakes, which I will exchange for Indian relics, shells, etc. I will also trade leaves.

Frank S. Clark, 8 Church street, Greenfield, Mass.—I will trade rose and milky quartz and red sandstone for any kind of curios.

Edward Moore, Oakwood, Wyo.: I have some very good boys' books, but I know them by heart, and would be glad to exchange them for others. Send me any boys' book you are through with and I will send you a book as good as the one received. I do not want novels and fiction; I want only books such as science, history or travel.

Robert H. Ramsbotham, 930 Madison avenue, Paterson, N. J.: I have four packets of foreign stamps which I will exchange for small curios not found in New Jersey.

Thomas G. King, 1401 Dryades street, New Orleans, La.: I will exchange a printer's guide and speller for a book on composition.

A Clock That Runs a Year.

A clock that runs for a year has been invented by Peter M. Ravenskilde, of Cary, Ill. This clock was started going in August, 1898, and has run ever since without being wound again. The clock proper is run with a wheel 60 inches in circumference. From the outer surface of the circumference are suspended 120 cups, each half an inch in diameter, and a third of an inch deep. Each of 40 of these cups, which are successive, contains a steel ball three-eighths of an inch in diameter. Every minute and a half, one of them falls out of its cup, rolls down an inclined plane 20 inches long, when, by its own weight, it reunites a broken circuit of electricity and is again elevated by a little car traveling along a steeper inclined plane to the top of the wheel, where it falls into a cup which stands vertical for a short time. After the car discharges its cargo, it returns to its original station from its own weight. From the time one of these balls is dropped into a cup until it is again dropped into another cup it tra-

vels 36 inches. Thus the work done by all the balls is equivalent to one ball traveling over one mile a day, 400 miles in one year, and during the lifetime of a person living three score years the distance round the globe. The electricity used is generated in an ordinary storage battery, which does not require any attention for fully a year. Mr. Ravenskilde has been asked to exhibit his clock at the Paris Exposition, but has declined to do so.

Questions Debated by College Teams.

The following were the questions discussed by some of the college debating teams in their annual contests this year: Harvard-Yale—Resolved, That Porto Rico should be included in the customs boundaries of the United States. Wisconsin-Iowa—Would it be politic for the United States to take direct action which would effect a substantial increase in her Merchant Marine? Harvard-Princeton—Resolved, That England's claims in its controversy with the Transvaal are justifiable. Pennsylvania-Michigan—Resolved, That the formation of Trusts should be opposed by legislation. Columbia-Chicago—Resolved, That the national regulation of corporations tending to capitalistic monopoly is unwise and inexpedient. California-Stanford—Resolved, That in France the Ministers should be responsible to the President. Brown-Dartmouth—Resolved, That it is the duty of the United States to accord complete independence to the Philippine Islands as soon as it shall be consistent with their permanent welfare.

THE BOY-ORATOR AND DEBATER. Includes illustrations of a boy speaking and a portrait of a man.

A Successful Boys' Debating Society.

The Excelsior Debating Society, composed of boys in Parsons, Kas., whose ages range from fourteen to twenty, was organized in December, 1898, with twelve members. Officers are elected in this society every two months, thereby giving each boy a chance at all the offices. Meetings are held every Wednesday evening. Programs consist of music, essays, declamations and debates, there being two debates on each evening. Each member is compelled to take part in every exercise, and if he fails to fulfill his part is fined. The meetings are secret, excepting every fourth, which is called an "open debate." Our correspondent, R. Ray Wilson, 1509 Stevens avenue, Parsons, Kas., says that when the boys began this work they were very timid and awkward and unable clearly to express themselves, but that now, to the wonder and surprise of all, the boys stand straight before an audience, without fear and with good command of expression. Mr. Wilson asks, through the columns of this paper, for correspondents among other similar societies.

Some men are always running to catch up with their business; they are always in a hurry, and give you the impression that they are late for a train. They lack method, and seldom accomplish much.—Pushing to the Front.

Constitution and By-Laws of the Lyconian Literary Society, Beatrice, Neb.

CONSTITUTION. ARTICLE I. NAME AND OBJECT. Sec. 1. This body shall be known as the Lyconian Literary Society or by the initial letters thereof. Sec. 2. The object of this order shall be: First: To promote fraternal regard among a class of students or ex-students of the Beatrice High School. Second: To improve its members in the art of public speaking and along parliamentary lines. ARTICLE II. MEMBERSHIP PRIVILEGES. Sec. 1. Any student of the Beatrice High School, known to possess a good moral character, is eligible to active membership in this club and may become a member if he receives not more than one black ball and complies with all other necessary conditions. Sec. 2. Twenty members shall constitute the club's limit of active membership at any one time. Sec. 3. Any person upon becoming a member of this body is required to sign its Constitution and By-Laws by which he pledges his honor to uphold all of their provisions to the best of his ability. Sec. 4. Nullae pullae in hunc conventum accipiantur. (This section shall not be so construed as to effect the one following.) Sec. 5. Any suitable person may be elected to honorary membership by a unanimous vote of members present. ARTICLE III. OFFICERS—ELECTIVE AND APPOINTIVE. Sec. 1. The Elective Officers of this or-

ganization shall consist of a President, Vice-President, Secretary and Treasurer. Sec. 2. An Executive Committee of three members shall be appointed by the President and voted on by the club.

ARTICLE IV. ELECTION OF OFFICERS. Sec. 1. The nomination and election of officers shall take place by ballot at the first regular meeting in the months of January, April, and October. Sec. 2. Three-fourths of all members shall constitute a quorum for all elections and trials of impeachments; two-thirds of members present being necessary to elect and four-fifths to expel. Sec. 3. The installment of newly elected or appointed officers shall take place on the next regular meeting following the election.

ARTICLE V. DUTIES OF OFFICERS. Sec. 1. The president shall preside at all meetings of this body and enforce the laws thereof. He shall at the time of his installation appoint the members of the Executive Committee, subject to the approval of the club. He shall fill all vacancies occasioned by sickness or otherwise, and such persons appointed shall hold office until the next quarterly election, or the ability of the previous officer to serve. He shall sign all orders on the Treasurer drawn in accordance with the laws of the club. He shall also sign all documents and papers that require his signature to properly authenticate them and he shall carry out all further presidential duties which may be specified in sections 40 and 50 of "Robert's Rules of Order." Sec. 2. The Vice-President shall assume the duties of the President during the inability of the latter to serve. Sec. 3. The Secretary shall keep a true record of all the proceedings of the club. He shall have charge of and be responsible for all club property, not otherwise provided for, and shall deliver same to his successor upon his installation. He shall receive all moneys due the club, giving receipts therefor, and immediately pay over such money received to the Treasurer, taking a receipt from him and keeping same carefully on file in his possession. He shall sign in conjunction with the President and draw all orders upon the Treasurer, allowing him to keep said order as voucher for money paid out. He shall report in writing at any time, when so required by a vote, the condition of the club funds. Sec. 4. The Treasurer shall receive all moneys paid to the Secretary and give receipt therefor; pay all orders signed by

the President and Secretary which may be drawn upon him; and keep carefully on file the above mentioned orders which serve as vouchers to be examined by an auditing committee at the expiration of his term of office. He shall, upon the installation of a successor, pay over to the newly elected Secretary, all club funds and give a written report of all expenses, whatsoever, which have occurred during his tenure of office. This report shall be submitted to an auditing committee who carefully examine same and attest its correctness of error.

ARTICLE VI.
STANDING COMMITTEES.

Sec. 1. The Executive Committee shall be held responsible for carrying out the following duties:

First: To arrange and present before the club, a program, two weeks previous to its execution.

Second: To investigate the different students of the Beatrice High School, and issue an invitation to join the club, to those who, in their opinion, would make good members.

Third: To investigate and report all applications for membership and

Fourth: To examine charges preferred against any member and if found to be of sufficient importance, to impeach the membership of said person and bring the matter to trial before the club according to the Impeachment Procedure.

Sec. 2. Other committees that may be created from time to time, shall examine and report at each meeting on such matters as may be referred to them.

ARTICLE VII.

MEETINGS—THEIR TIME AND PLACE.

Sec. 1. This club shall meet one night in the week at the hour specified in the Standing Rules, and at the club rooms unless otherwise designated at a previous meeting.

Sec. 2. Special meetings may be called by the joint consent of the President and Secretary, or by the concurrence of a majority of the club members.

ARTICLE VIII.

NECESSARY QUORUM.

Sec. 1. A majority of all club members is necessary to transact ordinary business.

Sec. 2. Three-fourths of all members shall be the necessary quorum for all elections, trials of impeachments, and amendments to the Constitution or By-Laws.

ARTICLE IX.
AMENDMENTS.

Sec. 1. A three-fourths vote of all members present is required to amend this Constitution or the By-Laws, provided that the amendment be passed upon favorably at a previous meeting.

ARTICLE X.
RULES OF ORDER.

Sec. 1. Robert's Rules of Order, together with such other Standing Rules which the Society may adopt, shall govern its deliberations, when they do not in any wise conflict with the Constitution and By-Laws.

BY-LAWS.

I.

Sec. 1. Applicants for active membership in this body must be of sound health physically and mentally, and of good moral character and exemplary habits.

Sec. 2. The applicant must fill out an application blank, complying with all conditions contained therein, and secure the recommendation of two club members. Said blank should then be handed to the Secretary of the club, who in due time should inform applicant of the result of the club's ballot.

Sec. 3. Each applicant for membership in this club, upon admission to same, is required to pay an initiation fee of twenty-five (25) cents before being allowed the right to vote.

II.

Sec. 1. Each member is placed on his honor to obey implicitly the provisions of the Constitution, By-Laws, and Standing Rules and to preserve order and decorum at each meeting of this organization.

Sec. 2. Each active member of this body shall pay monthly dues of ten (10) cents, for nine months in the year, for the purpose of defraying the current expenses of the club.

Sec. 3. All members of the L. L. S. who graduate from the Beatrice High School, or who become ex-members of same before graduation and serve for four years in the

club, shall constitute the club's list of retired members. These members during their attendance at future meetings of the L. L. S. shall be entitled to all privileges possessed by any active member.

Sec. 4. Honorary members are entitled to, and invited to participate in, all the privileges of active members, excepting the right to vote.

Sec. 5. Certificates of membership shall be issued to both Active and Honorary members.

III.

Sec. 1. Any member of this club is liable to impeachment, and if found guilty, to cancellation of membership, for willfully, knowingly, and deliberately violating any important rule of this Order, or for any act of treason, embezzlement, bribery, slander or libel, unauthorized alteration or destruction of official documents and all other high misdemeanors.

IV.

Sec. 1. All members shall keep informed on current events, and thirty minutes of each meeting shall be spent speaking on same.

Sec. 2. At each meeting of the club, the President shall appoint a critic, whose duty shall be to make a note of all Grammatical and Rhetorical errors occurring during the Orders of the Day, and submit a report of same at time specified in the Order of Business.

Sec. 3. In order to impart a knowledge and facilitate the usage of Parliamentary Law, Robert's Rules of Order shall be read at each meeting for at least ten minutes.

Sec. 4. At the next regular meeting following the installation of new officers, the Constitution, By-Laws, and Standing Rules of the club shall be read aloud by the Secretary in place of the reading of Robert's Rules of Order.

V.

Sec. 1. When the presiding officer takes the chair, the officers and members shall at once seat themselves properly, and at the call to order, there shall be general silence. The meeting shall then be opened in due form.

Sec. 2. The order of business at each regular meeting of the club is as follows and shall be strictly observed:

1. Roll Call.
2. Reading of Minutes of Previous Meeting.
3. Orders of the Day.
 - A. Reading of Robert's Rules of Order.
 - B. Program.
 - C. Discussion of Current Topics.
 - D. Critic's Report.
4. Report of Executive Committee.
5. Report of Select Committees.
6. Report of Treasurer, (quarterly.)
7. Unfinished Business.
8. New Business.
9. Adjournment.

VI.

Sec. 1. It is the duty of newly elected officers to read carefully the sections in Robert's Rules of Order, which give all necessary information concerning the various offices and the duties thereof.

Sec. 2. All regular elections of officers, all trials of impeachments, all voting on the installation of a member, Active or Honorary, and all other business, which should, from its nature, be regarded as private, shall be transacted in secret.

Sec. 3. The Secretary shall notify all committees concerning such matters as are referred to them, not later than the third day following their appointment. He shall also within the same limit of time, notify all members in the next program, of their parts and places.

Sec. 4. All principal motions, if required by the presiding officer, all resolutions, amendments, and instructions to committees must be in writing.

VII.

Sec. 1. The club colors of the L. L. S. shall be scarlet and green; the latter signifying loyalty; the former, strength of purpose.

Conundrum.—Answer, "Because they both shrink from washing." William C. Griffith, 1117 Shackamaxon street, Philadelphia, Pa.

Foreign Postage Stamps.

To the boy sending the largest number of new subscriptions to THE AMERICAN BOY by July 10 we will give, in addition to the regular premium offered, one-half of the foreign stamps accumulated in our office for the month ending that date, to the two next in order, one-fourth each.

Stamp Award.

One-half of the foreign stamps received in our office since last award, for largest number of subscriptions sent in, goes to Charles Gustafson, Chicago.

One-fourth of the stamps for second largest number, to Albert W. Fifield, Minneapolis, Minn.

One-fourth of the stamps for third largest number, to Fred Hilker, Ft. Wayne, Ind. This offer is repeated for the coming month.

Prizes for Mistake Hunters.

To the boy first notifying us of a mistake in spelling (dialect not considered) in this number of THE AMERICAN BOY, we will give \$1.00. To the boy next in point of time who detects a mistake, 50 cents. To the boy sending in the largest list of mistakes, \$2.00.

Prize Offers.

For the first correct solutions of the puzzles we will give prizes as follows:

Puzzle No. 57—An AMERICAN BOY Base Ball Scorer.

Puzzle No. 58—An AMERICAN BOY Watch Charm.

Puzzle No. 59—A Coin and Stamp Guide

Puzzle No. 60—An AMERICAN BOY Knife.

Puzzle No. 61—An AMERICAN BOY Fountain Pen.

Puzzle No. 62—A Coin and Stamp Guide.

With One Stroke of the Pen.

We give in connection herewith two illustrations, each of which is drawn without lifting the pen from the paper. What can our readers do in imitation of this very good work by our correspondent, Allen Seely, of Kemptville, Ont., who submits them? Try it, and send us the result. For the best head drawn with one stroke we will give a prize of one dollar, and for the best man drawn with one stroke we will also give a prize of one dollar.

Little Robert's Lesson.

Robert is being told by his mamma how to conduct himself in company.

"If you are asked to have a cake a second time," says mamma, "answer, 'No, thank you, I've had plenty.' And don't you forget it!"

What mother could do more for her child?

But when the time comes, and Robert is asked to have cake a second time, he answers merely:

"No, thank you, I've had plenty, and don't you forget it!"—From the Detroit Journal.

MAN WITH ONE STROKE OF THE PEN.

HEAD WITH ONE STROKE OF THE PEN.

As soon as a boy begins to think of the future he ought to begin to map out a program, remembering that the man who succeeds has a program; that is, he lays out his plans and then tries to execute them. Those who make failures in life are usually the aimless purposeless, shiftless—persons without any purpose.

Special Offer For Boys.

Earned in 3 Hours This famous **Columbian 500-Shot Magazine Repeating Air Rifle** can be easily earned in three hours by any boy introducing a few boxes of our High Grade Toilet Soaps among his friends and neighbors. Renowned for target shooting and for killing small animals and birds. Great amusement and practice for both men and boys. Also over 150 other valuable premiums, including gold and silver watches, cameras, bicycles, suitcases, etc., etc. Write to-day for full information about our Special Offer and large illustrated catalogue which we send free.

BULLOCK, WARD & CO. Dept. 50, 234-236 Fifth Ave., CHICAGO.

THE AMERICAN BOY

The Only Distinctively Boy's Paper in America.

(Entered at the Detroit, Mich., Post-office as second-class matter.)

The American Boy is an illustrated monthly paper of 24 pages. Its subscription price is \$1.00 a year, payable in advance.

New Subscriptions can commence at any time during the year.

Payment for The American Boy when sent by mail, should be made in a Post-office Money-Order, Bank Check, or Draft, Express Money-Order or Registered Letter.

Money sent through the mail is at sender's risk.

Expiration. The date opposite your name on your paper shows to what time your subscription is paid.

Discontinuances. Remember that the publishers must be notified by letter when a subscriber wishes his paper stopped. All arrearages must be paid.

Returning your paper will not enable us to discontinue it, as we cannot find your name on our books unless your Post-office address is given.

Always give the name of the Post-office to which your paper is sent. Your name cannot be found on our books unless this is done.

Letters should be addressed and drafts made payable to

THE SPRAGUE PUBLISHING CO.,
MAJESTIC BLDG. DETROIT, MICH.

WILLIAM C. SPRAGUE,
Editor.

GRIFFITH OGDEN ELLIS,
Assistant Editor.

Albert M. Pocock, of Sioux Falls, S. D., asks us to give the standing of the National and the American ball clubs from time to time in THE AMERICAN BOY.

Owing to the fact that nearly one hundred thousand copies of THE AMERICAN BOY have to be printed every month, it is necessary that the editor close his work on each issue nearly a month before it makes its appearance, so that were he to give the standing of the League clubs, the record would be nearly a month old when it came before readers of the paper. A daily paper can be depended upon to give the record up to date, while a monthly cannot give current news.

For this reason we cannot comply with the request.

An Interesting Race for Money Prizes.

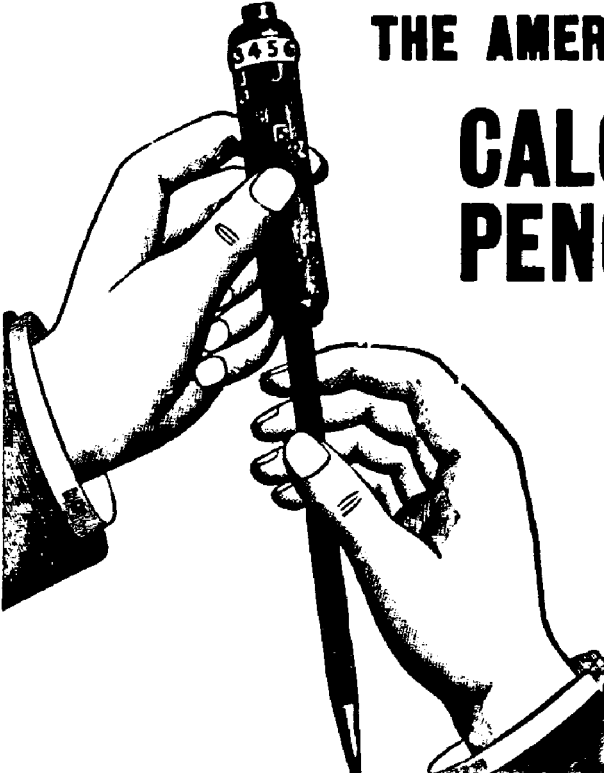

Readers of THE AMERICAN BOY are doubtless familiar with the fact that we have offered prizes to the amount of a thousand dollars to boys sending in subscriptions, the prizes to be awarded next Christmas. The race is becoming a very interesting one, some of the boys doing very good work. The prizes, fifty-five in all, range in amount from \$5 up to \$200; that is, each boy who stands within fifty-five of the best record will get a prize of at least \$5. Each boy contesting gets in addition to the money prizes such premiums as he may select from our premium catalogue. Alfred W. Fifield, a twelve year old Minneapolis boy, took the lead at the very beginning of the contest and holds first place to-day, though his Chicago rival is slowly gaining on him. The order of the fifteen highest as published in the June number has undergone little change in the past thirty days and now reads as follows: Alfred W. Fifield, Minneapolis; Charles Gustafson, Chicago; Emerson T. Cotner, Detroit; Louis Straka, David City, Neb.; Fred Hilker, Fort Wayne, Ind.; John D. Cronenweth, Detroit; J. L. Hirschland, Reading, Pa.; Clarence Pyeatt, Fort Lemhi, Idaho; Karl Matthews, Dubuque, Ia.; Heman H. Smith, Lamon, Ia.; Charles Meader, Chicago; Robert M. Gray, Hasbrouck Heights, N. J.; Avery C. Hand, Mansfield, O.; E. O. Henderson, Stockton, Cal.; Lyman Scriber, Detroit, Mich.

There are nearly six months remaining within which you may enter the race. The highest score is forty-nine. You can easily get into the race and win one of the fifty-five money prizes, particularly if you belong to a club or an organization where there are many boys whom you can easily reach.

THE AMERICAN BOY

CALCULATING PENCIL

YOU NEED ONE.

Have You Seen ?
The American Boy's Wonderful Calculating Pencil? The pencil that figures with a twist of the wrist? That figures quicker than you can and never makes a mistake? That calculates anything from 1 x 18 to 12 x 24 in the twinkling of an eye? That gives you hundreds upon hundreds of calculations with the swiftness and accuracy of an expert?

The American Boy Calculating Pencil?
Can you tell as quickly as this pencil how much 11 x 24 is? or, what 9 dozen at \$1.80 costs? or, how much 8 per cent of \$1617 is? etc. "It is truly a little wonder," says the Pittsburg Press. "It is a marvel of ingenious mechanism and has excited a great deal of interest among our readers," says the Boston Traveler. An article of the greatest educational merits," says the Youths Companion.

Made of pure Aluminum, and is attached to a pencil of standard quality. Fits any common lead pencil. Is also a pencil point protector, a pencil lengthener and eraser. Can be carried in the vest pocket.

Can You Beat It? BY MAIL, Address PREPAID, 15c. **THE AMERICAN BOY, DETROIT, MICH.**

When Ye've Stubbed Yer Toe.

From The Bismarck Tribune.

Did ye ever pass a youngster, et'd been an' stubbed his toe.
An' was cryin' by the roadside, sorter quiet like an' slow,
A-holdin' of his dusty foot, all hard an' brown an' bare,
An' tryin' to keep from his eyes th' tears that's gatherin' there?
Ye hear him sorter sobbin' like an' snuffin' of his nose,
An' ye stop an' pat his head an' sorter try to ease his woes,
Ye treat him sorter kind like, an' th' fust thing that ye know
He's up an' off an' smilin'—clean forgot he stubbed his toe.

Long the road of human life, ye see a feller trav'lin' slow,
An' like as not you'll find he's some poor cuss that's stubbed his toe.
He was makin' swimmin' headway, but he bumped into a stone,
An' his frien's kept hurryin' onward, an' they lef' him here alone.
He ain't sobbin' or ain't snuffin'—he's too old fer tears an' cries,
But he's grievin' jes' as earnest, if it only comes in sighs.
An' it does a heap o' good sometimes to go a little slow,
An' say a word of comfort to th' man that's stubbed his toe.

Ye'r never sure yerself, an' th' ain't no earthly way to know
Jes' when it's goin' to come y'er turn to trip an' stub y'er toe.
To-day, y'er smilin', happy, in the bright sun's light an' glow,
An' to-morrow y'er a shiverin' an' y'er strugglin' through th' snow.
Jes' th' time ye think ye've got th' world th' fastest in yer grip
Is th' very time, ye'll find, et yer th' likeliest to slip.
An' it's mighty comfortin' to have some feller stop, I know,
An' comfort ye and try to help ye when ye've stubbed yer toe.

Money paid for outfit returned with first work so you get outfit free. First answer from your town gets it. E. G. BRENTON, PEORIA, ILL.

Weasel and Rabbit Fight.

N. R. BRIGGS, BALLSTON SPA, N. Y.

A good story was told me the other day by Mr. Lanson Wiswall, a prosperous farmer of Saratoga county, New York, of how he caught a wild rabbit and weasel without gun or trap. It is as follows:

Mr. Wiswall, while driving through a woods, heard a cry as if made by some small animal. Stopping his horse, he alighted and following in the direction of the sound, saw a few rods ahead and in the middle of the road a rabbit and weasel in mortal combat.

With a view to getting as close as possible to the apparently unmatched fighters, Mr. Wiswall started toward them, and noticing that neither appeared alarmed at his presence, he kept on until within reaching distance of them. The weasel was upon the shoulders of the rabbit, which was growing weaker and weaker in its efforts to shake off its antagonist. The weasel aware of this fact, was striving to get around in position to bite at the throat of the rabbit and thus end the struggle.

Thinking that this would be a good time to take a hand in the fight, Mr. Wiswall stooped down, and with gloved hands grasped the weasel by the back of the neck with one hand and the rabbit with the other, and getting into his vehicle drove home with his prisoners.

On reaching home, he found the rabbit so frightened and completely used up that he decided to kill it and thus put it out of misery. The weasel was caged with a view of ascertaining whether a weasel does really change color from white in winter to a red or brown in summer, as is said to be the case.

How to Educate a Horse.

You can, with patience, teach your horse politeness—to bow to an audience, to say "No," with more or less decision, to kiss you, or even laugh. The animal may be taught to bow by tapping him on the back with a whip. He bends his head in trying to avoid the annoyance. The trainer ceases the tapping, caresses him, then resumes it till he repeats the bow. He is again caressed and presented with a carrot, or something of which he is particularly fond. At last it comes about that he "bows" upon any movement of the whip toward his back. To teach a horse to say "No," a pin is fastened to the butt of the whip. A slight scratch is given to the horse's withers, about where the collar would be. At this he shakes his head; and soon learns to shake it

whenever he sees the butt of the whip coming near his withers. The trainer teaches the animal "to kiss" by feeding him with apples from his mouth, gradually lessening the size of the apples till the horse does the trick without any. Or he puts salt, of which horses are very fond, on his cheek, and the animal naturally licks it off. He is taught to laugh by gently forcing the butt of the whip in at the side of his mouth, then prising his mouth open with it. Caresses and carrots follow, till at last the slightest motion of the butt toward his mouth makes him open it. He does not really laugh; he grins.—From Good Words.

How Dew Forms.

If a little water is taken into a sponge it holds it easily, but if the process be continued, even very carefully, there will be a time when if more water be taken the sponge will not hold it, but will let it drop. This is the point of fullest saturation for the sponge.

Now there is a strong analogy in this to the saturation of the air with watery vapor. For any assigned temperature of the atmosphere there is a certain amount of watery vapor, which it is capable of holding in suspension at a given pressure. The same truth may be conversely stated, that for any assigned quantity of watery vapor contained in the atmosphere there is a certain minimum temperature at which it can remain there. This minimum temperature is called the "Dew Point." The Dew Point is relative.

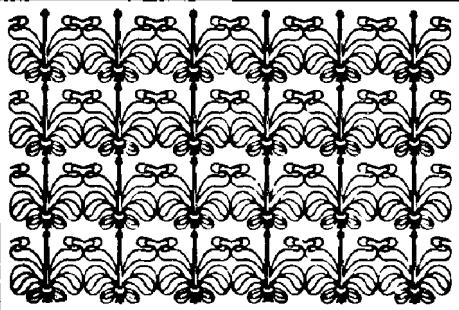

During a hot, calm day the temperature rises and the atmosphere takes up a large amount of aqueous or watery vapor. In the evening after sunset the atmosphere cools and lowers to or below the dew point, when the vapor is condensed and squeezed out, and in the evening may be felt or seen falling in a fine mist. This is evening dew. There is another kind of dew called the morning dew, caused by cooling vegetation, etc. The surface of the earth, and all things on it, especially the smooth surface of vegetation, cool rapidly and thus lower the temperature of the air in contact with the dew point, when dew is precipitated on the plant or other object. If the temperature is below freezing point, 32 degrees F., the dew freezes and is called hoarfrost. Neither of the above kinds of dew must be confounded with the little glistening drops of water seen in the early morning on the tips of the grass blades. This is water which has been drawn up by the plant from the ground during the night and which has oozed out at the stomata or pores so numerous at the end of the plant leaf.

A Cracker

Just what the giant cracker is to the common squib so is Wyandotte Washing Powder in comparison with all other washing preparations.

- It is greater in quantity (2 1/2 lbs. for 5c)—it is greater in quality; it is greater in results; it is greater in satisfaction for the user.
- For washing Shirt Waists and light summer gowns Wyandotte Washing Powder is ideal; containing no caustic alkali it does not injure the finest textures or colors.

[Before washing Shirt Waists of Silk, Muslin, Dimity, etc., make a light solution of Wyandotte Washing Powder and water, and immerse the articles for some time to thoroughly set the colors.]

- WYANDOTTE WASHING POWDER is the dependable friend in laundry and kitchen: lightens the labor—saves the time—saves the hands—saves the purse. Insist on your grocer keeping it in stock for you all the time.
- Ask your grocer for our Premium List and save trade-marks. We give many useful articles in exchange for them.

A Cracker

Just what the giant cracker is to the common squib so is **Wyandotte Washing Powder** in comparison with all other washing preparations.

- It is greater in quantity—(24 oz. for 5c)—it is greater in quality; it is greater in results; it is greater in satisfaction for the user.
- For washing Shirt Waists and light summer gowns Wyandotte Washing Powder is ideal; containing no caustic alkali it does not injure the finest textures or colors.

[Before washing Shirt Waists of Silk, Muslin, Dimity, etc., make a light solution of Wyandotte Washing Powder and water, and immerse the articles for some time to thoroughly set the colors.]

WYANDOTTE WASHING POWDER is the dependable friend in laundry and kitchen—lightens the labor—saves the time—saves the hands—saves the purse. Insist on your grocer keeping it in stock for you all the time.

JIM LEONARD'S KID

A STORY OF THE RAILROAD

KARL EDWIN HARRIMAN

The air was green with the pale glint of young foliage. May had opened the flowers, and the buds on the trees were bursting, the sun painted the high rocks glowing red and yellow brown, and cast weird, fantastic traceries in shadow on the road that wound around Mt. Hecker, towering loftily above the little town of Aylburg—an outpost sentinel of the range beyond, and the first guard of the entrance to Weller's Gulch. To the south, the gulch dug deep into the earth between the walls of sandstone, in a trail as of a mighty, twisting serpent, paralleled along its course by Snake River, a seething, whirling, squirming mass of water, that dashed over jagged rocks, biting pieces from the shelves at either side, and bellowing and hissing as it tumbled onward. To the north sprang the source of the stream, from the heart of the mountains,

THE KID.

and to the east and west, far away, the tattered, white peaks, pierced the low hanging clouds that floated around them like shrouds of death. There above the river dangled the little town of Aylburg, clinging to the side of Mt. Hecker as a burr clings to the perpendicular skirt of a woman who walks afield.

The little railway station of the town was painted a deep red without and papered a light blue within—a sunny, airy little station, that Lyndon took pleasure in caring for. But the time allowed Lyndon to care for the depot was short, much as he might have wished it longer, for the duties of telegrapher were not all that fell to his lot. Had he been ordered to prepare for himself a business card it would have been, of necessity, a long one and a broad one. Officially he was telegrapher, station agent, yard master, baggage handler, janitor and ticket seller of the Northeastern Railway, for the town of Aylburg. Furthermore, he was qualified to lock and unlock switches when occasion might demand.

On this bright Saturday morning, toward the close of a brilliant May, he came out of the station and changed the signals that hung against the sides of the V shaped case swinging above the depot platform. This done he called a greeting across the tracks to the man in the cab of No. 18, which stood wheezing on the siding that ran to the mouth of the Calumpit mine. Jim Leonard poked his head through the window of the cab and shouted back a brisk "mornin', Lyndon," to the agent, and pulled his head within again.

Leonard had been, up to six weeks before, the regular engineer of No. 32, which pulled the mountain special a distance of two hundred and seventy five miles along the tracks of the Northeastern, but now, owing to an illness that lingered dimly, he was making what little he could on the switch locomotive that played with the ore cars up and down the siding that led to the Calumpit mine. All day long he switched, backed and pushed forward to the main track, the squat cars, laden to their rails with wealth in the rough. It was dreary work to a man who, for fourteen years had been one of the best engineers in the road's employ, and if it hadn't been for the "missus" and the "kid"—but it was for the "missus" and the "kid" besides, Dr. Sloan, "the leading physician" of Aylburg, had told him half a dozen times within the past fortnight, in answer to his repeated questionings, that inside a month he would be back in the cab of old 32—the Lord and the company willing. Of the latter there was no doubt, and the former—well, a deep abiding hope lingered in the heart of Jim Leonard.

Lyndon stood on the platform and watched the efforts of the little switch engine. As she scampered playfully up to the main track with half a dozen ore cars in her wake, like a monstrously heavy tail to a miniature kite, Leonard poked his head out of the cab window again and grinned. "Big business, ain't it?" he called.

"Sure," replied Lyndon, laughing. "How is everything, anyway, Jim?"

"Awright."

"Who you got firin' for you?" Lyndon filled his pipe mechanically.

"The kid; see?" And the station master beheld a boy's head suddenly thrust through the window alongside the man's, and held there by the paternal hand that clutched the collar behind.

"Oh, it's you, is it, John?" said Lyndon; and then he added solicitously, "How do you like your job?"

The boy smiled behind the grime that covered his

face and melted into his red hair. "Awright," he replied—the tone was strangely like the man's—"if paw'd only lemme 'lone."

"He ain't any good," Leonard shouted, with mock contempt. "Ain't got a speck of the old man in him. Tain't likely he'll ever be takin' out 32; leastwise, not tomorrow." And Leonard jerked the grinning boy back into the cab. Lyndon laughed. The little switch engine coughed hackingly twice, and danced back down the siding for a new fall. Lyndon turned into the station to answer "T. K."—his call—that had been at it for the past five minutes, and whose clickety-click had floated from the sounder out to him through the raised window of the little box he called his office.

Jim Leonard's fourteen year old kid shoved on, unmindful of the playful jibes his father darted at him now and then. Jim Leonard was proud of that kid of his, despite his constant reiteration of the judgment, "I guess you ain't much good," for he seemed to see in him, young as he was, the making of an engineer who should prove worthy of his father, and—this possibly—worthy, also, of No. 32. But he never prophesied greatness for him within the kid's hearing, or even within the hearing of the "missus," for she would be sure to tell the kid of the paternal regard, and thereby spoil every prospect of the boy.

THE KID, SEE?

Once, when the kid was very much of a kid, he told his father one morning that during the night he had had a dream, and that in the dream he was at the throttle of a brand new engine and hauling a car full of directors over the road. His father had looked serious at that, but when the kid's back was turned, he had smiled a smile of deep satisfaction, and mumbled to himself a half a dozen words that were splendidly unintelligible. By the time he was ten the kid knew all the parts of a locomotive by name, and during the summer of his twelfth year his father took him over the road twice, in the cab, and taught him the ins and outs of the fire-box. He let him hold his hand on the throttle, too, along a piece of straight track, beyond the mountains, for seven minutes at a stretch. On the thirteenth birthday of the kid he presented his father, as a sort of a reverse anniversary gift, with a pen and ink drawing of a fire-box. All the ins and outs were marked by dots and were numbered and explained on the margin. And this Saturday morning he was acquiring his first taste of "firin'" on the little switch engine—No. 18. He took to the work as a duck takes to water. He seemed to comprehend, for all his youth, that it was a step forward, a stride nearer the throttle. Standing there, at the end of the tender, he vowed silently to cast into the darkening past all such theoretical things as pen and ink drawings of fire-boxes, and thenceforward attend only to the practical, the real business of the thing, that one day would send a conductor along the train to him with orders on tissue paper, and make him fit to receive into his hands for keeping, the iron, brass, wood, and nickel of an engine, a real engine—No. 32, for instance.

Lyndon came out on the platform again and rearranged the signals. The switch engine rolled to the main track and Leonard called, "What's up?"

"Special!" Lyndon shouted back.

"That so; what is it?" Little No. 18 came to a standstill. The kid clung to the rail along the edge of the cab window.

"Directors," Lyndon explained, "got a party of Englishmen aboard; 23's pulling her—two observation cars and a diner."

"Who's up ahead?" asked Leonard.

"Jameson, I guess; probably Riley's firin'."

"When they due?"

Lyndon took out his watch and looked at it. "Eleven twenty," he replied. "She left Evansville at 11:08; ought to be along in about nine minutes."

"Make a stop?"

"Yes, likely—water."

"Lordy," exclaimed Leonard, "runnin' pretty close to the 'leven thirty-seven, ain't she?"

"Oh, I dunno; it gives 'em twenty minutes, Jameson's good for it, I guess."

"That's right," agreed Leonard. Then turning to the kid, he exclaimed, in tones the harshness of which was obviously forced: "Now, what you doin'? Just hangin' on there for fun. Think this is sort of a picnic, do you? Never heard of an engine needin' coal did ye?"

The kid grinned a last broad grin at Lyndon, and stooped to his task, without replying. The little switch engine coughed again, spitefully, and started back.

As the special drew in, No. 18 darted up and down the siding with amazing alacrity, chooing and puffing like a thing alive. The rear platform of the last observation car was cluttered with men and women in tourist clothes. From the cab window of his little locomotive Leonard recognized one of the group—Harmsworth, vice-president of the road. Up ahead Jameson was superintending the dusting of No. 23, while No. 23 panted for breath between drinks from the great, round tank at the side of the track. Lyndon came along with the orders. Jameson glanced at them. "All clear, eh?" he muttered.

"All clear," replied Lyndon.

No. 23 shrieked three times—sign that she had drunk her fill. A man in knickerbockers and a little plaid cap, who had alighted to stretch himself on the station platform, clambered aboard again. The special dragged itself away with apparent effort, and an hundred yards from the little red depot began the twisting climb of twenty-four miles, to go six as a bird would fly. From the cab window of little 18, Leonard watched the train pull out, and from the tender step the kid followed, with his eyes, the rear platform of the last observation car, dreaming of the time when he might be qualified to be "up ahead" a directors' special.

Gathering speed at every revolution of her wheels, No. 23, with Jameson's knotty hand grasping the throttle, pulled the three coaches up the stiff grade lying to the north of Aylburg, and made the first curve of the spiral among the mountains. In half an hour she would slow down at the little water station of Mud Run and take another drink.

Lyndon's sounder checked and told him the 11:37 was six minutes late. His hand hovered over the key of his instrument. He glanced at the face of the watch, lying open before him on the table. The hand registered 11:38. Five minutes more and the Mountain Special Limited would come thundering up to the little red station and gasp. Lyndon glanced at his watch again. "She's in sight of Mud Run now," he muttered to himself, and glanced through the side window of the office, back down the track. Suddenly, the sounder before him began clicking furiously, it was "T. K."—his call. He answered. Then upon his half numb ears came dripping this word of destruction and death: "Special broke in sight Mud Run. Started back. Throw track open. Hold M. S." Lyndon understood that M. S. meant Mountain Special. It would be due in three minutes. For an instant desk, signals and all, swam before the eyes of the agent. His hand fell dead at his side. Then, with a struggle, he rushed from the building and screamed across to Leonard, at that instant backing down the siding.

"Jim! Jim!" he called. Leonard heard. "Pull up; special broke in two at Mud Run; car coming down the mountain. What in God's—"

Leonard comprehended the situation on the instant. He pulled the throttle of little 18 and she came leaping to the platform. No second was lost in speech. Leonard gazed into the eyes of his boy. Those of the kid gazed back into his as steadily. Lyndon heard only the cry back to him from the engine as she jumped along the track. "I'll try it; if I can reach Lead Curve first"—Then everything swam before

him again. Back down the track came tearing the Mountain Special.

"Now, kid," Leonard screamed to the boy there beside him, "shovel like mad, and let's see what you're good for!" Leonard pulled open the throttle of little 18 and held it. The baby locomotive jumped into the air almost, settled back on the rails, and shot forward up the grade like a rabbit pursued by a dog. As she passed out of sight around the first curve, the Mountain Special thundered up to the station of Aylburg and stopped. The conductor received Lyndon's words, calmly. He carried them to the man up ahead, and in thirty seconds the Mountain Special, the pride and joy of the road, was standing, puffing, like a tired runner, on the Calumpt siding, all regardless of time and schedule.

As Leonard bore down on the throttle of little 18 he glanced back at the kid. He was throwing the coal like a fiend. Perspiration was washing streaks in the dirt that grimed his face, and his red hair was matted on his forehead. Leonard bit his lip, and thrusting his head from the window, looked up the track ahead. "We'll see her up above us, at the next curve," he yelled at the toiling boy, "if she ain't jumped the track yet."

"Uh, huh." That was all, and the fire-box was fed another mouthful of coal from the big iron spoon that the boy wielded.

There was silence for awhile—silence of voices. Little 18 beat the track wildly. She was fairly flying. It was wild, wonderful, appalling.

Leonard glanced again at the boy. He noted the motion of the arms as the shovel was thrown forward. Impotent to hold back his pride longer, he screamed above the din of the pounding engine, "Kid! I guess you're some good after all!"

The kid didn't even smile, nor yet look up. Things were flying past—rocks, shanties, water-falls.

Little 18 was rounding the last curve before the only piece of straight track between Aylburg and Mud Run.

"Look, father, look!" The kid had been the first to see. He pointed ahead, to the left. Leonard sprang across the cab without releasing his hold on the lever. There, beyond the curve, at the other end of the stretch,

they both saw the car that had broken from the train. Its lightness had been all that had kept it to the rails thus far. With terrific speed it was bearing down upon them. Shortly it would vanish, then, a moment later, appear straight ahead, coming, coming, swift as a meteor, straight as a bullet. The sight sent something cold over Leonard. Afterward he said it felt like the twinge that accompanies a cold shower bath when the water strikes the skin suddenly. He had only time to hold the engine down, pull it up to a standstill, when his hand dropped from the throttle and he knew the dread disease he'd fought against so long was upon him. There was no feeling in his body. He sat there at the window of the cab like a wooden man.

FASTER AND FASTER SEEMED TO COURSE THE CAR AHEAD.

"Kid, kid!" he called, thickly. The boy noted the look in his father's face. "What is it!" he exclaimed. "Father, what is it?"

"Do as I tell you. Now we'll see if you're any good. If you make a false motion or do anything I don't tell you to, we'll both die here on the track, and the directors will die, and everybody will die. Kid, I'm paralyzed!"

The boy started and nearly fell backward. "Don't do that!" he heard his father exclaim, without turning his head. "That won't do no good." Leonard could see straight up the track. "When I say reverse her, you do it," he ordered. "You know how."

The kid didn't speak. He watched from the opposite window, every other moment shooting a frightened glance at the man sitting there across from him so still, so solid. The boy threw open the door of the fire-box and flung in four shovelfuls of coal.

"That's right," commented Leonard.

Then, around the curve, straight ahead, and not two hundred yards distant, came the car. It careened like a sled that takes a sharp corner. Leonard's jaw relaxed. He watched. He did not breathe. The boy knew that mass of iron was coming down upon him from the look in his father's face. He did not quail. He watched that face. The car had covered half the distance.

"Reverse her!" Instantly, little 18 started backward. "Send her as fast as she'll go!" The little engine screamed as she jumped. Faster and faster seemed to come the car ahead. It was almost upon little 18. Its height and breadth made her look like a toy.

It was a moment of intensity such as seldom falls to the lot of man to experience, a moment as when the world was born in a flash of lightning. Now the kid began to comprehend his father's plan. Before he had not. Then he had taken orders. Now he worked with the motionless man there in the window seat. "Hol' her down a little!" Thickly as the words were spoken, the boy understood, and slackened slightly the speed of the back flying locomotive. Thus far the distance between it and the sweeping car had not been lessened, now it was shortening, gradually, but still perceptibly, with every atom of time. The distance was only a scant hundred feet now. It struck Leonard as very like a game of tag between two good runners.

"Little mo' now." This order was obeyed upon the instant as had been the others. For a moment the boy left the engine thus, while he threw two more shovelfuls of coal in upon the dancing flames, hurriedly. The span had lessened to fifty feet. Then there fell upon the ears of man and boy a wild whirr that filled all the air around them and drowned the sounds of earth.

"Steady! steady! steady!" A slight jar that sent little 18 jerking and quivering for an instant—another—

And that was all.

When the kid glanced at his father after that first concussion, the look he saw in his face was one of horror, frozen there. He thrust his head out of the window. Close pressed to the breast of little 18 was the observation car. It was like a kiss. The kid couldn't make out anyone inside the coach.

"Steady! gradual! steady! steady!" The look of agony had died out of Leonard's face and left it calm.

Close together, the two masses of iron were sliding back down the track with one accord. So tremendous had been the velocity attained by the car on its mad whirl down the mountain, that it required a

great amount of giving way on the part of the engine before it was safe and practical for the two to merge together. Leonard had judged the speed of the flying car with an exactness that was amazing. When it had settled down upon his little engine the shock had been so slight that those inside still believed that they were pursuing the mad course that had begun at Mud Run. Little by little a speed was slackened. The car hugged the bosom of 18 like a child restored to its mother. Thus it was that at Lead Curve engine and car came to a standstill.

At Aylburg it was necessary to lift many of the men and women from the observation coach; one of them was Harmsworth, vice-president of the road. The Mountain Special did not wait for particulars, but pulled out at once, with a shriek of anger at having been delayed seventeen minutes. Leonard was carried by gentle hands to the little cottage clinging to the side of Mt. Hecker behind the town. The women were cared for in the Union Hotel. The kid went along with those who bore his father's motionless body. Now that it was all over, Leonard whimpered like a child, and those of the little party with him heard him mumble over and over again, "Kiddle I—guess—you're—some—good—after—all."

The kid was not elected president of the road at the next meeting of the directors; neither was his father. A pension for life—just that—was tendered him. As for the kid, he fired for two years on a freight and then they gave him the engine. It went well with him. He's "up ahead" of a "passenger" now, and the number of the locomotive is—32.

TO SAVE A BOY.

Roslaw L. D'Arv, Wartburg, Tenn.: "My mamma, papa, sister Ivah, seven years old, and myself send forty cents—ten cents each, for the boy saving fund. I hope it may do some good. Papa, mamma and I will give ten cents a month and sister Ivah five cents, making in all thirty-five cents a month, you can depend upon from us."

A FAMILY I KNOW

WE know who lives to the right and left of us and across the street, and we know what the father's business is, how many children there are, how the mother cares for her family perhaps, their joys and sorrows; but here, right in our own maple tree, may be a much more interesting family that we have not even noticed. The father, perched on a branch near by, has sung until his little throat was like to burst because he is so proud of the little wife he has won and the fine home they have made.

Then one day as you notice him acting more important than ever, and when the mother flutters off for a minute you take a sly peep into the nest and behold! there are five wee eggs in it. No wonder they are a proud couple. But wait awhile; by and by the little eggs are gone, but better still, in their place are five big-eyed, ugly looking birdies, with mouths so large that there is little time for the father to sing songs, for he and the little mother are kept busy filling the ever-open red mouths, which keep crying "more! more!" in their shrill baby voices.

I am going to tell you about a neighbor of mine who, with his family, lives in the large maple tree close by my chamber window. Let me introduce you to them, for you may have a neighbor who is a relative of this little family and whose acquaintance you have not made.

The father and head of the family is Mr. Oriole, called here, Baltimore oriole, and by New England people, Golden Robin or Hang-nest oriole. He is a much better dresser than his wife; his coat is a black which covers his back, neck, head, and part of his tail; the rest of the tail is trimmed with pretty, pale orange. His vest and trousers are a gorgeous, bright orange red. The wings are black and white, and the bill and feet slate blue.

Mrs. Oriole wears a very modest dress of yellowish brown with waist darker than the skirt.

Well, I first noticed Mr. Oriole when he was courting Miss Oriole, and a hard time he had to win his bride, for there was another older and much finer gentleman than himself, who liked the young lady too; but she preferred the younger lover, so one fine morning when I looked out of my window I saw the young couple busily beginning their nest-making, and the fine Mr. Oriole, who lost his bride, sat on a branch near by, with a very long face. Sometimes he flew up to the new wife to argue the question with her, but it only made her angry and she drove him away with much fluttering of wings, pecking and shrill cries. All day long they planned and worked together until when next I looked, not only was the little hanging cottage finished, but inhabited, and in it were seven small eggs; while papa Oriole, on a limb near by, tried to tell the world, with that sweet warble of his, that he was the proud possessor of this wonderful home and that soon he would have seven little hungry mouths to help fill and seven little half-fledged birdies to teach to fly.

Have you ever seen an oriole's nest? It is about five inches deep and three inches across, a little wider near the centre. He hangs it, usually, on the end of a branch of maple or elm and I have seen it in an apple tree; and a regular swinging cradle it is for his little ones. He weaves it so lightly from bits of cord, wood fibers and horse-hair, that you can take an old nest and press it until the sides touch, without injuring it. It is the horse-hair that, woven in and out, makes it so strong yet so flexible, like one of our own hammocks.

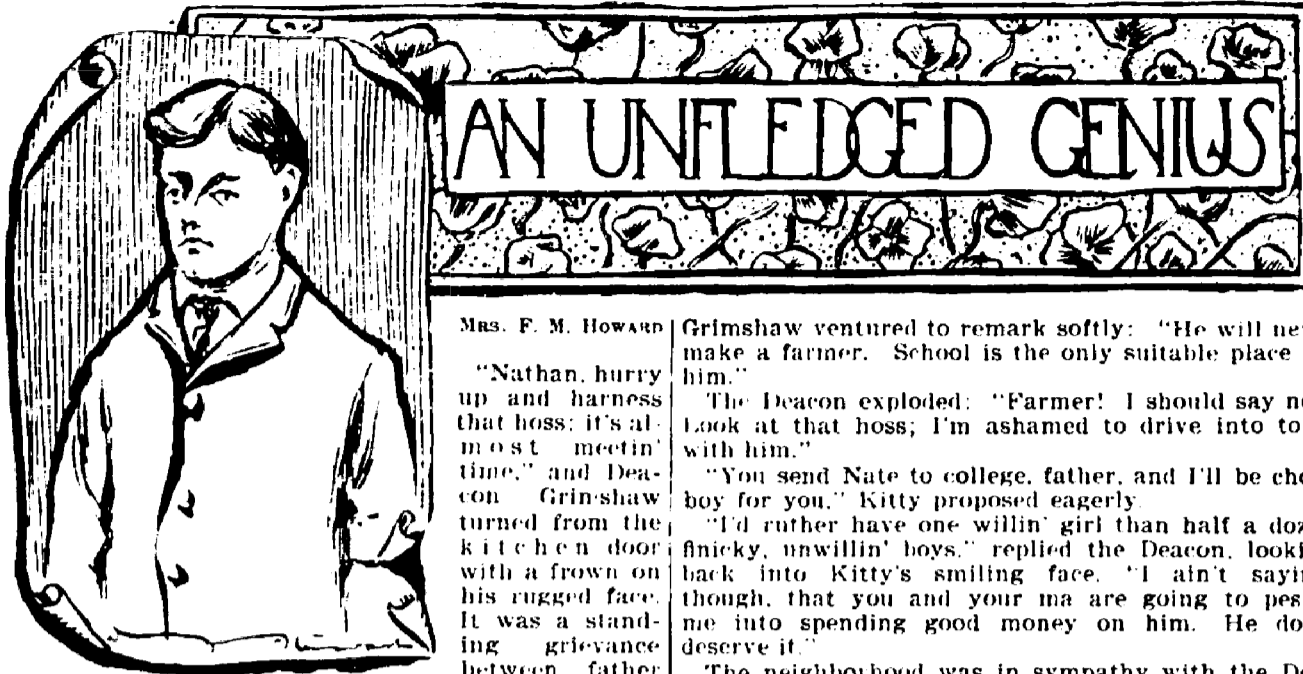

Now let us see what has taken place in our little family. Why, if there isn't seven little, naked, hungry, crying birds! And of all the cry babies in the bird-world, oriole babies are the worst. Now, perhaps, Mr. and Mrs. Oriole didn't have to work! From early to late they worked to keep the youngsters' mouths filled, for as soon as one was satisfied another was ready for more. I wonder they got a bite for themselves; any way, they certainly didn't have time to cook, carve and serve their favorite food—the insect—as they probably wanted to do.

Finally, all the little yellow headed children, with their fluffy, new spring dresses, were ready to go out into the world, so, one by one (never two), they scrambled to the edge of the nest and after much coaxing and encouragement, fluttered, hopped or stumbled to the next branch, where, feeling very independent, they tried again and again until they thought themselves as smart as any bird and wouldn't listen to a word of advice from their parents.

The last I saw of my friends they were down on the lawn, the parents working like drudges for their still hungry brood, which followed them up like chickens after the old mother hen.

The little swinging cottage is now deserted and lonely, but the maple tree has another tenant which claims no relationship to Mr. and Mrs. Oriole and their seven children.

MRS. F. M. HOWARD

"Nathan, hurry up and harness that hoss; it's almost meetin' time," and Deacon Grimshaw turned from the kitchen door with a frown on his rugged face. It was a standing grievance between father and son, har-

nessing the horse on Sunday mornings to the carry-all, and this morning the Deacon was late in dressing, and Nathan, being ready, was caught in the toils of the unwelcome task.

"I never saw such a lazy"—but Kitty was waiting with her father's necktie and a smile. "Come, father, we shall have to wait for you if you waste time in scolding," she said brightly, as she slipped the tie under his collar and deftly tied a four-in-hand.

Kitty was sixteen and her father's idol. She was fond of outdoor work, and often lent a willing hand with the planter and reaper, while Nathan much preferred indoor tasks.

"You are some comfort to me, Sissy," said the Deacon, embracing her trim waist with his big hands, but Nathan—

"Is going to be a credit to us after he has been to college," interrupted Kitty briskly. "Here he comes with the carriage."

A tall youth, slender and effeminate, came in at the door, and went to the sink with an aggrieved look as he rubbed soap on his hands, washed and rubbed with such pertinacity that his father exclaimed impatiently, "Come now, don't stand there and wash all day. We'll be late at church again."

"I'm not going," answered Nathan shortly. "Here, father, your hat is brushed, and we are all ready," said Mrs. Grimshaw, bustling in, her bonnet on and ready for the drive. She had planned to be there when Nathan came in, for the lad was obstinate and the Deacon's tongue and temper sharp and quick.

They were half way up to the church before Mrs.

THERE WAS JEERING AND LAUGHTER WHEN HE CAME IN CONTACT WITH THE RURAL WITS.

Grimshaw ventured to remark softly: "He will never make a farmer. School is the only suitable place for him."

The Deacon exploded: "Farmer! I should say not! Look at that hoss; I'm ashamed to drive into town with him."

"You send Nate to college, father, and I'll be chore boy for you," Kitty proposed eagerly.

"I'd rather have one willin' girl than half a dozen finicky, unwillin' boys," replied the Deacon, looking back into Kitty's smiling face. "I ain't saying, though, that you and your ma are going to pester me into spending good money on him. He don't deserve it."

The neighborhood was in sympathy with the Deacon. It was an un doubted affliction to have a visionary, unpractical son, who touched each unpleasant task pertaining to the farm life delicately, and with aversion; still he knew every bug and beetle which flew or crawled in the fields, and was better acquainted with the insect life than with the work life of the farm. There was jeering and laughter when he came in contact with the rural wits. "If I had such a chance as that in my family, I'd dress him up in petticoats for a scarecrow," farmer Grey was fond of saying. "I seen him milk a cow once, and, I swan, I was sorry for the cow."

"He knows a heap about bugs, though," remarked another. "Likes bug huntin' better than he does his dinner. Hear about his per-

tater bugs? He gethered a pan full of the critters one day when his pa and ma was gone to a neighbor's visitin', and when they got back the kitchen was a sight to behold. Nate had put 'em in the stove with jest enough fire to warm 'em up lively, and gone off to fix up a butterfly net. Of course, they crawled out of the stove, and over the walls and ceilin'—you couldn't pint your finger where there wasn't a pertater bug crawlin'. It took Mrs. Grimshaw considerable of a spell to get 'em swept down into a pall o' hot water, and she imagined she saw pertater bugs crawlin' for some time arterwards."

"Just like him. Set him shoveling sunshine and he's perfectly happy. Nothin' practical about him, and I'd give a dozen like him for one wide awake, sensible girl like his sister Kitty."

So far as his neighbors were concerned, Nathan was irredeemably sent to Coventry, but his mother and Kitty had faith in him, and lost no opportunity of urging upon Mr. Grimshaw's attention the idea of a college education for him.

"There certainly is something in him, father, though we're not bright enough ourselves to see just what it is," said the mother anxiously, as the time approached for the opening of school in the fall. "Nathan is lots wiser than the most of boys in some ways. He came in yesterday with a great, green moth with the loveliest crescents on each wing; a moon moth, he called it, and you should have heard him go on and explain all about it, and the kind of grub it came from. It was real interestin'. I tried to have him show it to you, but he said you wouldn't care."

"Thought his old dad didn't know enough to care, I s'pose," Mr. Grimshaw replied, perversely ignoring the fact that he never had interested himself in his son's researches, except on one occasion when a fine crop of choice peas had been saved by Nathan's study of the insect pest which infested it. He had patiently picked every infected leaf, destroying them with better results than at the time of the potato bug affair, and his father had really given him credit for sense and perseverance.

"Well, father, you know you don't give Nathan much except scolding when he tries to talk to you about the things he likes," Mrs. Grimshaw said, reproachfully.

"Well, well, there is no other way as I see but to send him to school," exclaimed Mr. Grimshaw, in an injured tone. "When a man's wimmin folks get sot on anything there ain't no peace for 'im nowhere;

but, mind you, Roxana, you and Kitty'll have to do without glmeracks while he is gone. It'll be a long, steady pull, I give you fair warning, for eddication costs like the dickens. No use of you thinkin' of carpets or bedroom sets for the next four years."

"All right, father," Mrs. Grimshaw responded, a glad smile on her face; "we'll promise not to pester you for anything, Kitty and I, that we can possibly do without."

Nathan was almost too happy to eat or sleep when he learned that at last he was to have his heart's desire, and he went about in a maze of delight which so irritated his father that he would have revoked his decision had he been in the habit of going back on his word.

"You must be nice to your pa, and willing to help him when he is doing so much for you," urged Mrs. Grimshaw, anxiously, as she stitched away on his college outfit, which advice Nathan honestly tried to follow, with but indifferent results. Nathan was unmistakably Nathan, in spite of his grateful desire to help.

The house was strangely silent and lonely after he left, and even his father wore a lost, dazed look.

"I had no idee I'd miss him so," he said one day as he caught his wife crying behind her gingham apron by the pantry door. "It's been on my tongue's end to call him to do something for me a dozen times since he's been gone."

"The fact is that Nathan has been a great deal more help to you than you were willing to give him credit for, and I am glad you are beginning to sense it," replied the mother with reproachful spirit.

Four years of sacrifice followed Nathan's advent into college life. Having put his hand to the plow, Mr. Grimshaw had no intention of turning back, though it seemed to him that Nathan's demands for money were both exorbitant and useless at times, and especially in the last year of his course.

"Nate will be ashamed of his old daddy when he gets home," he remarked as he surveyed his best suit ruefully.

"WHAT ON AIRTH ARE THEY GOOD FOR?"

"Never you mind, father, I will ink the seams and pare off the fringe, and if Nate dares to be ashamed we will chuck him into it, and give you his graduating suit," cried Kitty. "It will fit you nicely with a ruffle on the bottom of the trousers."

Nathan was coming home next week with a title attached to his name, and the girl was almost wild with delight.

"Professor of bugology," farmer Grey said scornfully, but the neighborhood had never admired Nathan, and still less now, sporting a mustache and a slender cane.

With all his faults Nathan had a heart, and he was shocked when he looked about the house and noticed the worn and faded condition of things, the braided mat which covered the patch in the parlor carpet, Kitty's hat in its third season of use, and his father's best suit, a pathetic contrast to his own.

His thin lips came together with decision as he saw further signals of sacrifice scattered all over the farm, but he said little.

It was not his habit to boast, or promise prematurely.

"What on airth are they good for?" Nathan was showing a large and carefully classified collection of botanical specimens, at which his father looked dubiously. He pursed his lips also in a depreciatory way as Nathan exhibited his collection of specimens in natural history. "It is the most valuable collection

in the state. Prof. Saylor says that, and he is an authority."

"It won't buy nothin', and I don't see no sense in sticking poor, harmless little critters on pins that way," returned Mr. Grimshaw, with an inconvenient recollection that one of his best cows had gone to pay for the cases.

"I'm sure they look real pretty," exclaimed Kitty. "Nathan has been telling me all about them, and I would like to go to college myself."

"You would like to go, too, wouldn't you mother?" retorted Mr. Grimshaw, with good natured sarcasm. "I'd better get out of here before I get to hankering after an eddication myself."

His eyes opened wide a few weeks later, as Nathan came to him with a letter, offering him a position as

teacher of natural science, at a salary which seemed to his father simply amazing.

"Good land, boy, accept it quick, afore they have a chance to back down on it," he cried. "That will pay better than running bugs on pins, I reckon."

"Running bugs on pins isn't such bad business, either, father," replied Nathan, producing another letter after a moment's hesitation.

"I did not intend to tell you until they were gone, but I have had an offer for my collection."

"Great Jiminy!" exclaimed Mr. Grimshaw, as he read the letter, "college folks must be crazier than loons. I wouldn't give five dollars for the whole pack, let alone five hundred."

"Because you do not understand their value, father," Nathan replied with natural triumph. "You have

made many sacrifices for me," he added with modest gratitude, "but after all, father, I think it will pay."

It did pay. Deacon Grimshaw ceased to be an object of pity among his neighbors, and began to allude to "my son, Professor Grimshaw," with a pardonable pride. Little by little the home was modernized and refurnished, and the farm provided with every help which modern science could supply.

When in after years the old people gave up the active labor of life, it was Nathan upon whom they leaned for advice, Nathan who supplied them with luxuries and pleasures which they otherwise could not have enjoyed, and Kitty, now a happy matron in a home of her own, sometimes levels a naughty "I told you so" at her grey haired father.

TALES OF YANKEE ENCHANTMENT

SAM FISHER'S ROLLER COASTER

Copyright by CHARLES BATELL LOOMIS, the Author, 1859

One day in early spring Sam Fisher went down to New York with his father and visited Coney Island, and for the first time in his life took a ride on a "roller coaster." For the benefit of those children who have not yet tasted the combined horrors and delights of this remarkable invention, I will describe it.

It is an inclined railway several hundred feet long. You climb up a ladder or a pair of stairs and seat yourself in a car or box on wheels. Then an attendant gives the car a shove and you glide along the railway for a few feet and then take a sudden dip, leaving your heart behind you, and experiencing that sensation that comes to you when you drop fourteen stories in an express elevator. You bob over one or two hills and then fetch up either on a level stretch or else in the water, when the car scoots through the water like a boat. If you survive the first shock you are crazy for more, and boys and girls are so happily constituted that they always do survive the first shock.

Mr. Fisher, Sam's father, is a rather nervous man, and he did not want Sam to go alone, so he got into the car with him, although he expected to be brought back on a shutter. He grabbed the sides until it seemed as if his nails would pierce the wood. As the car shot forward he shrieked at the top of his lungs, "Stop the car!" to the great amusement of the onlookers, but you might as well try to stop a

week? Jim was riding on a freight car, and he had just seen the headlight of the express on the same track when the chapter ended."

THEN IT STOPPED

The boys walked over to a maple tree that already gave quite a little shade. It was early in May. Sam was looking over Bob's shoulders at the pictures, when he gave a shout.

"Bob, there's the very thing—the roller coaster. It tells you how to make one!"

In a moment Bob had forgotten Jim in his perilous position of a week's standing, and the two boys sat down under the tree to read an account of how to build a roller coaster in your back yard.

"But we haven't a back yard," said Bob when they had finished.

"Goose," said Sam; "if it'll do in a back yard, what's the matter with the orchard or around the house. Say we build one as high as our house, and have it run around the house two or three times, and then go in at the front door and out of the back door."

"That'd be bully," said Bob. "You have such a long hall there'd be plenty of time to slack up. But I'm no good with a hammer, and I don't believe that I could build one."

"Well, I can. The instructions are just as easy, and Zack will help us. And, say, we can use some of those two-by-fours and those telephone poles that papa's been cutting to send to the telephone company."

The boys raced home full of the idea. Zack, the hired man, was in the barn throwing down some hay for the horses.

"Zack, will you help us build a roller coaster?" said Sam.

"What's a roller coaster?" said Zack, leaning on his pitchfork.

"Ho, don't know what a roller coaster is!" said Bob derisively.

"Well, neither did you till I told yer." Sam was fond of Zack and he objected to Bob's manner.

Sam explained the contrivance and then showed Zack the article.

"You see, it's just as easy to make," said he. "All you've got to do is to make four wheels and a wagon box and a frame to hold the track and run up a ladder to the top and away we'll go."

Zack was a handy man and he said, "I guess we can fix one up in a little while. It reads awful easy. And I think that if I rig up a hoister so that you can pull the car to the top and then make it a circular railway all around the house and the outbuildings, you can ride all day after you've started, if there's some one by to haul you up each time."

"What'll you use to build it with? Do you suppose papa would object if we used those two-by-fours and the telephone poles?"

HE WANTED THE CAR STOPPED.

sky rocket after it has got ten feet away from the ground as to stop a roller coaster after it has begun its journey, and poor Mr. Fisher was compelled to get his money's worth and ride out to sea on the terrible invention. Of course, Sam was wildly hilarious, and wanted to ride some more, and Mr. Fisher being a good natured man, consented, but he said to the attendant, "I wouldn't go through that experience again for all the money that is made at Coney Island in a season."

After Sam returned home he told all the boys in the neighborhood about the roller coaster and they were crazy to go to Coney Island, but Whiteville, the village where they lived, is over a hundred miles from the coast, and few of them had ever been further than a score of miles from home.

One day Sam went to the postoffice with Bob Garrison, and although there were no letters for either boy, there was the Easter number of "The Boy's Playmate," to which Bob was a subscriber.

"Oh, goody," said Bob. "I'm go'n' to sit down here under the tree as long as there's no letters for the house and read 'Bound to Win.' Did you read it last

"I don't know," said Zack, hesitatingly. "I'm sure he wouldn't if you only used them temporarily," put in Bob. "He likes to see you happy, Sam."

"Well, we can't ask him because he's away," said Sam. "I guess I'll take the resp—resp—"

"Responsibility," put in Zack, smiling.

When a man has the right kind of tools and the materials and an article written in simple language, with plenty of pictures to guide him and the knack of it besides, he can't go far wrong, and by nightfall Zack, with the boys' help, had fashioned the tramway, and after supper he began on the car. The tramway was sixty feet high at the starting point, and it had two dips in it that would make the ride more exciting, and it was six hundred feet long. I'm quite sure that if Mrs. Fisher had been at home she would have objected to it, for it was the reverse of slightly, but she and Mr. Fisher had gone to a meeting of Pomona Grange at New Haven and would not be back until next day.

When the tramway was finished the boys thought it looked beautiful, and although the Fisher mansion stood on a back road several of the other boys saw it, and Sam told them to invite all the boys in the hamlet to come next day for a ride.

All the boys agreed that it looked beautiful reared up above the house, but I'm sure no grown person would have said it was an improvement to the natural scenery of the place. Grown people have such queer ideas. It was higher than the chimney at the start, and it ended right at the front door.

After supper, Zack, with the boys' help, made the car and made it strong. It isn't any trouble to make wheels when you have a picture of one to go by, and he had whittled out four of them before the boys' bedtime, which Sam extended by one hour. Bob was spending the night with him.

Zack found that the hardest thing to construct was the elevator, because there was nothing about an elevator in the article, but his Yankee ingenuity stood him in good stead and by noon of the next day that also was done, and the road was ready to begin operations.

It was Saturday and upward of twenty boys had come around to be initiated into the delights of the rushing ride. Sam chose ten boys to take the first ride, and as there was some exhibition of feeling by those who were left, Sam explained that they would be back again so soon that it didn't really make much difference who went first.

After they had climbed into the car it was hoisted by Zack and the other boys to the top of the inclined plane.

"Hi, you can see over to Swampsea," said Sam when they had reached the top. "And there's pop and mom coming home. Hurry before anything happens."

Sam started the car by pushing it, and then boarded it from behind. It ran ten feet and the boys began to cheer. Then it stopped. One of the wheels had stuck.

It was while they were waiting for Zack to come up and see what the trouble was that the Fishers saw them.

"What has happened to our house?" said Mrs. Fisher, putting on her glasses.

"HI! GET UP, JERRY."

"Looks as if painters were at work. What is it? Why, as I live, it's a roller coaster, like the one I was telling you about that we saw at Coney Island. Why, there's a car on it loaded with boys. Hi, gitup, Jerry. Oh, they'll all be killed!"

He lashed the horse to a gallop. Just then a fringe of trees cut off all view of the house, and they were left in suspense. They still had an eighth of a mile to go.

IT JUMPED THE TRACK

Meanwhile the difficulty had been overcome and Zack gave them a push and they went down the incline.

Did it work? Just as well as the one at Coney Island. That Zack was a born carpenter I guess, for the car shot around the first curve as if it had never done anything else.

It is hard to tell who shrieked the loudest, the boys in the coaster or the boys on the ground, but Mr. and

Mrs. Fisher heard the yell, and misunderstood it, and lashed the old horse in an agony of fear.

Past the house and past the woodshed and around the corner of the hen house that coaster shot, the boys yelling like Comanches, and their hair streaming so straight behind that it's a wonder it didn't pull out.

It really looked as if Zack had built a railroad without a flaw, but—

The third turn headed them for the barn, and the next turn would run them through the barn yard, and if the brake worked they could come to a stop right in front of the door.

Just as they slid around the third turn the Fishers came to a stop at the barn yard gate, and an instant later the boys came to a stop also, with a quarter of the ride unfinished.

Whether a flange on one of the wheels broke or what happened will never be known, but as they were passing the left window of the barn the car jumped the track and sent the ten boys through the light sash like a shot out of a gun.

Mr. and Mrs. Fisher did the screaming now and the rest of the boys ran into the barn as fast as they could sprint.

And they found a badly mixed up mass of boys and wheels and hay and bleeding noses and cut hands and torn clothing, but if you'll believe it, not a seriously injured boy in the whole snarl.

There was no second trip on Fisher's House, Hen House and Barn R. R., and Zack would have been discharged on the spot if Sam had not explained—after he had been vinegared and brown papered—that Zack had merely followed the instructions to the letter, and if any one was to blame it was the man who had written the article, "How to Build a Roller Coaster in the Back Yard." And I'm inclined to think that Sam was right.

After this he lost interest to some extent in home matters, the blooded horses of the farm, the fine game chickens, all seemed valueless. He performed his duties faithfully, but in a listless abstracted manner, and spent as much time as possible reading of events in the various camps and on the battlefields.

His father cherished an intense admiration for courage, and became very indignant at the slightest display of cowardice, not only among his acquaintances, but in the lower orders of creation.

"I don't want a 'chicken heart' even in one of my chickens!" he would say when proudly watching the fine fowls in the barn yard. If one of them showed the "white feather" it was dubbed at once a "Dominicker," put into the coop for immediate execution and ingloriously consigned to the broiling pan.

One day news came to the farm that Colonel William Deloney, of Cobb's Georgia Legion, was in the neighborhood recruiting for his command, and James pled so earnestly to join him that the father at last consented. In a short while everything was ready and the two rode off together to "headquarters."

"Colonel," said Dunahoo after the greetings were over, "my boy's got the war fever, he's too young to go, but he's determined to do it; his mother's talked to him, I've talked to him; it doesn't do any good, so I've mounted him on the best colt in the stable and here he is. I want you to take him with you, but, Colonel, listen, if he ever shows the 'Dominicker,' send him home or put him in the guard house."

The Colonel turned and saw standing near them a tall, slender, fair-haired boy. He had straightened up at his father's words, and stood with compressed lips and flashing blue eyes which looked straight into those of the Commander.

"Why, yes, I'll be glad to have him," assented the Colonel; "I wish you had a hundred; we start to-morrow; he is just in time."

A few words more and the father turned to leave, James walked by his side.

"Father," he said slowly, "don't be afraid, I'm not a coward, I'll make you proud of me some day. Mother believes that, she told me so. She gave her consent at the last; I would not have gone without it." He paused and there was a quiver about his lips as he added: "Father, kiss her good-bye for me again—and—tell her I'll remember every word she said."

The old man grasped the hand and looked into the fearless young face. A mist came over his eyes which were blue like the boy's, but he did not speak. So they stood for a moment and then parted.

The next day the detachment of cavalry went on its way to Virginia, and day by day Colonel Deloney watched with growing interest his boy recruit. He was so alert and attentive, so faithful to duty, so quick to comprehend and so eager to obey orders, that the Colonel began to take special pride in his career. No man in his company conducted himself more satisfactorily nor won more rapidly the admiration and esteem of his comrades.

Months passed by, many bloody battles had been

fought, and June 9th, 1863, found the Georgia troops at Fleetwood, near Brandy Station, Virginia. Here Pleasanton encountered Stuart, and one of the greatest cavalry battles of the Civil War took place.

The fight was raging; shells hurtling through the air; squadrons charging and countercharging, and horses and men falling on every hand.

Suddenly General Young ordered Colonel Deloney to attack a Federal brigade which was forming.

"Get right among them, Colonel! Break them up with cold steel; don't give them time to form!" was the order.

Deloney turned and gave the command to charge; the troops dashed forward on the instant, the Colonel in the lead. They swept on like an avalanche, the dull boom of the cannon and the buzz of the balls keeping time to the hoof beats of the horses.

They were within a hundred yards of the enemy when the Colonel felt, rather than saw, something pass him "like a young cyclone." He shuddered and looked. It was the Georgia boy standing up in his stirrups bareheaded, his golden hair floating on the wind, his sabre raised, his face aflame with wild enthusiasm, his eyes gleaming and lifted above the storm. He turned in the saddle shouting:

"Colonel, here goes your Dominicker!" A moment more and he struck the enemy's line, leading his battalion. It came on like a sheet of fire, but the brave young Georgian fell, pierced by a dozen balls, while his comrades dashed over his lifeless body.

When the bloody fight of Brandy Station was over, the Confederates went out to look for their dead and wounded. The Colonel went to seek the boy who had been placed in his charge and who had become so dear to him. He was found lying just across the lines, dead and cold, the glory of a high resolve rested upon his fair young face. He had died with the thought "Mother will know that I remembered her words, 'So live, so die, that you will be an inspiration to your comrades.'" She will know that I fell at the cannon's mouth.

"Only a private" no ribbon nor star
Shall gild with false glory his name!
No honors for him in brass or in bar,
His Legion of Honor is only a scar,
And his wounds are his roll of fame!

Only a martyr! who fought and who fell
Unknown and unmarked in the strife!
But still as he lies in his lonely cell,
Angel and Seraph the legend shall tell—
Such death is eternal life!"

"THE AMERICAN BOY" AT THE SANTA CRUZ FAIR.

The Improvement Society of Santa Cruz, Cal., gave an entertainment on May 29 in aid of the Santa Cruz Board of Trade in its efforts to create a fund for improvements on the beach.

The women of Santa Cruz lent substantial aid to the enterprise. Among them was Mrs. Flora W. Kron. Mrs. Kron wrote THE AMERICAN BOY asking that copies of THE AMERICAN BOY be furnished that they might be offered for sale on the grounds where the entertainment was given, the proceeds to go to the improvement fund. THE AMERICAN BOY was glad

"THE AMERICAN BOY BOOTH" AT THE SANTA CRUZ (CAL.) FAIR.

to lend its assistance to the enterprise, and the result was an AMERICAN BOY booth presided over by two American boys and hundreds of copies of THE AMERICAN BOY sold to the boys of this sunny city of Southern California. Mrs. Kron writes: "The little fellows having the papers in charge netted a nice sum for the fund. It would have pleased you to hear the remarks of our mayor in the address with which the evening program began. He referred to your kindness in sending the papers and to the merits of the paper itself, really a large part of his remarks being devoted to THE AMERICAN BOY. There were more than two boys selling the paper, but I was able to get only two of them into the picture the following day."

The boys in the picture presented herewith are James Roney and Woodford Kron—the former in front.

AT THE CANNON'S MOUTH

The ninth story of a series entitled "Stories of Boy Heroes"

ANNAH ROBINSON WATSON

Down in Jackson County, Georgia, lived in the early days of the Civil War an old farmer by the name of Dunahoo.

He had been a brave soldier in the Indian wars of Florida when Zachary Taylor "won his spurs" and learned the tactics that led him to victory on the later fields of Mexico. Many a day had he related to his children the thrilling stories of those battles with the treacherous men of the forest, of their desperate attacks and stratagems, and of their haunts in the jungles and swamps to which only the bloodhounds could follow them.

James, the little boy of the family, had been fed upon these war tales from early infancy, and often when sitting beside his gentle-faced mother he would suddenly exclaim: "I'm going to be a soldier some day! I'm going to fight the Indians!"

And his mother would smile and say gladly: "But there are no Indians now to fight, and I am very thankful for it."

His face would cloud at this, and he would exclaim hotly: "But, mother, there'll be something, somebody to fight. Maybe the British'll come again as they did when George Washington was alive, or as father says they did when General Jackson whipped them at New Orleans."

"No, no, dear; I trust my boy will have nothing to fight but the army of evil. The giants of Anger, of Hate, of Selfishness, they will surely be enough."

But as the years went by the boy did not change his mind and frequently spoke of his wish to become a soldier. "The country always needs some defenders," he would say to his mother: "there are whole regiments out on the plains now ready to fight the Indians when necessary, and I would like to join them."

He was about seventeen years of age when the Civil War began. At the first call for troops in his state he announced his intention of enlisting, but this was seriously opposed by the family circle. "You are too young," said his father, impatiently; "they don't want little chaps like you."

"Boys younger than I have done duty on the battlefield," he answered firmly, "and I want to go."

"Not yet, dear, not yet," his mother replied gently. "I cannot let you go yet."

"I would rather die for my state than refuse to serve her," he said with compressed lips; "she needs me now."

The Cruise of the Yacht Gazelle; 6,000 Miles on Inland and Ocean Waters

KENNETH M. RANSOM

This is the sixth chapter in the story of a six thousand mile cruise by four Michigan boys in a boat of their own construction. Setting sail from St. Joseph, the "Gazelle," by which name their craft was known, proceeded by way of lake, river and canal to the Mississippi, thence to New Orleans and the Gulf, along the gulf coast to the Atlantic, thence to New York harbor by way of the ocean, thence by river, canal and lake, home to Michigan.

CHAPTER VI.

With all our visits among the interesting places, time slipped by very quickly. But April was at hand, so work was taken up with a will on our spars and rigging, which we decided would best be very strong and durable. We had our own tools and did all the work on our new spars ourselves, and as we had decided to leave New Orleans on May 1, we were greatly pleased when we finished our work one week ahead of time. We were thus able to spend the remaining days very pleasantly in the enjoyment of new pleasures. How well do I remember my pleasant day at the West End, where I was so kindly and pleasantly entertained by members of the Southern Yacht club. An alligator hunt on Lake Salvador was another very pleasant feature of those last few days, even though we didn't get but one little fellow, scarcely big enough for crab bait.

The only thing which marred the pleasure of our trip was the unexpected recall of our shipmate, Clyde Morrow, on account of illness at home. We were greatly disappointed in having our crew thus shortened, for Clyde was a splendid companion and had counted so much on continuing the journey.

So, when May day rolled around and our sails were raised and everything in shipshape for us to resume our journey, we were sorry to know that we were now only three. Our mooring place had long since found a tender place in our hearts, too, and as we cast off our line and Gazelle gathered headway, a feeling of sorrow came over us, but not for long. At the first lusty cheer from our friends, who had gathered to bid us adieu, the feeling left us, for we had new duties to perform and new troubles to conquer.

We were very desirous of sailing by New Orleans for several miles, to some place where we might come to anchor without risk of danger from the great shipping in the immediate vicinity of the city. It was great satisfaction to know, therefore, that Gazelle's speed had been such that ere darkness fell we were snugly anchored in a cozy nook safe from all danger. New Orleans was now twenty five miles to the north, and only the glow of the street lamps on the distant horizon gave evidence of its location.

Active sailor life seemed good again after our rest. Everything appeared to take on a briny flavor. Our thoughts were of the sea, and so were our songs; for our life for weeks to come was to be spent on the rolling deep.

A GULF ISLAND HOME.

Little did we imagine, however, as we sat on deck singing songs and breathing in the crisp night sea air wafted by the gentle southern breeze across the tide submerged meadows of southern Louisiana that, leaving the great river, we were to enter into a life entirely new to us. But that evening we felt quite at home and one and all responded with alacrity to the cook's call, "all hands below for supper."

A good night's rest made the morn come quick, and just as the first pale streaks of the sun's rays began to tint the eastern sky there was the creak of pulleys, the flap of the sails, and the merry Heave-ho, Heave-a-ho from the lads forward on the anchor, and the final crunch of the heavy bower as it was catted on deck. So our yacht swung out into the channel and headed southward for the Gulf. This was our last day's voyage on the old Mississippi. Truly a beautiful day in May time. Notwithstanding the fact that the old

river had occasioned us many hairbreadth escapes during our travels on her hundreds of miles of length, we had a kindly feeling for her sheltering banks and pleasant coves, and we felt some reluctance in the thought of leaving her. As we sped along we passed many boats, oyster laden, on their way to New Orleans. Many of these fishermen knew of us and our voyage, and one and all saluted as we passed, with friendly toots of their long tin horns which they blow to perfection. It was cheering, therefore, to know that we left behind us friends whose good wishes were to be ever with us.

THE GULF SHORE.

Several large ocean-going vessels passed us, and all in all we were quite satisfied with our day's run as we came to anchor at the little oyster fishing village of Buras, just above Forts Phillip and Jackson.

We found the inhabitants of the village very kind and hospitable. They are for the most part French, but understand and talk English quite well. They are sailors through and through, having plied their trade of tonging oysters on the treacherous Gulf sounds all their lives long.

After we had told the story of our trip down the river much to the delight of all, we listened with eager ears to the stories and information which they so willingly gave. I do not believe these men of the sea wished to discourage us in our plans, but it was plain to see by their conversation that they thought the odds were greatly against success in so small a craft and manned by sailors with no previous knowledge of seamanship on salt water. Nevertheless they seemed greatly interested and imparted all the information they could to help us along on our voyage. Neither did they wish to see us go off to starve, for just before we set sail next morning, we were presented with a huge sack of oysters and a basket of fresh shrimps packed in wet moss. Thus supplied, and amid hearty cheers from the villagers who had gathered on the wharf to watch us depart, we cast loose, and soon the village and kind hearted people were things of the past.

Passing the forts which stand on either side of the river and in time of war make the channel almost impassable, we came upon a small government tug which was anchored in the channel. As we drew nearer I noticed that a diver in his rubber suit and glass-eyed helmet was just coming up from the depths below. This was very interesting to us and became more so when upon rounding to and making inquiry we found that they were removing the mines placed in the channel during our war with Spain.

Several times we imagined we could hear the roar of the sea, for our charts, which were now being studied with great care, showed that we were near the Gulf, but as the day was quiet and balmy and no hard beach for breakers near by, this was just a fancy.

As most people know, the Mississippi River has many passes or routes into the Gulf. Several of the largest have been walled up with great bundles of willows wired together one on top of another, until a great pier called a jetty is formed. These bundles of willows are weighted with tons of rocks. The porous bundles finally become cemented together with mud and sand, and form a wall almost indestructible. Thus ship passages are provided and, although maintained at an enormous expense, prove a success, standing as another monument and world wonder left by the builder of the great Eads bridge.

As one passes down the river toward the jetties he will note upon examining the chart that a narrow, shallow passage, called Cubit's gap, leads out into the open Gulf. One shudders at the depths of one and two feet on either side of a very crooked channel, itself having only three and a half feet of depth in some places,

CASTING THE SEINE.

and extending for several miles into the Gulf. The thought of attempting the passage makes us hesitate, for we have been told that even the pilots dread the spot, and stories of the boats whose ribs lie bleaching on the bars make us more fearful. But a hundred miles is a good saving (and this channel will save so much), and the old adage, "Nothing ventured, nothing gained," comes before us. The weather conditions are good and the vote is unanimous in favor of trying; so, on reeking the cut, Gazelle turns to port and enters the dangerous channel.

Good-bye, old Mississippi! Good-bye to the fresh water, for we now turn toward the ocean.

It was all done very quickly, and never a feeling of reluctance came over us as we carefully picked our way among the shoals of the pass.

The run through the sand point, which the current of the river has forced out into the Gulf, was some six miles long. By careful sailing we ran this distance without mishap; and then spread out before us was the great Gulf of Mexico! Before us for several miles is the shallow shoal. Debris of every kind is seen. Everything is so lonesome. Not a sail in sight or anything to make one feel that the world is peopled.

A flock of sea birds rose from the water, and, with a peculiar cry, flew far away as if frightened by a sight seldom seen, and for a moment made it seem as if we were "Alone on a wide, wide sea."

The sea was calm, so, taking a sounding pole aboard the Nibs, Frank, with chart before him, measured the depth. Gazelle, under shortened sail, followed slowly in his wake, often luffing quickly to avoid a bar, and surely, though slowly, winding her way. So intricate did the path become at times that it was necessary for us to cast anchor and explore ahead for depths sufficient to float the yacht, but at last, just as the sun was sinking in the distant west, our labors were rewarded by success, for the cheery cry of "No bot-

A GOOD CATCH.

tom," came from our pilot ahead, and in a few minutes, our craft was gliding along on the long rolling surface of the open Gulf.

A peculiar sense of satisfaction came over us, and a good jolly feeling prevailed aboard, as we saw the labyrinth of shoals and debris through which we had passed disappear astern.

Way off on the horizon to starboard could be seen Breton Island, while dimly visible to port were the low marsh islands known as the Bird Isles.

We were now in the Bird Island sound, where it is supposed the "Paul Jones" went to pieces a few months before, but no feeling of danger came over me as I turned the yacht north on her course for Beloxi, which was to be our next city to visit.

How strange it all seemed! It was hard to believe that we were indeed on the salt sea. But here were the proofs: In the first place we would only need to

"Looks as if painters were at work. What is it? Why, as I live, it's a roller coaster, like the one I was telling you about that we saw at Coney Island. Why, there's a car on it loaded with boys. Hi, gitup, Jerry. Oh, they'll all be killed!"

He lashed the horse to a gallop. Just then a fringe of trees cut off all view of the house, and they were left in suspense. They still had an eighth of a mile to go.

IT JUMPED THE TRACK

Meanwhile the difficulty had been overcome and Zack gave them a push and they went down the incline.

Did it work? Just as well as the one at Coney Island. That Zack was a born carpenter I guess, for the car shot around the first curve as if it had never done anything else.

It is hard to tell who shrieked the loudest, the boys in the coaster or the boys on the ground, but Mr. and

Mrs. Fisher heard the yell, and misunderstood it, and lashed the old horse in an agony of fear.

Past the house and past the woodshed and around the corner of the hen house that coaster shot, the boys yelling like Comanches, and their hair streaming so straight behind that it's a wonder it didn't pull out.

It really looked as if Zack had built a railroad without a flaw, but—

The third turn beaded them for the barn, and the next turn would run them through the barn yard, and if the brake worked they could come to a stop right in front of the door.

Just as they slid around the third turn the Fishers came to a stop at the barn yard gate, and an instant later the boys came to a stop also, with a quarter of the ride unfinished.

Whether a flange on one of the wheels broke or what happened will never be known, but as they were passing the loft window of the barn the car jumped the track and sent the ten boys through the light sash like a shot out of a gun.

Mr. and Mrs. Fisher did the screaming now and the rest of the boys ran into the barn as fast as they could sprint.

And they found a badly mixed up mass of boys and wheels and hay and bleeding noses and cut hands and torn clothing, but if you'll believe it, not a seriously injured boy in the whole snarl.

There was no second trip on Fisher's House, Hen House and Barn R. R., and Zack would have been discharged on the spot if Sam had not explained—after he had been vinegared and brown papered—that Zack had merely followed the instructions to the letter, and if any one was to blame it was the man who had written the article, "How to Build a Roller Coaster in the Back Yard." And I'm inclined to think that Sam was right.

AT THE CANNON'S MOUTH

The ninth story of a series entitled "Stories of Boy Heroes"

ANSSEL ROBINSON WATSON

Down in Jackson County, Georgia, lived in the early days of the Civil War an old farmer by the name of Dunahoo.

He had been a brave soldier in the Indian wars of Florida when Zachary Taylor "won his spurs" and learned the tactics that led him to victory on the later fields of Mexico. Many a day had he related to his children the thrilling stories of those battles with the treacherous men of the forest, of their desperate attacks and stratagems, and of their haunts in the jungles and swamps to which only the bloodhounds could follow them.

James, the little boy of the family, had been fed upon these war tales from early infancy, and often when sitting beside his gentle-faced mother he would suddenly exclaim: "I'm going to be a soldier some day! I'm going to fight the Indians!"

And his mother would smile and say gladly: "But there are no Indians now to fight, and I am very thankful for it."

His face would cloud at this, and he would exclaim hotly: "But, mother, there'll be something, somebody to fight. Maybe the British'll come again as they did when George Washington was alive, or as father says they did when General Jackson whipped them at New Orleans."

"No, no, dear; I trust my boy will have nothing to fight but the army of evil. The giants of Anger, of Hate, of Selfishness, they will surely be enough."

But as the years went by the boy did not change his mind and frequently spoke of his wish to become a soldier. "The country always needs some defenders," he would say to his mother: "there are whole regiments out on the plains now ready to fight the Indians when necessary, and I would like to join them."

He was about seventeen years of age when the Civil War began. At the first call for troops in his state he announced his intention of enlisting, but this was seriously opposed by the family circle. "You are too young," said his father, impatiently: "they don't want little chaps like you."

"Boys younger than I have done duty on the battlefield," he answered firmly, "and I want to go."

"Not yet, dear, not yet," his mother replied gently. "I cannot let you go yet."

"I would rather die for my state than refuse to serve her," he said with compressed lips; "she needs me now."

After this he lost interest to some extent in home matters, the blooded horses of the farm, the fine game chickens, all seemed valueless. He performed his duties faithfully, but in a listless abstracted manner, and spent as much time as possible reading of events in the various camps and on the battlefields.

His father cherished an intense admiration for courage, and became very indignant at the slightest display of cowardice, not only among his acquaintances, but in the lower orders of creation.

"I don't want a 'chicken heart' even in one of my chickens!" he would say when proudly watching the fine fowls in the barn yard. If one of them showed the "white feather" it was dubbed at once a "Dominicker," put into the coop for immediate execution and ingloriously consigned to the broiling pan.

One day news came to the farm that Colonel William Deloney, of Cobb's Georgia Legion, was in the neighborhood recruiting for his command, and James pled so earnestly to join him that the father at last consented. In a short while everything was ready and the two rode off together to "headquarters."

"Colonel," said Dunahoo after the greetings were over, "my boy's got the war fever, he's too young to go, but he's determined to do it; his mother's talked to him. I've talked to him; it doesn't do any good, so I've mounted him on the best colt in the stable and here he is. I want you to take him with you, but, Colonel, listen, if he ever shows the 'Dominicker,' send him home or put him in the guard house."

The Colonel turned and saw standing near them a tall, slender, fair-haired boy. He had straightened up at his father's words, and stood with compressed lips and flashing blue eyes which looked straight into those of the Commander.

"Why, yes, I'll be glad to have him," assented the Colonel; "I wish you had a hundred; we start to-morrow; he is just in time."

A few words more and the father turned to leave, James walked by his side.

"Father," he said slowly, "don't be afraid, I'm not a coward, I'll make you proud of me some day. Mother believes that, she told me so. She gave her consent at the last; I would not have gone without it." He paused and there was a quiver about his lips as he added: "Father, kiss her good-bye for me again—and—told her I'll remember every word she said."

The old man grasped the hand and looked into the fearless young face. A mist came over his eyes which were blue like the boy's, but he did not speak. So they stood for a moment and then parted.

The next day the detachment of cavalry went on its way to Virginia, and day by day Colonel Deloney watched with growing interest his boy recruit. He was so alert and attentive, so faithful to duty, so quick to comprehend and so eager to obey orders, that the Colonel began to take special pride in his career. No man in his company conducted himself more satisfactorily nor won more rapidly the admiration and esteem of his comrades.

Months passed by, many bloody battles had been

fought, and June 9th, 1863, found the Georgia troops at Fleetwood, near Brandy Station, Virginia. Here Pleasanton encountered Stuart, and one of the greatest cavalry battles of the Civil War took place.

The fight was raging; shells hurtling through the air; squadrons charging and countercharging, and horses and men falling on every hand.

Suddenly General Young ordered Colonel Deloney to attack a Federal brigade which was forming.

"Get right among them, Colonel! Break them up with cold steel; don't give them time to form!" was the order.

Deloney turned and gave the command to charge; the troops dashed forward on the instant, the Colonel in the lead. They swept on like an avalanche, the dull boom of the cannon and the buzz of the balls keeping time to the hoof beats of the horses.

They were within a hundred yards of the enemy when the Colonel felt, rather than saw, something pass him "like a young cyclone." He shuddered and looked. It was the Georgia boy standing up in his stirrups bareheaded, his golden hair floating on the wind, his sabre raised, his face aflame with wild enthusiasm, his eyes gleaming and lifted above the storm. He turned in the saddle shouting:

"Colonel, here goes your Dominicker!"

A moment more and he struck the enemy's line, leading his battalion. It came on like a sheet of fire, but the brave young Georgian fell, pierced by a dozen balls, while his comrades dashed over his lifeless body.

When the bloody fight of Brandy Station was over, the Confederates went out to look for their dead and wounded. The Colonel went to seek the boy who had been placed in his charge and who had become so dear to him. He was found lying just across the lines, dead and cold, the glory of a high resolve rested upon his fair young face. He had died with the thought "Mother will know that I remembered her words, 'So live, so die, that you will be an inspiration to your comrades.' She will know that I fell at the cannon's mouth."

"Only a private! no ribbon nor star
Shall gild with false glory his name!
No honors for him in brass or in bar,
His Legion of Honor is only a scar,
And his wounds are his roll of fame!"

Only a martyr! who fought and who fell
Unknown and unmarked in the strife!
But still as he lies in his lonely cell—
Angel and Seraph the legend shall tell—
Such death is eternal life!"

"THE AMERICAN BOY" AT THE SANTA CRUZ FAIR.

The Improvement Society of Santa Cruz, Cal., gave an entertainment on May 29 in aid of the Santa Cruz Board of Trade in its efforts to create a fund for improvements on the beach.

The women of Santa Cruz lent substantial aid to the enterprise. Among them was Mrs. Flora W. Kron. Mrs. Kron wrote THE AMERICAN BOY asking that copies of THE AMERICAN BOY be furnished that they might be offered for sale on the grounds where the entertainment was given, the proceeds to go to the improvement fund. THE AMERICAN BOY was glad

"THE AMERICAN BOY BOOTH" AT THE SANTA CRUZ (CAL.) FAIR.

to lend its assistance to the enterprise, and the result was an AMERICAN BOY booth presided over by two American boys and hundreds of copies of THE AMERICAN BOY sold to the boys of this sunny city of Southern California. Mrs. Kron writes: "The little fellows having the papers in charge netted a nice sum for the fund. It would have pleased you to hear the remarks of our mayor in the address with which the evening program began. He referred to your kindness in sending the papers and to the merits of the paper itself, really a large part of his remarks being devoted to THE AMERICAN BOY. There were more than two boys selling the paper, but I was able to get only two of them into the picture the following day."

The boys in the picture presented herewith are James Roney and Woodford Kron—the former in front.

The Cruise of the Yacht Gazelle; 6,000 Miles on Inland and Ocean Waters

KENNETH M. RANSOM

This is the sixth chapter in the story of a six thousand mile cruise by four Michigan boys in a boat of their own construction. Setting sail from St. Joseph, the "Gazelle," by which name their craft was known, proceeded by way of lake, river and canal to the Mississippi, thence to New Orleans and the Gulf, along the gulf coast to the Atlantic, thence to New York harbor by way of the ocean, thence by river, canal and lake, home to Michigan.

CHAPTER VI.

With all our visits among the interesting places, time slipped by very quickly. But April was at hand, so work was taken up with a will on our spars and rigging, which we decided would best be very strong and durable. We had our own tools and did all the work on our new spars ourselves, and as we had decided to leave New Orleans on May 1, we were greatly pleased when we finished our work one week ahead of time. We were thus able to spend the remaining days very pleasantly in the enjoyment of new pleasures. How well do I remember my pleasant day at the West End, where I was so kindly and pleasantly entertained by members of the Southern Yacht club. An alligator hunt on Lake Salvador was another very pleasant feature of those last few days, even though we didn't get but one little fellow, scarcely big enough for crab bait.

The only thing which marred the pleasure of our trip was the unexpected recall of our shipmate, Clyde Morrow, on account of illness at home. We were greatly disappointed in having our crew thus shortened, for Clyde was a splendid companion and had counted so much on continuing the journey.

So, when May day rolled around and our sails were raised and everything in shipshape for us to resume our journey, we were sorry to know that we were now only three. Our mooring place had long since found a tender place in our hearts, too, and as we cast off our line and Gazelle gathered headway, a feeling of sorrow came over us, but not for long. At the first lusty cheer from our friends, who had gathered to bid us adieu, the feeling left us, for we had new duties to perform and new troubles to conquer.

We were very desirous of sailing by New Orleans for several miles, to some place where we might come to anchor without risk of danger from the great shipping in the immediate vicinity of the city. It was great satisfaction to know, therefore, that Gazelle's speed had been such that ere darkness fell we were snugly anchored in a cozy nook safe from all danger. New Orleans was now twenty five miles to the north, and only the glow of the street lamps on the distant horizon gave evidence of its location.

Active sailor life seemed good again after our rest. Everything appeared to take on a briny flavor. Our thoughts were of the sea, and so were our songs; for our life for weeks to come was to be spent on the rolling deep.

A GULF ISLAND HOME.

Little did we imagine, however, as we sat on deck singing songs and breathing in the crisp night sea air wafted by the gentle southern breeze across the tide submerged meadows of southern Louisiana that, leaving the great river, we were to enter into a life entirely new to us. But that evening we felt quite at home and one and all responded with alacrity to the cook's call, "all hands below for supper."

A good night's rest made the morn come quick, and just as the first pale streaks of the sun's rays began to tint the eastern sky there was the creak of pulleys, the flap of the sails, and the merry Heave-ho, Heave-a-ho from the lads forward on the anchor, and the final crunch of the heavy bower as it was catted on deck. So our yacht swung out into the channel and headed southward for the Gulf. This was our last day's voyage on the old Mississippi. Truly a beautiful day in May time. Notwithstanding the fact that the old

river had occasioned us many hairbreadth escapes during our travels on her hundreds of miles of length, we had a kindly feeling for her sheltering banks and pleasant coves, and we felt some reluctance in the thought of leaving her. As we sped along we passed many boats, oyster laden, on their way to New Orleans. Many of these fishermen knew of us and our voyage, and one and all saluted as we passed, with friendly toots of their long tin horns which they blow to perfection. It was cheering, therefore, to know that we left behind us friends whose good wishes were to be ever with us.

THE GULF SHORE

Several large ocean-going vessels passed us, and all in all we were quite satisfied with our day's run as we came to anchor at the little oyster fishing village of Buras, just above Forts Phillip and Jackson.

We found the inhabitants of the village very kind and hospitable. They are for the most part French, but understand and talk English quite well. They are sailors through and through, having plied their trade of tonging oysters on the treacherous Gulf sounds all their lives long.

After we had told the story of our trip down the river much to the delight of all, we listened with eager ears to the stories and information which they so willingly gave. I do not believe these men of the sea wished to discourage us in our plans, but it was plain to see by their conversation that they thought the odds were greatly against success in so small a craft and manned by sailors with no previous knowledge of seamanship on salt water. Nevertheless they seemed greatly interested and imparted all the information they could to help us along on our voyage. Neither did they wish to see us go off to starve, for just before we set sail next morning, we were presented with a huge sack of oysters and a basket of fresh shrimps packed in wet moss. Thus supplied, and amid hearty cheers from the villagers who had gathered on the wharf to watch us depart, we cast loose, and soon the village and kind hearted people were things of the past.

Passing the forts which stand on either side of the river and in time of war make the channel almost impassable, we came upon a small government tug which was anchored in the channel. As we drew nearer I noticed that a diver in his rubber suit and glass-eyed helmet was just coming up from the depths below. This was very interesting to us and became more so when upon rounding to and making inquiry we found that they were removing the mines placed in the channel during our war with Spain.

Several times we imagined we could hear the roar of the sea, for our charts, which were now being studied with great care, showed that we were near the Gulf, but as the day was quiet and balmy and no hard beach for breakers near by, this was just a fancy.

As most people know, the Mississippi River has many passes or routes into the Gulf. Several of the largest have been walled up with great bundles of willows wired together one on top of another, until a great pier called a jetty is formed. These bundles of willows are weighted with tons of rocks. The porous bundles finally become cemented together with mud and sand, and form a wall almost indestructible. Thus ship passages are provided and, although maintained at an enormous expense, prove a success, standing as another monument and world wonder left by the builder of the great Eads bridge.

As one passes down the river toward the jetties he will note upon examining the chart that a narrow, shallow passage, called Cubit's gap, leads out into the open Gulf. One shudders at the depths of one and two feet on either side of a very crooked channel, itself having only three and a half feet of depth in some places,

CASTING THE SEINE.

and extending for several miles into the Gulf. The thought of attempting the passage makes us hesitate, for we have been told that even the pilots dread the spot, and stories of the boats whose ribs lie bleaching on the bars make us more fearful. But a hundred miles is a good saving (and this channel will save so much), and the old adage, "Nothing ventured, nothing gained," comes before us. The weather conditions are good and the vote is unanimous in favor of trying; so, on reaching the cut, Gazelle turns to port and enters the dangerous channel.

Good-bye, old Mississippi! Good-bye to the fresh water, for we now turn toward the ocean.

It was all done very quickly, and never a feeling of reluctance came over us as we carefully picked our way among the shoals of the pass.

The run through the sand point, which the current of the river has forced out into the Gulf, was some six miles long. By careful sailing we ran this distance without mishap; and then spread out before us was the great Gulf of Mexico! Before us for several miles is the shallow shoal. Debris of every kind is seen. Everything is so lonesome. Not a sail in sight or anything to make one feel that the world is peopled.

A flock of sea birds rose from the water, and, with a peculiar cry, flew far away as if frightened by a sight seldom seen, and for a moment made it seem as if we were "Alone on a wide, wide sea."

The sea was calm, so, taking a sounding pole aboard the Nibs, Frank, with chart before him, measured the depth. Gazelle, under shortened sail, followed slowly in his wake, often luffing quickly to avoid a bar, and surely, though slowly, winding her way. So intricate did the path become at times that it was necessary for us to cast anchor and explore ahead for depths sufficient to float the yacht, but at last, just as the sun was sinking in the distant west, our labors were rewarded by success, for the cheery cry of "No bot-

A GOOD CATCH.

tom," came from our pilot ahead, and in a few minutes, our craft was gliding along on the long rolling surface of the open Gulf.

A peculiar sense of satisfaction came over us, and a good jolly feeling prevailed aboard, as we saw the labyrinth of shoals and debris through which we had passed disappear astern.

Way off on the horizon to starboard could be seen Breton Island, while dimly visible to port were the low marsh islands known as the Bird Isles.

We were now in the Bird Island sound, where it is supposed the "Paul Jones" went to pieces a few months before, but no feeling of danger came over me as I turned the yacht north on her course for Beloxi, which was to be our next city to visit.

How strange it all seemed! It was hard to believe that we were indeed on the salt sea. But here were the proofs. In the first place we would only need to

take one taste of the water to be convinced; then, too, the schools of porpoise playing round us make certain the fact. How these huge, good natured fish did amuse us by their antics. They would jump high in the air, striking the water with their great flat tails, then go coursing off with that funny circular motion which makes it seem as if they turn over and over, but in reality they simply hump up their backs.

Not caring to run the risk of becoming lost among the shoals of the sound, we came to anchor about ten o'clock in eighteen feet of water in the open Gulf sound. The night was clear and beautiful, and we felt little apprehension at not having reached a harbor. We were already acquiring the salt air appetite, and so we relished our supper greatly.

Dividing into three watches we retired. The rolling of the boat as she tossed about on the swell was new to us, but I enjoyed my rest and felt fine next morning.

OUR FISHERMAN FRIENDS

A fair breeze was blowing when we got under way early, and how our little yacht did speed along! Pt. Chico was passed in the early afternoon, and night found us anchored under the protecting lee of Barrel Key. We considered this a splendid run and were in high spirits accordingly.

At Barrel Key we found company. Two fishermen with a very pretty little lugger were lying at anchor in the cove. Supper over, we visited them aboard their craft, and spent a very pleasant hour, after which they returned with us to the yacht. They were greatly pleased with our comfortable quarters and the competence of our outfit. Although these men are fine sailors they knew little or nothing of navigation or how to work charts, so we furnished them with directions taken from our charts and they in return gave us many practical hints and helps as to weather conditions, etc.

It was quite late when our friends departed. We had been invited during the evening to help them haul their seine in the morning, and as this would be great sport for us, we gladly consented, and retired with great expectations for the morrow.

Early next morning we were ashore and stretched the great net in a crescent shape, with the ends on the shore; two of us beat the water with oars while two men on each end hauled the net slowly in. Thus the frightened fish were caught in the net and finally landed on the beach.

Never will I forget the hundreds of flopping, curious looking fish we caught, as they lay helpless on the beach, among the oyster shells; kinds I had never heard of before. Besides the fish, we caught a good many shrimps and crabs, and altogether I thought we were very successful, but our friends said it was a very poor catch, indeed.

Being anxious to reach Biloxi by night we refused a kind invitation to spend the day with our acquaintances, and, thanking them for the good time and fish they had given us, we were soon under way and flying along at a lively clip before a brisk breeze.

Sometimes we would be entirely out of sight of the land, but at noon I sighted the high lighthouse on the point of Chandeleur Island through our glass. An hour later the tops of the ships' masts at anchor at Ship Island were sighted, and we knew our course had been sailed true.

Nearer and nearer we approached the island until finally we could plainly see the many ships riding at anchor in the harbor. We held our course until the buoy marking the channel was sighted, when we turned to port leaving the island to starboard, and stood on a direct course for Biloxi, which the charts showed was about fourteen miles to the north. We passed a ship's gig full of sailors, and they gave us a lusty cheer as we sailed by.

It was not long before we were able to make out the city on the distant land, and soon we found ourselves among the fishing schooners returning heavily laden to the city. These boats were no match for Gazelle, and we were soon leading the fleet. Biloxi is reached by a narrow channel, which, however, is well buoyed, and we experienced no difficulty in running in.

Don't blame us if we felt proud of our success; for

we certainly were. We had saved our pilot fees and reached our port safely, too, so why should we not feel proud?

We found the city a very beautiful one indeed, and best of all we found welcoming friends to greet us.

An old friend, Rev. Ebenezer Thompson, an Episcopal clergyman, has his home here. I had not seen him for years, but way back in the early days of my childhood I was baptized by him at his church in Lansing, Michigan.

This good man and his highly respected family did everything in their power to make our visit of several days' duration a very pleasant one, and it did seem good to see people I had known before.

During our stay we took advantage of the fine opportunity to copper paint Gazelle's bottom, so she would be protected against the ravages of salt water worms, which soon honeycomb a vessel if not thus covered.

Taking out the ballast, we ran the boat on ground at high tide; then, letting the tide fall, we were able to successfully perform our job without the expense of going into drydock.

Never will I forget the good times we enjoyed on our excursions about Biloxi for oysters, flounders and soft shell crabs, and it was with no little regret that we finally bid our friends adieu and resumed our journey.

Crossing from Deer Island to Dog Island we sailed up the Mississippi Sound, keeping the Horn Island and Pilot Bois Island between us and the Gulf. The sail was a splendid one, and we enjoyed our voyage up the sound very much. The country began to take on a somewhat tropical look, much to our liking, and we felt we were getting quite far south.

Everything went well with us until we came to what should be the Dauphin Island, but this we failed to find as charted, and for a little while we hardly knew where to go next. But luck was with us. A fishing boat bound for Mobile came along with a string of six boats towed astern. We asked for information, and were told to follow, which we did. The captain knew the channel perfectly, and led us through the narrow pass known as Giant's channel, thus saving us many miles sailing in the open Gulf.

We afterwards found that our course had been correct, but owing to high tide the low island, barely visible at low water, was submerged when we passed.

We were very grateful to our friend for his kindness, for by his aid we were enabled to reach our anchorage off Fort Morgan, at the entrance of Mobile bay, just at sunset. The boom of the evening gun, the lugger's good-night call, and the simultaneous lowering of the stars and stripes marked the end of our successful voyage on the Sounds of the Great Gulf.

(To be Continued.)

BIOGRAPHY OF A "PUSHER"

This is the third installment of the story of a boy, who, at the age of ten, left his home in Kowno, Prussia, and came to America alone to seek his fortune, and at the age of twenty-six, after having been in this country thirteen years, found himself possessed of the degree of Bachelor of Laws from one of America's great universities, and comfortably settled as a practicing lawyer in the great city of Chicago. The story is remarkable for its evidence of "push." If for nothing else, we are accustomed to hearing the phrase "land of opportunity" as descriptive of the United States of America. Here is evidence, in concrete form, that the phrase is truly descriptive, and is not merely rhetorical. The story is told simply to show what can be done in this land of ours by a boy. The boy, whose biography is related, started on his career in America, as the first installment of the story suggests, without the ability to use our language, without a knowledge of our customs, without friends or acquaintances who were truly helpful to him, and without money.

We left our little Prussian on the threshold of his career as a student at Ann Arbor, chopping wood and taking care of a furnace, to pay for his lodging, and washing dishes, setting the table and helping to serve meals, to pay for his board. He had promised the secretary of the Law Department that if given time he would pay his tuition fee, and the secretary in his case had made an exception to the rule that the tuition fee must be

paid in advance. The boy has now come to years of manhood. He is nearly twenty one years old. He is small of stature, and does not look to be over sixteen or seventeen. He speaks English very imperfectly. On entering the law school he has been in this country for some ten years, and, as we have seen, these ten years have been a stubborn fight to get along, and particularly to get an education. He has now at the end of ten years entered one of the great law schools of the country, but he is just as poor as he was on the day, when as a lad of ten, he landed at the Battery in New York, friendless and penniless. He has seen, in these ten years, however, very much of the American people, has caught the spirit of our institutions, and become thoroughly Americanized in habit and thought. He wishes to grow up to be an American citizen, practice law, and make a home for himself in some great American city. Perhaps you think he

ought to be ashamed of himself to be carrying coal and washing dishes at the age of twenty, when he has strong arms, good health, and ought to be learning a trade, and earning two or three dollars a day, which, indeed, might have been the case had his aspirations run in that direction. It seems, however, that to this boy a dollar is of no value unless it can bring him some advance in education, and put him into the race with other American boys for high position and wealth. He loves study and is willing to sacrifice his dignity and put himself in the place of a servant before the eyes of other boys in the great University that finally he may win the battle which he had set out to fight.

Ann Arbor is not a large city, and during the school sessions the great University is full of boys and girls, many of whom are poor and are driven to earn some of the money which they must spend in obtaining their education, so it is not an easy thing for this boy to find work. The story of his efforts in this direction would be a very unhappy one to relate. As he looks back upon it now, he says, it seems like a nightmare to him. He always succeeds, however, in keeping his head above the water; and having his eyes firmly fixed upon the goal, he allows no difficulties or discouragements to master him. Being short of stature, speaking poor English, and occupying menial positions, as we have related, he serves very often as the butt of a joke and the subject of ridicule; but this seems only to serve as a prod to urge him on, for "some day," he says to himself, "I will be in a position where many of these boys will look up to me;" and so it came to be, for within six years of the date of his arrival at Ann Arbor he had put himself in a position where almost any man of his class might well envy him.

His cheerful disposition, even amid severe want, gives him the friendship of good men in the little city of Ann Arbor. They recognize in the boy a rare quality; so that what he suffers at the hands of the thoughtless and ignorant, he gains at the hands of those whose good opinion is of real value.

He entered the school in January, 1895. The school year began the previous fall, so that when he started in on his course he was one semester behind his class. In making up his lost time, he often studied until far into the morning, allowing himself little time for rest, with the result that he was soon abreast of his class.

One day he noticed in a law magazine an advertisement of a law publishing house to the effect that it wanted a bright young man to represent it in the University of Michigan in the sale of their books. Not trusting to a letter bringing the result, he took the train, and in a few hours was in consultation with the manager of the house, with the result that he was appointed sole agent of the firm in the University city. The publishing house issued a cheap line of helps for law students. With a full set of these under his arm, and authority to sell, in his pocket, he returned to Ann Arbor, and set to work. His tireless energy and his experience as a solicitor, which we have recounted in a previous chapter, came now into good play. It was not many weeks before he was doing a good business, and gave up his job as a waiter at a boarding house table, and quit tending furnace, depending solely on the publishing company for his support. At the close of 1895 he stood even with his classmates in their work, and was paying his way.

When school adjourned in the spring of 1895, he did not take advantage of the vacation period, but immediately enrolled himself as a student of the Summer School of Law at Ann Arbor and continued his soliciting work for the publishing company. A few weeks before the opening of his second year in the University, the idea came to him that a students' directory would be a good thing for the University town. He went with the idea to the steward of the University, a part of whose duty it is to send out catalogues to inquirers, explained to him what he proposed, and obtained his consent that these directories should be sent out with the college catalogues. He had a map of Ann Arbor drawn, on which were indicated all the prominent places of interest; this was given together with information as to where and at what price board could be had, so that the student on arriving in the city might find accommodations, with the least possible trouble. His revenue came from advertisements of Ann Arbor business houses and boarding places. When the boys began to arrive from the trains at the beginning of the school year, our friend had six boys at the station armed with directories, which they distributed free. In this way he became acquainted with the entire student body, and his services were sought wherever active and energetic soliciting was required. The publishers of the "University of Michigan Daily" wanted him as their agent to take subscriptions, while the "College Magazine" employed him as their advertising solicitor.

On the first day of July, 1896, our little Prussian, who is now a young man of twenty one, stands high up among the graduates in the class of 1896 of the University of Michigan, having already been admitted, with the other members of his class, to practice law in all the courts of the State of Michigan. He says: "I was a proud young man and I could forget the hardships I suffered when I went over to say good-bye to Judge Cooley, and handed him my diploma with the request that he sign it. The venerable Judge signed the diploma, wished me success in life, shook hands with me, and thus ended my life at Ann Arbor."

(To be Continued.)

The Children

of the Wizard.

By Vincent Van M. Beede.

THE LIBRARY IN THE LABORATORY.

THE WIZARD AT WORK.

THE EDISON LABORATORY "THE WIZARD'S DEN."

American boys and girls know and honor the name of Thomas Alva Edison, the greatest living inventor, the Merlin of our day, compared with whom King Arthur's Merlin was an amateur sleight-of-hand performer. "The Wizard of Menlo Park," "the Sage of Llewellyn"—no wonder Edison has been given these titles.

I am not going to write a life of Edison, nor to describe any of his scores of inventions; that task has been well done by a number of people.* No; I want to tell you something about two little folks of whom you have heard little or nothing. They are Madeleine and Charles Edison. Madeleine is eleven and Charles nine. And I must not forget to mention the baby brother, Theodore, who last Sunday shared with me a piece of candy because I had made him a handkerchief rabbit.

First of all, I must tell you of the visit to the den of the Wizard. He controls many factories and mills in different parts of this country and in Mexico. In some of them ore is extracted; in others, electric lamps, phonographs and many other things are made. Of all these places the most interesting and important—yes, the heart of them all—is the laboratory, where the Wizard spends most of his time.

It is a plain brick building on Valley Road, near the entrance to beautiful Llewellyn Park, West Orange, New Jersey, where stands the Edison home, Glenmont. The laboratory is two hundred and fifty feet long. Four outbuildings crouch in the shadow of the large one, and on the other side of them has recently been built a huge red wooden structure where parts of the phonograph are made. A high picket fence surrounds the buildings, and if you enter the laboratory at all, which is a very difficult matter, it must be through one particular gate.

Charles pressed a button and a grimy woman admitted us. A sign above the gate sets forth that Edison cannot see people if he is to do justice to his work. There is no kinder-hearted man than he, but if he is to keep forty and more schemes revolving in his head, he must call his time entirely his own. At Menlo Park, New Jersey, where his laboratory used to be, he saw many visitors—more to their benefit than to his.

We had seen the first attendant goblin of the Wizard. The road was strewn with cinders, and the hum and roar of machinery caused me to believe that I was in the yard of a machine shop. I told Charles so.

"So you are," he answered, "but papa's laboratory is a good deal more than that."

Barrels of ore stood about the doors of the outbuildings, and Charles led me to a little shed wherein were shelves of batteries.

"This," said he, "is our automobile stable. When the 'auto' comes down from the house with papa, it can be recharged here as well as at home."

"What are in those four smaller buildings?" I inquired.

"O, machines for breaking and testing ore. Papa has a mill at Edison, New Jersey, for extracting ore. There you should see the monster machines that crush boulders weighing tons between their jaws as easily as people chew gum. In these houses they try new ore-breakers. O, I tell you, a good many inventions have been born in this laboratory."

*The next book you draw from the library should be that fascinating piece of biography, "The Life and Inventions of Thomas Alva Edison," by Antonia and W. K. L. Dickson. A smaller volume is, "The Telegraph Boy Who Became a Great Inventor," by E. C. Kenyon.

The room at the end of the laboratory facing Valley Road is the very place in which a modern Wizard would be likely to read and think; and yet, as a matter of fact, he has little time to spend in it. Fairy wizards lived in caves, where crocodiles hung from the ceiling and owls blinked from bookshelf tops, and skulls rested as weights upon open books. This room is forty feet wide and forty feet high. When we entered it, it was running over with sunshine, and so far as light was concerned, there seemed to be little need of "The Genius of Light," a marble figure crushing a

zines, minerals and curios. You should see the collection of gems. They were on exhibition at the Paris Exposition of 1889. Look up the list of precious stones in the "Standard Dictionary" and you will find the names of some of the many gems that we saw. All the colors of the rainbow winked at us in the sunlight. A piece of sulphide of antimony weighs thirty pounds, and a meteorite from Mexico 1,470 pounds more. This odd "piece of a star" looked like a miniature Giant's Causeway constructed of pencil lead.

Downstairs Charles showed me the electric organ and called my attention to a sheet rolled up over the fireplace.

"Once in a while," explained the little boy, "we have pictures thrown on the screen from an electric magic lantern."

The storeroom next the library is the Wizard's big pocket. You know how many odds and ends a boy can cram into his pocket without hurting the "merchandise." Edison's big pocket has in it a little of almost everything. The storeroom is filled with cases of drawers; these drawers are all plainly labeled and are crammed with whatever, from tacks to badger skins, the Wizard or his two hundred laboratory employes may find useful in making a brand new thing, or in improving an old one. Crystals, shells, spices and chalk worth not very much, rub elbows with chemicals valued at three hundred dollars an ounce. Fabrics, skins, iron tubing, paper, oils, leather—mention some of the things that aren't there, and Charles will inform his papa of your discovery. The filament in incandescent lights is the fibre of a certain bamboo. Edison tried hundreds of substances before he found this one to be the most lasting running track for the electrical current. So you see it is worth while to save odds and ends—if you are to be a genius. Edison began his collection as a boy in his mother's cellar. But, there! I said I was not going to write a life of Edison.

Behind the storeroom is the lower machine shop. If I were able, I would tell you what some of those drilling, cutting, rolling and smoothing machines are meant exactly to do. They are giants of strength, are those machines, for metal, instead of wood, is what they transform into machinery which will help to build phonographs, to crush ore, and so on. That fly wheel that turns the machinery that makes other machinery that makes—(this sounds as though I were writing another "Old Woman and Pig" story) is made to turn by hissing furnaces downstairs. How the furnaces do stare at one out of their red eyes! Back of the furnaces and the machinery is—the Wizard.

It was a Saturday afternoon and most of the employes were enjoying a half holiday. Not so, Edison. He seldom nowadays works twenty hours at a stretch, as was once his custom, but he is still extremely busy.

Charles tried to pull us up on the elevator, but the power had been turned off. On the next floor was a little room where blue prints as large as a kitchen table are rolled out of a window on a track to be printed. Plans for inventions and working parts are copied on blue prints for the convenience of the workmen who are to make the models and the finished thing. In other rooms original plans are drawn from the sketches of Edison and his associates.

In the upper machine shop men were turning on a lathe what appeared to be big brass napkin rings.

"THE WIZARD" AT FOURTEEN.

gas burner beneath his feet, and holding aloft an incandescent lamp which Charles illuminated by pressing a button on the pedestal.

We were standing in the midst of a family of forty thousand books—a family, because all of them, from the ancient rolls of Egypt and Greece to the latest German work, tell of scientific matters like astronomy, mathematics, chemistry, and I don't know what all. Behind a big desk I wished to find the gray head of the Wizard himself, but in this I was disappointed.

"Papa is everywhere all of the time," said Charles. "One minute he is inspecting phonographs, the next he is in the machine shop, the next down street at the wax works or phonograph factory. He takes an interest in everything that is going on."

A handsomely carved electric clock was set in the wall over a fireplace in which sometimes burns a gas—*you thought I was going to say electric—log.*

Charles, like the spider in the verses, took me up a winding stair to galleries that surrounded the court. On the gallery shelves were, besides books and maga-

What they were, I'm sure I don't know. The Wizard's den is as full of secrets as you are of mischief and questions. And the secrets I stumbled upon I must not so much as hint at. I hope, therefore, you will pardon me if I don't quite satisfy your curiosity.

The precision department contains many marvelous machines—some of them of Edison's invention—for measuring fractions of an inch, and smelling smells and hearing sounds that no human nose nor ear can distinguish. The names of most of these machines end in "ometer." Just to look at the delicate parts increased my awe at the wisdom of the Wizard.

A blind person can almost see, one would judge, when the lamps in the testing room are lit. Here they are hung, glowing like my lady's necklace, until there is no doubt of the strength of glass and filaments. If there is stray air in a bulb—bang!—the glass is shattered to powder, and the operator feels thankful that no customer will have cause to complain of poor lamps. Barrels of bulbs awaiting test were standing in the hallway.

In a room on the third floor phonograph cylinders used to "drink in" sounds of voices and musical instruments. Receiving is now carried on in the phonograph establishment.

"That sofa you see through the door," said Charles, "is where papa rests. Often he is here until late at night."

Even Wizards grow tired!

At Old Chautauqua I was busy hearing lectures and music—music and lectures of the right kind are very pleasant—but some of my best play hours were shared with Charles. Poor little Madeleine was ill most of

pass the chef's table, whereon was Charles' "good hunting." Charles had lent the fish to me to show off, for Chautauqua Lake is said to be "fished out." Charles says it isn't. The next day he informed me that the fish tasted as good as it looked. In Florida last March

MADELEINE AND THEODORE.

the little boy added more honors to his fishing record by pulling in, with his father's help, a fifteen pounder.

Charles and I have done a good deal of exploring. It began last summer, when we went "through the dark continent" one afternoon. We chose a boiling August day in order that the climate might be as much as possible like that of Africa. The purpose of this journey was to come upon new animals and flowers, and to learn all we could about their natures. We hoped to find something even queerer and more slippery than the brown lizard we had caught napping in a rotten log.

Charles, as captain, was armed with his trusty rifle—a strong stick—while Eddie carried a trowel which should protect us from the natives and dig plants. As for me, the baggage train, and so forth, I was laden with boxes for caring the animals.

"Halt!" commanded Captain Charles. We were standing on the edge of a partly dried-up reservoir, with never a tree to shade it. The water was hot and sticky.

"Natives!" whispered Charles, gripping his rifle. Eddie twirled his trowel and I laid down the boxes in readiness for action. The natives, all but one of them, had little on; that fact made them appear quite African, although they were white boys. The exception was wading around in stockings and shoes.

"When he gets home," slowly said our Captain, "the chief will spank him for spoiling his clothes."

Before we returned we had a fierce battle with another tribe of natives, each of whom was armed with a spear. They chanted a droning war-cry when we charged on them with the intention of helping ourselves to their provisions. Fortunately, none of us was stabbed. We could not find the provisions, although we carried away a part of the enemy's huts. If we had found the bumblebee honey, it would not have been very good to eat.

Towards night, Charles' railroad in the nursery looks

its best. He places candles in the stations, round-house, and locomotives, and the headlight—a candle, too—flashes as the heavy freight train, loaded with stone blocks, dashes around curves. Maybe there is an accident, the headlight snuffing out, the "loco." on its back kicking like a cricket. But aren't there accidents on big railroads? At such a time Charles telegraphs up the line for a wrecking-train. There are little metallic poles along the track, and he rings electric bells in the stations over a real wire with a real electric current. You might know that Charles loves Mr. E. Lec Tricity with his whole heart—and knows him better than do most nine-year-olds.

There are over a hundred feet of tin track divided into curved sections which you can splice, one within the other, into loops and circles. Some of the sections have switches attached, so that the Western Mail can pass from one loop to another, touching at all the large cities of Nurseryland.

That was an exciting battle in the big bedroom downstairs. It was all over a missionary and a gold mine. In a swamp which was a hairy rug was ambushed a tribe of African natives. Their chief was a tall, red block, their medicine man a fat blue one. Many miles back of this dreadful swamp, behind a mango tree, which was a chair leg, was a good English missionary, whom natives of this same tribe were holding captive. Beneath the swamp was the gold mine of Christmas-tree tinsel. The natives had raided

Boxtown, near Lake Boxcover, and had killed many English people.

England was sending from Cairo, near the west window, trainloads of wooden block pontoons to use in crossing the great body of water. Sitting on the baggage and ammunition were (in) soldiers, ready to lay down their lives for their country, and fully prepared to conquer the natives and capture the good missionary and the gold mine.

Natives wrecked the train before it reached the lake, Colonel Oneleg being wounded by a poisoned arrow during the engagement. The iron-hearted soldiers, valiant as their ancestor, "The Little Tin Soldier," carried the baggage on foot, erected batteries at two points, and bombarded the natives in the swamp. The savages, who had hastily thrown up a battery of tree-trunks, shot huge block bombshells from a smoothbore pillar block. The walls of all three batteries fell, flags of both sides were shot away, prisoners on both sides were taken, and the famous British gas pipe pneumatic gun was shelled from its position on the footboard of the bed. At the close of the afternoon the British crawled from under their shattered walls, dashed on the swamp battery, captured its garrison from the rear, where a good path led into the jungle, and, blowing up the gold mine, caught the shower of gold as it fell. But since

GLENMONT, THE HOME OF THE WIZARD the missionary's whereabouts was not known to the British, the battle was not ended, and Charles and I, who tried to help both sides and favor neither, decided that the battle was a tie.

Madeleine and Charles were both much pleased with the story they found in a back-number of "St. Nicholas." It told of children who played in a worn-out horsecar. The little Edisons asked the Wizard if they, too, might not have a playhouse of this kind. One day a wagon drove into a field near the green-houses and dumped an old horsecar upon some rusty tracks. The seats are gone, the wheels stick up through the floor and the paint is scraped away, but the brake is in fine condition. A little friend of the children wishes there had been less strength in that brake. He wound it up and stood too near it when it whirled loose. You can imagine what happened. The hurt did not last long, however. Charles has discussed putting a boxing glove on the knob of the brake. The trouble would be that the horsecar would always come out ahead in a boxing match, as Madeleine said.

A whole book might be written on the adventures, real and imaginary, that Madeleine, Charles and I have had. I am sorry there is here no room to tell you of the crisp, bright days when there was "tag" and "snap-the-whip" on Crystal Lake. Just now

CHARLES, ONCE UPON A TIME

the summer—so ill that we could not take her out rowing or driving. If she had been well, the play hours would have been even merrier than they were. Now she is strong again, I am happy to say, and last winter I had trouble to keep pace with her in scrambling up a steep ledge on the mountain side.

Charles and I loved the lake so much that when the water flashed like fire opals and launches screamed and coughed, we hardly knew whether to step into a cedar boat or into the green woods rising up on the other side of us.

There was a stiff breeze blowing when Alling, Charles and myself balanced ourselves properly in the catboat. The lake is two or three miles wide, and we made for the middle, where the wind is strongest.

"Can't we fish?" asked Charles.

It would be rather hard to troll from a sail-boat," we told him. "We're going pretty fast. People row slowly when they troll. But there's no harm in your trying."

Charles seated himself in the bow and allowed the hook to drag over the side. "I do wish I'd have a bite," he said, after a time.

"Well—"

"O, my! Hang on to the end of the line!"

"After this, Charles," remarked Alling, "always tell the fish not to bite, and you'll have a hookful." He turned the boat in a small circle, and Charles, shivering with excitement, hauled in an ugly, handsome six pound muscullonge,—ugly as to mouth and teeth, handsome as to the glitter and trimness of him.

At the house that evening the boarders lined up to

THOMAS A. EDISON AND CHARLES AFTER A FISHING TRIP IN FLORIDA.

Charles is busy over the baseball team, of which he is manager. I think you will enjoy reading the verses which Madeleine wrote after looking into the clear eyes of her baby brother:

BABY.

Little pink cheeks and little pink toes,
Bless our baby wherever he goes.
Little blue eyes, and little brown hair,
Keep our baby from sorrow and care.
Little white heart, may it ever be so,
Let baby be God's from top to toe.

THEODORE.

THE BABY.

Gift of God, indeed you are,
Bright and lovely as a star.
Never has your heart been sore,
Happy little Theodore.

THE BOY.

Romping, laughing, shouting boy,
Full of spirit, full of joy,
Soon you'll be a boy no more,
But a man, my Theodore.

THE MAN.

Always thoughtful, always kind,
Strong of body, strong of mind,
Handsome, active, what is more,
A truthful man is Theodore.

Now you have met two of the dearest children in the world, and know something about the Wizard's Den.

THE BOY TRAVELER

ANNOUNCEMENT—We present herewith the sixth chapter of the narrative from the pen of Harry Steele Morrison, who is known as "The Boy Traveler," in which he is describing his adventures as a 16 year old boy on a tramp through Europe. The boy was living in 1896 in a small town of Illinois, but in that year became suddenly ambitious to go to Chicago to work. He lived in that city for a year, working as office boy at \$3.50 per week, and then, being determined to become a reporter, he started upon his famous trip to Europe. He had saved \$25, and with this money started for New York, stopping off at Washington, where he was received by the President and Mrs. McKinley. From New York he worked his way to London as cabin-boy on a cattle-ship, and arrived in England, where he worked for his room and board in an inn. He succeeded in interviewing Mr. Gladstone, Queen Victoria and the King of Belgium. He visited the late President of France and the Lord Mayor of London, and altogether saw more famous men than any other person could possibly have interviewed. He was lost in the Alps and had many startling adventures of various sorts. The trip was remarkable in every way. The story of his achievements is extremely valuable. It gives American boys a knowledge of the opportunities which are open to them, and teaches them that with industry and courage, the boy who is early thrown upon his own resources may rise by his own efforts and make a success of life.—The Editor.

CHAPTER VI.

Contrary to expectation, I found that I could live very cheaply in Switzerland. I had supposed that as the district was so popular with tourists, expenses would be high. But it was the month of October, and most of the summer visitors had left the country. There had been a light fall of snow early in the month, and this had sent the tourists hurrying back to London, Paris and Berlin. So when I visited the country all the hotels were quite deserted in appearance, and I had no difficulty in getting a room at night for almost anything I cared to pay. There were times when the kind-hearted landlords refused to accept any money at all from me. I suppose they figured that their season was over, and that they might as well let this boy have a bed free of charge. I am sure that my youth helped me very often in this way, and I congratulated myself upon being "only a boy."

The Swiss people were usually very pleasant and hospitable, except in the districts where tourists seldom go, and I managed to get along so nicely that I remained in the country much longer than I had expected, and covered it thoroughly afoot from one end to the other. The country was far more beautiful than any I had ever dreamed of. I remembered visiting Switzerland in my dreams, and I could remember places as I saw them then, but none of my dream cities could compare with the real Lucerne, and no mountain in my vision was half so beautiful as the Jungfrau at sunset.

It was rather difficult for me to walk from one place to another in Switzerland, because I had to climb a great many mountains. I wasn't used to this and it went hard with me in the beginning. But after a few days I became accustomed to scaling the heights, and mountain-climbing soon came to have a fascination for me. I even went out of my way at times in order to find mountains that I could climb, for it was glorious to start out in the early morning and find oneself above the clouds by sunrise.

My great enthusiasm finally got me into what bid fair to become a serious misadventure. For several days, while walking from place to place in the Bernese Alps, I had been observing from a distance those great blue fields of ice called glaciers. They were very attractive to me, and I couldn't help thinking what a fine thing it would be if I could reach one of them and see what it looked like at close range. They seemed very near as I looked at them, and I thought I surely wouldn't be very hard for me to get at them. "At any rate," I said to myself, "it will be a chance for me to do a little exploring on my own account." When at school I had been fascinated with the stories I read of explorers and their triumphs, and I thought that here was a chance for me to find out whether I had any talent in this direction. Before many days had passed I decided that I had better do my exploring in company with a guide.

I started out one morning, determined to reach a certain field of ice which seemed not far away. I had eaten my usual breakfast of bread and coffee, but decided that I need not take extra food along because I nearly always came to some house about noon where I could secure my dinner. I went out very bravely and with a light heart, for an adventure of this kind was what I loved, providing it resulted successfully.

I kept to the beaten path up one of the mountains for several hours, climbing higher and higher all the while, until the village in the valley below resembled a collection of toy houses. Then, feeling that I had continued long enough in this direction, I branched off upon what I thought would prove a short cut to the glacier. There was no path at all in the direction I wanted to go, but I plunged into the sparse woodland, determined to reach the object of my trip before noon, if possible. But, strange to say, the farther I walked, the more distant the glacier appeared, so that as the hours passed I became very much discouraged, and wondered why I got no nearer. And then I didn't reach any houses where I could get my dinner, which made me feel that I had perhaps made a mistake in not continuing upon the beaten path, where there were numerous houses. Here everything seemed to be a barren wilderness.

I continued walking until the middle of the afternoon, becoming more despondent with every step, and I was just wondering whether I hadn't better turn back, when I stopped suddenly upon the edge of a precipice, which descended for a hundred feet into a barren ravine below. I looked at the scene before me with wonder and astonishment. Never before had I seen any place so desolate of every living thing. On every side arose great walls of rock and mountains, which shut out the sunshine all the year round. The ravine was strewn with great boulders of rock, and there wasn't a living thing visible anywhere about, not even any goats upon the mountain side. There was perfect solitude, the only noises I could hear coming from a torrent of water which flowed through the ravine, and the occasional thunder of a falling avalanche of snow. It was all terrible, and I wasn't surprised to learn afterwards that the natives call the ravine a "Valley of Death."

I walked along the stony ground and seated myself upon a great boulder of rock. I was feeling miserably weak from hunger, and having lost myself in this desolate place, I became still weaker from fright. All about me rose the mountains, some of them seeming to touch the sky, and I thought that it would be perfectly impossible for me to ever climb the smallest of them. As I sat there despondent, I thought, with tears in my eyes, of the little home that I had been so anxious to leave a few months before. I wished heartily that I were back again at my desk in the office, and made up my mind that if ever I did get back home, I would be content to stay there.

I was so hungry that I could have eaten grass had there been any about, and quite realized the sensations of a starving man. The longer I remained in the ravine, the worse became my situation. The sun soon began to sink below the mountain tops, and great shadows stretched themselves across the valley. I then began to fear that I might have to remain out all night, and I knew in that case I might become too weak to walk at all. Finally I decided to climb over one of the mountains if I could, and trust to luck to finding a house of some kind on the other side. The mountain seemed almost too high for me to scale, but with the fear of starvation and an overcoming weakness to push me on, I started out upon the weary way. Up and ever up I toiled, until finally, at about six o'clock in the evening, I emerged upon a level plateau. I supposed that I would certainly find a house of some kind here, but there was none. Then I saw, rising above the plateau, another mountain, not so high as the first, but still much higher than I felt like climbing. There was no other hope but for me to climb this eminence, also; so I started out once more. It was after dark when I finally reached the second summit, and there, to my great joy, I saw, a short distance off, a chalet with a light in it. I hurried as fast as I could in my exhausted condition, and was met at the door by two good peasants. They seemed to understand something of what had happened me, and were as kind as they could be. Hot gruel they made, and when I had eaten it, I went off to sleep. The next morning I felt almost as well as ever, and was soon upon the path back to the village from which I had started. I had learned a valuable lesson, however, and always afterward I was careful to keep to the beaten paths when traveling afoot in Switzerland.

I remained in the interesting little Republic about five weeks and had many adventures. In Berne, the

capital, I succeeded in seeing the President of Switzerland. He was not a difficult man to get at, and he was decidedly interesting to talk to, so that I really enjoyed the audience. I simply knocked at his door, was told to enter, and was made to feel at home. While there, I told him that I thought he was the best President of a Republic I had ever seen, because he was so easy to get at. I remained with him some time, and when I went away he told me to be sure and call if ever I came that way again.

From Switzerland I made my way into France, and for several reasons I was very anxious to get there. It was rather cold in Switzerland in October, and somewhere I had got the idea that all of France has a warm climate. I also had the impression that all French people were very pleasant to meet. My first disappointment was in the climate. It set up a cold, drizzling rain on the second day I spent over the border, and this steady downpour continued almost every day for two weeks. There was a cold wind with it, and I found it very uncomfortable walking along the country roads in the Eastern Provinces. The land was mostly flat and uninteresting, and the people were decidedly uncivil to me on some occasions. They were so inhospitable at times that I sometimes feared I would have to walk all night, and there was one never-to-be-forgotten occasion when I really did have to walk all night to keep from getting cold.

It was a dreary, dreary time for me. Never before had I passed through such an experience, and I hope I never will again. From exposure to the wet and cold I contracted a bad case of the grippe, and I was miserable enough to have had a doctor. But I had no money for any such thing. My savings were nearly gone and I felt obliged to push on as rapidly as possible to Paris, hoping to reach there before I was entirely penniless. I felt perfectly sure there would be some money from the American editors waiting for me there.

It was a rather gloomy day when I at last reached the city I had longed so much to see. There was a light rain and a cold wind, and I was tired out with my long tramp across the country. Under such conditions it is not surprising that I failed to appreciate the beauties of the city. I could see nothing in this place which resembled the Paris of my dreams. The gay boulevards I read about in books were quite deserted. The trees were leafless and stood like specters in the mist—nothing was like what I had hoped it would be. I could hardly believe that this was Paris.

I hurried at once to the express office, to which I had ordered my mail forwarded. The clerk handed me just three letters. One was from home, one was from the old lady in the inn, and one was from the editor of a London paper saying that he hoped to use one of my articles in a few days and would send me the money for it then. I was almost stupefied at not receiving any money from the American papers. I couldn't understand it. I felt that it was a shame for them to keep the money due me when I needed it so badly. But I was in a bad predicament and must think of some way of getting out of it. I must live, and as I had less than a dollar in my pocket, I must get something to do at once.

But before seeking work I hurried out to hire myself a lodging. I hunted for some time before I found one cheap enough. And then, to my great relief, I found a house where the landlady spoke English, so that I was able to make a satisfactory arrangement with her about the payment for the room. When I secured my lodging, I determined to begin light housekeeping again. I had with me my little coffee-pot and my alcohol lamp, and I cooked all my own meals in my room, except a few times in my prosperous days, when I patronized a little cremerie next door to the lodging-house. My bill of fare in the beginning was a very limited one, and I had little beside my bread and coffee. But when I earned some money I had eggs and other more substantial food. I needed it to keep me up.

I didn't find it easy at all to get work in Paris. I spent several days in making a round of the different English and American stores in Paris, and it was only after much effort that I finally secured a position in an English jewelry establishment. My wages were only four dollars a week, but I was glad to earn even that, since I knew I could live upon it. I am sure I managed to exist more cheaply in Paris than most people would think possible. By this time I had learned all the ins and outs of cheap existence and was able to make every sou count for something. But in living so I was doubtless unable to appreciate the beauties of the city. I was unable to see anything at all attractive, and, of course, Paris is a city where one needs a great deal of money to have a good time

Climbing Up the Hill.

By JAMES WHITCOMB RILEY.

Never look behind, boys,
Up and on the way,
Time enough for that, boys,
On some future day,
Though the way be long, boys,
Fight it with a will,
Never stop to look behind,
When climbing up a hill,
First be sure you're right, boys,
Then with courage strong,
Strap your pack upon your back,
And tug, tug along;
Better let the lag-lout
Fill the lower hill,
And strike the farther stake-pole
Higher up the hill.

VERNON D. CAMP.

VERNON D. CAMP
....A SIX YEAR OLD GROWER OF CACTI....

Vernon D. Camp, son of Ida Belmer Camp, a philocactist, residing at Caro, Mich., is perhaps the youngest grower of cacti in the world. He is pronounced by his mother to be a philocactist of the most pronounced type, and no wonder, for he has been reared in the midst of the largest private collection of cacti in America. He has drunk in the perfume of their most wonderful bloom from his earliest breath, and has inherited an intense love of nature from both his father and his mother. As soon as he began to talk he began to study the cactus; and the questions he asked compelled his elders to make a deep study of the subject. They had to keep in advance of the boy, if they would answer his questions, for, as everyone knows, a boy can ask more questions, and harder ones, than men and women can answer. For two years Vernon Camp has been a successful grafter of cacti, and some specimens of his skill in that line have been called for from across the water. No doubt when this boy grows up, if he continues to manifest the intelligent interest in nature that he now shows, he will create much that is new in cacti. He is now trying his first experiments at hybridizing. Every one knows how hard it is to pronounce and learn botanical names, yet this little six year old is thoroughly acquainted with the botanical names of all the many plants in the home collection.

The boy desires to do something toward helping care for the boys that are being saved by the readers of THE AMERICAN BOY, through its "Boy Saving Fund," so he proposes to send a grafted cactus plant, valued at one dollar, to the publishers of THE AMERICAN BOY, that they may sell it for the benefit of the "Fund." The publishers, therefore, now make the offer to sell this cactus, and deliver it to that reader of THE AMERICAN BOY who bids the most for it before September first. The accompanying illustrations show plants from the home collection of Mrs. Camp. For this home collection, Mrs. Camp has secured her cacti from their native homes. She is thus enabled to show fine specimens of many not found in ordinary collections. There is no class of plants of more interest to the student than cacti, as they combine beauty with uniqueness. They have most wonderful blossoms. Many think that cacti have no practical mission and are of no use to man. The idea is erroneous. It is said that in their native homes they supply to man and beast much that is necessary to their comfort. Perhaps this little story of Vernon Camp and his cacti may cause some American boy directly, or through his parents, to make a collection of these wonderful plants, and thus obtain for himself a never ending source of study and entertainment.

DO YOU KNOW FIVE BOYS WHO ARE NOT SUBSCRIBERS TO THE "AMERICAN BOY?"

Send us on a postal card the names of five boys, in your town or some other, who are not subscribers to "The American Boy," with street address of each (or name of father), and we will send to EACH OF THEM free a copy of this paper and send to YOU either

- An "American Boy Key Ring," or
- An "American Boy Watch Charm," or
- An "American Boy Base Ball Scorer."

SEND QUICK AND SAY WHICH YOU WANT.

Address "THE AMERICAN BOY," Majestic Building, Detroit, Mich.

Trudger is a slow horse, boys,
Made to pull a load,
But in the end will give the dust
To racers on the road.
When you're near the top, boys,
Of the rugged way,
Do not stop to blow your horn,
But climb, climb away.
Shoot above the crowd, boys,
Brace yourself and go!
Let the plodding land-pod
Hoe the easy row.
Success is at the top, boys,
Waiting there until
Brains and pluck and self-respect
Have mounted up the hill.

THE PARIS EXPOSITION

REPORTED BY A BOY REPORTER
ESPECIALLY FOR THE READERS
OF "THE AMERICAN BOY" • •

SECOND LETTER

Dear Boys:

Things were highly interesting in London, so very interesting, indeed, that I almost hated to leave in order to visit Paris. There was tremendous excitement on the relief of Mafeking and everyone made as much noise as possible in order to celebrate the great event. English boys had a fine time playing soldiers, and in every neighborhood they got together after school and formed themselves into companies. Some had real drums to march by, but most of them had to use tin pans, just as we boys do at home. Of course they carried flags, and in some cases there were many who were very seriously wounded after a battle had been fought. The wounded had white bandages about their hands and foreheads, and on the bandages there were great daubs of red paint to look like blood. Some of these boys could sing the national songs very well, and whenever they sang they passed around the hat among the crowd assembled, and collected quite a sum of money for the war fund in aid of soldiers' orphans.

I almost felt like joining one of these companies, for the boys certainly had lots of fun.

I had already been in London some time and felt that I ought to be going to Paris to see something of the Exposition. Very fortunately I met a young English boy named Sidney W. who was going, so I didn't have to travel alone. Sidney is as different as can be from American boys, and perhaps it is because he is so different that we get along so well together. He is dreadfully slow sometimes, and he never sees any need of working harder than is absolutely necessary, but he can always be depended upon, and is a good friend to have. Neither of us have any more money than we need, so we both travel and live as cheaply as we can. We started from London one evening at nine o'clock, having bought third class tickets through to Paris. Our journey was an exceedingly interesting one in many ways. On the train were two other English boys, twelve and thirteen years old, who were going to Chantilly, near Paris, to be trained as jockeys. They said it would take them six years to learn to ride, and for the first three years they wouldn't be allowed to go home at all. After three years they will be sent home for a few days every twelve months. They were very glad to be going and not at all sorry to be leaving home for so long. They were nice fellows and no doubt they will some day be famous jockeys, earning thousands of dollars a year.

In the train there were people of all nationalities. In our compartment there were a Russian, two Swedes, a German and four Frenchmen. The noise when

they were all talking at once was tremendous, and Sid and I thought we should die laughing at the Russian, who was having a row with the German over the Boer war. There came near being a general scrimmage, for after a while the Frenchmen and the Swedes joined in, and every one continued the argument in broken English. All except the Swedes were against the English, and Sid was for joining in, too, and I had all I could do to keep him from defending the honor of his country, as he said. The whole affair was bad enough, and if the guard hadn't interfered, something serious might have happened.

We had a fairly good passage across the English Channel, but Sid was seasick, nevertheless. The poor boy was as pale as could be and declared up and down that he would remain in France forever rather than cross the English Channel again. I felt very sorry for him, having been through the experience many times myself, but I couldn't help laughing when he said this. He was much offended, and sat sulking in a corner of the deck until we reached Dieppe, on the French coast. After this we weren't long in reaching Paris, where we finally arrived at eight o'clock in the morning.

The day was fine and warm, and as Sid and I left the station and walked through the streets, we felt that Paris must, indeed, be the most beautiful city in the world. Everything was clean and beautiful when compared with the dingy streets and buildings of London, and of course, on account of the Exposition there were flags and decorations everywhere. It didn't take us long to find a room, because I knew of an old house in a back street where we could get a room for thirty cents a day, or one and one-half francs in French money. The room is away up in the seventh story of a house, but we don't mind the stairs, and the rent is certainly very cheap, for the street is right in the center of Paris. We can walk very easily to the Exposition and we don't have to pay car fare every time we want to visit any of the downtown streets. In our room we have set up a light housekeeping arrangement. Sid brought a coffee-pot and skillet with him from home and in Paris we purchased an alcohol lamp and some cups and saucers, so that we can get our own breakfast and supper in our room. We don't have much except bread and coffee in the morning, and perhaps an egg or a bit of bacon at night. This doesn't cost us much, and is all we need. Our dinners at noon we get at a little eating-house next door, where there is a nice old lady who is very good to us in every way. She understands our French by this time and charges very little for what we eat. We get a good dinner for about fourteen or

fifteen cents. We rise very early in the morning and while Sid is washing I fix the coffee and put it on to boil. Then I wash, too, while Sid attends to the breakfast, and when I am through the meal is ready to eat. We take turns washing the dishes and all our work is done by eight o'clock, as a rule. Then we are ready to start out to see things. We never go to the Exposition in the mornings, because it costs double before ten o'clock what it costs in the afternoon. Every morning we go to some place in or about Paris and have a fine time seeing the many interesting things there are to be seen. Of course we have lots of experiences and have sometimes been in pretty tight places. Sid, like every Englishman, has a great contempt for the French people, and he is always getting into trouble through being rude and inconsiderate. He never pays any attention to the policeman and the other day we came near being locked up for sure. As it was, I gave the "gendarme" a fifty centime piece (ten cents in our money) and he let us off. It was all on account of Sid's behavior. He insisted on going into a building which is closed to the public and, of course, the officer objected. If we had managed carefully, we would have got in without any trouble. We have learned, among other things, that it always pays to be polite here.

I am sure we have managed to see many things which are closed to the public generally, just because we are boys. They have here in Paris a famous morgue, where are kept the bodies of all unknown persons who die in the streets or hospitals, and also the bodies of persons who are murdered. Sometimes they are kept for years, just as they are found, because the officials hope that some one may come along who can identify them. And in the case of murdered persons, they keep the bodies so that if the criminal is ever found, he may be confronted with the body of his victim. The temperature in the place where the bodies are is many degrees below zero, so there is, of course, no danger in visiting it. Permission to do so, however, is very hard to get, and when Sid and I first heard of the place we were afraid we might not be allowed to see it. But one day we went to the morgue and got on the good side of the official in charge. We told him where we were from, and all, and finally he took us down into the vaults.

I am sure neither of us will ever forget that visit. Of all the horrible places I ever was in, this morgue was certainly the worst. There, in long rows, lay the dead bodies, with ghastly expressions upon their sunken faces, and many of them wearing the clothing in which they were found. It was horrible to

think of the circumstances under which many of them died—poor and hungry—without a friend in all this great city. Sid and I couldn't help shivering while we stood there, and I don't think we have recovered from the sensation yet. One visit to such a place is quite enough, and we'll "never go there any more." But it was well worth seeing and was perhaps a lesson to us, because most of those poor wretches had reached the morgue through their own reckless way of living.

Of course, we are at the Exposition almost every day, and I could write volumes about our experiences there. My first impressions of it were not very satisfactory. After the Chicago World's Fair it seemed rather small and not impressive. But now my opinion has all changed and I am willing to admit that in many ways this Fair is superior to the one at Chicago. There was so little available space here that the commissioners could not possibly make the Fair large, and everyone says that they have accomplished wonders with what space they had. The buildings are not so impressive as those in the Chicago Exposition, but they are very artistic and very finely decorated, which makes up for what they lack in size. And then this Exposition is better classified than any ever held before, and a person who wants to study will find wonderful opportunities for doing so. Sid and I have seen a great deal since we've been here. We have explored every nook and corner, almost, of the grounds. We have made the acquaintance of the Javanese in the Java village, and of the Ceylonese in their department. We have so far spent most of our time in the oriental exhibits and have had many funny experiences with the natives. There are people here from every corner of the globe, and we have decided that a visit to the Exposition is as good as a tour around the world.

Every arrangement has been made for having a good time. There is a great wheel, like the Ferris Wheel at Chicago; there is a "shoot the chutes;" and, of course, there are innumerable merry-go-rounds and other side shows. One of the best things we have seen is the "moving platform." It is built on trestles and extends all around the Exposition. There are two platforms which move along, one at a rate of about two or three miles an hour and the other considerably faster. By standing on the platform and riding around one can get a fine view of the Exposition grounds, and for ten cents you can stay on as long as you like. It's great fun. Next month I will have lots to tell about, but must close for this time.

THE BOY REPORTER.

Paris, June 5, 1900.

WHAT BOYS ARE DOING

Baker Washington, the Thirteen Year Old Son of Booker T. Washington.

MAX BENNETT THORNER.

Baker Washington, the thirteen year old son of Booker T. Washington, the famous negro teacher and speaker, is a skillful, trained brickmason. He knows how to lay out a piece of work, use plummet, line and trowel, mix mortar and handle bricks. He can do as neat a job as almost any man at his trade, and has worked on the walls of all the brick buildings which have been erected at Tuskegee Institute during the last few years.

