T least fifteen million American the New Century.

And yet there is work ahead, and enough. Boys under twenty years of Some boy will reconstruct our whole system of age cross the threshold of education. Boys will be graduated prepared to tury, methods for curbing the encroachments of Fifteen take hold of life and successfully master it. wealth. Some boy will introduce an economical

ful and wicked city governments. Some boy will lead a revolt against corruption in politics, intemperance, the social evil, and mark his day as one of moral purity. Some boy will devise and carry out, as a statesman of the new cen-

> system of home and industrial life. Some boy will lead a revolt against dogma and creed, and bring all men to a common sense religion. Some boy, I verily believe, will head a great university for the home instruction of the masses. Boys everywhere will arise to elevate and ennoble men, improve the conditions of the poor, and make the country happier, better and securer than it ever has been.

> Nothing for fifteen million boys to do?

You, fathers and mothers, are even now making blunders which it will take the muscle and mind, yes, perhaps the blood and tears of thousands of these very boys to atone for. You are even now setting problems that may cost these boys life and treasure to solve. You are even now building much that they must tear down as being founded on false foundations. You are even now fortifying error which they must overcome.

Great and glorious as has been the century just closing, the boys who, when the bells ring in the new century, join in the shout of welcome, are destined for even greater fields of effort and achievement. The future is yours, boys. Go in and possess.

many as the entire population of the United States fifty years ago.

millions!

nearly as

These are the fellows who thirty short years from now will hold the reins; they will govern, teach, preach, write, build, buy and sell.

And they are eager for it; many of them, too eager.

These fifteen million boys mean business. They are the natural born heirs of the spirit of push that has characterized the last two decades. Their boy eyes never saw the lumbering stage coach, their idea of transportation is the lightning express. Their ears never caught the hum of the mother's spinning wheel, their idea of manufacture is the mysterious mechanism of steel and iron that of itself does the work of human hand, and eye, and foot, and brain.

Nursed and cradled in such a time, with such a spirit bred in the bone, what will these boys not do in the days to come?

Every generation is prone to think it has reached the summit of achievement. An essayist twenty years ago wrote: "Revolving time works many miracles;" indeed, it does, for even now his essay reads like a story out of ancient history.

worked miracles, then generations, then decades, then years, and now scarce does the sun rise in the heavens that restless men and women have not dreamed new dreams of conquest over mind and matter and set to work to realize them. Men are prophesying that we will soon reach the limit of possibilities, and that then the pendulum of progress will swing back.

()nce ages worked miracles, then centuries | There will be fewer educated incompetents. School systems, schoolmasters, and schoolbooks will recognize that children have bodies and spirits as well as minds. Some boy will revolutionize our lumbering methods of transportation, which kill annually more human beings than the average war. Some boy will rid our city streets of wires, and tracks, and filth. Some boy will cheapen light and heat. Some Poor outlook, then, for fifteen million boys! boy will lead a successful crusade against waste. the new century.

THE ORDER OF THE AMERICAN Boy.

The attention of every boy and every friend of a boy is directed to pages 94 and 95 of this paper. We propose to make the organization of boys there outlined a powerful influence for good among the boys who will be the men of

THE GREAT PINE HILL SNOWBALL

CHELSEA CURTIS FRASER

WAS all Pete Bronson's He broke up the fault. snowballing just when it was first rate in Pine Hill and just at the time when all of us boys were having the best kind of a time.

None of the trustees Pete hadn't accidentally hit Deacon Meeks on the shoulder, and if he hadn't sent a wet ball, with a chunk of ice in it, clean through the front window of old McWhittler's cobbling shop. He's justice of the peace besides being the village shoemaker, and the one of those musty white up the biggest balls you can."

kid slippers that had hung there ever since the big circus came to Pine Hill four years before.

Pete Bronson was only nine years old then, but he looked as if he was over twelve, and he almost missed getting in at half price, and if his father hadn't insisted he was only nine he never would have time. got in. Then after he was inside, he poked sticks at the animals in the cages and made such a disturb-| Robbins. "It'll stop the ball from rolling before it | watching 'em, but Pete Bronson says:

ance by giving the monkeys some candy balls with cayenne pepper inside them, that the showmen said they would put him out if he didn't go into the other tent where the show was. So Pete went in there. He had never been to a circus before, and pretty soon a came running clown around the ring with a bunch of firecrackers tied to his back. They were popping in great shape, and every time an extra loud one would go off, the clown would jump about five feet in the air and yell and run faster than ever. Pete thought he was really scared, and be scrambled off his seat and started after him, to help him get rid of the firecrackers.

It was fun, I tell you. Pete caught up with the clown and tried to snatch the crackers off his back.

but just then a big one went off "bang!" and Pete put his finger in his mouth and yelled almost as loud as the clown had been doing. He started back for his seat, having had enough of it, and afterwards everybody said that act of his was the best part of the show, and Pete went about for the next two or three months the envy of all us boys.

Pete says he can do anything, if he knows how it's done, and has made most everything. I guess, except a steam engine. He bursted his mother's copper teakettle trying to do that once, and scalded his arm clean to the eibow, spoiling a whole batch of apple pies that happened to be baking. But that was nothing to the way he spoiled our snowballing, and all the boys were down on him because he stirred up the trustees to put a stop to it.

That Saturday was a thawy day, too. That's the way it always happens when a fellow wants to throw balls and has to tend the baby, or split wood, or the trustees won't let him limber up his arm, which all amounts to the same thing in the end. There was great skating on the pond from Monday till Thursday, of course. Then, when we all hoped it wouldn't snow again before Saturday, so we could go skating. the very next day the flakes came down as though it was the first time it had snowed that winter and wanted to make a good impression.

It never let up till Friday night, and Saturday morning we woke up to find it thawing again. What made it worse was that the north road up Pine Hill was only half-traveled smooth, and any really small, low-running sled had no business there.

Pine Hill, you know, so far as it's a village, is down in the valley along the creek, and they've narrowed that and walled it along on both sides, so that when a freshet comes there's little room for it to run in, and it pretty near chokes itself, some springs, squeezing through the arch under the stone bridge. Pete says he could make a fine milidam out of that cause it was the smallest. But it was aimed wrong, after it started to plunge down the slope. Anyhow,

next season of the contract side of it. I dare say he'll be trying it soon.

The boys said there was no use in dragging sleds all the way through the deep snow to the top of Pine Hill, but Pete said we might find it easier than we expected. We're almost always in the habit of doing what he says, and so we went. We grumbled all the way, though, about how deep the ruts were, and how damp and soggy the snow was-just because we couldn't snowball-for that was all it seemed good

"I'll show you something when we get to the top," says Pete. "Maybe there'll be some snowballing worth while."

"Nobody wants to go 'way up Pine Hill just to snowball," said Jimmy Wringle, who always was the first to whine; and the rest of us thought we'd like to would have said a word if | stop, too, but we didn't want to let any of the others know it, and we followed Pete till he halted us right on the top of the ridge and told us to look.

"It's a good deal more than half a mile to the bank of the creek, boys," said Pete, "and all there is of the village is on the other side—just one long, clean slope. It's pretty steep in some places, but it's awful shelvy right here near the top, and an avalanche could get the biggest kind of a start."

"Avalanche?" That was all we said.
"Yes, sir-ree," said Pete. "I know how to make ball lighted right square on one. Pitch in, now, and we'll have some fun. Roll

> And he went right to work himself, and we weren't far behind him. It was wonderful the way we worked rolling and packing that snow into balls. Only two or three boys could work well on one ball, and so there were five of them making at the same

> "The worst of it is, the snow sticks so," says Ted

It went down the ridge in fine style, and half way across the next slope, but it brought up among the chokecherry bushes and lay still.

Pikey Wright's was next, and his skimmed past the hokecherries and on down the old pokeberry and mullin pasture, and Olcott's barnyard gate was open and Pikey's avalanche went through it as if it had a bridle and bit and somebody to guide it. We all danced up and down and yelled.

"There it is!" said Pete. "Just look-right square in the barn door, wedged fast, and Squire Olcott will have to dig it out. That was a dandy! Yours is next, Jimmy."

Jimmy's rolled splendidly. It took up quite a bit of snow, and got halfway to the creek; but it went all to smash against the old butternut tree near the new railroad fence. It took off some of the top rails of the fence, too, but the tree settled it for good.

Tom Jenks' was the next biggest, and he had to have a good deal of help to loosen his ball. He had set it considerably to the left, so that it would go down the other side, beyond the turn in the road. Perhaps he hadn't thought about this, but anyway, when it went it certainly made things hum. It was grand to see that avalanche take up snow and go over and over and over, every minute bigger. But it bounced out of the way and went into the uphill road, only a few rods in front of Sam White's place. He was taking a whole sleigh load of young ladies to the singing school just then, and if you could have heard 'em scream when they saw Tom Jenks' avalanche bearing down on 'em, you would have thought the earth was coming to an end, and I suppose they thought it was.

But the ball had got so big, that, just before it reached 'em, it stuck between two high ridges, and for the next hour Sam White and his hired man were digging a roadway through it. There was the jolliest kind of fun standing on the top of Pine Hill and

> "Come on boys, let's set mine off before anybody comes up here to stop us. Mine is so big it ought to make things rip."

And it was a big one. All the boys tried to guess how he had managed to get it to that size. We had to use fence rails to set it up, and now we had to get em again to pry it over the edge.

Over it went, and down the slope, a little slowly at first, but in a minute it was jumping along smartly and gathering most all the snow under it till it was as big as a woodshed.

"She's beginning travel something like it," said Pete. Nobody else said a word, for we were beginning to get scared and thought that the avalanche must surely be alive by the way it knocked over bushes and whizzed downward, leaving a black track behind it.

It was awful!

Roll, plunge, rip. whir-rr! How the snow did fly, and how the shrubbery in the way did crunch and smash! Faster and faster, bigger and bigger. and it looked like a house now, it was so large.

"I don't believe she'll set to be quite two thousand feet high," said Pete. "but my! she's a-growing fast and no mistake." Little Jimmy Wringle

commenced to whimper and said he thought if it keps

Why, if it were two feet deep all the way, and all the father, and the rest of us were afraid of the same snow it passed over stuck to it, and it rolled over say a thing. Pete commenced to get nervous, too, though

over the creek." We felt a little better then, and watched the avaldidn't return to our work till he said "Hurry up, you anche cut across the railroad, sending the rails of the fence into the air like splinters, and it made an And when we thought of a ball two thousand feet awful roar, I tell you. By the time it got to the creek, it looked like a big circus tent, and in it went "ker-splash!" just above the bridge. If those rails went high, the water went ten times higher and it came down in sheets like rain. The ball wedged fast right in front of the bridge arch, making a regular mammoth snowplug. The stream couldn't have been good start," said Pete, "and the bigger and heavier dammed up nicer had everything been arranged beforehand.

Of course Pete Bronson had never thought of that. good fellow, and he helped the other boys to get and none of us boys did, till we saw it done. We theirs started first. from the village. Perhaps they had seen the big ball

"We had to use fence rails to pry it over the edge."

under it everv time it rolls over." Pete gave him a knowing wink, and

said: "That's just what we

want it to do. But it won't take too much snow, because it ain't so deep on the slope. | on it would smash his house and kill his mother and thousand times between here and the creek, that hall he tried not to let on, but then he said: would be two thousand feet in diameter when it got "Don't be babies!" That ball can't never jump would be two thousand feet in diameter when it got there."

We looked at Pete in amazed awe and respect, and daffies; there's going to be a circus pretty quick." thick, we rolled and packed away like beavers, and heaped up the balls till you couldn't begin to turn one over by yourself.

You never saw five such big fellows as we had at last, just balancing on the ridge of the hill.

There ain't anything to keep 'em from getting a they are the more likely they'll keep agoing.'

Pete's was the biggest, somehow, but he is a real theirs started first.

Bill Vance's was the first to be shoved loose, be-

there they were, and more were arriving every minute to see what would happen.

At first we were all afraid to go down, but at last we did. And didn't the water rise fast, though? It spread on both sides of the bank when it reached the top, foaming and gurgling to beat anything, and it wasn't long after until there was water in the main street of the village, and all the trustees said they would have to hold a meeting, for there was going to be a terrible flood if something was not done to stop the freshet. Nobody seemed to think of us being responsible for the presence of the avalanche, and Pete other men waded about and tried to make a hole

"It's the biggest snowball that was ever made in been a hole wore through it first, because while they these parts, boys," he said to us. "The water's get-stood telling how to do it. Pete exclaimed. ting higher all the time, too. Oh, but ain't it just a-pouring along down the street! I knew I could; make a good avalanche. It's better than a mountainslide and knocks it all hollow. And if it don't break too soon, and freezes to-morrow, there'll be the finest kind of skating, you see."

We were all sitting on Miller's hog-pen, to keep out of the water, while our fathers and a whole lot of was tickled immensely to think of the fun we had had, through the big ball. But I guess there must have

There she goes, boys! The avalanche has busted! But there's enough water about to make the skating all right. See her pour through, will you? My, what a gush!"

So there was-it was grand! It was the biggest gush of water that ever went through that arch. It just roared and tumbled and tossed as if it was mad at being shut up so long; and when it came out who it

was started the ball, everybody said:
"Dear me! What won't that Pete Bronson do

HERE is tucked in a pigeonhole of Meredith's desk an envelope marked: "Taken from the ill-fated 'Bullteaser," and the paper contains a torn bit of red cloth. That is all; but the remnant tells a long story, and part of it is this:

The boys made the kite on the barn floor. They said that they would be satisfied with no threefoot, toyshop article; what they wanted was a sixfooter that would soar like an eagle and pull Jimmy Lannis' billy goat clear off the ground!

The frame was of soft pine strips three-quarters of an inch thick. Down at the sawmill the proprietor told the boys to themselves from help waste cut from planks by steam lathes and saws. Hard pine strips were to be had for the asking, but big Meredith cast them aside as being too heavy. It was found necessary to whittle a number of strips to the right thickness. Lit-tle Tod did not observe that there were knotholes in

his pieces. Meredith saw the weak spots in time to preparation for battles with mighty winds. "Our say: "One knothole would kill the kite. Never mind, kite," said Meredith, "ought not to be launched until Tod; you are assistant sailmaker." And Tod proved

a handy boy. Two six-foot strips were laid side by side and four feet apart, for the kite was to measure six by four feet. Two feet from the ends crosspieces were secured with matting tacks. Then the strips were turned over. Upright strips two feet in length were tacked on the long pieces next the points where the crosspieces were fastened, and both crosspieces and uprights were bound and further strengthened with fish line. The remaining lengthwise strips were laid in position, and the part of the frame already made was turned over upon them and fastened with tacks

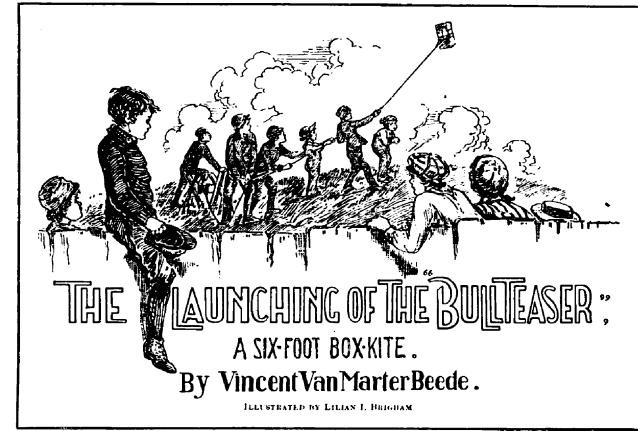

and line, as before. "The frame seems kind of wobbly," said little Tod, in a disappointed tone.

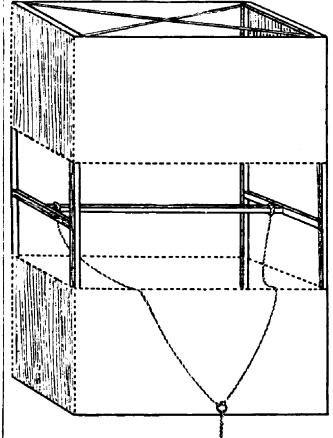

"Of course," answered Meredith, cheerfully. "Wait until the sails are in place.'

Five yards of light-weight red cambric cost twenty cents; and the lumber had been a gift. "The 'Bullteaser," remarked Meredith, "will not be a ten thousand dollar yacht." The cloth came in a yard width. It was cut lengthwise, and exactly in two. The sails. each a foot and a half wide, were fitted evenly over the frame in such a way that the space in the center was a foot across. Sail-fitting was the most difficult part of the undertaking. The six boys spent over an hour in the sail department. The strips of cloth were stretched so evenly that the frame was firm, and not pulled out of shape. There was cloth to spare after Bertie the Kid had sewed the sail with shoe thread.

Bertie was reputed to be fond of embroidering. Today his friends did not call him "Sissy," for he proved himself a sailmaker of the first class. I cannot tell you the name of the stitch he used; all I know is that it was strong, and just right.

The "Bullteaser" now appeared in its red glory, with not a suspicion of a wrinkle in its sails. The there is a spanking breeze on Sky Hill." Fish line up for it. And the next

framework, however, needed extra strengthening in braces were stretched diagonally across the forward crew will wear gloves!"

ends. Like the sails, these strings required careful adjustment. The line to which the guide rope was to be attached measured seven feet, and was therefore slack when tied to the centrepiece. An iron ring slipped over the first line saved the wear and tear of the guide rope.

An old hose reel of Merde Jr.'s, was the "spool" upon which the guide rope was wound. The proud kite builders marched in procession to Main street, and from there to Sky Hill. Four boys bore the "Bullteaser," and they whistled with gladness when the breezes tagged it, and it tried to tag them back. From the feeling of the big kite's uneasy, freedom-loving motions the boys knew that here was a trim, staunch, highflier.

Cod line was too expensive for the crew to buy, but Everett's father was manager of a shoe factory, and Everett was sure that the string used to bind leather was strong enough to hold a six-foot box-kite.

Like an eagle the kite rose from Meredith's armsrose with a snap of cloth and a buzz of string running swift and taut. Up-up-up-until the red flier was a bandanna;-up until the hose reel, although three boys were doing their best to hold it down, capered, and clicked, and hummed. Two others of the crew screamed: "How it burns!" as they hopped from one foot to the other in an effort to check the hot guide rope with hands and feet. Meredith was dragged scuffling, for a number of yards, and little Tod was actually dragged off his feet.-but not far, for the three thousand feet of line had come to an end-and with a snap! The mighty "Bullteaser" fluttered, shivered against the blue sky, and while the crowd of boys on the hill sighed together, the six-footer plumped downward like a bird with a broken wing.

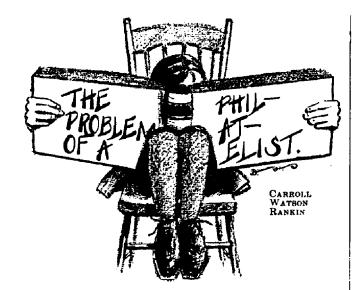

Everett risked his neck by coasting down rocky Sky Hill on his wheel. Behind a business block on Main street rested, after its journeys upward and downward, the vanquished "Bullteaser," surrounded by the town constables and a crowd of the little and the big, all of whom had watched the launching from start to finish. The "Bullteaser" was only slightly

damaged in one cross-piece. That mended, she made three more voyages-and three downfalls. At last, rain-soaked and battered, she was divided among her makers; and now you know about the envelope and the rag in Meredith's desk.

"Bulltenser the Second," said Meredith to me the other day, "will have a four thousand foot guide rope of cod line, if

THE AMERICAN BOY

Barton West had two distinguishing characteristics. He had the longest pair of legs and the finest collec tion of stamps of any boy in his native town. He was known throughout the length and breadth of the village as "the stamp fiend." There were other collectors, of course, for every boy collects stamps at some period of his boyhood, but Barton was prince of them all. Other boys contracted the fever, and in the course of time, recovered, but Barton's was a hopeless case. He spent most of his time buried, soul and body-all but his legs—in the fascinating pages of his stamp album.

He begged stamps, he exchanged stamps, and when he could get them by neither of these methods he bought them.

'Barton," said his sister, Mabel,

"Counts that day lost, whose low descending sun Sees no new stamp to add to his collection. (with the accent on the 'shun').'

Barton might, and did, wipe his inky pen on his handkerchief or on his trousers; he had been known to tie up the dog with his best tie, when nothing else came handy; and he even left his bicycle out at night. to be left or stolen, as the case might be; but his stamp album, though not especially valuable, was kept under lock and key, the pages were immaculate, and the stamps were arranged with mathematical

Barton looked at everything with the eye of a stamp collector. If the sky were blue, Barton could think of no more suitable comparison than the blue of the background of the 1851 Franklin. The scarlet radishes for tea always reminded him of the one penny Trinidad of '84, and the green of the summer foliage appealed to him most when it acquired the shade of the old three cent Washington, to his mind the handsomest of all stamps. Mabel, in her commencement gown, knew that she might consider herself the recipient of a genuine compliment when Barton told her that she resembled the Canadian stamp of 1868.

Barton searched diligently daytimes for water-marks, secret marks, shades and variations; and he dreamed at night of finding trunks full of old letters, and documents fairly plastered with rare and valuable

specimens of scarce issues.

"It wouldn't be safe," said Mabel on one occasion.
"to send Barton to the drug store after cough syrup; he'd be sure to buy the dollar bottle, even if the fifty cent one would do as well. It's a standing grievance with him that none of us have the rheumatism, so that he can get a certain proprietary stamp that comes only with 'Dr. Somebody's rheumatism powders.' If he had lived right after the Civil War, he would have wanted to mortgage the house in order to get the long revenue stamps off the papers.

'He can carry in his mind the date of every stamp issued in every country from Abyssinia to Zanzibar. though in school he couldn't remember the date of anything that happened prior to 1840, when the first stamp was issued."

"Good morning, Mr. Barton," said a familiar voice above the whirr of the lawn mower, one day.

"Oh, good morning, Mrs. O'Hagen," said Barton,

"Good morning, Mr. Barton," said a familiar voice.

with a friendly smile, for Barton was friendly with all the village. "Did you come to see mother?"
"Sure, Oi didn't," said Mrs. O'Hagen, a poorly clad,

shriveled up little old woman, whose head barely reached tall Barton's shoulder. "Tis a grand lady she is, that annybody'd be proud to see; but it's yersilf Oi'm wantin' to talk wid the day. It was goin' by Oi was, whin Oi was arristed be the music av yer stheam peanny there, and Oi thot Oi'd sthop an' tell yez thot Oi've got a bit av a sthamp fer yez, if ye'll be after callin' around, wan av these foine days.'

"Are you going home now, Mrs. O'Hagen?" 'asked Barton, eagerly, dropping the lawn mower and making a dive for his coat. "Because, if you are, I'll go right along with you."

"Tis proud Oi'll be to have you," said Mrs. O'Hagen. "Tis an awful hurry ye're in, wid thim foine, long gasped his companion, a moment later.

Oh, I'm sorry," said Barton, apologetically. afraid I was thinking more about the stamp than I was about you, that time. I'll take shorter steps. Where did you find the stamp?'

"Shure," said Mrs. O'Hagen, "Oi was lookin' in me little attic wan day lasht week for a bit av sthove poipe. 'Tis a terrible hard place to crawl into, so 'tis all av tin years since Oi've claned the place up. tho't, so long as Oi was wance in, 'twould be sinsible to tidy it up a bit."

"And the stamp?"

"Stamp is ut? "Tis nothing at all but stamp wid the lad. Oi tho't Oi'd open me father's owld tin box, and take a peep at his snuff box, just for the sake av his mimery, when Oi caught a glimmer av a bunch av shlips av paper an' thin Oi tho't av ye and yer stamps. Only wan was in an invilip and it was a foine fat letther, sint over forty year ago, to me father be his Uncle Mike in Canady. Me oi-sight's terrible bad"-Mrs. O'Hagen would never admit that she was unable to read—"but Oi remimber when that letther came, tellin' us all about the grand country up there though O'd clane forgot all about it when ye wor askin

"Why! I believe it's a rare one."

if Oi'd anny ould stamps at all fer that foolish book ye showed me wance."

"Come in." said Mrs. O'Hagen, throwing open her hospitable door. "Oi can mind the toime whin ye couldn't raich the knob on this door, and now look at the legs av yez."

"I'd rather look at that stamp."

"Oi belave yez," said his hostess. "'Tis here behind the ould clock. No, 'tis not. Whist! where did Oi put that bit av paper at all? Twould be sad to bring ye here and foind no sthamp at all."

But the stamp was finally discovered inside the glass case which covered a waxen water lily on the parlor

"Why, Mrs. O'Hagen," said Barton, "I have never seen a stamp like this. I believe it's a rare one." "Oi hope it is," said his hostess, cordially, "but rare

or well done, 'tis yours; you're heartily wilcome to't.'

But Barton, though he knew the stamp was an old one, did not realize its full value until he attempted

to locate it in his album.

"Great Scott!" he exclaimed, "that can't be the right place for it. Is it—no, it isn't perforated. Hurrah!" he shouted a moment later. "That stamp is worth four hundred dollars."

There was no mistake about it. It was a lightly canceled copy of the most valuable of Canadian stamps, nothing less than one of the rare twelve cent black stamps of 1851.

For fifteen minutes Barton was the happiest boy in the State of Michigan. Then, like a flash, a doubt

assailed him. 'She gave it to me," said Barton. "It is absolutely mine. She doesn't know one stamp from another. It wouldn't mean half as much to her as it does to me."

Strangely enough, the idea of selling it did not occur to Barton. He would have thought as soon of selling his mother.