Tuskegee Normal and Industrial Institute is the great school for colored young men and women which this boy's father has built up in the heart of the "Black Belt" of the South. Over a thou-

BAKER WASHINGTON.

sand students are taught here each year. Principal Washington is a strong believer in the value of industrial education. He believes in having his pupils learn not only books, but how to work, and twenty six different trades and industries are taught at Tuskegee by actual work. He not only preaches this doctrine, but he practices it. He himself learned to work when he was a student at Hampton, and he makes his own children learn. When Baker was ten years old he began to work one hour every day with the brickmasons' class at Tuskegee. As he grew older the time was increased until now he works from three to five hours a day. A certain portion of each day is also devoted to the usual study of books in the classroom.

Not long ago I heard Mr. Washington, speaking to an audience of his own race in the Metropolitan Church in Washington describe the course of training which Baker is having, and then add: "Teach your children to work, if you would have them grow up to be good men and women. I love my little boy as dearly as any of you here love your children; and it is because I do love him that I want him to learn to work. I do not know that he will be a brickmason when he grows up; he may be a minister, a doctor or a lawyer, for all I know, but this I am sure of, he will have a good solid trade to fall back on, if necessary, and he will have formed the habit of steady, systematic labor."

There are now over forty buildings on the Institute grounds, and all but three of them have been built by the students as a part of their industrial education. A picture taken recently of the chapel, which will seat twenty five hundred persons, built by the students, shows a class of brickmasons at work on the foundation of another building which is being erected near the chapel, and little Baker Washington is one of the number.

SOME DETROIT SOLDIER BOYS.

A Company of Boy Soldiers.

A little more than a year ago a military company of eight boys was formed in Detroit, and one of their number, Cresson Smith, was chosen captain. The boys drilled faithfully three times a week, getting, however, very little encouragement from their parents. At about the same time another company, consisting of five boys, was formed, and shortly afterwards the two companies were combined, with Cresson Smith as captain. Then the fathers and mothers of the boys became interested and gave the company their support. Within thirty days after the consolidating of the two companies, Captain Smith had fifty boys in line.

When the Thirty-first Michigan Volunteers came home from their service

in the Cuban war, the boy company went to the train to meet them, but as the train was late in arriving, the company marched home, tired and disappointed. On this occasion the little fellows were much annoyed by the newsboys, who poked all manner of fun at them as they trudged along the street. A few days before Decoration Day, last year, the captain and his staff visited the chief marshal of the Decoration Day parade and received from him an assignment to a place in the parade, just in front of the G. A. R., with policemen to protect them from the street urchins. The boys received more applause than did any company in the parade, and the Silver Grays of the G. A. R. were more than proud of them. The company continued its drill until the close of school in June last when it disbanded, to reorganize in the fall.

Dennis Weiss, a Brave Sailor Boy.

A distinguished company met on the front steps of the city hall in Detroit, Mich., a few weeks ago, to do honor to a lad who works on one of the Detroit & Cleveland Steam Navigation Company's boats, which plies between that city and Cleveland. There were the Mayor of the city, the officers of the Navigation Company, Hon. Charles A. Towne, of Duluth, the Populist candidate for the Vice-Pres-

DENNIS WEISS.

idency of the United States, and many others. The central figure of the group was Dennis Weiss, a sailor boy on the steamer City of Detroit.

On the first trip of the City of Detroit to Cleveland the past spring, the members of the Newsboys' Band of Detroit were passengers. One of the band boys fell off the gangplank into the Cuyahoga river, at Cleveland, and was in a fair way of drowning, when young Weiss

jumped in and supported him above the water until assistance arrived.

The Detroit Newsboys' Association passed a set of resolutions, raised money and bought a beautiful gold watch, on which they had engraved a brief record of the incident. The distinguished company referred to had gathered for the purpose of presenting this watch in an appropriate way. The mayor made the presentation speech. At its conclusion the boy was in tears, but in taking the watch he managed to make a very pretty little speech, saying that his heart was full and that he was not able to say all that he would like to say.

Dennis is twenty two years of age. His proper name is Martinus Duwysle, but when he started to the Duffield school, in Detroit, the teachers began to say Dennis, as short for Martinus, and being unable to get around the last name they coined for him the name of Weiss, and now the cabin-boy of the City of Detroit is known as plain Dennis Weiss.

When the boy was six years old he was left alone in the world and was forced to give up school. He is something more than a plain cabin-boy and is said to be something of a genius as a writer, many of his poems having found acceptance in newspapers throughout the state. Often he is found, when his work is over, on the deck or in the hold of the big passenger boat, writing poetry. Once he tried to write a play, but got no further than the third act, where he stuck in a hopeless tangle of plot and character. He is a great reader and we may safely predict a good record for him.

Alfred Smith Rescues a Girl From Drowning.

Alfred Smith, a San Francisco boy received as a reward for his courageous act in rescuing the daughter of Henry Bernard, of New York, from the breakers at the Cliff house, San Francisco, two years ago, a gold medal. The little girl who was rescued was eight years of age. She fell from a rock into the surf

and would have perished had not the boy dived into the sea and brought her to the shore. The boy refused to receive any money from the father on account of the act, insisting that he had done only what any one would do under the circumstances.

ALFRED SMITH.

Recently Mr. Bernard and his family were again in San Francisco. They sent for the boy to call at their hotel. When he presented himself the father introduced his little daughter to the boy, and she pinned upon his breast the gold medal. It bears the following inscription: "Presented to Al. Smith for an act of bravery, by H. Bernard, of New York."

Joseph E. McGuire, Honorary Captain of Cadets.

Joseph E. McGuire was made Honorary Captain of St. Stanislaus' Cadets, of St. Stanislaus' College, Bay St. Louis, Miss., recently, the honor having been conferred upon him in the presence of a large audience by the Cadets of the institution. The boy is a son of the late

CAPTAIN MCGUIRE.

Joseph E. McGuire, who was a prominent politician of North Louisiana and saw service all through the Civil War, having been Adjutant in the Seventeenth Louisiana Regiment. The little fellow looks every inch a captain.

Albert Byron Davenport, a Young Merchant of Twelve.

Albert Byron Davenport is the twelve year old son of E. F. Davenport, of New Orleans. The boy is a typical American boy, full of spirit and business energy. His business is a peculiar one. He rents clean aprons and jumpers to bookbinders, printers and lithographers. He receives five cents for an apron and ten cents for a jumper, and he has about

A. B. DAVENPORT, APRON MERCHANT.

fifty customers. His scheme required a little capital at the start, as he had to have two aprons for each man. The work keeps him busy only on Saturdays. He goes to school on other days. One of his cards is before us, reading:

A. B. DAVENPORT
Apron Merchant
NEW ORLEANS

Albert is proud of the success which he is meeting in his business venture. This may be a suggestion to other American boys in large cities. The photograph from which the accompanying picture was made was taken recently, on the occasion of his first communion at St. Therese's Church, in New Orleans.

Francis Lee Faris, Perhaps the Youngest Funeral Director.

The business of the funeral director is not one that ordinarily proves attractive to boys, but occasionally there appears a boy who seems to have a genius for it. Francis Lee Faris, when little

FRANCIS LEE FARIS.

more than sixteen years of age, passed a creditable examination, ranking second in a class of sixty one, with ages ranging from twenty to fifty years, before the Missouri State Board of Embalming, at Kansas City, on May 11. This probably

makes him the youngest licensed embalmer in the United States.

Frank was born in Illinois and when two years of age removed with his parents to South Dakota, where he lived till he was fourteen. During that time he attended the public schools. In November of 1897 Frank moved with his parents to St. Joseph, Mo., where he for a time attended the St. Joseph schools and worked at various minor positions, in all of which he was indifferently successful. In August, 1898, he secured the position of office boy in the Meierhoffer Undertaking Company's establishment, where it was evident that the boy had found the proper field for his energies, for he settled down to work with an assiduity that brought its reward. He soon became his employers' trusted assistant and learned the practical side of his arduous profession. While learning the practical side, he was also acquiring the theoretical from text books. The rapidity with which he learned his work may be judged from the fact that in less than two years he had passed the examination referred to, with a grade of ninety-two per cent.

Alfred Orebaugh Risks His Life to Save a Little Girl's Life.

The presence of mind, pluck and speed of Alfred Orebaugh, a newspaper carrier for The Columbus Despatch, recently saved the life of a little five year old girl on East Broad Street, Columbus. A runaway horse hitched to a buggy in which was sitting a little child, came dashing down the street. The little occupant sat with clasped hands and agonized looks. Young Orebaugh, who was on his bicycle, gave chase and was soon in advance of the

ALFRED OREBAUGH.

horse. Quickly dismounting, he dashed to the head of the runaway, caught him by the bridle and held on until he had brought the frightened animal to a standstill. To any person who has tried to grasp the lines of a runaway horse, the boy's quick appreciation of the situation, and his daring, will seem marvelous. After the boy had gotten the horse under control, a man ran up and, taking possession, drove away with the rig. It appears that a lady who had been driving the horse had been thrown from the vehicle. The boy has only the knowledge that he saved a life as a reward for his bravery. The boy is sixteen years old, goes to school and carries papers after school hours.

A Warning to Boys.

Harold Livingston, of Denver, Colo., a ten year old subscriber to THE AMERICAN BOY, died Sunday, July 8th, from the effects of an accident that occurred the evening of July 3d. He was shooting off fireworks, and was wounded by the explosion of a firecracker or a toy pistol, accounts differing as to just how. His mother poulticed the wound, and in a few days it seemed to be healed; but on the evening of the fourth day afterward the little fellow began to be faint, and at three the next morning he died. The doctors diagnosed the disease as tetanus or lockjaw. They think the germ was contained in the impure nitrate used in the making of cheap fireworks. The case is a very sad one, the little fellow's sufferings being intense. He stood it, though, like a brave boy. His father writes us: "Warn the boys."

We would like to become acquainted with what every boy in America is doing. Our address is

THE AMERICAN BOY,
DETROIT, MICH.

SCENE AT THE BEULAH LAND FARM.

The Boy Saving Fund.

The readers of THE AMERICAN BOY know that we have inaugurated a plan by which to save boys from evil surroundings and place them in good care, where they can grow up to be good men, useful to themselves and to the State. The publishers of this paper announced some months ago that they would, out of their own treasury, contribute sixty dollars for the saving of one boy, provided that the readers of THE AMERICAN BOY would contribute sixty dollars for the saving of another boy. The plan proved popular. In a very short time we received the necessary sixty dollars from the readers of the paper, and provision has been made for two boys. "Our boy," whose name is Frank, was taken from the streets of Chicago and placed at the Beulah Land Farm for Boys, at Leoni, Mich. "Your boy," Clarence by name, was taken from the streets of Baltimore and placed at the National Junior Republic Farm, Annapolis, Md. Portraits of these boys, just as they were taken from the streets, appeared in our July number, together with a short sketch of each.

The contributors of the sixty dollars for the saving of Clarence are two hundred and forty in number. The amounts contributed by individuals range all the way from one cent to two dollars and fifty cents. The first contribution was received April 26 from Willie G. Sprague, son of the editor, who contributed six cents, one cent for each year of his life. The last contribution came from William L. Bennett, of Stanton, Wis., on July 7. We were, therefore, a little over two months in raising enough from THE AMERICAN BOY readers to pay for the saving of Clarence. We firmly believe that no pennies were ever given for a better cause and will count more in good results, than those contributed by the boy readers of THE AMERICAN BOY for the helping of this boy.

Between July 7, the date when the amount of sixty dollars was finally made up, and July 11, seven dollars and twenty six cents were contributed by readers who did not know that the full amount had been raised. We have determined that we cannot do too much of this kind of work, and that if it is a good thing to save two boys, it is a better thing to save three. We will, therefore, with the consent of the contributors whose money makes up the seven dollars and twenty six cents, apply their money toward another sixty dollars, with which we will get him and where we will put him, we have not yet determined. We hope, however, by the time our September number is made up to have the name and the picture of the boy and be able to tell who he is and where he is.

We publish in this number of THE AMERICAN BOY the list of contributors to the saving of Clarence, together with the amount sent in by each contributor. Boys who are interested in Frank will

be glad to see a picture of some of the boys at the Beulah Land Farm, showing the kind of playmates he has in his new home. We have no doubt he is learning how to work, so that when he comes to be a man he will be self-supporting. At the same time, we are glad that he has an opportunity to play, and that his playground is not the filthy alley of some slum district in the city of Chicago.

Clarence's friends will be glad to read a letter from one who has visited him in his new home and who writes us of what he saw. The letter is as follows:

Washington, D. C., July 3, 1900.

Dear Boys:
Yesterday I celebrated the Fourth, by going down to the "National Junior Republic" where our boy Clarence is. The picture in the July number of THE AMERICAN BOY may have been a portrait of him as he was when he first arrived, it certainly does not do him justice as he is now. Mr. Rogers is quite sure that he can get the "tough" out of any boy in a week. His plan is regular meals with plenty to eat, regular bedtime for sleep, a good, clean bed, and the rigid discipline of a happy home where none live for themselves alone—but each for all. "Our boy" is the youngest on the farm and, of course, the pet. When he arrived he hadn't a whole garment on, looked as though he had been rigged out with subscriptions from rag-bags. The boys fixed that the next day. One bought him a cap, another a shirt, another a coat, and so on. Soon they had him quite presentable. When we remember that every boy had only money that he had worked hard for, and that a little unknown waif made such a strong appeal to their charity, it not only proves to us our boy's sad need of help, but that he is surrounded by good friends. One of the boys expressed the general sentiment when he told me that "the kid was all right, only he never had no show." His smile is as sweet as any I ever saw and I noticed that he seemed most pleased with the chance the box of good things I provided gave him, to pay off some old scores. I hope every one who contributed to put "our boy" where he is, will feel rejoiced to know that he has helped to have one whose only chance (but for kind friends) was surely to the bad.

It seemed to be taken for granted that as I had gone down to the farm to see our boy Clarence, that in some way I represented THE AMERICAN BOY, and I am expected to go down to see him often, and if anything should happen to him, a notice will be sent to me at once. DR. JAY.

A list of the contributors to the saving of Clarence will be found on page 311.

We now want Sixty Dollars with which to save another boy. Will you help?

GETTING THE CAPITAL BY SELLING OLD CLOTHES TO "OLD CAPN"

Novel Newspaper Published by Children—It is Printed from Rubber Type, and is Illustrated.

LA FAYETTE PARRO.

The most curious newspaper yet published is undoubtedly the Millbrook Messenger, issued at Boydton, Va., by Hamilton Feild, Harrison M. Feild and Jean R. Feild, aged respectively eight, ten and twelve years.

The outfit for this paper cost thirty five cents, and consists of a meagre font of rubber type, each line of the paper requiring two impressions, re-distribution being necessary each time the type is used.

The wonderful patience exhibited in producing the copies that comprise its rapidly growing circulation is no less remarkable than the earnestness and enthusiasm displayed in its reading matter.

Accuracy and truth of statement are marked characteristics of this delightful little journal, and the guilelessness which permeates its utterances is noteworthy.

"Jean's Jingles" are a feature of the Messenger, and if the feet and measure are not always exact, the jingle is there. Other special features, such as a continued story of Cuba by Harrison Minge Feild, add interest to its columns.

The following are a few specimen nuggets from the Messenger:

"Published as often as possible. Price five cents a month. As we haven't got any advertisements yet, we don't know what we will charge for them when we get any."

These publishers, at least, will not lay themselves open to the charge of asking exorbitant advertising rates. The same first issue shows that they do not believe in a padded circulation.

"Our paper," they say, "begins with nine copies, and the following subscribers: * * * We hope they will all be good pay. We don't want very many

LAYING PLANS.

subscribers, for it is so much trouble printing, as we have to print just part of a line at a time. Our press cost thirty five cents that we made by selling some old clothes to 'old Cap'n'."

This tells the story of small beginnings, indeed; but the subscriptions already bring a good interest on the capital invested.

"Politics crowded out" is one of the announcements in the first issue, but there are many other nice things that got in.

The paper grows ambitious in its second number, and presents a set of anagrams and offers a prize for their complete solution.

RESTING

It also adds the name of Bland Randolph Feild as political editor and makes this announcement: "This is a Democratic paper. We are for Col. Thomas F. Goode for Governor, Hon. Wm. J. Bryan for President, and Gen. Fitz Lee for Vice-President in 1900."

The Messenger places itself on the defensive when it says: "We don't expect to jump any other paper unless they hit at us."

That it is ready for any increased prosperity is shown in this one: "We don't care how many subscribers we get now, as we have found it is almost as easy to print several papers as a few."

I discover what may be considered a little inconsistency in the next two paragraphs, though innocent: "We started with nine subscribers and now we have twenty. One of them wanted to pay for a whole year in advance, but we were afraid to take it, as we were not sure our paper could hold out that long. But we let Edwin Overby go in as deep as ten cents."

"If the Mecklenburg News is correct in its assertion that Boydton cannot support two newspapers, it has signed its death warrant, for the Millbrook Messenger has come to stay." Then follows a budget of news and some of it would be suitable to a more ambitious journal.

"Wee, Wee," who seems to be an important contributor, has the following: "You should have seen the fight Dora (the baby's nurse) and I had with a

roach last night. We chased him around until we all got very much excited. Then he ran in the ashes and came out looking like a white ghost, and it seemed to me twice as big as when it went in. I reckon that was because he was coming towards me. As he got well out on the hearth I raised the tongs and brought them down with a mighty crash right on top of a long bare foot that Dora had slapped down just a second too late for the roach and just in time for the tongs. I don't know what became of the roach after that."

There is interesting local news under the fetching caption of "Home Happenings," beginning with the announcement, "We have just had our strawberry bed wed," and a serial story, "Adventures with the Redskins," by Harrison M. Feild. It is a matter for regret that this young and able contemporary should have deemed it necessary to follow in the path of the new journals by imitating a guessing contest; but its brand is at least original. It announces the contest thus: "Somebody asked us how many times we handled our paper in getting out one issue. So we counted the times and will give a prize to whoever comes nearest to guessing the number. The prize will be the biggest watermelon papa raises on the island; but we don't know how big that will be. If anybody off at a distance guesses it, they will either have to pay the freight on the watermelon or we will give them something else. We want all our subscribers to try for it."

HARD AT WORK.

Here are other items: "We sent the Hammock Man a picture and he said that if we didn't let him alone he would start a paper in opposition and ruin us. We are ready for him, so come on, Mr. Hammock Man, and let's see what kind of quill-driver you will make."

"The News Man asked us how much we would take to advertise him and when we told him we would charge him the same he charges other people, he said that was too much, but he gave us some black ink, so we put in this notice of him."

Several advertisements make up the remainder of the publication. The paper has six pages, about twelve by six inches, two columns to the page, and is a model of hand workmanship. It will doubtless rise to greater usefulness and increase in subscribers until it requires a great perfecting press to print its issues.

BOYS' EXCHANGE

NOTICE.

When you have what a boy asks for or wish to trade with a boy whose name appears in these columns, write the boy himself; don't write us.

Ray L. Fielder, Fallville, Va.: I have an Indian hatchet, sound and all right, that I will exchange for a bicycle.

B. Krebs, 2911 21st St., San Francisco, Cal.: I will exchange leaves from California trees for paper cigar bands from any State.

Ervin J. W. Huber, Newark, N. J.: I will exchange copper ore for stamps or for leaves from western, southern or northern trees.

William B. Rayburn, Bloomington, Ill.: I will exchange relics of the Bloomington fire for Indian relics, stamps, leaves, or rare coins.

A. C. Griffin, Bonds, Miss.: I will exchange splints of wood from trees of Mississippi for the same from trees of other States.

William L. Turner, Great Falls, Mont.: I would like to exchange Indian arrows, copper ore and silver ore for stamps worth over five cents apiece.

Fred Rowe, Letart Falls, Ia.: I will exchange ten different kinds of leaves from this part of the country for two orange leaves and some foreign stamps.

Thomas A. Connell, 415 W. 7th St., New Albany, Ind.: I have some foreign stamps that I will trade for arrow-heads, copper ore or leaves of the orange and banana.

Edgar R. Bean, 202 N. Main St., Fairfield, Ia.: I will exchange apple, cherry, plum, maple, elm and other leaves for leaves from other States, and particularly from foreign countries.

John S. Stubbs, 110 W. 129th St., New York City, N. Y.: I have a piece of crude rubber from Southern Brazil which I will exchange for Indian arrow-heads or other curiosities.

Eugene Blake, Greenwood, S. C.: I will exchange small pressed cotton plants for California redwood, maple or hemlock leaves, or any sort of curios not raised or found in my state.

Clarence Stilson, Gibsonburg, O.: I have stamps from Venezuela, Ecuador, Costa Rica, China and Liberia which I will exchange for foreign coins or stamps from Argentine Republic or Persia.

Clyde C. Swayne, 48 1/2 Bates St. N. W., Washington, D. C.: I have some petrified wood which I would like to exchange for Indian relics, iron, silver or copper ore, gold dirt and other curiosities.

E. S. Johnston, Gregory Landing, Mo.: I have some Mississippi River shells, out of which common pearl buttons have been cut which I want to exchange for sea shells, Indian arrows or good foreign stamps.

THE AMERICAN BOY is the only official organ of the Agassiz Association and should be in the hands of every member.
All correspondence for this department should be sent to Mr. Hurlan H. Ballard, Pittsfield, Mass. Long articles cannot be used.
THE AGASSIZ ASSOCIATION welcomes members

of all ages, and anyone who is interested in any form of natural science is invited. Established in 1875. Incorporated in 1902.
Short notes of personal observations are particularly desired for use in the A. A. department. Send illustrations when convenient. Questions are invited.
Address H. H. BALLARD, Pittsfield, Mass.

One secret of keeping young is to keep in touch with the life of boys, and on good terms with Mother Nature. Mr. R. S. Gray, now a prominent lawyer of California, joined the Agassiz Association many years ago, but judging from the delightful letter from which we quote below, he is as young as he ever was and as old as he ever will be:

Oakland, Cal., June 2, 1900.

H. H. Ballard, President of the Agassiz Association.

Dear Sir:—The card of membership you gave me more than six years ago lies before me. It has been my constant companion ever since I received it. Perhaps I have been too selfish to devote myself to some little corner and do thorough work there. I have so dearly loved to roam hither and thither when free from the toll of making a living, and let the leaves of Nature's great book blow back and forth, content with the glimpses thus afforded me into countless things. Within the last forty-eight hours I raced through Thompson's "Wild Animals I Have Known," and it seemed as if I was dreaming again of many things I had seen and heard.

True, I have done some work. Technical works in my library, from Parker & Huxwell's Text-Book of Zoology, to Wollie's Freshwater Algae of the United States, will testify, but after all, only when I found some door closed in my face which only thus I could unlock.

You know, perhaps, how dry and dusty is our beautiful California throughout a large part of the year, when we who dwell in its cities hardly know what streams of running water and fresh, cool ponds mean. In the last four years I have lost one happy hunting-ground after another, until, in despair, I have sought to replace them in part by my aquaria. It is true that throughout the year exquisite mountain brooks can be found, but for those tied down to desk and forum, they are like Yosemite—far more an exquisite dream than a present reality.

For years I often stopped on my way home, and visited a drug-store where a great nine-foot tank full of plants, fishes, etc., made me envious. At last, in the march of improvements, it was displaced, and I obtained it for a song and established it in my garden, among the trees and vines. Encased in wire netting to protect it from the archery of mischievous boys, slowly stocked with many kinds of animals and

hollow of your hand, will develop for months and even years. If rightly cared for, almost boundless life. Limitless wealth is thus really mine, wealth beyond my power to use, or even see. As much of the growth upon the sides of the tank as would cover the head of a pin often affords me hours of intense pleasure. For some time just before commencing this letter, I watched what, under the microscope, seemed a vast expanse. I traveled hither and thither as through some great wilderness full of life, beauty, tragedy, but where no human foot nor hand shall ever go.

In that little film of water, not one-half inch across, and thinner than tissue paper, my real self was lost for a space of time, as if it might be years spent in exploring the wilds of some great continent, without fatigue, disappointment or danger, brought close to the wild beauty of Nature's recesses as it was exposed unshrinkingly, without fear—and I was almost going to say, without reservation—but, indeed, that is not so. Here life's greatest problems still stand forth unsolved: birth, development, and death, a mosaic of beauty and horror. Whether it be years or moments, an eternity is typified. A careless touch, and all that life is swept like driftwood upon the shore of a boundless ocean, dead matter, yet ready, through nature's processes to spring forth into life again.

I like to know the names of things, and even to search a little into structure and relationship, but, above all, I delight to wander at will in the mighty mountains, by the roar of ocean surf, beneath the solemn and stately music of the pines, and just so I love to lose myself in the mighty depths of the infusorial ocean, and dwell with diatom, monad, and rotifer, embowered in a maze of algae. If but a little more had been given, it seems to me I would ask the poet's power rather than mere scientific knowledge. I started to tell you of my aquaria, but I fear I have not done so and never can. To tell of their contents in scientific phrases would not be to tell of my real treasures.

R. S. GRAY

[The editor of THE AMERICAN BOY finds that he is personally acquainted with the writer of the foregoing letter and possesses his photograph, so that boys may not only read this delightful letter but look on the face of the writer.—Editor.]

STATE FLOWERS.

Not all the states—only about half of them—have chosen a state flower. The choice is determined either by an act of the legislature or the vote of the school children, and in a few cases by a general ballot.

New York chose the rose; Alabama, the golden rod; Colorado, the columbine; Delaware, the peach blossom; Idaho, the syringa; Iowa, the rose; Maine, the pine cone and tassel; Minnesota, the moccasin flower; Montana, the bitter root; Nebraska, the golden rod; North Dakota, the wild rose; Oregon, the golden rod; Utah, the sego lily; Vermont, the red clover; Michigan, the apple blossom; California, the poppy; Kansas, the sunflower; Nevada, the sage brush; and Washington, the rhododendron. These are the only states that have adopted a floral emblem, though the partiality for certain flowers in various states has been clearly indicated. The Cherokee rose is Georgia's favorite flower; the school children of Illinois are divided in their preferences between the rose and the violet; the latter flower is the favorite of Rhode Island, and it is supposed that the trailing arbutus would, on a vote, be accepted as the favorite flower of Massachusetts. Oklahoma Territory has adopted as its favorite the mistletoe, and if New Mexico took any vote on the subject, its preference would probably be given to the cactus.

And speaking of flowers, I must tell you of a wonderful garden I saw this week, entirely made and tended by a boy, who is so modest that I should offend him if I gave his name. His home is in a beautiful old town of Eastern Massachusetts, and he conceived the idea of putting into a garden all the wild flowers of his town. Fortunately his father had a large estate, and gave the young botanist all the ground he needed. By a careful arrangement of rocks, and trees and walls, the natural conditions of field and forest have been so well reproduced that the boy has now four hundred species of plants growing and thriving in his garden. More than this, each one is labeled with its scientific name, and a card catalogue shows the varied contents of this living herbarium. The day I was there he was experimenting upon the rate of growth of a hop-vine: a string was tied about the trellis to mark the limit of growth which the vine had attained at a certain hour, and careful measurements were to be made at stated intervals. That same day, while strolling through a meadow, we were lucky enough to stumble upon a beautiful flower which was quite new to our friend, and he was as delighted as another boy might be at making a "home-run" or "kicking a goal" from the field.

NOTES OF PERSONAL OBSERVATION.

In response to our offer of a card of membership in the Agassiz Association, and a badge, for a written account of anything of interest observed in any department of natural history, if accompanied by a drawing or photograph, we have received a large number of replies, some of which we have already printed. In every case, thus far, we have sent the promised badge, even when the conditions have not been fulfilled. We are grateful to all our young friends for their interest, and we repeat the offer, insisting, however, on two conditions: 1. The notes must be original accounts of personal observations in some department of natural history. A story of travel, for example, would not answer. 2. The note must be accompanied by a picture of some sort.

NOTES.

16. QUAIL IN A CITY. One day I was standing in a yard of this city, when a large bird flew down and landed in a rubbish pile, where it began eating. One of my companions threw a stone and made it fly. As it rose and began to circle about, it flew through the glass of a large bay window, and fell dead in the parlor. It was a quail.—L. W. Slocum, Petoskey, Mich.

[A similar incident is recorded in THE AMERICAN BOY for March, p. 135.]

17. ROBIN CATCHING WORMS. [See also Note 9.]

Each kind of bird likes some particular worm or lug for diet. A robin seems to prefer fish-worms to any other food. I noticed a robin several mornings ago. It ran along on the ground a few feet, then stopped, turned its head sideways and viewed the ground for a second. Then he pecked the ground vig-

orously, and pulled forth a large fish-worm. Upon investigating the ground I found it covered with tiny hills thrown up by the fish-worm during the night. It is a curious fact that a robin makes so little labor out of gathering fish-worms, while a boy often spends an hour in gathering enough to go fishing with.

I could not help wondering how the robin got his worms. I walked to the place where he had been and tapped the ground for a few seconds with a small stick. The vibration of the ground caused the worms to come out with considerable speed. I had often wondered why the jar of the ground should

frighten them out, until I killed a ground mole and found it fairly gorged with fish-worms. Since then it has been my theory that the robin's bill gives the ground the same sort of vibration which the ground mole does when seeking food.

JOSEPH HOTCH.

306 Middlebury street, Elkhart, Ind.

18. PLANT PIERCES A SHELL. While walking through one of our parks I observed a peculiar growth of yellow star-grass. The flower had grown

through a small shell, in which it had made a hole the exact size of the stem. The shell was fastened on the stem about a half inch from the ground.

EILOWELL R. JACKSON, Trenton, N. J.

19. DID THE BIRD COMMIT SUICIDE? As Farmer S— was walking along one of the country roads near his farm, he spied hanging high up in an oak tree a bird in a very peculiar position. He climbed the tree, broke off the branch from which the bird was suspended, and brought it down. He afterward brought it to this city and loaned it to one of the local newspapers, where I had a good look at it. The bird was a bluejay, and was suspended from the limb, on which was its nest, by a horsehair. The bird had surely strangled to death, but was it an accident or did he do it intentionally? Who knows? I am sure I can not say, although I examined it as closely as I could. ALEXANDER MURRAY, Wilkesbarre, Pa.

[This death by hanging was almost certainly accidental. When a boy, I saw a chimney-swallow impaled on a lightning rod. As it was flying down to its nest it accidentally drove its breast directly against the sharp point of the rod.—Editor.]

AGASSIZ'S BIRTHDAY.

Detroit, Mich., May 29, 1900. Our Chapter of the Agassiz Association, No. 176, celebrated the birthday of Professor Agassiz, Monday evening, May 28. Papers were read on his life, and refreshments were served.

HENRY A. WIGHT.

[This is a pleasant custom that has been adopted by many of our Chapters.—Editor.]

MABEL (stroking kitten, a new present): Mother, kitty's so hot! Ought she sit so near the fire? (Kitten purrs.) Oh, mother, listen! She's beginning to boll!—Punch.

[We offer a card of membership in the Agassiz Association and a badge for the best explanation of the purring of a cat. Address H. H. Ballard, Pittsfield, Mass.]

R. S. GRAY.

vegetable life, like Topsy, it has "grewed," and become a source of infinite delight to me.
This aquarium is my leviathan, but another, which I call my pet, measures but a few inches across and is hardly an inch deep. Fourscore will not number them. It would take volumes to tell what I have seen drawn from their mighty depths, for in as much water as you might hold in the

Boys as Money-Makers and Money-Savers

SETTING THE TYPE.

LOCKING UP THE FORM.

RUNNING THE PRESS.

MAKING OUT THE BILL.

How a New Jersey Boy Earns Money

BY ONE WHO KNOWS HIM

THE boy, at least, is possessed of a desire to earn money and has acquired something of the art of earning it. There probably is not a boy of his age in Elizabeth, N. J., where he lives, who earns as much money as does Foster C. Howard. He is only eleven years of age, but he has advanced ideas about his business and what he should do with his income. He spends but little money; indeed, he does not spend any that he earns from his business, and will not for several years to come.

Although he is only eleven, he thinks a great deal of the future. If nothing extraordinary occurs to prevent it, there is no doubt but that he will be a physician, as all that he does is influenced by this desire.

He has his own bank account, and he declares that the earnings from his business shall be used to pay the expenses of his education.

An account of this lad's business venture and his success may be of interest and profit to other boys. Even parents who chance to read this may see something in it to help them solve the problem of what their boys may do to help themselves.

What does he do at eleven years of age to be so prosperous? He has a printing press, thirty eight fonts of type, and fixtures enough to make up a well-equipped printing office. He has a 6x10 Liberty press, and while this is a pretty large press for a boy of his age, he finds the chase too small to do many of the "jobs" that come to him. His business bids fair to outgrow his press. His type is well selected, so that he can do any ordinary printing that is turned out from the larger offices by older printers. His work is pronounced satisfactory, and exceptionally good for one so young. The printers say his "display" of type is fine and the "impression" is just right. He has never had a job rejected even by the best judges of printing. He does all his own work, excepting the "proofreading." He submits his proof to his parents, but makes his own corrections and turns off his own finished work; when it comes from the press it will pass the closest inspection, as it is properly inked, and when dry does not "offset."

His range of work includes envelopes, letter-heads, bill-heads, circulars, statements, programs, cards and tickets of all kinds. He does a great deal of church printing. As his father is a minister, this comes to him without solicitation. Upon the whole, he is kept pretty busy, as he attends school every day, and keeps up in his home work. Yet he has time to play and delivers his work when it is promised.

The amount of money he earns is quite

phenomenal for a lad of his years. Frequently his receipts amount to ten or twelve dollars a week, and several times since he has been in business he has earned ten dollars and over on a job, after all expenses were paid. He keeps a rigid expense account. He never forgets to figure up his profits. He has often said, "Well, I didn't lose anything on that job, when expenses are fifty

FOSTER C. HOWARD, PRINTER, ELIZABETH, N. J.

cents and receipts one dollar and a half, as it only required two hours to turn it off."

He makes out his own bills and does his own collecting. When he presents his bill he takes it for granted that he will get the money; and his absolute confidence that he will receive his pay induces him to receipt his bill before he leaves his office to make the collection. He says, when delivering his job and presenting his bill (as with him the two go together), "Here is your work, and here is my bill." His customers admire his confidence and promptness, and respect his demand. He never fails to make the collection when he presents the bill.

The bill collected, he deposits the money to his own credit, and the bank officials honor his demands. He is a veritable little business man, and is fast learning the ways of the business world. He is seeking all the time to buy to the best advantage, so that he may be a lively competitor in the printing business. He studies catalogues and price-lists as carefully as he does a school book. He already has the best terms offered the "trade," and takes advantage of the two per cent. discount for cash. By a study of his books, he has discovered that by discounting his bills he can replenish his office with type, furniture, etc.

Judging from the amount of business

he is now doing, and the money he is accumulating, there is not the least doubt but that he will in due time have money sufficient to pay for his entire course through college. What he does, may not any boy do if he is given a chance? Furnish the opportunity, and the boy, as a rule, will learn how to improve it. The opportunity may not be a printing press in every case; but it may be something. The average American boy will find a way to succeed, if the opportunity is presented.

The money that this boy's plant cost has been, and is, a great investment. It has paid in many ways; and the bank account he is accumulating is the least of the many profits. The printing business is an education in itself, and he will be better qualified, no matter what may be his place in life, from his experience in this little print shop. Correctness is one of the essentials of printing. Attention to detail, with the most painstaking care, also goes with the business. These, with many other accomplishments, to say nothing of the moral effect of being under his parents' roof, and not running the streets at night, as thousands of boys are doing, are sufficient to cause his father to feel that the cost of the printing press is the best investment he has ever made. He realizes every day that it pays to give the boy a chance.

PRESENTING THE BILL.

Foster is a subscriber for THE AMERICAN BOY, and while there are a great many papers that come to his home, he insists that none are so good as it. He reads everything in it, and regrets that it is not a weekly instead of a monthly

paper. Reading THE AMERICAN BOY and showing the cash after he has presented his bill are his chief delights.

SHOWING THE CASH.

SAMPLE distributors wanted. Good pay to good men. Enclose 2c. O. K. Adv. Co., Baltimore.

Wanted Agents in every county to sell "Family Memorials," good profits and steady work. Address—Campbell & Co., 23 Plum St., Elgin, Ill.

YOU are wanted for the NEW FIELD; position—large salaries. Address, with stamp, Prof. Steiner, Lexington, Ky.

Start MAIL-ORDER Business AT HOME, NO CAPITAL REQUIRED. \$1.00 monthly. Daily made. Write Joe H. Jackson, 223 Mackwick Ave., Brooklyn, N.Y.

BOYS EARN CASH Bicycles, Watches, Cameras, etc., selling Parallel-Blotter, Rulers, all writers want it. Sample made of Aluminum and particulars mailed for 2 cents. THE INDEX CO., Providence, R. I.

WANTED Reliable men or women to sell our goods to the consumer in communities from 1,000 to 10,000 population; permanent employment at good pay. Address THE GREAT EASTERN COFFEE & TEA CO., 301 N. Tenth Street, ST. LOUIS, MO.

BOY AGENTS Hot Seller for Hot Months. Hot money for you if you jump in now before the other fellows. Our Great Campaign Book. Every voter buys it. Both sides. Complete outfit and instructions free. 2 cents postage. Write quick. THE WALKER PUBLISHING CO., Dept B, CHICAGO, ILL.

AGENTS WANTED \$5 to \$10 per day sure selling photo of "Just as the Sun Went Down." Copyrighted, 1899, by Dietz. Send five cents for sample and full particulars. Big Commission. It is a genuine seller at night. Address John M. Dietz, 118 Fox St., Mandusky, O.

THE IDEAL SPOON HOLDER Is an article of merit and a novelty. Its needs have long been felt in every household. It is beautiful, elegant and will last for years. We want AGENTS. Boys can make lots of money in their spare hours, selling the IDEAL. It sells itself, every woman will buy it. \$1 to \$2. The sale of one creates demand for several dozen more. Sample 15c, a for 25c, by mail; postpaid. Send for catalogue. McKay Mfg. Co., 3727 La Salle St., Chicago.

PERFECTION CAKE TIN Has removable bottom which enables you to remove without breaking the most delicate cake or pie. Fits in its groove; will not leak batter. We make ten styles, round, square and oblong. We are the largest manufacturers of Pure Aluminum, Scotch Granite and Tin Ware in the world. AGENTS, write how to get free this and others of our best selling household novelties—Outfit worth \$1.00—Express prepaid. Address Dept. G D HOUSEHOLD NOVELTY WORKS, 25 Randolph St., Chicago, Ill., or New York, N. Y.; Buffalo, N. Y.; St. Louis, Mo.; Kansas City, Mo.; Denver, Col.; Seattle, Wash. This Co. is worth a Million Dollars and is reliable.—E4.

To Save the Boy.

J. F. Flood, Steubenville, O.: I send a dollar for the Boy Saving Fund. I hope that there are others like myself that will now respond to save still another boy. If there should be another fund started you can count me in for double the amount sent you herewith. Trusting we may be able to save both your boy and our boy.

BOYS WANTED

We set you up in business

We want Boys for Agents in every town, to sell

The Saturday Evening Post

Of Philadelphia

We will furnish you with ten copies the first week Free of Charge, to be sold at 5c a copy; you can then send us the wholesale price for as many as you find you can sell for the next week. You can find many people who will be glad to patronize a bright boy, and will agree to buy of you every week if you deliver it regularly at the house, store or office. You can build up a trade in a short time; permanent customers who will buy every week. You can thus earn money without interfering with school duties, and be independent. Address: **The Curtis Publishing Company PHILADELPHIA**

How Boys Make Money.

Edgar R. Bean, Fairfield, Ia.: I make my money by carrying the daily evening paper and doing odd jobs.
James Clark, Chicago, Ill.: I earn my money by scrubbing the floors, taking care of the baby, and helping mother in any way I can. I get twenty-five cents a week.
Ned Kennedy, Duluth, Minn.: I carry a paper route, getting twelve dollars a month. I also work in a butcher shop on Saturday for fifty cents a Saturday and do odd jobs, so that I earn about fifteen dollars a month.

Roy L. Gillett, Colden, N. Y.: My brother and sister and I earned money to pay for THE AMERICAN BOY by picking and selling peas and picking berries. We live outside the village on a farm.
P. E. Dennis, Jr., Macon, Ga.: My father is the chairman of the Board of Stewards at the church and I write letters on the typewriter for him and members of the Board. I also print them on a "printer-graph" and deliver the letters after I write them.
Adolph Brohaugh, St. Paul, Minn.: Buy a pair of rabbits. The first year they will not bring you any profit, but the years after they will bring all the money you will need for school books and other articles. I have raised rabbits for the last few years and find it quite profitable. I sell them both for pets and to the meat market.
Ervin J. W. Huber, Newark, N. J.: I make and sell ink. It costs me fifty cents a gallon. I get twenty-five cents a pint. I make some money occasionally picking berries and weeding gardens. I have a home repairing outfit, with which I make a little money mending shoes, etc. I have a little bank in which I put a cent every day. If we forget to put one in on any day, we put in three the next day—one for a fine. My brother does the same. We have resolved to keep this up until 1902 and then if we haven't any special use for it we will keep it up until we have.

What the Mayor of Boston Says to Boys.

Thomas N. Hart, President of the Mt. Vernon National Bank and Mayor of Boston, is seventy years old, but time has dealt leniently with him. He is another successful man who began life on a farm. He left the farm at the age of thirteen. He found employment in a dry goods house in Boston, afterwards becoming a member of the firm. What Mayor Hart has to say with reference to getting ahead in the world, should have weight with boys. He says: "Whatever success I have attained I attribute to strict attention to business. The young man who starts out in life with the serious intention of making a reputation and a fortune for himself, has a hard and difficult task before him. His

path will not be strewn with roses. He will meet with many disappointments. Ideals will be shattered before his eyes, and often the clouds will hang heavily over him. "The young man who is waiting and watching for the shutters to go up, and is ever anxious to leave on the dot of closing time, who never does any more than is expected of him, will be of little use to himself or his employers. He might as well give up the idea of ever amounting to anything. In my own case, if I may be permitted to make the observation, I worked hard, early and late. I always seemed to anticipate the wants of my employers. I had generally attended to things before they themselves had thought of them. I had always their interests in mind, and thus made myself valuable—so valuable, in fact, that they thought they could not get along without me, and so, one day, made me a member of the firm. "If there be any such thing as luck I think it consists in being on hand at the right time, and the young man who attends strictly to business is always on hand. That boy is sure to be pushed ahead when a vacancy occurs. Success in life is purchased only at the price of personal sacrifice. My own first appreciable success in life was when I was made a member of the firm of my employers. I did not make a great deal of money in that position, but during those six years the foundation for the business of Hart, Taylor & Co. was laid deep and firm. After that it was smoother sailing. "When I stop and consider my early struggles for a foothold in commercial Boston I wonder how I ever succeeded, but I attribute it all to hard work, faithfulness to self and employers, honesty in dealing with all, strict attention to business, sobriety, frugality, and living within my means. "Young men or women who will do this will greatly enhance their chances for making a success in life."

\$8 Paid Per 100 for Distributing Samples of Washing Fluid. Send 6c stamp. A. W. SCOTT, Cobeco, N. Y.

BE YOUR OWN BOSS—Go in Mail Order Business. No capital. For particulars send stamp. H. MOTTER, Box 49, New London, Ohio.

How to Use It.
Clean cavity of tooth, and press firmly into it a piece of the gum. If no cavity, apply to the gum as a plaster. At all drugists, 15 cents, or sent by mail on receipt of price.

Are You + or -?

"I'm the heaviest," said Barker.
"I'm the tallest, though," said Kent.
"You mean the taller, I suppose," said Uncle John, smiling. "You forget the grammar often, don't you boys?"
"Barker forgot, too," said Kent. They had been weighing themselves on the slot machine at the station. Barker carried the pointer around to 93, but Kent only to 87.

As they walked towards home Uncle John said, by way of a little instruction: "When you are an inch taller you will be about two pounds heavier. I mean, if the health conditions are about the same."

"Do you gain two pounds every time you grow an inch?" asked Kent.

"About that, on the average, after you get to be well grown boys. Do you know how high men are?"

"They aren't all alike," said Barker.

"No; but there is what we call the 'average.' In the United States the military average is five feet and nine inches; but that is taller than the general average. If all the men were made of the same height, all the tall ones cut down and their surplus placed upon the short ones, they would be very nearly five feet six inches. That means all the men in civilized countries. But in Africa there are dwarf races that are only four feet high or even less, when full grown."

"I'm more than that," said Kent.

"How much do men weigh, Uncle John? There is an average weight for men, isn't there?"

"Perhaps nearly 130 pounds; but that is a guess. Which do you suppose is heavier, a man or his bulk in water? I mean, if I had a vessel of water just as large on the inside as you are, head, body, limbs and all, which would weigh more: you or the water?"

"The water," said Kent.

"I think I would," said Barker.

Uncle John smiled. "If you were to think a little perhaps you could tell. Did you ever try to float in the water?"

"I can float," said Barker.

"I can, a little bit," asserted Kent.

"Tell me how it is done," said Uncle John.

"You breathe in a full breath," explained Barker, "and then lie still with your body kept straight out."

"What happens if you let your breath all out?" asked Uncle John.

"I begin to sink," answered both boys in a breath.

"What becomes of the water under you and around you when that happens?"

The boys thought a moment, and then Kent said: "I guess it is pushed out of the way."

"Yes; and before you can sink, the weight of your body must push out of the way as much weight of water as your body weighs. That means that the body is heavier than the water. But if it were much heavier even the breath in your lungs, which is much lighter than water

and that acts like a float to keep you up would not be sufficient to keep you from sinking. But the body, the average human body, and water are nearly the same in weight. Some human beings are as light as 950 specific gravity. Water is the standard, and we call water 1,000. Some men's bodies, especially if the bony parts are in great excess over the fleshy parts—what we call thin people—are as heavy as 1,040 specific gravity. Such persons cannot float easily; some not at all."

"What is that you call specific gravity?" asked Barker, neither of the boys understanding very well.

"It means the weight of anything compared with a certain standard. Water is taken as a standard because it is convenient and so nearly universal. There are other reasons that I need not mention. If a given bulk weighs more than the same bulk of water, then its specific gravity is plus, if it weighs less it is minus. If a man were ninety-five one hundredths as heavy as the same bulk of water, his specific gravity would be written like this: .95. If he weighed more it would be written, for instance, like this: 1.04."

Uncle John illustrated by making these signs on the side of a fence they were passing.

"I guess my specific gravity must be plus," said Kent, laughing. "I fell out of Capt. Chesboro's boat the other day and went clear to the bottom."

"You came up again, though," said Barker.

"And that proves that you are not very much plus," said Uncle John. "If you add the force of your hands and limbs to your buoyancy, as you do in swimming, this, and the motion forward, keeps you from sinking."

"Why don't I sink as easy in salt water as in fresh?" asked Kent.

"The specific gravity of salt water is greater. Salt is a mineral and sinks in fresh water. That proves that it is heavier. Your body, by its weight, in order to displace its own bulk in salt water, must 'push away' as you put it, a greater weight. Therefore, it is not so easily done. If the water contained more salt it would be still easier to float in it."

A Very, Very Small Boy.

"Swami" is not a very pretty name, but it serves to identify perhaps the smallest boy of sixteen that has ever been seen. Swami was found three years ago on the Bengal coast in Burmah. He measures 18 1/4 inches in height and tips the scale at only 12 1/2 pounds. He has a sister, Fatma, nineteen years old, who is 19 inches in height and weighs 15 pounds and 3 ounces. The German professors at Berlin who have seen the dwarfs say that they are probably the two smallest human beings in the world.

"CHUMS."

Price 10c, 3 for 25c, mailed postpaid. **AGENTS NOVELTY SUPPLY CO., 78 Dearborn St. Chicago**

The Boy in the Home, Church and School

Some Stories About Eton College.

The great school in England known as Eton College, has been written about recently by two of her sons. Some interesting facts appear in these books. For instance, it is said that Head Master Heath once flogged seventy boys at a single session; Keate flogged more than a hundred. In one of Dr. Moberley's published sermons the word "flagging" in the phrase, "We must revive our flagging energies," was printed "flogging".

One of these writers says that athletics are everything in Eton, studies nothing; that when he left the college his comrades gave him forty cricket bats. Once a tutor cried angrily to an Eton boy who had missed his lessons: "Stupid! Your younger brother could have answered that question." "Perhaps he could, sir," said the boy very respectfully, "but then, he has not been at Eton so long as I have."

A "Vigilance Committee" in a School.

A young lad of fourteen, named William, was the best scholar in a country school. The first class was made up of boys and girls almost men and women; and except for William, the term now begun would be their last chance for schooling. A young college student had been engaged for teacher, and the first day revealed that he had no aptitude for discipline. These great boys and girls were used to a strong hand over them, and generally began each winter with a tussle to see whether they would be obliged to obey rules. At the end of this first day the teacher went home discouraged, and the scholars had concluded to let fun take the place of study that winter.

The first class had remained around the stove, and the talk was generally to the teacher's discredit, when William spoke out.

"I don't want to throw away my winter," he said. "I want to fit for the academy and most of you are not going to school any more. Did you not all notice how finely the teacher explained everything, when we gave him a chance? Why not let him have the chance?"

Some said that he was a milksop; and others, that they wanted a man to teach them, not a boy. But several were sober enough to agree with William. The talk grew warm, and at last William put the matter to vote.

"All who want to learn this winter and will stand by the teacher raise your hands."

All but two put their hands up to that way of stating it.

"Now let us organize as a vigilance committee to keep order this winter. Let us each warn our younger brothers and sisters," said the largest young man in the class.

"Agreed!" all shouted as they went home.

Nothing more was said, but there was a new spirit in that school the next morning. The teacher found attentive scholars, and, as William had said, showed that he had a rare faculty to make studies clear and interesting. By night the whole school liked him. And with the exception of a few cases of insubordination that the public sentiment of the school subdued, the winter passed without friction and proved most memorable for progress in study. A teacher who could not govern became a great success, because the school became self-governed.

They Chased the Mayor.

Mayor James K. McGuire, of Syracuse, who was once a newsboy, has a habit of patting small boys on the head, giving them candy and pennies and inquiring about their pas. A little time ago the mayor was in a part of the city where a score or more of small boys can be seen at any time of night or day on the streets. The mayor got in the center of a ring of boys and dealt out candy and pennies.

The more pennies he produced, the larger the crowd got, until it would have taken a small bank account to satisfy them.

His Honor then gave half a dollar to the biggest boy, telling him to go to a store and treat the others. The scheme failed, for every boy wanted a half dollar.

The mayor made a break for a nearby mill with two score boys after him. They chased him through the mill to the tow-path of the Erie Canal. There His Honor begged the superintendent of the mills to hide him. The superintendent took him through a back portion of the building, got him into a boat and across the canal.

The boys made a vain chase around by a bridge.

Some Things Said by Boys in Answer to the Question Why They Like Their Teacher.

She can stand some fun. She has no pets. We feel as if she were one of us. She likes me, and shows it once in a while. When you don't have your lessons she is so sorry that it makes you ashamed. She takes a good deal of interest in us. She puts us on our honor. She never punishes us because she doesn't feel good. She never flies "off the handle." She always means what she says. She makes things pleasant.

A College Education Pays.

What becomes of the college-bred man? Andrew Carnegie once said, "The total absence of the college graduate in every department of affairs should be deeply weighed. I have inquired and searched everywhere, but find scarcely a trace of him." Then, with what approach a sneer, he asked, "Where is the college-bred man?" Prof. Kratz, Superintendent of Schools in Sioux City, Iowa, has made some investigation. He has found that nearly two-thirds of the Presidents, Senators, and Congressmen have been college-bred men, notwithstanding the fact that only about one man in every two hundred of the adult male population is college-bred. The Professor sent out inquiries to fifteen of the largest cities, with instructions as follows: "Make out a list of the five leading men in each of the following professions and occupations: Ministry, teaching, law, medicine, banking, journalism, merchandising and manufacturing (the last two to be considered as one class). Ascertain whether these men are college men or not. Regard all who have pursued a regular college course for two years or more as college men." From the replies received up to the time the compilation was made, he found that 90 per cent. of the foremost ministers were college-bred, 85 per cent. of the teachers, 68 per cent. of the lawyers, 60 per cent. of the doctors, 40 per cent. of the bankers, 30 per cent. of the editors, and 26 per cent. of the merchants and manufacturers; that out of a total of 533 from whom he had received reports, 55 per cent. were college-bred. Now, if there is only one college-bred man to every two hundred men, and if the college-bred man had no advantage over his fellow-man, we would find only perhaps four to six out of the 533 holding leading positions. Instead of that number, we find

293, or fifty times that number; so that we may say that the college-bred man has improved his chances of success about fifty times. Some say, however, that college education does not improve one's chances for success in general business. Out of 119 leading business men reported to Prof. Kratz, there ought to be about one college-bred man, but we find there are twenty times that number; so that it may be said that the college-bred man increases his chances of success in business about twenty times.

How to Bring Up a Boy.

Mrs. Mary G. Mears, the president of the New York State Assembly of Mothers whose object is the advancement of the education of American mothers, says: "Mothers should try to make the home the most beautiful spot on earth for the boy, so that no other place shall be so attractive to him. Harsh methods should not be used. I believe in the public school system. Boys should be watched in order that the parent may learn the tendencies in the boys' natures and plan their education along the lines for which they seem most fitted. Parents should make their children their companions. Let them eat at the family table. Make the meal time an hour for the exchange of ideas with them. Encourage them to talk freely about what has impressed them in the day's work and pleasure, and gently correct any mistaken ideas in their minds. Give plain and substantial food, with plenty of fruit. Impress the value of order and regularity upon them. Insist upon their keeping early hours, and give them a great deal of outdoor exercise. I approve of the kindergarten methods, and believe that education should begin at the kindergarten. Above all, remember that happy home life makes good boys and superior men. The remembrance of happy home life is an influence that has made home a potent factor in life. The devotion of father and mother is remembered and cherished. There should be a close intimacy between parents and children. Many problems now confronting the home would find solution in this helpful intimacy between parent and child."

The American Chromatic Harp
Only perfect, strongest, lightest, most beautiful and easiest learned. Plays any piano music. Greatest addition to orchestras. Music teacher can't readily instruct and sell them. For circular and sample music send two stamps to American Harp Office & Factory 234 N. Avers Av., Chicago.

Jersey City Convention of the United Amateur Press Association.

REPORTED BY JAMES C. BRESNAHAN.

The Fourth Annual Convention of the United Amateur Press Association was held in the parlors of the Hotel Washington, Jersey City, N. J., on July 2nd and 3rd. Delegates were present from Sioux City, Iowa, Utica, N. Y., Philadelphia, Pa., Newark, N. J., New York and Brooklyn, and in considerable number from Jersey City. The morning of the first day was spent in listening to the reports of the officers and laureate judges and in the reading of communications. The judges in the laureate contests awarded honors as follows: Poet Laureate, J. F. R. Enford, honorable mention, Wm. H. Greenfield; Story Laureate, Louis M. Starring, honorable mention, Geo. A. Seaton; Essay Laureate, Wm. R. Murphy, honorable mention, Louis M. Starring; Editorial Laureate, Wm. R. Murphy, honorable mention, Thos. McKee. The afternoon was spent by the delegates in viewing the sights of New York City and Coney Island. At the latter place the convention photograph was taken.

Tuesday the convention was called to order by President Phillips, of Sioux City, Iowa. After some minor business had been transacted, the committee on proxies made its report. The result of the election was as follows: President, Jas. C. Bresnahan, Jersey City, N. J.; Vice President, Floyd R. Switzer, Utica, N. Y.; Secretary, Guy N. Phillips, Sioux City, Iowa; Treasurer, Chas. E. Wing, Cleveland, Ohio; Official Editor, H. M. Konwiser, Newark, N. J.; Laureate Recorder, Chas. E. Wendemuth, St. Louis, Mo.; Historian, Jas. M. Reilly, Jersey City, N. J.; Eastern Manuscript Manager, Wm. J. Clemence, Nooseneck Hill, R. I.; Western Manuscript Manager, Geo. A. Dolan, San Francisco, Cal.; Directors, Jas. A. Clerkin, Jersey City, N. J., Wm. R. Murphy, Philadelphia, Pa., Thos. McKee, Butler, Pa.; Official Organ, "The Deway," Twinsburg, Ohio. Convention City, 1901, Sioux City, Iowa.

All amendments to the constitution except numbers three and eighteen, were lost on the proxy vote. The convention adjourned sine die at 6:15 p. m. At 7:45 fifteen persons sat at the banquet table. A splendid dinner was served and several excellent speeches made. The following are the names of those who spoke and their subjects:

"Journalism," F. Arthur Atkinson; "The West," Guy N. Phillips; "The Official Journal," Jas. A. Clerkin; "Amateur Politics," H. M. Konwiser; "The Ethics of Amateuria," Thos. F. E. Maher; "Critics and Criticism," Wm. R. Murphy; "Local Press Clubs," Jas. C. Bresnahan; "Should We Have Professional Ambitions?" Jas. M. Reilly, Jr.

Messrs. Reilly and Atkinson were the orators of the evening, and each won great applause. Geo. M. Brazer, of Philadelphia, was the pet and "baby" of the convention, and during the banquet Mr. Reilly, on behalf of the assembled amateurs, in a very witty speech presented to Mr. Brazer a Japanese doll on a rubber string. The incident caused much fun and George carried the doll with him to Philadelphia with its head all scratched over with autographs.

Not a discordant voice was heard. Everyone present voted it a splendid meeting, and many promised to go to Sioux City next year.

Boston Convention of the United Amateur Press Association.

REPORTED BY JOSEPH BERNARD LYNCH.

The Fourth Annual Convention of the United Amateur Press Association was held in Boston, July 2 and 3, with President De Hayn presiding. The address of welcome was delivered by Joseph B. Lynch, chairman of the reception committee. One session was held each day. After the address of welcome, the time of the first session was consumed by general routine business, consisting of the reading of the laureate awards, discussion of proposed amendments to the Constitution and By-Laws, and reports of officers. The afternoon was spent visiting points of interest and historical landmarks in and around Boston. In the evening "The Boston Attending Corporation" tendered a delightful reception to the delegates at the headquarters in the United States Hotel, which was beautifully decorated in honor of the occasion. On July 3 the second session was held, the election of officers being the principal business. The following officers were elected: Charles W. Heins, of New York, President; Joseph B. Lynch, Boston, Vice-President; James A. Clerkin, 563 Jersey Ave., Jersey City, N. J., Secretary; Walter B. Littlefield, New York, Treasurer; Otto W. Henschel, New York, Official Editor; Phillip F. McCord, East Liverpool, O., Historian; Charles A. A. Parker, Laureate Recorder; J. M. Reilly and Charles E. Wing, Manuscript Managers; Samuel De Hayn, Philadelphia, Thos. McKee, Butler, Pa., and Guy N. Phillips, Sioux City, Iowa, Directors. The editorial laureateship was awarded to J. Wm. Townsend, Long Island City, N. Y.; and the poet laureateship to Percy H. Gladstone, Baltimore, Md. The other laureateships are yet to be announced.

Atlanta, Ga., was chosen as the seat of the convention for 1901.

The National Amateur Press Association also held its convention in Boston during the week of July 4th, and many of the members arrived in time to participate in part, at least, in the U. A. P. A. convention. During the afternoon of July 3d the delegates to both conventions were the guests of Mr. Keith, of Keith's Theater who conducted the party through the entire theater, including the electrical department and machinery rooms, giving them an insight into the theatrical business that few people outside of that profession ever obtain.

The banquet was held at the United States Hotel, on the evening of the 3d, Joseph B. Lynch officiating as toastmaster. Toasts were responded to as follows: "The U. A. P. A.," Samuel De Hayn; "Amateurs' Opportunities," J. R. Abarbanell; "N. A. P. A.," Mrs. Edith Minter; "Boston and Its Amateurs," Dr. Wiggin; "Amateuria in General," Theodore B. Thiele; "New York Amateur Press Club," Otto Henschel; "Making Amateur History," J. William Townsend; "The Fair Sex," Eugene D. Swartout; "The Coming Year in the U. A. P. A.," Charles W. Heins; "Boston, 1900, Attending Corporation," B. Franklin Moss.

This convention will go down in amateur history as the most enthusiastic since the organization of the Association.

This year the U. A. P. A. was divided into two factions by politics, each holding a convention in the name of the Association. Both are above reported. We hope the Association may be soon again "United."—Editor.

Twenty-Fifth Annual Convention of the National Amateur Press Association.

REPORTED BY JOSEPH BERNARD LYNCH.

The annual convention of the N. A. P. A. opened its first session on the morning of July 3d at the United States Hotel, Boston, Mass., with President Theodore B. Thiele, of Chicago, Ill., in the chair. New members were proposed, and various committees made their reports. The chief debate of importance was over the legality of the proxy vote. One side contended that as the proxy blanks had not been mailed to members thirty days prior to the date of the convention, according to the constitution, all proxies were illegal and should be thrown out. The other side asserted that the proxies were cast in good faith by absent members, and should be counted even if they did not keep entirely within the letter of the law. It was finally decided, by a yeas and nays vote, that the proxies should be counted. The convention was adjourned at noon until July 4.

In the afternoon the members, in company with the United Association, visited Keith's Theater, the Art Museum, and many other points of interest where the Reception Committees of both organizations had made provision for free admittance of delegates.

The second session opened July 4th amid much excitement. The question of admitting members without full credentials, and other questions of similar import, were ably contested, the convention showing a natural division into two parties, led by Messrs. Edwin Hadley Smith, of New York, and by Rev. F. S. C. Wicks, of Boston. Many able speeches were made, and the parliamentarians had many chances to show their acquaintance with Cushing's Manual.

Nominations for officers followed the controversy. The two nominees for the office of president were Warren J. Brodie, of Cleveland, Ohio, who during the past year was official editor, and John M. Acee, of Atlanta, Ga., who had served as first vice-president. Mr. Brodie's decisive speech declaring himself out of the race left a chance for a dark horse to appear, in the person of Nelson G. Morton, of Boston. The battle of the ballots followed the surprise consequent on the "springing" of Mr. Morton's name on an amazed convention. The proxy strength was for Mr. Brodie, but as he was not a candidate the election was necessarily thrown into the convention. Several ballots were necessary to establish a winner, and on every ballot Mr. Morton gained votes, and was finally elected by a good majority. It would be impossible in the space at command to enumerate the many topics of controversy, or to mention the able speeches made by the delegates. In the speechmaking the New York delegates were especially active and showed good results from their experience in club debates.

The banquet on the evening of July 4th was a success in every sense of the word. Several former amateurs, now professional literary lights, gave able discourses on amateur journalism as it was in their time, which they of course considered the heyday of its existence, while the thirty six amateurs present did justice to a most bountiful repast. Ex-President Truman J. Spencer, of Hartford, Conn., acted as toastmaster. The following toasts were responded to with a precision and eloquence that had a tendency to suggest past masters in the art of amateur journalism, though only three of the speakers were "old timers"—the others being all active amateurs of today: "The N. A. P. A.," Ex-President Willard O. Wylie, of Boston; "Our Official Board," the retiring president, T. B. Thiele; "The Pacific Coast," John L. Pettret, San Francisco, Cal.; "The N. E. A. P. A.," Mrs. T. J. Spencer; "The Ladies," Rev. F. S. C. Wicks; "The Men," by all the ladies; "Our Politicians," T. J. Donoghue, vice president of the Hub Amateur Journalist Club, of Boston; "The Printer," Mr. Spencer; "The Author," John Livingston Wright, of Boston; "Young Blood," John M. Acee; "The Old Timer," Senator H. K. Sanderson, of Lynn, Mass.; "The Hub Club," Rev. J. H. Wiggin, of Boston; "The U. A. P. A.," J. William Townsend, of New York; "Boston's Four," Mrs. Edith Minter, of Boston. A pleasing feature was the pre-

sentation, by Arthur H. Delano, of New York, on behalf of those present, of a check for \$20.00 to Mr. and Mrs. Albert Woodbury Dennis, of Swampscott, Mass., as an evidence of the esteem in which these two newly married members were held. Mr. Dennis was official editor in 1894, and Mrs. Dennis was Miss Harriet Caryl Cox, of Abington, Mass., also a former official editor and one of the leading story writers of the association.

On the 5th, at 10 a. m., the convention re-assembled for the closing session. The morning was occupied in filling out the official board. The entire ticket elected was as follows:

President, Nelson G. Morton, Boston, editor "Kearsarge;" First Vice President, H. C. Jesson, Omaha, Neb., editor "Interpolitan;" Second Vice-President, Edgar M. Hayes, Nashville, Tenn., present address New York City; Recording Secretary, Miss Amanda E. Frees, Chicago, Ill., editress "Ariel;" Corresponding Secretary, Geo. A. Alderman, Wilmington, N. C., editor "Atlanta 1901;" Treasurer, Leston M. Ayres, New Brunswick, N. J., editor "Hebe;" Historian, John T. Nixon, Crowley, La., editor "Fossil;" Official Editor, John M. Acee, Atlanta, Ga., editor "Young Blood;" Executive Judges, T. B. Thiele, Chicago, Ill., editor "Pirate," Warren J. Brodie, Cleveland, Ohio, former official editor, Mrs. Edith Minter, Boston, Mass., editress "Aftermath." Next convention, Atlanta.

THE BOY PHOTOGRAPHER

Edited by JUDSON GRENFELL

THE AMERICAN BOY offers twelve prizes of Two Dollars each for the best Amateur Photograph received during the twelve months in the year, one prize for each month, the competition to be based upon the originality of the subject and the perfection of the photograph. The contest is open to subscribers only. Photographs will be returned if stamps are sent for the purpose. All photographs entered in the contest and not prize winners will be subject to our use unless otherwise directed by the sender, and one dollar will be paid for each photograph that may be used, the prize photographs in any event to be our own, without further payment than the payment of the prizes. Write on the back of the photograph its title, with a description of the picture, and the full name and address of the contestant.

real necessity for any such sized camera, which can readily be believed when it is understood that the cost of each plate is \$125. No plate should be put into a camera without being brushed to get rid of the dust, which, in spite of all the manufacturers can do, will sift in and settle on the face, leaving, when the plate is developed, tiny dust holes. To get the dust off these monster plates another method is used. A man enters a properly constructed door in the bellows of the camera, and when the plate is in place removes the dust with a brush as big as one of those used in painting a house. Isn't it about time to conclude that with this camera the limit of availability as to size has been reached?

Lantern Slides.

Perhaps by this time some AMERICAN BOY readers have advanced far enough in photography to make lantern slides. If so, they have entered on one of the most fascinating of diversions, and if they have patience and perseverance will never regret it. The first step in this pursuit is to make slides by contact, which is very simple. All that is necessary is to buy a box of a dozen lantern slide plates, which will cost fifty cents, and then, going into the dark room with your negative, place the film side of the unexposed plate to the film side of the negative selected, putting both in a printing frame. Then expose to any kind of a white light, from one to ten or more seconds, according to the density of the negative. One way to make an exposure is to open the side door to the dark lanterns, another is to turn on an electric light for an instant, or to use a common kerosene lamp. After the exposure is made develop as you would any other plate; then fix in hypo. If the timing has been correct you will have a beautiful positive, being white and black where it should be. If one has no lanterns, the pictures make nice hangers for windows.

The negatives from small cameras make as good lantern slides as do those from large ones, which have to be reduced. There is always some part of a negative better than the whole, and it is this that the lantern slide maker should select. Often a picture is improved by leaving out sky, or foreground, or some commonplace building. This is a matter of study and experience. Just keep at it until the "knack" of doing the right thing at the right time becomes second nature.

AT FLAG RAISING.

The Biggest Camera in the World.

A camera, the bellows of which when extended will hold fifty men standing up side by side, is worth a word of description. Such a monster has really been made, and it is said to have been tried at the recent national convention in Kansas City, Mo., of one of the great political parties. The actual size of the plate used in the camera is 4 feet 8 inches by 8 feet, and the plate holder itself weighs 100 pounds. Such a big plate requires a much larger box, which in this case is 6½ by 9½ feet. When the bellows of the camera is extended, the distance between the plate and the lens is 20 feet, and it is in this that the fifty men first spoken of can stand, and yet not be so very much crowded. The bellows is made of thick rubber sheeting, braced in the folds with quarter inch veneered wood frames.

While the camera box itself costs but a few hundred dollars, the value of the lenses run into the thousands. This monster camera has two, each fifteen inches in diameter. One is five and the other ten foot focus, and each weighs 100 pounds. They are what is known as combination lenses, and are composed of six parts, each part having a use that causes the picture to have a perfect representation on the surface of the plate. The lenses are said to be worth \$5,000. The weight of the entire camera, ready for use, is only 200 pounds less than two tons, and for efficiency and reasonable rapidity in manipulating it, at least a dozen men are required.

It is to be hoped that no ambitious AMERICAN BOY reader will attempt to build such a large camera for himself, at least without first consulting his papa, for after all such monsters are to be regarded more in the nature of freaks than really of any particular value. In these days of perfect enlargements there is no

Photographic Notes.

Care in selecting scene, exposing plate, developing, fixing, printing and toning will produce a good picture.

As a rule films give better cloud pictures than ordinary plates. But then, they ought to, for they cost twice as much.

When the corks of your chemical bottles become old and discolored change them for new ones, for old corks are depots of impurities.

Keep your solutions cool, and the superior effect produced over chemicals that are lukewarm will astonish you. In summer the ice box is none too cool a place for the developer.

In taking snap shots be sure to hold the camera perfectly steady as well as horizontal. A slight movement of the camera will cause a considerable distortion of an object fifteen or twenty feet away.

"ROUGH" AND "READY"

A BOY OF THE "TURKEY FOOT OIL FIELD, W. VA.
SECOND PRIZE PHOTO (JUNE CONTEST).
BY GEO. E. ROUSE, PENNETH, W. VA.

Rubber or fibre trays are better than those of stone or glassware, as they are not so apt to scratch the plate or film. Besides, the harder ware sometimes chips off, and the pieces, rolling over the tender film, generally ruin the negatives.

Bad water is the cause of more failures in photography than it is given credit for. Distilled water is the best to use, and as it can be so easily obtained, no amateur should attempt to get along without it. In some places in the United States, notably in Detroit, Mich., the water from the penstock will do fairly well after filtering, but in other places there is so much iron or lime in the water, that it is a wonder the chemicals produce anything.

The Popular Belgian Hare.

KATHERINE LOUISE SMITH.

The Belgian hare is the latest craze in this country and the little animal has already obtained a strong foothold, especially in California. The little bunny is not yet common, but there is promise that the cultivation of these animals will soon assume the proportions of an industry.

The Belgian hare originated in Belgium, and sometime early in the present century a number of them were sent to English fanciers who, taking into consideration size, shape, color and so on, finally adopted a standard. After repeated trials they succeeded at last in producing an animal with the color of their graceful English hare, but to accomplish this took many years and the change was not brought about in any haphazard way.

In this country the hare first attracted attention eight years ago during the World's Fair, and of late they have become so popular that an association known as the American Belgian Hare Club has been formed and several exhibitions held in some of the large cities. Hares and rabbits contribute largely to the meat supply of Europe. In France some seventy millions are consumed an-

CHAMPION PALACE QUEEN

THE 1898 CHAMPION DOE OF ENGLAND. WINNER OF 16 FIRST AND 10 SPECIAL PRIZES AND GOLD CHALLENGE CUP, CRYSTAL PALACE, LONDON

nually and fully half as many are imported into England. The average price received by dealers from consumers is forty cents. The hare is used commonly for food among the working classes, who value it for its nutritive qualities, and in France the pelts have value, as the hair is used for hat making and the fur is dyed to imitate seal and beaver. In this country the industry is about to be started in Chicago for the purpose of food and preparing the fur for market under the name "electric seal." The proprietors of packing houses in Kansas City, where Belgian hare figures as a delicacy on the hotel menus, have signified their intention to can hare's meat as soon as the supply becomes sufficient.

The growing of these little animals has assumed large proportions in this country already, especially in Southern California. While Denver is looked upon as the pioneer city in the business, its center is Los Angeles, where one company alone has invested fifty thousand dollars in the enterprise. Here, as elsewhere, hundreds of firms have turned their attention to the little brown hare and thousands of rabbit warrens are housing the interesting animals. At a conservative estimate there are one hundred and fifty thousand rabbits, old and young, in and about Los Angeles, and the care of the animals gives employment to nearly a thousand people who thrive on the industry, for it takes many persons to build hutches and attend to the animals. Many firms have expensive equipments costing thousands of dollars, and others have boxes in the back yard screened with wire netting, the owner being some boy or woman. As the Belgian hare is a handsome little fellow, graceful and clean in its habits, interesting and affectionate any child may handle it with perfect freedom.

The casual observer has generally looked upon the rabbit as a worthless pet, but the Belgian hare, through its own merits, has forced recognition wherever introduced. The flesh of the hare has not that rank flavor so common in ordinary rabbits. It is white, fine-

BOYS IN THE ANIMAL KINGDOM

grained, juicy, tender and pronounced by epicures as superior to chicken. As compared with the cultivation of poultry Belgian hare raising is much more interesting and profitable. The hares are easily cared for, are cleanly, seldom sick and require little space. These considerations have made them a back yard pet, for even in limited space the little fellows can be raised. There are thousands of bright boys and girls who could be raising these pets if they only knew how simple and easy it is to cultivate the little animals. The amount of money that can be made in this industry is exemplified by a firm in California who invested less than ten dollars and in ten months realized over three thousand dollars. This is the result of the animals being very prolific, and as it costs very little to feed them the profit is enormous. The prices of some of the best hares range from fifty to five hundred dollars, and an ordinary hare sells for twenty five dollars.

Every good specimen must have "points." They are about as follows: Color is considered an essential thing, the champion hare being generally of a golden tan shade, any tinge of gray is a defect. The distribution of white and black markings is another important consideration. The white should show only on the under parts of the hare, the sole of the foot, the tail and a small part under the jaws; too much in this last place being a grave defect. White on the forelegs or nose is considered a disqualification. Black markings should be confined to two places, "lacing" on the ears and "ticking" on the back. The "lacing" should form a black rim on the edges, well defined and distinct. The tint should be blue black, smudgy black being considered a defect.

Another important item is shape. In a general way the animal should be long, graceful and similar to the wild hare. Short, thickset hares are undesirable. The back should be arched, forelegs straight and slender, and hind legs long from back to toe and powerful in proportion to the forelegs. The ideal head is well poised with the nose slightly convex. The greatest beauty of the Belgian hare is the eye, which ought to be large and liquid resembling a fawn's. The ears should be about four inches long and the standard weight of the animal about eight pounds.

While it is given as a general rule that a rabbit will eat anything a goat does, still his appreciation of careful feeding is made manifest by results. Indiscriminate feeding may do for the common stock, but aristocratic hares have three regular meals a day and often a light lunch between. On the other hand they cannot be fed too freely, for like the fine race horses

FAMOUS LORD ESPRITAIN

A BUCK WHICH HAS PAID HIS OWNERS A PROFIT OF \$4,500.

their shape must be kept firm and free from superfluous flesh. Oats have been found to be a clean, wholesome food and something the little animal never tires of, if made appetizingly. A handful of oats or small carrot or other green stuff seems to be highly appreciated for the morning meal. Sometimes bunny likes warm mush, composed of equal parts of oats and bran and a little linseed added makes his fur sleek and soft. The bill of fare is often

varied and care must be taken not to give much green stuff.

It is an interesting sight to visit some of the large rabbitries, and a visitor feels more than repaid for the time he spends there. A good keeper sees to it that his hares are dry in winter and cool in summer, and the hutch or box arranged so that the air can circulate freely without exposing his pets to draught. The pens are kept scrupulously clean and earthen vessels used for food and water, as they are cooler and can be kept clean easier. Of course the hare must have a comfortable abiding place if sickness and consequent loss is to be avoided. There are many sizes of hutches or houses for hares in general use, but two feet by six by eighteen inches high is all that is necessary for one hare. The bottom of the hutch may be either earth or boards, and the sides and top, boards or wire netting. The front must be netting with a door. A dry goods box can be fitted up for a cheap hutch. The run or pen may also be enclosed with wire netting and must be located so the hares will not be

CHAMPION DASH

WINNER CHALLENGE MEDAL, 22 FIRST AND SPECIAL PRIZES IN ENGLAND

disturbed by cats, dogs and storms, for while the Belgian hare thrives and multiplies on small rations and with little attention, it always repays one for good care. Some of the hutches kept by large firms are in large buildings erected especially for the purpose. The interiors have rows of three-story hutches from sixty to eighty feet long, and in these fully two thousand animals are cared for, some of them valued at five hundred dollars each.

The champion hares are often exhibited and judges are appointed, fine points scored and pedigree kept just as in a highly prized race horse. Much care is taken to prepare the hares for the exhibition. They are not only fed carefully, but are groomed daily with a soft brush and cloth, and a few days before the show are rubbed with a preparation which imparts a beautiful gloss to their coats. They are also taught to stretch and pose on a table or box daily, and as the Belgian is an intelligent animal, he apparently likes to be manipulated. Some different attitudes can be noticed in the accompanying pictures, which show in a measure the beauties of these animals.

While California has been considered an ideal home for the hare, and some of the finest animals ever produced in this country are in the rabbitries of Southern California, there is no doubt but that the hare can be raised anywhere in the United States. It is a hardy animal and thrives under almost any condition, and in a northern country, where the winter coat "sets" for a long period and is heavy and the hair long, the pelts bring a good price. Any one attempting to raise Belgians should purchase animals as near to the standard as he can afford, and when they begin to multiply the best can be kept for stock, as no one would think of eating a high priced hare. The finest animals in England and America are related to each other, as shown by their pedigree, which traces back to a common ancestry.

The illustrations are from photographs of some of the highest priced Belgian Hares in America. The hares belong to the Meadowbrook Belgian Hare Company.

The Partridge.

SCOTT B. WILLIAMS.

In this State (Arkansas) you seldom hear the word "quail." Here the bird is called "partridge." Partridges are very intelligent birds. Their color resembles that of an oak leaf that has fallen in autumn. The bird has a white topknot, which looks very pretty contrasted with its brown body. The partridge begins to lay in May, some laying as many as twenty five or thirty eggs. It builds its nest in sage grass, on pine-tops, but never in a tree. When the young hatch out in June and July they resemble young guineas. The mother partridge loves her young and will resort to many tricks to distract the enemy's attention from them, so that they can escape. Once I was walking through a cornfield and I came upon an old partridge and her young. The mother ran toward me and fell down fluttering as if her wing had been broken. I stopped and watched her and after the young had time to escape she flew away. At night partridges roost on the ground, forming a circle, with their heads turned away from the center. There is nothing more pleasant in the spring than to listen to the "Bob, Bob White," of the partridge.

BOYS IN GAMES AND SPORT

Kite-Making and Kite-Flying.

GEORGE F. LORD

All boys like to fly kites, but few know how to make them properly. The kite made by the average boy will fly just so long as he "flies" over the ground

like a race horse. But this method of kite-flying is so tiresome and unsatisfactory that our readers will be glad to know how to make a kite that will "stand" in any moderately strong breeze, whether the kite-string is tied to the fence-post or held by the hand.

A kite should be strong, light, and so put together, strung and balanced that it will lay square against the wind, and rest on the breeze in as nearly a vertical position as possible. If a kite is too heavy for its size, it will not stand. If the belly-band is on crooked, or the tail too short, it will dive. If the framework is too weak, it will break while in the air, or when accidentally striking the ground.

We will, therefore, describe in detail the construction of an ordinarily shaped kite that is light, strong and well-balanced, and can be depended upon to stand whenever there is a steady breeze.

THE FRAME.—Procure three sticks of straight-grained hard wood about one-eighth inch thick by half an inch wide (oak, ash or birch are good woods to use). Cut two of the sticks twenty seven inches long, and the third eighteen inches long. About half an inch from the ends of each cut some notches as shown in Fig. 3. Then mark with a pencil the middle of the eighteen inch stick, nine inches from either end, and lay the half inch sides of the three sticks together with the short stick on top, so that one of its ends will be even with the ends of the long sticks. Fasten them together by driving a thin wire nail or brad through the middle point of the short stick. Use a nail long enough to project from the under side; then clinch it by hammering the end over sidewise into the wood.

Now open the sticks to the position shown in Fig. 1. Tie the end of a ball of strong brown stitching twine on the notch at B. Then take the string to A and fasten it as shown in Fig. 2. First

Fig. 2

make the single loop B, as in the lower figure; then pass A up through B as indicated by the arrow. You will then have the loop shown in the upper figure. This will hold very well when drawn tightly around the notches. Fasten the string to the other ends F, E, D and C, in the same manner, and tie it again at B, but be careful that the distance F-E is less than A-D, as shown in Fig. 1, and that A-B and C-D are equal. If the frame has been

carefully made, the distances A-O, B-O, C-O and D-O will each be one-half the length of A-D, and one-third the length of either B-F or B-E. If the frame is crooked, it must be altered until correct. Be very careful about this, as the kite will certainly dive if it is out of balance.

Fasten the tail-band H to the frame by tying it around the notches at F and E, and you are ready to put on the paper. A good kind is the yellowish paper that comes around packages from

dry goods stores. It is light and strong.

Fig. 3.

Don't use newspaper, which tears very easily, or heavy wrapping paper, which will prevent the kite from standing. Cut the paper about two inches larger than the frame all the way around, and cut a slit at each corner so that it can be readily folded over. Now cover the two-inch margin with mucilage, starch paste or flour paste, fold it over the strings and sticks, and set the frame in a warm place to dry.

THE TAIL.—While waiting for the frame, you can make the tail. Many boy kite-flyers have the idea that the only precaution necessary in making a kite-tail is to be sure that it is heavy enough.

Many a time have we seen a fine kite, with the tail made of a piece of string carrying a stick or weed, sail gloriously up into the air, turn a somersault, and dive ingloriously down again to be dashed to pieces on a house-top or hung ignominiously from a telephone wire. The trouble was all in the tail. While it should always be heavy enough to prevent the kite from laying flat on the breeze, it must also be long enough to prevent the kite from diving every time the wind shifts. The reason for this is that the kite can only stand still when it lays square against the wind. If the wind shifts to the right, for instance, the kite immediately moves to the right to get against the wind. If the wind shifts quickly, and the kite tail is short, the rapid sidewise motion of the kite causes the tail to stand out at one side, instead of hanging in its place below. With nothing to hold it down, the kite "keels over" and dives. The best way to prevent this accident is to make the tail so long that some of it always hangs

THE BEST TOE CLIPS EVER MADE, 25 CENTS A PAIR

Don't scar or mar the finest shoe. Don't strike the ground when you coast. Hold on like grim death—fit the foot—release it instantly when you want to. Made of tough steel—won't break. Many riders use two pairs—then the pedal is always "right side up." We have a good opening for a few agents.

Nelson Mfg. Co., Grand Rapids, Mich.

HOW TO BUILD A PLAY HOUSE

A NEELY HALL.

THERE are very few American boys who own nice play houses, and of these the greater number have them built by carpenters. How much nicer it would be to build one yourself, and save your parents the expense of paying for labor. Many a boy might have one but for the cost of the material, and how much more he would prize it if it was built by his hands.

By following the directions and illustrations given below, a very handsome little house may be built that will cause you to be envied. These plans are for a structure twelve feet long by eight feet wide, with two doors and one window, but these may be easily altered if the builder so desires. It will be supposed that you can procure enough two-by-fours for the rafters, beams and studs, two pieces of four-by-four timber each twelve feet long for the sills, and four pieces each six feet six inches long for the corner posts. For the floor, roof and sides rough lumber will do, but you can secure grooved flooring at such a low price that it will pay you to use it, for it will put a finish to the house and at the same time make it air-tight.

FIG 1 FIG 3

First level the ground as smooth as possible, and then lay the two four-by-four sills, parallel to each other and at a distance of seven feet four inches. Saw up seven two-by-four beams, each eight feet long, and spike them on to the two sills two feet apart. (Figure 1.) Now

take your four corner posts and cut a piece four inches wide by two inches thick from one end of each, and a piece two inches long by two inches thick from the opposite end of each (see Figure 2), after which spike them at the four corners with the end in which you cut the two-by-four notch fitting over the end beams, as in Figure 3. For the side plates cut two two-by-fours each twelve feet long, and for the end plates two pieces, each eight feet long. Spike the ends of both side plates to the corner posts. Cut a piece four inches long by two inches thick off each end of the two end plates (Figure 3), and slip them into the places already made for them in the corner posts, after which saw up four pieces of two-by-four each six feet six inches long, for studs. These should be placed between the side plates and sills, two on each side, at three and one-half feet from the corner posts. The window is to be made in the center of one side. At three feet from the sill, nail a rib between the two studs and another three feet higher, thus leaving a space four feet long by three feet high for the window. When this has been done, saw four more studs the same length as before. From one end of each of these cut a piece four inches long by two inches thick, and place two at each end of the house, the prepared ends fitting over the beams. These should be two feet six inches from the corner posts, so as to allow for the doors between them. Out of two-by-four timber cut six rafters each five feet nine inches long, and miter each end at an angle of forty-five degrees, and in the ends which are to rest upon the side plates, cut a notch (Figure 4), after which nail them together in pairs. Now take one pair and set it in place at one end of the framework, with the notches

FIG. 2.

fitting over the side plates. Strengthen this by means of boards, until the roof is put on, after which nail a pair at the

opposite end and one in the center. To strengthen the center rafters, nail a piece of two-by-four (eight feet long and

FIG. 4.

horizontally and leaving the spaces for the doors and window, after which roof the house with twelve inch boards. On top of these lay your shingles. Now lay your floor with matched flooring and if you can secure enough lumber, it will greatly add to the appearance of the house to cover the walls and ceiling with the same.

You had better have your window sash made at a carpenter shop, as it is difficult to make neat and true, but the two doors are much more simple

FIG. 5. FRAMEWORK COMPLETED.

and will take very little time to construct. Having all your woodwork completed, paint both inside and out with several coats of some pretty paint and your house is ready for use.

H. C. CROWELL, DEPT. A, Cleveland, O.

Questions Answered.
D. J. D., Pittsburg, Pa.—California state revenues have very little value as there are very few collectors who collect them, and all state revenues are left out of the printed albums for this reason.

M. W. P., Greene, N. Y.—We should advise you not to buy a Great Barrier Island stamp, as they were never used postally nor issued by any government, and from the view of a stamp collector they are simply fakes.

R. N. S., Springfield, Mass.—I cannot tell from your description what the stamp is, but if you will send it to the editor of THE AMERICAN BOY, he will see that you are given an answer in the next issue of the paper.

M. H. F., West Unity, Ohio.—The stamps you sent us are as follows: 5kr red Bosnia, 7 blue Russia, 5 maroon Switzerland, 3pf brown Bavaria and 20pf blue Wurtemberg. They are all very common stamps, such as you would get in a 100 variety packet for 10 cents.

B. M. S., Berkeley, Cal.—The stamps which you sent for examination are all German, Austrian and Hungarian revenues, except number 4, which is an Austrian unpaid letter. Foreign revenues are not collected much in this country, and therefore have little or no value.

H. M. H., Lansdowne, Pa.—The three stamps which you enclosed for inspection are counterfeits of United States local stamps. Most of the varieties of the local stamps have been counterfeited, so a collector should be very careful as to what he buys. What I said in regard to the Confederate stamps to "T. G. S." would also apply to United States locals.

D. D. M., Benton Harbor, Mich.—The stamp you have found is a 6c envelope of 1873 and depends on the color of the envelope as to how common it is. The cream paper is worth about 50c and the amber 25c, while the white paper is only worth 15c. All envelope stamps should be cut square to fit the spaces in the International album, or kept entire. If they are cut to shape (that is, round) they have no value at all.

J. B. B., Jr., Poughkeepsie, N. Y.—A 3c 1869 without grill, if unused, is worth a great deal, but used they are not worth much, as the grill is sometimes so faint that it cannot be seen except with a glass, and, therefore, collectors do not care to buy them except unused. The 10c green envelope is worth \$1.00, and the 3c 1869 unused \$15.00. When you ask for prices we quote prices at which you can buy good specimens, but you must remember that when you want to sell, you will have to take less.

J. H., Knightstown, Ind.—1c and 2c stamps of the present issue, if they are tied up in packages of 100, are worth 5c per 1,000. Any of our advertisers will inform you how to sell them. These stamps are of no value for collecting purposes, as they are so common that anyone can obtain them, but some people use them for making stamp plates. I once knew of a man who covered an entire set of furniture with 2c ones lightly cancelled, and varnished them with white varnish to prevent their coming off. The labor was immense, but the furniture looked very fine.

W. P., Woonsocket, R. I.—The first stamp you mention is Serbia. The Cuban stamp and the revenue stamp are worth something, but we cannot tell from your description just which issue they are. Your 5c registered stamp is Canadian. The Heligoland stamps, if they are unused, are probably reprints which are not worth more than 1c each. A reprint

is a stamp printed from the original plates (which were made by the government) by private parties and are not good for postage.

T. G. S., Jeffersonville, Ga.—Confederate state stamps are some of them very valuable and others common. The provisional issues of the different cities are scarce, but the general issues, which were used all over the Confederacy, are most of them common. All Confederate stamps used should be kept on the original letters or envelopes, as they are more valuable in that condition. There have been many counterfeits of these stamps, and so when they are on the original envelope it is easier to show that they are genuine.

A. M., Hamilton, Ontario, Canada.—Newspaper stamps of the United States (the use of which has been discontinued) were supplied by the Government for use in the larger Post Offices throughout the country. The stamps were never used on papers, but when a postmaster received an issue of a paper or magazine to be sent through the mails he stuck these newspaper stamps in a book provided for the purpose, which showed that the postage had been paid, and every once in a while when the accounts were verified these stamps were cancelled. They were never supposed to be used for any other purpose. As the postage on 100,000 papers all mailed at once would be a very large amount, the stamps were made in all values, as follows: 1c, 2c, 5c, 10c, 25c, 50c, \$2, \$5, \$10, \$20, \$50 and \$100, and in 1875 there was also a 1c, 6c, 8c, 9c, 12c, 24c, 36c, 48c, 96c, \$1.92, \$12, \$24, \$36, \$48 and \$60. The old rate of postage required the values last mentioned, but the change of postage to a cheaper rate made the 1c-\$100 set necessary. When the use of these stamps was discontinued about two years ago the government placed on sale at a few of the larger offices complete sets of these stamps at \$5 a set, and as all remaining unsold were withdrawn last January, the sets are now unobtainable except from the dealers.

Unpaid Letter Stamps are placed on letters which have been mailed without sufficient postage to carry them. These stamps were first issued in 1879 and there have been six different sets issued since then. The denominations are: 1c, 2c, 3c, 5c, 10c, 30c and 50c.

Official stamps were first issued in 1873. These stamps were the same designs as the regular issue of that date, but all values were printed in the same color and had the name of the department of the government in which they were to be used printed at the top instead of "U. S. Postage." There are nine sets of these stamps, as follows:
Agriculture, nine stamps, 1c-30c; color, yellow.
Executive, five stamps, 1c-10c; color, carmine.
Interior, ten stamps, 1c-50c; color, vermilion.
Justice, ten stamps, 1c-90c; color, purple.
Navy, eleven stamps, 1c-90c; color, blue.
Postoffice, ten stamps, 1c-90c; colors, black and white.
State, eleven stamps, 1c-90c; color, green.
Treasury, eleven stamps, 1c-90c; color, brown.
War, eleven stamps, 1c-90c; color, red.
Those with eleven values are 1c, 2c, 3c, 6c, 7c, 10c, 12c, 15c, 24c, 30c and 90c.
Those with ten values have no 7c.
Agriculture has no 7c or 90c.

The Oldest Coin in America.

P. VANDER EIKE.

Are any of the readers of THE AMERICAN BOY in possession of a Roman denarius? If so, let us hear from you through these columns.

Mr. C. A. Iffert, instructor in German in the public schools of New Glarus, Wis., is the fortunate owner of a Roman denarius, coined about 100 or 75 B. C. So far as known, there is but one other coin like it in the United States—the one purchased by the government for the coin collection at the U. S. Mint at Philadelphia, by which this was identified.

Mr. Iffert's coin was found at New Glarus, Wis., about three and a half feet below the surface in a lowland. One of a company of workmen employed in excavating for the foundation of an ice house for the brewery, picked it up, mistaking it for a nickel. After discovering his mistake, and not knowing the value of the coin, he sold it to the present owner for ten cents.

The coin is about the size and thickness of a nickel. The metal is a bronze composition, washed with silver. On the obverse side in bold relief is the figure of a head, facing to the left, with a Latin monogram and a few Greek letters to the right. On the reverse side are two human figures in the act of walking to the right; each is carrying something resembling a lance in his left hand, while the right is leaning on some object behind; above their heads and between the two figures is a representation of an anvil and a pair of tongs. There is no edging on either side. In the ancient times of Rome, different families were allowed to coin money, and each family had its own design. The earliest known denarius was coined about 269 B. C. by the family of Carissia. This coin, as mentioned before, was coined by the family of Caesia.

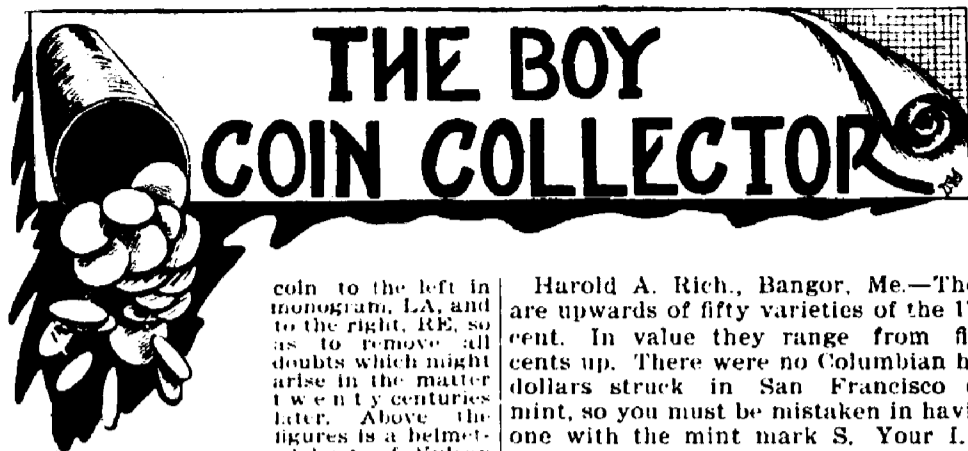

How the subject of this sketch came to be here is a matter of conjecture. This land was first brought under cultivation by the Swiss, who came here as a colony in 1815. None of the descendants of these settlers have any remembrance of such a coin being possessed by their ancestors; further, it would hardly have been possible for it to become covered so deep by cultivation in so short a time. The only plausible theory remaining is that the coin was lost by French traders who frequented this region during the seventeenth century. The surface being very uneven, rains and gravity acting together for more than two hundred years could easily have covered it to the depth at which it was found.

The denarius owned by the government cost two hundred and fifty dollars. Some collectors would probably pay one thousand dollars or more for the New Glarus coin.

To point a moral and adorn a tale the coin editor is glad to give place to the contribution of our correspondent. The editor has said before, that because a coin is old it does not become necessarily rare, neither because it may have been held long in the family or may have been found in some out of the way place or under peculiar circumstances, does it become any the more rare. The peculiar history of this coin, as far as known, may give it a little more local interest than a similar one in the possession of Mr. A or Z, though the latter may have a far more portentous history if it could only speak for itself. If these coins could only speak what strange stories they might tell. The imagination can hardly conceive what they may have passed through in the past 1975 years. How much of joy, how much of sorrow, may they not have been the mute witnesses since they were first struck amidst the decadent scenes of the first republic of Rome until they rest in the greatest republic of all the ages?

This family, Caesia, was only plebeian or of the common people. They had no pride of ancestry and were of little note at the time, and posterity knows nothing of them outside what this little coin may tell us. The Caesia worshipped the gods of Rome. They never knew of Christ, and Paul had not yet proclaimed from Mars Hill or been bound prisoner to Rome, and so in their veneration they put the head and bust of Apollo Vejois on the obverse of the coin and we see him with his back turned in the act of throwing a spear with his right hand. The monogram AP may be either an abbreviation of Apollo or Argentum (Publicum public money).

As a further evidence that they were a religious family, they placed on the reverse of the coin two youthful half-naked figures seated, each with a spear in his left hand. A dog is between them. Plutarch and Ovid would say that these figures were the lares or household gods, but we are not left in the dark for the moneyer placed on the

coin to the left in monogram, LA, and to the right, RE, so as to remove all doubts which might arise in the matter twenty centuries later. Above the figures is a helmeted bust of Vulcan and a pair of pincers or forceps. In the exergue we find L. Caesia, and now we know the denarius was coined by Lucius Caesius, the family moneyer, who was a monetary triumvir in or about 75 B. C., and so we have the date.

We have before said that numismatics was the "torch light of history." But for

CAESIA, ROMAN FAMILY DENARIUS. (Enlarged one-third.)

this single coin we would have never known of such a family as the Caesia. This is but a fragile thread, but there are thousands of similar strands which, when joined, unite distant periods of time and bind the centuries with a strand so strong, so large, that history is not only corroborated, but made.

It is a matter of much regret to the coin editor that this denarius is not worth the value our contributor would indicate. We wish it were, for we have one and know where there are quite a few in America that could be gotten for about a dollar each, which would leave us a fair margin.

The Numismatic Sphinx.

Chas. J. Walker, Wentzville, Mo.—The half dollar of 1857 is worth face value only.

Merritt E. Gill, Grand Rapids.—See answer to Joseph Gallagher and Alfred Bragdon.

Box 34, Village Creek, Iowa.—Your coin is a Denmark one-half skilling and is common.

Jules K., Eureka, Nev.—Your 1838 half dollar, O between head of Liberty and date, is worth seventy-five cents.

Emanuel G., Gaena, Ill.—There is no premium on the dollars of 1894 and 1895. An 1839 dime is worth twenty-five cents.

C. R. F.—A silver half dollar of 1818 is worth seventy-five cents. The other rubbing is too poor for us to identify the coin.

C. W. Ervin, Church, S. C.—Your 1837 dime, "E pluribus unum" type, if in good condition, sells for twenty-five cents.

X. Y. Z., Utica, N. Y.—The 1852 silver three cent piece sells for fifteen cents. All the current Canada copper coins are very common.

W. S. C., Denver, Col.—Regarding the 1891 dime, you are misinformed as to the mint. It was the San Francisco mint which issued only twenty-four, and which are consequently so rare. The Philadelphia issue of this year is quite common.

Claude C. Cunningham, Delta, Cal.—A Spanish two real piece of Charles III (1759-88), if good, would sell for about thirty-five cents. This real Spanish and Mexican silver is very common, and unless in at least good condition have only a bullion value.

Geo. H. Cornell, Brewster, N. Y.—A half dollar of 1809, in the condition of yours, is worth seventy-five cents. The two varieties of the half dollars of 1873, with and without an arrow-head each side of date, are worth seventy-five cents and one dollar each.

Karl W. Johnson, Union City, Pa.—The 1798 cent is worth twenty-five cents. Your German coin of 1845 with a crowned monogram, we presume to be from Hanover, but in the absence of a rubbing or detailed description, cannot state positively. Your other coin face value only.

Harold A. Rich., Bangor, Me.—There are upwards of fifty varieties of the 1791 cent. In value they range from fifty cents up. There were no Columbian half dollars struck in San Francisco (S) mint, so you must be mistaken in having one with the mint mark S. Your I. L. Wing token is common.

William Sampson, Rio, Wis.—Your copper-nickel cent of 1856 is a pattern piece. Like the other small cents of 1856 it was issued only in proof and never intended for circulation. The copper-nickel cent, like all the small cents of this date, is quite rare and brings from four dollars and a half to seven dollars and a half.

Alfred Bragdon, Mattapan, Mass.—The 1857 and 1858 eagle cents are worth only face value. The rare eagle cent is of 1856. The Prince Edward Island "Speed the plough" halfpenny sells for 20 cents. The Canadian "Ships, colonies and commerce" and New Brunswick halfpenny of 1843 are common. Your last coin is probably an East Indian piece.

Robt. M. Clayton, Hannibal, Mo.—Most of the large cents between the dates of 1817 and 1857 can be had in fair to good condition for from five to ten cents each. All the silver coins with dates between arrow points of 1853 are common. An 1829 dime is worth 25 cents. Your 1849 ten centimes of William II. (1840-49) sells for 20 cents. Mexican dollars, unless fine, are worth only bullion value.

C. Lineback, Carthage, Ind.—The half dollar of 1796 is an exceedingly rare coin. The hole through the six in your piece is most unfortunate, for a perfect coin of this date in the otherwise good condition yours seems to be, should be worth \$200.00, and we know of one lately sold for this sum. Your Spanish real of 1762, Charles III. (1759-88), and English sixpence, 1821, William IV. (1830-37), are both very common.

Willie Halsey, Chicago, Ill.—We do not know the value of a ten cent bill on the Columbian Bank of Washington, D. C. Perhaps some of our readers can give the information. The 1865 three cent nickel is worth only face value. 1877 is the only date that commands a premium. 1859 cents have no premium. Holed, disfigured or mutilated silver coins are only worth bullion, or about half face value.

Charlie Van Norden, Daytona, Fla.—Your rubbing is taken from a 1-3d Rix-daler of Gustavus III. (1771-92), of Sweden. The rubbing shows it to be a nice coin, such as the dealers would charge seventy-five cents for. The prices usually quoted in these columns are such as the dealers sell for. It must not be supposed that they would pay these prices, for they are in the business for profit to themselves the same as persons in any other line of business.

C. E. Graves, Hatfield.—Obverse: The head of George I. to right. Inscription "Georgius Dei Gratia Rex." Reverse: Hibernia with harp seated. Inscription "Hibernia, 1724." This is a Wood's half penny, one of a series of coins struck in England for use in Ireland. The Irish people refused to use them and they were sent to America. This piece is worth at least fifty cents. The cent of 1798 and the half cent of 1803 are both common dates, but the condition of yours would make them worth twenty-five cents each. Your "Auctore Connee," 1787, is a Connecticut cent, worth from twenty-five to fifty cents. A good 1812 cent is worth fifty cents.

Kaler Hackman, Womelsdorf, Pa.—The half cents of 1825, 1826, 1828, 1829, 1832, 1833, 1834 and 1835, if good to fine, sell usually for fifteen cents each. The 1835 is no doubt the commonest of all the half cents issued. There are two varieties of the 1828 issue, one having twelve stars on the obverse, the other thirteen, the former being somewhat the

rarer. The cents of 1808 and 1812, if in good condition, are worth seventy-five and thirty-five cents each respectively. The 1817 half dollar was struck in three varieties, (a) war 1813; (b) with punctuated date thus, 181.7; and (c) plain date. They sell usually for one dollar, one dollar and seventy-five cents and seventy-five cents each.

Roscoe S. Gorham, Morenci.—There are three varieties of the dime of 1837. (a) Liberty head; (b) Liberty seated, small date; (c) same with large date. The former, dealers ask twenty-five cents for; the last two usually command fifty cents. The dimes of 1839, 1841 and 1842 are worth twenty-five cents each. Half dime of 1853, twenty-five cents. An English shilling of 1736 (George II. 1727-60) is worth about sixty cents. Your copper "Gulicmus Shakespeare" is a Pennsylvania half penny. They were struck in great variety, particularly during the last half of the last century. They are commonly called "bungtown coppers." Very few collect them and they sell mostly for from twenty-five to fifty cents.

THE BOY SCIENTIST

How a Candle Burns.

GEORGE W. CAVANAUGH.

I. OXYGEN.

Light the candle and place it upon a piece of blotting paper.

Ques. What do you see burning?

Ans. The candle; or the wick and wax (or tallow).

Ques. Is anything burning besides the candle?

The answer will probably be "no." Well, let us see. Place the lamp chimney over the lighted candle, and partly over the top by a piece of stiff paper as in Fig. 1. You will observe very soon that the flame goes out; i. e., that it is gradually extinguished and does not go out instantly.

FIG. 1.
THE BEGINNING OF THE EXPERIMENT.

a couple of pencils beside the relighted candle and on them the chimney, as in Fig. 2.

Ques. What is the difference between the way in which the candle burns now and before the chimney was placed over it?

Ans. It flickers, or dances about more.

Ques. What makes boys and girls feel like dancing about when they go out from a warm school room?

Ans. The fresh air.

Ques. What makes the flame dance or flicker when the chimney is raised by the pencils?

Ans. Because it gets fresh air under the chimney.

Repeat the first experiment, in which the flame grows gradually smaller till it is extinguished.

Ques. Why, now, does the flame die out?

Ans. Because it had no fresh air.

Ques. Is it really necessary to have fresh air in order to keep a flame burning?

Ans. Yes; since otherwise the candle would continue to burn until it is all used up.

To prove this further, let the candle be relighted. Place the chimney over it, now having the top completely closed by a piece of paper. Have ready a lighted splinter or match, and just as soon as the candle is extinguished remove the paper from the chimney-top and thrust in the lighted splinter.

FIG. 2.
SUPPLYING AIR UNDER NEATH THE CHIMNEY.

Ans. Because there is no fresh air inside the chimney.

Ques. What became of the freshness that was in the air?

Ans. It was destroyed by the burning candle.

Evidently there is some decided difference between fresh air and air from which the freshness has been burned, since a flame can continue to burn only in air that has the quality known as freshness. This quality in fresh air is due to a gas which has the name of oxygen, and which is represented by the letter O.

Ques. Why was the splinter put out

instantly while the candle flame died out gradually?

Ans. When the splinter was thrust in, the air had no freshness or oxygen at all, while when the candle was placed under the chimney it had whatever oxygen was originally in the air within the chimney.

Endeavor to have this point clearly understood: that the candle did not go out as long as the air had any oxygen and that the splinter was extinguished immediately because there was no oxygen left. Relight the candle. Our second question may now be repeated:

Ques. Is anything else burning besides the candle?

Ans. Yes; the oxygen of the air.

When the subject of the necessity of fresh air and consequently of oxygen for the burning of the candle seems to be understood the following questions arise, and there are others that will suggest themselves.

What is the reason that draughts are opened in stoves?

Why is the bottom of a "burner" on a lamp always full of holes?

II. CARBON.

Let us now observe the blackened end of a burned match or splinter. This black substance is usually known by the name of charcoal and if handled will blacken the fingers. Try this. The same substance is found on the bottoms of kettles which have been used over a wood fire, only it is a fine powder.

Let us see what was burning when the candle was lighted, besides the oxygen in the air. Relight the candle and hold the porcelain or glass about an inch above the bright part of the flame.

Ques. What happens to it there? Next lower it directly into the flame. (Fig. 3.)

Ques. What is the black stuff that gets onto the glass?

Look closely and see whether it is not deposited here also as a fine powder.

Ques. Will this deposit from the candle blacken the fingers?

Instead of using the name charcoal for this black substance, let us call it carbon (represented by C), the better name, because there are several kinds of carbon, and charcoal is only that kind which is rather light and easily blackens the hands. Some other kinds are the diamond, coal and the black substance in lead pencils. This last kind is called graphite. These are all much harder than charcoal.

The carbon from the candle flame came mostly from the wax or tallow; only a very small portion came from the wick.

It cannot be seen in the tallow, neither can it be seen in unburned wood, and yet it can be found when the wood is partly burned. The condition in which the carbon exists in the tallow or wood may be explained in a later lesson. At present it suffices that it is there.

Why, now, is the glass blackened when held in the flame and not when held just directly above it? It is because the carbon from the candle has not been completely burned at the middle of the flame; but it is burned beyond the bright part of the flame. When the glass is held in the flame, the carbon that is not yet completely burned is deposited on it, because it is cooler than that in the surrounding flame.

A fine deposit of carbon can be had from any of the luminous parts of the flame; and it is these thousands of little particles of carbon, getting white hot, which glow like coals in the stove and make the light. Just as soon as they are completely burned, there is no more light, the same as coals cease to glow when burned to ashes.

III. CARBON DIOXID.

Let us now enquire what becomes of the carbon that we find in the bright part of the flame and of the oxygen that was in the air in the lamp chimney. When the candle was extinguished

FIG. 3.
THE CARBON OR SOOT ON THE GLASS.

was burning, the little particles of carbon that we find ascending in the flame are joining with the oxygen of the air and making an entirely new substance. This new substance is a gas like oxygen and can not be seen in the air.

Ques. Of what two substances is this new substance made?

Ans. Carbon and oxygen.

What shall we call this substance? Since it is made of carbon and oxygen it ought, if possible, to have a name that will show its composition. Its name is carbon dioxid. The words carbon and oxid show of what it is made and the prefix di, which means two, shows that it contains twice as much oxygen as carbon. This is represented by the formula CO.

Place the bit of quick lime in about half a glass of water on the day previous to the experiment. When ready for use there will be a white sediment at the bottom and a thin white scum on the top of the clear lime water. Pay particular attention, please, to this white scum, as a question about it will follow. Make a loop in the end of the piece of wire by turning it around the point of a lead pencil. Remove the scum from the lime water with a piece of paper and insert the loop into the clear water. When withdrawn, the loop ought to hold a film of clear water. Pass the wire through a piece of cardboard or stiff paper, and arrange as shown in Fig. 4.

Place the chimney over the lighted candle. Lower the loop into the chimney and cover the top of the chimney with the paper. Withdraw the wire a couple of minutes after the candle goes out. Note the cloudy appearance of the film of water on the wire. The cloudiness was caused by the carbon dioxid formed while the candle was burning.

Omitting the candle, hang the freshly wetted wire in the empty chimney. Let the film of lime water remain within the chimney for the same length of time as when the candle was used. It does not become cloudy now. The cloudiness in clear lime water is a test or indication that carbon dioxid is present.

Ques. What caused the white scum on the lime water which stood over night?

Ans. Some CO in the air.

Ques. How does the CO get into the air?

Ans. It is formed whenever wood, coal, oil or gas is burned.

The amount of CO in ordinary air is very small, being only three parts in ten thousand. If the lime water in the loop be left long enough in the air it will become cloudy. The reason it clouds so quickly when the candle is being burned is that a large amount of CO is formed. Besides being made by real flames, CO is formed every time we breathe out air. Renew the film of water in the loop and breathe against it gently for two or three minutes.

The presence of CO in the breath may be shown better by pouring off some of the clear lime water into a clean glass and blowing into it through a straw.

An interesting question to end the lesson with is, Why does water put out a fire? The answer is, not alone because it wets, but because it cools the carbon, which must be hot in order to unite with the oxygen, and prevents the oxygen of the air from getting as near the carbon as before.

within the chimney, there was no oxygen left, as shown by the lighted splinter, which was put out immediately. Neither could any of the particles of carbon be found except on the wick. Yet they both still exist within the chimney but in an entirely different condition than before.

(Continued from page 306.)
below the kite, no matter how quickly the wind may shift. A safe rule is to make the tail at least ten times the length of the kite. As your kite frame is about two feet high, make the tail at least twenty feet long.

Fig 4

Cut some waste paper into pieces about three inches wide by four inches long. Tie the tail string exactly in the middle of the tail-band H, so that it cannot slip. Then at every interval of six inches tie a piece of folded paper, with a loop similar to that used on the frame, as in Fig. 4. On the extreme end of the tail, tie a large paper tassel. When the kite is not in use the tail should always be wound around the frame; otherwise it will get tangled.

THE BELLY-BAND.—As soon as the paste on the paper is dry, you may put on the belly-band. This should be carefully done, as a little inaccuracy will cause the kite to dive. Connect A and D (Fig. 1), by a piece of stitching twine long enough to stand up from the surface of the kite when pulled taut, as high as O-B (Fig. 2). A-C representing the surface of the kite. Then connect B with E and C with F (Fig. 1), by pieces long enough to stand up from the surface as high as O-B (Fig. 2). Now fasten the three pieces firmly together at the point O (which should be exactly over the crossing of the sticks), by tying them with the kite-string. If the belly-band is tied too high, the kite will lay flat on the wind; if too low, the kite will not fly at all; if to one side, the kite will dive.

FLYING THE KITE.—If you have followed directions carefully you now have a kite that will fly well in a moderate breeze. To start it, have someone hold it at the crossing of the frame sticks, the

Fig. 5.

tail being stretched out in front of the kite towards you. Walk away a few hundred feet, letting out the string as you go. Then when your companion shouts "Go!" run swiftly until the kite is well up in the air, when it will stand. The remainder of the string can then be slowly paid out to the end, which should be tied to a stick.

If strong gusts of wind prove to much for the length and weight of the tail and the kite attempts to dive, run rapidly forward or let out more string (if not all unwound). This will temporarily prevent it from diving. Carefully draw in the string, walking forward the while to prevent diving. As soon as the tail is within reach, draw the kite down, tie ten or fifteen feet of string to the end of the tail, and fasten a moderately heavy weed to the end of the string. If the weight and length of the tail are then sufficient, the kite will stand all right.

SENDING MESSENGERS TO THE KITE.—This is great sport. If you wish to send messengers to the kite, "telling him to come down," cut some pieces of cardboard in circular form, as shown in Fig. 5. Cut four equidistant slits in each piece and bend up the portions marked I in the drawing, and bend down the darker portions. You will then have a sort of windmill. Untie the kite-string from the stick, and pass it through the hole at the center of your "messenger." Be sure that the hole is large enough. It will whirl rapidly along the string, far up into the air, until it reaches the kite. Its weight will tend to lower the kite, and a few messengers will bring it down. The lighter they are, the more will be required for the purpose.

THE AMERICAN BOY

The Only Distinctively Boy's Paper in America.

(Entered at the Detroit, Mich., Post-office as second-class matter.)

The American Boy is an illustrated monthly paper of 24 pages. Its subscription price is \$1.00 a year, payable in advance.

New Subscriptions can commence at any time during the year.

Payment for The American Boy when sent by mail, should be made in a Post-office Money-Order, Bank Check, or Draft, Express Money-Order or Registered Letter.

Silver sent through the mail is at sender's risk.

Expiration. The date opposite your name on your paper shows to what time your subscription is paid.

Discontinuances. Remember that the publishers must be notified by letter when a subscriber wishes his paper stopped. All arrearages must be paid.

Returning your paper will not enable us to discontinue it, as we cannot find your name on our books unless your Post-office address is given.

Always give the name of the Post-office to which your paper is sent. Your name cannot be found on our books unless this is done.

Letters should be addressed and drafts made payable to

THE SPRAGUE PUBLISHING CO.

MAJESTIC BLDG. DETROIT, MICH.

WILLIAM C. SPRAGUE, Editor.

GRIFFITH OGDEN ELLIS, Assistant Editor.

NOW FOR BUSINESS.

THE AMERICAN BOY starts into the fall months with more than 90,000 boy readers and an unnumbered host of grown-up friends who like THE AMERICAN BOY because they like boys and like to see and do what boys see and do.

A Fair Statement.

It is entirely fair to say that every copy of this paper has at least two readers. No one certainly can say that this kind of a paper going into a family having a boy, is read ALONE by the boy. If you say so, you forget your own boyhood, and have never been in a family where there is a boy and kept your eyes open. We venture the assertion, encouraged by what we have observed and been told, that no paper published gets so thorough an examination by all members of the family as does THE AMERICAN BOY. This being the case it is certainly a conservative claim that over

200,000 Persons Read this Paper.

every month. But figuring on 90,000, which is the minimum issue fixed on for the next few months, the present rate of 25 cents an agate line is but a trifle more than

1/4 of a Cent a Line Per Thousand.

This rate stands till October 1, after which it will be 50 cents a line.

It is entirely reasonable to suppose that having built up a circulation of 90,000 in eight months, three of which are admittedly dull in the subscription business, the publishers of THE AMERICAN BOY are not going to rest idle during the coming fall and winter—the harvest time in the subscription department. We make no promises as to these months, save to say that our advertising appropriation for the coming six months is

Three Times Greater.

than in any preceding six, and that advertising of THE AMERICAN BOY will appear in every first-class publication in America and many others; further that we have other plans for increasing our subscription list, many and varied, including those that have succeeded so well heretofore and some not yet tried

Will 150,000 Subscribers by Christmas Surprise You?

It will not surprise us. Advertisers who now buy space at 25 cents a line, to be used before January 1st next, will get more and better circulation for the money than in any medium in the country. Respectfully,

THE SPRAGUE PUBLISHING CO.

A Prize Offer to Amateur Journalists.

We want to get one hundred thousand more subscribers to THE AMERICAN BOY before Christmas. We believe the enterprising and energetic amateur journalists can help us. We will make it to their advantage to help us. For each annual subscription sent to us by a subscriber who is a member of any one of the recognized amateur journalists' associations, we will give a cash commissioner of twenty five cents, and to that one who sends us the largest number of new subscribers before January 1, 1901, we will give a complete printing outfit made up as follows:

5x8 Excelsior Press, prints a page 5x8 inches.....	\$18.00
Furniture.....	80
Can of black ink.....	40
Seven fonts of type.....	13.75
Five type cases.....	3.00
Gauge pins.....	35
Leads, bodkin and tweezers.....	75
Composing stick, etc.....	1.90
Mallet, planer, can of oil.....	75
Can of cleaning preparation.....	30
Total.....	\$10.00

These prices are the manufacturer's prices. This outfit executes good sized circulars and other solid work. It is just the thing for a boy's job printing office or for printing an amateur journal. Every article in the list is the finest the money can buy. We will deliver the outfit free anywhere in the United States.

Remember that this competition is limited to members of recognized amateur journalists' associations, that even if you do not win the prize printing outfit you will get twenty five cents cash commission for each subscriber that you get for THE AMERICAN BOY; that if you send us the largest number of subscribers you will get both the cash commission and the prize printing outfit, and that you will be doing a favor to every boy that you induce to subscribe to so excellent a publication.

If you do not belong to any amateur journalists' association, and are interested in printing, join one at once and enter this competition.

Retain your commission, and send us seventy five cents with each subscription.

Now boys, get to work and see how many subscriptions you can take before your friends get started.

In sending us subscriptions under this competition, address your letters to The Sprague Publishing Co., Press Competition, Detroit, Mich.

BUNKER HILL MILITARY ACADEMY
Bunker Hill, Ill. No better home and school for any boy at any price. College and business preparation. \$50. Write to Col. S. L. Silver, A. M., Ph. D.

 6. A woolen thread and leave the alder.
 The decapitated letters spell the name of a noted naval officer in the recent Spanish war.

Regarding Errors.
 Be sure that the errors pointed out are really errors. The word "navy," declared by some to be an error, is a word in good use. See your dictionary.
 Look for errors in the reading columns. We cannot always control the wording of advertisements, as these are frequently "cuts" which cannot well be altered.
 Don't neglect to send your name and address with your letters to the puzzle editor.

Foreign Postage Stamps.
 To the boy sending the largest number of new subscriptions to THE AMERICAN BOY by August 19 we will give, in addition to the regular premium offered, one-half of the foreign stamps accumulated in our office for the month ending that date; to the two next in order, one-fourth each.

AN OPPORTUNITY FOR EVERY YOUNG MAN IN AMERICA.

A LETTER FROM A FORMER SCHOOL TEACHER.

J. FRANK BUTTS,
ATTORNEY AT LAW, COURT ST.

FREDERICK, Md., July 15th, 1898.

The Sprague Correspondence School of Law, Detroit, Mich.

GENTLEMEN—I herewith send you a letter stating the circumstances which led me to study law and what induced me to take your course, and the progress made, etc.

I have been teaching school for several years, and found that at the meagre salary I received did not justify me to prepare myself to properly teach, so I resolved to enter some profession of my own and feel free from the hazards that attending one would involve. I considered the profession of law, and I would like to see the profession of law in our country. I was encouraged by one of my lawyer friends, and I encouraged me to it by saying that he would be able to be my instructor. I therefore entered upon the study of law and began reading in the office. My preceptor had quite a clientele, and had but little time to help me in the study, but gave me Blackstone to begin with. I read and re-read it, and was really getting the wiser, and soon became discouraged in the matter by thinking that I was not doing justice to myself. I found the trouble to be the lack of any sensible method in my study, and I began to look around for some plan or method at the best possible moment. I found one that would help me and prepare me for the bar examination. I wrote to Sprague and received his circulars, etc. concerning his school and its methods, and among the many advantages mentioned I found the name of a university in our country. I let my preceptor know and he advised me to take the course, saying that it was equal to a law university course, with the exception of the usual environments.

I immediately signed with Sprague, and from the very beginning I was fascinated with the work, and never regretted it, taking my lessons every day, excepting Sunday. I followed their instructions as near as possible, and always found them ready to fill their part of the contract. I was determined to win, and applied myself to the work, which any one must do, no matter what school he attends.

I took the challenge course of two years, but at the end of eighteen months' study with them I determined to take the bar examination, and passed with the greatest ease. I found that I had been not only up to date, but that which I need for the present practice of law.

Immediately after I was elected a member of the Legislature, and since its adjournment I have continued in my profession, and with success. I had the determination, but I am grateful to Sprague school for the method and aid in the study of law. I can recommend the school to be what they claim, and found them always up to their contract.

Yours very respectfully,
J. Frank Butts

The following is a sample of hundreds of letters from men studying law at home. It is on hand. Write for catalogue and particulars. Sent FREE.

Fellows, Here's Money Made Easily

You can canvass for subscriptions to "The American Boy" for premiums or for a commission in money. You can not get commissions and premiums. If you ask for a money commission, that is all that you get. If you ask for a premium you get, in addition to the premium, a chance at one of the money prizes to be distributed next Christmas. We have told you about these prizes several times, but the story bears repeating.

Next December we will divide \$1,000 among fifty-two persons. We will give to the person who will have sent us up to November 20th the largest number of one dollar subscriptions (each accompanied by a dollar) the nice little sum of \$200; to the one sending the next largest, \$100; to the two next in order, \$75 each; to the three next, \$50 each; to the five next, \$25 each; to the fifteen next, \$10 each; to the twenty-five next, \$5 each.

In addition to these prizes the winners get whatever premiums their subscriptions entitle them to; indeed they select and receive their premiums as fast as they send in their subscriptions, so that if one fails to get a prize, he gets a premium or the premiums which he may select from our large premium list, which every subscriber has received.

Now, up to date, the race has been an interesting one, and yet no one has sent in very many names; for instance, the boy who is in the lead for the two hundred dollars has sent in only fifty-seven subscribers, and if the contest were to close to-day some boys who have sent in only two or three would each get a prize of ten or fifteen dollars. This is fortunate for you, because you can, by getting right at it, succeed in getting valuable premiums and stand a good chance of getting fifty dollars or more by Christmas, without much work. You will find people ready to help you earn money, and a little canvassing will show you how easy it is to make money with "The American Boy." So, let us hear from you within the next few days or weeks, with your subscriptions. Send them in as you get them; don't wait till you get a large number, but send them in at once. We keep an accurate account of what you send. The fifteen (in their order) who have sent in the greatest number of subscribers since the start are:

- ALBERT FIFIELD, Minneapolis, Minn.; CHAS. GUSTAFSON, Chicago, Ill.; EMERSON COTNER, Detroit, Mich.; LOUIS STRAKER, David City, Neb.; LOUIS CRONENWETH, Detroit, Mich.; FRED. HILKER, Ft. Wayne, Ind.; J. LAWRENCE HIRSCHLAND, Reading, Pa.; RAYMOND POND, Chicago, Ill.; CARL MATTHEWS, Dubuque, Ia.; CLARENCE PYEATT, Ft. Lemhi, Idaho; DONALD ANNIS, Detroit, Mich.; HEMAN H. SMITH, Lamoni, Iowa; CHAS. MEADER, Chicago, Ill.; T. F. WILSON, Columbus, Neb.; AVERY C. HAND, Mansfield, Ohio.

Get to work, boys.

Respectfully, THE AMERICAN BOY, DETROIT, MICH.

DUMPSEY'S DIAMOND RING

BLANCHE MARY CHANNING

DUMPSEY sat on the ash heap with something tight shut in his hand, and a great joy in his face. The ash heap was Dumpsey's favorite seat, and from this fact he had gained his queer name. His real, true, proper name, was Patrick Michael O'Rourke, but no one ever used it. Dumpsey was the only name he answered to in the social intercourse of daily life. It was not a pretty name, but he himself was not pretty. He would have come nearer to that desirable quality if he had not been dressed wholly in rags, and covered, from the crown of his head to the soles of his bare feet, with dirt and ashes.

If Dumpsey's mother had lived, he would have had a clean face and mended clothes, but she had died when he was a baby, and there was no one left who took enough interest in him to care how he looked. He didn't care a bit, himself. He had no home, unless it was the ash heap; though an old woman he knew let him sleep in a corner of her cellar if he did a few errands for her. The cellar was damp, however, and rats ran about in it, and tickled his nose with their long tails, and, on the whole, he liked the sheltered side of the ash heap better. When there had been a bonfire of rubbish, the ashes would still be warm at bedtime, and quite delightful to curl up in.

Poor little Dumpsey! But he did not know that he was to be pitied. He was a sturdy little fellow, with merry gray eyes and a light heart, and sometimes, when the sun shone, or he had made an extra

THERE LAY A TINY HOOP OF YELLOW METAL.

good find among the ashes, he felt so glad that he had to turn as many as six hand-springs without stopping. The desire for this mode of expression was strong in him on this particular morning, and it grieved him that reasons forbade the carrying out of his impulse. But all was not lost; he could not, at the moment, turn a hand-spring, but he could tell 'Nita!

'Nita was an important factor in Dumpsey's life. He had, in the days before he met her, considered girls very poor company indeed; and being of a very frank, not to say, blunt disposition, he had taken no pains to conceal this feeling. Even after his fighting the two big bullies who were teasing 'Nita one Sunday as she was going home from Sunday school, and winning a glorious victory, he had not wished to keep up the acquaintance, and, when 'Nita sought him out on the ash heap, had made this unmistakably clear. But 'Nita was not to be so easily got rid of. Day after day, her smiling, black-eyed Italian face had appeared round the corner, and there she had stood, twisting her red and yellow apron in her small, brown hands, waiting.

It had bored Dumpsey badly at first, and we regret to say that he had said in a gruff, disagreeable tone: "Go home, Dago!" than which nothing could have been more rudely ungallant. And 'Nita went, obediently; but the next day, there she was! So Dumpsey resigned himself to the inevitable, and at the time of which we write, had admitted 'Nita to so close a degree of intimacy as to permit her to see his secret store of treasures found on the ash heap in times past—a privilege accorded to no one else.

The chief reason for his elation this morning, was that 'Nita was so nearly concerned in his good fortune. How delightful it would be to see her surprise! He laughed aloud at the anticipation. If only he could turn a hand-spring! But that was clearly out of the question. He must keep calm. And as he sat waiting, 'Nita appeared, and seeing that he was laughing, at once began to laugh also.

"How you look glad!" she said.

"Ho!" shouted Dumpsey, "youse don't need to do no laughin'; youse don't know somethin'!"

'Nita's quick eyes went to his shut fist.

'NITA WEPT DISCONSOLATELY.

"Aren't youse de lucky girl! Youse goin' to have a new dress, an' shoes—an'—an'—a hat; an'—an'—an' a handkerchief!"

Dumpsey, sex and training to the contrary, had for the handkerchief a species of admiration amounting to reverence; his imagination, therefore, halted at this point, and he looked at 'Nita to see in her face the effect of his words.

'Nita's eyes had grown rounder and rounder.

"Why then?" she asked simply.

"Cause! Youse won't tell?" He came down from the heap, stood beside her, and opened his hand. "cause I found a diamond ring, an' old Sheeny Jacobs will give a lot o' money for it; an' I'll be rich, an' youse'll be rich, too, 'Nita!"

'Nita stared.

There, in his very dirty little hand, sparkling in the sun, lay a tiny hoop of yellow metal with three big white stones in it, transparent, like raindrops.

The two children sat down on the heap. They had so much to talk about that when at last 'Nita reached home, the family dinner hour was long past, and her mother slapped her, and called her "Sorrow of my heart"—which was hard. But the thought of the ring prevented her feeling cold or hungry or sore. What did the loss of a plate of maccaroni, or anything else, matter, when one was going to have a new dress, and a hat, and shoes, and a handkerchief?

The next day was Sunday, and when 'Nita's teacher (a beautiful young lady who wore roses in her hat, and always had a handkerchief), dismissed the class, 'Nita lingered behind the others until Miss Meyer asked:

"Well, dear, do you want to tell me something?"

'Nita's white teeth gleamed.

"I goin' have new dress-a," she whispered.

"Why, how nice!" said Miss Meyer. "Then your father has found work, I suppose?"

The child shook her head.

"Little boy—Irlandy boy—he buy me new dress-a; he look on ashes—look every day, and one day he find diamond ring-a; so now he goin' be rich, goin' buy me everything!"

Her face was so perfectly and serenely radiant, so sweetly sure of her teacher's sympathy, that it seemed a cruel thing to question and throw cold water. But Miss Meyer felt that there was more here than appeared at first sight. She put her arm around the little girl.

"I do not quite understand," she said; "tell me all about it." And 'Nita was nothing loath. She told it all, her broken English making queer work of the story, but her brightness making amends. And it surprised and grieved her that Miss Meyer did not seem so pleased as she had expected.

"I lucky girl, ain't I?" she said; then she looked up into the young woman's face, as she did not at once respond.

Miss Meyer was at a loss how to say what had to be said. She stroked the child's hair gently. Then she began: "Now, dear, I want to tell you something. I'm sorry I have to, but it is best. The trouble about this is that that diamond does not seem to be Dumpsey's own; do you see, 'Nita?"

"Oh, it his all right-a!" the little girl said eagerly. "He find it all himself!"

"I know; but someone must have lost it, and if someone lost it, why, it belongs to that person, doesn't it?"

'Nita began to cry.

"I wouldn't cry, dear," remonstrated her teacher, "you wouldn't want to keep what was not yours, I'm sure."

But 'Nita looked down at her old faded dress, and the boots which let in the rain, and wept disconsolately.

Miss Meyer felt very sorry for her—more so than

"What-a you find-a!" she asked wistfully.

Dumpsey giggled non-committally.

"Youse couldn't guess—not in all de time dere is!"

She drew closer, and made a movement to take his hand, but he thrust it behind him.

"Give youse tree guesses!" he cried challengingly.

'Nita was not an adept at guessing. She failed utterly.

Dumpsey danced a wild double shuffle on the top of the dust heap.

"Say!" he yelled, "aren't youse de lucky girl! Youse goin' to have a new dress, an' shoes—an'—an'—a hat; an'—an'—an' a handkerchief!"

Dumpsey, sex and training to the contrary, had for the handkerchief a species of admiration amounting to reverence; his imagination, therefore, halted at this point, and he looked at 'Nita to see in her face the effect of his words.

'Nita's eyes had grown rounder and rounder.

"Why then?" she asked simply.

"Cause! Youse won't tell?" He came down from the heap, stood beside her, and opened his hand. "cause I found a diamond ring, an' old Sheeny Jacobs will give a lot o' money for it; an' I'll be rich, an' youse'll be rich, too, 'Nita!"

'Nita stared.

There, in his very dirty little hand, sparkling in the sun, lay a tiny hoop of yellow metal with three big white stones in it, transparent, like raindrops.

The two children sat down on the heap. They had so much to talk about that when at last 'Nita reached home, the family dinner hour was long past, and her mother slapped her, and called her "Sorrow of my heart"—which was hard. But the thought of the ring prevented her feeling cold or hungry or sore. What did the loss of a plate of maccaroni, or anything else, matter, when one was going to have a new dress, and a hat, and shoes, and a handkerchief?

The next day was Sunday, and when 'Nita's teacher (a beautiful young lady who wore roses in her hat, and always had a handkerchief), dismissed the class, 'Nita lingered behind the others until Miss Meyer asked:

"Well, dear, do you want to tell me something?"

'Nita's white teeth gleamed.

"I goin' have new dress-a," she whispered.

"Why, how nice!" said Miss Meyer. "Then your father has found work, I suppose?"

The child shook her head.

"Little boy—Irlandy boy—he buy me new dress-a; he look on ashes—look every day, and one day he find diamond ring-a; so now he goin' be rich, goin' buy me everything!"

Her face was so perfectly and serenely radiant, so sweetly sure of her teacher's sympathy, that it seemed a cruel thing to question and throw cold water. But Miss Meyer felt that there was more here than appeared at first sight. She put her arm around the little girl.

"I do not quite understand," she said; "tell me all about it." And 'Nita was nothing loath. She told it all, her broken English making queer work of the story, but her brightness making amends. And it surprised and grieved her that Miss Meyer did not seem so pleased as she had expected.

"I lucky girl, ain't I?" she said; then she looked up into the young woman's face, as she did not at once respond.

Miss Meyer was at a loss how to say what had to be said. She stroked the child's hair gently. Then she began: "Now, dear, I want to tell you something. I'm sorry I have to, but it is best. The trouble about this is that that diamond does not seem to be Dumpsey's own; do you see, 'Nita?"

"Oh, it his all right-a!" the little girl said eagerly. "He find it all himself!"

"I know; but someone must have lost it, and if someone lost it, why, it belongs to that person, doesn't it?"

'Nita began to cry.

"I wouldn't cry, dear," remonstrated her teacher, "you wouldn't want to keep what was not yours, I'm sure."

But 'Nita looked down at her old faded dress, and the boots which let in the rain, and wept disconsolately.

she judged it wise to say. She kissed her, and soothed her, and when 'Nita's sobs grew less, she said:

"Now, dear little girl, I think I have a better plan than your friend Dumpsey's. The way to do when anything is lost, is to write a description of it and print it in a newspaper, and ask the person it belongs to, to come and get it. If this is a real diamond ring, I think some rich lady must have lost it, and will be so glad to get it back, that she will give Dumpsey a present for finding it. You and he had better bring the ring to show me, and I will advertise it for you."

'Nita's face was very grave. What would Dumpsey say to this scheme?

"You think that rich-a lady give Dumpsey present, sure?" she asked.

That "virtue should be its own reward," was evidently not enough in the child's mode of reckoning.

"I cannot tell, but I should do so were I in her place," said Miss Meyer.

'Nita sighed; her joy was clouded, and she went slowly away, saying that she would tell Dumpsey what Miss Meyer had said.

Dumpsey took her message ill and he was very angry with 'Nita for having said anything to her teacher about their plans. It wasn't any of her business, anyway, he averred, and 'Nita was a silly to take any notice of what she said. He guessed he wouldn't give up the ring! He wasn't so green as some folks—not much! And if 'Nita didn't want the fine dress and hat and all the rest of it, why, he knew who would jump at the chance, and make no fuss! He would sell the ring to old Jacobs that very evening, and next day he would buy a blue silk dress, and red shoes, and a hat with roses in it, and a handkerchief not for 'Nita, oh, no, but for Katie Molloy, that lived in the bend!

'Nita went crying away, with her apron at her eyes, and Dumpsey tried to whistle, though there was a big lump in his throat. He had never quarreled with 'Nita before, and it hurt him to see her cry; but he wasn't going to give in, not he! He was going to sell the ring to-night, when it was dark, so that the policeman would not see him, for he had learned the first sorrowful lesson of wrongdoing already—the lesson of fear! Until now, he and the policeman had been good friends, exchanging jokes, and, in winter, the occasional amenities of a snowball. Now, Dumpsey looked another way when he saw his old acquaintance, and slunk out of his reach, like the big, bad boys he had seen, who stole things, and were always afraid.

Still, for some reason which he did not explain to himself, he did not try to sell the ring that night, nor the next, nor the next. He sat on the ash heap every day, pretending to hunt for new treasures, but, in reality, waiting for 'Nita. And 'Nita bore no malice, and would have gone to him, but that she, also was afraid—afraid of Dumpsey and his reproaches!

It was a hard week for both of them. When Sunday came round again, 'Nita did not appear at Sunday school. She dreaded Miss Meyer's questions. Instead, she sat in her mother's dark room, and cried. Dumpsey cried, too, out among the ashes. It really seemed as if the ring had brought them nothing but trouble.

On Monday morning, Dumpsey, being unable to bear the existing state of things any longer, went to see 'Nita. He took her hand, and silently led the way to the ash heap. She trembled for fear he was going to scold her again, but went without hesitation, to have a cross Dumpsey was better than to have no Dumpsey at all; and by this reflection she proved her genuinely feminine nature.

SILENTLY LED THE WAY TO THE ASH HEAP.

But Dumpsey had no intention of scolding her. His soul longed for peace, and he wanted to see his little playmate smile as she had been wont to do.

"Say, 'Nita," he said, looking away from her. "I think youse awful silly, but I'se goin' to do what youse wants me to about—"

'Nita's little thin arms went round his neck without giving him time to finish his sentence. Dumpsey had never been kissed before in all his life, and he sincerely hoped that no one saw it happen now. He

submitted with a scarlet cheek, for a brief moment, and then he pulled gently but firmly away.

"Oh, say! drop it," he whispered, "I ain't no little kid to be fooled over; let's go see dat teacher of yours, an' give her de ugly old ring, an' done wid it!" So they went.

Miss Meyer was out, they were told by a big man in a black coat and a white tie, who came to the door. Dumpsey thought he must be a minister, but 'Nita, who had been there before, said his name was Mr. Butteler, and that he always opened doors.

Miss Meyer would be in at six, they were told, so they repaired to her house once more at that hour, and arrived at the entrance just as she herself did.

Miss Meyer shook hands very cordially, and took them into a wonderfully beautiful room, full of books and pictures, and waited for Dumpsey to speak. But he was shy, and kicked the legs of his carved chair, and, stuffing the ring into 'Nita's hand, signified that she was to negotiate the affair.

'Nita put the ring into the young lady's hand; she took it to a window, and examined it very closely. Then she rang for a lamp to be brought in, and gave it a yet closer scrutiny, after which she came back to the eagerly interested children.

"You were a good, brave boy," she said to Dumpsey, "to bring me this ring, because you thought it was worth a great deal of money. Now, it will surprise you very much to know that these diamonds are not real, and that the setting is not gold. It is a brass ring, and the stones are only bits of white glass. So no jeweler would have given you anything for it. Do you see?"

Dumpsey grew pale. "Youse sure?" he asked. "Youse seen real diamonds so youse can tell dem always?"

"I am quite sure." "Den I couldn't buyed dat dress for 'Nita, anyway," said Dumpsey; "it's all no go at all!"

The thought that 'Nita would never have a new dress now, so far as he could see, was too much for him, and he rubbed his torn jacket-sleeve across his eyes.

"Come on, kid!" he said hoarsely, grasping her hand and pulling her towards the door. And 'Nita went meekly, with a trembling lip, for everything was at an end now, even that rather vague hope of a gift from the rich lady to whom the ring belonged, as they had supposed. There were no diamonds; there was no rich lady; there was nothing at all but disappointment.

Miss Meyer's sweet voice called out after them:

"Stop a minute, Dumpsey. Will you let me keep this ring?"

"Keep it if ye like; I don't want none of it."

"But I must buy it of you, Dumpsey."

"Tain't worth nuffin'," the boy said gruffly.

Miss Meyer's blue eyes filled suddenly.

"It is worth a great deal to me," she answered softly. "It means Truth, and Honesty, and Self-sacrifice—the best things in all the wide world, Dumpsey. I like this ring better than any that Mr. Tiffany

has in his shop, and I will give you for it—well, if you and 'Nita will come here again next Friday at the same time, you will see!"

The children did not understand what she meant, but they felt happier, and as if something was left them still to look forward to.

When they went to the big house on the appointed day, they found, first of all, a dress, and a hat, and shoes and stockings, and a handkerchief, for 'Nita;

might vary from fifty to several hundred. If one day was insufficient to decide the game it was continued the following day. The contest was accompanied invariably by great noise and rude violence.

The outer square of this primitive fortification of a century and a half ago was surrounded with high palisades of cedar; within this enclosure was a smaller one with officers' quarters, barracks, etc., and above the wooden bastions, the British flag floated lazily in the summer breeze, guarding the fort and the little cluster of Canadian houses just beyond. In the open space between the walls of posts, the red uniforms of the British soldiers, the gray coats of the Canadian voyageurs, and the gaudy blankets of the Indians mingled in picturesque confusion. The last named were permitted free access to this outer court to bargain with the traders whose goods were stored there for safety.

It was the birthday of King George III. and a partial holiday, consequently discipline was relaxed. In response to the invitation of the chiefs, many of the officers and soldiers had come outside the gates in order the better to see the sport, while the squaws were allowed to stand within the enclosure. While the soldiers strolled around in full enjoyment of the unusual privilege, four hundred Indians gathered between the stations, near the open gate. They were in festive costume, stripped to the waist, their bodies daubed with paint and scalp locks adorned with feathers, all in readiness to begin the play, which, with its attendant yelling and shrieking, was designed to divert the attention of the garrison from any possibility of danger; it was an ingenious plot and aroused no suspicion.

At length the moment for action came; in great excitement the ball was tossed high in air when a general scramble ensued to secure it. The fortunate one who caught it in his bat, held the stick high above his head and ran swiftly toward the goal of the opposing party; when his course was intercepted he threw it as a boy throws a stone from a sling. Back and forth it whizzed, repeatedly changing its course as the throng rushed after it in mad haste. Several times when all were running at full speed the foremost one stumbled, when fifty or a hundred unable to stop in their fierce pursuit, fell upon him until there was a mound of struggling, screaming Indians.

In the midst of this frenzy, while shouts from four hundred savage throats filled the air, the ball was thrown: rising higher and speeding swifter than before, it fell within the palisades. Onward came the Indians, pushing and struggling for advance, shrieking in the unrestrained indulgence of their rude game.

They rushed through the gates where the squaws stood, impassive as ever, though sharers in the plot. Suddenly the braves seized tomahawks and knives which the squaws had concealed beneath their blankets, and uttering their terrible war whoop, commenced an indiscriminate slaughter.

Of the three officers, ninety soldiers and four traders at the fort, but twenty escaped death.

This atrocious massacre resulted in no permanent advantage to the Indians; strange to say, they did not destroy the stockade and buildings, and, one year later, Captain Howard, with a detachment of British soldiers, occupied the fort. Again the cross of St. George was raised over that frontier post which, with its suggestion of safety to the various fur companies, for many years made the great Province of Michilimackinac the commercial center of one of the grandest business enterprises in the world.

THE BOY SAVING FUND.

The publishers of THE AMERICAN BOY and the boy readers of that paper are doing some practical work in the way of saving boys, having taken one boy from the slums of Chicago and placed him at the Beulah Land Farm for Boys, at Leoni, Mich., and another boy from the slums of Baltimore and placed him with the National Junior Republic, at Annapolis, Md. These two boys are doing well under the watchful eye of good men.

Encouraged by the requests of readers who are unable to send their money in time to have a share in the raising of the fund for the saving of the boy Clarence, we announced in a recent number of THE AMERICAN BOY that we would receive contributions from boys for the saving of a third boy, the amount necessary for that purpose being sixty dollars. Up to the 20th of August the amount received for the third boy was thirty one dollars and twenty seven cents, a little more than half of what is required. We are sure that another appeal to our boy readers will result in our receiving enough pennies and nickels to make up the sixty dollars which will be required for the rescue of another boy from the streets and alleys of some great city and the placing of him in good hands, that he may be educated and brought up to be a good citizen. Let no one do more than he can afford, but let every boy who reads THE AMERICAN BOY do something.

RIGHT IN THE MIDDLE OF MISS MEYER'S BEAUTIFUL ROOM . . . DUMPSEY TURNED A HANDSPRING.

and then—that which made Dumpsey open his mouth wide and forget to shut it again—a whole suit of perfectly new clothes for Dumpsey himself!

It was so splendid and wonderful and glorious, that he could think of nothing to say.

For Dumpsey, there was only one way of adequately expressing his feelings and he therewith expressed them. Right in the middle of Miss Meyer's beautiful room, with its pictures, its books and its statues, Dumpsey turned a handspring!

On the first days of June the Indians appeared at Michilimackinac in great numbers, camping in the woods and visiting the fort to dispose of their peltries, with every appearance of friendship. Some of the traders who understood their character and knew the deadly hatred they bore toward the English, cautioned the commandant, Major Etherington, that it might be dangerous to permit hundreds of Indians to have such freedom; but the Major, young and confident, only rallied the traders for their timidity, asserting that there was no danger.

On the fateful morning of June 4th, the Indians gathered in front of the fort, announcing that they were to play their favorite game of Bag-gat-i-way, the Ojibways being pitted against the Sacs, for a high wager. This game played with bat and ball resembles lacrosse, the national game of Canada, which it is believed the French Canadians adapted from the Indians. The stick used was four feet long and one inch thick, made from the toughest wood that could be procured. One end was curved or ended in a ring, in which a net work of buckskin thongs was loosely woven; the ball was not to be touched by hand nor foot, but caught in the net.

At each end of the ground two tall posts were firmly planted a few inches apart; these marked the stations of the rival parties, the distance varying from a few rods to a mile. The object of each party was to defend his posts and send the ball between those of his adversary. The numbers of the contestants

A Historic Game of Ball

EDWARD FROST WATROUS

The particular game of which I write was played on June 4th, 1763, at Fort Michilimackinac; the date is that of the renowned Indian uprising known as "Pontiac's conspiracy." The fort was the most isolated of any of the English frontier posts, standing at the northern extremity of the southern peninsula of Michigan, just where the Straits of Mackinac widen into Lake Huron. The Province of Michilimackinac was the very heart of the Indian country, the principal tribes being the Sacs, Ojibways, Ottawas and Hurons.

The previous summer, Pontiac, the daring chieftain of the Ottawas, had sent his swiftfooted runners to every camp and village of the northwest bearing the belt of purple and black wampum and the tomahawk stained red, notifying all that a grand council was to be held soon on the banks of the river Ecorse, near Detroit. The war tokens were seized with enthusiasm, and all of the tribes were represented in the council held at the appointed place in April, 1763, which pledged itself to exterminate the English and restore the red men to their former power as rulers in the land.

The animal tenders with Dyson's Greatest Show on Earth, said that the old lion, Tiglath Pileser, was growing ugly. They referred to his disposition, and not to his personal appearance. Physically he had long since lost the good looks of youth. He was old and mangy, and almost toothless; his mane, once so

"And really, I own, I myself feel afraid,
"Sometimes when I hear myself roar"
And he wished, as he went and lay down in the shade,
That he need be a lion no more.

But that was long before this, and by this time Tiglath Pileser had even lost his interest in abstract speculation, and seemed merely to have a vague desire that he need not be anything any more. Countless turnings backward and forward had dizzied his understanding.

But the feelings of Tiglath Pileser made no difference to Dyson Brothers. The price they had paid for him was too far in the distance, and he had ceased to be a paying card; so they kept right on with their travels, and one fine day landed at Cape Town. It was the first visit of the Greatest Show on Earth to Africa, and after the Cape Towners had seen its glory, it started by rail to Johannesburg.

A mile out of town the rails spread and threw a car down a bunk. The car spread, and threw a part of its contents; among them the cage of Tiglath Pileser, old and rusty like its occupant. So the cage spread and threw out the old lion, who stood, for the first time in forty years as he was created—free, if not equal!

For a moment he stood bewildered; then, with a mighty thrill, he realized he was free! "Away to the sands!" sang his exulting spirit, and he set out for the cover of the woods; the showmen, who thought him about to die of old age, and not worth pursuit, waving their caps at him crying:

"Farewell to thee, Araby's daughter!"

On he went, over kopje and along vval. What guided his steps? Did he know he was going home, or was he unconsciously led by that capricious thing we call chance, instinct or providence, according to the cut of the ideas with which we are clothed?

Any way, seventeen months and eleven days after he left Cape Town, Tiglath Pileser, stiff in the knees and wheezy in the

throat from sleeping out nights, stood on a rocky spar overlooking a green level on the border of the Barcan desert. From beneath the rocks gushed a spring which widened into a pond; and hither he had been accustomed to lead his mate every evening to drink.

It was the land of his birth, the home of his childhood, and every loved spot which his infancy knew. Did unspeakable feelings fill him now? We can not tell, but let us believe so. He had gone straight to the spot where he had been accustomed to lie and sun himself and meditate to his heart's content; where no such nightmare as his years of captivity ever disturbed his day dreams.

There stood this Rip Van Winkle, looking down on the plain below where he (it seemed ages and ages ago) played with his brothers and sisters. Here later, he had first seen his handsome mate, and here had taken place that bloody battle with his rival, Nemo. Here he had come again from a far country, and how strange it seemed to him, and how weary he was! He thought wistfully of his eight by twelve cage!

The place was deserted and he lay down on the bare rock, and rested with half closed eyes. He lay there a long time, too listless to move, before he began to hear a faint sound in the distance—a low moaning gradually deepening to a deafening roar. He slowly and painfully rose to his feet and listened. Presently he saw four lions approaching the pond to drink. For the first time in forty years, Tiglath Pileser looked upon those of his own kind! He tried to give an answering roar, but it sounded hoarse and feeble even to himself.

As they came near, there was one in the company whom he recognized. It was his enemy, Nemo! Here Tiglath Pileser was, old, decrepit and dispirited; and here was his foe, as young and active looking as he remembered him fifty years ago! His peculiar black and yellow markings looked as bright and fresh as ever. It sent a pang of bitter envy through the old lion's heart. (It was not Nemo at all, but a son remarkably like him. Nemo himself had been pining for twenty years in a zoological garden. But of this Tiglath Pileser dreamed not.)

The quartet stopped, and with one accord looked at the newcomer. Then they began to wag their heads and make remarks about the stranger's appearance.

"He must have eaten grass with Nebuchadnezzar!" said one.

Nemo started toward him. Tiglath Pileser glared as fiercely as his jaded old yellow eyes would permit, and he essayed one of his old roars that used to resound for miles; but it ended in a wheezy rattle. For an instant he stood, himself amazed at the sound; and a derisive roar sounded from the company. He saw Nemo still advancing on him, and turned and slunk away with his tail between his legs.

A week later Tiglath Pileser's buzzard-picked bones lay bleaching on the desert sands. It would be romantic to say he died of a broken heart, but it would not be historically correct. It was really influenza and sciatic rheumatism that killed him, though his soul was filled with harrowing feelings, and this no doubt hastened the machine (that was to him Tiglath Pileser), to suspend activity. The player had withdrawn his hands from the worn-out instrument—more to be likened to a horse fiddle or a callopo than a sweet toned lyre—and the rasping, discordant music was no more!

Did unspeakable feelings fill him now?

thick and fawny, was thinned and faded, and he was run down in flesh. The little boys who were awestruck by the fearful and dazzling beauty of the Bengal tiger, wagged their heads tantalizingly at Tiglath Pileser and mocked his gray hairs without evoking any response. He simply lay still and blinked his sleepy old eyes.

Tiglath Pileser was weary of life. He would that he were dead. For forty years he had been in captivity, and had ridden in the train so much it made his head swim to think of it. I have heard persons say that travel imparts a polish that nothing else can; but Tiglath Pileser did not show it. He did not show it any more than does a Wandering Pete or a Weary Wraggles; and perhaps for the same reason. He had never been able to travel in a Pullman car and take his meals in the diner, but had to eat packed lunches or pick-ups; and so, was not able to observe the exclusiveness of high breeding.

Nevertheless, in the earlier years of his captivity, Tiglath Pileser had worn an expression of aristocratic hauteur, and had been accustomed to pace his cage, lashing his tail and gazing with sullen fierceness at the people who crowded to see him as, per advertisement, the largest and handsomest specimen of the African lion in captivity.

But gradually his spirit was broken; and no wonder, for every day he suffered the humiliation of being stared at by persons who made him feel thankful that he was a lion. Constant scrutiny will demoralize the best of us, and it finally preyed on Tiglath Pileser's nervous system—especially the eating of his meals on exhibition. He grew morose, and the demon of discontent gleamed in his yellow eyes. He gradually quit pacing his cell, and spent nearly all his time brooding, stretched out on the floor.

Of what did he think? Perhaps of his old home, far away on the skirts of the Barcan desert, and the changes life had brought to him. Perhaps even on the mystery of his own identity, for Tiglath Pileser had never been a common lion, but had always had an introspective mind, with ideettes and thought-lettes far beyond his educational advantages. If he had been human he would have been a Schopenhauer. He was the original of the lines you have no doubt seen in the children's rhymes below the picture of the lion looking into the river—in the attitude of Narcissus, but with none of his vanity:

"A lion gazed down at his shadow one day;
Said he: I look theree, I declare!
'No wonder that people keep out of my way,
'And wish they were birds of the air!"

GAZING WITH SULLEN FIERCENESS AT THE PEOPLE.

TALES OF YANKEE ENCHANTMENT
The Witch Woman of Watertown
 Copyright, 1899, by CHARLES BATTALL LOOMIS, the Author

All the boys in Oakville had hen fever. I once heard a little boy say "hen fever is something like chicken-pox and something like scarlet fever, but it lasts longer than either," and I guess he was right. But if you who are reading this are so unfortunate as to be a city boy and only know hens as the featherless things they hang up by their legs in the poultry stores, I can tell you that hen fever is very delightful while it lasts, for it means the enthusiastic care of hens—which are the birds that lay the eggs of commerce. It means feeding them the right food and rejoicing in their cackling, which is their way of saying "Watch me lay an egg," and it means hunts for hidden nests with maybe a dozen eggs in them and it may be a dozen fluffy little chickens. It means the right food and plenty of water for them and tucking them into bed at night so they won't catch cold, and it sometimes means enough pocket money from the sale of eggs and chickens to buy a handsome double ripper with a picture of Dewey winning out, at Manila, on it.

So you see that hen fever doesn't require the services of a physician and you can catch it at any time of the year, although March and April are the easiest months in which to get it, for then any old hen at all will lay eggs and you think she's going to do it all the year round and you get your father to buy forty of them and the first thing you know your hens are all on strike and you're buying your eggs at a grocery store. And that sometimes cures hen fever. But it also shows you that you didn't have the right brand of fever or they would have kept on laying.

The annual Bangtown fair was billed to come off the first Tuesday in October and ten of the Oakville boys had entered their hens in the hope of winning

"HAVE YOU HURT YOURSELF? CAN I HELP YOU?"

prizes. Abbott Lyman was going to send ten Black Leghorns and Philip Wendell was going to ship a crate of White Plymouth Rocks and Beecher Ward was going to exhibit three Black Spanish hens.

But poor little Bryant Williams felt quite left out because he had nothing to send. He was a little orphan who would have had hen fever in a minute if he could have bought or borrowed any hens, but it was all he could do to get enough clothes to cover him and sufficient food to keep his internal machinery going and to have bought even one scrub hen would have overtaxed his resources.

I'm rather afraid that Abbott Lyman crowed a little over Bryant—maybe he had caught it from his hens—and maybe not. But wherever he had caught it he should have dropped it instantly. He said in that taunting way of his that made him so unpopular with smaller boys and got him into so many scrapes with bigger ones. "If I was so poor that I couldn't enter any fowls at the fair I'd go jump into Naugatuck."

But little Bryant, instead of making an ugly reply, simply turned a handspring and went down the road to help Beecher Ward knock a crate together for his Pekin ducks.

On the way to Beecher's house he came upon an old woman who had slipped on a "slide" and had fallen. She had dancing black eyes and a sugar loaf hat and

long straight hair, and her nose was within hailing distance of her chin and she looked a good deal like old Mother Hubbard or Mother Goose or one of the other mothers of nursery tales.

Bryant was a helpful chap and instead of laughing at the old woman as Abbott would have done he stopped and said, "Have you hurt yourself? Can I help you?"

"Indeed you can, sonny. I think I've cracked my hip. I didn't see the ice and the first thing I did see was stars."

Bryant laughed. Here was an old woman who could make a joke of her trouble and he was the better pleased to help her for he was always joking himself.

He put his arm around her and finding her a bag of bones he lifted her with no trouble at all.

"Indeed but you're a good lad. Once I'm on my feet I'm good for all day, but when I tumble—which I don't often do—I'm as badly off as a turtle on its back."

"Are you going far?" said Bryant. "Can't I carry your basket?"

"Thank you kindly if you will," said the old woman. "My hip pains me a good deal. I suppose you'll be going to the Bangtown fair and exhibiting some chickens like the other boys."

"No, indeed," said Bryant, ruefully. "I have just money enough to get in myself and I made that helping Beecher Ward to take care of his ducks. I wish I could enter some hens, for I love them and would like to win a prize."

"Well, it's a lucky thing that you met me and that I fell, for I have the hen that laid the golden egg in my basket, and I will let you have her all day tomorrow if you will promise to return her to me next day. I live on Black Mountain."

And then Bryant knew who it was that he had befriended: none other than the witch woman of Watertown who in winter lived in Watertown but in summer lived in an abandoned charcoal burner's hut on the mountain.

"You can win a prize with the hen and you can sell the golden egg which she will lay at ten in the morning, for a great deal of money, and you can show her in a tent and charge so much admission."

Did ever a boy find fortune knocking so many times on his door at once? His eyes filled with tears and he grasped the old woman's hand and thanked her with all the fervor of a warm nature.

"I must go and see about getting a tent at once," said Bryant.

"Now I like that," said the old witch. "Some boys would have expected me to furnish tent and all myself, but I see that you are willing to help yourself. Go to Lowell Russell and tell him I sent you and he will fix you out. Here, take the hen along, but be sure that no one steals her or she and the thief will disappear entirely."

Bryant promised and ran off with the basket. While he was waiting for Mrs. Russell to open the door he lifted the cover of the basket and looked in. There sat a quiet looking hen of a bright golden color. Her comb was as red as blood and she looked exactly as if laying golden eggs was a good thing for her health. Which it undoubtedly was, for think how many years it is since she was first discovered!

Bryant told his errand to Mrs. Russell and she told him that her husband—who was vice-president of the Bangtown Fair Association—had a tent that was to have been used by a man with a five headed calf, but the calf had lost four of his heads in a railroad accident and was now no better than any calf so the man didn't need the tent. And then Mr. Russell came in and proved to be kindness itself.

Next morning the fair opened and it was like all the country fairs that were ever held. And if you never attended one I can tell you that the chief things to be seen there are people. People who have come afoot and ahorseback, on wheels and between wheels—and some would come in balloons rather than miss coming. There is one big tent and a lot of smaller ones, and there are men who sell candy and oysters and soda and whips. The whip men are really worth while. They sell half a dozen whips, each one worth a dollar, and charge a dollar for the lot and still make money. Now that ought to make a good problem in arithmetic. If one whip is worth one dollar and a man sells six such whips for a dollar and makes money on the sale, how much does he make? Do it in long division. Or maybe fractions would be better. But I'm sure I don't know how the man does it.

The poultry show was a fine one; not only all the boys but the farmers for miles around had entered birds. But Bryant took first prize as a matter of course. A hen that lays golden eggs is worth any number of hens with silver feathers.

Bryant was kept busy taking in the nickels that the

BRYANT WAS KEPT BUSY TAKING IN THE NICKELS.

people paid to go in and see the hen in a parrot cage—loaned by Mrs. Ward. Mr. Russell had painted a beautiful picture of a hen at least two feet high and with two high feet and the tent was naturally a magnet of attraction.

Of course the biggest crowd was in the tent at ten o'clock when the hen was advertised to lay the egg. The tent had been full before that, but there's always room for more people in a crowd. These people who happened to be in the tent when the egg was laid had something to talk about for the rest of their lives, and I dare say if you go up to Oakville you'll find persons who saw the whole proceeding.

At ten sharp the egg appeared and the hen began to cackle a silvery lay. Mr. Russell, who stood by Bryant to see fair play, held the egg up and told the crowd that it was probably worth three hundred dollars and any farmer could have it for that price spot cash. While the crowd was laughing at this, for people up Oakville way don't carry many three hundred bills around loose in their clothes, a queer thing happened.

One of the men who ran a wheel of fortune—the kind where you pay ten cents and are sure to get an article worth a tenth of a cent—no blanks—thought that a hen who laid golden eggs laid over any fortune wheel in the country, so he told his pal that he was going to steal it.

He was standing on the other side of the hen and while the crowd was intent on the glistening egg he seized the enchanted fowl and burst through the crowd and out of the tent as quick as winking. The farmers followed him, crying "Stop thief," but they had not run ten feet when a remarkable thing happened.

That man and the hen disappeared as if they had been swallowed up. There was no place where the man could have hidden. He had simply vanished because he stole the hen.

THE FARMERS FOLLOWED HIM, CRYING "STOP THIEF."

And neither the hen nor the man has been seen from that day to this, although it was way back in October. The old witch's prediction had come true. I dare say that she had the hen, but who has the man I don't know. And I don't care much.

As for Bryant, he sold the egg to a banker in Waterbury for four hundred dollars and put the money in the savings bank and he bought some blooded Wyandotte hens with the gate money he took in, and now he has one of the best poultry farms in the whole State of Connecticut.

A LEGENDARY RIGMAROLE OF THE RENOWNED INDIAN CHIEF,

SITTING BULL

BEING A STORY WRITTEN AND ILLUSTRATED FOR THE PAPOOSES

F. J. THOMAS

SITTING BULL, the savage and bloody Indian Chief, was a wanderer on the plains beyond the Rocky Mountains. He is said to have murdered many brave men and fair and innocent women and children. He was, no doubt, a descendant of the famous Sitting Bull, the great discoverer, once a chief of the Arapahoe Indians, and originally named Roaring Bull. A sitting bull is rather an anomaly. Who ever heard of a bull sitting, as we understand it? Well, the Indian of whom this story is told, is said to have been the first among the race of red men who discovered sitting to be a very easy and comfortable posture.

The story is something like this: The Indians, you are aware, are a roaming, restless race, who have none of the comforts of a home, no chairs, no tables, no beds, no sofas, no old china, no ceramics, no pianos, no anything, because in reality they have no home. They wander about from place to place, dwelling in wigwams, hunting and fishing, eating and sleeping, and tradition says they once had so little knowledge of the enjoyments this life affords that they never even sat down. They had in fact nothing to sit upon, not a fence, stump, or gate post. They slept at night by hanging themselves across the limbs of a tree, as a washerwoman hangs out her clothes to dry; and they probably rested themselves after the same peculiar fashion.

One day a party of Indians were crossing the plains; the sun had sunk in the red clouds of the western horizon, and the night was coming on. The party, consisting of some ten or fifteen, had retired to roost, so to speak, by hanging themselves across the limbs of

BEFORE THE DAYS OF SITTING BULL.

a small tree, the only one in sight. All 'tis said, were on the roost save one, Roaring Bull by name; and before hanging himself up for the night, he went down to a small stream that ran close by to bathe, and to take a thorn out of his foot, which had accidentally got in during the day's travel.

Indians seldom, if ever, bathe; they have a horror of water something like that of little white children on a Saturday night. They look upon bathing very much in the light of a surgical operation; but this Indian was an eccentric Indian, and wanted to see how it felt to remove the dirt from his person. After he had bathed and dressed he went to the edge of the stream to drink, and as he arose and was coming away, a weed caught his foot and threw him forward, knocking his shins against a rock and landing him upon it in a sitting posture. He sat there and rubbed his shins for some time, and found himself very easy and comfortable, but up to this time he had not noticed the strange position he was in. A thistle growing close by, and waving in the breeze, called his attention to it, when one of its sharp leaves happened to touch his skin; for when he jumped up he found that he was very much relieved of his fatigue.

He felt himself gently all over and, with one eye on the thistle, sat down again and nodded and winked approvingly, congratulating himself, as it were, as any man would naturally do who was satisfied that he had made a great discovery. After sitting down and getting up a number of times, more and more to his satisfaction every time, he thought of his companions. Running and waking them all up he told them to come and see something. They grunted and expressed dissatisfaction at being aroused from their roost, but they got down and followed Roaring Bull in single file to the river. When they came to the edge of the stream Roaring Bull deliberately sat down upon the rock with a self-satisfied air and an exhibition of the pride that Watt must have displayed when he discovered the steam engine, or Morse the electric telegraph. He gazed at his brethren with an expression that seemed to say, "There, what do you think of that?" They

gathered all around him in a circle with their eyes fixed and protruding in amazement, and then burst into a loud laugh; that was a little derision which wounded Roaring Bull's feelings, but he got up and invited "Toad-in-a-Hole" to take a seat. "Toad-in-a-Hole" turned away with an expression of ridicule. Bull then invited "Young-Man-Afraid-of-His-Mother-in-Law" to be seated. This young brave took a seat, and a renewed laugh went round the circle of red men. "Young-Man-Afraid-of-His-Mother-in-Law" then got up and eloquently expressed his satisfaction, signed a testimonial approving the discovery, and recommending a seat upon the rock for its ease and comfort to all the red men of the prairie and the forest. After a little pressing, all the Indians present sat down one after another (there was only room upon the rock for one at a time), and all got up and pronounced it good. They then all signed Bull's testimonial, and with some considerable ceremonial afterwards dubbed him "Sitting Bull," in honor of his discovery, as men are nowadays frequently invested with honors by European kings and queens for inventions and discoveries of less importance.

Sitting Bull then with commendable enterprise went into business. He put up a wigwam over the rock, got his handbills printed, and published his testimonials thereon, got a hand organ, which his squaw played at the door, and then invited all the Sioux, Ogahallahs, Comanches, Arapahoes, Pawnees, Modocs and the others to "walk in and take a seat," at the low charge of fifteen cents each, children half price, matinees on Saturdays. He continued in the business some time and accumulated considerable means from his discovery, when he left the plains, and is said to have gone east and established himself in the hair business.

With his superior business acumen and enterprise he had discovered when operating upon the heads of his unhappy victims on the plains, that a great deal of the hair found by him on the scalps of those operated upon, was false, especially among the ladies; and that much of the hair had been grown upon other heads than those that wore it.

The frequent discovery of this false hair led Sitting Bull to thinking on the subject, and after mature deliberation he concluded that if he could only learn where the market was for this material, he would be able to sell the scalps, of which he had a large collection, taken during his long life of murder and robbery upon the plains.

He accordingly arranged his plans for a visit to the Great Father at Washington, intending also to learn what he desired to find out about the false hair business and establish an agency in some one of the large cities most suited thereto, where he would receive the scalps taken by his fellow savages on the plains, and have them properly dressed and prepared and sold to those of the white people, who from vanity or necessity required more hair than nature had provided them with.

He found out what he wished to know about the business, and went into it with great success, and much to the satisfaction of his brother Indians, from whom he received quantities of human hair, and to whom, he returned large sums, the profit of their labors as scalp hunters.

His stock was noted for its great variety and his store was largely patronized. He dropped his character as an Indian, as far as possible, and spent his days in comparative composure, smoking his calumet of peace and surrounded by what seemed to be an endless variety of wigs, toupees, etc., all neatly combed, oiled and perfumed, and labeled, "this style \$4.00," "this style \$7.00," and so on.

He, it is thought, made New York City his home, where he became rich and respected. And as he passed away quietly in the bosom of his numerous family of papooses, his faithful squaw soothed his last moments by playing slow psalm tunes on the hand organ, which

THE GREAT DISCOVERY.

had done duty years before on the plains, and which now took the place of a piano in his parlor.

Before his death he became noted for his business enterprise and integrity, and, even to this day when business men push their business with unusual vigor, they are said to "Bull the market."

After the death of "Sitting Bull the Great," his business prospered in the hands of his sons until, one day a very bald headed gentleman came into the store to purchase a covering for his naked scalp, when to his great amazement he recognized his own hair that had been ruthlessly torn from his skull by the Indians, when he was crossing the continent two years before. Yes, sure enough, there it was, on a wooden block, brushed and curled and for sale for three dollars and fifty cents.

THE HAIR EMPORIUM.

This led to an investigation of the business of "Sitting Bull's Hair Emporium," which resulted in breaking it up and dispersing the family. And as the Indian is said to be an untamable savage, the family went back to the wilderness of the far, wild west from whence it came; and the late Sitting Bull who gave our government so much trouble, was undoubtedly one of its descendants, other members of which still roam the plains, wild and intractable—but no longer engaged in the hair business, that having been stopped by the police.

From Pop-Corn to Politics

MR. J. E. SMITH

Prominent in national affairs just now is the figure of a man who began his business career some thirty odd years ago selling pop-corn in the depot of a certain thriving railroad town. His mother was a widow, and as the oldest of three children it fell to his lot to help fill the family purse. This is the way he did it:

When the through train pulled into the station to wait "twenty minutes for refreshments" and change engines, John was on hand with a big basket of crisp, freshly popped corn, fragrant, delicious, nicely buttered and salted. Mother and sister attended to the popping and seasoning of the stock in trade, and John was salesman, general manager, and hustler in chief. It was his business to sell the corn after it was popped, and he did it. He was wide-awake, obliging, honest. The corn was of the best quality, neither burned nor leathery, and the butter was above reproach. A good many travelers discovered that it was pleasanter to lunch on fresh pop-corn than on stale sandwiches. When the trains pulled out, John made the rounds of stores and offices, and little by little worked up a trade that brought in quite a respectable income.

When the younger brother was old enough, the pop-corn route was made over to him and John found employment in the office of a lawyer who had been one of his customers. He was janitor, errand boy, copying clerk and all round "handy man" with little time for anything but work, but he soon saw that the trained mind is the one that wins life's race. So he made arrangements to attend night school and spent his spare time digging into mathematics, history and various other branches of a practical education. Later he asked and received the privilege of reading his employer's law books, and, to make a long story short, he succeeded in passing a creditable examination, was admitted to the bar, and by and by became junior partner in the firm he had served as janitor. Law led him into politics, and today the Hon. John S. — represents in Congress the very district in whose principal town he once sold pop-corn, did errands and swept offices.

So much for the pluck and perseverance of a typical American boy. He has won success for himself, and his example remains for an inspiration to others who, like him, are bound for the hill top.

The Cruise of the Yacht Gazelle; 6,000 Miles on Inland and Ocean Waters

KENNETH M. RANSOM

This is the seventh chapter in the story of a six thousand mile cruise by four Michigan boys in a boat of their own construction. Setting sail from St. Joseph, the "Gazelle," by which name their craft was known, proceeded by way of lake, river and canal to the Mississippi, thence to New Orleans and the Gulf, along the gulf coast to the Atlantic, thence to New York harbor by way of the ocean, thence by river, canal and lake, home to Michigan.

CHAPTER VII.

Having been told that we would find excellent fishing in the waters of Mobile Bay, daybreak found us ready for the sport. We were not obliged to journey farther than to take a comfortable seat on our own craft, however, for the sailors on the vessels near our anchorage were having excellent sport; so we had the pleasure of casting our line from our doorstep, so to speak, and the finest fish of the sea were ours.

A beautiful view was before us, as Gazelle rode peacefully at her anchorage, gracefully rising and falling in the long, rolling swell of the bay. On our left was Fort Morgan, with the barracks and officers' houses near by; on the right was the bay, as far as the eye could see. Many steamers following the narrow dredged channel were wending their way to the city.

At last the sun rose from out of the sea and as it appeared but half-round above the distant horizon the clear notes of the bugle sounding the morning call, and the sharp bang of the morning gun broke the stillness. The Stars and Stripes unfolded at the mast head, and the day was begun.

Our fishing was soon over, for the tide began to ebb and then the fish stopped biting; but not before we had caught a fine string of ground mullet and sea trout. This sport ended, we decided to go ashore and take a look at historic Morgan.

We drew lots and Frank and Arthur were the lucky ones, leaving me aboard to the less inviting pastime of clearing the breakfast dishes away.

Reluctantly I watched them row to the shore, for, to tell the truth, I had desired to look about the fort very much, and had hoped that one of the long matches would fall to my lot. It was not to be, however, and I turned to my task, which was made the more uninteresting because nothing but salt water was at hand for domestic use.

Taking the marine glass, I watched the boys, and when about to land, I could plainly see a sentinel draw near the boat, as if to meet them. Strange as it seemed to me, they did not land but turned around at once and rowed back to the yacht. As they drew near I asked: "What is the matter?" They answered that a guard pointed a gun at them and ordered them to halt and state their business. They said they wanted to look at the fort; but the soldier immediately informed them that it could be seen much better at a distance; in other words, no visitors were allowed ashore. This being the case, and as there was nothing more of interest to be seen in our vicinity, we decided to take advantage of a good wind to resume our journey, and were soon skipping along down the channel for the open Gulf.

A long bar runs out into the sea at Mobile, so it is necessary for vessels to sail through a buoyed channel until they reach the whistling buoy which marks the end of the shoal, where they can turn either way and speed along in deep water.

I can think of no more mournful sound than the woe-begone note of a whistling buoy at sea. The peculiar sound, like a moan, is produced by the action of the waves on a huge pair of bellows, which forces air through the whistle. As we reached the gulf and squared away for Pensacola, our next port, we all seemed merry enough, notwithstanding we were now obliged to sail right out in the open sea. Gazelle acted beautifully on the big billows and sped along as if she had always been a salt-water craft. About noon we passed a full-rigged ocean schooner. She was a five masted ship of almost perfect proportions, with tall tapering masts and well conditioned spars, upon which was spread cloud upon cloud of white canvas. She was a most attractive sight as she passed by, gracefully careening, every sail drawing and urging her along. There is something grand, even majestic, in these great carriers, and we indeed felt complimented when the captain himself saluted us with a wave of his cap as he paced back and forth on the quarter deck.

I often wonder just what these sailors thought of us alone in so small a craft on the ocean. But we were comfortable and, aside from our size, felt quite as important as did our larger friends.

It was about two o'clock on the second day out from Mobile Bay that a sudden drop in the barometer, accompanied by a line of heavy black clouds on the western horizon, reminded us that it was beginning to "smell squally."

The night had been warm and sultry, with just enough breeze to give us head way, and we had all whistled for more wind several times. So when it at last came it was in such full measure as to make Frank remark, "Well, boys! we whistled altogether too loud!"

This was our first squall at sea; but we were ready for it, and the first heavy gust found Gazelle snugly reefed and waiting. It was a hard blow, lasting about an hour, kicking up a very large sea, and I don't believe I ever saw it rain so hard before in my life. It happened to be in our favor, however, and Gazelle settled down in her old time fashion, reeling off miles and sporting with wind and wave.

So it was that just at dusk we crossed the bar and sailed up the bay leading to the City of Pensacola. The tide began to ebb before we were able to get far, however, so we cast anchor in the lower bay just off the lighthouse where we remained until daybreak, when we again hoisted our canvas and proceeded toward the city. We found Pensacola a very pretty city indeed. It is a great port. Ships of almost every nation lay at anchor or were loading at the wharves.

THE GAZELLE SPEEDING ON.

We found many things of interest and were greatly pleased to make the acquaintance of the manager of the refrigerating plant, who not only showed us the complete process of making ice in hot weather, but also sent us a generously large cake aboard which was accepted with grateful thanks, for the worst of all things about salt-water sailing in the south, is the scarcity of fresh water, which soon becomes warm and brackish in the heat.

As we had heard much of the beauties of the Santa Rosa Sound we determined to continue our journey by this route. Accordingly, next morning we turned to port and passed down the bay, rounding the buoy which marks the entrance, and soon came upon a dozen ships riding at anchor. The yellow flag at their masthead showed they were in quarantine and inasmuch as we were all well aboard, we felt no desire to stop and inspect, so we sped along.

The beauties of the sound had not been exaggerated to us; in fact, it would be hard for ordinary tongued mortals to do them justice.

The sound is formed by a narrow neck of land extending parallel with the main shore for some sixty miles. The channel itself is narrow but deep, and is plainly followed by its deep blue color, for the edges terminate in abrupt white sand bars washed by the water until nearly as hard as rock.

On the ocean side of the sound are the sand hills, some being so white as to actually look like snow. The government has a large reservation on the mainland extending along the sound, planted entirely with live-oak trees. These are simply beautiful, contrasting as they do with the pure white of the opposite shore.

The wind was fresh and we found considerable enjoyment in simply flying, as it seemed, through this path of beauty. The channel would wind in graceful curves to right or left, and the wind being always abaft of beam, made it easy to follow the course without tacking.

Night came on, and not knowing the channel, we had about concluded to come to anchor, when another vessel came along going our way, and finding no trouble keeping in its wake we continued on with it as our guide, until at last the helm went down and the flapping of sails was heard as the vessel came into the wind. The familiar sound of the anchor followed by the clink of the chain running through the chocks, announced that they had anchored, and we, following

suit, did likewise. We could hear the surf as it pounded on the beach, and knew that we had reached the inlet leading to the Gulf.

Supper disposed of, we rowed over to the schooner which, strange to say, had our name, "Gazelle." The boys aboard, who proved to be fishermen, were glad to see us and gave us a cordial welcome. Their boat had sixty tons of ice below. Thus loaded, she was headed for the red-snapper banks, where they would fish until a cargo was packed in ice, when they would return.

We listened with interest to the yarns spun by these followers of the sea, and it was interesting to learn of their methods of taking and preserving fish caught many miles out at sea and in so warm a climate.

Before leaving our friends we learned that they would continue on their way early in the morning, and as the pass over the bar into the Gulf is a treacherous one, we decided to follow them out. The next morning found us both ready to start, our anchors came aboard at the same time and together we continued toward the Gulf. "Gazelle," the yacht, proved to be too speedy for her big namesake, and we were soon far in the lead, notwithstanding that we slackened sail. Finally we reached the bar a long way in advance of our pilot and decided to use our own judg-

ment and cross it. We were completely successful and were soon skipping along o'er the deep blue of the Mexican Sea.

Although the Gulf coast from Pensacola to Apalachicola is very bold and dangerous and we had several severe squalls with heavy seas, we reached the latter city safely, and after a short visit and making a few necessary repairs to our rigging, we continued our journey, our next stopping place being Cedar Keys.

Passing through St. George's sound and continuing along the coast without serious mishap or incident, but every day proving pleasurable and instructive, we finally, on the twenty third day of May found ourselves becalmed off the mouth of the Suwanee River. We were lonesome, and as we thought and realized how far we were from home and friends, the strains of the old melody seemed to cross our minds and we found ourselves saying over and over,

"Way down upon the Suwanee River,
Far, far away."

How strange it seemed to be right there, and to realize that it was "dreary" too. But next morning brought us a fine breeze and by nine o'clock the beautiful emerald islands of the Cedar Keys were in sight.

How green and pretty these beautiful little islands seemed, rising up from the sea like gems in a rich setting! Sea Horse Key, on which is situated the pure white picturesque light-house and keeper's home seemed a garden of paradise, so rich and beautiful was its verdant foliage.

It seemed good to land once more and we found the little old town of Cedar Keys quite interesting. The harbor was well filled with sponge fishing schooners, and we were greatly interested in learning from the sailors how this article of high commercial value is procured and made fit for market.

The outfit consists generally of a wide schooner vessel of generous beam and strong construction, varying in length from fifty to one hundred feet. Notwithstanding that the accommodations for sleeping are necessarily limited, sometimes the crews consist of a dozen or more negro sailors and fishermen. These negroes are more enlightened than are those reared in the States, as their position in the Bahama Islands, from whence they come, gives them a far better chance to improve their condition. These negro spongers are nevertheless hated by the few white crews that still go forth in quest of this product of the sea, for it

is claimed that they are ruining the trade for the white man and driving him from the shoals.

Each boat is provided with many long, slim poles, made from clear southern pine. These poles are very slender, but strong, and range from ten to forty five feet in length, while their diameter throughout is only about one inch. They are provided at the end with hooks and with these tools the expert fishermen drag the sponges up from the bottom. They do not fish from the large boat but from small yawls about twelve feet in length, and each vessel is provided with at least six of these consorts which string out behind by a long towline. The schooner is thus made a rendezvous, store house and general living place for the outfit during the several weeks spent in securing a load.

Cedar Keys seems to be a favorite stopping place for the spongers after their long time at the sea. They gather there in large numbers and after a general jollification and, I am sorry to say, much dissipation they continue their way to Key West, which is the home port.

Having visited these boats in the harbor and seen the cured sponges nicely strung on strings and ready for sale, we became so interested as to wish to hurry along and visit the fishermen on the sponge reefs.

Our provisions all aboard and stored away, with a new supply of fresh water, we bade farewell to the

Keys and resumed our voyage down the coast. After leaving Cedar Keys the charts show a peculiar bottom formation reaching a hundred miles or more along the Gulf coast. From the shore line out into the sea at varying distance of five to twenty five miles, the water deepens only about one foot a mile. This forms a peculiar shoal safe to sail upon, for the gradual slope breaks the force of the waves and seldom does a sea of any size form on this bank. It is, therefore, a grand place to cruise as one can anchor in safety almost any place.

The stillness of the water no doubt is the cause of such splendid marine plant life as grows on the bottom; the water, too, is so clear that everything is plainly visible, so that the fisherman is greatly aided in securing the sponges.

We enjoyed our cruise on this water very much, but it seemed good to sight a fleet of spongers the second day out of Cedar Keys, for we had kept out of sight of land during the entire time.

We were welcomed by the vesselmen, and anchoring near by, we tried to make up our minds whether or not we could stand the odor of decaying sponges for the sake of the knowledge gained by a visit with the fleet. Soon, however, we became accustomed to it and greatly enjoyed watching the process of gathering and caring for the cargoes. It was fun to see the men with

their long poles hook up the jelly-like balls from the bottom. A trial with one of the hooks proved fruitless for me, and the trick, which looks so easy, was seen to be the result of long training.

The sponges are piled up on deck where the sun decays the animal matter, after which they are thoroughly pounded with clubs. After this operation they are buried in sand for a few days, when they are again thoroughly washed and hung in the sun to bleach.

How the men ever live aboard these boats during the curing operation is more than I can understand, for the odor is very disagreeable and in the hot sun doubly offensive; but they become used to it, and I am told that the men are exceedingly healthy while plying their trade.

We met these fleets of boats all along the reef, and when we came to St. Martin's Point we found great numbers of them.

Thus we enjoyed the passing days greatly. We were also becoming used to the tides, the currents and all the peculiarities of the salt sea. Many good times, without any exciting incidents, marked our voyage to Tampa, but as we came to anchor in the lower bay in the friendly lee of an island we little imagined what a time of adventure our visit to the Ten Thousand Islands and the Everglades of Florida would bring.

(To be Continued)

VIEW OF "OLD PARIS," ALONG THE SEINE.

THE PARIS EXPOSITION

Reported by a Boy Reporter Especially for the Readers of "The American Boy"

THIRD LETTER

Dear Boys:

Paris becomes more crowded with visitors every day, and if we boys had not already secured our room for thirty cents a day I am afraid we wouldn't be able to get one now at that price. Even the small houses in out-of-the-way streets are beginning to raise their prices and every room, almost, is in demand at any price. People are flocking here from everywhere. As we go through the streets we see representatives of all nations. There are a lot of Algerians and Tunisians from Northern Africa and, of course, there are numerous Turks and Armenians. There are not so many Chinamen here as we see at home, but those here are doubtless of better class than the laundrymen. Sidney, coming from England, has never seen many Oriental folk except the East Indians, and he is always calling to me to look at some strange individual in the crowd. It is almost impossible to get along the main streets in Paris in the afternoon or evening, for the crowd is simply tremendous. Most French people walk slowly, too, and when Sid and I are in a hurry we simply have to run along the street between the carriages and wagons. Being boys, we can get along pretty well this way, but, of course, we have to keep watching to avoid getting run over by some of the automobiles, of which there are hundreds in Paris. The machines go shrieking here, there and everywhere, and most of them carry horns, which they are always blowing. We wonder that the horses don't get frightened, but they all seem to be used to automobiles by now. They do scare old ladies from the country, though, and it is sometimes amusing to see the expression on the faces of the frightened ones. But Sid and I were a little afraid in the beginning, too, so we can't laugh at anyone.

We continue to visit the Exposition almost every day and always find something new and interesting to see. We have learned to know our way everywhere within the grounds by now, and I think I have seen nearly all the American exhibits. In most departments I couldn't help being disappointed with our showing. I had been telling Sidney that the United States was sure to surpass England everywhere, but when I began to compare the exhibits of

the two countries I found that England had surpassed us in nearly every section. It was very humiliating to me, and Sid keeps roasting me about "the great United States exhibits." Even our National pavilion is less interesting than that of England. Ours is very large and imposing from the outside, but as soon as one enters the door he begins to be disappointed, for there is nothing at all that is interesting to see, just some chairs and tables and some American newspapers that are a week old. All the other countries have interesting exhibits of some kind in their buildings so that visitors are not disappointed when they enter. In the British Royal Pavilion there are some famous tapestries and paintings and Sid never tires of pointing them out to me and asking if we have anything like them in the "States." The German building also contains some fine works of art, and the Norwegian, Italian and Spanish pavilions are simply overflowing with interesting exhibits of various kinds. The American pavilion is the least interesting in the grounds from a foreigner's standpoint. I wish the Commissioners had only seen fit to furnish one room in our building with Indian things. There are any number of beautiful things they could have secured and everything Indian is interesting to Europeans. Or they might at least have secured photos of Niagara Falls and the scenery among the Rocky Mountains and in Yellowstone Park. Or they could have shown some pictures of our great buildings and our fine railway trains. All of these things would have attracted thousands of people to our building, whereas now few go even once and none go a second time.

Germany seems to have the finest and most complete exhibits of any nation, next to France herself. She has evidently spent much time in preparing them, and the men at the heads of departments must have known their business thoroughly. Germany has secured good space and has made the best use of it. The result will surely be of great value to German commerce.

There is one American exhibit that has interested us boys more than any other one thing we have seen. This is the American Corn Kitchen, or "Cuisine de

Mais" as they call it in French. It has been established by the United States Government for the purpose of educating French people to use corn as a food. They raise but little corn here and most of that which is raised is fed to pigs and to chickens. The people have never discovered that it is a good food for human beings, and our Government is trying to teach them that it is. Of course, corn is very cheap, so there is no reason why it shouldn't become a popular food here, and if it does our trade with France will be greatly increased. In this Corn Kitchen is a real old Southern "mammy," and she makes all sorts of good things out of corn and serves them free to the French people, who come in by hundreds to eat. Of course, she has a lot of assistants and they manage to serve a mighty good lunch, in which everything is made of corn. They first give people some corn soup, then follows some hominy or some fried mush. The next course consists of corn cakes with syrup and for dessert there is a kind of corn starch pudding. Frenchmen have never eaten any of these things before and neither have Englishmen, and Sidney was very much surprised when he found how good everything was. He has been back to the Corn Kitchen at noon three times and says he would go again, only he's afraid "Aunt Jemima" will refuse to serve him any more. The Frenchmen seem to like the corn immensely, too, and I have seen many of them back again for more of it. The corn products have been introduced into the Paris stores and are said to be having quite a sale. In the same room with the Corn Kitchen is a stand where a certain famous Pittsburgh firm is serving free samples of their baked beans and sweet pickles. Sid and I have patronized this stand quite extensively for Sid likes baked beans, too. Frenchmen can't understand how beans are cooked in this way, but they eat the samples in great quantities. It will be very strange if corn and baked beans do not form hereafter an important item on every French bill of fare. The only bad thing about this exhibit is that it is very hard indeed to find. It has been located on the third floor of a small building away at the edge of the Fair Grounds and it is nearly an all-day job to find it. I met an American from Kansas the other

admission. It is a collection of buildings which have been constructed along the right banks of the river Seine and they are built to represent Paris as the city looked hundreds of years ago. All the buildings are true to history and one can read about some of them in the books telling about medieval France. There are people inhabiting this quaint old village and they are dressed in the ancient costumes and live as much as possible in the old-fashioned way. When in the village we could imagine that we really stood in ancient Paris and the experience was a very delightful one. There were men, women and children walking about dressed in a most outlandish way, and the stores, the church and the furnishings of the houses were all wonderfully interesting. We remained in the village for quite a

omnibuses, one must get a ticket with a number and then wait with a crowd until one's number is called out by the conductor. Sometimes we have to wait more than an hour, and nearly always walk rather than do that. Sid tried to take a bus one evening at a starting-point and as usual was told to get a number. He got his number all right, but as this was his first experience he tried to get on at once without waiting to be called. The conductor put him off, while a crowd of Frenchmen laughed and jeered. Then Sid lost his temper, and from his appearance when he reached home he must have fought the whole crowd. He hasn't ridden on an omnibus since and says he never will in Paris. "We do things better in London," he says.

But we are rapidly learning all these little peculiarities of Paris and are getting used to French ways. This past week we have been seeing a lot of new things and to-morrow we are going to Versailles to see Napoleon's bedroom, and next time I'll have a lot to write about, I'm sure.

Paris, July, 1900.

THE BOY REPORTER.

day who said that the kitchen should have been located in the rotunda of the National pavilion, and I think he was about right. It should have certainly been placed somewhere in a building that people can find. Aunt Jemima says she doesn't blame people for not wanting to walk two miles and climb three flights of stairs to get corn cakes. "Them cakes is mighty good," she said the other day, "but I wouldn't kill myself walkin' to git 'em." Old Aunt Jemima is the most homelike thing I have seen in Paris and I hope she stays here as long as I do.

One thing at the Exposition which Sidney and I have had lots of fun visiting is "Old Paris." This is perhaps the leading "side show" on the grounds and is also about the only thing that's worth the price of

forever. Although we spend much time at the Exposition we go about Paris a great deal, too, and have all sorts of funny experiences. It is almost impossible to get a seat in any of the trams which run in Paris streets, so we have usually to walk from place to place. We wonder that the omnibus companies do not put on more trams during the Exposition, because there are always about twice as many people wanting to ride as they can accommodate. In order to get on at one of the starting points for

TWO HEROES OF MALVERN HILL

The tenth story of a series entitled "Stories of Boy Heroes"

ANNAR ROBINSON WATSON

"Do you think you can get along without me, mother?" asked Louis Thornton.

His face was grave and earnest while his eyes were lifted with an anxious tenderness which for a moment brought the tears to her own.

"It will be hard, dear," she answered slowly, "but if our State needs you, I have nothing to say."

"Father joined the army a year ago. I have tried to take his place, mother, and now little Jim must take mine."

"You have been brave and true in the discharge of duty," she replied. "I believe you will be so always. In six months you will be fifteen years old, but you have borne a man's responsibilities already."

It was a very simple little farmhouse down in Georgia where they lived; the mother, Alice, little Jim and Louis, but it was the home of heroes, nevertheless.

The father went out with the first regiment from his county when war was declared, and was one of the earliest to answer the musket call of the enemy.

Although Louis was yet only fourteen, the spirit of a long line of knightly ancestors fired his soul, and the need for soldiers seemed so great, his mother could not refuse to let him go.

The command which he joined was ordered to Virginia, later to the banks of the Chickahominy, where in the battles of Frazer's Farm and White Oak Swamp, June, 1862, it bore itself with distinguished gallantry.

For a while, with the other Confederate forces engaged, they drove the enemy before them though every step was hotly contested. Towards Malvern Hill the fight was tending, that impregnable spot, cannon-crowned and gun-girt.

Here the Confederates, in the face of certain destruction, were sent out from the cover of the forest to face the enemy, but as they advanced their step was firm, proud and unhesitating.

Over on the James the gunboats lay, and every moment or two, high over head, came crashing through the treetops their death-laden missiles. Shell after shell ploughed its way from the hillside through the advancing ranks of gray; but on they came, leaving the comrades who fell, stumbling over their dead bodies, but "closing up" and facing the fire like men to whom fear was an untranslated word.

It was July the first, and the day was warm and sultry. Clouds began to gather, then the rain fell, the twilight was descending, but the most desperate charge of all was yet to be made. The approaching phalanx of Confederates was now within musket range of the enemy and with the fierce "Rebel yell" charged on the run in the murky darkness.

They were mowed down by scores, for the storming

of the hill was foolhardy, worse than useless, and at last the "retreat" was sounded, and down the incline the Federals rushed towards them with bayonet points in the lead.

In the smoke and gloom it was difficult to distinguish anything. Federals and Confederates were falling on all sides, when a blue-coated soldier, charging, heard a loyal voice call out:

"Hold on, I surrender!" and reaching forward he laid his hand on the shoulder of a mere child, a pale-faced, gentle-voiced boy. It was Louis, who following his soldier father, had left the little Georgia home almost a year ago.

"I surrender," he repeated faintly and his captor saw that he was wounded in the side and head.

He was only a child, and the blue-coated soldier, thinking of his own little lad so safe in a New York village, tenderly lifted his little enemy and carried him in his arms to a point somewhat removed from the carnage.

The wounds were bleeding copiously, but no groan escaped the lips of the little hero while he was being placed upon a pile of blankets hastily thrown together.

There were dead and dying on all sides and he was only a little boy Confederate, of small importance in the scene; but the generous-hearted Blue-coat, thinking tender thoughts of home, remained near by to do what he could to soothe the last dark hour which he saw was drawing on apace.

"You are not afraid, my little man?" he asked very gently.

"Afraid of what?" was the half audible reply.

"You are going, don't you know—where the guns won't fire any more—where—the Great General has declared peace, and there's no fighting and no suffering."

"Oh," was answered very slowly, then "I—I don't care for myself, but mother and Alice and Little Jim—it'll be so hard for them."

He was quiet for a time, then started up, exclaiming: "It was a grand charge! Were we defeated?"

"Yes, driven back," was the answer.

"But some of us reached the lines?"

"Yes, and you among them."

A faint smile lit his face. "The boys said I would be afraid, but—but—you can tell them I was not. I was cheering when the last ball struck."

"Yes, you were as brave as any of the noble fellows who fought to-day," answered the kindly voice and the boy smiled and seemed to sleep.

The soldier bending over him took one of the slender brown hands and clasped it tenderly; the finger tips were growing icy and damp. A half hour later the boy stirred again and tried to sit up, calling softly, "Mother, mother!" then fell back—dead.

A sob went up from the compassionate heart that throbbed under the blue coat, a tear fell upon the face of the dead child, and a very gentle hand smoothed back the hair on the white forehead, buttoned the little gray jacket over the wounded breast, and folded the arms so that they hid the cruel blood-stained rent.

Two American soldiers they were, the man and the boy, though enemies in life they were friends at the

last. The wand of Death, the Great Reconciler, had touched them.

It was many years before the mother, Alice and little Jim knew how he died, they had only learned that he fell at Malvern Hill and was buried there. But after so long a time "the boys" of the little country school, grown to be men now, had his message that he was not afraid, that he fought to the last, that he was cheering when the fatal ball struck.

THE DISTRIBUTION OF \$1,000 IN MONEY PRIZES

As announced from time to time during the past nine months, the publishers of THE AMERICAN BOY will distribute, a few days in advance of the Holidays, \$1,000 among the fifty-two boys who will, by that time, have sent in the largest number of subscriptions, each subscription being accompanied by one dollar. The boy who has sent the largest number of subscriptions will receive the nice little sum of \$200; the one sending the next largest, \$100; the two next in order, \$75 each; the three next, \$50 each; the five next, \$25 each; the fifteen next, \$10 each; the twenty-five next, \$5 each. This competition is open to all readers of THE AMERICAN BOY who are working on commission. Boys who send in subscriptions are entitled to the premiums listed in our premium catalogue, and the subscription sent count toward these money prizes. Boys, however, who are retaining a money commission on each subscription on sending it in are not entitled to be counted with the contestants.

The time is drawing near when the distribution is to take place, and as a consequence the boys are greatly interested and working with might and main for subscriptions. Remember that the lowest prize that any one of the fifty-two boys will get is \$5. Any boy with a moderate degree of energy in his make-up can go out and by a few hours' work put himself within the number of those who will get a cash prize on or about Christmas. He will find people ready to help him earn a little money, and he will find, also, that THE AMERICAN BOY is a good paper with which to canvass. Send in your subscriptions as fast as you get them and we will keep an accurate account of what you send.

We would like to give the names of the fifty-two boys who stand highest on the list, but we have not the space for it. The fifteen, in their order, who have sent in the largest number of subscriptions are:

- Albert W. Field, Minneapolis, Minn.; Charles Gustafson, Chicago, Ill.; J. Lawrence Hirschland, Reading, Pa.; Emerson T. Cotner, Detroit, Mich.; Louis Straka, David City, Neb.; John D. Croneweth, Detroit, Mich.; Fred H. Hilker, Fort Wayne, Ind.; Raymond Pond, Chicago, Ill.; Donald Annis, Detroit, Mich.; Carl Matthews, Dubuque, Ia.; Clarence Lycett, Fort Lemhi, Idaho; Herman H. Smith, Lamoni, Iowa; Eugene Steele, Phillipsburg, Mont.; Charles Meader, Chicago, Ill.; T. F. Wilson, Columbus, Neb.

It will be noticed by comparing the relative standing of these fifteen that some changes have taken place in the order of names as published in the August number. For instance, J. Lawrence Hirschland, of Reading, Pa., has jumped from seventh place to third place, Donald Annis has jumped from eleventh place to ninth place, Eugene Steele, who was not named in the August number among the first fifteen, is now number fifteen, having passed Avery C. Hand, of Mansfield, O., who was number fifteen at the time the August issue went out.

Perhaps in our October number we shall publish the names of the fifty-two boys who stand at the head. Let us tell you, in confidence, that young Field, who stands at the head, has not so many subscriptions but that any boy, particularly if he lives in a city or large town, can outstrip him in the race in the next two months.

IN AND AROUND THE ACADEMY.

MICHIGAN MILITARY ACADEMY
THE WEST POINT OF THE WEST

SITUATED on the shore of Orchard Lake, one of the prettiest lakes in the whole lake region of Michigan, but a short distance from the City of Detroit, is an institution of which all Michigan is proud, namely, the Michigan Military Academy, sometimes called "The West Point of the West." Here, amid scenery most enchanting, free from the allurements of city life and yet near enough so that on appropriate occasions the boys may have city advantages, this institution of learning has flourished for many years, presided over by Col. J. Sumner Rogers, a military officer of high standing who has been at its head since its founding, assisted by a large academic and military staff. In 1877, at which time the school was organized, General Sherman wrote to Colonel Rogers: "It requires no prophet to tell that, with perseverance in the course you have so well begun, the Michigan Military Academy will become famous and honored throughout the land." That his prediction proved true is shown by the fact that Captain Lee, in his report to the War Department, as United States Army Inspector, in 1894, said: "The Military Department of the Michigan Military Academy stands pre-eminently without a peer among all of its class."

The surroundings of the Academy are healthful and inspiring. The soil, unlike that of many lake regions, is dry and fertile, entirely free from low, marshy places. Beautiful shaded drives about the shores of Orchard Lake and its neighbor, Pine Lake, make it a favorite resort for those who drive or take delight in the wheel. Orchard Lake, being eight miles in circumference and having a sand and gravel beach, affords ample opportunity for bathing and boating.

LIEUT. LANDIS ON WAR CRY, JR.

The parade grounds belonging to the Academy consist of about fifteen acres, and here, outside of study and drill hours, the boys may be seen engaged in tennis, golf, football, baseball, and such other amusements as delight the heart of a boy. In the months of May and June visitors come from far and near to witness the dress parade of the cadets and listen to the excellent band concerts on the parade grounds. In stormy weather the gymnasium, which has a clear floor space of one hundred and fifty by fifty feet, is used for infantry exercises, and the riding hall for cavalry exercises. To the west of the parade grounds along the shore of Orchard Lake, stands the target, with the lake as a safe background.

In 1877, when the Academy began its existence, it had but a single building, which was at once a schoolroom, teachers' quarters and barracks. Now, many splendid buildings are scattered throughout the grounds, the principal one being the recitation building, with its ten

MARCHING FROM MESS.

recitation rooms, four offices, a chapel and a library; then there is the barracks, with accommodations for one hundred and forty four cadets; the gymnasium and riding hall, already mentioned; the quartermaster's building containing postoffice, armory, laundry, tailor shop, and other rooms for the accommodation of employees; the mess hall, which includes the kitchen and bakery; the Castle, which is the residence of Superintendent Rogers; the boiler house, including shops and dynamo room. A new science building is in process of erection.

The curriculum at Orchard Lake embraces the courses of study offered in the best high schools of the large cities, as well as a preparatory year, by which students may prepare for the regular course, and a post graduate year following it. The post graduate year is designed for students who have graduated from the Academy or from a first-class four year high school. It covers the first year's work in the best colleges and universities.

Every cadet must look after his own room, march in military fashion to recitation and mess, and learn promptness and precision in his movements. This means much more, educationally considered, than is usually understood. We may easily underestimate the value of a discipline that begets habits of attention, punctuality, promptness, obedience, industry, and at the same time gives a military bearing and a vigorous body and mind.

ACADEMY BAND.

THE BOY TRAVELER

ANNOUNCEMENT—We present herewith the seventh chapter of the narrative from the pen of Harry Steele Morrison, who is known as "The Boy Traveler," in which he is describing his adventures as a 16 year old boy on a tramp through Europe. The boy was living in 1886 in a small town of Illinois, but in that year became suddenly ambitious to go to Chicago to work. He lived in that city for a year, working as office boy at \$1.50 per week, and then, being determined to become a reporter, he started upon his famous trip to Europe. He had saved \$25, and with this money started for New York, stopping off at Washington, where he was received by the President and Mrs. McKinley. From New York he worked his way to London as cabin-boy on a cattle-ship, and arrived in England, where he worked for his room and board in an inn. He succeeded in interviewing Mr. Gladstone, Queen Victoria and the King of Belgium. He visited the late President of France and the Lord Mayor of London, and altogether saw more famous men than any other person could possibly have interviewed. He was lost in the Alps and had many startling adventures of various sorts. The trip was remarkable in every way. The story of his achievements is extremely valuable. It gives American boys a knowledge of the opportunities which are open to them, and teaches them that with industry and courage, the boy who is early thrown upon his own resources may rise by his own efforts and make a success of life.—The Editor.

CHAPTER VII.

Though I didn't particularly enjoy my stay in Paris, I had several very interesting experiences. When I started out upon my trip to Europe I was very anxious to have an interview with the President of France, M. Faure. I had read somewhere that he had once been a poor boy, so I was more desirous of meeting him than of talking with any other man in Europe, except Mr. Gladstone. And I thought that because M. Faure was the President of a Republic he would be an easy man to get at. In this idea I was much mistaken. The President lived in the Elysee palace, which was surrounded on every side by high walls. There was apparently but one entrance to the courtyard, and this entrance was guarded day and night by soldiers. I called several times at this gate, but the soldiers refused to let me pass. They couldn't speak English and I couldn't speak very much French, so my visits to the outside of the palace never amounted to much. I soon saw that the guards were determined not to let me in, because they supposed me some boy from the streets, no doubt. And I saw, too, that people arriving at the entrance in cabs and carriages were not stopped, but were allowed to drive right in. So, finally, it occurred to me that I might be able to get in if I could only fix myself up to look like some person of importance. I was very anxious, too, to outwit the soldiers who had treated me in such a shabby way, so I waited, and meantime made great preparations for my effort. I hired a dress suit and a cab, and drove up to the main entrance in style. The soldiers at the gate made no effort to stop me, and into the courtyard I went, and up to the very palace door. Once inside the building I sent in a card to the President, who received me, and the expression of surprise on his face when he found me only a sixteen year old American boy was very funny to see.

But when I explained to him why I had been so anxious to see him and how I had succeeded in gaining admittance, he laughed heartily and was much interested in learning about the trip I had been taking. I told him the whole story, and when I had finished he made me glad by telling me a great deal about his own early life and experiences. I was surprised to learn that this great man had at one time been an apprentice to a tanner in the city of Havre, and that he had to work early and late for a mere pittance. President Faure told me how he had worked himself up from one position to another, studying nights to improve himself, until finally he was made a partner in the firm and married his employer's daughter. It seemed almost like some story from a book, and after I had seen him I felt vastly encouraged in my own efforts to succeed.

After seeing President Faure I felt ready to return to England on my way home again, and having received the money from the London paper, I was able to make the journey in comparative comfort. My second stay in London was to be the most enjoyable period of all the trip.

I wrote daily for one of the leading evening papers in London, and when I had exhausted the narrative of my experiences on the Continent they had me write my impressions of various things I saw in London. I wrote for them my opinion of the British boy, and what I thought of London omnibuses. I also interviewed several famous men whom I had not seen before. Among these was the Lord Mayor of London, whom I had long been anxious to talk with. At school I had heard about Dick Whittington having been Lord Mayor, and I had seen pictures of this one in his robes of office. His portraits looked very interesting and I was exceedingly anxious to see him. So one day I went to the Mansion House in London, where the Lord Mayor lives, and sent in a card to "His Lordship." I didn't have to wait long for an answer. His secretary hurried out and said for me to come in. "As soon as His Lordship heard that the "American Boy Traveler" was outside he sent for you to enter," said the secretary, so I went in feeling that the Lord Mayor must be a very pleasant man indeed.

I found him seated at a long table in his office,

dressed in a purple velvet robe trimmed with gold and other ornaments, and wearing a white wig over his hair. He was, of course, very impressive in appearance, and I was just a little overawed at first, but after awhile I felt perfectly at ease. The Lord Mayor was exceedingly pleasant, and seemed anxious to do all in his power to make me feel at ease, and he told me a great deal about the duties of his office and what a Lord Mayor has to do. Then, when we had talked

THE MANSION HOUSE.

some time, he had me shown over the Mansion House, from top to bottom. It was all very interesting indeed, for there were many old relics and curios that were well worth seeing. I was even taken down to the kitchen and introduced to the cook. I found the kitchen to be one of the most interesting places in the entire building. The cook was roasting meats on a spit before an open fire, just as in olden times, and I enjoyed watching the operation.

When I had passed through the building I was much surprised to be told that I could sit beside the Lord Mayor on the bench in the Mansion House Court if I cared to do so. I was surprised, because this was an unexpected honor, and a new experience for me. But I determined to accept the invitation, and in a short time I was seated beside the Lord Mayor of London in the court-room. It was a trying position, for, of course, everyone in the court below was staring at me and wondering who that boy could be. I was very proud indeed. The Lord Mayor was exceedingly kind, explaining things I didn't understand, and pointing out many interesting persons in the court-room. I shall always remember the day spent with the Lord Mayor as one of the most delightful in all the trip.

I was almost tempted to remain in London during the Christmas holidays, but I had now been away for many months and was beginning to feel anxious to see my friends and the dear ones at home. Then, too, I couldn't be sure that my prosperity would be lasting, and after several months of traveling under difficulties I was anxious to avoid any more such experiences. So I began to make preparations for returning to the United States, and as I had been successful in earning some money I was able to come back as a first-class passenger on one of the great ocean liners instead of having to wash dishes to pay my way. I could as well have traveled second-class, but I was anxious to come home in the best way possible, just to show my friends that I had been able to get along without any help from them and without any money from this side.

I was a little sad at leaving London. I couldn't but remember the good times I had had while exploring the nooks and corners of the grand old city, and I knew that such good times would never come to me again, because I could never have the same feeling in going over the ground a second time. I hated to say good-bye to my many friends, too, but I felt sure I would be able to see them all again some time.

The voyage home in the fast liner was hardly as interesting as had been my voyage over aboard the cattle steamer. I had no grumbling "Pants" to order me about, and I had no dishes to wash, which was much more pleasant. I was again a sufferer from sea sickness, but could, of course, lie down when I felt it coming on. That was better than having to work in a hot, stuffy pantry and submit to being scolded because I couldn't wash dishes as fast as was necessary during meal hours.

After six days the vessel entered New York harbor, and I was overjoyed to see the Statue of Liberty rising proudly in the distance. We steamed slowly up the North River to the company's pier, and I could see the tall buildings standing like sentinels on the shore. One of the tallest of them was that owned by the newspaper to which I had been sending articles, and I made up my mind to see the editor as soon as possible after my arrival.

I was, of course, delighted to find myself in New

York once more. I went to see the editor and asked him why he hadn't sent me any money for the articles he had used. He surprised me very much by saying that he thought it would be so much more interesting for me to be over there dependent on my own resources. "There's a much better story in it, now that you are back," he said. I told him that it was certainly "interesting" enough to be abroad without money, but not very pleasant. He paid me then for the articles he had used, and he made me very happy by saying that I could begin work on the paper if I cared to. I was glad to hear this because it showed that the first object of my trip had been accomplished. I had started out in the beginning hoping to get a start in newspaper work, and now my hope was realized. I could feel that I had made at least a beginning in my chosen profession.

Before taking up my work I was, of course, anxious to go West to Chicago and down to the little town from which I had gone to that city nearly two years before. So I planned to get there just before Christmas. I found many persons willing to aid me after my return, and because he was interested in my trip, the good-hearted president of a great railroad gave me a ticket to Chicago. I went back, therefore, triumphant and was received by my friends in the most pleasant way possible. They all congratulated me on what I had accomplished, forgetful that they had done their best to keep me from taking the trip.

The person I was most anxious to see, excepting my mother, was the editor who had first helped me to accomplish my ambition. He was truly glad to see me successful and paid me for the articles he had printed. He, too, it seemed, had been testing my perseverance, by allowing me to make my way alone in Europe.

And then at last I returned home. There was quite a crowd present when the train from Chicago pulled up at the station platform, and all were glad to see me back again. I didn't tarry at the station to talk. Mother was waiting for me at the old home and I was more anxious to see her and feel her arms about my neck, than to see all the people in the world beside. And, oh, what a good time we had together, talking over my experiences, and wondering if it could be really less than two years since I left home first. Mother had, of course, worried a great deal about me while I was away. I had written her nothing concerning the hard times which came to me; nevertheless she worried some. But now all that was over with and we were thankful that things had turned out so well after all.

When I had been home a day or two they held a public reception for me in the dear old church, and I got up and told the neighbors all about my experiences and interviews. It was an evening long to be remembered for I appreciate the fact that those who knew me best were proud of what I had managed to do.

After several happy days at home I returned to New York to take my place upon the paper, and during my term as reporter I have been sent to interview many famous and successful men. I have talked with all of them and have asked them to what they owed their success in their chosen career. Most of them have quickly answered: "To hard work and perseverance."

THE STATUE OF LIBERTY.

So I have come to believe that perseverance and hard work will enable a boy to do almost anything he undertakes. I wouldn't advise any boy to undertake a trip to Europe under such circumstances as mine. I am quite sure that I would never have gone if I could have looked ahead and known all I would have to go through and I shouldn't care to go again under the same conditions. But I am sure that when a boy has decided upon the career he wants to follow, he can find equally original ways of getting a start in that career; and I am sure that all boys will find, as I have, that men and women everywhere, all over the world are always ready to help those who help themselves.

(The End.)

BOYS AT THE SEASHORE

By GEORGE F. LORD

From the moment when the first breath of "salt" air fans the cheeks of the passengers in the hot and dusty railway car, to the last backward look of the returning visitor, the ocean is the great object of interest. The first glimpse from the train reveals only a thin blue line of water on the horizon. In a few moments some bright boy shouts, "I see a ship!" Then as the train draws rapidly nearer the depot, the blue line widens, yachts, schooners, and steam vessels can be distinguished, and the journey's end finds the tired but happy travelers within earshot of the everlasting roar of the breakers.

If the reader has never visited the seashore, he must know that the big waves are constantly rolling in toward the shore, but as the water shallows, the lower part of the wave is held back by striking the bottom or beach, and the crest rolls over and "breaks" into white foam. Thus the water is always advancing and receding from the beach.

As the boys of whom I write felt the

air to keep their heads above water. Sometimes a nervous chap would jump too soon and land right in the middle of a heavy wave. Down he would go, with his mouth open; then, spluttering and rubbing his eyes, "bob up serenely" on the other side, only to be tumbled over again before he could recover his footing.

Thus they spent the merry moments, shouting, diving, and rolling over in the buoyant water until blue lips and chattering teeth drove them to the warm sand of the shore to rest.

Here they dug holes in the sand and watched the water filter in from the ocean, or buried each other's legs in huge sand heaps. Then they played tag on the shore, or hunted for the little air holes in the sand that betoken the presence of clams. Sometimes the clams could be found half buried in the sand. These the boys usually gave to the negro men and women that made a business of "digging clams" with sticks or clamshells.

Finally dinner time would draw near, and after washing off the sand in the surf, the boys would re-enter the bath-houses, change their clothes, and

under the piers. The water that washed up around the wooden posts seemed to be alive with the funny ten legged animals. The boys had to be very careful in handling them as their big "nippers" were ever ready to close on a finger or toe that came within reach. As soon as a crab discovered their presence, it would bury itself in the sand. Then the boys would dig for it with shells, sticks, or shovels. But often the crab was too quick for them and escaped.

All the young folks patronized the "Hokey Pokey Ice Cream" men. These enterprising merchants would drive their little donkey carts up and down the beach, crying, "Hokey pokey ice cream! All flavors! vanilla, strawberry and chocolate! Three cents a package, two for five!" They sold a sort of custard ice cream wrapped in paraffined paper. It was frozen and tasted nice on a hot day.

Then there were donkeys to hire for riding purposes. For five cents the donkey leader would give a boy or girl a ride on the back of his sleepy looking "Jack." The donkey rides were very popular with the girls and the younger children.

Lifeboats were stationed along the beach.

handle and feed the fishes, and point them out as the lecturer explained all about them. The lecturer was in telephonic communication with the diver, and sent him messages from the audience. Two pumpmen pumped a supply of fresh air to the diver, and two other men hauled him up out of the water after the exhibition, and took off his suit before the audience, explaining the purpose of each piece.

When the boys preferred, they went farther out on the pier to an opera house to see the moving pictures and hear the opera, or still farther out to another large hall, where exhibition games of basket ball were played.

Out near the end of the pier, the fishermen hauled up their nets twice each day. My! What a lot of fish were in those nets! Hundreds of small ones weighing from eight ounces to a pound; dozens of skates—queer animals with jelly-like heads—and here and there a huge "drum-fish," as big as a Newfoundland dog. After the net was drawn up

MAKING CANALS.

"HOKEY POKEY ICE CREAM"

DIGGING FOR CLAMS.

water surging around their feet, it seemed cool, but as they waded in deeper and deeper, and the foam dashed against them, it seemed to grow warmer, until finally a tremendous breaker took them unawares, and sent them sprawling. As they rose again, wet from head to foot, mouth, ears, and nose filled with generous samples of the "briny deep," they discovered that after their involuntary "ducking under," the water was "just fine."

And then the fun began.

One of the boys produced a hollow rubber ball, and they began to catch and throw it to one another. If one failed to catch it, he waded or swam after it as it floated lightly around. Or, perhaps, in reaching for it, he would forget the breakers, and just as his fingers started to close around the elusive ball, a huge wave would bury him from sight.

After tiring of this sport, the boys would join hands and "take the breakers," this is, stand waist high in the water, and as a rushing wall of foam threatened to engulf them, jump in the

leave their wet suits to be dried for the morrow.

The bathing was enjoyed every day at least once, although they soon learned from experience that lying in the sand with their wet bare arms and legs soon produced sunburn and blisters that necessitated the careful application of witch-hazel, "sun-burn lotion," cold cream, etc., for several days, to reduce the swelling and relieve the pain. But after being well browned, and "shedding" one or two thicknesses of skin, they were not so sensitive, but gradually changed from pale-faced "landsmen" to brown-skinned "Jack tars."

THE SEASHORE.

There were many interesting things along the shore and much of the boys' time was spent on the white sand. Sometimes they dug clams with iron shovels purchased at one of the many toy stores that fronted on the beach. Then there was lots of fun to be had "crabbing"

and a man in uniform went out in the surf with each boat whenever many bathers were in the water, and watched to see that no one got beyond his depth.

THE PIERS.

At several points along the shore, immense piers extended far out into the water. These were very popular places to spend the afternoon. For five cents a boy could go on the pier after dinner and stay until half past five. It was not only cool and pleasant there, but some kind of free entertainment was always in progress. First there would be a minstrel performance. Then a trick bicyclist would give an exhibition of his skill. This would be followed by a funny Punch and Judy show, or a band concert. Then there were two fish tanks containing ocean water, in which large turtles, and king crabs, bumped up against fish as big as a good sized boy. Twice each day, a diver in full diving uniform would enter one of these tanks,

so that the fish could not escape, they were lifted out in a big basket, dropped into a sorting box, and rapidly sorted by the fishermen. The fish flopped around in the box so fast that a regular shower of scales flew up into the air, and when the basket brought up a big drum-fish, everybody shouted with excitement.

On the extreme end of the pier was a man with a telescope. For five cents he would let you "see the people on the ships, or the spots on the sun."

Every hour a steamer left the pier for a five mile trip out to sea. Twenty five cents a trip was charged, but it made a very nice ride, except when the boys got seasick. Sometimes the big waves would lift the prow of the steamer right out of the water, and then drop it down in a hollow again. Out in the ocean the steamer would pass the pleasure yachts that were always sailing up and down, filled with people. There were usually two or three on each boat that became seasick through the motion of the boat. But they soon recovered their health on land. The well ones enjoyed these ocean

trips immensely and felt sorry for the sick people, but that did not make them feel any better.

THE BOARDWALK.

All along the shore for about four miles was a promenade or walk about ten feet above the sand and forty feet wide. It was called the "boardwalk" because it was covered with boards. Crowds of people were constantly walking up and down and the boys found much that interested them there. The side of the boardwalk opposite the ocean was lined with stores, hotels, bath houses, and places of amusement. One of the latter contained a fine merry-go-round. A pipe organ poured forth sweet melodies and popular airs while the boys and girls rode around on the backs of lions, dragons, horses, camels, etc. In the same building was an orange-juice machine that made a drink from oranges. This

was sold for five cents a glass, and was very cool and refreshing.

Near the merry-go-round were the penny mutoscopes. The boys could drop their pennies in the machines, turn the handles and see amusing moving pictures.

In nearly all of the candy stores "salt water taffy" was made in full view of the public. The operation was interesting and the taffy very good.

Several "weight guessers" were located along the boardwalk. Each had a large scale from which hung a chair. He charged nothing for weighing a person, unless he guessed within three pounds of his weight, before he sat in the chair. If he guessed correctly, five cents was asked. The boys were surprised to see how often these fellows guessed correctly and got their money.

Of course our old friend, "the balloon man," was there, with red and blue balloons, filled with light gas. Many boys and girls bought these floating spheres

and let them rise on the end of long threads.

There were numerous Japanese stores, for the sale of china and ivory wares; Mexican stores, where curious burnt leather goods and Indian curios were sold; and Turkish stores in which one could find beautiful rugs and silken scarfs. While the boys could not buy all they saw, they enjoyed looking at them, and seeing the queer foreign people that presided over the stores.

THE SHORE AT NIGHT.

Everything was bright and gay along the shore during the day, but it was like a dream at night. As soon as it grew dark, thousands of electric lights flashed out from the piers, and jeweled the waves with sparkling reflections. Throngs of gaily dressed ladies and gentlemen walked up and down the boardwalk, and many others rode around in large wheel chairs that looked like overgrown baby carriages. The soft wind

that blew in from the ocean brought strains of sweet music from the bands playing out on the piers. The electric searchlight shot its white beam of brilliancy up and down the water and over the tops of the buildings. As the boys sat down and watched the people pass and repass with their brilliant dresses and sparkling jewels, it all seemed like a glimpse of fairyland.

Thus the days and evenings passed away. The boys' skins turned brown; their appetites increased at an alarming rate; they waxed fat and strong, and fooled the "weight guesser" on their avoirdupois. But like all good things, their vacation at the seashore came to an end. But as they returned, healthy, but tired with their numerous adventures, filled to the brim with wonderful tales to tell all the other boys, they realized, as we all do many a time, that when all the world's seen, "there's no place like home."

THE BOYS' PRIZE GARDENS.

JOHN BOWER, Winner of the First Prize in the Boys' Vegetable Garden Contest.

READY FOR WORK IN THE BOYS' GARDENS.

BOYS' GARDENS

The National Cash Register Company, of Dayton, Ohio, is a wonderful institution in the extent of its business and the character of its product, but in nothing is it so remarkable as in the care it exercises over all its employes and those connected with it even in the remotest degree.

Readers of this paper will be interested in no feature of its work more than in the Boys' Vegetable Gardens, where the boys in the neighborhood of the institution cultivate gardens and raise vegetables, under the watchful eye of skilled landscape and vegetable gar-

deners by one hundred and thirty feet in size, tools, seed and instruction. The boys raise two crops a year, the first including early vegetables, and the second summer and fall vegetables. In many cases the boys have raised enough to supply their families throughout the entire year.

Our readers will be interested in reading a short account of one of the annual distributions of prizes.

With the assistance of the stereopticon, views in colors, of homes of contestants and illustrations of good planting in each particular class were thrown

A BACK YARD NEAR THE FACTORY.

deners and under the stimulus of prizes. The last annual distribution of prizes took place April 20, the prizes ranging in value from one dollar and fifty cents to five dollars. Fifteen boys received distinction for their work. These boys were all between the ages of eleven and fifteen. Forty three boys competed, and the judges took into consideration care of grounds, quality and quantity of product and attention to duty. The Company supplies the gardens, which are

and the factory. I will tell you. Five years ago I asked one of our foremen why he lived three miles from the factory and paid \$2,000 for a lot when he could get one near the factory just a good for \$500. And he replied, "I don't like your neighborhood." Upon investigation we found that three boys gave the neighborhood this bad reputation. We made an estimate of the value of the land that these boys influenced in South Park within a radius of one-third of a mile from the factory. We found that these three boys cost the property owners within this district \$30,000. Ten thousand dollars for a bad boy? What do you suppose a good boy would be worth? We further studied the cause of this trouble with the boys and soon found it to be idleness. "Nothing to do" was the secret of most of this difficulty, as it is of most of the evils of city life.

This was especially true when the little children who won the back-yard prizes came forward and received their money. Some of these prize winners were so small that it seemed impossible for them to care for a yard.

Mr. John H. Patterson, president of the Company, presented the prizes to the successful contestants. Introducing the subject, he said:

"Some one may ask what is the connection between our Boys' Vegetable Gardens

and the factory. I will tell you. Five years ago I asked one of our foremen why he lived three miles from the factory and paid \$2,000 for a lot when he could get one near the factory just a good for \$500. And he replied, "I don't like your neighborhood." Upon investigation we found that three boys gave the neighborhood this bad reputation. We made an estimate of the value of the land that these boys influenced in South Park within a radius of one-third of a mile from the factory. We found that these three boys cost the property owners within this district \$30,000. Ten thousand dollars for a bad boy? What do you suppose a good boy would be worth? We further studied the cause of this trouble with the boys and soon found it to be idleness. "Nothing to do" was the secret of most of this difficulty, as it is of most of the evils of city life.

"The boys who were raised on the farm (and I am thankful that I was one of them) were compelled to work. They had gardens to plant and cultivate, sheep, calves and fowls to feed, wood to carry in, and many other things to do. But improved machinery has cheapened farm products, and it requires fewer people to do the work. Hence the boys have been driven by the great progress of civilization to the cities, and the little village shoeing shop and wagon making shops have been swept away by the great organizations in the cities. The little factories are gone, and the boys are here; and what are we going to do with them? Make men out of them.

"We cannot change the old men, but we can change the young boys. A man took me through the Tombs, in New York, the other day, where he talked to some of the three hundred and fifty convicts and tried to induce them to be better. When we came out he asked me what I thought of it. I said, 'Do you see that tree over there?' It was as big as my body. 'Yes,' he said, 'Go and bend that tree. You can do it as easily as you can bend these men back to the right way. Do not waste your time on them. Commence with the boys and girls. Keep them from being criminals. One hour so spent will do more good than a lifetime spent trying to change men and women.'"

"Forty boys can do a great deal, and we will show to-night what they have done, and thus give models for every boy in South Park and every boy in Dayton.

"Everything that helps the boys in South Park helps everybody in it. And everything that helps the people in South Park helps everybody in Dayton. Everything that helps Dayton helps every other city in the country.

"Look out for the boys. Give them something to do. I hope that in the next five years every school in Dayton will be teaching gardening, the use of tools, domestic economy, cooking, kindergarten art, and everything the N. C. R. Co. is teaching. All these things will aid in teaching the children business and keep them at school.

"I want to congratulate the parents of these children. They deserve to be congratulated for having boys who will do what these boys have done. This speaks well for South Park. We feel proud of the boy farmers of South Park."

John Bower, the winner of the first prize, then stepped to Mr. Patterson's side and said:

"Mr. Patterson: We want to thank your company for the prizes you have given us; and on behalf of the boys of the N. C. R. Boys' Gardens I wish to say that the gardens have cost us much hard labor, but have also given us much pleasure. Many times we would have preferred to play or go fishing or in swimming rather than to work. When our teacher would catch us on the way to the river he would make us work in our gardens, and we thought we had a hard time of it.

"We are glad now that we have worked, for we learned a lot of things. First, we learned how to prepare the ground, and then how to plant our seeds, and how to cultivate our vegetables. Then we learned that we had to get all the weeds out and hoe our gardens well, or else we would not get a very large crop.

"We are ready for three cheers for Dewey, Schley and the N. C. R. Co."

THE N. C. R. BOYS' BRIGADE.

WHAT BOYS ARE DOING

Harry Turner, a Little Hero.

HARRY TURNER.

On June 26th last, Harry Turner, of Muncie, Ind., and his little sister, aged six, with several other children, were playing at the home of Harry's father, who is Captain of Police. On the preceding day, his little sister, Margaret, had taken part in an entertainment given by the Catholic Schools, and had carried a candle fixed in a stick of pretty design. She had lighted this candle and was running about when the flames ignited and caught on her dress. In an instant the little girl was enveloped in a sheet of flame. Harry, who is only nine years of age, heard the screams of his sister and hurried to her assistance. Instead of becoming frightened or calling for aid, as many boys would have done under the circumstances, he bravely tore the burning dress from the child and saved her life. Both of the children were badly burned, but the boy insists that it did not amount to anything. The entire police force of Muncie, of which his father is a member, are proud of the boy.

Wesley Breese, a "Silent Worker."

The illustration shows a little deaf-mute boy setting type in the office of "The Silent Worker," Trenton, N. J. His name is Wesley Breese. This little twelve-year-old has learned to read the lips, having been deaf from his birth. He is the smallest boy in "The Silent Worker" office, yet one of the most care-

A "SILENT WORKER"

ful and industrious. George S. Porter, the publisher of "The Silent Worker," says that all the work on his paper, from the typesetting to making up on the stone and making ready on the press, as

well as feeding, is the work of his deaf-mute pupils. Wesley Breese's department of the paper is entitled "Bits of Science." Mr. Porter says the boy makes few errors in his department.

Raymon Rives, a Filipino Drug Clerk.

The only Filipino drug clerk in the United States, as far as can be ascertained, is Raymon Rives, who is employed by the Sherman-McConnell Drug Company, of Omaha.

He has had a very interesting career for a boy of his years. He was born in Borongan, a small city on the eastern coast of the Island of Samar. His father is a merchant and young Rives received a good Spanish education, but not being contented with the tame life of a Philippine village, and not seeing matters always as his father viewed them, he ran away from home and went to Iloilo, where he worked in a factory. He afterwards enlisted in the Spanish army and was at Manila when Dewey annihilated the Spanish fleet. He was twice wounded in battle—once slightly in the chest by the fragments of a bursting shell and once in the right

RAYMON RIVES

hand by a rifle ball. He was taken prisoner by Uncle Sam's soldiers, and after his release, came to America on a transport. He was one of the Filipinos who were on exhibition at the Philippine village during the Greater American Exposition.

Young Rives is a bright, energetic and pleasing young man. As the accompanying picture shows, he is rapidly becoming Americanized. He is in love with the United States and says he has no desire to return to his native home. He is a devout Catholic. He is studying English and speaks it quite readily, considering his short residence here. Notwithstanding his limited opportunities and being entirely among strangers, he promises to become a very useful and patriotic citizen. He says he would gladly defend "Old Glory" if opportunity offers, and there are reasons that cause one to believe that he is sincere.

Risked His Life to Save Another Boy.

On the fourth of June, Leo Reuscher, of Newport, Ky., saw a lad named Otto Scherer struggling in the water near the foot of Washington avenue in the Ohio River. He rushed out on a barge and plunged in, not taking time to remove any of his clothes. He reached the drowning boy as he was sinking for the last time. Scherer clutched Reuscher in a death grip around the neck, and, although Reuscher is a good swimmer, he prevented him from swimming to safety. Their cries for help brought several men in a boat to the rescue and both were saved.

Wm. H. Cross, a Boy Life Saver.

When the steamer "Morning Star" was putting passengers aboard a lighter from which they could walk up the gang plank onto the Iowa's deck at Long Beach, Cal., a woman tried to jump as it swung away from the steamer on the swell, but instead fell into the sea. An eighteen-year-old boy, Wm. H. Cross, of Los Angeles, was on the battleship's deck when he saw the accident. Without a moment's hesitation he dived into the water and rescued her.

It is hardly four months since young Cross saved a companion from drowning, after a hard struggle, in which both the rescued and rescuer went down twice.

WM. H. CROSS.

A Novel Exploit by a Young Illinoisan.

Will Nicol, a seventeen-year-old boy, has succeeded in working his way from Monmouth, Ill., to the Paris Exposition. He received the consent of his parents to attempt the trip without capital, and left Monmouth March 15, reaching Paris June 8.

The boy is a natural magician and made the money necessary for his expenses by giving little entertainments on the way. He went from Baltimore to London as a cattle tender on board a cattle ship. It takes a boy of grit and pluck to accomplish an undertaking like that. About a year ago he attended the Omaha Exposition, and while there sprang into prominence by his performance of tricks as an attraction to draw a crowd at McDonald's Battle of Manila. He earned considerable money at Omaha, which he saved. When he made up his mind to go to Paris, he did not think for a moment of spending his accumulations, but determined to pay his way as he went along, and gave his mother a check on the bank for his entire fortune. His first stop after he left Monmouth for his long trip was at St. Albans College, Knoxville, Ill., where the faculty permitted him to give a performance, from

WILL NICOL

which he realized five dollars. He made several other stops before reaching Chicago. From Chicago he traveled through Indiana and Ohio, making a little money at every place he stopped by giving exhibitions. At Pittsburg he real-

ized quite a large sum, for a boy. A few more stops were made in Pennsylvania, and in a short time he was at Baltimore, where he took passage on the Bothnia.

On shipboard he entertained the sailors with his music and his magic, and the captain gave him two dollars and a half and a return trip ticket to Baltimore good for thirty days. This he sold for five dollars.

"On the entire trip," he says, "I did not see a face that I knew, but the secretaries of the Y. M. C. A.'s at Baltimore, Pittsburg and other places, were very kind to me and gave me much assistance in working up my exhibitions."

His baggage consisted of a shoulder grip, containing a change of clothing, and a hand "telescope" containing the suit shown in the picture, which he used in his exhibitions, together with his paraphernalia with which he was enabled to hold his audiences interested for an hour and thirty minutes.

Since reaching Paris he has been invited to appear before some of the old masters of magic who have taken a great interest in him. His father says the boy has not yet decided whether to follow magic or music.

Tommy Doran.

Tommy Doran, of Monon, Ind., at the age of eleven lost both of his arms through a railroad accident. At the time, his life was despaired of, but it has been two years since the accident took place and Tommy is a boy of sturdy physique, cheerful, and determined to make something of himself—as much so as is any other American boy.

When he came to play with the boys after he got well, he saw that he could never be equal to them physically, so he resolved to be equal to them intellectually at least. As soon as he was able he returned to school, and displayed such a determination to learn that the teachers were astonished and delighted. Writing was, of course, the first difficulty which presented itself to him, but he has mastered that by holding the pen or pencil in his teeth. His letters are said to be models of neatness and legibility—so much so that the superintendent of the Monon schools has on exhibition compositions written by him, of which he is very proud. Although Tommy is a studious boy, yet he is a merry little chap, playing tag and hide and seek with his chums with great gusto.

TOMMY DORAN.

Kubelik, the Boy Violinist.

Fame and fortune came almost in a day to Kubelik, the wonderful boy violinist, who has recently appeared in England. Three months ago he was unknown outside of a small coterie of musical enthusiasts, and now he is playing to immense audiences. He has played before the Queen, at her request. A well-known nobleman recently offered him five hundred and twenty-five dollars to play at a reception, but he refused unless he was given twice the sum. It is said that already over a thousand engagements are booked for the young star in America and on the European continent. The boy's parents are quite poor, but yet will see he is in a fair way to make them rich.

The boy is a social creature; he goes in crowds. He must have companions—one chum, and others less intimate. He needs help to find the right kind. He follows a leader or is a leader himself. If the former, see that he gets a good one.

A Boy With a Remarkable Memory.

Joseph Mansfield Earl is the four year old son of a railroad switchman living at Vincennes, Indiana. He is like most other citizens of Boyville when it comes

JOSEPH MANSFIELD EARL.

to romping and playing. There is one unusual thing about him and that is his remarkable memory. It has puzzled doctors and all others alike who have met him and come to know how much knowledge there is stored away in his little brain and how he retains everything that he learns. The boy is also remarkable in the knowledge of machinery that he evinces. He understands the working of a big locomotive and can name each piece of the big iron horse. He knows how steam starts the locomotive. He can describe the action of the water in passing from tank to boiler, the use of the air pump, steam pipes and blower pipes, how to apply air brakes to stop the train. And he can give accurately all the signals and meanings of the various colored flags and lights used in signalling. His knowledge of the human body is equally remarkable, and his ready answers to hard questions in physiology would do credit to a high school pupil. It is hard to give him a question in American history that he cannot answer. He can relate story after story of Bible history in the most interesting manner.

A Talented New Orleans School Boy.

One of the brightest students in the New Orleans public schools is Guy Livingston Hauck, the twelve year old son of Mr. and Mrs. Daniel Hauck of that

GUY LIVINGSTON HAUCK.

city. He is a pupil at the McDonough School, number sixteen, his teacher being Miss Virginia Leclerc. The boy was recently the recipient of a silver medal for penmanship. The medal was offered for the best vertical writing in a class of over fifty pupils. The design of the medal was that of a shamrock and represented the highest achievement of the engraver's art. The boy has an unusu-

ally bright mind and applies himself with great diligence to everything he undertakes. He is an ambitious little fellow and has all the qualities that go to make a noble man and a useful citizen. He is popular among his classmates and has friends by the score. His greatest delight when out of school is to go hunting and he is quite an expert with a gun. He is a good composer as well as a good penman and has received a number of prizes in that line. His great desire is to become a reporter and he will doubtless enter upon newspaper work.

Designs and Builds a Steam Launch.

John R. Hayes, nineteen years old, living at Farmington, New Hampshire, has constructed a steam launch of his own design. It is twenty feet long, four feet eight inches beam, and draws two and one half feet of water. It is constructed of white pine plank, the wash rail or gunwale and all inside finish of oak and cypress, finished in natural wood. It has a three horse power gasoline engine, fifteen inch propeller blades, which make four hundred and fifty revolutions per minute. The gasoline tank holds ten gallons, a quantity sufficient to keep the engine in motion twenty hours. Boat and engine are fitted with all modern

JOHN R. HAYES

appliances, including exhaust mufflers. The young man did all the work alone, made the patterns and put the boat together. It is pronounced to be a beauty in every particular. Its speed is estimated at eight miles per hour. This is the fourth boat the young man has made. He recently finished a naphtha launch, with which during July he cruised along the coast of New England. He asked no help in his work, even going to the blacksmith shop and getting out his own iron work. His mother says of him: "I have never seen him undertake anything yet that he could not do." He thinks he would like to be a shipbuilder. He is a boy of most excellent habits.

PHOTOGRAPHIC REPRODUCTION OF A PAGE OF "THE FROGTOWN NEWS."

CHICAGO CHOIR BOYS' CONCERT CO. Louis Magnus, Violinist; Reuben Manierf, Soprano; Louis Klein, Dramatic Soprano; Reginald Martin, Organist and Pianist.

Ben Burton, Editor of the "Frogtown News."

Here is a paper printed by a colored lad thirteen years of age that will interest our readers; at least, it has interested us. The editor, Ben Burton, is a colored boy, living at Ruston, La. The copy of his paper before us, which we reproduce in the illustration, is printed upon a cheap pink paper. The editor of The Daily Leader, at Ruston, tells us that the size of the paper varies, depending entirely

THE EDITOR OF THE "FROGTOWN NEWS."

upon whether the boy can get hold of waste cuttings from the paper cutter in The Leader office, or blank wrapping paper from the butcher. In a copy of the paper which we do not reproduce, the subscription price is stated to be "five buttuns" a week; advertising, "one buttun for four lines." The boy posed for the photograph from which the accompanying picture of him was made, especially for us. You can see that he realized the dignity of his position as an editor.

Poverty is very terrible, and sometimes kills the very soul within us, but it is the north wind that lashes men into Vikings; it is the soft, luscious south wind which lulls them to lotus dreams.--Ouida.

DO YOU KNOW FIVE BOYS WHO ARE NOT SUBSCRIBERS TO THE "AMERICAN BOY?"

Send us on a postal card the names of five boys, in your town or some other, who are not subscribers to "The American Boy," with street address of each (or name of father), and we will send to EACH OF THEM free a copy of this paper and send to YOU either

- An "American Boy Key Ring," or
An "American Boy Watch Charm," or
An "American Boy Base Ball Scorer."

SEND QUICK AND SAY WHICH YOU WANT.

Address "THE AMERICAN BOY," Majestic Building, Detroit, Mich.

THE AMERICAN BOY is the only official organ of the Agassiz Association and should be in the hands of every member. All correspondence for this department should be sent to Mr. Herlan H. Ballard, Pittsfield, Mass. Long articles cannot be used. THE AGASSIZ ASSOCIATION welcomes members

of all ages, and anyone who is interested in any form of natural science is invited. Established in 1875. Incorporated in 1892. Short notes of personal observations are particularly desired for use in the A. A. department. Send illustrations when convenient. Questions are invited. Address H. H. BALLARD, Pittsfield, Mass.

The responses to our invitation to American boys and girls to join the Agassiz Association are most gratifying. New members from at least twelve different states, including Massachusetts and California, Wisconsin and Florida, show the already phenomenal extent of the circulation of THE AMERICAN BOY, and also demonstrate the fact that, wherever he lives, the American boy is wide awake, alert and observing. It is remarkable, too, that to most of our young correspondents this paper has brought their first knowledge of what scientific nature study means.

Nothing has given us more pleasure than the rapid improvement in the quality of work done by our army of young observers. The change is noticeable even in the second letter from the same boy or girl. Many did not seem at first to "catch on" to the idea. They did not know just what a "note of personal observation" means. One boy sent as his first contribution simply a story of adventure, another an account of a favorite horse, another a description of an article of furniture. But among even our first letters have been many which contained just what we wanted, viz., simple accounts of interesting facts in bird or animal, or insect life personally noted by the writers, and accounts of expeditions in search of minerals or plants. Now, since we have published selections from the best, showing the sort of thing we wish, a larger proportion of our young friends understand the plan at once, and fall in line promptly. This month we have a larger number of interesting letters than ever before, and the success of these will stimulate many others to join us. We want to lead our young scientists to appreciate the value of acquainting themselves with the beauties and wonders of their own natural surroundings, interest them in studying the minerals, animals and plants that are to be found within five miles of their own front doors.

The work will at first be very simple, even crude. The observations will often be hasty and inaccurate, but the habit of looking at things carefully will be formed. The value of accuracy will be more and more appreciated. The need of systematic study will be felt. Already we are asked to recommend books which may be used as guides to a better understanding of Nature in all her forms. To the first question: "What is the name of this bug?" already succeeds the question, "How can I learn to classify all my insects?" and soon will follow the more important query, "How can I best study insects or birds, or flowers, so as to obtain a true knowledge of their structure, development and life-history and their place in the great system of nature?"

More slowly, but none the less surely, is growing the understanding of our general plan of organizing all our young friends into local societies for the combined study of local flora and fauna. New "Chapters" of the Agassiz Association are already being formed, as the value of united effort is realized. The advantages of corresponding with distant friends engaged in similar efforts will next be perceived, and letters and exchange specimens will begin to fly back and forth between our new Chapters as they have long been flying between our older organizations. Only

four members are necessary to the formation of a Chapter. These may be all members of the same family, they may be associates of the same school or college, or they may be united only by a common liking for natural science. Little museums will follow, in which will be gathered more or less complete collections of all local specimens. A little parliamentary law will be learned, so that the meetings of these societies may be carried on smoothly. Later, rooms will be secured for these meetings and these collections. Some buildings may be erected, some endowments obtained, money will be raised by entertainments of various sorts, courses of study will be taken up; lecturers engaged, libraries established, and finally out of the ranks of our home-trained observers, there will come many whose love for nature will lead them to devote their lives to these delightful pursuits, and we shall have budding teachers, professors, and specialists in science. If any part of this program seems attractive to you, the sooner you begin to act with us the better. You don't have to wait until you know something. Begin to-day. Write us a letter telling about yourself, your home, and your town.

If you send us a description of any personal observation of your own, together with a drawing to illustrate it, no matter how rude, or a photograph, we will send you a card of membership worth fifty cents, and our beautiful badge containing a fine portrait of Louis Agassiz, the great American naturalist whose name we are proud to bear.

If you haven't seen anything of interest, write to us just the same, and we will put you in the way of seeing many things of surpassing interest even in your own door-yard. And remember, what may seem common to you, may be rare and extremely interesting to those who live far away from you. "Horned toads" are as common in Texas and Arizona as "tumble-bugs" are in Ohio; and while garnets are as common as robins in Berkshire county, Mass., we have none of the "potato-stones" that Iowa boys play duck-and-drake with. Join the Agassiz Association today!

We will now open our budget of letters.

The first is from one of these same Iowa boys we have just mentioned, and is in answer to our question:

"What is the purring of a cat?" Edgar R. Bean says: "I think it is a peculiar sound made by a cat when happy. It might be called 'singing.' Now, that's all right as far as it goes. But this is Edgar's first letter; his first step in natural science, and he doesn't yet quite understand what we are driving at. What we meant by the question is, How does the cat make this peculiar noise? Is it in the throat or the nose, or the mouth, or where? And by what exact means is it produced? This is really a difficult question, too difficult, for a beginner to solve, and we again invite an answer.

A FAMILY CHAPTER.

The next envelope we open contains letters from nearly a whole family, all of whom wish to join the Agassiz Association as a Chapter, and are heartily welcome. Their Chapter has been enrolled as No. 257, North Chatham, N. Y. The mother writes, "We are very much in-

terested in collecting insects and studying their habits. We have about 500 specimens named, and wish to exchange. Can you recommend books on the habits of insects?" [Lubbock's Ants, Bees and Wasps, D. Appleton & Co., N. Y. City; Ballard's Among the Moths and Butterflies; G. P. Putnam's Sons, N. Y. City, and McCook's Tenants of an Old Farm, Fords, Howard & Hulbert, N. Y. City—Ed.]

One of the sons, Walter E. Bain, aged 11, sends this account of

TUMBLE-BUGS.

"I found a pair of these bugs rolling a ball of hard earth. It was three-fourths of an inch in diameter, and solid as a marble. The eggs are laid and then rolled into these balls, which grow larger and larger until it seems as if the bugs cannot roll them any more."

[Walter will be interested in a curious sight told us by an observing friend a day or two after his letter came. This gentleman watched one of these "Tumble-bugs"—which, by the way, are not bugs at all, but beautiful beetles, of several families, the most common species

being known as *Canthus laevis*,—rolling its ball until it rolled it into a crevice in the sidewalk, from which, kick and tug as it would, it could not extricate it. Finally it stopped struggling as if in despair; then in a moment it scampered off as fast as its six crooked legs could carry it, and presently returned with three other tumble-bugs. All four then set to work upon the ball, two pulling in front and two kicking from behind, and they soon had it out of the crevice and on the smooth road again.]

Howard C. Bain, ten years, sends an account of a stag beetle, and William sends a drawing and sketch of the wonderful

"ESSIGN," OR ICHNEUMON FLY (*Pimpla atrata* and *lunator* Fabricius), a cut of which we give.

This form, William says, is the female, and he wishes a description of the form and habits of the male. This insect may often be seen with its long "tail" thrust deep into a hole in some old tree, and hence many suppose that it stings the tree, or that it lays its eggs in the wood, later to hatch and become borers. On the contrary, it really protects the tree against the ravages of another insect, the boring beetle (*Tremex*) as it is in the living body of this borer that the Ichneumon thrusts her ovipositor, depositing eggs therein, from which are hatched parasitic grubs which destroy the life of the tree-destroying borers.

A MOTHER'S VIEW.

Mrs. Bain gives the following valuable hints on nature study for boys:

"Ruskin gives as a common exclamation of an Englishman on awakening, 'This is a beautiful morning; let us go out and kill something,' and how aptly this can be applied to our restless American boys, ever alert for something new! Their untrained instincts can be turned into channels of observation and usefulness. Turn the boys loose with an air-gun, and some form of life must be extinguished, and for no good result unless to train future 'rough riders' to shoot; but turn your boys out with a good net, a cyanide bottle, and proper mounting-board, and the foundation of a life-study may be laid. Teach them not to kill needlessly, nor destroy wantonly. In-

sects may well be captured as they are for the most part pests. Books will soon be asked for, and names and descriptions hunted up. Questions multiply, 'How, when, and where?' and the rollicking boy has 'struck a fad' that may blossom into a scientific life. The next cry is for a museum: bugs, beetles, butterflies, all are there, to be talked over and enjoyed. Patience is required on the part of the older ones, but what of the future? Consider that the mind is a storeroom of good or of evil. The 'fad' drives evil away, and adds to the wonderful store for future years. Mosses, lichens, mushrooms, all are wonderful. What boy can pass a collection of minerals unheeding its beauty? In a little while play hours are spent in collecting, and rainy days in arranging the treasures. We hope for wonderful reports from the AMERICAN BOY'S boys."

NOTES OF PERSONAL OBSERVATION.

20. "Dobsons" again—*Corydalis cornuta*. [For the larva, see Note 10.]

Enclosed find two drawings of a creature I obtained in one of the offices in this city. It is of a gray-brown color, and just about the size of the drawing enclosed. It has two pairs of net-veined wings, the outer thicker and darker than the inner. The 'horns' are covered with fine hairs. The eyes are prominent. There are six several jointed legs. The

head is jointed to the thorax at A, and can be moved up and down, or sideways. The long antennae have a rotary motion. The mouth is a complication of horns and books. I have searched in several books, and made many inquiries but fail to get the name of this creature.—D. C. Bartley, Grand Rapids, Mich.

[By a curious coincidence Mr. Bartley's note reached us shortly after Mr. Hatch's description of the larva of the same insect. See Note 10. This is the "imago" or mature form of the so-called "Dobson," or Hellgramite, or Horned *Corydalis*. The larvae are used as bait for bass. They live under stones in the beds of streams, where the water flows most swiftly. They feed upon the larvae or 'nymphs' of Stone flies, May flies, and other insects. When nearly three years old, the larvae leave the water, and make cells under a stone or some other object near the bank of the stream in early summer. Here they change into "pupae," which correspond in a way to the chrysalids of butterflies. From this state they emerge in about a month in the adult form shown in the cut. The eggs are then soon laid in chalky-white masses, attached to stones overhanging the water. A single Mass contains from two thousand to three thousand eggs. See Comstock's manual. Answered also by Robert White, Clark, Pa.—Ed.]

21. Pacific Great Horned Owl.

On Jan. 21, 1900, while rambling in the mountains, I spied an old hawk's nest in a hollow tree about half way up the cliff. On throwing a stone a bird flew from the nest. It proved to be the Pacific Great Horned Owl. My partner stayed at the foot of the cliff, while I went to the top and looking over the edge saw two young birds in the nest. My partner secured a gunny-sack, while I got a large, flat stone, which I dropped down on the butt of the tree. It jarred the tree so violently that the young owls tumbled out, and rolled down the precipice, where my

partner put them in the sack, and I took them home. I have them yet.—Percival L. Bradford, Placentia, Cal.

22. House Finch, or Linnet.
The house finch, or linnet, is one of our most common California birds, being a resident during the entire year. They

pair early and nest-building begins at once. Complete sets of eggs may be found about April 1. It occupies any convenient site, a tree or bush, the eaves of a house or barn, or a hole in a tree. I have seen them even nesting in cans, and in large Abilone shells which had been hung up purposely for them. I have found quite a number of their nests in

Eucalyptus trees, where, as a rule, they were close to the trunk and supported by small twigs. The bark of the Eucalyptus often peels down in long strips which coil and twist about the trunk, forming convenient nesting places (see cut), which I have frequently seen occupied by the house finch. The material of the nest is as varied as its location. The greater part is composed of twigs, rootlets, grasses and leaves, but cotton, string, sheep's wool, cloth and feathers are also used, and as a rule the lining contains a few horse hairs. There are from three to six eggs, but commonly four or five, in a set. Their color is light, bluish green, lightly marked with specks or lines of dark brown, mostly around the larger end. The nesting season ends about July 1.—W. H. Hiller, 147 W. Twenty-third street, Los Angeles, Cal.

23. Trilobites.—Not long ago I found a round stone and broke it. On the inside I found a long bug, which looked a great deal like a "Dobson." (See Notes 10 and 20). I sold it to a man for \$2. It was very nearly perfect.—Russell Hertzog, Hiram, O.

[The "bug" may have been a "trilo-

bite," a cut of one species of which we give. If so, it is not a "bug," but a ——— Who will tell what?]

24. Happy Family.—The white mice, when first born, were queer looking animals. They had no fur to cover their pink bodies, which were only about a half an inch long. At two days old they were quite sturdy. With them were several young rabbits, and as they were about the same color they were allowed to remain in the same nest. The mother rabbit seemed to enjoy her varied family of fifteen, and when I left them they were getting along nicely.—P. Dettelbach, Baltimore, Md.

ANSWERS TO QUESTIONS IN JULY NUMBER.

Being a reader of THE AMERICAN BOY, and very much interested in the Agassiz Association, I take leave to answer the question about the gigantic beetle. I think it is "Megasoma elephas," described by Fabricius. Yours respectfully, Charles Daly, 2028 Vine street, Philadelphia, Pa.

[The name is correct, and Mr. Daly has won his admission into the Association and his badge. According to Dr. Champion, an authority on the Coleoptera, or beetles, of Central America, this insect is said by the natives to inhabit mango trees when in fruit.—Ed.]

The difference between a bug and a beetle is that a bug is always a bug from the egg, and a beetle is first a grub and goes through transformations similar to those of a butterfly. A bug also has a proboscis-like mouth, adapted to sucking the juices of plants, while a beetle has jaws or mandibles for biting. These are the main points in which they differ.—E. A. Lester, Kinsley, Kansas.

[Mr. Lester is substantially correct. The young 'nymphs' of bugs resemble the adults more closely than do those of beetles, and their wings are gradually developed at successive molts. It should be added that the Coleoptera, or beetles, have a pair of horny wing-covers, called "elytra," which meet in a straight line down the back and beneath which there is a single pair of membranous wings; while the Hymenoptera, or bugs, have four wings.—Ed.]

A KIND OFFER.

Binghamton, N. Y., July 30, 1900.
Dear Mr. Ballard:
It is possible that your readers of THE AMERICAN BOY may have questions regarding ferns. If so, I shall be glad to identify any ferns that may be sent to me for that purpose. Specimens should consist, if possible, of both fronds and root-stalks, and should be gathered when in fruit, that is, when covered underneath with spore-cases. I shall be glad to send free on application a copy of the Fern Bulletin, published in the interests of the Linnaean Fern Chapter, one of the largest of the "Corresponding Chapters" of the Agassiz Association, and numbering more than a hundred members. Yours truly, Willard N. Clute.

Goldfish.—Bethel, Vt., July 27, 1900.
Will some one please answer through THE AMERICAN BOY, "What are goldfish fed? Also kindly give a few points as to their care.—Benj. M. Washburn.

NOTICE.

Reports from Chapters of the Eighth Century, Nos. 700-800, should reach the President of the A. A. by Oct. 1, 1900.

How Boys Make Money.

LeRoy R. Cortell, Spring Lake, O.: I would like to tell you how I earned two dimes for the Boy Saving Fund. I am twelve years old and live in the country. I take a music lesson once a week and have a paper route, selling from twenty to thirty papers a day. My brother subscribed for THE AMERICAN BOY, but as he goes to school six miles from here, he took his AMERICAN BOYS with him, so I could not read them. I sent to you for some papers and in the meantime he sent me his, so I sold mine, as you recommended, and now the proceeds will go to help some boy. I would like to do more if I could, and probably I will find a chance before long. I am pretty busy and will take more papers to sell soon. You may think the money I get from my papers is not very much, but it helps, and I save every bit.

J. C. Bayer, Cumberland City, Tenn.: I have a peanut and popcorn patch, out of which I expect to make some money the coming season. In the winter I make money catching rabbits, partidges, muskrats, opossums and pole-cats. If I work good this year I am to have one eighth of the tobacco crop on our place.

Walter C. Ficklin, Charleston, Ills.: I have made money by carrying an evening paper, at fifty cents a week, and after I worked at that for fifty five weeks I was promoted to collector, at a salary of two dollars and a half a week.

Benjamin M. Washburn, Bethel, Vt.: I keep hens and think it's a very good

Boys as Money-Makers & Money-Savers

and easy way to earn money, providing that you have a good henhouse. This summer I am raising cabbages, which when full grown my father will sell in his store, and I expect to make a nice little sum of money out of it. This vacation, too, I have helped my father in the store.

Henry Adams, Tipton, Iowa: I carry a paper route, getting five dollars a month. I own a cow which I bought by selling papers and milk. I make about thirty five cents a day and expenses by selling milk.

How Some Grand Rapids Boys Make Money.

MARY P. SAYRE.

Let me tell you how some Grand Rapids boys are earning money for a college education.

One is making money with his camera by taking photographs of houses for sale by real estate agents. Nearly every house for sale bears the sale card of the agent, and it is quite an easy matter to get an interview with a real estate agent. It only requires a little courage to carry on this pleasant and profitable employment. Real estate agents generally are willing to do anything reasonable that will help along the sale of their property, and will often pay a good price for a good view of a house.

Another boy has, during the past year, outside of school hours, earned enough money to clothe himself, pay his school expenses and lay by twenty five dollars toward a nest egg. Two lady teachers in the schools offered him an opportunity to care for their pony and carriage. He accepted, rented a barn near the school, furnished the feed and kept pony and carriage clean and ready for use. For this he received a fair compensation. Every Saturday he earns one dollar working for his uncle in a lumber yard.

Another little fellow has earned a new suit of clothes and a pair of shoes by cutting flowers for bouquets at the greenhouse close by—a work for which he received fifty cents a day. Often he works at potting plants, receiving twenty five cents a day. The small pay

does not discourage him, for he saves the dimes, knowing that the dollars will care for themselves.

Several small boys whom I know have made money digging ferns and selling them at five cents a root, for border plants. Ferns can be had in woods and swampy places for the asking.

Of course, there are many boys in Grand Rapids selling papers and distributing circulars. Some boys are doing well acting as agents. Boys should not go into this work, however, unless they are especially adapted to it. There are some who have genius in this line.

The inspiration with many a boy is a college education. I know boys who are at work as salesmen and helpers in the furniture factories in Grand Rapids during the summer, who are saving money for their schooling. The fierce competition of schools nowadays is putting tuition fees at a figure within the reach of even poor boys, so that there is little excuse for the average boy failing to get a business education, if not something more. I know one boy who was so eager to get a business education that he took the position of janitor in a business college, paying for his tuition by the hard work that this entails; not only this, he waited on table at a restaurant for a total of three hours a day to pay his board, and carried wood and water at another place for his room rent.

A gentleman recently resigned his position as a teacher in the Grand Rapids schools to take charge of a beet sugar farm. He offered work to any of the High School boys who wanted to go on the farm for the summer vacation, and several of them took advantage of the opportunity; still others are going to summer resorts to work during their vacation. This is a favorite way of earning money during the summer with college boys who are poor. The hotels at the seaside and mountain resorts offer opportunities for college boys to serve as waiters, and in other capacities, and an earnest, aspiring boy does not hesitate to take this kind of work when nothing better offers itself. Let me express the earnest hope that every boy who is dependent upon his own exertions may deserve success and meet with it.

MAKE and sell ink, big profit, easy work. Formulas for black and 4 colors. Plots. C. H. French, Lansing, Mich.

\$8 Paid Per 100 for Distributing Samples of Washing fluid. Send stamp A W MOTT, Coburn, N.Y.

Salesmen Wanted Good hustlers make big wages taking orders for our Made-to-Measure Clothing. Capital and experience unnecessary. Send 2-cent stamp for sample outfit, and full particulars. THE PROGRESS TAILORING CO., 198 O. Monroe Street, CHICAGO.

Printing Programs.

An American boy writes of his experience in making money as follows: "I was part owner of a small printing outfit, and my partner and I were anxious to enlarge the plant, but lacked the necessary money. The happy thought struck us that we could print the opera house programs. Our parents at first objected, because the manager of the opera house was known to be tricky. However, we soon won them over and sought an interview with the manager. We asked him if we could print his programs for nothing. He readily agreed to it, provided we could do a good job and had them on time. We asked if we could put advertising on the programs. He consented, but said that this had been tried and there was not enough of it in the town to pay a printer. We took a piece of cardboard and cut it into a quarter sheet and marked ten spaces, twelve ems wide down each side, leaving the center for the cast and synopsis of the play. Then we went to all the merchants and succeeded in selling all the advertising space, two dollars being charged for each space. After the winter season opened, there was a very busy time in our office. The casts and synopses were so long that sometimes they had to be written on the other side of the cardboard. We then decided that the back, too, should be filled with advertising. We succeeded in filling it. The cardboard was a good advertisement, as it could not be rolled and made into spitballs, and it could be used as a fan. The programs caused much comment and a local paper gave us praise. When a show came to town that stayed a week we cleared about fifteen dollars on the programs for that week. Of course, this cannot be done in a large city, but in a town of a few thousand inhabitants it is a money maker for a boy who has his own outfit and is learning the work. In the spring we had enough money to add quite a bit to our plant."

Freddy (aged six) was seated in a barber's chair. "Well, my little man," said the barber, "how would you like your hair cut?" "Like papa's, with a round hole at the top."

A Boy Who Will Succeed.

Down in Missouri lives a boy who likes pets. He began with a pair of pigeons that he got in trade for a dog that he had traded a knife for. His parents allowed him to keep the pigeons until they multiplied so that there were pigeons all over the place. Then he sold the pigeons and bought a goat that ate the clothes off the line every Monday. He was compelled to dispose of it, and traded it for a pair of game chickens. In a week there wasn't a rooster left in the neighborhood: the game rooster had killed them all. His father took the game chickens for a ride one night and lost them three miles out in the country. Three days afterward the boy brought them home, but he never told anyone how he got them. And so he fought for his pets one by one—his dog was lost, his lamb stolen, his rabbits ran away. He has come down to one old hen. Recently he bought a "settin'" of eggs. A "settin'" of eggs is as many as a motherly hen can hatch into chicks. He had made up his mind that his hen was lonely and needed company, and what so companionable as a hatch of little chicks to scratch for? The hen, however, had different views and didn't want to sit on the eggs. But he was not a boy to be stumped by a hen—he had borne too many losses already. He put the eggs in a box in which he had made a nest of hay. Then he planted the indignant hen on them, put a board in which he had bored a lot of holes over her and left her to come to terms. That night his big brother kicked off the box and set the hen free. The next morning the boy put her back and put some bricks on the board, for he thought she had raised the board and released herself. The brother kicked both bricks and board off that night. The boy replaced hen and board again, and again they were kicked off. Then he got a board and made a hole in it for the hen to poke her head through and nailed the board to the box. Once a day he takes the board off and chases the hen around the yard for exercise, and twice a day he carries food and water to her. What is the use of trying to discourage a boy like that?—Kansas City Star.

Boys' Exchange.

J. F. Mosley, Columbia, Fla.: I will trade orange, persimmon and chinquapin leaves for foreign stamps. Sidney S. Wortsman, 115 Gaston street west, Savannah, Ga.: I will exchange Cuban shells for other curios. Arthur R. Talbot, care H. L. Judd & Co., Wallingford, Conn.: I will exchange good foreign stamps for arrowheads. James C. Montgomery, 368 Abbott street, Detroit, Mich.: I have some good stamps that I would like to trade for arrowheads. Howard O'Brien, 1928 Arlington Place, Chicago, Ill.: I would like to exchange stamps and would like sample copies of amateur journals. Dwight Jennings, Thornton, Mich.: I have a flint arrowhead that I will promptly send any boy who will send me ten foreign stamps. Ray Gates, Auburn, Neb.: I have Indian arrowheads which I will exchange for foreign stamps. The stamps must be in good condition. C. Baggett, Oak Plain, Tenn.: I have five Indian arrowheads which I will exchange for gold, copper or silver ore, or for shells from the East or Great Lakes. Grover C. Reese, Box 185, Mena, Ark.: I will trade cotton bolls, pine burrs, sweet gum balls, and the leaves of the holly and cucumber trees for curios from other states. L. Lester, Kinsley, Kans.: I will exchange a thirty two caliber rifle and a telescope for a four by six printing press. The telescope is a five-power one. J. C. Bayer, Cumberland City, Tenn.: I will exchange leaves and splinters of wood from trees in this locality for leaves and pieces of trees from other localities. I have an Indian arrowhead that I will exchange for something I have not. Frank J. Kearns, 348 Thirteenth street, St. Paul, Minn.: I want the first nine numbers of THE AMERICAN BOY and will give for the same twenty numbers of "The Argosy," published during '88 or '89, or will give twenty numbers of "Golden Hours," in exchange.

Court Plaster—100% profit. You can sell it. Write for particulars. F. C. Bowman & Son, Reading, Mass. Wanted Agents in every county to sell "Family Memorials," good profits and steady work. Address Campbell & Co., 223 Plum St., Elgin, Ill. MEN, WOMEN, BOYS and GIRLS can earn 25 cts. an hour. Business light, pleasant, genteel. Send for circular. INK AGENCY, POLTNEY, VT. LOOK BOYS! A hundred ways to make a living. Profitable. Address HAWKEYE SUPPLY CO., 721 5th Street, Cedar Rapids, Ia. BOYS EARN CASH Bicycles, Watches, Cameras, etc., selling Parallel-Blotter Rulers, all writers want it. Sample made of Aluminum and particulars mailed for 24 cents. THE INDEX CO., Providence, R. I.

Learn (and get) great Sign, Show Card and Ticket Lettering. A new field for clerks and others to increase their earning capacity. Full course of practical, high class work easily acquired AT HOME during spare moments. By new booklet gives full particulars free. Address: W. A. THOMPSON, Postville, Vt.

"I want Ralston Breakfast Food!" \$1000.00 in Cash to One Thousand Children. An exceptional opportunity for bright boys and girls in every city and village to earn money easily by introducing. Ralston Breakfast Food. No money required. Cash sent to you as service is rendered. A good chance to gain a knowledge of business methods. Write for full particulars, giving your grocer's name, also the name of a minister or doctor for reference. PURINA MILLS, "Where Purity is Paramount." 807 Gratiot St. St. Louis, Mo. To ADULTS: If your grocer hasn't Ralston, send us his name for a sample, free.

THE BOY HOME, CHURCH AND SCHOOL

September.

MORNING STARS—Mercury to September 11, Venus, Mars. EVENING STARS—Mercury, September 13 to the end of month, Jupiter, Saturn. LEGAL HOLIDAYS—September 3, Labor Day in all the States and Territories and District of Columbia except Arizona, Arkansas, Louisiana, Mississippi, Nevada, New Mexico, North Carolina, North Dakota, Oklahoma and Vermont. It is observed in Wyoming, but is not a legal holiday. September 6, Labor Day in North Carolina. September 9, Admission Day in California. ANNIVERSARIES—September 1, 1870, Capitulation of Sedan; September 8, 1781, Battle of Enlow Springs, S. C.; September 10, 1812, Battle of Lake Erie, Perry's Victory; September 11, 1812, Battle of Chancellorsville, McDonough's Victory; September 12, 1847, Battle of Chapultepec; September 14, 1847, City of Mexico taken by the U. S. troops; September 17, 1862, Battle of Antietam; September 19-20, 1862, Battle of Chickamauga; September 20, 1870, Italians occupied Rome.

The name of the ninth month, according to our calendar, is September. September is from the Latin "septem," seven, this being the seventh month according to the old Roman calendar.

Father Quinn says: "I proffer the advice to study closely before anathematizing profane, free-fisted, police-baiting youngsters under fifteen. In many instances they are promising crude material. Not a few of them are really diamonds, though admittedly the roughest conceivable. Hidden under rags, slang and boyish mischief, often lie generous hearts, honest and pure; souls amazingly responsive to a sacred touch."

The Boy Who Is Liked.

J. L. HARBOUR.

Any life of Abraham Lincoln that you may read will tell you that he was a boy whom every one liked, although he was utterly lacking in grace or beauty. He was, indeed, a very awkward and homely boy, and it falls to the lot of few American boys to be poorer than was this boy of the common people. He must have been liked for some inner qualities, some traits of character that caused those who knew him to forget that he was poor and homely, and uncouth in his appearance. These were the traits that made Abraham Lincoln so popular both as a boy and a man. He was overflowing with human sympathy. He hated everything that was small and mean. He was generous in thought and deed. He was kind to everybody and everything. He was always kind to the dumb beasts, and he was always patient and gentle with the weak. Then he was absolutely honest, and he gave to things their true value. He admired the man in homespun quite as much as the man in broadcloth, and yet he was not a man who ridiculed well-dressed people, but he gave to dress the only real value it has. If you will read the lives of the men who have lived in the hearts of their countrymen long after they have gone from earth, you will find that they were boys who were liked in their boyhood. You will find that the honesty, the kindness, the unselfishness, the sympathy that have made them such good and popular men also made them popular in their boyhood. You will find

that they were invariably polite boys, and that no one ever accused them of being "too smart." You will find that they were not idlers, for even boys have a contempt for out and out lazy boys. Then they did not whine. Let no boy who wants to be popular with his mates or with any one else ever descend to the low estate of whining. Nothing is so contemptible in a boy as a tendency to whine about everything. A boy of this kind will find that his room is more desirable than his company in any assembly of spirited and manly boys. I know of nothing so sure to make a boy disliked as a tendency toward whining and complaining. Fortunately this weakness is not very common among the boys of America.

The boy who would be popular must be manly. Let him avoid above all else any tendency toward that which other boys call with proper contempt "girl-boyishness." Be anything but a "sissy." A boy can be gentle, polite, affectionate, clean in person and speech, and sympathetic, without being in the least "girl-boyish." Be manly as God intended all boys should be. The "girl-boy" is held in as much contempt by girls as by boys, for there is nothing that girls and women admire more in boys than manliness. Do not, however, make the mistake of thinking that it is a sign of manliness to affect contempt for girls and their occupations. The American boy has had proof in recent years that the American girl has what the boys would call "mighty good stuff" in her, and that she can hold her own when it comes to intellectual

DO YOU WANT A JOB?

YOUR school days are over and you are looking for work almost anything paying even small wages now, but promising more later. Perhaps you have tried to find a job, but every position was filled or "experience" was required. You have a good education, but cannot turn it into money. We can help you. We will show you how to fit yourself in a few months at home, for a position paying good wages with rapid promotion. What others have done you can do. Read this from a

SCHOOL BOY WHO BECAME DRAUGHTSMAN.

After graduating from the high school at home, I asked the principal of the school where any one who was unable to go to college could obtain a knowledge of mechanical drawing. He said he considered the "International Correspondence Schools" courses the best way of obtaining it. I accordingly enrolled in the Mechanical Drawing Course and completed it in less than six months. I think the drawings made in my course aided me materially in obtaining my present position as draughtsman, as I brought some of them here when I applied for it.

CARL W. GAUR, Croton, N. Y.

Write us fully stating the kind of work you prefer and we will send you FREE full particulars about our plan.

International Correspondence Schools, Established 1891. Capital, \$1,500,000. Box 178. SCRANTON, PA.

attainments and general force of character. That she is generally physically weaker than the boy is a fact that should entitle her to his protection instead of his contempt. There is something radically wrong with the boy who sneers at the physical weakness of girls. The most popular boy I can think of at this moment is one whom I once saw grow white with indignation when he saw another boy strike a girl full in the face with his open hand. Off flew the coat of this popular boy and his clenched fist dealt the cowardly fellow a stinging blow full in the mouth, while he said:

"You strike a girl and I will strike you!"

The dazed assailant of the girl, although he was fully four inches taller and evidently much stronger than the champion of abused girlhood, gave further proof of his cowardly nature by turning and running without making the least attempt to defend himself.

The boy who would be liked must be far removed from anything suggestive of the sneak. He must be "open and above board," as the other boys would say.

Woe to the boy who is known to have done a sneaking, contemptible deed to serve any end. Boys who are true and manly will distrust him ever after they know of this lapse from true manliness. It always pays to be perfectly frank and honest in all that you do or say. Nothing but the truth will serve when the truth should be told. The boastful boy will never be very popular because boastfulness is an unfailing sign of conceit, and no one likes a conceited boy. I have in mind a boy who could be a very agreeable fellow if the pronoun "I" did not enter so largely into all that he says. The boy who acquires the reputation of being a "blow" will be looked at askance by other boys. Modesty is a very good attribute for any boy to possess. The greatest and bravest men of the world have always possessed this attribute.

Neatness and cleanliness are necessary to the make-up of the boy who wants to be popular. I know of a boy who was refused admission to a boys' club because he was so grossly untidy that the other boys said that they would be ashamed of him. It is a shame and a reproach to any boy to be slovenly and actually dirty when soap and water are so abundant.

The boy who would be popular must not seek popularity. He cannot do this without attracting attention to the fact that he is seeking popularity, and no one could or would like such a boy. Seek to be honest, brave, manly, true-hearted, generous, and your friends will be legion.

The Whistling Yankee Boy.

We like the whistling boy. We like to fall in behind him as we go down the street. He has as many tunes as the mocking bird. If it is Monday morning, the Sunday School tunes follow him. If it is after the Dewey parade, the last thing from Sousa. It is the young folks who set the standard in music. The great composer may sigh in vain for recognition until comes the whistling boy and girl at the piano, then his success is assured. If whistling is any index, American boys are full of music. Alone as he drives the cows to pasture or rides the horses to water, or goes on errands, the boy takes up the burden of the latest air and makes his ways melodious. It is not to keep his courage up, as the old proverb implies, it is to communicate his superabundant life to others; it is to bubble over as does the fountain. And these airs go about as by some vocal infection, until every other boy has added them to his catalogue of accomplishments. — The Christian Herald.

"He Was Pure Grit."

The boy is a skeleton, and the long, white skeleton is wasting to a shadow. The other boys know he is going, but they say nothing to him about it, and he says nothing to them. His wasted face is always smiling, even in a grimace of pain. And they crowd around him, their great bodies redolent of health, bringing the outdoors he loves so well. They tell him about their plays—his old plays—and school, and how the fish bite, and

how many millions of bluebells there are in the woods. They lay sheaves of the azure things before him, making room on the table among vases and pots of flowers which they love to bring him every day.

As often as he can go out in his wheeled chair, two of the gentlest push him, taking turns, and the rest accompany him like a body guard. He loves this better than anything else, except to have his father sit beside him reading aloud—a grizzled, bald boy, who understands, just like the other boys.

The boy had been so full of life. He got his injury in fearless climbing and leaping. Now he has to lie and watch tree trunks turning sleek and black in the rain and the leaves enjoying moisture. And soon he can hug his agonizing limb no more. But all the boys, without any nonsense of reminding him that he suffers, will stick to him until his smiling face is at last covered from their sight in flowers. They will say: "He was pure grit" and sneakingly wipe tears from their eyes. And to the end of their lives his paper-white hand will still seem to hold them in fraternal grip, and his wasted face will smile on their triumphs. — Times-Herald.

Gen. Andrew Leish, who stammered for more than 20 years.

Aim High

There is a multitude of men and women who are filling ordinary positions, not from lack of ability, but from lack of aim. Circumstances cannot keep a man back, but his view of them may. He must aim above circumstances and not draw the arrow at random. Trained ability is always sought for. For any advanced position a study of Law offers the best training and equipment. The future merchant, banker, manager or secretary will surely need some knowledge of Law, while those who aim to practice Law exclusively need thorough, modern training.

Does the possibility of studying Law appeal to you? If so, perhaps your circumstances practically prohibit a college or law school course, but if you have a purpose **THE SPRAGUE CORRESPONDENCE SCHOOL OF LAW** enables you to

Study Law at Home

with the time you can give. We meet the student on his own ground and adjust the course to his circumstances. He may set his own pace if only he be determined. A little study each day will produce wonderful results. Every facility is offered by our method, books, lessons, selection of studies, side helps, lectures, examinations, suggestions, encouragement and counsel. A systematic course, thoroughly abreast of the times, which offers the best to new students and to lawyers who wish to review.

We have Graduates in all parts of the World, and will send you our Handsome Book of Testimonials and Information Free.

Free Scholarships

The Trustees of the AMERICAN SCHOOL OF CORRESPONDENCE have at their disposal a limited number of Scholarships for instruction by mail in Mechanical, Electrical, Steam, Marine and Locomotive Engineering, including a complete course in Mechanical Drawing. Tuition is FREE. Students must furnish text-books, and pay postage. For particulars, send for Handbook "B."

American School of Correspondence (Chartered by the Commonwealth of Massachusetts) BOSTON, MASS., U. S. A.

The publishers of THE AMERICAN BOY will sell at a very reasonable rate to professional or amateur papers the cuts used in illustrating this or any of the preceding numbers of THE AMERICAN BOY. Illustrate your papers.

Notes.

"The Interpolitan," published by Jessen Brothers, of Omaha, is of such excellence as to deserve more serious consideration than is usually given, by older readers, at least, to amateur papers.

"The Juniors' Collector" is a little eight-page paper devoted to stamp and coin collecting. It is published by Treymond Babcock, at Dayton, Texas. The number before us is eight pages, without a cover. By devoting his paper to this hobby, the publisher succeeds in getting a good advertising patronage, which probably pays at least the expense of publication, and he is enabled to gratify two hobbies at once: namely, collecting and amateur journalism.

In Flushing, N. Y., a young man is devoting his entire time to the publication of a neat little monthly, called "The Shut-In-Friend." Its object is to bring sunshine into the homes of poor invalids who are not able to romp and play in God's bright sunshine, but are forced to remain in the darkened sick room. This young man gave up a position paying him eighteen dollars a week in order that he might devote his time to this. In His Name. The young man is Harry J. Cornell and he can be seen in his office early and late.

We have received a copy of No. 3 of Volume I. of "The Reporter," which, according to the editorial announcement, is "published occasionally," by Heath & Newcomer, Monroe, Mich. Donald R. Heath is the editor. As the editor's inclination fixes the date when a new number may be expected, instead of being published on a regular business basis, we presume it is not run for profit, but the boys are getting out a very good amateur paper just the same. The issue before us has two stories, a column of general editorials, a page of news notes from their school and other miscellaneous matter.

"The Advertiser," published at Fultonham, O., by W. E. Slack, is, we suppose, called an amateur journal, but the copies that have been received at this office merely bear out its name, for it has no reading matter and consists simply of eight pages of small advertisements. This may be good business, but it is not journalism, though financially it may be more profitable than publishing reading matter. Certainly there is little profit in publishing any periodical unless it can get advertisements. As "The Advertiser" is now in its tenth volume, the "editor" evidently finds its publication satisfactory.

We have received copies of several amateur papers started by boys whose interest in amateur journalism has been awakened by this department of THE AMERICAN BOY. The fact that a boy is not able to buy a printing outfit, however, is no reason why he should not start an amateur paper. We advise boys to print their papers if they can, but if they cannot get together a plant for doing that work, they need not delay starting their papers, but can have them printed at local offices, doing the editorial and literary work themselves, and thus getting a large part of the benefits to be derived from this hobby.

"The Amateur Record" is another AMERICAN BOY amateur paper. It is published by Carlton Houston, editor,

and Zach. Sanderson, business manager, at 609 S. Boots street, Marion, Ind. The March number was the first. This is an excellent number and one of which the editors may be proud. It exemplifies the true principles of amateur journalism. The contents consist of an article on Amateur Journalism; a biography of George Washington; a page of well-selected and well-written short editorials; a description of Honolulu; Y. M. C. A.; list of the best books for boys; a fourteen year old boy's composition on "Breathing"; news notes of the Marion High School; a letter from the Philippines, and three pages of advertising.

The first number of "The Auburn Echo," published at Auburn, N. Y., by Ray Burgess, as editor, and Roy Burgess, as assistant editor, consists of six pages about the size of those of THE AMERICAN BOY. It is printed in regular newspaper style. The first page is divided between literary and local news features. In fact, it has very much the appearance of an ordinary country weekly, with its plate matter bought from the press association. This may add interest to the contents of the paper, but if "The Echo" is to be run as an amateur paper, we would advise against publishing this kind of matter. Anybody can publish that kind of stuff, but it has not educational value for the editor, nor does it give him any experience.

"The Huronia Amateur," published by Harvey M. Whipple, as editor, and Richard T. Baldwin, as manager, at 1417 Sixth street, Port Huron, Mich., is one of the amateur journals started as a result of the reading of this department of THE AMERICAN BOY. The April issue, just at hand, is the first number. It consists of eight pages about five inches square. The first page contains a very sensible and well-written salutatory from the editor, and the other pages are made up of a story by Philip F. McCord entitled "Saved by Tobacco, A Cheerful Tale of Poverty;" a poem; the first installment of a continued story by Harvey M. Whipple, the editor, entitled "Under the Shadows of Grey Rock;" two pages of editorials, and one page of advertising. We congratulate the publishers on this their first issue.

The Editorial.

GEORGE R. S. CONNELL.

The editorial is almost a stranger among amateur journalists, especially with the younger element. Why this is so I cannot determine. If one edits an amateur paper and publishes a poem by someone, a story by someone else and a serial or a department, and then leaves a column or so for editorial talk, no matter how much praise the paper may get, so far as the editor is personally concerned, he gets praise only for what he has written himself.

When I started "The Antecedent" last April I was very new at the newspaper business and I took little or no pains with my editorials, scribbling off a few notes of absolutely no interest, and those in the following issue were worse. I soon began to notice the editorials of other amateurs, especially those of Walter S. Golf, of Blissfield, Mich., in "The Review," and I saw that much care was taken in writing them. In the third issue of "The Antecedent," therefore, I took particular pains to have my editorials both longer and more carefully prepared, but still, after they appeared

in print, I was far from satisfied. My last editorials were prepared while in the country and I took great pains, criticizing everything severely and rejecting much that I at first thought good, writing something new every day, until after

GEORGE R. S. CONNELL.

about a week I managed to prepare a page and a half of editorials that I deemed worthy of publication.

Most amateurs think that their editorials should be confined to the doings and happenings in amateur circles. No greater mistake could be made, as editorials may be written on any subject, and the wider the range of subjects discussed the better for both the editor and the readers of the paper, for the editor learns much in preparing his discussions of the various subjects—more, in fact, than the readers to whom he gives only a part of which he reads in his investigations.

The question as to whether a paper should contain nothing but editorials depends upon the taste of the writer. There is much difference of opinion on the subject. Such a paper is not apt to be very interesting or popular.

I hope that no amateur who reads this will sit down and write off a score or so of short notes. His editorials should consist of several paragraphs, not too long nor yet too short, and they should be written on a variety of subjects.

There is too much harsh criticism and personal denunciation in the editorials of many amateur papers. Such editorials lower the dignity of the papers that publish them and do no good to anyone. A plain statement of the facts of the matter and of the editor's opinion, written in gentlemanly and courteous language, will command more respect from his readers and have more weight with them. As an amateur paper is published for the intellectual benefit as well as amusement of the editor, even more than for his financial benefit, amateur editors should employ the editorial for its proper purpose, and when properly employed there is no feature of an amateur paper that will prove more beneficial. It gives the editor practice in original writing, as well as in thinking connectively and forcibly, and will lead him into lines of study and investigation that will greatly increase his store of knowledge.

The Youngest Foreman of a Printing Company in the United States.

Frederick Herman Jaenichen was born August 29, 1878, in Cincinnati, O. At the age of twelve he finished his grammar school studies in Cincinnati

FREDERICK HERMAN JAENICHEN.

and the next year the family removed to Columbus, O., where they have since resided. In 1892 young Jaenichen was forced to leave school, in order to help support his parents, and on May 29 went

to work for the Westbote Printing Company as office boy. Just one year later he went into the Ohio State Journal job printing office, where he remained for exactly two years, and where his faithfulness and ability gave the greatest satisfaction to his employers. On May 29, 1895, he was given a better position in the publishing house of the Weekly Law Bulletin and Ohio Law Journal, of Columbus.

Young Jaenichen's idea at this time was to thoroughly understand and operate the typesetting machines which were at that time installed in this office. After working at the machines six months he was appointed assistant foreman, and on April 10, 1896, when only seventeen and a half years of age, he was appointed foreman over the entire plant, many of the employes of which were nearly twice as old as he. Since then he has had the distinction of being the youngest foreman of such a publishing concern in the country. The fact that he has won such an important position speaks volumes for his ability as well as for thoroughness in his work and his faithfulness to the interests of his employers. Although he had to give up school at the age of twelve, young Jaenichen did not entirely give up his studies when he left school, as so many boys do. He is well read for a young man of his age and speaks the English, German and Spanish languages fluently. A young man with the qualities that he has shown must certainly have even higher ambitions. The future holds much in store for such young men.

Prize Offer to Amateur Journalists.

Did you see the prize offer to amateur journalists who will get subscriptions for THE AMERICAN BOY, published on page 310 of the August number? If not, look it up and take advantage of it. You will find it worth your while.

100 FINE WHITE ENVELOPES neatly printed with your return card, postpaid for only 25c. 50 for 25c. W. K. HOWIE, Printer, Heebe Plaza, Va.

LITERARY ECHO an amateur monthly magazine, subscription 25c a year. Sample copy FREE. Literary Echo, Box 776, Savannah, Ga.

100 Fine Cards 25c. Stylish, elegant; name and address exquisitely printed in latest fashionable script. 75 extra fine, or 40 finest card made, same price, sent prepaid. New type and second-hand presses, 23 and larger, CHESA. Commercial Press, West Brighton, Monroe Co., N. Y.

Aluminum Lead Pencil (7 PENCILS) 10c Six extra leads with each Aluminum Case Pencil—protected point—just the thing for school and office. Also, our Anti-Nervous Pen Holder, made of compressed paper; light as a feather; enjoyed by all penmen; only 8 cents. Stamps taken. Walker Publishing Co., Dept. B., Chicago, Ill.

Money Maker And saver. Print your own cards, circulars, book, newspaper, with our \$500 printing press. Type setting easy; printed rules sent. For man or boy. Send for catalog, presses, type, paper to factory. The Press Co., Meriden, Conn.

School JOURNALISM INSTRUCTION BY MAIL ONLY. A thorough and scientific course adapted to the individual needs of writers. Long established. Responsible. Successful. Instructors experienced and competent. Students successful and pleased. Heat of references. Write for descriptive catalogue. It is sent free. Address, Sprague Correspondence School of Journalism, No. 108 Majestic Bldg., Detroit, Mich.

"U. S. History Without Study" is the name of the newest, most complete, and best set of history games ever published. There are five of them, as follows:
 1. Discoverers and Explorers.
 2. The Thirteen Colonies.
 3. The French and Indian Wars, Revolution, etc.
 4. Washington to Fillmore.
 5. Pierce to McKinley.
 They are the result of years of experience in the school room. You can learn more history in a month from these games than in a year without them. Get them, and you will have no more trouble with history. Old and young are fascinated with them. They are played like "Authors." Get them before you start to school. Any single game, 50c or the five, \$1.25. T. J. Fox, Washington, D. C., Box 206.

U-AU-TO HAVE A PRINT- (PLEASURE) AND PRESS. (PROFIT) These prices talk for themselves.
 No. 10. Hand inking. Will print a form 14 x 24 inches. Weight of press and outfit 4 lbs. Price of outfit, including press, roller, one font of type, cards, ink and furniture. \$1.00

 NOT A CHEWING GUM.
 How to Use It
 Clean cavity of tooth, and press firmly into it a piece of the Gum. If no cavity, apply to the gum as a plaster. At all drug stores, 15 cents, or sent by mail on receipt of price.

American Boys Should Learn a Trade.

P. W. HUMPHREYS.

Why is it that so many of our American boys are prejudiced against learning a handicraft or trade? It is said with a great deal of truth that such Americans as must work at the mechanical trades find themselves at a disadvantage when competing with trained foreigners.

Americans lay the bricks, but the stone masons are from Europe. There are native plasterers, but the ornamental work is nearly always entrusted to a German. There are American and English carpenters, but the fine joiner work in hard woods, and the carving and other decorations are necessarily entrusted to the French technically trained workman. Americans paint houses, but for the frescoping and decorative work the Italian, French or German has the call.

One valid reason against training a boy to a particular handicraft is the progress of invention whereby ingenious machinery has supplanted manual labor.

Our apprentice laws have fallen into disuse, and the trades unions have discriminated against lads who wish to become mechanics.

Then there are so many opportunities for making money in trade and speculation that ambitious young Americans are eager to enter the fields of commerce, to become politicians, to do anything, in fact, rather than confine themselves to the farm, the shop, or the factory. And so it comes about that when any work requiring technical skill is required, foreigners have to be employed.

A change has taken place of which our people have not taken advantage. It is true that machinery has supplanted manual labor in the manufacture of clothing material, but no inventor can take the place of the skilled workman. We have too many traders and speculators.

An advertisement for a bookkeeper or a salesman is answered by a hundred boys and young men, while skilled and artistic workmen are so scarce that we are forced to import them from Europe.

What we need is such an extension of our public schools as will give our boys and girls the same advantages of art education as those possessed by the young French, German and Italian workmen. We want technical industrial schools. And we want sensible boys to appreciate the advantages of these schools and to consider it an honor to be a thorough master of some trade or handicraft.

There are too many bookkeepers, salesmen, merchants and politicians in the United States. It is a mortifying fact that the most keen-witted, inventive and intelligent people on earth allow themselves to be beaten in many of the industrial arts by foreigners who have not the same natural capacity, but who have the advantage of an excellent technical and artistic education.

The boys of today—yes, and the girls, too—should see to it that they are taught occupations in which foreigners now excel, and in which there is no danger of competition in the way of improved machinery. It is only when the boys lay aside their prejudice against trades, and look at the matter from a common sense standpoint, that we can hope to compete with the skilled workmen from other countries.

A Good Motto.

A boy who was very anxious to obtain work called upon a merchant to whom he was an entire stranger and asked for employment.

The merchant told the lad that he had all the assistance he needed. But the boy persisted in his entreaties, and the merchant said to him, "What do you wish to do?" The boy replied, "I am willing to do anything; only give me a chance." "What is your motto?" asked the mer-

chant. "The same as yours, sir," replied the boy. "What is my motto?" asked the merchant, "and how do you know what it is?" "Why, sir, it is on your door, 'Push!'" The merchant was so pleased with the boy's reply that he gave him work, and he had no reason to regret his decision.

Battleship Display for a Druggist's Window.

W. H. Pring, of San Jose, Cal., describes a rather unique window display: "On the floor of the window was spread a white cheese-cloth bunched and ruffled to represent waves. Then I built a ship of bars of Castile soap (white); for the line of soap next to the top I used short bars, leaving holes to represent port-holes; through these I placed a line of shaving brushes (to represent cannon). I made the smokestack of a five-yard roll (blackened) plaster can. Masts of wood were fastened to the floor, and chamois skins used as reefed sails. Smoke was represented by a piece of carbon paper stretched on a loop of bamboo, the paper being creased and dented. For night effect I lowered the lights in the window and placed tapers in little boxes covered with red and blue glass. Near the front of the window I placed a few small rocks and three or four pounds of white sand, and on this an oblong box two by three by twelve inches, with four windows cut near the top; inside the box I placed a lighted taper at night time to create an impression of a lighthouse."

Do More Than You Are Paid to Do.

"One trouble with many young men who start out in business is they try to do too many things at once," says Hetty Green. "The richest woman in America," in the June Ladies' Home Journal. "The result is that they don't know as much as they ought to about any one thing, and they naturally fail. The trouble with young men who work on salaries is that they're always afraid of doing more than they are paid for. They don't enter into their work with the right spirit. To get on and be appreciated, a young man must do more than he is paid to do. When he does something that his employer has not thought of he shows that he is valuable. Men are always willing to pay good salaries to people who will think of things for them. The man who only carries out the ideas of another, is nothing more than a mere tool. Men who can be relied upon are always in demand. The scarcest thing in the world to-day is a thoroughly reliable man."

"It's a queer world," said the old man, "when you come to think it over. You know, I dedicated Jim fer a lawyer?"
 "Yes."
 "An' Bill fer a preacher?"
 "Exactly."
 "An' Tom fer one o' those here literary fellers?"
 "I've heard so."
 "An' Dick fer a doctor?"
 "Yes."
 "Well, now, what do you reckon I'm a-doin' of?"
 "Can't say."
 "Well, sir, you mout not believe it, but I'm a-supportin' of Jim an' Bill' an' Tom, an' Dick, an' it keeps me a-goin' from daylight to dark!"—Atlanta Constitution.

"There is but one way," says Dr. Lyman Beecher, "of securing universal equality to man—and that is, to regard every honest employment as honorable, and that for every man to learn in whatsoever state he may be therewith to be content, and to fulfil with strict fidelity the duties of his station, and to make every condition a post of honor."

FREE PLATE. POCKET STAMP, PEN & PENCIL. SEND PLATE TO ANY PARTY. STAMPS, ALL FOR ANYTHING NAME ON 127 WITH ANY RUBBER. All kinds of Stamps, Rubber Type, etc. J. F. Hullet, 511 W. Balto. St. Balto. Md.

THE BOY PHOTOGRAPHER

Edited by JUDSON GREENELL

THE AMERICAN BOY offers twelve prizes of Two Dollars each for the best Amateur Photograph received during the twelve months in the year, one prize for each month, the competition to be based upon the originality of the subject and the perfection of the photograph. The contest is open to subscribers only. Photographs will be returned if stamps are sent for the purpose. All photographs entered in the contest and not prize winners will be subject to our use unless otherwise directed by the sender, and fifty cents will be paid for each photograph that may be used, the prize photographs in any event to be our own, without further payment than the payment of the prizes. Write on the back of the photograph its title, with a description of the picture, and the full name and address of the contestant.

Light Struck Plates.

One of the greatest difficulties amateur photographers have to contend against is light struck plates. And yet it is only a question of proper care in guarding them against streaks of light. It is not enough that the plate holders are not manipulated in broad daylight; they should always be kept in the shade. A good plan is to have made a black cotton flannel bag, just the size of the camera, with puckering strings at the top. When the camera is not in use, it will make a good covering for it, protecting it from dust and abrasion. When in the field, use the bag to carry the plate holders. Always make the change from bag to camera in the shade. Always cover the camera with the cloth when withdrawing or replacing a slide. Always interpose your body between the sun and the camera, when making changes. If you will follow these suggestions your light struck plates will be few and far between.

Some Pretty Fair Pictures.

Among the pictures received by THE AMERICAN BOY, above the average for general merit, was a picture of an interior of a machine shop, by John Evans, of Newton, Iowa; "Atlantic Highlands," by L. M. Moody, Hartford, Conn.; "Drawing on Nature," a milking scene, by Robert Brubaker, of Johnstown, Pa.; "Pork Chops," a farm scene, when the little pigs were being fed; and "Tobe Tired Out," showing a pool of water and a panting dog in it, the circling eddies producing a pleasing effect. But unfortunately some of these were not properly printed for reproducing. They were either too dark, or had some other defect. However, the contestants should not despair. Let them try again, and again, and finally success will crown their efforts.

Time to Take Sea Pictures.

In a few weeks, now, will be the best time to take pictures of the sea, with coast lines, beating surf, and mayhap a wreck in the foreground. The sun will be rather low but that will make the shadows all the better. The sun in July and August sails the heavens at too high an altitude, but in October, when the winds begin to blow the salt water into spray, it hugs the horizon closer, and the color of sky and water produces beautiful effects.

Have the sun at your right or left. It will not do to have it directly at your back. Be careful of the focusing, making the foreground sharp. Stoop down as much as is needed to give depth, but not so much as to make the horizon line as sharp as the foreground. To do that destroys the atmospheric effect.

Keep the camera well covered with the focusing cloth. With hand on bulb, and when breaker, sky and water combine to form a real picture, make the exposure—

a quick one that catches the turn of the breaker and does not allow the foam to run away into a streak of white without any definition.

A good way to keep the focusing cloth over the camera when the wind blows hard, is to tie an ounce or two of shot in each corner; or take some strong wooden spring clips such as are used to hold a washing on the line on a windy day. It is really necessary to keep the camera dry. Particular attention must be paid to its protection from the salt spray. And, too, care must be taken, when drawing the slide, that no stray ray of light enters to play havoc with the plate. One streak will spoil everything. These little attentions to details will well repay the trouble, for they make the difference between success and failure. For general interest nothing can exceed a good sea picture.

Largest Plates Ever Made.

The Seed Dry Plate Company, of St. Louis, Mo., has just completed an order for six of the largest photographic plates ever made. They are five feet by eight feet in size, weigh one hundred and fifty pounds apiece, and cost a dollar a pound. The plates are for a Chicago man, who expects to utilize them in taking actual life size photographs.

Just follow these plates a little way and see how the expense will pile up. It will take a dozen men to manipulate the camera, for one hundred and fifty pound plates will require a four hundred pound plateholder. Then after the man has gone inside the camera and dusted off the plate, and after the exposure has been made, it will take a bucketful of developer to properly flow the plate, which must be in a great and strong waterproof box so adjusted that it can be rocked without warping. And, too, the air bubbles must be broken by a big swab, so that every part of the surface of the plate will get the effect of the developer. After that comes the fixing bath, and finally the careful washing that will remove every trace of "hypo."

Finally the negative must be printed and then when the print is toned, it will take a mount something like nine by twelve feet to properly set it off. So from beginning to end everything must be made to order, and it is probable that each completed picture will represent an expenditure of five hundred dollars. AMERICAN BOY photographers will find it cheaper to stick to their four by five cameras.

Photographic Notes.

Weak negatives with clear shadows show underdevelopment.

A "squeegee" roller is almost a necessity for nice mounting.

Prints should be printed darker than wanted, as they tone up lighter.

An exposure of one-fifth of a second or quicker, is called instantaneous.

The camera cannot be held in the hand while making a time exposure. To try it is to spoil a plate.

A negative dried in a warm atmosphere is more intense than when dried in cooler air, with a draught.

If you are taking an interior in which there is a clock, stop it, or the face will appear blurred in the print.

In taking a portrait, give more time to people with sallow complexions than those whose color is bright.

Cloud pictures are best when taken with a long focus lens. It makes the clouds look more majestic.

When the "subject" has small eyes, they should be looking up; staring eyes, down; deep set eyes, full view.

If your film or plate is soft after being developed, drop it in water containing a little alum, before final washing.

For a "Rembrandt" lighting, the head must be three-fourths in the shadow, the light coming more or less from behind.

Do not attempt to make instantaneous exposures on a dark, cloudy day, for the picture will be no better than the day.

In pictures of scenery, the horizon line should be either above or below the center of the plate—never just in the middle.

As shadows are as necessary for a pleasing landscape as sunlight, always place the sun to one side, and never, directly back of the camera.

Outdoor pictures of people should be taken in the shadow of a building, or of dense shrubbery. Do not let the sunlight play in spots over the face; it produces a mottled appearance.

The Camera and Dark Room advises amateurs not to wet plates before developing. If they are not wet, then be sure to cover all the plate with developer, to prevent blotching from places being left uncovered for a moment.

After developing and before placing the plate in the hypo or fixing bath, rinse sufficiently to get rid of the superfluous developer. This will prevent the fixing bath being discolored too rapidly, thereby saving expense by making it last longer.

There is now a very good paper on the market that is developed with just salt and water. It produces a warm tone. The only objection some have to it is that it has a glossy surface. But, then, there are others who do not want the dull finish at any price.

In developing a picture the only safe course is to take the developer recommended by the maker of the kind of plate used. There are other developers that will do just as well, and it may be even better than the mixture recommended by the plate man, but it is expensive finding this out.

Time was when one camera satisfied the ordinary person, but nowadays, to be fully provided for every emergency, three are necessary. For journeys and street scenes, where a tripod cannot be used, a 4x5 camera will be found just the thing. With posed pictures and views of a more ambitious nature, especially when the beauties of the woods are wanted, a 5x7 or 6 1/2 x 8 1/2 is none too large. And then, "just for fun," not a little amusement and pleasure can be obtained from one of the Eastman Co.'s "Brownies."

Answers to Correspondents.

John Smart—For a permanent paste use arrowroot, one ounce; water, ten ounces, in which an ounce of gelatine has been soaked; and boil. After cooling add an ounce of alcohol and a few drops of carbolic acid.

Harry G. Harper—Your print shows that the plate is light struck. It very likely occurred while either pulling out or putting in your slide when making an exposure. Cover the camera with the focusing cloth when manipulating the slides.

Ernie Bengler—If there is much yellow in the negative, in all probability it cannot be removed. Some makes of plates will not respond to anything. You might try a ten per cent solution of sulphite of soda, to which a few drops of sulphuric acid have been added.

Joseph Hitchcock—Try blue prints by all means. After printing, like any other printing out paper, just wash them in pure water for a few moments, but the printing must be carried further than with other paper—so far, in fact, that the shadows bronze over. It is permanent.

Horace Mainwaring—Self-toning papers are handy, but as a rule are not permanent. You might try Argo Matte for your landscape; a correspondent speaks very highly of it, though THE AMERICAN BOY has never used any. Next to carbon, platinotype has the most admirers, but its cost prevents a great number using it.

Eastman Kodak Co.'s BROWNIE CAMERAS

Make pictures 2 1/4 x 3 1/4 inches. Load in Daylight with our six exposure film cartridges and are so simple they can be easily operated by any school boy or girl. Fitted with fine Meniscus lenses and our improved rotary shutters for snap shots or time exposures. Strongly made, covered with imitation leather, have nicked fittings and produce the best results. **\$1.00**

was established an English standard. This standard did not prove satisfactory and a revision of it was made in 1889, when the English standard now recognized was adopted. The revised standard required a much more racy animal than before, and one as nearly as possible like the wild English hare in shape. Then the Belgian hare made one grand leap, which carried him across the Atlantic. He alighted in the back yard of a Scotch stone mason, a Mr. E. M. Hughes, of Albany, N. Y. So delighted was this gentleman with the little animal, that he

veloped and should be mated no oftener than once in six weeks or two months or the progeny will be small and puny. The pairs must be separated inside of two weeks after mating, as the male frequently destroys the young. In England mice have been popular as pets for years. Over two hundred persons belong to the English mouse club. Last year the United States Mouse Club was organized in Chicago, with John H. Grube, of Albany, president, Anton Rothmueller and Mrs. Leland Norton, both of Chicago, secretary and treasurer, respectively.

HISTORY OF THE BELGIAN HARE

The Belgian hare, which is attracting so much attention of late, is a descendant of the rabbit. The hare has a long, slim body, with short fore legs and long hind legs. Someone has said that the hare must go down hill diagonally to avoid the danger of toppling over on its head. The animal builds its nest on the surface of the ground, usually in some depression or hollow. The little ones, which are seldom more than five in a litter, are born with their eyes wide open and a goodly covering of hair, and at the age of thirty days are able to take care of themselves. Rabbits, on the contrary, are short and chunky. They burrow in the ground in making their nests. Their young are born without hair and with eyes closed and to remain closed until they are ten days old. Fifteen or sixteen young ones in a litter are not uncommon. Then, too, rabbits mature more slowly than do hares.

There is a difference of opinion among breeders as to the origin of the Belgian hare, but there is not much doubt that fanciers in Belgium first began to breed from the little rabbits belonging to the species Leporidae, differing somewhat in shape and color, with a view of producing animals uniform in size, shape and color. Finally they succeeded to a marked degree and called the animal produced Leporine. The Belgian hare can be said to date back to the early part of the nineteenth century, but for nearly fifty years after the time we first hear of it, it did not cut much of a figure; indeed, not until it was taken to England, where it attracted great attention as a meat-producing animal, did it come into any prominence. For a time it was bred for meat purposes only, but soon it attracted attention as a fancy animal, and great efforts were made to raise the standard. For a long time the breeders who bred for meat purposes only and those who bred for beauty, held long and heated discussions, and their diverse efforts finally led to the establishment of two types—the heavy meat-producing type coming to be known as Flemish Giants, and the stylish, fancy and more symmetrical animal, as the Belgian Hare. Trouble again arose among the fanciers, for they differed as to the qualifications that a fancy animal should possess, but later—that is, in 1882—there

devoted the most of the remainder of his life to advancing the interests of the Belgian hare, getting it admitted to show-rooms and classified. Then a number of eastern fanciers effected an organization known as the American Belgian Hare Association, but it was short-lived, the members being too widely scattered. For a few years not much was heard of the Belgian hare, although Mr. Hughes and Mr. G. W. Felton, of Barre, Mass., continued, wherever they were able to gain admission, to exhibit their animals in poultry shows. They exhibited specimens of their stock at the World's Columbian Exposition, in Chicago, in 1893. Then Mr. W. N. Richardson, of Troy, N. Y., by his pen, began to stir up public interest in the Belgian hare, and to-day, only a few years after its first introduction into America, the Belgian hare is the most talked of and popular little animal in America.

In articles by the same author, which are to follow, the boy readers of this paper will learn how to make a start in the Belgian hare business, how to build houses for the little animal, how to care for and how to feed it.

Fancy Mice.

There are few pets more interesting than Fancy Mice. They are little rolls of brown, black or white satin. They should have another name; there is but little connection between these pets and the wild gray creatures that sometimes cause so much annoyance. With proper cages and the right diet, there is very little odor from them and nothing offensive; two inches of sand in the cage, renewed once in two or three days or a week, and oats to eat, will keep their quarters in good condition. Fancy mice are as gentle as kittens and never bite; they are as beautiful as the finest lace or the daintiest picture. During the mid-day they sleep curled up in the nest but in the evening whisk about, nibble their oats, sip a little water and go through endless antics around the cage. They can be made very tame and taught many tricks. Besides several plain colors, there are mixtures of two or more shades, the tri-colors often being very beautiful.

Colors are not always inherited, a previous generation sometimes giving varieties altogether new and unexpected. Fancy mice are naturally hardy and prolific. The young should remain three weeks or more with the mother; they should not be paired before three months of age when they are fully de-

A Rooster's Queer Love.

SIDNEY S. WORTMAN, SAVANNAH, GA.

I have a very fine game rooster in my yard and out of six partridges I have one blind one left. Since the rest died the rooster lets the partridge sleep under his wing and lets it roost with him. When dinner comes he always crows until the partridge comes out, and will not let anybody come near or hurt the partridge.

Some Pointers Regarding Raising Chickens.

Healthy parents will have healthy children, so the parent stock of little chicks should be active, not too fat, well mated, and properly fed and cared for.

The first enemy the little chicken is apt to meet is lice. One or two of them on the head of a chick will soon kill him. Keep the chicken house, and everything about it, clean. If the chicks are raised in a brooder, whitewash it inside and out.

Don't let the little fellows get their feet wet. Don't let them go out into the wet grass, but make them stay in until the sun has come out and dried it. A little cold is good for a chick, but the cold must not be a damp one, nor should it last long.

Give the chicks what they will eat. It is useless to lay down any certain method of feeding or rule as to kind of food; let it be wholesome and let there be variety about it. Never feed as much of any kind of grain as the chicks will eat. Don't let them stuff themselves. Chicks are very much like little children; they are liable to eat too much. When chickens are kept confined, the first meal of the day should consist of soft food, because it takes a long time to digest grain, and on a cold morning the chickens need something that will get into their system as quickly as possible. Grain may be given at night; indeed, it is the very best food for that time, as it will afford support and warmth during the greater part of the night. Give fowls fresh water every day and see that the water vessels are not so arranged that dirt can be scratched into them. Add a few grains of sulphate of iron to the water, as it acts as a tonic. See that the water given is not real cold. Make them take plenty of exercise. If they have no room to run, make them scratch on some chaff into which some fine seeds, such as millet, have been thrown. The exercise produces strength and invigorates them.

They should have green food, such as grass and the tops of plants. If you have no grass, substitute cut clover or cabbage. At first they should be fed quite often—say every three hours. As they grow older they can be fed more at one time and not so often.

If you use a brooder, do not raise too many chicks in one brooder or department. Fifty is as large a community as will thrive well. As the chicks grow older, of course they will need larger quarters.

The Conceited Rooster.