"I'll ask father what to do about it," said he.
"Legally," said Mr. West, "that stamp is yours.

Morally, it, or the price of it, belongs to Mrs. O'Hagen. I happen to know that she was on the point of applying to the town for aid last winter. You know what a proud little body she is, and how it would hurt her to have to ask for assistance. But you are quite old

"But you are quite old enough to decide the question for yourself."

enough to decide the question for yourself. Only remember, Barton, that the price of that little stamp would make Mrs. O'Hagen comfortable for the rest of her days. "The price of it!" exclaimed Barton.

"Certainly," said his practical father. "You would sell it in any case."

"I hadn't thought of it," faltered Barton. But he thought of it then, and before night he had written to several dealers, asking what the stamp really was worth, almost hoping to find that he had been mistaken as to its value. At first he looked at it twenty times a day; but after a while, it was observed that Barton refrained from looking at his album; but no one guessed that it was because the new stamp had suddenly grown distasteful to him.

By the end of the week, the feeling had grown so strong, that he could not endure the touch of the key of the drawer in which he kept his book, so he removed it from his pocket.

Toward the end of the week, he received the answers to his letters. He was offered various sums, ranging from fifteen cents to three hundred and ninety five dollars for the stamp.

Would he keep it? Would he sell it? If he sold it, would he keep the money, or give it to Mrs. O'Hagen? He thought so much about it that his brain and his conscience were all in a tangle.

"I want," said he, "to do all three things, and I want to do one just as much as I want to do the others. Most of all, I want that stamp. I wish somebody or something would settle it for me."

Barton laid his aching head against the cold radiator for comfort.

It was Mrs. O'Hagen's hen that settled it finally. "'Tis me," said Mrs. O'Hagen, when Barton opened the door that afternoon, in response to an urgent ring. The color flew to Barton's face, and fled again, leaving him pale.

"The stamp!" he gasped.

"Bother the sthamp, 'tis me troublesome hin. Would yez do a big kindness fer an ould woman?"

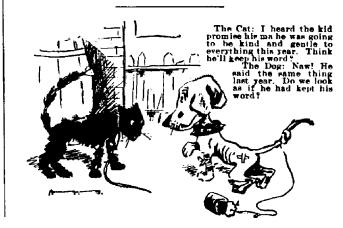

"Of course I would," said Barton.

"Thin come wid me an' Oi'll explain as we go along. Tis like this: Oi've got wan hin, an' thot hin lays wan egg ivery day fer me dinner, an' Oi dunno phativer Oi'd do without me egg, fer butcher's mate do be that high, and Oi've no teet' to be chewin' it wid annyhow. But lasht avenin' O'Shaunessy's dog kem intil me yarrhd and chased me poor hin till the top av me roof, and the silly burrhd won't come down fer all me coaxin'. There's no ladder in me neighborhood that will raitch, so Oi that av yer foine long legs."

"If Mabel could hear that," thought Barton, "she'd call me 'ladder' to the end of time.

Of course Barton rescued the hen; but he did something else for Mrs. O'Hagen that same afternoon. He sent the stamp in a registered letter to the dealer who had made him the best offer for it; and it would be hard to say which was the happier, Mrs. O'Hagen, or

Barton, when the latter presented her with the money.
"Of course," said Barton, "it was the one thing to do, but I can't see why I didn't discover that at once."

The 52 Boys Who Earned the \$1,000

aggregating \$1,000 to the fifty two boys who stood highest in the number of subscriptions to THE AMERICAN BOY sent in by them prior to November 21, 1900. The fifty two boys who were successful in this contest have received their money, and readers of THE AMERICAN BOY will be interested in knowing who they are. The list is as follows:

Albert W. Fifield, Minneapolis, \$200.00; J. Lawrence Hirshland, Reading, Pa., \$100.00; Charles Gustafson, Chicago, \$75.00; Raymond Pond, Chicago, \$75.00; Woodford Kron, Santa Cruz, Cal., \$50.00; Charles Karkau, Lansing, Mich., \$50.00; Emerson T. Cotner, Detroit, \$50.00; Donald Annis. Detroit, \$25.00; Louis Straka, David City, Neb., \$25.00; Willie G. Sprague, Detroit, \$25.00; Marion Sprague, Detroit, \$25.00; Fred Hilker, Fort Wayne, Ind., \$25.00; Archibald D. Andrews, Meadville, Pa., \$10.00: John D. Cronenweth, Detroit, \$10.00; Avery C. Hand, Mansfield, O., \$10.00; Everett Sherrill, Andover, Mass., \$10.00; Clarence Schwab, Weir City, Kans., \$10.00; Robert M. Gray, Hasbrouck Heights, N. J., \$10.00; George Bacon, Fort Scott, Kans., \$10.00; Frank P. Beal, Albion, Mich.,

Harry Mohler, Ephrata, Pa., \$10.00; Karl Matthews, Dubuque, Ia., \$10.00; Archie Williams, Sawyerville, Canada, \$10.00; Clayton Adams, Binghamton, N. Y., \$10.00; Herman Smith, Lamoni, la., \$10.00; Eridean O. Henderson, Stockton, Cal., \$10.00; Charles W. Holst. Portsmouth, N. H., \$5.00; T. F. Wilson, Columbus, Neb., \$5.00; Norman Griffin, Big Springs. Texas, \$5.00; F. H. Kane, Charlevoix, Mich., \$5.00; LeRoy Wehrle. Belleville, Ill., \$5.00; Halford Whitlock, Columbus. Ill., \$5.00; G. C. Kellogg, Tiskilwa, Ill., \$5.00; Charles Meader, Chicago, \$5.00; D. E. Morris, San Antonio, Texas, \$5.00; Eugene Steele, Phillipsburg, Mont., \$5.00; George C. Stickney. Newburyport, Mass, \$5.00; E. & B. Carmack, Boulder, Colo., \$5.00; Clarence Alger, Taunton, Mass., \$5.00; Myron K. Sweet, Bridgewater, Mass., \$5.00; Otway Stapler, Talequah, I. T., \$5.00; Waldo Harris, Neosha Falls, Kan., \$5.00; Ray Lambert. Anderson, Ind., \$5.00; William Northwood. Forest Hill, Cal., \$5.00; Grover C. Oxford. Elizabethtown, Ill., \$5.00; Gilbert D. Johnson. Glencoe, Ill. \$5.00; Arthur Crouch, St. Louis, Mo., \$5.00.

When it came to the last four of the fifty two it was

In our December, 1899, number we offered cash prizes | \$10.00; Clarence Pyeatt, Fort Lemhi, Idaho, \$10.00; found that there were twenty five who had each sent in three subscriptions. As only four of these twenty five could be entitled to five dollars each, the proposition has been made to the twenty five either to divide equally between them the twenty dollars remaining, or to extend the time until March 1 for these twenty five to contest for the four prizes of five dollars each. The method that will be adopted by us will be determined by the vote of the majority of the twenty

> It may be of interest to contestants to know that Albert W. Fifield obtained one hundred and two subscriptions; J. Lawrence Hirshland, eighty nine; Charles Gustafson, forty seven; Raymond Pond, twenty nine; Woodford Kron, twenty seven; Charles Karkau, twenty six; Emerson T. Cotner, twenty. None of those who received five dollar prizes obtained over six subscriptions each, and some of those who received ten dollar prizes sent in as low as six subscriptions. Many a boy who reads this will wonder why he did not contest for these prizes when he sees how easy it would have been for him to have earned, five, ten, or even twenty five dollars.

....THE OFFER FOR 1901....

Instead of offering a thousand dollars to the boys; who work hardest during the coming year, we shall pay out fifty dollars a month in cash prizes as follows: A contest will open on the fifteenth of each month and close on the fifteenth of the following month. For instance: fifty dollars will be distributed among the ten boys who send in the largest number of subscriptions between the fifteenth of one month and the fifteenth of the next. The one sending in the largest number gets \$10.00; the second largest, \$10.00; the

third largest, \$5.00; the fourth largest, \$5.00; the fifth | largest, \$5.00; the sixth largest, \$4.00; the seventh largest \$4.00; the eighth largest. \$3.00; the ninth largest, \$2.00; the tenth largest, \$2.00. The subscriptions must be annual subscriptions, and one dollar must accompany each subscription. The prizes are not offered to those who retain cash commissions on subscriptions sent in. The sender of a subscription, however, is entitled to the premium or premiums offered in our premium list. In addition to the cash awarded to the

three who stand at the head, we will give to the one sending the largest number one-half the foreign stamps accumulating in our office in the period named; to the one sending the second largest, one-fourth the stamps; and to the one sending the third largest, onefourth the stamps.

Experience has proven that solicitors find ready sale for subscriptions to THE AMERICAN BOY. The paper sells itself, as every boy and every parent and friend of a boy sees at once its desirable qualities.

themselves to boys in just this form. If boys could either boy going the way that he went. Johnnie was up to the threshold of business life unembarrassed by prejudices, parents' wishes, and special training, and were the whole field of employments then thrown open to them, boys generally would select the work most congenial to them and best suited to them, and their choice in a great majority of cases would be a wise one, for men succeed best along the lines of their natural inclinations and abilities.

But alas, this free opportunity of choice is not the way of the world. Parents choose, circumstances choose, but boys seldom choose.

Now and then a boy carries out his childhood plans and becomes what he dreamt of becoming; but in the overwhelming majority of cases that mysterious force we call "Fate" drives him into paths he never sought. | free air of the mountains.

Then, is it well for a boy to choose?

Yes: I am one who thinks it is better for a boy to choose and lose than never choose at all. A boy with a "career" before his eyes will study harder and to better purpose than the boy who is letting the future develop his chances, without attempting to control

events. There is such a thing as making chances, and it is only the boy who has his eye on a goal who will dare, and make the chances needed to reach it. A boy who ardently longs to be a lawyer will be a better lawyer for the longing; and if fate tumbles him

into another berth and makes a physician out of him, he is none the worse for the added strength of mind and purpose which his young life of aspiration has

I am often impressed with the littleness of the things that affect our lives. A momentary decision of a seemingly unimportant question often shapes a boy's destiny. For instance: A boy wants a job, and he and his parents scan the "Help Wanted" columns of a daily paper. They read that a butcher wants a delivery boy. Very well; Johnnie can do that, at boy do? When least temporarily, till something better turns up. Johnnie gets the position, and the chances are John-

Again, to help out the family larder, he becomes a "cash boy" in a grocery, comes to know the goods. Mighty questions, indeed, but they seldom present becomes a clerk, then a grocer. Nobody dreamt of with tools; indeed he could do marvels with a jackknife. He ought to have been a carpenter, or a designer or engraver, or an architect, perhaps a sculptor; but he took the first job open to him, stuck to it, and that settled it; he's a butcher-honorable, of course, but he spoils something good in making what is probably an indifferent butcher.

I hear it said to boys, take the first thing offered you and do it well. I would add, "and if the thing isn't suited to your tastes and your abilities, keep a weather eye open for something that is." An eagle might live out a long life in a dirty cage, but it would never be what God intended it to be if it neglected any opportunities offered it to escape and try its pinions in the

So a boy can live, and grow, and marry, and have children and die in doing any one of a thousand kinds of work, but he isn't doing himself or his Creator justice till he gives expression to his aspirations and uses the peculiar abilities with which he is endowed -and in a certain sense every boy is endowed with abilities peculiar to himself.

I would that every boy had a father as wise as was mine. My dream by day and by night was the law. When about to receive my college diploma and begin my law studies. I received a flattering offer of a position in an honorable calling outside the law. It pleased me. I telegraphed home. Father said, "No; stick to your text." I was ready to fling away the aspirations of twenty years for the bauble of a petty salary and immediate employment. Father knew better. I now know better myself.

But of the millions of boys-little fellows-thrust into the world to earn a living before they have formed hopes at all and before they have the opportunity to choose to do things other than what they must do; what of them? I can only say, God pity such boys. They are thrown into the world as so much molten metal, to be shaped in the rough mould of circumstance and trial. No wonder there are so many failures, so many half-hearted men, so many incompetent men, so many men unfitted for their tasks!

Still, there are hundreds of these poor boys who do choose, who rise above circumstance, and, plodding along at uncongenial tasks, are studying, and striving and watching the chances, and finally choosing, and choosing aright.

And there are a lot of fellows who never choose. because having been nursed in luxury, provided with money, the value of which they have never learned. and being assured of a living without labor, they never feel the necessity of choosing. Such boys seldom earnestly and determinedly select a course for themselves, though of all boys they are in the best position to do so. Many of these boys inherit strong characters from sturdy, successful parents, and fortune leads them whether or no into congenial paths, but many more belie their lineage, disgrace their name and choose-degradation and failure.

Every father and mother should study to find out what the little hands and eyes and brain can best do. and where the boy heart carries the boy legs; and unless the inclination is toward dangerous places, they should encourage and stimulate the tendency-and then, see that no chance act of theirs or his decides the question of the boy's career, for the issues are too weighty to depend upon a chance circumstance.

A boy's choice! Eternity often hangs on it. May every AMERICAN BOY reader have the opportunity to choose, and then choose aright.

The Cruise of the Yacht Gazelle; 6,000 Miles on Inland and Ocean Waters

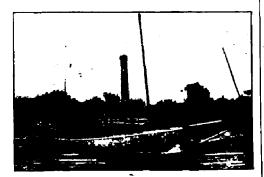

KENNETH M. RANSON

These are the eleventh and twelfth chapters in the story of a six thousand mile cruise by four Michigan boys. in a boat of their own construction. Setting sail from St. Joseph, the "Guzelle," by which name their craft was known, proceeded by way of lake, river and canal to the Mississippl, thence to New Orleans and the Gulf, along the guif coast to the Atlantic, thence to New York harbor by way of the ocean, thence by river, canal and lake, home to Michigan. and lake, home to Michigan.

CHAPTER XI.

Taking advantage of the remaining hour of daylight, we got under way and moved down the bay to a more protected spot for the night.

As darkness fell the sky became overcast and off over the ocean in the north west was a great bank of black, ugly looking clouds, while the rumbling of distant thunder and frequent flashes of lightning betokened a stormy night. The barometer, too indicated a change, and the rapidity with which it had fallen was a sure sign of a hard squall.

GAZELLE AT A QUIET MOORING.

Safely anchored in our haven we were joyful, and after a good supper we sat on deck enjoying the cool night breeze as it blew in off the ocean. Our canvas was carefully spread to catch the rain as it fell, and replenish our supply of fresh water. About ten o'clock, when all save the watch had gone to bed, the storm broke with tremendous fury. First a heavy wind squall bore down upon us and Gazelle straightened out her anchor cables and then pulled forward with a jerk; but our hooks were well placed and did not budge. The wind, however, increased and soon the downpour of the rain beat upon our roof and the gale was on in earnest. Thunder like the roar of cannon seemed to shake the very waters, while flash upon flash of vivid lightning rent the sky. It was a grand sight in all its wildness. Providence had been kind to us, for had it not been for running on the bar in the morning this terrible night would have found us in the open ocean exposed to the fury of the terrible storm.

The wind continued to blow until early morning, but the rain stopped at midnight. Morning broke clear and beautiful with a fine trade wind from the south west in our favor.

Successfully wending our way through the buoys which mark each side of the channel over the bar, we were soon bounding along on the large swells of the open ocean.

Our day's run was splendid. How I did enjoy it as we sped along, mile after mile before the wind, not far from the shore, for a good depth of water made it possible for us to keep quite near.

At intervals of twenty five miles the government has station houses called houses of refuge. These houses are provided with clothing, bedding and food for the use of unfortunate seamen who may be shipwrecked along the coast, and are another one of the many conveniences which make our aids to mariners the best of any in the world.

Night came on with a clear sky, but a gentle breeze continued to waft us on our way. How beautiful and grand as we sped along! The phosphorescent glow at our bows and the twinkle of the moonbeams on the white tipped waves made a scene sublime. But all this grandeur was unable to dispel the feeling of hunger which the fresh salt air made almost perpetual, and, speaking for myself, I can honestly say that I was overjoyed when the cook called us below for supper.

had heard sailors spin yarns about the coast which we were now passing. All seemed to have a feeling of dread for this coast of East Florida. Stories of shipwrecks, terrible storms and heavy seas had made us feel some fear of the locality, too, and we had often said when talking of our progress, "If we can only get from Miami to Jupiter all right, the rest will be easy."

One of the great dangers that had been portrayed to us was the fact that we were apt to have "a glistening calm." This we learned was a sudden dropping of the wind, but a continuance of the sea; thus a sailboat was at the mercy of the swell and, without headway, would be drifted toward the beach.

Tne water along this shore is very deep right up to the beach, so that anchors would be of little use and, unable to help himself, the mariner and his ship are easily dashed upon the rocks and destroyed. Imagine our joy, then, to find that weather conditions were perfect, and instead of experiencing the difficulties we had anticipated we were having one of our most pleasant runs.

At Jupiter inlet is a light and signal scrvice bureau. The light can be seen for twenty miles, and we were kept busy watching for the beacon, as we felt we were drawing near to it. At last, just before dawn, the light was above the horizon, and calling "Light ahead." the boys were soon on deck and we were congratulating one another on our success. The wind increased with the sun so that by six o'clock we had passed ing the bar. Jupiter and were standing on for St. Lucias inlet, twelve miles farther. Here we had planned to risk crossing the bar that we might reach the Indian River, where the cruiser's wish for sport, adventure and pleasure can be fully gratified.

It was haif past seven o'clock when we neared the inlet, and the sea which was running high on the deep ocean. broke with thunderlike sound on the shoal at the entrance to the river. The surf was beautiful; the three great rows of breakers rising like distant mountains with their curling, foaming crests dashing on with the gigantic power

which defies resistance. We had plain instructions and a map of the passage, but marks on paper with dotted lines where to go are considerably different from the real thing. tell you it looked threatening, and I'll admit it did seem as if no boat could ever run through the billows. Making sure that everything was snug on deck. we closed the cabin tightly and made ready for the trial. We had now come near enough to make out the channel over the bar, but it was very narrow, and a single mistake or false turn would send us into the breakers and our cruise would suddenly end. As she squared away for the channel the little vessel seemed to feel the importance of good behavior, and running down the great billows she shot ahead like an arrow, never swerving, but always steady, until again lifted high in the air she again began her downward course. At last the bar is reached. thirty feet of deep water is before us. but mile after mile of boiling surf is about us, and great rocks jutting from the foam as if hungry to wreck and ruin. It's magnificent sport now, and with a great bound and a leap forward Gazelle mounts the first breaker. Will she ever reach the top? Almost it seems no; but soon there is a rushing forward, and a great hiss of the water as she glides downward proclaims that she Thrice does she successfully repeat the act, each time sailing beautifully, until at last with a proud forward bound she clears the bar and has en-

CHAPTER XII.

Indian River.

tered the peaceful inlet leading to the

For nearly three weeks we had been rolling and pitching on the great billows of the ocean and, notwithstanding we had long since found our sea legs, and that seasickness was a thing un-

Way back in the upper gulf towns we known aboard the Gazelle, still the quiet, peaceful waters of the river were very welcome, and we hailed with joy the beginning of this part of our cruise.

The inlet at St. Lucias is but a short branch of the river, which extends along the coast north and south of this cut. It was not long, therefore, before we reached the main stream, and, having passed the points which the source of the branch forms at nearly right angles with the larger body, we were able to look both up and down the river.

SAIL, HO!

As we gazed to the southward I thought I saw a sail in the distance; bringing the glasses to bear. I found it was a boat of considerable size coming our way. We decided to come to anchor and prepare breakfast while the vessel was nearing us. Our appetites were very good, being stimulated by our night's sail and the excitement of cross-

While Frank was preparing potatoes, Arthur and I tried our hand at trolling. We were very successful, for in less than five minutes we had a three pound Spanish mackerel. Soon the delightful odor of cooking sea fish was wafted upward from the cabin, and with it came the cook's call to breakfast.

The breeze was very light and we found the sailboat still a good ways off when we came on deck after breakfast. It was yet quite early in the day, however, and it seemed to us a good plan to await the coming of the sailboat, as she would make a good escort for us in the dangerous channel ahead; so I busied myself tightening up the rigging while the dishes were being washed below.

The Indian River is affected by the rise and fall of the tides, and I knew that it was almost low tide. I was greatly pleased, therefore, to note that the breeze was rapidly freshening, and, as our company would soon arrive, we made sail and lay in readiness to accompany it.

ROBINSON THERMAL BATH COMPANY'
700-785 Jefferson St., Telede, C.

A MINIATURE NAVY And How to Build it By James Rodney

The more tools you have the better; but these are necessary: One crosscut saw, one circular saw, a tack hammer, a smoothing plane, one or more chisels of different widths, a pair of nippers and cutters, an awl, a brace with different sized bits for boring holes, and above all, a strong vise. It is also well to have screw-drivers, a gauge and a sharp punch for making holes in tin, etc. A common kitchen table is perhaps the best work bench you can use.

See that your tools are sharp and clean, always remembering that a dull tool will not work well and is far more dangerous to handle than a sharp one, for it is liable to slip instead of doing its work.

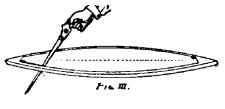

Always use clear grained white wood, and begin with the under water hull, or that part of your vessel that will be under water. For our model we need four boards, each sixty one and one third

steamer in a show window, and wish that you were the proud owner of one like it? How the railings glisten and the polished masts and smoke pipes shine! The little anchors and the keen propeller blades, how perfect! And you turn away with a sigh, not thinking that you can make a practical model of a battle ship! How? I am going to tell you.

Taking it for granted that you are fond of manual work, the first necessity is pauence, the second perseverance and the third care, without fear; you must never be afraid of your tools or of your work for if you become nervous it will be all the harder for you to succeed.

TOOLS.

The more tools you have the better; but sides, or freeboard, will be two and one sixth inches at the ends and four inches at the center. The proportion of the turrets, guns, small boats, smoke pipes masts, pilot house, etc., can be determined in this way: Take a pair of dividers and measure on the drawing the height of, say, for example, the smoke pipe, and then see how many times it will go into the length of the ship. In this case it goes into it eight and one fifth times. The length of the model being sixty one odd inches, we divide sixty one by eight and one half, gives us the height in inches that our smoke pipes must rise above the superstructure. The distance between the smoke pipes, their diameter or any other distance on, the ship can be found in the same way.

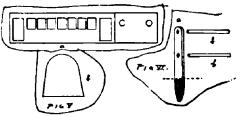

Upon a board as long and wide as the model, only three eighths inch thick, draw out your deck plan. Then cut out the deck with your circular saw, afterward smoothing the edges. At the bow and stern of the under water hull erect blocks of wood properly shaped, an inch and five eighths high, and fasten them securely (Fig. iv., a.a.). Now place your deck upon these and nail it on them. Upon this in exactly the same way place a central deck, the shape of the superstructure, leaving hatchways through both decks to give access to the inside. One large hatch in the superstructure upon the cover of which fasten the smoke pipes, ventilators, etc., will be enough, if in addition you cut a small hatch at bow and stern about three by three inches. Upon a board as long and wide as the

by three inches.

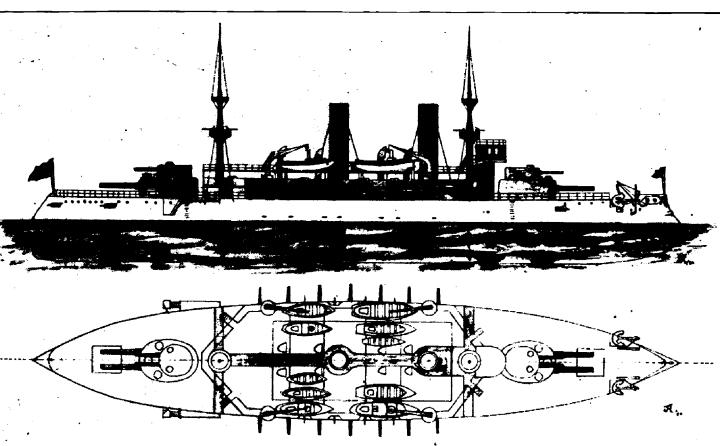

The sides of the ship must now be enclosed. Take light sheet tin or aluminum, third and from paper patterns cut out pieces to

ship is completed up to the water line, and the interesting stage of construction is about to begin. (Fig. IV.).

District the stage indicated on the plan, round for the military tops, elliptical for the turrets and curved in front and straight at back for the pllot house, etc. With a tapeline measure the circumference of cach, then cut a piece of the the same length and as high as required. In these pieces cut holes for the turret guns, or windows for the pillot house (Fig. V., a) and bend around

the base (Fig. v. b), tacking it on. Fasten in a top the same way, but in your turrets make the top to lift out so that you can get at your guns. The upper turret can lift off with the top of the under one. The miller to the proper turner to the control of the under one. military tops need only a bottom piece, in the center of which bore a hole for the mast to pass through, wedging it at the her a formidable and very realistic appearance. The ends of the superstructure can be enclosed in exactly the same way as the sides.

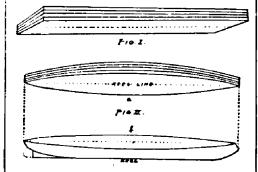

THE START.

The start must be made intelligently, with the plan of your ship sketched or drawn on paper or firmly fixed in your mind. If you do not care to plan out your own models, a good way is to choose a war ship of the United States Navy, and to work from a photograph of her, procuring, if possible, a sketch of her deck plan. The pleture must always be of the ship's broadsida so that the spacing and proportions of her parts may be accurately observed.

THE FIRST MOVE.