BY A GRAY GOOSE GANDER.

Being a dignified old gander, and knowing that one goose is of more value than three hens, I have never had much to say to the roosters and their flocks. Now and then I have met an old hen who had other thoughts than clucking about and ruffling up her feathers and trying to pass for a pullet, but most of them are not worth a gander's time. It is still worse with the roosters. I can't say that I ever met one who'd talk about the weather or the crops for five minutes. Their idea is to strut about and show off before the hens and chickens, and because they can crow and fight they try to put on airs over the geese and ducks. They know what I think of them, however. I've given many of them a good drubbing, and they quit strutting around me years ago.

It was about three years ago we had a rooster here who was a beauty. He was black as night, and his feathers shone like silk, and if it hadn't been for his foolish ways the whole farm would have been proud of him. Because he was big and handsome he thought himself the smartest rooster in the whole state. The other roosters ran from him, and the hens all bowed down, and the chickens held their breath as he passed by. One day I heard this rooster boasting to the hens that he had heard of a fox being

in the neighborhood, and that he was going to hunt him up and drive him away. This was dreadfully foolish talk, and I called the rooster aside after awhile and said:

"My friend, you should not talk such nonsense to the hens. No rooster ever hatched is a match for a fox."

"Do you mean that I cannot make the fox run for his life?" he asked.

"Of course you can't. A fox would kill you in a minute. Even the biggest gander is afraid of a fox."

"That's because you are geese and can't crow. My dear old gander, don't worry about me. I can not only take care of myself, but of all the ducks, geese and

"You wait a bit," said I to them. "A rooster who sets out to hunt a fox may be very brave or very much of an idiot. If he ever comes back he'll know a fox from a hollyhock all the rest of his days."

They said I was a jealous o'd gander and ought to be ashamed of myself, but I went swimming over to the other side of the pond and let them talk. When sundown came and we went to roost and the rooster had not come back the hens began to look very sober. His crow did not sound at daybreak next morning as usual, and soon after breakfast the farmer started out to hunt for him. It

I CALLED THE ROOSTER ASIDE.

hens beside. Just waddle back to your pond and mind your own business."

I had no more to say. I knew what would happen if a fox and the rooster met, but my words of advice had not been heeded. That very afternoon, after crowing as loud as he could for ten minutes and strutting up and down in his pride, the rooster set off for the back field to find the fox. The hens flapped their wings and clucked to encourage him, and some of the geese and ducks said he was a brave fowl and ought to wear silver spurs.

was almost noon when he returned, and in his hand he had three or four black tail-feathers belonging to our missing friend. As the wife came out, the husband showed her the feathers and said:

"Mary, here's all that's left of our big black rooster."

"What has happened him?" she asked.

"Why, he went off to the back field by himself yesterday, and a fox must have got hold of him and eaten him up. He was a fine looking fowl, but he didn't know half as much as a goose."

American Boys and the Olympic Games.

In the contest between Elijah and the priests of Baal you will remember that the priests slashed themselves with knives, thinking that shedding their own blood would please their god and lead him to grant their requests. In the Middle Ages, monks and nuns would whip themselves, go without food for long periods of time, wear prickly clothing, and lie on cold stone floors, thinking that by doing thus they were pleasing God and making themselves better men and women. In India little children used to be thrown into the river Ganges as offerings to Buddha, and living wives were burned with their dead husbands as religious acts. But the gods of ancient Greece were not cruel and were never to be honored by pain or torture. They were honored by pleasure, by public and tumultuous rejoicing. Therefore, in Greece, all acts of public worship took the form of popular festivals. The greatest and most celebrated of these was the athletic festival known as the Olympic Games.

Similar contests were no doubt held in pre-historic times, but from the year 776 B. C. the Greeks began to reckon their time by Olympiads, or periods of four years at which intervals the games took place. A sacred truce lasting for a month put a stop to all war between the various states at the time of the games. This enabled every one to travel in safety as none would dare to offend the terrible god Zeus. Almost every town in Greece sent representatives either to compete or to look on at these contests, and from the islands along the coast as well as from the colonies in Asia, Africa

and Western Europe visitors came for business or pleasure. No women, except one priestess, were allowed to be present at the contests.

All competitors were obliged to prove that they were of pure Greek blood and that they had spent ten months in preparation for the contests. Then, if accepted, they were obliged to pass the thirty days immediately preceding the games in training at Olympia under the direction of the officials. During this period the athlete and his friends made frequent sacrifices and prayers to the various deities whom they thought might assist in giving him the victory. On the day of the games all the competitors were obliged to take a solemn oath at the altar of the god Zeus that they would abide by the rules and would take no unfair advantage of an opponent.

Originally the games consisted of but a single race, the stadium—600 feet; but at the time of their greatest glory five days were consumed in deciding the contests. They were then as follows: Foot races, the pentathlon, horse and chariot races, boxing, wrestling and the pancratium. The foot races consisted of the single course, already mentioned the double course, the long race, sometimes twenty four times the length of the course, and the race in armor. The pentathlon consisted of five events, leaping with dumb bells, throwing the discus, throwing the spear, running and wrestling. A victor was obliged to win three out of the five events. The wrestling was not very different from what we have now-a-days; but the boxing was done with the hands enclosed in strips of leather on which were fastened pieces of metal. This arrangement was called a cestus, and you can imagine what a terrible mass of blood and bruises would result from such a contest. One day was

given to the contests of boys, the others to the men and youths.

After each contest the victor was given a palm branch. At the end of the games there was a formal presentation of olive wreaths to all the winners, then followed feasts and sacrifices almost without number.

When a champion neared home, the whole town or city came out to meet him. If there was a wall about the city, a new opening was made for the glorious one to enter through, songs were sung regarding him, statues were made of him and set up in his native town and at Olympia. Presents of all kinds were made to him in such numbers and of such magnificence that all necessity of working for the good things of life was taken away from him.

From the year 394 A. D. when they were discontinued by the order of the Emperor Theodosius, until 1896, there were no Olympic Games. But in that year, through the efforts of Baron Pierre de Coubertin and a committee representing all the nations which take an active interest in gymnastic and athletic exercises, a modern edition of the Olympic games was held at Athens. America led in the prize winning, with nine events to her credit. The other winning countries were France, England, Greece, Germany, Australia, Hungary, Austria, Switzerland and Denmark.

The second of the new Olympic Games is now being held in Paris, as you all know and with the results of the events which have already been held, it is certain that America will again be leader of the winners.

Baron de Coubertin, in bringing about the revival of these games, was animated by a desire not only to see uniformity in the rules under which the athletes of the world compete and an end put to the constant quarrels between athletic associations, but also by the hope that International Games would stimulate that perfect disinterestedness and the sense of honor without which athletics become detrimental to the best interests of young men and of the country in which they flourish. In addition to this it is hoped that by bringing representatives of many nations together in these friendly contests, the cause of universal peace may receive a distinct, if indirect, impulse.

It has been stated that the next Olympic Games are to be held in Philadelphia, in 1904, on the athletic grounds of the University of Pennsylvania, known as Franklin Field. By that time many of the readers of THE AMERICAN BOY should be in possession of such strength and skill as will make them eligible to compete in track events, in gymnastics, in rowing, in bicycling or in fencing for the honor of the United States against the athletes of the other nations of the world. And while the prizes and honor which the victors will receive will be somewhat less than those accorded the champions of Ancient Greece, the vigorous constitution which careful gymnastic and athletic preparation through the coming four years will give him, and the unbounded admiration which thousands of admirers will shower upon him by voice and through the newspapers will be something worth striving for by every American boy.

[The foregoing article was written for THE AMERICAN BOY by Horace Butterworth, Associate in Physical Culture at the University of Chicago.—Editor.]

ARNOLD SUPPLY CO. 405 Tacoma Bldg. Chicago.

SAMPLE 20c.
-Greer New Lever Skot Hook-

No more had Jack for fishermen. Whether fish bite or not, his returned hook releases and spikes them. Lever action.

By Mail 50c

Not a Toy

Nickel-Plated Durable.

Will stop the most vicious dog man without permanent injury.

LIQUID PISTOL.

Length of barrel, 3 in.; total length 5 1/2 in.

Parker, Meyers & Sutton, 224 South St., New York

EVERY BOY

His Own Toymaker—

A great book for boys, telling how to make a Steam Engine, Photographic Camera, Windmill, Microscope, Galvanic Battery, Electrical Machine, Telegraph, Telephone, Magic Lantern, Boats, Kites, Balloons, and many other things. Over 200 illustrations. Price 50c. Catalog free.

JOS. C. STEELE, 2213 Beech Ave., Baltimore, Md.

A YARD RULER.

Johnny (who has just been told by his mamma that God sees every thing he does)—"You go on back! It's bad enough to have Dod follerin' me 'round widout havin' you chasin' after me every minute."

A COLLEGE EVENT—"THE JUNIOR HOP."

A CART LOAD OF FUN FOR ONLY 10 CTS

RUFOND OF JOKES and FUNNY STORIES

MAGIC TRICK CARDS FULL PACK 10c. Big book on "Parlor Magic."

LATEST OUT Filipino Puzzle, entirely new. Sample postpaid 8c.

BOYS send two cent stamp for sample latest novelty. "The Cracker-Jack Joker Telegraph."

ANY BOY CAN HAVE FUN writing secret letters; LOTS OF FUN can be read only by party for whom they are intended.

FREE, BOYS, FREE! To every fifth boy who sends ten cents for my book telling how to make your own boats, cameras, steam engines, kites, electric batteries, wind mills, telephones, magic lanterns, bow and arrows, fishing tackle, balloons, toy houses, all kinds of traps, and many other things.

THE AWKWARD SQUAD. Boys at the Buelah Land Farm, where we are paying for the saving of "Frank."

"Water Rats" at Aden.

ELLA BARTLETT SIMMONS.

"Boys are boys, the world over" and all have their ways of making money, but not many perform such remarkable feats in the pursuit of wealth (?) as do the little Arabian divers at Aden.

Aden, you remember, is a small volcanic peninsula on the southern coast of Arabia, about one hundred miles from the foot of the Red Sea. It is a romantic spot, admirably situated and strongly fortified. The streets are narrow and the houses are typically tropical; the Mahomedan troops, with their striking costumes, add to the oriental effect of the whole.

Our good ship Arabia had passed through the Isthmus of Suez, paying six thousand dollars for the privilege, had sailed slowly down the Red Sea, had left the Strait of Bab-el-Mandeb behind, and had arrived at Aden.

"We stop here to coal and water," said our jolly captain, "get your coins ready; here comes the water rats, the renowned Arabian divers."

"Water rats," indeed, they appeared to be. They seemed to emerge from the depths of the Gulf, to spring upon the deck with the agility of a "really, truly" rat, and to stand before us while we were drawing breath.

These tiny specimens of humanity knew enough English to make us understand that if we would throw coin in the water, they would dive and get it.

"Me, me, twy me," importuned one little fellow, dressed in a coat—a coat of coconut oil.

Wondering if he really could perform so marvelous a feat, we threw a shilling far out into the water. Quick as a flash, the keen-eyed well-trained diver jumped from the ship's deck into the Gulf, and in an incredibly short time returned with the money between his teeth.

The other passengers being attracted to the spot, coins of all denominations were thrown into the water, to be dived after and kept by these little Arabs, it being an unwritten law among them that

possession is TEN points of the law in such instances.

"How are they able to dive with such accuracy?" you ask.

It is the old principle, "We learn to do by doing." These little boys are brought up on the seashore. From infancy they are taught to be as much at home in the water as on the land. They receive daily instructions from their parents in swimming and diving. Many times they are subjected to severe discipline before they are able to satisfy the demands of their father. Many methods of testing the skill of these little ones are tried before they are allowed to jump from the ship.

It is a proud day for the parents, as well as for the diver, when the well-earned coins are brought home.

The Game of Impromptu Artists.

Any number can play, and all that is necessary is that each player must be provided with a sheet of white paper and a pencil. All must mark five dots, in any arrangement that he pleases, on the paper and then pass it to the next player on his left. He then takes the dotted paper which has been handed him, and tries to draw on it some human figure in such a position as to bring one of the five dots at the middle of the top of the forehead, one at the point of each foot, and one on each hand.

No one must be allowed longer than a given time in making his picture. The results are often very laughable and the game calls for a good deal of invention on the part of the players.

CLIP THIS OUT and send to us with 10c and we will send you prepaid "SNAP SHOTS," a book that would make a cat smile and a mule laugh. Interesting catalogue FREE.

10c Pays for our special packet of 7 choice stamps from F. J. L. Hornes, CHINA, Kow Kiang, COCHIN, Barbados (jubilee issue) and Egypt OFFICIAL. office. That is to say, the gum should be in its original condition as sent out from the manufacturers, the perforation should be complete, the impression well centered, and the color unfaded.

Face Value One-tenth of a Penny.

While it is not desirable to neglect the colonial issues of France, the familiar design of which is illustrated here, it is necessary to point out that they are of little value. For instance, the stamp illustrated represents one of the face value of one centime, which is, roughly speaking, one-tenth of a penny. As it is not customary for the publishers of catalogues to price stamps at anything less than one penny, these stamps are included at that price. It is quite obvious that to pay ten times the face value for a current postage stamp is to incur a direct loss. Young collectors are frequently lured by the attractiveness of these and similar stamps in the unused condition; and they think they are getting bargains when they pay 1d. each

for these pretty stamps, whereas they are really paying seven or eight times too much. The same applies to the 2 1/2 reis stamps of the Portuguese Colonies, the one centime stamps of Monaco, and others.

Other stamps which should be neglected by the collector when making his purchases are the stamps that have been "made for collectors." There are not a few countries which issue unnecessary

SOME SPECULATIVE STAMPS.

stamps in order to make profit from their sale to collectors. Jubilee, commemorative, exhibition, and other stamps are included amongst unnecessary issues. They are generally of brilliant, artistic, and attractive appearance, but are ignored by the advanced collectors, who very justly resent their hobby being taxed in this manner in order to fill the coffers of impecunious governments.

100 choice rare stamps, 12c; 20 curiosities, 25c; 25 sea shells, 15c; 5 rare old coins, 12c. My price list, 5 var. rev. stamps; old 1798 liberty cent, all for a dime.

C.H. MEKEEL STAMP & PUB. CO.
Dept. B. St. Louis, Mo.

The Numismatic Sphinx.

Geo. M. G., Coffeyville, Kas.—1866 nickel only worth face value.
Ralph V. Rich, Onancock, Va., wants to exchange old coins and stamps for others.
A. I. W.—The nickel cent of 1856 is worth \$4.00. The other nickel cents only face value.
John Swanson, Chicago, Ill.—The C. C. (Carson City) quarter of 1876 commands no premium.
Herbert Jeffries—Your 1860 Orleans mint half dime, unless uncirculated, has no premium.
J. F. Moseley, Columbia, Fla.—An 1869 three-cent piece and English halfpenny are both very common.
E. Morgan, Benson, Neb.—The quarter of 1854 and nickel five cent piece of 1867 are both very common.
Charles Mason, Oil City, Pa.—Your II. skilling piece of Frederick III. (1648-70), Denmark, 1650, is worth 30 cents.
J. F., Chicago, Ill.—A Chinese coin (cash) of the present dynasty, equal to a mill of our currency. They sell for five cents each.
Joseph Wells, Chicago, Ill.—The cent of 1845 and quarter of 1838 are both very common. The dealers would charge you five and fifty cents respectively for them.
Lloyd B. Bennett, St. Louis, Mo.—The rubbing you enclose is taken from a five Lepta of Greece. It is a neat bronze coin and was struck at the Paris mint. It is common.
Louis H. McBain, Grand Rapids, Mich.—The two-cent piece of 1873 is much the rarest of these pieces, having been issued only in proof condition. They sell for about \$1.50.
John W. Culver—Your half dimes of 1829 and 1854 are comparatively common, and unless in extra good or uncirculated condition, would hardly bring over ten or fifteen cents each.
H. M. Clark, Maple Park, Ill.—An 1856 cent is worth only five cents. U. S. paper currency (shinplasters) are always worth face value, and if in fine condition often bring a good premium with the collectors.
Ernest Kuhn, Mansfield, O.—Half dimes of 1839 and 1853 are worth twenty

THE BOY COIN COLLECTOR

cents each. Half dollar of 1825, seventy five cents. The 1828 copper cent, large date, is common; small date sells for twenty five cents.
Sherrill B. Greene, Warren, O.—Your ecu (dollar) of Louis XVI. (1774-93), 1777, France, is worth \$2.00. The two-cent pieces issued during the years 1864-72, though rarely seen now in circulation, hardly command a premium.
George W. Austen, Hamilton, Ont.—The "Washington and Independence" cent of 1783, with Liberty seated on the reverse, is usually classed as a Washington cent. It is one of the commonest of these coins and sells at the dealers for fifty cents.
C. Davis, Lowell, Mass.—The Carson City dime of 1875 is worth, in mint condition, twenty five cents. The dimes of 1894, with the exception of that issued in the San Francisco mint, which is invaluable, are worth face value. The 1863 cent is common.
F. W. J., Belvidere, Ill.—In 1895 the Philadelphia mint issued 13,000 silver dollars; the San Francisco mint 450,000, and the New Orleans mint 400,000. Thus only the dollars of this year, of the former mint, can be in any ways rare. The 1867 two cent piece is common.
W. G. Scholtz, Minneapolis.—(1) 10 sen silver of Japan (3d coinage, 1873-90), worth twenty cents; (2 and 3) common Canadian cents showing the Queen laureated and diademed; (4 and 5) nickel cent of 1862 and nickel three cent piece of 1870, face value only.
Irving Truett, Berkeley, Va.—Your piece with "Army and Navy" on one side

and head of Liberty on the obverse is a common war token of the Rebellion 1861-65. The cent of 1817, with thirteen stars, is worth fifteen cents. Another variety, with fifteen stars, sells for fifty cents.
Reslaf L. D'A., Wartburg, Tenn.—Your quarter dollar of 1815 is worth from one to two dollars, depending upon condition. There are two dimes of 1828; large and small date; the large date is much the rarer, bringing a dollar in good condition; the other sells for 25 cents; 1842 copper cent, if good, 10 cents.
R. I. P., Beatrice, Neb., wants the names of some coin companies who send coins on approval. If he will watch the advertising columns and look back into some of the Sphinx columns of THE AMERICAN BOY he will find the addresses of dealers who no doubt will be glad to accommodate him if he will give good references.
Wayne Seely, Maple Park, Ill.—An 1803 half dollar is worth one dollar; one of 1826 seventy five cents. Half dollars of this type of Liberty head and lettered edge were struck between 1807 and 1836. Good quarter dollars of 1844 and 1849 are worth fifty cents each. The other coins you mention have no particular premium value.
George A. Moore, Chicago.—An 1850 half-cent sells for 20 cents. Your Puerto Rico 20 centavos of 1895 is interesting from the fact that that island now belongs to the United States. Many of these pieces have been brought home by our soldiers as souvenirs, thus making them common. Your other rubbings are of coins easily obtained and correctly named by you.
Wright Wilson, Knoxville, Ia.—Your dimes and half dimes are all common mints and dates. No premium on the 1859 nickel cent. The date has been worn off your Canada dime. All originally bear dates. Your German coin is a six einenreichs thaler of Frederick

William III. (1737-1840). It is base silver, or silver much alloyed with baser metals, and has little value.
Harry C., Monrovia, Cal.—Your 1833 cent is worth ten cents. None of the minor coins have mint marks, as all are issued at the Philadelphia mint. The letters D. K. on your coin must have been stamped there by private parties. 1847 cent is worth five cents. An 1806 half cent sells for twenty five cents. The Columbian half dollars sell for seventy five cents each at the dealers. Mexican silver hardly brings face value in this country.
Lewis A. Austin, Milwaukee, Wis.—(1) Five pesetas of Peru, 1880; \$1.75. (2) Confoderatio Helvetica or Helvetian Confederation or Switzerland nickel coins of five, ten and twenty centimes, and copper two centimes are all very common. (3) "Our Navy," one of the innumerable Rebellion tokens issued during the Civil War, 1861-65. (4) Half cent of 1807, if good, is worth twenty five cents. Your Canada Bank Token, 1854, face value only.
Clyde Boyd, Rowell, Ark., asks if an 1849 twenty-dollar gold piece is worth anything. Were there any of these pieces for sale or to be obtained we should unhesitatingly answer, yes. Only one piece of this issue was ever struck, and it has ever remained in the mint cabinet at Philadelphia. There was but one other twenty-dollar gold piece issued in this country during 1849, and that was a Mormon (Salt Lake City) issue. This is valued at \$50.00.
Harry Berg, Manistee, Mich.—Sends some rubbings of very interesting coins and asks information concerning them. No. 1 is a Vernon medal, struck to commemorate the capture of Porto Bello, a fortified Spanish city on the Isthmus of Panama, by the British Admiral Vernon with six ships of the line. This event occurred in 1739 and occasioned the issue of many varieties of medals in brass and copper to celebrate the event. Lawrence Washington served under this admiral in this expedition, and in compliment, named his estate on the banks of the Potomac, Mount Vernon, after him. No. 2. A square ore or klippe of Gustavus Adolphus of Sweden (1611-32), usually sells for one dollar and seventy-five cents. No. 3. A bronze medal struck in honor of Gustavus Vasa of Sweden (1523-60). No. 4. A silver klippe of Eric XIV.

of Sweden, 1560-68. This is a piece rarely met with outside of the auction rooms. No. 5. A Papal two and one-half mezzo of Pius VI. (1775-99), worth thirty five cents. A similar piece has the bust of St. Peter to left and is somewhat rarer. No. 6. A Roman first bronze coin of Septimus Severus A. D. 193-211. Good first bronze coins of this emperor are worth a dollar each. No. 7. A silver IIII skilling of Christian IV., of Denmark, 1588-1648. Obverse: C4 crowned and inscription. Reverse: Hebrew letters in the field. Justus above and Judex beneath. Worth fifty cents. No. 8. This is another Danish silver coin of the same king, but the rubbing is so poor we cannot give particulars. No. 9. A Norwich (England) half penny token of 1797. No. 10. An English half penny token issued plentifully and in great variety by private parties during the latter part of the seventeenth century. These (as well as many similar to No. 9) were struck for necessary change and are found in lead, tin, copper and brass. These small pieces were suffered until 1672, when King Charles, having had struck a sufficient quantity of small change they were forbid circulation by law. No. 11. Hamburg (Germany) II skilling base silver of 1758. Very common. Would be glad to know more regarding No. 12. Cannot make out the reading on the Victoria bronze. No. 13. Silver of Gustavus Adolphus of Sweden (1611-32).

Some Rare U. S. Coins.

It is not often that a series of coins so rare and in such perfect condition as here illustrated are found in one collection. These coins at one time all belonged to the veteran collector, Lorin G. Parmelee, Esq., of Boston, and while all are not of extreme rarity, their condition makes them all extremely valuable.

Cent, 1795—Lettered edge; the same weight and thickness of the cent of 1791.

Half cent, 1796—The mint records state that one hundred and fifteen thousand four hundred and eighty of these pieces were struck. This must be an error. The best authorities now believe but few were struck and

SOME RARE UNITED STATES COINS

these as pattern pieces. This is by far the rarest of the half cents.

Half cent, 1795—Lettered edge, heavy type. The rarest of the half cents of this date.

Half dollar, 1815.

Cent, 1799—The rarest of all the cent issues.

Cent, 1812—A tolerably common date, but always very rare in fine condition.

Half dime, 1797—Six stars facing.

Half dime, 1802—A good half dime of this date readily brings one hundred dollars.

Cent, 1807.

Cent, 1813.

Half eagle, 1795—No stars on obverse.

Dime, 1804—The rarest of the early dimes.

Quarter dollar, 1823 and 1827—The rarest of the quarters, only four thousand of the latter being struck.

Dollar, 1804—Often called the "king of rarities." There has long been much controversy and speculation regarding this coin. The mint records say that nineteen thousand five hundred and seventy were issued. At this time we know to a certainty that the early records of the mint are far from reliable. They are certainly so in this instance. The most reliable authorities now agree, that, while the dies were no doubt prepared for this issue, no dollars were struck from them until between 1836 and 1842. They are thus, properly speaking, re-strikes. Some eight or ten undoubted specimens are known to exist, and it is likely that not over twenty were struck, the die was destroyed in 1869.

Eagle, 1795—Five stars facing.

Half dollar, 1797—An extremely rare coin. The mint records stating that three thousand nine hundred and eighteen were struck.

Charles R. French, Lansing Mich.—Your 1848 and 1851 cents are worth ten cents each. The Canada 1859 and 1882 cents, laureated and crowned heads of Victoria, face value only. The rubbings show them to be nice specimens and you should keep them as a nucleus for a larger collection.

THE BOY CURIO COLLECTOR

The Collecting of "Indian Relics."

L. A. B.

There is one branch of collecting in which no more than two out of every hundred collectors proceed correctly, and that is the collecting of "Indian relics," so called.

The average collector is acquainted with but the arrow point and the stone axe or tomahawk. These articles are widely known, but how many can tell the difference between a game point and a war point, a fish point and a leaf point, a knife and a spear?

How many know what a great and interesting study goes with the collecting of these things? It is called Prehistoric Anthropology, and means the origin of art as it has been manifested in the works of man who lived before written

history. When you come to think of it, that was quite a while ago.

When our country was discovered by Columbus, civilization was fairly advanced in the old world. Here the red man lived near to nature, but without the art of chronicleing or writing history; hence, up to the time that the white men landed here, these Indians were a prehistoric race.

In the very fascinating work of making stone collections it is necessary to learn, in order to properly classify results, that all stone implements found may not necessarily have been the work of the Indian. When man lived without the knowledge of how to use metals, he quite naturally resorted to the making of necessary tools and weapons out of stone. This period was very properly named the "stone age"; following this

comes the age of bronze and later, that of iron.

The stone age has been divided into three periods, the Eolithic, Paleolithic and Neolithic periods, the words meaning first stone, old stone and recent stone. The quality of the implement found and its geological surroundings determined the period, but the collector will pay but little attention to these periods until he has advanced somewhat in his study of prehistoric times.

One writer in THE AMERICAN BOY has stated that any boy living in the country has "unlimited chances" for finding relics, but be assured that this is a rather broad statement, for by no means are the chances "unlimited." The most likely places for the finding of these things are such localities as would appeal to your judgment as good camping places, for, bear in mind that the life of the Indian was a camp life. Consequently the land at the outlet of lakes and ponds, mouths of rivers, commanding sites on river and creek banks are generally worth a very careful search, as are also shell heaps upon the sea shore.

The richest finds are always made at Indian burial places, while next in order come the sites of the arrow maker's workshop and the camping places. Of course, specimens are found singly in isolated spots at times, but they are implements, etc., that have been lost by hunters and others, and the finding of these is not by any search but by mere

Figs. 1 and 2—Hammer Stones. Fig. 3—Grooved Axe. Fig. 4—Chisel. Fig. 5—Gouge. Fig. 6—Scraper. Fig. 7—Piercer. Fig. 8—Game Point. Fig. 9—Needle.

chance. Our advice to boys is that they save whatever they may have or find, for what they may think to be mere "chips" may be of considerable value.

William Treffeisan, of Philadelphia, sent the editor a piece of flint from a collection he made at League Island, near Philadelphia.

John W. Dixon, Bigpine, Cal., asks us to give him a few points on Lapidary work. He says he has a large amount of onyx, agate, raganite and orange mottled marble that he wishes to polish, but can find no data or description of machinery necessary to do the work.

An Indian Drill.

CARL M. DODSON.

Every boy has a knife of some kind, and, having a knife, the number of interesting and instructive toys he can make is unlimited. Here is a contrivance, which, though used hundreds of years ago, is still new to many American boys. The method of its construction is as follows: Take a piece of wood about ten inches long by one inch square, and shape as in Fig. 1, making the small part round and smooth. Then

take another piece, the same length but about twice as wide and half as thick (which will make it ten by two by one-half inches) and shape it as Fig. 2, making a hole in the center just large enough to admit the small part of the first piece. Then tie a piece of strong cord to the second piece as in Fig. 3. Now, by giving

the cross piece a few turns, the cord will be wound around the upright piece, giving the appearance of Fig. 4. Press

downward on the cross piece and the cord will unwind and turn the upright around at a great speed. The momentum thus received will again wind the cord in the opposite direction, and so the operation can be repeated any number of times. This contrivance illustrates the exact manner in which the old Indians drilled the holes in bones and teeth which they used as ornaments.

How to Find Indian Relics.

F. E. H.

In a recent issue of THE AMERICAN BOY was an article entitled "The Arrow Head Collector." Perhaps a few hints about where and how to find arrow heads would be welcomed by the amateur.

To begin with, we should learn as much as possible about the habits and customs of the Indians who inhabited that part of the country in which we wish to search. A few general rules, however, will apply to most parts of the country. As they traveled mostly by

water, and obtained a good deal of their living by fishing, we find more implements, etc., near streams that were deep enough for canoes; also near lakes in some dry spot sheltered from the wind. They almost invariably chose the sunny side; at least, the writer has never found anything on a northern slope, except near the ocean; even then they were not so abundant as on southern slopes. At the forks of large streams are found evidences of big camps; here ceremonial objects are often found. Wherever you find a good spring, search diligently over the dry ground in its vicinity. You will never find anything on swampy ground.

In autumn, after crops are harvested, is the best time to hunt for relics, because rain and cultivation bring more of them to the surface. It will also pay to look over ground that has recently been plowed, if there has been a shower or two on it to wash the dirt off the pebbles.

Always carry a light walking stick, and with it turn over every small stone that you see which looks at all peculiar. When you find numerous little thin pieces of flint or other stone, look very carefully, for these are chips broken off in making implements.

A little experience will soon teach you whether a location is favorable; and sometimes the collector is rewarded for digging in ground that has never been worked. The writer once found five arrow points in digging over about five square yards, and six or eight inches deep. It was at the top of some rocks, and twenty feet or so above high tide.

The collection of Indian relics affords a very interesting study, from the fact that one seldom finds two specimens of the same size and material; and one is constantly coming across implements the use of which is a mystery, and which sometimes prove to be some rare ceremonial objects of value.

ANCIENT and Modern Coins, from 10 up. List free. T. L. ELDER, Princeton Place, E. E., PITTSBURGH, PA.

A Boy's Books.

H. H. H.

So much of the reading of boys, and of men, is valueless that one almost wishes there were not so much reading matter in the world. Some of it is simply inane while some is harmful. Some is really amusing, and we can find no great fault with this for there are times when one ought to be amused. But the boys of to-day do not read enough books. The best literature of the day is to be found in books. The most lasting impressions are made by the careful and systematic reading of good books. It was that wise and good writer, Horace Mann, who wrote:

"Good books are to the young mind what the warming sun and the refreshing rain of spring are to the seeds which have lain dormant in the frosts of winter. They are more, for they may save from that which is worse than death, as well as bless that which is better than life."

If you believe this to be true, and it is true, you may be glad to know the names of some of the best books for a boy to read. It is a great waste of time to read other than helpful books. What books will be most helpful to you? Theodore Parker answered this question for all readers when he said: "The books which help you most are those which make you think the most. The hardest way of learning is by easy reading, but a great book that comes from a great thinker—it is a ship of thought, deep freighted with truth and with beauty."

Every boy in America ought to read a book that I fear a good many of our American boys do not read, and that book is the Bible. He should do this because, as some one has wisely said, "It is the history of all that is highest and lowest in mankind; the depths to which he can sink in degradation and despair; the heights that he might reach if he but would." A wise and careful reading of the Bible cannot but be helpful to every boy, even though he read it only as history or literature. It is not often that a boy reads the Bible without being impressed by its spiritual power and influence. And so I would urge all boys to read the Bible because of its helpfulness.

Most boys like to read some fiction, and good fiction is often helpful reading. One of the best books of fiction is Cooper's "Spy," Scott's "Ivanhoe," Irving's "Bracebridge Hall," Aldrich's "Story of a Bad Boy," and Hawthorne's "Grandfather's Chair" are all charming stories in which an intelligent boy will become interested. It is well to give all "blood and thunder" tales a wide berth. They convey absolutely false impressions of life. They weaken the intellect, and have a tendency to make a boy coarse. They never inspire him to do or to be anything that is good. They are trashy to the last degree. Read fiction if you will, but let it be the kind of fiction that will give you right standards of living and inspire you to be better boys and good men.

This is an age when there is great interest in outdoor life, and nearly all boys have in their boyhood the instincts of the naturalist. They are more or less interested in birds or flowers or animals or sports or geology. Such boys will derive much pleasure and profit from such books as "Wild Animals I Have Known," "How to Know the Wild Flowers," "Nature's Garden," "Birds Through an Opera Glass," "Up and Down the Brooks," "Outdoor Papers." It is a good thing for a boy to have a real interest in the world of nature. It is a good thing for him to know all that he can about animals and flowers and trees. Hunting and fishing and rowing are fine for both mental and physical development, and every boy should read nature books.

No boy can be well informed without reading history. Every boy's library should have in it as many historical books as possible; and they should be for use and not merely for ornament. Charles Coffin's "Boys of '76," Parkman's books, particularly his "Oregon Trail," Fiske's "War of Independence," "The Rise of the Republic," Gray's "Crusade of the Children" and the books of Motley and Prescott will be valuable additions to the library of any boy.

Every boy should have a library, and the books in that library should stand this test. Never was there an age when good books could be had for so little money. Let every boy invest a part of his money in good books and have nothing to do with the "penny dreadfuls."

A Simple Arrangement for Books.

JOSEPH HATCH.

Nearly every boy has treasures in the shape of books which must have a resting place when not in use.

In many instances a boy's room is rendered untidy by books being stacked one upon another or else littering the table.

The illustrations show some cabinets which can be constructed with such sim-

In Fig. 2 is shown a combination book case and writing desk which is also constructed on simple lines, and will be sure to please a boy. The door that forms the writing desk, when let down, can be held in position by a telescoping piece of iron. The back of the shelves may be of some cheap wood such as pine or white wood.

The top of the desk can be covered with green felt bordered by a narrow

braided fastened with brass headed tacks. From a brass rod, yellow silklike curtains may be draped.

There are many nooks and corners in a house which a cabinet or book case will nicely furnish; and a boy's room with its many little belongings absolutely demands something of the kind.

plicity that anyone who is a little skilled in the use of tools can make them.

The case can be stained a cherry color or any other color one fancies. Curtains which serve to keep out the dust may be hung from brass rods at the top. Two drawers at the bottom make an excellent place for papers and magazines

 Detroit, Mich.

Alfred J. du Perier, a Boy Orator.

Alfred J. du Perier, of New Iberia, La., has recently been graduated from Notre Dame College, Vincennes, Ind. The young man has just passed his majority. While in college he made a good record as an orator. At Notre Dame he won the Barry elocution gold medal in 1899, and afterwards the Breen gold medal for oratory, the subject of his address on the latter occasion being "Joan of Arc." His

ALFRED J. DU PERIER

composition abounded in many thrilling and pathetic descriptions, and his delivery was easy and graceful.

The judges on thought and composition were Hon. George Clarke of South Bend, Prof. Will D. Howe of Indianapolis and Rev. M. A. Quirk of Ottawa, Ill. The judges on delivery were Mr. James S. Handy of Chicago, Mr. M. H. Carmody of Grand Rapids and Prof. J. Stuart Lathers of Ypsilanti, Mich.

Daniel Webster and the Bible.

Daniel Webster was remarkable not only for his oratorical powers, but for his familiarity with the Bible. His colleagues once nicknamed him the "Biblical Concordance of the United States Senate." One man says that he never received such ideas of the majesty of God and the dignity of man as he did one clear night when Mr. Webster, standing in the open air, recited the Eighth Psalm. On one occasion the teacher of the district school offered a jack knife to the boy who should recite the greatest number of verses from the Bible. When Webster's turn came he arose and recited off so many verses that the master was forced to cry: "Enough!" It was the mother's training and the boy's delight in the idioms and music of the King James version that made him the "Biblical Concordance of the Senate."

But these two factors made him more than a "concordance." The Hebrew prophets inspired him to eloquent utterances. He listened to them until their vocabulary and idioms, as expressed in the King James translations, became his mother tongue. Of his lofty utterances it may be said, as Wordsworth said of Milton's poetry, they are "Hebrew in soul." Therefore they project themselves into the future.

The young man who would be a writer that will be read or an orator whom people will hear, should study the

English Bible. Its singular beauty and great power as literature, the thousand sentiments and associations which use has attached to it, have made it a mightier force than any other book.

Ten Peace Questions for Debate.

G. W. WISHARD.

1. Resolved, That James Watt, the inventor of the steam engine, did more good than any warrior that ever fought.
2. Resolved, That Napoleon Bonaparte did the most harm of any person that ever lived.
3. Resolved, That the nineteenth century has wasted enough in war and war preparations to have fed, clothed and educated every human being.
4. Resolved, That Great Britain has disgraced herself forever by the South African war.
5. Resolved, That imperialism means militarism. Remark: The discussion of this resolution now (1900) would have special reference to the annexation of the Philippine Islands.
6. Resolved, That the New Testament does not sanction war.
7. Resolved, That the world should compel the nations to resort to arbitration before a permanent court instead of resorting to war with one another.
8. Resolved, That more good will flow from the Hague Peace Conference than from the Spanish-American war.
9. Resolved, That history should be rewritten, so as to contain less of the details of war and more concerning the works of peace.
10. Resolved, That New York should hold an international exposition in 1907, to celebrate the centennial of the steamboat.

The Difficulties of the Young Orator.

W. F. STEPHENS.

The young man who would achieve success as an orator must not be deluded by the impression that he can realize his ambitions without a struggle. The path of the aspirant for oratorical honors is beset with difficulties. In addition to the arduous preparation which he must undergo, there are at least two other difficulties to be overcome in all ordinary cases. They are self-consciousness, of which nearly every speaker is or has been a victim, and vocal defects which in one form or another, nearly all possess.

Many of our greatest orators have been afflicted with organic defects of speech which were cured only after hard and diligent labor. We are all familiar with the story of the great Demosthenes and his successful efforts to control his stammering tongue. Curran, the famous Irish orator, when a boy, was called "stuttering Jack Curran." He labored indefatigably to remedy his defect of articulation, for years following the practice of reading aloud daily, clearly enunciating each syllable.

The part which the voice plays in oratory should not be underestimated. It has been instrumental in bringing fame to many a speaker. The charm of Clay's oratory lay in his marvelously sweet voice. We have heard of orators with "tears in their voices," and such have always been eminently successful.

We cannot all hope to acquire the wonderful vocal powers of a Garrick, of whom it is said that he could make men weep by the manner in which he pronounced the word 'Mesopotamia,' but there are few who cannot by the exercise of patient and persevering effort improve their voices so as to make them at least pleasing.

The voice is an organ of marvelous mechanism, and time spent in its cultivation will repay one an hundredfold

The practice of reading aloud is of inestimable benefit. Singing, exercised judiciously, will strengthen the voice. Mumbling, a fault which is all too prevalent, is merely a habit. It can be remedied by aiming to pronounce every word clearly and distinctly both in reading and conversation.

Self-consciousness, the principal difficulty which the young orator encounters, is in many respects an inexplicable thing. Many a man who has marched without flinching up to the very mouth of the cannon has been transformed into a veritable coward at the mere thought of speaking in public. But this diffidence, strange as it is, is a most painful reality, as most of us can testify, and all of the great orators have experienced it.

Webster's first attempts at public speaking were flat failures. When he rose to speak, his mind became a blank, his tongue clave to the roof of his mouth, and he was compelled to resume his seat. Patrick Henry, the peerless young orator of the Revolution, disappointed and chagrined his friends by his early efforts.

When Henry Clay first addressed a debating society, which he had joined, he was so nervous that he opened his speech by saying, "Gentlemen of the Jury."

The first appearance of Franklin Pierce in court was disappointing in the extreme, but he was stimulated by his failure to greater effort, and eventually he became one of the leaders of the bar.

Disraeli, the celebrated English statesman, was laughed down in his first speech in the House of Commons. Stung almost to madness at the ridicule which greeted his effort, he shouted, "I have begun several times many things and have succeeded in them at last, and the time will come when you will hear me." His prediction was verified.

Curran, in his maiden efforts, both in debate and at the bar, was so overcome that he was unable to utter a syllable, but perseverance and determination brought him success.

Erskine, the noted English advocate, was extremely diffident, but he was spurred on by thoughts of the family which was dependent upon him, and he is now admitted to be one of the greatest forensic orators which the world has ever seen.

These examples and many more which might be quoted, show us that before determination, these difficulties fade away like the mist before the morning sun. The remedy for self-consciousness is practice. The young orator should embrace every opportunity to speak, and while speaking he should, as far as possible, become so wrapped up in his subject as to become oblivious to his surroundings.

AGENTS WANTED \$5 to \$10 per day sure selling photos of "Just as the Sun Went Down." Copyrighted, 1899, by Diets. Send fifty cents for sample and full particulars. His Commission. It is a gem and sells at night. Address
John M. Diets, 118 Fox St., Sandusky, O.

Detroit, Michigan, October, 1900

PRICE, \$1.00 A YEAR
10 Cents a Copy

It was the fifth day of September. A new school term was about to begin at Arthur's Academy. The boys had been straggling in for a week with trunks, satchels and the usual accompaniments of a student's outfit. But at last all had arrived and had taken their places in the big hall called the "Assembly Room," or

"Chapel," where, every morning before the day's duties began, the boys met to join in the religious exercises.

The older students—those who had been at Arthur's one or more terms—seemed much at home, while to the freshmen, or those in their first year, everything appeared strange and embarrassing. The tales of hazings and all manner of hardships which awaited them in their earlier days at school, and which had been industriously dinned into their ears with painstaking effort by playful older brothers, and not infrequently by fathers themselves, did not tend to reassure them as they took note of the easy, self-confident bearing of the "men" of the higher classes, who strutted about as though all the academy belonged to them individually.

The two boys who interest us most, as leaders of their respective classes and in athletics, were Hector Traynor and Chester Farley, and each was now entering upon his senior year. The final struggle for supremacy was about to begin, both in studies and sports, and there was an unspoken defiance in the eyes of the rivals that meant much.

Sometimes Chester would forge ahead; then Hector. But, take it all in all, they remained about equal in popularity. All the other boys looked up to them as a peasant would regard a knighted prince. Each was a hero, among his own following. The little freshmen spoke their names with bated breath and in lowered tones, and if it chanced that any of them should happen to be spoken to by either of his chieftains, he was looked upon as a favored being by his less fortunate companions.

Even the new boys soon learned, in that mysterious boarding school way that this was to be the last term of Chester and Hector, before they had been there two hours. As the two athletic kings took their seats that bright September morning, they each made

said. The rivalry between these two institutions in every form of sport was very bitter.

Chester Farley had been selected, by a majority of one ballot, as captain of the Arthur's, and played right half back. Hector held the position as left half back. The friendly relations which had existed in previous years between the two boys, despite their warm rivalry, had never, it seemed, been so strained as now. Though the leaders themselves could have offered no explanation of their estrangement, it was largely due to the irrepressible zeal of their followers, and the speeches with which each faction extolled the merits of its particular favorite.

At last the eventful day arrived. There had been very little snow thus far, and the great field was in excellent condition. The grand stand was well filled: hundreds of enthusiastic "rooters" stood below outside the ropes—many of them "old boys," whose blood was now set a-tingling with the fervor of their own reminiscent games, and who pranced about and nudged and poked one another, with comical awkwardness, and laughed like delighted children. It was pleasant to see these bewhiskered old fellows made young again.

Among the concourse in the grand stand, none were more noticeable than the girls from Miss Wrightman's Seminary, five miles away from Arthur's Academy. Their own colors were prominently

THE BALL TIGHTLY CLASPED TO HIS SIDE.

blended with those of the home boys, and their many fresh young faces made a picture pretty to look upon. But Parkhurst admirers were not to be overlooked. From all quarters, the gold and silver colored ribbons of the visiting team flaunted in the air, and as the sturdy Parkhursts emerged upon the gridiron, hatless and padded for the fray, a mighty yell went up from the multitude.

"Count 'em up; count 'em down!—One-nine-ought-ought! Parkhurst! Parkhurst! Victory! Victory-y-y! we have fought!"

But scarcely had the last words died, when there burst forth a second deafening cry, and the Seminary girls arose in a body and waved their colors to the accompaniment:

"Ivan! Ivan! Ho! Ho! Conquerors we as he! Hoo-rah! hoo-rah! Arthur's Ack-a-dem, Ack-a-dem, ee! ee! ee!"

The Arthur's were coming on the field. Not one whit inferior in point of appearance, they looked equal to the task of giving their strong opponents a hard contest.

After a short time of preliminary practice, punting, kicking and trying formations, the two elevens lined up at the referee's whistle as follows:

Arthur's.	Position.	Parkhurst.
BROOKES	Right End	BLAIR
MANNING	Left End	FORDICK
RELVILLE	Center	BROTDENNY
OTIS	Right Tackle	CAPSON
SCOTT	Left Tackle	SAMUEL
HENSLEER	Right Guard	MCCARTHY
JACQUES	Left Guard	GEMDORFF
BRIDGES	Full Back	LOCKE
FARLEY	R. Half Back	PIERCE
TRAYNOR	L. Half Back	O'DONNELL
GALLAGHER	Quarter Back	WEBB

The Arthur's secured first kick-off, and Bridges made a pretty punt, sending the egg-shaped spheroid clear to Parkhurst's twenty yard line. But it was quickly advanced by the foe's wiry left guard to their forty-five yard mark, where he was "downed" by Arthur's. On the second attempt, Parkhurst again made a gain of eight yards, but they could get no further and lost the ball on "downs" to the home eleven.

"6-11-43-A-!" cried little Gallagher. Arthur's quarter back, as he snapped the ball to Brookes, and forming a "revolving wedge," in the protected center

of which the right end hugged the ball, the boys dashed into the Parkhursts, cutting their defense like a knife. However, it was only the surprise of the unexpected movement that confused the visiting team. In a moment they had rallied, and Capson, getting inside Arthur's interference, pulled Brookes to the ground, after a gain of fifteen yards. It was a splendid tackle, and the adherents of Parkhurst voiced their delight and approbation in loud cheers.

"You just watch Traynor and Farley to-day," said Tom Turner, a well grown fellow in football attire and sweater. He was a substitute for Arthur's, and stood near the side lines, conversing with another student in civilian's dress. "Each of them is going to try his best to outdo the other, they say."

"That's dead certain," returned the one addressed, with an air of conviction. "I heard Farley myself say only last night that he would rather win the honors of this game than the class rosette—and I guess he wants that bad enough."

In the meantime the game was going on fiercely. Neither side seemed able to gain any pronounced advantage, for as sure as Arthur's advanced the ball twenty yards into the enemy's territory, so sure were the others to force them back with their greater weight. End plays were the only ground-gainers for the home team, and Parkhurst's best work was done through the center, their battering-line generally regaining the ground lost by the brilliant running of Arthur's two tackles, Otis and Scott.

Both Farley and Traynor had been working like Trojans. They were really the backbone of their eleven. Their faces were covered with dirt, but even through the coating of grime could be discerned the set expression of their determined features. Finally, by a persistent rushing, Parkhurst forced the ball to Arthur's ten-yard line. The linesmen sang out:

"Third down!—five yards to gain!" With a feeling of despair and desperation, Arthur's men waited for the expected dash of their more weighty opponents, but less nimble ones. In a second it came. Like an avalanche the rugged Parkhurst rush-line struck the strained front of Arthur's defense; it wavered, and through the opening made, Blair, of Parkhurst, plunged with the ball.

"He is going over the line! It's a touchdown!" shouted some one outside the ropes.

But no! With the bound of a tiger, Chester Farley is after the escaping fellow; he overtakes him, throws him to the earth, and falls upon the released pigskin. It is now Arthur's ball.

They line up, panting. The cries from the spectators have all ceased, and they crane their necks to see what Arthur's Academy will do. They soon know. Bridges falls back, as little Gallagher darts the ball to him. Too late to prevent his move, Parkhurst sees the egg of leather leave the toe of the full back's shoe and go sailing over their heads toward their own goal. In the middle of the field, they are on the point of lining up when the sharp blast of the referee's whistle tells that the first half of the game is ended, and neither eleven has scored.

"Wasn't that a great tackle of Chester's?" said

IT WAS A SPLENDID TACKLE.

a separate vow to do his best to surpass the other and to win the much coveted Badge of Honor as well as the field contests.

When the students filed out of the recitation rooms, late in the afternoon, they gathered about the bulletin-board and read the freshly posted notice pinned to its face.

"All candidates for the Academy football eleven are requested to meet at the gymnasium at 7:30 p. m."

In little knots they excitedly discussed the contents of the notice, and the ensuing seven or eight weeks witnessed a great deal of practicing on the part of the chosen members who were to compose the team. Meantime several games had been played with minor schools, but the big contest of all was to be brought off Thanksgiving Day, when the doubtless eleven of Parkhurst Hall was coming over to Arthur's Academy to "trounce the stuffing out of them," as they

WHEN THE SHARP BLAST OF THE REFEREE'S WHISTLE TELLS THAT THE FIRST HALF OF THE GAME HAS ENDED.

Danny Naber, one of the smaller boys, who almost worshipped the object of his remarks, because Chester Farley had on one occasion rescued him from some of the Seniors who were tormenting him.

"It was all right," answered a small follower of Chester's rival, "but if Hector Traynor hadn't pulled Brotdenny, the other fellows would have got the ball."

"But what do you think of that twenty-yard run of Farley's?" put in another.

"It wasn't any better than the run Traynor made through right tackle," defended the admirer of Hector's.

And so, all over the field, the respective adherents of the rival athletes argued in favor of their particular star with great vehemence.

After a rest of ten minutes, the teams are again in their positions and the last half of the game is on. Swiftly and almost savagely the contest progresses, but neither side is able to gain any great advantage, though they are both fighting like gladiators in a Roman arena. Little Gallagher is playing the game of his life at quarter back—not a fumble nor mistake. So are all the other fellows of Arthur's struggling as they have never struggled before.

On their part, the Parkhurst eleven, too, realize that it will take the hardest kind of work to score. Pierce, the captain, is a big, cool-headed fellow. By his example, he infuses new life into his tired players—for they have discovered that Arthur's men are not to be despised. He is everywhere, making seemingly impossible tackles, and blocking superbly.

Now the ball is on Parkhurst's forty-five yard line. "Third down; Arthur's ball!" calls the referee. "Three minutes of play!" shouts the timekeeper.

And still neither team has scored. Then, with the next call of Gallagher's, comes Hector Traynor's temptation.

"E—G—7—92—99—1!" calls out the doughty little quarter back.

That is the signal for Chester to go around left end. In a flash he is circling with the ball in the desired direction. The Arthur tackles are covering his steps beautifully, and the guards are bunting away the Parkhurst men who are striving to reach him. A moment later, Hector Traynor has joined the defense of his rival, and fighting valiantly, they skirt the end and speed swiftly toward their opponent's goal.

As he sees the Parkhurst full back alone between Chester and victory, Hector, running beside the former with his one hand resting lightly upon the shoulder of the other boy, is assailed with a great temptation. He recollects that the time left for play is so short that should Chester be downed by the full back in their way, there will be no chance for either team to line up again and score. Shall he do his utmost to guard his rival from the coming assault of Locke's, and thus help him to become the lion of the school? Or shall he, on the other hand, allow the Parkhurst full back to get under his interference and throw Chester to the ground, and spoil his opportunity to gain distinction?

Swifter than his flying feet do these thoughts run through Hector's mind.

"If Locke throws him, it will delay the game. Do not let Farley snatch the honors from you!" It is the fierce whisper of Evil in his ear.

"Be true to yourself and your school!" said conscience softly.

No one in that vast concourse of spectators knew of the struggle which was being fought then in Hector Traynor's breast. None of the players realized that he was engaged. In those few seconds of time, in a battle far stronger, far more momentous, than that of the past hour.

But he must decide quickly. Already Locke is crouching for the spring at Chester, directly in the path. Suddenly he vaults low for the tackle, grim and determined. See! he has wound his long arms about one of the speeding Arthur back's knees, and together they fall to the ground. Has Hector succumbed to the tempter?

The excited throng in the grand stand arise to their feet as of one mind. Then a wild cry echoes over the field, as they see the one remaining runner, the ball tightly clasped to his side, stumble over the goal line for a touchdown.

It is Chester Farley! Hector Traynor has saved his rival by springing into the arms meant for the other.

Arthur's Academy has won, and as Bridges sends the ball fairly between the goal posts, at the try for goal, making the score 6 to 0, the colors of Arthur's wave in triumph from all parts of the enclosure, and Miss Wrightman's Seminary girls are especially demonstrative.

"What's the matter with Farley?" shouts some one. And the loud response comes from all parts of the field:

"He's all right!"
"Who's all right?"
"Farley!"

"Hold on there, fellows!" said the generous and grateful victor. "While you are cheering, send up your loudest for Hector Traynor, for he saved me!"

Then, from the apex of the admiring mass, on whose shoulders he was being borne, Farley tossed his head-band high in air, shouting in a voice that could be heard all over the field:

"What's the matter with Hector Traynor?"
And the boys, catching the spirit of the fierce but honorable rivalry between the two leaders, broke out into a tremendous ovation, which went far towards repaying Hector for his sacrifice.

"He's all right!"
"Who's all right?"
"Traynor!"

Hector Traynor and Chester Farley had many earnest competitions after that, and sometimes the indiscreet zeal of the followers of each would nearly involve the two in hard words. But something would always check Chester's hasty temper in time. It was the thought of his rival's self-forgetfulness on the hard-fought gridiron of that Thanksgiving Day contest with Parkhurst.

And Hector Traynor, when he felt slightly out of sorts, would again see his contemporary from his perch above that sea of heads, tossing his rubber head-band high over his curly hair, and would hear again as in a pleasant dream, the clear, ringing shout of Chester:

"What's the matter with Hector Traynor?"
And then would come the deep roar of the spectators:
"He's all right!"
"Who's all right?"
"Traynor!"

WILL YOU HELP?

The Publishers of THE AMERICAN BOY are desirous of placing this paper in the hands of every boy and every friend of boys. Tell your boy friends that they should not fail to send \$1.00 for a year's subscription at once to get the fine numbers that are coming this fall and winter.

"I ain't the kind that gits prizes," was the sullen reply. "Turner's the chap to git it. He's one of yer goody kind. I ain't." Never, seemingly, had Jack been more idle or wantonly disobedient than all that week.

The prize failed utterly to effect its intended purpose. "If Jack would learn, would get his lessons, I could overlook some things," murmured the troubled teacher as he worked on this human problem, far more difficult of solution than originals in geometry.

Of all the characters, gentle or tough, with which he had to deal, none so utterly upset all his theories and so completely discouraged him as did this one.

"Was a rousing thrashing what the boy needed?" The teacher sat with bowed head and puzzled over his living problem.

The fire died out, and the ashes chilled in the fireplace.

Monday came. The demon of disobedience and sullen idleness seemed to possess Jack Ballard, and when at afternoon recess a fight came off, in which the boy was reported as aggressor, the teacher turned white with suppressed anger, and resolved that a sound whipping could no longer be deferred.

No one was surprised when, at the close of afternoon recitations, the teacher said, "Jack Ballard, I wish to see you after school."

A look of sullen defiance and ugly resolve came over the boy's hard, sun burned face. When the pupils were all gone, and Professor Grey stood alone with Jack, a great pity, unbidden and unexpected, rose in the teacher's heart, for there was something so outcast and so wretched in the lad's appearance.

His voice was troubled as he said, "Jack, I'm sorry to whip you."
"You needn't be, 'Fessor, I's used to it."

The boy's stubborn manner irritated the teacher.

"Take off your jacket and shirt; I'm going to whip you so you'll remember it." The boy removed the patched garment, hardly worthy the name of coat. He pulled somewhat more slowly at his dirty shirt. When he had removed it he turned his bare shoulders and waited for the teacher's lash.

The teacher raised his whip to strike, then suddenly dropped in a seat near by. "Oh, my God," he cried half aloud.

The boy's back was marked from shoulder to waist line with dark streaks.

"What's the matter, 'Fessor? Why don't you fire away; you see I's used to it," came in hardened tone from the boy, still bent, waiting for the blow to come.

"Who whipped you in this brutal manner, Jack?" asked the teacher. The lad turned a stolid look on Professor Grey.

"That's nothin'. Pap licks me that way 'bout twice't a day."

Trembling with indignation, and with his heart full to overflowing, the teacher threw down the lash.

"Put on your coat, Jack; I cannot whip you."

Jack stood puzzled. He couldn't understand.

"If 'Fessor Grey was goin' to flog him, why didn't he do it and be done foolin' 'bout it?"

"Do you hear me, Jack? Put on your clothes. I cannot strike you."

"You ain't goin' to lick me?" Jack asked, in a dazed sort of way.

"No, my boy," and the teacher's eyes were full of tears. "I shall never whip you. I wouldn't after what I have just seen. You can go. Try to bear your life as best you can. I want to help you, but I can never strike you."

The boy's face flushed painfully, then a softened look, a look unknown and hitherto strange to his whole being, passed over it.

The teacher had won. He had reached the boy's soul.

"WHO'S ALL RIGHT: TRAYNOR?"

UTTERLY INCORRIGIBLE

KATE ALMA ORGIAN

"Utterly incorrigible!"

Yes, that was what the worried, worn out teacher said, as he sat alone in his room one night, watching the fire sizzling, dying out in pale glow, amid the gathering ashes of his fireplace.

"What can reach him? I will try him one more day, and if he does not behave himself I am going to give him a thrashing that will count as long as he can remember. He's the toughest problem I've met yet."

Jack Ballard had tried his teacher in every conceivable manner in the school room during the past week. Ordinary punishment seemed to have no effect upon him. Coarse, sullen, vicious, he defied the teacher.

"Just thrash him," said the trustees. "He's given us more trouble than any boy in school. Flail him out."

Professor Grey had entered the profession of teaching with steadfast, earnest purpose. He wished to cultivate the heart, as well as the brain of his pupils, but Jack Ballard seemed utterly beyond his reach. Nothing, so far, had touched or bettered this uncouth, and seemingly incorrigible boy.

"I'll give a fine knife," Professor Grey had said on the previous Monday, "to the boy who behaves best till Friday afternoon." It was a kind of forlorn hope. Most boys can be reached by a good pocket knife. "Jack, will you not try for the knife?" the teacher asked.

THE AMERICAN BOY, PUSH IT ALONG

BY EARL HOPKINS, ST. LOUIS, MO., AGE 14.

....TALES OF YANKEE ENCHANTMENT....

SYDNEY AND THE JAR FAIRY

A STORY OF SCHOOL BOOKS, A CHEERFUL GRAND-MOTHER AND A GOOD, BUT STUPID LITTLE BOY

Copyright by the Author, CHARLES BATELL Loomis, 1900.

Sydney Puffer was the stupidest boy in the Malburn school. Now, some boys are stupid and don't know it. If you were to be led by their opinion of themselves you would say they were anything but stupid, but Syd. knew he was stupid and wished every day that he could become less so. It is not the custom at the Malburn school for the boys to have any home studies. All their studying is done in the class room, but Syd. was so anxious to learn that he would take his geography and his speller home and would study and study until he fell asleep over the books.

And next day in class Miss Greene would say: "Sydney, spell 'few.'" "F-i-e-w." Sydney would say. "Wrong. Spell 'exasperate.'" "I-g-s-p-a-r-a-i-t." Sydney would spell slowly and painstaking, and, then, like as not, Bob Addoms, who had not looked at his lesson, would spell both words as glibly as could be and poor Sydney would feel utterly disheartened.

Then would come the geography lesson. "Sydney, where is France?" "France is the capital of England." "Yes, but where is it?" Miss Greene would continue. She really seemed to take pleasure in leading Sydney on.

"Is it in Ireland?" he would ask doubtfully.

"IS IT IN IRELAND?" HE WOULD ASK.

"No, it isn't. What are its chief products?" "Products" would start Syd. off: "Tar, pitch, turpentine and lumber," he would say with unusual speed, and amid the laughter of the class he would sit down and Bob would get up and bound France and tell her chief products and something about her form of government, and yet he had only dipped into his geography between classes.

But it was in reading that Sydney fared worst. He could not read the simplest words without stumbling along. Once Miss Greene gave him this verse from Longfellow:

"The shades of night were falling fast,
When through an Alpine village passed
A youth, who bore mid snow and ice
A banner with the strange device,
'Excelsior!'"

Sydney rose at his desk, held the book close to his face, for he was near-sighted, opened his eyes wide, and, frightened, dropped his lower lip, and very slowly read:

"The shads of nigt were fall-ing fast
When thog in Al Pine villag paced
A yout who bore mid snow and ice
A baner with the strong device, 'Ex-
Excellent!'"

"Very excellent," said Miss Greene, "but I'm afraid not excellent enough for you to get an 'extra' in reading."

When Syd. sat down he was in tears, but that did not cause the sniggers and smiles of his classmates to subside, nor did Miss Greene make any attempt to stop the scholars.

Little Syd. felt humiliated and hardly knew what happened the rest of the day. He was kept in for an hour and had to read that verse out loud fifty times and then write it twenty five times.

It was late in the afternoon when he finally left school and started for home. His way lay along the seashore, and he shuffled through the damp sand, half wishing that a big wave would come and bear him away to a land where there was no such thing as school.

"I wish I could learn. I don't want to grow up a dunce," he said to himself, "but everything is so hard, and Miss Greene doesn't think I can do anything, and then I can't. I read that verse all right to grandma,

but she kept stroking my hair and that made the words look easier."

So he talked out loud to himself and shuffled along until his foot unearched, or rather unsanded, a bronze jar of a very curious shape. Little Syd. had never read any fairy stories, of course. Reading was too hard a thing for him to do more in it than he had to do. And his grandmother, although a lovely old lady and devoted to her little grandson (the only one left of a large family of children and grandchildren) was no believer in fairy tales. "It's a waste of time," she had said to a caller who had asked her whether she read "Alice in Wonderland" to Sydney. "It all seems very nonsensical to me. What is the use of filling the poor boy's brain with stories that are not only untrue, but are silly? It isn't easy for him to learn, so I believe in reading only those things that will do him good."

"Yes," the visitor had said, "but if you don't exercise his imagination you are going to give him a cheerless old age."

But grandma had laughed in her cheery way and had said: "Well, I'm old enough, conscience knows, and I've had enough to try me, but I find life pleasant and that without any fairy stories, either."

So the caller had changed the subject. You see, therefore, that Sydney did not immediately wonder as an imaginative boy would have wondered what the jar was good for and whether it was one of the kind told about in the Arabian Nights.

But it is a peculiar thing about fairies and their ways that it doesn't make a bit of difference to them whether you believe in them or not. If they think that you need them they will come to you and force you to believe in them.

As soon as Sydney kicked the jar he stooped and picked it up and began rubbing the sand from it, and lo and behold! a beautiful fairy came out of it and flew before him like a butterfly, talking as she flew.

"What do you want of me, my dear?" she said in the sweetest voice imaginable.

But Sydney only stared in amazement. "You call'd me, my dear, and here I am. I can do anything for you that you wish done. Make you rich, make you wise, make you good."

Now, there are a number of boys in the Malburn school who would have said: "Oh, make me rich," but dear little Syd. hardly ever thought of money. He did want to know something, so he said:

"I wish that I could learn easily."

You see, he didn't even ask to know everything without study; he merely wanted to learn easily and as he had asked so he received.

The fairy fluttered up to him and kissed him on each cheek, and he told me afterward that it was as if a warm snowflake had touched him, which was not a bad idea for a fellow like Sydney.

Then the fairy and the jar vanished, but Sydney walked home as happy as if he had never been bothered at school. He had his school books under his arm, for he had determined to have good lessons next day if it took him all night to learn them.

I think that he fancied his grandmother would not believe that he had met a fairy, so he said nothing to her about it, but eager to test his new power he sat down at the center table in the sitting room and began to study his history lesson. The boys had studied far beyond their ages in that school. Sydney was only ten, and as you have seen he could hardly read, and yet he had history, geography, spelling, arithmetic, grammar and physiology.

Well, the history lesson for the next day was about the battle of Concord, and Sydney began to read it out loud, as was his habit, and to his great astonishment he read it as glibly as Bob Addoms, and to his greater astonishment he remembered every word of

A BEAUTIFUL FAIRY CAME OUT OF IT.

GRANDMA CAME INTO THE ROOM JUST AS HE WAS FINISHING.

it, and when he had shut the book up he found himself repeating the whole chapter, word for word, and with as much expression as Lorimer Halstead put into his reading, and Lorimer was the star "elocutionist" of the school.

Grandma came into the room just as he was finishing his recitation, and she was astonished enough. "Why, my boy, you are improving a great deal. I always said you had it in you. Your dear father was as smart as a steel trap and I knew you'd inherit some of his smartness. That's an interesting part of history. My grandfather was at the battle of Concord. He was a cousin of Paul Revere's. Do you know about Paul Revere? There are some very pretty verses about him by Longfellow, the poet, in this book. See if you can read them to me."

She handed a volume of Longfellow's poems to the

THE SUPERINTENDENT OF THE COUNTY BOARD OF EDUCATION WALKED IN.

boy and he read "Paul Revere's Ride" as easily as if he had known it by heart. Not only that, he shut the book up and recited it with appropriate gestures, and his grandmother caught him in her arms and said: "Just like your father. He could recite that so that people always wanted him to repeat it immediately."

You can imagine how pleased Sydney was at this praise from his grandmother, but he did not allow it to turn his little head. He took his other books and studied each lesson and found that one reading fixed it in his mind. He was able to do examples in fractions that had merely given him a headache formerly, and as for geography, before bedtime came he had read the whole book through, from beginning to end, and could draw maps and color them and print the names of cities and counties in most beautiful letters. And as he did each thing his grandmother would say: "Your father all over, my dear."

Some boys would have been eager to show off next day to the class, but it never entered little Sydney's head. He was very happy that he was going to be like his father; that father who had died when he was a small baby, and he would be glad not to vex Miss Greene any more, but he was not at all anxious to show off. I must say that a little bit of that spirit would have been natural and perhaps commendable, but I am not trying to draw a picture of a boy who might have been, but of a boy who was.

The first lesson after morning exercises was geography. Bob Addoms was asked to go to the board and draw a map of Africa and to name all the Dutch possessions. Addoms was the champion map drawer of the school, and he knew it and I suppose that that fact made him careless. At any rate, when it was done and Miss Greene had said, "Excellent, Bob. I will give you two extras," Sydney raised his hand and said: "Is it quite right at the Cape of Good Hope?"

A shout went up from the scholars and Miss Greene herself smiled. Sydney, who did not know the difference between Europe and South America, to be criticising Bob's map!

"Perhaps you can draw a better one," said Miss Greene. I didn't like the sarcastic way in which she talked. Teachers have no business to be sarcastic.

"I'll try," said Sydney, and he went up to her table and selected crayons of different colors.

Then he drew such a map as had never been seen on the school board. It was as accurate as the map in the geography, even to the smallest inlets and tiniest capes. And when he had drawn it he colored all the

divisions and printed all the names, amid the dead silence of the class.

Just as he finished it the door opened and the superintendent of the county board of education walked in.

In spite of his coming, the boys and girls clapped their hands at Sydney's work, and Miss Greene said: "Beautiful, Sydney! I'll give you ten extras."

Sydney stood erect and felt that at last he had come to his own.

And the superintendent, who was quite a good draughtsman himself, said: "Miss Greene, I consider that map so remarkable that I am going to have the blackboard removed and sent to the Paris Exposition

as a sample of American school work."

And the scholars rose to their feet and gave three cheers for Sydney, quite unchecked.

Now, if you go to the Exposition just ask them to show you Sydney Puffer's map of Africa.

But I don't vouch for its being there. It was drawn under fairy influence, and it may have been withdrawn under the same influence.

But this I do know. Sydney Puffer is now the best scholar in Malburn school. Miss Greene says it is awakened ambition, his grandmother says it is his heritage from his father and Sydney says it is the fairy.

THE PARIS EXPOSITION
AS SEEN BY OUR "BOY REPORTER" FOURTH LETTER

THE ELECTRICITY BUILDING.

THE AVENUE DE L'OPERA.

Dear Boys:

We boys have been living in Paris long enough to begin to feel somewhat at home, but we have made up our minds that we can never hope to get along with Frenchmen. They are forever trying to cheat us in some way, and as I said to Sidney yesterday, "It seems that we spend most of our time fighting for our rights." There is not a day but what we have a row of some kind with somebody, and I expect every morning that one of us will be in the police station before night. So far we have managed to escape such an adventure. My latest row was with a barber. Of course I had always read of the great skill of barbers here in Paris, and I felt that I would like to see if they were really as fine as reported. So I decided yesterday evening to get a shave. I didn't need one, but I thought a shave would be the cheapest thing I could get. I went into the shop, rubbed my chin to indicate what I wanted, and sat down. It seemed to me that the barber had a shrewd look on his face, and I almost wished I had visited some other shop. It was now too late to leave, though, and I decided to stick it out. He finished shaving me in about a minute, and before I had time to remonstrate he had begun to cut my hair. I saw through the scheme at once. He was going to put me through the whole process of shaving, hair-cutting and shampooing, and then expect me to pay the bill. I made up my mind that I wouldn't be caught in that way.

He finished the cutting and then he shampooed my hair. After that he singed it, and ended up by rubbing my face and hair with various perfumes and bits of grease. Then he seemed to be through. I put on my hat and laid ten cents on the cashier's desk. The barber nearly fainted with surprise and immediately began to jump about and gesticulate in the regular French way. He went almost blue in the face trying to make me understand that I must pay sixty cents instead of ten. It was almost pathetic to see him in such convulsions, but I was determined to teach him a lesson if I could. So I told him that I had asked for a shave only and that I wouldn't pay for anything else, and then I walked hurriedly away, leaving the poor barber in agony. I was afraid he might send for a gendarme and have me arrested, but none came after me. If he had done that I am sure I would have come out ahead in the court, because I certainly asked for a shave only and had no chance to object to all the other operations.

All the Frenchmen seem determined to make as much as possible out of the foreigners during this year of the Exposition, but so far they haven't succeeded in getting much money from Sidney and me. Our landlady isn't making much when we pay less than two dollars a week for our room, and I'm sure there's no great profit for our restaurant man on our meals. The laundresses don't make on us because we do nearly all our own washing, and the wicked cabbies don't cheat us because we always walk when we can't get on top of an omnibus. The French people in the house where we live don't know what to make of some of our doings. All the Americans they ever heard of were very rich, they say, and they are much concerned to know how we happen to economize so. They see us making our coffee in the morning, and the concierge knows that we buy our own candles, rather than pay her double price for them. The restaurant keeper

next door has probably told the whole neighborhood about how we never have dessert when we buy soup, and how we sometimes skip the soup and take dessert instead, in order to save money. But the great sensation was when we first hung a lot of handkerchiefs and stockings on the clothesline in the courtyard. I was in the room writing that day, and at intervals I saw the whole population of the lodging house looking at those things and talking in low tones, probably about "those peculiar boys." But we don't mind what they think and are quite content to be objects of curiosity. It was rather trying to be always stared at, at first, but now we are quite accustomed to it.

One soon gets used to being an object of interest in Paris because whenever the least thing unusual takes place there is immediately a great crowd collected in the street. The French are certainly the most curious people on earth. I had an adventure the other evening which proved it to me. The whole affair was the result of an attempt by a bootblack to cheat me out of sixteen cents. The price of a "shine" here is only four cents, and that includes two cents for the bootblack. I usually do my own polishing, but on this evening I was in a hurry and stopped at a stand on the sidewalk to get it done. The old fellow had polished my shoes for me before and I had always given him four cents, with which sum he seemed well satisfied, but this time I gave him a franc (twenty cents), and asked him for change. The old robber calmly pocketed the whole sum and began to insult me and carry on in a terrible way when I insisted on having my change. A crowd soon collected, as it was in the Avenue de l'Opera, one of the principal streets, and the first thing I knew I was the center of a great mob, all of whom were trying to see what the row was about. I couldn't speak sufficient French to explain to anyone, and was much relieved when a young girl who spoke both English and French came up and offered to help me. She demanded the sixteen cents from the bootblack, and he began to yell and shake his fist at her. He was actually blue in the face with anger. I was determined not to go away without my money, so I went for a policeman. The crowd all waited to see how things turned out and most of them jeered at me and asked me if I wanted three cents to ride on top of an omnibus, or if I wanted to buy a piece of chocolate. I didn't answer them, but when I found a policeman the affair was soon settled, and I departed amid the laughter of the crowd. It was all very unpleasant and I didn't like being made fun of, but it is wrong for bootblacks, cabbies and barbers to be always cheating Americans, and I wasn't going to submit to it. Sometimes the police decide in favor of the Frenchman and then there is nothing to do but stand it.

Sydney and I sometimes get into trouble with French boys in the street, but these skirmishes do not result seriously. They nearly always start by some French boy shouting "A bas les Anglais" to Sid, who never fails to chase that boy. "A bas les Anglais" means "down with the English," and Sid says he can't stand still and allow these Frenchmen to say that. I tell him it's no use chasing them because they always run away, but still he does it. The French boys seem very peculiar to us, both in dress and actions. They all wear long aprons over their trousers until they are about fifteen, and sometimes they can hardly be distinguished from girls. The aprons are usually made

of black sateen, and I suppose they are worn to keep the clothes clean. The boys don't play much in the street here, but they seem to have a lot of indoor games, many of which are similar to ours at home. We were invited to a boys' party the other evening and among other things they played our old game of "Hot and Cold." They had a pie-eating match, too, and the party closed with some amateur theatrical performances which were very like some of the shows we have had in our old barn at home. Our refreshments consisted of cake and lemonade, and were not the language and clothing so different, we could have imagined ourselves at home again.

We continue to visit the Exposition every day. On account of the low admission fee (ten cents) we can afford to go as often as we like, and we always find something new and interesting to see. Every Sunday and Friday night the grounds are illuminated, and I have never seen so beautiful a sight. The great Electricity Building has fountains in front, and on gala nights these fountains show all the colors of the rainbow. Some of the buildings seem to be fairly covered with small electric lamps, and the whole scene is like a night in fairyland. There are band concerts, too, on these nights, and it is no wonder the crowd is very great. Sidney and I never miss going on these occasions.

We had just begun to feel the other day that we had seen nearly everything in the Exposition, when we happened to run across the exhibit of mechanical toys. This is certainly one of the most interesting departments to be found anywhere. If anyone had told me of some of the wonderful toys to be seen here I would have suspected him of exaggeration, for I could not have imagined such ingenious arrangements. There is nearly every kind of game and toy that any boy could want, and there are all sorts of wonderful dolls for the girls. There are horses which run around a track, and engines which travel from Moscow to Peking over a miniature Trans-Siberian railroad. There are fiddlers and jumpers and street sweepers, and there are some toy soldiers which go through all the motions with their muskets. None but the French could produce such remarkable figures. No doubt some of these toys will find their way across the ocean when the Fair is over and will be in some American boy's stocking about Christmas time. There are crowds of children about these toy cases all the time, and many of the best of the dolls and games are already marked "sold."

Sydney and I can't buy any, because they are very expensive, and just now we are saving all we can for a trip we hope to take into Switzerland and Germany before very long.

JULIA TRUITT BISHOP

"TIME'S out; why don't you go?"

The boy looked up from the horse's foot which he was examining, into the face of the foreman.

"This horse was a little lame yesterday, Mr. Long," he said; "and he's worse today. I thought I'd better speak to you about it."

But the foreman was already hurrying out at the door; and the night watchman, hanging his overcoat up on its accustomed nail, said grimly:

"What's that to you, Smarty? It ain't anything out o' your pocket, I reckon, if the horse dies."

The boy straightened up and rubbed the neck of the animal with a gentle hand.

"He's a good horse," he said pleasantly. "I wouldn't like anything to happen to him."

But the watchman was not to be conciliated.

"You won't gain nothin' by snoopin' around after hours," he said. "It's been my experience that when folks pertends they're so desprate anxious to cram all they can do into about fourteen hours o' daylight, you kin afford to watch 'em the other ten. You needn't let on like you're so fond o' fact'ry work, anyway."

"I'm not so fond of it," said the boy candidly. "I took it because I had to have work; but now that I've taken it I'm going to do the best I can with it, you can depend on that."

He was slipping into his coat and running his fingers through his tumbled curls and straightening his tie, with an instinctive habit of neatness. Even factory work, so demoralizing to most youths, could not keep Roy Morris from being neat. The sight seemed to inflame the anger of the watchman.

"Here, git out, you dude!" he cried savagely. "What

"Here, git out, you dude!" he cried savagely.

business have you got hanging aroun' here after hours?"

Roy laughed indifferently and went his way; but as he passed the coat on the wall he noticed that a well-filled bottle protruded from one of the pockets.

"Not very good company for a night watchman," he said to himself, involuntarily glancing back, but Dennis scowled after him and muttered something he could not hear.

After all, Roy might have said to himself, what did it matter to him whether or not the night watchman did his duty. His own business was to work there all day, helping to clean moss or to make mattresses or to drive one of the delivery wagons; and when six o'clock struck his labors were over, and he had earned his fifty cents. All the other workmen looked at it in that light, and he had seen them leave a stitch half taken or throw down a bundle of moss or cotton at the very first stroke of that six o'clock bell; and even Mr. Long, the foreman, was generally out of the building by the time the last of the six strokes had sounded. Somehow, Roy could not help feeling uncomfortable at this haste to get through, to give their employer no more than the exact number of minutes bargained for.

And yet, Roy was the only one among them, perhaps, who was not born and bred to factory work. Less than two months since, his father's death had left him the bread-winner, walking the streets wearily from day to day in search of work, and at last eagerly accepting this place in Menge's Mattress Factory and

the poor fifty cents a day that it implied. True, his mother sewed, but there was so little she could get to do; and there was little Bob to be taken care of and to be nursed and petted, and he must see the doctor occasionally, and there were medicines to buy always. A mist was in Roy's eyes and a lump in his throat when he thought of Bob, brave, patient little Bob, with the thin little white face and the two crutches that were so pathetically small.

Roy flew home and bounded up the long stairs and into the room at the top of the house like a young whirlwind. Bob, on his lounge at the window, screamed with pleasure at the sight of him; and the mother, busy with supper, paused a moment to be hugged and kissed, and to look into Roy's face with those farseeing mother eyes that saw quite beyond the smile and the jest.

"Tell us what's happened!" cried Bob; and Roy rattled away merrily as though he were the happiest boy in the whole city. How did he find so many things to talk about? And how did they ever come to be such amusing things? Why, Bob went into such shrieks of laughter that he had to be beaten on the back when he heard about that funny old Mr. Cobham who always put the long mattress needle behind his ear when he wasn't using it, and then forgot where it was and got a new one, which he afterwards stowed away in the same place, until he went about with sheaves of needles bristling out on either side of his face.

"But I found one of the horses in a bad way to-day, mother," Roy said thoughtfully, while he was eating his supper; and he told all about the lame horse which was growing worse, and for which no one was doing anything.

"It's a pity Mr. Menge isn't at home," he went on. "Perhaps he'd see that it was taken care of. Mr. Long doesn't seem to mind, nor Mr. Dennis, either."

Bob burst into a shrill little cackle of laughter.

"Oh, Roy you are such a funny fellow!" he cried. "Here you are workin' at Mr. Menge's factory at fifty cents a day, 'stead o' studyin' medicine, like you was goin' to do; an' a body'd think it was your factory 'stead o' Mr. Menge's."

"Yes, and I was going to study medicine just as though everybody's health depended on me," said Roy good-humoredly, and yet a little sadly, too. He was sore at heart still for the sake of the dreams he had given up. Roy sat silent and thoughtful for a few minutes, but when he roused up presently his mother was saying that when her father's horses fell lame he used to bathe the strained or bruised member in warm water to allay the inflammation.

"I'll try that in the morning, if I can get time," he said; and then he helped Bob to bed and, bidding his mother good night, sat down by the kitchen stove to read.

But reading was hard work for Roy, now that all his future seemed to be swept away. His thoughts turned sadly back to his daily work and the happenings at the factory, and the thinking brought him around at last to the lame horse. He started up with a sudden purpose.

"I won't have time in the morning," he said to himself. "I might as well attend to it to-night—if Mr. Dennis will allow me. He can't do more than refuse, anyway."

He found a tin bucket, filled it from the kettle of hot water on the stove, and then searched the rag-bag for some old cloths. Fully equipped, he slipped out, careful not to wake his mother, and stole down the long stairs and out into the street.

"I hope Dennis won't be cranky," he thought, as he ran lightly up to the first crossing; but there he stopped and gazed with amazement at Mr. Dennis himself, mounted on the other horse, the sorrel one, and riding rapidly up the street and away from the factory. The man's face was very red, and his blood-shot eyes were set. And Dennis was the night watchman, and the factory was left unprotected! And Roy had heard the foreman say that there was always a good deal of money in the safe since Mr. Menge was away!

Roy ran after him and called to him, but he did not hear, and the boy was left standing in the middle of the street.

In another instant Roy was off, swift as the wind. He had forgotten all about the bucket of water, which he still carried unconsciously, and was rushing past astonished wayfarers and doubling around corners. Two or three persons turned to look after him curiously, as he dashed up to the factory and in at the door, which had been closed, but not fastened.

Yes, everything was silent and safe. The lame horse neighed softly and joyously from his stall at the sound of the familiar footstep. The electric light was burning in the little corner office. Nothing was wrong—nothing at all—except—what was that smell of smoke?

With sure foreknowledge Roy rushed to the stock room, that was always piled full of cotton, excelsior and moss. A glance showed him that some one had been making a bed of a pile of cotton; a second look revealed a tobacco pipe near the door, while a thread of fire crept away from it through the loose cotton.

Quick! The bucket of water was poured carefully along the full length of the fiery thread which, in a few moments more, would have been so fatally beyond control, and then Roy was tramping desperately on what was left, and crushing out a spark here and another there, until finally he stood, bucket in hand, breathlessly watching the sullen smoke that still curled up from the blackened cotten.

"It's out, I reckon," said a voice behind him.

He turned, very much startled, and found a queer little wrinkled man leaning against the door casing with his hands in the pockets of his long overcoat.

Two or three persons turned to look after him curiously.

"You'll have to go out," Roy exclaimed hastily but firmly. "No one's allowed in at night—and even my being here isn't regular. I'm sorry if you haven't any place to stay," he added hesitatingly, for the little man certainly did look shabby.

"You might let me sit down stairs long enough to get warm," said the new-comer, taking his hand out of his pocket to scratch his chin reflectively, and watching Roy out of the corners of his eyes.

The man was very thin and weak and had a cough. Roy was very tall and strong. The little man couldn't do any harm if he tried. Roy silently led the way down stairs, and the two sat down in the office and looked at one another.

"So you're the night watchman," said the man with a burst of confidence.

"No, I'm not," Roy replied blushing. "He's—he's been called away unexpectedly, I think. I was bringing some warm water to bathe that horse's leg—and there! I've poured the warm water on the fire!" he cried regretfully.

"Cold water would have done," grunted the little man, thrusting his hands deeper into his pockets. "Did they hire you to 'tend to the horses?"

"No—not especially," said Roy, surprised. "I believe I'm a kind of man-of-all-work. But I've noticed that horse has been lame for the last two days, and so I thought I'd doctor him up a little."

"And get paid extra for it!" sneered the man, scratching his chin again and looking particularly offensive.

Roy laughed and poked the fire.

"I get fifty cents a day, whether I do much or little," he said.

"Then you're a fool for doing more than you have to!"

snapped the little man, with his wrinkled face all screwed into knots. "What's fifty cents? Who wants to work for fifty cents?"

"No, it isn't much," said Roy thoughtfully.

"I'd like to make a good deal more. But then, it isn't the fifty cents, after all; for there's the pride in your work—"

The man leaned back and laughed—a most unpleasant laugh.

Taking his hand out of his pocket to scratch his chin reflectively.

"Pride in your work! Nonsense!" he snarled. "Always do just what your employer pays you for, and no more. If you get small wages, then do little work. Lounge on the sidewalk till the work-hour strikes; an' never work a minute after the first stroke of six. Don't be an idiot an' work over-time tryin' to make yourself so useful to your employer that he can't get along without you. If work gets slack he'll fire you just as quick as anybody. Comin' up here to doctor a sick horse! It isn't your horse, is it? You don't lose anything if it dies? An' what are you stayin' here for? Go back to bed, an' let the place take care of itself!"

Roy's face reddened and he laid the poker down carefully.

"I hope you won't mind my saying it," he remarked; "but if that's the plan you've always followed, it's no wonder you have to go into other people's places to get warm. And even if I knew your kind of work would succeed, I just couldn't do it. It seems so dishonest. I would be looking down on myself all the time. If a man hires me he hires the best I can do. A few months ago I wasn't thinking of doing factory work. I—I thought I was meant for something entirely different. But there was mother to take care of, and little crippled Bob—and—in short, since this work has fallen to me I'm going into it with my whole heart, just as I would have gone into the other."

The little man sniffed, and rattled something at the bottom of his long pockets, and looked at Roy from under his shaggy brows, but he said nothing more. In fact, he leaned back presently and went to sleep, or seemed to do so, while Roy walked up and down to keep himself awake, or went out to pet the horse, or peeped into the stock room to see if there was any further trace of

fire. When he came back from one of these trips, toward morning, he found that the little man had disappeared; but a little later Dennis came riding back, pale and sullen, and put the wearied horse into its stall; and then Roy went out into the gray dawn and ran home.

They were all at breakfast that morning when there came a knock at the door, and there stood the little man, with his face screwed into more wrinkles than

Roy had risen, but he fell back into a chair and tried to recover his breath and to remember all the things he had said to his employer the night before.

"I'm in search of a boy, ma'am," Mr. Menge went on, with a stiff little bow to Roy's mother. "I haven't got much education, an' my spirit's kinder broke, I reckon, so that I don't even 'tend to things like I used to, an' the men get the better of me, an' it spoils 'em an' ruins my business, too. I want a young man who'll—who'll take an in'trest in things over an' above what he's jest hired to do—who'll be a kind of assistant to me, like my own little boy might have been, if he'd a lived."

Such a look was in Roy's face—such a look!—and he began to murmur:

"Oh, Mr. Menge, you don't mean—"

But the little old man continued:

"An' there'll be a good salary, boy. An' you can go on with your studies—you'll have plenty of time. An' when you get ready for the profession, whatever it is, why, maybe—maybe—the lonely old man can help you out; for somehow I think you're very like what my own little boy would a been—if he had lived!"

There were tears streaming down the wrinkled cheeks, and so it was perfectly natural that the little old man should run away, which he did, quickly. And when he was gone, it was Roy, strong-hearted Roy, who threw himself face down on the lounge, and sobbed out:

"Oh, mother, my chance—my chance after all! And little old Bob!"

And Bob screamed and cried and laughed and pounded his crutches on the floor in the wildest manner; and it was only the mother that sat still, while her lips were moving with words the boys could not hear.

• • • And there stood the little man, with his face screwed into more wrinkles than ever.

ever, and with his hands plunged deep into his pockets.

"My! but you do live high up!" he exclaimed gruffly. "Why didn't you get up to the stars at once, young man? My name's Menge—Jeremiah Menge—and I used to think I owned Menge's Factory, but now I ain't so sure."

A HERO OF FISHING CREEK

The eleventh story of a series entitled "Stories of Boy Heroes"

ANNAR ROBINSON WATSON

From a Tennessee home three young brothers went out to join the Confederate army when the Civil War broke out. Their father was dead, the widowed mother and two sisters remained in the old home.

John Rhea, the eldest of the three, was only eighteen years of age. The others were only fifteen and thirteen, but all of them were earnest, true-hearted young fellows, answering the call of duty with the determination to act the parts of men in the emergency which confronted them.

John joined the Nineteenth Tennessee infantry; his brothers were in the same command and were detailed for skirmish duty. With them went a young neighbor, Samuel Cox, who lived on an adjoining plantation. The four boys, only half realizing the terrors of battle and the fearful dangers so soon to be encountered, promised always to be watching for one another, and to render assistance should it be possible, no matter what it might cost nor what the difficulties to be overcome in so doing.

When January of 1862 came only a short time of service had passed, but John Rhea had several times faced the fire of battle and had learned through its hard lessons the seriousness of the life upon which he had entered.

The Nineteenth Tennessee infantry in this month took part in the battle of Fishing Creek. General Zollicoffer had made his winter quarters on the north bank of the Cumberland river. The Federals, under General Thomas, were not more than twenty miles distant on Fishing Creek. One bitter cold January night the Confederates moved out to attack General Thomas. The rain and sleet were falling in a steady downpour, the wind was blowing and howling, but the Confederates marched out with firm tread and unflinching hearts, hoping to surprise the enemy and win a great victory.

The hurried march was made, and at dawn, with a wild yell, the Southern soldiers rushed forward. The Federals quickly formed in line to meet them, but so impetuous and unexpected was the attack, so furious the charge, that for a while resistance seemed

useless. But soon came a withering fire from front and flanks. The Federals were now fully aroused. They almost surrounded the Confederates and mowed them down in fearful numbers. Two-thirds of their dauntless men who entered the fight lay dead or wounded on the field, and a retreat began. Those who were left turned under heavy fire, and, hotly pursued, started back across the ill-fated field. The heavens were ablaze with lurid light; there was a deafening noise and confusion everywhere; the retiring army went stumbling over the dead, dying and wounded, while others of their number were falling at every step. It was maddening to hear the groans of agony, the prayers for help from their comrades, and yet to be forced to rush on seemingly unheeding.

John Rhea was in his place in the remnant of his retreating company when suddenly from a prostrate form a piteous moan attracted his attention. In all the din and confusion it seemed to appeal specially to him. Something influenced him to pause and look, and there, lying just beside his path, he saw Sam Cox, the friend and comrade who had come with him from the old home in the mountains, desperately wounded.

He hesitated just a moment, taking in fully the situation. Before and around him his own flying command, behind him the Federal army in fierce pursuit. To stop even a second might mean death, but he could not desert his friend; he could not break his promise.

Falling on his knees beside the prostrate form, he cried hoarsely, "Sam! 'Sam! I am here; it is John. Come, I will carry you; try to move, I will lift you to my back."

The wounded boy, only half conscious, stirred feebly. He lifted an arm, but it fell back nerveless.

"Oh, Sam! try, quick; there isn't a moment to lose, the Federals are almost upon us!"

Then with a strenuous effort he bent forward, lifted Sam to his back and started across the field. The sky was black with clouds, the rain was falling, the burden was very heavy and it seemed as if the shelter of the forest was a thousand miles away, but the young hero bore up bravely until a place of safety was reached, and at the imminent risk of his own life he had rescued his friend.

There were many bloody battles following Fishing Creek, in which John Rhea was conspicuous for gallantry, through which he passed unharmed, but at last, at the siege of Vicksburg, he was shot through the chest and very dangerously wounded.

It was impossible to secure the attention of a physi-

cian, and all night long he lay in the greatest agony, a friend staunching the flow of blood as best he could, and trying in every way to lessen his suffering. Next day he was carried to the temporary hospital and everything possible was done for him, but week after week he lay in greatest agony. Then he began to improve, but the wound would not heal. All efforts were unavailing, and at last, chafing under the inactivity of the hospital, and knowing that the "cause" he loved was in need of every supporter, he decided again to go into the field.

"I can't wait to get well," he said. "Give me a horse, I can fight in the saddle."

And so he did until the close of the war. Then, still suffering from the wound, which had never healed, he went home to wage war against other foes—Poverty and Destitution. The two younger brothers, who had gone through the war unharmed, joined him, and the three reached the old home in the mountains together.

Awaiting their return were the mother and two sisters. They had labored faithfully, but the place looked desolate and deserted. The fences were down, the fields were overgrown with weeds, the farm houses were falling into ruins, there was no money in the family coffer, and nothing with which to begin life over again, except twenty bushels of corn in the broken-down crib, and the old worn-out army horses which the boys rode home.

Nevertheless, the three young soldiers went into this fight with poverty as valiantly as they had faced the conflict when cannon and bayonet were in front. A field where great forest trees had been felled by the enemy was cleared and corn was planted. Half of the horses were worked in the morning, half in the afternoon, the idle horses being turned out to graze, as there was no provender.

In this way a crop was gathered, and the first terrible year after the close of the war had passed. But when the second year came, gallant John Rhea died from the effects of the musket ball received at Vicksburg. During all these weary months he had worked faithfully, and had borne his sufferings with patience and fortitude. Through all, his heroic soul did not flinch nor falter, and when the final encounter with death came he met it bravely and calmly.

This gallant John Rhea was the great-nephew of Major Matthew A. Rhea, who performed a like heroic deed upon the battlefield of Guilford Courthouse during the Revolutionary War. He carried a wounded comrade upon his back to a place of safety.

CHAPTER I.
PLANNING.

"Hurrah, fellows, I am going to Pike's Peak!" exclaimed Jack Carroll excitedly as he rushed pell-mell into a group of boys on the ball ground who were discussing the game that was to come off the following day between the "Stars," the crack club of the neighboring town, and the Hickories," their own home club, to which they belonged.

"When are you going to start?" asked his cousin, Frank Chapman, a boy somewhat older than Jack and a little less lively in temperament. The question was asked rather testily, as Jack was always going to do many wonderful things, few of which he ever really did do.

"Why, just as soon as I can get ready," answered Jack, between gasps for breath. You see it's this way: Father has a friend in the mountains who is an artist. He paints pictures of Indians. He can do it better than anyone else because he lives with them most of the time. He knows them by heart. Well, you know how much I have wanted to see the mountains; so father wrote to Mr. Sinclair, that's his friend's name, and asked him if he would keep an eye on me for a few weeks if I turned up some day out there, and he wrote back, 'Of course, I will. Send the boy along. I will show him some Rocky Mountain life and it will do him good.' So I am going." And Jack ended with a toss of his hat into the air and two or three steps that might well be taken for an Indian war dance.

Every boy in the group was busy thinking by this time, but not one of them had the courage to say a word, for the truth is that each one was inwardly wishing he was Jack Carroll and wondering if anything so splendid could ever happen to him.

"Hurrah, fellows, I'm going to Pike's Peak!"

Frank, who, as has been said, was Jack's cousin, had never known a time when he and Jack had been separated for a whole week, so he could not restrain a feeling of envy and not a little bitterness of heart that Jack was going to have all this fun and adventure and he be left out.

There was some more talk about the trip, the coming ball game being entirely lost sight of, and Jack told the boys what he knew about Pike's Peak. His father, who had been in the mountains several years

before, had described to him this snowy peak that rises companionless from its broad foothills, and from the very edge of the "Great Plains," eight thousand feet into the air. He had been told how, less than half a century before, it was unknown to the white man—the hunting ground of the Indian and the home of the wild beast; how the early travelers to California had swept three hundred miles to the northward, by way of the Oregon trail, or far to the southward, on the Santa Fe trail, leaving these mighty mountains alone to the red man; how in 1806 Lieutenant Zebulon M. Pike first caught sight of its snowy summit, and how ten days later, after forced marches, he reached its base and afterwards attempted to scale its rugged steep, meeting with failure, which he recorded in his diary in the words, "No human being can ascend to the summit;" how Lieutenant Long in 1819, Fremont, the Pathfinder, in 1843, and Ruxton, the intrepid explorer, four years later, were fascinated with its grandeur and its beauty.

Jack, since hearing his father's description of the mountains, had longed to see them and explore their fastnesses, and now, as he said, he could scarcely believe that he was actually going to see them and climb their rocky sides and stand on their snowy tops.

There was one other boy in the group who with Frank Chapman said nothing during Jack's excited talk; that was Ned Roberts, the most popular boy in

town, the best ball player in the Hickories, of sturdy physique, honest and hearty, and just the very boy to be the captain of as fine a lot of boys as ever swung a bat. Ned was the youngest of the three boys, but a natural-born leader. His enthusiasm and his quickness of thought and action put him at once at the head of every boy enterprise in his neighborhood; and Ned, too, was doing a lot of thinking.

The upshot of it all was that when the little group broke up and the boys went home to supper, two of them, Frank and Ned, went with well defined plans to go to Pike's Peak, if they could get parental consent, and if Jack and Mr. Sinclair would agree to it. They were sure of Jack; they had not much misgiving as to Mr. Sinclair; but their parents—well, when a boy sets out to get consent to do a thing, if the thing itself is not wrong and harmful, it is not such a hard matter. So it came about within a week that three mothers were washing, ironing, darning and sewing buttons on tighter. The three boys slept in one bed, turn about, at the home of each during the last few nights before the start for Colorado, for they had so many plans to make, so many matters to talk over and decide, that, in fact, they had made the trip in their minds more than a dozen times before the day of their departure.

"Do you suppose we will get lost in the mountains?" whispered Jack one dark night a good hour or two after the light was put out.

"I suppose we will," replied Frank. "It wouldn't be much fun if we didn't," added Ned, brave enough. "There wouldn't be anything worth telling about when we got home if we didn't get lost or shot at by Indians."

"Or fall over a precipice," suggested Frank. "Say, wouldn't it be fun to get caught in a big storm of thunder and lightning on Pike's Peak?" asked Ned. "To see lightning underneath us and hear thunder coming up from away down under our feet!"

"I suppose there are caves in the sides, so that if it should rain we could get in," said Jack.

"Yes, but I don't think I'd trust myself in a cave at night. I am not anxious to get acquainted with bears that way," replied Frank.

"That reminds me," said Ned, sitting bolt upright in bed, "we must take a stock of matches—the kind that light in the wind. We might want to light a signal of distress."

"Or fire one at the bears," suggested Frank. "I don't suppose they have any matches out West," added Jack, with mock gravity.

Then all three boys punched one another in the ribs and laughed till their sides ached and the bed clothes were in a hopeless tangle, and a big but kindly voice came up somewhere from below. "Here, you boys, be quiet! It is nearly midnight and you are keeping the whole house awake." A few more sly punches and smothered laughs and the three boys were dreaming of Pike's Peak lifting its snowy summit till it pierced the sky, its hoary sides covered with majestic forests, its tops encircled by wreaths of smoke from a thousand wigwams.

CHAPTER II.
ON THE WAY.

Jack's father was to go with the boys as far on their way as Chicago, where they were to take the night train for Denver; there Mr. Carroll's friend was to meet them. No one of the boys had ever been in a large city; so the big buildings, the crowded streets, the great rush and rattle made them feel a little queer and uncomfortable.

"What's the matter?" asked Mr. Carroll of Frank, as they were walking down La Salle street on the day of their arrival in Chicago. The boy had not spoken for fully half an hour.

"Why, sir?" asked Frank timidly. "Well, you have said scarcely a word since we landed in Chicago. You are not homesick, are you?"

"No, I guess not—but I never thought it was so big as this! I wouldn't like to live here. The buildings are so big and—"

"Say, young feller, wot ye doin'? Ye'll git run in fer takin' up all de street, see?"

Mr. Carroll turned to find Ned standing awkwardly in front of a dirty, ill-featured lad, who held a bundle of papers under his arm, and, with an air of braggadocio, was peering out at Ned from under a poor excuse for a hat.

"I don't want any more of the street than you do, I guess," retorted Ned, showing a little warmth.

"Well, you needn't tink I'm go'n to git off'n the earth cause you're on it. Seems ter me ye kin size up that sky scraper 'thout standin' all over de street. Do yer want to buy it? Yer mus' have jist got in. Where's yer lugs?"

Ned was about to make a retort in kind when Mr. Carroll, seeing a crowd gathering, put a hand on the shoulder of his protege and faced him about down the street, telling him at the same time that the best policy to pursue in a big city is to attend strictly to business and not get into people's way, and that a crowded city sidewalk is a poor place from which to take overhead observations. Ned more than once glanced over his shoulder as if to return and give the boy a lesson in politeness, but the newsboy and his billingsgate were soon lost in the crowd.

"You mustn't judge of all newsboys by that one," added Mr. Carroll. "When one thinks of the kind of homes these boys live in, if indeed they live in any, and the life they are driven to lead, it is really strange that many of them are brave, honest, little fellows, and deserve the sympathy of every boy—especially of such boys as you are, with your good homes, good friends and good times."

Mr. Carroll pointed out to the boys the objects of interest in the great city, and when late that night they entered the depot they were as tired a lot of boys as ever dragged one foot after another at the end of a day of sightseeing.

The big depot was ablaze with lights; people were coming and going; bells were clanging; and men were announcing trains—bewildering, indeed, to boys who were accustomed only to the sights and sounds of a little country town. In the waiting room was a motley crowd of travelers of every description, and for the first time the boys saw a real trapper. Yes, sure he must be a cowboy or a trapper; for he wore a big brimmed hat, a full suit of buckskin, and there were spurs on his high top-boots. His hair, too, was long and his face swarthy, as if burned by the suns of a score of summers and toughened by the blasts of an hundred storms.

"I wonder where he's going?"

"I'll bet he can ride a broncho."

"And hit the bull's eye every time,"

"I suppose he's got a gun in his pocket."

"Two or three of them."

"Don't you wish he would go on our train?"

"There he goes to buy a ticket."

"Say, I'm going to see," and Ned took a few cautious steps from home base, as it were, till he was within earshot of the ticket-seller's window.

"Gimme a ticket fer Denver."

That was enough. Ned slipped back to tell his companions and the three congratulated themselves heartily on the fact that the picturesque stranger was actually going on the same train with them.

As the big hunter stalked away the boys turned their attention to another queer sight: a whole family of strange looking people, three grown persons and a flock of children all hand in hand, were trailing through the depot, conducted by a man in uniform, who looked like a policeman.

"They are foreigners, I suppose," said Frank, "going West. My, they are afraid they will lose one another, aren't they? I suppose that fellow in uniform can speak their language. They follow him just like sheep, don't they?"

"And they don't look as if they know any more than sheep do," remarked Jack.

Then, as the immigrants were lost in the crowd, the attention of the boys was attracted to a company of smart tourists who wore clothes the like of which the boys had never seen, and many were the guesses as to whether they were dukes, or lords, or princes, or what; but before they had made up their minds, Mr. Carroll returned, and the sonorous call of the train announcer rang out. "All aboard! Denver limited! All aboard!" The boys' hearts jumped. They were really going. Mr. Carroll took up the hand baggage and led the way out through the pushing crowd to the train, which looked bewilderingly beautiful among its fellows, several of which stood in a long shed awaiting their turn to glide forth into the night.

"This way for the Denver Limited! Denver Limited, third track! This way, please!"

The boys had just time to glance along the rail at the great train and on ahead

at the powerful iron horse that was to draw them out into the night and on past the sleeping towns and villages of Illinois, scarcely stopping for rest until it stood for a moment panting on the banks of the Father of Waters, which, to their keen disappointment, they were to cross in the night.

They were brave lads—each of them

"Where's yer lugs?"

—but the truth must be told: When the last "All aboard!" rang out in the depot and Mr. Carroll had swung himself from the slowly moving train and waved his hand in a last good-by, the three boys scarcely dared look one another in the face for fear of betraying a little of the nervousness they felt. But they were off, and to their joy, just after starting, they espied at the forward end of the car in which they were sitting the object of their greatest interest while in the depot—the man with the broad brimmed hat and bronzed face.

CHAPTER III.

AN INTERESTING ACQUAINTANCE.

The three boys could scarcely await the coming of the morning. Indeed, several times during the night they pressed their noses against the car windows and peered out into the darkness, but to no purpose. There was only the heavy roar of the great train to tell them that they were rushing through field and forest, over streams and under hills, to the great prairies of the trans-Mississippi country. When finally the light streamed in at the windows they hurried into their clothes, snatched a hurried breakfast from the big lunch box which Mr. Carroll had had prepared for them in Chicago, and were busily engaged studying their railroad map and trying to make out where they were; but they met with little success, for their eyes rested only on great stretches of rolling

country, the like of which in their own hill country they had never seen, which might be in any one of the great States of Iowa, Nebraska or Colorado, through which

they knew they must pass. Great fields of undulating grass that seemed endless, stretched to the very horizon and for miles along the track.

"Isn't it splendid!" exclaimed Jack. "did you ever suppose there was so much country?"

"Why do you suppose people will crowd themselves into big cities like Chicago, with all this land going to waste?" asked Frank wonderingly, unconscious that he was stating a problem which has puzzled older heads than his.

"Oh, what's that?" Ned almost shouted. "Where?" asked the others in one breath. "There, quick, before we pass it! There are more of them! See, way over yonder!"

Then the boys caught a glimpse of what was exciting Ned—little animals sitting upon little heaps of dirt—scores of them, in fact a little colony. "They must be squirrels!"

"Pshaw, you never saw squirrels acting like that! They look as if they were saying their prayers."

"I'll tell you what they are," said Frank. "they are prairie dogs. They are just like the ones in the pictures in the geography. How funny they are; just like a lot of people, each one sitting before the door of his own house."

"They say," said Jack, "that you will always find owls and rattlesnakes where you find prairie dogs."

"If that's so, I'm glad my ticket doesn't read for any prairie dog town," answered Frank, with a shake of his head.

"Well, that would just suit me," answered Ned bravely. "I want some excitement. I hope I'll not be cooped up in cars and houses all the time I am away. I want to rough it. If I don't get into a rattlesnake's nest or have a fight with a grizzly I'll be sorry I came. Say, let's brace up and get acquainted with that fellow with the big hat. He looks like he might know a good deal about this country. I want to know where we are and I've got a lot of questions I want to ask somebody," and Ned made a move as if to go forward and introduce himself to the trapper.

"Better not," suggested Frank, "you know Mr. Carroll said we must be careful about talking to strangers. We might get taken in. I don't just like his looks."

"O, say, we can't do anything or learn anything if we are just going to stay by ourselves and guess at everything," said Jack. "Father didn't mean we weren't to speak to anybody. We have been gone nearly a day and a night and haven't said a word to a soul but the conductor. I am going to get acquainted."

Two is a majority in a company of three, and that settled it, so the boys moved slowly to the forward end of the car, where the big hat could just be seen over the back of the seat. When they stood before its owner they found him stretched out at full length, his feet, encased in long top-boots, resting on the seat in front of him, his body occupying nearly the whole of the section. The man's eyes were closed and the brim of his big hat shaded his swarthy face. The boys were puzzled as to just how to proceed, but not for long, for the big fellow slowly pulled himself together, sat bolt upright and looked curiously into the eyes

of the three boys, who were standing confusedly before him.

"Wall, youngsters, kin I do anything fer ye?"

"Yes, sir, if you please," answered Ned, who was generally quickest to meet an emergency. "We want to know where we are and we thought perhaps you knew better than anyone else on this train."

"Wall, now, I do that. I've ben over this 'ere ground more times than you kin count. I've chased buffaloes and follored the herds and trailed Injuns up and down these prairies till I know every inch of 'em. Set down an' tell me whar yer goin'!"

"To Denver, and after that into the mountains," answered Frank.

"Ben thar afore?"

"No, sir."

"Know anyone thar?"

"This boy's father has a friend in Denver who paints pictures and knows all the country and the Indians, and he has promised to give us a good time."

"Huh," grunted the trapper, with a look of disdain. "Paints picters! Likely 'nough he's seen a few half-breed squaws, or maybe he's taken a ride on a stage. The chances is that's 'bout all he knows. I never saw a city chap yet what knew a grizzly's track from a hole in the ground. Takes picters, does he? Wall, a real redskin would make short work o' that feller. Take keer he don't git ye inter trouble. Who are ye and whar d'ye come from?"

Frank gave the information asked for.

"Wall, I'm sorry fer ye. Right sorry. Yer right pert lookin' chaps. But yer ain't goin' to see anything, I tell yer, with that city chap. I never saw but one city chap yet what was real grit, and he was the nerviest man I ever seen, not barrin' anyone. I'll never fergit that feller the longest day I live." And the big, swarthy face turned to the window and nothing was said for fully a minute.

"Youngsters, d'ye mind hearin' a story?" he asked, turning a serious face on the boys.

The three assented with one voice and all took the seat facing the trapper, motionless as statues, their eyes riveted on him, and the story began.

CHAPTER IV.

THE TRAPPER'S STORY.

"Once't I was a dare-devil of a feller, livin' back up in the mountains near Fort Bridger. I had played in hard luck, lost my money and friends and was drinkin' myself crazy. The redskins in them parts was oneasy in them days and it was as much as a feller's life was worth to stick his head out o' the camp. I had come in from the mines whar I had run through everything, desprit 'nough to give my life away fer a word. Jist about that time the boys in camp was bein' hard pressed fer pervisions, as nuthin' had got through fer some weeks on account of the red varmints who were watchin' us from every bush. I told the boys I'd take a message to the Fort twenty miles off. I didn't keer much if I was scalped, and I was ready to take any chances, no matter how slim they was, for I was desprit, as I said. The boys told me I was foolish and begged me not to go, and two or three fellers better'n me said they would go in my place, but I told 'em I was the one to go; that I warn't wuth much anyhow, and that I would get to the Fort or never show my face to an honest man agin. The boys give me a hoss—a big critter, strong as iron.

I rode out o' camp one black night on old 'Lion,' fer that was the name the boys give him, feelin' that death was the only thing that stood 'twixt me and the Fort. I took with me a bottle of fire-water; fact is, youngsters, I was never 'thout it. The stuff was killin' me, but I was stickin' to it as if it war my best friend. Fer two or three miles that hoss picked his way careful 'long the trail, bein' anxious as if he knew how pertickler it was not to step on a twig or make a false move. I was feelin' purty good at gettin' 'long so well, and took a pull at my bottle, to keep my nerves steady. In a few minutes I swollered another dose of the stuff, and then another, fur I seemed to need it, till I felt the old fire in my brain. I must hev given the spur to old 'Lion,' fer he was now in a wild gallop. Along the trail up the mountains we went, the stones flyin' down the sides from under the critter's hoofs which were beating like an avalanche on the hard mountain path. All to once't a flash of light and the crack of a rifle and my hoss was down, with his crazy fool of a rider strugglin' to free hisself. A

dozen red devils was on me afore I could draw my weepion, and bound me, fightin' like the demon I was.

Next day when I come to my senses I found myself tied to a tree with cords of buffaloe hide, and a hundred redskins holdin' a pow-wow 'round me, tryin' to make up their minds how to get rid o' me. I didn't care what they did with me. I was 'shamed o' my failure and never wanted to see the face of a white man agin. The pow-wow was goin' on afore my very eyes, and to tell the truth, youngsters, I longed to tell them devils they could do their worst. Then all to once't a man, who, even with his blanket and his feathers and his moccasins, I could see was a paleface, stood up 'mong them. I've had lots of surprises, I've come suddenly face to face with a she grizzly and her cubs, and more than once't walked right into the arms of onfriendly Injuns, but I was never more surprised in my life than when I saw a white man standin' there 'mong them bloodthirsty Injuns. He stood there tall and commandin' and begun to talk, movin' his arms back and forth and pointin' up to the sky. Them redskins never moved a muscle. But they didn't seem to like what he was sayin'. Then he got excited and seemed to get riled. He took his blanket from his shoulders and threw it on the ground. He tore the feathers from his hair an' broke 'em. He stamped his feet. Every redskin looked more and more sullen. Then he talked earnest agin and seemed to be beggin' for suthin, and at last

"What do you say?"

took up his blanket and wrapped it 'round him, folded his arms and stood before them still as marble, his eyes fixed upon an ugly old warrior who seemed to be the chief. It seemed to me he stood there for hours, but I 'spose it was only a minute, and then the old chief said a few words and the hull lot of 'em got up and filed off inter the forest.

"Will you believe me, youngsters, that paleface then walked straight up to me. He began talkin' afore he hed reached me, and as near as I kin rekillect he said, 'My friend, you are a fool, but you are a brave feller. No one but a brave feller would ride through this country when the Injuns are on the war-path, and no one but a fool would let whisky get him into this scrape.' I had nuthin' to say. I knew he was right and I almost felt like askin' him to take his rifle and shoot me, as he couldn't hurt me any more than to do what he was doin'. But I didn't say nuthin'. 'I am goin' to save your life,' he continued, 'but to do it I have had to risk my own. These Cheyennes owed me a debt, and they have paid it with your life. You are now mine and I kin do with you what I like. I don't know who you are or what you were goin' to do when these redskins caught you, but you are a brave feller and deserve a better fate than to stand agin this tree as a target fer tomahawks. As I say, you belong ter me. I bought you and I kin do what I please with you. In a minute I kin call them Injuns

back and call our agreement off, or I kin take this knife and cut you free. It is fer you to say what I shall do. But if I save your life its on one condition, and that is that as long as you live you will let this infernal whisky alone. It has ruined many a brave trapper and miner and now its got you by the throat. You are a brave feller, but yer not brave 'nough. You know its yer enemy, but you haint got the nerve to kill it. I ain't sentimental 'bout this thing, but I won't do a thing to save you till yer promise me that by all that's good and holy you'll never tech liquor agin. What do yer say?"

"Wall, what could I say, youngsters? But I wasn't goin' to say suttin' jist to get free and then go back on it afterwards. I hed sunk purty low down, but I wasn't no sneak. I felt all the man there was left in me risin' up, and it sez to me, 'Promise, Jim, promise; here's yer chance ter be a man agin,' and I up and said it, and I ain't no coward, but right afore that paleface I broke down and cried like a woman. Then that feller whipped out his huntin' knife and cut the strings of hide that was sawin' their way inter my arms and legs and I was free ter go. I didn't know

what to say, I was so 'shamed of the fix I was in, but onc' thing I sez to myself in that minute, I'll see that feller agin and I'll do him the best turn fer this day's work he ever had or my name's not Jim Galloway. So I jist said out loud ter him, 'Stranger, I ain't got words to say that's good 'nough fer ye now, but afore we part I want yer name. I want ter remember it. I want ter speak it when the devil gits me by the throat.' Then that feller took from his belt a little picter with his name on the back of it, an' handed it ter me 'thout sayin' a word, and here it is. I carry it with me n'ight an' day, fer somehow I feel that the time'll come when I'll see that man and tell him I've kep' my word."

With this the trapper took from his belt a little picture and handed it to one of the boys. They all looked at it and, on turning it over, read the name on the back:

"Robert Sinclair."

"Why, that's the name of father's friend, the Indian painter," cried Jack.

(To be continued.)

\$1000^{IN} MONEY PRIZES

To be given the 55 boys who show the largest number of one dollar subscriptions taken for "THE AMERICAN BOY" by next Christmas. \$200 to the highest, and large sums to the 54 others in their order. Get to work. Make the next two months count. Address for particulars

THE AMERICAN BOY, - DETROIT, MICH.

THE SHAH OF PERSIA AS SEEN AND DESCRIBED BY A BOY

HARRY STEELE MORRISON, FOR THE AMERICAN BOY

Mouzafer-ed-Din, Shah of Persia and "King of Kings," has been in Paris for nearly two weeks in order to visit the Exposition. His majesty has been having a fine time in every way, and has been an object of great curiosity to all the visitors in Paris. I confess that I was just as curious as anyone to see what he was like. I had read of the Shah many times, but having never seen a picture of him, I had only my own imagination to tell me what he looked like. I supposed him to be very, very fat, and very dark complexioned. I also thought that he must be lazy and sleepy looking like so many of the East Indians, and that perhaps he was very dull-minded on account of living in the midst of much luxury. Well, I was mistaken in all these ideas. I went to the railway station on the day of his arrival in Paris to see him, and I found him to be quite the opposite of what I had supposed him to be. Instead of being very dark, he has a sort of yellow complexion, and instead of being fat, he has a rather slender and upright figure. His eyes are bright, and he takes a wonderful interest in all that goes on about him. He is, in short, quite an ideal monarch in looks and action, and has made a fine impression upon the people whom he has met.

He is popular with the Parisians because he has done so many graceful acts while going about the city and the Exposition. He seems to possess a happy faculty of doing the right thing at the right time. He made a State visit to the Persian building at the fair, and almost the first thing he did was to buy two copies of the Persian Bible. One of them he kissed devoutly and placed in his pocket to keep, the other he presented to one of his friends. When the Frenchmen who were gathered outside the doorway saw this action they cheered loudly, because it appealed to their sentimental natures.

A few days ago His Majesty visited the great Louvre Museum in Paris, and had a fine time there. He admired some of the paintings, and then he entered a room where some refreshments were spread on a table. The crowd stood around to watch him eat. The Shah doesn't mind being stared at; he rather enjoys it, than otherwise. While he was eating a wafer a little boy about four years old went up to him and handed him a rose, blushing furiously all the while. The Shah was delighted with the gift. He took the boy by the hand and thanked him very nicely. Then he put his hand in his pocket and brought out a gold piece stamped with his effigy. This he handed to the little fellow as a keepsake, and the child ran back to his mother wild with delight over the lovely gift. It was indeed a valuable present and will probably be handed down in the family for generations.

On another day the Shah went to visit the famous factory where the Gobelin tapestries are made, and while he was there a very funny incident took place. I happened to be on hand to see it all,

and I laughed over it very much. No one seemed to know that His Majesty was expected at the factory and we were all walking about examining the tapestries, when all at once the guards began to hustle us about. "Go into the room there on the side," they said, "the Shah is coming." So we were all crowded into the side room in order that we shouldn't be in the way of the royal party. Among us was a little girl about ten years old, and she carried a little skye terrier in her arms. She seemed wildly afraid that the dog would bark, and that was just what he did do. It was quite natural that he should make a noise. The word in French for "cat" is "chat," pronounced in the very same way as the word "Shah." So when the little terrier heard everyone saying "the Shah" he naturally supposed that they were talking about a cat. And he

she saw him coming, thought he was certainly going to take her dog, and she held him behind her back. But the Shah saw her do it, and he went up to her first thing. "Let me see your dog," he said, in French, and she was obliged to hold him up. The Shah wanted to take him in his arms, but she wouldn't let go of him for a minute. His Majesty asked what we were laughing about, and I told him about the dog thinking a cat was coming. He laughed heartily at this. "Your dog seems to be very smart," he said to the little girl. "Do you want to sell him?" The child was badly scared. "No, siree!" she exclaimed, using words which mean that in French. "I wouldn't sell him for anything in the world." The Shah laughed again. "Oh, all right," he said, "you mustn't sell him if you love him so much." Then he patted the little girl

visitors to the Exposition are entertained. They were certainly a pleasant party in appearance. They were dressed in European clothes, which was rather disappointing but they were a very cordial lot of men. The gentleman introduced me as "An American boy who wants to shake hands with you," and the Shah immediately rose from his chair and extended his hand. "I'm very glad to meet you," he said, in fair English, and then he introduced me to the members of his suite. I was given one of the chairs at the table, and while they all drank their coffee, they asked me many questions about myself and how I happened to be in Paris. They thought it very remarkable that a boy of my age should be so far from home alone. "But you know American boys are very enterprising," said one of the gentlemen, and that remark seemed to explain everything to the Shah's satisfaction. His Majesty asked me a great many questions about the United States, which I was only too glad to answer.

"Of course you will visit America before returning to Persia," I said. But the Shah shook his head. "I'm afraid not," he said. "You see, it is a very long way off, and my time is limited. I must be going back to Teheran." I told him that I had crossed the ocean in little more than seven days and that some vessels make it in less than six. Then he asked me how I had come across, and I told him I had been a steerage passenger. They all thought this very interesting. "You must tell us about your experiences in the steerage," said one of the gentlemen. I tried my best to remember all the interesting things which had taken place during the voyage and told them as much as I could. They listened most attentively, and the Shah laughed at everything funny which had happened to me. "Well, that is certainly unusual," he said, when I had finished.

I couldn't help thinking when I was in the room how very informal everything was. The Shah and most of the gentlemen had their coats unbuttoned and were leaning forward with their elbows on the table. I am afraid that mine were there, too, and anyone looking in would never have supposed that this party included the "King of Kings." But His Majesty seemed to enjoy the informality, and he didn't send me away until an usher entered to say that the carriages were ready for some drive. Then they all shook hands with me again, and the Shah said he hoped I would visit Teheran some day. I told him I would certainly call on him if I did.

I left the palace delighted with the reception which had been given me, and I was an enthusiastic member of the crowd which cheered His Majesty when he drove out a few minutes later. He is far more bright and enterprising, in my opinion, than many greater and supposedly more enlightened monarchs. He has been seeing everything possible during his stay in Paris, and he will probably go back to Teheran with dozens of new ideas.

I wished after I had left the palace that I had asked the Shah about his boys and girls at home. I am sure he must have children of his own when he displays such a kindly feeling toward all the children he meets on his travels. I bet his children have a mighty good time. Paris, August, 1900.

THE SHAH OF PERSIA

had been taught to bark whenever that hated word was mentioned. As the Shah and his suite entered the larger room the little fellow barked as loudly as he could, and everyone in our corner was convulsed with laughter. The guards looked around to find the dog, and I heard the little girl's mother say to her that the Shah would certainly carry the dog away if he heard him barking. Then the little girl was frightened half to death. She held the dog as close as she could, but he lept on barking, and we kept on laughing, because we couldn't help it. It seemed so very funny that the dog should mistake the Shah of Persia for a common, everyday cat.

He made such a racket finally that the Shah noticed him, and when he saw that we were all laughing, he immediately walked over to our corner to find out about the joke. The little girl, when

on the cheek and walked away. The guards were horrified at this occurrence. They couldn't understand how any little girl could refuse to sell her dog to the Shah of Persia. They considered that it would have been an honor and a privilege, but the little girl thought differently. She preferred keeping her pet to pleasing the Shah and everyone in the crowd thought she had done just right.

I was very glad to find the Shah so very friendly in manner, and I determined to get an introduction to him if I could, so that I could have a talk with him. I finally succeeded in obtaining the necessary letter to a French gentleman, who was managing the Shah's affairs, and one morning I found myself standing before His Majesty and four members of his suite, while they were at breakfast in the dining-room of the Palais des Souverains, where all royal

...SHORT TALKS TO BOYS...

J. W. BURGESS.

No. 1.

You are attending school, or ought to be. Make a business of it. Don't be content with skimming over your lessons, and picking up barely enough to enable you to pass an examination with seventy five or eighty points to your credit. But learn your lessons; devour them; digest them and make them so much a part of your being that you can apply them any time, anywhere, as naturally as you do your eyesight and power of locomotion. This done, the passing of an examination with a score of ninety eight to one hundred will be a natural and easy task. It is the patient and conscientious plodder that not only captures the prize, but retains his hold of it after he has secured it. You know of a boy who started in at school when you did. He knew almost nothing. Every time he turned around he stumbled over something. The girls laughed at him, and the boys played jokes on him. He said little but studied much, and when the examination papers were returned he had more points than any of you, and it was not the result of luck, either. While you were pitying his ignorance and thinking how much smarter you were than he, and kicking footballs and riding bicycles (all of which are proper in their place), and making believe to learn your lessons, he was poring over his books, and putting in every minute to the best advantage. He will keep right on working and plodding and toiling until his school days are ended, and then he will not stop. He will very likely go to work at a trade, or in a store, until he earns money enough to carry him through college. He may never be able to kick a football clear across the gridiron; nor break a man's back in the attempt to get the ball away from him; nor bat a baseball away over the left fielder's head. He may never be able to do a mile in one minute and fifty seconds on a bicycle, nor inhale the smoke of a cigarette without choking, but it is more than likely that he will some day occupy a position where you or some of your chums will be applying to him for a clerkship on the plea that you were an old schoolmate of his. Such things are happening every day, and it is for you to say, in this great, free country of ours, which of the positions mentioned you will train for.

No. 2.

Get into the habit of committing things to memory; not merely your lessons, but poems, orations, essays, literary gems of any kind. If you chance upon anything that suits your fancy sit down and learn it. Your memory will soon become accustomed to this sort of treatment, and will, with continued exercise, begin to write down indelibly everything you read the moment you set your mind upon it, until as time passes it will develop into a perfect scrap book, all pocketed, numbered and indexed, that will, in after years, prove a mine of wealth to you. For, depend upon it, no matter what particular calling you may choose as your life work, there will surely come a time when every decent thing you ever committed to memory will come in play, and you will be glad you learned it. During the exercise of these mental gymnastics, you will need some mental recreation. Select some good story book, something with spice and snap, and life in it. Have it where you can lay your hands on it when you are waiting for dinner, or at odd times when it is too wet for the playground, and your brain is weary of study. Read, if only a few pages, and then remember or mark the place and return the book to its place. About all the reading of books that some truly great men do is on just this piecemeal plan. And it is astonishing what a vast amount of reading one can do in this manner of simply filling in the moments that would otherwise be wasted. Of course, you are reading the papers every day. Not the murder trials and divorce suits and sporting news alone, but the general happenings in state and national affairs. This advice does not mean that you should be old men before your time, but simply that you should make a business of life while a boy, as you surely must when you are a

man, and, as you must then relax occasionally, so it is doubly important that you do so now, while you are growing and developing physically as well as mentally. When you play, put your whole soul into it. Do your best to excel while at play as you do when at study. Be as fair and manly on the playground as you expect to be as a business man in after years. Never compromise yourself to gain a temporary advantage, but stand up squarely and boldly, but always kindly and fairly, for what you believe to be the right. Thus you will gain the respect of all fair minded associates, and cultivate a habit and principle that will stand you in good stead at every turn you may make in the years to come.

(Other talks to follow.)

A Sliver in His Toe.

LORENA OSBORN HUNT.

THE 'AMERICAN BOY'S' a paper
What tells of fellers brave,
Who fish folks out from drownin'
An' pert near rob a grave;
But swimmin' in a river,
A catchin' folks, you know,
Ain't half as brave as laughin'
With a sliver in your toe.

There is some great, big fellers,
What think they're awful flip,
A sailin' round among the girls,
A twistin' their upper lip;
But, put 'em in my place jist onct,
An' see where they would go,
They'd go plum crazy, surer'n guns,
With this sliver in their toe.

I got it out in our back yard,
A playin' Comp'ny G,
My throat it kep' a fillin' up,
An' I could hardly see,
I didn't know I could be brave
Till mother told me so,
Then I busted out a laughin'
With this sliver in my toe.

Germantown Boys' Parlors.

For some twelve years, thirty five or forty young men and women of Germantown, Pa., have interested themselves in providing a pleasant, unobjectionable place where boys, particularly those who have no homes or have unhappy homes, can meet and spend their evenings. Games and good reading are provided, as well as the means for instruction in drawing, hammock making, carpentering and scroll sawing. A ten-minute talk is given once a week by some interesting speaker. The average attendance has been 140, while 220 boys are on the membership roll. The gymnasium, which is one of the features of the "Parlors," has been the star attraction. The boys are taught to save money, and quite a number have opened accounts.

There is a call for institutions of this sort, not only in the large cities but in small towns, and the editor of THE AMERICAN BOY is not sure but that the small towns are in greater need of helpful places of rendezvous for boys than are the cities.

\$25.00

Extra Prize to the Boy

Who sells the Largest Number of Copies of

The Saturday Evening Post

During the month of October. \$20.00 to the boy selling the next largest number; \$15.00 to the next, and so on, making 50 cash prizes to the 50 different boys selling the Post. This is in addition to your regular profit made on every copy you sell.

We will furnish you with Ten Copies the first week FREE OF CHARGE, to be sold at 5 cents a copy; you can then send us the wholesale price for as many as you find you can sell for the next week.

You can find many people who will be glad to patronize a bright boy, and will agree to buy of you every week if you deliver it regularly at the house, store or office.

You can earn money without interfering with school duties, and be independent.

THE SATURDAY EVENING POST

Is a handsomely illustrated weekly magazine; established in 1728 by

Benjamin Franklin

Has the greatest living writers and a circulation of nearly a quarter of a million copies every week.

Address THE CURTIS PUBLISHING COMPANY, PHILADELPHIA

Cleveland Rough Riders Invade Canada.

The Rough Riders of Cleveland, an organization among the members of the Junior department of the Young Men's Christian Association. They recently made a trip into Canada, which was their third annual outing. The party consisted of thirty boys, in charge of the Junior secretary. They made the trip on the steamer Melbourne, stopping at Toronto, Montreal and Niagara Falls. When their boat approached a port the Rough Riders would assemble on the top deck and, accompanied by a cornet, would sing national airs and give their yell. At Toronto the mayor, to whom they were introduced, gave them a hearty welcome and the freedom of the city. The boys gave the mayor three rousing cheers. Their trip through the Welland Canal was a most interesting one. They sailed down the St. Lawrence, through the Thousand Islands, and at Montreal a stop of three days was made. The boys thoroughly enjoyed every mile of the trip and returned to Cleveland tanned and healthy.

Eighty per cent of the cost of the world's governments is caused by war.

There is no legitimate descendant of any king of England who sat on the throne before the reign of George I.

Of the twenty five barons who set their hands to the Magna Charta not a single male descendant remains.

Married couples in Norway are privileged to travel on railways at a fare and a half.

The total cost of the trans-Siberian Railroad is estimated at five hundred million dollars, of which amount three fifths already has been expended.

If all the money in the world were divided equally, each person would get about thirty dollars. Were the division made, five minutes thereafter there would be a good many of us that wouldn't have a penny.

THE CARRIAGE CONSTRUCTED FOR GEN. LAFAYETTE'S USE ON HIS LAST VISIT TO AMERICA (1824). BY ORDER OF CONGRESS.

We marvel at the mechanism of the human body, with its four hundred and ninety two bones, but man is not so remarkable in this particular as is the fish called carp, which moves no fewer than four thousand three hundred and eighty six bones and muscles every time it breathes.

The largest gun in the world is now in process of being finished at the Government works at Watervliet, between the cities of Albany and Troy. Without its carriage, it weighs two hundred and fifty two thousand pounds. It is forty nine feet and six inches long, and its bore is one foot and four inches in diameter. At the breech it is eighteen feet and six inches in circumference. The shot for this monster gun is five feet and four inches long and weighs two thousand three hundred and seventy pounds. One thousand and sixty pounds of powder are necessary for a charge. Every projectile costs six hundred dollars, powder for one shot two hundred and sixty five dollars, the time of the men to handle the gun at least thirty five dollars more; so that every discharge of the gun will cost at least nine hundred dollars. The gun will throw this enormous projectile the marvelous distance of twenty miles and two thousand six hundred and forty feet. In order to reach thus far it will have to travel through the air at an elevation at its highest point of at least five miles.

der are necessary for a charge. Every projectile costs six hundred dollars, powder for one shot two hundred and sixty five dollars, the time of the men to handle the gun at least thirty five dollars more; so that every discharge of the gun will cost at least nine hundred dollars. The gun will throw this enormous projectile the marvelous distance of twenty miles and two thousand six hundred and forty feet. In order to reach thus far it will have to travel through the air at an elevation at its highest point of at least five miles.

A Single Pound of Coal.

A single pound of coal is capable of producing two hundred and thirty six horse-power, and could do the work of an express locomotive for one-fifth of a minute. In other words, it is enough to haul a train of eight cars, including the Pullman sleeping cars and dining-cars, at the rate of fifty miles an hour one-sixth of a mile.

In sawing wood, a man may work at the rate of about sixty strokes a minute, and his saw-blade may have progressed five feet a minute, but a circular-saw, driven by machinery, will cut seventy times as much wood in the same time. And yet this one little pound of coal contains power enough for one hundred and eighty such saws.

We can easily compare the power locked up in this black diamond with the work of a strong man. The strength of a man may be reckoned at one-tenth of a horse-power. Allow him eight working hours, equal to four hundred and eighty minutes. During this time he occasionally stops for short rests, to change his position, to pick up another tool, to judge of the result of his work and plan for further procedure. This will take one-tenth of the time, leaving four hundred and thirty two minutes, which, at one-tenth of a horse-power, gives him a total effect of forty three and two-tenths horse-power as the result of his day's labor. This pound of coal contains more than sufficient power to do in one minute the day's work of five such strong men. Or it would take about nine thousand, six hundred strong men, working steadily side by side, to do jointly as much work

in one minute as nature has locked up for us, ready at our call, in a single pound of coal.

Felling a 200-Foot Stack.

It is not an easy matter to demolish a lofty chimney. It usually takes long continued work and the expenditure of considerable money. A method is adopted in England which has proved very practicable. It consists of removing the greater portion of the base of a chimney, substituting thick, wooden underpinning for the masonry, and then setting fire to the props, which in time burn through, with the result that the chimney collapses. Recently a stack was felled which was two hundred and fifty feet high and weighed three thousand five hundred tons. It took six and one-half tons of coal, four tons of pitch, forty sacks of shavings, one hundred and eight gallons of tar and one hundred and twenty six gallons of paraffin. The burning of the props has to be most carefully watched, since it is necessary that they all collapse at the same time. We present an illustration of the felling of a shaft in Lancashire which was two hundred feet high, as shown in a recent issue of "The Scientific American"

CLOTHING---C. O. D.
Our free style book of the "Famous Maryland" Made-to-Order Clothing is now ready and shows the most fashionable styles, with large samples of cloth that will be worn by the best dressed this season. DENT'S Toothache Gum
STOPS TOOTHACHE INSTANTLY
NOT A CHEWING GUM.
How to Use It.
Clean cavity of tooth, and press firmly into it a piece of the Gum. If no cavity, apply the gum as a plaster. At all drug stores, 15 cents, or sent by mail on receipt of price.

THE HOUSE IN WHICH LINCOLN DIED. IT IS ACROSS THE STREET FROM THE OLD FORD'S THEATRE IN WASHINGTON. (Photograph by James B. Nichols, Waltham, Mass.)

"U. S. History Without Study"
Is the name of the newest, most complete, and best set of history games ever published. There are five of them as follows:
1. Discoverers and Explorers.
2. The Thirteen Colonies.
3. The French and Indian Wars, Revolution, etc.
4. Washington to Fillmore.
5. Pierce to McKinley.
They are the result of years of experience in the school room. You can learn more history in a month from these games than in a year without them. Get them and you will have no more trouble with history. Old and young are fascinated with them. They are played like "Authors." Get them before you start to school. Any single game, 50c or the five, \$1.25. T. J. Fox, Washington, D. C., Box 206.

How to get STRONG and MUSCULAR
Send for "The Standard Chart of Physical Culture." You hang it on the wall of your bedroom. It shows by carefully prepared illustrations and instructions the scientific methods by which you can easily develop each and every part of your body to the ideal of perfection. Sent on receipt of 10 cents—stamp or coin. State age and occupation. Address:
FIFTH AVENUE SCHOOL OF PHYSICAL CULTURE, Dept. 1, 111 FIFTH AVENUE, NEW YORK.

WHAT BOYS ARE DOING

A Successful Boy Singer.

Wesley Mayne, a boy soprano of Chicago, has won the plaudits of the music-loving public for his beautiful rendition and interpretation of the Masters. The boy is described as having a phenomenal voice, sweet and clear as a skylark's, flexible and sincere in its wide scope of exquisite timbre. For several months he has been earning public approval through his charming and delicately accurate work as soprano soloist in Grace Church. The boy is an Australian, having been born at Melbourne, the home of Madame Melba, who was a school comrade of the boy's aunt. He is thirteen years old and has lived in Chicago with his parents for the past ten years. At the age of eleven he became a member of St. Chrysostom's Choir, and his talent was promptly recognized. He is

ELIHU ROOT, JR.

EDWARD W. ROOT.

We present pictures of the two bright sons of Hon. Elihu Root, Secretary of War. Elihu, Jr., a young man of eighteen, and Edward W., a boy of fifteen.

main to remove the obstruction, succeeding in getting the last tie from the track just before the train arrived. The first inkling had of the matter by the railroad officials was when Hawes appeared at the Northwestern depot, in Kenosha, hatless and breathless, having run the entire distance from his home, a mile and a half from town. The chief of police immediately swore in a posse of four men and started to find the desperadoes, but was unsuccessful. Young Hawes was the hero of the hour, as the train was loaded with passengers, and had the attempt to wreck it been successful, great loss of life would have resulted.

Charity Wins.

The McDowell Club, an organization of Chicago boys on the "South Side," was split for a week over the question of disposing of one dollar and four cents that was left as a surplus after an entertainment recently given by the Club. One leading member of the Club loudly championed the purchase of a pair of boxing gloves with the money. Another leader favored giving the money to La Rabida Sanitarium for Infants, in Jackson Park. The boys held several meetings, at which the discussions were long and earnest. Finally, charity won over sport, nine boys voting for the gift to the Sanitarium.

WESLEY MAYNE.

Indefatigable in his voice practice, and his instructor, Frederick Bruegger, says that with ordinary care his voice should hold and gain in sweet volume and tone for several years. Although he is slender and rather delicate in general appearance, he is quite an athlete, with a bundle of nerves and muscles capable of unexpected endurance. He has recently returned from an extended engagement in Iowa. An item in a Carinda Iowa paper says of him: "He is a thorough-going, gentlemanly boy. In his sports with the boys since he has been here he has proved himself no mean competitor. He is a typical city boy. Saturday evening he went to the home of C. A. Lisle for the express purpose of seeing a cow milked, it being only the second time in his life that he had ever seen the marvelous operation."

A Boy Prevents a Railroad Accident.

A few weeks ago an attempt was made by unknown persons to wreck the Northwestern passenger train due to arrive in Kenosha, Wis., at 9:32 p. m. A large number of ties had been placed upon the track.

CHARLES HAWES.

A farmer boy, Charles Hawes, who was a witness of the act, watched the men, who were three in number, pile the ties on the track, but was unable to get close enough to identify them. After the men had disappeared young Hawes worked with might and

The boy who posed for the picture entitled "Jockey" is the son of James M. Johnson, of Washington City, and a great grandson of Col. James Johnson, of Savannah, Ga.

TWO OF A KIND.

From L. A. W. BULLETIN AND GOOD ROADS

Mr. Humtover went out for a run,
And he flew like a bullet shot out of a gun;
He didn't look east nor he didn't look west,
But he pushed on the pedals and they did the rest.
He kept his eye riveted close to the earth
As he tore through the country for all he was worth.
Though others would warn him with bell and with shout,
Still he wouldn't look up nor he wouldn't turn out.

In the course of his journey he happened to meet
The fellow who cycles all over the street.—
The highway marauder, of reason bereft,
Who rides on the right side and then on the left.
This cheerful galoot and his fast flying friend,
The terrible scorcher, they meet at a bend
Of the road they were riding and oh, what a mess!
And the next time they'll ride as they ought to, we
guess.

P. MEYENBERG, Proprietor and Sole Agent, 159 LaSalle Street, CHICAGO, ILL., U. S. A.

A Mink Farm.

There is a novel industry at Lakemills, Wis. A boys' paper once suggested to Mr. E. N. Harvey, of that city, that money could be made by raising minks...

Boys as Money-Makers & Money-Savers

Learning How to Spend Money.

Boys cannot truly be said to have been taught economy if they have simply been exhorted to save and perpetually taken to task for extravagance.

Boys should never be allowed to ask their parents or anyone else for pennies, nor to receive money from strangers.

Let the boy spend his own money, not yours. If the father gives a penny any and every day for a new pencil the demand is constant...

As the boy grows larger the chance to earn larger sums of money may be given to him.

Some-times a weekly allowance has been conditioned on promptness at breakfast. Some boys who live at a distance from school are allowed a certain sum for luncheon and car fares and are encouraged to save as much as they can of this for themselves.

When a boy is fifteen or sixteen years old he should be trained to buy all the simpler articles of his wardrobe. A boy who has been trained to consider values and utilities in purchasing can be taught to save without much trouble.

These are some of the expressions our agents are using in writing us. Send us your name on a postal and get full particulars of the easiest and pleasantest way to make money that you have ever heard of.

BOY WANTED You can earn 25 to 50 cents an hour for all your spare time until Xmas. Send us your name, and we will tell you all about it.

WE GIVE Child's Reeler, Cameras, Parlor Furniture, etc., to persons taking orders for our perfumed Toilet Soap...

"It Makes Me Laugh." "Like Finding Money." "Easiest Dollars I Ever Made." "Nothing But Fun."

BOYS HERE IS THE QUICKEST SELLER YOU EVER SAW!

Every man, woman and child needs it. To show it means a sale. One man sold 55 in 61 minutes. Send 25 cents for sample.

GOLDEN BOY, JR.

How Two Boys Made Money With Belgian Hares.

CARRIE D. BOND.

"Hurrah! we've hit it at last!" "Hit what, Joe?" "Belgians, of course!" "Why, Joe, what do you mean? Has trouble turned your brain?"

Mrs. C. D. Bond, the writer of the foregoing story, which she declares is a true one, was the pioneer importer to the Pacific Coast of Belgian Hares.

it—feed regularly and keep spotlessly clean. Remember, it's the worker and "sticker to it" that always wins!

"Well, brother, this seems just what mother calls 'Providential like,' and we must try our hand at it. She'll let us have the ten dollars to fix up some dry goods boxes for hutches—they call them—and we'll have enough to buy feed until we can sell the youngsters.

The boys went to work with a will and in due time had forty one youngsters. But it was not all smooth sailing; they had to battle with their trials and

experiences and prove what sort of stuff they were made of. They fed the mothers green food and the babies got slobbers from eating it, too, but kind Mr. Simmons soon helped out and only two were

lost. Then the wire mesh was too large and a youngster got out one night and proved a delicious supper for the rats. This left thirty eight. Then two weakly ones dropped off, leaving thirty six. When six weeks old they sold eleven at five dollars each and five at ten dollars each, making one hundred and five dollars.

Joe and Hal went to school and supported their mother, worked mornings and evenings at the rabbitry with an indomitable perseverance that surmounted every difficulty, and were as happy as the birds.

In time, no doubt, we will hear of Hal as a famous educator; and Joe will always be "just mother's boy," for, as Schiller says: "Es liegt ein tiefer sinn ein kinder spiel" (there lies a deep meaning in children's play), or, better still, to quote our own Shakespeare, "The child is father to the man."

Mrs. C. D. Bond, the writer of the foregoing story, which she declares is a true one, was the pioneer importer to the Pacific Coast of Belgian Hares.

We have extended the opportunity for bright boys and girls to earn money easily introducing Ralston Breakfast Food by offering an additional one thousand dollars. The business knowledge gained, and the bank account started, are big inducements, especially as no money is required and check is mailed for service rendered. Write and we will tell you how to earn the money. Give the name of a minister or doctor for a reference and the name of your grocer, as all orders will be filled through him. PURINA MILLS. "Where Purity is Paramount" 806 Gratiot Street, St. Louis, Mo. To Adults: If your grocer hasn't Ralston, send us his name for a sample, free.

ANTICIPATION.

"Here you are, five cents a bag."

HOW ABOUT THIS, BOYS?

"THE NUMBER OF YOUNG MEN OF EIGHTEEN, NINETEEN AND TWENTY YEARS OF AGE WHO ARE BEING REJECTED DAY AFTER DAY BY THE LIFE INSURANCE COMPANIES IS APPALLING. WHAT IS MORE, THE BOYS AND GIRLS LACK THE STAMINA OF OLD DAYS. I KNOW, AS A SCHOOL COMMITTEEMAN, THAT THE SCHOLARS OF TO-DAY CANNOT DO THE HARD WORK OF EVEN TEN YEARS AGO. WE MAY SERIOUSLY QUESTION IF WE ARE NOT BECOMING A CITY OF DEGENERATES."

From a statement made publicly in the State House, Boston, Mass., by Dr. W. J. Gallivan, President of the Boston School Board.

REALIZATION.

A poor market for pop corn.

Some Good Advice About Making Investments.

Within the last year or two a number of gigantic swindlers in New York have been unearthed. Millions of dollars are found to have been taken out of the pockets of the poor throughout the country by men who promised to make people suddenly rich. The New York World interviewed Mrs. Hettie Green, the richest and one of the shrewdest women in America, regarding investments, and among other things she said: "No way has ever yet been invented to prevent people from being credulous and throwing away their money. It is a thankless task to warn anybody against these 50 per cent. enterprises."

"I remember an instance of this many years ago. My father warned a friend of his against a concern that promised enormous profits and had no capital behind it. This man became very angry at my father and told all the members of his family not to have anything to do with us. A short time afterward my father's words came true, and the business that he had warned his friend against went to pieces, and all the depositors lost the money they had invested, my father's friend among them. But father never received any gratitude for the warning he had given.

"People should have more sense than to listen to this wild talk about getting rich in a night. Unprincipled men may promise to pay depositors 50 per cent. for their money. Anyone can make promises and perhaps keep them for a while to deceive people, but it is ridiculous to suppose that a business man or banker can pay such percentages.

"Such a thing has never happened since the flood and it is a very good thing that such profits are impossible. If there were a country in the world where people got 500 per cent for their money, I wouldn't want to live in it.

"Of course, I do not say that such profits are never made. But if they are, they must be obtained by the blessing of God and not by listening to the foolish talk of some man on the street.

"Here and there a single individual may do well by a wise investment. For instance, if one happens to put his money into a rich gold mine or silver mine, he may be fortunate enough to multiply it many times over or if he is a member of some large concern like the Standard Oil Company he may now and then make a good deal of money by a transaction that has been carefully thought out.

"But a hundred people cannot make such large profits, and nobody is smart enough to make five times his capital every year as a regular thing. Any person with half a grain of common sense knows this. Those who do not will never grow any wiser, no matter how much we may preach to them.

"I think real estate is the best investment for people who have only a few thousand dollars and want to make as much by it as they honorably can.

"They must be careful to pick out the right kind of property, and to get possession of it at a reasonable figure. If one chooses the right piece of property he has it half sold as soon as he buys it. He must depend, too, upon the blessing of God more than upon his own skill and wisdom. That is one thing that most people do not stop to consider when they go into business. The result is that they soon find themselves much poorer than they were before.

"Not long ago a man sold me some real estate in Chicago, and my lawyer discovered that the property had been misrepresented to me, and that it was not worth as much as I had paid for it. It seemed as if I were going to be a heavy loser by the transaction, but just then the Madison street railway had its route changed and went past my property.

"I had a number of houses on this property, and when I discovered that the street cars were to run in front of these, I at once had store fronts put in, making the property very valuable. Altogether I cleared \$12,000 by the transaction, in spite of the misrepresentations of the man who had sold the property to me. This looked to me very like "the blessing of God."

"I am an old-fashioned Puritan, and I believe that every business undertaking must be entered into with a proper sense of our dependence upon the divine will.

"People forget this too readily in these later days, and it is no wonder that swindlers are springing up everywhere and robbing those who are foolish enough to trust them with their money.

"The Bible says that every one shall earn his living by the sweat of his brow, and I believe that old saying is as true to-day as ever. The only way to get rich is the Bible way. No man would ever go wrong in business if he went by the Bible.

"The good old virtues of thrift and prudence and carefulness should be cultivated more than they are. One more point: When a man promises to pay 500 per cent. for the use of money, every one should remember that he has no place by right in the business world of today."

A "Short Cut" to Wealth.

J. L. HARBOUR.

A boy cannot make a greater mistake than when he thinks there is some better way to make a dollar than by honestly earning it. There are very few "short cuts" to wealth, and few of these are to be recommended. Very few of the wealthy men of to-day amassed their wealth at a single bound. With most of

them the acquiring of their money has been a slow and careful process. They have "made haste slowly," and have developed character and intelligence with their wealth. One needs character and intelligence to make a right use of money. A great fortune can seldom be acquired honestly in a short time, and ill-gotten gains never bring real happiness.

Many prison cells are occupied by men, both young and old, who have been unwise enough to think that they had discovered a way of making money without honestly earning it. I went with a minister not long ago to see a young man of this class. He had grown tired of "plodding and poking along," as he expressed it, and had concluded to take a "short cut" to wealth. He invested three hundred dollars that he had inherited from his father in stocks. This gave him the "stock exchange fever." The young man had a good position with a salary of fifteen dollars a week, and the certainty of more in the near future. All of his savings he invested in stocks, and was certain that he was on the high road to immediate wealth. He was so sure of this that he took a hundred dollars of his employer's money to invest in a certain "deal," whereby he would make twenty times a hundred dollars and could then repay the money. He was dazed with surprise and disappointment when the stock in which he invested suddenly depreciated, and he lost not only his own money but his employer's. Then he took another hundred dollars to buy stock that was "dead sure" to treble in value in a week. It also depreciated, and the final result was that the young speculator found himself in jail as a defaulter. He had discovered that any "short cut" to wealth offered by the stock market was a "cut" that young and inexperienced men should fight shy of. Had his hopes been realized it is doubtful if he would have been level-headed enough to have used his gains wisely.

Sudden wealth is often an actual misfortune. I lived for several years in one of the great mining camps of the west.

Now and then a man would "strike it rich" in a single day, and from being almost poverty-stricken would suddenly become rich. I know of many a man to whom this sudden acquisition of wealth was a positive harm. Most of these men "lost their heads" at once, and began a course of "riotous living" that soon dissipated not only their money but their health.

I once saw a man going around among the miners with a subscription paper securing funds with which to pay the funeral expenses of a man who had been worth half a million dollars in a single day, and who had in less than three years wasted all of it. He died in the charity ward of a hospital. His "short cut" to wealth had also been a "short cut" to the grave.

If the boys who are so eager to discover some "short cut" to wealth will look about them they will discover that the rich are not any happier than the poor. Some of the most fretful, complaining, unhappy and altogether miserable men and women I have ever met in my life have been men and women rich in this world's goods.

The American boy is wise who starts out in life determined to honestly earn every dollar that he is to possess. He will not seek nor want any "short cut" to fortune. He will not want anything that is not the result of his own industry. He will scorn to take a mean advantage of the necessities of others. He will prefer honest poverty to ill-gotten wealth. He will write on the tablets of his heart this further saying of Franklin's:

"The way to wealth is as plain as the way to market. It depends chiefly on two words, industry and frugality; that is, waste neither time nor money, but make the best use of both. Without industry and frugality nothing will do and with them everything." This is the shortest cut to wealth of which I have knowledge.

"Better late than never" is not half so good as "better never late."—Pushing to the Front.

SPECIAL 60 DAYS' OFFER To Introduce Our Latest Large, Powerful, . . . Achromatic Telescope & Microscope Combined

POSITIVELY such a good Telescope was never sold for this price before. These Telescopes are made by one of the largest manufacturers of Europe, measure 12 inches and open over 3 1/2 feet in 3 sections. They are BRASS ROUND, BRASS SAFETY CAP on each end to exclude dust, etc., with POWERFUL LENSES, scientifically ground and adjusted. GUARANTEED by the MAKER. This is a grand offer, and you should not miss it. WE WARRANT each instrument JUST AS REPRESENTED or money refunded. Send 98 cents by Registered Letter, Post Office Money Order or Bank Draft payable to our order, or have your dealer order for you. W. HILL MUSE, CO., A. B., 96 STATE STREET, CHICAGO

The BOY

in the Office, the Store, the Factory and on the Farm

Rothschild's Rules.

When Meyer Rothschild, founder of the great banking house in Frankfort, Germany, died he left something better than wealth—an example that has become a tradition in this noted family. He also left precepts. Among them were the following:

- Carefully examine every detail of your business.
Be prompt in everything.
Take time to consider, but decide positively.
Dare to go forward.
Bear troubles patiently.
Be brave in the struggle of life.
Maintain your integrity as a sacred thing.
Never tell business lies.
Make no useless acquaintances.
Pay your debts promptly.
Shun strong liquors.
Employ your time well.
Do not reckon on chance.
Work hard.

A Boy in a Hurry.

The merchant had arrived at his office rather early in the morning, and five minutes after he got down to his desk a foxy-looking, bright-faced boy came in. The merchant was reading and the boy, with his hat off, stood there expectantly, but saying nothing.

At the end of two minutes he coughed slightly and spoke.

"Excuse me, sir," he said, "but I'm in a hurry."

The merchant looked up.

"What do you want?" he asked.

"I want a job, if you've got one for me."

"Oh, do you?" snorted the merchant.

"Well, what are you in such a hurry about?"

"I've got to be, that's why," was the sharp response.

"I left school yesterday afternoon to go to work, and I haven't got a place yet, and I can't afford to be wasting time. If you can't do anything for me, say so, and I'll go. The only place I can stop long is the place where they pay me for it."

The merchant looked at the clock.

"When can you come?" he asked.

"I don't have to come," replied the youngster.

"I'm here now, and I'd been at work before this if you had said so."

Half an hour later he was at it, and he's likely to have a job as long as he wants one.—Cincinnati Enquirer.

Stay on the Farm.