Having chosen the plan of your ship, the next thing is to determine the size. Having met with many discouragements and mishaps myself, this rule will save you untold trouble: Always work to a scale, and let that scale be one inch to six feet; or, in other words, one inch on your model will be equivalent to six feet on a real man-of-war. That will bring your railings half an inch high, representing the three-foot railings on a real ship, and will bring yery other part in proportion—a man on your model thus being seven eighths of an inch tall. The World Almanac gives the cour model thus being seven eighths of an inch tall. The World Almanac gives the dimensions of every American war ship, that you can easily get the proportions correct. And let me say that this is by ar the most important thing. Models you see in toy stores with very few exceptions, ire ill proportioned monstrosities, and are made to sell.

inches long, twelve inches wide and one inch thick. Nail these one on top of the other, using as few nails as possible, driving them in along the center line of each board. (Fig. I.). The line on top is the

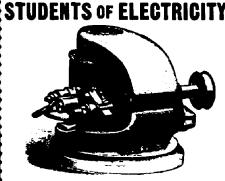

center of your deck and the bottom is the keel line. On the top board draw the shape of the deck drawing, and cut the four boards that shape. Fig. II. a.).

shape of the deck drawing, and cut the four boards that shape. Fig. II. a.). Then turn the keel line up, and with your chisels, plane and gauge shape the hull, cutting the bow away to form the ram and the stern away in a somewhat similar manner, only more to give room for the rudder, propellers and shafts. (Fig. II., b.). The under water hull now shaped and rubbed perfectly smooth with sandpaper, unfasten your boards and mark out the space to be hollowed out, leaving the bottom board untouched to form the bottom of the ship. Bore holes at opposite corners of this space (Fig. III.), and then insert your circular saw and saw out the centerplece. This done to the three upper boards, replace all four boards as at first, gluing and nailing them together, taking great care that all fit perfectly. Any glue that squeezes out, remove with a cloth. The hard work is now over, and with the exception of rudder and propellers, your made to sell.

Now, for example, take the U. S. S. Now, for example, take the space to be hollowed out, leaving the bottom board untouched to form the bottom of the ship. Bore holes at opposite corners of this space (Fig. III.), and then insert your circular saw and saw out the centerplece. This done to the three upper boards, replace all four boards as at first. Shove the waterline and twenty four feet high at the superstructure. Our model, then, will be sixty one and one third inches long, twelve inches wide, will draw four inches of water, while her

tack along the open places at the sidentirst cutting in the metal portholes and anchor chain holes, spacing all accurately. Then tack on the sides to the edge of the deck, at the top and to the hull at the lower edge. And, believe me, you will be greatly astonished to see how the metal molds itself to the form of the boat, giving. The turrets, military tops, pilot house and the coming tower (which is under the

DECK FITTINGS.

The deck fittings require special care, that the model may appear well finished. The railings are best made of line copper wire (Fig. VI., b, b), and the stanchions of sheet aluminum, cut and bored as in Fig. VI. (a). The little rigging required should be made of victors with expensions from a standard with the control of the control VI. (a). The little rigging required should be made of picture wire, except such ropes as pass through pulleys, which are best made of various kinds of fish line. The small boats, launches, etc., can be cut out of blocks of white wood, hollowed out with a small gauge, and tin or aluminum seats inserted. They are lowered into the water either by davits or cranes, the former being best made out of stiff wire and the latter out of sheet aluminum, of sufficient thickness to give them stiffness. The anchors can be cut out of flat solder or brass, and a stiff wire run through the shank to form the cross bar. Fine brass or iron chain can be bought by the yard at hardware stores. The guns, in this model rep-

If you wish to have motive power in a model, use steam and a steam engine. Clockworks and electricity are very unsatisfactory. Steam takes up less room, and, if properly put in, is cheap, powerful and safe, provided you have enough ventilators to let air to the spirit lamp. An engine bought at a toy store can be coupled to your propeller shaft by means of a belt, or fastened direct, and two engines can be attached where you have twin screws, as in the Kearsarge model. Remember that the hole through which your propeller shaft passes must be packed to exclude the water. The best packing I have found to be a pulp of oiled tissue paper. Always line your boiler room with tin or asbestos, so that, should the rolling of the model cause the lamp to take fire, it can burn out without damaging the model.

In all your construction never use carrect to the steam and a steam engine. Clockworks and electricity are very unsquares of mica over your portholes, painting around the edges when the varnish, used as cement stick little squares of mica over your portholes, painting around the edges when the varnish is dry.

Models of your own design are of more credit to you than if copied; and if you are at all inventive, you have a chance to you. Naval architects are always in demand in all parts of the world, and the making of these models might be the foundation of a successful career. But even if in later life you never should take up shipbuilding, your chances for success in any business will be much greater, for unconsciously you will have learned care, perseverance, patience and forethought; you will have become more neat and thorough which your will have become more neat and thorough which you will have become more neat and forethought; you will have become more neat and thorough which you will have become more neat and the white varnish.

in all your construction never use carpet tacks or any large nails that will split

proper height above deck. Flat pieces of tin can be rolled into smoke pipes, rings of wire being put around to hold them, as in the sketch.

MOTIVE POWER.

DECK FITTINGS.

resenting thirteen, eight and six inch rifles, your wood. Thin wire nails one-half inch should be bought at a novelty toy store and mounted on carriages of your own make.

MOTIVE POWER.

If you wish to have motive power in a white varnish, used as cement stick little white varnish.

later, even if a few failures do rather dis courage you.

BENJAMIN FRANKLIN.

DANIEL WEBSTER.

GENERAL MOBGAN.

JANUARY IN AMERICAN HISTORY

JANUARY 1. 1808: IMPORTATION OF SLAVES ABOLISHED. The Constitution of the United States provided for the continuation of the slave trade by permission until the year 1808. In 1807 Congress by law forbade the importation of slaves after January 1, 1808, and in 1829 the detention or transportation as a slave in any vessel of any negro or mulatto was declared piracy.

JANUARY 1, 1863: EMANCIPATION PROCLAMATION BY PRESIDENT LINCOLN. The friends of the North perceived the necessity for destroying slavery in order to save the life of the Republic. The slaves carried on the farming at home while their masters fought in the armies of the South. The President and his supporters believed that the most effective blow that could be struck against the Southern cause was the freeing of the negro, and so resolved to abolish slavery. The President proposed to give pecuniary aid to any State government which might provide for the abolition of slavery. The South refused to listen to the proposition. Congress then proceeded to deal with the subject vigorously. It first abolished slavery in the District of Columbia, and prohibited officers in the service of the Republic returning fugitive slaves to their masters. In 1862 a law was passed which declared the absolute freedom of the slaves of public enemies under certain operations of war. The President hesitated to sign this bill, although in sympathy with it, for he belleved it would be inoperative. On the 22d of September. 1862, it was declared by proclamation that on the 1st of the following January the slaves within every State, or designated part of a State, the people whereof should then be in rebellion, should be declared free. Accordingly, on the 1st day of January, 1863. President Lincoln issued his proclamation, one of the most important public documents ever issued by the hand of man. From that moment the power of the North became invincible, as it enlisted the sympathy of every lover of freedom the world over, and from that moment victory followed victory for the Norther of State. The first utterance of the proclamation to the negro was given to a regiment of negroes in arms beneath a great live oak tree near Beaufort, S. C., within bugle sound of the spot where the South Carolina Ordinance of Secession for the perpetuation of slavery was framed. By the adoption afterwards of the Thirteenth the adoption afterwards of the Thirteenth Amendment to the Constitution, slavery was abolished from the domain of the Republic. The signature that we have copied was signed on New Year's morning, and appears to have been made with a tremulous hand. The President had just previous to signing it shaken hands with numerous callers. The pen with which the President signed the proclamation was given to Senator Charles Sumner, of Massachusetts, one of the greatest friends the negro has ever had. By him it was presented to George Livermore, of Boston. It is a steel pen with a common cedar holder.

JANUARY 1, 1876: THE CENTENNIAL YEAR BEGAN WITH GREAT DEMONSTRATIONS AT PHILADELPHIA.

STRATIONS AT PHILADELPHIA.

JANUARY 1, 1879: RESUMPTION OF SPECIE PAYMENTS. On January 7, 1875, Congress had passed a bill fixing the time for the Government and banks of the United States to resume specie payments at January 1, 1879. The great commercial depression that followed the panic of 1873 made gold so scarce that it practically was out of circulation. When it was proposed to resume specie payment on January 1, 1879, it was contended by a great many persons and by a great political party that it would be impossible to resume at that date. But the resumption took place with great ease, the United States Treasury and the banks receiving more gold on deposit on that day than they paid out. Great business improvement at once took place. Congress had prepared for resumption by passing an Act in July, 1876, authorizing the issue from the United States mint of ten million dollars of silver coin to take the place of the same amount of fractional paper money. The consequence was that within a year nearly every piece of fractional paper money disappeared from circulation, and silver coin became exceedingly plentiful.

JANUARY 5, 1838: PRESIDENT VAN

JANUARY 5, 1838: PRESIDENT VAN BUREN'S PROCLAMATION WARNING AMERICANS AGAINST AIDING THE CANADIANS. In 1837 the upper and lower Canadas attempted to separate from Great Britain. Their efforts had warm sympathy in portions of the United States. So much was this the case that peace between the United States and Great Britain was endangered. President Van Buren issued a proclamation warning the Americans against the infringing of international laws. General Scott was sent to the Northern frontier to preserve order. By 1842 the trouble was over. 1838: PRESIDENT

JANUARY 7, 1867: IMPEACHMENT OF PRESIDENT ANDREW JOHNSON AGREED TO IN A COMMITTEE OF CONGRESS. Andrew Johnson was the seventeenth President of the United States, succeeding Mr. Lincoln as President on his death in 1865. He was continually at warfare with Congress, and was impeached, but acquitted in 1868, and retired from office in 1869. He died in Carter county. Tenn. He died in Carter county, Tenn.

In 1875.

JANUARY 8, 1782: DANIEL WEBSTER BORN. Daniel Webster's birthplace was Salisbury, N. H. He died at Marshfield Mass., Oct. 24, 1852. He earned enough money to go through Dartmouth college by teaching school. Was admitted to the bar in 1805. Was a member of Congress, a member of the Massachusetts Constitutional Convention, and a splendid orator. He visited Europe; was Secretary of State during the administrations of Presidents Harrison, Tyler and Fillmore. His services in what is known to lawyers as the Dartmouth College case placed him in the front rank in his profession. Among his great speeches were his celebrated reply to Hayne, and his Bunker Hill Monument oration.

JANUARY 8, 1815: BATTLE OF NEW ORLEANS. In this battle the British lost two thousand, six hundred men, while the Americans lost only eight killed and thirteen wounled. The Americans were well protected by breastworks. General Lambert, of the British troops, withdrew all his soldiers from the Mississippi, and Louisiana was saved. The news of the victory gave great joy throughout the country. State legislatures and other bodies thanked General Jackson and his brave men. A small medal was struck in commemoration of the event and circulated among the people. Congress voted thanks to Jackson and ordered a gold medal to be given him. The anniversary of this battle is celebrated as a legal holiday in Louisiana. legal holiday in Louisiana.

JANUARY 8, 1861: MISSISSIPPI SE-CEDED FROM THE UNION. The con-vention that carried Mississippi out of the Union met at Jackson, Miss. The action of the convention was unanimous, although quite a respectable number of the delegates desired some delay in order to get the co-operation of other States. Mississippi de-clared itself to be an independent sov-ereignty and acknowledged the sovereignty of South Carolina, which had seceded. of South Carolina, which had seceded.

JANUARY 9, 1854: ASTOR LIBRARY IN NEW YORK OPENED. John Jacob Astor gave four hundred thousand dollars for a public library in New York. At the head of the first board of managers was Washington Irving. The library was opened with seventy thousand volumes. William B. Astor. John Jacob Astor's son, added further donations. further donations.

JANUARY 11, 1861: ALABAMA SE-CEDED FROM THE UNION. The convention was not harmonious. There were some men with Union leanings in it who were for the postponing of the act with the hope of preserving the Union. Imme-diately upon the passing of the act, a seces-sion flag, which the women of Montgomery had presented to the Convention, was raised over the Canitol. A great celebration took over the Capitol. A great celebration took place, during which the city blazed with fireworks.

JANUARY 15, 1865: FORT FISHER TAKEN.

JANUARY 16, 1872: GENERAL AM-NESTY BILL PASSED.

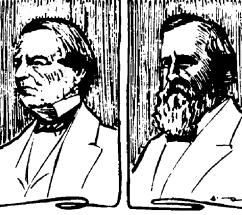

JANUARY 17, 1706: BENJAMIN FRANK-LIN BORN. Franklin's birthplace was Boston. He died in Philadelphia April 17, 1730. He was a leading member of the Convention of 1787, which framed the Constitution of the United States. It is impossible for us to give more than a brief summary of the life of this great American. He worked as a journeyman printer, started the Pennsylvania Gazette. at Philadelphia; published for many years Poor Richard's Almanac; was chief founder of the Philadelphia library; Postmaster of Philadelphia; founder of the University of Pennsylvania and the Philosophical Society, of Philadelphia; was Deputy Postmaster for the English-American colonies; a delegate

JANUARY 17, 1781: BATTLE OF THE COWPENS. "The Cowpens" was the name of a region in South Carolina which, on account of its grass and springs, was favorable to the rearing and use of cows. A great battle took place in this region between the Americans and British, in which the British were routed, with a loss of over three hundred killed and wounded and five hundred prisoners, and many cannon, mushundred prisoners, and many cannon, mus-kets and horses. The American general who accomplished the defeat was General Morgan, and to him Congress gave a medal and the thanks of the nation.

JANUARY 17, 1873: THE MODOC INDI-ANS DEFEATED OUR TROOPS. The Modocs were first found in California. ANS DEFEATED OUR TROOPS. The Modocs were first found in California, where they fought the early emigrants. By strategy, forty one out of a party of forty six Modocs were slaughtered by a party of whites in 1852. The Modocs never forgave the whites for this. They kept up a war against the Government until 1864, when they agreed to go on a reservation. The reservation was not set apart until 1811. They were cheated by the Government, and, finally, under Captain Jack, became rebellious, and when attacked took refuge in the lava beds of Oregon. A conference was arranged for between the Modocs and representatives of the Government, and at this conference the Indians killed General Canby and others of the commissioners. The Government then pressed the fight, and Captain Jack was compelled to surrender. He and others of his associates were executed, and the remainder of the band placed on a reservation in the Indian Territory. tion in the Indian Territory.

JANUARY 19, 1807: ROBERT E. LEE BORN. General Lee was born at Stratford,

Va., and died at Lexington, Va., Oct. 12. 1870. He was a West Point graduate and came of a family of soldiers, his father being a brave general of the Revolution. He served in the war with Mexico, coming out of it a colonel and a great favorite with General Scott. Was superintendent of the West Point Academy. Became Lieutenant-Colonel of Cavalry, and later Colonel. When the Civil War broke out Lee went with his State, which had seceded from the Union, and accepted the command of the Virginia troops. He became military adviser of President Davis, Commander of the Confederate army of Northern Virginia, which army he surrendered to General Grant at Appomattox Court House, having just previously been appointed General in Chief of the Confederate army. After the war he became President of Washington College, at Lexington. Va. He had three sons, all of whom served in the Confederate army. Lee was an officer of fine culture, a brave soldier, and the idol of the Confederacy. His birthday is celebrated as a legal holiday in Florida, Georgia, North Carolina, South Carolina and Virginia.

JANUARY, 19, 1861: GEORGIA SE-CEDED. A majority of the delegates elected to this Convention were against secession. Alexander H. Stephens, though believing in the right of secession, opposed it. A vote decreeing it to be the right and duty of the State to withdraw from the Union, was carried by a majority of thirty five in a total vote of two hundred and ninety five. When the Secession Ordinance was passed, Stephens declared he would go with his State. A resolution to submit it to the people for a vote was rejected.

JANUARY 29, 1861: LOUISIANA SE-CEDED. The Union sentiment was power-ful in this Convention. An effort was made to submit the question to the people, but it failed. There were one hundred and thirty delegates in the Convention. The Ordinance was adopted by a vote of one hundred and thirteen against seventeen. A motion to submit the Ordinance to the peo-ple was lost. ple was lost.

JANUARY 25, 1871: STATUE OF ABRA-HAM LINCOLN IN THE CAPITOL AT WASHINGTON UNVEILED.

JANUARY 28, 1859: THE HISTORIAN PRESCOTT DIED. William H. Prescott, the historian, was born at Salem, Mass.,

JANUARY 30, 1877: THE ELECTORAL COMMISSION CHOSEN IN CONGRESS. On Dec. 4, 1876, a resolution was adopted in the National House of Representatives, which was then controlled by a democratic maniority, providing for the investigation of the action of the returning boards in Souti, Carolina, Florida and Louisiana in the presidential contest wherein Rutherford B. Hayes was the candidate of the Democratic party. This resolution created much excitement in Congress and among the people, with the result that Proctor Knott, the representative from Kentucky, offered a resolution for the appointment of a commission of seven members and the speaker, to act with a like commission appointed by the Senate, to prepare and report a plan for the creation of a commission to count the electoral votes whose authority no one could question, and whose decision all could accept as ation of a commission to count the electoral votes whose authority no one could question, and whose decision all could accept as final. The resolution was adopted, and on January 18 the committee reported a bill providing a plan for the counting of the votes. After much debate the bill passed both houses and became a law. By this law each of the two houses of Congress selected five of its members to serve on the commission, together with four judges of the Supreme Court named in the bill, the four judges to select the fifth. The four judges selected Judge Bradley. The commission completed its count on March 2, and the President of the Senate announced that Hayes and Wheeler were elected.

ANUARY, 1863: GENERAL BRAC DEFEATED AT MURFREESBORO.

JANUARY, 1871: DISTRICT OF COLUMBIA GIVEN TERRITORIAL GOVERNMENT. So extravagant, however, were the expenditures made by the officials of the territory that in 1874 Congress repealed the Act and gave the executive powers into the hands of three commissioners appointed by the President, Congress assuming legislative powers over the District. One-half of the expenses of the municipality were to be defrayed by taxes—one half by appropriations. The citizens were given no right to vote on national or local questions.

Short Talks to Boys J. W. Burgess

No. 5.

And then, boys, be careful. Many a boy has made a good impression when he did not even know he was being watched. Business men are continually watching the boys. If they see one boy coming out of a saloon, with a cigarette between his lips, and the other one with a clean collar on, coming out of Sunday school, it doesn't take long for them to decide which one of the boys they want to employ. Men, business and professional men, do a great many things themselves that they don't want their boys to do. When you are a man, you can do as you please about those things. but until you are, you will do well to be careful. The great trouble with the avambitious. about him that will make him do his level best; that will make him keep neat and tidy: that will make him polite and Politeness does not accommodating. consist solely in taking your hat off and carrying it in your hand half a block on a cold day every time you chance to meet a lady on the street. It means lots more than that. It means giving elderly and infirm persons, however poorly clad, the right of way every time. It means being just as considerate of the rights and feelings of your own sister as you are of account duly verified. There is no truer those of some other boy's sister. It saying between the covers of the Holy means a thousand little kindnesses that Book than that "whatsoever a man sow-fall in your power to confer, which, eth, that shall he also reap."

A Young Club Leader.

HENRY B. PHILLIPS.

Henry B. Phillips, a sixteen year old New York boy, is the president of the Young Boys' Democratic club of the twenty eighth assembly district of New York City. During the last campaign they worked hard for the Democratic ticket. At one of their meetings they had fully fifteen hundred persons present, and the boy orators were heartily cheered. The speaking was

done from a platform built at the side of the street by the boys themselves. Young Phillips, the president, was the first speaker, and he was roundly applauded.

This boy, by the way, is a characteristic New York boy, and an account of his life during the past two years will give an insight into what young fellows in a great city are found doing. He says in a letter to the editor of THE AMERICAN BOY: "At the age of fourteen I left public schools and started out on my 'business career.' I first struck a place in a drygoods store as cash boy at two dollars a week. I stayed there about six months and then left to better myself in the drygoods house of James Mc-Creary and Company. Here I was cash boy at two dollars and a half a week. After staying there six months I left the drygoods business for good. I took with me good recommendations. Then I struck a place in a lawyer's office at 257 Broadway at three dollars a week. I was there about a year when I got four dollars a week. At the end of November, 1900, I was promised a raise of another dollar. I am now well known to a lot of lawyers of our city and the judges and clerks of the court. I even go so far as to adjourn cases, and hold cases until my employer reaches the court. At the last election I went around stumping for the Democratic party. I explained to the people what show us boys would have if the trusts are in existence when we become men. I told them that I was helping to smash the trusts. I am president of the Young Boys' Democratic Club, a member of the Young Boys' Defender League, and a depositor in the Union Dime Savings Bank. I also have the pleasure of being a subscriber to THE AMERICAN BOY."

Denver Newsboys' Jolly Thanksgiving.

The Denver newsboys ate their Thanksgiving dinner at the Brown Palace Hotel, as guests of the Denver Evening Post. The Governor was there, the Mayor was there, and scores of other prominent citizens were there, and it goes without saying that every newsboy in town was there. They began to gather in the alley back of the Post building before seven o'clock in the morning. By eight the crowd was so large you couldn't see the alley, and. what was strangest of all, every one of the boys had a clean face. One boy thought he ought to wear a white shirt, but as he hadn't any, he put on a clean white cotton nightshirt under his coatand he looked like a gentleman. At ten o'clock a procession of tallyhos, band wagons and drags drew up at the alley, and then the boys exploded. Every boy received a chrysanthemum and a horn. The former they thrust into their worn little coats, and the latter into their mouths. Then they clambered into the wagons, and if they hadn't been restrained half of them would have been

on the horses. Then the Governor and the Mayor appeared and the band played "A Hot Time." Primrose and Dockstader's Minstrels were there. Primrose and Dockstader rode with the Governor and the Post man. The dinner was spread on long, narrow tables and was a sight to behold. The Mayor made a speech, the band played again, and some of the minstrels sang. Primrose and Dockstader invited the boys to their Saturday matinee. Neil O'Brien sang "If I Only Had a Dollar of My Own." The boys joined in the chorus. Some-body, writing of the affair, says, "Brave little fellows; plucky, staunch hearts. We who heard you sing that song aren't a bit worried about you. You will have a dollar of your own, all right, and many of them. Here's looking at you with a heart full of good wishes." Primrose and Dockstader's band broke into a cake walk that just sent cramps into the calves of the newsboys while they tried to hold their legs stiff under their chairs. After twenty five turkeys had been picked clean as ribbons the little fellows withdrew, acting all the time like perfect little gentlemen; but once again on the outside they let loose with their horns.

A Chicago Musical Prodigy.

Little "Abie" Shynman, nine years of age, has been granted a preparatory certificate by the Balatka Musical College. He has won the honor of being the youngest music teacher in Chicago. His piano performances have often delighted Chicago audiences, and no pieces have proved too difficult for him to render.

Young Shynman is also a composer. He was born at Newcastle-on-Tyne, England, and at the age of four took part in a benefit concert at Cardiff, South Wales.

Guard. I beg to say in reply, that the of-fer of yourself and Company in the war with China is alike patriotic and honorable; I am pleased to state, however, that the present outlook seems to be favorable to the early settlement of hostilities, and I do not think it will be necessary to offer up the lives of your brave men on the altar of their country. With profound gratitude to you and your Company, I have the honor to be,

Very respectfully,

A. H. LONGINO. Commander in Chief Miss. National Guard.

Wants to Be a Page.

Roy Thomas Duncan, a fifteen year old Detroit boy, is trying to get an appointment as page at the coming session of the Michigan legislature. He has written a nice letter to the members elect, has followed up the letter with personal visits to all those in Detroit, and has received assurances of support from a number of them. We print his letter because it is a good one. It reads:

Dear Sir-Having secured my father's permission to do so, I have decided to become an applicant for a position as messenger during the next session of the legislature, and take the liberty of asking if you will kindly assist me in securing the same same.

was born in Detroit, and am in my tifteenth year; have always been a pupil of the Houghton school, and a member of the A eighth class at present.

the A eighth class at present.

I reside with my parents at No. 246 Sixth street, and am the son of George W. Duncan, who has been employed as a compositor on the Detroit Journal for the past seventeen years.

While I have never had any experience in such work as the duties of a messenger require, I feel safe in saying that I believe I could fill the position in a manner satisfactory to both yourself and your fellow members.

If it is necessary to do so. I can furnish

members.

If it is necessary to do so, I can furnish you the names of many citizens in every walk of life as a reference to my character and fitness for the place, which I seek, but it will please me more if given to me on my own merits as a schoolboy.

BOYS AS MONEY MAKERS AND MONEY SAVERS

To Learn the Value of a Dollar.

Robert L. Coleman, son of Walter H. Coleman, a New York millionaire, on his graduation from Cornell University in 1898, was told by his father to get out into the world and hustle for himself for three years in order to learn the value of a dollar. The New York World is authority for the statement that the young man is a bell boy in the Turkish cheap things because they cost little. Baths connected with the St. Charles hotel, New York. He first took a place in the treasurer's office of the South Carolina and Georgia railroad. Next he tried a broker's office on Wall street. New York, but his employers failed and the young man was without resources. Then he got on the Eighth avenue elec-Two English girls have made very tidy tric car line as conductor, remaining fortunes by the breeding of Shetland there four months and working for fifponies. They began in a small way a teen hours at a stretch. Then he was few years ago to raise the cunning little in a Brooklyn iron foundry for a month. where he lost sixteen pounds in weight profitable that they have now large Then he obtained a position as bell boy stables and drive a thriving business, at the St. Charles. He is reported to stables and drive a thriving business. at the St. Charles. He is reported to We would hazard the guess that an have said. "Father thought I wouldn't American boy could do as well as an English girl, if he tried. now and I guess I can stick to it. The experience has been tough, but great. When the three years are up I'll know the value of money all right. I've paid my way with the money I've earned myself. It was pretty close sometimes, but I always succeeded."