A recent writer urges boys to go on the farm. He prophesies that the farm will soon return to favor as it will to greater profit. He suggests that the life of the farmer is far more peaceful and independent than the lot of the average city man. Conditions are annually growing more uncertain and difficult in the cities. Then, too, a dollar earned at home is worth two earned abroad. The writer refers to Lancaster County, Pa., showing the money made and saved by the farming community. There are in that county thirty seven thousand men, and there are twenty two million dollars out at interest in the county, hundreds of millions in homes, besides nearly one horse to every adult male, and household comforts galore.

How to be a Good Hotel Clerk.

Remember that the best trade of a hotel is the old customers. Keep the old ones and new ones will come. To hold old customers is an easy thing. The first thing is to treat them right. Never let them think that because you have their trade they are neglected. Keep their likes and dislikes in mind. A guest is pleased with a clerk who

says, "Mr. Jones, you had room 124 when you were here last. Would you like the same room?" Little accommodations that cost you nothing go a great way toward making and holding customers. Never call a guest by his christian name; always say "Mr. So-and-so." Keep the hotel office tidy; put things in their place. Keep in your place yourself. Don't make guests wait unnecessarily. Render accurate itemized accounts to your guests. Wait on customers in a many way and not lose your head. Be patient. Don't think it is necessary to wear a high collar, red tie and a diamond. Don't think that you have learned it all. Study to please the management. Be polite and not gruff or short. Use horse sense. Don't be fresh. Remember the old saying, "Once a gentleman always a gentleman." Learn your house so you can describe a room if the question is asked. Learn the train times by heart.

A Pertinent Question.

H. H. H.

A boy of sixteen was an applicant for a very desirable position in the office of a man noted for his kindness and generosity to his employees. After asking a number of questions, the gentleman said to the boy: "Where do you spend your evenings?"

The boy resented this question and said smartly: "My evenings are my own, and I spend them where I please." "I make no claim on your time in the evening, my boy," said the gentleman kindly, "but I think that I can tell a great deal about a boy's character if I know where and how he spends his evenings."

This gentleman must have had in mind the saying of the wise man: "I care not how a young man spends his days. Let wisdom but direct his evenings, and his future is assured."

I have often thought of this saying when I have seen boys on the street late at night. One sees hundreds of them in

"WHERE DO YOU SPEND YOUR EVENINGS?"

the cities dawdling and idling away their time, when they might have the advantages of the reading rooms and free libraries provided for those who will use them. It is certain that many a boy takes his first lesson in crime when he is wandering around the streets in the evening. There are hundreds of men in prisons and reformatories who would not be there if they had made wise use of their evenings when they were boys.

The old curfew law requiring boys under a certain age to be in their homes by eight o'clock in the evening is being introduced in some towns, and there are many who think it a wise law.

The American boy has been for so long a privileged character that he is likely to resent this law, but there is sure to come a time in his life when he will know that it is a wise law that requires a boy to be in his own home at night.

It is true that a boy's character can be pretty well determined by a knowledge of where he spends his evenings. Few business men would care to put a young man in a place of trust if they knew that he spent his evenings wandering around the streets or with questionable associates. The question, "where do you spend your evenings?" is a pertinent one that any man has a right to ask of the boy he employs.

A Good Worker.

Alfred Smith is probably only one of many American boys who apparently prefer work to play, but he is the only one I have ever happened to meet. When I asked him how long he had been at work, he said, with a twinkle in his eye, "Oh! ever since I was born, I guess." And there wasn't so very much exagger-

ALFRED SMITH.

ation in that statement, for I have seen him ever since he was a wee bit of a boy trying to "help" around his father's meat market.

He tells me he has really worked in the market since he was nine years old. He began to "deliver meat" then, and now he delivers meat, waits on customers, helps "get in ice," and, in fact, does all the work of a grown man, excepting the heavy lifting.

From early morning till sometimes late at night he is at work, with very few "days off" during "vacation," and in the winter, when he goes to school, his Saturdays and most of his leisure hours are spent working in the market.

I wonder how many boys of fourteen—to which grave and serious age and the dignity of "wages" Alfred has now attained—could honestly say they "couldn't be spared" from the place where they work? When I asked Alfred if he enjoyed the Y. M. C. A. camp this year (the Y. M. C. A. boys of our city camp out for a week every summer), he replied, "Yes, but I only stayed two days. My father couldn't spare me any longer. You see, we were moving into this new market and he needed my help." And I wondered if Alfred's "help" had not, to some extent, made that "new market" possible.

Well, I'm glad to have met one "American boy" like Alfred, and I would like to hear of more of them. And the best of it all is he really seems to enjoy his work, as the picture of him, taken last year in front of the "old market," shows.

O. and Express office and state whether Ladies or Gent's Watch is wanted. Jeweled Elgin or Waltham Watch at same price if desired. This offer can not be continued long, so send order at once to

Sam Ward & S. Allen & Co., 45 Dearborn St., Chicago, Ill.

\$1.25 FOR NOTHING

Our presses have completed printing our Catalogue No. 89, of everything in LAY, USE AND WEAR. Each copy costs \$1.00 to print and 25 cents to mail. As an evidence of interest, send 10 cents in stamps to help pay postage, and you may deduct these 10 cents from your first order of \$1. It required 17 cartons of paper for this wonderful catalogue, which contains 180 pages, size 10 1/2 x 14 1/2 inches, equivalent to over 1000 pages of the ordinary catalogue. We save you 25 per cent. to 75 per cent. on everything you buy at every season of the year. This book quotes wholesale prices to consumers, and with it in your possession you buy cheaper than the average dealer.

There is little you can think of that this book does not contain, excepting Lacquered Boots. We even quote Live Animals. Everything a man, woman or child wears, all kinds of food, everything for the home, for the office, for a hotel, for use on a farm, in a barn, or for every known purpose, can be found in this catalogue. This book contains over 13,000 illustrations and quotes prices on over 150,000 different articles.

Lithographed Carpet, Rug and Drapery Catalogue, and our Clothing Catalogue with large samples attached, are also Free. Expressage paid or Clothing: Freight paid on Carpet.

Which book shall we send? Address this way:

October.

MORNING STARS: Venus and Mars. **EVENING STARS:** Mercury, Jupiter and Saturn.

LEGAL HOLIDAYS: None. **ANNIVERSARIES:** Battle of King's Mountain, N. C., October 7, 1780; Great Fire in Chicago, October 8-11, 1871; Columbus Discovered America, October 12, 1492; Burgoyne Surrendered at Saratoga, October 17, 1777; Cornwallis Surrendered at Yorktown, October 19, 1781.

Street corners are poor colleges.

There is no poverty like ignorance.

What goes into the brain today comes out tomorrow.

Boys are the most neglected portion of the community.

Boy friends are as dear and beautiful a source of inspiration as this old world affords.

A good condensation of the greater part of advice to boys is, "Work hard and keep straight."

Many men do not discover the true relation of father and son until it is too late to save the boy.

More than once a Christian teacher has found a boy's father standing between him and the boy.

A boy and his father should be confidential friends, even if it takes a little time from the father's business.

Oliver Wendell Holmes says: "Children are wonderfully sagacious in detecting their natural friends and enemies."

Charles Dickens says: "I love these little people, and it is no slight thing when they, who are so fresh from God, love us."

The key to success in life lies close to the hand of every boy. It is doing thoroughly and well every task, even the humblest.

There can be no doubt that the captains of industry today, using that term in its broadest sense, are men who began life as poor boys.—Seth Low.

A man recently bought an umbrella in Germany that cannot be opened without inserting a little key in a keyhole in the slide. It is said that he has never lost this umbrella!

A certain eight-year-old, when his father and mother were away, wrote them letters, all signed, "Your little friend." It meant son, companion, comrade, all in one.

During the past four years the Young Men's Christian Associations of the United States, through their employment departments, have placed in good positions 3,000 men and boys.

Young Men's Christian Associations are becoming more and more convinced that it is growing harder each year to bring its religious influences to bear upon men, while it is easier and more fruitful to bring them to bear upon boys.

Tommy—It was a dreadful day the last time I went to grandma's. It blowed and it—
Mother—"It blowed" is not proper. Say "it blew."
Tommy—It blew and it snowed awful.

The boy is the best thing on earth out of which to make a man.

If a boy is quiet, send for a physician. There is something wrong.

Expect boys to be gentlemen, but also expect that they will continue as boys.

Somebody says, "Don't worry about the boy wearing out the carpet. One yard of boy is worth ten thousand yards of carpet."

"He is a good boy!" That is as good a recommendation as you need, and you can earn it from a hundred persons if you but half try.

P. B. Fisk, the lecturer, claims that every boy at the age of fifteen has cost about five thousand dollars, and that if he attends college the amount will be doubled by the time he is twenty one.

It is a bad sign when a boy cannot be contented except when in the company of other boys. Every boy should have resources in himself. Have a mission in life, boys. Be of some account.

Charles Dudley Warner has said: "The disadvantages of being a boy is that it does not last long enough; it is soon over; just as you get used to being a boy you have to be something else, with a good deal more work to do and not half so much fun."

You can save fifty boys in the same time it will take to rescue one from the gutter. There is need for a fuller appreciation of the preciousness and value of the boys. They are pearls among our treasures, and harvests for our enrichment.

Horace Mann once remarked in an address at the opening of a reformatory institution, that if one boy was rescued from ruin the enterprise was worth all it cost. At the close of the exercises a friend asked him if he had not exaggerated the matter a little. Horace Mann replied: "Not if it were my boy."

Amid the cares and distractions of a singularly busy life, Horace Greeley managed to be on time for every appointment. Many a trenchant paragraph for the Tribune was written while the editor was waiting for men of leisure, tardy at some meeting.—Pushing to the front.

The older men of every community—the men whose good opinions are worth having—always keep an eye on the boys of their acquaintance, watch the development of character, and are proud to discover evidences of talent, force and honest purpose. Boys do not realize it, but they are making reputations for themselves which will some day be solid capital.

A teacher in a Chicago school not long ago noticed a group of boys counting holes in a piece of cardboard and was curious to know what it meant. The explanation given was that a saloon-keeper around the corner punched one hole for every free drink of beer a boy drank, two holes for a straight drink, and three for each mixed drink; and that at the end of each month three prizes were awarded as follows: The first prize, a revolver; the second prize, the Life of Jesse James; and the third, a meerschaum pipe. The prizes were awarded to the boys who had the most punches in their cards. The saloon-keeper knew that a saloon could no more run without boys than a sawmill without logs.

THE 'BEST' SADIRON "REST"

Is new and has merit. Every household, every milliner, every dressmaker, and every body else needs it. Saves room, saves temper, and is convenient. Cannot heat handle. SCIENTIFIC PHYSICAL CULTURE

Successfully Taught by Mail. The Stone System requires only a few minutes a day, in your own room, before retiring, with no apparatus whatever. Your individual condition carefully considered, and mild, medium, or vigorous exercise prescribed exactly as your particular requirements and mode of living demand. Intelligent exercise will cure or prevent most of the ills to which the flesh is heir. Mr. Frederick W. Stone, director of Athletics of the Stone School of Scientific Physical Culture, has been director of Athletics of Columbia College, The Manhattan Athletic Association, The Knickerbocker Athletic Association, and is at present acting in the capacity with the Chicago Athletic Association, an organization of Chicago's most prominent business men, whose clubhouse represents an investment of over \$50,000. He is a practical instructor, and at the age of 50 years is a physically perfect man. Our aim is to create a perfect development, greater strength and better health, rather than to produce professional strong men. Does not overtax the heart. Both sexes, all ages, from 15 to 80 are alike benefited. Illustrated descriptive booklet and measurement blank sent **FREE.** The Stone School of Scientific Physical Culture, Suite 1645, Masonic Temple, Chicago, Ill.

Boys in Flats and Boarding Houses.

"There is hardly any excuse for a parent rearing a boy in the average boarding house, flat or tenement," says the Reverend T. Dewitt Talmage. We might as well expect a hothouse plant to have the strength of the crocus growing at the foot of the snow bank...

Keep the Boy Ambitious.

FRANK H. SWEET.

Many of us have seen the discontented boy making a pretense of picking up stones or potatoes, or perhaps sulkily working his way across an onion or turnip field, and we know something of his value in the economy of a farm.

We coax the restive or refractory horse, and do not think time wasted in training him to usefulness; and yet some of us are unwilling to do as much for the boys who are being fitted for the higher and more intelligent work of the farm.

Remember that work is well done when the laborer's heart is in it, but when the heart strays, the work flags.

Better Than Taking a City.

M. B. S.

The Mausers were coming over the hill at the rate of millions to the minute. It appeared, yet none seemed destined to touch the broad-shouldered Major who paced up and down behind the prone firing line.

less advice to men who had been waiting for this chance all day.

"One thousand yards!" called the Major; then, "Make it eleven hundred." We were getting their range down fine, but they were retallating in the same way.

Major Arnold walked a little beyond his accustomed beat, and came face to face with Captain Warren before either realized that the other was anywhere near. There was a moment's pause, then both grasped the outstretched hand of the other.

The musketry continued without a pause. "Here, bind up this sergeant's arm!" Hardly were the words out of his mouth before the Major fell, shot through the thigh, and was carried to the rear.

The fortunes of war compelled me to bunk with the Captain that night, for one thin poncho was all we had to cover both of us. The excitement of the day made both restless and sleepless.

My thoughts went back to the proverb about conquering one's self and taking a city, and as I turned over to sleep, my last thought that night was one of pride in the two brave men I could number among the list of my comrades.

The publishers of THE AMERICAN BOY will sell at a very reasonable rate to professional or amateur papers the cuts used in illustrating this or any of the preceding numbers of THE AMERICAN BOY. Illustrate your papers.

A Well-Known Amateur.

WILLIS EDWIN HURD.

Few amateur authors have been so prolific in all branches of literature as William H. Greenfield, of Philadelphia, who has been called the father of the United Amateur Press Association, being its founder and principal organizer. In editorial argument, in essay, in verse and in story writing he has had exceptional success, winning during 1899 either first or second place in all the literary laureateships of the U. A. P. A., thus demonstrating beyond a doubt his versatility as well as ability.

Mr. Greenfield was born in Philadelphia in 1881 and had attracted notice as an amateur writer by the time he was thirteen. At fourteen he contributed to a number of professional juvenile publications, and though most prominent as an amateur, he has done a great deal of work for which the professional press has paid him liberally, much of the work

WILLIAM H. GREENFIELD.

being of a high order of merit. Last winter he completed a long serial on the English-Boer war, under an assumed name, which he disposed of to a literary syndicate. Few, if any, contributors to the amateur press stand higher than Mr. Greenfield, who has been a leader since 1895, when he became the first president of the U. A. P. A., laying the foundations of the organization, undertaking its first expenses, and raising it to a position of prominence in the "junior world of letters." Mr. Greenfield has published, edited or helped to edit a great number of amateur journals, at one time being connected with eighteen different publications. Among these were Greenfield's Monthly, Greenfield's Magazine, The Amateur Press, and Hot Stuff, the last named being an illustrated comic monthly having professional contributors. In 1896 he published the first amateur newspaper modeled on professional lines, with headlines, display, editorials, etc. He is a leader in the world of amateur journalism.

A boy in Flushing, N. Y., who is not yet twenty has secured the publication of a weekly religious journal and is making great preparations for bringing it out. He is installing a sixty by twenty press, with new type and a motor, and intends to give employment to several men. He says he has also an offer for the publication of another journal, a monthly, which he is considering. This shows the opportunities that there are for boys with the right stuff in them—enterprising, energetic boys who wish to get ahead.

Practical Printing for Amateurs.

W. S. KNOX.

To the average American boy there is no more intensely interesting or really instructive study than that of printing, and the mysteries of the typographical art—"the art preservative of all arts"—are perhaps mastered more easily and quickly than are those of any other art or profession. Time and experience, of course, are required to perfect the learner in this as well as in any other trade, yet the boy who can not go into a printing office and learn the "lay of the case" (the location of the various letters of the alphabet in their boxes) sufficiently well the first day to set two or three "sticks" (the printer's implement for holding the type as he picks them letter by letter from the case), would, indeed, be a dull boy. "Practice makes perfect," 'tis true, and the young student in the art typographical can only expect to become expert and "fast" by diligent practice and careful attention to details and particulars.

A "printer" is generally supposed to be a person who does all the work that is required in a printing office—from setting the type and "locking the forms" ready for the press, to washing the ink rollers and doing the actual work of printing on the press. This is now only true in the small printing offices. In the larger shops each operation is a "trade" by itself. The man who sets the type is a compositor—and even that occupation is sub-divided into several specialties, such as "news compositors," "book compositors" and "job compositors"; the one who arranges and prepares the "forms" for the press is the "make-up" or "stone man"; the one who puts the "form" on the press and prepares it for the act of printing is a "pressman"; the one who actually prints the "job"—who places the sheet of paper in the press to receive the impression of the type form and removes it therefrom—is a "press-feeder." The small shop and "country" printer, however, has the opportunity to become proficient in all these operations and become what is known as an "all-around" printer—able to fill any and all of the various positions in the mechanical department of a printing office. The amateur printer may be classed with the "country printer" in the opportunities he has for "learning the business from the ground up."

This article is written on the supposition that those who are sufficiently interested in the art of printing to peruse it are also acquainted with the simpler mechanical details of producing a printed sheet. Boys' printing presses are numerous in variety and cheap in price, and there are few neighborhoods where at least one boy is not the envied possessor of a printing machine. Most of these small printing presses, too, be it said, execute as good work, mechanically, as the larger and more expensive "Gordons." It all lies in the "manner of doing it." Any boy with some pains in selecting his type assortment, a little taste in arranging his lines, and the exercise of care in using the right quantity of ink and in handling the freshly printed job so that it will not "smut" or blur or "offset" upon the sheet laid on top of it, can turn out work hardly distinguishable from a "city" job.

When a boy receives a printing press and a few fonts of type, the first thing he prints is his name. Then he prints "name cards" for all his sisters, aunts and cousins. This soon becomes mo-

notonous, and then he gets himself up a "business card" as follows:

WILLIE B. GREEN,
Plain and Fancy Printer,
Blankton, O.

His career as a printer is now fully under way, and it depends entirely upon his own energy and ability whether he will earn a reputation for neatness, accuracy and general excellence as a typographical artist, or whether he will become a "botcher" and his work be the laughing stock of all who see it.

The trouble with the great majority of amateur printers is that they choose too much "fancy" type, when selecting an office. Fancy type, except in very modest faces, is considered "out of date." Little of it is now used except upon special occasions and then only sparingly and by expert printers. Scripts, too, are used sparingly and are confined mainly to invitations, announcements and the like. Shaded outline, and very light face letters are used much less than formerly. The prevailing styles are toward the use of plain, neat, and rather heavy faced type in various styles. A study of the advertising columns of THE AMERICAN BOY will attest this fact, and also disclose some of the most popular styles of type faces now in general use. Besides being tasty in design, these letters are good wearers, long lasting and are not easily injured or broken. They are serviceable in nearly all classes of printing, and, with comparatively few sizes and varieties, very creditable job work can be produced by any boy who gives his work thought and careful attention. The average amateur printer is generally over anxious to do "fancy" printing, when plain work would be easier to do, present a much more tasty appearance when finished, and be more pleasing and satisfactory in every respect.

(To be Continued.)

We have received several copies of "Arrows," issued from the press of Charles W. Heins, 1920 Lexington avenue, New York. It is an amateur magazine deserving of much praise, both from an editorial standpoint and for the work of the printer. Charles W. Heins is editor; Otto W. Henschel, associate editor; Arthur J. Maecker, business manager, and Henry M. Henschel, staff artist. The contents are well selected and a good variety is given, and the pages are enlivened with cuts, ornamental initial letters and a fancy running head, the word "Arrows" being in heavy script with a long arrow running horizontally through the letters.

"Evel Angel's Magazine," published at Victoria, Tex., has just made its appearance. The contents consist of two stories, some historical articles, a department headed "The Waste Basket," another for recipes and another entitled "The Florist." The name "Magazine" is hardly appropriate for the publication in its present form, as it is printed on rather poor paper and consists of only eight pages about half the size of the pages of THE AMERICAN BOY.

Answers to Correspondents.

Fred T. Woodruff—Flashlight powder can be bought already put up in boxes, with fuse attached; six boxes for thirty five cents or less.

Henry Allen—There is no necessity for you to buy a dark closet; every room in the house is a dark room at night. Do your developing at night.

Wm. Eickoff—You must make "positives" of common plates, but it is not so easy as to use lantern slide plates. The ordinary plate is too quick.

Jules Labadie—Never draw your slide with the sun shining right on the plate holder. Cover it with the focusing cloth, or a handkerchief, or the sleeve of your coat.

Photographic Notes.

Developing powders, when fresh, can generally be depended on to give satisfaction.

For under-exposed plates metol cannot be excelled; but use it cautiously, or it will fog your plate.

The slightest movement of the camera during an exposure will cause double lines to appear on the picture.

Beginners are advised to buy their developers already prepared. But insist on being given something reasonably fresh.

The simplest paper to use is the blue print, and it is the cheapest. After the print is made, it is fixed by washing it in water.

Some photographers when making a picture of an auburn haired girl, will discreetly powder the hair, so as to prevent the picture giving the golden locks too dark a color, for red photographs black.

The reason why a picture is not as clear on the edge as in the center is because the marginal rays of light do not come to the same focus as those entering through the center. This can be remedied by using a smaller stop, and giving a longer exposure.

Quick Picture Making.

Doubtless many readers of THE AMERICAN BOY have noticed an item in the daily papers telling of quick picture making before the Michigan and

Ohio Photographers' Association while it was in session at Put-in-Bay, the latter part of August. It stated that the negative and finished print, even to the mounting, was completed in eight minutes and twenty four seconds. How was it done?

The negative was made at night, with four seconds exposure by acetylene light, which seems to have most of the qualities of daylight. It was taken out of the developer as soon as there was sufficient density to show detail in the shadows—less than two minutes—and then dropped into a strong fixing bath and cleared in a moment. Then with hardly an apology for a wash, a piece of Velox printing in paper was floated on the plate under water to make it lay smooth, and it was afterwards exposed to artificial white light for ten or fifteen seconds. The print was then treated exactly as the original plate was: developed in a few seconds, dropped in a fixing bath, given an apology for a wash, and mounted.

Such a print will not keep very long; neither will the negative, for in neither instance has the "hypo" been washed out; but it serves to show what can be done in an emergency. After the quick print is made, the plate can be put back into the fixing bath, and then thoroughly washed, when it will be all right, providing the original developing was carried sufficiently far.

Tone Values in Pictures.

The common, everyday plate used by amateur photographers lacks one quality essential to the highest photography. It does not represent the true color values of the various shades photographed. To the eye, a bright yellow appears much lighter than a medium dark blue; but when the blue and the yellow is photographed on the ordinary plate, the yellow comes out dark, and the blue is nearly white. This is because the blue reflects actinic rays, and the yellow does not.

While the yellow possesses the illuminating power that makes it look bright, the blue has a chemical power that causes it to impress itself much more readily on the sensitive plate. So chemists made a hunt for some chemical or combination of chemicals that, when used on the plate, would make it more sensitive to the yellow, while not being any more sensitive to the blue, thus producing in the finished print what is called

ALL IN A BOAT.

SECOND PRIZE PHOTOGRAPH, BY CLARENCE CORP, CURFU, N. Y.

"tone value," that is, the representation of colors as they appear to the eye—yellow, light; and blue, dark.

The result of all the experimenting has been the production of "orthochromatic" plates, from two Greek words, "orthos," correct, and "chroma," color. The plates are prepared by so coloring the emulsion that it is sensitive to red and yellow. These plates are a little slower than the regular kind, and therefore are not so well adapted to snap shots requiring short exposures. Besides, unless very carefully developed, they are apt to come out flat, without sufficient contrasts. For this reason many photographers will have nothing to do with them, preferring to manipulate the plate by reduction or other baths, to paying a big price for a plate that loses in one direction as much as is gained in another.

Worthy of Notice.

The photos sent THE AMERICAN BOY, the past month, are in the main of a better quality than usual. Among those most worthy of notice might be mentioned Forest S. Harvey's picture of "Rip Van Winkle Rock," showing the face of an old man. It is a beautiful scene, but it lacks snap. M. Blanchard's picture of a Texas dam is a good photograph, except for the lack of detail in the shadow; but the woods are too far away. Roy Case's ponies are good. The blue prints by Charles H. Otis are well taken, but the view selected is not sufficiently striking to justify the trouble, except for personal reasons. Lawrence C. Godfrey's Pan-American buildings are all right, but badly printed. George W. Kennedy sends a negative of his pony Fanny. It ought to make a good print, yet it is slightly fogged—probably from too warm developer, or the light of the dark room being too strong.

"Oh, how I do appreciate a boy who is always on time," says H. C. Brown. "How quickly you learn to depend on him, and how soon you find yourself intrusting him with weightier matters! The boy who has acquired a reputation for punctuality has made the first contribution to the capital that in after years makes his success a certainty."—Pushing to the Front.

"PEACEFUL LIFE."

FIRST PRIZE PHOTOGRAPH BY ARTHUR G. GILMAN, LEBANON, OHIO.

BOYS IN THE ANIMAL KINGDOM

Why Do Birds Migrate?

No one has given a really satisfactory reason for the migration of birds. Some say it is a matter of instinct; others that it is a matter of example—the younger learning from the older; still others that it is largely a matter of search for food. The last-named reason will hardly hold in view of the fact that, often, birds disappear when food conditions are seemingly perfect. Notwithstanding naturalists have studied and written much on the subject, the real reason remains a mystery. Some extraordinary stories are told of migratory birds. It is said that the Virginia Plover flies to the height of two miles and at a speed of two hundred and twenty-five miles an hour. It is reported that a Black-cap Warbler arrived at a certain bush in the north in three successive years at half-past three o'clock of the afternoon of the same day.

A Fish That Fishes.

Most remarkable of strange fishes is the angler fish, whose very name seems a paradox. The fishing fish is nevertheless a reality, and a stern one to all that approach those awful jaws of his. With a body the color of mud he generally lies in the shadow of some rock on the bottom of the sea, waiting motionless for

the approach of his prey. He is provided with an odd kind of fin just over the mouth, and this is held out in front of him to give warning of the coming of something to be swallowed. One taken alive was experimented on, and it was found that if this projecting fin was touched with a stick, even though the stick did not come near the mouth, the jaws closed convulsively. This shows that the fin, by some provision of nature, closes the jaws as soon as it is touched.

The mouth is tremendous, growing to the width of a foot when the whole fish is only three feet long. One of these anglers was caught not long since, and, although it was only twenty five inches long, a fish fifteen inches long was found sticking in its throat. The angler is provided with peculiar teeth set in double or treble rows along the jaws and at the entrance of the throat. Some of these teeth are a foot long. He is not a pretty fish to look at, but he attends strictly to business, and will swallow anything that touches his warning fin, whether it be meant for food or not. All kinds of things have been found in the stomach of anglers, from bits of lead and stone to fish almost as large as the angler itself. This is without doubt one of the most peculiar and interesting fish in the whole ocean.

DOGS

BY
A. Neely Hall.

Of all the pets owned by boys, I think that the dog is the best liked and usually the last to be neglected. If it be only the common street cur it generally finds kind treatment at the hands of a boy. This seems natural when you realize what a good companion a dog is. He loves to accompany his master upon his hunts and rambles, and, if taught to fetch game, he can make himself very useful.

When choosing a dog it is best to secure a young puppy, as he can be more readily trained than an old dog, and he will grow up to understand and obey your commands.

If you live in a large city, where there are very small back yards, it is not advisable to keep a large dog, for he cannot get enough exercise to keep him in good health. Our best authorities on dogs say that if he has plenty of exercise it does not matter how much meat he is fed. The old idea that meat gives him disposition is now dropped, as it has been discovered that it is a germ disease, and the contagion is always received from some other dog. This dreaded disease has a great many stages, each of which must be gone through before the dog can recover, and there is nothing to do for him but put him in warm quarters and keep up his strength by plenty of nourishing food. I think you will find Shields' book, entitled "The American Field and Dog," one of the best publications upon dogs' diseases and the remedies for the same.

To return to the feeding of dogs, let me say, that you ought to have regular times for their meals. Puppies should be fed four times a day until about one year old, when three meals a day are sufficient. From two years on feed your dog two meals a day, morning and night, the hearty meal being given in the evening.

HOW TO TRAIN YOUR DOG.

Begin when he is a puppy, and make him understand that he must obey every command given him. This done, it will be found very easy to teach him the most difficult feats. If you go hunting of course you want to teach him to retrieve. He will very soon learn to fetch a stick thrown fifty or a hundred feet away from him. When you have taught him this you can try him at game. He will very likely mouth the first bird; to cure him of doing this take a dead bird and stick pins in it points outward. Toss this as you did with the stick and command him to "go fetch it." You will find that he will very soon learn to carry it without making the slightest mark of his teeth upon it, as the pins will prick him sharply if he does not.

FIG. 1. SIDE OF KENNEL.

The best time to train a dog is just before meals, as he is then hungry and can be rewarded with some food every time he performs a trick successfully. To teach him to jump through a hoop, hold one close to his head and taking a small piece of meat hold it in your other hand in front of the hoop, at the same time giving the order, "jump, sir!" He will naturally jump for the meat and go through the hoop. Raise the hoop a little higher each time, repeating the order, "jump, sir! jump!" In this way you can get him to jump through it at quite a height, and when he becomes accustomed to your command, he will jump at the snapping of the fingers.

I once had a water spaniel, named Jerry, whom I taught to jump through a hoop. He thought it such fun that when I was not around he would often times jump an eight-foot fence into the alley and come around to the front porch and wait until let in.

Unless you are rewarding him for doing a trick, always make your dog speak for his food. I find that the best way to teach him is to hold a piece of meat about as high as your head and command him to "speak!" At first he will look puzzled and try jumping for it, but after you have repeated the order several times he will usually growl. Give him the meat and taking another piece go through the same performance. It is very likely that he will understand what you mean this time and will answer more promptly than before.

A dog may be taught how to shake hands very easily. First take hold of his paw and shake it, saying, "shake! shake hands!" then try tapping his paw and at the same time repeating the order. If he fails to give you his paw you will have to take it and shake it, as you did in the first place, until he understands

what is wanted. A favorite performance of Don, a Yorkshire terrier, is to stand holding a cane between his paws while decked with a large, dark cravat and a pair of spectacles. His picture is here reproduced in this costume. There are three good rules to follow in training a dog: First, never tire him out; second, do not attempt to teach him more than one trick at once, wait until he has thoroughly mastered one before attempting to teach him another, or he will get confused; third, always be firm with him and make him mind everything you tell him to do.

The first thing that should be done after getting a dog is to provide a shelter for him. Unless you have a barn in which to keep him, you had better build him a kennel. The dimensions depend entirely upon the size of the dog. For one of medium size, a kennel should measure three feet long, two feet wide and three feet high. Cut two six-inch boards each two feet long, and two each three feet long. Mitre the ends of these and nail them together. On this foundation nail the floor, after which saw twelve pieces of six-inch board two feet long, and eight pieces each three feet long. Taking six of the two-foot boards for each side, nail them together by means of braces (figure 1). In the same way make the front and rear walls out of the three-foot boards. Cut a doorway

in the front wall, large enough for the dog to enter with ease, after which set the four sections in place and nail them together. It will be noticed that the front and rear walls were made a foot taller than the side ones. This was done to allow for a slanting roof. With a pencil and ruler find the centers of the top edge of these walls marking them (b). Taking a carpenter's square, draw b, a

FIG. 2.

(figure 2), after which cut off the triangular pieces. The roof is made in two pieces and put together in the same manner as the walls. Each section should be three feet six inches long by one foot eight inches wide. Fasten one section on with nails and hinge the other to it at the peak of the roof. By lifting this section you can get at the inside when you wish to change the bedding. To keep the kennel well ventilated, bore

one-half inch holes around the base about three inches apart, and three or four near the top of both front and rear walls. If boards with matched edges are used in the construction, your kennel will be water tight, and a few coats of paint will keep it in good condition for a long time.

One disadvantage in having a dog in the city is that you cannot keep your lawn or garden in good condition with him running about upon it, digging here and there to bury his bones. There are several ways of overcoming this difficulty, however. A good plan is to fence off a run about four feet wide along one side of your yard with two-inch wire mesh. If your dog is large this will have to be made between six and eight feet high to keep him from jumping over it. A much cheaper way is to make

A TROLLEY FOR YOUR DOG.

It may be run alongside of your fence from the house to the barn. Fasten a hook in the wall of the house and barn about four feet from the ground. Secure a piece of stout wire the required length and a small pulley. In one end of the wire make a loop, similar to figure 3, and put it on one hook, after which slip the pulley on the wire and fasten the other end to the second hook. Attach the dog's chain to the pulley and the dog will take the place of the electricity found on a trolley wire. If you cannot

FIG. 4- CROSS SECTION OF FENCE WITH TROLLEY.

spare the entire length of the yard for the trolley, you can put it up differently. Cut two pieces of two-by-four about two feet long and nail them to the fence posts as far apart as you wish. In the ends of these fasten the hooks, and after attaching the wire, brace the two-by-fours to keep the wire tight. (See figure 4.)

Place the kennel at one end of this trolley in such a way that your dog can enter it without being checked by his chain. Although the freedom of a dog is somewhat limited in this way, it is a great improvement over chaining him up to a post.

\$450.00 net profits from the sale of the progeny of one doe. Similar stock of all ages for sale. Belgian hares breed five times each year, thrive anywhere; require little attention or capital. Send 4c (stamp) for booklet on feeding and breeding. Kemp's Belgian Rabbitry, Los Angeles, Cal.

SPECIAL—three does not related and bred, and one buck, from \$20.00 up.

MRS. C. D. BOND, Sta. A, Los Angeles, Cal. (Box 20), BRANCHES IN ENGLAND, MINNEAPOLIS, AND CHICAGO.

A Novel Fishing Experience. N. R. BRIGGS.

If the readers of THE AMERICAN BOY were told of how thousands of fish have been caught alive, right fresh from the ocean, without hook, line, net, or even the so called "silver hook," used by some fishermen when in hard luck, no doubt they would think the story a little fishy. However, the story is too good and true to be left untold, so I will relate it, as I myself took an active part on one of these "easy" fishing occasions.

It was early one afternoon, late in November, when I boarded a car for Coney Island, that famous watering place by the sea, to look at the damage done by a great storm that had passed along the coast. It was sundown when I concluded to return home. As I strolled along the beach in the direction of the station, as many others were doing, I saw a man rush to the water's edge, pick up something and hastily retreat again, a big wave following close on his heels. When I drew near to where he stood, I saw that he had a large fish still wriggling in his hands. I remarked that it was an easy way of catching a fish. He replied, "Yes, and the first I ever caught in this manner."

Continuing on, I saw another man rush toward the water and pick up something. Hastening to his side, I saw that he, too, had caught a large fish. Surely this was really the first good fishing I had ever seen or taken part in.

Full of excitement, and determined to try my skill at rushing, I walked on a few feet farther and stopped to watch a big wave come rolling in. As it broke upon the beach and began running out again, I saw my first chance to rush, for there in about an inch of water was floundering a big fish. The next wave would carry it out again, should I wait but an instant. I rushed, and with a smart kick sent the fish up on the beach high and dry. In this novel manner of rushing and retreating, I caught twelve nice fish which, I found on reaching home, weighed nearly nine pounds. I saw over two hundred fish caught in this manner, some of them weighing from two to three pounds each.

The explanation is this: In running in too close to shore to feed on the sand cel, three or four inches long, the fish are caught in the breakers and thrown up on the beach, and if not caught are generally carried out again with the next breaker. The fish are called Frost-fish, or English Whiting, and are splendid eating. Codfish are frequently caught in the same way. During the first frosty weather of winter is the time to look for this kind of fishing along the seacoast.

JUMPING.

The Proper Way to Jump, the Different Kinds of Jumps, and the Benefits of Jumping as a Gymnastic Exercise.

P. W. HEMPHREYS

Jumping is an athletic sport as old as history. It is often referred to in the Greek and Latin classics. In fact, jumping was one of the five great events at the Olympic games—the national sports of the Greeks held at Olympia every fourth year.

It is claimed by those who are experts in this sport, that there are many reasons why boys should practice jumping. Aside from the fun of it, it is one of the very best gymnastic exercises. Unlike tennis, bicycling, and many other popular sports of to-day, it does not require an expensive outfit. It is as free as air, as walking, as running. It demands no skill in managing tools; simply skill in managing one's self, but of that sort of skill a great deal. Only the juggler, in fact, is more completely master of every nerve and fibre of his own body than is the leaper.

Jumping is exhilarating, exciting and manly. It teaches the throwing of one's whole self into a thing in an instant, and this is something that every boy should learn, for he will have to practice it very many times when he becomes a man in the business world.

That it is useful to know how to jump, nobody will pretend to doubt. The story book, "Leap for Life," is rare enough in the real world, but the leap to save distance and time is a thing of every day.

There are three kinds of jumps, each of which admits of more or less variation.

- 1. The long jump (also called wide, broad, horizontal, level, ground).
2. The high jump.
3. The jump from a height down, generally known as the vertical jump.

It may not be necessary to explain to a boy, who is a boy, just how to use the hands, feet, and body in each of these jumps, but a few hints can be given that will help him to become, with practice, a powerful and graceful jumper.

In all jumping, take the fullest possible breath at the moment of the spring.

An old champion writes: "When the jumper throws himself forward, he must employ all his vigor, so as to make a bound as far as possible." "When he has thrown himself forward, he must employ all his activity in order to fall as softly as possible." Fall on the ball of the foot; bend the legs the instant the ground is touched, and then let the heels drop. The jar of the falling directly on the heels may cause a shock great enough to injure the brain, while dropping heavily on the toes may sprain them.

The long jump may be taken with or without a run. The standing long jump is sometimes made with dumb-bells or other heavy weights in the hands. By throwing these backward a greater distance can be cleared. The use of weights, however, is no longer in favor with the best jumpers. In the standing long jump, most boys jump too low, jump high, and you will surprise yourself.

A run of forty yards is often made for a running long jump, but there is no rule for the length of the run. The spring, or "take-off," as it is called, should be made at the top of your speed and on the ball of your foot. If you feel as if you were going to take-off too soon or too late, or on the wrong foot, don't slow up, or lengthen or shorten

your stride. The chances are ten to one you will take-off all right.

It is an admirable plan to lay a white handkerchief or paper just beyond the point where you expect to land. The sight of this makes you strain every muscle at the right moment, and at the same time makes you less nervous about your take-off. In the air, keep the arms perfectly straight, pointing front and slanting downwards. Held in this way, they will help a good deal in keeping the body bent forward as it should be. One of the best jumpers in the world gives the following three rules for a running long jump:

- "1. Use all your pace. 2. Never alter your stride. 3. Jump much higher than you feel inclined to."

In practicing the high jump, you will do well to use a simple apparatus by means of which you can tell exactly how much you gain day by day. You can easily make this apparatus yourself.

Perforate two poles six or seven feet long with holes an inch or two apart; number the holes, and make for each hole a pin which slides easily into the holes. Fix the poles erect, place the pins in holes of the same number, and lay over the pins a cord weighted at both ends with bags of shot or sand, or, if you prefer, lay on the pins a light wooden rod. The rod or rope falls readily to the ground when hit by the jumper, and no harm is done. This is much safer than practicing on stone walls and fences.

In the running high jump, there is as much danger of running too hard as there is in the running long jump of not running hard enough. For the running high jump many professional jumpers walk a part of the distance to the point of the spring—"to fix the nerve and muscle," as they say—and depend on the last three strides for momentum. About half the height of the jump is the best distance to take-off from; as much depends upon gauging this accurately as upon making a strong spring.

No rule can be laid down as to the position of the body in crossing the rope or bar. No two jumpers cross exactly alike. Some always bend their legs under them, and then straighten them out, while others throw the legs one side.

The vertical jump is not often seen in athletic contests, but it is perhaps the most useful of the three kinds of jumps at the same time that it is the most dangerous. In this jump it is much more important to land right than to spring right. Landing on the ball of the foot is here absolutely necessary, and in jumping from a great height it is safest to bend the knees at the moment of striking the ground, and to fall forward lightly on the hands. Jumping from a height should be practiced very gradually, but for that matter so should all jumping and all athletic sport.

The comet which visits our atmosphere but once in a thousand years is never a single second behind time.—Pushing to the Front.

JOUST AND CIRQUE Two entirely new and extremely interesting games for young or old. Both games are played by two persons on a specially designed folding board, with two sets of ten men of adverse colors. Joust is a game of chance and skill—the extent of the movements of the men being governed by the throw of dice—while the choice of the men to be moved is with the player. As the name indicates, it is somewhat in the nature of a "Combat" or "Battle," very exciting as the game draws to a close. Cirque is a game of skill, commencing in the style of "tick tack toe, three in a row" and closing on the order of checkers. Very interesting. These are, undoubtedly, the best games, for the price, in the market. Board, Men, Dice and Dice Cups in Box, with rules for both games, sent postpaid for 50c. DETROIT HOME AMUSEMENT CO. Box 119, DETROIT, MICH.

WORDEN'S PHONOGRAPH TOP THE LATEST CRAZE Spins from seven to eleven minutes, by far the longest of any top ever sold. Any tune in perfect harmony can be played upon it. Easy to spin and play, and equally interesting to young and old. The latest fad in parties is the top party. Let us send you one dozen tops. Give a prize for the best tune, the most tunes played, the poorest tunes, etc. Your party will be the most amusing of the season. BOYS MAKE MONEY SELLING THEM. Procure from your dealer, or we will send you one dozen prepaid \$2.50, single tops 25 cents, with 8 cts. for postage, silver or money order. WORDEN & WHITMAN, 110 RIVER STREET, YPSILANTI, MICH.

A Champion Jumper.

BAXTER, OF THE UNIVERSITY OF PENNSYLVANIA.

TETHER BALL.

It is the Popular Sport Among Schoolboys as Well as College Men Just Now.

The illustration shows a game of tether ball in full progress. To give the best results the pole should be about sixteen feet long. As two feet must be buried to make it stand firmly, fourteen feet will be above ground.

Two rackets are necessary, one for each player. If you possess tennis rackets they may be used; if not, rackets cut from a pine board will do quite as well. The cord to which the ball is attached should be eleven feet long. Fasten the ball to the cord by means of a small net. If there is some member of the opposite sex whom you can interest in tether ball (and this game is quite as well suited for girls as boys) she can probably crochet a net for you with very little trouble; but if this kindly aid can not be secured, a strong and durable fastening may be made as follows: Cut from a piece of cotton flannel or chamois, a disc ten inches long. Make a large knot in the end of the cord. Gather the flannel or chamois about the ball and knot. Tie firmly by binding the edges of the disc close to the cord above the knot. Paint a black circle one inch wide six feet from the base of the pole. Bore a hole three inches from the top of the pole; push the end of the cord through, and then knot it. This makes much the best fastening.

To play: Toss up to see which player shall have the choice of court. The courts consist of half the circle about the pole. If the winner of the toss prefers he may forfeit the choice of court and choose in which direction he will wind the ball. After deciding this point the two players take position in their respective courts. (On no account must they make an off-side play by trespassing into the court of an opponent.) The player to whom has fallen the choice of direc-

A GAME OF TETHER BALL.

BAXTER WINNING THE WORLD'S CHAMPIONSHIP IN POLE VAULTING, IN THE PARIS SPORTS. —Collier's Weekly.

tirely wound round the pole. His opponent's play is to, if possible, interrupt this and start the ball in the opposite direction. The last decisive turn of the cord which brings the ball against the pole must be above the black ring mentioned. If a player strike the cord above the ball, and so winding it around his racket and stopping it altogether, his opponent is allowed a free serve.

HOME-MADE PRINTING PRESS

FREE, BOYS, FREE! To every fifth boy who sends ten cents for my book telling how to make your own boats, cameras, steam engines, kites, electric batteries, wind mills, telephones, magic lanterns, bow and arrow, fishing tackle, balloons, toy houses, all kinds of traps, and many other things. The Beginner's Guide to Stamp Collecting. FRED. J. MELVILLE. Author of "Stamp Collecting," "The Stamps of Haiti," "A Postage Stamp Zoo," etc., and Editor of "The Young Stamp Collector" (London, England). (Begun in June Number.)

STUMBLING BLOCKS AND HOW TO GET OVER THEM. The collection of the unguided beginner is generally a veritable agglomeration of blunders. The chief cause of this state of affairs is the neglect on the part of some Governments to include in the inscriptions on their stamps the name of the country by which they are issued. In other cases where the alphabetical characters are different to our own, beginners are puzzled to know to which country to give the credit of some postal issues. Not unfrequently will it be noticed in glancing over the collection of a comparative beginner that specimens of Swiss stamps are included in the space devoted to the stamps of France. This is on account of the word "Franco" (meaning free) being confused in the name of the French Republic. Mistakes of a similar character are surprisingly numerous, and it is with a view to preventing in some measure the repetition of such errors that this dictionary is given naming the inscriptions by which the readers may identify certain stamps with the nationalities of their emission. The Numismatic Sphinx.

Station A, Detroit—The 1832 cent, with either small or large letters on the reverse, is worth only five cents.

J. O. H., Chicago—Your rubbings are all of very common coins. The Mexican one centavo nickel is worth a dime.

Arthur Bergantz, Phoenixville, Pa.—A ten cent piece of 1821, in good condition, is worth thirty five cents. The head on the obverse is that of Liberty.

Miss Leona G., Des Moines—Your rubbing is taken from a two ore copper coin of Denmark. The large C within which are the Roman numerals IX, is the monogram of Christian IX., under which the coin was issued. There are three coins in the set, viz.: One, two and five ore, all of which are very common.

Preserving Insects.

The care of a collection of insects is quite a responsibility, as there is constant danger of other insects getting in and devouring the specimens. When the insects are caught they are killed by being put into what is called a cyanide bottle. This bottle is prepared by covering several crystals of potassium cyanide with plaster of Paris, dampening the plaster and allowing it to harden. The fumes of the cyanide fill the bottle and are very poisonous. If the insect is too large to be placed in the cyanide bottle, place it in a vessel with a few drops of chloroform, and cover from the air. After the insects are dead they are "mounted" by thrusting a slender pin through the thorax, or the division of the body to which the legs and wings are attached. With beetles, however, the pin is thrust through the hard covering of the right wing. Moths and butterflies are prepared for mounting by spreading the wings out smooth on a "stretching-board." This board is made by placing two soft wood pieces on blocks, parallel with each other, leaving a space between them to receive the body of the insect. The wings are then spread out upon the two pieces, where they are held by papers or threads, and pins, while the body rests in the space between the boards. The insects, after being dried are placed in shallow boxes, such as cigar boxes, the bottoms of which have been covered with some soft substance, such as sheets of cork or pieces of corn-stalk pith, into which the pins may be easily inserted. Moth balls, or some such insect preventive, should be always present in the boxes to prevent the specimens being eaten by other insects.

The Army and Navy Button Collection.

W. G. S.

Surely every American boy has a fad or "hobby" of some kind. It may be collecting stamps, coins, curios or any other articles, but there is one thing that I have known but few boys to collect, that is, the buttons of the army and navy. Of course, some boys may have two or three buttons, given to them by the soldiers of the late war, but this is not a collection. Each state has a militia, and the buttons used by the militia have the seal of their state on them. Another button is that worn by the regulars, which has the American eagle on it. Then there

P. A. Warsabo, Coldwater, Mich.—A good 1798 dollar the dealers would charge you two dollars and fifty cents for. It is one of the commonest of the old date dollars.

D. W. Randall, Watervliet, Mich.—Your rubbing is taken from a Roman silver coin, but the inscription is so indistinct that we cannot locate it. As you state, it is a difficult matter to get a desirable rubbing from these ancient coins. Send us a copy of the inscription on the coin, or, better still, the coin itself, and we will place it for you.

Stewart Riblet, 1684 Superior street, Cleveland, O.—Wants to know the value of a Bank of Old Dominion (Va.) note of one dollar and twenty five cents, issued May 1st, 1862. Who can tell him? He also wants to know the value of a silver coin of Mexico dated 1786. As there were half, one, two, four and eight reals, silver, of this date issued under Charles III. (1759-88), he will have to be more explicit before we can answer him.

J. F. Moseley, Columbia, Fla.—The coins you describe are all very common. Victoria D. G. Britt; Reg. F. D. on your coins is the abbreviation of Victoria, Dei Gratia, Britannia, Regina, Fides Defensor (Victoria, by the Grace of God, Queen of Great Britain and Defender of the Faith). The female seated by a shield is emblematic of Britannia and was handed down from the time the Romans were in Britain.

Robert R. Cook, Caledonia, Mich.—Writes that he has a "Carolus a Carollo" half penny dated 1412. There are no coins of this date. Charles II. of England, who issued this half penny or farthing, reigned between 1660-1684. If a

farthing, it is worth twenty five cents; if a half penny, about a dollar, providing it is in good condition.

Alfred Robinson, Albion, N. Y.—1826 cent, ten cents; 1853 and 1854 cents, five cents each; 1841 dime, twenty five cents; 1836 half dollar, lettered edge, seventy five cents. Spain, one real, 1785. Charles III. (1759-1788), twenty five cents; Canada, Bank of Montreal, 1844 half penny, five cents; Feuchtwanger Composition 1837 one cent, eagle on rock, twenty cents.

C. R. Giles, 144 E. Sixtieth street, New York—Wants to exchange starfish and Indian arrow points for coins and relics. His rubbings are taken from (1) a facsimile of a Jewish shekel of the time of the Maccabees, 140 B. C. This facsimile was struck to go with a work on Bible coins, and is of no value; (2) a brass jetton of no value; (3) a Hacienda or more likely a railway token of Talca, Mexico, worth twenty five cents.

Charles J. Braden, Broughton, Ill.—The Missouri defence bonds were issued by the state authorities at the beginning of the Civil War, supposedly to protect the neutrality of the state. The Union forces promptly entering the state for its defence against secession, rendered this money worthless. There was a large issue and we have seen the various denominations from one to one hundred dollars. The notes are common, and when properly signed are interesting to both the paper money and the autograph collectors, as they should have the signature of Claiborne F. Jackson, the governor of Missouri, beside those of D. M. Frost and Jno. P. Clarke, both of whom

became later prominent in state and congressional politics. A fine one hundred dollar note is worth fifty cents at the dealers.

We have received the usual number of questions regarding the premium on nickel cents between 1857 and 1864, both inclusive; two cent pieces, dates 1861 to and including 1872; silver quarters and half dollars of 1853, with date dividing arrowpoints and rays about the eagle. To all these we will repeat that they have no premium value. For a good 1817 and 1817 cent the dealers will charge fifteen cents each. The O (New Orleans) mint did not coin any half dimes in 1873 or 1874. In fact the half dimes were discontinued in 1873. We would again advise that none of the common coins be sent us. A good rubbing or description in all cases is all that is necessary.

ANCIENT and Modern Coins, from 8c up. List free. T. L. ELDER, Princeton Place, E. E., PITTSBURGH, PA.
OLD COINS Book giving highest prices paid for all kinds of coins sent for 10 cents.

II. Six months trial subscription on receipt of 25 cents.
III. Sample copies on receipt of ten cents none free.
Address **The Numismatist, Monroe, Mich.**

THE BOY CURIO COLLECTOR

are various buttons of the navy having eagles, anchors and stars on them. Now a collection of army and navy buttons should contain the large coat buttons and the small sleeve buttons of the various state militia, the navy and the regular army. The way I got the idea of collecting came about in the following manner. During the war with Spain several regiments of volunteers were at Camp Ramsey, near my home. I made frequent

visits to the camp and became acquainted with many of the soldiers, who often gave me buttons from their coats in return for rides on my wheel. On one visit I met a sergeant, who drew from his pocket a handful of buttons from different states and offered me my pick if I would give him a ride on my wheel. After this I received more buttons from him for more rides on my wheel, and by the time the soldiers left the camp I had quite a collection.

"THE LAST OF THE MOHICANS."

George H. Atkins, a friend of THE AMERICAN BOY, living at Beeville, Texas, sends us a photograph of a steer, named by J. M. Doble, his owner, "The Last of the Mohicans." The photograph was taken by Mr. Atkins shortly before the steer started on his journey to the North from the land of his birth in the sunny South. The steer belongs to a now fast disappearing long-horn variety. He is furnished with a very large pair of horns, measuring six feet and three inches from tip to tip in a straight line. Mr. Doble bought him with a bunch of cattle somewhere on the Lower Rio Grande. He has refused an offer of a thousand dollars for him, preferring to send him North for exhibition purposes. Many American boys will no doubt have an opportunity of seeing the wearer of these big horns.

ANCIENT INDIAN RELICS—4 different, 25c. Send stamps. List 2c stamp. H. D. HAY, Winston, N. C.
INDIAN stone RELICS of New Jersey FOR SALE; duplicates from my large collection. Sample variety 6 for 25 cents. Other curios also. Correspondence desired. M. P. OAKES, Highlands, N. J.

E. E. CHALMERS & CO., 829-836 Dearborn St. Chicago.

Where Boys Are Whipped by Machinery.

If you were a Scotch boy and were inclined to get into mischief you might appreciate the value of a recently invented Scotch machine. It is a device for whipping young folk who have been unruly. It is said that this ingenious machine works like a charm and will turn out more well-punished boys in an hour than the average person could attend to in a day. The machine is in operation at the town of Airdrie. The complaint that the boys make who have been birched by the machine is that too much time passes between the strokes, and each one of them feels like a sound thrashing in itself. Four strokes is a pretty severe punishment for any boy. The lads about the town of Airdrie are said to either be growing better behaved or are moving to another part of Scotland.

Schoolboys Serve as Barometers.

"What do you think of this beastly weather," asked a gentleman of a young woman who took her seat beside him in the street car recently.

"I can't tell you today," answered the young lady, smiling an acceptance of whatever might come. "If it were a school day, and you were willing to come to school with me, I could tell you in a very few minutes with absolute certainty. It'll sound funny to you, but it's true. I have noticed that you can always tell what the weather is going to do by the children. They're regular barometers. If there's going to be a storm they get restless, and I have the hardest kind of work to control them. Particularly the boys. The girls aren't so bad, but there seems to be some mysterious quality about approaching rain that always affects the former. I've got so now I don't blame them, because I don't believe they can help it. So you see," she concluded, "children have their uses, after all."

THE BOY CURIO COLLECTOR'S ROOM.

A Boy Is Like a Bicycle.

A boy is like a bicycle, because he cannot stand alone. He needs a steady hand to direct his way. He runs the easiest down hill. If you lose control of him, he may break your heart, if not your head.

He is not made to travel on bad roads. The straighter you keep him the more safely he runs. The faster he runs the more closely must his guide stick to him. He needs blowing up once in awhile. He should never be run by more than two cranks.—Young Churchman.

THE BOY'S LIBRARY

William T. Hornaday.

WILLIS EDWIN HURD.

Three years ago I read one of the most powerful, curious and interesting books it had been my good fortune to run across. It struck me as being so peculiarly odd and valuable, with its wealth of imagination and good sense, that I was carried away with it, from beginning to end. It is the story of "The Man Who Became a Savage," by William T. Hornaday.

WILLIAM T. HORNADAY.

The tale was first written as a serial for the "Buffalo (N. Y.) Illustrated Express," in 1894, then published in book form by the Peter Paul Book Co. It is a narrative of the adventures of Jeremiah Rock, who, becoming disgusted with the unchecked multiplicity of crimes, political and otherwise, taking

place in the midst of our civilization, goes to Central Borneo among the free and simple head-hunting tribes—with whom, for a time, the author has lived—hoping to find there the native purity which is denied where there are lawless politicians, rum sellers and divorces. He arrives in the Dohong Country in good season to prevent a "civilization" company—with rum—from gaining a hold upon this natural people. As a story with a purpose, full of interest and excitement, the book stands ahead of anything of the kind I have ever seen. It so delighted me that I wrote Mr. Hornaday regarding it. Being an autograph collector, quite naturally I enclosed a "much vexed" request in my letter. About a week later, on the Fourth of July, a reply came, of more value to me than twenty times the whole fireworks of the evening. It was from New York City, where Mr. Hornaday was then living as the director of the New York Zoological Park. I give it to you in full, trusting that you will forgive some of the expressions which, perhaps, I should have withheld:

"New York Zoological Society,
"69 Wall St., New York,
"July 3, 1897.

"Dear Mr. Hurd:
"Your letter of June 28 has such a clear ring of sincerity—and of sympathy in ideas—that it quite 'warms the cockles of my heart.' Had I a hundred autographs, you should have them all.
"I am pleased that you are pleased with Mr. Rock, and the Dohongs. It is not every man who likes my kind of people. You are undoubtedly of a more thoughtful and reflective turn of mind than the great majority of people who read fiction. I fear my story was writ ten either ten years too late, or twenty years too soon; for it strikes me that today scarcely anyone cares—or has

time—to read an old-fashioned story with a purpose."

"Therefore, I rejoice that I have found one more man who takes life seriously, and regards its problems as proper food for reflection. And I thank you most heartily for your frank and generous expressions of approval of my one literary pet—my first, last and only novel. If you ever write books, you will know how soul-satisfying is the approval of The Reader! Yours gratefully,

W. T. Hornaday.

In pursuance of my idea of completing autographical sketches with a biographical mention, I broached the subject to Mr. Hornaday, who answered that he is very much interested in the American boy, but that he thinks "the great A. B. would be much more interested in the story of the Zoological Park of Greater New York." However, I think you would like to know something about the man, and I really wish I could do more than merely outline it.

"If you do write anything about me," said the naturalist-author, "tell the boys that on one subject I have become a genuine crank, and that is—the extreme importance to every American boy and girl of giving more attention to English grammar, composition, rhetoric and elocution. The young person who specializes on these studies, and masters them, has a long start in life's race ahead of those who do not. I wish I could say this to every boy and girl in this country; for I fear they are beginning to neglect their mother tongue."

Thus having given his message to many thousands of them, I will proceed to tell the youths about the sender.

From the moment when, as a very little chap, I had read the first chapter of a serial entitled "Rifle and Canoe on the Orinoco," I had placed its author on the list of my favorite story-tellers. What with the alligators, jaguars and tapirs—in stories in which I then reveled—as well as in the pleasing style of the writer, I received a fascination which will ever be felt whenever I think of it. And let me ask you young men—it is more natural to call you fellows—of sev-

enteen, or thereabouts, if some very first impressions in reading have not always clung to you? This author was William T. Hornaday, and his story was doubtless of incidents which befell him while in the jungles of Venezuela.

Forty-five years ago Mr. Hornaday was born, first sniffing the breezes of an Indiana backwoods; then catching the airs that haunt an Iowa prairie, in a large farm in the midst of which were spent his boyhood days. In the colleges of Iowa he received his education, until the romance of a technical course dealing with natural history appealed to him so strongly that he entered Professor Ward's famous naturalists' school at Rochester, N. Y.

Crusoe's Island to be a Colony.

The Island of Juan Fernandez, on which every boy has wandered with Robinson Crusoe, is to be colonized by the Chilean government. Since Alexander Selkirk died, the island has been inhabited by only a few dozen people. Now Chill is to send out at once a colony of 150 adults. The fruit trees which were planted by Selkirk have reproduced themselves, and peaches, quinces, pears and grapes are now plentiful. The island also abounds in wild cattle, goats and pigs. The adjacent sea swarms with cod and other edible fish. The cottage which Selkirk built, and which Defoe describes, still exists as a broken-down ruin. The Chilean government proposes to christen the colony "Crusoe's Island."

Canvassers make from \$5 to \$25 a day. VIR PUBLISHING CO., 186 R. E. Trust Bldg., Philadelphia, Pa.

Letters from Boys

Eau Claire, Wis., Aug. 1st, 1900. Editor of THE AMERICAN BOY: We notice in your August issue that you would like to know what every American boy is doing, so I will try and tell you what I am doing. For the past two years I have been studying to be an architect

and draughtsman and have made quite a few drawings. I think every American boy should know what trade he is going to follow before finishing high school. I have carried papers for over four years, sold magazines been a messenger boy, worked in a store, picked berries and worked on a farm. As I like drawing I think I ought to make a good draughtsman. I have traveled in all of the States bordering on the Gulf of Mexico, the Mississippi River, and Canada west of the Great Lakes. When I was ten years old I could telegraph thirty eight words a minute but my

father made me stop practicing as I would have to go away from home to get work. I collect stamps, coins, stones, shells and confederate bills. I remain, an American Boy, CHAS. S. FINNEY.

Seville, Ohio, July 20th, 1900. Editor AMERICAN BOY, Dear Sir: Please find one dollar for my subscription to THE AMERICAN BOY. I could not subscribe any sooner for I had to earn my subscription money. I have a little camera and sold pictures. I send you one of my pictures of some boys swimming in Chippewa Creek. I have been very busy this summer taking typewriter and shorthand lessons and I am nearly through my shorthand book and the teacher says I am the best scholar he ever had in shorthand and I am only ten, but I am an American boy and a Michigau boy. I like THE AMERICAN BOY paper better than any paper I have ever read. One of your American boys, ROBERT McNEIL.

Toledo, O., August 27, 1900. Mr. Editor: As I wish to become acquainted with all boys who read your paper, I take pleasure in introducing myself. While I was visiting at Alma last month my uncle with whom I live subscribed for THE AMERICAN BOY for me. I want to say right here that I have the best uncle that ever lived. He is pure gold. I hope I will be as good a man

and true when I grow up. My father died when I was four years old. I am twelve now. I have commenced business in a small way, making sixty cents a week clear. I have a small paper route in my neighborhood, and have a wheel, which enables me to get around quite lively. I will send you names of boys who do not take THE AMERICAN BOY. JAMES P. CRAIG. Colorado Springs, Colo.

Dear Editor: I had some bantams while I lived in Iowa. One hen hatched five chickens, two of which lived. Their mother soon died. One day I went out to their coop to feed them. I found the rooster digging and calling to the chickens. He seemed to understand the responsibility of having a family left in his care, for he took care of them till they were old enough to care for themselves. Yours truly, BERT CONNER. 405 North Second St., Carrollton, Mo.

Dear Editor: I see someone asks how to take care of gold-fish. We have some and just feed them cracker crumbs. We never change the water. We keep sand in the bowl and add fresh water as it evaporates. Yours truly, F. HOSSICK.

(He bows and begins- The boy lay over his fathers knee, before his time for bed The strap was in that fathers hand, The hand was over head The strap came down with whizzing sound. The boy was under weath, And us that strap touched tender parts, his breath. It took away He cried aloud "Say, "No Sir," the old man "It's only just be- the boy braced up, A spring, and he was He gave a gasps; free- scended- But Alas! it struck He rose with mingled The boy-Oh where Ask of the hay-loft, where (But the praise he got went to his head. rage and pain - was he? all night hes hiding stealthily

SEND US... 10c to pay postage and we will send you, post-paid, on approval one of the most marvelous toned HARMONICAS ever invented. Examine it, and if you find it entirely satisfactory and the equal of any \$1.00 Harmonica you ever saw or heard, and worth all we ask for it, send us 50c, and the Harmonica is yours. If not satisfactory in every particular, return it and we will return amount paid in full. WHAT IT IS—A cornet—trombone—in fact a full brass band in tone—its equal has never before been produced—a Harmonica that anyone can play after a few moments' practice. With it one can play the most exquisite music imaginable. You can trill like a bird, imitate the tones of a pipe organ or violin. Harmonica players say they have never heard anything like it. Easiest blowing Harmonica ever produced. Measures four inches wide and 5 1/2 inches long; finest nickel plate. When cash in full—50c.—(stamps taken) accompanies the order we include FREE a Harmonica instruction book. Agents wanted. Send stamp for big illustrated music instrument catalog. G. Harger Blich, 904-910 Main St., Dubuque, Iowa

THE AMERICAN BOY

The Only Distinctively Boy's Paper in America.

[Entered at the Detroit, Mich., Post-office as second-class matter.]

The American Boy is an illustrated monthly paper of 24 pages. Its subscription price is \$1.00 a year, payable in advance.

New Subscriptions can commence at any time during the year.

Payment for The American Boy when sent by mail, should be made in a Post-office Money-Order, Bank Check, or Draft, Express Money-Order or Registered Letter.

Silver sent through the mail is at sender's risk.

Expiration. The date opposite your name on your paper shows to what time your subscription is paid.

Discontinuances. Remember that the publishers must be notified by letter when a subscriber wishes his paper stopped. All arrearages must be paid.

Returning your paper will not enable us to discontinue it, as we cannot find your name on our books unless your Post-office address is given.

Always give the name of the Post-office to which your paper is sent. Your name cannot be found on our books unless this is done.

Letters should be addressed and drafts made payable to

THE SPRAGUE PUBLISHING CO., MAJESTIC BLDG. DETROIT, MICH.

WILLIAM C. SPRAGUE, EDITOR. GRIFFITH OGDEN ELLIS, ASSISTANT EDITOR.

ONE YEAR OLD.

This number closes our first volume. Look it through carefully; then read over, if you please, the editorial on the first page of our first number. Have we not reached, in fair measure, a fulfillment of our promises, and may not our readers and advertisers join with us in the confident belief that ere long we will realize our ideal of a boys' paper?

There is a certain amount of doubt in the public mind of the permanency of a publication for boys. May this not come from the fact that few such publications have DESERVED success?

The public have come to look with suspicion upon such publications because they have either lacked the manly tone of the true boy or they have purposely pandered to the lowest in the boy nature.

Is it possible that a high-toned boys' paper, seeking to elevate boyhood and give healthful stimulus to thought and action cannot find support among the millions of boys and friends of boys in America?

The answer comes in THE AMERICAN BOY, now twelve months old, its pages filled with the evidences of the support of shrewd advertisers and its subscription list grown to proportions beyond that dreamed of by its proprietors when last November they set this paper afloat in the already crowded sea of journalism.

This number contains the advertisements of over three hundred business houses, reaches ninety thousand homes and—what is more—commends itself to every boy and lover of boys who sees it.

BOYS' EXCHANGE

W. Bartlett Sumner, 233 Herkimer street, Buffalo, N. Y.: I will exchange old United States stamps for Indian relics (especially from Yavapai County, Colo.), or old United States pennies.

Diagram.

- Upper Square. To separate. Space. Behind. Sour.
Left square. Rapid. Distant. A French author. A car.
Right Square. An allowance. A scheme. Latin for "to be." Abounds.
Lower square. Part of a ship. A dull pain. Part of the leg. To care for.

No. 84.

Charade.

A careful mother ties my FIRST Beneath her baby's THIRD. My SECOND is a letter. It sounds just like a word. Sad and dark and stern and cold My WHOLE doth look, but never bold.

Regarding Answers to No. 71.

Worthy of special mention are the following: Several excellent sentences were sent in response to the query (Number 71). "Queen Roxy and lover saw the circus zebra jump and kick from the wagon." by D. Valentine Godard, Topeka, Kas.; "The zealous but anxious navigator beholds with keen joy the friendly, picturesque Esquimaux." by Douglas Gott, Baltimore, Md.; and "Jackey exchanged twelve pieces of quartz for a bantam." by John Meredith, Eutaw, Ala. A hundred, or more, sent us the stock phrases used in teaching typewriting, which, of course, we could not consider. Five sent good sentences in which one letter was lacking, the defect being fatal.

The Stamp Prizes.

The three boys sending in the largest number of subscriptions during the last thirty days are, in their order: J. Lawrence Hirschland, Reading, Pa.; Albert W. Effield, Minneapolis, Minn.; and F. H. Kane, Charlevoix, Mich. The first named receives one-half of our accumulation of foreign stamps and each of the others one-fourth.

Photographic Prizes.

The amateur photograph contest for last month resulted as follows. First prize—Arthur G. Gilman, Lebanon, O. Second prize—Clarence Corp, Corfu, N. Y.

Foreign Postage Stamps.

To the boy sending the largest number of new subscriptions to THE AMERICAN BOY by Oct. 20 we will give, in addition to the regular premium offered, one-half of the foreign stamps accumulated in our office for the month ending that date; to the two next in order, one-fourth each.

Prizes for Mistake Hunters.

To the boy first notifying us of a mistake in spelling (dialect not considered) in this number of THE AMERICAN BOY, we will give \$1.00. To the boy next in point of time who detects a mistake, 50 cents. To the boy sending in the longest list of mistakes, \$2.00.

Prize Offers.

Puzzle No. 82—An AMERICAN BOY Fountain Pen.
Puzzle No. 83—An AMERICAN BOY Watch Charm.
Puzzle No. 84—An AMERICAN BOY Knife.

THE REST FREE OF THE YEAR FREE

We desire to have you become a regular subscriber for PETS and ANIMALS, a handsomely illustrated monthly magazine for the home, and in order to induce you to do so will give you, absolutely FREE, the remaining numbers of 1900, if you will remit us the small sum of 50 cents in payment of one year's subscription, to begin with January 1, 1901.

Pets and Animals is the only publication of its class, and will be welcomed in every home. Its purpose is to give a better understanding of the animal world, to form a sympathetic bond between human and brute creatures. The scope of its purely practical side is a wide one, as it gives much valuable information about the care and keeping of domestic animals. Of deeper and wider significance, however, is the influence of the publication as a teacher of the doctrine that thoughtful kindness and mercy extended to dumb creatures add nobility and breadth of mind to the person who performs the service.

The literary features of Pets and Animals are surpassed by those of no other publication. The matter it contains is alike entertaining and instructive. Among the clever features of late fall and early winter issues may be mentioned: "Rudyard Kipling's Pets at College," by Michael Gifford White; "Manx Cats," by Alice J. Cleator; "Simplified Entomology," by Frank H. Farquhar; "Our Neighbors the Spiders," Elizabeth Grinnell; "The Circus at Home in Winter," by Katherine L. Smith; "A Dog Circus," the story of educated canines, by Lawrence D. Fogg. Boys and girls always watch for its coming, and read its columns with deep interest. Children of larger growth enjoy Pets and Animals hugely. It is the publication you have been looking for. Every family needs it. Remember, all the remaining numbers of 1900 FREE, if you send us 50 cents for a year's subscription, to begin January 1, 1901.

FIFTY PER CENT CASH COMMISSION. AGENTS WANTED.

We want thousands of agents to work for subscriptions on this great offer. One-half or 50 per cent cash commission will be allowed. Send for free samples and further particulars. Address

PUBLISHERS PETS AND ANIMALS, 19 Gotwald Building, SPRINGFIELD, O.

A HUMMER FOR BOYS. Particulars FREE. R. P. Silver, Dept. A, Foxcroft, Me. TO REACH "THE AMERICAN BOY" BOYS USE

FINE WATCH FREE. We have hundreds of other premiums for selling only \$1.00 worth jewelry. Goes like wildfire as we give 75 cents value for only 15 cents. We trust you with the goods, when sold send us money and get your premium. KING HARVARD CO., Dept. P, Chicago

FREE! A WATCH. For selling 17 stick-pins at 10c each. Send name and address; no money. CUMMINGS JEWELRY CO., Department B, 2202 Spring Garden Street, Philadelphia, Pa.

HOW A LADY READER IS GETTING RICH. I thank you for Dr. Hull's Flavoring Powders Agency. They sell easy. I had no experience. I earn \$20 to \$4 a week, or 100 to 250 per cent profit. Any one can do this if they get a free sample from C. S. HORNETT MFG. CO., 1465 Penn Avenue, PITTSBURGH, PA.

BOYS - GIRLS. and Ladies—get Watches, Cameras, Air Rifles, Rings, Silverware and other valuable premiums FREE for selling 20 packages of our IMPERIAL COURT PLASTER at 10c each. Send name and address and we mail you 20 packages with premium list and instructions. When sold send us the \$1.00 and we will forward premium you select. Write for outfit to-day, and be first in your town to get a premium. Address MAYWOOD NOVELTY CO., 618 N. W. MAYWOOD ILL.

FREE WE TRUST YOU. with 20 large beautiful colored pictures worth 50c each. You sell them at only 15c each and send us the money. For your trouble we give you a nice WATCH, like illustration. If you cannot sell all we give you a handsome present of JEWELRY or SILVERWARE for what you do sell. We pay just face. We take back unsold goods. We run all the risk. Address STANDARD CO., Dept. A, Omaha, Neb., Chicago.

BOYS AND GIRLS. Watches, Cameras, Sporting Goods, Jewelry, etc., given away for selling 18 packages of Belgian Ink at 10c. We ask no money. Send your name and address and get outfit and premium list with instructions postpaid. When you sell the ink send us the money and receive your premium. We Trust You. This is our honest offer. Write for outfit today. BELGIAN INK CO., Dept. 57 Chicago

POLITICS AND THANKSGIVING

POLITICS AND THANKSGIVING! We venture to say that boys, much less grown up people, will find little harmony between these two characteristics of the month of November. Thanksgiving comes last, and that would seem to be very proper; for then there will surely be one thing everybody—unless it be the professional “spell-binder”—can be thankful for, and that is the end of another election campaign with its fuss and fury and needless disturbance of the peace that should characterize individual and national life, and the tranquility that business requires in order that it be safe and profitable.

Politicians for a few days to come will be busy spreading seeds of strife and discontent, arraying man against man, class against class, prophesying dire calamity, and making out that as a nation we are in a bad way and headed straight for perdition; but later, when the smoke of conflict clears away, we will all, at the suggestion of the nation's Chief Executive, go down on our knees and thank God for the richest, wisest, happiest and best country on His footstool; and many will add to their prayer of thanksgiving a short but earnest expression something after this sort: “We thank Thee for deliverance from politics.” Every boy should love his country; but he should early learn that he can do this without becoming a politician or running for office. To the end that he may love his country he should study history; but the less of so called history he gets from curbstone philosophers and professional stump speakers the clearer will be his knowledge and the purer his loyalty.

Every boy should prize the right of the American citizen to govern himself through a free and untrammelled ballot; but he should

remember that a Republic is not a rabble or a communism.

Most boys are born into party as they are born into church. They are Republicans or Democrats, as the case may be, by inheritance: and the

charged with the responsibility for the evil in existing conditions. These stay-away men are the curse of the land, and in no small measure they are men of intelligence and virtue. In a national election a few years ago over four million registered voters failed to appear at the polls!

Every boy should see to it that his father votes; for is not this country the boy's own country? Is it not his inheritance? And is it not to come into his keeping after a while in the condition in which his father has left it? Then let every boy on election day resolve himself into a committee of one on public safety to see that his father marches up to the

polls and votes *like a man*. Let the man do it for the sake of the boy, at least, for eternal vigilance is the price of *liberty*, not only his own liberty, but that of the boy to come after him.

One more word: Candidates and issues and a full discussion are all proper in a Republic, where men govern themselves, but let not the boy deceive himself. This country is too great to be ruined by a man or a set of men. Mistakes and evil men may apparently block her progress for a time, but the perennial ante-election cry of alarm is only a bugaboo set up to frighten the timid. The great love of freedom and fair play and the good common sense of the American people is underneath it all, and the future depends not upon the “say so” of any man or men who plan and plot and make and unmake issues to the end that they or their party may hold the offices.

There has been no time in the history of our country, from Washington down, when its rulers have not been vilified and their motives and purposes attacked; no time when there were not men and parties prophesying dire calamities; and yet, despite the calamitous mouthings of orators of all parties, the United States of America was never greater and never more firmly established in the respect of the world and the affections of its own people than now.

The election will come and go, boys, and whichever way the will of this mighty people is registered, the country will still live; and when a few days thereafter the President proclaims a day of thanksgiving, you will still be able to thank the God of Nations for a great, a happy, a blessed country.

“The union of lakes, the union of lands,
The union of States none can sever;
The union of hearts, the union of hands,
And the flag of our union forever.”

best reason many a boy can give for his faith is

“Father votes this way and so do I.”

Every boy should aim to become an intelligent voter with settled convictions of his own. Parties change in character. The party to-day may be very different in character from what it was when father joined it. The mere fact that he voted with a certain party is not sufficient reason for the boy's doing so. Before everything else we will say as young Americans, with

Choate, “We join ourselves to no party that does not carry the flag, and keep step to the music of the Union.”

Notwithstanding the fact that the freeman's will can be but poorly expressed by the ballot, where ignorant and bad men are clothed with citizenship and the same right denied some men for other reasons, and where candidates are made in secret council by party leaders and issues framed by designing demagogues for party advantage, yet for all that, every boy should come to know that voting is a duty devolving on every citizen, and that he who wilfully neglects this duty may be rightfully

TALES OF YANKEE ENCHANTMENT
**JACK HOLIDAY, A GOOD BOY
 WHO WOULD TELL TALL STORIES**

(Copyright by the Author, CHARLES BATTELL LOOMIS, 1900)

Jack Holiday was a great exaggerator. He could never hear any remarkable statement without telling of an experience of his own or of his father or brother that was even more remarkable.

If Harrison Morgan said that his father had been on a train that went sixty miles an hour for nearly two hours:

"Pooh, that's nothin'," Jack would say. "My father owned a train once that would go seventy miles an hour all day long."

"Oh, get out," some one would reply. "That would wear an engine out and the engineer would get tired to death."

"Why, you silly, of course my father had the strongest engine in the world and the tender was all filled with engineers. When one got tired another one took his place."

Or maybe Sam Ormiston would tell of his brother, who went up in the Maine woods and caught ten trout in a half hour.

"Pooh, that ain't any fishin'," Jack would say. "My Uncle Tim used to catch trout so fast that he had to hire two boys to take 'em off the line, and all he did was to throw the hook into the water. No bait, nor nothin'."

Well, as some of you know it is very irritating to have anything to do with a person who is always telling stories that are not true. You would have grown tired of my stories long ago if you had not been sure that every word was as true as any fairy story that ever was told, but these friends of Jack knew that he was just making up, and when they had told stories that they expected would astonish the rest of their companions and that miserable Jack had something more wonderful to spring right on top of them, it vexed them exceedingly, and they determined to stop it.

All these boys lived in New York, up near Central Park or Prospect, or some park—maybe it was Carroll Park. You see, I live in the country, so I can't be sure of city localities, but it was near some park where they have animals and an obelisk.

One day the boys were looking at these animals. There were lions and crows and tigers and sheep and hippopotamuses and sparrows and rhinoceroses and mice and elephants and canaries and all sorts of beasts that strike terror when they are loose. If you don't believe they strike terror just put a lion into a school room and see the boys run, or put a cat into a mouse trap and hear the mouse squeal, or put a mouse into a sewing circle and hear the women scream, or put a sparrow into a canary's cage and hear the canary beg to be let out.

Now, one of the keepers in this menagerie is an Asiatic of some kind and he is generally supposed to be a magician. Some people say that his great-great-great-great-great-grandfather was Aladdin. I don't believe it myself, but at any rate the boys had heard that he possessed magic powers, and they thought it would be an excellent plan to get him to cure Jack of his exaggerating.

They stopped in front of the lion's cage and Sam said: "My father saw a bigger lion than this in London—"

"Huh," said Jack, "my father had a kitten given him."

"Huh," said Jack, "my father had a kitten given him by a man out west and the first thing he knew it grew up to be a lion and it was the biggest ever known. This lion would look like a baby beside it."

"Oh, come off," said all the boys together. "Where is the lion? We've known you ever since you were a kid and we never saw it."

"Oh, I don't mean lately; I mean when papa was a little boy. He sold the lion long ago."

Just then some boys swept by the lion house on roller skates, and Sam, who was looking out, said: "Phewee! See those kids go. I wish I could skate as fast as that."

"That's nothin'," said Jack. "I can skate twice as fast as that—up hill, too."

"Why, Jack Holiday!" said Tracy Ledyard. "You know your ankles are weak and you can't skate hardly any."

Then it was that Sam made up his mind to see the Asiatic and ask him if he could help them out.

He found him in the elephant house with a turban on his head and a shawl thrown over his shoulders, for the day seemed cold to him, although it was June. Sam ran back and got the other boys, and while Tracy kept Jack out of hearing Sam said: "Are you a magician?"

"Yes," said the Asiatic, nodding his head up and down. "Me make magic. Get gold fish in hair, pull butterflies out of butter, pull rabbit out of vest pocket. Yes, me magic man."

"Me make magic."

"Good enough," said Sam. "You see we have a friend here who is a terrible—well, he doesn't know when he's telling a whopper, and we thought that if you could give him a dose of magic that maybe you could stop him."

You should have seen the gleeful smile that appeared on the sober face of that Asiatic. He nodded his head so fast that Sam was afraid he'd break his neck and he said: "Oh, yes, me cure him. Me make him do what he say he do."

"That's it," said Sam. Then he added a little doubtfully: "I don't want him hurt, you see, but we fellers are dead sick of hearing him say he can do this and that better than anyone else, or that his father is richer than the President. He can't skate a little bit, and he says he can skate faster than any of us, and he hasn't any brother at all, but he says that his brother can play the cornet better than anybody in the big military bands."

"Me know that kind. In India, too. Call 'em liars."

"Do you?" said Sam rapturously. "So do we, only I thought you might not like the word. Well, when will you begin?"

"Any time. Bring boy." Then the fellow turned and affectionately patted the trunk of the big elephant behind him, and that great beast lifted him high in air, just for pure mischief.

When he set him down the magician said to Jack, who had been brought over to him: "How do." Jack shook hands with him, and while he was doing so the magician said something that sounded to Sam like "Ramshapinghboombindarbrahmapootrah." Then he said, "All right. Cure all right. Good-bye," and pointed to the door, and the boys all rushed out as boys do, screaming and yelling for no reason in the world except that they were in high spirits.

The boys were exceedingly curious to see how the charm would affect the unconscious Jack, so Sam walked over to a very high elm and said:

"I wish I could climb that."

"Pooh," said Jack. "I can shin to the top of that."

In a second, very much to his surprise and discomfiture, he was shinning up that tree and never stopped to take breath until he had worn out his trousers at the knees and reached the top, both of which feats he accomplished at the same time.

But when he stopped he was a very scared boy. How to get down he did not know, nor could the boys suggest any way.

A crowd began to gather. "Mercy on us. How did he get up there?"

There he was, and there he'd stay unless some one went for him.

It was a tree that would have been hard for a steeple Jack to climb, and how such an ordinary Jack as Jack had accomplished it no one not in the secret could tell. But there he was, and there he'd stay unless some one went for him.

"Cut the tree down," said one man, for there are always people around who think no more of trees than they do of old shoes, but fortunately there were some there who knew how many years the tree had taken to climb as high as Jack had in a minute, and they said it would be better far to cut Jack down than to harm the tree.

But by great good luck there was a boy in the crowd who had a box kite and he immediately flew it and the twine passed near enough for Jack to catch hold of it.

"Now," said Sam, "I bet I could slide down that twine in two shakes of a lamb's tail."

"But I can do it in one shake," said Jack, and he did, landing all right on the asphalt pavement.

The crowd cheered and dispersed and that was the end of lesson number one.

"You never had such an experience as that before, did you, Jack?" asked Sam.

"Lots of times," answered Jack. "I told you I was a tree climber."

"He isn't cured yet," whispered Tracy to Sam.

"Give him time," answered Sam. "Let's go down to the lake."

So they all ran pell-mell down to the lake, and there were the swan boats. "Those look hard to manage. It's harder to run one of those than it is to run a bike," said Sam.

"Tain't either," said Jack, puffing out his lips. "My father used to have those up on our lake in the country, and I can make 'em go faster than those men can."

The words were hardly out of his mouth before the swan boat glided up to the wharf, the boatman jumped out and lifted Jack into the seat and he began to propel it around the lake. It will be understood that these are really water velocipedes and a, worked by means of pedals that turn big paddles, so that any one who rides a bicycle will know how to run one, although he may lack the requisite strength. But, for once, thanks to the magician, Jack's muscles were strong enough. Round and round the lake he went at a speed that had never been witnessed before and that made him so dizzy that he would have been glad to stop, but he couldn't. The boys stood on the shore and cheered and jeered by turns. Then they fell to laughing as poor Jack raced around, his hair streaming in the wind, his hat in the bottom of the boat and his feet bobbing up and down like corn in a popper.

At last he began to show signs of exhaustion and then quick-witted Sam called out: "Ah ha, you can't stop. Bet I could stop in two minutes."

"Bet I can stop right off," said Jack, and did so with a suddenness that threw him out of the boat upon a little island in the center of the lake.

The boatmen had been watching him with the greatest astonishment, and one of them rowed to the island in an ordinary boat and brought him to the mainland in a really exhausted condition.

"You're a wonder, boy," said the boatman. "I never saw anyone go as fast as that—"

He tackled the man and threw him in a jiffy.

"That's nothing," said Jack, true to his instincts. "You ought to see me wrestle."

This remark made Sam afterward wonder whether he had not suspected that he had been enchanted and wanted to pay the boys back for playing such a trick on him.

At any rate, as soon as he said it the weariness went from him, and he began to wrestle with Tracy and had thrown him inside of thirty seconds. He tackled Sam next and each boy in turn until there were ten boys lying winded on the grass. But he now found that he couldn't stop wrestling. A man and his wife

came walking by and he tackled the man and threw him in a jiffy. Then he set on a park policeman and threw him, and when another policeman came to his companion's aid he threw him.

But suddenly in the midst of his active exercise he dropped like a stone, white and breathless. Sam went to him and asked him what was the matter. "Oh, I don't know. I didn't want to climb nor run the swan boat, nor wrestle, but I just had to, and my heart feels as if it was going to stop."

"Well, Jack, if you'll promise not to tell such horrible whoppers in future I think I can get you out of this fix."

"I bet I'll tell less whoppers than any boy in this crowd for the next year," said Jack in a weak voice.

And the very next instant the magician stepped out of a tree trunk and said "Ramshapinghboombind-arbrahmopotrah" backward, and Jack got up as fresh as a daisy.

But now the boys complain that he is very uninteresting, because no matter how much they exaggerate he only says: "My, I wish I could do as well as that," but he never offers to tell them how much better he and his family could do it.

MR. CYRIL E. RUDGE, MUS. BAC.
Choirmaster Trinity Church, Chicago.

Some Promising Boy Singers
... and Their Teacher

ALLAN DALBY CRAIG.
Soloist, Trinity Church, Chicago.

J. ARTHUR SCHEIB, AGE 14.
Contralto Soloist, Trinity Church, Chicago.

THE choir of Trinity Episcopal Church, Chicago, has always been remarkable for its continuous supply of good boy singers, some of whom have obtained a wide and flattering reputation.

Allan Dalby Craig is one of them; he is just commencing his career as a soloist and bids fair to become as well known as many of his predecessors. Master Allan is just thirteen years of age, and was born in Chicago of Scotch-American parentage. His father, Mr. Adam Craig, is well known in Chicago musical as well as business circles. The boy has a full, round mellow voice of remarkable purity and richness, his range being from low B flat to upper B flat, powerful and even throughout.

He is a pupil of the Choirmaster, Mr. Cyril E. Rudge, who has for years made a specialty in the training of boys' voices. Mr. Rudge, whose photograph is here reproduced, was himself a choir boy and soloist in the famous choir of St. Paul's Cathedral, London, England, and is a graduate in music of Trinity College, Toronto, Canada, in which city he resided before taking charge of Trinity Church Choir, Chicago. He trains his boys exactly on the lines and system used in the choir room of St. Paul's Cathedral. To be a pupil of Mr. Rudge is a long step towards the success of the boy as a singer.

Choir under Mr. Rudge's tuition: Gilbert Porter, Joe O'Hare (the famous choir boy), Edward Woods, John Burtch, J. Arthur Scheib, and Lloyd Simonson—all of Chicago. Master Sam Loose, brother of George Loose, whose portrait appeared in the July issue of this paper, is also one of Mr. Rudge's pupils, and is studying for the mantle of his brother, who is so well known in New York as the soloist of the Church of the Heavenly Rest in that city.

The choir of Trinity Church numbers some fifty five voices, thirty of whom are boys; there is also a preparatory class of ten boys, to fill the vacancies constantly occurring caused by the breaking of the voice and other causes.

In connection with the choir is a gymnasium, well fitted up for the use of the choir boys, and also a Mandolin Club, which is under the direction of one of the ex-choir boys. The boys meet for rehearsal three times a week, and receive a small remuneration for their services, according to their classification and usefulness. Every effort is made by the choir-master to procure situations for such boys as require them in deserving cases, then advancement is urged where interest and influence can be honestly used.

There is an annual outing under canvas provided for the boys for two weeks, at one of the numerous Lake resorts around Chicago, where fishing, boating, bathing, etc., is the order of the day.

Here are some of the names of boys who have made their debuts as soloists in Trinity Church Choir under Mr. Rudge's tuition: Gilbert Porter, Joe O'Hare (the famous choir boy), Edward Woods, John Burtch, J. Arthur Scheib, and Lloyd Simonson—all of Chicago. Master Sam Loose, brother of George Loose, whose portrait appeared in the July issue of this paper, is also one of Mr. Rudge's pupils, and is studying for the mantle of his brother, who is so well known in New York as the soloist of the Church of the Heavenly Rest in that city.

THE FIRST THANKSGIVING DINNER

FRANK H. SWEET.

"The dainty Indian maize. Was eat with clam-shells out of wooden trays."

The first New England Thanksgiving was not a day of religious observance but a week given up as much as possible to merrymaking. Edward Winslow of Plymouth wrote to a friend in England Dec. 11, 1621, "Our harvest being gotten in, our Governor sent four men on fowling so that we might, after a special manner, rejoice together after we had gathered the fruits of our labors. They four killed as much fowl as with a little help beside served the company about a week. At which times, among other creations, we exercised our arms, many of the Indians coming amongst us, and among the rest their greatest king, Massasoit, with some 90 men, whom for three days we entertained and feasted, and they went out and killed five deer, which they

brought and bestowed on our Governor, and upon the captains and others."

According to the account this feast was probably held in the block house. The deer and fowl were roasted in the open air, the fowl being wild duck and turkey, both of which were plentiful. Although the first Thanksgiving was held in November or early in December, other Thanksgivings were appointed as the political or military event, which gave rise to them, occurred. But it was not until November, 1677, that the first regular Thanksgiving proclamation was printed, and at this time, the day had come to be observed as an occasion of family reunion, on which our Puritan ancestors heard long sermons and returned home to eat Indian pudding, wild turkey and pumpkin pie.

The colonial kitchen is the most appropriate setting for the picture of an ideal Thanksgiving time. We find it in the low, heavy-timbered room, with its huge, yawning fireplace. Here the blazing fire gives out its genial warmth and a cheery welcome to the shivering guests, the children and children's children who have come home to feast around the family board. Ordinarily the table, around which the family and guests were accustomed to gather, was improvised; it con-

sisted of a board laid on trestles. They gathered literally about the "board." It was covered with a "board cloth," of fine napery brought from Holland. The guests were seated around the board on long forms (benches) and stools of various heights. Pewter or wooden trenchers lined the table, and by each lay a napkin and spoon. Knives and particularly forks, were considered curious implements, denoting extreme luxury. Gov. Winthrop was the fortunate possessor of the first table fork brought to America.

The other "plenshings" of the table were drinking cups, tankards and chargers of silver plate, pewter or wood. At the settlement of America, wooden ware was just giving place to pewter. The centerpiece that gave the crowning distinction to the table was the "standing salt." In families of distinction this was usually an heirloom and of silver. In 1720, standing salts were out of date and trencher saltcellars came into fashion. The universal table furnishing.

"The porringers that in a row Hung high and made a glittering show."

were out of place at a ceremonial dinner

THE morning dawned clear and bracing in the mountains of West Virginia, one November day in the early fifties. In the air was a breath of frost and a spicy fragrance, as Nathan Arnold, with his sons and servants, mounted on fleet-footed horses, and with dogs impatient for the chase set out to hunt "big game." One dog yelped and tugged at his restraining chain, eager to be gone with his fellows, and two boys with lumps in their throats, watched till the hunters disappeared up the mountain, and listened as long as the music of the horn was caught and echoed by the neighboring hills. How they had longed to go and how they had begged! But they, like "Lion," the big puppy, had been told they were too young for such sport.

The early hours of the afternoon found the boys lying prone upon the ground, under a large beech tree, that stood in front of the house. They talked in low tones, and at intervals, following with their disappointed hearts, the hunters in the chase. The dog, released from restraint, lay beside them, his head between his paws, his eyes half closed, a picture of dejected and insulted caninity.

"Henry," said David, in a half whisper, and with a cautious glance toward the house, whence came the hum of a spinning wheel; "Henry, let's take a gun and go up towards the sugar camp an' see if we can't find something!"

Henry's countenance brightened for a moment, then fell as he answered, "Don't you know, Marse Davie, dere hain't nary gun on dis yere place!" David had scarcely time to give vent to his vexation, as he remembered the truth of this statement, before they were startled by a great crackling of bushes, and beating of hoofs. Springing up with a bound, boys and dog beheld, with that mingled sensation of surprise, joy and fear, that makes strong men tingle with pleasure, and tremble, as well, a huge buck deer, with wide branching antlers, evidently pursued by some hunter.

For a few seconds he stood, not more than one hundred feet away, and faced them with antlers reared aloft, eyes blazing, nostrils dilated, and muscles quivering. Then, with a loud snort, he made down the cañon. The dog, true to the instinct of his breed, gave chase; and the boys, forgetting everything in their thirst for adventure, followed, as fast as their sturdy legs could carry them.

"Sick 'im, Lion!" "Go it, Lion!" they shouted as they ran, and with ever growing excitement, they had measured half a mile, when—presto! they beheld the dog coming toward them, with long leaps, yelping with every leap! The sight of the deer hard upon his heels, explained the cause of his retreat. Quick as thought the boys looked about them for a tree among whose branches they might seek safety. To their dismay the trees about them were all too large for them to climb quickly, excepting one sapling, close at hand. Realizing in a flash that in it lay their only safety, David shouted, "Up it, Henry, skoot!" Up went Henry almost as nimbly as a squirrel, with David close behind him.

Scarcely had they reached a safe distance from the ground when the dog, seeing them, came yelping toward the tree. He was too hard pressed, however to stop, and the buck, close in his wake, with lowered antlers, struck the tree such a blow as to send him reeling backwards and to frighten the boys almost out of their wits. Quickly recovering himself, the animal stood at bay, more furious than ever. The boys, terror stricken, scrambled further up the tree, when, horror of horrors! their combined weight was too great for the slender sapling, and the top, where they clung for dear life, began to bend toward the ground! Back they crawled as far as they dared, but the tree once bent was not inclined to straighten. Desperately they clung to their frail and only chance of safety, their little hearts beating so hard beneath their homespun blouses as to almost choke them. So near were they to the ground that the buck, if he had known it, could have picked them off with his antlers. Sometimes he would stand off a little way and look at them with eyes blazing, toss his horns, snort, and stamp the ground; then turning upon the dog, would chase him round and round the tree, the dog's litheness in doubling, saving him from being run through with the sharp horns. Then the dog, hard pressed, would dart off to one side, and choose another tree for a circuit.

"Suppose the tree should snap," "Suppose the buck

should raise his horns as he goes under us," were some of the terrible possibilities that suggested themselves to David, as he wrapped his arms and legs the tighter round the tree.

After a very creditable display of bravado, Henry's pent up agony overcame him, and he gave way to his terror. "Mam-my! Mam-my!" he screamed. "O Lawd, o' massy, Marse Davie, I kyan't hole on no longer! I gwine drap sho!" "I thought I gone dat time, sho; Mam-my! Mam-my! come quick, fo' de goodness sake! Me an' Marse Davie done et up by a mons'rous buck deer!" "Shut up!" shouted David, whose courage was stretched to the snapping point, "Hold on tight, or I'll shake you off the next time the deer comes this way. Now, let's both call together, and maybe they'll hear us at the house, or over at Mr. Moreland's." "Help! Help!" they yelled with one voice.

But the only result was that the deer, diverted from the dog by the cries, turned and looked at them a moment, the picture of wild ferocity, then made a mad dash at the tree, and struck it such a blow as to almost dislodge the terrified boys.

"Good bye, Marse Davie, I'se gone dis time, sho! I kin hole on no longer! 'Good bye Mammy!—boo-hoo-hoo—'" "Henry," shouted David, "hush that blubbering and hold on tight, or you're a dead niggah!" "I'se dat now Marse Davie, I done feel myse'f on dem horns!"

Whizz! the deer went under the tree after the dog, who had again diverted his attention. "Dat's de time he most got me! Mam-my! Mam-my!"

"Hush, Henry," said David, in a more conciliatory tone, and in full sympathy with his terror. "Try to be sensible, and use your strength to hold on with. We may have to stay up here all night, if father and the boys shouldn't get back." "I ain't gwine stay up here all night—I gwine drap now, kase I kin hole on no longer!" "Henry," said David, seizing him by the leg, really frightened lest he should do what he threatened, "if you don't hush that and hold on tight, I'll—listen!" he said in a hoarse whisper, "Some one's coming!"

And sure enough they could hear, at the ford below, the welcome splashing of horse's feet through the water. A moment they waited, breathlessly, until they could discern, through the trees, the form of a man on horseback. Recognizing him as a neighbor, David shouted lustily to him: "Mr. Scott! wait, there's a mad buck here, trying to get Henry and me, an' he'll get you if you don't mind; can you shoot him?"

Mr. Scott approached to where he could see the boys in the bending sapling, and the deer, for the time, occupied with the dog.

"Boys," he said, "keep your courage and hold on tight! I've got just one bullet left, and I'll do my best, and if I don't get him, maybe he'll get me, but you'll be safe at any rate!"

So saying, he wheeled his horse half about so that he might be ready for flight in case of failure put an extra priming of powder into the pan of his flintlock gun, and looked up to find the deer standing at bay, in all the grandeur of his fury. Just then, however, a fierce yelp from the dog attracted the buck's attention, and he turned toward him with lowered antlers.

Mr. Scott quickly raised his gun, aimed just behind the shoulder, and fired. A shout from the boys announced the success of the venture, and the smoke clearing away revealed the buck fallen on his side.

Two more relieved and happy boys never scrambled out of danger than those who followed Mr. Scott to the fallen monarch. And Lion went almost wild with delight, evidently taking the credit to himself. Indeed it was a magnificent specimen, and any hunter might have been justly proud of such game.

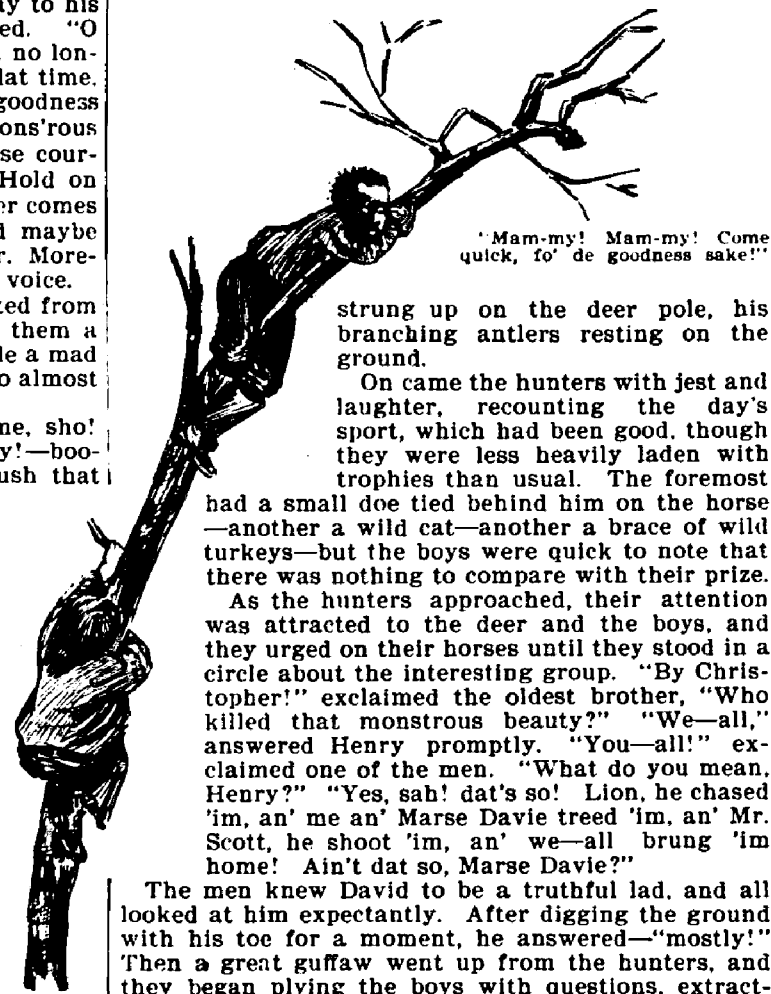

David held himself with the air of a young Nimrod, while Henry danced about, half wild with delight. With their aid Mr. Scott succeeded in lifting the deer to the horse's back and started for home, Henry leading the horse and David and Mr. Scott walking on opposite sides of the horse to steady his load.

As they neared the house, their shouts brought Mrs. Arnold and her daughters from their spinning wheels, and "Mammy" from the kitchen. Clustered about the door they awaited the procession.

"Look what we— all killed!" proudly announced Henry; and then came exclamations and explanations, amid which the boys were both petted and scolded.

As the day began to deepen into twilight,

there came upon the evening breeze the sound of the horn, first faintly, then louder and clearer, announcing the return of the hunters from the chase. David and Henry, instead of running to meet them, as usual, took their places beside the buck which had been

strung up on the deer pole, his branching antlers resting on the ground.

On came the hunters with jest and laughter, recounting the day's sport, which had been good, though they were less heavily laden with trophies than usual. The foremost had a small doe tied behind him on the horse—another a wild cat—another a brace of wild turkeys—but the boys were quick to note that there was nothing to compare with their prize.

As the hunters approached, their attention was attracted to the deer and the boys, and they urged on their horses until they stood in a circle about the interesting group. "By Christopher!" exclaimed the oldest brother, "Who killed that monstrous beauty?" "We—all," answered Henry promptly. "You—all!" exclaimed one of the men. "What do you mean, Henry?" "Yes, sah! dat's so! Lion, he chased 'im, an' me an' Marse Davie treed 'im, an' Mr. Scott, he shoot 'im, an' we—all brung 'im home! Ain't dat so, Marse Davie?"

The men knew David to be a truthful lad, and all looked at him expectantly. After digging the ground with his toe for a moment, he answered—"mostly!" Then a great guffaw went up from the hunters, and they began plying the boys with questions, extracting all the fun out of the situation possible. One examined the antlers with all a hunter's fondness, one smoothed the sleek brown coat, and one remarked that "next time they would send these Nimrods to the chase, while they stayed home to capture the big game."

A shout from the boys announced the success of the venture.

TURNING POINTS IN A BOY'S LIFE

...A SERIES...

JOINING THE COLLEGE FRATERNITY.

THE advisability of a boy joining a college fraternity will always remain a question. In the nature of the case, it can be answered only by "It depends." Arguing from my own experience, I would advise in favor of it; arguing from the experiences of some others, I would advise against it.

Just at this time of the year the "freshies" of the colleges are being scrutinized very carefully by the boys of the older classes. The chief excitement in the fraternity chapter at this time

is the struggle for the best material; and the boy who is now entering college with the influence of a good family name and some reputation at home for good-fellowship, good scholarship or some prowess in athletics, finds himself sought after. And, even should he go to college without the influences named, in his favor, if he presents a good appearance in the classroom and on the streets and shows himself to be wide-awake, he will be the recipient of many attentions that will cause him to wonder. Flattered by these attentions, the average boy will easily fall in with the plans of his new-made friends and soon wear the colors of a "pledged man." Many are the rejoicings in the chapter hall on the announcement of a brother's success in "rushing" an available candidate. Every member of the chapter hastens to throw the protection of his presence and his friendship around the fledgling, that the conquest may be a sure one.

I have one word of advice for the boy who is now entering college and besieged by "frat boys," and that is, don't allow yourself to be "spiked" until you have been in college for one term, at least. On the threshold of your college life you are not prepared to select a fraternity. Perhaps when you know more about them you may not care to join any. Certainly, when you know more about them than you do now, you will have a choice between them, and the choice will be based on something more than that you like the looks of a certain set of men, or prefer the style of architecture of some particular chapter house. You will come to know that college fraternities possess characters, just as do boys and men. There is one fraternity that is recognized by its partiality for boys out of rich families, who have money to spend and are free, easy livers. There is another whose life is characterized by a generous supply of conviviality. No boy is invited into this fraternity unless he likes society and is not averse to tipping. Another fraternity selects its men from among the best students, that is from among those who stand highest in scholarship—some regard, of course, being paid to a man's social qualities. Another, while not perhaps avowedly or purposely doing so, collects to itself the "sissy boys," the entree to it being smart clothes and a cigarette.

Then, too, each of the many fraternities in the field has a history, and the boy who has made up his mind to become a fraternity man owes it to himself to know something of fraternity history. He ought to know something about the men who founded the fraternity, and particularly about the old fellows who belong to it and who, graduating years ago, still retain an interest and a guiding hand, for the destinies of the fraternities are largely determined by the old boys who manage its affairs, and not by the young fellows not yet out of college. Ask the boy who has "bid" you, to furnish you with the history of his fraternity and the history of his chapter. All good fraternities have put their history in print. Determine for yourself, from an examination of this history, whether or not the fraternity is founded on good principles and has a record to be proud of.

If you are invited to join a fraternity, make the acquaintance of all the members of the chapter with whom you must associate. Note their character and

habits in class and out. If these are not such as would commend themselves to you, or better still, if you can say that you are satisfied that your father or your mother would not approve of such associates, you need not hesitate long in making a decision.

But you can't learn much about a crowd of boys in a day, or a week, or a month. Take sufficient time for thorough observation. Don't be an easy mark. You are not going to lose an opportunity of joining a fraternity simply because you do not at once fall a victim.

It is a good plan to ask some one of the instructors in the school his opinion of the various chapters represented in the institution. If the instructor has been in the college for any length of time he has had ample means for observation, and doubtless has an opinion. You will find many boys in the college who are "anti-frats." Learn what you can of what these boys think regarding the groups of boys making up the chapters. Note particularly what company of boys succeed best in class-room work. That is usually the best indication of the chapter's character. Students who make high grades do not, as a rule, waste time nor dissipate it in pursuits that do not conduce to good work.

In a word, delay your decision until you know the situation. Don't decide until the first term has rolled around and you have been home and had an opportunity to confer with your parents, who have a right to know what you propose to do. Then, when you have returned to college, you will be ready to make a decision that will not prove afterwards an unfortunate one for you.

There is a general impression that college fraternities are a detriment to student life. This may be so in the main, but I can conceive of nothing more helpful to the student and the college than the college fraternity, if its affairs be conducted by earnest young men of character who are in college for an education, and not for the fun there is in it.

I was fortunate enough, when in college, to join a chapter composed of just such young men. Their influence upon me throughout my entire college course was elevating and inspiring. The brightest memories of my life cluster around the chapter fire. Among the best friendships I cherish are those made about its altar. Good scholarship was necessary in the candidate who knocked at its door. Good-fellowship was a close second in the requirements. The result was a society of fellows all of whom were in dead earnest in the getting of an education, and yet full enough of snap and fun to make a congenial and hearty company. Instead of lowering the character of its members, every one of them was made the better for the association. One boy was saved from the gutter by the protecting influence of his brothers in the chapter, and he now lives to hold a responsible position in one of the leading universities of the land. Yet that boy's father to the day of his death was a bitter opponent of the college fraternity.

If my boy were to go to college to-day I would give him one piece of advice. I would not advise him to refuse the overtures of the fraternity men, but I would beg of him to wait at least three months before making his decision and confer with me before taking the final step.

A GREAT MAN HONORED.

It is well for the children of each succeeding generation to know something of the great and good men of the generations behind them. It is a good thing for the boys of to-day to know about the good men of yesterday. No one can read the life story of Wendell Phillips without being made better.

The people of Boston, the city in which Wendell Phillips was born and in which he died, never tire of honoring his memory although there was a time when he had many enemies in that city. If you should chance to be in Boston at any time and should go to No. 50 Essex street, which is now in the heart of the business center of the city, you will find there a tablet on which there is this inscription:

"Here Wendell Phillips resided during forty years devoted by him to secure the abolition of African slavery in this country. The charms of home, the enjoyment of wealth and learning, even the kindly recognition of his fellow citizens, were by him accounted as naught compared with duty. He lived to see justice triumphant, freedom universal, and to receive the tardy praises of his opponents. The blessings of the poor, the friendless, and the oppressed enriched him. In Boston he was born November 29, 1811, and died February 2, 1884. This tablet was erected by order of the City Council of Boston."

Could there be a nobler tribute than this paid to

any man? Could there be a nobler life than that which could make a man deserving of such a tribute as this? Could earthly riches give such luster and honor to a name as "The blessings of the poor, the friendless, and the oppressed?" It is a great thing for a man to have spent forty years of his life for a just cause, and to see that cause triumphant at the end of the long and hard struggle.

Last March the Wendell Phillips Memorial Association of Boston, placed in the magnificent new Public Library of that city a bronze bust of Wendell Phillips, and it was right that the bust of so noble a man should have a place in so noble a building. One of the speakers said at the ceremony of placing the bust in the library:

"We are met here to set up in his native city a memorial to one of those rare personages who make illustrious the place where they are born, who illuminate the pathway of peoples, who lift up nations to a loftier view and quicken them with a nobler aspiration, and who thereby do highly make the world better for their having lived in it. Such a man was Wendell Phillips, in whose name we are gathered, and may the word spoken in this hour be a tribute worthy of him. Wendell Phillips was born into the purple, of one of the best families of New England, of whom it was truly said, 'God sifted a whole nation that he might send choice seed wheat into the wilderness,' and from among the finest of that 'choice seed wheat' he sprung."

WENDELL PHILLIPS.

Wendell Phillips spent forty of the best years of his life contending for the right in the face of popular sentiment. He lived to see some of his foes become his warmest friends, and the tears of a nation flowed when he died. He was one of the most eloquent orators America has ever known, and his voice was always uplifted for the right. He might have won the highest place in the social world for he had money, accomplishments, unusual personal beauty, tact and great kindness of heart; but the social world had no charm for him, and he put it aside for the greater and nobler things of life.

There are men and women who are living better lives because of the good life lived by this man. The tablet with which his native city has sought to honor him is a source of help and of inspiration to many who pass by it daily in going to and from their work. It is a mute appeal for them to live good and helpful lives and to trample under foot all that tends to make them self-centered and unmindful of their duty to the poor, the friendless, and the oppressed. There can be no better thing said of any man than that he lived for God and his fellowmen; and if the fact of his having done so is not recorded on a public monument or tablet it is certain that it is recorded in the hearts of those he has helped and in the book of our Lord's remembrance.

BE A GOOD BOY; GOOD-BYE.

JOHN L. SEROY, IN THE SATURDAY EVENING POST.

How oft in my dreams I go back to the day
When I stood at our old wooden gate,
And started to school in full battle array,
Well armed with a primer and slate,
And as the latch fell I thought myself free,
And gloried, I fear, on the sly,
Till I heard a kind voice that whispered to me:
"Be a good boy; good-bye."

"Be a good boy; good-bye." It seems
They have followed me all these years;
They have given a form to my youthful dreams
And scattered my foolish fears.
They have stayed my feet on many a brink,
I 'nseen by a blinded eye;
For just in time I would pause and think:
"Be a good boy; good-bye."

Oh, brother of mine, in the battle of life,
Just starting or nearing its close,
This motto aloft, in the midst of the strife,
Will conquer wherever it goes.
Mistakes you will make, for each of us errs,
But, brother, just honestly try
To accomplish your best. In whatever occurs,
Be a good boy; good-bye.

(Begun in October.)

Review of Preceding Chapters: Jack Carroll, Frank Chapman and Ned Roberts, three boys whose homes are in a village in the far East, obtain the consent of their parents to go to Denver for a visit to Robert Sinclair, a friend of Jack's father, who is a painter of mountain and Indian life, and spends the greater part of his time among the Indians. They are accompanied on their journey so far as Chicago by Mr. Carroll, and are greatly delighted with the sights and sounds of the great city. On the train for Denver they meet Jim Galloway, a trapper, who tells them a true story in which his life is saved by a white man, who was living at the time with the Indians, and turns out to be Robert Sinclair, the artist, whom the boys are going to visit.

CHAPTER V.

THE INDIAN PAINTER.

COURSE, the big trapper was both surprised and pleased on the discovery that the man who had saved him from the tomahawk of the Indians was none other than the one whom the boys were about to visit. Naturally, he set about at once trying to take back the hard things he had said a few moments before about that "city chap" who was to show the boys life among the mountains. It made all the difference in the world with the trapper if that "city chap"

was the man who had saved his life; so he assured the boys that they were going to fall into good hands and would have the best kind of a time.

The trapper's apologies were really pitiful, and once, as Frank afterwards declared, he saw the big fellow brush something from his eyes suspiciously like a tear, but it couldn't have been that, he said, for it was hardly to be conceived that an old hunter, hardened by the storms of more than a score of winters and bronzed by unnumbered suns, accustomed to danger and toil, as brave as the wild beasts among which he had passed the greater part of his life, could be guilty of anything so foolish as a tear. Perhaps he was just brushing away in imagination the cobwebs from his memory so that he could see more distinctly with his mind's eye the face of Robert Sinclair as he saw him that day in the mountains.

For some time the four could do little else than talk about this man who had so strangely come into their lives. The trapper plied them with questions innumerable, and before he was satisfied they had to tell him what they had heard from Mr. Carroll about the Indian painter. The story, as Jack gave it, prompted now and then by the other boys, ran something as follows, though the boy did not tell it in exactly this language:

Some years ago Robert Sinclair was a young fellow living in New York City. He belonged to a rich and influential family, his father being a merchant and head of a great importing house. Robert was the youngest of several brothers, all of whom save himself had gone into business and had homes and establishments of their own. Robert being the last to leave home, became the joy of his mother's life, and was petted and humored in everything.

The father, disappointed in finding his older sons drifting away from him into other lines of business than his own, centered all of his hopes, so far as the carrying on of his own business was concerned, on Robert; but the boy had a will of his own, and was intent on following it. It seemed to be his sole purpose in life to get out of it as good a time as possible. With an artistic temperament and not a little talent with the pencil, careless about matters of money and business, he drifted into a gay, careless world, and there became a favorite. He looked upon his father's business as drudgery, and secretly despised the grind of the office and the details of money making and money saving. At first he spent one or two evenings

a week with congenial fellows of his kind, in a way that his conscience scarcely approved of, though it exactly suited his tastes.

Finally he came to hate the quiet and matter-of-fact companionship of his father and mother; their quiet, earnest life galled him. He became uneasy and restless unless in the freer society of young fellows of Bohemian ways and surroundings. The result was that he sketched a few pictures, which were good—remarkably good, for so little effort and study as was given them—and in addition incurred some vicious habits which, when once started, grew at an alarming pace. In less than two years he was a drunkard—a disgrace to himself and his friends, and almost a stranger in his own home. So low indeed did he fall that one day his father, after a last attempt to win him back, shut the door of his home against him and forbade his name being mentioned again by the members of his family.

Robert Sinclair was now thoroughly disgraced. He walked the streets dazed with the suddenness of the blow. He feared his father, feared the world, and particularly did he fear the taunts of friends and the indifference of his former companions. He had no money and no home. In a poor excuse for a studio, shared with another young man much like himself, he had a few belongings—a little canvas, some pencils, crayons, brushes and colors. Despair led him finally to a resolve to leave New York and start life anew somewhere among strangers. Going to his room he packed up what little he had and set his face toward the new West, scarcely knowing more of it than that it was the Eldorado of many an adventurer and the source of great stories of opportunity. With little realization of the distance, he started on foot. His first stopping place was at a country tavern on the outskirts of the city. Here he offered to sketch the barkeeper's picture in exchange for a drink; the offer was accepted, and by a few deft strokes with the crayon he had done the work, earned the miserable reward and the applause of a group of idlers who frequented the place, each of whom demanded a picture and received it amid the guffaws and jokes of the company, the whole performance ending in more drinks and a penny collection for the artist. It was but a short journey to another tavern or country bar, and here the same performance was repeated. Thus from town to town the young man traveled, eking out a miserable existence, but all the time getting farther and farther away from the scenes of his failure and disgrace. Now and then some lucky happening threw in his way work that he could do with brush or pencil which gave him money enabling him to travel some distance by rail. In several places he found congenial though not very profitable employment for some months, the last of these being St. Louis, where he remained for over a year. One day while there he made the acquaintance of one of a company that was fitting out for the long trail across the plains to the new gold fields of the Pacific Coast. He sought and obtained permission to join it; so, buying a horse and such equipments as he could afford, he set out with the little caravan, and after months of severe experiences found himself at the foothills of the Rockies.

At the sight of the great mountains the artist awoke to the grandeur of his true nature, and bidding his friends good-bye, he cut loose from the caravan, determined to make his home among this wilderness of beauty and here to live a new life, alone if necessary, in the pure air of mountain and plain. Carrying his trusty rifle and his little bundle of sketching materials, he explored cañons and crevices known only to the Indians, climbed the untrodden tops of many a mountain peak, and became the guest and friend of every Indian band for hundreds of miles in all directions.

The Indians came to love him in their own stolid way, and he in turn treated them as his best friends, and helped and instructed them in many ways. It was on one of these visits to a band of Cheyennes that he had been able to save the life of Jim Galloway, the trapper.

This story, told falteringly and in a boy's way, was of intense interest to Jim Galloway. All through the telling of it the trapper kept his eyes riveted on Jack, and after the last words were spoken he sat for some minutes motionless and silent; then he said:

"Youngsters, many's the time I've wondered why that pale-face was so earnest in makin' me promise not to tech liquor agin, but I know now."

CHAPTER VI.

THEY SEE BUFFALOES.

The train was still speeding along over the great undulating plain, and the boys several times in their eagerness thought they could see mountains in the distance, but in each case what appeared to be mountains was only little sandhills or clumps of bushes on the horizon, and the trapper told them that they must spend another night on the train before they could get the longed for glimpse of the Rockies.

"When yer wake in the mornin' you'll see 'em 'long the line o' sky yonder," said he.

As the boys' eyes followed the direction of the trapper's index finger, suddenly Frank caught sight of a strange object in the distance.

"What's that, Mr. Galloway?" he asked.

"Hold on thar, youngster, don't mister me. Jest plain Jim. I wouldn't know myself out here 'cept as Jim, an' the boys would run me out o' camp if I 'lowed a feller ter call me mister. Say Jim an' I'll allers know who yer referrin' to."

Jim, too, had seen the object that occasioned Frank's question, but to him it was no strange sight. He was too much taken up with the thoughts engendered by the story of Robert Sinclair to particularly notice anything else, and then, too, he had failed to realize that everything about them was new to his young companions.

"That's a buffaler," he said, answering Frank's question.

"A buffalo!" exclaimed the three boys in one breath.

"Didn't yer see that buffaler trail we passed back yonder?" asked the trapper.

"I did see something that looked like a path a ways back," said Ned, "and wondered what it was."

"Wall, that war a buffaler trail, an' it looked fresh, so I knowed thar war buffaler 'round here," said the trapper.

"But I thought," said Frank, "that buffaloes traveled in big droves, and how could they make a narrow path like that?"

"They does ginerally, but long 'bout sundown you'll see 'em trail off injun file, hundreds and thousands sometimes, goin' ter some place whar ther's water. They most ginerally git thirsty in the evenin'. Some ole bull leads the way an' the rest o' the herd trails along arter. If yer foller one o' them paths on the plains you'll allers find it leads to water. Many's the time I've come upon one o' them when I was 'bout to give out fer a drink, an' I tell, yer, youngsters, one o' them trails is a lucky find fer a thirsty trapper."

"No wonder," said Ned, "that the path was cut so deep. It seemed to me that it must have been a foot. But I wish we could get nearer to that buffalo, and I believe we are," and the boys strained their eyes to get a good look at what was little more as yet than a black speck on the horizon.

"He's prob'ly some ole bull driven out o' the herd to shift fer hisself," said the trapper.

"Why should they drive him out?" asked Jack.

"Wall, yer see, when a buffaler bull as has been a leader gits old, some young bull gits to thinkin' ne knows better'n the ole one how to boss the rest, an' he'll up an' strut roun' as if ter pick a fight, an' sooner or later he'll git it, an' arter he's had two or three scraps with other ambitious young fellers, the buffaler cows and calves gits ter thinkin' he's the hull thing, an' they jest naterally snub the ole leader and foller the young un. Then the ole bull he feels disgraced like, fer nobody wants ter foller him any longer, an' he sulks and falls back into the herd and gits run over some day in a stampede, or more ginerally wanders off broken hearted alone and gits et up by wolves. But thet feller over thar ain't alone; there's others."

The boys could now plainly see the shaggy forms of four or five buffaloes grazing a little distance apart, just as the train rounded a slight swell in the ground.

"We're now in the buffaler country an' ought ter see a lot of 'em," continued the trapper. "Them fellers yer see is prob'ly spies sent out ter watch fer trouble. A buffaler herd is a good deal like an army; it has its captains an' its generals an' its pickets. Buffaloes are strange critters. They act most like human at times, an' then agin they hain't got a grain o' sense. Them fellers over thar'll likely take ter their heels afore long, when we git nearer, an' run right inter the middle of the herd and give the warnin'. Then the leaders 'll start off with the hull lot of 'em gallopin' arter, and jist like as not they'll run right inter danger, fer they're big fools that way. They've ginerally got a notion that they must keep agoin' straight ahead, an', instid of turnin' from the track whar their pursuers is goin' they'll keep straight on it er try ter cross it in front. I've seen a herd o' buffaloes run head of a train fer miles, tryin' to outrun it, and stick clost ter the track all ther way."

In a few moments more the train was within a short distance of the group of buffaloes, and the boys wondered that they did not become frightened.

"The wind's comin' this way," explained the trapper, "an' they hasn't scented us yit. You ken git close up ter a buffaler if the wind is off."

Just then the animals lifted their heads and gazed from side to side in a nervous way, so that the boys

Publishers' note: The author of "Three Boys in the Mountains" has attempted, at our request, to write a story of adventure for boys devoid of impossible incidents and questionable morals. The race with buffaloes described in Chapter V. was not an unusual occurrence in the early days of railroading in the West. Trains were often delayed for hours by the closing in upon them of multitudes of these animals.

had a good view of them. Their great, shaggy heads were covered with matted hair, tangled and full of burrs, almost concealing their little horns and their eyes that seemed to stick out of the sides of their heads, so that, as Frank suggested, they could see both ways.

So near had the train now come to the animals that the boys were wild with suppressed excitement, and this was increased when several short, sharp whistles from the engine startled the big beasts into a run, or rather a clumsy gallop. Sure enough, just as the trapper had said, they plunged off in a way parallel to the railroad track and in the same direction in which the train was going.

"I shouldn't wonder if we'd see some fun," suggested the trapper, with a significant movement of his arm, as if he was feeling to see that his "shootin' iron" was all right.

CHAPTER VII.

NED KILLS A BUFFALO.

The train had not gone far 'ere it had left the galloping buffaloes in the rear, but the wild shrill whistles of the engine at short intervals, and the perceptible slowing up of the train, indicated trouble ahead. So intent were the boys on keeping the buffaloes in view that they scarcely noticed these signs of something unusual ahead.

"Youngsters, we've run down a herd o' buffaloes sure. 'Taint ofter yer git this sport now. It use ter be a few years ago thet yer couldn't cross these plains without runnin' inter a bunch o' them big fellers. Looks like we war in fer a race with 'em good and heavy."

The boys were on the tiptoe of excitement. Just to think of it, they had only been gone from home two or three days, and already had seen buffaloes and were about to have a race with a herd of them! Were boys ever so lucky? Each of them found a window that was unoccupied, and out of it stuck his head to get a good view of what was about to happen. Just ahead of the engine appeared the rear guard of an immense herd of the shaggy-coated monarchs of the plain. The herd itself could be seen at a distance, evidently not yet fully aware of the approaching danger, for they had not started to run. The engine kept up its shrieking as it crept nearer and nearer the outskirts of the great mass. Now they were in the midst of them, and the whole pack of countless hundreds were lumbering along, bellowing with what seemed like a low, hoarse groan, and making a noise with their hoofs which sounded like the rumble of thunder heard above the rattle of the train. A great cloud of dust arose on all sides, almost blinding the sight. Strange to say, the entire

herd was galloping along in the same direction with the train, pushing and jostling in their mad attempts to outrun the danger, carried by their foolish leaders right in the very way in which they should not go.

The boys found themselves in a seething, struggling mass that seemed to be closing in on them more and more every moment. Through the clouds of dust they could see distinctly the forms of the animals nearest them as they plunged along, pushing away as far as possible from the danger line, and beyond these, so far as the eye could reach, they beheld nothing but a black sea unlike anything that they had ever before looked upon.

There was the sudden crack of a breechloader ahead, and Ned, whose head was out one of the forward windows of the coach, cried out: "Some one in the car ahead is shooting out the window! Don't you wish we had a gun?"

"I don't believe," said Jack, excitedly, "that a fellow could miss at this distance, no matter how bad a shot he might be," and just then a young buffalo threw his head in the air and pitched forward upon his knees. In an instant a score or more of big fellows stumbled over him and fell, some to catch themselves and go limping away, others to be trampled to death under the hoofs of the oncoming horde.

"O, isn't it awful!" exclaimed Frank, as another shot rang out, this time from a window of their own car, and then another and another, until it seemed as if the train were a moving arsenal.

"I don't like this at all," cried Frank. "It isn't hunting. It's more like murder."

"What's one buffalo more or less among these thousands? I wish I had a gun," said Jack.

"Wall, I guess yer ken git satisfaction ef yer really want it," said the trapper, accompanying his words with a quick movement toward his hip pocket. Here's a feller as'll fetch 'em as good as a rifle," and with this he handed to Jack an ugly looking pistol that had evidently seen considerable service. Jack for a moment almost regretted having expressed a wish for a gun, but now that he had one in his hands he was not going to show the white feather.

"Now, youngster, aim keerful. Fire at buffaloes. You won't hit nothin' that way 'cept the ground. Up a little! That's it! Pint it at thet big feller comin' this way; he's nearest to yer. Hit 'im in that little spot jest back o' the shoulder. That's the place to git a buffaloe."

Jack's hand trembled so he could hardly pull the trigger.

Bang!

Four heads peered out through the smoke and dust, but not a sign could be seen of a wounded or dead buffalo, and the big fellow was lumbering along as if nothing had happened.

"Ha! ha! ha!" laughed the boys.

"Let me try it," said Ned, and by this time the train was going so slowly that the big fellow at whom Jack had shot was still opposite their window.

The trapper looked his weapon over, set the trigger, and handed it to Ned. Ned had scarcely taken it in his hand and turned its barrel toward the window than he had pulled the trigger, and again the

anxious to get a near view of a bison; but they stood very near the train until the mad throng had somewhat thinned out, and then they cautiously approached the shapeless mass of shaggy heads, hoofs and horns that almost covered the big buffalo which Ned had brought down.

The boys were awed by the spectacle, and Ned could scarcely be prevailed on to do what the other boys did with the aid of the trapper's hunting knife, cut off some of the shaggy locks of the big fellow for a memento.

"I don't know," said Ned, "why I should feel this way, but I really feel like a coward. If the buffalo could have had a fair chance for his life I think I wouldn't feel so bad."

Jack broke into a laugh, and suggested that he thought the buffalo had more than a fair chance for his life with Ned holding the trigger, and he declared testily that he thought it was all luck anyway and that Ned needn't feel so bad about it; that he wasn't to be blamed for hitting something that he really didn't expect to hit.

As they clambered back into the train the old trapper said, putting his hand on Ned's shoulder: "I wisht more people had yer feelin's, youngster. Them buffaloes used ter run these plains by the millions. They war masters then. Ther only foe war the Injuns an' the wolves, but the wolves didn't dare tech 'em 'till they got old and feeble, an' the Injuns didn't take enough of 'em to keep 'em from growin'. They killed 'em fer their hides fer their wigwams, an' fer their meat in the cold winter, an' arter they got that they let 'em alone; but the travelers an' fortune

hunters from the States has been killin' 'em for sport. There's been hundreds o' the poor critters give up their life to-day fer fear o' these keers. In a few years this noble critter will not be found in all this country, an' I don't know what the Injun will do without 'im, fer the buffaloe is 'bout all he has to depend on fer grub an' shelter."

The sun had now set and the air was still. The train was speeding along amid the usual quiet and desolation of the prairies. Not a sign of life appeared, save here and there a single buffalo laboriously creeping along through the grass, while scattered about lay dead members of the great herd, singly and in groups, awaiting the crows and wolves, which, after feasting on the flesh of the dead animals, would leave the bones to whiten in the sun until time should crumble them back to earth.

The three boys fell into a sleep that night that was not altogether untroubled; but they wakened in the morning happy at the sight in the far distance of the low lying foothills of the old Rockies with Pike's Peak standing sentinel over all.

(To be continued.)

The entire herd was galloping along in the same direction with the train.

boys were peering through the smoke to see what had happened.

"Ha! ha! ha!" and in the laugh that followed Jack's voice was the loudest. "Now let me try," said the trapper quietly, and taking the pistol in his hands he held it at arm's length for just a moment, then quietly withdrew his arm and almost rose from his seat as he said: "Youngster, look, you've got 'im. See, he's droppin' behind. He's stumblin'. Now he's up agin. Look out, ole feller, or you're done. There he goes! Give me your hand, youngster; you're a dead shot." "Oh-h!" exclaimed Ned, scarcely above a whisper, his face suddenly growing pale. "I'm sorry I did it. He's a noble looking fellow. He had just as much right to live as I have, and it was cowardly of me."

During all this excitement the train had gradually slowed up and had now come to a standstill a few yards beyond the point where the big buffalo had dropped at Ned's shot, and over the body his fellows were tumbling in a mad rush.

"We're goin' to wait to let 'em pass," suggested the trapper.

"I wish," said Ned, "they had not stopped just here."

"Pshaw!" exclaimed Jack in disgust, "I wish I'd killed him. I'd give anything to be able to write home that I hadn't been gone a week before I'd killed a buffalo."

"You'll have ter git over them sentimental feelins if yer goin' ter see this country," said the trapper; but let's git off till the train starts an' see what you've got."

It was no sooner said than done, for the boys were

A FARMER FATHER'S PHILOSOPHY.

FRANK S. PIXLEY, IN CHICAGO MAIL.

Dear Son—Your letter of the 10th came in the mail today. And so you want to marry, and you wonder what we'll say!

Well, Joe, your mother here and I have read your letter through.

And she seems to think that I'm the one who'd better lecture you;

For, though in most affairs, of course, there's nothing; quite so nice

As a mother's letter, still it takes a man to give advice.

Your letter says: "She's beautiful and handsome as a queen."

I hope so, Joe, and hope you know just what those two words mean.

A beautiful form is one which tells of a beautiful soul within;

A handsome face is one which wears no damning brand of sin;

Beautiful eyes are those that with the fire of pure thought glow;

Beautiful lips are those which speak for a truthful heart below;

The handsomest hands are those not ashamed the Master's work to do—

Hands that are patient and brave and kind, gentle and strong and true;

Beautiful feet are those which go in answer to duty's call;

And beautiful shoulders are those which bear their dally burdens all.

Remember this maxim true, my boy, wherever you choose a wife:

"The handsomest woman of earth is she who leads the handsomest life."

I therefore trust that the woman you wed (if you really love each other)

May be the handsomest one in the world—excepting one—your mother.

(Begun in October.)

Review of Preceding Chapters: Jack Carroll, Frank Chapman and Ned Roberts, three boys whose homes are in a village in the far East, obtain the consent of their parents to go to Denver for a visit to Robert Sinclair, a friend of Jack's father, who is a painter of mountain and Indian life, and spends the greater part of his time among the Indians. They are accompanied on their journey so far as Chicago by Mr. Carroll, and are greatly delighted with the sights and sounds of the great city. On the train for Denver they meet Jim Galloway, a trapper, who tells them a true story in which his life is saved by a white man, who was living at the time with the Indians, and turns out to be Robert Sinclair, the artist, whom the boys are going to visit.

CHAPTER V.

THE INDIAN PAINTER.

COURSE, the big trapper was both surprised and pleased on the discovery that the man who had saved him from the tomahawk of the Indians was none other than the one whom the boys were about to visit. Naturally, he set about at once trying to take back the hard things he had said a few moments before about that "city chap" who was to show the boys life among the mountains. It made all the difference in the world with the trapper if that "city chap"

was the man who had saved his life; so he assured the boys that they were going to fall into good hands and would have the best kind of a time.

The trapper's apologies were really pitiful, and once, as Frank afterwards declared, he saw the big fellow brush something from his eyes suspiciously like a tear, but it couldn't have been that, he said, for it was hardly to be conceived that an old hunter, hardened by the storms of more than a score of winters and bronzed by unnumbered suns, accustomed to danger and toil, as brave as the wild beasts among which he had passed the greater part of his life, could be guilty of anything so foolish as a tear. Perhaps he was just brushing away in imagination the cobwebs from his memory so that he could see more distinctly with his mind's eye the face of Robert Sinclair as he saw him that day in the mountains.

For some time the four could do little else than talk about this man who had so strangely come into their lives. The trapper plied them with questions innumerable, and before he was satisfied they had to tell him what they had heard from Mr. Carroll about the Indian painter. The story, as Jack gave it, prompted now and then by the other boys, ran something as follows, though the boy did not tell it in exactly this language:

Some years ago Robert Sinclair was a young fellow living in New York City. He belonged to a rich and influential family, his father being a merchant and head of a great importing house. Robert was the youngest of several brothers, all of whom save himself had gone into business and had homes and establishments of their own. Robert being the last to leave home, became the joy of his mother's life, and was petted and humored in everything.

The father, disappointed in finding his older sons drifting away from him into other lines of business than his own, centered all of his hopes, so far as the carrying on of his own business was concerned, on Robert; but the boy had a will of his own, and was intent on following it. It seemed to be his sole purpose in life to get out of it as good a time as possible. With an artistic temperament and not a little talent with the pencil, careless about matters of money and business, he drifted into a gay, careless world, and there became a favorite. He looked upon his father's business as drudgery, and secretly despised the grind of the office and the details of money making and money saving. At first he spent one or two evenings

a week with congenial fellows of his kind, in a way that his conscience scarcely approved of, though it exactly suited his tastes.

Finally he came to hate the quiet and matter-of-fact companionship of his father and mother; their quiet, earnest life galled him. He became uneasy and restless unless in the freer society of young fellows of Bohemian ways and surroundings. The result was that he sketched a few pictures, which were good—remarkably good, for so little effort and study as was given them—and in addition incurred some vicious habits which, when once started, grew at an alarming pace. In less than two years he was a drunkard—a disgrace to himself and his friends, and almost a stranger in his own home. So low indeed did he fall that one day his father, after a last attempt to win him back, shut the door of his home against him and forbade his name being mentioned again by the members of his family.

Robert Sinclair was now thoroughly disgraced. He walked the streets dazed with the suddenness of the blow. He feared his father, feared the world, and particularly did he fear the taunts of friends and the indifference of his former companions. He had no money and no home. In a poor excuse for a studio, shared with another young man much like himself, he had a few belongings—a little canvas, some pencils, crayons, brushes and colors. Despair led him finally to a resolve to leave New York and start life anew somewhere among strangers. Going to his room he packed up what little he had and set his face toward the new West, scarcely knowing more of it than that it was the Eldorado of many an adventurer and the source of great stories of opportunity. With little realization of the distance, he started on foot. His first stopping place was at a country tavern on the outskirts of the city. Here he offered to sketch the barkeeper's picture in exchange for a drink; the offer was accepted, and by a few deft strokes with the crayon he had done the work, earned the miserable reward and the applause of a group of idlers who frequented the place, each of whom demanded a picture and received it amid the guffaws and jokes of the company, the whole performance ending in more drinks and a penny collection for the artist. It was but a short journey to another tavern or country bar, and here the same performance was repeated. Thus from town to town the young man traveled, eking out a miserable existence, but all the time getting farther and farther away from the scenes of his failure and disgrace. Now and then some lucky happening threw in his way work that he could do with brush or pencil which gave him money enabling him to travel some distance by rail. In several places he found congenial though not very profitable employment for some months, the last of these being St. Louis, where he remained for over a year. One day while there he made the acquaintance of one of a company that was fitting out for the long trail across the plains to the new gold fields of the Pacific Coast. He sought and obtained permission to join it; so, buying a horse and such equipments as he could afford, he set out with the little caravan, and after months of severe experiences found himself at the foothills of the Rockies.

At the sight of the great mountains the artist awoke to the grandeur of his true nature, and bidding his friends good-bye, he cut loose from the caravan, determined to make his home among this wilderness of beauty and here to live a new life, alone if necessary, in the pure air of mountain and plain. Carrying his trusty rifle and his little bundle of sketching materials, he explored cañons and crevices known only to the Indians, climbed the untrodden tops of many a mountain peak, and became the guest and friend of every Indian band for hundreds of miles in all directions.

The Indians came to love him in their own stolid way, and he in turn treated them as his best friends, and helped and instructed them in many ways. It was on one of these visits to a band of Cheyennes that he had been able to save the life of Jim Galloway, the trapper.

This story, told falteringly and in a boy's way, was of intense interest to Jim Galloway. All through the telling of it the trapper kept his eyes riveted on Jack, and after the last words were spoken he sat for some minutes motionless and silent; then he said:

"Youngsters, many's the time I've wondered why that pale-face was so arnest in makin' me promise not to tech liquor agin, but I know now."

CHAPTER VI.

THEY SEE BUFFALOES.

The train was still speeding along over the great undulating plain, and the boys several times in their eagerness thought they could see mountains in the distance, but in each case what appeared to be mountains was only little sandhills or clumps of bushes on the horizon, and the trapper told them that they must spend another night on the train before they could get the longed for glimpse of the Rockies.

"When yer wake in the mornin' you'll see 'em 'long the line o' sky yonder," said he.

As the boys' eyes followed the direction of the trapper's index finger, suddenly Frank caught sight of a strange object in the distance.

"What's that, Mr. Galloway?" he asked.

"Hold on thar, youngster, don't mister me. Jest plain Jim. I wouldn't know myself out here 'cept as Jim, an' the boys would run me out o' camp if I 'lowed a feller ter call me mister. Say Jim an' I'll allers know who yer referrin' to."

Jim, too, had seen the object that occasioned Frank's question, but to him it was no strange sight. He was too much taken up with the thoughts engendered by the story of Robert Sinclair to particularly notice anything else, and then, too, he had failed to realize that everything about them was new to his young companions.

"That's a buffaler," he said, answering Frank's question.

"A buffalo!" exclaimed the three boys in one breath.

"Didn't yer see that buffaler trail we passed back yonder?" asked the trapper.

"I did see something that looked like a path a ways back," said Ned, "and wondered what it was."

"Wall, thet war a buffaler trail, an' it looked fresh, so I knowed thar war buffaler 'round here," said the trapper.

"But I thought," said Frank, "that buffaloes traveled in big droves, and how could they make a narrow path like that?"

"They does generally, but long 'bout sundown you'll see 'em trail off Injun file, hundreds and thousands sometimes, goin' ter some place whar ther's water. They most generally git thirsty in the evenin'. Some ole bull leads the way an' the rest o' the herd trails along arter. If yer foller one o' them paths on the plains you'll allers find it leads to water. Many's the time I've come upon one o' them when I was 'bout to give out fer a drink, an' I tell, yer, youngsters, one o' them trails is a lucky find fer a thirsty trapper."

"No wonder," said Ned, "that the path was cut so deep. It seemed to me that it must have been a foot. But I wish we could get nearer to that buffalo, and I believe we are," and the boys strained their eyes to get a good look at what was little more as yet than a black speck on the horizon.

"He's probly some ole bull driven out o' the herd to shift fer hisself," said the trapper.

"Why should they drive him out?" asked Jack.

"Wall, yer see, when a buffaler bull as has been a leader gits old, some young bull gits to thinkin' ne knows better'n the ole one how to boss the rest, an' he'll up an' strut roun' as if ter pick a fight, an' sooner or later he'll git it, an' arter he's had two or three scraps with other ambitious young fellers, the buffaler cows and calves gits ter thinkin' he's the hull thing, an' they jest naterally snub the ole leader and foller the young un. Then the ole bull he feels disgraced like, fer nobody wants ter foller him any longer, an' he sulks and falls back into the herd and gits run over some day in a stampede, or more generally wanders off broken hearted alone and gits et up by wolves. But thet feller over thar ain't alone; there's others."

The boys could now plainly see the shaggy forms of four or five buffaloes grazing a little distance apart, just as the train rounded a slight swell in the ground.

"We're now in the buffaler country an' ought ter see a lot of 'em," continued the trapper. "Them fellers yer see is probly spies sent out ter watch fer trouble. A buffaler herd is a good deal like an army; it has its captains an' its generals an' its pickets. Buffaloes are strange critters. They act most like human at times, an' then agin they hain't got a grain o' sense. Them fellers over thar'll likely take ter their heels afore long, when we git nearer, an' run right inter the middle of the herd and give the warnin'. Then the leaders 'ill start off with the hull lot of 'em gallopin' arter, and jist like as not they'll run right inter danger, fer they're big fools thet way. They've generally got a notion that they must keep agoin' straight ahead, an', instid of turnin' from the track whar their pursuers is goin' they'll keep straight on it er try ter cross it in front. I've seen a herd o' buffaloes run head of a train fer miles, tryin' to outrun it, and stick clost ter the track all ther way."

In a few moments more the train was within a short distance of the group of buffaloes, and the boys wondered that they did not become frightened.

"The wind's comin' this way," explained the trapper, "an' they hasn't scented us yit. You ken git close up ter a buffaler if the wind is off."

Just then the animals lifted their heads and gazed from side to side in a nervous way, so that the boys

Publishers' note: The author of "Three Boys in the Mountains" has attempted, at our request, to write a story of adventure for boys devoid of impossible incidents and questionable morals. The race with buffaloes described in Chapter V, was not an unusual occurrence in the early days of railroading in the West. Trains were often delayed for hours by the closing in upon them of multitudes of these animals.

had a good view of them. Their great, shaggy heads were covered with matted hair, tangled and full of burrs, almost concealing their little horns and their eyes that seemed to stick out of the sides of their heads, so that, as Frank suggested, they could see both ways.

So near had the train now come to the animals that the boys were wild with suppressed excitement, and this was increased when several short, sharp whistles from the engine startled the big beasts into a run, or rather a clumsy gallop. Sure enough, just as the trapper had said, they plunged off in a way parallel to the railroad track and in the same direction in which the train was going.

"I shouldn't wonder if we'd see some fun," suggested the trapper, with a significant movement of his arm, as if he was feeling to see that his "shootin' iron" was all right.

CHAPTER VII.

NED KILLS A BUFFALO.

The train had not gone far 'ere it had left the galloping buffaloes in the rear, but the wild shrill whistles of the engine at short intervals, and the perceptible slowing up of the train, indicated trouble ahead. So intent were the boys on keeping the buffaloes in view that they scarcely noticed these signs of something unusual ahead.

"Youngsters, we've run down a herd o' buffaloes sure. 'Taint often yer git this sport now. It use ter be a few years ago that yer couldn't cross these plains without runnin' inter a bunch o' them big fellers. Looks like we war in fer a race with 'em good and heavy."

The boys were on the tiptoe of excitement. Just to think of it, they had only been gone from home two or three days, and already had seen buffaloes and were about to have a race with a herd of them! Were boys ever so lucky? Each of them found a window that was unoccupied, and out of it stuck his head to get a good view of what was about to happen. Just ahead of the engine appeared the rear guard of an immense herd of the shaggy-coated monarchs of the plain. The herd itself could be seen at a distance, evidently not yet fully aware of the approaching danger, for they had not started to run. The engine kept up its shrieking as it crept nearer and nearer the outskirts of the great mass. Now they were in the midst of them, and the whole pack of countless hundreds were lumbering along, belching with what seemed like a low, hoarse groan, and making a noise with their hoofs which sounded like the rumble of thunder heard above the rattle of the train. A great cloud of dust arose on all sides, almost blinding the sight. Strange to say, the entire herd was galloping along in the same direction with the train, pushing and jostling in their mad attempts to outrun the danger, carried by their foolish leaders right in the very way in which they should not go.

The boys found themselves in a seething, struggling mass that seemed to be closing in on them more and more every moment. Through the clouds of dust they could see distinctly the forms of the animals nearest them as they plunged along, pushing away as far as possible from the danger line, and beyond these, so far as the eye could reach, they beheld nothing but a black sea unlike anything that they had ever before looked upon.

There was the sudden crack of a breechloader ahead, and Ned, whose head was out one of the forward windows of the coach, cried out: "Some one in the car ahead is shooting out the window! Don't you wish we had a gun?"

"I don't believe," said Jack, excitedly, "that a fellow could miss at this distance, no matter how bad a shot he might be," and just then a young buffalo threw his head in the air and pitched forward upon his knees. In an instant a score or more of big fellows stumbled over him and fell, some to catch themselves and go limping away, others to be trampled to death under the hoofs of the oncoming horde.

"O, isn't it awful!" exclaimed Frank, as another shot rang out, this time from a window of their own car, and then another and another, until it seemed as if the train were a moving arsenal.

"I don't like this at all," cried Frank. "It isn't hunting. It's more like murder."

"What's one buffalo more or less among these thousands? I wish I had a gun," said Jack.

"Wall, I guess yer ken git satisfaction ef yer really want it," said the trapper, accompanying his words with a quick movement toward his hip pocket. Here's a feller as'll fetch 'em as good as a rifle," and with this he handed to Jack an ugly looking pistol that had evidently seen considerable service. Jack for a moment almost regretted having expressed a wish for a gun, but now that he had one in his hands he was not going to show the white feather.

"Now, youngster, aim keerful. Fire at buffaloes. You won't hit nothin' that way 'cept the ground. Up a little! That's it! Pint it at that big feller comin' this way; he's nearest to yer. Hit 'im in that little spot jest back o' the shoulder. That's the place to git a buffaloe."

Jack's hand trembled so he could hardly pull the trigger.

Bang!

Four heads peered out through the smoke and dust, but not a sign could be seen of a wounded or dead buffalo, and the big fellow was lumbering along as if nothing had happened.

"Ha! ha! ha!" laughed the boys.

"Let me try it," said Ned, and by this time the train was going so slowly that the big fellow at whom Jack had shot was still opposite their window.

The trapper looked his weapon over, set the trigger, and handed it to Ned. Ned had scarcely taken it in his hand and turned its barrel toward the window than he had pulled the trigger, and again the

anxious to get a near view of a bison; but they stood very near the train until the mad throng had somewhat thinned out, and then they cautiously approached the shapeless mass of shaggy heads, hoofs and horns that almost covered the big buffalo which Ned had brought down.

The boys were awed by the spectacle, and Ned could scarcely be prevailed on to do what the other boys did with the aid of the trapper's hunting knife, cut off some of the shaggy locks of the big fellow for a memento.

"I don't know," said Ned, "why I should feel this way, but I really feel like a coward. If the buffalo could have had a fair chance for his life I think I wouldn't feel so bad."

Jack broke into a laugh, and suggested that he thought the buffalo had more than a fair chance for his life with Ned holding the trigger, and he declared testily that he thought it was all luck anyway and that Ned needn't feel so bad about it; that he wasn't to be blamed for hitting something that he really didn't expect to hit.

As they clambered back into the train the old trapper said, putting his hand on Ned's shoulder: "I wisht more people had yer feelin's, youngster. Them buffaloes used ter run these plains by the millions. They war masters then. Ther only foe war the Injuns an' the wolves, but the wolves didn't dare tech 'em 'till they got old and feeble, an' the Injuns didn't take enough of 'em to keep 'em from growin'. hunters from the States has been killin' 'em for sport. There's been hundreds o' the poor critters give up their life to-day fer fear o' these keers. In a few years this noble critter will not be found in all this country, an' I don't know what the Injun will do without 'im, fer the buffaloe is 'bout all he has to depend on fer grub an' shelter."

The sun had now set and the air was still. The train was speeding along amid the usual quiet and desolation of the prairies. Not a sign of life appeared, save here and there a single buffalo laboriously creeping along through the grass, while scattered about lay dead members of the great herd, singly and in groups, awaiting the crows and wolves, which, after feasting on the flesh of the dead animals, would leave the bones to whiten in the sun until time should crumble them back to earth.

The three boys fell into a sleep that night that was not altogether untroubled; but they wakened in the morning happy at the sight in the far distance of the low lying foothills of the old Rockies with Pike's Peak standing sentinel over all.

(To be continued.)

The entire herd was galloping along in the same direction with the train.

boys were peering through the smoke to see what had happened.

"Ha! ha! ha!" and in the laugh that followed Jack's voice was the loudest. "Now let me try," said the trapper quietly, and taking the pistol in his hands he held it at arm's length for just a moment, then quietly withdrew his arm and almost rose from his seat as he said: "Youngster, look, you've got 'im. See, he's droppin' behind. He's stumblin'. Now he's up agin. Look out, ole feller, or you're done. There he goes! Give me your hand, youngster; you're a dead shot."

"Oh-h!" exclaimed Ned, scarcely above a whisper, his face suddenly growing pale. "I'm sorry I did it. He's a noble looking fellow. He had just as much right to live as I have, and it was cowardly of me."

During all this excitement the train had gradually slowed up and had now come to a standstill a few yards beyond the point where the big buffalo had dropped at Ned's shot, and over the body his fellows were tumbling in a mad rush.

"We're goin' to wait to let 'em pass," suggested the trapper.

"I wish," said Ned, "they had not stopped just here."

"Pshaw!" exclaimed Jack in disgust, "I wish I'd killed him. I'd give anything to be able to write home that I hadn't been gone a week before I'd killed a buffalo."

"You'll have ter git over them sentimental feelins if yer goin' ter see this country," said the trapper; but let's git off till the train starts an' see what you've got."

It was no sooner said than done, for the boys were

A FARMER FATHER'S PHILOSOPHY.

FRANK S. PIXLEY, IN CHICAGO MAIL.

Dear Son—Your letter of the 10th came in the mail today. And so you want to marry, and you wonder what we'll say!

Well, Joe, your mother here and I have read your letter through.

And she seems to think that I'm the one who'd better lecture you:

For, though in most affairs, of course, there's nothing quite so nice

As a mother's letter, still it takes a man to give advice. Your letter says: "She's beautiful and handsome as a queen."

I hope so, Joe, and hope you know just what those two words mean.

A beautiful form is one which tells of a beautiful soul within;

A handsome face is one which wears no damning brand of sin;

Beautiful eyes are those that with the fire of pure thought glow;

Beautiful lips are those which speak for a truthful heart below;

The handsomest hands are those not ashamed the Master's work to do—

Hands that are patient and brave and kind, gentle and strong and true;

Beautiful feet are those which go in answer to duty's call; And beautiful shoulders are those which bear their dally burdens all.

Remember this maxim true, my boy, wherever you choose a wife:

"The handsomest woman of earth is she who leads the handsomest life."

I therefore trust that the woman you wed (if you really love each other)

May be the handsomest one in the world—excepting one—your mother.

The Cruise of the Yacht Gazelle; 6,000 Miles on Inland and Ocean Waters

KENNETH M. RANSON

These are the eighth and ninth chapters in the story of a six thousand mile cruise by four Michigan boys in a boat of their own construction. Setting sail from St. Joseph, the "Gazelle," by which name their craft was known, proceeded by way of lake, river and canal to the Mississippi, thence to New Orleans and the Gulf, along the gulf coast to the Atlantic, thence to New York harbor by way of the ocean, thence by river, canal and lake, home to Michigan.

CHAPTER VIII.

A TURTLE HUNT.

It was scarcely daybreak when I was awakened by the boat's rolling and pitching. At first I thought that the waves were caused by a passing steamboat, for so placid had been our anchorage when I retired from my watch, only a few hours before, that a sudden change was unlooked for. However, after waiting several minutes for the swell to pass without any satisfactory results, I jumped up, shoved back the companion-way, and saw that the wind had shifted right about, and as it was now blowing directly down the bay, our island was no longer a protection.

Sheets of fog floated off before the wind looking like great folds of velvety gauze, twisting and changing form as they were wafted along and finally dispelled by the rising sun's penetrating rays.

I was impressed with the beauty of the ever changing scene. It was indeed one grand dissolving view. At first only objects in the immediate vicinity of the yacht could be seen, but little by little, as the dark gray of early morning and the vapor disappeared, the sun shown on distant clouds and water, disclosing a splendid panorama.

The wind was a favoring one for us. I called the boys, and soon the sounds incident to getting a craft under canvas dispelled my day dream, and as the sails filled and I grasped the tiller, the thrill ran through me which I always experience as the yacht gathers headway and comes under my control. I know I was happy, as were my crew, for we all joined in the mate's song, which proclaimed:

"The sailor's life's the life for me."

With a good breeze abaft of beam it did not take us long to round Egmont Key, on which is situated the Tampa Bay light, and reach the gulf. All day long we sped merrily along, reaching Lemon Bay at noon. A small sloop, lumber laden, came out of Lemon Pass, and, as we were glad to note, held our course. It seemed truly pleasant to have company, and as the speed of the two boats looked nearly even we were able to sail together. The craft's name was "Gasparella," and a very smart little boat she was, too. We learned that she was headed for Charlotte Harbor, and that excellent fishing, hunting and turtling was to be found in the vicinity; so we decided to stop and have a hand in turtle flipping, a sport to which we were strangers.

During the afternoon several squalls accompanied by heavy rain and electrical disturbances, made the run exciting. It was great sport to race our companion under shortened canvas. In reducing sails in reefing I plainly demonstrated the superiority of the yawl rig over the sloop in squally weather, for we made decided gains on our rival, both in speed and in trimming our sails. Nevertheless we both reached Charlotte Harbor lighthouse early in the evening, and crossing the bar, came to anchor in the beautiful bay inside.

The quarantine flag floated over the inspector's residence, and it was not long before "his honor" came down to the wharf, and taking a seat in a small yawl boat, directed the man at the oars to row him to our craft.

It was our first experience with quarantine inspection, but we did not fear the outcome of it, for our craft was neat and clean and no traces of even "homesickness" were manifest. So it was that after a pleasant chat with the doctor, who took considerable interest in our undertaking and kindly offered to do all in his power to make our visit a pleasant one, we carefully laid away the bill of health he gave us, and, acting

upon his suggestion, hoisted sails and moved a short distance up the bay, where we found a more protected anchorage.

We were delighted at the prospects of big game. The lightkeeper having told us that the turtles were now beginning to crawl in large numbers on the outer beach. The thought of capturing these mammoth "armored cruisers" was exciting, and each of us was on nettles to see which would be the lucky ones, for one of us must stay with the yacht.

Never before had we chosen lots with keener interest, and when the matches were drawn and held up for comparison I found mine the shortest. But it was a fair draw, so I forgot my disappointment in the interest I took in helping the boys to get ready for the exciting night excursion.

At certain seasons of the year the female turtles crawl out on the sandy beach to a point not reached by tides, and after digging a deep hole in the sand, deposit their eggs, which often

EGMONT LIGHTHOUSE.

number as many as five hundred, there to be hatched by the sun's rays. These eggs are very good to eat when cooked properly, and are much sought for by the people living along the coast, as well as by bears and coons, which relish them greatly. We had been told that where turtles were numerous bears are frequently found, watching and waiting in some nearby cover for the turtle to leave her nest that they may feast on the eggs. The possibility of meeting Mr. Bruin to dispute our claim to the spoils was enough to stimulate us to a high degree of excitement. My companions started out "armed to the teeth." Frank carried two revolvers, a rifle, a small ax and a huge knife, while Arthur had a very similar outfit and also carried a lantern and cordage, the latter to be used in securing the meat to poles on which it was to be carried.

Thus equipped I rowed the hunters ashore. We landed on the low, marshy beach of the harbor side of the point. The land back from the shore was heavily wooded with a dense growth of palmettos, palms, and semi-tropical undergrowth, forming a jungle which could not be penetrated; so the boys were obliged to follow the beach several miles around the point to the open coast.

Bidding them good night and with assurances that I wished them splendid sport, resulting in a replenished larder, I rowed back to the Gazelle and began my lonely watch.

I could see the twinkle of the lantern as the boys plodded along, and once the sharp crack of Frank's rifle rang out on the stillness of the night. Visions of bears danced before my eyes; but as there was no repetition of the report I made up my mind that the engagement, whatever it was, could not have been very exciting.

I wrote my day's log and several letters in hopes that time would pass quicker. But how the night did drag! Hours seemed doubly long and I wondered if morning would ever come. It was half past twelve o'clock when the land breeze sprang up, causing a little roll on the water, and the lullaby of the wind in the ropes was so soothing and the rocking so gentle that to keep awake was a thing impossible; so taking pillows on deck, I lay down and soon was enjoying a turtle hunt of my own in dreamland.

The first bright rays of the morning sun shining in my eyes awakened me, and jumping up, I took a plunge into the sea. After swimming twice around the yacht I donned my clothing, and feeling greatly refreshed by my morning dip, proceeded below. Soon the merry song of the teakettle, followed by the aroma of boiling coffee, gave evidence that the morning meal was begun, for I knew the boys would return hungry.

Taking the glass I scanned the coast in search of my companions, and finally made them out sitting on a low hummock near the water, evidently resting. I watched them until they again started, when I saw that they were carrying a heavy load of some sort suspended from two poles which rested on their shoulders. This showed some success, and I immediately rowed ashore to relieve them of their heavy load and bring them on board.

They could scarcely wait to tell me their story, for they were justly proud of the results of their expedition. Strung on the poles were the hains of a huge sea turtle which weighed fully one hundred and fifty pounds, while a basket carried by the mate contained several dozen eggs. I looked for a bear or two, but Frank understood my questioning look and said, "We couldn't carry a bear, so we let them alone."

Being anxious to hear the story, we hastened aboard, and, while the cook prepared the choicest steaks for breakfast, Frank told me of their night's adventures.

After I left them they tried to penetrate the jungle, hoping to cross the narrow point and reach the sea, which they knew by the pounding of the surf on the shore could not be far distant; but this proved fruitless and they were forced to believe that "the longest way around is the shortest way," and stuck to the beach.

Nothing exciting occurred in the first part of the journey. Frank, seeing a large sea fish in too shoal water to navigate, took a chance shot at him, which explained the rifle shot I had heard.

Continuing around the point past the lighthouse, they proceeded up the coast for about two miles, where they found two trenches running parallel with each other up the beach. This they knew from previous descriptions was a turtle crawl, and a walk up the path was soon begun. On reaching the end, however, they were greatly disappointed to find that a turtle had been and gone, and noting the broken shells and empty hole it was evident that bruin or coon had also paid their respects. Nothing daunted, they proceeded on and soon came upon another crawl, and this time they found their game; for about fifty yards from the sea they came upon a huge loggerhead turtle and their joy was supreme. It was the first they had seen and its size and weight was a big surprise. Taking advantage of the description which the lightkeeper had given as to the way to flip turtles, they soon had Mrs. Turtle successfully turned upside down; but they had not figured on any defense on the turtle's part and the shell monster's advantage for a short time was complete. Using her great flippers as scoops she sent the sand flying with great force in every direction. This onslaught was unexpected and as a result the turtle's foes nearly had their eyes put out. After a while when the monster had scooped great hollows on each side and was unable to longer reach

the sand, she became less formidable, and the boys were enabled to approach very near. Taking careful aim Frank sent several bullets through her head and the prize was won.

The sport was good and both boys were soon again winding their way along shore over shells and coral, and after walking for about half an hour they came to another sandy spot which had a turtle look, and, sure enough, they were not disappointed, for, high up on the beach, they found a green turtle considerably larger than the one they had killed. Confident of their ability to flip the biggest of turtles, they approached from the rear and grasping the shell with both hands, tried their best to end her over, but she proved too heavy. By vigorous use of her flippers she soon "gave them the shake" and started for the sea. Now it was exciting, for the boys had no idea of letting her escape.

RENDEZVOUS OF THE FISHING FLEET.

Several revolver shots failed to stop her and at last Frank jumped on the huge shell, but as the turtle proceeded as if nothing uncommon had occurred he imbedded his hand axe so deeply into the turtle's skull that he was unable to remove it. This did not seem to check her progress; on the other hand, infuriated by the harsh treatment, she renewed her efforts to reach the sea and had nearly gained her point with the axe still fast in her head, when Arthur, by two good shots, ended the fight and the sailors were victorious.

The excitement over, the boys began to think how they would get their prizes home, for they each weighed several hundred pounds. It was now approaching daylight. The lighthouse keeper having heard the shots knew the boys were having success, and when he was relieved from duty he started up the shore and arrived just in time to show the boys how to cut up the animals. Thus aided, they were soon on their homeward march with the best cuts of one of the turtles and their basket of eggs. They left the second for the keeper of the lighthouse, and so, all in all, their first experience with sea turtles was something long to remember. We found the turtle meat nice, tasting much like the best porterhouse steak. The eggs were also most acceptable and furnished several very good meals.

After breakfast we began to salt our turtle, so we could keep it for future use. Cutting it into long, narrow strips, we covered it completely with a thick coating of salt and hung it on strings in the sun to dry. This operation occupied our time until after two o'clock, when we again made sail and were soon on our way. We selected the pass between the islands and night found us anchored off Captavia Island.

CHAPTER IX.

LOST ON CAPTAVIA ISLAND.

Our sails being nicely furled and all snug aboard, Frank and Arthur visited the island, but as night was beginning to fall mosquitoes were very troublesome ashore, so they returned early.

Next morning the mate and myself visited the shore and found a cottage inhabited by a man who raised vegetables for the northern market. He showed us the pass across the island to the Gulf beach and we experienced little difficulty in reaching the sea, where we spent a very pleasant morning in quest of sea curios. But, alas! when we returned, or tried to return, we found we were lost. All palmetto trees "looked alike to us," and try as we would, we could not find the pass through the

swamp. Starting in at the sea coast we hunted and hunted for the lost trail, but without any comforting results. The day was a terrifically hot one, and as the hours passed by we became faint and hungry and our thirst was intense, with not a drop of fresh water to be found. Sunset came and still the pass was a lost trail. Each time we made a search one of us would proceed into the jungle and skirt along the boggy strip that ran down the center of the entire island, while the other remained in the open and shouted at short intervals, so as to guide the searcher back.

As it became dusk the mosquitoes swarmed down upon us by the millions. Our hands and faces became dreadfully swollen by the poison of their bites, and notwithstanding that we started huge fires all round us and remained in the smoke they gave us little rest. Added to our discomfort was the knowledge that the island was infested by large and poisonous snakes, so that, all in all, our night of captivity was one of intense misery.

After a wait which seemed a week, the first golden hues of the morning sun became visible. As soon as it was light enough so there would not be so much danger of being injured by the monstrous sharks which frequent the waters in large numbers in this vicinity, we took a plunge into the sea and felt greatly refreshed. But we were getting desperate. Well knowing that another day in the heat without food or water and another night such as we had just passed through would be serious, we determined to find the narrow pass across the mire; or, if we should fail, to walk up the coast to the extreme point of the island and fire our guns in the hope of attracting some passing fishing smack. We were about to put this plan into execution, having failed in repeated attempts to find the pass, when I heard a dog bark near by. We both whistled and called, and soon a dog, which we immediately recognized as the one we had petted at the planter's home came up to us and wagged his tail as if glad to see us.

Never before was I so glad of a dog's company. I knew now that we were safe, for it would not be long before he would return home, and, as the muck was impassable to man and beast alike I was certain his route would lead us across the island to the planter's home. I therefore began to scold him, telling him in a commanding way to go home, but this he did not seem to understand, so I cut a switch and as soon as he saw this he immediately started off, with us after him. It was comical to see us chase that dog. I do not believe I will ever run so fast again. I was so afraid we would lose sight of our guide, who seemed anxious that we should. After a lively chase through palmetto trees and underbrush, we at last were overjoyed to see that he had found the trail, and soon we also stepped into the well-beaten path and, knowing that we were now safe, we let our canine friend proceed unmolested. Besides being a pass across the island, the path led to the spring of fresh water which supplied the planter's wants, and this accounted for its being well trodden and easy to follow when once found.

Using my hat as a cup, I dipped up some of the water from the spring, for my mouth was dry and parched, and my lips felt like chips. There is nothing like hardship and privation to make a fellow appreciate the blessings of even

a humble existence. I thought of the many faultfinders at home, complaining of the fact that they must live on simple food. What a contrast! Experience has told me that it's a blessing to have even pure, good water to drink and a crust of bread to eat.

An hour's walk brought us to the planter's and in a few minutes more we reached the beach. Here we found the small boat just as we had left it, tied to a palm tree. Luckily the tide was at flood, so we did not have trouble in floating the boat, and were soon making all haste toward the yacht.

We found Frank greatly worried at our long absence but he had hoped for the best. When he first saw us approach the shore he started dinner, so when we reached the boat the meal was well under way. We sat down and told our companion of our experience, and he agreed with us that he would prefer our snug cabin and a life at sea to being lost on a lonesome, mosquito-infested island.

We always relished our meals, but this day's dinner tasted extra fine, for we were nearly starved, not having tasted food for over twenty four hours. Being anxious to continue our journey we set sail immediately after our noon time meal, and ere evening fell we had visited St. James City, where we mailed letters home, took on a fresh supply of seventy five gallons of rain water from the kind dock keeper's mammoth cistern, and with several days' provisions, we cast anchor under the lee of Senibel Island for the night.

Noting a small schooner loading at a dock on the island, we rowed ashore to get information, if possible, from the captain or crew as to the coast below, for we could see by our charts that we were now approaching a part of the gulf which was studded with thousands of islands, making sailing dangerous by reason of the ugly shoals and reefs.

We found the whole crew very companionable and their knowledge of the shore quite complete, although their course, which carried them to Key West, did not take them coastwise a great way. They gave us all the aid they could, however, and as the captain expected to have his load, which consisted of eighteen hundred water melons, on board so as to set sail on the morrow, we resolved to sail in his company, at least while his course kept him near the coast. We were therefore very glad to find him making canvas when we awoke next morning, so we brought our anchors on board and together the two boats glided through the pass. Safely passing the shoal beacon and holding our southern course, we were soon bounding forward over the billows of the Gulf. The morning was beautiful, but during the afternoon squall after squall kept us busily employed reefing sails, etc., and we were glad when night came and with it a gentle land breeze which calmed the large sea and enabled us to hold our course by compass.

(To be Continued.)

A COLLEGE COURSE AT YOUR OWN HOME

Complete courses in Language, Literature, Science, and full Undergraduate and Post-graduate work, leading to Degrees from chartered universities. Competent professors, graduates of European and American universities. Send post card for full information. University Extension Correspond. School, Registrar's office, 1235 Chamber Com., Suite 14, Detroit, Mich.

**LIFE SIZE DOLL, 2 1/2 ft. high.
SMALL DOLL, for Baby, (20 IN.) HIGH)
BABY'S BALL, (30 INCHES IN) CIRCUMFERENCE)**

This Doll is hand-painted in oil colors that will not crack. Doll to be stuffed with cotton as directions will show. Dollie has Golden Hair, Rosy Cheeks, Brown Eyes, Kid Color Body, Red Stockings, and Black Shoes, and in following the directions in making up if piece of heavy cardboard is inserted in the soles a perfect shoe is formed, enabling the doll to stand erect. The Baby's Ball is hand-painted same as doll, to be stuffed as per directions.

Price of Life Size Doll,	50c, or stuffed, 75c
Postage on Life Size Doll,	5c, 31c
Price of Baby Doll (white or black) 25c,	45c
Postage on Baby Doll,	4c, 16c
Price of Ball	25c, 50c
Postage on Ball,	4c, 28c

If ordered by mail add postage.

Woodward Ave. and State Street, DETROIT, MICH.

FAMILY RECORD Agents Make | A 50-Cent PICTURE for ONLY 12 Cents. | \$25.00 a Day | A \$2.50 FRAME for ONLY \$1.00. | A Handsome Watch and Chain given FREE to every person ordering 200 RECORDS. You need not order all at one time.

Upon a background of pure solid gold rests the Family Record in the shape of a handsome volume with gold clasps upon a cushion of crimson velvet with a beautiful gold tassels. On the pages under the different headings are spaces in which to write the names and date of birth of each member of the family. Upon either side is a beautiful scroll ornamented by lovely flowers on which to register marriages and deaths. At the top of the picture are the words "Family Record" in the richest and choicest lettering known to the printers' art. Under this are two spaces for father's and mother's pictures. Enclosed in these spaces are lovely bluebells and morning glories. In the lower part of the picture is a beautiful home scene in colors. The dear old grand-parents, the handsome stalwart husband and happy young wife, the loving daughter and the baby boy—the idolized grand-child—are all gathered around the table while grandfather reads a portion of God's Holy Word. A truly delightful scene. Underneath are the words in rich lettering, "God Bless Our Family." Around the picture are arranged eight spaces for photographs of the other members of the family, each space enclosing a little gem flower piece. Elsewhere on the picture are scattered creeping vines, buds and blossoms in rich profusion, the whole resting on and thrown into bold relief by the gorgeous background of solid gold, which produces a picture of dazzling beauty. **AGENTS** Mark Hagie, Ugly, Mich., has sold over 5,000 pictures; Wm. D. Weesner, West Salem, Ill., has sold over 1,000 frames; H. C. Jackson, Fillmore City, Pa., bought 375 records for \$55.63, sold them at half-price, 25 cents each, making \$48.12 clear profit. If you take orders for twelve Framed Pictures your profit will be over \$25.00 PER DAY, sample for 12¢ 9 for \$1.00; 100 for \$9.50. Sample frame made of beautiful gilt moulding nearly four inches wide, \$1.00. One dozen frames \$9.00, glass and backs included. We will send a Present Free with Every Order, if you will cut out and return this advertisement. J. LEE, 124 G, VAN BUREN STREET, CHICAGO, ILL.

'1.50 OUTFIT FREE TO ANYONE WHO WILL ACT AS OUR AGENT.

We have given profitable and permanent employment for years to thousands of agents throughout the U. S. who are making from \$4.00 to \$10.00 per day selling the new and attractive Household Specialties in Tinware and Aluminum which we are constantly manufacturing and introducing. Our goods are made of the best material, are pleasing to all housewives, give liberal profits to agents and find ready sale the year round. They are labor-saving articles, most of which were invented by women because they were needed. To encourage the interest shown by agents now selling our goods and add good active workers to the large number already employed we have decided to make another free outfit comprising a most desirable selection from the large variety of useful and attractive Household Novelty which we alone absolutely manufacture. Read our offer and learn how to get free this outfit of five attractive articles which we have found are among our very best sellers.

<p>PERFECTION MEASURING CUP.</p> <p>Is standard cup measure for which all receipts call. Is banded to indicate 1/2 cup, 3/4 cup, etc.</p>	<p>STEAM CEREAL COOKER.</p> <p>Our retined Steam Cereal Cooker consists of a large bottom pan 10 1/2 inches wide with an inside rack and cereal pan which holds five pints for cooking cereals, etc. It allows the steam to circulate over and into the cereals making the kernel tender, delicious and readily digestible.</p>	<p>THE WONDER.</p> <p>Egg Beater will beat eggs in thirty seconds</p> <p>Cream Whip will whip cream in one minute</p>
<p>THE "CLEAN CUT" CAKE TIN.</p> <p>Prevents cake from sticking and produces a perfect cake. Is made of best quality tin with a flat, thin knife, securely riveted in center and at rim. Simple and durable. It is a great seller.</p>	<p>COMBINATION DIPPER.</p> <p>Consists of nine different useful articles combined in one.</p>	

HOW TO GET FREE OUTFIT All that is required of anyone who wishes to secure the above \$1.50 outfit free is to send us name and address with 50c and this valuable outfit, together with catalogues, printed matter, instructions, etc., will be sent by express to any part of the U. S. We ask for this small deposit of 50c just one third the value of the goods only as a guarantee that the person asking for the outfit is willing to work for us, selling our goods and to protect the agent from those who might wish to get the outfit only for their own use. When any person who receives the outfit has sent us an order amounting to \$5.00 or over we will know that he or she is acting as our agent and will allow a deduction of 50c and the express charges paid on outfit from the amount of the order and in this way the outfit is obtained absolutely free. **TO SAVE FREIGHT OR EXPRESS CHARGES TO AGENTS** and to insure more quickly the receipt of goods, orders may be addressed to and shipped from any of the following seven cities where we have permanent branches established. In writing mention Special Offer 156. **HOUSEHOLD NOVELTY WORKS, 19 to 25 Randolph St., Chicago.** or New York, N. Y.; Buffalo, N. Y.; St. Louis, Mo.; Kansas City, Mo.; Denver, Col.; Seattle, Wash.

NOVEMBER IN AMERICAN HISTORY

NOVEMBER 1, 1861: GENERAL GEORGE B. MCCLELLAN MADE COMMANDER IN CHIEF OF THE UNION ARMY. McClellan was a West Pointer of the class of 1846, and served in the war against Mexico. He was promoted for gallantry on several occasions. He became an instructor at West Point, and was sent by the Government to Europe to study European armies. He left the army in 1857, and engaged in civil engineering and superintending railroads. When the Civil War broke out he took command of the department of the Ohio. He afterwards was given command of the Army of the Potomac, and made a Major General. After being appointed General in Chief he made a campaign against Richmond with the army of the Potomac, which was not successful. His delay in following up the Confederates after he had driven General Lee out of Maryland caused the command to be given to General Burnside. In 1868 he was a candidate for President against Mr. Lincoln, and was unsuccessful. After holding various civil positions he was, in 1877, elected Governor of New Jersey. He died in 1885.

GEN. GEO. B. MCCLELLAN.

NOVEMBER 2, 1783: WASHINGTON MADE HIS FAREWELL ADDRESS TO THE AMERICAN ARMY.

NOVEMBER 2, 1865: PROCLAMATION OF NATIONAL THANKSGIVING FOR PEACE.

NOVEMBER 3, 1794: WILLIAM CULLEN BRYANT BORN.

NOVEMBER 5, 1818: GENERAL BENJAMIN F. BUTLER BORN.

NOVEMBER 6, 1800: ABRAHAM LINCOLN, THE REPUBLICAN CANDIDATE, ELECTED SIXTEENTH PRESIDENT. The number of electors required to elect was one hundred and fifty two. Lincoln received one hundred and eighty; John C. Breckinridge, seventy two; John Bell, thirty nine; Stephen A. Douglas, twelve. During this month there was intense excitement at Charleston, S. C., and in other Southern States, resulting in the secession of South Carolina in the following month.

NOVEMBER 2, 1783: WASHINGTON MADE HIS FAREWELL ADDRESS TO THE AMERICAN ARMY.

NOVEMBER 2, 1865: PROCLAMATION OF NATIONAL THANKSGIVING FOR PEACE.

NOVEMBER 3, 1794: WILLIAM CULLEN BRYANT BORN.

NOVEMBER 5, 1818: GENERAL BENJAMIN F. BUTLER BORN.

NOVEMBER 6, 1800: ABRAHAM LINCOLN, THE REPUBLICAN CANDIDATE, ELECTED SIXTEENTH PRESIDENT. The number of electors required to elect was one hundred and fifty two. Lincoln received one hundred and eighty; John C. Breckinridge, seventy two; John Bell, thirty nine; Stephen A. Douglas, twelve. During this month there was intense excitement at Charleston, S. C., and in other Southern States, resulting in the secession of South Carolina in the following month.

NOVEMBER 6, 1869: "OLD IRONSIDES" DIED. Admiral Charles Stewart, known as "Old Ironsides," died at Bordentown, N. J., at the age of ninety two. He entered the service as a cabin boy at the age of thirteen. He served in several wars. In July, 1862, he was made Rear-admiral.

"OLD IRONSIDES."

NOVEMBER 7, 1811: THE BATTLE OF TIPPECANOE. In the summer of 1811 the Government proposed the seizure of the Indian Chief Tecumseh, and his brother, known as the "Prophet," who were giving trouble in Indiana. General Harrison was placed in command of a body of troops numbering about eight hundred. They went up the Wabash about sixty miles to Terre Haute, and there established a post called Fort Harrison. Harrison then sent chiefs on a commission to the Prophet, who treated them with scorn.

THE PROPHET.

Then the troops advanced until within three miles of the Prophet's village. Harrison arranged his camp in the form of an irregular parallelogram, and soon after supper on the evening of the sixth, the whole camp was soundly slumbering. Rain fell through the night and darkness was intense. Shortly after midnight the Indians crept through the prairie grass, and with horrid yells, fell upon the camp. Shortly after daylight they were dispersed, leaving forty of their dead on the field. Harrison lost over sixty men. Twice as many were wounded. The soldiers burned the Indian village and then drew back on Vincennes. The battle ground is close by Battle Ground City, a little village in Indiana. It is covered with the same oaks as at the time of the contest. This battle gave General Harrison a military reputation.

NOVEMBER 8, 1830: GENERAL O. O. HOWARD BORN. General Howard is a gallant soldier and an active christian worker.

NOVEMBER 8, 1864: ABRAHAM LINCOLN RE-ELECTED PRESIDENT OF THE UNITED STATES. Mr. Lincoln had the largest majority ever given in an electoral college. His opponent, General McClellan, who resigned his post in the United States army on this day, received the votes only of the three States of Delaware, Kentucky and New Jersey. The soldiers in the army gave 121,000 votes for Lincoln and 35,050 for McClellan.

NOVEMBER 8, 1867: AMERICAN FLAG FIRST RAISED IN ALASKA. The Russians acquired possession of Alaska by right of discovery in 1741. In 1867 negotiations were begun for the purchase of the territory by the United States, and a treaty to that effect was ratified by the United States Senate in May of the same year, the price paid being \$7,200,000. A district government for Alaska was established May 17, 1884. A census of the territory taken in 1891 showed a population, including Indians, Eskimauz, Chinese and whites, of about 41,000, all but nine thousand being Indians and Eskimauz.

NOVEMBER 9-10, 1872: GREAT FIRE IN BOSTON: The losses in this fire approximated seven million dollars. The insurance amounting to fifty million dollars.

NOVEMBER 10, 1865: CAPTAIN WIRZ HUNG. Captain Wirz, after a long military trial, was hung for cruelty to Federal prisoners at Andersonville. Twelve thousand and four hundred and sixty two prisoners died in Andersonville.

NOVEMBER 10, 1876: THE CENTENNIAL closed. The international exhibition at Philadelphia, known as "The Centennial," was open for one hundred and fifty nine days. The gates were closed on Sundays. The total number of cash admissions at fifty cents each was 7,250,620; at twenty five cents each, 753,654. The grand total of admissions was 9,910,966. The largest number admitted in a single day—"Pennsylvania Day"—was 274,919. The total cash receipts of the exhibition were \$3,813,725.50. The cost of the buildings, 190 in number, was \$4,444,000. They covered, with their annexes, over seventy five acres of ground.

NOVEMBER 16, 1864: GENERAL SHERMAN BEGAN HIS FAMOUS MARCH TO THE SEA, BEGINNING AT ATLANTA. Sherman's force numbered 60,000 infantry and artillery and 5,500 cavalry. On November 11th he cut the telegraph wires between Atlanta and Washington. He was then in the heart of an enemy's country, with all avenues of communication with the Government at Washington closed. Two hundred acres of buildings in the heart of the city were fired, bands played, and soldiers marched to the song, "John Brown's Soul Goes Marching On." The Confederates did not know where Sherman was going, so there was great consternation throughout Georgia and South Carolina. General Beauregard, who was sent to meet him, issued a manifesto to "destroy all the roads in Sherman's front, flank and rear, and be trustful in Providence." Benjamin H. Hill, of Georgia, wrote from Richmond to the people of his State, "Destroy the enemy by retarding his march. Be firm. Burn what you cannot carry away. Burn all bridges and block up the roads. Assail the invader in front, flank and rear, by night and by day. Let him have no rest." Governor Brown, of Georgia, offered pardon to prisoners in the penitentiary if they would volunteer. About one hundred convicts accepted the offer. Sherman steadily advanced. On December 22nd he took possession of Savannah, and on the 26th wrote to President Lincoln, "I beg to present to you as a Christmas gift the city of Savannah, with one hundred and fifty heavy guns and plenty of ammunition, and also about twenty five thousand bales of cotton." On

GEN. W. T. SHERMAN.

his march he appropriated to the use of his army 13,000 beehives, 160,000 bushels of corn, more than 5,000 tons of fodder, besides a large number of sheep, swine, etc. He forced into the service 9,000 horses and mules, captured 1,328 prisoners and 167 guns. Fully 10,000 negroes followed the flag to Savannah, and many thousands more, chiefly women and children, were turned back at the crossing of rivers.

NOVEMBER 18, 1871: GRAND DUKE ALEXIS OF RUSSIA WARMLY RECEIVED AT NEW YORK.

NOVEMBER 18, 1890: BATTLESHIP MAINE WAS LAUNCHED. The Maine was destroyed in Havana harbor by the explosion of sunken mines February 15, 1898, which was the immediate forerunner of the war between Spain and the United States.

NOVEMBER 18, 1886: CHESTER A. ARTHUR DIED. By the death of President Gartield, Chester A. Arthur, Vice President, became President. He had occupied many important positions, among them that of collector for the port of New York. He was a lawyer by profession.

NOVEMBER 19, 1861: MASON AND SLIDELL CAPTURED. The Confederate Government sent James M. Mason and John Slidell, two able men, as their diplomatic agents, to European courts. Each took along a secretary of legation. They left Charleston harbor one stormy night and landed at Havana. They there boarded the British steamer "Trent" for St. Thomas, intending to sail from there to England. The American warship San Jacinto, in command of Captain Wilkes, then on its way home from the coast of Africa, touched at Havana and heard of the movements of the men. He at once set out in search of the Trent, and found her on November 8. He fired a shell across her bow, and sent Lieutenant Fairfax to demand of the captain the delivery of the ambassadors and their secretaries. The captain of the Trent protested, and the reinforcements were sent from the San Jacinto and the four men were taken by force, but not before the daughter of Slidell slapped Fairfax in the face three times as she clung to the neck of her father. The captives were lodged in Fort Warren, at Boston. It looked for a time as if the British Government was preparing for war against the United States on account of this act. Congress and other legislative bodies thanked Captain Wilkes, but President Lincoln, believing that the principles of neutrality were not properly recognized in the act, disavowed the act of Wilkes and released the prisoners. They were placed on board a British vessel and went to England.

NOVEMBER 21, 1789: NORTH CAROLINA ADMITTED INTO THE UNION. North Carolina was the twelfth State in numerical order. Though next to the last of the thirteen original States to accept the Constitution, she was the first to sanction independence officially.

NOVEMBER 22, 1862: GENERAL BURNSIDE SUMMONED FREDERICKSBURG TO SURRENDER. Confederate General Lee and about eighty thousand men were in the neighborhood of Fredericksburg. General Burnside had superseded General McClellan on November 5, and was in command of one hundred and twenty thousand men. Fredericksburg refused to surrender. The Battle of Fredericksburg, which followed, resulted in a loss of over fifteen thousand men to the Union army. The Confederates continued to occupy the town.

NOVEMBER 24-25, 1863: GENERALS SHERMAN AND THOMAS DEFEATED GENERAL BRAGG AT CHATTANOOGA.

NOVEMBER 25, 1783: EVACUATION OF NEW YORK BY THE BRITISH. On the morning of this day the American troops, commanded by General Knox, marched to "Bowery Lane" and halted at what is now the crossing of Third Ave. and the Bowery and remained there until one o'clock in the afternoon, the British claiming the right of possession until noon. At one o'clock the British soldiers went on board ship, and before three o'clock General Knox took formal possession of the city and Fort George amid great rejoicings. Governor Clinton during the afternoon gave a public dinner to the officers of the army, Washington being present. In the evening the town was brilliantly illuminated. Fireworks and bonfires blazed everywhere. When the British left they nailed their flag to the staff in Fort George and slushed the pole. A boy soon pulled it down and put the Stars and Stripes in its place.

WORDEN'S PHONOGRAPH TOP

THE LATEST CRAZE

Spins from seven to eleven minutes, by far the longest of any top ever sold. Any tune in perfect harmony, can be played upon it. Easy to spin and play, and equally interesting to young and old. FARBE & CO., 23 Quincy St., Chicago, Ill.

NOVEMBER 28, 1859: WASHINGTON IRVING DIED AT TARRYTOWN, N. Y.

Washington Irving began his work in literature while but a boy. At the age of twenty four he published "Salmagundi." At twenty five he published "Knickerbocker's History of New York." Was Secretary of the American Legation in London from 1829 to 1831, and received from George IV. a medal for eminence in historical composition. From 1842 to 1846 he was minister to Spain. His last work was "Life of Washington" in five volumes, completed a few months before his death. He never married. He was buried in the cemetery attached to the ancient Dutch church at the entrance of "Sleepy Hollow." The church remains the same as when it was built in 1669, and is the oldest church building in New York.

WASHINGTON IRVING

NOVEMBER 29, 1811: WENDELL PHILLIPS BORN. Wendell Phillips graduated at Harvard in 1831, and from the Cambridge Law School in 1833. He joined the abolitionists in 1836. He left the profession of the law because he could not take the attorney's oath to a Constitution that sanctioned human bondage. During his whole life he did not cease to lift up his voice against slavery. He was an eloquent and effective speaker, refused to vote under the Constitution, and was an advocate of temperance and labor reforms.

NOVEMBER 29, 1872: HORACE GREELEY DIED. Horace Greeley, the eminent journalist, died at the age of sixty one. At fifteen he was a printer's apprentice at Poultney, Vt., and soon became an expert workman. While yet a boy, he visited his parents, who were living at Erie, Pa., twice, walking each time nearly the whole way. At the age of twenty he was in New York searching for work, with ten dollars in his pocket. He worked as a journeyman for two years and then started a business of his own, printing the "Morning Post," the first penny daily paper ever published. On April 10, 1841, he issued the first number of the New York Daily Tribune. He was nominated for the Presidency against General Grant, but was defeated and died shortly afterward. Mr. Greeley held to a belief in universal salvation.

HORACE GREELEY.

NOVEMBER 30, 1782: PRELIMINARY TREATY OF PEACE BETWEEN THE UNITED STATES AND GREAT BRITAIN. This treaty was signed at Paris by Richard Oswald on the part of Great Britain, and John Adams, John Jay, Benjamin Franklin and Henry Laurens on the part of the United States. The previous July the British Parliament passed a bill to enable the King to acknowledge the independence of the United States. Mr. Oswald was then vested with full power to negotiate a treaty of peace. The chief features of the treaty were: 1. Recognition of the independence of the United States. 2. The Mississippi made the western boundary and Canada and Nova Scotia the northern and eastern boundary. 3. Navigation of the St. Lawrence was opened to the English. 4. Navigation of the Mississippi was made free to both parties. 5. Rights in the Newfoundland fisheries were adjusted. 6. Bona fide creditors were not to be hampered in the collection of their debts. 7. Certain measures looking to the return of confiscated property of loyalists were to be recommended to Congress and the several States. 8. A general cessation of hostilities, withdrawal of troops, and restoration of public and private property. In September of the following year this preliminary treaty was made a definitive treaty and was signed by David Hartley on the part of Great Britain, and Franklin, Adams and Jay on the part of the United States. When they had signed it Franklin put on the clothes he had laid aside about ten years before, at which time he made a vow that he would never put them on again until he should see the degradation of England and the independence of America.

NOVEMBER 30, 1861: JEFFERSON DAVIS ELECTED PRESIDENT OF THE CONFEDERATE STATES. Jefferson Davis was a graduate of West Point in 1828. He served in the Black Hawk war; afterwards resigned and became a cotton planter in Mississippi. He was for several years in congress, and also served in the Cabinet of President Pierce as Secretary of War. He died December 6, 1889.

Send for Catalog and "Pooultry Helper." We are also sole makers of Simplicity Incubator. COLUMBIA INCUBATOR CO., 110 Water St., Delaware City, Del.

SELF MADE MEN WHO BECAME GREAT LAWYERS Study Law at Home. THESE EARNED THEIR PLACE IN THE ROLL OF LEGAL FAME. [List of names: William S. Black, Logan S. Breckley, John S. Bush, John S. Corliss, Matthew M. Carpenter, Henry Clay, Thomas M. Coon, Joseph M. Coon, Stephen A. Douglas, George F. Edwards, James F. George, Walter G. Graham, Robert S. Ingersoll, Abraham Lincoln, Samuel F. Miller, Charles O. Connor, Ben. Paken, Allan G. Thurston, Lyman Trumbull, John W. Stephenson, Emory S. Starr, John Sherman, William West, John F. Critchfield, Shelby M. Curtis, John F. Brien, Edwin Douglass, Thomas B. Reed, Henry M. Teller, Charles F. McCreary, Charles C. Conling, Tom Carter, Thomas Long, Ben. F. Butler, John A. Trumbull, Benjamin Harrison, Augustus H. Garland, Oliver P. Sargent, Judah P. Benjamin, George H. Stephens, Edwin M. Stanton, AND HUNDREDS MORE]. THE young man to whom early opportunities have been denied needs only the qualities of industry and nerve to achieve success in the field where his peculiar abilities will have wider scope for expression. Few young men are able to readily determine in what field their lives can be made the greatest success. Many a man has studied and prepared himself for a special field of effort, and found late in life that he made a mistake in thinking that he could be a successful lawyer. No man, however, ever made a mistake in studying law, because no study has so great a tendency to broaden the mind, elevate and cultivate thought, sharpen the reason, as the study of law. A young man versed in the law has a better chance for success in any direction in which he may turn his talents. A man is a better preacher, a better teacher, a better statesman, a better workman in any department of physical or mental activity for having studied the law. The law is a great stepping stone to preferment. The chances for employment are greater, other things being equal, to the young man thus equipped. A law school is the best place in which to study law. It is not the only place. The men whose names appear in the margin of this advertisement, and countless others, have made great successes without law-school instruction. They became great lawyers not because they never attended the law school, but despite the fact that they did not. The opportunities open to the most of them for study were inferior in number and in character to those open to any young man nowadays. The correspondence system of study which claims to be second only to study in a resident school and infinitely better than study in an office or alone, comes near bringing the law school to the home of the student. Certainly what young men have done, young men can do again under more favorable conditions. We want you to write us for our handsome catalogue of particulars with reference to the correspondence system of the study of the law, and our book of testimonials from hundreds of students, many of whom have become successful practicing lawyers in every State in the Union and in some foreign countries. These are furnished you free of charge. They will interest you and may lead to something of great advantage to you. Address: The Sprague Correspondence School of Law, No. 300 Majestic Building, - Detroit, Mich.

S. H. Kruger
SIGNATURE OF OOM PAUL KRUGER.

Great Britain eats her entire wheat crop in about thirteen weeks.

The Prince of Wales owns as a paper weight the mummied hand of one of the daughters of Pharaoh.

A German mathematician has calculated that if all the gold in the oceans of the globe could be collected it would be worth \$1,450,000,000,000,000.

There is a tusk of Ivory on exhibition in San Francisco twelve feet and ten inches long, weighing two hundred pounds. It was discovered in Alaska.

In Sweden, street cars rarely stop to pick up or set down passengers and the natives of both sexes are wonderfully expert in jumping on or off while the cars are in motion.

Letters dropped into a box in Paris are delivered in Berlin within an hour and a half, and sometimes within thirty five minutes. They are shot through tubes by pneumatic power.

Chopin's last study in C Minor for the piano has a passage, taking two minutes five seconds to play, that requires a total pressure of the fingers on the keys estimated at three full tons.

Aumone, a French village, is said to be the healthiest spot in the world. There are forty persons living there, twenty eight of whom are over eighty years of age and three are over a hundred. There are no graves in the local cemetery, and the oldest inhabitant cannot remember seeing a funeral.

The debt of the United States in 1898 was two per cent of her wealth; the debt of Great Britain was five per cent of her wealth; France, twelve per cent; Germany, one per cent; Russia, five per cent; Italy, twelve per cent. Germany, therefore, is the only country better off financially than is the United States. The total wealth, however, of the United States is from three to four times the wealth of Germany.

The Record Breaker.

We present a picture of the "Deutschland," which holds the record for the fastest trip across the Atlantic. She has a length of six hundred and eighty five feet, a beam of sixty seven feet, and a speed of twenty three knots.

In the April issue of THE AMERICAN BOY we described and gave a picture of the "Oceanic," the largest steamer that floats the ocean. The Deutschland, which has since been built, if not the largest, is at least the fastest, most powerful and best appointed vessel ever built. She was constructed in Germany and is an ideal Atlantic racer, reminding one in the beauty of her lines of the model of the steam yacht. Steam is supplied by sixteen boilers, twelve of which are double-ended. The firemen have to feed coal continuously to no less than one hundred and twelve separate fur-

Her record-breaking trip was her second trip across the ocean. She attained the average speed throughout the entire course of twenty three knots an hour. Had it not been for a fog which she encountered on two days of the run, her speed would have been greater. She makes the round trip to Europe every three weeks.

The greatest ships that sail the ocean have been built in the last eleven years. It may be of interest for us to compare the lengths of seven of the greatest ships built in that time: The "City of Paris," five hundred and sixty feet; "Teutonic," five hundred and eighty five feet; "Campania," six hundred and twenty five feet; "St. Paul," five hundred and fifty four feet; "Kaiser Wilhelm Der Grosse," six hundred and forty nine feet; "Deutschland," six hundred and eighty six feet, and "Oceanic," seven hundred and four feet.

THE "DEUTSCHLAND," THE RECORD BREAKER.

naces. She carries four hundred and sixty seven first cabin, three hundred second cabin and three hundred third-class passengers. In her first cabin is a separate playroom for children and a gymnasium. There is a grill room on the boat deck at an elevation of forty feet above the sea where passengers may obtain a meal at any hour of the day. The dining saloon, reaching across the full width of the vessel, is lighted by large portholes at the sides and through a large light-well, terminating in a dome covered with cathedral glass. The promenade deck gives an unobstructed walk of five hundred and twenty feet, or over one thousand feet circuit.

Lightning at One Hundred and Fifty Miles.

Lightning is believed to be invisible at a distance of one hundred and fifty miles. Opinions differ as to how far away thunder can be heard. A French astronomer who has made observations declares that thunder cannot be heard at a greater distance than ten miles. An English meteorologist has counted up to one hundred and thirty seconds between the flash and the thunder, which would give a distance of twenty seven miles from the place where the lightning occurred.

Slate Pencils.

Slate pencils were formerly all cut from solid slate, just as it is dug from the earth, but pencils so made were objected to on account of the grit which they contain, and which would scratch the slate. To overcome this difficulty, an ingenious process has been devised by which the slate is ground to a very fine powder, all grit and foreign substances removed, and the powder bolted through silk cloth in much the same manner in which flour is bolted. The powder is then made into a dough, and this dough is subjected to a very heavy hydraulic pressure, which presses the pencil out the required shape and diameter, but in length of about three feet. While yet soft the pencils are cut into the desired lengths and set out to dry in the open air. After they are thoroughly dry, the pencils are placed in steam baking kilns, where they receive the proper temper. Pencils made in this manner are not only free from all grit and of uniform hardness, but are stronger than those cut out of solid slate. For these reasons they have superseded the old kind. Over twenty-five millions of these pencils were made and sold in 1899 by one American concern in Chattanooga.

FIGHTING FIRE IN OIL TANKS.

Star Routes, 269,452 Miles. LENGTH OF POSTAL ROUTES.

Something About the Post Office.

The SCIENTIFIC AMERICAN of September 15 contains an interesting article entitled "The Greatest Business Concern In The World," by which it means the postal establishment of the United States. Here are some of the interesting facts stated:

A letter can be sent in thirty days from Florida to the Klondike for two cents. To carry the same by courier would cost something like three hundred dollars. The total length of the routes traversed by the mail service is 496,948 miles, or more than a round trip between the earth and the moon, as is shown in our illustration. The number of miles traveled in carrying the mails per annum is over 445,000,000, or more than two round trips to the sun. The cost per annum of carrying the mails is over fifty three million dollars. The illustration shows the number of miles traveled by the various classes of carriers. By "star route" is meant a route where the transportation is something other than railway, steamboat, street car, or pneumatic tube. The daily travel for one year by the star routes is 361,830 miles, or seventeen times around the world. The number of miles traveled per annum by the mail carrying railroads is nearly 300,000,000, the daily travel being 813,000 miles, or thirty one trips around the world. In one year the railway postal clerks alone have handled 13,351,992,725 pieces of mail. In addition they handled 17,537,058 packages of registered mail. It has been calculated that the railway mail clerks make one error for over ten thousand correctly forwarded pieces of mail. The steamboats cover in a year 4,327,028 miles. The street car service amounts to 4,978,130 miles in a year. The pneumatic tube service is, of course, small, there being only 8.05 miles of pneumatic tube in the whole country. This service is confined to Boston, New York, Brooklyn and Philadelphia. "First-class" mail matter includes letters, postal cards and sealed matter. "Second-class" matter includes newspapers, periodicals, and so on. "Third-class" matter includes printed books, pamphlets, circulars, etc. "Fourth-class" matter embraces merchandise and samples of all kinds. Of first-class matter there was carried, in the year ending June 30, '99, over 3,588,000 pieces. There are nearly 10,000,000 pieces of first-class matter mailed daily. This would make a pile more than seven miles high. The total number of pieces of second-class matter in the same time was something over 2,173,000,000. The number of pieces of third-class matter was something over 747,000,000, and the number of pieces of fourth-class matter was a little over 66,174,000. The total number of pieces mailed in the year was 6,576,310,000, and if these pieces were placed together they would make a band seven feet wide around the earth. The total weight was 664,286,868 pounds. To carry this enormous weight would require 33,214 freight cars, forming a train three hundred miles long, hauled by five hundred locomotives, and the locomotives alone would require seven miles of track. There was enough money received by the Postal Department for postage to make a pile of ten dollar gold pieces 47,000 feet high. The number of registered pieces carried in the year was over 16,000,000. The number of post office money orders issued was nearly 30,000,000. The Dead Letter Office, which is a

department of the post office to which unclaimed and defectively addressed mail is sent, received nearly 7,000,000 pieces. Of these 367,469 were misdirected, 71,919 were without an address, 4,903,700 were unclaimed, and 113,917 had fictitious addresses. The number of stamps issued was 4,917,269,025. There are not far from 75,000 post offices in the United States, with about 200,000 employes.

Golden Kansas.

At any reasonable figure the present wheat crop will bring sixty million dollars in cash into the State of Kansas, and fifteen million dollars into Oklahoma. What this means to a single state is best shown by a few figures. From her wheat crop alone the wealth of Kansas will be increased this year forty dollars per capita. The amount received would pay for all her public schools ten times over. The railroads of the state share largely, directly and indirectly, in this prosperity. It will take two hundred thousand box cars to

THE TRAIN REQUIRED FOR CARRYING THE CORN CROP OF KANSAS.

move the crop. These cars would make thirteen thousand ordinary trains, or one single train which would reach from Topeka, Kansas, to Buffalo, New York. The harvest has lasted five weeks. It has required the use of five thousand machines and the labor of twenty five thousand men. For labor alone the farmers have paid out nearly a million and a half dollars. There were four million seven hundred and ninety six thousand one hundred and twenty nine acres of the state in wheat alone.—Harper's Weekly.

A Mammoth Watch.

There will be a mammoth watch at the St. Louis World's Fair in 1903. The watch will have a polished metal case and will lie on its back and be so large and roomy that people will be able to walk around inside of it among the moving wheels. It will be nearly seventy five feet in diameter and more than forty feet high, with neat little stairways running all about it. The balance wheel will weigh a ton and the "hairspring" will be as thick as a man's wrist. The mainspring will be three hundred feet in length and made of ten sprung steel bands, two inches thick, bound together. Guides will point out and name every part. The watch will be wound by steam regularly at a certain hour during the day.

It is interesting in this connection to read that there is in Berlin a watch which measures one fourth of an inch in diameter, its face being about the size of the head of a large sized tack or nail. It weighs less than two grains Troy and keeps perfect time.

No two persons see color exactly alike.

Muscles Lost by Disuse.

There are over two hundred distinct muscles in the human body, of which the best of us keep about one hundred in prime condition by proper use. By sticking our feet into shoes we lose the use of the toes, so there is not one man in a thousand who can manage them. In other words, the interossei muscles are dead. If we wore mittens all the time the individual control of our fingers would be lost. As we eat so much soft food we are losing the need of teeth. The gums after awhile will answer every purpose, as mastication is performed by machinery before we begin the meal.

A Novel Exhibit.

One of the most novel exhibits at the Paris Exposition is a complete set of bed hangings from Madagascar, manufactured from the silk of the halabe, an enormous and ferocious female spider, which has a way of eating the males which come near it and feeding on the weaker members of its own sex. A great scientist invented an arrangement for winding off the brilliant golden-colored thread, which a spider yields to the amount of three hundred to four hundred yards and in texture finer than that of the silk worm, and of remarkable strength.

"The Duty of an Educated American."

In view of our recent acquisitions in the Pacific Ocean, it may interest boys to read the following paragraph from the graduation address of the late James G. Blaine, made when he was 18 years of age, his subject, "The Duty of An Educated American":

"The sphere of labor for the educated American is continuously enlarging. But recently we added the vast dominion of the Lone Star Republic to our glorious Union. The war to which that act gave

rise is now in victorious progress, and will not end without another great accession to our territory, possibly carrying our flag beyond the great American Desert to the shores of the Pacific sea. Where our armies march, population follows; and the full duty for the scholar is to be continental in extent and as varied as the dominions of a progressive civilization."

BRILLIANT Self-making GAS LAMP Makes its own gas. Everybody can now have light brighter and better than electricity at about 1-10 the cost of kerosene or common gas. One quart gasoline lasts 18 hours, giving 100 candle power light; more than 5 electric bulbs or a mammoth Rochester lamp. Anybody can run them; can be carried around or hung anywhere; perfectly safe; approved by insurance companies; over \$5,000 in daily use nearly two years; all recommend them. Don't experiment or risk cheap or unknown lamps. It costs no more to get the best. Local agents wanted. **BRILLIANT GAS LAMP CO., 48 State St., Chicago.**

SCIENTIFIC PHYSICAL CULTURE

Successfully Taught by Mail. The Stone System requires only a few minutes a day, in your own room, before retiring, with no apparatus whatever. Your individual condition carefully considered, and mild, medium, or vigorous exercise prescribed exactly as your particular requirements and mode of living demand. Intelligent exercise will cure or prevent most of the ills to which the flesh is heir. Mr. Frederick W. Stone, director of Athletics of the Stone School of Scientific Physical Culture, has been director of Athletics of Columbia College, The Manhattan Athletic Association, The Knickerbocker Athletic Association, and is at present acting in the capacity with the Chicago Athletic Association, an organization of Chicago's most prominent business men, whose club house represents an investment of over \$400,000. He is a practical instructor, and at the age of 50 years is a physically perfect man. Our aim is to create a perfect development, greater strength and better health, rather than to produce professional strong men. Does not overtax the heart. Both sexes, all ages—from 15 to 85—are alike benefited. Illustrated descriptive booklet and measurement blank sent FREE.

The Stone School of Scientific Physical Culture, Suite 1645, Masonic Temple, Chicago, Ill.

WHAT BOYS ARE DOING

PIERCE LONG,

Son of John D. Long, Secretary of the Navy.

The Champion Boy Rider.

One of the brightest boys of his age in the United States resides at Conneaut, Ohio. Although but about eight years of age, Elmer Thompson has already gained considerable distinction, both in the United States and England. He is the champion wheel rider of his age in the world, and has made some records of which he may be justly proud. He holds many valuable medals, and is in training to compete for even better ones in the future.

When but five years of age, Elmer began his famous career upon a wheel. He rode a quarter of a mile in fifty nine and one-fourth seconds. It was then that he received his first silver medal. The following year, he rode in another quarter mile contest and won his second medal. This time his record was forty six seconds. It was in that same year that he lowered the world's record by thirteen seconds, making a quarter

in forty four and one quarter seconds. When he closed his sixth season, he was the possessor of four medals, two of silver and two of gold.

In his seventh year he made his first half mile and mile records. The mile in competition was made in three minutes and fifteen seconds on the Erie, Pa., race track. The half mile on the same track was covered in one minute, twenty five and one-fifth seconds. He has appeared at the state meets in his own state, where he has always been the idol of all the boys in attendance.

Elmer weighs but fifty two pounds and stands forty six inches in height. He has the best of health, and thoroughly enjoys the athletic sports in which he engages.

Elmer is ready to challenge any boy, anywhere near his own age, either in the United States or Europe. His printed schedule of challenges is as follows: A five year old, one-eighth of a mile start on a half; a six year old, one hundred and seventy five yards; a seven year old, one hundred yards; an

gested that his attire was not in keeping with the dignity of his position. Ray is an honest and energetic bright American boy and an exceptionally good penman and bookkeeper. His treatment of all he comes in contact with in the discharge of both his official and private duties is so courteous and gentlemanly that no doubt he will become county clerk when he attains his majority, for courtesy is a rare quality in a public official. Oratory and public speaking are also in his line. At a public competition in the high school last winter Ray won an honorable place with the larger boys.

Ray is the son of H. W. Davis, a local lawyer and Republican leader. The boy has probably made out as many marriage licenses since May 1 last as has any person in the country. The business of marrying couples is St. Joseph's healthiest industry. From one hundred to two hundred couples of cooing lovers come to this Michigan town every week from Illinois, Indiana, Wisconsin, and even from points as far

ELMER THOMPSON, A BOY CHAMPION.

eight year old, fifty yards. With a nine year old, he will start even; with a ten year old, he will take fifty yards; with an eleven year old, he will take one hundred yards; with a twelve year old, one hundred and seventy five yards.

Elmer is a businesslike little fellow. He receives and answers letters from many parts of the world, and keeps all his correspondence nicely classified.

Earl and Louis Calkins of Conneaut are juvenile friends of Elmer's, who have paced him during two years past in his contests. Elmer's father, Mr. J. H. Thompson, is an athlete of ability. He, too, rides a bicycle and is also an expert oarsman. Elmer's little sister is about a year and a half old. She guides a wheel about the room in a way which shows the interest she takes in one. When she is two years old she is to have a little wheel made to order, and her papa is sure she can learn to ride it even at that early age. As Elmer has friends in Paris and London who are urging him to come across the water, it will not be surprising if next season he should appear in a bicycle race on a foreign track.

W. FRANK M'CLURE.

The Youngest Deputy County Clerk.

Ray Wallace Davis, of St. Joseph, Mich., is probably the youngest deputy county clerk in the United States, being fourteen years of age. At the time of his appointment in March last he was a sophomore in the high school and wore short trousers. His short trousers were retired in favor of long ones when two young ladies of his acquaintance called on him in his new office and sug-

gested that his attire was not in keeping with the dignity of his position.

County Clerk Needham started the business in 1899, when Cupid was driven out of Milwaukee by a law which prevented swift and secret marriages by requiring publication of a license five days before the solemnizing of the marriage.

The young deputy clerk receives candidates for the matrimonial venture in his office and fills out the blank spaces on the marriage licenses. He has issued during the last summer as high as twelve hundred licenses.

RAY WALLACE DAVIS.

Besides writing marriage licenses, the youthful official performs the numerous other duties of a deputy clerk, such as the recording and filing of hundreds of legal papers of divers kinds.

BARRATT O'HARA.

Address, SEARS, ROEBUCK & CO., CHICAGO, ILL.

CHOOCHEE WU,

The Little Son of the Chinese Minister to the U. S. (Photograph by Gilbert, Washington.)

Here is a picture of a real Chinese boy. His name is Choochee Wu. He is the little son of the Chinese Minister to the United States. He wears a figured silk gown, covered with rich embroidery of the finest workmanship.

Horace Boyer, "the World's Fair Boy."

Our readers this month have the pleasure of looking upon the face of a boy who enjoys a peculiar distinction

HORACE BOYER, "THE WORLD'S FAIR BOY."

His name is William Horace Boyer, and he is known as "The World's Fair Boy." Two pictures of him are given, one showing him in the costume of the "Dude Brownie" in "Columbia's Fete," an amateur theatrical performance recently given at Galesburg, Ill., where Horace, the adopted son of Mr. and Mrs. W. R. Boyer, resides.

HORACE IN FANCY COSTUME.

The boy's life history is an interesting one. It will be remembered that at the World's Fair Exposition there was a place provided for babies, with cribs and playthings and nurses, so that mothers wishing to spend a day at the great Exposition could, for a small fee, leave their little ones in safe hands for the day and receive them again at night. Of the one thousand and two little ones that were thus cared for only one failed to be claimed by its parents. In other words, one little baby was abandoned. Strange to say, he was the youngest and the smallest of all that were cared for. Two kind-hearted persons, Mr. and Mrs. W. R. Boyer of Galesburg, Ill., adopted the little one, after vain efforts had been made to find his parents. He has grown up to be a sturdy boy, as the picture shows.

Horace has a wealth of russet curls, bright, penetrating eyes, olive skin, and princely manner. He is unspoiled, despite the ceaseless singing of praises that greets his ears. He is very fond of dogs, an enthusiastic sportsman, and something of a musician. One who knows him declares that his little soul is all tenderness and kindness toward every living creature, a characteristic of a first class boy.

An Energetic Newsboy.

HUGH PARK, A Boy Who Aspires to High Places.

Hugh Park of Asbury Park, N. J., was born in England. He is fourteen years old and the grandson of an English clergyman. He has been compelled, young as he is, to earn money, and for two years has sold papers at Asbury Park, ranking among the most successful of the newsboys there. He has shown energy, business ability and independence. He thoroughly identifies himself with America, and has already come under the notice of the Governor of New York and the President of the United States.

When Governor Roosevelt visited Asbury Park recently, Hugh went up to him in the railway station, and the Governor shook hands with him. On the President's arrival in the same station Hugh again came to the front, and offered to hold the horses until the President was ready for them. When the President left he gave Hugh fifty cents and shook hands with him, so he has twice been the one among a crowd of boys to come forward at the right moment.

"I wonder," said little Harry, "if men will ever live to be five hundred or six hundred years old!" "No, I guess not," replied his five year old sister, who was studying her Sunday school lesson. "The Lord tried the experiment once and they got so bad that He just had to drown them."

Has Made Himself Useful.

CLAUDE FRANCESCO.

A little more than two years ago Claude Francesco became an apprentice to a meat dealer near his home in Grand Rapids, Mich. He at once took charge of the "order wagon," and in one year succeeded, by his uncommon business ability, in bringing the number of wagon customers from seventeen up to seventy five. He has succeeded in making himself invaluable to his employer by strict attention to his work. Boys of this sort are wanted, and do not long need to be out of employment.

A Young Reporter.

FRED FARLEY

Battle Creek, Michigan, claims to be the home of the youngest reporter in Michigan, if not in the United States. He is Fred Farley, a boy fifteen years of age, and an all-around reporter, writing everything from banquets and balls to suicides and police news. An evening newspaper in Battle Creek gives him employment. He is the son of a prominent merchant of Battle Creek, a high school pupil, and, while active as a reporter, is taking a course in stenography in a business college. He is still in knee breeches, slight in build, has a refined yet resolute face and determined manner. Recently, when sent on an assignment that was particularly distasteful to him, he said: "I don't like it, but I'll do it all the same, "showing that he is made of true stuff.

In a letter to THE AMERICAN BOY young Farley says: "I have always been very much interested in printing. A few years ago my father bought me a small hand-press with which I have done some work. During the summer of 1899 I secured work in a printing office in a small town in Indiana where I was visiting. While there I set type and fed the job press. In the winter of 1899-1900 I attended school in Battle Creek, and at the end of the term was offered a position as reporter on one of the dailies. I will be sixteen years old next December, and am in the tenth grade at school. I enjoy the work of a reporter very much, and hope to make journalism my profession."

Here is a boy's definition of a mammoth: "A mammoth is a dead elephant that has kept fresh for a thousand years, and perhaps for more. Dogs eat it as it comes out of the ice. It is more ancient than the old army preserved meat."

WHAT WOULD A PRESIDENTIAL CAMPAIGN BE WITHOUT THESE BOYS?

YOUR MONEY BACK If this Watch is not as represented.

Guaranteed for 10 years. Sent Free by Insured Mail. **At \$7.25** We sell the very best 7-jeweled Elgin or Waltham Movement, in a genuine Gold filled case, guaranteed for 10 years. The people just go wild about it, because, it mystifies, it fascinates, it pleases, and drives away worst kind of blues. Thousands sold for a quarter. We want to sell a million. You get one. Show it to your friends, and they want one. Just to get acquainted, send 10 cents, and we will send The Yankee Doodle Blockade and an American Beauty Pin FREE. "looks like \$5.00 Pin" for your sister, or some other fellow's sister, and you won't be sorry you did it. **ALBERT BINNS, Box 748, Philadelphia, Pa.**

A Newsboy for Ten Years.

I was a newsboy for ten years, because I had a keen desire to earn my own money.

In the spring of 1890 I took the agency for a Chicago paper, and my first attempt to sell this paper proved to be a flat failure, but I remembered this old proverb quoted often by my mother: "If at first you don't succeed, try and try again," and, with this deeply engraved upon my mind, I, for the second time, attempted to sell papers, and succeeded in selling ten; thus my career as a newsboy began, and it was thus that my first money was earned.

I was so proud, oh, so proud, when I returned home that day with two ten-cent pieces jingling in my pocket, and I was all the more proud to think that the money was actually and really mine.

After selling copies of one paper three years, I came to the conclusion that I might expand my business, so I took the agency for two more papers and a magazine; from these I made enough money to keep myself in clothes, and be the sole owner of a bicycle besides.

When the American-Spanish war broke out I thought it was the chance of my life, so I took the agency for several more papers and magazines, making twenty in all. I was at this time clearing ten dollars a week.

When the Christmas of 1898 rolled around I had a small bank account of my own, and was holding a position as clerk in a drug store.

To any boy wishing to sell newspapers I would offer the following advice that I myself followed: You must first have courage, self-confidence and endurance. Then you must not antagonize your customers by your brusqueness, lack of courtesy or tact. Thirdly, don't smoke cigarettes; many a boy's success has been spoiled by this evil habit.

ROY J. STRICKLAND.

Making Money Out of Bees.

Many boys take readily to bee culture, and, much of the work being light, they are well adapted to it. A good smart boy who is not afraid of a few stings and can get around lively can manage an apiary of his own successfully. A good bee keeper can find useful and steady employment in almost any country on the globe. Bees have but one language. If we learn their ways and methods in America we can handle them in any country. Honey bees are the same little people the world over. We have heard of a boy who goes to school the usual number of months each year, but works with bees during vacation time. He has learned something that is worth as much to him as an ordinary trade. The first work he did was when he was a little fellow of five or six. With a veil that covered him down to his feet, he was set to watch for swarms while the older "hands" were absent from the apiary. Finally he came to have little hives of his own. His father gave him a small nucleus hive with two or three frames of bees with a beautiful Italian queen. The bees were gentle, and he was in the habit of opening the hive and opening the frames until he saw the queen bee, which he would point out with great glee. He certainly knew something about bees, for there are comparatively few people who can

BOYS AS MONEY MAKERS AND MONEY SAVERS

find and point out the queen bee of a colony. Along toward fall, however, when the bees got restless and cross, the little fellow got badly stung, but he stood it bravely and in a short time was as well as ever and back with his bees.

The expense of fixtures and supplies in the keeping of bees may exceed the profits for the first year or two, but never mind. Persevere, and in due time you will find the balance on the right side of the books.

A BOOK HOSPITAL.

Any Clever Boy or Girl Looking About for an Occupation Could Find a Congenial and Paying Scheme for Making Money in Conducting a Sanitarium for Aged or Injured Books.

If a clever boy or girl chose to establish a book hospital there is no doubt but that plenty of patients—quite enough to afford a comfortable living—would apply for treatment.

Patience, neatness and care are the capital required, with time to learn how to nurse abused or aged volumes back to a good physical condition.

Purchasers for libraries will tell you that they are continually rejecting books because they are tattered and worn, or "holey." These could be sent to the hospital and doctored into value. All public as well as private libraries would be patrons of such an enterprise, and to their own great gain.

"The art of restoring and mending," says one who speaks with authority, "is as yet much in its infancy."

One cardinal rule to keep in mind is never to try experiments with valuable works; try new methods of restoration on comparatively worthless books. For book bindings which have lost their gloss a preparation is made as follows: Take powdered gum-copal, add to it oil of rosemary sufficient to form a solution. Pour off the superfluous liquid and mix the remainder with sufficient alcohol to dissolve it well. In making, take only enough oil to cover the copal; and of alcohol, about eight parts to the whole.

INK SPOTS.

A fresh ink spot can be easily removed from a printed page by rubbing it with a finely pulverized mixture of saltpetre, sulphur, alum and powdered pumice. If the spot is an old one moisten it first with a little water. When the ink does not penetrate the paper it can be removed by erasure with a sharp pen-knife or a preparation of powdered pumice and vulcanized India rubber sold at the shops. When this does not "bite" its action can be aided by moistening it. After erasure rub the spot with powdered pumice, and then polish with a burnisher. Or, still another way: Lay underneath the blot a pad of blotting paper; dip a fine sponge in lemon juice and press it on the stain so as to moisten it. Then with a clean, soft rag, folded into a pad, press on the spot, and the pad, lifted off, will remove a little of the ink. Repeat this process, taking a clean part of the pad each time. Do not try to rub the stain out, but to draw the ink away or out by absorption. To become an expert at this treatment pour ink over a worthless page and experiment. In old manuscripts ink spots were sometimes cleverly covered with ornaments in gold or color.

GREASE SPOTS.

Heat an iron and hold it as near as possible to the stain without discoloring the paper, when the grease or wax will disappear. Upon any traces that are left put on powdered calcined magnesia for a time. Bone, well calcined and powdered, is an excellent absorbent of grease; also plaster of Paris. For extracting spots of a resinous nature use cologne, turpentine or benzine. A beautifully bound book and quite new had oil from a lamp spilled over it. The culprit called for quicklime, but there was none to be had. So he got some bones,

which he quickly calcined and pulverized and applied. The next morning there was no trace of oil, but only an odor, which soon vanished.

BOOK WORMS.

Book worms and their ravages have been made the subject of recent experiment at Cambridge, Mass. An ounce of prevention is worth a good many pounds of cure in the case of book worms. Books kept clean and well dusted are seldom visited by them. To get rid of these pests pyrethrum insect powder may be used, or bisulphide carbon, evaporated in closed boxes or cases containing the books.

To mend a worm-eaten hole on a page take another piece of paper of the same quality and mash it fine with a knife. Combine it with flour paste, which has a little clear, white glue in it. Lay a piece of tin under the sheet which has the hole, spread the paste, which is really soft paper, with a knife over the hole. When dry it is well mended. The pulp must be a fine paste, not lumpy and stringy.

It is better first to experiment on a sheet of paper in which holes have been punched, because success may not crown one's first efforts. Torn edges may often be reunited so as almost to be as good as new. This is remaking paper with paper. Pages which have been torn across, or engravings usually have a transverse rent; that is, a rent which leaves a small flap edge. With good glue, taken in microscopic quantities on the point of a camel's hair brush, the edges may be perfectly reunited.

DOG-EARED LEAVES.

When a book is dog-eared or its leaves have been turned, if the paper is not too stiff, there is a chance of restoring them. Dampen the leaves, one by one, with water, in which a little gum tragacanth has been dissolved. This is not so much an adhesive as a stiffener, and is used as such for laces. Then flatten the leaves, putting a piece of smooth, white paper between every leaf.

If there is any trace of dampness in a library, or books begin to show mould, place a pan of quicklime near the shelves. This is better than a stove to dry the air. In the process of slaking, the lime absorbs all the moisture in the atmosphere. When slaked it must be thrown away and a new lot procured.

Do not pack books tightly together on their shelves, as the bindings are liable to burst.

Windfall of a Bright Boy.

A strange incident is reported from South Auburn. Two gentlemen, strangers, driving through the country apparently for pleasure, called at a farmhouse and asked a little girl standing at the threshold for a drink of water. The child brought out two glasses of water, and each of the gentlemen gave the child twenty five cents. As they were about driving away one of the family asked if the gentlemen would like to hear the little boy "recite a piece." "Of course we would," they replied. The lad recited his "piece" with admirable effect, and one of the gentlemen was so pleased that he said, handing the boy a bank bill: "Here's a little something for your education." The lad ran in to his mother and the gentlemen turned to drive away, when the lad, running breathlessly after them exclaimed: "Look a-here—you've made a mistake. That was a fifty dollar bill." "All right," said the stranger, "that's no mistake; it may go a little piece toward your education," and the gentlemen drove away in the direction of Lewiston. Now everybody is guessing and nobody knows who they were.—Lewiston (Me.) Journal.

Diligence is the mother of good fortune.

A young man should be what he would appear to be.

The way to make an opportunity good is to lay hold on it and use it.

\$8 Paid Per 100 for Distributing Samples of Washing Suid. Sand & stamp. A. W. SMYTH, Coboes, N.Y.

Sells on sight to all good housekeepers. Boys can make money on our liberal terms. Get agents' sample 25 cents. Dearborn Supply House, 115 E. 52d St., Chicago.

HOW A WESTERN BOY GOT HIS START IN LIFE

CHARLES CURTIZ HAHN

WHEN Hermon Browning started in business life in the dingy, cobwebby attic, politely termed the Leader office, besides learning to set type, it was his special privilege to sweep out the office, build fires in the winter, stand behind the old Washington hand press on Wednesdays when the paper was run off, and

run a black rubber rolling-pin backward and forward over the forms before each individual paper was submitted to the squeezing process, assist in wrapping and mailing the papers Wednesday night, and scrub the type in the rickety sink afterward.

Besides these favors, the editor also gave him two dollars a week in money, or "store account," more frequently the latter.

The editor and Hermon did all the work!

The other hand did not fare much better than Hermon, but then he owned the Leader, and that was glory enough for one man.

Then both were young, as was the Leader, and Hermon liked his work, dirty as it was. There was something deeply interesting to him in the work of transferring a paragraph from a sheet of wrapping paper on which the editor always wrote his editorials, into a solid mass of "tenpenny nails," which, when put in the forms, and planed, and adjusted, and locked up, and pressed, gave out a clear copy that all Windom could read. And as for the mysterious manner in which different sized "quads," and "leads," and "slugs," could be used in filling out a line or a column—that was as fascinating to him as chucking stones at a dog is to most boys. He handled the mallet and "shooting stick" at first with a feeling of undefined respect, and stood by the editor as he "made up the form" "adjusted," and "locked" it, and thought there was nothing more wonderful in the world than the business-like way in which he did it, and wondered if ever he would become skilled enough to do likewise.

In fact there was not a thing about the office he did not like—from setting type to scrubbing the ink from them after the great event of the week was over and the Windomites were eagerly scanning the paper fresh from his, Hermon's, hands. So, loving his work, he went rapidly on as fast as he could, taking up each part one by one, until the whole art was acquired and the editor graciously allowed him to do all the work.

After he had been in this beatific condition for two or three months, Hermon received another favor. His salary was raised to thirty dollars a month. But I do not believe he took as much pleasure in that as he did in controlling the office.

This was in the fall. His board and other expenses, being but a boy, amounted to about four dollars a week, so out of his salary at the end of six months, he would have about fifty dollars—if he saved it.

He did save it! For the editor some way always found it convenient to pay Hermon's board bill himself, by turning in a grocery "ad" here and a dry goods bill there, etc., on to the end. The rest he told the boy he had better save! So when spring came his money was all carefully laid away in the editor's savings bank.

When, at last, he was entrusted with thirty five dollars and an order on the tailor for a suit of clothes, Hermon of course felt duly grateful and set about finding a way to invest his capital.

The editor wanted him to invest it in the newspaper, but Hermon felt as if he was too young to enter into such a deep speculation.

Just west of town was a piece of land

He offered Hermon six hundred dollars for it.

thickly grown up with "scrub oak," elms and small underbrush. To the owner it was an eyesore, fit for neither pasture nor farming, and although only a short distance from town, it was entirely unsuitable for laying out in lots.

On Saturday, after the type had been distributed and enough matter set for the next issue so that he need not be hurried on Monday and Tuesday, Hermon took a walk down by that land. He met the owner of it just coming to town.

"Mr. Jones, how much will you take for that piece of land cut off by the creek?"

"I don't know, Hermon, it isn't worth much, there's only an acre of it. Do you want to buy?"

"Perhaps, if I can get it reasonable. What's your price?"

"I don't know, I'm sure. I never thought of selling it. Don't know as I really care to. Pity to break into one's farm. Suppose, though, forty dollars would be about the figure."

"Fine weather for planting corn!" remarked Hermon as he turned back towards town.

"I don't know—O—yes—very good. Were you wanting to buy that land? If you do, perhaps I might take a little less than that. What do you think it is worth?"

"I'll give you twenty dollars."

As land was worth about ten dollars an acre any place around there, they made out the papers when they got to town, and Hermon went home the owner of an acre of scrub oak, elms and underbrush.

After this his time was pretty well occupied. As the days grew longer, he had more and more time out of the office in the morning and the evening, and this

he spent on his new possession. With an ax he cut down all the smaller trees, leaving only the best shaped oaks and elms standing. These poles he sold for firewood, for this was a time, and a state, when and where anything would sell for wood. He did not have time for anything else, and so hired a man for a few days who went through and dug up the roots of the trees and cleared away the underbrush. All of which Jones, the former owner, watched and wondered at.

By this time it was growing rather late in the season for such work, nevertheless, when a rain seemed to be coming up, Hermon went out and sowed the place with timothy.

The shower came and the bare places where the roots and brush had been, were soon covered with bright, green grass. Now in place of the rough land, was a well kept young grove, and Jones wished he had not sold it. Several men who passed by thought it would be an excellent place for picnics, which Hermon at once vetoed.

The scrub oak makes a most beautiful ornamental tree, with its deep green leaves and symmetrical shape; the elm, with its long, slim branches, has an entirely different appearance, but is more picturesque even than the oak.

Hermon had this advantage also, of having his trees full grown, while if he had bought open prairie it would have taken years to accomplish what he had done in a few months. In the fall his land was one fine lawn, with diminutive hills and valleys, with here and there a large rock in it. With his spare money he put a neat fence around it,—and was offered two hundred dollars for the whole.

The next year his wages were changed

to five dollars a week and board and washing. He sold a lot, and with the proceeds, added to what he had saved from his wages, he was able to put up a small house next to the lot he had sold. The remaining part of the land he further improved by laying out walks and thus heightening the picturesqueness of the little hills and valleys. This attracted the attention of a business man who had just moved to Windom and wished to build a house. He offered Hermon six hundred dollars for it and Hermon took him up. Hermon still had his own house and lot.

This was what one western boy did with his money, and there are many other chances like it.

MEN OR BOYS Wanted to distribute circulars in country towns, not cities. Send for circular and particulars. **INK AGENCY, Poultaey, Va.**

MANDOLINS Guitars, Cameras, Bicycles, Watches, etc., given to persons selling our Aluminum Thimbles, needed in every household, and, therefore, easy to sell. Send name and address, with two references, for outfit. No money wanted in advance. **A.M. SUPPLY CO., Dept. A, Beaver Springs, Pa.**

BOYS MAKING ARE MONEY

Selling *The Saturday Evening Post*

Writes a bright boy from Scranton, Pa.:

"Through your kindness I now expect to attend college. The first week I started to sell the POST I opened an account in a saving fund and deposited 60 cents. Since that time my account has grown until now it is over \$70.00. I work only on Friday afternoons and Saturday mornings, and it has never interfered with my school work. I do not believe that there is any work which a boy can do which will pay him so well and give him so much business experience, as acting as an agent for THE SATURDAY EVENING POST. Some day, when I have graduated from college, I will write to you and tell you how much you have done for one boy."

\$25.00 Extra Prize to the Boy selling the Largest Number of Copies during the month of November; \$20.00 to the boy selling the next largest number; \$15.00 to the next, and so on, making 50 cash prizes to the 50 different boys selling the Post. This is in addition to your regular profit made on every copy you sell.

We will furnish you with Ten Copies the first week Free of Charge, to be sold at 5c a copy; you can then send us the wholesale price for as many as you find you can sell the next week.

You can earn money without interfering with school duties, and be independent.

Violin Value A Violin bought by our original and unique plan becomes simply an investment. It is always worth exactly what you paid for it. It will pay you to investigate this plan before buying. We carry the largest line of fine and rare Violins in America. Large, handsomely illustrated Violin Cat. FREE on request. The Rudolph Wuritzer Co. 205 EAST FOURTH ST. CINCINNATI, O.

ZITHO HARP THE 20th CENTURY INSTRUMENT Is the latest and most attractive of all musical inventions. It is a double overstrung instrument of highest standard and excellence, having two distinct parts, one for melody, the other for accompaniment. The deep, rich, full and sympathetic tone of great volume, resulting from the crowded vibrations is most wonderful, and cannot be approached on any other instrument of this class. The player occupies a natural and easy position, both hands being supported by rests. Complete self-instructor, and full outfit free with every instrument. Any one, young or old, can learn to play perfectly without a teacher. Price \$5. C.O.D. if preferred. Circular and sample music free to any address. BREEDHALL & FABER, Mfrs., 791 Milwaukee Ave., Chicago, Ill.

SEND 10c US... 10c to pay postage and we will send you, post-paid, on approval, one of the most marvelous toned HARMONICAS ever invented. Examine it, and if you find it entirely satisfactory and the equal of any \$1.00 Harmonica you ever saw or heard, and worth all we ask for it, send us 50c. and the Harmonica is yours. If not satisfactory in every particular, return it and we will return amount paid in full. WHAT IT IS—A cornet—trombone—in fact a full brass band in tone—its equal has never before been produced—a Harmonica that anyone can play after a few moments' practice. With it one can play the most exquisite music imaginable. You can trill like a bird, imitate the tones of a pipe organ or violin. Harmonica players say they have never heard anything like it. Easiest blowing Harmonica ever produced. Measures four inches wide and 5 1/2 inches long; finest nickel plate. When cash in full—\$6.00—(stamps taken) accompanies the order we include FREE a Harmonica instruction book. Agents wanted. Send stamp for big illustrated music instrument catalog. G. Berger Bros., 904-910 Main St., Dubuque, Iowa.

Killing Time. "When I was a boy in a printer's office," says Robert Bonner, "and it came along about three o'clock in the afternoon, I would say to myself, 'Suppose the proprietor should come up where we were at work and say, 'Robert, what have you been doing to-day?' what would I answer?' "He never did such a thing, but I used to reason to myself, 'Suppose he were to do it?' If I could not, with pride and pleasure, point to what I had been doing, I would pack up at six o'clock and leave the place. I consider that kind of spirit is an element of success, and there is always room for men who show that kind of disposition. The indolent man, who shiftlessly goes through his day's work, will never reach the goal of success. The man who is constantly watching the clock, waiting until it shall strike six, and trying to 'kill time'—well, it will not be long before time will kill him, so far as business is concerned."

He Wouldn't Tell. Not long ago a merchant employed a clerk who had been discharged from another house in the same line. A few days afterwards one of the heads of the office was anxious to know what terms the other house made to a certain customer. He went to the young clerk for the information. The clerk hesitated, looked distressed and finally asked to be excused from replying.

"I know the facts, of course," he said, "but I don't think I ought to tell." The department head became angry and reminded him pretty sharply that, having been discharged from the other house he didn't owe it anything in the way of keeping its secrets. Nevertheless, the young man stood firm, and the matter was reported to the head of the house, who at once complimented him on his sense of honor and raised his salary. There are few things more dangerous to the average business house than the thoughtless tattling of employes. Every establishment has secrets—that is, matters of a private character which are as much the exclusive property of the house as is the stock on the shelves. Clerks come into a knowledge of these secrets, and the more important the secret is the more likely are they to tell it. Every employe ought to understand that the affairs of his employer are things he has no more right to give away than he would have the right to give away his merchandise. Young men who proceed on this principle are pretty certain to win esteem.

Competent Boys Always in Demand.

Abram S. Hewitt, a business man whose name is familiar to the country, says he believes that competent boys have just as good a chance to get ahead now as they ever had, but he particularly emphasizes the word "competent." In the interview referred to he says: "We need competent boys now. I need five or six of them; boys who are willing to begin at the bottom and work up." And the word "competent" is the key to the whole situation. The trouble today with boys is that their eagerness to get ahead and climb the ladder toward success rapidly really keeps them from reaching the goal at all. When you are building a house, you must first lay the foundation, and the more solid you get the foundation the more substantial will be your house. Many boys of to-day build the foundations to their prospective business careers on sand, or similar unsubstantial material. That is, they dislike to start at the bottom and perform the necessary amount of drudgery required in all cases to prepare a suitable foundation upon

JUST WHAT EVERY YOUNG ELECTRICIAN WANTS THE MODEL . . DYNAMO-MOTOR Will Decompose Water, Do Electro Plating, Light Incandescent Lamps, Run Machinery, etc. ELBRIDGE ELECTRICAL MAN'G COMPANY, Box A, ELBRIDGE, N. Y.

which to build a successful business career. The boy who wishes to achieve success in business has no particular need to be in a hurry. If he doesn't really get started on his career until he is thirty five years of age, there will be time enough for him to make his mark. Competent boys can always find profitable employment, and the only way to become competent is to start at the bottom of a business and learn every detail of it by hard work. There is no other way to accomplish this. Hard work will bring success to even mediocre ability.

The Boy Wanted in Business. "What kind of a boy does a business man want?" was asked of a merchant. He replied, "Well, I will tell you. In the first place he wants a boy who don't know much. Business men generally like to run their own business, and prefer some one who will listen to their way rather than teach them a new kind. Second, a prompt boy, one who understands seven o'clock is not ten minutes past. Third, an industrious boy who is not afraid to put in extra work in case of need. Fourth, an honest boy—honest in service as well as matters in dollars and cents. And fifth, a good-natured boy, who will keep his temper, even if his employer does lose his now and then."

Are You Learning to Write Shorthand? Speed is by no means the most necessary thing in shorthand writing, although teachers often make it the great consideration. The big thing in shorthand is legibility. There are many who can write fast enough, but are unable to tell what it means after it has grown cold. An expert said that there is no necessity for a stenographer who does amanuensis work to write over one hundred and twenty words a minute, and, in ninety nine cases out of a hundred no necessity to write over a hundred words a minute. He says he knows of at least twenty five stenographers drawing large salaries as private secretaries who have assured him that they have never been required to average as much as ninety words. It seems strange, therefore, that teachers of stenography will excite pupils to write one hundred and fifty to two hundred words a minute and make them believe that that is a necessity. There are instances where it may be necessary to write over two hundred words a minute, and there is a legend around the United States Senate Chamber that General Hawley, for ten or twelve minutes in a speech, once spoke two hundred and twenty five words a minute. The average speed of senators in speeches does not reach one hundred and ten words, and in dictating rarely reaches one hundred words.

A boy is naturally a "club man," and if the exercise of his social qualities are denied him at home, or are not provided for, he will provide for them himself.

PRACTICAL TYPEWRITERS. \$1.00—\$1.50—\$3.50—\$5.00 Circulars and samples of work FREE. Gem Typewriter Co., Dept 12, Williams Bay, Wis.

Write for our free illustrated book entitled, "Can I Become an Electrical Engineer." The Electrical Engineer Institute of Correspondence Instruction, Dept. 86, 240 West 23d St., NEW YORK.

How to Reach the Heart of a Boy.

1. Study his parentage and home influences.
2. Observe closely his likes and dislikes, aptitudes, temper, companions, reading.
3. Converse often with him in a friendly way.
4. Ask as to his purposes and ambitions.
5. Lend him books.
6. Interest yourself in his sports.
7. Speak to him of the lessons in the lives of good men.
8. Tell him of your own struggles in boyhood or girlhood with adverse circumstances.
9. In brief, be his friend; when he leaves school and neighborhood keep informed as to his whereabouts by correspondence.—Western School Journal.

Time and Frequency of Religious Experiences.

Sunday school teachers will be interested in the accompanying illustration representing the time and frequency of religious experiences, the heavy line representing girls' experiences and the dotted line boys'.

Note the three periods of greatest activity. The dips correspond to periods of indifference. The illustration is taken from the "Psychology of Religion," by Edwin D. Starbuck, Stanford University.

Russell Sage's Thanksgiving.

"When I was a boy," says Mr. Sage, "I lived in Troy, where I was employed, and our Thanksgiving dinners were eaten in that city. Early Thanksgiving mornings I was up doing some work, for my holidays as a boy were not all play. After the work was done I went to church and heard a sermon.

"And after church came the dinner. "Our Thanksgiving dinner, no doubt, had various things on the table, but my only real recollection is of turkey and pumpkin pie. I ate both of these rapturously and ravenously.

"I ate until I almost burst. I could have all the turkey I wanted and all the pie I could hold. And I assure you that I did not stop short of a great deal. "I drank cider by the gallon. My merriest Thanksgiving day when I was a lad was the memorable one when I succeeded in polishing off a whole pie and several more slices of turkey than any other member of the family."

There once lived in a western village a woman who was anxious that her only son should achieve some great success in life, and lift himself above "the common run of men," as she said. When she reflected that even the presidency of the United States is within the reach of the poorest and humblest boy, she did not wish her son to fall far below that station in life. Long after the son was a man, an acquaintance met the ambitious old lady, then visiting in a distant state, and asked her about her son's success in life. "Well," she said, cheerily, "he ain't the president of the United States yet; he ain't a senator, nor yet a congressman, nor governor, nor mayor; but I tell you he's the very best blacksmith there is in our part of the country. Indeed he is!"

From Angell's Lessons on Kindness to Animals.

1. Never to stick pins into butterflies and other insects, unless you would like to have somebody stick pins into you.
2. Never to carry poultry with their heads hanging down, unless you would like to be carried in the same way.
3. Never to throw stones at those harmless creatures, the frogs, unless you would like to have stones thrown at you in the same way.
4. That nearly all snakes are harmless and useful.
5. That earth worms are harmless and useful, and that when you use them in fishing they ought to be killed instantly, before you start, by plunging them in a dish of boiling water.
6. That it is very cruel to keep fish in glass globes slowly dying.
7. That it is kind to feed the birds in winter.
8. That bits should never be put in horses' mouths in cold weather without being first warmed.
9. That it is cruel to keep twitching the reins while driving.
10. That when your horse is put in a strange stable you should always be sure that he is properly fed and watered, and in cold weather that his blanket is properly put on.
11. That you should never ride after a poor-looking horse when you can help it. Always look at the horse and refuse to ride after a poor-looking one, or a horse whose head is tied up by a tight check-rein.
12. That you should always talk kindly to every dumb creature.
13. You should always treat every dumb creature as you would like to be treated yourself if you were in the creature's place.

Practical Printing for Amateurs.

W. S. Knox.

(Continued from October.)

There are established forms or styles for almost every variety of job printing, and amateurs are not entirely alone in not being fully acquainted with them. Some alleged professional printers show a wonderful ignorance in some of these matters, though they would not, perhaps, believe it were their shortcomings brought home to them. For instance, the term "letter-head" is often used to refer to letter-heads, packet note-heads and commercial note-heads. A "head," by the way, is the space left at the top of printers' ruled stock for the insertion of the printed matter by the printer. There is from two to two and three-quarter inches of "blank" space above the first ruled line. A letter-head is eight and one-half inches wide by eleven inches in length; a packet note-head six by nine and one-half inches, and a commercial note-head five and one-half by eight and one-half inches. The manner of setting type for either a letter-head or note-head is the same, except in size. There are also two styles for setting same—either a "corner card" or "full width." The former is generally used by professional men and consists of a few lines of small type in the upper left hand corner, with the "date line" in its usual place—bearing to the right down to within a half-inch or so of the first ruled line. The "full width" stretches across the face of the head in either large or small type as taste suggests. The "date line"—name of town and state, dotted line for month and day, and the figures 190... with dotted or blank space to fill in last figure of date of year, always appears just above first ruled line of the head, starting near the middle and running to within a half-inch of the right hand margin. A bill-head is the form used by business men in notifying a purchaser of the number of articles purchased and the price charged therefor. These heads are all the same width (eight and one-half inches), but are of various lengths. A "sixth-sheet" and "quarter-sheet" head (named from the number ruled on and cut from a sheet of flat paper) are the most generally used sizes. A "sixth" has six or seven ruled lines, and a "quarter" thirteen or fourteen. A "half-sheet," therefore, would be twice as long as a "quarter." These heads are also ruled crossways, being spaced for date, name of article, and double ruling for dollars and cents. The blank space for printing is two and three-quarter inches wide. The style for printing a bill-head is almost the reverse of that for a letter-head. First comes the date line with blank spaces as described above; then a dotted (or straight) rule line starting at left hand margin and running half or two-thirds of the way across (for the name of purchaser); under this a second rule line, commencing three or four inches from left margin and running nearly or completely to right margin (for address); then the name of the person or firm, preceded by the words "Bought of," or the word "To" with the abbreviation "Dr" (debtor) following the name; then comes the announcement of the firm's business (Dealer in Dry Goods, Groceries, etc.) followed by the telephone number, street address, etc. A statement is a form generally used at monthly or other stated intervals by merchants for notifying debtors as to the standing of accounts. A statement is five and one-half by eight and one-half inches in

size, same general ruling as a bill-head, but narrower, and has from eighteen to twenty ruled lines. The typesetting for a statement is similar to that for a bill-head, with the exception that the word "Statement" or words "Statement of Account" are usually placed immediately at the top, in the center, over the date line, and the words "In Account with" used instead of "Bought of" or "To-Dr." These styles, of course, can be and often are varied to suit different conditions and different compositors. But they can not be improved upon, as a general thing, except by artists, and nine printers out of ten use no other forms for these classes of work.

An envelope corner is always set in the upper left hand corner, and is from two to two and a half inches wide. A plain "card" consisting of name, business and address, each set in a separate line, is the style, though a good many persons would not have an envelope printed without the words "If not delivered in five days, return to—" or the simple "Return to—" preceding the advertising matter.

Business cards, tickets, checks, and the like, are of all sizes and shapes, and are among the simplest of the many styles of job printing. The average size is about two and one-half by four inches for a business card; one and one-half by three inches for tickets, and one by two inches for milk or bread checks. Business cards are printed upon good Bristol cardboard; tickets upon cheap, colored boards, and checks upon heavy tagboard or "tough check." Tickets, checks, etc., should be printed as plainly, neatly and distinctly as possible—using no fancy type, ornaments or other "flubdubs." Whatever the job, try to keep it well "balanced." Don't have all the heavy or large type on one side of the center and all the small or light type upon the other. In a business card or ticket the most prominent line generally appears in the center and the next most prominent should be the leading top and bottom lines.

Circulars, dodgers and bills should all be set to regular measure and not put up in any size or shape regardless of how the paper may cut. Paper and cardboard should be cut so as to leave little or no waste strips to a sheet. These odds and ends may be utilized, but they litter up a shop and are generally a dead loss. A "sixteenth" is about the largest regular size bill that the average boy printer's press will take in. This sheet is six by nine inches in size, and the type form should not be greater than five by eight inches. This is also the same size as a note circular. A letter circular is eight by twelve inches. A bill is printed on cheap newspaper, while a circular or other better grade work, such as notes, recipes, "blanks," etc., are printed upon "writing" paper.

However, the boy printer who is anxious to learn will gather all necessary information upon these things when the necessity arises. One particular requirement will be patience. He will obtain the greatest assistance, perhaps, from studying the work of the professional printer. Note the arrangement of the lines singly and as a whole; note how the prominent features are brought out in larger or heavier type than the secondary matter; note that in the displayed lines two lines of the same length seldom appear together, nor do the lines always alternate long and short. A keen observer often picks up valuable points that a heavy student passes over unperceived.

(To be Continued.)

American League of Amateur Authors.

This league is attaining some prominence among amateur journalists, and the interest and enthusiasm manifested by its members indicates a promising future. Its aim is "the encouragement and perpetuation of all literary pursuits among the young people," and it has done much in the way of gathering in new recruits who had no previous knowledge or experience in regard to literary work. The officers of the league are: President, George Julian Houtain, 282 Putnam avenue, Brooklyn; vice-president, Morris J. Cohen; secretary, Harry Shannon Elliott, 109 Olney avenue, Marion, O.; treasurer, M. Jay Lancelot; official editor, Percy H. Gladstone; laureate recorder, L. W. Fitch; literary director, L. J. Cohen; historian, J. F. Gamble; chairman recruit committee, George Marcus Brazer, 1738 North Fifteenth street, Philadelphia; chairman auditing committee, John W. Carpenter; official organ, The Zenith Magazine. It is published by George Julian Houtain and is well worthy of the attention of all amateurs. The League is making great efforts to bring recruits into the fold and will be glad to hear from any amateurs or prospective amateurs in the field of literary work.

THE "ONE MAN OFFICE."

Roller Composition.

"I am an amateur printer and subscriber to THE AMERICAN BOY. I would be very thankful if you could give me the formula for making a good roller composition. I have a roller mold for my press, but although I have tried over twenty times I have been unable to cast a roller that would do good work. In a large number of cases I have been unable to remove the roller from the mold without tearing it all to pieces."

Our correspondent lives at Santa Paula, Cal. We would advise him to get from the American Type Founders Company, which has a branch in almost every large city, a patent composition that the company has for sale, which is a great deal better, and where one uses very many rollers, at least, if not in any case, is cheaper than any home-made composition that one can manufacture. The Inland Printer gives the following recipe for a set of form rollers for a cylinder press:

Soak in clear water nine pounds of clear and brittle glue; when soaked about half way through, spread it out on boards until the moisture has penetrated through the cakes of glue and the surplus water drained off. The glue should then be placed in the melting kettle and allowed to melt; after this has taken place and it is on the point of boiling, add three gallons of treacle, and let this be stirred through the glue and allowed to slowly get to the boiling point. When the mass becomes quite hot, skim off the froth and dirt that floats on the top and then add two pints of crude glycerin and two ounces of venice turpentine. Mix these well into the composition a few minutes before removing the melting kettle from the fire or steam heat. While the composition is being prepared see that the roller molds are clean, well oiled with lard oil, and comfortably heated so as not to chill the material; when all is ready, slowly pour the composition into the molds. The rollers may be drawn from the molds in about ten or twelve hours after pouring.

Unless our inquirer uses enough rollers to enable him to save considerable money by making them himself, we would advise him to buy them already made, for it will be cheaper, because an expert roller maker will turn out a roller that will do a great deal better work and last a great deal longer than any that an amateur can make even with the best prepared composition. Unless the roller maker is expert, the roller is apt to be full of blow-holes.

The foregoing recipe, it will be noticed, is for several large rollers. While the proportions should be the same the amounts must be varied according to the quantity of rollers to be molded.

THE BOY PHOTOGRAPHER

Edited by JUDSON GREWELL

THE AMERICAN BOY offers twelve prizes of Two Dollars each for the best Amateur Photograph received during the twelve months in the year...

glass; others cannot be so treated. To know all this requires observation, added to experience. Keep a sharp lookout on store windows, or wherever there is a display of prints.

Negatives That Are Not Perfect.

The following are defects found in the negatives of amateurs. They constitute about all that lay in wait for the poor fellow who doesn't read his instructions...

Crystallization on negative—Imperfect washing of plate, leaving hypo on it. The remedy is care in washing.

Clear shadows—if a weak negative, it is under-developed; if strong, it is under-exposed.

Fine transparent lines all over negative—This comes from using too stiff a brush when dusting off.

Foggy negatives—Several things may cause this. The plate may be light struck while in dark room, caused by having too bright a light while manipulating the plate...

Mottled negatives—When a fixing bath containing alum becomes old, a precipitation of the alum is liable to occur, and this gives the negative a mottled appearance.

Pinholes in negatives—These are generally caused by dust on the plates, or the use of old developer; or, it may be caused by air bubbles while developing.

Yellow colored negatives—This is not a particularly bad defect, unless the negatives are very yellow. It is caused by not using enough sulphite of soda in the developer, or the article may be old and decomposed.

Yellow stains—Old hypo, which has assumed a dark color, will sometimes cause this. At other times it is caused by impure chemicals. The cure is obvious.

Answers to Correspondents.

Charles Holmes.—Instructions in mounting will be given before long. A good picture is often spoiled by a bad mount.

Earl K. Shorett—Your plates turned "rusty" because they were not washed sufficiently after being "fixed." All the hypo was not washed out of them.

Willie Nelson.—Red will photograph black, or very dark, and blue will be pretty light, even when the blue to the eye looks quite dark.

Ben M. Washburn.—The same kind of developer may be used for snap shots as for time pictures; only it wants to be diluted. To three ounces of the normal developer add an ounce of distilled water.

Charles Westingway—You can sometimes save over-exposed plates by having your developer almost ice cold. That makes the development come very slowly.

An English concern has prepared for the market tablets of persulphate of ammonia. Dissolve one of these in an ounce of water, and the reducing solution is ready.

Photographs for Half Tones.

It has often been asked: "What kind of a photograph makes the best half tone?" A short answer is: One with plenty of detail, yet with contrasts, printed on a smooth paper and toned black.

The reason why a smooth paper is needed is that otherwise the reflection from a rough surfaced print scatters the light while it is being photographed for the half tone. The resulting negative has a mottled appearance, plainly seen under the magnifying glass, preventing the plate being as clear as desired.

But perhaps the reader does not know how half tones are made. The process is not so very complicated. First the photograph from which the half tone is to be made is set up in front of the camera, tacked to a board, and a couple of strong electric lights are turned on it.

Some Excellent Pictures.

A set of photographs of Florida scenes, taken by Wm. C. Conrad, of Massillon, Ohio, are especially worthy of mention. They are of more than usual interest and excellence, and show careful work and good judgment.

"HOLDING ON TO THE AMERICAN BOY—A GOOD THING." Second Prize Photo, by Joe Stone, Buffalo, N. Y.

Photographic Pointers.

When the dark room is a hot box, it can be made several degrees cooler by hanging some wet cloths around on nails or strings.

Sometimes a thin negative can be made a fine printer by covering the glass side with blue aniline dye, but it should be put on very evenly.

A pyro-developed plate can be stripped of its negative by soaking it for a few minutes in a strong solution of bicarbonate of soda, and then transferred without washing to a weak acid solution.

Yellow Stained Negatives.

The Professional Pointer gives the following formula for treating yellow stained negatives: Sulphate of iron, 3 oz.; sulphuric acid, 1 oz.; alum powdered, 1 oz.; water, 20 oz.

THE PALMETTO'S FIRST BLOSSOMS—FLORIDA PICKANINNIES. First Prize Photograph, by Wm. C. Conrad, Massillon, O.

A Very Important Question.

Allow me to ask THE AMERICAN BOY how to finish a picture, from developing to mounting. D. B. M.

My dear boy, that is just what this department is doing every month, but the subject is too big for one issue. Volumes have been written on the art of developing, printing, toning and mounting, and it has not yet been exhausted.

Read this department for a year, and if anything has been missed during that time, let us know. As the cool weather advances, and picture-taking becomes less active, the most improved methods of printing will be taken up, and that, with mounting, which can be followed without the aid of sunlight, will be fully exploited.

Getting Ready for the Fall Exhibits.

Now is the time to make a careful selection of your summer's work for the various exhibits being held throughout the country, paying the most attention to your home club. If there is one in your vicinity, every camera enthusiast certainly has a few negatives without a flaw.

Take these selections and give weighty consideration to the problem of printing and mounting. Will they look best on artisto platino, or platinum, or velox? Is rough or smooth paper required? Should the mounts be dark or light? It is on correct answers to such questions that the effective picture depends.

Some pictures are greatly improved by an appropriate frame; others are weakened. Some need to be covered with a

Something About Bantams.

HARRY UNGERER.

I am often asked, "Do bantams pay?" In answer I say, "They certainly do when properly handled." They consume but a small amount of food and require but small space, so here is economy to start with. There is no other fowl out of the raising of which one can get more pleasure. My advice to beginners is, purchase the "American Standard of Perfection," which costs one dollar. Read it thoroughly, and if you are not interested in the little members of the feathered tribe you are not a true lover of animals. You will perhaps be bothered to know what variety to take up with. Attend the next poultry show or county or state fair in your vicinity, and there, by examination of the varieties on exhibition, you can make your selection according to your taste. Do not take up more than one breed as a starter. After a few years, if you find you are successful, add others. Do not hide the results of your labor under a bushel, but trot out

Commander Winslow is inclined to doubt the accuracy of this statement, as there is no palace at Shanghai and Pekinese pugs are not seen that far south. He says he was in Tien Tsin for a year, and that it was nearly impossible for him to get a thoroughbred there, or even in Pekin. He further says that people are very easily deceived in regard to Pekinese pugs. "Well," says he, "my little fellow has added twenty three thousand miles to his travels since his picture appeared in THE AMERICAN BOY."

Hunting Rabbits With Hose.

A Western paper is responsible for the statement that boys hunt rabbits in Nebraska with the hose. They carry with them when hunting a coil of hose about an inch in diameter, which they run down a rabbit hole until the bottom is reached. They shout down the holes, and then draw the mouth of a sack over the hole. The rabbit comes out plump into the sack.

BANTAMS BRED BY A BOY OF FIFTEEN.

your fowls to the first nearby poultry show or fair, and do not get discouraged if you do not receive the blue ribbons at first. The knowledge you will gain by comparing your stock with those of older breeders will soon place you in a fair way to win prizes. If you are a true fancier and work hard you will always find a little cash to your credit besides considerable pleasure in the pursuit. The accompanying picture shows a pen of white Cochins bantams bred by a boy fifteen years old. A number of these bantams were first prize winners at some of the leading poultry shows.

The Hen and Her Eggs.

The common hen lays about five hundred or six hundred eggs in ten years. In the first year the number is only ten to twenty; in the second, third and fourth one hundred to one hundred and thirty five each, whence it again diminishes to ten in the last year.

Li Hung Chang, Pug.

In our May number we gave a picture of Li Hung Chang, the Pekinese pug belonging to Commander Winslow of the United States Steamship "Solace." Our readers may be interested in knowing that about the middle of September, Commander Winslow returned from China, and at once on seeing the number of THE AMERICAN BOY containing the picture, wrote to the editor saying that he had received a letter from a lady in Ohio who had seen the picture, in which she made the statement that she had a Pekinese pug whose ancestors lived in the Imperial Palace at Shanghai. Com-

Squirrels and a Squirrel Hunt.

CHAS. W. HAWKINS.

There are six different kinds of squirrels known to hunters of this little animal. The fox squirrel is the largest. He is called fox squirrel because of his cunning, large size and yellow hair on underside of body and tail, thus resembling a fox in habit and color. He is really the king of the squirrel family; his kind is not now and never has been numerous.

Gray squirrels are quite plentiful. They are also known by this name because of their color. In size they become nearly as large as the fox squirrel. The black squirrel belongs in the same class with the gray squirrel and is different only in color.

The next in order is the red squirrel, which is distinguished from other members of this forest family by its color and size. It never assumes the same proportions as does the fox, black or gray squirrel. Red squirrels are very numerous and multiply much faster than any other variety.

A flying squirrel is quite a curiosity. It is almost like the red squirrel in appearance, although not quite so red, having two streaks of white running lengthwise of its back. Its greatest diversity is the fact that it is endowed with a little more skin than any of the other species, which is so arranged that by stretching its four legs out directly from its body the skin forms into sort of wings, enabling it to fly from one tree to another. This squirrel is very scarce.

Lastly, we have what is familiarly known to hunters as the chipmunk. It gets this name because of the chipping sound it emits from its throat when dis-

WHITE FANTAIL PIGEONS THE BOY'S PET AND PROFIT.

More pleasure and money made raising these wonderful pigeons than anything a boy can do. Only \$5.00 a pair. Sent on approval. E. A. Hebbcock, Wobchester, Mass.

NO MOISTURE. need be supplied to a properly made incubator; neither should change of climate affect the hatch. The free catalogue of the STAR INCUBATOR explains why, and gives much valuable information on poultry-raising written by experts. The STAR hatches more and healthier chickens than any other. STAR INCUBATOR CO., Church St., Bound Brook, N. J.

turbed. He is not very cunning, nor is he easily scared. He is very small—not larger than a half-grown rat.

All the species mentioned are inhabitants of the forests and are found principally in Ohio, Indiana, Kentucky, Michigan, and other states of the Union, where nut-producing timber is plentiful, from which they secure their food.

The hollow tree serves for its home, summer and winter, although the chipmunk does not, as a rule, live in hollow trees that are standing, but takes up its abode in trees which have fallen to the ground. They often burrow in the ground and live there.

Hickory nuts, beech nuts, walnuts, butternuts and berries comprise the squirrel's bill of fare. In the autumn, if one were to go into the forest where any of the trees bearing the nuts mentioned

Since the modern shotgun has come into existence these animals can be much more easily bagged; consequently they are usually hunted in this manner.

With the aid of a shotgun the hunter who has been born and reared in the country, near the forests, is generally better equipped to bag these little animals than any one else. It requires a constant watching of their habits and ways to hunt them successfully. One must live among them, as it were, in order to study them closely.

The fox squirrel is very "foxy" indeed. It will climb a tree and crouch down on the top of some large branch, directly opposite where the hunter may be standing. As the hunter moves around the tree to get a good view of him "his majestic shyness" will quickly move on around also, constantly keeping the limb of the tree between himself and the hunter. Therefore, one has to be strategic in his movements in order to get a shot at this squirrel.

No doubt the best time to hunt the squirrel is during the months of October and November. Then the leaves have nearly all fallen from the trees and squirrels can easily be seen from a distance if in them. The hunter should start out directly after rain has fallen, as, when dry, the leaves make considerable noise in being tramped upon.

It was in the autumn, after a slight shower, that a young hunter who lived in Northern Ohio, started out one afternoon to bag some gray squirrels which he knew to be quite numerous in a certain piece of wood, not far from his home.

This hunter was armed with a double-barreled, muzzle-loading shotgun, one known as a number twelve bore, and which would carry number six shot very closely for a considerable distance.

With plenty of ammunition in his pockets and gun loaded, he approached the wood very stealthily; then walking slowly and quietly some distance into the interior he stopped and stood perfectly still, looking around on all sides, now and then gazing into the tree-tops. After a few minutes had passed he espied

"HOW D'YOU S'POSE THE SQUIRRELS DO?"
(Photograph by A. J. Swanson, Faribault, Minn.)

were growing, and should stand under one for some little time he could hear the nuts dropping here and there. Upon investigation he would find the squirrels cutting them off with their teeth so they could drop to the ground. When this frisky animal has accumulated a large number of nuts on the ground he goes down and gathers them into heaps under or near some fallen trees and covers them up with leaves and shucks, to be uncovered when winter comes.

A great deal of sport is enjoyed in hunting and killing squirrels. They are a cunning, crafty animal and one must employ strategic measures in order to get near enough to do execution with a firearm. Years ago the rifle was the only weapon used in their destruction, and many interesting "yarns" have been "spun" by early settlers when relating their experience in shooting squirrels.

a large gray squirrel perched upon a log about twenty rods from where he was standing, but too far away for a successful shot. Moving slowly to one side until a large oak tree, which stood about half-way between the squirrel and the spot where the hunter was standing, shut him from the squirrel's view, the hunter began to move in that direction, at the same time making as little noise as possible and using every advantage to keep out of sight.

After taking a few steps the hunter would stop, peer around the tree and locate the squirrel, who, probably scenting danger in the air, began to make quick motions towards a large beach, which he proceeded to climb at a very rapid rate, reaching its top in short order. After passing the oak and observing the squirrel in the top of the tree, making ready to spring to the limbs of another tree, in which its nest was undoubtedly located, the hunter hastened his steps into a sharp run, bringing himself directly under the tree in which the squirrel had taken refuge. By this time the squirrel had reached the extreme end of the limb and was in the act of leaping into the branches of another tree near by.

The exciting moment had arrived. It was a time when a cool head and a steady nerve were in demand.

The hunter brought his gun to his shoulder, and, taking aim a little ahead of the jumping squirrel, pulled the trigger.

Bang!
There was a loud report. When the smoke had cleared away the squirrel was seen coming toward the ground at a terrific speed, turning over and over on the way down. Striking the ground, he quickly regained his feet and scampered

for the tree somewhat under difficulties, as it was very evident he had been wounded, and began ascending the tree in a winding fashion.

The hunter was not to be so easily outdone. When the squirrel appeared on that side of the tree nearest him he promptly sent the remaining charge of the other barrel after him, which brought the would-be-escaped to the ground, not to go up again. He was bagged.

The hunter promptly loaded his gun, and, after picking up his game, started off in the direction from whence he heard the bark of another of the gray squirrel family, who had probably been aroused from his midday meal by the reports of the gun a short time before and discovered that danger was near. It was not long before the hunter was within gunshot range, although he had to dodge behind trees and logs on his way there and use the same tactics he had used before. One well-directed shot was sufficient to bag the second squirrel.

This seemed to stir up more and more of them, and soon squirrels could be seen in all directions, gray ones, red ones, and even the little chipmunk added his chipper to the excitement of the others, but this young hunter did not desire to waste his ammunition on so small game as red squirrels or chipmunks. His ambition was bent towards capturing larger game than they would prove to be. Consequently, on this occasion, his whole attention was given to bagging large ones.

Six shots were fired by him that afternoon, during the hour and a half in which he was in the wood, resulting in his bagging three large gray beauties. It is almost needless to add that he felt somewhat proud of his successful adventure.

THE AMERICAN BOY is the only official organ of the Agassiz Association and should be in the hands of every member.
All correspondence for this department should be sent to Mr. Harlan H. Ballard, Pittsfield, Mass. Long articles cannot be used.
THE AGASSIZ ASSOCIATION welcomes members

of all ages, and anyone who is interested in any form of natural science is invited. Established in 1875. Incorporated in 1882.
Short notes of personal observations are particularly desired for use in the A. A. department. Send illustrations when convenient. Questions are invited.
Address H. H. BALLARD, Pittsfield, Mass.

Hints on the Study of Insects.

Many of the boys who have joined the AGASSIZ ASSOCIATION in response to the invitation of THE AMERICAN BOY have evinced a particular interest in insects. Many letters show that there is a general difficulty in the path of our young friends in properly classifying and naming their specimens, and not a few have asked us to give some simple hints to help them get a clearer understanding of the insect world.

far the greater number of all the living creatures upon this earth are insects. It is a multitude no man can number. The task of reducing the myriad tribes of flying and creeping and crawling things to order, and learning their names, and life-histories, and habits, seems at first impossible. Yet so long and patiently have these little animals (O, yes—insects are animals!), been studied by scientific men, that it is really a simple matter to get a clear notion in a general way of the entire branch of the animal kingdom, known as Arthropoda (Ar-throp-o-da). This great division in-

cludes not only insects proper, but also their near relations, the spiders, centipedes, lobsters, etc.

The young student should procure at the outset a good manual, and we recommend Comstock's Manual for the Study of Insects, published by the Comstock Publishing Co., of Ithaca, N. Y., of which we shall make free use in our further explanations.

The study of the forms of animal life in its broadest form, with special reference to their proper classification, is called zoology.
Classification is the process of dividing confused masses into smaller groups whose members shall be closely related to one another through well-marked resemblances, or putting similar animals into separate classes.

It has also been learned that there is a real blood relationship between the different kinds of animals. This is called the Natural Classification.

The animal kingdom is made up of individuals, each the offspring of parents like itself, and each in turn producing similar offspring; offspring never exactly like either parent, but in a single generation varying but slightly. Thus there are large numbers of individuals which closely resemble one another. Such a group of individuals is called a Species. The name sparrow hawk indicates a species of hawk; and pigeon hawk another species.

Roughly speaking, a species is a group of individuals which are as much like one another as the offspring of the same parents.

Again, it is found that there are groups of closely allied species, resembling one another somewhat as cousins do. Such a group of species is termed a Genus.
Thus,—to take an illustration from the vegetable kingdom,—all the different species of pine trees, such as pitch pine, scrub pine, etc., taken together constitute the genus pine, or as the botanists term it, Pinus.

The several species of hawks and falcons are classed together by zoologists as the genus Falco.

Kindred genera, again, are grouped into families. Falcons, hawks, kites, and eagles are classed together as the Falcon Family (Falconidae).

Closely related families are grouped into

CHRISTMAS PRESENTS

Nothing in the world makes such a beautiful, cheap and acceptable Christmas Present as a GUITAR, MANDOLIN, BANJO or VIOLIN. We have them for \$1.00 and upwards. COMPLETE OUTFITS, including Case, Tuning-Pipe, and Figure Music Self-Instructors, for \$3.75 and upwards. We ship first instrument to each locality at an EXTRA BIG DISCOUNT, simply to advertise our goods and establish a trade. BIG ILLUSTRATED CATALOG AND 100 BANGAIN MENT FREE.

orders. The Owl family, the Falcon family and the Vulture family constitute the Order Raptores, or Birds of Prey.

Closely allied orders are grouped into classes. Thus, all the orders of birds taken together form the Class Aves, or Birds.

Finally the classes are grouped into branches.

It is found that animals in general are built on several distinct structural plans. All animals built on the same plan are included in the same branch. The backboneed animals constitute the Branch Vertebrata; the clams, oysters, snails, cuttlefish, and other soft-bodied, skeletonless animals form the Branch Mollusca; the insects, spiders, etc., as we have said before, constitute the Branch Arthropoda, etc.

All these branches together constitute the Animal Kingdom, and the three Kingdoms, Animal, Vegetable and Mineral, constitute the entire material world.

The limits of all these different groups cannot be precisely defined, yet each is sufficiently definite to be of service to the student, and the longer he studies the more accurate his understanding of each becomes. We now set these groups in the form of a table, beginning with the highest, and this table may well be learned:

Branch or sub-kingdom.
Class.
Order.
Family.
Genus.
Species.

ARTHROPODA.

If an insect, spider, scorpion, centipede, or lobster be examined, the body is seen to be composed of rings or segments, and some of these segments bear jointed legs. This structure is clearly shown in the accompanying cut of the curious insect known as the Walking Stick.

Worms are distinguished from Arthropods by the absence of legs.

Many animals popularly called worms, as the tomato worm, apple worm, etc., are evidently not worms at all, as they have legs. They are the larvae, or immature forms of insects; and an illustration is shown in Fig. 2. The larvae of moths and butterflies may properly be called caterpillars, but not worms.

The Branch Arthropoda is divided into four main classes: Crustacea, (lobsters, shrimps, crabs, etc.); Arachnida, (spiders); Myriapoda (centipedes, etc.); and Hexapoda, (insects). We pass directly to the last class.

Fig 1. "The Walking Stick."

Fig 2. Caterpillar.

HEXAPODA (HEX-AP-O-DA.)

THE INSECTS.

Insects are Arthropoda, with distinct head, thorax, and abdomen. They have one pair of antennae, three pairs of legs, and usually, in the adult stage, one or two pairs of wings.

This definition should be carefully learned. It is well illustrated in Fig. 3. Notice, first, the three distinct parts of the body, the head, the thorax (that part to which the wings and legs are attached), and the abdomen. The two "feelers" growing out from the head are called antennae; one of them is an antenna. Note the three pairs of legs, and the two pairs of wings. Some insects, house-flies for example, have only one pair of wings, and some have none.

We hope that we have now made clear what an insect is, and the place it holds among the various groups of the animal kingdom. In following papers we shall take up some of the more interesting features of the Hexapods, or six-footed creatures, and learn the different orders into which this class is subdivided.

Fig. 3. Hexapod.

TREES AND LIGHTNING.

The German government has been making systematic inquiry into the subject of lightning-struck trees. Overseers of nine forestry stations, scattered throughout an area of 250,000 acres in the district of Lippe, have made a thorough investigation of the forests in that locality. They report that the oak is the most susceptible to lightning. The beech is the most seldom struck, and next in exemption comes the pine. In that

locality the forests are composed of trees in the following proportion: Beech, 70 per cent; oak, 11 per cent; pine, 13 per cent; fir, 6 per cent. There have been 275 trees struck in this acreage within three years. Examination shows this to be the ratio: Fifty-eight per cent oaks, 21 per cent firs, 3 per cent pine, 7 per cent beech.

[We offer a badge of the Agassiz Association to every reader who will send us an account of lightning striking a tree. The name of the tree should be given, and as full details as possible.—Ed.]

QUEER TREES.

Louis H. McBain, of Grand Rapids, Mich., sends the following picture (Fig. 4). He says:

Fig. 4. Freak Trees, as drawn by Louis McBain.

"Back of our summer cottage are two queer cedar trees. When they were young an old tree fell upon them, bent them to the ground, and held them there until they had grown as you see in the picture."

[Can any one send a picture of any (trees as strange? Photographs preferred.—a badge for each. Ed.]

NIGHT HAWKS.

The common night hawk is about eight or nine inches long. Gray, brown, and black may be found on the same feather. The general color is brown, like the dead limb of a tree. A little more than halfway from the base of the wing to the tip is a white streak about three-fourths of an inch in width. The food of the night hawk consists of insects, which it catches on the wing. It flies only in the evening and at night. In the daytime it sits on some dead limb, and looks so nearly like a knot that few would notice the difference. HARRY CLARK, Maple Park, Ill.

HIGH FROGS.

Big Pine, Cal., Aug. 9, 1900.

President of the Agassiz Association:

Dear Sir—I notice at an elevation of about twelve thousand feet, on the east slope of the Sierra Nevada mountains, that the lakes at the foot of the glaciers, and above the timber line, have thousands of frogs; not very large ones, but dark in color. One of the lakes is called Frog Lake because it has so many frogs in it. Now I want to ask some of the older naturalists how they get there. The mountain passes are 13,000 feet, and it freezes every night, even in this month. To the south is 200 miles of waterless desert, to the east in Nevada are numerous chains of barren mountains. (I can count five ranges from the lakes); and to the north is nearly two hundred miles of volcanic rock almost impassable for men. Every direction it seems impossible for a frog to go unless he carries his canteen and blankets as we do. My papa is a civil engineer. He says the lake is in latitude 37° 12' N. and longitude 118° 20' W. JOHN W. DIXON.

A STRONTIAN CAVE.

Put-in-Bay Island is one of a group in Lake Erie, midway between Detroit and Cleveland. It abounds in minerals. It is chiefly underlaid with limestone, in which are many small caves. In these caves the water of the lake forms numerous clear pools. Mr. Gustav Heinemann bought a portion of this island, including a well which had been drilled to the level of the lake, and a bed of strontianite, partially worked. On examining this well, Mr. Heinemann determined to enlarge it, and in doing so, broke through into a wonderful circular cavern, walled and overhung with great blue-white crystals of the rare mineral. He has now fitted this grotto and the passages leading to it with electric lights, so that it glitters and sparkles like a fairy palace. It is believed that other caves are waiting discovery here, and the whole region invites the exploration of scientific men. [Some of our American boys must know of interesting caves. Why not earn a card of membership and badge of the Agassiz Association by telling us about them, and sending a flash-light photograph of the interior?]

VIVID DESCRIPTION OF CALIFORNIAN ANIMALS.

Rosedale, Kern Co., Cal., Aug. 16, 1900.

Mr. Harlan H. Ballard, President A. A.:

Dear Sir—Enclosed please find Wells-Fargo express money order for seventy five cents, for which please send me a copy of "Three Kingdoms," a Handbook of the Agassiz Association.

I am writing for my son, as he is at present absent in vacation, and is anxious to have the book on his return.

We are living some forty miles due south of Tulare Lake, in the San Joaquin valley, where there are many excellent opportunities to make observations in natural history. The country being still thinly settled, the wild animals are only partly exterminated. Here and there the "grizzly" is still

found in the Sierra Nevada and the Coast Range. During the dry seasons it occasionally happens that that animal known by the many names of panther, cougar, catamount, mountain lion, puma, or California lion, comes down into the valleys in search of water, and then the herds of the ranchers have to suffer. The prairie wolf (coyote) is both in the mountains and valleys in distressing numbers. A species of badger is found on the prairies, and also a large wildcat. The hares can be seen by the hundreds and are a great nuisance, especially as they cannot be used for food in this section, owing to a skin disease which some of them have, probably caused by the excessive heat and lack of water. The gopher is also found here, and a kind of a kangaroo rat, with two strong hind legs, hopping in preference to running. Among the reptiles we have several kinds of lizards, also an animal erroneously called the "horned toad," although it is more of a lizard, yet it differs much from the lizard, too; a most curious animal. The rattlesnake fortunately is becoming scarce. The irrigating of the farmers drowns them, yet in unbroken land you have to be careful. There are many other varieties of snakes, some of which may be poisonous, but a snake without a rattle is not very seriously thought of by the people here. The gopher snake is numerous. This is a most useful and harmless snake. It kills the rats, lizards and gophers, and is neither poisonous nor disposed to fight, and it is a pity that the animal cannot be preserved. But it is a snake, and is therefore killed together with all other snakes. This snake is very large, sometimes over seven feet long, and therefore often is an imaginary terror to the average tourist from the east, who does not know the animal. The scorpion, centipede, and tarantula are rapidly disappearing here through irrigation. There is a glossy-colored blue-black spider, however, whose bite, if neglected, may become fatal. This is really the most dangerous animal, because it is found so near to men. It spins its webs in woodsheds, stables, abandoned rooms, etc., and it is necessary to be constantly on the lookout and to use the broom freely in sweeping out the corners.

There is also a sort of a bee with an indigo blue body and ochre brown translucent wings, the body sometimes two inches long. This bee, it is claimed, kills the tarantula. Whether true or not I do not know. With all these animals, however, life here is by no means any more endangered on account of them than anywhere else, after the habits of ordinary care are acquired. Among the birds we occasionally find a stray eagle from the mountains, the various varieties of hawks and owls, white and blue cranes, the bittern, wild ducks and geese, a species of gull on Tulare and Buena Vista Lakes; the bald-headed buzzard is very numerous and useful in cleaning away dead animals, and is protected by law. Then we have many mocking birds, the meadow lark, the butcher bird, the bee martin, the oriole, the wild dove, the California quail and many others. Also the road runner, a most beautiful bird of the size of a pheasant, which, it is claimed, can run as fast as a horse but cannot fly. Thus you see what a splendid opportunity a boy has in this section to make observations, and I trust that my boy, when under the direction of your book, may make good use of this opportunity. F. W. W.

NOTES OF PERSONAL OBSERVATION.

- 25. ENGLISH SPARROWS.—We fed the sparrows brown bread and white bread. They like white bread best. I enjoyed having them come to our window and pick the crumbs we gave them. They are brown and plump, but no songsters. They are lots of company on a cold day. FRED LITTLEFIELD (age 10), Haverhill, Mass.
- 26. FLYING SQUIRREL.—The flying squirrel is about the size of a very young kitten. It has about two inches of skin on each side, and is of a mouse color. MYRON W. RIGHTMIRE, Fairmount, W. Va.
- 27. WHITE SPARROW.—While at work the other day in the Draper Co. works, a friend called my attention to a white sparrow, which was on a fence near by. EDWARD DRISCOLL, Mendon, Mass.
- 28. TARANTULA.—I have a large tarantula, given me by a friend. Its eight legs, or, to be accurate, seven, for one is gone,—are covered with black hairs. Its body, which is about an inch long, is covered

Fig. 5. Tarantula.

with brown hairs. The head, which seems to be of a light brown, horny substance, has two feelers with very sharp red claws on them. The legs are about an inch and a quarter in length. This is the largest one I have seen. When caught it was all doubled up in a ball, as if about to spring, which they can do, to a height of from five to six feet, and they always seem to jump at the face when angry. ROY GASKILL, Little Rock, Ark.

29. SIREN, or WATER LIZARD.—Please find enclosed a sketch of a water-lizard, the like of which I never saw before. It is about four inches long. The upper part of the body is lead color, belly white, and tall yellow. It has a red fringe, resembling small feathers, about a quarter of an inch long, around the upper part of its neck. I drew it up from the well. I should like to know what kind of water-lizard it is. STANLEY HENDERSON, Bentonville, Ark.

[We cannot determine from the imperfect sketch the exact species. It seems, however, not to be a lizard, but one of the sirenidae, or possibly an urodelian. We

Fig. 6. Siren.

give a picture of one of the sirens (Fig. 6), Necturus Maculatus, so that Stanley may see whether this is like what he has found or not. Ed.]

REPORT OF CHAPTER 591, HYDE PARK, MASS.

(A). The Barton Chapter has reorganized on new lines. The chief changes are the limitation of the number of active members, the formation of an associate membership, for which the only requirement, besides the payment of the annual fee, is a love for nature.

Our active membership is now full, and we have several associate members. Our work this spring has been in the form of weekly and holiday outings, and although several Saturdays have been very cold and cloudy, we have omitted but one trip, when it really rained very hard. The list is as follows:

- April 19—Lexington, where we were delightfully entertained at the Dana home-stead, over one hundred years old.
- April 21—The Japanese green houses in Dorchester.
- April 28—Crescent or Revere Beach, where we collected algae, desmarestia, punctaria, laminaria, euthora, delesseria, polysiphonia, ulva, chorda, etc.
- May 5—The Fells Reservation; hepatica and other early wild flowers.
- May 12—Clifton—"Dogtooth violets," "Jack-in-the-pulpits" and algae. We found great quantities of euthora and others fruited.
- May 19—We planned to have supper on Chickatabut Hill and watch the sunset, but it rained too hard for anyone to think of starting.
- May 26—We collected spiders (and wild flowers) in the Stony Brook Reservation.
- May 30—We go to Needham.
- June 2—Hemlock Pool, Fells Reservation.
- June 9—Nahant. Low sea life and algae.
- June 15-18—Woods Hull, with the party from the Teachers' School of Science; also an electric ride through Lexington and Concord. So you see we are busy.
- One of our members was with one of the parties viewing the eclipse in the south. Very sincerely, (Miss) M. E. CHERRINGTON, Secretary.
- Reports of the Ninth Century, Chapters 84-900, should reach the President by Nov. 1.

Your scale of wages depends on your efficiency.

FREE SCHOLARSHIP

The Trustees of the American School of Correspondence will award a limited number of Free Scholarships in Mechanical, Electrical, Marine, Stationary, and Locomotive Engineering, including a complete course in Mechanical Drawing. Application blank on request.

American School of Correspondence, Boston, Mass.

DO YOU STAMMER

Our new Institute provides accommodation for one hundred students. Facilities for training unequalled elsewhere.

Refer by permission to Hon. H. S. Pingree, Gov. of Mich.; Hon. Wm. C. Maybury, Mayor of Detroit; Rev. Robert Stuart MacArthur, D. D., LL. D., Pastor Calvary Baptist Church, New York City; Prof. Thos. C. Trueblood, University of Michigan, Ann Arbor, Mich.

Additional references furnished on request. Our 200-page book, "The Origin and Treatment of Stammering," the largest and most instructive book of its kind ever published, sent FREE to any address for 6 cts. in stamps to cover postage. Ask also for a FREE sample copy of "The Phono-Meter," a monthly paper exclusively for persons who stammer. Address,

THE LEWIS PHONO-METRIC INSTITUTE, 12 Adelaide Street, Detroit, Mich., U. S. A.

FREE DOLL

Girls, send us your name and address and we will mail you 30 handsomely engraved Silver Novelties to sell among friends at 10 cts. each. When sold, remit us the money and we will promptly forward to your address a most magnificent Dressed French Doll, a big and lovely beauty, nearly Two Feet Tall, full jointed body, turning bisque head, pearly teeth, automatic sleeping eyes, slippers and stockings to take off, and beautiful long flowing hair that can be combed, braided and curled. A large and handsome doll that will delight and please the girls. Order 30 Silver Novelties at once, and address,
AMERICAN NOVELTY CONCERN,
 Doll Dept. No. 27, Bridgewater, Conn.

AMATEUR THEATRICALS 12 good Comedies and 100 Farces for Amateurs, J. H. BADER, 901 N. Wolfe Street, Baltimore, Md.

MAGIC TRICK CARDS FULL PACK 10c. Big book on "Parlor Magic." (over 100 tricks, 121 illustrations, 10 cents.) J. H. BADER, 901 N. Wolfe Street, Baltimore, Md.

MAGIC TRICKS Full information how to do 100 tricks as performed by professional magicians. Entertain your friends and make money this winter. Price, 10c. W. H. Henry, Hartford, Conn.

THROWING THE VOICE

A most fascinating accomplishment, within the reach of every one. Read the new manual "VENTRILQUY," which contains explicit directions "How to Acquire the Art of Ventriloquism." Hours of solid fun can be obtained by a knowledge of this art. Easy to learn. Send 25 cents for the book to **A. H. BROCKLEHURST, Duluth, Minn.**

The MINSTREL Show

OR, BURNT CORK COMICALITIES
 A book full of fun from cover to cover. It contains Comic Songs, End Men's Jokes and Stories, Comedians, Dances, Dialogues, Monologues, Speeches, Negro Songs, Dances, Banjo Solos, Marches, etc., etc. It is the largest and best collection of Minstrel Wit ever published. Price 10c. Catalogue of Books, Tricks, Novelties, etc., free. J. U. STEELE, 213 Beech Ave. BALTIMORE, MD.

10,000,000 BOYS PLAY MARBLES!!

None who see it fail to want the Marble Shooting Pistol. No caps, no powder, no danger no accidents. Hits the "bullseye" every time! endless pleasure at no expense. Boys will part with last cent to get it. Fastest seller out. Agents coin money everywhere. Sample 15 cents. **H. O. HALL CO., 1345 Arch, Philada., Pa.**

PHOTO BUTTONS

ALL SIZES.
YOUR PHOTO ON A GOOD BUTTON FOR 25 Cts
 Our work guaranteed to last a lifetime. All Pictures returned uninjured.
Have you seen the New Oval Button?
 Your picture on one for 25 cts. It's new. We mount Photos in handsome frames and make large Medallions too.
 Send for our handsome book "Gems of Art." It will be sent FREE to any address.
PHOTO NOVELTY CO., Dept. A. CHICAGO, ILL. 129-126 LaSalle St.

A CHRISTMAS PRESENT

POWERFUL ELECTRIC MOTOR \$1.00
 (Sent by mail or express for \$5 cts. extra.)
 HEIGHT, 8 1/2 inches. WEIGHT, 18 ounces.
 The perfect combination of mechanical and electrical detail in construction of this motor makes it by far the **STRONGEST ELECTRIC MOTOR** of its size in the world.
 The **PULLING POWER** is really wonderful, and with one cell of battery to operate it **THE ARMATURE REVOLVES 2,300 TIMES A MINUTE.**
 It will operate model machinery, boats, trains, show window displays, fans to cool or perfume rooms, sick rooms, offices, etc.
 IT TEACHES girls and boys very much about **ELECTRICITY**, and the electrical trade pays best of all.
 The motor is beautifully finished and is an ornament in any parlor.
 Larger motors and portable fan outfits if required.
 We want agents in all parts of the United States. Sold wholesale and retail, by the inventor, James H. Mason, 519 A American Tract Socy Bldg., New York City. (ESTABLISHED 1888.)

BOYS IN GAMES and SPORT

Some Hints on Football.

HORACE BUTTERWORTH.

You have probably heard your mother say more than once that "a stitch in time saves nine," when she has noticed a little rip in your coat, and have seen her take that stitch immediately. Upon the same principle, a few words of advice regarding football should be given boys every year at the beginning of the season.

The best way to avoid injuries is to protect yourself as thoroughly as possible. In addition to the padding which all football trousers have, you should sew a good sized sponge into the seat, so as to protect the end of your spinal column when you are tackled and thrown backward. You should have padding sewed on to your jersey, so as to cover the collar bone and shoulder joints. Many bad accidents occur to these parts, which could be avoided. These suggestions are in addition to the usual ear and nose guards, and head protectors for the men who do a great deal of line bucking. Protect yourself thoroughly before beginning any practice. It is well to wear ankle braces, either of webbing or leather whenever you practice or play a game. This extra stiffness will often save you a sprained ankle from some quick turn or roughness in the ground.

The word "training" is something to conjure with to most boys. Training simply means that you should be careful to do only those things which will make you a good strong boy. In the matter of eating it has been found by experience that for rough, vigorous exercises in the bracing air of autumn a diet composed more largely of meat, beef and mutton, than you ordinarily get is helpful for strength and endurance. Such articles as give you a touch of indigestion, or such as have very little nutritive value—those things which just taste good or act as filling, like cabbage, pie, etc., are to be avoided. But this care about your food should not be a matter which you think of only when you are trying to excel in some athletic event. It should be a part of your daily life always. "Breaking training" is a "bad hoodoo." It has come to mean an indulgence in smoking, drinking beer, and worse things, none of which any boy should be guilty of who wishes to be perfect physically and mentally and to enjoy to the very utmost the good things of life.

Among boys' teams, and often in college teams, too little attention is paid to the one who fills the position of quarter back. The experience of years has shown that it is for the best interests of all, as a rule, to have the quarter back run the team, whether he is captain or not. This makes him the general, and no matter how much of advice or instruction others may feel at liberty to give him before the game begins, after the kick-off he should be left to his own thoughts and his instructions carried out implicitly. This makes it a most necessary thing that the boy who fills this position should be a very quick thinker, a rapid observer and of good judgment, besides having the other and more usual qualifications for the position—the ability to handle the ball quickly on either side of his body without fumbling, be a good interferer, and be able to speak clearly. Generally speaking, the quarter back

gets little training except in passing the ball to the players, giving the signals and interfering. He should have as much or more practice off the field as on it. For instance, when the fellows are talking over matters, all kinds of possibilities should be suggested for the quarter back to solve. With the assistance of the others he will decide what is best to be done in such and such a supposed case. Have two or three of these thoroughly in mind, and then have the opposing team daily put itself into one of the supposed positions and let the quarter back put into practice the method of play which has been decided upon as best. Let this be done so frequently that when a similar case arises in a game his judgment will be formed, and he will act instantaneously. Judgment—good judgment—doing the right thing at the right time, is something which comes from practice. Have some new positions to try every day. If there is a large boy who has a good many of these qualities, and whom it is possible to spare from the line, it would be well to use him at quarter back on account of the advantage which his weight gives back of the line in defensive playing and in acting as an interferer. A good quarter back opposed to one of only medium ability can win every time.

In the early part of the season there should be daily practice in dodging and tackling. Tackling is best learned by practicing sliding, as though sliding to a base in playing base ball. You run, looking downward toward the spot where you intend to land, lean a little forward and throw yourself through the air on to your hands, forearms and chest, and in this position slide as far as possible. The fingers are raised so as to be doubled up, and sprained. Two thicknesses of gymnasium mats with something smooth for a cover is an excellent sliding place. This practice teaches you to keep the head down and your eyes about your opponents' hips when ready to tackle, and to throw yourself through the air. The latter will often enable you to stop a runner who is on his way to a sure touchdown.

In going through the line, everyone directly assisting in the play should push and pull and struggle until "down" has been called. A very successful method of gaining a little additional ground—sometimes a great deal of it—is to have two players turn after they have broken through and grab the man having the ball by his trousers and haul him along after he has been tackled. These should be strong fellows, of course.

A great deal more can be done in passing the ball than has been usual. It is customary in making a run to have interferers ahead and one or more men behind the runner. After the runner is tackled and thrown, there is frequent opportunity for him to pass the ball to the man who is following, and thus enable his side to gain much more than if he simply hung on to the ball and yelled "down." This requires lots of practice in throwing and catching, of course, but it will pay. The same thing can often be done immediately after the kick-off, if arranged beforehand. Have the player who catches the ball run toward one side of the field protected by nearly all of the opposing side in that direction, then, before they have closed in on him, have the man with the ball make a long throw toward the other side of the field to one of his own side, being careful not to make a "forward pass." This player, with one or two interferers, goes down with a comparatively clear field before him.

The amount of space is too limited to go into the details of particular plays, but these suggestions will show you that football is to be played with

51 worth of Tricks & Make-ups, sent postpaid for 25 cts. (stamps or silver). Apparatus for performing great vaulting half dollar trick. New Mustache or Full Beard. Boys and girls who never have tried these games can buy them at dealers and then enter contest. They cost 25 cents and 85 cents each.

brains as well as muscles, and the things which can be done have by no means all been tried. If you know the ordinary plays, get on your thinking cap and conjure up some new ones. Don't get into the habit of thinking that because you have not access to the games of some of the colleges that it is impossible for you to be in the lead among your town schools or state schools. Make diagrams that you have never seen or heard of and try them. You will get some good things and a great many poor ones, but the good ones will more than repay you for the time spent on the poor ones.

How the Boy Caught His Fish.

I went fishing the other day for trout in a small country stream which I have always held sacred even from my closest friends of the rod. I had no luck, and was on my way home when I met a small boy with a long string of fine trout. His outfit would have caused a horse to laugh, but he had the fish, and I had none, so I did not feel like laughing myself. With my guying friends in mind, I struck a bargain with the urchin, paying him three prices, and went on my way rejoicing. Two days later I visited the same stream and had the same luck, not even hooking the big one that always gets away. Coming out I met the boy again, carrying another string of trout, and we struck another bargain.

"See here," said I, somewhat exasperated at his luck, "I'll give you fifty cents if you will tell me how you manage to get such a string of trout every day."

The boy held out for a dollar and got it. "It's jest this way," said he, "all the kids around here fish more or less and sometimes they catch one or two, and I go around and buy 'em up; then I sell 'em to some greeny that ain't had no luck. I ain't caught a fish myself this year. I ain't had time," he added, with a grin.

It is a great scheme, and I don't begrudge him the money that he made out of me.

Some Things You Can't Do.

You can't stand for five minutes without moving, if you are blindfolded.

You can't stand at the side of a room with both of your feet touching the wainscoting lengthwise.

You can't get out of a chair without bending your body forward or putting your feet under it, that is, if you are sitting squarely on the chair and not on the edge of it.

You can't crush an egg when placed lengthwise between your hands, that is, if the egg is sound and has the ordinary shell of a hen's egg.

You can't break a match if the match is laid across the nail of the middle finger of either hand and pressed upon by the first and third fingers of that hand, despite its seeming so easy at first sight.

The Boys Got the Bears.

If the hunters of Patten, Me., ever have another chance to chase a bear from this side of Mount Katahdin to her death, they will tell the boys of it before they start out, and will allow those who wish to join in the sport free privilege of going along. For a fortnight an old she bear and her cubs have been hanging about the Patten side of the mountain, coming out at night to raid the sheep pens and piggeries of the farmers. The bears had been seen a dozen times. Two women, who had been out to watch with a sick neighbor, met a roadful of bears one morning about daylight and ran all the way to the village to tell the news, but they were so excited and out of breath that nobody believed what they said. A few days later, a boy going home from school was chased half a mile by two bears. The lad says that he won.

Things went on this way for sometime until so many reports had come in, that the doubting ones were forced to believe, after which a hunting party was organized and a plan of campaign was mapped out. It was agreed to get back of a beechnut grove, half way up the mountain, and come down on both sides so as to compel the bears to seek the open fields back of the village. Three men who were supposed to be the best shots in town were stationed back of a ledgy bluff called

Danding's Big Nob, to do the shooting in case the bears attempted to make a break for the valley. While the men were taking the positions to which they had been assigned, three boys of the village, feeling slighted and neglected by the men, took rifles and went up the mountain side on their own account. One was stationed in a grove on top of Handling's Big Nob, another hid away under the Little Nob, a bluff half a mile further up the mountain, and the third stood near a wood road, which led from the fields to the big grove of beeches. All three agreed to shoot as soon as the bears appeared and keep shooting as long as there was a bear in sight.

The strategy of the men soon drove the bears from the beeches, where they had been nosing about for beechnuts. They followed the wood road for half a mile and then, scenting the boy near the fields, turned off to the right in the direction of Little Nob. The boy ran along the edge of the woods and shot the old bear as she emerged. In attempting to eject the shell his rifle stuck, and the cubs escaped. Hearing a shot where they had stationed no sentinel, the men rushed through the woods and found the boy cutting the throat of the bear he had killed.

"Who shot that bear?" asked one of the men.

"I did," replied the boy. "Why?"
"You're a mean sneak," said the man. "We wanted that bear ourselves. We planned the hunt and made sure of getting him."

"And we've got him, see!" said the boy beginning to skin the game.

Meantime the boy who was lying behind Little Nob, hearing angry voices near the woods, looked up the side of the ledge in time to see a cub's head emerge above the ledge. He fired without taking aim, and as the body disappeared, he believed he had not hit the mark. As he had agreed to remain in hiding there was nothing to do but wait and watch. A minute later he saw the cub's head above the nob two rods further away. He was mad and excited and fired offhand, causing the cub to again withdraw behind the ledge.

"Shaw!" said the boy in disgust. "Two straight misses! I must be getting awfully rattled. If he shows himself again I'll take aim to kill!"

While he was talking to himself and blowing his luck, a cub had climbed over the ridge of the nob and stood in full view among the rocks not ten rods away. This time he made sure of his aim and dropped the young bear in its tracks. On going up to inspect his game he found two other dead cubs beyond the ridge. After the death of their mother the cubs had come across the nob in Indian file, and the boy had shot them as they came along.

Instead of congratulating the boys on having killed an old bear and three fat cubs, the men were very mad and made a solemn compact that no boy in Patten under twenty years of age shall carry a fire-arm to the woods. As the four bears were all shot beyond the timber belt the boys are not at all frightened.

JOUST AND CIRQUE

Two entirely new and extremely interesting games for young or old. Both games are played by two persons on a specially designed folding board, with two sets of ten men of adverse colors.

Joust is a game of chance and skill—the extent of the movements of the men being governed by the throw of dice—while the choice of the men to be moved is with the player. As the name indicates, it is somewhat in the nature of a "Combat" or "Battle," very exciting as the game draws to a close.

Cirque is a game of skill, commencing in the style of "tick tack toe, three in a row" and closing on the order of checkers. Very interesting.

These are, undoubtedly, the best games, for the price, in the market. Board, Men, Dice and Dice Cups in Box, with rules for both games, sent postpaid for 50c.

The Beginner's Guide to Stamp Collecting.

FRED. J. MELVILLE.

Author of "Stamp Collecting," "The Stamps of Hayti," "A Postage Stamp Zoo," etc., and Editor of "The Young Stamp Collector" (London, England).

PHILATELIC FRAUDS AND HOW TO GUARD AGAINST THEM.

As in the cases of most hobbies, Stamp Collecting is by no means free from the wiles of the swindler. In a variety of ways are philatelists imposed upon. The chief of these is Forgery. Illegal facsimiles of rare or medium stamps are (alas!) too common, and the buyer will do well to restrict his purchases to those he can obtain from thoroughly reliable and established dealers. In cases of doubt as to the genuineness of a specimen it is desirable to consult an expert who will give an opinion on pay-

Collectors have also to guard against "faked" specimens. These are stamps of a common variety doctored up to represent rarities. For instance, in the case of the rare Indian 4 anna stamp of 1854, which was printed in two colors, a few specimens (about twenty altogether) exist with the center printed upside down. The ordinary copies are only worth 5 shillings, while those with the center inverted are worth nearly two hundred pounds. On several occasions collectors have been offered copies of the common variety, which have been doctored up by cutting out the center and replacing it in the inverted position. Thus the common stamp worth 5 shillings was faked up to represent the rarity worth £200.

The famous V. R. Black English, which is valued at over £10, has also been a subject for fakirs. An ordinary penny black stamp of 1840, worth fourpence, has been skillfully treated so that the little ornaments in the upper corners have been scraped away and the letters V. R. cunningly inserted in their places. A recent discovery made by Mr. Charles Nissen, a well-known expert, showed that common imperforate British stamps of 1841 had received the addition of a fraudulent

THE GENUINE SPECIMEN.

A FORGED COPY.

ment of a fee, which is usually half-a-crown, for a minimum of a dozen specimens. Many of the philatelic societies have experts who are prepared to give advice to members on payment of a smaller fee. The accompanying illustrations show an example of one of the most clever stamp forgeries ever perpetrated. The first picture shows a genuine specimen of the shilling green stamp of 1872, and the second one is a forged specimen. Although the fraud took place in 1872, it was only discovered after an interval of more than a quarter of a century, during which time the English Post Office was defrauded of many thousands of pounds. The differences are minute, except that the watermark (a spray of rose) is absent from the forgeries.

perforation which had allowed them to pass for a rarer variety of a later date, 1854-5. Bogus stamps have done no little harm to stamp collectors. These are issues that have been put forth by private speculators, and which purport to be postal labels, although they are really frauds. Instances of such stamps are the emissions of a Mr. Harden Hickey, who styled himself Prince James the First of Trinidad. This was not the British Colony of Trinidad, but a small uninhabited islet off the Brazilian coast, which of course had no use for stamps. The young collector is occasionally confronted by a set of labels which purports to be stamps of Sedang, and if he is not strong in his geography he may take it

for granted that there is such a stamp-issuing country. But there is not, and the stamps are bogus. They were issued by an ex-officer of the French Navy, who when staying in Paris, adopted the title of King Marie the I. of the Sedangs.

Where to Find Stamps.

In the October number we said that in this number, we would tell you where many old and rare stamps could be found, and with which you could build up your collection until it became large and valuable at comparatively little expense. This is not a "Get Rich Quick" scheme, but simply tells you how you can build up your collection and accumulate a good many rare stamps.

In the first place, and the most essential of all, you must be persistent. Never let an opportunity go by to secure a stamp when you think you can get it by asking for it. It may be worth little, if anything, but the fact that you are a collector will soon become known among your friends and you will be surprised to see how many will save them for you, if they know you are an enthusiast.

While a great many valuable stamps have been found on old letters stored away in trunks and boxes, there are still many undiscovered ones packed away in some dark attic, which only wait for the earnest search of bright American boys to unearth them from their resting places.

"Well, now, how shall I begin?" you say. I presume you have been all through your own home, so that it is unnecessary to tell you to look there for old letters. The first government issue of United States stamps was in 1847. For a few years prior to this date, the postmasters in New York, Baltimore, St. Louis, Providence, New Haven, Brattleboro, Vermont, and some other cities issued stamps which were recognized by the Government. Most of these are very scarce and are rarely found, even on letters from these cities.

The five cent New York is the most common. The majority of letters mailed prior to 1851 have no stamps on them, the prepayment of postage being indicated by these words, so exasperating to the searcher for rare stamps, "Paid 5" or "Paid 10"; but if you come across a large bundle of letters written in the '40s, do not fail to examine every one, simply because they all seem to be marked paid, and with no stamps. Your patience may be rewarded with one stamp worth many days' labor. The writer went through a box containing about a thousand letters one afternoon, and only found five with stamps on, but these were catalogued at \$65.00. Years ago, people saved their letters more than they do now, and as envelopes did not come into general use until 1852, the letter was simply folded up, sealed with wax, and the stamp put on outside. Many elderly persons and old business houses have their letters of fifty years

ago filed away, and will, in many cases, if approached in the proper manner, grant you access to them. If this privilege is extended, do not abuse it in any way, but replace the letters exactly as you find them, after examining them and removing the stamps. If possible, however, secure the stamps on the original letter, as those prior to 1851 are worth more on the "cover" than off, and also the higher denominations of later years, that is, the 5, 10, 12, 15, 24, 30 and 90 cents. Letters of law firms and justices of the peace frequently contain these higher denominations of stamps.

One source which is generally prolific in old stamps is the files of business houses who were in existence during and prior to the Civil War. Here your search for postage stamps will not always be as well rewarded as that for revenues, as business firms did not, as a rule, save their envelopes; but the papers of any firm doing a large business in those years will often yield thousands of revenues. From 1862 to 1872, all notes, checks and drafts, express receipts, bills of lading and many other kinds of commercial paper were taxed the same as at present, this being one source of revenue for meeting the enormous expenses of the Civil War. The tax on checks and drafts was two cents, and as there were millions of these papers, most of the stamps on them are very common, hardly worth saving, but up to 1864 several varieties of two cent stamps were in use, which are now worth from 20 cents to a dollar apiece. The 2c Certificate, 2c Proprietary, and 2c Playing Card are all good in blue and orange. The 2c Express is also worth saving. All of the blue stamps of this denomination are found imperforate, and some of them are very valuable, but save them all. It is on notes that revenues are most abundant. Here are found the odd denominations, the 30 cent, 40 cent, 60 cent, 70 cent, \$1.30, \$1.90, etc. The tax on notes was five cents for every one hundred dollars or fraction thereof, so that a note for one thousand dollars would have fifty cents in stamps on it; two thousand dollars, one dollar; five thousand dollars, two dollars and a half, etc. Both checks and notes are generally tied up in packages, each month by itself, so that their examination is very easy. Express receipts, which are generally in book form, will often yield some of the scarcer of these denominations, particularly those dated in 1863.

The above are the principal commercial papers which were subject to stamp tax, though you will occasionally run across others, but a careful, systematic search through the files of most any large commercial house, which has preserved its papers since the War, will yield a good return for your trouble, provided no one has been there before you.

In the next number, we will tell you some other sources for finding old revenues, more certain, and even more prolific in stamps than the above.

POSTAGE STAMP ALBUM FREE TO EVERY READER OF THIS PAPER

COLLECTING postage stamps has now become a fad with our young people; and to fill that want we have imported a fine lot of ALBUMS from Germany. Each contains exact facsimiles of the different postage stamps issued by all the countries of the world. In addition to showing the postage stamps of all the countries, the Album contains fine portraits of the Rulers of Germany, Austria, Italy, France, Saxony, Great Britain, Spain, Belgium and Portugal. Each a beautiful gilt frontispiece, and will prove instructive and entertaining. Every stamp collector should send for the Album at once. We send this Album FREE to any one sending us 15c. to pay for 3 mos. sub. to our Magazine. Address BATES & CO., Box 1546, Boston, Mass.

THE "CRYING EVIL" OF THANKSGIVING DAY. Johnnie (thoroughly alarmed): "Say, the turkey's all gone, an' the stuff'n's all gone, an' the puddin's nearly all gone, and the deacon's a-kin' for more, an' then it'll be all gone. If they keep up this gait what'll be left for us!"

The Numismatic Sphinx.

Wm. Lumm, Newark, O.—1858 cent no premium.

Harland Blair, Plana, Ill.—A good 1812 half dollar is worth seventy five cents.

W. Raymond Evans, Yeadon, Pa.—See answer to J. M. Blanchard.

Samuel S. Rosenberg, New York—An 1835 dime is worth twenty five cents.

Arthur Bergantz, Phoenixville, Pa.—An 1821 dime, large date, in good condition, is worth thirty five cents.

Julius Milsolczik, Bridgeport, Mich.—The dealers charge \$2.50 for a silver dollar of 1872. 1849 cent is worth five cents.

A. B. —, Rolfe, Iowa—The dealers would charge you two dollars for a good 1860 silver dollar. The Philadelphia and New Orleans mint both coined them.

Frank Kirtley, S. Corey, W. Va.—Wants to know what we pay for a coin of 1778. The coin editor is not buying coins, and besides many coins in many metals were issued by many countries in 1778.

Alvin Bryan, Ruthven, Iowa—The quarter dollars of 1844 and 1873, without arrow points, sell for seventy five cents each. The latter date with arrow points, fifty cents; 1853 quarters with arrow points, no premium.

Lyman A. Wirl, Stillwater, N. Y.—Unless the half dollars of 1856, '58 and '59 are very fine there is no premium on them. An 1853 gold dollar is worth \$1.75. The U. S. issued no coins prior to 1793, so your cent of 1787 is likely one of the colonials.

Lawrence Giersenheimer, Washington, D. C.—Your rubbing is taken from a 4 escudo or 1/2 Dobra, a gold coin of Portugal, Joseph I., (1750-77) 1765. Its intrinsic value is \$8.65. So few collectors are interested in these larger gold coins that it would be difficult to place on it a numismatic value.

George Shull, Everett, Pa.—Asks "when coins of to-day were first made"? There has probably been no year since 650 B. C. (and perhaps earlier) when some country has not struck coins. We have said something regarding the earliest coinage in some of the earlier issues of THE AMERICAN BOY.

L. F. L., Amherstburg.—(1) There are three varieties of the 1799 dollar, viz., over 1798, five and six stars facing. If in good condition they are worth \$2.50, \$3.00 and \$2.50 respectively. (2) English sixpence 1825, George IV., (1820-30) is worth seventy five cents. This is much rarer than the varieties which follow 1826-29. (3) English farthing 1825 and U. S. cent 1855, five cents each.