A New Profession for Young Men.

Forestry is an interesting study, and is in a fair way to be a very profitable one for young men. We are adopting in this country a system of scientific forestry, and there is and will continue to be great need for men specially versed in the sub-

iect. The United States government has offered to take supervision of private forests and make plans by which timber can be cut to the best advantage and the forest still be preserved in good condition, without any cost to the owners. A great many timber owners are accepting the offer, and, of course, employment is being given to many bright young men who are taking up this new profession. Many young men who have decided to make forestry their vocation are employed by the government during the summer at twenty five dollars a month and their expenses. They work under experts and receive practical instruction. Over one hundred and sixty applied for positions during three months of this year. Forty of them were undergraduates of Yale; eleven Cornell and University of Minnesota; twenty three of Harvard, and three of the Baltimore Forest School. The remainder of the applicants represented several different schools, and some were not college men. The interest at Yale is so great that a school of forestry probably will be established there soon. Three or four months in the woods during the hot season, with twenty five dollars a month in cash and all expenses paid, is a pretty good thing for a young man as a starter. If he masters the profession of forestry he can easily add that of landscape gardener, and has a paying job for life.

A child's savings bank has been dug out of the ruins of Ostia, the scaport of ancient Rome. The bank was an earthen pot containing one hundred and forty five silver coins Issued by Roman emperors between the years 200 and 19 B. C. The little savings bank was almost perfect when it was uncovered. It is three inches long and two and one-half inches wide, with a slit in the top through which the money was dropped.

Practical Printing for Amateurs.

W. S. KNOX

(Begun in October.)

PRICES FOR PRINTING.

Prices for printing vary according to circumstances, but no printer should make estimates upon his products so low as to allow any possibility of a loss. The most pernicious habit any printer can fall into-be he professional or amateur is to do work at the bare cost of stock just to prevent some one else from doing it. Don't do it, boys. If your work is not worth a fair, honest profit for your own labor and a return for your investment in machinery, material, etc., don't the market, and simultaneously there accept it under any conditions. Do business in a straightforward, businesslike manner, and you will succeed where "the other fellow" will become bankrupt.

A very fair scale of prices for the grades of printing most generally used is as follows, based on fair grade stock:

Letter Heads—One thousand, three dollars and fifty cents; five hundred, two dollars; two hundred and fifty, one dolfor and fifty cents. Smaller quantities,

Note Heads-One thousand, two dollars and fifty cents; five hundred, one dollar and fifty cents; two hundred and fifty, one dollar. Less, seventy five cents. Bill Heads—Quarter sheet or smaller,

same price as note heads. Statements-One thousand, two dollars; five hundred, one dollar and twenty

five cents; two hundred and fifty, one

dollar. Less, seventy five cents. Envelopes-Same price as note heads. Cut Cards-Same price as note heads. Tickets, Checks, etc.-One thousand,

one dollar and fifty cents; five hundred, one dollar; two hundred and fifty or less, seventy five cents.

Bills, Dodgers, etc. (newspaper)-Six by nine inches, one thousand, one dollar and fifty cents; five hundred or less, one

Circulars (on good paper)-One thousand, two dollars; five hundred, one dollar and fifty cents; two hundred and fifty or less, one dollar.

The printer will find that it will not pay to set and print any job for less than seventy five cents or one dollar, unless it is a "name" card, a small order of labels or the like. Always try to do the very best you know how. Ask a fair price for your work and make the finished product worth the price you expect to receive for it.

A Professional Survey of Amateur Journalism.

JOHN LIVINGSTON WRIGHT.

During the week of July 2, 1900, the attention of the amateur journalists of old to the monthly that could hardly be the country was directed toward the city distinguished in typography and reading of Boston, because of the annual conventions of the National Amateur Press and D. A. Sullivan, now proprietor of the the United Amateur Press Associations Lowell Daily News, printed, some years being held there. Nor was this the limit. ago, a paper called "Youth" that would Down in Newark, New Jersey, a faction of the United Amateurs was holding a third convention.

This revivifying of interest in this delightful and helpful amusement inspires an old amateur, who was privileged to attend one or two of the Boston gatherings, with the disposition to attempt a

England, France and Australia, Ben-

cld, he edited and printed the New England Courant at Boston. Nathaniel Hawthorne is alleged to have served an apprenticeship as an amateur editor. Daniel Webster had his period as an amateur author. Thomas A. Edison, while a newsboy on a Lake Shore & Michigan Southern train, printed and circulated Philadelphia, James M. a little paper. In England, Canning, graduates of amateurdom. once Prime Minister, is said to have been the first amateur. Charles Dickens, George Augustus Sala, Gladstone and Robert Louis Stevenson are among those whom the young Britons point out as one-time amateurs.

It was about 1868 that the little amateur hand-printing press was put upon arose a widespread and tremendously enthusiastic army of budding printers, editors and authors. In 1869, J. Blair Scribner, a son of the New York publisher, Charles Scribner, issued a "call" and at his home originated the "National Amateur Press Association." J. Blair Scribner was chosen president and Wilham L. Terhune, now editor of the "Boot and Shoe Recorder," of Boston, was made secretary. Since that time the association has regularly held annual meetings.

No amateur journalist expects or exacts pay for his efforts, be they editorial. authorial or typographical. Secondly, as amateur journalism is invariably entered into purely as an amusement or recreation, it invariably follows that the boys and girls who maintain amateur journalism as a permanent institution are those imbued with a natural love of the play. Thus it becomes a school of instruction in line with what is coming to be regarded as the real basis of education, namely, that the sort of play or sport into which a child enters most eagerly and persistently is apt to indiate the calling in life for which he is most fitted. Amateur journalism has been claimed to exhibit features which make it superior to any of the other socalled "Schools of Journalism." One of these features is that the boy journalists are criticised not by their parents, professors or elders, but by rivals of their cwn age and experience. Comment which, uttered by a professor, would pass unheeded, stings sorely when emanating from other boys. Thus, the early discovery, by those who have not a natural love for the odor of printing ink or the sight of pencil and paper, that amateur journalism is associated with something savoring of a kind of drudgery is bound to keep out the young people not "to the manor born.

The appearance of these amateur papers presents a variance as wide as that in the professional field. There are all types, styles and sizes, from the daubed "thumbnail" of the thirteen-yearcompare favorably with many of the leading juvenile magazines gotten out by the most expertly trained heads and

The practical witnesses to the fact that amateurdom may be made a stepping stone to the reporter's or editor's chair or allied occupations are to be found in bit of reminiscing and generalizing. the leading newspaper offices of almost Organizations of amateur journalists any of the large cities. E. A. Grosier, are found not only in America, but in publisher of the Boston Post, Wm. Howe Downes, the art critic of the Boston jamin Franklin is credited with having been the first American amateur journal, tress of the Boston Home Journal, nalist, for in 1723, when seventeen years Norman E. Mack, proprietor of the

Buffalo Times, Judge William T. Hall, of Chicago, formerly dramatic critic on the Evening Post of that city, are some who might be mentioned in this connection. Among New Yorkers, Washingtonians and Philadelphians who connection. have succeeded as professional publishers, writers or artists may be named: George H. Richmond, C. F. Zimmerman, Will M. Clemens, James J. O'Connell and Irving J. Romer of the Sun, Joseph Dana Miller, Sam S. Stinson and Abby H. Underwood. Herbert Stone, the Chicago publisher, is a once enthusiastic amateur, as are also J. Austin Fynes of New York, manager of Proctor's vaudeville interests, Alexander Dingwall, of Chicago, who acts in a similar capacity for Jacob Litt, Bruce Edwards, manager for Julia Marlow. Among the writers, Frank Dempster Sherman, Harrie Irving Hancock, Minna Irving, Roy Farrell Greene, Jerome Bull, Frank Roe Bachelder, S. P. Rounds, of Salt Lake, Utah, the former Public Printer, and the present United States District Attorney at Philadelphia, James M. Beck, are all

Like the professional politics of the great parties, the struggles for and over office at the amateur conventions are fraught with schemes deep and daring. The button-holing, star-chambering and sharp maneuvering that prevail, portend the coming into power of future Platts and Crokers. In truth, many of the plots conceived and worked out at these annual assemblies would compare very favorably with the machinations of far older and more experienced heads. The hoys of the "Uapa" tribe would seem to have had a moderately torrid political history for the past few moons, and the fact that a contingent in Newark was trying to duplicate the Boston meeting did not add to the calmness of the braves who conscientiously believe in the motto of the "Tapas," namely, "United we stand. Divided we fall.'

Despite, however, the fierce rivalry for office, the amateur journalists always come out of their conventions and squabbles with a unanimity and a doffing of war bonnets that is truly delicious. Kiss and let's make up again," can be truthfully and happily stated to be the good rule that induces naughty and perverse amateurs to hesitate in their occasional tendencies to slap their fellow playmates and to bring back their dolls and play in the universal yard.

C KEYLER CO 981 Madison Ave. Cincinnati, O. BOYS IN THE OFFICE, STORE, FACTORY, AND ON THE FARM

<u>; \$</u>

"Why did George Blank lose his position in your office?"
"Oh, he was one of these boys who want to work altogether by the clock, and that sort of a hoy is never satisfactory."
"What do you mean by working by the clock?" I asked.
"Wall he would drap anything he was

clock?" I asked.
"Well, he would drop anything he was doing the instant the clock struck six or twelve. He wrote a very good hand and I had him write a few short business letters for me, and I have known him to lay down his pen at six o'clock and put a letter aside to be finished the next morning, when he could have finished it in three or four minutes. And if he chanced to reach the office five or ten minutes before eight he would sit around in idleness waiting for the clock to strike eight before he would

do a thing. That is what I call 'working by the clock,' and I have never known such workers to amount to much in life."

I doubt if such workers ever achieve a high degree of success in life. The boy whose eyes wander to the clock every few minutes to see how long it will be until noontime or until six o'clock is not interested in his work. His heart is not in it. He is not anxious to do his work to the utmost of his ability. He is disposed to give as little as possible in return for the wages paid to him. Such workers will generally shirk if they can. A wealthy man told me that he once had in his employ two boys each about eighteen years of age. One day he gave them a certain task to do. Just as the clock struck six he chanced to overhear one of the boys say to the other. "Come, Joe; there goes the six o'clock whistle. Get your hat and let's get out o' this."

this." said Joe, "let us finish up this

"No," said Joe, "let us finish up this work. We can do it in ten minutes and get it out of the way."

"Not much!" retorted the other boy. "You don't catch me working ten minutes over time, and not getting anything for it!"

"Well, you know we were allowed to go home half an hour ahead of time because there was nothing for us to do, one day last week."

"That's all right," said Harry, the other

last week."
"That's all right," said Harry, the other boy. "We aren't paid such great wages that they can't afford to let us go home early once in awhile. I'm going home right

now."
"All right. Run along, and I'll stay and finish this work up myself. I'd rather do it and be ready to start in on something fresh in the morning."
"I kept my eye on those two boys after that." said the gentleman who had told me the story, "and I discovered that the boy called Harry was a regular shirk, and that his work was rarely well done. The other boy, whose name was Joe, was, on the other hand, extremely careful and painstaking. He paid no attention to the

Working by the Clock.

H. H. H.

I once went to no little trouble and spent considerable time in securing a good position for a boy of seventeen, in whom I was interested. The boy seemed to me to have a good deal of ability, and he was most fortunate in securing the position referred to. I was, therefore, surprised and disappointed when he came to me at the end of two weeks and wanted me to use my influence in securing him another place.

"Why. George!" I said, "why did you leave the place I secured for you?"

"Because they wanted to make a slave of me," he said sharply.

I could not believe this to be true, and when, a day or two later. I met the gentleman in whose employ George had been, I said:

"Why did George Blank lose his position"

"That is the sort of young men always out of a job," sald one, in answering a question about a certain family of boys.

We are all familiar with the "sort." Every business man has had his patience worn down to a thin edge by the blunders, carelessness and stupidity of members of this undesirable "leisure class," whom he has been persuaded to "give a trial." Perhaps the place was given at the solicitation of some friend, perhaps because he was in need of immediate help, and must perforce take whatever offered itself—but one thing is always certain: The employer is the one who has the "trial." and it is only a question of time and patience before the employed is turned out to graze in pastures new.

Not long ago a young man (he is twenty two years old, and he ought to be a man), who five or six years ago was taken as an apprentice in the press-room of a large printing office, but was discharged after repeated blunders, the spoiling of several valuable orders, and an expensive injury to a new press, was taken back into the same office "on trial." He had had various and varied "jobs" since his dismissal, so he was in no position to grumble at the work offered him—running a freight elevator. But the men who were delayed by his dallying, sometimes five, ten, lifteen minutes, had reason to grumble, and they could not be blamed for improving the occasion. It was not only inconvenient but expensive, when a large "form" was walting to be taken from the composing-room to the press-room, to leave it and chase upstairs and down in search of the elevator boy. Forliearance came to an end when he was found in the basement, asleep, the elevator bell plugged with cotton. Now this desirable young man is again "looking for a job." If you had a place for a boy, would you hire this one? His address is to be had.

In the same town where he lives there is another young man of the same age.

would you hire this one? His address is to be had.

In the same town where he lives there is another young man of the same age, who, by his falthfulness, diligence and application has mastered the details of a complicated inechanism, and won the respect and confidence of his superiors. Lately he was appointed to a position involving the greatest responsibility. Every sense must be on the alert, every faculty on guard; a moment's forgetfulness or neglect might lead to results too dreadful to think of. "Alex, is good for it; he is always on hand, and always to be trusted." say the men who know him.

These are typical cases; the individuals composing the two classes are to be found in every city and village in the land.

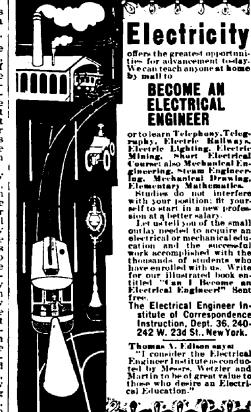

The question for the boys in the school-room, and those who have been obliged to

| leave school to take up their share in the | world's work, is, To which class shall I

The world has need of you, boys, and its richest treasures of service and achievement and success are yours if you are of the right sort; but it has nothing honorable or desirable to offer to the boy, youth or man who is perpetually "out of a job."

A CAR ON THE "SWITCH-BACK," GOING UP MT. JEFFERSON, AT ONE OF THE POINTS WHERE IT CROSSES ITS OWN COURSE.

A Famous Mountain Railroad.

F. E. HALBERT.

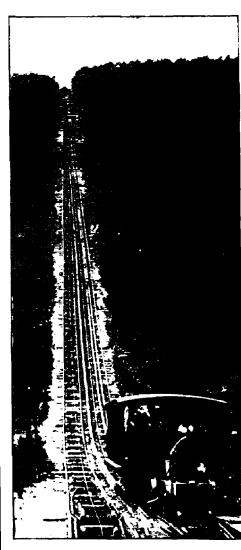

In 1791, Philip Ginter, a hunter, was living in a wild, unsettled part of Pennsylvania less than an hundred miles from Philadelphia, near where now stands the village of Summit Hill, and nine miles from Mauch Chunk. One afternoon Ginter was returning home from an unsuccessful hunt, and as he strode along his foot suddenly struck something which attracted his attention. Stooping down. he picked up what appeared to be a black and shining stone. The following day he took this stone to Fort Allen, now Weissport. It was such a curiosity at the fort that it was thought best to send it to Philadelphia. There it was pronounced to be "stone coal." It was nothing more nor less than what we now know as a piece of anthracite coal. A chort time after that a company was formed for the purpose of mining the coal, but even at a price of twenty one dollars a ton at which it first sold, the company failed. It was not until nearly thirty years after its discovery that the coal was brought to market in any large quantities. In 1818 a road was laid out by a company, extending from the mines to the Lehigh valley, a distance of nine miles, and this road is said to have been the first road laid out by an instrument -the level. Coal was hauled down this road in wagons until 1827, when rails were laid. Cars were run down these rails by gravity and hauled back by mules, the little animals making the down trip in a special car. They enjoyed this immensely: it was just like boys pulling their sleds up hill for the purpose of riding down again. Later the cars were drawn up by other power. For several years the railroad, which is now known as the Switch Back Railroad, has been used exclusively for pleasure rid ing, and a ride around the famous eighteen mile loop is something never to be forgotten. I hope all our boys some day will have a chance to enjoy it.

Soon after leaving the station the car reaches the foot of the Mt. Pisgah incline. Looking up the steep grade for the first time, you feel half frightened at the thought of climbing it in a car. but there is no danger; the safety appliances are strong and sure. The broad, heavy steel bands pull us safely and surely up the mountain side, the bands being attached to the safety car which pulls the passenger car. At the top of Mt. Pisgah we start off by gravity on a long run to the foot of Mt. Jefferson. passing over a short trestle spanning a deep and wild ravine, where we seem to be suspended in space. Here a grand view is spread out before us made up of distant mountains, hills, and valleys, and the winding river far below We can see below us a railroad train wending its way along the foot of the mountain; it looks like a toy. The speed at which we are going is something frightful. Shrubs, trees and boulders whiz past us. We whirl along dizzy heights, plunge into wild forests, and cross mountain streams that dance and sparkle in the sunlight. This part of the ride is for over six or seven miles, and then we go up Mt. Jefferson, another run of a mile, reaching Summit Hill at the top, a typical mining village. Here one can stop off and visit the burning mine which has been smouldering since 1857.

But the keenest pleasure yet awaits

us. Our ride homeward is over a nine mile track. A motion of the brake and off we start. Down, down that long stretch of track with ever-increasing speed we whirl, through wild, uncultivated fields, along ravines, past imposing ivy-grown crags and through long shady lanes where nature smiles her sweetest. We dance along at a speed that makes timid ones nervous; and for all, it is exciting. Now the wind almost takes away our breath. Look out for your hat! We feel like jumping up, swinging our hands and shouting, "Let 'er go," just as we did when we were boys coasting.

We see below us and in the distance the town of Mauch Chunk, often called the Switzerland of America; and just as our enjoyment is at its full, our speed be gins to slacken and the car glides smoothly into the station, the whole side including stone having taken about ride, including stops, having taken about

THE AMERICAN BOY offers twelve prizes of Two Dollars each for the best Amateur Photograph received during the twelve months in the year, one prize for each month, the competition to be based upon the originality of the subject and the perfection of the photograph. The contest is open to subscribers only. Photographs will be returned if stamps are sent for the purpose. All photographs entered in the contest and not prize winners will be subject to our use unless otherwise directed by the sender, and fifty cents will be paid for each photograph that may be used, the prize photographs in any event to be our own, without further payment than the payment of the prizes. Welte on the back of the photograph its title, with a description of the picture, and the full name and address of the contestant.

How to Mount Prints.

ing propercy and the factor of a first fir

It requires artistic knowledge to properly

It requires artistic knowledge to properly mount a picture as well as to decide on the best point of view of a bit of scenery. There has been great improvement in this line by regular photographers, the past few years, until to-day the proper commingling of print and mount is generally the rule.

There is such a thing as too much as well as too little margin between the edge of the print and the edge of the card. In this respect one must be neither scrimpy nor prodigal. If an inch margin is the proper thing for one size of picture, it will be too small for a larger print and too large for a smaller one. Then, again, the color of the photograph makes a difference as to the proper color of the mount. If it has a warm tone, a different colored mount is needed to one having a cold black tone. A picture may be dark, or it may be light. That also requires a change in the color to suit the conditions. Freak mounts, highly ornamented and of queer shapes, are never desirable.

highly ornamented and of queer snapes, are never desirable.

Let the mount, then, suit the general tone of the picture. A strong print will require a darker mount than a weak one. A light print usually needs a light mount. It is a good plan to avoid strong colors, as a rule. Neutral tints do not draw attention from the picture itself.

"A WARM DAY IN JUNE." First Prize Photo, by Arthur Hust, 139 Oak St., Lewiston, Me.

After your prints have been toned and washed, let them dry for a few minutes, to get rid of the superfluous moisture. Then gather them up and put them, face down, on a piece of glass, any old negative glass will do, or a piece of window pane, one on top of the other, though in irregular positions; that is, not piled up evenly. Have a boiled starch paste ready, and apply it to the top print with a brush. The paste will slop over on the edges of the other prints, but that does not matter. Have your penknife ready, and insert the blade under the edge of the pasted print, lift up sufficiently to get a grip, and then take hold of the corners and lay straight

dry, put them under a weight, so that they will not curl too much. The curl can be entirely taken out by pasting on the back of the cardboard a wet piece of stiff paper, so that when it dries it will contract sufficiently to bring the mount straight.

A Handy Box for Negatives.

As negatives accumulate, it becomes a question of how to keep track of them. Envelopes can be procured at the supply houses, but this adds quite an item to the cost of the "fad." A simple and inexpensive way is to get some cigar boxes, which will cost nothing, as the law does not allow them to be used for cigars again; knock them to pieces, and then cut down sides and bottom to the size desired. To keep the negatives apart, line two sides of the box with corrugated cardboard, which can be fixed in place with glue or a few tacks. One box can be used for land-scapes, another for portraits, a third for interiors, and so on through the whole list of subjects. Be sure and have one for "the baby," and take a picture at least once a month. It will be a perpetual source of delight to thus record its growth. As negatives accumulate, it becomes a

Posing for Snap Shots.

J. C. Warburg gives in the Photographic Times Annual several amusing instances of trying to pose people for snap shots. As he truly says, the moment the subjects have any idea that their pictures are being taken, they become stiff and unnatural, and persist in staring into the camera. So he had to engage their attention on other matters, and when they were off their guard press the bulb. The introduction of animals into a posed picture helps to make it appear natural, especially if the animals are used to the presence of those in their vicinity. Then they will go about their business and pay no attention to the camera man, and if the amateur can induce his human subjects to for an instant forget his presence, he will be much more successful than otherwise.

Really artistic snap shots are very rare, but when one is obtained it is much more

nan otherwise.

Really artistic snap shots are very rare, but when one is obtained it is much more valuable than a posed picture. Naturalness has a charm all its own, but often natural positions make awkward looking pictures, so that obliviousness to the vicinity of a camera will not alone make a good picture of the subject. Fortunately, camera outfits and plates and developers are becoming so cheap that one can afford to take several pictures that are not particularly praiseworthy when finished, if only out of the lot one good one has been obtained. It is foolish to snap at everything, but it is also foolish not to take some chances on snap shots, when the view is in the least promising.

A Fine Annual.

The Photographic Times Publishing Association. No. 5 West Nineteenth street. New York City, seems to have outdone itself this year. In its Annual for 1901. It is a bulky volume, filled with the choicest matter pertaining to photography, and so handsomely illustrated that not a few of the half tones are good enough to frame. One of the most instructive articles is on cloud photography, and the formulas for every conceivable photographic operation are legion. With this Annual the amateur photographer need want for nothing, and the seventy-five cents it costs will be money well spent.

Answers to Correspondents.

Charles Hastings—There is no way of doctoring a negative out of focus. Throw it away and try again.

John Grant—Developing outfits can be bought for from one dollar and fifty cents up. Use your kitchen or bath room at night for a dark room.

George Cunningham-Your negatives are all underdeveloped. Leave them in the developer until the picture begins to fade. Also watch the back of it to see when the high lights appear.

George Hutton-Nothing is gained by using a smaller stop than is really necessary. Focus with the largest opening, and if all that appears on the ground glass is clear, regulate the light by the speed of the shutter.

With a Comment or Two.

with a Comment or Two.

With a Comment or Two.

Clyde C. Swayne, Washington, D. C., sends a large number of prints, but most of the other prints, but that does not matter. Have your penknife ready, and insert the blade under the edge of the pasted print, lift up sufficiently to get a grip, and then take hold of the corners and lay straight on the card which has been selected for that print.

Be sure and get it on straight. Nothing looks so bad as a nice picture mounted crooked. One must in the main depend on the eye for this, but with a little practice it can be done, especially if the mount is an embossed one, having lines running parallel with the edges. After the first print is disposed of, apply the paste to the card. Squeegees are cheap. Place a piece of white printing or hard blotting paper over the face of the print, and after the squeegee has been lightly used to set the covered print, bear down sufficiently to make every part of the picture come into contact with the card. Before thoroughly

Photographic Notes.

Many styles of "adapters" and "ray filters" are on the market. Amateur photographers are advised to experiment with ray filters in taking snow pictures.

A new idea in dark lanterns is one run by dry cell batteries, which are, of course, without smoke or odor. The lantern has a capacity of twelve or more hours, and can be recharged with little expense.

There is a "spotting medium" on the market, which is used to cover pin holes and other imperfections. With this and a red sable spotting brush the amateur can wonderfully improve imperfect negatives.

CHAIR AND BROOMSTICK TRICKS.

With a Couple of Ordinary Chairs and Broomsticks Girls and Boys Can Have All the Exercise and Fun Afforded by a First-Class Gymnasium - Directions for Using These First Aids to Athletics.

A couple of ordinary chairs and two broomsticks are a whole gymnasium in themselves. Perhaps this may seem rather an exaggerated statement to boys who have never tested their possibilities, but half an hour's work with these domestic articles, if the suggestions offered in this article are followed, will be sufficient to persuade any one of their athletic usefulness.