J. J. McKallip, New Kensington, Pa.—Your silver coin that you call a "Colonial" is one of Spain, Charles III. (1759-88) 1781. A Spanish silver coin so poor that it cannot be read is worth only its weight in metal. The same may be said of all the common U. S. silver that is headed or mutilated. No premium on 1872 half dime. The mint mark on the dime up to 1861 is always found within the wreath on the reverse. After this date it is found just beneath the tie in the wreath.

Julian M. Blanchard, Hertford, N. C.—No premium on twenty cent piece of 1875. Ten cent piece of 1823 sells for fifty cents. Any of the gold dollars sell for from \$1.50 up. Twenty dollar gold pieces, unless uncirculated or fine, command no premium. The Columbian half dollars of 1892 and 1893 are held at seventy five cents each. The cents of 1817, 1818, 1822 and 1831, in good condition, are worth 15, 15, 25 and 30 cents each respectively. The English half penny of 1891, no premium.

J. A. Heartwell, Port Huron, Mich.—(1) 1814 dime, large date, forty cents. (2) Brass Canadian token, obverse head of King George IV., reverse harp and date 1830. There are several varieties of these, all very common. (3) A George III. token. There are also many varieties of these and few care to collect them on this side. You must be mistaken in date, "1701," as this king reigned 1760-1820. (4) A French clng (5) centimes Napoleon III., dated 1855, very common. (5) A half penny of Victoria 1850 first coinage, also very common. (6) "Ships, Colonies and Commerce," a Canadian token easily obtained, having been issued in great quantity for small change. (7) An English "hard times" half penny token of 1796. Thousands of varieties of these tokens were issued by the towns, cities and corporations and private parties in England during the latter part of the last century to meet the necessity of small change. (8) English half-farthing of 1847 is worth ten cents. (9) 1854 cent, five cents.

THE BOY CURIO COLLECTOR

What Some Boys are Collecting.

A number of boys at Cape Girardeau, Mo., have a hunting and athletic club. Within a few miles from Cape Girardeau these boys have discovered some old mounds in which they have found a collection of relics. The boys take much pride in their collection and are adding to it constantly. What is better, the boys are doing a great deal of reading about historic people and things, and the result is that in addition to their interesting collection they are acquiring some very valuable information. Their collection of arrowheads is very large, embracing nearly every conceivable shape and form. They have found stone axes, wedges, knives, etc., peculiar specimens of pottery, pipes and other articles too numerous to mention. The members of the club are Elmer List, Albert Huhn, Himer Hunze, Norman Moody and Alfred Vogt. One of the boys having seen the pictures of stone arrows in a recent number of THE AMERICAN BOY, suggested that the club select a number of their specimens and have them photographed for THE AMERICAN BOY. The picture accompanying this item shows only a part of the collection.

Are there any boys in America who have a better one?

FREE! A WATCH \$6

THE BOYS LIBRARY

“Young America Abroad: A Library of Travel and Adventure in Foreign Lands.”

A few days ago I came across our friend, Oliver Optic's (William T. Adams) delightful book-series, "Young America Abroad: A Library of Travel and Adventure in Foreign Lands." "These would be excellent books for an American boy's mid-summer reading," I thought, and after a perusal of the initial volume, "Outward Bound," my thought was confirmed. The character which dominates the entire series is Mr. Lowington, a very wealthy, retired naval officer. The death of Mr. Lowington's wife and children leaves his luxurious home desolate, and growing tired of his idle, aimless life he longs for "old ocean." Being not only an energetic and practical man, but a philanthropist as well, Mr. Lowington determines to gratify his desire in a way that will benefit his fellow-men. Certain events attract the attention of the ex-officer to the distressing number of wealthy young men, who through their own folly, and the culpable indulgence of their parents, are sowing the seeds of future misery, and inevitable ruin. Mr. Lowington, therefore, determines to devote his means to the rescue of these foolish young fellows.

"By making honest, intelligent men of these boys I will enable them to use their wealth and influence for the benefit and uplifting of their fellow-men, and thus accomplish a double good," thought Mr. Lowington. Accordingly, this philanthropic gentleman, after a long and careful study of the matter, decides upon the following unique plan: He will purchase a large vessel, and equip it as a model naval academy where unruly young fellows can receive a thorough education, enjoy all the novelty and delights of constant travel in foreign lands and, at the same time, be rescued from the ruin toward which they are drifting, by means of kindly but strict discipline, plenty of physical exercise, and freedom from temptation and evil association. The academy-ship will be commanded, officered and manned exclusively by the students. The best instructors will be in charge of collegiate departments, and history and geography will be illustrated by actual visits to the countries and places under discussion. A handsome uniform will be worn by the crew. Mr. Lowington's unique plan meets with enthusiastic approval from the parents of idle, or unruly boys, and the novelties and constant adventures inseparable from such a school prove irresistible to the very individuals for whose benefit it is to be established. So in course of time, the academy-ship becomes an actuality. Students crowd in upon her until eighty seven young fellows answer to the daily roll-call, and after remaining in New York harbor long enough for its student-crew to master the art of navigation the school ship, which has been given the very appropriate name—"Young America"—lifts anchor, spreads her white sails and sails away to foreign lands.

The story of the "Young America" and her sailor boys is brimful of interest, which increases with each story of the series, and reaches a climax in the final volume—"Isles of the Sea."

The first series of "Young America Abroad" contains the following stories: "Outward Bound, or Young America Afloat"; "The Shamrock and the Thistle, or Young America in Ireland and Scotland"; "Red Cross, or Young America in England and Wales"; "Dikes and Ditches, or Young America in Holland and Belgium"; "Palace and Cot-

tage, or Young America in France and Switzerland," and "Down the Rhine, or Young America in Germany." While the second and last series is made up of the following delightful and interesting books: "A Trip Up the Baltic, or Young America in Norway, Sweden and Denmark"; "Northern Lands, or Young America in Russia and Prussia"; "Crown and Crescent, or Young America in Turkey and Greece"; "Sunny Shores, or Young America in Italy and Austria"; "Vine and Olive, or Young America in Spain and Portugal," and "Isles of the Sea."

A Marine.—The first steamship that crossed the Atlantic sailed under the American flag. The name of this ship, which was a vessel of three hundred tons burden, was the "Savanna." While still in the docks at New York, the vessel was purchased by Mr. William Scarborough, of Georgia, and converted into a steamship. The "Savanna" started upon her first trans-Atlantic voyage May 20th, 1819. When the English seaman, Lieutenant Bowin, saw for the first time, the volumes of smoke pouring from the chimneys of the "Savanna" he hastily boarded the American vessel, thinking it was on fire. The "Savanna" made her trial trip "from land to land" in twenty days, and returned to her native shore without the loss of a single "screw, bolt, or rope-yarn."

Your librarian,
ALEXANDER JENKINS.

The Habit of Book-Buying.

The habit of book-buying once formed is just as helpful and is just as strong and continuous and as easily maintained as the habit of saving money, after the first few dollars have been systematically laid aside. The interest upon the investment is far greater than that which comes from accumulated money. It is hard to believe that in these days a young man of average intelligence and earning power cannot afford to purchase at least one volume a month—and thereby greatly increase both his intelligence and his earning power.

Some Book-Rules.

- Don't borrow books from private libraries.
- Don't lend books. No one will treat your books as you yourself do if you love them.
- Don't wet your fingers when turning leaves.
- Don't leave a book face down, i. e., open.
- Don't shut a book up with anything bigger than a narrow ribbon in it.
- Don't turn down corners.
- Don't mark a book in any way unless it's your own.
- Don't increase the quantity of your books at the expense of the quality in contents.
- Don't scorn cheap books if you cannot afford better publications.
- Don't buy cheap books if you can afford better ones.
- Don't keep books in damp places.
- Don't keep books on open shelves if you can avoid it.
- Don't handle books carelessly. Treat them as if they were alive.
- Don't forget that good books are the best company in the world, if read understandingly and appreciatively.

KEES-BOOK-&-COPY-HOLDER SAVES BOOKS AND EYESIGHT IS A NECESSITY IN EVERY HOME AND SCHOOL ROOM. POSTPAID 15¢ NO STAMPS F.D. KEES BEATRICE NEB.

A \$4.75 BIBLE \$1.35 FOR ONLY

J. L. NICHOLS & CO., 912 Main St., NAPERVILLE, ILL.

What a Young Boy Ought to Know.

Dr. Sylvanus Stall is the author of a number of the Self and Sex Series, entitled "What a Young Boy Ought to Know." The character of the book may be judged from a word by Bishop Vincent: "You have handled with great delicacy and wisdom an exceedingly difficult subject; one which is almost dangerous to broach, but which must be presented to the growing boy and his parents in a frank way, and with forcible, practical scientific hints for prevention and correction. Your work has been well done."
The book contains commendations from Dr. Joseph Cook, Dr. Theodore Cuyler, Dr. Charles L. Thompson, Mrs. Kate Waller Barrett, Edward W. Bok, Mrs. Alice Lee Mogue, Rev. F. B. Meyer, Rev. Thomas Spurgeon, Anthony Comstock, etc.
The book contains one hundred and ninety pages, is neatly bound; \$1.00. Vir Publishing Company, Philadelphia.

We will send these five books by mail, postpaid, for 50 cents, or 15 cents for either of them. Stamps taken. Address J. A. OGLIVIE PUB. CO., 98 Rose St., New York.

HOW I ACQUIRED MY MILLIONS This book gives in full detail the very information most American boys are eager for: how to become a millionaire. No one ever earned a million dollars by his own labor; life is too short for that. To make yourself a millionaire you must get other people to work for you, and this book shows how it is done. It is safe to say that every millionaire in the United States has made or increased his fortune by following out the ideas explained in this book. Price 10 cents postpaid. LEWIS & MYERS, 586 57th St., CHICAGO, ILL.

EVERY BOY 10 Years and over should read "WHAT A YOUNG BOY OUGHT TO KNOW." A new book by Sylvanus Stall, D.D. It answers in a pure and truthful way the questions that are sure to arise in the mind of every intelligent boy. Approved by Drs. Theodore L. Cuyler, Joseph Cook, Rev. F. B. Meyer, Bishop Vincent, Edward Bok, Anthony Comstock, John Willis Baer, Lady Henry Somerset, and hundreds of others. Price \$1.00, post free. For sale everywhere. Circulars FREE. VIR PUB. CO., 1605 E. E. Trust Bldg., Philadelphia, Pa.

"A Message to Garcia."

Should be read by every American boy and every American girl. Every man and woman should read it. It interests the man who employs men, and equally interests every person who is employed. It contains the secret of success.

A copy in illuminated covers, fully illustrated, will be sent FREE, postpaid, upon receipt of a postage stamp by George H. Daniels, General Passenger Agent, New York Central Railroad, Grand Central Station, New York.

CAPITAL BOOKS FOR BOYS

In the Hands of the Redcoats--

A Tale of the Jersey Ship and the Jersey Shore in the Days of the Revolution. By EVERETT T. TOMLINSON, author of *Boys of Old Monmouth*. A *Jersey Boy in the Revolution*. All three books are illustrated. Each \$1.50.

This is another of Mr. Tomlinson's true stories of the Revolution, reflecting the life and spirit of the time. The story of the prisoner on the old Jersey prison-ship is based on the personal recollections of a man once confined on it. Mr. Tomlinson has visited the localities of which he writes, and his book is a capital story for boys of all ages.

Friend or Foe--

A Tale of Connecticut during the war of 1812. By FRANK SAMUEL CHILD, author of "An Unknown Patriot." Crown 8 vo., \$1.50.

The atmosphere of the War of 1812 is in the story, though there is little fighting. There is plenty of adventure and incidents, and the tale appeals strongly to youthful readers, and almost as much to older ones who count themselves still young.

Sold by all Booksellers. Next, postpaid, by

HOUGHTON, MIFFLIN & CO., BOSTON.

THE AMERICAN BOY

The Only Distinctively Boy's Paper in America.

[Entered at the Detroit, Mich., Post-office as second-class matter.]

GRIFFITH OGDEN ELLIS, ASSISTANT EDITOR.

OUR CHRISTMAS NUMBER.

The Christmas number of THE AMERICAN BOY, which will go to the press on or about the 10th of November, gives promise of being a record breaker in every sense of the word. The advertising columns of the November number may be taken as an index of what we may expect in the way of advertising patronage for the Christmas month. In order to accommodate our pages to the increase in advertising for Christmas, we shall add some pages for that number. The exact number of copies of the December issue that will be printed has not yet been determined, but we guarantee not less than 50,000.

Certainly, no paper at Christmas time will have more earnest and careful study, both in its advertising and in its reading departments, than THE AMERICAN BOY. It is the time of the year when every one, whether a grown-up or a boy or a girl, is widest awake and the most liberal buyer. The whole world is at that time looking for new things—things desirable for presents, and every source of information in this line is carefully read. Certainly, in the nature of things, no paper will attract more attention in its advertising columns than will THE AMERICAN BOY for Christmas. We have, too, some excellent reading, for that number, in the way of Christmas stories, and other special matter, all profusely illustrated.

All in all, the Christmas AMERICAN BOY will be the most interesting publication, for all classes of people, that will find its way this Christmas into the homes of the American people. The paper has improved with every issue, and we expect the December number to reach a high notch of achievement.

Will you join us?

SEND NO MONEY

Cut this advertisement out and send to us and we will send you this, OUR HIGH GRADE DROP HEAD CABINET EDGE-MERE SEWING MACHINE by freight, C. O. D., subject to examination. You can examine it at your nearest freight depot, and if found perfectly satisfactory, exactly as represented, equal to the highest grade sewing machines advertised by other houses at \$90.00 to \$100.00, and as good a machine as you could buy from your dealer at home at \$90.00 to \$100.00, the greatest bargain you ever saw or heard of, pay your railroad agent our SPECIAL OFFER PRICE OF \$12.75 and freight charges. Give the machine three months' trial in your own home and we will return you \$12.75 ANY DAY YOU ARE NOT SATISFIED.

OUR \$12.75 EDGE-MERE SEWING MACHINE is covered by a binding 20-year guarantee, is made by one of the best sewing machine makers in America, has every new and up-to-date improvement, very high arm, positive four-motion feed, is very light running, does any work that can be done on any sewing machine made. It comes in a beautiful solid quarter-sawn oak, drop head cabinet, as illustrated. Cabinet is beautifully finished, highly polished and decorated with a complete set of the finest colored floral marquetry designs.

WE FURNISH THIS SEWING MACHINE COMPLETE with a big double set of attachments and accessories, instruction book and our 20-year binding guarantee, as one of the highest grade, high arm, 5-drawer marquetry decorated, drop head cabinet machines made. We can only guarantee this special \$12.75 price until our stock on hand is gone. (Sears, Roebuck & Co. are thoroughly reliable.)—Editor.

PRIZE AND PUZZLE DEPARTMENT

NEW PUZZLES.

No. 85. Acrostic.
A wise man, one of seven famed of old.
A fabled region, rich in gems and gold.
The largest state in Uncle Sam's domain.
The lower class of noblemen in Spain.
A fabled river of the world below.
A Hebrew measure, as, perhaps, you know.
The planet third in distance from the sun.
A proper synonym for sport and fun.
A fabled place of Darkness now behold.
A Persian governor's title, we are told.
A form of rain when it is very cold.
Initials give the Hebrew name of an ancient city of great renown.

J. CAL. WATKINS, Kanawha Falls, W. Va.

No. 86. Enigma.
My FIRST is a part of a wheel,
A projecting part, I ween.
My SECOND, a period of time,
The length remains to be seen.
If you have none already, you will confess
That you are anxious my WHOLE to possess.

No. 87. Anagram.

If I one evil habit have,
I know I must overcome it
By using all my whole.
I MEND ONE TRAIT must be my staff
If I would reach the summit
Of success, which is my goal.

No. 88. Rhomboid.

Across—A spear, a Northman, pertaining to dower, to place in proper position, danger, think much of, way.
Down—A letter, an article, to droop, a season's harvest, to stay, a frame for holding a picture, a dormouse, to plunge, a boy's nickname, thus, a letter.

No. 89. Rebus.

VISIT VISIT VISIT MAKE

No. 90. Hidden Cities.

- I saw Sally on Susan's doorstep.
- Come, Augusta, then Sophia will come.
- His name is Doolittle Rockman.
- Plato led others to conquer themselves.
- He that hath ague must take quinine.
- Emma conducted the class to-day.
- A burden very seldom grows lighter.
- The elevator on top of that hill is unsafe.
- There is a beautiful lilac on Cordella's terrace.
- Thou lovest royalty and loyalty.

No. 91. Metagram.

I am a color; change my head and I am successively—full size, a wreath, a scowl, to inundate.

No. 92. Hour-Glass.

Weak, haughty, an insect, a letter, a utensil, a heathen, a whole number.

The Stamp Prizes.

The three boys sending in the largest number of subscriptions during the past thirty days are, in their order: J. Lawrence Hirschland, Reading, Pa.; Donald Annis, Detroit, Mich.; Charles Holst, Portsmouth, N. H. The first named receives one-half of our accumulation of foreign stamps and each of the others one-fourth.

Photographic Prizes.

The amateur photograph contest for last month resulted as follows: First prize—Wm. C. Conrad, Massillon, O. Second prize—Joe Stone, Buffalo, N. Y.

Foreign Postage Stamps.

To the boy sending the largest number of new subscriptions to THE AMERICAN BOY by Nov. 20 we will give, in addition to the regular premium offered, one-half of the foreign stamps accumulated in our office for the month ending that date; to the two next in order, one-fourth each.

Prizes for Mistake Hunters.

To the boy first notifying us of a mistake in spelling (dialect not considered) in this number of THE AMERICAN BOY, we will give \$1.00. To the boy next in point of time, who detects a mistake, 50 cents. To the boy sending in the longest list of mistakes, \$2.00.

Prize Offers.

- For the first correct solution of the puzzles we will give prizes as follows:
- Puzzle No. 85—An AMERICAN BOY Base Ball Scorer.
 - Puzzle No. 86—An AMERICAN BOY Watch Charm.
 - Puzzle No. 87—A Coin and Stamp Guide.
 - Puzzle No. 88—An AMERICAN BOY Knife.
 - Puzzle No. 89—An AMERICAN BOY Fountain Pen.
 - Puzzle No. 90—A Coin and Stamp Guide.
 - Puzzle No. 91—A six months' subscription to this paper for any boy whom the winner may name.
 - Puzzle No. 92—An AMERICAN BOY Fountain Pen.

Extra Foreign Stamp Prize.

Wortsmen Brothers, of Savannah, Ga., proprietors of "Hogan's Alley News," sent us a hundred foreign postage stamps, which they authorize us to offer to the boy getting the largest number of subscribers to THE AMERICAN BOY before the issue of the December number. This offer, made by our Savannah friends, is in addition to the offer that we elsewhere in these columns make of one-half of all the foreign stamps that accumulate in our office during the thirty days immediately preceding the issue of the December number, to the boy sending us the largest number of subscribers during that time. Certainly here is considerable of an inducement to a boy who wants foreign stamps. Arthur R. Talbot, Wallingford, Conn., sends twenty five foreign stamps, which he also offers to the boy getting the largest number of subscriptions to THE AMERICAN BOY during the time stated. These offers on the part of our friends indicate the interest they are taking in the growth of the subscription list of THE AMERICAN BOY, as the offers were made without solicitation on our part. The boy who gets the largest number of subscriptions by the time the December number of THE AMERICAN BOY goes into the mails will get a very large packet of foreign stamps.

The Standard Gas Lamp

MONTHLY
Vol. 2, No. 2

Detroit, Michigan, December, 1900

PRICE, \$1.00 A YEAR
10 Cents a Copy

CHRISTMAS

ONE year ago, 8,800 copies of THE AMERICAN BOY carried our Christmas greeting to boys. To-day

90,000 copies are needed for this purpose. A wonderful enlargement of our family circle in twelve short months, isn't it? It is fair to say that 180,000 boys read these 90,000 papers. What a sight it would be, were these boys to pass in procession before our eyes! Were they to march single file the line would stretch over hill and dale for nearly 150 miles; and if marshaled in army array there would pass 180 full regiments of ten companies each, with a hundred boys to the company. Before this tremendous army of bright and enthusiastic American boys we feel like a General at review, proudly conscious of our position as in one sense its leader. At least, while these boys are reading the pages of THE AMERICAN BOY we can claim to be Commander in Chief of their time and their thought; and to occupy this place of privilege for several hours each month in the lives of nearly a fifth of a million American boys, is to possess an influence over them for good or for evil wider than any preacher, or philosopher, or reformer enjoys.

To this great company of boys we wish to say a word about Christmas, in order that the true significance of the day may not be lost amid the glitter of shop windows and the carnival of giving and receiving:

Christmas is the one world-wide festival. The "Glorious Fourth" is purely American; "Dominion Day" purely Canadian; "The Queen's Birthday" purely English, but Christmas is the world's holiday, or, better still, the world's holy-day.

Every boy celebrates in some way his own

birthday, and sometimes others join in the celebration. No matter how bad he is, someone, most likely his mother, is glad he was born.

But there was a boy born nineteen centuries ago whose birthday millions of men, women and children delight to commemorate. It is

inspiration for the greatest and best things these centuries have known.

It is an uplifting thought that for one day the world steps aside from the routine of life, with its selfish rush for gain, to contemplate the life of one whose every utterance in word and

deed was a benefaction. All men in civilized lands thus get into their hearts for one day in the year, at least, a little of the religion of love—the essence of what the Bethlehem babe came to teach.

One has said that there is a place in the universe where the myriad sounds of earth and sky blend into one great and splendid note of praise to the Creator; another has said that if our ears were fashioned to catch the minutest sound-waves, we might hear the music of springing blade and bursting bud; still another has said that all nature sings a continual anthem of thanksgiving, and that man alone of all created things, though made in the image of his Maker, is prone to forget.

Suppose with ears fashioned to catch the faintest sounds, we could stand on that spot where all sounds of earth blend into one, as this most blessed day of all the year approaches. Day after day the note of joy increases, as men turn from the struggle of daily life to deeds of kindness and thoughts of sympathy and love. As Christmas eve draws nigh, the tone becomes tender and sweet, as mothers tuck their little ones into bed and tip-toe about the house, their hearts throbbing with the joy of making others happy; and as morning breaks on the blessed day we hear the diapason of wildest melody that floats up from palace and cottage, mountain and plain, a chord in which is

well that they do, for whether Christian or Jew, Protestant or Catholic, believer or infidel, no sane man will deny that the life of the man Christ was the most beautiful and perfect life ever lived upon the earth, and that his example and teaching have raised the world to higher and higher planes of living, and proved the

mingled church bells and myriad choirs, the mellowed voices of the aged, and the merry shouts of children. How marvelous that note as it rolls in from every land! We can imagine all Heaven listening to hear the grandest of the hallelujahs of the universe, "Glory to God in the highest, and on earth peace, good will toward men."

A Prairie Christmas

DALLAS BURTON

It was my brother Jeff who "thought up" the first Christmas tree in Windom County. Our grandmother Randall told the truth when she said that Jeff was a master hand at "thinking up things, speshly things with lots of fun in them." It was well enough that Jeff had this fertility of invention, for Windom County needed all the fun that Jeff could "think up." It was an almost treeless county in the west, and only those who have lived there can have any adequate conception of how dreary and desolate the western prairies are in the winter time.

And one must have lived there to understand how cold it gets, and how the wind goes roaring and sweeping across the snow-covered plains with an edge like a blade. Jeff and I knew, for we were born there, and we never knew anything about a milder climate until we were men. We went three miles across the wind-swept plain to school during the four winter months, walking both ways and not minding it very much because we were pretty rugged boys, accustomed to rigorous winters. We had so few diversions that we rejoiced at the opportunity of walking six miles to a spelling school or a singing school when we were lads of thirteen and fifteen.

Jeff's ideas were never of slow growth. He said that they "just popped into his head all of a sudden." The idea of the Christmas tree "popped into his head" one evening when we were walking home from school. The teacher, a pretty young girl from the east, had been telling us about a Christmas tree she had had in the schoolhouse in the district in which she had taught the year before.

I do not wonder that she had not proposed to have a tree in our schoolhouse, for it was the dreariest little sod affair in which thirty persons would have been uncomfortably crowded. When we were about half way home Jeff said:

"Say, Fred!"

"Well?" I said.

"I have an idea."

"Better hang on to it or you might lose it," I said with poor wit.

"Smarty," retorted Jeff, but with good humor.

"What do you say to a tree like the one Miss Drewe told us about?"

"Where would you have it?"

"In our new barn."

I saw Jeff looking at me out of the corner of his eyes, and I, after the manner of boys, pretended to think little of his proposition, although I was really so impressed by it that I came near expressing my real feeling. Overcoming this unboylike weakness I said:

"But, then, all boys are holler clean into the ground."

"Pooh! The idea of a Christmas tree in a barn!"

"It is just as good a place for it as a schoolhouse. You know that father said this morning at the breakfast table that he had a notion to have some kind of a merrymaking in our new barn before he put in the stalls and partitions. I believe that he will fall right in with the idea of a tree in the barn. So will Aunt Randy. I am going to stop at her house and see what she says about it."

Aunt Randy Dill was a somewhat eccentric elderly woman who lived on a homestead between our house and the schoolhouse. We went within a few rods of her door on our way to school. She was our great aunt and as kind-hearted as she was peculiar. She was

sure to come to a door or window and call out something cheery and kindly to us every time we passed her house. On her baking days she was likely to come out with some hot doughnuts or a couple of turnovers to put into our dinner pail.

"Of course I know your mother has put up dinner enough for you," she would say, "but, then, all boys are holler clean into the ground, and they can allus stow away a turnover or a fried-cake on top of a two-gallon pail of dinner. Beats all how the avridge boy kin eat."

When Jeff told Aunt Randy of his idea she clapped her fat hands together and said with genuine enthusiasm:

"The very thing! And what more appropriate place for a tree could there be than a barn when you recollect that the Christ child was born in a stable? I think that it will be just splendid! You can count on your old Aunt Randy to take right holt and help carry the thing through. If her and Jeff can't make a go of that tree no one in Windom County can. You sail right in, Jeff, and I'll 'aid and abet' you in it. Of course your pa will let you have his barn! I know Hiram Turner well enough to know that he will fall right in with the plan. It'll be just great! It's a burning shame that we have all been so busy building up the country since we moved out here that we ain't paid hardly any attention to Christmas. I was thinking about that very thing the other day. We've too much work and not half enough play here, and I wouldn't be a mite s'prised if this Christmas tree was the beginning of a good deal more sociability and merrymaking among us. We'll have a supper along with the tree. My land! I wouldn't wonder if the thing grew into a reg'lar barbycue yet!"

It was characteristic of Jeff that he carried out his ideas while they were still "hot," as he said, and as soon as we reached home he said to father:

"O, father! Aunt Randy and I have planned to have a big Christmas tree in your new barn."

"Oh, you have, have you? It seems to me that you and Aunt Randy are taking a good deal of liberty with my barn," said father laughingly.

"Well, Aunt Randy said that she knew that it would be all right with you, and I guess so, too."

Father "dropped into line," as Jeff said, and preparations for the tree went merrily forward. Jeff and Aunt Randy went all over the neighborhood the following Saturday "stirring up the neighbors." They set out early in the morning in Aunt Randy's pung and did not reach home until after dark.

"I don't think that any one within a radius of fifteen miles escaped us," said Aunt Randy on their return. "And all but one or two fell right in with the idee. Old Jonathan Riggs wanted to know how much it would cost to 'git in,' and if he'd be expected to fetch any more supper than he and his wife would eat, and when I told him no he said that he reckoned they'd come. Old Squire Holt said that it was 'all nonsense,' but that is what he says about every idee that don't 'rignate in his own noddle, and I guess he'll be here. I've got about a barrel o' doughnuts and fifty pies and ten turkeys and eighteen cakes and all kinds of sasses and preserves and pickylillys and fell promised for the supper after the tree is over with. I'm going to send word to the storekeeper over in Ridgeville to lay in a lot o' Christmas things, for there'll be a big demand for them for the tree. I kin tell you that the idee of the tree took like wildfire with all the children ev'ry place we went. It'll be the first tree most of 'em ever saw."

"Perhaps they will enjoy it all the more for that reason," said my mother.

"So they will, so they will. We want to git a turrible big tree, and we must have yards and yards of strung popcorn to drape on it. Then if you take strips of old white cotton cloth about an inch wide and ravel it on both sides until there is only a thread or two left in the middle you can fix it on the branches so that it will look ever so much like snow. Then I have some pink and blue tissue paper that will come in handy. I have counted up and I think that there will be fifty six children under eighteen years old at the tree so I am going to fix up at least that many bags

of candy and a like number of gingerbread animals with icing on them. Then Jeff and I have app'nted ourselves a committee of two to 'tend to hanging the things on the tree. We give out word that ev'rything must be left at the barn the day before Christmas. I have a job for you, Henry."

"Oh, I daresay," said father. "What is it?"

"I want you to go away over to the Widow Miller's homestead and get her and her three little ones and fetch them to the tree."

"Why, Aunt Randy," said father, "didn't you say that you thought that old Squire Holt would come even if he did say that the tree was all nonsense?"

"Yes, I did. What of that?"

"Why, you know that the Widow Miller is Squire Holt's daughter, and that he has never spoken to her since she married against her father's wishes."

"More shame to the Squire, considering that the worst that could be said about poor Hugh Miller was that he was poor and not very capable. But what's that got to do with the Widow Miller coming to the tree even if her father is here?"

"We saw father open our barn-yard gate."

"Why, if they don't speak to each other it will be rather awkward for them."

"You leave that to me. I've allus said and I say now that if the Squire could once see them three sweet little grandchildren of his he would give up his sin-

ful spite and warm to them as he ought to do. I'm going to give him a chance to see them. He won't s'pishion that his daughter will be here because she really lives out 'o this district, but you go and get her, Henry, and if the Squire don't take her and her babies home with him, as I lot on him doing, I'll take her home with me and carry her to her own poor little home next day. You can trust me to see to it that the old Squire gits an interdoose to his grandchildren. It's my private opinion publicly expressed that he wants to make up with his daughter, but that his mizzable pride won't let him. Christmas day will be a good time for him to scatter that pride to the four winds, and I'm going to help him do it through the happy meejeum of our Christmas tree."

She laughed merrily over her "schemes," as she called them, and then said:

"Come, Jeff; let's go right out to the barn and decide where we want the tree to stand. The rest of you can come if you want to, but you wont have anything to say about it. Jeff and I are running this tree, ain't we, Jeff?"

Preparations for the tree went merrily forward. Aunt Randy's enthusiasm did not wane, and her merry spirit seemed infectious. New ideas regarding the tree kept "popping" into Jeff's head, and he and Aunt Randy were in daily and sometimes secret confidence over their plans.

The weather had been unusually mild thus far that winter, but the week before Christmas a sudden change came and it grew intensely cold and a heavy snowstorm set in. We lived on what was called the "Big Road," and many emigrant wagons went by our door moving slowly out across the great plains. It was not often that an emigrant wagon came along in the winter time, but five days before Christmas my mother, who was sitting by a front window sewing, called out in a tone of surprise:

"Why, if there isn't a mover's wagon going by this bitter day! And what a sorry looking outfit it is! Do come and see it!"

We hurried to the window, and saw a rickety old wagon drawn by a pair of bony and feeble horses moving slowly by the house. The canvas cover sank limply between the wagon bows, and we could see that it was ragged in places. A dejected looking yellow dog trotted along under the wagon. A foot or more of rusty stovepipe protruded through the wagon cover. Smoke was coming from the pipe and we could imagine the occupants of the wagon huddled around the little sheet-iron stove in a vain attempt to keep warm. On the driver's seat sat a girl or a woman, we could not tell which, because of the way in which she was bundled up to protect herself from the bitter wind.

When father came to the window he said:

"I must go out and speak to them. They must not

try to camp out any place to-night for it looks as if there would be a real blizzard before morning. They must be very ignorant regarding this climate or they would not be traveling in such a wagon as that in this kind of weather. I'll go and hail them."

"Don't let them go on if there are any children with them," said my tender-hearted and ever-generous mother. "Bring them in here. I cannot bear to think of little children out on the prairie in a wagon on such a night as this is sure to be."

A few minutes later we saw father open our barn-yard gate and the driver of the wagon drove into the yard. When the driver had jumped down from her seat we saw that she was a girl of about fourteen years of age. Then we saw father help a boy of about nine years and a little girl of perhaps five years from the wagon. He came toward the house with the little girl in his arms while the older girl led her brother by the hand. We were all at the door to meet them.

"Here are some little wayfarers for you to look after, mother," said father. "Boys, you run out and put up the horses and give them a good feed. Better get these little folks something to eat right away, mother. Hungry, little one?"

The little girl nodded her head, but did not speak. She had big dark eyes and a thin white face. All of the children looked as if they had suffered from cold and hunger. None of them were warmly dressed, and the hands of the girl who had been driving were blue with cold. This was her story as she told it to us after she was well warmed and had a cup of tea:

"We started from Illinois many weeks ago, my mother, Paul, Lucy and I. My father had been out west for more than three years, and he had sent word for us to come out to where he was. We lived on a little place in the country and we sold off the little we owned and started west without our horses and wagon. We thought that we would fall in with other movers, and we did for a part of the way, but when we got a little this side of the Missouri River the folks we were with concluded to stay there for the winter, but mother wanted to come right on to where father is. He said that he would be sure to meet us some place on the way after we got into Nebraska, and we have watched and watched and watched for him. Mother would sit up on the front seat of the wagon and keep looking for him when she was too sick and weak to hold up her head—poor mother."

The girl drew her sleeve across her eyes before adding:

"Mother never was very strong, and she was sick when we started. A fever set in and she died about a month ago in a town away back here. The folks in the town were real good to us, and they tried to have us stay there until spring and go on then with the movers that would be sure to be coming along at that time, but mother had said for us to go as long as the weather kept good, and we have had real fair weather so far, so I came on hoping and praying every day that I would meet father. Something must have happened to him or he would surely have met us long ago. He wrote that he would be likely to meet us some time in October. We would have been where he is by this time, only mother was sick so much that sometimes we have had to camp for a week at a time. Then our horses are old and they are about tired out. I guess we will have to put up for the winter at the next town we get to. We can't go on now that winter has set in. If father had only come to meet us!"

She cried a little and mother said soothingly:

"Don't you cry, my child. Father will come yet. I am sure that he will. And you shall stay right here with us for the present. I want a little girl like Lucy. It is so long since I have had a little girl in my house."

Mother took Lucy upon her lap and kissed her as she spoke. The little girl nestled close to mother's heart, and seemed to realize that she had found a true and loving friend. There were no railroads in the west at that time, and it seemed certain that the three little wayfarers would have to stay with us until spring. It was impossible that they should go on in the wagon now that winter had set in with such severity. Moreover, they were almost entirely out of food and Martha, the oldest girl, confessed tearfully that they were out of money.

"Well for pity's sake!" exclaimed Aunt Randy when she came over to our house in a blinding snowstorm the next day and heard the story Martha had to tell. "Of course you can't go on now. You got to stay right here. You must stay with me part of the time. Like enough your pa will bob up some day when you least expect him. Something has turned up that he didn't expect, but don't you worry. You are in good hands. Then you'll be here for our tree. Ain't heard 'bout the tree, I reckon? Well, it's going to be worth your coming all this far to see. And Santy Claus won't forget any of you. I guess that he has a speshly soft place in his heart for children that ain't got any ma and who don't know where their pa is. He's got you writ down for something real nice. I feel that in my bones. I'm going to town to-morrow no matter if it blows and snows great guns."

But the next day was serenely fair and the hearts

of many children out there on the prairie were glad when they saw their fathers and mothers setting forth in sleds and pungs for the only town in the county. They knew that there would be mysterious bundles and packages come home in the sleds and pungs, and that they would not know what those bundles contained until they saw their contents on the Christmas tree. Aunt Randy was off early and did not get home until late. Her old pung was half filled with bundles, most of which were for the tree.

Christmas eve was fair and cold, but the wind that had swept the snow-covered prairie all day died down at sunset. There was a full moon and the Christmas stars twinkled in a cloudless sky. The wide prairies were one unbroken expanse of snow shimmering in the yellow moonlight. Our big new barn wore a wonderfully festive appearance. Father had set up two big stoves so that there was plenty of warmth. Jeff and I had borrowed every lantern in the neighborhood and these lanterns hung from posts and beams and crosspieces all over the barn. Lamps and rows of tallow candles added to the illumination. We knew a way of braiding husks of corn together so that the ears hung in a heavy and graceful fringe. We had made many yards of this fringe and it hung in festoons all around the barn. Aunt Randy, in a

and be thankful for him!" and all the people clapped their hands when the old Squire took the child in his arms and kissed him.

"I knowed he would," fairly shouted Aunt Randy. "Why, la, he couldn't help it! He's human, the Squire is, and no human man could refuse a heaven-sent gift like that! Come, Mary Miller, bring the other babies and yourself over here to your pa. He likes grandchildren for Christmas presents so well that we'll give him a couple more of them. Hooray! Hooray! Praises be! There's the real Christmas spirit here this night!"

This last outburst was caused by the fact that the old Squire had gone forward to meet his daughter and had kissed her and her children. Hardly had the applause over this scene died away when the door of the barn opened, and a strange man entered. He closed the door and stood with his back to it looking on the merry scene before him. He looked travel-stained and careworn. By what intuition Aunt Randy guessed who he was we never knew, but she looked at him for an instant and then ran forward with little Lucy Hayden in her arms crying out joyfully: "You are Myron Hayden and I just know it, and here is a Christmas gift for you! It's your own little Lucy girl! And Paul and Nettie are right here!"

"It looks like—it is father!" cried Nettie, running forward to have her father clasp her in his arms.

"This is the best of all!" exclaimed Aunt Randy. "I tell you we've got to sing the Doxology right out of our hearts before we go home! The Lord knows that we have a sight to praise him for! It's the blessedest Christmas I ever see!"

Suddenly Hetty Ward, the sweetest singer in the county, sang in her clear and ringing voice:

"Now to the Lord sing praises, all ye within this place."

Myron Hayden had been dangerously ill for a long time. Letters that he had sent to his family had failed to reach them. When he was able to do so he had set out on horseback in search of his wife and children. He had heard in the town eight miles from our house of the children we were caring for, and he felt sure that they were his, therefore he had pushed on although he had ridden many miles that day.

"All who think that this tree has been a success say 'I!'" shouted Aunt Randy when some of those who had come a distance of ten miles felt that they must start for home.

"I!" shouted every one present.

The supper had been a scene of great festivity, and it was after midnight before the last of the merry-makers had gone. We could hear their shouts and merry laughter as they rode away over the snowy plain, and I am sure that all of them carried away in their hearts the beautiful Christmas spirit of peace on earth and good will to men.

A GIRL'S ADVICE.

Here is a letter from Lelia Templeman, Fisk, Cal., a girl who is not afraid to write to a boys' paper. She says, "I wish you would devote a part of your paper to the question of parents. I think 'Father' and 'Mother' are the proper names to call our parents, and I would like for you to impress upon the minds of young boys that 'Father' and 'Mother' sound better than 'Pa' and 'Ma.' Some of the young boys whom I know and who are almost men, say 'Paw' and 'Maw.' Don't that sound bad? Now I want to tell you I am a little girl, but I like THE AMERICAN BOY just the same. So does father and mother. They say it is just what our boys need. Good-by for this time."

THE BOY WHO DOES.

ADAPTED FROM L. A. W. BULLETIN.

Say, Do you know the kind Of a fellow who's Just to the world's mind? The kind of world Can't lose? The kind that folks enthuse Over And take off their hats to? Why, it's the Boy-Who-Does!	If he starts a little sweat! He doesn't need a big Brass-buttoned copper To tell him to move on; He keeps the procession humping To keep up with him He's hustle from his feet Up And from his head Down. He's not only in the Push, But he is the Push. The whole thing; And say, The way He makes things come And business hum Is a caution. The way the world Takes that follow up And is good to him Makes your heart glad. He's all right, He is. He greases the wheels of Progress And keeps the world spin- ning round. And that's why I say Here's to the Boy-Who-Does! Bully for him!
He's the fellow! Not the boy whose grandpa Got there; Not the fellow who would If he could; Not the boy who's going to do Some day. But the Boy-Who-Does Now, Today! No setting round Waiting About him; No expecting something to happen; No looking for something to turn up. No, sir! He calls the turn And turns 'em He takes off his coat And doesn't care	

"I," shouted every one present.

sudden outburst of patriotism, had ridden eight miles to borrow a flag from a friend of hers, and this flag hung from a beam of the barn. Strips of red, white and blue bunting had been used with fine effect, and there were many outbursts of surprise and delight when the people began to arrive. The tree was concealed behind a great curtain and it was not to be revealed until all were present. When the curtain was finally drawn there burst upon the dazzled eyes of the children a huge tree with two hundred little candles on it. From every twig and branch hung toys and gifts of every description. Father was the Santa Claus who was to distribute the gifts. His disguise was so complete when he came climbing down from his place of concealment in the top of the barn jingling his sleigh bells that no one recognized him, and the smaller children did not suspect that he was not Santa Claus himself.

It would take many pages to describe the simple joy of that evening. Aunt Randy was radiant. Her loud and merry laugh could be heard every few minutes and she was here and there and everywhere helping, directing, planning. She it was who took the Widow Miller's pretty little baby boy and laid him in his grandfather's arms, saying as she did so:

"There, Squire Holt, that's your Christmas gift! What reasonable man could ask for a finer gift than a beautiful little grandson like that? And he's got your name, too, Ira Holt Miller! You take him

(Begun in October.)

Review of Preceding Chapters: Jack Carroll, Frank Chapman and Ned Roberts, three boys whose homes are in a village in the far East, obtain the consent of their parents to go to Denver for a visit to Robert Sinclair, a friend of Jack's father, who is a painter of mountain and Indian life, and spends the greater part of his time among the Indians. They are accompanied on their journey as far as Chicago by Mr. Carroll, and are greatly delighted with the sights and sounds of the great city. On the train for Denver they meet Jim Galloway, a trapper, who tells them a true story in which his life is saved by a white man, who was living at the time with the Indians, and turns out to be Robert Sinclair, the artist, whom the boys are going to visit. The boys tell the trapper the story of Sinclair's life. The train on which they are traveling runs into a herd of Buffalo and Ned shoots one.

CHAPTER VIII.

THE CORRAL.

AFTER a few hours, which seemed endless to the impatient boys now that the mountains were continually in view, the train pulled up at the station and the long journey by rail was at an end.

Mr. Sinclair was there to meet them and his greeting was a hearty one. It did not take long, you may be sure, for Sinclair and the trapper to renew their acquaintance, and the reunion was a joyous one all around.

Mr. Sinclair had come up from "The Springs," by which name the region about the foot of Pike's Peak was generally known, to meet the boys. He had thought that Denver would be a good place at which to buy an outfit for the hunting trip which he had planned; then, too, he had determined that after making his purchases he and the boys should return to "The Springs" by easy stages on horseback, so that the boys might accustom themselves gradually to rough life before plunging into the heart of the Rockies. In this way the boys would get needed practice at riding their horses, shooting at the smaller game, and sleeping hunter fashion under the open sky.

It took but a moment for Mr. Sinclair to tell the boys about his plan, after they were gathered in their room at the hotel; then, with one accord, they pounced upon the big trapper, who had accompanied them to the hotel, and begged that he go with them.

"Nothin' would please me better, youngsters," said he, "but I've got a job on hand fer nigh on a month back up in the hills for the Government—doin' a little scoutin', so I can't go with you, much as I'd like it; but I ain't goin' to lose track o' you fellers now I've found yer," and as he said this he looked straight at Sinclair, "fer I've bin lookin' fer that ma'n high an' low fer years; I've got ter even up with 'im. I'll do it soon, too, er my name's not Jim Galloway."

"Suppose," suggested Mr. Sinclair, smiling, "that we set a time and place that will suit us all and agree to meet for a big hunt together?"

The suggestion met with approval, the time and place were arranged, with the boys almost wild in their excitement over the prospect, for nothing could be a grander scheme for three boys than a season in the mountains with Robert Sinclair, the friend of the Indians, and Jim Galloway, the noted trapper and scout.

The following morning the big-hearted hunter rode away mounted on a hardy Mexican pony, fully equipped for what to the boys was some mysterious expedition for the Government. Mr. Sinclair and the boys were loath to see him go, and their last words to him as he rode away were, "Don't you forget;" and nobody could doubt, by the tone of his answer, but that he would be on hand at the appointed place and time.

Then the little company set to work getting together an outfit for their journey to the Pike's Peak region. The boys were a little disappointed to find that they were not on this first trip to really get into the mountains and that the trail lay along the foothills only.

But this feeling was soon over in the novel experience of getting together their equipment. The first thing to do was to select their horses. Mr. Sinclair having made some inquiries, had learned that there was a ranch on the outskirts of the town where suit-

able horses could be obtained at a fair price; so as soon as the trapper had left the four made their way to the ranch, where they found a big collection of mules, bronchos and ponies which Ned declared to be the worst looking lot of scrubs he had ever seen.

"Never you mind," said Mr. Sinclair with a knowing shake of his head, "all things are not what they seem, and horses are no exception to the rule. You'll think differently about these scrubs after a while. You can't always tell about these homely critters 'till you've had a little experience with them. They're not beauties, but it isn't beauty you need in the mountains. You want a horse that's got sand and bottom. He's got to have muscles of iron. He must be able to stand fire, go without eating or drinking, jump ravines, swim rivers, climb mountains, stand rain or sunshine without complaining, and not lie down and get sick on your hands when you're miles away from camp, and may be running a race with a pack of wolves or a lot of unfriendly Indians."

This reassured the boys, and they set to work under Mr. Sinclair's guidance picking out their horses from among the motley crowd that were pushing one another about in a frightened way inside a big corral, or pen, into which the ranchman had led his four customers.

The ranchman was a rough looking specimen who looked more like a Mexican than an American with his immense sombrero and swarthy skin. The boys didn't just like his looks but they soon made up their minds that he knew his business—so much so that they lost all thought of his appearance in their admiration of his knowledge of horseflesh and skill in trading. He carried over his left arm several coils of rope, one end of which he held in his right hand, looped and ready for throwing.

Mr. Sinclair walked about the enclosure scrutinizing, with the eye of an expert, each one of the excited group of horses, while the boys were quite satisfied with keeping as far away as possible from the heels of the struggling mass which seemed bent on kicking up as much dust in the enclosure, as possible.

After a few minutes Mr. Sinclair called the attention of the ranchman to a tough looking bay, one of the biggest in the bunch. The ranchman took a step or two forward, swung the long loop a few times above his head and shot it out over the heads of the frightened animals. "Surely," thought the boys, "he can't in that way expect to get any particular horse in that jumble of heads." The loop caught on something; then bracing himself the ranchman drew in the slack rope and, sure enough, out walked as demurely as possible, the big bay. The ranchman put a halter on him, tied him outside the corral and returned, again deftly winding the rope into a coil.

Within a half hour four horses had been caught and a bargain had been struck. Mr. Sinclair took the bay, as he was the strongest and could best carry a man's weight, and to the three boys fell the task of choosing each his horse. There was nothing to do but draw lots as between the three ugly looking animals, no one of the boys was able to make a selection. So it was in this way that Ned got a fiery little gray, Frank a sleepy-looking little animal that didn't appear to care what happened, and Jack a lanky fellow distinguished principally for long legs, prominent ribs, and scarcity of mane and tail. The boys laughed and joked one another over their mounts, and forthwith christened them. Ned said that he guessed he'd call his "Snap," from a remark that Mr. Sinclair had made when the fellow was kicking and plunging under the lasso, "He's got snap in him." Frank named his "Sleepy Sam," and Jack thought "Spareribs" about the most appropriate name for his.

A little later Mr. Sinclair had bought saddles—the kind made of wood and leather, with a big horn in front and wooden stirrups—bridles, ropes, blankets, and a few cooking utensils. Some provisions in the way of cornmeal, bacon, coffee, etc., were added, and then came the buying of guns and ammunition and a rough suit of clothes for each of the boys.

The start was made from the ranch where they had bought their horses, and as they rode, single file, away from the ranchman's hut and waved "good-bye" to the swarthy Mexican, they made a queer looking procession. In the lead rode Mr. Sinclair gracefully astride his big bay, which the boys had named "Jim" after their friend the trapper, his fine athletic figure clothed in a suit of buckskin which had already seen some ad-

ventures, his rifle across the horn of his saddle, his belt decorated with several good knives and a brace of trusty revolvers. A broad-brimmed hat, high boots, and a pair of shining spurs completed his outfit. As he turned in his saddle and waved his big hat in the breeze and shouted, "Forward, march" to the little company that trailed after him, the boys thought they never had seen a more splendid looking man. They just couldn't help shouting, "Hurrah for Uncle Bob," for he had already been adopted as an uncle by each one of the boys.

The first thing Ned did in his excitement was to stick his spurs into the sides of his steed—an act of imprudence that cost him his seat. The pony didn't forget it for some minutes, and the boy made up his mind either to take off his spurs the next time he took a ride or keep them at a respectful distance from Snap's hide.

The boys were dressed very much like their leader, except that they each wore a good strong suit of blue-jeans instead of buckskin. Each wore a hat and belt and spurs, and carried weapons and ammunition. Indeed, they looked very much like frontiersmen, though any one could see with half an eye by the way the boys rode their nags that they were "greenies."

CHAPTER IX.

THE START.

The little party had started from the ranch at day-break, not so much because they wanted to cover a long distance on the first day, but because it is the style in the mountain country to get up early when there is anything to be done. Indeed when night fell they had only ridden ten miles, but Frank said the tenth mile was longer than all the others put together.

As they rode away from the ranch they thought they had never looked upon so beautiful a scene as lay spread out before them. To be sure, they didn't have much time to discuss nature, for it was about all that the boys could do to hold on to the pommels of their big saddles and carry their guns, but they did not fail to see the undulating plain which stretched away to the left with its never-ending carpet of green, and to the right away off on the horizon the low-lying range of the Rockies with its dim suggestions of snowy tops, dark forests, and yawning chasms.

The trail lay over a hilly country dotted here and there by great rocks that the boys could imagine some giants had rolled down from the distant mountains with which to play at marbles on the plain, and that tired of the sport the giants had gone away and left them. They crossed little valleys down which trickled mountain streams, and now and then ascended the tops of hills which to the boys, seemed veritable mountains, but which were only ant hills as compared with the great peaks in the range beyond.

In their first day's travel they met with little adventure. True, Snap had given his rider some trouble and had once landed him on the ground all in a heap, and Frank had had excitement enough keeping Sleepy Sam from falling completely to sleep; but this was not exactly what the boys had pictured to themselves to be mountain life. Now and then, however, some small animal darted out from under their horses' feet, a prairie dog saucily barked from the door of his little hut, strange birds fluttered up from the sage brush and whirred off out of danger (but not before Mr. Sin-

An act of imprudence that cost him his seat.

clair had bagged three of them with his rifle for their evening meal) and ugly looking snakes went squirming through the grass, and once they thought they saw a coyote skulking along the base of a hill.

The sun was not very high when they halted in the shadow of a big boulder, turned their ponies out to graze, and stretched themselves on the ground for a good rest. Mr. Sinclair here gave the boys their first lesson in shooting. They were as green at this as they were at riding horses, but their teacher declared that he would have them hitting the bull's eye before many days, for they were all boys of good nerve, quick of eye, and anxious to know how.

By the middle of the afternoon they struck camp and were again on the trail. The scenery was rapidly growing wilder and more to the boys' liking, but by

sundown they had lost all interest in their surroundings and talked only of finding a good place to dismount and tie up for the night, for they were about as tired a company of boys as ever turned in. The hard saddles and the jolty gait of their horses had made the boys so lame they could scarcely get out of their saddles, and when they did so they had scarcely energy enough left to help Mr. Sinclair gather together dry grass and branches to make a fire for their evening meal. Soon, however, the coffee was steaming, and the aroma from it and the frying bacon acted like a charm to drive away exhaustion.

It was indeed a happy little company that lounged about the camp that evening. As night fell they were stretched at full length upon the soft turf, each with his saddle and blanket for a pillow, and at a little distance the ponies quietly grazing.

"Just the time for a story, Uncle Bob," said Jack when they had comfortably settled themselves.

"Very well; what shall it be?"

"An Indian story!" exclaimed the boys in chorus.

"Well, it shall be an Indian story, but you'll promise me that when I tell it you boys will go to sleep, for we must cover more miles tomorrow and be up before the sun. I will tell you a story that was told me by an old Indian some years ago. The raccoon by some Indian tribes is considered the mischief-maker among animals, and this story is about the raccoon.

The relatives of two old blind Indians, wishing to move them from a place of danger, built for them a wigwam in a secluded spot near the bank of a lake, provided them with food, a kettle and a bowl, and left them there, first stretching a line from the door of their wigwam to a post in the lake, so that the blind men could easily find the water by following the line. The two old men here took care of themselves. One of them would do the cooking one day and the other the next, and so on. They divided the work equally, and ate out of one bowl, each taking half.

One day a raccoon which was looking for crawfish came to the line near where it was tied to the post, and, curious to know what it meant, determined to follow it up, so he followed it to the wigwam. Peeping in at the door he saw the two old men asleep on the floor, their heads toward the door and their feet to the fire. Sniffing about, he found there was something good to eat within, but he decided to retire and see what the men would do. Presently the old men awoke, and one said, "My friend, I'm getting hungry; let us prepare some food." "Very well," replied his companion, "you go down to the lake and fetch some water while I get the fire started."

The raccoon hearing the conversation ran to the water, untied the line and carried the end to a clump of bushes, and there tied it. The old man stumbled along until he reached the bush, where he began to dip his kettle upon the ground. Not finding any water, he slowly returned, and said to his companion, "We shall surely die, because the lake is dried up and the bush is grown where we used to get water. What shall we do?"

"That cannot be" responded his companion, "for we have not been asleep long enough for the bush to grow upon the lake bed. Let me go out to try if I cannot get some water."

Then the raccoon took the line back and tied it to the post, and the second old man, of course, got his pail full of water, and returning to the wigwam said: "My friend, you told me what was not true; there is water enough, for here I have our kettle full." The other old man wondered. Then the raccoon came in and awaited the cooking of the meal. When all was ready, the two old men sat down before their bowl, which contained eight pieces of meat—four for each of them. Each took a piece, and talked and laughed in their enjoyment. The raccoon then quietly took out of the bowl four pieces and began eating them with great relish. Presently one of the old men reached into the bowl and found only two pieces left. "My friend," he said, "you must be very hungry to eat so rapidly. I have had but one piece, and there are but two pieces left."

The other replied: "I have not taken them, but suspect that you have eaten them yourself," whereupon the other replied, more angrily than before.

Thus they argued, and the raccoon tapped each of them on the face. Then the old men began to fight, each thinking that the other had struck him, rolling over and over on the ground, upsetting the bowl and the kettle, and setting fire to the wigwam. The raccoon then snatched the two remaining pieces and ran out of the wigwam laughing "Ha! ha! ha! I have played a nice trick on you. You should not find fault with each other so hastily," whereupon the old men ceased fighting and knew that they had been deceived.

When the story was ended the boys remained quiet

for a moment; then Ned exclaimed rather disappointedly, "Uncle Bob, that's not an Indian story."

"Indeed it is; I heard it myself from the lips of an old Indian, years ago."

"I suppose," said Frank, "that he heard it from some white man."

"No," said Uncle Bob, "it is a real Indian story, and the Indians have many such stories to tell. They believe most of their stories, too. I suppose hundreds of Indians—not Indian boys but grown up Indians—believe the raccoon story to be true. The Indians have many stories that point good morals. White men mustn't think that they have all the good in themselves and that the Indian is all bad."

"Whiz," went the loop.

"Well, I supposed you were going to give us a hair raiser," said Frank. "Somehow I can't think of an Indian without he's a regular devil in paint and feathers, and with scalps hanging around his belt."

"Well, my boy, you want to get over that feeling; and when you have been with me through the summer and fall, I will miss my guess if you do not go back to the States with a different idea of Indians. Now I'll fix the fire a bit, and then we'll spend our first night under the sky. I guess you'll not have any trouble getting to sleep after this hard day's jaunt," so saying Mr. Sinclair piled a fresh supply of branches on the dying embers, for the night air was chilly under the mountains, then glanced out on the prairie to see that the horses were all right.

"Hello, how's this? Where's Snap? Confound that little vixen; he's taken 'French leave.'"

The boys were on their feet in an instant, and Ned was for putting off post haste on foot to follow his runaway.

"Here, lad, you stay right where you are. That horse is going back to the ranch, and probably he's had an hour's start. You stay here and I'll fetch him."

In a moment Mr. Sinclair had bridled and saddled Jim, given him a few vigorous spurs, and was cantering at a lively pace back over the trail. He came up with the fiery little animal, about two miles from camp, leisurely trotting along with his trail rope dragging for yards behind him. As soon as Snap heard his pursuer coming he gave a jump and a kick and away he went. Now it was a pretty race. Two or three times the pursuer got close up to the runaway, and, as quick as a flash, had leaped from his horse to catch the end of the trail rope as it whizzed past, but each time he missed it. Jim was a good horse, but he had a load to carry, and Snap was rider-

less, and what was more he was frightened, so the race was an uneven one. At last Sinclair bethought himself of his lasso, which was securely tied to the horn of his saddle. Loosing it, he made ready to cast, and driving his spurs smartly into his horse he was soon alongside of the gray.

"Now I've got you, you rascal," he shouted, and "whiz" went the loop, but Snap heard it coming, jumped aside with the agility of a cat, and was off at right angles to the trail, up a little ravine that ran among the rocks. Quick as lightning Jim was brought to his haunches and was turned in hot pursuit up the ravine. Snap made a big mistake in his sudden resolve to leave the trail, for his new path was only the bed of a little stream, now run dry, which ended abruptly a hundred yards or more from the trail plump up against a big boulder. Here the little gray stopped stock still, palpitating like a scared rabbit, while Mr. Sinclair, coming suddenly upon him, took him captive and led him ingloriously back to camp.

The boys, of course, had not slept a wink, as minute after minute went by without the return of Mr. Sinclair. They then felt the first sensations that come from being alone at night on the plains, and they were not entirely pleasant ones. They now heard noises they had never heard before—strange night birds, owls, wolves; and several times they thought they saw round burning eyes peering at them from out the darkness. Maybe they did. They were just in the right state of mind to see such things; and then, too, they were in the home of the wild beasts, and not far from the home of the Indian.

No telling what might have happened had not Mr. Sinclair, just in the nick of time, saved them from sheer panic by marching into camp with two rather dilapidated looking horses.

(To be Continued.)

ADAM: THE MAN WHO NEVER WAS A BOY.

Of all the men the world has seen
Since time his rounds began,
There's one I pity every day—
Earth's first and foremost man;
Just think of all the fun he missed
By failing to enjoy
The dear delights of youthtime.
For—he never was a boy.

He never stubbed his naked toe
Against a root or stone,
He never with a pin hook fished
For minnows all alone.
He never sought the bumblebee,
Among the daisies coy,
Nor felt its business end,
Because—he never was a boy.

He never hooky played, nor tied
A bright and shining pail
Down in the alley all alone,
To a trusting poodle's tail,
And when he home from swimming came,
His pleasure to destroy
No slipper interfered
Because—he never was a boy.

He might remember splendid times
In Eden's bowers—yet
He never acted Romeo
To a six-year Juliet.
He never sent a valentine
Intended to annoy
His good but maiden aunt,
Because—he never was a boy.

He never cut a kite string, no,
Nor hid an Easter egg;
He never spoiled his pantaloons
A playin' mumble-peg.
He never from the attic stole
A 'coon hunt to enjoy,
Nor found the "old man" waiting,
For—he never was a boy.

I pity him, why should I not?
I even drop a tear;
He never knew how much he missed;
He never will, I fear,
And always when those dear old days
My memories employ,
I pity him, Earth's only man
Who—never was a boy.

Bobby Monks: Please, Mr. Hippo, will you lend me your stocking to hang up this Christmas?

The Deer Lick Endeavor Society

FRANK H. SWEET

IT WAS uphill work starting a Christian Endeavor Society at Deer Lick, for there was neither church nor resident minister, and the available young people were scattered over a wild, almost roadless territory which extended from the foot of the Cumberland mountains on one side, to Yellow Pine Ridge on the other, a distance of twenty miles. But Tom Hunt and

Jud Brown were at their best when confronted by uphill work, and when they declared that they intended to start a Christian Endeavor Society, they meant that they would strain all their sturdy strength and yet sturdier determination to that end. Tom had spent part of the summer with a cousin over the mountains, and there had attended Endeavor meetings, and become a member, and taken an active, enthusiastic part. And now he meant to have a society here for the benefit of himself and the other young people, and Jud, as his nearest neighbor and best friend, was, of course, to help him.

Just above Deer Lick—so named from the animals coming to this particular run in search of the saltiness which the water contained—was a small log building which was the only school house in the community. Here preaching was held once or twice a month, according as the minister from over the mountain found himself able to leave his own work. The building was also used for political meetings, and for all public business which called the people together.

Tom found no difficulty in securing the use of this building, and he and Jud at once sent word through the neighborhood for the young people to meet there the following Sunday afternoon to organize a Christian Endeavor Society.

The room was about twenty by twenty four, with two openings for windows which had never been put in, and which were closed against the weather by loosely fitting shutters. Log benches enclosed three sides of the room, the fourth being reserved for the pine table and stool of the preacher. In the center was an old-fashioned box stove of the Franklin pattern, without legs, and propped up from the floor on bricks.

The boys swept the room, and cut wood on the slope and brought and packed it in a generous pile behind the Franklin. Then they scoured the immediate neighborhood in search of small Bibles and books of music. Three Bibles were secured, but the one music book found was a collection of ballads which Tom declared would not do at all.

Sunday afternoon, between thirty and forty young people gathered, some of them coming from seven or eight miles away. Most of them rode horses or mules, though a few were on foot. That they came chiefly through curiosity, Tom understood. A public gathering of any kind was of such rare occurrence that even the notice of one was sure to bring out a good proportion of the people. But would they continue to come after the novelty had worn off? That was the work he and Jud were to do: they must make the young people understand what the Christian Endeavor was for, and get them interested.

When he rose and explained what they hoped to do, a few laughed; but more listened. Then Jud stood up and said a few words, haltingly, and as though encouraged by his diffidence, two or three others rose hesitatingly and said something in favor of the project. Then Tom called for those who were willing to join, and was agreeably surprised to have ten promptly enroll themselves as active members, and as many more promise conditionally to attend the meetings.

Over the mountains, singing had been one of the interesting features of the service. In this all had seemed to take part, and the girls especially had been helpful. When a break occurred in the speaking, some one had called a hymn, and the inspiration of the music had borne away the hesitation, and after it the members had always seemed to have more confidence and willingness to speak.

Several times Tom tried to start a hymn, but failed, and grew embarrassed at the suppressed chuckles from the scoffers on the benches near the door. Neither he nor Jud could carry an air, and the eight or ten girls present seemed diffident and afraid to trust their voices to begin. Still, Tom knew that most of them were fairly good singers, and that with something to lead they would be glad to take part. Oh, if they could only have some instrumental music—a piano, or organ, or cornet—or anything that would draw out the fresh young voices that were only waiting for confidence, to do their share!

After the meeting, some of these girls approached Tom.

"Don't you s'pose we could borrow Junkin's old melodeon?" one of them asked. "Seems like we can't get started on singin' without something to go ahead."

"We can't get that anyhow," another girl spoke up; "it's broke. Mis' Junkin told me so herself. They're goin' to send it over the mountains to be fixed."

"Well, we've got to have something," the first girl insisted; "if we don't these meetin's are bound to fall through."

As they went out, Jud looked at Tom significantly. "I wouldn't wonder if Sally's right," he said; "none of us can talk much, an' if we don't have music, folks will begin to stop comin'. A few of the members might keep on, but that ain't what we're after. We want the meetin's to be interestin' enough to bring all the young folks out. After we've been at it a while we'll learn to talk better, mebbe, an' that'll help; but jest now we need singin', an' to get singin' I reckon we'll have to hunt up some music for a starter. What do you think, Tom?"

"I'm afraid you're right," Tom answered, slowly; "but I don't see where we're to get it. Junkin's melodeon is the only one I know of in the neighborhood. However, we'll scour the country before another Sunday. Maybe we can find something up to the iron works."

The next morning they started out, and kept up the search until Wednesday afternoon. The superintendent of the iron works, eight miles away, had a piano, but, of course, he would not care to let it go; they did not even ask him. And they were equally loath to ask the wife of his foreman for a fine organ she had just purchased. But while at the iron works they heard of a cornet which one of the workmen played, and him they interviewed. He was willing to lend them the instrument occasionally, he said, but his duties as watchman prevented him from coming to play on it himself, so as there was no one else in the neighborhood who could play on a cornet, the offer of it was declined.

Wednesday afternoon they were returning from an unsuccessful search of the upper neighborhood, when low, intermittent strains of music caught their ears, apparently coming from some distance away. They were about four miles from Deer Lick, in a narrow valley through which a broad, shallow creek ran. The forest here was chiefly of oak and walnut, and not very dense. The locality had the reputation of being an especially good place for hunting and trapping. When they heard the music the boys looked at each other with sudden questioning.

"It's old Leclere playin' his fiddle," Jud said, "no use tryin' him, I s'pose?"

"N-no, I reckon not," Tom answered, doubtfully; "he's a foreigner, you know, an' a Catholic; an' he's queer." Then, suddenly, "But s'pose we go an' hear him play a few minutes."

Nearly a year before, old Leclere had come among them and built his camp and quietly begun his hunting and trapping. He was a shy, reserved man, never making any advances, and by his silence and preoccupation seeming to repel such as were made by others. His camp was three miles from the nearest settler, and in an out-of-the-way angle among the ridges; so for the most part he had been left to himself, only an occasional party of boys venturing to the camp to listen to him play.

That he had some strange power over the fiddle, they all understood. They had heard negro players at corn shuckings and various "doings" in the lower valley, where there were more people; but none of them had made music like this man. When he pressed his chin caressingly upon the fiddle and allowed his eyes to stray off, off, wistfully, toward something which no one else could see, they knew what to expect. At such time a boy could have gone through the camp and taken anything or everything it contained, and the owner would not have known; but no boy ever thought of it, he would rather listen to the music.

Leclere was in that position now, his chin pressed against the fiddle, and his gaze fixed upon some indeterminate point where the creek twinkled through the openings in the foliage. Before they reached him, the boys began to walk on their toes, not lest they should disturb him, but that they might not lose any strain of the music.

He was not aware of their presence until they had stood fully twenty minutes beside the stump on which he was sitting; then he looked up, started a little, and rose slowly to his feet.

"You garcons come so sof'," he grumbled; "me neva hear. What you like?"

"Oh, we heard you playin' an' jest came to listen," Jud explained.

"You see, we've been huntin' three days for some kind of music," Tom added, "an' are on our way home."

A gleam of interest came into Leclere's deep-set eyes.

"Hunt music, for why?" he queried; "cornshuck, danser, some be marry, oui?"

Tom explained about the Christian Endeavor, and their need for some kind of in-

strumental music to accompany the singing. The man listened attentively.

"An' you come for me do dat, with my feedle?" he asked.

"Why, no; not exactly," Tom replied hastily. "We never thought of you until we heard the music. Of course we—we wouldn't ask you."

"For why?" gravely.

"Well, this is a sort of church work, you know," Tom hesitated; "an' you're a—a Catholic."

Leclere was a small, broad-framed man, but as he threw out one of his arms with a slow, deliberate motion toward the noisy water of the creek, the boys felt a sudden sense of awe.

"Music be for all kin'," the man said, reverently. "Dat water be sing, sing, all t'rou de time of de worl', an' it neva stop for Catholic or Protestant or Heathen. Dey all like hear de same. De same sky cover over dem, an' dey warm in de same sun, an' de same Fader as make de worl' make dem: Me neva play for your danser, non, nor cornshuck, nor marry. You hab plenty black man for dat. But if you like me play for dis t'ing dat make people bettair, den me play; me glad to play. Me Catholic, oui; you Protestant; but we both work for make de worl' bettair, hey?"

The faces of the boys were glowing; this was better than they had expected, better than they could have hoped for; but to assure themselves more fully, Tom said:

"It will be mostly slow music; hymns and the like. Can you play from notes?"

A slight smile touched the man's face for an instant, then vanished, leaving his face expressionless as before. But a wistful, far-away look was in his eyes.

"Long time ago," he answered, "I play mooch. You garcons no un'erstan'. No like dese woods. Here I play for myself, for my lonesome an' mebbe for de birds. You get music book what you like, an' me play, anyt'ing. Me glad for play to make worl' bettair."

Tom possessed but two articles which had a market value, his horse and a half-grown calf. That evening he sold the calf to a neighbor for two-thirds its value. But then he got cash.

The next morning he started on a journey over the mountains. The society of which he had been a member, had purchased new singing books during the summer; he was going to see what had become of the old ones. When he returned, two days later, he had them

"Music be for all kin'."

strapped in a large package behind his saddle, purchased with the money he had obtained for his calf.

The next Sunday afternoon nearly fifty young people—all within eight or ten miles who were able to come—gathered in the log building, for Jud had been careful to spread the news of the violin and the hymn

books. A special seat of honor was made for old Leclere near the table, and there were books enough for each one present to have a copy. Before the meeting ended, twelve more members had been added to the roll, and the permanence of the Deer Lick Endeavor Society was assured.

THE PARIS EXPOSITION

Reported by a Boy Reporter Especially for Readers of
The American Boy

FIFTH AND LAST LETTER

Dear Boys—There is a little village just outside Paris where we boys have had lots of fun. The place is called Robinson, and as some of you may guess, it was so named after the famous "Robinson Crusoe," who is as well known in France as he is in England and America. The village is peculiar because it has a number of houses built up in the tree-tops and these queer old structures were modeled after the ones described in the "Swiss Family Robinson." They are made of rough wood, have thatched roofs and one can only reach them by climbing ladder-like steps. Once up in them, however, there is a fine view to be had of the surrounding country, which is picturesque and beautiful. A great many people visit Robinson from Paris and take luncheon or dinner in one of the old tree-top houses. It is a most charming spot and simply teems with attractions. The greatest attraction there for Sidney and me is the number of donkeys which we can ride. There must be three or four hundred of the little beasts in the village and their owners hire them out by the hour. As the price is very low we never go out without having a donkey ride and it is great fun. We go all around the village and sometimes far out on the country roads leading over the hills. Some of the donkeys are not very easy to ride and the first time we went out Sidney was unfortunate enough to select one which was unruly. The little beast went up the hills in the nicest way imaginable, and Sid was delighted with its behavior, but when we wanted to turn back the donkey absolutely refused to turn around. Sid labored with him for some time with a little stick, but the old fellow seemed to pay no attention to it. Finally Sid decided to get off, when the treacherous little beast gave a snort and sent poor Sid flying over his head to light among the grass on the roadside. I couldn't help laughing. It looked so funny to see Sid flying into the road with that surprised expression on his face, and as he wasn't at all hurt, except in feelings, it was really quite a laughing matter. The donkey stood very still after he had accomplished this feat, and Sid said he was bound to ride him back to the village. He turned his head in the direction we wanted to go and much to our surprise the old fellow moved along as nicely as we could wish. But I noticed that Sidney held on very tightly to the reins and since then he has been careful not to choose a wicked looking donkey with gray hair, when we wish to go to ride.

In Robinson there are swings and merry-go-rounds and amusements of every kind for the children, and I couldn't help thinking that it would be a fine thing if there were some such playground for children near some of our great American cities. The Paris boys and girls spend whole days with the donkeys and tree-houses at Robinson, and, of course, they return home at night much refreshed by so happy a country holiday. Sidney and I hope that the picturesque old place may exist for many years longer, and whenever we come to Paris again we will certainly have dinner in the trees at Robinson and afterwards a good long donkey ride.

The great Exposition has been increasing in interest every week and lately there have been many special events which we have liked immensely. We have always liked the illuminations which have taken place on certain nights and of late these have been finer than ever before. Some evenings the Champ de

Mars, which is a great square in the Exposition grounds, is so brilliantly lit up that one can see the reflection in the sky for miles, and when we boys have stood in the square itself we have thought that we must be in fairyland, so wonderful is the scene. At one end of the long esplanade, or oblong square, are some remarkable electric fountains which change color very rapidly and form most beautiful spectacles. Then, about midway in the esplanade is the great Eiffel Tower, lit with thousands of incandescent lamps until it seems to be a tower of fire. At the other end of the space are more fountains, while, all around, the great buildings are decorated with white and colored lamps, making the entire place one blaze of light. On nights when these illuminations take place there are always band concerts, and we have never failed to have a good time. We have decided that we enjoy the Exposition more at night than in the daytime, because all the side-shows are open and it is great fun to wander about examining the various buildings and listening to the music of the bands. We have now visited about all the shows we care to see and have decided that there are only two in the whole lot worth the price of admission. These two are the Swiss Village and the collection of buildings called "Old Paris."

I was successful the other day in obtaining a short interview with President Loubet, of the French republic. I had once seen President Faure and on this account I was very anxious to have a talk with his successor in office. Of course the President is just now a very busy man, and for some time I was afraid that I might not be able to accomplish my desire. There are a great many functions and entertainments held in connection with the Exposition which he is obliged to attend and he hasn't much time to devote to strange boys with an ambition to secure his autograph. I tried for a long time to think of some way in which I could secure an introduction to him, but there seemed no chance of securing any one to do this for me, and I finally made up my mind to visit the Elysee Palace and trust to luck to getting in without being stopped at the gates. I had been to the palace when here before and had finally succeeded in getting in when Felix Favre was President, and I hoped I might be remembered this time. So I went up to the entrance of the courtyard and, sure enough, the soldiers made no attempt to stop me. I walked in and up to the entrance of the palace and soon found someone who could speak English. I asked for the secretary, whom I had seen in 1897, and learned that he was out. They told me I could see him if I returned the next day. Of course I did go back and found that I was remembered. The Secretary said he would be glad to introduce me to President Loubet and I was conducted into his presence without delay and introduced. I found him a very pleasant man. Everyone knows that he is beloved for his great geniality and goodness, and it seemed to me that he couldn't possibly have been more friendly in his manner. He shook hands with me and through the interpreter I told him of some of our experiences in Paris. He seemed greatly interested in all that I said. "I have heard a great deal of American boys," he said, when I had finished, "and I believe they deserve to be complimented for their pluck and energy." President Loubet impressed me as being a man full of business, who works hard

to fulfill the duties of his office, and those who know say that he is going to prove one of the best chief executives the French republic has had. He was raised on a farm amid hard conditions. He had to work long and faithfully for whatever he received, and now that he has achieved such great success, he deserves great credit. His career should be an inspiration to boys all over the world, for he has proved that any boy can make a success in life if he only tries hard and in the right way. President Loubet gave me one of his autographs before I left and wished me a successful trip abroad.

We have been getting along fine with our light housekeeping lately and Sidney says he is going to be his mother's cook when he returns to London. He seems to be really fond of preparing our breakfasts and suppers. He gets up early in the morning and makes the coffee and sets the table and gets everything ready. In the evening he nearly always returns home to get the supper and usually manages to fix something very good. But he says I must do the shopping. "I simply will not fight any more with these awful French shopkeepers," he said, when he came in the other afternoon. "They will not understand what I want, and it takes me about an hour to get two eggs and a loaf of bread." The truth is that Sidney hasn't progressed very rapidly with his French and it isn't much wonder that the shopkeepers don't understand him. He doesn't seem at all ambitious to learn the language. "It sounds to me like pig-latin," he said yesterday, "and I've got something else to do than to spend my time learning any such crazy stuff." Of course he isn't likely to learn anything at all as long as he feels that way about it and he may as well make up his mind to study some.

We will not be in Paris very much longer. We are beginning to feel that we have seen enough of the Exposition for a while and are going to make a short trip into Switzerland, where we hope to climb mountains and have a good time generally. From Switzerland we will go to Oberammergau to see the famous "Passion Play"; and then we will probably come back again to Paris through Germany.

We have had a mighty good time here, and will be glad if we can come back again. Paris is a wonderful city, with the Exposition, the museums, and all the interesting places to visit. Still, there is an idea in my mind just now, that I would rather be an American boy than any other boy on earth.

THE BOY REPORTER.

Paris, November, 1900.

GRIM PLACES FOR NESTS.

If you will note where the English sparrow builds his nest, you will oftentimes be surprised. I once saw a nest built by some sparrows in the mouth of a cannon in the Old Fort on Governor's Island, just off the battery in New York City. I hope that the pair had the good fortune to raise their brood unmolested, and that the family are now fitting about Greater New York, notwithstanding their grim, warlike home.

On the corner of Forty-fourth street and Lexington avenue, New York City, high above the pavement, there is carved a lion's head, in the mouth of which a pair of sparrows recently built their nest and raised their young unmolested, regardless of the ferocious eye and mouth of the King of Beasts.

Little Hercules admits he ate it all; but the question is, where did he stow it?

LITTLE CHING CHUNG LING'S CHRISTMAS

L. E. M. SMITH

LITTLE Ching Chung Ling lived with his parents on the very edge of Chinatown, and so it happened that not far away lived a "Melican" family with a little boy about the same age as Ching Chung Ling. These children were very fond of spinning their tops together,

and when a tempting wagon passed that way it was nip and tuck between the two to see which would hang on the longest, though the driver usually decided this point by shaking both off at the same time.

The American boy had tried to teach the little heathen the fascinating game of leap frog, but the little fellow's clumsy clothing, consisting of a loosely fitting quilted under vest and over this a broad, flowing garment of cloth with wide, loose-hanging sleeves and bulging trousers, made it impossible for him to show the agility in jumping that was necessary in emulating the lively "Melican flog." The game of horse, however, was a success, as Ching Chung Ling's long braid of hair, or "pig tail," as the "Melican" boys called it, always came in very handily for reins, which made Ching Chung Ling the horse every time. But Ching Chung Ling, like other Chinese children, was of a joyous disposition, and he good naturedly submitted to such restraints of government as his playmate took advantage of.

Christmas time was drawing near, and the American boy could talk of nothing else but Santa Claus and what he

The game of horse was a success.

expected that wonderful person to bring him, enlarging, of course, with a lively imagination for the little Chinaman's benefit, upon the number of things he had found in his stockings the Christmas before.

Little Ching Chung Ling couldn't make out all that the "Melican" boy told him, but he understood enough to excite in him the most lively feelings of interest in this "Melican god," as he thought this "Sanna Clausa" must be. His little jet-black eyes that usually had the appearance of being ready to spill out of his little brown countenance, now caused the other boy considerable uneasiness as he noticed how they fairly bulged out after listening to one of his highly colored descriptions of Santa Claus's liberality in bestowing gifts.

Little Ching Chung Ling now began cautiously to question his parents, to discover whether they had not an idol like the "Melican Sanna Clausa," before which he could bow down and burn little slips of paper bought from the priest,

and in this way bribe that god to remember him at Christmas. But to his disappointment, he learned that "Sanna Clausa" was not numbered among their gods, or idols. Then he began questioning the American boy as to the possibility of communicating with this "Melican god," and also the best way to court his favor. He learned what many American children would do well to remember, that to make friends with Santa Claus he must be "oh, so dreadfully good!" for just three or four days before Christmas, and then "Sanna Clausa" would be sure to remember him.

Little Ching Chung Ling was "oh, so dreadfully good!" for as long as six days before Christmas. He judged from the malicious desire that possessed all the Americans boys he had ever met to pull his "pig tail," that to the American mind it must be a very objectionable appendage, and so the poor little heathen thought that his "pig tail" must be atoned for by doubling the time of probation. In his zeal to attain the proper amount of goodness prescribed in the recipe given him by his playfellow to make a favorable impression on the "Melican god," the little fellow was running to Quong Chong's shop on errands for his mother all day long, bringing home many little brown paper parcels containing such small dabs of the queerest looking stuff! And once, when they had company from over the sea, actually he was sent after as many as three chicken legs, two wings, a neck and the back of a duck, all cooked and ready for the table.

And he tried to be "oh, so dreadfully good" in other ways. He was always anxious now to go with his father to the joss house—the Chinese church—where he imitated his papa and the other Chinamen in bowing down to the floor before the hideous idols that frightened him so very much. He always gave his little head an extra hard bump to please the gods, thinking that this extra goodness on his part might be mentioned incidentally some day by the Chinamen's gods when conversing with those of the Americans. In his sleep at night his mother heard him say something that sounded like "ohsodreadfullygood!" and she thought it must be some bad "swear word" he had learned from the "Melican" boy.

Christmas Eve arrived, and little Ching Chung Ling, full of perfect faith in "Sanna Clausa," was wild with excitement, and looking forward anxiously to bed time, when he could place his little white slippers in a convenient place for the "Melican god" to find them, after which he would go to bed and to sleep that he might quickly bridge over the long time that must elapse before Christmas morning arrived. He would like to remain awake all night watching for "Sanna Clausa," but the "Melican" boy had especially warned him against committing so fatal a mistake as that, and the little heathen wasn't going to risk any of his chances with this strange god by disobeying directions.

But the poor child's patience was sorely tried by his own papa and a number of other papas staying up most of the night to play cards, after which they smoked long pipes ending in a tiny little bowl or no bowl at all, and the smoke was so queer that it made the little fellow very sleepy, and he knew that he must not go to sleep until he had put out his little shoes for "Sanna Clausa." "And, oh! suppose the Melican god should come while they were all up, and see all those pig tails!"

At last every one was asleep, and little Ching Chung Ling, trembling with excitement, carried his two little shoes to the door, where he placed them on the floor just to one side where "Sanna Clausa" was sure to see them as soon as he opened the door. That was the only way the "Melican god" could get into this room, for there wasn't any fireplace nor even a crack left open in the window

where he could squeeze through, even were he ever so thin, which he was not, according to the "Melican" boy's vivid description.

On Christmas morning, little Ching Chung Ling was awake before any one else in that crowded, ill-smelling room. He peered out of his end of the bunk, or bed, towards the door, but in the dim

A heart-rending howl broke from his little bosom.

light could see nothing, not even his little white shoes. Then he got up very cautiously, for fear of waking some one, and, greatly excited, crept up to the door and felt around tremblingly for his little shoes and the Christmas gifts that would be pouring out of them all over the floor; for had he not been "oh, so dreadfully good" for as long as six days before Christmas?

He got hold of one shoe, and "oh!" it was actually empty! He could hardly keep from crying. "But perhaps the Melican god wouldn't fill but one shoe for a little boy that wore a pig tail." So the confiding little heathen gulped down his tears while he felt around for the other shoe. It, too, had nothing in it! He was so dumbfounded that "Sanna Clausa" should have broken faith with him thus entirely that he was too hurt now to be able to cry. He persisted for a while in feeling around all over the floor, hoping against hope that the things might have spilled out. He rubbed his trembling little hands over the rough, dirty boards for a yard or more around—but most certainly there was nothing—"Sanna Clausa" had not come, after all!

When the poor child was finally convinced of this woeful fact, he made a rush for his bed, and burying his head under the bed clothes to stifle his despairing cries, the little heathen sobbed and sobbed as though his little heart would break. Then when he had quieted down sufficiently to be able to think, he remembered how short a time he had spent in bumping his little bruised head before that hideously ugly idol in the joss house, the one that always frightened him so very much.

"Oh! oh! oh!" he cried, "that must be the reason 'Sanna Clausa' did not come, oh! oh! oh!"

The grief-stricken Ching Chung Ling finally got out of bed and went out on the pavement, where he found the "Melican" boy tugging a little wagon after him, and in this wagon were other things that Santa Claus had brought him. His hands were full of candy, his face, too, was smeared with it. Before gazing upon these indisputable proofs, little Ching Chung Ling had begun to harbor a faint hope that the "Melican" boy might have made a mistake in the day—that it wasn't yet time for "Sanna Clausa" to come. But now! how could he doubt it! Well, he was but a little heathen, and human at that; so a heart-rending howl broke from his little bosom, and rent the morning air.

The mother of the American boy came running out of her house at the sound of this cry of distress, and upon learning

FREE TO BOYS and GIRLS

walkers, cameras, jewelry, music instruments, sporting goods & many other valuable premiums for selling 30 SILVER ALUMINUM THIMBLES at 10c. each; package gold-eyed needles given FREE with each thimble. the cause of Ching Chung Ling's great woe, she immediately thought of a cure for it. She told him that Santa Claus must have surely lost the number of his home—he did do that sometimes, there were so many places for him to visit. If Ching Chung Ling, however, would go with her in the evening, she would take him to a place where Santa Claus himself was going to distribute gifts from a Christmas tree, and, strange to say, most of the things were what he had forgotten to take around Christmas night.

Little Ching Chung Ling's grief soon vanished at the thought of this great event of the evening. Actually! he was going to see "Sanna Clausa, the Melican god!"

When evening came, so did little Ching Chung Ling, dressed in his best suit, which consisted of something out of the ordinary. He wore green silk trousers tied in at the ankles and puffing out like two balloons; a quilted yellow brocaded silk undervest with silk cord and tassels of a green color; an over garment of purple velvet with wide flowing sleeves; and on his head a little red silk skull cap. His hair was braided out with yellow string, and his "pig tail" almost swept the ground as he walked along so daintily and proudly in his tiny canoe-shaped white slippers, embroidered in silk threads of red, green, yellow and blue.

When he reached the Sunday school and got his first glimpse of the Christmas tree, his astonishment and delight knew no bounds, and when "Sanna

Claus, the Melican god," appeared upon the scene and gave to little Ching Chung

The poor little heathen bowed down before this god.

Ling with his own hands some pretty things off the tree, and a little wagon that was just like the "Melican" boy's, the poor little heathen bowed down before this god, as he thought him to be, and in his great awe and gratitude was proceeding to bump his little head full of bruises, but just then the American boy's mother raised him off the floor and led him away. And, oh! he was so very happy this Christmas day that "Sanna Clausa, a Melican god," had remembered to bring something to a little boy that wore a "pig tail"

The Bad Boy.

FROM THE WASHINGTON EVENING STAR.

His hair is red and tangled, and he has a turned-up nose; His voice is loud and strident, and it never gets repose; His face is full of freckles, and his ears are shaped like fins, And a large front tooth is missing, as you'll notice when he grins. He is like a comic picture, from his toes up to his head— But his mother calls him "darling" when she tucks him into bed.

It is he who marks the carpet with the print of muddy boots; And rejoices in a door-bell that is pulled out by the roots. Who whistles on his fingers till he almost splits your ear, And shocks the various callers with the slang he chanced to hear. He fills the house with tumult and the neighborhood with dread— But his mother calls him "darling" when she tucks him into bed.

A BOY'S ASCENT OF MT. HOOD

TRAFTON M. DYE

THE CLIMB.

ern Oregon and Warm Spring's Indian Reservation. Not far away the piled-up ice of the White River glacier plowed its way in a deep canyon and finally issued in a stream of milky waters far below. From among the foothills, flashing through the morning light, came a heliographic signal from the faithful wife of our guide at the camp which we had lately left, to which he flashed an answer by holding a hand mirror up to the sun.

An hour passed as we sat there on the rocks, then with weariness somewhat abated, we grasped our alpenstocks and turned our faces upward. Ascending to the Arete, a ridge of snow, we followed its steep and icy crest to a yawning crevasse forty or fifty feet across and of unknown depth. Creeping cautiously along its edge we came to a bridge of ice and crossed the dangerous chasm.

Then came the steepest part of the climb, just as a heavy fog rolled down, enveloping the entire party. A single

fog we were enabled without dizziness to proceed the remaining distance to the top. Zigzagging along, we followed the guide under whose care no life has ever been lost, at an incline of forty five degrees or fifty degrees, on the face of the cliff, cutting each step with an ice axe as we proceeded. Occasionally we heard what seemed to be falling rocks on a neighboring cliff, but proved afterwards to be thunder.

We stepped on the summit, eleven thousand feet above the sea, in a snow-storm. Soon the clouds lifted, though continuing to hide the sun, and the storm ceased; yet standing there, on Mt. Hood's top, we could look out under the clouds and see the rain pouring down on Eastern Oregon. Then our heads began to itch and something buzzed in our hair. I thought there was a bee in my hat, but could not find it. One of the men ran his fingers through his hair and electric sparks were seen. Our iron-tipped alpenstocks, when held up, began to buzz like arc lights. The clouds seemed to be closing in on us, so we concluded we had better return. We went down very cautiously until we had crossed the crevasse, then sliding much of the way, we soon arrived at the timber line, where we found our lantern, and were soon through the

MT. HOOD IN CLOUDS.

TRAFTON M. DYE.

ON August 20, 1900, as one of a party of five, under the guidance of the veteran mountaineer, O. C. Yocum, I made the ascent of Mt. Hood, the highest snow peak in Oregon. This was my third and by all odds most exciting ascent of the famous mountain.

We left Government Camp at three o'clock in the morning, with only the flickering light of a lantern to guide our footsteps through the forest. After a brisk walk of four miles, up hill all the way, we arrived at early dawn at the timber line and left our lantern in a bush. Clambering over the rocks we reached the edge of the vast snow-field and started to cross it. Crater Rock was plainly visible before us, and appeared to be only a quarter of a mile distant, yet it took us several hours to reach its welcome shelter. The rock is apparently a fragment of the southern edge of the old volcanic crater of Mt. Hood. Here in places we could hear water boiling, and see steam issuing from crevices in the rocks. Seated on a bench of the great rock we ate our lunch and caught our drinking water in cups, a drop at a time, on the edge of the melting snow.

A most magnificent view was spread out before us. Immediately in front were the receding foothills, rising ever and anon into distant snow-peaks, like Mt. Jefferson, the Three Sisters, and others of the great Cascade Range. To the left lay the great wheat fields of East-

misstep, a lost footing, might hurl us into the yawning abyss below, but with the danger behind hidden by the friendly

timber and safe at the foot. A hard day's work, but sights seen never to be forgotten!

THIS TOY

Consists of rubber stamps representing parts of a man, a horse, a rifle, sword, two hats and a cap, the object being to stamp out a picture or composition from these various parts. The stamps are nearly twice the size indicated by the accompanying pictures. For instance, the picture of the man with the gun on his shoulder shown herein is about one and one-fourth inches long, but the rubber stamp represented by this picture makes a man two inches long. The pictures had to be reduced to three-fifths the size of the stamps in order to get them into this page. The rubber stamps are used in connection with an ordinary ink pad.

With the set of twenty stamps here shown, thousands of combinations are possible. We show a few simple ones made by an eight year old boy.

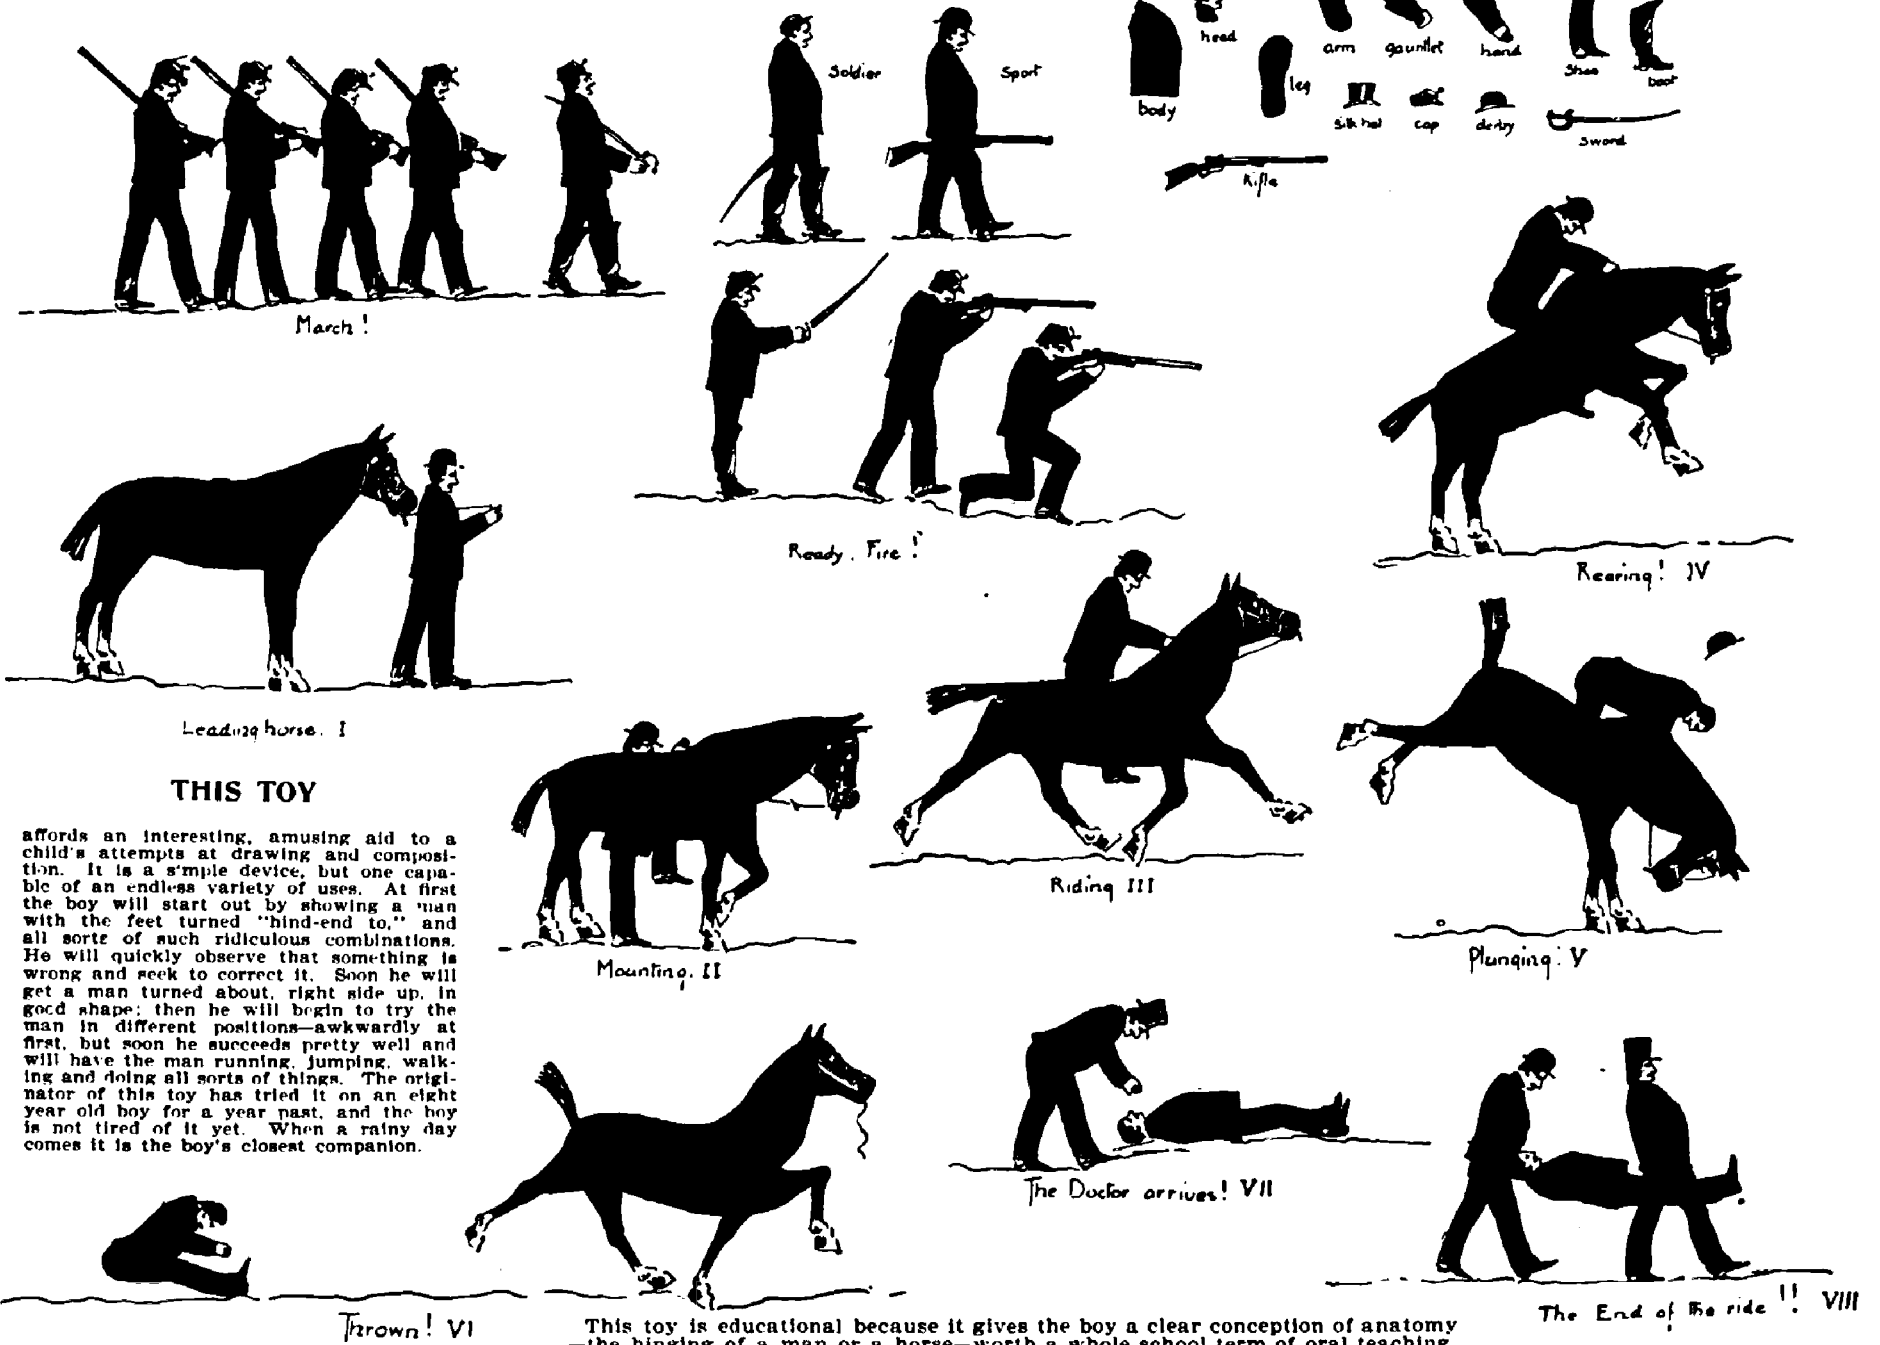

THE COMPOSITE RUBBER-STAMP PICTURES

An amusing, interesting and educational Toy It cultivates originality, composition and form; also the study of anatomy

OUR OFFER.

We will sell this educational toy, consisting of the seven parts of the horse and thirteen parts of the man, gun, sword and clothing, together with self-inking pad and full directions, all neatly enclosed in a box and delivered free for 75 cents; or will give the toy complete FREE to any AMERICAN BOY subscriber who will obtain for us a new subscriber.

THE SPRAGUE PUBLISHING CO.,
DETROIT, MICH.

THIS TOY
affords an interesting, amusing aid to a child's attempts at drawing and composition. It is a simple device, but one capable of an endless variety of uses. At first the boy will start out by showing a man with the feet turned "hind-end to," and all sorts of such ridiculous combinations. He will quickly observe that something is wrong and seek to correct it. Soon he will get a man turned about, right side up, in good shape; then he will begin to try the man in different positions—awkwardly at first, but soon he succeeds pretty well and will have the man running, jumping, walking and doing all sorts of things. The originator of this toy has tried it on an eight year old boy for a year past, and the boy is not tired of it yet. When a rainy day comes it is the boy's closest companion.

This toy is educational because it gives the boy a clear conception of anatomy—the hinging of a man or a horse—worth a whole school term of oral teaching. He soon takes to drawing in connection with his stamping, supplying with his pencil parts or accompaniments he does not have in stamps. He must be accurate in stamping out a picture in hinging the various parts together, and this gets him into habits of thoroughness and painstaking in detail. There is no end to the thing. One boy has gotten up over one thousand combinations of a man, showing him drilling, swimming, exercising, and what not. There is, in fact, a bushel of fun and instruction in this educational toy.

Short Talks to Boys

J. W. BURGESS.

No. 8.

Remain in school as long as you can, consistently with your circumstances, and don't be ashamed to fill in your spare hours at manual labor, in order to help along in the purchase of your books, and the defraying of other necessary expenses. Be just as independent as your circumstances will permit, and never use the funds of another when you can provide them yourself. Don't think you must be helped to everything you have. An education for which you toil, and scheme, and economize will stand by you longer, and be appreciated by you more than one that costs you no effort beyond the mere mental exertion necessary to

the study of books. The country is filled with college-bred young men looking for situations, who have no experience beyond book-learning. Whether graduated from a college or from a district school, the men who hold the reins of power today, in every walk of life, are those who have come up out of more or less tribulation, and who have good, hard, common sense and practical methods gained by rubbing against the rough side of the world. That sort of experience produces within a man a rugged determination, and a rigid back bone that can be secured in no other way. So, boys, cultivate independence.

No. 4.

If it becomes necessary for you to leave school for a time and go to work, do it gracefully. Work is honorable. Don't be afraid of it. It would be an excellent

idea for everybody to learn a trade. The old Jewish law made it obligatory, asserting that if a man neglected to teach his son a trade he did the same as make him a thief. The emperor of Germany is a bookbinder. The fact that you have a trade need not make you work at it, but with a good trade at his fingers' ends and good health to back it, a man is seldom floored, no matter where he finds himself. If you start to learn a trade, remember that the harder you work, and the more closely you apply yourself, the sooner you will outstrip all your chums and land on the top of the ladder where situations are many and wages are high. Don't be afraid to work. Don't be content with merely putting in the allotted time, but try and find out the best way to accomplish the work you have to do in the heaviest and most expeditious manner. You may think that effort of this

kind is not appreciated, but it is, and when some fine day there is a chance for promotion, and when you find yourself singled out from half a dozen of your chums, and sent up a step higher, don't attribute it to luck, but to the fact that your employer saw and appreciated the fact that you were careful and painstaking and took this method of rewarding your efforts.

On the other hand, if you go fooling along, doing just as little as you can, and not even that until you are told repeatedly, and then in a slipshod and slovenly manner, don't attribute it to luck when some other fellow is allowed to go several rounds above you on the ladder, at better pay. The employer has seen the difference between your way of doing things and the other boy's, and prefers his to yours, that's all.

(Others to Follow.)

MANY American boys love to tinker with hammer and nails. Some do it just for a pastime, spoiling their materials and casting the work away when something new comes into their heads, but others spend their time to better advantage, making kites, boats, wagons, etc., instead of buying them.

They very often, too, enjoy making playthings for their sisters. Next to the doll, there is hardly a doubt but what the doll-house is prized more than any other plaything, and one made by a brother is certain to be thought a great deal more of than is one that has come from a store.

I shall endeavor, in this article, to tell how to construct a doll-house with little expense. The plans given here are for a house of three floors, containing seven rooms, and in size, twenty inches deep, thirty two inches wide, and four feet high.

Large packing boxes can be used, but any boards you have on hand about one-half inch thick will answer the purpose.

For the foundation, cut two boards each thirty one inches long by six inches wide, and two each nineteen inches long by six inches wide. Mitre the ends of these and nail them together. Saw up enough boards thirty one inches long to make a floor nineteen inches wide. Nail this floor onto the foundation. Now, with a sharp pencil and square, mark out upon the floor the part inside the heavy line of the plan of Fig 1, being careful to get the dimensions exactly the same as given upon the plans. The reason for not including the part outside of the heavy line is that that represents the outer walls which are to be nailed onto the edges of the floor.

For the side walls, cut enough boards two feet long to make a width of twenty inches, and nail them onto the edges of the floor. We will leave the cutting of the windows until near the last, but when partitioning off the rooms, we will cut the doors there as they cannot be made so easily when the partitions are put in place. First cut out partition (F) the shape and dimensions given in Fig. 2 and after making it (F) lay it aside and make partitions (G) and (H). When these are made, nail (F) and (G) on the places drawn for them upon the floor. Then slip partition (H) between (G) and

the side wall, on the line marked out for it. In fastening these, hammer the nails from the outside walls and underside of floor, using great care not to split the wood. It will now be necessary before making the second floor to cut two strips nineteen inches long, and nail one on each side of the house, thirteen inches from the floor. This gives something to which you can attach the floor for the second story. It will be noticed in Fig. 3 that there is a space five and a half by ten and a half left in the floor for the stairway and elevator shaft. After nailing down this floor, mark out upon it the plans for

second floor (Fig. 3). For the partitions see Fig. 2. When these have been made according to the dimensions given in the figure, nail them on the places marked for them. Partitions (D), (B), (E), must be mitred at the ends where

they meet so as to make them join neatly. Partition (B) goes above the door. When these are nailed in place the third floor should be made (Fig. 4). As in the second floor, a space two and

a half by five and a half inches should be left for the elevator shaft. Care must be taken to have this space exactly over the one left in the second floor.

Next make the roof. It will probably be easier to construct it in two parts, the dimensions of each being twenty eight inches long by twenty four inches wide. After cutting the boards, fasten them together by means of strips of wood, as shown in Fig. 5. Mitre one edge of both sections and nail them to the top of the house.

It will be noticed that neither back nor front of the house has been made. It is intended to have the front swing on hinges, and also the part of the back wall enclosing the kitchen and bathroom. Cut the boards the right length and after fastening them on, in the way described above, make the gable ends, fastening the rear one and leaving the front loose, so that it may be removed.

With a small saw, cut windows where they are indicated upon the plans, five by seven inches. Secure some pieces of glass five by seven inches (old camera plates will do nicely) and nail them in place with some strips of cigar boxes, which will also do for window casings.

Use your ingenuity in constructing a pair of stairs from the first floor to the second.

Make an elevator five inches long by

two inches wide and, fastening a small pulley to the ceiling of the third floor, run a small chain over it, attaching the elevator to one end and a weight heavy enough to balance it on the other. To keep it from swaying from side to side it is advisable to have it run on wires, which may be fastened to each side of

the elevator by small screw eyes or tea tacks.

You can now paper the rooms, nail on the door casings, baseboards, etc. Cigar

boxes, broken up into strips, and oiled will answer very well for finishing the inside of the house, such as the baseboards, door casings, hall floor, steps, etc. Cover the floors with scraps of pretty carpet, and out of cigar boxes a very pretty set of furniture can be made. Lace curtains may be put on the windows. It will be unnecessary to cut a door in the front of the house, but a false one can be made and fastened upon one of the swinging fronts. Below this door construct steps. Make a chimney and nail it on the roof, after which paint the house a terra cotta color with blue trimmings.

A MAP OF THE UNITED STATES
SIZE 48 X 34 INCHES
MOUNTED TO HANG ON THE WALL
PRICE 15 CENTS
This map is particularly interesting and valuable, as it shows in colors the different divisions of territory in America acquired since the Revolution. The original thirteen states, Louisiana purchase, the Texas annexation, the Gadsden purchase, the cession by Mexico and the Northwest acquisitions by discovery and settlement. It will be sent on receipt of price, fifteen cents.

The Cruise of the Yacht Gazelle; 6,000 Miles on Inland and Ocean Waters

KENNETH M. RANSOM

These are the ninth and tenth chapters in the story of a six thousand mile cruise by four Michigan boys in a boat of their own construction. Setting sail from St. Joseph, the "Gazelle," by which name their craft was known, proceeded by way of lake, river and canal to the Mississippi, thence to New Orleans and the Gulf, along the gulf coast to the Atlantic, thence to New York harbor by way of the ocean, thence by river, canal and lake, home to Michigan.

CHAPTER IX.

TEN THOUSAND ISLANDS.

On the west coast of Florida is found Cape Romano, generally conceded to be one of the very roughest places along the whole Gulf shore. On the second day out from St. James City, Romano was sighted and by noon Gazelle was abreast the reef-bound point. The wind which had been fresh all day had by this time increased to a perfect gale, and coming as it did from the southwest was not at all in our favor. The idea of a ten mile beat to windward until we should clear the buoy, far out at sea, was not a decidedly pleasant one; but it had to be done.

Retaining all sail, our exciting beat to windward began. Along the bar, as far as the eye could see, was one frothing, boiling mass of white breakers, with now and then a huge black rock lifting its ugly head far above. Then again on the uneven bottom a swell would break sometimes near the yacht, warning us of sunken dangers. The wildness of it all was grand. Gazelle did strain and creak, but ever onward in the deep sea, far out from the dangerous reef, she found her way. At last the bell buoy was reached and knowing that the end of the shoal was doubled, we headed eastward and, although nearly in the trough of the large sea, with sheets

FISHING AMONG THE TEN THOUSAND ISLANDS.

slackened, we simply flew along, leaving a wake of foam aft, and the shoal far astern. Soon the first emerald hue of the Ten Thousand Islands loomed up in the distance and we were glad, so glad, when we finally dropped anchor in the lee of the largest of a large group. Frank and I rowed ashore, leaving the mate to prepare supper. We were impressed with the beauty of the place and wished we might have a cottage on its lovely shores. As we walked along, picking up shells, I was startled by a rooster's crowing. At first I thought I was mistaken, but the crow was again repeated, so we started inland in quest of Mister Rooster. We had not gone far before we reached a small clearing. Nestling in a grove of banana and cocconut trees was a small weather-beaten cottage, commanding, from its location, an excellent view of a small bay on whose bosom a small sloop rode at anchor. It was a beautiful scene. Improvised garden tools and other utensils gave evidence that the owner was a genius. Near by the door on a rudely formed bench was a tub made from the inverted shell of a huge turtle, and several pieces of clothing hung on a bark clothesline.

Approaching the door, I knocked and was met by a rather young woman who seemed timid at a stranger's approach, but I tipped my hat and asked if she could direct me to a fresh water spring or give me any information as to the coast farther on. She told me where to find the water but was unacquainted with navigation, but beckoning me to

follow her, she led the way across the room to a door leading into a second apartment.

As I entered the room I saw before me, reclining on a low couch, a man. He was brown from exposure and

INDIANS OF THE EVERGLADES.

showed the unmistakable signs of a life spent at sea. In stature he was short, but his broad shoulders and stocky build proved that he had once been a very strong man.

As I asked for information and told of our trip the old man rose to a sitting posture and seemed greatly interested in us. After hearing our story he gave me many helpful and interesting accounts of the navigation of the labyrinth we were about to tackle, and I was truly surprised at his complete knowledge of seamanship. In fact, there was something extraordinary about him, but just what, I knew not. When we started to leave he expressed a desire to see our craft, which being anchored on the opposite side of the Key made a walk of nearly half a mile necessary. Lighting his pipe and taking up a Cuban machete he led the way and in Indian file we proceeded along the narrow trail.

When we reached a point of vantage we all stopped and gazed upon Gazelle riding peacefully at her mooring. Our guide expressed himself as greatly pleased with the craft and for half an hour we stood and talked upon the relative merits of small boats of past and present design. The old man was so well informed on all matters pertaining to the sea that I became anxious to know the history of his past. I asked him if he would not relate some incident in connection with his life that would make an interesting item for my log.

He looked at me with a queer glance and asked: "Well, how old would you say I am?" I guessed eighty five. Frank thought eighty. The old man laughed and said, "Ah! boys, I fool them all; my name is John Gomez, and if the Lord spares my life until Christmas day I will be one hundred and twenty three years old." Thus the oldest man in America had looked upon our yacht. His remarkable old age was the extraordinary something I had seen in John Gomez, inhabitant of Panther Key.

For several days we cruised among the beautiful Keys and enjoyed them hugely. The tribes of Seminole Indians living in this locality greatly interested us. They are splendid specimens of physical manhood, and those I saw seemed to be exceedingly generous. Notwithstanding the pleasant things of the day, the mosquitoes were such a pest at night that we were all glad when we left the Everglades and sailed more in the open sea, for although the Indians and "razor-back hogs" seemed to stand their bites, we couldn't.

We had already been several days out from Senibel, and being anxious to reach Miami and thus be homeward bound, we all gave a shout of joy as Cape Sable was sighted. At five o'clock we dropped anchor in the lee formed by the east cape and were glad to find a large fishing fleet of small sailboats. It was good to see white men again, for Gomez and the young woman at his cottage were the first whites we had seen for several days.

We had a nice visit with the fishermen, who seemed to think we would make a speedy voyage to our destination. Thus encouraged we remained a

day at the cape and loaded our spare room with several hundred cocoanuts, which we had come to like.

The sky had a threatening look when we left Sable. Crossing to Sandy Key, we held our course across Florida Bay and by night had reached Grassy Key, one of those small islands forming the long chain from Key West to Biscayne Bay.

The storm which had been gathering all day finally broke at sunset with great force. Heavy rain, accompanied by vivid lightning and heavy thunder made a very tempestuous night; but Gazelle was securely anchored in a small bay, which gave ample protection from the gale, and had it not been that our water and food supply were running scant we would have been very happy. Next day dawned bright and clear, but a heavy sea ran in from the ocean and we were held prisoners for three days more. Cocoanuts and oatmeal formed the principal articles of our diet during this period, and though we found the milk of the nut a good substitute for poor water, we were all glad and thankful when the wind again settled down in a southwesterly direction and allowed us to proceed on our way up the Hawk channel to Miami, which we reached in safety.

During this time we had been unable to send communications home, and owing to our delay and the dangerous character of the waters we were navigating, our parents and friends had long since begun to fear for our safety. But telegraphic messages, followed by long explanatory letters, told that we again had conquered.

The Gulf was behind us, Gazelle had acted her part well, and now she seemed restless to enter the new element which spread out before her, and my confidence was complete that the little craft would successfully master even Old Ocean.

CHAPTER X.

MIAMI AND A SHARK.

It seemed good to be among people again after a voyage of thirteen days. Miami people were on the lookout for us, and no sooner had we stepped ashore than we were greeted by them as if we had been old friends.

The name Gazelle on our sweaters told who we were. All seemed familiar with our cruise, for our parents had long since become solicitous for our safety, as they had been unable to get word to or from us since our departure from St. James City. Frequent telegrams and letters had been sent to the postmaster asking if any information had been received from or of us, and in each case a negative reply had been

THE PLANTER'S HOME, CAPTAVIA, FLA.

sent. Those were days of anxious suspense at home. Our parents fully realized the dangers of the voyage through the everglades, knowing as they did the history of the dismal, intricate passes and dangerous shoals. How easy it was

"All Roads Lead to Rome."

And all business in New York seems to tend toward

Grand Central Station.

This great building, which covers the space of four city blocks, beginning at the corner of 4th Avenue and 42d Street, is the Metropolitan terminus of the

New York Central Lines

and is the center of the hotel, residence, club and theater district of the second city in the world. To reach it, see that your ticket reads by the NEW YORK CENTRAL.

A copy of the 40-page Illustrated Catalogue of the "Four-Track Series," New York Central's books of travel and education, will be sent free, post-paid, to any address on receipt of a postage stamp, by George H. Daniels, General Passenger Agent, New York Central Railroad, Grand Central Station, New York.

to become lost, perhaps wrecked; and even if lucky enough to reach the shore, one might die of thirst and starvation away from friends and nevermore be heard of. No wonder then that our being long overdue greatly distressed our dear ones. But now all worry must vanish, for here, peacefully riding at anchor off this southernmost city of Florida, on the bosom of Biscayne Bay was Gazelle with crew well and hearty, and little the worse from their long diet of weevilly oatmeal and coconuts.

Soon messages were clicked off to our parents telling of our safe arrival, followed by first mail by our long, long letters which had been written from day to day, and were now almost of sufficient size to send by express. These letters told all about our delays, and how we had fared and enjoyed ourselves, and I am sure were very gratefully received.

During our cruise our hair, which had not been trimmed since leaving New Orleans, had grown to such a length that football players would have turned green with envy in gazing upon us. While ready to admit that such long locks are a decided benefit in the fall, when we line up with "five yards more to gain or lose the pigskin," I am equally positive that they are not conducive to comfort in a climate whose June days seldom find the mercury below the one hundred mark.

It was therefore agreed that our hair must go. Not simply a good, stylish trim, but a downright close clipping was the decree. So like Indians on the trail we three fled into the barber shop. The result was wonderful. When I gazed upon my companions I thought I should die from laughter, and they in turn laughed at me; in fact the whole community enjoyed a laugh at our expense and I didn't blame them, either.

Talk about funny looking mortals, we were the funniest! Our faces were burnt nut-brown by exposure to the sun's rays, while our heads, so long covered, were white, and the decided contrast made us look very comical, but we were comfortable, and people forgave us for comfort's sake.

Miami is a city of mushroom growth so to speak, having risen to importance in a very short time. Besides being the terminus of the East Florida Railroad it is the nearest and most convenient port in touch with Cuba and Key West. The magnificent hotel known as the Royal Palm offers most luxurious entertainment for the tourists who come to winter in this favored latitude where sunny days and all kinds of fishing and other sports are enjoyed.

The pineapple season was at its height when we were in Miami and we were surprised at the vast number of crates brought to the city for shipment north.

After a two days' visit we hoisted "mud hooks" and waving back adieu to our friends, wended our way toward the old Point Florida lighthouse, passing which we would be in the broad Atlantic and our course would be to the north, and once more toward home.

Biscayne Bay is shallow and full of bars, and the bottom being covered with a thick seaweed growth makes them hard to see and the channel very difficult to follow. We had proceeded about two miles from the city when we brought up on one of those sand spits, and good and hard, too, for we were traveling along at a merry clip. The tide was ebbing and each minute the receding water left us higher and higher on the sand, notwithstanding that we made every effort possible to get afloat. Finally the water had so fallen, that we knew it was no use, and that we must stay a-bar until another high tide, which would be at least a six hours' wait. This was very disappointing for we had hoped to round the point by ten o'clock and be well up the coast ere nightfall, but by the time we would get free it would be too late to think of crossing the bar; thus we must stay in the bay all day and all night.

Taking our anchors out into the deep channel in the small boat, we cast them overboard with the ends of the cables made fast on Gazelle. By this means we would be enabled to haul the yacht into the channel as soon as the flood tide should rise to sufficient height, and thus

escape the danger of being driven higher on the bar by wind and wave when the boat floated.

The tide soon dropped so low as to leave our craft almost high and dry on the bar, of course she heeled over on one side and made it hard to stick on board, but it also gave us a splendid opportunity to examine the bottom, which we found in excellent condition.

Inasmuch as we would have to remain in the bay all day we resolved to make the best of our time and enjoy ourselves. The yacht was so tipped that there was no pleasure in remaining aboard, so we all decided to have a good swim, after which it was agreed that an excursion should be made along the beach in quest of shells. On one side of the bar we found a quick shelving bank dropping off into deep water, which afforded a splendid swimming hole. Leaving our clothing aboard the boat we ran across the bar to this place and each in turn took a dive into the sea. We enjoyed our swim for some time when Arthur and myself made up our minds to come out. Frank had not satisfied his appetite for the sport, however, and, while the mate and myself ran foot races along the smooth, hard-beaten sandbar, he continued to force his way over the long swells which were running in from the ocean.

Frank is a fine swimmer and I always watched him cleave the waters, with delight. I chanced now to look his way and was surprised to see how far out he seemed to be, and as far as I could make out was still swimming away from us

FLORIDA "RAZOR-BACKS."

as if to reach the other bar some one hundred yards from where we stood. I could not account for this as we had agreed not to get far separated as large sharks frequent the waters of the lower bay and swimming there is dangerous. I became alarmed and shouted for him to return, when I noticed that he was swimming in circles and splashing the water frequently. I made up my mind that he was in trouble, and, running to where the yawl lay hauled out on the sand I forced her into the water and was soon flying over the swells toward my companion.

As I neared him I looked over my shoulder, and my blood almost ran cold as I saw his dangerous situation. I could see now and then the fin and sometimes the back of what I knew to be a shark of the largest kind. Frank was swimming and splashing with all his might and main, and I was surprised at the coolness he displayed as his voice called, "Hurry up, Cap, I am most tuckered." I bent to the oars and was soon up with him. Taking advantage of being in the boat I swung in between the cook and his enemy, at the same time rocking the boat violently so as to frighten the monster and keep him at a distance, while I hauled Frank, who was now all but exhausted, into the boat. It was a narrow escape and I realized that help had arrived just in the nick of time for our comrade was almost overcome by his battle with the man eater.

No one would have supposed such a thing had happened had they chanced to see the hero an hour afterward, as we all three walked along the shore looking for shells, hatless, barefooted, with only a flannel shirt and a pair of overalls cut off just below the knees as a costume.

Young People's Weekly

The Best for Youth

"The Best for Youth" is the trumpet-call of the Century. No longer are our young men and young women assigned secondary parts upon life's stage. This is the Age of Youth. Young People's Weekly strives to be helpful to the young and thus stand the Right-hand of Home and Nation.

THE WORLD OF T-O-D-A-Y

Among many new features none are more popular than "The World of To-Day," edited by William E. Danforth. Mr. Danforth is the possessor of strong convictions, coupled with a courteous Christian spirit. He believes in youth, and is loyal to its interests. Things pertinent to the hour, and vital to the growth of true manhood and womanhood, will be given a large place in this department, and the best men and women of the nation will be counselors and aids.

SERIAL STORIES FOR THE NEW YEAR.

Toilers in the Dark
A STORY OF THE MINES
By William Futhy Gibbons

A STRONG STORY.
A Shining Mark
By William E. Barton, D.D.

Six Striking Stories

The coming year the WEEKLY will hold attractions for every member of the family. While it is distinctly a young people's paper, it is the friend of the fire-side. Of interest to all will be the following six stories:

Old Ironsides' "Scoop"
By Annie Hamilton Donnell

A Woman of Business
By Emma C. Dowd

Greatest Moment of Their Lives
By Max Bennett Thrasher

My Ain Country
By Ida Reed Smith

The Way Margery Found
By Mabel Nelson Thurston

Bowen's Sensational Story
By Ethelwyn Wetherald

Here @ There Series

In the Empire of the Czar
By F. P. Kopta

In the Heart of a Lumber Camp
By William Davenport Hulbert

Guests in Winter Woods
By Captain Charles McIlvaine

In the Pavillion for the Blind
At the Congressional Library, Washington, D.C.
By Helen Marr Campbell

Contributing Editors. Nothing has been more prized by our readers than the short, helpful articles appearing not only upon our editorial pages, but scattered like jewels through every page. A large corps of Contributing Editors are at work in this department. This is but a Glimpse of the Young PEOPLE'S WEEKLY for the coming year. Our boys and girls have been delighted with our color-numbers in the past. There are still better things in store for them in the future.

Young People's Weekly

is the leading young people's paper in America. Each number contains from eight to twelve large pages of four broad columns each, all beautifully illustrated in black and colors. It reaches over 235,000 homes each week. It is "The Best for Youth."
PRICE.—Single subscription, 75 cents per year. In clubs of three or more, to one address, 50 cents each per year. Subscriptions may begin with any month.

Special Offer. To make new friends at once, we will send Young People's Weekly for three months (13 weeks) for only 10 cents, if your order be sent before January 1, 1901. Address:

DAVID C. COOK PUBLISHING COMPANY
36 WASHINGTON STREET, CHICAGO

After we left the water Frank had begun to practice fancy strokes and was enjoying himself greatly, when he noticed a great blackish object glide by him. This he knew must be a shark or a porpoise. If a porpoise, harmless, if a shark, only the most favoring circumstances would save him from great injury or death. With rare presence of mind he prepared for the worst, and in a second almost the monster was turned and was coming toward him. Turned upon his side, exposing row upon row of ivory teeth in his fiendish mouth, the fish advanced; but surprised and frightened by great splashing and a counter attack on the part of his supposed prey, he halted; then began to retreat,

with Frank after him, keeping up the fight. At times he would back up, then go round in circles, the sailor always after him keeping up the splashing. Thus Frank had held the monster at bay until assistance arrived. Had he tried to escape, the coward shark would have immediately borne down upon him and nothing would have saved him from great injury; but courage won and we rejoiced.

We enjoyed our afternoon greatly, finding sea curios to add to our collection, and we were surprised when night began to fall. Boarding our yawl we rowed back to the yacht, which had swung into the channel at high tide, and now lay at anchor in deep water.

(To be Continued.)

DECEMBER IN AMERICAN HISTORY

DECEMBER 1, 1841: STATUE OF WASHINGTON PLACED IN THE CAPITOL OF WASHINGTON.

DECEMBER 2, 1859: JOHN BROWN EXECUTED. John Brown was hanged at Charlestown, Va. He was born in Connecticut, and moved with his father to Ohio when five years of age.

JOHN BROWN.

At the age of fifty five he went to Kansas, where he became a bitter enemy of slavery. He conceived the idea that he was to be the instrument for the abolition of African slavery, and in May, 1859, made his first attempt to liberate the slaves in Virginia in what was known as "John Brown's Raid", which resulted in failure and his own death by hanging. On a dark night, with seventeen white men and five negroes, Brown stole into Harper's Ferry, seized the government arsenal and railroad bridge, and arrested citizens found on the street. He expected as soon as daylight should come and the negroes in the vicinity should learn of what had happened, that they would flock to his aid, and that there would result a general uprising of the slaves. The local militia immediately hastened to Harper's Ferry, and a hand-to-hand fight was had with Brown and his followers. The latter were driven into a fire engine house, where they bravely defended themselves. Brown's two sons lay dead by his side, but with all the composure of a general he bade his followers to be firm. They held out during the entire day, until evening of that day, when Colonel Robert E. Lee arrived with ninety United States marines and two pieces of artillery. Brown and his followers were then captured, and the leader was tried for murder and treason, found guilty and hanged. Governor Wise, of Virginia, declared that he was ready to make war on all the free labor states. In a letter to the president he declared that he believed a conspiracy to rescue Brown existed in northern states. Attempts were made to fasten suspicion on leading republicans, and a committee of the United States Senate was appointed to investigate, but no proof was found that Brown had other accomplices than the twenty or more followers who were with him in the fight.

DECEMBER 7, 1796: WASHINGTON'S LAST ADDRESS TO CONGRESS

DECEMBER 13, 1813: THE TOWN OF BUFFALO (N. Y.) BURNED BY THE BRITISH. Dr. Amos Hall was in command of the Americans gathered at Black Rock and Buffalo, two thousand in number. General Raill, in command of the British and Indians, crossed the river on a dark night, drove the Americans out and took possession of Buffalo, and proceeded to burn and destroy. Only four buildings were left standing in the village. Four vessels were burned in the harbor.

DECEMBER 14, 1799: WASHINGTON DIED. Before his death he enjoyed domestic quiet at Mt. Vernon for about three years. His last words were, "It is well".

He was buried at Mt. Vernon, his home, where his body now reposes by the side of that of his wife. Thousands of visitors annually make a pilgrimage to Mt. Vernon to view the old homestead and look through the iron grating upon the stone sarcophagi that hold the remains of George and Martha Washington. There was universal sorrow at his death.

DECEMBER 16, 1773: BOSTON TEA PARTY. The merchants of Boston agreed among themselves not to import anything from Great Britain until the unjust taxation laws forced upon the colonies by Great Britain were removed. The English parliament declared that they had the right to tax the colonists without their consent. The colonists denied the right. Tea imported into the colonies was among the things taxed. The Boston merchants refused to allow any cargoes of tea to be landed, and vessels were sent back without their cargoes being touched. Two ships full of tea were anchored in Boston harbor, and the citizens of the town met in the old South meeting house on the evening of the sixteenth of December, 1773, and about sixty men disguised as Indians rushed to the wharf, boarded the vessels, and threw overboard three hundred and forty chests of tea. The citizens of Boston offered to pay for the tea, but the English government punished them by closing the port of Boston the following year against all commerce and navigation.

DECEMBER 16, 1835: THE GREAT FIRE OF NEW YORK. Six hundred and seventy four houses and many public buildings

burned, with a loss estimated at twenty million dollars.

DECEMBER 18, 1878: GOLD WAS AT PAR FOR THE FIRST TIME SINCE 1862.

DECEMBER 20, 1860: SOUTH CAROLINA SECEDED FROM THE UNION. On the day when Lincoln was elected, a joint resolution was offered in the house of the South Carolina legislature providing for a state convention to consider the withdrawal of the State from the Union. Then the legislature passed an Act authorizing such a convention, and declared that a sovereign state of the union had a right to secede from it. Then orators went through out the length and breadth

DAVID F. JAMISON.

of the State crying aloud "the wrongs suffered by South Carolina in the union." The Charleston Mercury called upon natives of South Carolina in the army and navy to resign their commissions, whereupon many South Carolinians resigned their positions. Vigilance committees were organized to discover and suppress anti-secession sentiment. Delegates to the convention were chosen December 3, 1860. David F. Jamison was president of the convention. J. A. Inglis was chairman of the committee appointed by the convention to draft an ordinance of secession. The ordinance was reported at noon of December 20, and was adopted just forty five minutes after it was submitted, without debate. At seven o'clock, of the same evening, the one hundred and sixty nine members of the convention went in procession to Institute hall, in Charleston and signed the ordinance in the presence of the authorities of the State. On their way they were cheered by the populace, and the chimers of St. Michael's church pealed forth "Auld Lang Syne" and other airs. After the signatures were affixed a venerable minister of the gospel uttered a petition to God for His blessing; then the president of the convention stepped forward, read and exhibited the instrument to the people, and said, "The ordinance of secession has been signed, and I proclaim the State of South Carolina an independent commonwealth."

A great shout then went up from the multitude.

DECEMBER 21, 1864: SHERMAN ENTERED SAVANNAH ON HIS MARCH TO THE SEA.

DECEMBER 22, 1620: THE MAYFLOWER PILGRIMS LANDED AT PLYMOUTH ROCK. The Mayflower first anchored in Cape Cod Bay on November 21. The Constitution of the Plymouth colony was signed by the forty one persons who comprised the adult male members of the company. The Mayflower had set sail for New England on September 6. She was a vessel of one hundred and eighty tons, and carrying in all one hundred and one souls, among them Edward Winslow and his wife, Miles Standish and his wife, and John Alden, whose names are familiar to every true American. The Constitution referred to was written on the lid of a chest belonging to Elder Brewster, one of the company, and the signatures were all written on this lid. It was nearly a month after the signing of this Constitution before the people of the Mayflower landed upon a rock in a snug harbor. Before spring nearly one-half of the Mayflower company were in their graves.

THE MAYFLOWER.

DECEMBER 23, 1783: WASHINGTON RESIGNED HIS COMMISSION AND RETIRED TO MT. VERNON.

DECEMBER 24, 1814: TREATY OF PEACE WITH GREAT BRITAIN SIGNED AT GHENT. The Empress of Russia tried to bring about peace between the British and the United States, but the English Government refused Russia's mediation and proposed that the two governments treat directly with each other at the old city of Ghent, in what is now Belgium. The American commissioners were John Quincy Adams, Jas. A. Bayard, Henry Clay, Jonathan Russell and Albert Gallatin. The discussions of this commission continued several months, but on December 24 a mutual agreement was reached providing for the restoration to each country of territory taken from it, and for three commissions—one to settle the titles to islands in Passamaquoddy Bay; another to mark out the northeastern boundary of the United States as far as the St. Lawrence,

JOHN QUINCY ADAMS.

and a third to run the line through the St. Lawrence and the lakes to the Lake of the Woods. No provision was made as to the boundary west of the Lake of the Woods, nor as to the fisheries on the shores of British America. It took away from the British the nominal right of navigating the Mississippi, and from the New England fishermen the right of catching and curing fish on the shores of the Gulf of St. Lawrence. Both parties agreed to do their best to suppress the African slave trade. The treaty as drawn up by the commissioners was ratified.

and a third to run the line through the St. Lawrence and the lakes to the Lake of the Woods. No provision was made as to the boundary west of the Lake of the Woods, nor as to the fisheries on the shores of British America. It took away from the British the nominal right of navigating the Mississippi, and from the New England fishermen the right of catching and curing fish on the shores of the Gulf of St. Lawrence. Both parties agreed to do their best to suppress the African slave trade. The treaty as drawn up by the commissioners was ratified.

DECEMBER 24, 1851: PART OF THE CAPITOL AT WASHINGTON AND THE WHOLE OF THE LIBRARY OF THE UNITED STATES CONGRESS DESTROYED BY FIRE. The Capitol is built of white freestone, and is composed of a central building with two wings. The north wing was begun in 1793 and finished in 1800, at a cost of four hundred and eighty thousand dollars, the corner stone being laid by President Washington. The south wing was commenced in 1803 and completed in 1808 at an expense of about three hundred and nine thousand dollars. The central part was not begun when the two wings were burned by the British in 1814. The construction of the central building was begun in 1818 and completed in 1827, at a cost of nine hundred and fifty eight thousand dollars. The Capitol was first occupied by the two houses of Congress December 6, 1819. An enlargement of the Capitol was begun in 1851. The old building now forms the center.

DECEMBER 26, 1776: HESSIANS AT TRENTON SURRENDERED TO WASHINGTON. Washington had nearly six thousand men on the Delaware river, opposite Trenton. The English army was at Trenton, Princeton, Elizabethtown, and other neighboring towns. Fifteen hundred Hessians were in Trenton. Thinking that the backbone of the revolution had been broken, the English were careless. Not a cannon had been mounted at Trenton. On Christmas night Washington, with two thousand men, crossed the Delaware, a few miles above Trenton. There was ice floating in the river, the current was swift, the night dark, and a storm of snow and sleet falling. The American troops under Washington crossed safely and reached Trenton before they were discovered. The conflict lasted thirty five minutes. The American army took a thousand prisoners, twelve hundred small arms, six cannon, and all the German flags. This victory awakened anew the courage of the Americans, and many who had left the army, or were about to leave it, re-enlisted.

DECEMBER 26, 1853: GREAT FIRE IN NEW YORK.

DECEMBER 26, 1860: Major Anderson, of the United States army, occupied Fort Sumter in South Carolina.

DECEMBER 29, 1778: BRITISH CAPTURE SAVANNAH. Two thousand British invaded Georgia late in 1778, arriving at the mouth of the Savannah on December 23. Six hundred continentals and a few hundred militia unsuccessfully opposed their march. By the capture of Savannah the continentals lost four hundred and fifty three prisoners, forty eight cannon, twenty three mortars, the fort, with its ammunition and stores, the shipping in the river, and a large quantity of provisions, together with a hundred men killed.

DECEMBER 29, 1865: EIGHTY FIVE MEMBERS OF CONGRESS FOR SOUTH-

ERN STATES EXCLUDED FROM CONGRESS. Congress refused to recognize the state governments instituted by the South, and insisted upon a plan of reconstruction different from that of the President. At that time began a long contest between the President and Congress over reconstruction. DECEMBER 30, 1851: LOUIS KOSSUTH, THE HUNGARIAN CHIEF, ARRIVED AT WASHINGTON ON THE INVITATION OF THE UNITED STATES CONGRESS.

LOUIS KOSSUTH.

Louis Kossuth was the exiled Governor of Hungary. He received great attention in America, being presented to President Fillmore by Daniel Webster, and later introduced to the Senate. He entered the Senate Chamber accompanied by Generals Cass and Seward. He was introduced by General Shields. He also visited the House of Representatives, where he was enthusiastically received. A banquet was given him by Congress at the National hotel, where Kossuth made one of his greatest speeches. He was indeed a wonderful orator. Hungary had attempted to throw off the yoke of Austria, and Louis Kossuth, Governor of Hungary, led the patriots in their struggle. On the failure of the revolution he took refuge in Turkey. The Austrian Government demanded that he be turned over to them by Turkey. The United States and England interfered, the United States sending a warship to bring him to this country. He could talk not only in his native tongue, but in English, German, French and Italian. He endeavored to interest this country in the cause of Hungary, but the Government, after a little hesitation, refused to depart from its attitude of neutrality. He returned to Europe in July, 1852.

SEND NO MONEY. If you live within 700 miles of Chicago (if further send \$1.00), cut this ad. out and send to us, and we will send you this BIG HEATING STOVE by freight C. O. D., subject to examination. You can examine it at your freight depot, and if found perfectly satisfactory, exactly as represented, one of the handsomest heating stoves you ever saw and equal to heaters that retail at \$12.00, pay the freight agent our SPECIAL OFFER PRICE \$9.85 and freight charges (\$2.25 and charges if \$1.00 is sent with order). The stove weighs 175 pounds, and the freight will average 50 to 75 cents for each 500 miles. Our \$9.85 ACME OAK HEATER burns anything: Wood, hard coal, soft coal, coke or cobs. Greatly improved for this season. Latest style for 1900. A BIG HEATER, 2 feet 8 inches high, 22 1/2 inches on bottom, 16 inch fire pot, 4 inch pipe, mounted with 18-gauge smooth steel draft, heavy cast iron fire pot, has shaking and dumping center grate for coal, double circular wood grate, constructed so the fire can be kept under complete control; large ash pan, large feed doors; ash pit doors swing on double hinge, check drafts on collar and feed doors. Beautifully finished, fancy nickel mountings and ornaments, highly polished and heavily nickel plated feet rails, nickel name plate, top ring, hinge pins and knobs; heavy nickel bands and mountings, fancy nickel plated and ornamented top urn. Every stove covered by a BINDING GUARANTEE and safe delivery guaranteed. Made from the best quality of heavy sheet steel, pig iron and nickel, positive the handsomest, best burning, best heating, most economical and durable Big Parlor Heater made. If you don't find this stove the equal of those sold at double the price, return it to us at our expense and we will return any money paid us. ORDER TODAY. Write for Free Stove Catalogue. Address, SEARS, ROEBUCK & CO., CHICAGO, ILL.

SEE! BOYS AND GIRLS AND LADIES. How to earn a Gold Watch or a Pair of Barney & Berry Nickel Skates or a Sled. W. G. Baker wants to introduce his Teas, Coffees, Flavoring Extracts and Borax Soap. Just sell a few dollars' worth among your friends and neighbors and choose your own reward. Sell 50 lbs. for a Waltham or Elgin Gold Watch and Chain, Ladies' size or Gents' size; 25 lbs. for a Solid Silver Watch and Chain; 8 lbs. for a Boy's Sled; 10 lbs. for a Girl's Framer Sled; 8 lbs. for a Pair of Barney & Berry Nickel-Plated Skates. Premiums are all of best quality, and Baker's well-known brands of Teas, Coffees, etc., are better and cheaper than those sold in the grocery stores. A host of young people all over the land are engaged in the work. Many bright boys and girls thus spend their spare time, and very capable agents they make, too; yes, and many women who find their limited store cannot afford a Gold Watch or a Sewing Machine, start at once to earn it by selling Baker's Teas. Many parents write that they are happy to have their children engage in the undertaking, for it teaches them to depend on their own resources and is really a business training. Mr. Baker pays all the freight and express. We would like you to be our agent. Send your name and address for 100-page illustrated catalogue with full particulars. W. G. BAKER, (Dept. 128) Springfield, Mass.

One week old silk worms. Two weeks old silk worms.

Three weeks old silk worms.

Four weeks old silk worms.

How a Boy May Raise Silk Worms

MARY H. O'CONNOR

THE raising of silkworms does not require the investing of much money and presents few, if any, disagreeable features; neither is it hard work, nor does it take any great amount of intelligence or special aptitude.

Of course, there are some things about the work that require careful attention, and some rules that must be strictly followed; but that is true of any sort of work if it is to be successful.

There are many varieties of silkworms imported from Europe and Asia. A cross between the Japanese and Italian breeds is desirable, for this worm spins a cocoon that is large, white and firm.

First, regarding the silkworm's food: It feeds on the leaves of the mulberry tree. Trees that are grown for the feeding of the worms are not allowed to become as large as the mulberry trees to which we are accustomed; they are kept down within four feet of the ground. Careful pruning regulates their height and form, so that the leaves may be easily gathered. They are trimmed once a year, in March, all the dead leaves and twigs being removed. In picking the leaves, the silkworm raiser follows a system. The first leaves that appear should not be picked when very young, for then they are bitter and pungent, and are not liked by the worms. The trees begin to send forth sprouts in April or May, and it is when you see these young leaves coming that you begin hatching the eggs. You can fancy how small the eggs of the silkworm are when it is estimated that

Five weeks old silk worms.

one ounce of them will hatch into forty thousand worms. They resemble a mustard seed, are nearly circular, slightly flat, and indented in the center.

When the leaves begin to appear on the mulberry trees, spread the eggs upon clean paper and place them in a room kept at seventy degrees. Stir the eggs once in a while with a small camel's hair brush or a feather, so that every part of each egg comes in contact with the warm air. In about a week the eggs will hatch. During that week they will change greatly in appearance; their fluid contents will become concentrated in the middle of the egg, leaving a semi-transparent space between it and the shell. The worm gnaws a hole through this shell and emerges as about the tiniest living thing you have ever seen. You should have trays ready in which to put the tiny worms. These may be made of the covers of cardboard boxes, say three feet long by two feet wide, and two inches deep. Line them with wrapping paper. When about one third of the little worms are hatched begin putting them in trays. Move all the worms as they appear, putting as many in each tray as seems practical. In order to change them from the hatching paper to the trays, place a few mulberry leaves over them, and after they have crawled upon the leaves move the leaves carefully to the trays.

Now begin feeding the worms crisp leaves, chopped into small pieces and spread evenly over the tray. You must feed young worms six or eight times a day, for they have good appetites, particularly when the temperature is kept even and the weather is not damp and cold.

Pierced cocoons and silk floss.

There should be some system of ventilation whereby the air of the room may be kept pure. If the room is heated by an open fire the floor should be sprinkled or the air dampened in some way, as dry air is not good for the worms. After five days clean the trays by putting in new paper, never transferring the worms without the use of a brush or mulberry leaves.

Silkworms live through five "ages," as they are called. At the end of each age they go to sleep, and on awakening cast off their old skins. When the tiny worms are seven days old they start to go to sleep. You must continue feeding for some time longer, however, as some will be slower to fall asleep than others. They will stay asleep about thirty hours, and when they awake they are in the second age and now are somewhat larger, and you can see the twelve segments of the body joined one after another and connected with muscular fibres. You will find on each worm four pairs of non-articulated legs under the abdominal part, three pairs of legs under the anterior part, and one pair under the posterior part, opposite which a tiny horn is located.

The worms remain in the second age for six days, during which time they should be fed five times a day, and their trays cleaned every other day. Before they go to sleep the second time you may find it necessary to put some of them on new trays, for they are so much larger now that they need more room—indeed about twelve times as much as they did when first hatched. You will find it difficult to move them

Nest (spinning cocoons).

on leaves now, so you will lay mosquito netting over the trays and spread crisp mulberry leaves over it. The worms will creep upon the net, attracted by the sweet, fresh leaves, and the entire company be thus lifted over and shaken down on the new trays.

When they go to sleep the second time it is for twenty five hours, and on awakening they are in the third age. During this age, which lasts for seven days, the worms should be fed about six times a day, the leaves cut one-half an inch square, and the trays cleaned daily. At the end of seven days they fall asleep for the third time, to sleep for twenty four hours.

The fourth age continues for seven days, during which the worms must be fed five times a day, this age being followed by a sleep of forty hours, upon the awakening of which the worms are ready for work.

During the last age the color of the worm is white for the first two or three days; then it turns gray, and gradually lightens until it assumes a yellowish-white color. The worms are now about three inches long, and have increased in weight ten thousand times since the day they were hatched. They crawl around the trays in a restless fashion, spinning on the green leaves over which they crawl traceries of white silk thread. They will creep up the sides of the trays, peer out into the world beyond, and swing themselves from corner to corner. They are now looking for a suitable place to nest, and after a few days this must be furnished them.

To make a nest for the silkworm, take a bunch of clean straw and put it in a fairly deep box, or between strips of cardboard folded into zigzag lines on a shelf. When you place the largest worms in their nests they will first inspect them with apparent gravity and will then select each his little corner and begin spinning.

The worm fastens its threads first at one straw and then another, moving its head backwards and forwards; in the course of two days it will have encased itself in a little silk prison. At first you will see its body, slightly dark, moving in the cocoon. At the end of ten days you will see a shining white silk roll, which is the completed cocoon. As each cocoon is perfected you can remove it from the nest and put a new worker into its place.

After selecting the largest, cleanest, and most perfect cocoons, laying the stained and inferior ones aside, you may remove the floss or loose silk from the outside. Now you must remember that the worm is still

within its little white silk house and is preparing to become a butterfly. When this change takes place it will pierce a hole at one end of the cocoon and creep out. This must be prevented, because in reeling, the silk filaments unwind from side to side, and if the cocoon is pierced the threads will all be broken, so the life of the chrysalis must be sacrificed to keep the cocoon intact.

To keep the chrysalis inside, place the cocoon, as soon as it is taken out of the nest, in a steam mill, which is merely an air-tight vessel with shelves. Fifteen minutes after steam is turned in the worm is choked. The cocoons are then placed in the sun to dry. Fresh cocoons are sometimes put in a warm oven for 20 minutes, as heat will kill the chrysalis in them, but if you do this you must be watchful and not allow the cocoons to be scorched, and there is danger, too, of the gum which holds the filaments of silk together becoming sticky and making reeling difficult.

You should put a few of the cocoons in a warm corner and allow the moths to come out of them. Place the moths on a clean piece of paper in a shallow box, and there they will lay countless eggs. These you will set aside in a dark, cool place as your stock in trade for next season's work.

Pierced cocoons may be picked and pulled to pieces with the fingers, and thus become floss, or "silk cotton," which is used for padding, or interlining. It is very warm and as light as down.

If one wishes to reel the perfect cocoons, he will have to invest in a machine which consists of a reel, an electric regulator, an automatic brush and a self-feeding basin. From six to thirty cocoons, according to the size of the thread required, are put into a basin of water containing a little alkali, and the

Stifled cocoons ready for reeling.

cocoons are cooked for ten minutes in one hundred and forty eight degrees of water. An automatic brush passes among the floating cocoons in the basin and catches the filaments of silk, which having been twisted several times are run upon the reel, after passing the electric regulator, which automatically regulates the size of the thread. When the reel is full it is taken down and the silk is dried and made ready for the market.

In Europe and Asia, where great quantities of silk are produced, each district has a central station which purchases the cocoons from the operators. All the culturists in the district send their cocoons to this reeling establishment, from which the silk factories all over the world buy their silk.

The silk firms in our own country complain that they cannot get reeled silk or cocoons in sufficient quantities, so there is an opportunity here for silk culture. The silk factories order from samples submitted, and pay from forty to seventy cents a pound for fresh cocoons, and one dollar to one dollar and sixty cents for stifled ones. The fresh cocoons hold the living worm and hence weigh a great deal more. Of course, one cannot ship the fresh cocoons unless he lives near a factory. In any case, it is always wise to submit samples, and be prepared to follow them with cocoons of the same grade.

Considering that it has not been over fifty days between the time the eggs were hatched and the time when they are ready for shipment, and that the work, although indoors, is not confining, it would seem that the raising of silkworms might be a lucrative, as well as interesting employment.

Stifled cocoons and reeled silk.

THE FLOUR MILL PUZZLE

TEN BARRELS OF FLOUR AS PRIZES

FRANK W. FITZPATRICK

Our American boys are great fellows to work out puzzles; they'll stick to one with the tenacity of "Tanglefoot" fly-paper until it yields, and then how easy the pesky thing seems!

Why not give them something instructive as well as amusing to mull over? There's a modern flour mill, for instance. Is there anything that runs so smoothly and simply and yet presents to the uninitiated such a maze of machinery, such a tangled-up looking lot of shafts, belts, spouts and wheels?

To trace out on the accompanying diagram of a flour mill, the "flow" or run of one part of the wheat from the raw to the finished product of its class is the puzzle we suggest, and we will give a substantial prize to each of the first ten boys—time of mailing and distance considered, of course—who get satisfactory solutions into this office.

So as to familiarize the "puzzleists" with the problem in hand let us briefly glance at flour, its uses, and its manufacture, the instructive part of the problem.

Bread eaters are increasing in numbers tremendously. In 1877 there were about 395,000,000 in the world, to-day there are over 520,000,000.

It requires 2,324,000,000 bushels of wheat a year to feed these millions of people. Some years we raise more than that and hold it in store, as Joseph did of old, against a time of want such as in '97, when the crops ran 311,000,000 short. North America supplies about a sixth of this wheat; Europe, a little over half; Asia an eighth; South America, a fortieth; Africa, a sixteenth, and Australia, a hundredth.

In this country we raise about 500,000,000 bushels of wheat a year, upon some 40,000,000 acres of land. Minnesota heads the list of the states with about 60,000,000 bushels, then Kansas is next with about 48,000,000 and Ohio with some 35,000,000.

From all this wheat the mills of the world will grind out about 360,000,000 barrels of flour this year. The Anglo-Saxon race will use up nearly one-half of this supply, the Latins a little over one-third, the Germans one-sixth, and the Slavs one-twentieth.

In this country, in our fifteen thousand mills, some with a capacity from 1,000 to 8,000 barrels a day (the Pillsbury-Washburn Co., of Minneapolis, grinds out nearly 25,000 barrels a day in its own system of mills alone), we make enough flour to supply our own needs of nearly one barrel of flour per year to every man, woman and child of our population, some 73,000,000 barrels, and then export over 15,000,000 barrels, besides nearly 75,000,000 bushels of wheat.

Together with Russia we supply nearly all of Western Europe with flour and certainly give it and most other countries their very best flour. Our "Northern" or spring wheat, rich in nitrogenous and flesh-forming properties makes the very best bread in the world, and most of it is milled in Minnesota. That State can grind out 119,000 barrels a day, the biggest flour milling district in the whole world, while Missouri with its mill capacity of 60,000 barrels a day is the center for and grinds most of the "Southern" or winter wheat, the starchy, prize pastry-making flour.

Spring wheat makes from 20 to 40 more pounds of bread to the barrel than does winter wheat. Four and a half bushels of wheat make one barrel of flour, or 270 pounds of wheat relieved of its husks, dust, bran, etc., etc., make 200 pounds of flour, called "196 lbs. net" per barrel that in turn makes up into 325 pounds of bread.

They say that we make enough bread every year to pave a street thirty six feet wide all around the world, or that would fill 20,000,000 two-horse bakers' wagons—a procession 60,000 miles long, or eighteen 'abreast from ocean to ocean! We also make 3,000,000 barrels into biscuits and crackers in New York alone, and then we bake nearly 8,000,000 pies a day besides all the cakes, flap-jacks and other flour-made, light or heavy things, our boys help to consume every day.

Until thirty years ago our process of grinding between stones was not unlike the way Father Abraham made his flour centuries ago. Since 1870 our mill machinery has been wonderfully improved. The "patent process" is used to-day. There are five distinct grindings of the wheat and no less than sixty one distinct and separate processes to go through before the flour is ready to be barreled.

Now, then, look at the diagram and follow us carefully: The wheat passes through primary receiving, weighing and milling machines, where bits of straw, oats, seeds and foreign bodies are removed. It passes through "smutters" where that fungus growth called "smut" is brushed off it, then all fuzz is also brushed off, the light bran or anything else that might stick to the berry. The wheat after all this is heated for tempering purposes and is then ready for the first process we are now interested in, the beginning of its being ground into flour.

It is conveyed to the grinding machines through spouts shown by A on the diagram, in the direction shown by arrowhead, to the first reduction-rolls that slightly crush the berry, about as if you set an old pair of millstones pretty far apart. The arrow line, 1,

under the rolls shows how the ground product is carried down to C, the first receptacle under the rolls, a "separator" or sifting machine in which the coarse and fine portions are divided. The very coarsest passes off to the right into a "purifier," 2, where the poor part of the berry is passed off on line 5 down and along—follow the arrowheads—until it meets other similar grindings or "shorts," and passes off at Jj; and the best part of the berry is carried on down to the next series of reduction-rolls or grinders, at D. The floury siftings from C are passed into another separator, 3. There the residue is passed along line 6 on up to the sieve graders J where we will leave it awhile and follow the next coarsest product down line 7 to where it meets similar grindings and is conveyed along and up to the rollers V that grind "tailings" of the wheat. The nearest approach to flour in 3 is sifted into separator 4, worked over again and part of it is conveyed along line 8 and out at Hh as "low grade" flour, the other portion joining that from the machine above it along line 7.

The best part of the wheat we left in "purifier" 2 goes on down to the next series of rolls at D that virtually repeats with its separators C the process carried on at B.

This grinding goes on over and over again, finer and finer every little particle of impurity being removed, next at E at F at G and at H.