Take, for instance, diagram number one. A boy is here kneeling on a chair with a tempting lump of sugar, seemingly just within reach of his teeth; when this is borne in mind the sugar is thing to do with it. seldom tasted.

With your back to the wall, however, you can, to your friend's deep chagrin. pass under the stick quite easily. This is also an excellent way to practice the bend back which is so essential to any kind of tumbling.

USING A BROOMSTICK.

The first time I tried to climb around a stick, as shown in diagram seven, it seemed to me that even a professional contortionist could not possibly extrithree feet space between the hands.

> snited to you after the first trial. Slip your left foot over the stick, put vour head under your right arm and then the test will come. If your back and shoulders are flexible they will allow you to carry the stick on around and to finally draw your right leg over without letting go of the stick. It is rather un-likely that you will succeed in doing this the first time you try; but a little practice will make the performance quite easy.

Good practice in limbering the shoulders is to be had by grasping the stick with the hands, perhaps two feet apart, and then without loosening the hands raise

Another extremely amusing spectacle | teresting trial of the accuracy of the | the stick over your head and bring it down across the back. Gradually reduce the distance as your arms and shoulders become more pliant.

In trying the position shown in diagram number eight be sure that the chairs are well braced so as not to slip from under you. I have known men who would let me sit on their chest while they were in this position; but any boy may be satisfied simply to hold it without any additional weight.

The last exercise I shall suggest. shown in figure nine, looks difficult, but it really is not. The left shoulder, supported by the back of the chair, gives a splendid brace. Almost any boy can throw his feet over his head against a wall, and when the assistance given by of this kind are seldom hurt; they acquire the cat-like habit of always landing on their feet.

Remember that the boy who is continually getting hurt is not the boy who wins the confidence of the home rulers or the admiration of his comrades. Always have a profound respect for your limbs; they are worth taking care of. Work up to your feats by slow degrees, until what an untrained man will be to you as safe as any ordinary

but the moment he reaches for the sugar the chair tips forward and the prize is lost. The best way of succeeding is to bring the weight of the ally attends a girl in this experiment. body as much as possible to either the right or left of the center; but even in the shoulders may also have something to a half or three feet, space between the procession of the shoulders may also have something to a half or three feet, space between the procession of the shoulders may also have something the shoulders may also have somethi Diagram number four shows an in- You can easily judge of the distance best

is offered when some boy aspires to acnumber two. In this case not a lump of sugar, but a bit of wax, is the desired prize; but as in the former trial an ignominous tumble is the usual termination. There is, of course, not the slightest danger of being hurt, for the one who is making the trial can easily eatch himself with his hands. In diagram two a bit of wax is stuck to the back of a chair and must be removed by the teeth without the boy's touching either hands or feet to the floor. After capturing the wax he must be able to regain his seat in the chair.

IN WHICH GIRLS EXCEL.

but at least two girls in every three can do it quite easily. Measure back three of your own feet from the wall of a room and place a chair between you and the wall; then bend over the chair until your head rests against the wall. Now raise the chair and attempt, without moving your feet or touching the chair to the floor or wall. the rest of his sex, will find that the and in this position it is next to im-thing simply can't be done. I suppose possible to get safely under the stick. will be to

eye. Place a chair at one end of a room complish the trick shown in diagram and then let some one walk rapidly from the opposite end of the room towards the chair, his right arm held stiffly in front of him. As he passes the chair he will attempt to snap off a cork balanced on the back of the chair. Nine people out of ten will snap at least an inch too high. The way to succeed in hitting the cork is to quietly get close enough to the chair to make a mental note of the exact button wrinkle or seam in your clothing which is exactly on a level with the cork. It is then an easy matter to hold your hand at just the right height as you approach the cork.

A boy who rides a bicycle or in some Diagram three shows an experiment in which the feminine sex easily outclass all masculine rivals. I have never known more than one or two boys who five. Measure three of your own feet you lose your balance; but boys who could engegesfully regain his equicould successfully regain his equi- from an imaginary line on the floor and have accustomed themselves to work librium after taking the position shown: place a cork upright at that distance, step back to your starting point and attempt to kick the cork over and regain your equilibrium without touching the floor in front of you.

Diagram number six shows some fun with one of the broomsticks. Place one end against the angle formed by the wall of a room and ask some friend to pass his body under it without lifting his feet from the floor. He will natto regain your upright position. Any his feet from the floor. He will nat-degrees, until what an untrained man hoy, unless he differs materially from urally face the wall in his undertaking, could do only at the risk of his neck,

FIFTY GOOD GAMES

As Played in Brooklyn Public Schools

From Report by Jessie H. Bancroft, Director of Physical Training

No. 6. FIST BALL.

No. 6. FIST BALL.

Mark off two large courts and draw a line, or, if possible, stretch a rope head high, through the center. Divide the players into equal sides, occupying the two courts. The ball is served, i. e., put into play, by a player in one court, who bounces it, and then bats it with the hand over to the other court. The ball may bounce once and then must be returned, or it may be returned before it bounces, except immediately after a serve. The point is lost by the side not returning it, or returning it from outside of the opposite court. Each side serves alternately, the players taking turns. The game should be played with both hands, and may be made more difficult by forbidding the bounce, except in serving. The number of players is limited only by the space at disposal. Twenty five points make a game. When there are many players, each court should be subdivided into six or more spaces, each to be occupied by certain players, who cannot go out of their own space.

No. 7. ARCH BALL.

Players stand in two or more lines, single file, players about two feet apart. The leader throws the ball backward overhead to the player behind. If the ball falls to the ground, the one who failed to catch it must pick it up and return to his position in the line, before throwing it. The last one in the line runs to the front with the ball, takes his place at the head of the line, and begins over again. The line wins whose leader first gets back to the front.

No. 8. TEACHER.

Players stand in a line, all facing one,

One point is scored every time the captain makes a fair catch. Two points are scored when the ball passes entirely around the circle of one side. It is a foul it (1) the ball; (3) it a player steps over the dividing line; (4) if a circle man steps out of his circle. One point is scored by the opposite side whenever a foul is made. After each point is scored the ball comes back to the center to be again started. to be again started.

No. 10. DRIVE BALL,

A court about thirty feet by twenty is divided to form two courts, each a little wider than it is long and each occupied by a team of players. A goal about two by three feet is marked at the rear end of each court, the object of each team being to get the ball into the opposite goal. Each team has a captain, who stands at the middle of the dividing line, and is responsible for the the ball into the opposite goal. Each team has a captain, who stands at the middle of the dividing line, and is responsible for the discipline of his team; a guard, whose duty it is to keep the ball from the goal, and who stands in the goal, and from six to twelve players, each assigned a certain spot, marked as his territory, and from which he cannot move more than two feet. At no time can the players do mass work. To start the game the ball is placed between the captains on the dividing line. At a signal from the umpire each captain hits the ball with his fist; the ball is then kept going back and forth, hit always with the fist. To put the ball into play at any time after it has been caught, or otherwise stopped, it may be bounced or thrown from one hand, and then hit with the fist. Kicking the ball, holding it, throwing it with both hands, or crossing the dividing line, are fouls, and count one point for the opposite side. Each goal made counts two for the side making it. When a goal is made, the ball his the fence or wall back of the goal, and bounds into the goal, it counts a goal.

The game is played in three rounds of fifteen minutes each, with a rest of five minutes between. The teams change courts for successive rounds.

the leader. The latter throws the ball to each in turn. Each one missing goes to the foot of the line, and the one at the head of the line takes the leader's place when the leader misses. The action should be as rapid as possible.

No. 9. CAPTAIN'S BALL.

The playing space is divided into two equal parts by a line across the center; in each part a series of small rings is arranged in a circle, equal distances apart. The captain's place is in one of these rings, near the center of the dividing line.

the center of the dividing line.

There may be from eight to sixteen players on each side exclusive of the captain. Half of these players stand in the small rings on their own side, and each must remain in his own ring. The captain also remains in the place marked off for him. The other players, called runners, run about between the rings and the dividing line, on the opposite side from their captain and circle men, and try to catch the ball from the opposing team and throw it across the line to one of their own men. The object of the game is to pass the ball entirely around one of the circles without its being caught by the runners who seek to gain possession of it.

gain possession of it.

Some one starts the ball in the center, and the runners take it and try to throw it to their captain or one of their circle men.

To all Chapters and members of the Agassiz Association: A Happy New Year. For all the boys and girls who accept our invitation to join with us in the study of nature, we will try to make the new year happy; and everybody is invited.

Hints on the Study of Insects

(Concluded).

(Concluded).

With this paper we conclude our hints on the study of insects, our aim being not to write a book on entomology, but only to make plain the right way to use the many excellent books already written. Never forget that no book study can take the place of the actual collecting and examination of the insects themselves. The thorough study of one insect without a book will help you more than the study of any book without an insect.

In our last paper we explained the subdivision of the class Hexapoda, or insects, into orders. We shall now consider one of the most important orders, namely, the Lepidoptera, or scale-winged insects, including moths or millers, skippers and butterflies. Every boy who has ever caught a microscope it is found to be composed of very small and delicate scales of regular form and great beauty. These scales are often arranged upon the wings with considerable regularity, overlapping one another like tiny shingles. This is particularly true of the larger butterflies and moths. (Fig. 1.) In the upper part of the figure the membrane of the wing is shown with the scales removed.

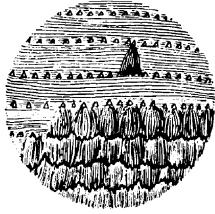

Fig. 1-Part of wing of Butterfly, greatly magnified.

It is these scales which carry the beautiful colors, and produce by their arrangement the exquisite markings of moths and interflies.

Lepidoptera may be distinguished from

Lepidoptera may be distinguished from other insects as follows:

They have four wings, which are membraneous and covered with overlapping scales. The mouth is formed for sucking, not biting. The metamorphosis is complete. The larvae of Lepidoptera are known as caterpillars. The caterpillars vary greatly in appearance, but are usually cylindrical and provided with six "true" legs, growing from the thorax, and from two to ten "false" legs, which grow from the abdominal part of the body. These abdominal legs are shed when the larvae shed their skins preparatory to changing into the winged or imago form. They are thick and fleshy, and usually provided at the ends with minute hooks. The six true legs have a hard outer covering, and persist have a hard outer covering, and persist throughout the life of the insect.

More than six thousand species of Lepidoptera are found in America, north of Mexico. The three principal divisions of Lepidoptera are moths, skippers and butterfiles

Moths, as a rule, fly by night. When at rest, the wings are either folded closely around the body, spread horizontally, or closed down over the abdomen like a roof. The antennae of moths are usually threadlike, or feathery, and only rarely are thick-ened or enlarged at the tip Their bodies are usually stout and heavy.

Skippers are so named from their peculiar method of flight. They fly in the daytime, darting suddenly, and with a flipping motion, from place to place. Skippers resemble butterflies in the erect position of their wings when at rest, though their hind wings are often spread horizontally. They resemble moths in the stoutness of the abdomen. Their antennae are threadlike, and enlarged toward the tip, but in most cases the extreme tip is curved backward into a hook.

Butterflies fly by day, and when at rest hold their wings erect over their backs. The antennae are thread-like, and enlarged into a club-like shape at the tip, which is never curved into a hook. The abdomen is

never curved into a hook. The abdomen is

slender.
We have now carried our readers as far

We have now carried our readers as far as is best, namely, to the front door of the science of entomology. We have explained the meaning of classification, which underlies all forms of science, and given a few simple illustrations of its operation.

We have taught you how to distinguish insects from all other forms of life; given the names of the orders of Hexapoda; and taken a brief glance at one of the more important orders, with its main subdivisions. Those who care to pursue the subject further should procure a good manual, as Comstock's, previously noticed, and a microscope or magnifying glass, catch their insects and study them with patience and ject turtner snould procure a good manual, as Comstock's, previously noticed, and a microscope or magnifying glass, catch their insects and study them with patience and care. If to this can be added a good teacher, time will do the rest. Now here is where the Agassiz Association steps in. Thousands of boys all over the country will carry their knowledge of insects to this point, and then become discouraged by the difficulties they meet from lack of a friend to guide and assist them. A few will persevere until they really master the subject, We invite all such to write to us freely just as often as they need assistance of any kind. We do not know very much about insects ourselves, but we do know several men who know a great deal about them, and who are always glad to make their knowledge freely serviceable to any of our members who are in earnest.

Aside from the technical study of entomology as a science, there is much that every one can do. Every one can make a collection of insects, and every one can study the habits of insects, watch their strange growth and transformations, and learn in what ways they are helpful or injurious to mankind. Every farmer is directly and deeply interested in this part of the subject. The gypsy moth alone has cost the single state of Massachusetts millions of dollars. Without a knowledge of the forms and habits of insects it is difficult to take the right means to get rid of them. Every boy and girl, then, who is ready to study further along this line is cordially invited to write to the president of the Agassiz Association, telling frankly both what he has already learned and what more he particularly wishes to learn.

more he particularly wishes to learn.

Agassiz Association Calendar.

JANUARY.—Get four or more congenial friends together and organize a "Chap-ter." Full directions in the A. A. Hand-book. Write for a charter.

FEBRUARY.—Fit up your Chapter room. Begin building a cabinet for your specimens, and a case for your books. Write to the president of the A. A., telling of your progress, and sending, if convenient, photographs of yourselves and your room. Read White's Leiborne.

MARCH.—Decide upon your line or lines of work for the spring and summer. The greatest freedom of choice should be allowed to each. Look out for stray birds wintering in woods or swamps, or about houses and barns. Read the Scotch Naturalist.

APRIL.—Observe the progress of the buds on different sorts of trees. Make a collection of twelve varieties during the first week in the month, and arrange them on a card. Collect specimens again from the same trees two weeks later, and compare them with the former. Read "Three Kingdoms," the handbook of the A. A. Watch for the first flowers.

MAY.—In most of the northern states the tide of wild flowers is rushing gloriously up from the south, covering the earth with beauty. Begin your herbarium, or collection of pressed plants. Observe Agassiz's birthday, May 28. Read Longfellow's poem on Agassiz.

JUNE.—Arrange for one or more field meetings. These may be combined with "picnics." The time before luncheon may be spent in searching for whatever specimens each one prefers. After luncheon the treasure trove may be spread out upon a rock, or on the grass, for comparison and exchange. Read Winchell's "Sparks From a Geologist's Hammer," and Going's "Field, Forest Wayside Flowers."

JULY.—About this time look out for bugs.

JULY.-About this time look out for bugs. beetles, moths and butterflies. Study carefully the effects of any strokes of lightning near your home. Read Ballard's "Among the Moths and Butterflies."

AUGUST.—Seaside life is at its height. Search for starfish, sea-urchins and sea-anemones in pools left by the tide. Gather seaweed and preserve it, as explained in the A. A. Handbook. Begin a collection of shells. Read Agassiz's "Seaside Studies in Natural History."

"Seaside Studies in Natural History."

SEPTEMBER.—Study the fall flowers, especially the common roadside weeds. Many of these now show the formation of seeds, and curious methods of scattering them. Label and arrange the specimens in your museum. Begin the study of mineralogy. Read Crosby's "Common Minerals and Rocks," and Hyatts' "Pebbles."

OCTOBER.—Study the common fruits of the garden and orchard; and the nuts and berries of the wood. Get to work with your microscope. Read "Microscopy for Beginners," by Alfred S. Stokes. Open correspondence with distant Chapters of the A. A.

NOVEMBER.—Get all your friends to sub-

tant Chapters of the A. A.

NOVEMBER.—Get all your friends to subscribe for THE AMERICAN BOY.

Make a special effort to increase the membership of your Chapter. Arrange for an entertainment of some sort, the proceeds to go toward a Chapter library fund. Study the phenomena of clouds, rain, springs and rivers. Read Huxley's "Physiography."

DECEMBER.—Study the formation of ice

DECEMBER.-Study the formation of ice ECEMBER.—Study the formation of ice and snow crystals. Search for cocons under old fence rails, in clumps of bushes, and in the corners of outbuildings. Write to the president of the A. telling of your year's work. Read "The World of Matter," published by D. C. Heath & Co. Give a Chapter reception, inviting all your friends to see the results of your labors, your room, your cabinets and your library. Renew your subscription to THE AMERICAN BOY.

Eighth Annual Report of Chapter 685, Nelson Girls' College, New Zealand.

This club has held six (6) general meet-

This club has held six (6) general meetings since the last report was sent.

The members have sustained a great loss this year by the departure of their president, Miss R. E. Gibson, M. A., to England. She has been with us since the inauguration of the club and has always shown her interest and sympathy in our work. Her place has been taken by Miss A. C. Tendall, M. A., the present Lady Principal of the College.

Outside friends have been most kind in taking interest in our doings; the girls are now competing for prizes offered by the Hishop of Nelson, himself a naturalist, for the best mounted and named collection of Nelson ferns, of which there are over 90 varieties. The collections to be given as a foundation for a "Girls" College Herbarium." Another kind friend has offered a prize for the best "Observation Note Book." Meetings are held fortnightly, the secretary giving a course of lessons on zoology, more especially on Sub-Kingdom Annulosa. Division, Arthropoda Class, Insecta.

MARION D. HOLLOWAY,

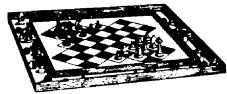

Hon. Sec.

In addition to the formal report, the sec-

In addition to the formal report, the secretary writes, under date of October 11, 1900: may honestly say our work is more

enthusiastic and encouraging. I think the revival in America, that we hear has taken place amongst the Chapters there (through the influence of THE AMERICAN BOY) has sent an electrical current through the whole organization."

TUMBLE-"How To" A book of 150 pages, containing 225 illustrations; tells you how to do handsprings, carrwheels, flips, somersaults, and every other kind of tumbling. It also describes and illustrates a great variety of Tricks, Pyramida and Games. Everything is so clearly explained that you can easily learn without any other teacher Send for terms to agents. GOLDEN GATE STAMP CO.

682 Market Street, Sam Francisco. Cal.

Answers to Correspondents.

B. J., Houston—Cancelled one and two cent stamps such as are used on letters now are of absolutely no value. Why dont you try and find some old Confederate stamps? Many of these are worth look-

A. G. C., Cincinnati—The one, two, five, eight and ten cent stamps of the United States were surcharged "Porto Rico." Afterwards the one and two cents were surcharged "Puerto Rico." The spelling on the higher values was not changed.

F. W. P., Parkersburg—There are no stamps as yet reported from the Republic of Acre in South America, though we presume as soon as they discover there is a demand for them from the outside world, this demand will be bountifully gratified We understand the so-called Republic is opposed both by Brazil and Bolivia, between whose territory it lies, and the probabilities are that it will be short lived.

Norman B., Springfield, Or.—Unfortunately, the stamps on your letter are merely post marks and have no value from a philatelic standpoint, though it is interesting as an illustration of the methods of transportation fifty years ago.

There are several varieties of the five cent, fitty cent and one doilar values of United States Internal Revenue stamps of 1866. This is dependent upon the inscription in the lower label of the stamp. They vary in value from one cent each for the common ones to five dollars each for the common ones to five dollars each for the scarcest.

Pan-American Stamps.

The first year of the new century will witness the most handsome set of postage stamps ever issued by the United States

government.
They will be known as the Pan-American

They will be known as the Pan-American series and are to be issued in commemoration of the Pan-American Exposition to be held at Buffalo next summer.

The stamps are to be of the same size as the Columbian and Omaha series, but will be printed in two colors, the center vignette in black and the border in color, each border and vignette being slightly different in design and form.

At the top of each stamp will be the words "Commemorative Series, 1901," and immediately under this, "United States of America."

each vignette will be Under each vignette will be a description of the picture and the words "Postage — Cents." The pictures on the stamps represent different methods of transportation and are as follows:

One cent—A large lake steamer.
Two cent—Express train at full speed.
Four cent—Automobile.
Five cent—Suspension bridge, Niagara Falls. a descrip-ls "Postage

Falls

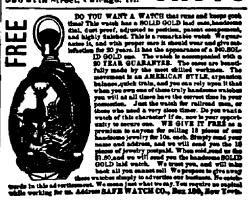

Falls.
Eight cent—Canal locks at Sault Ste. Marie with vessels passing through.
Ten cent—An ocean steamer.
The colors of the borders, it is said, will nearly correspond with those of the current series, being for the one cent green, two cent red, four cent light brown, five cent dark blue, eight cent maroon, and ten cent dark brown.
These stamps will be placed on sale throughout the country at the time of the Exposition, and can be used on international as well as domestic letters. As the set only runs to ten cents there is no reason why every stamp collector in the United.

why every stamp collector in the United States should not have a set and it will undoubtedly add many new collectors and rejuvenate old ones who have laid their collections aside years ago.

SNAP
This new humorous book, just published, contains anecdotes, stories and jokes, written by Hill Nrs, Max Adeler, Mark other humorous writers, it is the most laughable book of the 20th century. Postpaid 10 eta.

This new humorous book, just published, contains anecdotes, stories and jokes, written by Hill Nrs, Max Adeler, Max A

teards in this advertisence: while working for us. Add:

New United States Revenues.

A few months ago the color of the one and three dollar documentary stamps were changed from green and dark brown to red and red brown respectively, but owing to the large number of stamps in the old colors on hand at the revenue offices, the colors on hand at the revenue offices, the new ones have had a comparatively limited circulation. These promise to become scarce as they have already been supplanted by an entirely new series and design for the dollar values, the denominations being \$1, \$2, \$3, \$5, \$10, \$30 and \$50.

The new stamps are printed in aniline gray, which will prevent cleaning, and have printed in the center in large black figures.

pray, which will prevent cleaning, and have printed in the center in large black figures, the numerals of value.

The one dollar value is already in circulation and the remaining values will be sup-

lation and the remaining values will be supplied as fast as ordered.

It is understood that all of the old stamps on hand at the Bureau of Engraving and Printing will be destroyed.

Specimens of the one dollar red and three dollar red brown should be secured at once as they promise to rise rapidly in volve.

as they promise to rise rapidly in value.

Something new in the line of a cancellation stamp is reported from East Clarendon, Vermont. The portion used for cancelling the postage stamp is an outline portrait of Admiral Dewcy, with his name below, and thus the features of the founders of our country are impressed with those of the nation's latest hero.

This reminds us of an amusing story connected with the first issue of postage stamps of Sicily, which occurred during the reign of Ferdinand II. It was decided that his Majesty's portrait should appear on the stamps, but when it came to the

that his Majesty's portrait should appear on the stamps, but when it came to the subject of their cancellation, much difficulty was experienced in fixing upon a mark that would not show disrespect to his majesty. Ferdinand at first would not hear of any obliteration being applied to his royal features by any menial post effice clerk, but when it was shown to him that unless the stamps were indelibly cancelled, many would be used again and the royal treasury thereby cheated out of just so much revenue, a compromise was finally adopted in the shape of a post mark in the nature of an ornamental picture frame with only three sides. This, when carefully applied, did not disfigure his Majesty's features, and also left the value unobliterated.

It is reported that no more surcharged United States stamps will be sent to Porto Rico and Guam. The stamps from the latter promise to be very scarce, as only five thousand copies of the four cent and six

cent denominations were sent out.

If you have not already done so, you had better secure a complete set of Guam stamps right away. They will never be purchased as cheap as they can be to-day.

On the fifteenth of December there was shipped to Porto Rico a quantity of the current United States Documentary Revenues stamps surcharged in the following form:

Porto Rico Excise Revenue.

It is understood that these will very shortly be superseded by a regular issue.

We should be pleased to hear of any good finds of stamps made after following out the suggestions given in the November and December issues. We are confident good results will be obtained with a little patient reports. patient search.

SUMWALT & JONES COMPANY. NEW YORK.

The Numismatic Sphinx.

Temple, Flemington, N. J.-Your 1813 half dollar is worth eighty five cents.

A. W. G., Utica, N. Y.-The Columbian half dollar and the Hawaiian half dollar the dealers charge seventy five cents each

Charles D. Catherman, Bluff City, Kas.— Your 1806 cent is worth half a dollar; 1827 and 1854 half dollars, in fine condition, seventy five cents each.

Emmett Ford, Louisville, Ky.—A two real silver piece of Charles III. of Spain, date 1774, if fine, is worth thirty five cents; otherwise, bullion value.

Earle Buckingham, Bridgeport, Conn.— An 1856 cent is only worth ten cents. There are two varieties, straight and italic five; yours is the latter variety.

Geo. H. Proctor, Jr., Napa, Cal.—Your gold coin with the inscription. Libra cresca fecundo, and with sun rising over the mountains, is from Guatemala.

Elmer Foust, New Albany, Ind.—There are two varieties of the balf cent of 1820; twelve and thirteen stars, worth twenty five and fifteen cents each, respectively.

Helen D. Amerman, Onarga, Ills.—Luther B. Tuthill, South Creek, N. C., and R. L. Dietrick, Lorraine, Va., both deal extensively in paper money. You might address them

Fred Dargatz, Schreyer, Kas.—The 1853 halves and quarters with rays and arrow points, are only worth face value. Those without the rays and points only command a premium.

Harry M. Penny, Covington, Ky.—An 1838 dime of the O (New Orleans) mint is worth lifty cents; the one with thirteen stars, twenty five cents. The other coins you mention, face value only.

Forest P. Blodget, Bowdoinham, Me.—Your Mexican dollar of 1831, unless it is very fine, brings no premium. The ordinary Mexican and Spanish silver so common in this country, unless it is in fine condition, is only worth builion value.

Harold Brooks, Marshall, Mich.—Your rubbing is taken from an Austrian coronation medal and has reference to the coronation of Francis of Austria, who was associated with Maria Theresa (1743-1765). Date

of medal, 1432.

S. F. Hockensmith, Pittsburg, Pa.—Your coin is a two real of Charles III. (1769-89) of Spain. The mint mark Mo., on the reverse, shows that it was coined in Mexico for use in that country, then belonging to Spain. The arms on the reverse are those of Spain, Lions and Castles, for Leon and Castle, the two calculations of Spain. the two original provinces of Spain.

Frank S. Glover, Chicago, Ilis.—(1) A common Canadian (habitant) two (dieux) sous or penny of 1837. (2) Poland, of Augustus III. (1738-1763). (3) Dutch East India, dolt 1753, with the arms of Utrecht.

C. C. B. B., New York City—A ten cent 1874 Meredith green seal ten cent currency, if fine, twenty five cents. Red seal, same price. With new treasury seal, twenty cents. The coin rubbing is from a Mexican centavo, one centavo, current issue; no premium.

James P. Craft, Hartwell, Ga.-The 1827 half dollar is a common coin and sells for seventy five cents, while the 1827 quarter of which you send a drawing is extremely rare. The 1825 half dime, if in good condition, is worth fifteen cents; 1820 cent, worth ten cents.

Mrs. J. C. McD., Wayeross, Ga.—Your rubbing is from a Spanish half quadruple of Charles III. (1759-1788), 1787. The intrinsic value of this gold piece is about eight dollars. Only a comparatively few collectors care for foreign gold, so these pieces hardly bring any premium.

Omer Marner, Marlon, Kas.—None of the two cent bronze pieces issued between 1864 and 1873 command a premium except the last date, which was issued in proof only, and is worth \$1.50. Your one ore coin, with head of King Oscar, is from Sweden. The other coins you mention have no premium other coins you mention have no premium.

Lewis Pettit, Addison, Mich.—See answer to J. K. Temple. Your rubbings are all of common coins that hardly command a premium. Your silver coin, "50 cent," is a fifty centime piece and thus worth only ten cents, face value. France, Italy, Belgium, Holland and Switzerland use these centime coins.

Chase Flint, Pittsburg, Kas.—A New Jersey £6 note of 1776 is worth, in good condition, tifty cents. There were several varieties of the twenty five cent fractional currency of 1863. As a general thing, unless these notes are new, or in fine condition, they command no premium; 1863 nickel cent, only face value. only face value.

F. W. Behle, Richmond, Va.-A half dolfecundo, and with sun rising over the mountains, is from Guatemala.

E. Earl Amick, Bunceton, Mo.—You do not mention the date of your half dime. They vary in value from the 1802, if fine, worth \$100, to face value only.

H. B. Wimberly, Jeffersonville, Ga.—The 1798 cent, in either the small or large date, is worth twenty five cents. This is the commonest of the early date cents.

Elmer Foust, New Albany, Ind.—There are two varieties of the half cent of 1828:

Erank Bullivant Popular Bluff Mo.—Your

the nature of a charm or medalet. Three cent pieces of 1851 worth fifteen cents.

Frank Bullivaut, Poplar Bluff, Mo.—Your rubbings are taken from coins as follows:
(1) First bronze of Philip, emperor of Rome, A. D. 244-249. This coin has Greek inscription showing that it was struck in one of the Greek provinces, and we should say Antioch, in Syria, but the reverse is so poor cannot make out positively. (2) Sweden, 1799, one half skilling, Gustavus Adolphus IV., 1792-1899, This coin, as its inscription would indicate, is a model half sovereign of England and was struck in copper; it may properly be called a pattern piece, as the design was never adopted. It is best not to attempt too much cleaning of coins. Strong acids or alkalis always injure the coins; what cannot be removed by application of sweet oil, soapsuds, cleaning with whiting, and polishing with soft chamois skin, better be let alone. Many fine and valuable coins are ruined in an effort to make them of better appearance.

FOREIGN STAMPS 160 var. 10c, 800 var. 25c, 500 var. 40c, all nice. I also send wheets of U.S. and foreign on approval at 60 to 75c discount. Let me hear from all. L.E. Moore, Moorefield, Ark.

DEITRICK, Lorraine, Va.

EXCELSIOR CABINET OF TRICKS.

This Cabinet contains many startling surprises, and when the tricks are properly exhibited in the parlor or drawing-room, or before a public audience, they are sure to please and prove highly entertaining. Each Cabinet contains nine pieces as follows, viz.:

1 CUP AND COIN TRICK.—A metal case or little cup is shown with a U. S. coin fitting closely in the top under the rim. How it got there and how to remove it is a puzzler. The operator can remove it instantly. A clever illusion and a nest pocket trick.

1 CHANGING VARE.—A silver coin placed in the vase is slmost instantly changed into a nickel or copper coin, act is changed into perper, augar into four, etc. Very surprising.

1 PACE MAGNIG VARE.—A silver coin placed in the coin, act is changed into perper, augar into four, etc. Very surprisings.

1 PACE MAGNIGIAN'S CARDS.—With these cards from formations that are really wooderful can be made, and any one can perform the tricks without the slightest difficulty.

1 COMPLETE FIRE-EATING OUTFIT.—With this outfit in his possession any person can become a perfect salomander, apparently breathing for and ejecting thousands of brilliant sparks from his mouth, to the horror and consternation of all beholders. Very sensational.

1 MAGICIANS NAIL—An ordinary nail is shown, and immediately driven through the performer's flugger.

1 IMP'S ENCHANTED BOTTLE.—A surprising little frick. A desuriful casseded bottle which will intensity return to an exect position when laid down by any member of the company, but the performer may cause it to lie

series. A securiful enameted bottle which will instantly return to an excet position when laid down by any mon-her of the company, but the performer may cause it to lie in any portion desired. At his command it falls down as flat and as dead as a nell, but let an outsider touch it

in any position desired. At his command it falls down as flat and desired. At his command it falls down as flat and as dead as a said, but let an outsider touch it levens a Madio Trap.—This trap is a carching novelty, having caught thousands of timid and bashful lovers. It cause of this is its simplicity and never-falling grip. A couple can be joined together, and their struggles to be released only make matters worse. Worth its weight in gold.

1 TRUE CALL WHISTLE.—A besuifful nickel-plated call whistle, toud and clear if you know how to blow it, but dumb as an oyster if you are not in the secret.

1 PUNCH AND JUDY WHISTLE.—With this whistle you can readily learn to imitate the different characters in the Punch and July show, by speaking in entirely different tones. Boys and young men can have any amount of fun with these whistles.

1 COUY OF BEXOND SIGHT EXPLAINED.—A book fully explaining the second sight mystery, which has astonished and mystified thousands. A handsomely bound 24-page book.

1 COUY OF PARLOE MAGIO MADE EARY.—This work fully explains how to perform 25 of the latest and best tricks, suitable for the parlor or drawing-room; also instructions for performing 10 wonderful illusions, without apparatus, and a treatise on legerdemain.

We send but and aradical directions for performing 10 the tricks.

A Bird's-nest Lantern.

Many tropical birds are known to display a decorative tendency. Most of them build nests on the ground and place around them bits of bone, bright colored shells and pieces of glass; the wings of butterflies and so forth; but the Baya bird of southeastern Asia, which builds its nest in a tree, has a method very different, and as beautiful as it is unique. The nest resembles a long sack much enlarged in the

A BAYA BIRD OF ASIA.

middle and contains three rooms. When completed the male bird goes off at evening and gets a lump of moist clay. which he attaches to the inner wall of the nest. Then he captures several fireflies and secures them to the clay. This he repeats until he has made several of these insect lamps, some of which are placed on the outside of the nest. where they send forth their strange phosphorescent glow throughout the night.

Crating and Shipping Hares.

C. R. Root, in the Colorado Pet Stock Hare:

With suitable crate a hare can be transported around the globe.

I find the most satisfactory crate is with light bottom and sides for nine inches up; balance of sides and top lathe or slatted material, except in center of top, use a six inch board on which place address, etc. This board strengthens the cover. Space between slats on side three fourths of an inch; on top one inch. never more. Use as light material as possible—say five eighths of an inch for ends and three eighths of an inch for

Two one quart tin cups fastened in each box is advisable, one for oats and one for water. Use factory made cups; never old tomato cans, as their rough edges may cut and scar the animals.

Guard against draughts, yet have good ventilation from above. The object of side opening is for air when crates may be packed one above the other, as often is in express cars.

To insure against boxes not being set right on top of the crate, nail two or three three quarter inch square strips across in a similar way that apple and peach crates are made.

Crates eighteen by eighteen by fifteen inches are suitable for one specimen, and thirty by eighteen by fifteen inches for two or three. Never place more than three adult or five young in a compartment. Choice, matured specimens had better be in separate compartments.

If you have two or more crates for one

address, be sure and advise the express agent of such, otherwise they may be billed separately, and thus cost your customers more than if billed together. Learn the express rate and remind the agent that hares now cost but one single

Horse Talk.

Never go near your horse without speaking to him.

A horse can travel better and with less wear and tear with his head free.

A well-broken horse is much more graceful and easy in his motions without a check-rein.

Use a check-rein with the bitting rig, and when training, but when the colt has completed his education and can be used for regular driving, take it off.

Breed horses with style and spirit enough to hold their heads up naturally.

Encourage your horses to lie down by making their stalls comfortable. The more they rest the better.

When driving on hot days give a few swallows of water whenever it is pos sible.

If heated do not let him fill up, but give a little at every trough.

Take a barrel of water to the field and give the work horses a few mouthfuls every hour or so. It will help them as much as it will yourself.

Low mangers are best.

Keep them scrupulously clean. Any accumulation in the corners will soon sour in the hot weather.

Do not allow the dried perspiration to remain in the hair over night. It will

◆ause the coat to fade.
A good brushing will rest the horse and is almost as essential as the feed.

Take the horse out on the floor or out in the air and it can be cleaned quickly and thoroughly.—Farm Journal.

How a Big Elephant Collected Coins.

When "Jumbo," P. T. Barnum's big elephant, was struck by an engine and killed at London, Ont., in 1885, Mr. Barnum telegraphed a Rochester (N. Y.) taxidermist, employing him to superintend the saving of the skin and bones of the big elephant. It took five Journal, writes as follows regarding the hours to remove the skin, and then for crating and shipping of the Belgian fifteen hours more the men worked cutting the flesh from the bones. In Jumbo's stomach the workmen found an assortment of odds and ends that would have gladdened the heart of a junk dealer. There were a lot of stones as large as hen's eggs, and a collection of coins that represented nearly every civilized country: French, German, Australian, English, American and others. There were half dollars, quarters, dimes and nickels. Besides, there was a large number of lead car seals. There was even an English policeman's whistle in the capacious paunch.

THE ORDER OF THE AMERICAN BOY

A NATIONAL NON-SECRET SOCIETY FOR AMERICAN BOYS.

Under the Auspices of "THE AMERICAN BOY"

Object:—The cultivation of manliness in mind, manners, and morals.

The object more definitely stated: To promote mutual and helpful friendships among boys; to give wider circulation to high class boy literature; to cultivate in boys physical, mental and moral courage, and develop them along social, intellectual and moral lines; to cultivate purity of language and actions; to discourage idleness, and encourage honest sport and honest work; to cherish and emulate the examples of great and good men; to inculcate lessons of patriotism and love of country; to prepare boys for good citizenship; to cultivate reverence for the founders of our country, and to stimulate boys to all worthy endeavor.

THE PLAN

Name and Divisions.

The society is known as the ORDER OF THE AMER-

The society is known as the ORDER OF THE AMERICAN BOY, and is divided into groups known as DIVISIONS, and COMPANIES. Beginning with the smaller group, a COMPANY is a group of persons associated together to the number of five or more, with a CAPTAIN at its head. All the COMPANIES in a State comprise a DIVISION, whose officers are termed COMMANDER and LIEUTEN, ANT COMMANDERS. The DIVISIONS take their names from the State to which they belong; as, for instance, a DIVISION made up of all the COMPANIES in Obio will be known as the OHIO DIVISION. All the DIVISIONS together comprise the ORDER. There will, therefore, be as many COMPANIES as there are groups of boys who organize for COMPANIES that may thus be formed. There will be as many DIVISIONS as there are States and Territories in the United States.

will be as many DIVISIONS as there are States and Territories in the United States.

Each COMPANY (the smallest part or division of the Order), will receive a name and a number, the name to be selected by the members of the COMPANY and the number to be given by the REGISTRARGENERAL. In selecting a name, the COMPANY will endeavor to honor some great man who has lived in the tewn or county in which the COMPANY is located; as, for instance, boys in Lexington, Ky, who form a COMPANY, may call it the JOHN C. BRECK-ENRIDGE COMPANY; and if this is the first COMPANY organized in the State of Kentucky, it will be known as THE JOHN C. BRECK-ENRIDGE COMPANY NO. 1 OF KENTUCKY. If boys in Larue County, Ky., form a COMPANY, and that is the second COMPANY organized in Kentucky, they may call it the ABRAHAM LINCOLN COMPANY NO. 2 OF KENTUCKY, Mr. Lincoln having been born in that county.

that county.

For the present, at least, the EXECUTIVE COUNCIL, has determined that the COMPANIES in one State shall not duplicate names, so that if a COMPANY selects a name that has already been selected by another COMPANY in the same State, the COMPANY will be advised of that fact and it must select another name.

same State, the COMPANY will be advised of that fact and it must select another name.

A COMPANY need not select the name of some one who has lived in its State. COMPANIES in different States may choose the same, name; as, for instance, there might be an ABRAHAM LINCOLN COMPANY NO. 2 in Ohio, and an ABRAHAM LINCOLN COMPANY NO. 2 in Kentucky. The EXECUTIVE COUNCII, will require that all the members of a COMPANY shall become thoroughly familiar with the life and character of the man whose name they select for their COMPANY name.

Members.

Any paid-up yearly subscriber to THE AMERICAN BOY, whether the applicant be a man, a woman, a boy or a girl, may become a member of a company, provided the company by vote agree to accept the applicant. Two votes against the applicant's admission will bar him out, but he can then apply to some other company for membership, or organize a company of his own. The fact that he is barred out by one company will not count against his admission to another.

Members of companies should all live in the same town.

Members of companies should all live in the same town and neighborhood, if possible, for only under such circumstances can successful meetings be held, but there is no objection to a company's accepting a member who lives at a objection to a company's accepting a member who lives at a distant point. When a person once becomes a member he remains a member, so long as he fulfills the requirements of the local company and remains a paid-up subscriber to THE AMERICAN BOY. The local company may make such rules as it sees fit regarding membership, and compel the members to live up to these rules or withdraw, provided that it may make no rule by which one not a subscriber to THE it may make no rule by which one not a subscriber to THE AMERICAN BOY can be a member. Each member is entitled to a membership badge, which is furnished free by the publishers of THE AMERICAN BOY.

Officers.

The only officer that a company is required to have is a captain, but a company may choose a secretary, a treasurer, a librarian, or any other officers, giving them any names that it may choose. The head of the company must, however, be designated as "Captain." A company may not elect officers more often than twice a year, and the Registrar-General at Detroit must be advised of any changes. All national officers, and division officers will be appointed by the Executive Council, and until said Council meets the appointments will be made by the President-General. The national officers to be appointed will be General-in-Chief, Lieutenant Generals, and Major Generals; division officers are Commanders and Lieutenant Commanders.

The executive officers are a President-General, Secretary-General, and Registrar-General, with offices in Detroit, Mich., and an Executive Council of 20 men and women.

Executive Officers and Council.

The government of THE ORDER OF THE AMERICAN BOY is vested in a board, to be known as the Executive Council, consisting of twenty men and women, the Editor of THE AMERICAN BOY being Chairman of the Council, with the title, President-General. The Executive Council meets once a year at the call of the President-General. Its first meeting will take place at the Hotel Victory, Put-in-Bay, Ohio, July 25, 1901. The Executive Council as at present constituted was appointed by the President-General, and its members will elect their own successors on the date mentioned. Until July 25, 1901, the President-General will have general direction of the affairs of the Order, in association with a Secretary-General and a Registrar-General, who ciation with a Secretary-General and a Registrar-General, who are associated with him in the publication of THE AMER-ICAN BOY, with such assistance as can be obtained from the members of the Council by correspondence. The Execu-tive Council elects the executive officers and its own suc-cessors.

How the Selection of Officers is Made.

In appointing National officers, the Executive Council will select for positions boys who have distinguished themselves in any department of life, either as scholars, as workers, as inventors, as athletes, as orators, as travelers, as naturalists, as scientists, as heroes, etc. In other words, the National officers will all be boys who have won distinction in some praiseworthy direction.
In appointing Division officers, the Executive Council

of the Order may grow. THE AMERICAN BOY must grow, and the incentive is held out to every member, the incentive is held out to every member. whether he be a captain of a company or a private, that he may attain to Division honors if he shows special activity in increasing the number of members of the Order, and hence the number of subscribers to THE AMERICAN BOY.

Promotions,

A private may be promoted to the captaincy by the vote of his company, or may be appointed by the Executive Council to a Division office by zeal in working up the membership in the Order, or to a National office by distinguishing himself in some praiseworthy way.

Degrees Conferred.

Like the Masons, Oddfellows and other fraternal orders, the Order of the American Boy confers degrees, but not, as with the Masons, Oddfellows and others, on the payment of a fee and the learning of certain formulæ and an election, but as an honorable distinction by the action of the Executive

Council and without any charge to the member receiving it or the imposition of any set task.

A boy may receive any number of degrees, according as his conduct merits them. Degrees are given for the following:

One degree for a conspicuous act of heroism.

One degree for good scholarship.

One degree for excellence in public speaking. One degree for excellence in literary work.

One degree for skill in invention and use of tools and machinery.

One degree for habits of thrift, One degree for continued self-sacrifice for the good of

One degree for manly deportment in every-day life. One degree for patient endurance of suffering.

One degree for energy and determination amid difficulties.

One degree for skill in athletics.

One degree for purity of conversation and habits. One degree for unusual musical skill.

One degree for industry and devotion to duty.
One degree for good work in behalf of "THE AMERICAN BOY" and the Order.

One degree for skill with pen or pencil.

One degree for skill and experience in travel.

One degree for skill in care and culture of animals or One degree for excellence in any department of amateur

business or endeavor.

One degree for unusual originality and enterprise.

Thus a boy may be entitled to twenty degrees.

Captains of Companies will report to the PresidentGeneral such members as he deems worthy of degrees, and
if the facts warrant the degrees will be conferred.

Whenever a member's name appears in print in these
pages, the number of degrees conferred upon him will be

indicated thus:

Harry S. Brown (5).
Frank T. Mason (8).
The figure shows the number of degrees conferred.

Any member, whether an officer or a private, may receive a degree, but no member can be a national officer who has not at least 5 degrees nor a Division Officer who has not at least 3 degrees. A Captain is not required to have a degree in order to hold office.

Salaries, Dues, Etc.

Officers in all cases serve without salaries. No dues are chargeable by the Order, though local companies may fix upon reasonable dues, or fees, or fines for their own benefit, though their action in this respect may be nullified or changed by the Executive Council. There is no requirement for a member to pay anything to the Order or its national officers other than the requirement that he be a subscriber to THE AMERICAN BOY.

What Companies May Do.

The Executive Council will exercise supervision over what the local companies do, and will withdraw the charter from any company which is going contrary to the purposes of the Order, or is engaged in any bad practices or enrolling in its membership any persons whose influence is harmful. The Executive Council will not, however, dictate more than in a general way what the companies shall do. It will provide a regular monthly programme for companies, which they will be requested to follow, but variations will be permitted. The Council will not interfere with any meritorious line of work that a local company may decide upon; as, for instance, it may become a constituent part of the Agassiz Association of Young Naturalists which THE AMERICAN BOY repre sents, and it is hoped that many companies will so do. It may resolve itself into a correspondence club, corresponding with members of other companies in other parts of the country in reference to exchanges of specimens or making country in reference to exchanges of specimens or making collections of stamps, curios, etc.; it may take on a seminilitary character, and with the assistance of some older person learn military tactics, and drill; it may devote a part of its effort to building up its members in debating, holding exhibitions and public debates, etc.; it may exercise its effort in the line of religious work, if the boys so elect. Where, however, the company sees fit to follow the directions only of the Executive Council, it will find good work laid out for it and plenty of it, and all of it in a line to stimulate and help the members.

Constitution and By-Laws.

A set of rules, to be called the Company's Constitution and By-laws, will be furnished free to any company desiring it. These rules are simple enough to work with any company of boys. There is no objection, however, to a company adopting other rules, provided they are not contrary to the purpose and spirit of the organization.

Meetings, Reports, Etc.

Local companies must meet at least once a month, and report by letter to the Secretary-General at Detroit at least once every six months. Company meetings will be presided over by the company's captain, the place and time of meetings to be determined by the company itself.

Libraries.

It is hoped that every company will endeavor to gather together for its own use a circulating library of good books for boys. The Executive Council will lay plans by which the local companies may easily obtain such libraries.

How to Form a Company.

A company may consist of any number of persons, young or old, more than five, and each member of the company must be a yearly subscriber to The American Boy. If you can find five boys in your neighborhood who are already subscribers to The American Boy, you can at once form a company. If you cannot find that many who are already subscribers, go out and find boys who are not subscribers and induce enough of them to subscribe to make up your five. Call a meeting at some convenient place, and select a captain from among your number and a name for the company This is all you will need to do at the first meeting. The Captain must then send to Wm. C. Sprague, at Detroit, Mich., the names of the members

of the company, with their street addresses, and advise him as to the name selected for the company. He will then give the company a number, to be used in connection with the name, and will send to the Captain a charter for his company enabling it to act as a part of the Order of The American Boy. He will at the same time send to the Captain of the company the articles, documents, etc., mentioned in the next paragraph. The company will then be ready for work, as laid down in the monthly programmes to be furnished by the Executive Council. One boy can very easily interest four of his friends and establish a company.

What "The American Boy" Will Do.

The Order of The American Boy is founded by the publishers of The American Boy for a purpose partly selfish and partly unselfish. The publishers expect to gain an advantage from it, but they expect to give an advantage equally great to the boys of America The Editor of The American Boy is the official head of the Order, and the publication will serve the Order in every possible way to further its ends and make it a power among boys. The American Boy will give free to every company, as soon as it has received the name and address of its Captain and members and a statement as to the name selected, the following:

A badge for each member of the company, and a special badge of distinction for its captain; a charter signed by the National officers empowering it to work as a company; a facsimile copy of the Declaration of Independence, with signatures; a small handbook on Parliamentary Law; a copy of a suggested Constitution and By-laws, to be adopted or not, as desired by the company, and during the year a programme for each month (furnished two months in advance); prizes for best work done by companies in various lines of activity; suggestions as to athletics, books and reading, exhibitions, debates, military drill, charity work, etc.

ORGANIZE.

Every boy should now get to work and get at least four more boys to form a company and get ready for the work to be mapped out in the February number of this paper. We want 1,000 companies organized during the year 1901.

We expect to make THE ORDER OF THE AMERICAN BOY the most powerful and popular organization of boys that the world has ever seen. With just a little effort you can become a part of it.

Don't delay. Get in your Captain's name, and your members' names, and the name you select for your Company at once and be No. 1 for your State. Get as big a Company as you can.

The regular premiums are allowed on subscriptions you take for new members. These premiums may go to the boy or boys who get the new members' subscriptions or may go to the Company—as you may want to take books for your Company library.

We will print in each issue of *The American Boy* the news concerning the organizing and work of the Companies.

This is the sort of a society your parents and friends will approve of and they will assist you in getting members, selecting a meeting place, etc.

Prize Offer—Every Company should have a good library of boys' books. We shall send free of charge to the largest company organized and enrolled by February first next, ten splendid new cloth bound books for boys, costing at retail price fifteen dollars. cheap, "blood and thunder" books, but first-class, up-to-date boys' books by reputable authors. Books new and handsomely bound and illustrated.

Look out for interesting news regarding the Order in our February number.

Let us report the organizing of your Company in our next number. Address all letters to

100,000 COPIES.

A WORD TO ADVERTISERS.

The Publishers of THE AMERICAN BOY promised advertisers an issue of 90,000 last month and gave them 100,000. What is more, every copy, beyond actual needs in our office, is out and in the hands of readers.

It is something to have reached the one hundred thousand mark in the last

month of the old century, particularly as the issue that has thus distinguished itself was only the fourteenth issue of the paper.

This allows us to start on a new hundred thousand with the beginning of a new century and is quite appropriate, as you will see.

But the main point is, we are treating advertisers fairly; we are not juggling with figures, we are not indulging in any guesswork, when we talk about circulation.

Furthermore, THE AMERICAN BOY is read, and you need not accept our word for it. You are a discriminating reader yourself and have seen the paper and need no verbal assurance from us to this effect. We want to call your atten-. tion to our plan of organizing boys in a great national body for good purposes. This is going to strengthen the paper with boys, increase its influence, entrench it in the good graces of men and, women of the better sort, awaken widespread interest, and immeasurably build up the paper's character and circulation.

We offer to advertisers no cheap, catchpenny, low priced constituency. offer them one hundred thousand introductions into the best homes in America where we are welcomed by old and young.

Prize Winners.

Winners of prizes offered to puzzle solvers, in our December number, and of the flour mill puzzle, will be announced. privately by mail, and publicly in our February number.

THE RECORD OF WASHINGTON'S BIRTH.