J are "sieve graders" that sift the part of the wheat that comes to them into K, the purifiers for the various grades. The finer parts in these last are carried

down into "gravity-purifiers" M. Then parts from these are again ground between the rolls N for a certain class of product while the other portions are carried down to still another set of purifiers at S. The coarser portions from K go into sieves L for the re-separation of classes, some of which are ground into the rolls below while others follow along the arrow lines into still other machines.

O are "hopper sieves." P are still more purifiers of another kind, while 2 are millstones to grind up "No. 1 middlings" and R to grind "fine middlings." U are finishing rolls and W are rolls for the second run in the "patent process" for the highest grade flour. X are flour reels and Y are millstones between which are ground the low grade flour and Z is a finishing machine for the "shorts" or low grade of flour.

Then Aa shows the run of what is called "first clear," Bb "second clear" and Cc the "low grades." Dd is the exit for the finished "patent flour." There it is barreled or bagged ready for shipment. Ee is the bran outlet from whence it is also carried off to be sold for the many purposes that useful material is put to, while Ff—Gg—Hh—Jj are the respective outlets for the "clear," "second clear," "low grades" and "shorts" brands of flour used by cheap bakers, the very poor people, and for commercial purposes such as paste and things of that sort.

Remember, that where two arrow lines are shown running in opposite directions, as they are under "separator" 3 they indicate that as the product is sifted, one part is carried one way, while the other

ANY SCHOOL-BOY OR GIRL CAN MAKE GOOD PICTURES WITH ONE OF THE

EASTMAN KODAK CO.'S Brownie Cameras

\$1.00

Brownies load in daylight with film cartridges for 6 exposures, have fine meniscus lenses, the Eastman Rotary Shutters for snap shots or time exposures and make pictures 2¼ x 2¼ inches.

ONE OF THE PILLSBURY-WASHBURN MILLS.

part goes the other. Still taking "separator" 3 as an example; the nearly whole wheat that remains in the machine after sifting is carried off on line 6 to the other processes of reduction, the next coarser product passes off to the right down line 7 to another grinding for wheat "tailings" at V and the nearly finished but low grade flour, or finer sifting is carried off to the left down into "separator" 4 where it is again operated upon and one portion of that flour goes off into 7, the other down 8 and out as a "low grade."

INTERIOR OF FLOUR MILL, SHOWING SECTION OF ROLLER FLOOR.

For a boy who likes machinery it will be interesting to trace out these various lines and follow the twistings and turnings, the ups and the downs of the wheat berry while its outer coat or epidermis is broken off, blown away, its next jacket crushed off and made into one kind of product, while its minute gluten cells are powdered into the finest and whitest flour that can pass through the spider-web-like meshes of the bolting cloth. And all this without being touched by the hand of man!

But to make it still more interesting we want the boys to trace out the flow backward from the exit of the best or "patent flour"—where it is barreled—and tell us how many machines that main line receives its supply from direct. We don't want them to show us how it passes through any of the machines. There are several, in different parts of the diagram, that put the last touches upon that flour and empty direct into the line that finally conveys that product out to the barrel. How many such final machines are there? Two, five, nine, ten or more? Just write us the one word, the number of your answer.

It's an easy thing to find out and to the ten who get their answers into this office before the rest do we will give each one a barrel of "Pillsbury's Best Flour." Now then, that's something worth trying for. Go ahead.

SOMETHING MORE ABOUT PEKINESE PUGS.

Considerable interest has been stirred up in that very rare breed of dogs, the Pekinese pug, by our mention of one owned by Commander Winslow, of the United States Navy, and the picture of the little animal given in our May number. Through the publication of this item in our May number, Commander Winslow received a letter from Mrs. J. C. Fahnestock, of Piqua, O., in which she informed him that she was the owner of a genuine Pekinese pug, and stating that the ancestors of this pug lived in the Imperial Palace at Shanghai. Commander Winslow somewhat questioned the purity of the stock, and expressed the opinion that Mrs. Fahnestock had been imposed upon, from the fact that there was no imperial palace at Shanghai and that Pekinese pugs were not seen that far south in China. Dr. Fahnestock, the husband of the lady who owns the dog, writes us under date of Nov. 6, saying that he has been in correspondence with Commander Winslow and has sent him a picture of the dog, whose name, by the way, is Li Hung Chang, the same name as that possessed by Commander Winslow's pug. The gallant officer, on seeing the picture, writes Dr. Fahnestock that the dog is all right, and congratulates the Dr. on having one of these rare and valuable dogs, adding, "He is undoubtedly a very fine specimen." The doctor says: "We were mistaken in saying the dog came from Shanghai." The fact is

that the gentleman from whom the doctor got the dog lives in Shanghai, and obtained the sire and dam of the Pekinese dog from the Imperial palace in Peking, through a high court officer. The Piqua dog is therefore, a pure bred Pekinese pug, and a fine specimen.

We are glad that we are able to give pictures on this page of the Li Hung Chang of Piqua, O., in one of which the little fellow is doing a trick for the doctor's son.

Pekinese pugs are beautiful, affectionate little animals, and are destined in the near future to be very popular.

Why the Pickaninnies Made Up

ANTONIA NELL

"Go it, Eb! Da's right, Jim, lam 'im one! Hurrah!" yells Rastus.

"Ma-a-a!" squeals Theodosia, tearfully, "Jim's fightin' Eb an'-an' hurtin' 'im!"

"Wha's dat? Yo' fightin' Eb? Wha', I'm 'shamed o' yo' chilluns. Come in 'ere. I's gwine tell yo' 'bout dem chilluns what fought so much."

Eb and Jim come shamefacedly in, while Theodosia dries her tears, and Rastus, disappointed in not being able to see the finish, follows, shambling with Snowblossom, who wanted to see Eb get the worst of it.

"Once 'pon a time," begins ma, when all are comfortably seated, "dere was two lill boys what fought an' fought an' fought, an' one 'special day when dem boys was a fightin' so hot yo' couldn' see dere fists, dey was a flyin' so fas', suddenly dey hears a awful whoop an' yell an' down swoop a terrible lill debble, takes Jonas unner one arm an' pickin' up Bob by de seat o' his pants wid

his tail, he begin risin' an' risin up in de air an' fin'ly wid a thump he drop on de groun' agin, an' dere right afore dem boys was two long fences wid a roof on 'em, an' dem fences dey was so long yo' couldn' see de end. Inside dey was all covered wid dem picturs like what dey paste on de fences 'roun' here—posters I specks yo' call 'em—an' dese ones all represented lill nigga boys an' gals.

"An' bless yo' heart, dem chilluns was too skeert ter tink o' 'scapin'; dey jus' foller dat debble like lill lambs. Well, when Jonas pass de fust picture he jus feel a terrible kick on de back an' tinkin' Bob was er gettin' funny he turn 'roun' an' was er goin' ter fight when dat debble say awful like, "Here, come on!" an' dat boy he foller, but when he gits by de secon' pictur', he feels anoder kick an' not darin' ter stop agin he turn his head so's he can look o' his shoulder an', lawsy, when he pass dat third pictur' he see one of its legs move right out o' de paper an' gib 'im a awful kick, den it go back inter its place agin, an' yo'd a nebbber thought 't moved 't all.

But affer dem pore boys was kicked till dey was all colors o' de rainbow, suddin' Jonas feel a terrible pain in de left ear an' glancin' out o' his left eye, he see one o' dem lill nigga gals 'ad

stretched out a arm which looked jus' like a real one, on'y de res' ob her body was like paper, an' her face turnin' inter a grin, she lift Jonas up by his left ear 'till 'is left foot couldn' tech der floor no moah, an' when he go furder a lill gal on t'other side do de same thing wid his right ear an' et looked so funny Bob would o' laughed on'y he was did de same way. But fin'ly dey git to de end, which wus er great big dark cave.

Jonas an' Bob, dey jus' stan' an' wiggle, dey're so skeert, an' Bob his hair all cum out o' curl wid fright till et look like de hair ob dat poor white trash nex' door, an' Jonas he turn so pale all his freckles begin ter show es plain es der red dots in dat han'chief wat I wears on ma head, an' Jonas' heart stopped an' his liver 'gin beatin' instaid; Bob he wud 'a' hid 'hind Jonas er Jonas 'hind Bob on'y dey wus dat skeert dey could'n move.

"Soon when dere eyes gits more used to de dark and dere ears to de noise, dey sees a dim red fire in de middle an' 'roun' it some more lill debbles like de one wut bring dem boys, wus a dancin' an' a screamin' like mad. Jonas cry real soft, "O! Bob, I wisht we hadn' fought, doan' yo'?" an' Bob he say, "Ye-es." Ef dem pore chilluns hadden a bin so skeert dey'd o' had lots o' fun watchin' dem lill debbles. One o' 'em jumps inter de air an' sticks out 'is tail real stiff an' 'stead o' litin' on 'is feet he lites on de end o' his tall an' stay up in de air jus ez dough he war a

sittin' on top o' a pole 'stead o' 'is own tail. Den one debble bring a bowl an' dey all puts in some mystifyin' fire, red 'n' blue 'n' green 'n' yaller, till yo' couldn't tell what color et wus, an' mix et till finally et gits too hard to mix wid de hands, so anoder debble stiffens up an' dey begins ter mix et wid him ez a spoon, an' soon et git so stiff dey can't mix et so dey takes et out an' begins a pullin' et jus' as yo' chilluns does taffy an' soon it gits stiffer 'n' stiffer till dey can't pull et no more, den dey pulls et out real far an' one debble gits un'erneath an' blows an' blows till Bob thought sure he'd bust but he didn't an' when he blow, de center ob dat stuff et go up till at las' et forms a arch 'n' den dose debbles puts

de two ends on de groun' 'n' dere wus de mos' bufulles' rainbow yo' eber seed, an' what do dose debbles do but run an' jump on top'n slide down t'other side a yellin' all de time, 'n' Bob an' Jonas gits so 'cited dey is jus' about ter run 'n' have some fun too, when sudden, 'fore dem boys knows et, demimps dey rush over an' graspin dem pore boys, dey drags 'em fo'ward. Ef Bob had a know'd how ter faint he surely would 'a' on'y he didn't know how. Well, what do dey do but put dem boys on de floor jus' where dey put dem oder debbles an' put some mystifyin fire 'roun' 'em, an' dat fire creeps closer an' closer till dem pore boys jus' has time ter see dey bof got tails an' horns an' long ears an' look jus' like de oder debbles, an' dem boys wus punished fer fightin' sure! Well, dat fire creeps closer an' biney et jus' reaches dem boys an' burns. O! dey gibs such a heart-rendin' cry what sounds jus' like de debbles', but jus' den, Bang! went suthin' an' eberyting wus pitch dark, not a sound. 'Dem debbles is sure gwine ter do us suthin' terrible,' whispered Bob. 'O! ef we uns on'y hadn't fought,' says Jonas, an' den dey feel they're risin' an' risin' 'till fin'ly et gits lighter an' lighter an' las' dey find demselves up on er big mountain which wus at de end o' dat wood tunnel, an' two angles wus a standin' dere an' laffin'. But O, dem pore boys dey still had dere tails on an' horns an' ears, an' wot wus dey ter do? Dey see dat fense tunnel what dey came trough an' what dey nebbber noticed 'fore, de roof slanted down from dat mountain so dat at las' dey couldn't see de oder end (which mus' hab been a mile away). Now dis roof wus covered wid suthin' slipprier dan ice an' wus awfully steep an' den dem angles jus' gib 'em a shove an' down dey goes, an' slides an' slides, an' dey tumble ebry which way till Bob hit 'is head ag'in'st a sort o' balaster which wus put on each side to keep folks fum fallin' off, I s'pose, an' fust t'ing he do he knock off 'is horns an' Jonas knock off 'is tail an' dey keeps on a knockin' off t'ings till finally dey ain't nuthin but common ordnary boys agin, but when dey gits to de end how dey do run and run till a' las' dey gits home an' dem boys neber had anoder fight. In going down dey wore off de seats o' dere pants an' dere ma 'ad to put on patches, an' Jonas, his hair neber got kinky agin' an' now he curles et ebry monin' on a curlin' iron, an' Bob his 'plexion neber got dark agin an' his mudder 'as to dye et ebry now an' den, an' Jonas doan know to dis day wedder 'is heart or 'is libber is a beatin'.

An' dose boys dey doan fight no more, an' now ef yo' Eb an' Jim, doan stop fitin' dem debbles 'll sure do yo' wuss 'n dat some day."

Composition on a Horse.

A father going into his stable one day last week found his little son astride one of the horses with a slate and pencil in his hand. "Why, Harry," he exclaimed, "what are you doing?" "Writing a composition," was the reply. "Well, why don't you write it in the house?" asked the father. "Because," answered the little fellow, "the teacher told me to write a composition on a horse."

A Famous Cartoonist.

The name of no American artist has been more prominently before the public for the last fifteen years than that of F. B. Opper, now a member of the staff of a metropolitan journal. His drawings have been important features in several campaigns and his illustrations for humorous articles, from the early writings of "Bill Nye" to those of "Mr. Dooley" of the present, have made the name of the artist a household word.

F. B. OPPER, WHEN A BOY.

Opper is a self-made man. He has worked his way by degrees and through hardships and discouragements which would have daunted most fellows of his age. He was born in Madison, Ohio, a small village forty miles east of Cleveland. He had no educational advantages except those afforded by the common country school; and he did not even avail himself of all of these, but before completing his studies, entered a printing office, where he served an apprenticeship.

In school and in the office he gained a reputation among his companions for his remarkable pen drawings. His pen was not only artistic and accurate, but prolific as well. He soon accumulated a large number of sketches, illustrating rural scenes which came before him daily; and fortunately, at this period of his career, his parents moved to New York City, taking the family with them.

Young Opper immediately set about offering his work for sale. He did not first resort to the weekly publishers, from whom he expected he would find encouragement, but with true boyish instinct went upon the streets and himself offered his work to passersby. He soon thus obtained an appreciative audience, and before the fact became known to his parents, interested purchasers had paved the way for him with certain illustrated periodicals, so that he was soon the possessor of an assured salary, with work according to his own choice.

Natural genius and the care with which he labored soon brought him fame; and to-day in the same city in which he offered his sketches for sale upon the streets, Fred B. Opper, the famous cartoonist, is receiving for his work a princely salary. ARCHIE BELL.

A New Idea in Boys' Clubs.

The Paulist Fathers, in one of their parishes in New York city, have decided upon a new way of caring for the youngsters. A club room has been secured, occupying a floor and a half of an old mansion at No. 915 Tenth avenue. The house contains a large hallway with coat and hat racks, a large reception room, a music and assembly room, a large apartment for all kinds of quiet games, two rooms fitted with athletic apparatus, an empty room for drill and athletic purposes, and a bath room and closets. The house has been furnished richly with curtains, statuary, pictures, tables, piano, etc. The library contains many of the finest of recent juvenile publications. A member of the Society of St. Vincent De Paul will have control of the club at each meeting, assisted by

ladies and gentlemen, who will conduct classes in debating, singing, history, etc. Competent teachers will give domestic exercises and train boys for public dramatic performances. Outings and games in the country and upon the water will be arranged for the summer. There will be club meetings every night of the week, and on Saturday and Sunday afternoons. A boy must be between ten and fifteen years of age to be admitted to membership. If a boy wishes to enjoy the privileges of the institution, he must purchase a ticket for the meeting he desires to attend. The tickets are two cents each. Only fifty tickets will be sold for each meeting, so that there will never be more than fifty boys in the rooms at one time.

The plan is said to be in successful operation in the St. Elizabeth's House, Boston, where it was inaugurated by the Jesuit Fathers a year ago.

What California Boys See and Do.

I am sure readers of THE AMERICAN BOY are glad to learn all they can about our great country; and, of course, they already know something about California. One of the prettiest little cities and one of the finest counties in Cali-

Santa Cruz and the adjoining counties of Santa Clara and San Mateo (you see we are all "saints") possess a large and still untouched tract of redwoods known as the "Big Basin." It lies high up in the Santa Cruz mountains, and within its boundaries are the sources of scores of living streams which flow into and fertilize the three counties I have named. Besides the redwoods there are, within this area of sixty thousand acres, some fifty varieties of native trees, growing in untrammelled beauty, including madrono, oak, pine, fir, maple, sycamore, California nutmeg and manzanita. Thousands of blossoming shrubs, delicate vines, wild flowers and ferns add to the picturesqueness of the "Big Basin"; the fauna of this region represent all the native species of wild animals.

The oldest and biggest redwoods have attained a height of three hundred feet, and hundreds are two hundred and fifty feet high. Try to realize that these trees were stout young saplings when Rome was built and that all this wonderful beauty lay here undiscovered and undreamed of for centuries.

Do you wonder that Californians want to save the "Big Basin?" That they want it for a great park and pleasure

Circumference, 64 feet; height, 300 feet to a point many feet from its one time top, where it has been broken off.

ornia are the city and county of Santa Cruz, lying on the beautiful bay of Monterey and embraced on the landward side by the Santa Cruz mountains, a part of the Coast Range. Once these mountains were covered with dense forests of the redwood tree, the "Sequoia sempervirens," a cone-bearing evergreen, a tall, straight, wonderfully beautiful tree, with its trunk of dark red and its foliage of dark green. Many of these trees are of great age and are giants in size.

As the redwood makes excellent lumber, these fine forests are rapidly being turned into boards, and from boards into buildings, and this process is accomplished by an enormous and unnecessary waste, which the best citizens of California deplore very deeply; accordingly, they are making an earnest and systematic study of how to save and renew the redwoods, and are trying, with the help of state and national lawmakers to reserve certain of the finest groves of the sequoia sempervirens and also the sequoia gigantea. The latter are the "Big trees" of Calaveras and other counties, and are quite a different species from the sempervirens.

ground for the people of the state, the nation, the whole world? The Basin is only forty miles from San Francisco, and, although there is not, as yet, a single wagon road traversing the thirty five thousand acres of the central part, and visitors have to leave their horses or their mules almost at the entrance, yet it is really but a few miles from the railway and can be made as accessible—almost—as Central Park, in New York.

If there were space for it I am almost sure I could interest "American boys" in the wonderful variety of pleasures that Santa Cruz boys and girls are blessed with. They begin to swim in the surf when they are so young that they almost forget their first "dip"; they have all kinds of fishing, from deep sea salmon to tiny and delicious mountain trout; they go berrying for nearly twenty sorts of wild berries; they hunt, and botanize, and "collect" more kinds of things than most boys have dreamed of; and all the year round they just live out of doors with nothing colder than a good rain-storm to hinder them—and they mind that no more than do the ducks.

APPLICANTS for approval sheets this month, sending reference and 2c postage, will be given FREE an unusual stamp, catalogued by Scott and Mc Gibbons, W. F. Price, 84 Washington Ave., Newark, N. J.

TURNING POINTS IN A BOY'S LIFE

...SECOND ARTICLE OF A SERIES...

THE QUESTION OF GOING TO COLLEGE.

MY subject for last month, which was "Joining the College Fraternity," and the one for this month should have swapped places, as naturally the question of whether one shall go to college precedes that of whether he shall join a college fraternity. I changed the order, however, as the subject treated last month seemed more appropriate to the time, it being the time of the year when the "spiking" is being carried on among the college freshmen.

Should a boy go to college?

My answer is, Yes. I am sorry that I have not more space in which to give my reasons, for they are many and are weighty. I can

only hope to hint at a few of them.

I knew a man who achieved great success in business, in society, in politics. He was universally respected throughout a wide territory, and died full of honors. I have heard him say many a time that his greatest handicap through life had been his lack of college training. He came at one period of his career into close contact with men of culture, men of the schools, and got a good opportunity for measuring himself alongside of such men. He felt, as he expressed it, a continual consciousness of something lacking in himself that they possessed, and this feeling gave him a degree of diffidence and lack of self-control and self-confidence that made his position one of great trial and interfered with his largest usefulness. To his sons he was accustomed to say, "I may not leave you money, but I am determined to give you what I did not get—a college education; that legacy, if rightly used by you, will prove better than lands or stocks."

This man's experience is the experience of the great majority of men who have succeeded despite obstacles and

without college training. They have succeeded, yes, but at an enormous cost to themselves, much of which might have been saved to them in the way of physical and mental strength had they started out better equipped for the race.

The best argument in favor of the college is that it gives mental discipline, mental training, of the highest order. Mental discipline or training gives mental power, just as the training of the gymnasium gives physical power; and mental power—not money, as we are accustomed to thinking—is the dynamic force that moves the world.

True, a great part of what is taught in college is of little practical benefit, so far as the actual knowledge acquired is concerned; much of it may be forgotten without great disadvantage to the man. It is one of the arguments most commonly used against the colleges, that they teach so much that is impractical. The argument has some force; and yet much of the training in the line of these impractical subjects is of the very highest order. I may forget the Latin, the Greek, the Trigonometry, the Calculus, the Chemistry, but I will not readily lose the strengthened memory, the increased power of reasoning, the quicker grasp of cause and effect, the heightened power of analysis—in a word, the mental acumen I have obtained in the pursuit of such studies.

It is, after all, not so much knowledge that is power as it is ease and certainty in the right application of knowledge. I have met some very "knowing" men who were failures; they were crammed full of fact, but had absolutely no power of applying fact.

It is not that a college education gives a superior knowledge of the practical things of life that I argue for it, but that it gives the mind strength to discriminate, arrange, combine, apply, and these are imperatively necessary to the greatest success.

I insist that the best place for mental discipline is the college. Taking a man when his mind is in the formative period, the college gives him that mental stimulus and that systematizing of effort that he needs.

Sometimes we point to the giants of other days and say they did so and so without a college education. We argue therefore that a college education is unnecessary. But the mere fact that some

men have succeeded despite a deficient education proves nothing, save that there are men who have the God-given faculty of working miracles of achievement against every obstacle. It is not fair, however, that I should purposely handicap my boy and chance his being that

sort of a man, nor should I, as a young man, take these chances for myself if I can help it. The college presents to the boy insidious temptations; but where, indeed, will he not find them? It presents to him also some things which tend to counteract the evil influences, namely, the opportunity to associate with good and wise men, who go in and out before the students as inspiring examples. It presents to him also companionships with bright young men, many of whom are filled with zeal and the determination to succeed. The slow and unambitious boy is pushed ahead by the very force of his contact with such young men; the laggard is urged on; the indifferent is encouraged and enthused. The very soul of college life, not only in the class room but on the campus, is enthusiastic rivalry. In the college the boy meets the flower of the rising generation—the boys who are to be the leaders some time. He makes friends with these boys. They become his best friends for all time, as old friends, particularly school friends, are the best. When he and they have left college, the very fact that they are getting ahead will be a standing remonstrance against his failure.

A college education gives the boy a taste for learning. I need not stop to argue this point, but "just as the twig is bent the tree's inclined."

A college education will best fit him for professional studies. Many of our professional schools are now closing their doors against boys who have not a college education. One of the best law schools in the East has recently taken this step. The managers of professional schools have come to know that the highest and best results are obtained only from men who have learned to study under the discipline of the schools.

Nor will a college education make the boy, should he choose to go that way, any the less successful as a tradesman or artisan, for college learning melts like snow into the soil of practical life, watering and vivifying it into the best of which it is capable.

All successful men have not been college men, but the converse of the proposition is wonderfully near true, that a large majority of college men have become successful men.

men have succeeded despite a deficient education proves nothing, save that there are men who have the God-given faculty of working miracles of achievement against every obstacle. It is not fair, however, that I should purposely handicap my boy and chance his being that

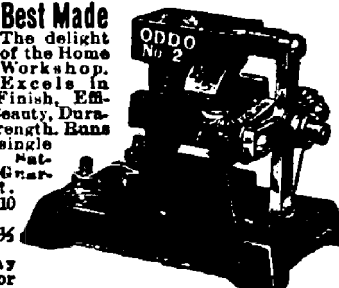

THE BEST PAYING PROFESSION AND THE MOST FASCINATING BUSINESS

ELECTRICITY

My book "Electric Light Home" Illustrated, (4th Edition) Explains every detail of a motor and how to obtain Electric Light from home-made chemical batteries. Price, 10 cents, postpaid.

\$1 ELECTRIC MOTOR

Best Made
The delight of the Home Workshop.
Excels in Power, Finish, Efficiency, Beauty, Durability, Strength, Runs well on single Dry Cell, Satisfaction Guaranteed.
Weight 10 ounces
Height 3 1/2 inches.
I prepay express or mailing charge to any part of the U. S. or Canada, or I will send the above motor, with battery to drive it at the rate of over 2,000 revolutions per minute. The motor and cells sent complete for \$1.50. Express charges extra.

BOYS a number of these Electric Motors will be given away for a few hours work, write at once for full particulars "How to Obtain the Best Small Electric Motor, made ABSOLUTELY FREE!"

WE TRUST YOU
THE FAMILY RECORD is a beautiful and attractive picture, size 16x22, printed in 10 rich colors upon a background of solid gold. In the center is an open book resting upon a base of pure white marble. On the pages under the different headings are spaces in which to write the names and date of birth of each member of the family. Upon either side is a beautiful scroll (surmounted by lovely flowers) on which to register marriages and deaths. At the top of the picture are the words "God bless our family" in the richest and choicest lettering known to the printer's art. Under this are two spaces for father and mother's pictures. Enclosed in these spaces are lovely roses and pansies. Around the picture are arranged eight spaces for photographs of the other members of the family, each space enclosing a little gem flower piece. Elsewhere on the picture are scattered creeping vines, buds and blossoms in rich profusion, the whole resting on and thrown into bold relief by the gorgeous background of solid gold, which produces a picture of dazzling beauty. H. C. Jackson, Ellamere City, Utah, sold 375 framed Records, making over \$600 profit in 60 days. Why cannot you do as well? We will send you a **SAMPLE FREE** if you will promise to send us 15 orders for \$2.50 each. As soon as you have taken the orders we send you the pictures. You collect the money and send it to us and we send you a nice watch for your trouble. If you sell and pay us for 30 at 25c each we send you a very handsome Gold plated Watch, either ladies or gents size. We have other premiums, such as Rings, Pins, Bracelets, Musical Instruments, China Tea Sets, Silk Dresses, etc. Our watches are all guaranteed to keep accurate time and our goods and premiums are exactly as represented. We refer you to the publishers of this paper who will tell you we are perfectly reliable. Address Standard Picture Co., Dept. 38A, Chicago, Ill.

"The American Boy" an Inspiration.

"Hawaii's Young People," a juvenile monthly published at La Hai Na Luna, Maui, Hawaiian Islands, reprints the sketch of Baker Washington, the thirteen year old son of Booker T. Washington, which appeared in the August number of THE AMERICAN BOY, the editor adding a note of comment as follows:

This is the kind of boy to imitate. Learn to work, and work, if you wish to get along well in Hawaii. You will not become brickmasons, since there is so little brick-work done in the country; but there are many kinds of work you can learn to do. Boys can learn to be helpful to parents in the work about home; they can learn to mend fences, to repair houses, to shoe horses and to do a great many things to make themselves useful. They can learn to make their living as carpenters, painters, blacksmiths, machinists, sugar boilers, printers, or bookkeepers. Or, better than anything else, they can learn skillfully to plant and cultivate fruit trees and other useful plants. Girls, besides becoming helpful to their mothers, can learn to make their living as dress-makers, tailoresses or printers. Or, best of all, they can learn to take care of a house, to cook and to make and mend the clothing needed in every family. What can you do?

Personal Purity.

SAMUEL B. CAPEN, L. L. D.

No young man can do faithfully any work unless he be temperate and pure. The evils of intemperance are so often dwelt upon, that young men are on their guard at this point. To use intoxicating liquors in any form is a barrier to any progress. Alcohol is a poison, and the temperate young man will win, other things being equal, every time. But the perils of impurity are not so often emphasized. That is the most direct road which the devil has prepared to the world of despair.

Shun the very beginnings of evil. Refuse to keep company with those who tell the questionable story and who speak slightly of that which is pure and innocent. Avoid such men as you would the pestilence. No matter if they seem good in other respects. As a chemist can tell from one drop of blood that there is poison in the veins, as a chip will tell you the current of a stream, so in these beginnings there are the seeds of disease which will surely end in failure and moral death. Beware of harboring impure thoughts for they are like the spark in the hold of a ship; it will work its way right and left until there is a bed of fire under your feet and destruction is at hand.

Well, sirree, if mother hasn't laid in another cargo of this stuff just before Christmas. Wonder why!

A BOY'S SISTER

It is a little strange that a good many boys are inclined to treat the sisters of other boys with much more courtesy and kindness than they treat their own sisters. It is also true to a certain extent that girls are kinder and more courteous to other boys than they are to their own brothers. But the purpose of this article is to have a little talk with the boys regarding their relations with their sisters, and something may be said in another article regarding the relation of girls to their brothers.

Next to having a good mother, no greater blessing can come to a boy than to have a good sister, and a boy who has such a sister should thank God for her and manifest his gratitude by treating her with the greatest affection and consideration. There is no more beautiful example of brotherly and sisterly affection than that of the lives of Charles and Mary Lamb. Many instances could be given of men who have held their sisters in the highest respect and given them the tenderest affection. There is nothing more beautiful in this world than the friendships of brothers and sisters, and nothing sadder than the indifference and real discourtesy with which some brothers treat their sisters.

There are boys who have the impression, judging from their conduct, that the chief good of having a sister is in the opportunity she affords for unlimited teasing. I have in mind at this moment a boy who teases his three sisters from morning until night. He calls them by nicknames peculiarly disagreeable to them; he plays all sorts of rude tricks on them; one of them is of a very nervous temperament and he whistles steadily when she is near because he knows that it makes her nervous. He does a hundred annoying, teasing little things every day of his life, frankly admitting that he "just loves to tease the girls."

Now a boy of this kind lacks a good many things that every boy should possess. He lacks, in the first place, a manly spirit. It is just as unmanly to tease a girl and cause her actual distress as it is to strike her. He lacks the spirit of kindness and courtesy, without which a boy is likely to become boorish and vulgar. He lacks the qualities that all boys must possess if they ever expect to become gentlemen, and the boys who do not expect to become gentlemen are undesirable as boys and will be still more undesirable as members of society when they are older.

A boy's sister is usually his most faithful friend, next to his mother. She will make sacrifices for his pleasure and comfort that no one else but his mother would make. There are not many selfish sisters in the world. I could fill columns of this paper with instances of the beautiful unselfishness of sisters who have denied themselves in every way that their brothers might have college educations or that they might be given opportunities of making the most and the best of life. And it has sometimes happened that these brothers have not repaid their sisters with the gratitude and affection such sacrifice demands.

There are very few sisters who will not eagerly respond to any kindness and affection shown them by their brothers. It is always a matter of regret when this kindness and affection are withheld. It is still more to be regretted when a boy is habitually rude to his sister. Many boys affect a lofty superiority over their sisters and always speak contemptuously of girls. I have never known a boy of this kind to develop into a man whom it was a pleasure to know or whom it was safe to trust. Reverence for all women is a virtue possessed by all good men. I have in mind a brother and sister between whom there is the beautiful bond of friendship and comradeship that ought to exist between all brothers and sisters. I met them yesterday going off to play golf together. I have often seen them on their tandem bicycle out for a ten mile ride. They go to church together, to concerts and other entertainments. When

this brother meets his sister on the street he tips his hat to her as politely as if she were the sister of some other boy. I have never heard him speak rudely to her. In fact, he pays her exactly the same courtesy that he would pay the most distinguished woman in the world. I would not be afraid to trust that boy. He has a fine sense of courtesy, of honor and of his duty as a son and brother.

Have you ever read of how Margaret of Navarre loved her brother, Francis I.? When he was very ill and death was imminent she would take a seat in the middle of the road, where she could see, when yet a great way off, the messenger coming from her brother's bedside, and would say: "Ah, whosoever shall come to announce the recovery of the King, my brother, though he be tired, jaded, soiled, disheveled, I will kiss him and embrace him as though he were the finest gentleman in the kingdom." But no messenger ever came to tell her that the King, her brother, was recovering, and her anguish was pitiful when the messenger of death came with the summons for her brother that even kings must obey.

A boy's sister should be his comrade, his friend, his companion in his studies, his joys and his sorrows. There are many sisters who would gladly be all this to their brothers, but their brothers deny them the happiness of this relation, through selfishness or boorishness or for some other equally inexcusable reason.

May every brother who reads this be the brother he ought to be to the sister God has given him.

Can You Dust?

The "National Rural" contains the following good advice on the importance of dressing well:

"A shabbily dressed young man applied to the manager of a big department store for employment.

"What can you do?" asked the manager.

"Most anything," answered the applicant.

"Can you dust?"

"Yes, indeed."

"Then, why don't you begin on your hat?" The fellow hadn't thought of that.

"Can you clean leather goods?"

"Oh, yes."

"Then it's carelessness on your part that your shoes are not clean." The fellow hadn't thought of that, either.

"Well, can you scrub?"

"Yes, indeed," was the reply.

"Then I can give you something to do. Go out and try your strength on that collar you have on. But don't come back."

While a neat attire is not always an index to good character and ability, the fact remains that of two applicants the business man will always employ the well-dressed attractive looking boy rather than the one who is careless in his appearance.

The reason is obvious. The boy who is particular in regard to the details of his dress will be careful in his work and thus command the respect and confidence of his employer.

Where his presents were Christmas morning.

You Can Play Them Without Learning

THE CHURCH CHOIR ZOBO BAND OF PATERSON, N. J.

Photo from Life.

This band was organized by the church choir and Organist, Mr. W. F. Miller, as a means of raising money for Church and Missionary purposes. It was a success from the start, and has even participated in Easter Sunday service. The band is very proficient, and is now taking outside engagements. They find it a pleasant, profitable variation from routine work. Many Church choirs have these Zobo Bands, and find them of great value. As a means of earning money for church purposes, a "Zobo Concert" invariably draws full houses. Zobo Bands can play any piece of music in all parts by ear or by note as preferred.

READ WHAT PASTORS AND ORGANISTS SAY ABOUT OUR INSTRUMENTS

G. B. Richardson, Business Manager of the "Young Peoples' Weekly," Elgin, Ill., writes: "The Zobo Instruments I purchased of you were first used at an entertainment given at my home to the 200 employees of the Young Peoples' Weekly. Although the Quartette had opportunity for but one rehearsal the effort met unbounded enthusiasm and was voted a great success. We are now considering the organization of a full orchestra for next winter's entertainment, and I write this to ask you to forward me a select list of 25 to 35 instruments." Wm. J. Siemens, leader of the Beacon Light Zobo Band, Baltimore, Md., writes: "I send you to-day copy of a Baltimore paper, giving a very complimentary notice of the 'Zobo' Concert given last night by the Beacon Light Zobo Band, composed of members of the choir of the Scott Street United Brethren Church. The concert was a great success, both artistically and financially, and at the close we received an offer at good pay for another engagement. Every church should have a Zobo Band. It is the pleasantest and easiest way of raising money that I ever tried or heard of, because any one that can hum a tune can play on a Zobo." Miss Hattie E. Komty, of Springfield, S. Dak., organist, choir leader, says: "Zobo Instruments received, and are all right, and we want more of them." Rev. James C. Mitchell, of North Easton, N. J., says: "I have just received the Zobo Cornet and I am delighted with it; will organize a band." Wm. F. Miller, organist and director of church choir of Park Ave. Baptist Church of Paterson, N. J., says: "I find the Zobo Brass Band Instruments to be first-class, and just what we needed, as we have a very small organ. We have a fourteen piece Zobo Band, and intend to enlarge it. We have had one Zobo Concert, and would say it was a complete success." Mae Hance Winfield, instructor of music at Allaway Female College of Seneca, Ark., says: "I am much pleased with the Zobo Band Instruments." Had we space we could quote you thousands of such letters from renowned persons who have had our goods, but we believe we have quoted enough to satisfy any reasonable person that we are perfectly reliable and that our goods are as represented.

CAN BE PLAYED BY ANY ONE WHO CAN HUM A TUNE—NO LEARNING

We do away with that long tedious labor of practice. It is the most extraordinary musical instrument ever produced. An instrument capable of almost every modulation, its music may be softened to the cooing of a dove or the thrilling song of the nightingale. The Cornet is an elegant accompaniment to Organ, Piano or any string instrument, and affords unlimited pleasure to the individual; suited for all in and outdoor entertainment. These instruments open up new possibilities to the Vocalists, and develop the vocal cords.

WITH A FULL BAND A GRAND PIPE ORGAN EFFECT CAN BE OBTAINED Those that have no pipe organ, the Zobo supplies the want at a minimum cost. Every church without a paid choir should organize a Zobo Church Choir Band. Sing into the mouthpiece—Zobo does the rest.

\$1.00 SPECIAL OFFER

To introduce the musical marvel of the age and to give you a chance to test our instruments and prove all our claims, we will send the Zobo Cornet, solid brass, highly polished and lacquered, 11 inches long, 5 1/2 inch bell, with full instructions how to play, and illustrated catalogue, prepaid, for \$1.00. We make this offer, believing that all interested will eventually organize a Zobo Band. This is a grand offer, and you should not miss it. We warrant each instrument just as represented or money refunded. Send money by registered letter, postoffice money order, or a bank draft payable to our order.

STRAUSS MANUFACTURING COMPANY, 360 BROADWAY, Dept. G, NEW YORK CITY.
Awarded First Prize, Gold Medal, at the Greater America Exposition, Omaha, Neb.

To be well dressed is not to have expended a great deal of money on your clothes; on the contrary, if your garments are neat in appearance and whole, if your collar is clean and necktie neatly fastened, if your shoes are polished and pants carefully pressed, the care and thought displayed in these small matters will more truly reflect character than the richness of the material of your clothes.

Muddy shoes can reflect nothing! Neatness and cleanliness as well as a little style are important recommendations and are within the reach of every boy seeking work.

There are five thousand two hundred and eighty two Smiths employed by the Government. One thousand five hundred and twenty three Joneses. One thousand one hundred and two Browns and one thousand and four Johnstons. There are eighteen George Washingtons, two William McKinleys, three William Bryans, and two Grover Cleverlands.

WHAT BOYS ARE DOING

A Young Telegraph Operator.

Harold Sherman Thomas, who lives with his parents, Mr. and Mrs. William S. Thomas, at Bee Creek Junction, eight miles east of St. Joseph, Mo., is the youngest telegraph operator in the state of Missouri and possibly in the United States.

Harold is but eight years old. He can send a message as well as the average

HAROLD S. THOMAS.

operator and can read it as fast as can any one. He can put down only twenty five words a minute, which is much less than he can read, being handicapped in not being able to write fast.

Harold was born in Kansas City on April 1, 1892, and came to Bee Creek Junction with his parents on December 1, 1898. His father is block station dispatcher for the Santa Fe road at Bee Creek Junction, and it was under his father's teaching that the boy learned to send and receive messages by telegraph. He never heard the click on an instrument until April, 1899, and when it came under his notice he immediately took an interest in telegraphing and expressed himself as wishing to learn to use the instrument. He worked, studied hard and in a few months could operate with ease.

Harold goes to school now and when not occupied with his studies assists his father in his work. He says he is going to be a telegraph operator when he becomes a man.

The Messenger Boy Returns.

Several readers of THE AMERICAN BOY have asked us to tell them the sequel of the journey of James Francis Smith, the messenger boy who last spring carried to President Kruger at Pretoria a message of sympathy signed by nearly twenty nine thousand Philadelphia school boys.

Young Smith conveyed the message safely and returned to New York, reaching there Sept. 16. He reached Pretoria on May 28, at a time when the British troops were within forty miles of the Boer capital. He saw the Boer secretary of state, who arranged for an interview with President Kruger at three o'clock that afternoon. At that time the messenger drove to the president's one story cottage, in front of which are the two marble lions presented to Oom Paul by Cecil Rhodes. He carried with him the petition bearing the nearly twenty nine thousand names, in a black leather-covered box weighing seven pounds. The president stood at the end

of a table holding his pipe in his hand, wearing his tall hat, and stooping slightly. Young Smith made his speech, which was as follows: "Your Excellency, I have the honor to present to you a message of sympathy, signed by twenty nine thousand young men of Philadelphia, which was entrusted to me to deliver." Then everybody shook hands with everybody else, the secretary showed the first part of the roll to the president, and then the latter said in Dutch to his secretary: "Say to this young man: My son, I thank you for taking this long journey to bring a message of sympathy to an oppressed people. I hope that you will have a safe and pleasant journey home. Tell the young men of Philadelphia that this expression of sympathy will encourage the people of the Transvaal to continue their struggle for freedom."

That night Oom Paul left Pretoria for Middleburg, one hundred and fifty miles toward Delagoa Bay.

A Boy of Rare Presence of Mind.

MARY P. SAYERS.

Probably no boy who has acted the part of a hero ever did so with less self-consciousness than Herbert Botsford, a lad of fifteen, when on the morning of July 2, 1900, he saw a tiny break six inches wide in the huge reservoir which supplied the city of Grand Rapids, Mich., with water, and without a

HERBERT BOTSFORD.

thought of his own danger ran to warn the people in that vicinity.

Herbert had started out at five o'clock on the eventful morning to deliver his papers when he noticed the break, and meeting another newsboy asked him to take his papers, and then ran as fast as his legs could carry him to give the warning signal. He was none too early either, for soon the whole side of the reservoir gave way and an immense volume of water poured into the city, carrying destruction with it. Thanks to the boy, but one life was lost, though the destruction to property entailed a loss of over four hundred thousand dollars.

Herbert is a boy of rare presence of mind. At one time a little child caught fire at a Christmas entertainment, and with uncommon thoughtfulness he took off his own coat and wrapped it about the child, thus smothering the flames and no doubt saving its life.

The reservoir incident, and the straightforward manner in which the hero gave his testimony in regard to the break of the reservoir, resulted in his appointment to the position of messenger in the United States Census Department at Washington at a salary of four hundred dollars a year, which on account of his sterling qualities and strict attention to business, has since been raised to six hundred dollars. His

duties consist in attending to the supplies of about seventy persons in the building where he works. He must be on hand every morning to see that the desks are in readiness for the workers; that the ink bottles are filled, pencils, paper, blotters, carbon paper, and, as he expresses it, an hundred other little things are attended to. In his letters home he gives many descriptions of the beautiful things he sees at Washington. He describes the congressional library as "all marble and gold, and such an inspiration to me that it almost took my breath away." At the time of his appointment he had been a newsboy in Grand Rapids for seven years.

A Young Globe Trotter.

A New York paper tells of a boy of eleven years of age, Edward H. McMichael, who has traveled sixty three thousand miles. The boy was born in Shanghai, and has crossed the Pacific ocean and the American continent seven times. He spent last summer with his uncle, Dr. Robert F. Adams, in Syracuse, and entered St. Paul's School at Arden City, Long Island, a few weeks ago. He speaks and writes Chinese, French and English, and his knowledge of geography and history is remarkable. One day last summer he visited a man ninety years of age who had lived in one town for eighty eight years and whose travels had been limited to the neighboring villages. The old man and the boy had their photographs taken together.

A Boy "Street Boss."

John A. Minewegen, son of an alderman of that name in Chicago, is only twelve years old, but he is playing at a novel game. The boy has organized a boys' cleaning brigade. Every day, under his direction a good sized load of rubbish is removed from the streets and alleys and piled up where the city wagons can haul it away. The youngster wants all the glory of "bossing" that he can get. His father spent his vacation in old clothes, walking around the streets and directing the city work. The boy, however, rides in a small wagon with a high seat which two of his playmates draw from place to place. His work is both wise and comical, but it has a pathetic side, too, for the boy really hopes that the streets of Chicago will be clean some day.

A Boy Fiddle Maker.

"The Fiddle Maker of Tamarack" is the title won by Harry Evans, a fourteen year old boy living at Syracuse, N. Y. Last March the boy started in to make a fiddle after the Stradivarius model. He got books from public libraries treating on the subject, and then supplied himself with fine seasoned woods from far away places. Then, with the best tools that he could get, he went to work, getting up at four o'clock in the morning, that he might have time for his violin making before school. When his first violin was completed he found that it weighed too much, according to the Stradivarius standard, so with infinite patience he took it all apart and smoothed and sandpapered the surfaces until it was reduced to the proper weight. Then he invited all the musicians of note in the city to come and hear it, for he is something of a violin player as well as maker. Every one proclaims the fiddle a marvel in workmanship and tone, and its maker a genius. He is a nephew of the actor, Charles Riegel, of New York.

The boy has a sister who is deserving of mention. She is fifteen years old and is in business for herself, having opened a grocery which promises to develop into a department store, having already a meat market, a drug department, an ice cream parlor, and a candy kitchen.

An American Boy Among the Boxers.

We are able to tell our American boys this month about one of their number who witnessed some of the stirring scenes in China during the Boxer outbreak there. The boy is Ted Chalfant, the nine year old son of Rev. Frank H. Chalfant, a prominent American missionary located at Wei-Hien. The missionary's family consists of himself, his wife, an eleven year old daughter, Margaret by name, and Ted. For many years they have lived in that far-off clime—in fact so many that Ted is more familiar with things Chinese than with things American. He dresses, however, just as do boys in this country, as will be seen in the picture.

Wei-Hien was among the first of the missionary stations to meet with trouble. Early in the uprising every foreigner in Wei-Hien was in danger. At the first outbreak the pretty mission station occupied by Mr. Chalfant and his family was burned. Then their residence was attacked and laid in ruins. At the time of the attack the missionaries at Wei-Hien were preparing to leave for safer quarters. A number of them had already gone away, but the Chalfants were still at the station. Mr. Chalfant met the

TED CHALFANT.

mob and tried to reason with them, but it was of no avail. The Chinamen were bloodthirsty, and there was nothing for a missionary to do but protect the foreigners in his charge by the use of firearms. At first he tried to frighten them by shooting over their heads; but the Chinese believing their bodies to be invulnerable as against bullets, the missionary found it necessary to shoot right at them. When several of the Yellow men fell the crowd retreated; and in the interval of a few minutes before the second attack, the missionaries climbed over the wall of the compound, or yard, and made their escape, finding refuge in the German mines.

Little Ted is still in China with his parents, but his sister, Margaret, has reached America, in company with a lady missionary. Miss Margaret will not return to China until the Boxer troubles are entirely over.

The American home of the Chalfants is at Pittsburg. When Ted returns to America he will tell his Pittsburg boy friends of real exciting times, such as most boys only have a chance to read about.

Ted is a very bright boy. He shows a great interest in the work in which his parents are engaged, and proves a valuable assistant to them. He is too young yet to decide on his life work, but it may be that he, too, will become a minister of the gospel in the country which will soon open a new era in its history.

A Medal For Good Penmanship.

JAMES J. HARNEY

James J. Harney graduated from the Christian Brothers' Commercial Academy of New Orleans a short time ago with high honors, receiving the gold medal for penmanship. The boy is eighteen years old and is a graduate of the New Orleans High School. After graduating from the Commercial Academy he obtained a position in the post-office at Chinchuba, La., where he is now at work.

Winner of the Cuyler Prize.

Robert B. Sawyer won the Theodore Cuyler prize in economics at Princeton University recently. He is the son of L. M. Sawyer, of Evanston, Ill. He took high rank as a scholar and an athlete in the Grammar and High Schools of Evanston. He entered Northwestern University in 1895. He played in his class baseball team in both his sophomore and freshman years. When a junior at Princeton he was chosen as one of the editors of the "Syllabus," the college annual. The scholarship he has won is the interest on five thousand dollars for one year.

Selected for West Point.

LeRoy Bartlett, a sophomore in Brown University and a member of the football team, who volunteered and enlisted in Battery B, of the Rhode Island Artillery during the late war, has been appointed by the Secretary of War to the United States Military Academy at West Point. He holds the bronze medal given by Rhode Island to meritorious soldiers and sailors, and has won several prizes in athletic contests between the Rhode Island batteries while in camp. He is nineteen years of age.

A "Tall Story" from California.

The San Francisco Call says with a sober face that a two year old baby, by name Robert Bruns, the infant son of Mr. and Mrs. J. H. Bruns, of Alameda, can render in perfect tone and without the loss of a note, "The Holy City." The little phenomenon is said to have a wonderful ear for music. His parents have no desire to pose him, and have bent every effort to prevent the abnormal development of the child. The little fellow seems to be as much at home with the classics as with ragtime. Friends are endeavoring to urge the parents to exhibit him, but they wisely refuse.

A Prize Winner.

The James Gordon Bennett prize in the University College, N. Y., was established in May, 1893, by the gift to the university of one thousand dollars. The interest on that sum is awarded annually to that member of the senior class or special student of two years standing who shall have taken the prescribed course in political science and English literature and shall have written the best essay in English prose upon some subject of American, governmental, domestic or foreign policies of contemporaneous interest. This year the contest was remarkably close. The successful contestant was Stanley Holcomb Molleson. The young man won in the Brooklyn High School a scholarship sufficient to pay all his tuition fees through the four years' college course. In his sophomore college year he walked off with the Herman Ridder prize of fifty dollars given for an essay on some topic connected with German literature. Throughout his course he has worked in various ways to pay his own expenses. Just before the end of his undergraduate course he won the Butler physical fellowship, which will give him three hundred dollars and a year's free tuition in post-graduate work. In addition, he is an all-around athlete.

The subject for the essay this year was, "The Government of Federal Dependencies."

A Little Hero of the Storm.

Twenty five days after the storm, two little lads were found in the ruins at Avenue R and Thirty seventh street, Galveston. They would never speak again, and so with their lips they could not tell of the horrors that overtook them when the awful cyclone swept down upon them, as away from their parents, and turning, perhaps from childish play, they met its horrors. Yet, a part of that story was plain. The smaller lad, a little fellow of four, was clasped tightly in the rigid right arm of the elder, whose left arm was shattered, and whose whole body gave evidence that he had suffered painfully before death overtook him. He had died trying to shield his little brother. This twelve year old hero was identified as Scott McCloskey, son of Captain McCloskey, a well known seafaring man of Galveston. The little brother bore the name of Earl. "I lost my wife and three children," said the Captain, when the little lads were shown to him. "I did not get ashore until after the storm. When I went to where my house had been there was nothing left but the brick piers. I haven't found the body of my wife. It's an awful blow, seeing these little lads. But I'm glad Scott died a hero's death. He was manly and lovable, brave as a boy could be."—Christian Herald

Captured a Runaway Horse.

Walter Jack, a Chicago boy, aged thirteen, distinguished himself recently by racing on horseback after a runaway horse on Washington Boulevard, capturing the animal and saving a number of boys from being run over. The race was an exciting one and aroused the admiration of those who witnessed it. He was escorted to the police station by several officers, where he was complimented by the captain of police. Inspector Shay, when the story was told to him, said he would secure for Walter a place on the police force when he grew older. The captured horse was attached to a light delivery wagon and was dashing down the boulevard at a great rate. Walter, who was riding his pony, at once gave chase. Three times the little animal headed the horse off, and Walter made as many daring attempts to stop the animal. At one point a number of boys were in danger of being run over,

WALTER JACK.

WALTER JACK AND HIS PONY.

and here the daring young rider dashed directly in front of the horse and almost pushed him against the sidewalk, at the same time leaning far over in his saddle, catching the bridle and bringing the frightened animal to a stop.

A German boy was reading a blood-and-thunder novel. Right in the midst of it he said to himself: "Now, this will never do. I get too much excited over it. I can't study so well after it. So here goes!" and he flung the book into the river. He was Fichte, the great German philosopher.

Here is a bright boy in Crestline, Ohio. In writing of his work for THE SATURDAY EVENING POST he says:

"When I saw your advertisement I knew that there was a good chance to earn some money, which I wanted. I sold my first ten copies easily and then started to work for new customers. My order has grown until I now sell more than sixty a week. I deliver all the copies on Friday, after school closes, and on Saturday. In addition to selling single copies I have earned about \$12.00 by taking yearly subscriptions."

BOYS we set you up in business. We want boys for Agents in every town to sell

The Saturday Evening Post
(of Philadelphia)

A handsomely printed and illustrated magazine, published weekly at 5 cents the copy.

We will furnish you with ten copies the first week free of charge; you can then send us the wholesale price for as many as you find you can sell for the next week.

You can find many people who will be glad to patronize a bright boy, and will agree to buy of you every week if you deliver it regularly at house, store or office.

You can build up a regular trade in a short time; permanent customers who will buy every week. You can thus make money without interfering with your school duties, and be independent.

Send for Full Particulars. Remember that THE SATURDAY EVENING POST is 112 years old; the oldest paper in the United States, established in 1788 by Benjamin Franklin, and has the best writers of the world contributing to its columns. So popular that a hundred thousand new subscribers were added to its list the past year.

ADDRESS: The Curtis Publishing Company, Philadelphia

FAMILY RECORD | Agents Make | A 50-Cent PICTURE for ONLY 18 Cents. A \$2.50 FRAME for ONLY \$1.00.

to every person ordering 200 RECORDS. You need not order all at one time.

Upon a background of pure solid gold rests the Family Record in the shape of a handsome volume with gold clasps upon a cushion of crimson velvet with a beautiful gold tassel. On the pages under the different headings are spaces in which to write the names and date of birth of each member of the family. Upon either side is a beautiful scroll (surmounted by lovely flowers) on which to register marriages and deaths. At the top of the picture are the words "Family Record" in the richest and choicest lettering known to the printers' art. Under this are two spaces for father's and mother's pictures. Enclosed in these spaces are lovely bluebells and morning glories. In the lower part of the picture is a beautiful home scene in colors. The dear old grand-parents, the handsome stalwart husband and happy young wife, the loving daughter and the baby boy—the idolized grand-child—are all gathered around the table while grandfather reads a portion of God's Holy Word. A truly delightful scene. Underneath are the words in rich lettering, "God Bless Our Family." Around the picture are arranged eight spaces for photographs of the other members of the family, each space enclosing a little gem flower piece. Elsewhere on the picture are scattered creeping vines, buds and blossoms in rich profusion, the whole resting on and thrown into bold relief by the gorgeous background of solid gold, which produces a picture of dazzling beauty.

Mark Hagle, Uxly, Mich., has sold over 5,000 pictures; Wm. D. Wessner, West Salem, Ill., has sold over 1,000 frames. H. C. Jackson, Fillmore City, Utah, bought 375 records for \$36.68, sold them at half-price, 25 cents each, making \$48.12 clear profit. If you take orders for twelve Framed Pictures your profit will be over \$25.00 PER DAY. Can you do better? We have over 5,000 testimonials, and we want yours. We will mail a sample for 12c; 9 for \$1.00; 100 for \$9.50. Sample frame made of beautiful gilt moulding nearly four inches wide, \$1.00. One dozen frames \$9.00, glass and backs included. We will send a Present Free with Every Order, if you will cut out and return this advertisement.

ELBRIDGE ELECTRICAL MAN'G COMPANY,
Box A, ELBRIDGE, N. Y.

A Boy Financier.

An eleven year old boy of Lowell, Mass., whose name is Wesley Court, earned enough money during his last summer's vacation to buy a pony and cart, and pay the expenses of an "across the continent" trip for himself and his father. Francis G. Court, father of the boy, says that he has been a money maker since he was six years old. At the close of school last spring many of the boys in Lowell erected canopies at the street corners for the purpose of selling soft drinks to the passers by. Wesley had one of these stands, but he was not satisfied with the income from it. He sold out his shop for five dollars and increased this capital by ten dollars which he borrowed from his father at six per cent. Then Wesley went to the managers of each of the many shoe factories, manufacturing chemists, etc., and said that he would give them twenty cents for every dollar of his income for the exclusive privilege of selling root beer, lemonade, etc., on their premises at lunch time. In nearly every instance the privilege was granted, in most cases the managers refusing to take any money from him. In two weeks he had paid back the ten dollars he had borrowed from his father and had six boys working for him. He paid the boys liberally. The lad actually startled his father by the amount of money he realized. "He bought himself a suit of clothes and then a pony and a cart," said his father, "and before I was fully aware of it he had money enough in bank to take us both to California."

This winter Wesley will substitute hot coffee, tea and milk for the cool drinks sold in the summer.

Make Money Raising Aster Plants.

We give a picture of Mark Wright, a bright boy of thirteen who lives in Grand Rapids, Mich. In company with Phil Merrit, a boy about his own age, he raises aster plants to sell. Mark says:

MARK WRIGHT.

"Last spring Phil Merrit and I raised aster plants at our own homes and went

BOYS AS MONEY MAKERS AND MONEY SAVERS

from house to house making contracts to sell them at fifteen cents a dozen. Our first venture brought us one dollar and eighty five cents each. This is to be the beginning of a business that we expect to carry on next summer quite extensively."

A Colored Boy Who is Worth Money.

There is a colored boy in Boston not yet twenty years of age who has in bank more than three thousand dollars, every cent of which he has earned. His name is Isaac Jackson, and he is employed by one of the leading firms on Washington street. "I worked for a long time in Philadelphia for two, and then for three dollars a week," he said, "but I saved some of it every week, for my old mother told me I should do it. When I had a little put away in a savings bank a friend advised me to go into a building society, and that is just what I did. Then I got more money and took more shares in the society, until now I have got quite a little sum put by. Here in Boston I am now earning eight dollars a week, and I save just half of that."

Jackson has the respect and confidence of his employers, works honestly and diligently, studies at nights and Sundays, and dresses in good taste. He doesn't expect ever to be a Vanderbilt or a Rockefeller, but he does expect some day to have a home of his own.

A New Way of Making Money.

The Young People's Weekly says that a bright boy in a western city has found a new way of making money. He has a long list of customers whose pencils he keeps sharpened and who patronize him for new pencils. He has a patent sharpener and goes from store to store and office to office doing unique work. By spending four or five hours a day of his time in this way he makes from five to seven dollars a week.

The Milkman.

Let me introduce you to John Apsey, Jr., milkman, aged thirteen, who has served daily one hundred and twenty three customers, through cold and heat, sunshine and storm, for nearly a year. He is a level headed little fellow, and although his route takes in many of the principal thoroughfares of Grand Rapids (Mich.) he has no fear of accidents, as he drives a trusty team.

Just see how pleasant he looks in his photograph as he is about to step out with a measure of milk.

Recently I inquired his name and he replied: "John." "Yes," said I, "just plain 'John'; no fixings to his name. He is all business."

His father owns and manages an extensive dairy, and "John" is his right hand man. MARY P. SAYERS.

JOHN APSEY, JR., MILKMAN.

How Boys Make Money.

Harry Brown, P. O. Box 306, Columbus, Wis., age fourteen: I am saving my money to buy a printing outfit. During the greater part of the summer vacation I worked in a jewelry store in this town, earning three dollars a week while I was there. I also did odd jobs when I found them. If you know of any second-hand self-inking, foot-power press for about twenty five dollars will you please let me know?

James H. Crawford, 722 Hattie place, Schenectady, N. Y.: I practice one hour every day on the piano and carry golf sticks at the golf grounds. I get twelve and a half cents a round—that is, nine holes. I am saving up my money to buy a small printing press. I think it will help me to make a little money.

Lester Orr, Mount Hope, Wis.: My father is a doctor and I earn money by attending to three horses and a cow. I have two rabbits at my home. This year I bought a calf for one dollar and fifty cents and now it is seven months old and is worth fifteen dollars. I am worth about fifty one dollars and seventy cents in addition to my calf and rabbits. Am twelve years old.

Paul Sheridan, Youngstown, O.: I make my money by typewriting for my father. I get two cents for a letter and one cent for a postal. I make from seventy five cents to a dollar a week. Mornings I sweep out a store for a dollar and a half a week, and earn about fifty cents more for odd jobs.

It is not every calamity that is a curse, and early adversity is often a blessing. Surmounted difficulties not only teach, but hearten us in our future struggles.—Sharpe.

The Largest Chicken Farm in America.

There is a farm near Cobleskill, N. Y., owned by Henry Van Breeser, where they will show you thirty five hundred hens. On this farm is one hen house three hundred and sixty five feet long, with thirty two each, and three other rooms for six hundred rooms large enough for seventy five hens. There is a hatching house with incubator capacity for two thousand eggs at a setting. Thirty shanty houses, each with room and hot air for one hundred little chickens, and an "egery" where often the day's laying amounts to sixteen hundred eggs, which are cased and expressed to one New York hotel every night on the six o'clock train. The hens have a forty acre pasture for a run, and hence are never sick. The average lay is not far from one hundred and sixty eggs for each hen. The big hen house has double walls packed with wild hay five inches thick, cement floors and net partitions, except that every third one is of matched lumber, so that there can be no draughts of air. There are scratching boxes in the corners, fresh running water in each pen, and large windows. Each room is partially cleaned every Wednesday, and on Saturday the whole house is cleaned, swept and dusted. At times a good scrubbing is given. In a ten acre orchard may be seen more than twelve hundred pullets at one time. The little roosters are fed on cornmeal, and as soon as they weigh about a pound each are sent to New York for broilers. Four acres of sunflowers produce the seed fed to these chickens every year. In one year the chickens will consume nine hundred bushels

of wheat, six hundred bushels of shelled corn, four hundred bushels of peas and oats, six hundred bushels of buckwheat, one hundred and twenty five bushels of sunflower seed, seventy five bushels of millet, besides acres of beets and cabbage. This whole plant did not cost more than five thousand dollars, aside from the land. Commencing with October 1, this great establishment became part of the Cornell Experiment Station, and while it remains the property of Mr. Van Breeser and under his control, the workings will be published in the bulletins of the station.

The great secret of success is laying by a nest egg and adding to it, never spending more than one makes and being strictly economical.

POLISHING MITTEN A MONEY COINER FOR AGENTS.—Used for polishing pianos, furniture, stoves, shoes, etc.; in fact, anything that can be polished. Being long and water-proof it prevents dirt and dust from getting on the hands. Lasts much longer than a brush, and besides, it gets into corners where a brush cannot. It is made of soft, long-wool sheepskin, and positively will not scratch the most delicate piano finish. On back of each Mitten is a Dauber, which can be easily used by simply closing the hand, and is so made that it can be used on either hand. Price, 30c.; 1 doz., \$1.00. SPECIAL OFFER: Send 10c. and we will send a sample, post-paid, to any genuine agent. J. LEE, 186 Van Buren Street, - CHICAGO, ILL.

The Blanket Indian Boy

And his Father

The Blanket Indian Boy.

LELA FISHER WOODWARD.

When a boy babe makes his appearance among the Blanket Indians there is much rejoicing, for will he not grow up to be a warrior?

If twins are born and one of them be a girl, she is speedily killed, for to give birth to twins is a terrible thing in the eyes of savages.

When the boy papoose opens his keen, black eyes, he sees his doting parents looking appreciatingly at him.

He sticks his chubby red fist in his mouth, just as a white baby would, and regards his mother who, with her coarse, black hair uncombed and falling down over her eyes and almost hiding her face, takes him in her arms and then deposits him in the bright, warm blanket on her back.

He probably considers his father handsomer than his mother, for the father's long, black hair has been nicely combed, greased, and wrapped in strips of otter hide or beaver skin or some bright bits of cloth he has picked up around the stores at the agency.

His little eyes rest wonderingly upon the skins on the dirty tepee floor and glow with admiration as he catches a glimpse of the bright fires outside, around which many blanketed, moccasined squaws are pounding corn in wooden mortars, preparatory to cooking bread.

No sooner has his father seen him than he rushes pell-mell from the tepee to find his boy a name. The first object that strikes him favorably suggests a name for his son and heir. He may spy a lone wolf at a distance; thereupon he runs back and christens the little one Lone Wolf. (This is probably how the noted Kiowa Indian chief, now residing on the Comanche reservation, received his name.) If nothing he sees suggests a name, the father rushes back and looks

intently at his papoose again. Why? To see if his nose is not crooked, for then he will be called Crooked Nose. Or, perhaps his ears flop; his name will then be Flop-Eared. He may have weak eyes; he may be christened Evil Eye.

Not only personal characteristics, but circumstances may suggest a name. One little Indian boy was born at some distance from home and his father called him "Born-a-long-ways-from-home." Another was born while on a visit to Texas, so he was christened "In-the-white-man's-country."

The first name given, however, is not always permanent. The boy may lose a leg, and his name be changed to "One Leg," or he may grow into a brave who stumbles along, and his tribe thenceforth call him "Stumbling Bear."

Some of these names are very peculiar, but all Indian names are significant and suggestive. There is not one without a meaning. Indians have no surnames.

The little papoose is not bathed and early becomes acquainted with dirt. When he can walk and frolic, he runs faces with his father's ugly Mexican dogs, plays football with his brothers and lords it over his sisters, who are only to be squaws. He delights to drink hot blood from the cow which his father has killed—probably stolen from some white man's pasture—and which his mother and other squaws are dressing with scalping knives. He will thrust in his hands and fill his palms and drink blood, that he may become a warrior.

Taught from infancy that woman was created for use and man for ornament, he soon becomes vain and exacting. He delights in having his hair, which is never cut, plaited, for this is considered his crowning glory. He decorates him-

self with all kinds of bright things, especially brass trinkets.

It is the Blanket Indian boy's ambition to become a great warrior like his grandfather, who has shown him his scalps of the "pale faces" and has proudly recounted to him around the camp fires the treacherous, bloody deeds committed in his youth. Or, if he be specially ambitious, he desires to become a mighty "medicine man" or a great "war chief."

His parents allow him to grow up in Nature's own free way and exercise no discipline over him. He does what he likes, which consists in using the rifle, riding the wildest horses, and going to the pasture with his father to "round up" the few head of cattle and horses.

When he reaches the age of sixteen, he becomes the most potent factor in his family. His word is law and he can even give away his sister or sisters in marriage in exchange for some bright baubles.

When he has occasion to go to the Agency he decks himself in full savage regalia, while his mother or sister paints and decorates the pony he is to ride. Reaching the Agency, he sits around the stores of the traders and discusses women and horse flesh with the older braves. Or, if it be Issue Day, he goes to the Commissary building and draws his government supplies. He may be the recipient of a bright blanket, a gaudy sombrero, or a pair of trousers. These latter he converts into leggings and after trimming them with fringe, or some other savage decoration he considers himself resplendent.

When he draws his allotment of "grass-money" he repairs to some secluded spot, where, with older braves, he engages in playing monte, and so passionately fond of gambling is he that he will stake his last cent; or if he be wiser, he will only look on, while he munches candy or nuts bought with his "grass-money."

But he comes to the "parting of the ways" when the government agent or teacher visits his father's wigwam on the reservation and tells his parents they must send him either to the public school or the mission. After many threats or promises, he, contrary to his own desires, and to his parents' extreme dissatisfaction, enters one of the schools. Here he must stay for ten long months, must be given an English name, must adopt civilian's clothing, forget his language and the old savage life. He is docile if he likes his teacher, but will not study what he does not wish. When his parents visit him, he longs to go back with them to the skins and wigwams. In vacation he does go back and would enjoy the wild life were his happiness not marred by the thoughts of September and of the school to which he must return.

Notwithstanding the millions of dollars spent for his amelioration, the Blanket Indian boy much prefers savagery to civilization. True, some of them attend the noted Carlisle Indian school, where they graduate, but more of them prefer the skins and tepees.

After all, the Blanket Indian boy is really the only American boy.

A distinguished theological professor once said: "If I had a son I should tell him many times a day to make himself as big a man on the inside as possible."

Young men, too often, want to be big men on the outside.

The BOY

in the Office, the Store, the Factory and on the Farm.

Take for your star self-reliance.

Think well of yourself; strike out.

A good apple is a good physician for a boy.

Inscribe on your banner: "Luck is a fool, pluck is a hero."

Remember that the art of commanding is to take a fair share of the work.

Put potatoes in a cart, go over a rough road, and the small ones go to the bottom.

No young man in the practical work of to-day can hope to get on if he shirks his work.

Many young men fail to render valuable service through lack of ability to do accurate, systematic work.

There are few young men who do not possess sufficient ability to make a successful start in life if they are thoroughly imbued with the precept, "Keeping everlastingly at it brings success."

Every business man knows that there are moments on which hang the destiny of years. If you arrive a few minutes late at the bank, your paper may be protested and your credit ruined.—Pushing to the Front.

Business Methods of Newsboys.

The newsboy on the corner shouted: "Evening Papers—Stevenson nominated for vice-president!" and the people passed on, satisfied. In the next street another newsboy shouted: "Evening papers—democrats nominate a vice-president!" and the people were curious and bought. "Who's nominated, sonny?" asked a dry old fellow eagerly. "Have a paper sir?" was the answer. This boy was selling the news; the first boy was giving it away. It is easy to pick the winner between the two.

Too Particular.

J. L. H.

I feel quite sure that one reason that some boys do not succeed in retaining positions they have secured, or that their friends have secured for them, is because they are too particular. They are inclined to define too closely the boundaries of their duties, and are too unwilling to go beyond those boundaries. One day last spring my wife's laundress came to me and wanted to know if I could tell her where to find employment for her boy of sixteen years.

"You know," she said, "that his father died two months ago and I cannot keep Hugh in school any longer. I have answered a dozen or more advertisements in the papers, and have tried in every way to get a place for him. I am in great need of his help in providing for my family, and you do not know how grateful I would be if you could help me to secure a situation for him."

Now it happened that the very next day I was in the office of a friend of mine who is the manager of a large business establishment, and just as I was leaving his office he said to me:

"You do not happen to know of a clean, willing, bright boy who wants a place, do you?"

I thought at once of the son of my laundress, and I said:

"Why, yes, I do. I know of a boy who needs a place very much, and he impresses me as a very bright boy. If he is as faithful as his mother in doing work, he would please you. What kind of work would you want him to do?"

"Oh, I want him for general office work. The boy I have is very satisfactory, but his folks are going to move out of town next week and he is going with them, so I must start in with a new boy on Monday."

"Do give Hugh Hoopes a chance," I said. "I will have him come at once to see you if he may."

"All right; send him around. He shall have the place if he can fill it."

I felt that a bit of real good fortune had come to Hugh when he secured the position in my friend's office. The work was not very hard, and I knew that my friend would deal justly with him. It was, moreover, a place in which there were excellent opportunities to "work up." I congratulated Hugh on securing the position, and advised him to do his utmost to please.

Three weeks later Mrs. Hoopes came to me to ask if I would use my influence in securing another place for Hugh.

"Why," I said, "he has not left his place in my friend's office?"

"Yes, sir; he—well, he couldn't get along there. They expected too much of him, sir."

I knew that my friend was a very kindly and considerate man, and that he would not "expect too much" of any boy, therefore I thought it wise to visit him before I tried to get another place for Hugh Hoopes.

"I will tell you the simple truth," said my friend when I went to see him. "The boy was too particular, and he did not have a proper conception of what was due me as his employer. When I engaged him it was with the understanding on my part that his time belonged to me from eight in the morning until five in the evening. I paid him a fair salary for giving me his time during those hours. I did not and I could not tell him of all the things I might ask him to do. I told him some of the more important things, and I was very much surprised the fourth day after he came to work for me to have him object to doing something I asked him to do."

"Why," he said, "I thought that was the other boy's work."

"So it is usually," I said, "but the other boy has gone over to the other side of the city for me, and may not be back for several hours, and I want that work done now."

"He did the work, but evidently under silent protest. A day or two later, when he was not doing anything at all, I asked him to do something else he had never done before, and he said:

"It isn't my place to do that."

"My boy," I said, "it is your place to do anything reasonable I may ask you to do during the hours that I am paying you for your time. Do you not think so?"

"He said that he did not come to me with the expectation of doing anything and everything. I tried to show him that he ought to be willing to give me all of the service he could during the hours for which I paid him, but he was sullen and impertinent, and I was compelled to send him away at the end of the next week. I wanted to keep him to oblige you and on his own account, for he is really a very capable boy, but he must change his ideas regarding his duty to those who employ him before he can hold a place very long."

This was true, and every boy who reads this should bear in mind the fact that the too particular boy, the boy who is unwilling to serve, the boy who would rather be idle than do anything "not nominated in the bond," is the boy whose life will be a failure. Better far have the spirit of the boy whom I hired to work for me on Saturdays a few years ago. He came to me the first Saturday with his sleeves rolled up and said:

"Now I am ready to sail in to anything you happen to have for me to do. My time is yours."

That boy will "get along" in the world.

How General Tom Thumb Got His Title.

GEN'L TOM THUMB.
(From an old picture.)

General Tom Thumb was a Mr. Stratton, before the well known title was given him. When P. T. Barnum first met young Stratton the showman persuaded the parents of the boy that it would be a good scheme to introduce him to the public as Tom Thumb; so by that name he was introduced to the public and finally to Queen Victoria. On one of his visits to the Queen the midget was presented both to the Prince of Wales and to the Princess Royal, who afterwards became Empress of Germany. As he stood beside the Prince and Princess his smallness was more noticeable. The Duke of Wellington was present, and noticing this fact said to one standing near, "Their Royal Highnesses are getting shoulders taller than Tom Thumb." This remark was overheard by the Queen, and turning to the Duke she said, "General Tom Thumb." Bowing low to her majesty the Duke then gave the military salute, repeating the title, "General Tom Thumb." Everybody bowed, and from that time on it was "General Tom Thumb."

A Boy's Essay on Lions.

The boy's teacher had taken him to the zoological garden with his classmates. Upon their return the teacher asked that each should write an essay on some one of the animals he had seen. Here is a sample from a bright minded eleven year old.

"Lions always walk except when they eat and then they growl. Their roar is most terrifying to men and other beasts when heard in the forest, but when they are in cages it sounds like they was sorry about something. Their tails are not so long as the monkey's according to their size, but keep switching all the time, and the seals can make just as loud a noise and have more fun in the water. They are cats no matter what you think and their size has nothing to do with it, and they think without talking. Once a donkey stole a lion's skin and went around bragging about it, but the other donkeys got onto him because he talked so much. That showed he was a donkey. Keep still when you are thinking."

CORRECT TIME FOR A DOLLAR!

THE BOY'S FIRST WATCH should be an INGERSOLL, and he should have it early. You equal it? You had to wait because watches were high; your boy need not, because the times have changed and you can now get him a

GUARANTEED INGERSOLL FOR A DOLLAR

He will grow up with it; teach him to treat it properly—like any other watch—and it will run ten years. Teach him to go by his INGERSOLL, to be punctual, and your dollar will do more good than any other you have spent. Its construction gives it resisting power to the boy's hard knocks. Yet it is not designed for boys alone; it is a first-class man's watch, handsome in appearance, an accurate time-keeper, and FULLY GUARANTEED. Sold by 10,000 dealers, or mailed post-paid, upon receipt of a dollar bill, by the makers.

Address RCBT. H. INGERSOLL & BRO. Dept. 34 67 CORTLAND ST. NEW YORK CITY

Dan Rice and the Boys.

The late Dan Rice, the famous circus man, was fond of boys and always wanted to see a lot of them in his audience. He never gave a performance when the nooks and corners were not filled with youngsters who had come in free. One story of this sort is told of a time when Rice's show visited Zanesville, Ohio. It was Mr. Rice's custom to stand at the door until the first "grand entree" of the circus people, when he would leave. On this occasion a very large crowd of boys had assembled, penniless but hopeful. He saw the hungry look on the faces of the boys and called them around him. "You want to go in, don't you, boys?" he asked. "Bet your life!" shouted back the youngsters. "Very well," said Mr. Rice, gravely. "All the boys who are back here in ten minutes with clean hands and faces can go into the show free!" The words were hardly out of his mouth before there was a dash for the river, and in less than seven minutes two hundred clean faces and twice that number of clean hands came back to the tent. The boys went inside with a rush, and maybe they didn't applaud that performance."

Punished Enough Already.

A very subdued-looking boy of about eleven years, with a long scratch on his nose and an air of general dejection, came to his teacher and handed her a note before taking his seat and becoming deeply absorbed in his book. The note read as follows: "Miss B—: Please excuse James for not being there yesterday. He played troant, but you don't need to lick him for it, as the boy he played troant with and him fell out and the boy licked him, and a man they sassed caught and licked him, and the driver of a cart they hung on to licked him also. Then his pa licked him, and I had to give him another one for sassing me for telling his pa, so you need not lick him till next time. He thinks he better keep in school now." Under the circumstances the teacher thought James had been punished enough.

He Had Enough.

There is a New York physician, says the New York Tribune, who takes an active interest in politics and is popular with the "boys." In spite of his jolly disposition he is an extremely thin man, so thin that many a joke is aimed at him. Here is the latest story they are telling about him:

A grocer's boy entered the doctor's office the other day with a basket of fine fruit which some grateful patient had sent to him. The doctor told the boy to place the basket in a cabinet which stood against the wall. At the same instant he stepped out of the room, and, going into an adjoining one, manipulated a contrivance which caused an articulated skeleton within the cabinet to waggle its head and limbs in an appalling manner just as the messenger boy opened the door.

With a yell of terror the boy fled. When the doctor had enjoyed a hearty laugh, he picked up a fine apple and followed the boy into the street to give it to him. "Come here, my boy!" he shouted, "Here is a fine apple for you." "Not on your life!" replied the affrightened youngster, taking to his heels again. "You can't fool me with your clothes on."

An old painter watched a little fellow who amused himself by making drawings of his pot and brushes, easel and stool, and said: "That boy will beat me some day." So he did, for he was Michael Angelo.

Her View of Boys.

At a recent school examination for girls, this composition was handed in by a girl of twelve: "The boy is not an animal, yet they can be heard to a considerable distance. When a boy hollers he opens his big mouth like frogs, but girls hold their tongue till they are spoken to, and then they answer respectable and tell just how it was. A boy thinks himself clever because he can wade where the water is deep. When a boy grows up he is called a husband, and then he stops wading and stays out nights, but the grown-up girl is a widow and keeps house."—Ledger Monthly.

When We Were Boys.

When a boy grows older and begins to realize how very little he knows compared with what he thought he knew, he stops calling his father "the old man" and ceases to regard him as a back number. During this period he considers himself five fourths of the village, and if corrected, talks about what he will do, and threatens to leave home. He is the most abused person in all the world, and does not stop to consider the feelings of his parents, who coax him to be half way decent. If the "Old Gent" had taken the most of us across his knee and flailed thunder out of us it would have been what we deserved. This is the experience of one who has traveled this pathway, but who has just begun to realize it.—American Thresherman.

Got a Letter from Dewey.

Some boys in Casselton, N. D., organized a club and named it after Admiral Dewey. The corresponding secretary of the club wrote to the Admiral and told him about the honor that had been conferred upon him. The Admiral replied as follows:

"Washington, March 13, 1900.—Dear Sir: I have the pleasure to acknowledge the receipt of your letter of the 7th inst., in relation to the organization of the Admiral Dewey Chapter of the Journal Junior Club. I beg to express the hope that the Chapter may be successful, and that its members may grow up to be many men, full of patriotism and love of country. Very truly,

Alfred Dewey

One boy, when asked what was raised in damp climates, replied, "Umbrellas."

Study Law at Home

You can obtain by home study a complete legal education under the guidance of the most successful correspondence school in the world, without its interfering with your present employment, and without the expenditure of much money.

We can convince you of this

If you will write us for particulars. Our students are everywhere, in this and foreign countries. Hundreds of them have completed the course, and are practicing law with great success. We are the oldest correspondence Law School in existence, and have the support of leading educators and business men at home and elsewhere. We will refer you to persons right in your own neighborhood.

It matters not how you are situated

we can help you to get a legal education, which you can use as a lawyer or in general business. A great opportunity! Send to-day for our Catalogue. It costs nothing and will interest and inspire you. It tells about our three law courses, namely: Preparatory Law—Business Law—Regular College Law Course. Address **the Sprague Correspondence School of Law**, No. 500 Majestic Bldg., DETROIT, MICH.

Yours for the young man with no class
W. C. Sprague, Pres.

The publishers of THE AMERICAN BOY will sell at a very reasonable rate to professional or amateur papers the cuts used in illustrating this or any of the preceding numbers of THE AMERICAN BOY. Illustrate your papers.

Practical Printing for Amateurs.

W. S. Knox.

(Begun in October.)

PRICES OF STOCK.

The cost of printers' paper stock varies with the condition of the market, but the following prices are about those asked to-day for the common grades. The goods can be obtained at any newspaper or printing office, in either city or country, at a small advance over these prices. Most of these goods are done up in packages of five hundred, and dealers do not like to break packages. There are, of course, both better and cheaper grades, but these prices are based upon good, fair stock. Prices are for one thousand:

Letter Heads—White, ten-pound, one dollar and twenty cents; twelve-pound, one dollar and forty cents. Linen and Bond, eight-pound, one dollar and thirty five cents; ten-pound, one dollar and sixty five cents.

Note Heads—Packet, white, six-pound, sixty cents; seven-pound, seventy cents. Linen and Bond, four-pound, eighty cents; five-pound, one dollar. Commercial, white, five-pound, fifty cents; six-pound, sixty cents.

Bill Heads—Sixes, fifty cents; quarters, seventy five cents; thirds, one dollar; halves, one dollar and fifty cents.

Statements—Five-pound, fifty cents; six-pound, sixty cents.

Envelopes—Manilla (for circulars, etc.) six inches, XX, sixty cents. White, six and one-half inches, XX, ninety cents; same, XXX, good, one dollar and twenty five cents. Amber, blue, canary, granite, and other colors, XX, six-inch, one dollar and fifteen cents.

Cut Cards—Size two by three and one-half inches, fair quality, white or tinted, seventy five cents. A nice, heavy, round cornered, ivory surface card, in tints, ninety cents. Tough check for tickets, sixty cents. Thin, colored board, forty cents.

Cut Paper—(For circulars, bills, dodgers, etc.)—"Writing" paper, white or colored, five and one-half by eight and one-half inches, forty five cents; eight and one-half by eleven inches, eighty cents. Newspaper, white, six by nine inches, twenty cents; nine by twelve inches, thirty five cents; twelve by eighteen inches, sixty five cents.

These sheets can be cut into smaller sizes to fit the requirements for any special work by the use of a "straight-edge" and a sharp shoe-knife. Straighten a number of sheets with the edges perfectly even and place upon a table or board. Mark the top sheet off into the sizes desired. Place a heavy ruler or smooth, straight edged stick to the mark and press down upon the paper tightly with the left hand. With the right hand draw the point of the knife across the paper, bearing down heavily and rubbing close against the straight-edge. Don't raise left hand until the last sheet of paper on bottom has been severed. Repeat this operation until the paper has been cut into the size slips desired. This is the way the "country" printer always cuts his paper, until he can afford a modern lever paper-cutter.

Nearly all printed stationery is now put up in neat tablets or "pads." In this shape it is more convenient to handle by the user than in loose sheets, and only the top sheet may become soiled. Tablets are easily made by the use of liquid padding glue (which is always ready for use and dries on the pads quite readily), although the composition requiring melting in a glue pot is more substantial.

Liquid padding glue is made by dissolving eight ounces of the finer grade of common glue, well broken up, in eight ounces of acetic acid, with a small quantity of glycerine added. The glycerine keeps the composition from becoming too brittle when dry. Color as desired with aniline. If the preparation is too thick, add more acid until it drops readily from the brush. About one hundred sheets should be placed in a tablet, with a piece of heavy strawboard the same size as the paper upon the bottom of each tablet to stiffen and protect it. Straighten the paper and bottom board nicely and evenly from the top and one side, and lay smoothly upon the edge of a box or table with the top of pad to outer edge. Place a board carefully on top to the outer edge and lay a brick or other heavy weight upon it. Then take your brush and apply the glue evenly and thinly over the surface of the paper

THE YOUNG PUBLISHER ON HIS THIRTEENTH BIRTHDAY.

exposed at the top end of the tablet. After this coat has been allowed to dry for ten or fifteen minutes, apply a second coat of glue. Two thin coats are better than one heavy application. Let it dry from thirty to sixty minutes. If you have padded several tablets at one operation, separate them by slicing apart with a thin bladed "case knife"—being careful not to get the heavy bottom board cut off on top of the pad beneath. In the regular printing offices these tablets are trimmed in the paper cutter on the three unpadded sides, after padding, giving them a smooth, finished appearance.

(To be Continued.)

A Successful Publisher at Thirteen.

William P. Little, of 23 Washington street, Delaware, O., son of the cashier of one of Delaware's prominent banks, is a successful publisher, though only thirteen years of age. He began publishing at the age of seven, when his outfit consisted of a series of rubber Brownie stamps and a small font of rubber type. His paper contained pictures and descriptions of them made with rubber stamps, printed one line at a time. As the leading paper of the city was the Gazette, and as the young editor's name was Little, he appropriately named his sheet "The Little Gazette." For one year he published a little paper, which was a monthly, presenting it promptly on its issue to the publishers of other papers in his town, receiving in exchange their papers.

At the end of a year his father gave him a rubber type press which had been used at the bank. The boy bought new type and fixed the holder so that he could print an entire page at a time. At the end of the next two years, with money earned from subscriptions, he bought a hand press, printing a paper 3x5 inches, and a set of lead type. From a one column paper it became a two column. Then he began soliciting advertising, and so successful was he that in a short time he had to buy a new press which would print a paper 5x8 inches, and an equipment of fourteen different kinds of type. It then became a three column four page paper.

The boy has now a job office in connection with the paper, and prints deposit slips for the banks, cards, and other matter for business men who take an interest in his enterprise and want to encourage him. He deposits in the bank two-thirds of his receipts from job printing, and the other third he keeps for spending money. Every purchase he has made has been paid for from the earnings of his establishment. He does all the work, from that of editor to delivery boy. The heading of his paper for some time was "William P. Little, Editor, Manager and Delivery Boy." Once he said in his paper, "If the delivery boy is not polite to customers, please report him to the manager." The paper has not missed an issue since it was founded.

BOYS 3 mos. trial sub. to "The Yankee," a boy's paper, 5c silver. Yank. Pub. Co., Baker's Summit, Pa.

BE YOUR OWN BOSS—Go in Mail Order Business. No capital. For particulars send stamp. H. MOTTER, Box 49, New London, Ohio.

THE BOY PHOTOGRAPHER

Edited by JUDSON GREENELL

THE AMERICAN BOY offers twelve prizes of Two Dollars each for the best Amateur Photograph received during the twelve months in the year...

After the aristo platino paper come those that, like velox, have to be developed after being printed. They are called "printing in" papers.

The various glossy and dull surfaced papers are next in importance. Their name is legion, and all have points of excellence.

This article is not intended to give precise information as to manipulating these papers. The directions accompanying them do this.

Photographic Notes.

"Nature to become art must be filtered through the fingers and brain of the artist." -H. P. Robinson.

A woodland view, to be interesting, should contain in the foreground a well-defined object of interest.

When the subject of the photographer's effort wears a broadbrim hat, have him raise the front so as to let light in on the face.

Cold developer is apt to leave a plate thin. A good way in winter is to place the developing tray on a brick thoroughly warmed.

One of the chief sources with the beginner is the opportunity of gleaning from the experiences of others.

When putting a plate in the plate holder, do not let the fingers touch the sensitized side. An oily mark is left that prevents development.

A short talk on negative making has been issued in pamphlet form by the Hammer Dry Plate Co.

Ernest Seton-Thompson advocates "hunting with the camera," instead of with a gun.

Take care of your lens. Keep it clean, but never wipe it with any material that may contain grit.

"Pyro" is a new form of pyrogallie acid which seems to have met with considerable success.

Pictures Worthy of Note.

A print sent by A. G. Gilmon, of Lebanon, O., is a beautiful one—well timed, well printed and correctly mounted.

Answers to Correspondents.

Barton A. Brown—Write to the Nodark Camera Co., New York city, for descriptive circular of camera that takes, develops and fixes a picture in three minutes.

John Conline—You took your plates out of your developer too soon. Watch for details in the shadows, and do not take it out until the image begins to fade.

Charles Tomlinson—Toldol is spoken of very highly by acquaintances who have used it. So is Rodinal. But probably more pyrogallie acid for developing is used than all the other developers combined.

Benny Levenson—Experience is the only sure way of knowing when a plate is sufficiently developed. One plan is to watch the back of the plate. When the "highlights," that is, the sky and the other light parts, show through, it is probably sufficiently developed.

H. H. Wilder—If you had printed your platinum paper a shade darker, you would have had some definition in the high-lights, and consequently a better picture.

To Get Natural Expressions.

One of the tricks of photographers to get a natural expression is to talk to the sitter of the thing in which he or she is interested. Is he a farmer? Then talk of crops.

IN JACK O'LANTERN TIME. First Prize Photo, by Lyman H. North Waukegan, Ill.

Printing and Toning.

After a negative has been developed, washed and dried, it is ready for the printing frame. Is it dense or thin? Soft or harsh? Is it a portrait or a landscape? On the answer to these questions depends the selection of the proper paper.

The highest style of photographic art demands carbon paper. It is also the most permanent, and when properly done the picture will never fade.

Next in beauty and permanence is platinum paper. This any amateur can work, but it is expensive. It comes in rough and smooth surfaces. The paper is placed in the printing frame next to the negative, and exposed to sunlight only until the high-lights begin to appear.

Next in excellence comes aristo platino paper. Most professional photographers use this for their studio work. It is printed much darker than the ordinary paper, then toned and fixed, and can be produced in the fashionable sepia, in warm tones, or in white and black.

Send five cents for sample copy. CHAS. K. REED Station A, Worcester, Mass.

BOYS IN THE ANIMAL KINGDOM

How to Start a Rabbitry.

CHAS. B. BOVIER.

The breeding of Belgian hares opens up opportunities for many who before had no means of earning a dollar for themselves. It also provides another very dainty item of fresh meat for the thrifty housekeeper.

It gives the boys business training and teaches them self-reliance. Many boys, through raising Belgian hares in their back yards, are laying up money. It also teaches them practical lessons in stock breeding. For instance, the learning that the mating of one animal with good shape and good color, but short on ear-lacing, ticking or color of hind feet, with another having an abundance of those points, produces in their descendants more perfect specimens.

DIAGRAM OF FRONT HUTCH.

A—Nest box. B—Door to nest box. C—Space above nest box. D—Main door.

The first great essential is to have suitable and comfortable quarters kept always in a cleanly condition, and well ventilated, but without drafts. These requirements must be conscientiously looked after to insure the health of the animals.

The hutches may be easily and cheaply made from dry goods boxes. Take a box, say about three by four feet and two feet high. Take off one side. In the doe's hutch put a smaller box, say about twelve by twelve by twenty inches, with a hole cut in the back end about eight inches square, through which the doe can enter. In the front end make a door, and place the nest box at one end of the hutch within easy reach of the door. Close the opening above the nest box with one inch mesh poultry or rabbit wire. Make a door to fit the entire opening from the nest box to the other end. The frame should be made of seven-eighths by two inch lumber and covered with the one inch mesh screening. Tack the wire on the inside of the door to prevent bunny from nibbling at the wood.

A hutch made in this way is tight on three sides, while the front is all open, except the end of the nest box, thus insuring ample ventilation.

These hutches should be placed under shelter, from storms or too great heat. They should also be raised from the ground to avoid dampness. Again, we say, keep dry, clean and well ventilated.

The hutch for the buck does not require a nest box.

The next thing is to procure the stock. Boys who have had little or no experience in stock breeding, should start with only a few good animals. At first I would not advise buying fancy stock.

While there is big profit in raising fancy animals for show specimens, yet the risk is greater, and it is much better for boys to be content with the smaller profits derived from raising meat animals, until they become familiar with the habits of the little animals and the best methods of caring for them.

Get the name of some reliable breeder and write to him, telling him about what you want and get his prices on a pair or trio.

If the rabbits are to be raised for meat only, it is not necessary to purchase pedigreed stock, but for fancy breeding get stock that is pedigreed from some well known strain of blood.

It is better to take an inferior animal known to have good blood than a much better animal with inferior blood, for the specimen with the good blood will in all probability, with proper mating, produce young better than itself, while with the other animal the opposite is true. If you can not afford to spend much money, a good grade of stock may be procured by buying animals two and a half or three months old, and as they mature rapidly one will not have to wait long, as they can be bred at about six months of age.

About a week before the doe is due to have her young, give her plenty of good, clean straw out of which to build her nest, and she will line it with hair pulled from her own body.

If the weather is extremely cold, sometimes she will not pull enough hair to keep her young warm, and they will be chilled to death. This can often-times be obviated by saving the pelt of a hare which may have been killed for meat, and cutting the hair from it and putting it in the nest about the time the doe is going to have her young. Many valuable litters have been saved in this way. Soft feathers are sometimes used to good purpose, where the hair is not available.

The Bellbird.

Our illustration represents the Bellbird from Brazil, a remarkable ornithological specimen. It is the Spaniards' celebrated Campanero, and called "Dara" by the Indians. His plumage is white as snow, and he is about the size of the jay. He has a spiral tube on his forehead that when expanded, rises nearly three inches high; this communicates with the palate, and when filled with air looks like a spire. It is jet black, covered all over with tiny white feathers; when empty it remains flat.

The Bell Bird.

The Bellbird's note is loud and clear like the sound of a bell, and may be heard a distance of three miles. The Campanero is found in the extensive wilds of Brazil. No sound or song from any of the winged inhabitants of the forest, not even the clearly pronounced "Whip-poor-will," causes such astonishment as the toll of the Campanero.

Like many of the feathered songsters, he greets you with a morning and evening song, and even after the meridian sun has silenced almost the whole of animated nature, the Campanero still cheers the forest. You hear his toll, and then a pause for a minute, then another toll, then another pause, then a toll, then he is silent a few minutes, and then a repetition of the tolls.

WHITE FANTAIL PIGEONS THE BOY'S PET AND PROFIT.

More pleasure and money made raising these wonderful pigeons than anything a boy can do. Only \$5.00 a pair. Sent on approval. E. A. Hulbrook, Winchester, Mass.

The Star Incubator

is best because simplest in construction and in operation. Hatches every hatchable egg. Positive directions and no moisture. Perfect hatcher, 60-egg size, \$6. Illustrated catalogue free. STAR INCUBATOR CO., 66 Church Street, Bound Brook, N. J.

WHITE BELGIAN HARES

Imported direct from Belgium. These white beauties are bound to become great favorites in America, and all who start with a pair now will be sure to make big money. Booking orders now at \$30.00 per pair up; also Buff Plymouth Rocks and Buff Leghorns. Winners at New York, Boston, Washington and Philadelphia. Stock for sale. AUG. D. ARNOLD, Box 666, DILLSBURG, PA.

THE CHICAGO RABBITRY, George Rohm & Son, Props.

1298 Ogden Ave., CHICAGO. We are importers and breeders of high-grade Belgian Hares. We can furnish you with does bred to imported bucks at from \$10 to \$50 each, well pedigreed. We have on hand a fine lot of youngsters direct from imported stock on both sides at \$15.00 per pair.

THE COMING INDUSTRY! BELGIAN HARES

We have all kinds of stock from \$1.00 each to \$250.00 each. Write for prices. LEM MUMMAH & SON, 428 South Cascade, Colorado Springs, Colo.

Incubators FROM \$5.00 UP Brooders FROM \$3.80 UP Fully Warranted. Free Catalog. L. A. BANTA, Ligonier, Ind.

BOYS WANTED

To raise high grade BELGIAN HARES for Pleasure and Profit. Some beautiful red specimens of CHAMPION stock with full pedigree, and four red feet, at the lowest prices. Lord Roberts, score 95 1/2 points, in our herd. Shipped in light crates, and safe delivery guaranteed. Address F. M. ROOT, Lansing, Mich.

THERE IS NO INCUBATOR which has been more successful than the SUCCESSFUL. You hear about them everywhere. The reason is that they do their work so well. Send 6c in stamps for new 154 p. book, printed in 5 languages, describing our fine successful incubators and brooders. They deserve their name. Des Moines Incubator Co., Box 530 Des Moines, Iowa.

BELGIAN HARES Best stock: lowest prices. Send 6c for booklet, prices, etc. Belgian Hare Book 25c. CALIFORNIA BELGIAN HARE CO. EXPOSITION BLDG. MINNEAPOLIS, MINN.

BELGIAN HARES We have some fine young stock ready for sale. Our hares are of the finest pedigrees. Safe shipment guaranteed. Correspondence solicited. Normandy Rabbitry, Normandy, Mo.

INCUBATORS THE CYPHERS. One Style Only. OUR BEST. Warranted to last Ten Years without repairs and to out-hatch during three trials any other incubator—bar none; THIS OR YOUR MONEY BACK. Sent for business—sold on honor. 16-page illustrated circular and price list FREE. Poultry Manual and Catalogue No. 140 (100-pages, 8 1/2 in.) entitled "How to make money with Poultry and Incubators" sent postpaid for 15c. in stamps with dollars. Address nearest office. CYPHERS INCUBATOR CO., Chicago, Ill. Wayland, N. Y. Boston, Mass.

PETS FOR THE PEOPLE J. HOPE, 29 N. 9th St., PHILADELPHIA. Fine bred Dogs of all varieties. Talking Parrots, Singing Canaries, Fancy Cage Birds, Monkeys, Squirrels, Waltzing and White Mice, Rabbits, Cavies, Gold Fish and supplies. Send for my catalogue.

CATS Two very fine pictures, one head, one full view, of Persian long-haired cat Crystal. Size 9x12, suitable for framing. Mailed for 10c. Just the thing to send to cat lovers. Do you own a cat? If so you should have The Cat Journal, the finest publication of its kind in the world. Profusely illustrated. Printed on heavy enameled book paper. It contains information of interest invaluable to cat owners. Special attention given to breeding and care of long-haired cats. Price \$1.00 per year, in advance. The above pictures sent FREE to all yearly subscribers. THE CAT JOURNAL, Box M, PALMYRA, N. Y.

WHY NOT BE SURE ABOUT IT?—Sure that an incubator will hatch before you pay for it. We will send you our New Premier Incubator on trial, you pay for it after thoroughly testing it. Put eggs in it, make a hatch, then you'll know if you want it. First prize at World's Fair. Medals at Nashville, Omaha & Nat. Export Exps. Sole makers of Alapilly Incubators. Catalogue and "Poultry Helper" for 5c stamps. COLUMBIA INCUBATOR CO., 110 Water St., Delaware City, Del.

THE AMERICAN BOY is the only official organ of the Agassiz Association and should be in the hands of every member.

of all ages, and anyone who is interested in any form of natural science is invited. Established in 1875. Incorporated in 1902.

Hints on the Study of Insects.

Don't be alarmed, boys! It is not our intention to write a treatise on entomology. The plan of the Agassiz Association is to lead its members out of doors; to bring them into contact with Nature; to help them use their own eyes, rather than to ask them to read what other people have seen with theirs.

But it would be a great mistake to suppose that we can successfully study any branch of natural science without learning something of what has already been done. Our own little observations will perhaps be of greatest benefit in helping us understand the observations of others. We must have books as well as bugs if we would learn about insects. Reading and observation and experiment must go hand in hand.

But you cannot very well talk or write about insects unless you know their names; and knowledge which cannot be communicated or shared is not very valuable. At all events it is a fact that whenever you find anything new almost the first question you ask is, "What is it?"

In our last paper we explained as clearly as we could the general outlines of natural classification as applied to the animal kingdom; and this kingdom we divided and subdivided until we came to the class Hexapoda, or Insects.

We also learned that insects have bodies divided into three parts, known as the head, thorax, and abdomen; that they have one pair of antennae, three pairs of legs, and usually, in the adult state, one or two pairs of wings. If you have carefully read thus far, you should be able whenever you find any living creature in its full grown state, to determine whether it is an insect or not.

As a test of your attention we invite answers to these two questions:

- 1. Is a spider an insect?
2. Is a caterpillar an insect?
All correct answers will be acknowledged. We will now glance at the sub-divisions, or "orders," of the class Hexapoda.

The first order given by Comstock, in his Manual is Thysanura (Thys-a-nu-ra), or, as the Greek name means, fringe or bristle-tails.

Thysanura are wingless insects which undergo no metamorphosis. The mandibles and maxillae are drawn back into the head so that only their tips appear. They can, however, move enough to bite and chew soft substances. The abdomen is sometimes furnished with rudimentary legs, in addition to the six true legs of the thorax.

We give this definition now, not for the sake of having it learned, but merely to show that before we can go on with our study of insect orders, it is necessary to learn something more about the structure of the bodies of insects, and some of the unusual words used in describing insects and their ways. The definition is useless unless we understand the words "metamorphosis," "mandibles," "maxillae," "abdomen," "rudimentary," and "thorax."

Metamorphosis means change of form. Most of our common insects appear in four very different forms, the egg, the larva, the pupa and the imago, or adult form.

The eggs are usually laid by the mother on or near food appropriate to the young. These eggs are sometimes smooth and oval; but often are of exquisite shapes and beautifully ornamented and colored.

The larva is the insect in the form that hatches from the egg. The caterpillar of the butterfly, and the grub of the beetle are familiar examples. The growth of the insect occurs almost wholly during this second or larval state. It is the larvae of insects that do most injury to vegetation.

chrysalids of butterflies. This stage has a certain resemblance to the first, or egg, state; and the perfect, or adult, form often breaks from its case in such a way as to suggest the former "hatching" from the egg. The whitish, rice-like pupae of ants are often mistaken for eggs.

Many pupae, especially those of moths, besides the protecting pupa-case, are further shielded by silken coverings spun about their bodies, and known as cocoons. These cocoons are sometimes made inside rolled leaves, and sometimes in cells under the ground.

From the pupa the insect emerges in its fourth and final form, which is the adult or imago. Insects never have wings until they have reached the adult state. Therefore as the classification of insects is largely based upon a study of their wings, it is wisest not to attempt to classify or name insects until that stage has been reached. Many questions regarding insects have been sent to us which our young friends could have answered for themselves if they had only waited for their specimens to reach the adult form.

The best way to capture a butterfly may be to catch a caterpillar, but the easiest way to name a caterpillar is to wait until it changes into a butterfly.

Now, there are some insects which do not pass through all the various changes or "metamorphoses" we have described. In one order the young insect just from the egg is of the same form as the adult, and afterward merely grows larger. Insects of this order have no wings; and now you can understand the first part of the definition with which we began: "Thysanura are wingless insects which undergo no metamorphosis."

In our next paper we propose to examine the anatomy of insects far enough to get an understanding, at least, of the rest of our definition of Bristle-tails.

A. A. Chapters.

Now is the time to organize a chapter of the Agassiz Association in your school or home. You can get into good working order, and carry forward all the indoor preparations and study needful for active outdoor work in the spring. All are invited.

The Child is Father of the Man.

Jean Louis Adolphe Agassiz, the naturalist, was born in Motier, canton of Fribourg, Switzerland, May 28, 1807. His father was the pastor of the Motier Protestant church, and his mother was the daughter of a Swiss physician. She educated her son at home during his earlier years and implanted that love of nature which afterward served to make him famous. Even in boyhood he spent much of his time collecting natural history specimens. When he was ten years of age, he was sent away to school with his younger brother. When he went to college at Lausanne, he continued his studies in lines that would aid him in becoming a good naturalist. He studied medicine at the universities of Zurich and Heidelberg and became connected with some of the greatest living naturalists. His first contribution to science was a classification of South American fishes collected by an explorer named Spix. After this he spent his time in study, traveling, writing and giving lectures in natural history. In 1846 he came to the United States to make some scientific investigations, and his reception by the American people was so enthusiastic and the opportunities for making research afforded by the government were so great that he removed his family to this country. In 1848 he accepted the chair of geology and zoology created for him in the Lawrence Scientific School at Cambridge, Mass. From 1851 to 1854 he was professor of anatomy and zoology in the Charleston (S. C.) Medical College. In 1855 he traveled in Brazil, and in 1857 he joined a government expedition in a trip around Cape Horn. In 1873 was established on Penikese Island a summer school, over which Agassiz was to preside. Shortly after its establishment, Dec. 14, 1873, he died in Cambridge.

The Isaac Lea Chapter of Conchology.

The Isaac Lea Chapter of Conchology is a correspondence chapter of the Agassiz Association. It was organized many years ago, and has had members all over the

BOYS! Do you want to make Money? Of course you do. There is more money in raising Belgian Hares than any other business. Very little work and a small capital will start you. We have started hundreds of boys in the business who are now making more money than their fathers. To start you we will send you one pair of young pedigreed BELGIAN HARES, fine strain. \$5.00 PRAIRIE STATE BELGIAN HARE CO. 1816 West Madison St., Chicago.

FREE "RAPID" AIR RIFLE 100 shots for 1c. Your choice of this or a good Watch or Camera if you sell 2 doz. packs Laundry Bluettes at 10c each. When sold send us \$2.40 and get premium. Send only name and address now. Reeves Mfg. Co. Dept. E. Lock Box 174, Grand Rapids, Mich.

NEW BREECH LOADING SHOT GUN \$3.75

LEVER ACTION 20 gauge for smokeless powder, every part made of the best forged steel. F. BASSERMAN, 679 Broadway, N. Y. Safest and best system ever made. Catalogue.

TUMBLE—"How To" A book of 150 pages, containing 228 illustrations; tells you how to do hand-stands, cartwheels, flips, somersaults, and every other kind of tumbling. It also describes and illustrates a great variety of Tricks, Pyramids and Games. Everything is so clearly explained that you can easily learn without any other teacher. Send for terms to agents. Price, postpaid, 50 cents. Send money order to H. O. HALL, Associate in Physical Culture, The University of Chicago, Chicago.

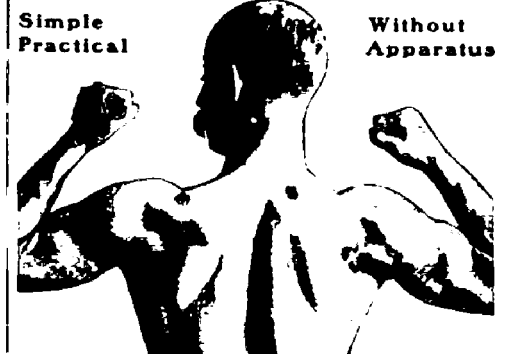

10,000,000 BOYS PLAY MARBLES!!

None who see it fail to want the Marble Shooting Pistol. No caps, no powder, no danger, no accidents. Hits the "bullseye" every time; endless pleasure at no expense; boys will part with last cent to get it. Fastest seller out. Agents coin money everywhere. Sample 15 cents. H. O. HALL CO., 1345 Arch, Philada., Pa.

A Wonderful & Startling Novelty "Pharaoh's Serpents" Are produced from a small egg, no larger than a pea. Place one on a plate, touch fire to it, instantly a large serpent, a yard or more in length, slowly uncoils itself from the burning egg. Each serpent assumes a different position. One will appear to be gliding over the ground, head erect, as though spying danger; another coils itself up, as if preparing for the fatal spring upon its victim. Immediately the egg stops burning, the serpent hardens, and may afterward be kept as a curiosity. Put up in wooden boxes, six eggs in a box. Price, 5 boxes 10c; 1 doz. boxes 25c, postpaid. BATES & CO., 160 Congress St., Boston, Mass.

FOR HEALTH AND STRENGTH

Use no lessons in physical culture. For only 50 cents I will send you a good system as was ever devised, with every movement fully illustrated and carefully explained. I make it a PRACTICAL method by dividing the complete system into thirty daily parts and clearly outlining the exercises to be used each day and the time required for each.

SEND 50 CENTS TO-DAY for the book giving complete course with all instructions. No further cost of any kind needed. I'll return your money if you want it back. H. K. DEAN, GRAND RAPIDS, MICH.

It is a Christmas gift he would surely appreciate. It will give him lots of innocent amusement and he'll become a crack shot without danger, noise, smoke or powder. The Daisy has black walnut stock, handsome nickle-plated steel barrel, globe sights, interchangeable parts. Our 20th Century "Daisy" (Price \$1.00), shoots either darts or shot, while our "Daisy" Repeater (Price \$1.25), shoots 48 times without reloading. We have reduced the price of darts to 85 cents per doz., and you can buy shot in your town for 10 cents per 1,000. If your dealer will not sell you a "Daisy" (be sure the word "Daisy" is on the stock), send us his name and we will send you one from our factory, charges prepaid, on receipt of price.

DAISY BUTTON AND HANDSOME BOOKLET FREE DAISY MFG. CO., PLYMOUTH, MICH., U. S. A.

Leaf Hoppers.

Detroit, Mich., Sept. 29, 1900. The insect, of which I send a sketch, I caught on a hollyhock. It resembles a grasshopper, but is only three-eighths of an inch long. It could run rapidly, side-

UNDER SIDE UPPER SIDE G. B. DENTON LEAF HOPPERS.

ways or forward, and could hop to quite a distance. The wings are bright red, with blue stripes running to the middle of the back. Can you tell me its name? GEORGE B. DENTON.

[The insect is one of our more common "leaf hoppers," and its name—several times as long as its body—is Diadromella coccinea.—Ed.]

200 Egg Incubator For \$12.00.

The simplest, most perfect incubator made in the world. This is a new one at a remarkably low price. It is an enlargement of the famous

WOODEN HEN

and made as thoroughly good as any incubator on the market. It will hatch every fertile egg put in it, and stand up to regular usage as well as the most costly. Write for free catalogue. GEO. H. STAHL, Quincy, Ill.

The Sparrows' Shower Bath.

Chicago, Sept. 25, 1900. One morning, as I was walking down one of our boulevards, I heard the chirping of sparrows, and to my delight saw, under the heavy shower of a lawn sprinkler, a flock

BOY'S SKETCH OF SPARROWS' SHOWER BATH of sparrows enjoying their morning bath. I send a sketch of the pretty sight. GEORGE W. JOHNSON.

Government Launch Carries Wide-Awake Agassiz Chapter.

Chapter 132 of the Agassiz Association made an interesting excursion yesterday afternoon to Windmill Point on the Canadian shore of Lake Erie. Robert M. Codd, Jr., was enabled to arrange this excursion for the Chapter through the courtesy of Maj. Thomas W. Symons, who kindly gave the use of the government steam launch, Gen. Wilson, for the occasion. The geologists had a delightful trip and gained much interesting and valuable data regarding the immense deposit of corniferous limestone that is being quarried and brought over to Buffalo to be used in constructing the magnificent breakwater at Stony Point. This hard, flinty limestone is doubtless the most durable material that can be found to withstand the force of our storms on the waters of Lake Erie, and protect the fine harbor in this vicinity.—Buffalo Sunday News.

Water Shrew.

Pine, Oregon, Sept. 17, 1900. While out prospecting for quartz with my father, I saw a mouse which excited my curiosity. We were camped on the summit of the Eagle Creek mountains in Eastern Oregon. It was too cold to be comfortable, although it was August. We were near a spring that was cold enough to make your teeth ache. I went to get some water, and saw a mouse swimming in the spring. Thinking it was drowning, I tried to get it, but it seemed to dive into the bank, as a muskrat does. I saw it several times afterwards coming from the grass that surrounded the spring. It swam across perhaps two feet of water, then dived into its hole. It was about the size of an ordinary house mouse, which it resembles in color and general appearance. There is no account of this mouse in my books. FELIX RIDENOUT.

[This animal is probably one of the water shrews, perhaps Neosorex navigator, which is especially partial to Washington and Oregon. Shrews look much like mice, but have a longer snout. Professor Cope found one of another species, the Marsh Shrew (Neosorex palustris), swimming in a lake in New Hampshire about forty feet from the bank. Ed.]

How the Agassiz Association Helps Mothers.

As an illustration of the help which our Association brings to many who are beyond the reach of ordinary means of culture, we give the following letter from a devoted and grateful mother, omitting names:

Sept. 16, 1900. H. H. Ballard, Pres. Agassiz Association: Dear Sir—I have received the Handbook of the AGASSIZ ASSOCIATION, which I like ever so much. It is just what I need. I have always wanted to study Nature, but never knew how. I do so want to get our teacher to start a school chapter. If I cannot do that I will have a family chapter. I have always had a few specimens of minerals and pressed flowers, and yesterday a friend sent me two beautiful pieces of coral. I sent for a three months' subscription to THE AMERICAN BOY and liked it so much that I sent in a dollar for a year. My girls like it also. You will hear from me again soon. Respectfully, Mrs.

Two New Chapters.

Curran, Mich., Sept. 15. We live in the woods in northern Michigan. Our settlement of about a dozen families is situated near the center of a large tract of hardwood timber, which as yet has scarcely been touched by the lumberman's ax. Surrounding this are the vast hilly plains that once were covered with pine forests. Lakes nestle among the hills in all directions, and most of them abound in fish, while all through the hardwood lands are small spring creeks well filled with speckled trout. We have a good school, a Sunday school, a minister once a month and a postoffice. We have become much interested in the A. A. and wish to form a family chapter if possible. We have quite a collection of stones, of which there are a great many here. Yours respectfully, MRS. IDA PATTEE.

Livermore, Colorado, Oct. 8, 1900. Myself and family wish to join the A. A. as a chapter. We organized as such Oct. 5, choosing as our name the Agassiz Look-about Club. I am chosen president, my daughter treasurer, and we have five other members. Our year's program will be "The months of the year and what they bring us." We have the hand-book and THE AMERICAN BOY. MRS. BELLE OLSON.

[Both these chapters are most heartily welcome. The former is No. 36, Curran, Mich., and the latter, No. 243, Livermore, Col. Ed.]

Birds That Build Their Own Incubators.

PROFESSOR CHARLES F. HOLDER.

Some years ago a sea captain who was trading in the Celebes Islands received, as he was about to sail, a basket which the messenger said contained a few eggs which he wished delivered at the next port. The skipper placed the eggs in his cabin for safety, and thought no more about them until one morning he heard a noise in the basket and to his amazement saw one of the eggs break open and its occupant fly across the cabin.

Later he learned that the bird was the Maleo, a pheasant-like creature that deposits its eggs in the volcanic sands of the beach, allowing the sun to hatch them. The young birds dig their way out and are able to take care of themselves from birth, and can fly immediately to a limited distance.

Closely related to the maleo is a group of birds which can be properly termed the mound builders of bird life. They are the Megapodes of New Guinea and Australia, the only birds that use incubators to hatch their eggs. There are a number of species, but in general they resemble small turkeys with large feet, and are found in the brush near the shore or beach.

When the breeding season arrives both sexes select a suitable place and proceed to build a mound of grass and vegetable matter. This is accomplished by the birds seizing the material in their large and powerful claws and hurling it backward. The work of perhaps a score of birds so accumulates, that a large sized mound is the result, which, when used year after year, often assumes striking proportions.

As an example, some naturalists who were traveling on the island of Nogo, in Endeavor Straits, were attracted by the accounts of the natives of a bird that made mountains in which to hide its eggs from enemies. By offering to reward the natives, the travelers were taken to the mound of a megapode, from which the guides triumphantly dug out several eggs. The mound was, if not a mountain, a small hill, and measured one hundred and fifty feet in circumference, and at one end was fourteen feet in height, sloping in one place twenty four feet to the level of the ground, which was scraped bare in the neighborhood. Another observed was twenty five feet in length and five feet high.

Notes of Personal Observation.

31. SQUIRRELS AND MUSHROOMS.—One day last summer when I was in the woods picking berries, I saw a squirrel run along a fallen tree. It had something white in its mouth which looked like a piece of bread. This it placed in a little crotch

Drawn by our correspondent.

among the limbs and ran away. I went over to see what it was, and found it was a mushroom. Afterwards my brother found another mushroom fastened up in the same way, and we think they fasten them up in this way so they may be ready for use whenever they want to eat them. GRACE PATTEE, aged 12.

32. BLUE JAYS AND BEECHNUTS.—I noticed several blue jays in a beech tree, and discovered that they were gathering beechnuts. They would fly out to the end of a branch and hang with back downward

Drawn by our correspondent.

until they secured a nut; then they would fly back toward the trunk of the tree where the limbs were stronger, pick the nut open and eat it. ROLAND C. PATTEE, Curran, Mich.

33. BUTCHER BIRD AND MICE.—In passing through a fallow I became interested in the movements of a bird that was evidently picking something to pieces. Upon closer examination I found the body of a small bird pierced through with the point of a limb and neatly dressed. On another occasion I observed a bird of the same species sitting on a stub, when three mice ran from under a shock of corn. The bird must have very sharp eyes, for, though fully twenty rods away, it saw the mice, and before they could get to shelter, caught each by the tail and carried them to trees near by. I think that this must be the great butcher bird. MR. JNO. A. PATTEE.

34. THREE-LEGGED FROG. While in Morris, N. Y., this summer we came to a spring, and being thirsty, I was just stooping to get a drink, when a frog jumped into the water. I picked it up, and to my surprise it had three legs, one where the tail was when the frog was a tadpole. Only one of its legs was fully developed. CHAS. R. TOKEY, 1747 Capouse avenue, Scranton, Pa.

Prize Offer.

Our offer of a card of membership in the Agassiz Association, and a badge, is still open to all who will send us notes of original observation, accompanied by a drawing, no matter how crude, or a photograph.

Reports from the First Century, Chapters 1-100, should reach the President by Jan. 1.

BOYS You can earn a Watch selling our novelties. Send 10 cts. for catalog, sample and terms and begin at once. GRAHAM NOVELTY CO., Baltimore, Md.

A large advertisement for the Combinola game board, listing 40 different games and providing details about the board's price and features.

Football Advice.

The following is taken from Football by Camp and Deland:

Don't fail to play a fast game. Line up instantly after each down. Your game is twice as effective if there are no delays.

Don't sing. Scrapping is not football. More than this it prevents good playing.

Don't wait for the opposing runner in the line. Break through and stop him before he reaches the line.

Don't let any player whom you tackle gain an inch afterward. Never let him gain his length by falling forward. Lift him off his feet and throw him back toward his goal.

Don't fail to try and take the ball away from an opponent when he is tackled. Make a feature of this, and you will succeed oftener than you anticipate.

Don't be satisfied with a superficial knowledge of the rules. Master every detail.

Don't make excuses, however good they may be. There is no room in football for excuses.

Don't answer back to a coach upon the field, even if you know him to be wrong. Do exactly what he tells you to do, so far as you are able, and remember that strict obedience is the first requirement of a player.

Don't lose your temper. The man who cannot control his temper has no business on the football field.

Don't rest contented after a misplay. Redouble every energy till it is redeemed by some exceptionally brilliant stroke.

Don't stop if you miss a tackle. Turn instantly and follow the runner at your highest speed. He is your man now more than ever. This is important.

Don't weaken or slow down when about to be tackled.

Don't forget that a touch-down is twice as valuable and only half as difficult to make in the first three minutes of a game. The opponents are often not completely waked up, and the moral effect of such an immediate score is very great.

CONJURING TRICKS.

Sleight of Hand that is Easily Accomplished.
P. W. HUMPHREYS.

The very name of conjuring suggests delightful possibilities to lovers of mystery; indeed sleight of hand is one of the most fascinating of pastimes for the long evenings at home. Many wonder-moving tricks may be practiced by boys which will prove a pleasing diversion on "guest nights." Here are a few simple ones—simple to the performer, but puzzling to the onlooker—which may lead to more elaborate performances later.

MAGIC DOMINOES.

Taking a complete set of dominoes, the conjurer manages to secrete one domino—which must not be a double—while shuffling. He then asks the company to arrange the rest after the ordinary fashion of the game, and, without looking at them, engages to tell the two numbers forming the extremes of the line. These will correspond with the numbers on the secreted domino. Of course, if the trick is repeated, the domino must be changed, or detection would be imminent.

RECOVERING A LOST RING.

Another trick is the recovery of a lost ring. The "properties" necessary are two rings precisely alike, a piece of elastic thread, and a lemon. The rings should be quite valueless. One point that is essential in performing this trick is that the sleeves should be loose at the wrists. The elastic thread must be about three or four inches long. To one end secure one of the rings, and let the other end be fastened to the sleeve, on the inside, the elastic being of such length that it permits of the ring being worn on the finger, and that when the ring is removed it will fly up the sleeve, so as to be concealed from the audience. In the middle of a lemon make a crosswise slit, into which the second ring is forced until it lies in the heart of the fruit. This slit must be carefully cut so that no rind is removed and the incision is closed up and imperceptible after the ring has been pushed in. All this preparation must be made before the trick is proposed. It will readily be seen that a plain ring is better than one with a setting. When all is ready you hold up the lemon in view of the company, then setting it down, proceed to cut it in slices which are nearly, but not quite, severed. Hold it in such a way that if anything were between the slices it would fall out, and be very careful that, in the process of cutting, the ring is in the center of one of the slices. Now take a piece of tape, and thread it through a bodkin, which you push lengthwise through the lemon in such a way that it is passed through the ring. A little practice will soon make this easy. Give the tape ends to two of the guests, and ask them to

stretch the tape tightly. Slip the first ring over your finger—the ring which has the elastic attached—and hold it between your thumb and your finger, being careful that the elastic is not seen by the company. Explain that it is your intention that the ring should pass from your hand to the inside of the lemon. Point toward the fruit with your hand, suddenly spread out your fingers, and let the ring go. It naturally flies up your sleeve and is hidden. The action must be swift and sure. Go to the lemon, and separating the slices, pull them, one by one, from the tape, keeping the central slice till the last. When this one is reached, take the knife again, and cut it into the slice until the ring is visible; then ask a member of the audience to disengage it from the tape.

FINDING THE MARKED COIN.

Less practice is required for the accomplishment of a trick by which you may detect a marked coin without looking at it; and, moreover, no previous preparation is necessary. Place the pennies in a hat, then hand it around, one of the guests being requested to remove one, and one only, of the coins, and to mark it, by scratching it with a penknife. Induce the same person to hold it as long as possible in the hand in order that the penny may become warm. All the coins, by the way, in the first instance, should come from a very cool place—if possible, from the ice box, or cold outdoor air. The hat should now be covered with a silk handkerchief and be passed to you as quickly as possible. You immediately thrust your hand beneath the covering and detect, by the warmth of the coin which has been handled, the marked one. Do not, however, make the fact instantly known, but appear to hesitate before selecting the penny.

How to Measure the Chest.

Every boy should develop his chest if he wishes to grow up into a strong and healthy man. Every boy should also know how to measure his chest, from time to time, so as to keep a record of his development, and here is the only accurate system, which is in use in all the recruiting offices of the United States Army:

Strip to the waist. Hold your arms above your head, the tips of the fingers touching. Have the measurer put a tape around our chest under the armpits. Inhale and exhale naturally. Let your arms fall easily by your side. The tape will slip down to the maximum girth of the chest. This is the mean chest. Exhale all you can, still keeping your arms by your side. This is the minimum chest. Inhale and inflate all you can, in the same position. This is the maximum chest.

The difference between the minimum and maximum chests is called the mobility. A mobility of over three inches in a man of medium height is considered good, below two and one-half inches it is poor.

Artificial movements of the arms or muscles interfere with proper measurements. Having made the above measurements, record them in your diary, and then repeat the measurements on the first of each month, for one year. By that means you may keep an accurate and instructive record of your muscular progress.—Golden Days.

BOYS in GAMES and SPORT

A Noiseless Ring Game.

The small rubber rings that are used in every household with which to seal preserve jars may be made the means of much amusement when a lively game is desired for the amusement of friends. First obtain a smooth head of a flour or sugar barrel, and see that the pieces are all fastened together, forming a circular board, or any smooth board about a square foot in size will serve the purpose. Procure ten coat hooks of medium size and secure them into the board, and mark above each hook its number, ranging from No. 1 to No. 10. A hole may be made in the upper end of the board, or a screw eye inserted by which to hang it upon a nail in the wall.

No. 10 is sort of a "bullseye," and each player having three of the rubber rings, takes turns in throwing them from a position about ten feet away, endeavoring to "hook" as many on the board as possible. A score is kept of the points gained by each player, the one first getting one hundred points being the winner. However, exactly one hundred points must be made. For instance, if a player has ninety nine he has to work for "Hook No. 1," as any other hook would carry him over the mark. This difficulty adds to the interest of the game. An advantage of the game is that no noise is made nor damage done by the rings, and it may be improvised by any boy or girl.

FIFTY GOOD GAMES As Played in Brooklyn Public Schools From Report by Jessie H. Bancroft, Director of Physical Training

NO. 1. CENTER BASE. The players form a ring; one player stands in the center holding the ball. He tosses it to some player, who must catch it, place it in the center of the circle, and at once chase the one who threw it. The one who threw it runs out of the circle and tries to return and touch the ball before being tagged. If he is tagged he rejoins the circle, and the other player throws the ball. If he is not tagged before returning to the ball, he throws again.

NO. 2. CATCH BALL. The players form a circle with one in the center, who throws the ball in the air, and calls the name of someone in the circle as he does so. The one called tries to catch the ball before it reaches the ground. If he catches it he returns to the circle; if he does not catch it, he exchanges places with the one in the center and throws the ball.

NO. 3. CIRCLE CATCH BALL. Form a circle with six to eight feet between the players. Toss the ball in one direction from one player to the next. The first player who fails to catch the ball steps into the center and throws it to someone in the circle. It is then tossed promiscuously from one to another, so as to elude the one in the center, who tries to catch it. If he is successful, the one toward whom it was aimed takes his place in the center.

NO. 4. PASS BALL. Form a circle with the feet in straddle position, touching the feet of the adjacent players, so as to form a barricade for the ball. One player stands in the center and tries to roll the ball out of the circle, between the feet of the players; the latter roll it back with their hands. If it passes between a player's feet, or he moves his feet to stop it, he exchanges places with the one in the center.

NO. 5. HAND BALL. The players are divided into two teams of from one to five each. On a wall free from obstacles, draw a line three feet and a half above the ground. On the ground or floor, draw a line parallel to the wall, and ten feet distant. Draw lines at the sides to mark the outer edge of the court on the side of the wall and on the floor. One player bounces the ball on the ground, and strikes it on the bound with the open palm of the hand, so as to bound it against the wall. When it has bounced back from the wall, or rebounded from the ground after touching the wall, or before it touches the ground, a player of the opposite side strikes it against the wall. One of his opponents must strike it next. The ball is thus struck alternately by one of each side until a failure is made. A failure consists in missing the ball, striking it against the wall below the chalk line, letting the ball touch the ground outside the court, or not striking it until after the second bounce. When any such failure is made it scores one for the opposite side. The game consists of eleven or twenty one points. (Other Games to Follow.)

FREE Any one can earn this Beautiful Gold-Plated, Hunting Case, Stem Wind Watch, a perfect timekeeper, by selling BLUEETTE (Sheet Bluing), OUR SPECIAL OFFER! EXCELSIOR CABINET OF TRICKS.

and it is up like a flash, and he cannot make it lie down. 1 LOVER'S MAGIC TRAP. — This trap is a catching novelty, having caught thousands of timid and bashful lovers. The cause of this is its simplicity and never-failing grip. A couple can be joined together, and their struggles to be released only make matters worse. Worth its weight in gold. 1 TIGER CALL WHISTLE. — A beautiful nickel-plated call whistle, loud and clear if you know how to blow it, but dumb as an oyster if you are not in the secret. 1 PUNCH AND JUDY WHISTLE. — With this whistle you can readily learn to imitate the different characters in the Punch and Judy show, by speaking in entirely different tones. Boys and young men can have any amount of fun with these whistles. 1 COPY OF SECOND SIGHT EXPLAINED. — A book fully explaining the second sight mystery, which has astonished and mystified thousands. A handsomely bound 24-page book. 1 COPY OF PARLOR MAGIC MADE EASY. — This work fully explains how to perform 25 of the latest and best tricks, suitable for the parlor or drawing-room; also instructions for performing 10 wonderful illusions, without apparatus, and a treatise on legendeism. We send full and explicit directions for performing all the tricks.

This Cabinet contains many startling surprises, and when the tricks are properly exhibited in the parlor or drawing-room, or before a public audience, they are sure to please and prove highly entertaining. Each Cabinet contains nine pieces as follows, viz.: 1 CUP AND COIN TRICK. — A metal case or little cup is shown with a U. S. coin fitting closely in the top under the rim. How it got there and how to remove it is a puzzle. The operator can remove it instantly. A clever illusion and a neat pocket trick. 1 CHANGING VAPE. — A silver coin placed in the vase is almost instantly changed into a nickel or copper coin, and is changed into pepper, sugar into flour, etc. Very surprising. 1 PACE MAGICIAN'S CARDS. — With these cards transformations that are really wonderful can be made, and any one can perform the tricks without the slightest difficulty. 1 COMPLETE FIRE-EATING OUTFIT. — With this outfit in his possession any person can become a perfect salamander, apparently breathing fire and ejecting thousands of brilliant sparks from his mouth, to the horror and consternation of all beholders. Very sensational. 1 MAGICIAN'S NAIL. — An ordinary nail is shown, and immediately driven through the performer's finger. Very startling. 1 IMP'S ENCHANTED BOTTLE. — A surprising little trick. A beautiful enameled bottle which will instantly return to an erect position when laid down by any member of the company, but the performer may cause it to lie in any position desired. At his command it falls down as flat and as dead as a nail, but let an outsider touch it

C. H. Mekeel Stamp and Publishing Co. Rooms 603, 604, 605, Century Building, ST. LOUIS, MO.

Mention "American Boy" when answering adv.

The Numismatic Sphinx.

Leslie Hamner, Gibsland, La.—Your 1829 dime is worth twenty five cents; the others face value only.

C. O. L., St. Paul, Minn.—A 4 real silver of Charles III. (1759-1788), 1776, of Spain. The dealers charge seventy five cents for it.

H. M. F., Louisville, Ky.—A three dollar gold piece of 1878 is worth \$4.00. An 1851 gold dollar, \$2.00, and a 1798 silver dollar, \$2.50.

Harry Tidd, Kendallville, Ind.—The East India quarter anna of 1837 is worth ten cents and a Hanover groschen of 1857 the same price.

George Ferguson, Lincoln, Neb.—The dealers would charge \$12 for a good five dollar gold piece of 1834. See answer to Wm. H., Jr.

S. J. Sandoz, Opelousas, La.—Your 1853 quarter, if of ordinary type, with rays surrounding the eagle and arrowhead each side of the date, is worth just face value.

Mervin R. Owens, Manitou, Manitoba.—The coins you mention as having are nice to have in a collection, but none of them have any premium value.

Lloyd Lee, Mill's Mills, N. Y.—The rarest dates in our cent series are about in this order, beginning with the rarest: 1799, 1804, 1793, 1855, nickel, 1809, etc.

James Kidd, Steele, O.—The two cent pieces, with the exception of the last date of issue 1873, have no premium. The half dime of 1853, if fine, is worth twenty cents.

W. Glenn Phillips, Youngsville, Pa.—An eagle cent of 1856 is worth \$1.50. A half dollar of 1812, seventy five cents, and a half dime of 1866, if fine, twenty five cents.

Ralph Angle, Cedarville, Ill.—The half dollar gold pieces struck in California in 1871 are both octagonal and round. They are worth \$2.00 each. Your other coins, no premium.

Wm. Hildebrand, Jr., Sheboygan, Wis.—See answer to Julius M. The Columbian half dollars, if fine or uncirculated, sell for seventy five cents each. That of 1892 is somewhat the rarer.

A. W. B. Ruthven asks the value of an 1826 ten cent piece. No dimes of that date were issued by this country. The dimes of 1873 have no premiums. The same may be said of the 1855 half dollar.

Ralph S. Weaver, Macedon, N. Y.—Your 1894 dime is from the Philadelphia mint and is common. The rare one is from the San Francisco mint and has the letter S beneath the wreath on the reverse.

J. S. Wells, Chicago, Ill.—An 1838 quarter dollar is worth fifty cents. There are two varieties of this date, one with Liberty head, the other with Liberty seated; both the same value. 1845 cent is worth five cents.

John S. Spicer, Harrisburg, Pa.—Your rubbings are taken from Spanish coins: 1. A half real silver of Charles III. (1759-88) 1773. 2. A 5 centimo of Alphonzo XII. (1874-85) 1877. Both the coins are very easy to obtain.

Frank Lilly, Catonsville, Ind.—1821 dime worth twenty five cents. A good 1803 cent is worth from twenty five cents to a dollar, depending upon the die variety. No cents were issued in 1773. Your other coins face value only.

Jerome Simer, Kell, Ill.—Your rubbing was taken from a 2 real silver coin of Charles III of Spain (1759-1808). 1796. Intrinsically it is worth only bullion value, but collectors of coins have to pay the dealers for such a coin about forty cents.

Herbert Jeffries, Louise, Texas.—Your drawing is of a five (cinco) centimos piece of Spain. There are four pieces in the series, viz.: 1, 2, 5 and 10 centimos and all are dated 1870, thus representing Spain while she was a Republic. The coins sell for ten cents each.

Willard Gardner, Shreve, O.—1804 and 1806 half cents are worth from twenty five to fifty cents each, depending upon condition; 1798 cent, same price. Your rubbing is from a common "Ships Colonies and Commerce" Canadian token. The other coins you mention have no premium.

Curtis Hallingsworth, Wheel, Md.—Your "coin" with the legend, "If anybody attempts to tear it down, shoot him on the spot," is a war token, sometimes a "Dix token," for these are the words of Gen. John A. Dix. A rare error of this medal has the word "spot" spelled "spoot."

Charles V. Runyon, Clarksville, Tenn.—The coin that you are troubled about is a

common Canadian half penny. The man on the horse is to represent St. George killing the dragon. The 1842 and 1848 cents are common, bringing but five to ten cents each, depending upon condition.

Ethel, Shawnee, O.—Your coin with "Our army" on one side and Indian head and twelve stars on the obverse is a war token, issued during our Civil War, 1861-1865. A two real piece of Ferdinand VII. (1808-33), 1817, worth perhaps thirty five cents. Your others are very common. Canada issued no coins in the year 1700, so you must be in error.

W. G. P., New York, N. Y.—The half dollar of 1849 is worth seventy five cents. Cent of same date, five cents. You do not say whether your three cent piece of 1865 is of silver or nickel; if silver it is worth seventy five cents; if nickel, ten cents. There is no premium on your other coins. A Rebellion token of no value only as a memento of an interesting period of our history.

Alvin W.—There are several die varieties of the 1795 half cent, and they sell for from seventy five cents to two dollars each if in collectible condition. There are two varieties of the 1795 cents, viz.: Lettered edge and plain edge. In good condition they are worth easily two dollars and one dollar each respectively. Denmark skilling of 1771 is very common. Iverness half penny sells at twenty cents each.

D. M. K., Madison, S. D.—Your rubbings are taken from (1) 1 ore Charles XV. (1859-72) 1870, of Sweden, five cents. (2) rubbing poor, evidently a sou of France, Louis XV. (1715-74), no value in its condition. (3) A common war token, "The Federal Union it must be preserved," no value only as a memento of an interesting period of our history. The same may be said of your fifty cent Confederate scrip.

Ellwood S. High, Dillinger, Pa.—The 1878 dollar with eight feathers in eagle's tail is considered rarer than the one with seven. Neither have any premium except they be in uncirculated condition. The half dollars of 1827, 1829, 1830 and 1836 sell for seventy five cents each. A cent of 1801 in good condition is worth the same. Your 1843 dollar usually brings two dollars. Your other rubbing is taken from a 100 reis nickel of Brazil, worth fifteen cents.

Walter G. Williams, Hot Springs, Ark.—Has over \$5,000 in Confederate bills from 25 cents up to \$500.00. Many of our boys would be "independent" if Confederate bills were only exchangeable at face value for our Uncle Samuel's money, but they "Represent nothing on God's earth now, And nought in the water below it; But as the pledge of a nation's that's dead and gone, Keep it, dear friend, and show it." No premium on an 1857 half dime.

Edward Ellsen, New York, N. Y.—Your description and drawing is of a Russian coin, issued during the reign of Catherine II. (1762-96) for Moldo-Wallachia. There are three copper coins in the set struck at the Sagodowna mint, viz.: 1, 2 and 5 paras. and bear dates 1771-1773. Instead of the right shield on the obverse bearing "a peacock with a cross in its mouth" it is a dove with an olive branch. These pieces sell for fifty cents each in good condition. Your small copper For Public Accommodation, 1861, is one of those war medals or tokens so largely used during the last years of the Rebellion, of no particular value. Your other coin is doubtless Austrian, but your description is indefinite.

BOYS' EXCHANGE

Percy L. Small, 21 Union Street, South Norwalk, Conn.: I will exchange a hand printing press and outfit for an old camera. J. Lee Sullivan, 601 Barnard St., Savannah, Ga.: I would like to exchange a small printing press and outfit for a 22-calibre rifle.

Ray M. Belden, 225 Central Ave., Grand Rapids, Mich.: I will exchange specimens of gypsum for Indian relics, shells or minerals.

William F. Klett, 109 So. Frt. St., Wheeling, W. Va.: I will exchange fifty United States stamps, all different, for three Indian arrowheads.

Frank Parnell, Ashley, Ind.: I will exchange stamps, arrowheads and leaves for other stamps, fossils, minerals, old coins, relics and curios.

E. S. Johnston, Gregory Landing, Mo.: I will exchange fossil shells and shells from the Mississippi River for sea shells and Indian arrowheads.

Samuel A. Jenks, 52 River St., Pawtucket, R. I.: Will give ten copies of "Snaps" for either No. 2, No. 3, No. 5 or No. 8 of the "Tip-Top Quarterly."

S. S. Wortsman, 115 Gaston West, Savannah, Ga.: I will exchange twenty five stamps for each of the first six copies of THE AMERICAN BOY.

Ray Venetitsch, care Crews and Beggs, Pueblo, Colo.: I would like to exchange a nice collection of stamps in an album for a cornet or a printing press.

Sam Hemmingsen, Sundown, Minn.: I will exchange ten foreign stamps, all different, for one hundred common U. S. stamps. Send a good stamp for return postage.

Harry Higby, 304 Third South St., Fairfield, Ia.: I will exchange nine foreign stamps, all different, for two Indian arrowheads, or for shells from the Great Lakes.

George Sweeting, 109 Terrace Hill St., Brantford, Ont.: I will exchange one 3-cent jubilee, one 5-cent 1880, and one 8-cent, two maple leaves, for one 15-cent 1880 Canadian stamp.

Walter Mashburn, Flomaton, Ala.: I would like to exchange with some of the readers of THE AMERICAN BOY, one No. 1 camera and some supplies, for a printing press.

Lawrence D. Ackerman, Bristol, N. H.: I will trade leaves with any boy of any section other than my own. I will trade valuable coins or stamps for Indian relics or curios from any State.

Fred Rowe, Letart Falls, O.: I will exchange one arrowhead, one Roman stamp, twenty five mixed stamps, one relic, one shell from Point Comfort, for one dollar in Confederate money.

Robert L. Hindman, Ottumwa, Ia.: I will exchange eight numbers of the Inland Printer of 1898, January to August, inclusive, and four late Argosies, for seven Inland Printers of 1899 or 1900.

Clinton Baird, Pataskala, Ohio, asks for the names of boys who make a specialty of gathering Indian relics. He also wants to know the name of a magazine in the field of prehistoric anthropology.

Henry C. Sauerer, Media, Pa.: I will exchange seventy four different foreign stamps worth about eighty or ninety cents for military or naval buttons not from Pennsylvania, or for Indian relics.

G. H. Play, 167 11th St., Long Island City, N. Y.: Will exchange United States and foreign stamps or old copper cents for eggs of birds special to the South, West, or Mexico or other countries, in good condition.

Louis D. Nalty, L. B. 29, Brookhaven, Miss.: I will exchange leaves of China berry, water oak, plum, cherry, peach, beechnut and black gum, and other trees of this locality, for a book on how to train dogs.

Clarence R. Curren, Millbrook, Ill.: I have a coin book worth a dollar which gives the value of all coins, that I will exchange for Indian arrowheads, or Indian axes or tomahawks, or petrified wood from Arizona.

Edward Miller, 2 Boehm St., Lawrence, Mass.: I will exchange thirty six numbers of the "Golden Days," beginning with No. 37, Vol. 20, and ending with No. 21, Vol. 21, for the first ten numbers of THE AMERICAN BOY.

F. Tripp, 2715 Forest St., Port Huron, Mich.: I would like to exchange leaves from Michigan trees, and stones and shells from Lake Huron, for leaves from other States, army buttons, or Indian relics.

George Nesbit, 94 Wakeman Ave., Newark, N. J.: I will give some good books, some copper ore and red maple, pear, chestnut, apple and elm leaves, and foreign stamps, for Indian or other relics.

Clyde Jennings, 405 Harrison street, Lynchburg, Va.: I will exchange a fine collection of postage stamps, six hundred and twenty five varieties valued at thirty dollars, for type or printing fixtures.

Frank Vallant, Spring Lake, N. J.: I have stamps used during the Civil War which I will exchange for Cuban or Spanish newspapers or foreign stamps, or leaves of trees from California or Colorado.

George William Lewis, Sonoma, Cal.: I will exchange leaves of silver poplar, pepper, pepperwood, cork, quince, buckeye, osage, walnut and acacia, for fifteen different postmarks from any other State excepting California.

Harry Lindquist, Iron Mountain, Mich.: I will exchange iron ore specimens for Omaha stamps, any denomination, Columbians, above two cent, or other stamps catalogued at and above two cents each, and interesting curios.

Harry Slocum, Gouverneur, N. Y.: I have a printing press and type which, when new, cost five dollars. It is in good condition. I have also a collection of twelve hundred stamps, all of which I will exchange for Indian relics.

Howard Murphy, Williams, Ind.: I have a good New Haven stem-wind and stem-set watch, two Indian arrowheads, an Indian corn pounder, a piece of petrified wood and some iron ore which I will exchange for a good boy's bicycle.

H. L. Metzger, 1009 Baugh Ave., East St. Louis, Ill.: I have a big stock of reading matter which I would like to exchange for anything of value. I have a 2 1/2 x 1 camera and complete outfit that I will exchange for a 2 1/2 inch double tube bicycle tire.

William Trapp, 220 11th St., Hoboken, N. J.: I will exchange some Saturday Evenings Posts for AMERICAN BOYS or other magazines. I have also old newspapers of 1850 which I will exchange for the first six numbers of THE AMERICAN BOY.

Walter C. Smith, 282 Lincoln Ave., Detroit, Mich.: Would like to exchange 4x8 unmounted photographic prints with readers of THE AMERICAN BOY. I have fine views of Washington's Tomb and of State, War and Navy building in Washington city.

Scott B. Williams, 314 Common St., Shreveport, La.: I will send a stamp from each of the countries France, Germany, Belgium, Italy, Japan, Switzerland and England, for a stamp from each of seven other countries. I would like also samples of amateur papers.

George H. Slocum, Caro, Mich.: I have a Baltimorean, No. 10, self-inking, one roller press, size of form 3x5 inches. Outfit consists of one press, one new roller, two fonts of type, ink, cards, paper. Has only been in use a little. Is as good as new. I will exchange the outfit for a goat; or write me what you will exchange.

Charles Rochefort, Jackson, Mich.: I will exchange five striping brushes; one left bicycle pedal, good; one new pedal, same; four pedal rubbers, new, fit any bicycle, aluminum lock and chain; three pieces patch rubber, 4x16; one checker-board and checkers, new; for arrowheads, coins, shells or best offer.

Ralph B. Rich, Chincoteague, Va.: I will exchange an old book, bound in calf, published in 1801 in Dublin. I will exchange it for good foreign or United States stamps catalogued to over five cents each. I have also Chinese chopsticks and Chinese spoon to exchange for good stamps.

Harry B. Lohmeyer, 922 N. Gilmer St., Baltimore, Md.: I will exchange 4x5 photographs of Western Maryland, Gettysburg Battlefield, Baltimore and vicinity, for views of Great Lakes, Niagara Falls and Western United States. I will also exchange petrified wood from Western Maryland for Indian arrowheads or spearheads.

Charles Gabrielson, Sloux Rapids, Ia.: I will exchange pressed leaves, oak, elm, ash, elder, bittersweet berry, blackberry, raspberry, willow, silver maple, hard maple, for any leaves not mentioned here, or for Indian arrowheads or ore of any kind. I will exchange a copy of the Sloux Rapids Republican or Sloux Rapids Press, for a copy of the Pittsburgh Commercial Gazette or the Steubenville Herald-Star.

GEN NOVELTY CO., 27 Academy St., Attleboro, Mass.

THE BOYS LIBRARY

Prize Fight Literature Causes School Boy Fights.

Fighting among small boys has increased to an alarming extent, according to Mr. John Jasper, superintendent of New York public schools.

"There are many reasons for this," said Mr. Jasper. "There is the cheap sensational paper, with pictures of the fighters, which gets into the schoolboys' hands. The newsboys can tell you all about the coming fight. They read about our governor taking boxing and wrestling lessons. This and other examples are always before them.

"Last week I had to act as peacemaker in four of these fistic encounters. In each instance a large crowd had gathered and it was with great difficulty I reached the fighters and put a stop to the fight. I was surprised to see that the crowd in each case contained many men, well dressed and of middle age, who encouraged instead of putting an end to these shameful exhibitions. They encouraged the boys to hit each other harder and acted collectively as referee, using in their comments the well known slang of the prize ring.

"These exhibitions are in many cases the result of the extensive literature published concerning prize fights and the example set by some of our leading citizens who attend the contests at so called athletic clubs. The schoolboy hears his older brother, or his father, discussing some fight, and his mind becomes filled with the subject. The consequence is that street fighting between schoolboys has increased fifty per cent."

Some Good Boys' Books by George Waldo Browne.

Like Edward S. Ellis, G. Waldo Browne has taken both history and juvenile fiction for his literary fields. A few years ago he was editor of "The American Young Folks," published in Manchester, N. H., where the author lives. Then he sold his magazine to "The Youth's Companion," determined to devote himself entirely to authorship, taking the American boy as the object, largely, of his entertainment. He contributed serials to such juveniles as "Good News," "The Argosy," and "Golden Days," then drifted naturally into steady book making, where we know him at the beginning of this new century.

Passing by his newly published histories of Hawaii and the Philippine Islands, entitled respectively "The Paradise of the Pacific," and "The Pearl of the Orient," as well as his forthcoming volumes on China and Japan, we shall glance at three of his narratives of adventure, first of which will be "Two American Boys in Hawaii," published by Dana, Estes & Co., Boston, at \$1.50.

Lewis Hilland, a boy with weak lungs, is obliged to take a change of climate, so he goes to Hawaii, where lives a former

friend, Ned Merriweather. He arrives on the island in time to be thrown into the troubles which led to the raising of the American flag over Honolulu, in August, 1898. Scenes among the surf riders, the wild men, the lepers, and during a volcanic eruption, work together into a series of exciting times, while the two boys are in search of Ned's family, who had been carried off by the natives. History and description enter into the narrative in the ever-interesting manner of Mayne Reid and Jules Verne.

In "The Woodranger," published by L. C. Page & Co., Boston, at \$1.00, Mr. Browne takes up a period of history ever delightful to our patriotic boys of America, yet in a place not often drawn upon for narrative. The scene is laid around the Merrimac Valley and Massabesic Lake, one hundred and sixty years ago, when the Scotch-Irish settlers of New Hampshire were in a state of angry dispute with the Massachusetts settlers over the boundary question. The Woodranger himself is that typical frontiersman, like Murray's John Norton, and Cooper's Leatherstocking, dear to the Yankee heart. Among his young friends are Norman McNeil, Robert Rogers, afterwards famous as the leader of Rogers' Rangers, and John Stark, later the Revolutionary hero of New Hampshire. The incidents of the story are such as will enthrall any live boy who is at all interested in descriptions of adventure and sporting contests. Here are boat races, shooting matches, forest fires, floods, and humorous situations enough to make the boy wish he had another three hundred pages to read, including more bears, panthers and mysteries as wholesomely told by this prince of juvenile authors.

"The Young Gunbearer," a companion book to "The Woodranger," has for its two principal characters the unique old forester and Rob Rogers, who are in the land of "Evangeline" eleven years before the Exile of the Acadians, and at the time when Nova Scotia and New England were threatened by an invasion from a great French fleet being organized across the water, while also there were troubles at home. The story is introduced by a quip-pitching contest between the boys of Grand Pre and those of a neighboring town. Then follow intrigues and scouting scenes about the smithy of Basil Le Noir; an Indian attack upon the house of a suspected spy; the night flight along the river, through dangers of chase, rapids and ambuscades, when a family is rescued from peril, and the settlement of Main-a-Dieu is warned in time of its immediate danger from an attack by the enemy; the descent of Rob Rogers into New Hampshire; the organization of rangers for a siege of Louisburg, the powerful French fort; and the siege itself, all of which incidents are told with the author's characteristic clearness. Mr. Browne is without doubt a man whom the boys want to know.

Iron Melted in Five Seconds.

A European inventor recently performed a remarkable experiment in the laboratory of Thomas A. Edison at Orange, N. J. He placed a cup half full of a chemical in a crucible and covered it with a small quantity of powdered aluminum. He then placed an iron wrench about half an inch thick and six inches long in the crucible. Touching a match to the compound, the mixture blazed furiously, and in five seconds the iron wrench was melted. It was estimated that the heat evolved in the process was three thousand degrees centigrade, hitherto considered impossible to reach.

The inventor keeps the nature of his chemical compound a secret.

A \$4.75 BIBLE \$1.35 FOR ONLY

"Cling to the Bible My Boy" and read "Daniel Webster and the Bible," on page 343 September Number "American Boy."

ASSISTANT EDITOR.

TO ADVERTISERS.

THE AMERICAN BOY closes the year 1900 with the best number so far issued. This number contains forty pages—eight more than regularly appear. It also excels in interest, being more fully illustrated and covering a wider range of topics than usual. These eight additional pages were made necessary by the big advertising patronage recently accorded the publication. This patronage has been growing at a remarkable rate, surprising every one, and none more than the publishers themselves. Honest quality and honest quantity of circulation have done it. We believe in doing business straight, and would as soon steal from the advertiser's money drawer as get his business on false statements or false promises. There is no difference in the two methods of stealing, to our notion. Again, our circulation is of a high class. The paper does not appeal to the low element, and it does stand in high favor among the better classes. The paper speaks for itself, and does not need our assurances in this regard.

With the splendid showing made by this fourteen months old publication, and with our efforts to furnish clean, enterprising, wholesome literature for young men and boys, we have a right to go confidently and boldly to the advertiser and ask for business. THE AMERICAN BOY has stood a hard test in the past few months, its advertising being mostly of the "keyed" variety. That it has met the test successfully and holds its old patrons, many of them with continually increasing space, is evidence that it is a business bringer and a medium that the general advertiser can not afford to pass.

CASH PRIZES FOR NEW SUBSCRIPTIONS.

Fifty dollars and several hundred foreign stamps will be divided among the ten persons who send in the largest number of new subscriptions at \$1.00 each to THE AMERICAN BOY, between December 15 and January 15. Contestants may in addition have premiums as per our regular premium list.

- To the one sending largest number of new subscriptions, . \$10.00
And one-half the foreign stamps accumulating in our office in the period named.
- To the one sending second largest, 10.00
And one-fourth the stamps.
- To the one sending third largest, 5.00
And one-fourth the stamps.
- To the one sending fourth largest, 5.00
- To the one sending fifth largest, 5.00
- To the one sending sixth largest, 4.00
- To the one sending seventh largest, 4.00
- To the one sending eighth largest, 3.00
- To the one sending ninth largest, 2.00
- To the one sending tenth largest, 2.00

YOU CAN EASILY WIN.

It will be very easy, just before Christmas particularly, to get subscriptions for THE AMERICAN BOY. Just show them the paper. It sells itself wherever there are boys.

\$1000 SALARY Per Year to Men or Women by Old Reliable Firm, Established 12 Years

PAYABLE IN CASH WEEKLY. We want 6 more General Organizers to travel and appoint local organizers in each town. Also 6 more State Managers for office work at home. Experience not necessary as we supply full instructions. Any honest and worthy man or woman who desires a good salaried position with no canvassing to do, should write us at once as the vacancies must be filled soon. No capital required. We allow \$3.00 per day for expenses in addition to a straight, out and out, genuine cash salary at the rate of \$83.33 per month. As soon as arrangements are completed for you to begin we send check to defray first week's salary and expenses, together with supplies and instructions. We mention these details as we do not wish to be misunderstood in reference to our offer. We want honest employees who will appreciate the confidence reposed in them, and who would like to be connected with a large concern where they will be well treated, and have an opportunity to build up with the house. For these positions we want 19 honest men and women who are capable of collecting some of our accounts and looking after any special matters which frequently arise throughout the country in connection with a large business like ours. State which position you prefer, whether to travel or do office work at home. We have no connection with any other firm. This advertisement will not appear again. Send references and stamp for reply. Address President, Monroe Company, 320 to 324 N. Dearborn St., Chicago.