► HE old family Bible of the Washingtons contains the following: "George Washington, son to Augustine, and Mary, his wife, was born ye 11th day of February, 173 1,

The handwriting is supposed to be that of Washington's mother. The date is according to the old style calendar then in use, and is equivalent to the 22d of February, 1732, new style.

Mildred Gregory, god-mother".

WASHINGTON'S ANCESTORS.

The ancestors of George Washington came to America from the north of England during the protectorate of Oliver Cromwell, about the year 1657. His great-grandfather, John Washington, is said to have inherited the blood of English nobility, on both the paternal and the maternal side. He settled on the banks of the Potomac, in Westmoreland County, Virginia. After John, in line of descent, came Lawrence, then Augustine, the father of George. The mother of the first President was Mary Ball, a daughter of Colonel Ball, of Virginia.

WASHINGTON'S BOYHOOD.

The Washington family, when George was a child, moved to the banks of the Rappahannock, opposite Fredericksburg, Virginia, and there George's father died when the boy was but ten years old. We know very little of Washington's boyhood. As he was young when his father died, the boy lacked paternal instruction, but the loss was largely made up by his

faithful mother. It was she who directed his that if she died without issue, it should go to conquering truth, and he bravely cried out, mental, moral and religious development; and she did it so well that the whole tone of his life as a boy and a man was exalted. There were no such schools then as we have now, and Washington's school education was limited to reading, writing, arithmetic, geography, history and surveying. In the last named he became proficient. He was a leader among boys both and a stranger to dissipation. One of his early though blossomed with silver, and their fruits in work and play. He was the only boy in his biographers says the boy's father taught him of purest gold."

neighborhood who could throw a stone across to be kind and amiable to his playmates, liberal the Rappahannock. As a boy he early showed a military taste. At eighteen he was county surveyor. For three years he was surveyor for Lord Fairfax. When nineteen years old he accompanied his half brother, who was in ill health, about 10 in the morning, and was baptized the to the Barbadoes. The brother died within a

ad of April following. Mr. Beverly Whiting and year leaving his estate of Mount Vernon to his Capt. Christopher Brooks, god-fathers, and Mrs. infant daughter, with a provision in his will,

GEORGE WASHINGTON

George. She did so die when George was nineteen years old, and to him fell the ownership of the spot whose fame has since become immortal. He was at this time adjutant-general in the Virginia militia with the rank of major. He was grave, silent, thoughtful, diligent, methodical, dignified, strictly honorable in his dealings, in sharing with them his good things, instilling into his mind a noble and generous disposition.

We can but wish that we knew more of the boy Washington, for then we might discover some of the germs of his future greatness. But with such a father and mother perhaps we need go no further for the source of his greatness.

THE FAMOUS STORY OF THE CHERRY TREE.

"When George was about six years old, he was made the wealthy master of a hatchet, of which, like most boys, he was immoderately fond, and was constantly going about chopping everything that came in his way. One day in the garden, where he often amused himself hacking his mother's pea bushes, he unluckily tried the edge of his hatchet on the body of a beautiful young English cherry-tree, which he barked so terribly, that the tree never got the better of it. The next morning, the old gentleman finding out what had befallen his tree, which, by the by, was a great favorite, came into the house, and with much warmth, asked for the mischievous author, declaring at the same time that he would not have taken five guineas for the tree. Nobody could tell him anything about it. Presently George and his hatchet made their appearance. 'George,' said his father, 'do you know who killed that beautiful little cherry-tree yonder in the gardent' This was a tough question; and George staggered under it for a moment, but quickly recovered himself, and looking at his father, the sweet face of youth brightened with the mexpressible charm of all-

'I can't tell a lie, Father; you know I can't tell a lie. I cut it with my hatchet! 'Run to my arms, you dearest boy,' cried his father in transports—'run to my arms! Glad am I, George, that you killed my tree, for you have paid me for it a thousand times. Such an act of heroism in my son, is worth more than a thousand trees,

A BOY IN THE UNITED STATES CONGRESS

YOUNG WASHINGTON IN A WRESTLING MATCH AT MOUNT VERNON.

Although the story I am here to relate has no connection with my duties as a "page," I have deemed it the narrow gang plank; yet, even with all the exciteworthy of telling at this time when all American boys are thinking of George Washington.

The life of "pages" in Congress twenty five years ago was not one of work alone; we had our good times, close confinement made nec during the sessions, gave to our holidays an added zest. It was on one of these holidays that three of us boys paid a visit to Mount Vernon, the ancestral estate of the Washingtons some twenty miles down the Potomac from Washington city. The little steamer 'Arrow" made the trip every day, and on this particular day she was loaded to the water's edge with a merry crowd whose center was a little band of Italian musicians. The broad, historic river was delightfully smooth, and glistened in the morning sunlight. We ate popcorn and bananas and shouted at passing boats just as boys do now on an all-day excursion, until near midday, when the little steamer rounded gracefully a bend in the stream and, "There's Mount Vernon!" came from an hundred lips. Then there was scurrying

to get our lunch baskets and fall in line to pass over ment consequent on the disembarking of a motley crowd all eager to get ashore, I was just a little awed at the thought that we had actually touched land on the estate of George Washington.

One of the first books I had ever volume edition of Irving's Life of Washington-a massive work staggering many a grown person; for me, however, it had possessed the fascination of a novel, and the result of this early and extended reading had made me a hero worshipper at the shrine of The Father of His Country. Little wonder was it, then, that my heart gave an extra thump or two as I stepped ashore with my comrades, realizing that here Washington spent years of his young manhood; that to this spot he returned from his many and varied successes in public life, and that here he had died and now lay buried.

From the boat landing a path leads directly up the steep hillside, shaded by forest trees, to the fine old house that stands in the open on the very brow of the Note.—Other contributions by a Boy "Pace" in Congress are found in hill. In our eagerness we boys ran ahead of the procession of sight-seers, and before we realized it came,

upon a group of people standing before double grated doors, behind which, in rude simplicity, stood two misssive sarcophagi containing, as shown by their simple inscriptions, the remains of George and Martha Washington. We boys don't have to be told to take off our hats as we stand there and peer in through the iron bars trying in imagination to pierce the darkness and the solid stone coffins and see the revered forms whose pictures stand so vividly before our mind's eye. We do not need to be told to talk in whispers: it is an aweinspiring place even for a careless boy.

A large company soon gathered and we all stood solemn and speechless before the grim vault, while the leaves rustled and the birds chirped in the trees above us. I stealthily picked up a few pebbles from the gravel walk where I stood, and when out of sight of the rest of the company I stowed them carefully in my pocket to add to my collection of relics and mementoes.

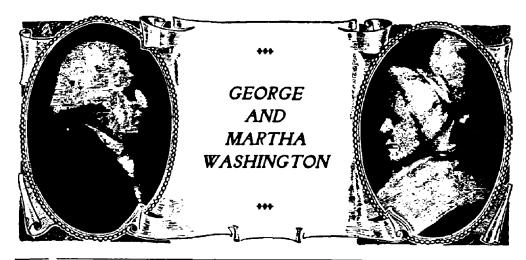

Now for the old house on the summit! A dear old Virginia mansion, with its broad stone piazza and its pillars of white and, back of it, the negro quarters and the capacious barn. Standing on the stone floor of this piazza I looked up and down the broad sweep of the Potomac, and recalled that Washington was wont to sit here and converse with his visitors, and tread up and down its stone floor musing and thinking out mighty affairs of state, and that here his body lay in state on that eighteenth of December, 1799, to be carried about the middle of the afternoon, at the signal from a cannon on board a vessel at anchor in the river. to its resting place on the hillside below. I remembered reading that in that little procession of cavalry infantry, clergy, masons, friends, neighbors, servants and immediate family, there was Washington's war horse, led by two grooms in black. It was riderless that day, but carried saddle, holsters and pistols. Just behind it came the body of its master on a bier.

I walked with my boy friends up and down this piazza of now crumbling sandstone, and we tried to picture to ourselves the boy George Custis and his sister Nellie, son and daughter of Washington's step-son who had died, and after his death, adopted by George and Martha Washington. What fine times they must have had romping on this big lawn! And think of the dogs, and horses, and guns, and game in the woods. and ever so many faithful servants to do anything on earth for young massa and young missus!

Then we turned and entered the hospitable front door to find ourselves almost immediately in the "Martha Washington Reception Room"-very insignificant as compared with the drawing-rooms of our own day but yet imposing in its way, especially when seen through the eyes of memory. Here is old time simplicity. Time-stained and time-honored paintings, some of heroic size, adorn the walls, and the great open some of heroic size, adorn the walls, and the great open size. fireplace yawns as of old. Here Lady Washington received her guests. It is the "East Room" in the old "white house," made sacred by many a brilliant scene glowing with color and life from out the colonial days. We can picture the gallant Marquis de Lafayette leading Lady Washington in the stately dance, and officers, and civilians, many of whose names are graven in imperishable history, with the lovely dames and damsels of old Virginia making merry at the simple court of the citizen President. Oh, could we but recall the twenty second day of February, 1799, the last birth-day celebration of the master of Mount Vernon! That was a celebration to remember, for on that day in this room Washington gave Nellie Custis as a bride to his nephew, Lawrence Lewis. Fifteen years before, Wasaington's birth had been celebrated at Alexandria, Virginia, by a ball. In Richmond it was celebrated as early as 1786, and in Philadelphia in 1790. After this celebration at Mount Vernon, when Nellie Custis graced the day as a bridal flower, it became a day of nation d rejoicing. Then we wandered through other rooms

MOUNT VERNON

filled with the relics of colonial days. We gazed with wide-open eyes on the clothes the great general wore. his sword and camp equipments, the chair in which he was wont to sit, the family furniture and dishes. Then we went upstairs, to find ourselves in a little room with low ceilings and a single window, containing only a bedstead minus furnishings. Here was a "guard." whose duty it was to tell that in this room Washington died, and that looking out of this window he designated the spot where they were to lay him to rest.

How visitors gaze upon that bedstead in which Washington died, with its old cord! Old, did I say? Well, not so very old; for, says the guard, a new cord must be purchased every month or so to supply relic hunters, who stubbornly imagine, despite evidence to the contrary, that the few inches of rope which they have adroitly cut when the guard is not watching is the original rope placed there by hands long since folded to rest. When the guard tells us this we scarcely smile, for the place and the air is oppressive. We lower our voices to whispers. Here, too, memory is busy, and we recall those last words to the doctor: "It is well, doctor: I am not afraid to die," as the great man calmly folded his arms across his breast.

breathed his last. At the foot of this bed sat Martha Washington, her face buried in the curtains, and silently praying, and when the suwe hear her saying: "Tis well; all is now over; I shall soon follow him; I have no more trials to pass through." At midnight that night room and a pale taper set at its head; then with the speed of the fleetest messengers the dread news spread over

the land and over the world, that Washington was dead. I stood for a moment beneath the tree by the side of the house where Washington was wont to mount his horse and calling to his dogs, gallop away to the chase, or with sword and gauntlets and glittering aides march away to war. I roamed about the grounds, into the negro cabins and the barns, and eagerly drank in the stories of guide book and guide until the whistle of the little steamer at the landing below recalled me to the duty of the moment, which was to get myself back to my work in the big Capitol whose cornerstone Washington himself had laid so many years ago

But I didn't go empty-handed, or rather emptypocketed, for I had a handful of pebbles from the tomb a piece of moldy shingle from the roof, a small piece of sandstone which my boot heel had loosened from the plazza floor, and a cane cut from the growing underbrush in the woods back of the house. But a guard at the landing took the cane away from me, it being against the rules to carry anything away but memories which I am thankful to say no one could deprive me of and years ago the pebbles, the shingle and the stone went the way of all things mortal and nothing now remains to me but my story.

A YANKEE BOY'S ROMANCE

FRED. MYRON COLBY

I do not suppose that a mere title makes a man really greater or better for possessing it. but when one wins such a distinction by real merit it is well enough to give him honor.

Democratic America does not award titles of honor (unless we except the ill-used "Hon." and some of the college degrees), and but few American citizens have ever borne them in foreign countries. Probably the number can be counted on the fingers of both hands. The story of each of these is interesting, from that of Benjamin Thompson, who was made a count of the German empire by the King of Bavaria, to that of the late Gen. Charles Stone, who won the three horse-tails of a pasha under the Khedive of Egypt. But none exceeds in interest that of the sturdy young Yankee who began his romantic career as a merchant's bound boy and ended it as Count Zinscherskoff.

In the town of Meredith, New Hampshire, near the shores of Lake Winnipisiogee—that beautiful lake which the aborigines named the "Smile of the Great Spirit"-there stands a large, wooden dwelling house, gray and venerable with the storms and sunshines of a hundred years.

During the last decade of the last century, and the first decade of the present one, this ancient mansion was the home of the Rev. Samuel Finlay Williams. a graduate of Harvard College, and the settled minister of the town.

Here, somewhere about the year 1795, was born a boy who, in spite of poverty and the unromantic name of John, was destined to lead a life as wonderful in many respects as that of Aladdin in Eastern story.

There was nothing in the boyhood of John Williams to indicate in any way a brilliant destiny. In fact, a very different career was often predicted for him, his being one of the unusual instances where the man

was not foreshadowed by the boy.

He was an ordinary country lad, wide-awake enough, somewhat fonder of play than of work, and proverhial of propensity to misdeacons' and ministers' sons, which, if not generally true, was so in this case. His natural disposition to roguery and license was perhaps less restrained than usual in a parson's son, for the reason that his father accepted a chaplaincy in the navy. At the age of thirteen, Jack, as he was familiarly called, was bound out to service to a well-to-do merchant in his native town. He remained in that situation three years, increasing his reputation for reckless adventures if for nothing else.

One night on returning from a nocturnal expedition. he was intercepted by his employer and treated to a was at Ossipee, twenty miles distant, where he hired a team to convey him to Portland. At the time of his arrival in that prosperous Maine town, a Russian merchant ship was lying at anchor in the harbor, nearly ready to sail on its homeward voyage. Young Williams, fancying he would like the sea, embarked on board as a cabin boy and turned his back on his native land.

It is said that the merchantman was just sailing out of the harbor as an officer of the law, who had followed Jack from Meredith with a warrant for his arrest, arrived at the wharf. By so little space did the future count and admiral save his honors.

The Yankee cabin boy made quick friends with his new masters. He performed his duties faithfully, and made great progress in nautical knowledge. Being alert and fearless, he speedily acquired all of those tricks of going aloft which so puzzle a landsman, and could climb and leap and swing, and shout 'Ave. ave. sir!" with the boldest.

At that time the Barbary pirates were the dread of all seamen. Commodore Bainbridge and General Eaton had but recently given the Bey of Tripoli a sound drubbing for misbehavior toward our commerce, but it had by no means put an end to his freebooting.

On the voyage the merchantman was attacked by an Algerine cruiser, and the captain, seeing no hope of escape, was about to surrender. The little Yankee cabin boy, however, had no desire to become a slave to his serene mightiness, the bey, or to any of his barbaric subjects, and he plainly told the captain so in as many words.

"But what can we do?" inquired the Russian commander.

'We can fight," answered Jack, with that same spirit which had enabled the heroes of '76 to stand up against British oppression.

And then he proceeded coolly to inform the captain that if he could have two men to help him, he would take care of the pirates if the others would sail The officer expressed both amazement the vessel. and doubt, but acceded to the lad's request.

Jack, in his investigations about the craft, had discovered an old swivel cannon hidden away among a mass of trumpery on the lower deck. This was now cleaned, and loaded with scraps of iron and such other missiles as he could obtain. The sea was so calm that the Algerines advanced in their boats to board the vessel, and were greeted by several volleys, fired by the hands of Jack Williams, who secured the best aim that he could.

Fortunately the old swivel stood the test, and after three boatloads of their crew had been sunk, the pirates withdrew and left the merchantman to pursue her voyage.

Of course, Jack was regarded as a hero from that hour; and when the ship arrived at St. Petersburg, crisis. The following night the boy started upon a longer tramp, helping himself to a large sum of money in his master's desk. By noon of the next day he in his master's desk. By noon of the next day he the story of his heroism was told from mouth to

closed his eyes and appearance and intelligent answers, he ordered him placed in the naval school, and subsequently gave him a high post of command.

This was but a stepping stone to his fortune. Gradually he rose through all the grades of command, and at the great naval battle of Navarino exhibited so much courage and skill that he was made admiral in preme moment arrived chief of the Russian navy. At the same time he was created a nobleman of the empire, with the title of Count Zinscherskoff, and given large estates near Smolensk and an annuity of fifty thousand rubles (\$37,500).

Some time after the accession of Nicholas, Alexander's successor to the Russian throne, Count Zinscherskoff obtained permission to visit his native country, which he had left under such embarrassing the body was carried down to the reception circumstances. He sailed in his own yacht, a magnificent new vessel built after the most approved fashion of the time, and in the summer of 1830 anchored in Boston harbor

Entering his coach with its armorial bearings and drawn by four stately horses that pranced in their gold-mounted harnesses, all of which the Count had brought with him, he drove to the distant New Hampshire town of his birth, attracting much attention on the way by the almost princely style of his turnout.

Upon reaching his father's old parish, he drove to the house of his boyhood's friend. John Wadleigh, subsequently adjutant-general of New Hampshire.

It was some time before he could make his old playmate believe that the famous Count Zinscherskoff, the favorite of an emperor, was the freckle-faced, shockheaded boy he had formerly known. But the relation of several adventures in which they had both been engaged finally proved his identity beyond question.

The next morning, in company with Wadleigh, the Count called upon his former employer, who was still alive.

"Compute the interest on three hundred dollars for twenty years, my good sir, and I will pay you prin-cipal and interest," he said to the aged merchant, when he came to the door.
"What! Who are you?" gasped the old man, sur-

prised at the sight of such magnificence and at being addressed in such language.

"I am Count Zinscherskoff, admiral of the Russian navy, at your service, sir," answered the quondam runaway; "and I am come to pay you the sum I abstracted from your desk twenty odd years ago, for I wish to go back to Russia an honest man."

"But you are not Jack Williams?" cried the still more astonished merchant.

"The same, sir, as Mr. Wadleigh, our mutual friend, can testify. Besides, sir, did you ever know one willingly to pay another man's debts?"

The bill was made out, and the money was paid in bright gold pieces, counted from a plethoric purse that a servant carried. Doubtless the Count was made as happy by the payment of a debt that had burdened his mind so many years as was the man who received the amount a long time before crossed from his balance sheets.

The Count soon after returned to Russia, having made this, his first, and as far as is known, his last visit to his native land. A younger brother accompanied him, whom he helped to a prosperous career in his adopted country,

He died on his Russian estate in 1862, and his son inherited his title, taking high rank among the great nobles at the imperial court.

Several years ago, a silver mine was discovered on the old parish farm, which promises to be valuable In honor of the Yankee sailor boy who became a count, the mine has been named the Zinscherskoff mine, testifying alike to the truth of this romantic story set in the pages of New England history, and to the good taste of the people who remembered the honor that rose from so low a condition among them.

The Cruise of the Yacht Gazelle; 6,000 Miles on Inland and Ocean Waters

KENNETH M. RANSON

These are the twelfth and thirteenth chapters in the story of a six thousand mile cruise by four Michigan boys, in a boat of their own construction. Setting sail from St. Joseph, the "Gazelle," by which name their craft was known, proceeded by way of lake, river and canal to the Mississippi, thence to New Orleans and the Gulf, along the gulf coast to the Atlantic, thence to New York harbor by way of the ocean, thence by river, canal and lake, home to Michigan.

CHAPTER XII—Continued.

The Sharpie was soon abreast of us, so we raised anchor, and together we went speeding along up stream. We were easily the faster craft and had no difficulty in keeping alongside our companion, so near, in fact, that we not only exchanged greetings but enjoyed a pleasant chat.

The captain was a jolly man, who seemed greatly pleased with the short account I gave him of our voyage, and said, "when we reached Jensen, that we had better stop and spend the night.

As we came in sight of the little town we saw there was a good place to tie up at the dock and decided to take the advice.

On boarding our friends' boat, which was called the "Merchant," we were surprised at the great amount of room below deck. It was indeed the queerest craft I had ever seen. The sides were angular, and shelving provided accommodation for the large stock of groceries and provisions carried aboard. craft was fitted with regular store counters, etc., in fact, it was nothing less than a well appointed grocery store

The good captain explained how he had plied up and down the river for fourteen years in the grocery business, and it was plain to be seen, from the number of customers that came aboard, that his visits were not only looked for but appreciated.

We plied the captain with questions about the Indian River, and found him thoroughly familiar with all the chanuels as marked in our charts; ere we left him we were ready to admit that the passes among the islands would be as difficult to find as they looked on the

We were not discouraged, however; in fact we had learned that the little perplexing incidents which we daily met with were the spices that flavored it all: so we were glad that "there still remained worlds to conquer."

The village had one railroad to make it lively, and, besides being in the heart of the pineapple country, the people seemed hustlers and quite up to date. At one packing house where we called to buy some of the fruit, the foreman took us to a huge pile of luscious big fellows which were too ripe to stand shipment and told us to "help ourselves" and "not to be afraid to take all we wanted," because they would only spoil. This was a great treat and each of us carried a bushel sackful to the yacht.

Pineapples ripened before cut are not at all like the tough, fibrous fruit we have in the north. They are delicate and melting and altogether "too good to last." For the next few days we feasted continually on them, notwithstanding the fact that the acid made our mouths bleed and smart.

CHAPTER XIII.

ney and, although the oyster bars congood headway and before nightfall had reached the narrows where the fun and hard part of our journey really began.

We could hear some of "the hard part' as we listened to the squeaky hum of the myriads of mosquitoes as they came our way.

It was my belief that the mosquitoes of the Everglades were unquestionably the thickest in number, but I am ready to admit that the swarms in this locality put up a splendid fight on behalf of their claim to the honor. At any rate, after trying to remain below in a suffocating smoke of cocoanut husks, which was harder on me than it was on that it was Captain Fisher who had still gasped and groaned, so I asked him

plan. Wrapping myself completely in several turns of my blanket, I lay down on deck, with my head inside a cracker box with little holes cut in it and covered with cheese cloth, for air. A fold of the goods also extended from the hood and was tied under my arms. It was a pretty warm outfit for tropical weather, but, believe me, a continuous Turkish bath is far better than mosqui-

Before the railroad came down the east coast, the Indian River had a very good line of boats which carried freight and passengers. So long as this traffic continued the government maintained a dredged channel, lights and day marks; now, however, the course is neglected and, save for the cruisers who frequent this waterway, travel is small. The lights are no longer lighted and the day marks are in many cases destroyed. It is said that pilots secretly destroy the beacons, so that their services as guides through the labyrinth of islands may be almost compulsory. Although we had a fine chart, we found that all we had heard in regard to the channel was true. In some places we would have to anchor and spend hours sounding the passages between the islands to find a channel. Often we would stick willows in the mud with a bit of white rag on them, these we would follow up and then anchor and try again. Thus "we snatched victory from the jaws of defeat," and finally had

ON TURTLE MOUND.

the satisfaction of reaching Titusville in safety. It was raining when we dropped anchor, and it continued to storm for two days; so we remained at our moorings, taking advantage of the delay to lay in a store of information that would be of use as the voyage continued.

Among the many friends we made was an old sea captain whose name was Fisher. It had been many years since he retired, but his perfect knowledge of the coast from New York to New Orleans had made him famous as a pilot. For this reason Captain Fisher was often engaged by wealthy yacht-owners to pilot their magnificent yachts from New York to their winter homes in Florida. Next morning we resumed our jour- He was a kindly man and made our stay ney and, although the oyster bars con-tinually impeded our progress, we made joyed our visits to his home, where he spun yarns by the hour, and with charts spread out for our inspection explained how to make this or that port, etc.

On the morning of our departure. while seated in the cabin awaiting the return of my companions, who had gone ashore for a few supplies. I heard the sound of oars, and, supposing it was the boys, did not go on deck; but presently I heard someone say, "She's so small, Captain; do you have an idea the boys will make it?" The man addressed then replied, "True, she is small, but bless you, man, look at that bow and quarter; she'd weather a hurricane." Knowing

These are the twelfth and thirteenth chapters in | the insects, I finally resorted to my old | thus complimented our yacht, I felt very proud, but not caring to have them know I had heard what they said, I waited a few minutes, then went on deck, and invited them aboard. During their visit the boys returned, and soon our sails were hoisted, our friends entered their boat, and with many wishes for a fortunate voyage, we were again under

It was three o'clock in the afternoon when we reached the "Haul Over Canal." The canal, or cut, is an arti-The canal, or cut, is an artificial channel about half a mile long connecting the Indian River and the Mosquito Lagoon. At one time it was deep, but neglect had caused it to close up at one end, so that there was now less than three feet of water on a bar fully sixty five feet across. As we were drawing over three feet of water, we were almost discouraged, for unless we could in some way cross the spit we would have to retrace our course back to St. Lucias and continue up the coast on the ocean. This would delay us a week, at least, besides depriving us of the interesting cruise up the Mosquito Lagoon. It was suggested that we remove the ballast and reduce the yacht's draft, but as the nearest land was half a mile off and our small boat could not carry a large load this would be an almost endless task. for our ballast must needs be saved. The only way left was to dig a little channel through the oyster shell bottom and shove the craft through. This plan being decided upon, we set about to find tools with which to accomplish our task. We had no shovel or hoe aboard. but finally I found among the ballast the blade of an old cultivator. This I bolted to a stick, thus making a very

As all the digging was under water. you can imagine it was slow work. We took turns of half an hour each and. little by little, our ditch was dug. It was no easy matter digging among those oyster shells. Then, to add to our misery, the sun fairly baked our necks and arms, and the sea nettles (a jelly fish abounding in this river) stung our arms and legs until we could hardly stand the pain.

A great loathsome stingaree, a much dreaded turtle-shaped fish, with a long. tarbed tail, was seen by Arthur. When disturbed, this fish thrashes its tail about, and woe to the person whom it strikes, for the barb inflicts a terrible wound as it is withdrawn, at the same time sending a poison through the system which thickens the blood and causes death. No wonder, then, that we dreaded working under such circumstances.

Night coming on and being all tired out, we stopped our work and pulled the boat into our channel, well satisfied, for we had worked so diligently that we had covered a third of the distance. This was very encouraging, considering the many difficulties under which we labored. Next morning by daybreak we were again at it, and at nine o'clock we found that by making a slight turn we could avoid the shells and continue for the remaining distance through the mud.

We had placed the anchor at the other side of the bar, so as to keep Gazelle pulled along as fast as we dug. This let the line slacken along the bottom when we were not pulling. It was Arthur's turn to dig. and Frank, wishing to haul the vacht up to where he had ished, climbed on board and, going forward, jerked upon the rope. At the same instant a terrible shriek came from Arthur. I came on deck to see what was the matter, and found the lad pale as death, hanging on the bowsprit, entreating us "in the name of mercy" come to his rescue. I was startled, but Frank stood on deck with his hands on his knees, just more than laughing. could not understand this, and running out on the sprit, pulled the mate aboard and carried him to the cabin. A slight wound on his leg from which a little blood flowed was all I could see, but he

•◆•◆•◆•◆•♦•♦ | where he was hurt. This made him mad, and proved a good cure, for, jumping up, he cried, "Can't you see, I am wounded by a stingaree and apt to die.' Then followed a long description of the size, etc., of the fish, as he saw it dealing its blow and disappearing. Frank could stand it no longer, but came below, still hoarse with laughter. "How long did you say its tail was, old man?" Art. looked up in a puzzled way and said, 'Well, I bet it was fully three feet.' Frank looked at me and continued, "Well, that's putty long for a fish. but I can vouch for the truth of what he says, 'Cap,' for this one was just as long as our anchor line, as I had hold of one end of it myself." I saw the joke; Art. subsided, and we again went to work with a will. By noon the long, tedious task was completed, and we cheered ourselves hoarse as our good ship was hauled over into the deep water beyond. This canal was surely appropriately named, the "Haul Over." Once on the bosom of the Mosquito Lagoon things were much more to our liking. We made splendid time and evening found us anchored under the shadow of "Turtle Mound," at the other end of the lagoon.

The mound is fully one hundred feet high and is formed of shells. Some think it was built by the Seminoles as a lookout; at any rate from its top a splendid view of the river, valley and ocean may be had.

From Turtle Mound to New Smyrna is the most difficult channel of all, as the river is a complete network of channels separated by little islands. The water is full of oyster bars and sand spits which gave us a great deal of trouble. We made the best of it, however, and had good times while waiting for tides to free us from bars. Hunting and fishing were good, and with the small boat we explored the surrounding country.

We were greatly pleased with what we saw. Great herons and flamingoes were seen in large numbers, while our old friends, the pelicans, also visited us. Victory was ours, finally, and as we passed the last of the little islands and stood upon an almost straight channel for New Smyrna, which could be seen in the distance, we were glad: still, our river experiences had been really pleas-

(To be continued.)

The Boy Who Tries.

MARGARET E. SANGSTER.

The boy who wins is sure of praise, And yet, I somehow prize
Through stress of dark and cloudy days
The gallant boy who tries.

Not once nor twice nor thrice he lifts
His sturdy hand, ere life
Shows bright and clear, the blue that rifts
With peace the sky of strife.

The lad whose valor holds its own In presence of defeat.
Who falls and rises, makes no moan
In dust, or cold, or heat

I find it in my very soul To bless the stubborn stuff That takes of poverty its toll, And makes that dole enough.

A thousand praise the boy who wins. But twice ten thousand rise Beyond this world of clamorous dins To praise the boy who tries.

Little Tommy Smith.

JAMES WHITCOMB RILEY.

Dimple-cheeked and rosy-lipped.
With his cap rim backward tipped.
Still in fancy I can see
Little Tommy smile on me—
—Little Tommy Smith.

Little unsung Tommy Smith-State a man tenderly to me
Sometimes sings unceasingly—
—Little Tommy Smith.

On the verge of some far land
Still forever does he stand,
With his cap rim rakishly
Tilted; so he smiles on me—
—Little Tommy Smith.

Oh, my jaunty statuette
Of first love, I see you yet;
Though you smile so mistily,
It is but through tears I see
—Little Tommy Smith.

But with crown tipped back behind, And the glad hand of the wind Southing back your hair, I see Heaven's best angel smile on me— —Little Tommy Smith.

POURTH ARTICLE OF A SERIES

QUITTING SCHOOL.

ing point in a boy's life more perilous than that where he comes plump up against the question of school or no school. Senator Beveridge, in a recent magazine article, insists that any boy can

get a college educa-tion—that it is only a question of "will," He would have us think that all a boy need do is to say "I will" and go ahead.
But this is hardly sensible.
It does very well to talk and write after that fashion. It serves to encourage many a boy who can, but who thinks he can't; yet we all know that the iron hand of necessity is laid on many a lad and his own "will" because absolutely im-

potent.

I have referred to my father before in this series of articles, and I hope

I may be pardoned if I do so again. His life illustrates so much that I want to say. By dint of the hardest kind of work and the saving of every possible penny, he had enough money in hand when a boy to get him at least one term in an academy or college preparatory school some miles away from his home. But scarcely had he entered on his course of study ere his father died, leaving a widow, five daughters and two sons, of which my father, then only a boy himself, was the oldest. There was no money to support the family, and father was the only one of the eight able to earn a dollar. His immediate return from the academy and immediate employment in some moneyearning position was an absolute necescity. And this necessity was not temporary; it lasted through the years of his young manhood. The door of oppor-tunity was shut and barred against his aspirations for a school education.

So there are boys who must quit school by well directed home instruction. The great danger lies, however, in determining whether the necessity of quitting does or does not exist; for what appears to be a necessity is really often not a necessity. It is so easy for a boy to conjure up a necessity if it meets his notion. It is not enough to create a necessity that the few dollars the boy might be earning would come in handy at home, would help clothe him better or add a little to mother's or sister's comfort, or make it easier for father. Fathers, mothers, and sisters of the right sort are willing, nay, are glad to give up something of comfort, and are pleased to sacrifice something that the boy may get an education. It speaks well for the boy that he thinks of what he might do with his money to help along at home, if this is really his motive in quitting school; but let him not conjure up out of his kindness of heart the existence of a real necessity where it does not exist. And then if he is really anxious to help out at home there are scores of ways of earning a dollar or two now and then outside of school hours. Is he taking advantage of these? Are these dollars being used in the way he is so heroically picturing to himself? And if he can't earn a dollar outside of school hours, there are many, many ways of relieving burdens at home and making the sacrifices of the home folks easier to bear. Is he mindful of these? If not. his heart longings to be earning money to bring home are just fooling him.

Perhaps the boy has got the notion from some dyspeptic philosopher that a school education is not after all a good thing to have, and that the sooner he gets into active life the better. Well, I haven't the space to argue this question. I think it is pretty well settled that the times demand educated men, and that all things considered, the educated young man has the inside track in the race. Of course, men do succeed in money-making and in other directions without it; but I notice in reading their biographies and their advice to boys, they have keenly felt the lack of school training and earnestly advise that boys do not follow their

example.

There is a period pretty well marked in

HERE is no turn- | had an iron "will," but here it was pow- | boys generally, where they grow restless It is the period when they begin in the seclusion of their rooms at home to rub the not necessarily quit reading and study upper lip and nearly crack the looking mind you, for a boy may in these days get, glass to find a sprouting hair. They get a fair equivalent for a school education their first temptation to smoke and possibly fall a prey to it on the quiet. They begin to study the most effective part in the hair. They assume lordly manners at home. They take unkindly any interference with their plans. They begin to worry mother by irregular hours and uncertain whereabouts at night. They prefer other company to that of sister. Now look out for this boy. He has reached the turning point. He is, as we say of horses, "feeling his oats." He is getting ready to break loose. He is getting too old for school. Many of his companions have graduated immaturely and are earning money—a little, and they are spending it, too. They have a little something to jingle in their pockets—for a night or two after pay day, and he hasn't. He feels mean in consequence. They are 'independent": he is "dependent". He is a boy; they are men—at least, they can act like it while their money lasts. Now he must quit school. Other boys are beating him in the race. He will earn money and be a man, too. But he will not do as they do; he will bring his earnings home, keeping just enough to jingle when out with the boys, so that he need not feel stingy. How he longs to help contribute at home! Perhaps he does. Indeed, he always thinks he does. Sometimes he really does. But look out for this boy. He's got to the danger line. Hold him. Kindly, earnestly hold him Don't scold him. He is developing-shall say naturally?—not unnaturally. These phenomena are characteristic of boy life. it's the turning point between innocent careless, buoyant boyhood, and earnest strifeful, self-assertive manhood. Let him pass that safely and the chances are in his favor; let him fail at this point. let him have his way, let him loose with his unformed character and mind into the world of boys, who, like him, have quit school capriciously and foolishly. and the chances are all against him.

1900

The Editor is compelled to say that he cannot accept any more Exchange notices for this column for several months, as he has enough Exchange notices on hand to till this column for some time to come.

Homer Pickrell, Webber, Kas.: I will exchange books by Alger, Ellis, and others, for books by other authors.

Russell Bailey, Boundbrook, N. J.: I would like to exchange books with any reader of THE AMERICAN BOY.

Wilbert Magee, Wyllis street, Oil City, I have several kinds of pigeons that I want to exchange for other pets.

H. G. Redrut, 408 South Market street, Vanwert, O.: I will exchange a good mandolin for a printing outfit or printing

Walter Chansler, Bicknell, Ind.: have five Indian arrowheads which I will exchange for a reasonable number of seashells of any kind.

Chester Rehm, 1298 Ogden avenue, Chicago, Ill.: I have six hundred and fifty varieties of stamps and some coins that I will exchange for any kind of

Fred M. Henry, 11 West One Hundred and Thirty Fifth street, New York City, N. Y.: I have some valuable autographs which I will exchange or sell at a reasonable price.

R. Mora, Jr., 101 Hillside avenue, Newark, N. J.: I have foreign stamps, vegetable ivory. Cuban and Spanish news-papers, which I will give for Indian relics, war relics, etc.

Sidney S. Wortsman, 115 Gaston street west, Savannah, Ga.: I will exchange a stamp collection valued at ten dollars for a printing press large enough to print a small newspaper.

Eugene G. Adams, Danville, Va.: I will trade a stamp collection of six hundred and twenty five varieties, catalogue value over thirty five dollars, for secondhand printing press, chase 5x7.

Lloyd B. Bennett, 1024 Hickory street, St. Louis, Mo.: I have some shells from the California coast, near Frisco, which I will trade for bugs, leaves, shells from other coasts or relics of any kind.

W. Bartlett Sumner, 233 Herkimer street, Buffalo, N. Y.: I will exchange old United States stamps for Indian relics (especially from Yazoo County, Colo.), or old United States pennies.

Henry O. Clark, 106 Warner street, Fond du Lac, Wis.: I will exchange pressed leaves from Wisconsin for leaves from Kentucky or copper ore or shells from the Atlantic Ocean or any other

Walter H. Rose, Pierre, S. Dak.: I will exchange sixteen kinds of Dakota woods, pottery from the ancient Indian pottery field near this city, geological specimens, Yncca pods, specimens of prairie sage and cactus, for curios of any kind.

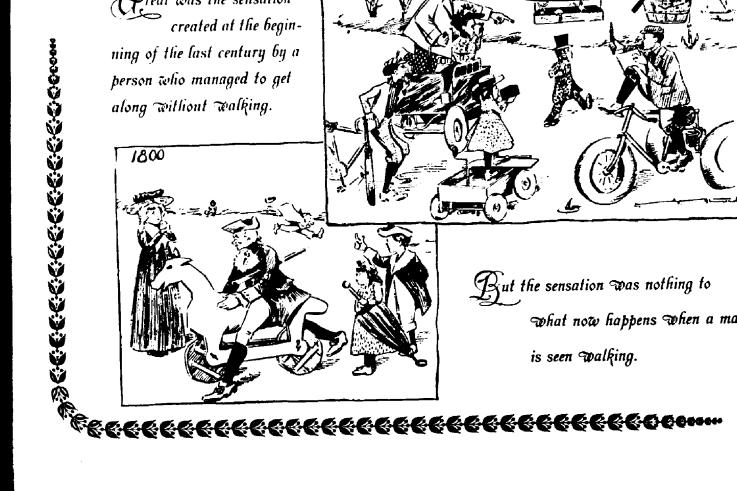

Henry C. Pifer, Lovington, Ills.: I have stamps from South Africa, Heligoland. Roumania, Japan, Spain, Finland and South Australia, which I would like to trade for stamps from Persia, Peru, Paraguay, Bolivia and Liberia.

Luis Robert, Center Moriches, L. I. N. Y.: I will exchange Golden Days, beginning with July 1, 1898, Vol. XX., No. 33, and extending to May 5, 1900, Vol. XXI., No. 25, making a total of forty five papers, for an ostrich egg.

A. E. Miller, 275 Wellesley street, Toronto, Canada: I will exchange petrified wood, curiously shaped stones, from Lake Erie, foreign stamps and leaves of Ontario, for banana, orange, California redwood leaves, arrows or spearheads, or any such curiosities.

Charles Rocheforte, Jackson, Mich.: I will exchange five striping brushes; one left bicycle pedal, good; one new pedal, same; four pedal rubbers, new, fit any bicycle; aluminum lock and chain; three pieces patch rubber, 4x16; one checkerboard and checkers, new; for arrowheads, coins, shells or best offer.

created at the begin-

That now happens When a man

(Begun in October.)

Review of Preceding Chapters: Jack Carroll, Frank Chapman and Ned Roberts, three boys whose homes are in a village in the far East, obtain the consent of their parents to go to Denver for a visit to Robert Sinclair, a friend of Jack's father, who is a painter of mountain and Indian life, and spends the greater part of his time among the indians. They are accompanied on their journey as far as Chicago by Mr. Carroll, and are greatly delighted with the sights and sounds of the great city. On the train for Denver they meet Jim Galloway, a trapper, who tells them a true story in which his life is saved by a white man, who was living at the time with the Indians, and turns out to be Robert Sinclair, the artist, whom the boys are going to visit. The boys tell the trapper the story of Sinclair's life. The train on which they are traveling runs into a herd of Buffalo and Ned shoots one. On arriving at Denver the trapper leaves them and Sinclair and the hoys buy their outfit and start on the trail for Pike's Peak along the foot of the mountains. The first evening in camp Sinclair tells the boys a story, and Ned's nony makes a dash for home, but is captured by Sinclair. Review of Preceding Chapters: Jack Carroll, Frank Chapman and Ned Roberts, three boys whose homes are

CHAPTER X.

FRANK'S PONY GETS HIM INTO TROUBLE.

"Get up. boys; time for breakfast!" cried Sinclair, springing to his feet and shaking himself to throw off the numbness due to the chill air of the early morning. It was easier to say "get up" than to do it in the case of three boys who had slept, or rather tried to sleep their first night on the bare ground, after the greater part of a day's ride on hard saddles strapped to the backs of half-broken mustangs. Their efforts to rise were ludicrous, and as each tried, in turn, the others let out whoops of laughter and made pointed comments on his poor success. Soon, however, they were racing to a little stream near by, and oh, how good the cold water from the heart of the mountains felt as they turned down their hunting shirts and threw it in double handfuls over their faces, necks and chests! "Heroic treatment!" sputtered Frank, between splashes, to which there was a sympathetic echo from the others; but as the boys had seen Sinclair do it and heard him recommend it for health and safety, as well as for cleanliness, that was enough; for they had determined to learn as speedily as possible how to live as hunters and were quick to follow the example of "Uncle Bob."

Then they built a rip-roaring fire, watered their ponies, and in an incredibly short time were squatting. Indian fashion, about a steaming pot of coffee, some savory bacon and good bread and butter, with appetites like prairie wolves.

How do you like it, boys, as far as you have gone?" inquired Sinclair, when he saw from the satisfied expression on their faces that he was pretty sure of a favorable answer.
"Splendid'" " It's all right!" "It's just great!" came

three voices in chorus.

'It'll grow on you, too." said Sinclair. "You'll get so you can't breathe in a house, and a bed will keep you awake all night; and as for eating, you boys 'll be eating your shoe leather before long if I don't watch you.'

"But we must be off! Fetch up the ponies, boys, and I'll pack up."

No captain ever had quicker obedience from his company. They sprang to their allotted duties and in a jiffy they were all "aboard," as Ned declared, sitting sidewise, and every other wise, on their saddles, to ease their sore spots, and keeping up good courage by a running fire of good humor.

The morning was cool and bracing, the ponies in good fettle, and before they had gone a mile the young adventurers were racing down the trail on a dead gallop, leaving Sinclair to bring up the rear in a

more dignified and orderly fashion.

trail up a steep hillside.

"Look out, now, young man, or you'll get lost!" shouted Sinclair. "Better save your wind; you may need it before night!"

"All right! I'll see you later!" came back the answer with a ring of boyish enthusiasm in it.
"That boy has got metal in him." thought Sinclair,

as he spurred his horse into a trot to overtake the other boys, who were some distance ahead.

rough for the horse's feet, and the rider let him take scant tufts of grass that grew between the rocks, he

his own way, which proved to be a ziz-zag one that finally brought him around on the side of the hill opposite the trail and out of sight of the rest of the company. He was about to rein in the animal and turn his head back over the way they had come, when a sudden rustle in the bushes startled him and the pony at the same time, and before the boy could gather rein the pony had taken the bit in his mouth and was going like mad down the hill in a direction away from the trail. Frank shouted and sawed on the reins, pulled and pled, but it was of no use, the animal was frightened and bound to run. How far would he go? Where? Could he ever find his way back? Was the thing that had made the noise in the bushes following them? Frank was too much occupied in trying to check the runaway to look behind him or to take note of the country through which they were passing. He only knew that they reached the foot of the hill, in what appeared to be but a few seconds. dashed across a little stream, sending the stones and water flying, scrambled up a bank and across a little mesa, and were now running into a dark opening between two great hills that led-who knows where?

"Uncle Bob! Uncle Bob! I'm here! I'm lost?

Up this ravine the crazy animal dashed, with his head almost to the earth at every leap, until the path became so narrow that Frank felt that the mountains were closing in upon them and that they certainly would be swallowed up. Finally, however, the little animal stood hot and trembling under the shadow of a shelving rock in the very depths of a great canon.

CHAPTER XI.

LOST IN THE CANON.

Frank threw himself from his horse, leaned his gun against a rock and sat down to rest his tired, jolted "Good-by, fellows, I'm off up this hill for a view of body and collect his senses. Where in the world was the country!" shouted Frank, turning his horse he? In what direction was the trail? How far had smartly to the right and galloping away from the he come? He had been so busy keeping his seat on the pony's back and pulling and hauling at the stubborn animal that he had taken very few observations of the way. He knew he had crossed a little stream and a long level tract of grass, plunged into a gulch. and finally came to this wild spot-high rocks all about him and just a patch of sky overhead.

The boy was not a coward, but never having been in the mountains before, the darkness and the sense of loneliness oppressed him. "If I stay here long," The hill was higher than it at first appeared to he said to himself, after looking about a few minutes, Frank, but he had started and he wasn't going to "I'll be too scared to get out." Then turning to his stop short of the top. After awhile the path became horse, which was now complacently nibbling at the

took some comfort in scolding him: "A nice sort of fellow you are to play me this trick! Now, you'll just naturally show me the way back, and will do it in a hurry! If I get a chance to trade you for a jackknife I'll do it, and I hope you'll fall into the hands of a crazy Comanche who'll ride your legs off!" With this, Frank flung his gun to his shoulder and mounted. Turning his pony's head down the canon. he set off, with just a little chuckle at the thought of his adventure and how he had got the start of his friends in seeing the mountains. Indeed, he half expected at every turn in the way to meet Uncle Bob and the boys, and he pictured to himself their white and anxious faces. As he rode along, however, his lightness of heart gradually gave way to anxiety and then to positive fear as he came upon one and another difficult place in the way which he could not for the life of him remember to have gone over before, and as he noted at several points that the canon branched out, making it well nigh impossible for him to choose the direction with certainty. At such times, after dismounting and examining the rocks and the earth for footprints, he usually left the decision to the pony, trusting that the animal's instinct would lead him to take the right track.

At length Frank became almost certain that he was lost. At first he stopped only at long intervals when uncertain as to the way, but now every few steps he drew rein; but that was hardly necessary, for the pony seemed as uncertain as his master, and several times turned his head and looked into the boy's face with almost a human look, as if to say, "Master, we're lost! I'm sorry I did this! Now, what shall we do?" Finally, the young rider drew rein, turned his animal about and retraced his steps until another branching defile stared him in the face. The sun was evidently going down, for the gloom was increasing and there was a chill in the air. Then the boy stood up in his stirrups and shouted:

'Uncle Bob! Uncle Bob! I'm here! I'm lost! Hello! Hello!! Hello!!!"

Then the boy and the pony listened with intent ears. but nothing came back save the echo of the boy's own voice, weird and terrifying, from the cliffs above him.

Then it dawned upon Frank that he must spend a night alone in the canon: but he kept up his search until it was almost impossible for him to see his way. and only gave up when he stumbled upon a good place of shelter under the shelf of a rock near which was a little stream. There was a suggestion of moisture in the air, and the boy, tying one end of the pony's rope to a young sapling so securely that the animal could not make a dash for home in the night without his master, set to work gathering grasses and twigs for a

Luckily, on starting out, each of the boys had been equipped with a flint and steel for striking a fire and had had a little practice in using it, so after repeated attempts to light his fire he finally succeeded, and lay down beside it, under his rock roof, wrapped in his blanket, with his arms for a pillow. A boy might be excused for lying awake all night under such circumstances: but Frank was tired almost to the point of exhaustion, so when rain began to fall, as it did during the night, and something told him that the Indians would not likely be abroad at such a time, he just curled up before the warm fire, with his rifle by his side, closed his eyes and went to sleep. Several times during the night he was awakened by the uneasy movements of his pony; then he got up and replenished the fire, took a look at the pony to see that he was all right, and again curled himself up and fell asleep.

Early morning found him refreshed, but very sore from his hard riding of the day before, and when he saw that the rain had passed over and that there was a clear patch of blue in the sky he almost felt a joy in his surroundings. There seemed to be more life in the canon in the morning; birds were singing somewhere up the slopes and the rain had freshened the green, and, as he imagined, added volume and music to the little brook. Somehow he felt that he must find his friends that day, and he smiled with a little chuckle at the way the boys would listen to his adventure and how he would grow in their estimation.

But breakfast! He hadn't thought of that, and he

was awfully hungry. A growing boy cannot go a whole day and night in mountain air without food and not be nearly starved. He hadn't seen a living thing in the dark canon the day before, save his pony and the grasses and trees up the slopes, and he couldn't eat them. But the pony was not so hard up. He was having the best kind of a time among the little patches of grass that the rain had freshened, and appeared to be perfectly satisfied with the situation. Frank looked helplessly about him. Here were his gun and his knife and a fire, and even a few cooking utensils strapped to his saddle, but where was the something to cook?

Uncle Bob had undertaken to carry the provisions, and the boys had divided among them the other accoutrements of the march, but none of the things that had fallen to Frank were just what he wanted at this instant.

"Well, there is nothing to do but be my own provider," said he to himself. "One thing is sure, nothing is going to walk up and jump into my frying-pan. I may as well start out and get something, for if I

Two of the ugliest faces * * * peering at him just over the edges of a rock

don't I'll not have strength enough in another hour. the way my appetite's growing." So, shouldering his rifle, he struck off up the canon, stopping now and then to listen and look about him. He had gone nearly a mile on what appeared to be a fruitless search, and was about to set out on his return, considerably disheartened, when peering around the corner of a big boulder that lay at the turn of his path he saw something that almost caused his heart to stop beating—a big buck deer, standing just beyond him on the brink of a little stream, from which the animal had just had his morning drink. "What a magnificent creature!" exclaimed Frank half aloud. The boy's hand shook as he set the trigger and cautiously laid the rifle barrel in a little angle in the rock and braced himself for a steady aim. His legs shook and his heart beat like a trip hammer, and—"bang!" The boy peered ahead through the smoke, and, to his bitter disappointment, the splendid creature was bounding up the bank and away. Boylike, Frank threw down his rifle and made a dash after him, hardly knowing why. He jumped into the stream, regardless of consequences to himself,

and was just clambering up the opposite bank when, to his intense joy, he saw the stag totter and fall headlong-dead.

'Hurrah!" shouted the young hunter, "I've got him! I've got him!"

Caution gave place to enthusiasm, for without an instant's thought of what might happen if the animal should not prove to be dead, the boy rushed upon his fallen victim; but the proud fellow was really dead and there could be no danger.

"Now, what shall I do? I can't drag him home bodily, and I can't get help." How he did long to be able to carry away those splendid antlers! But even if he could succeed in removing them, he was not certain that he could carry them. One thing he could do. however, he could cut with his hunting knife some nice pieces from the flank-as much as he could well carry—and have something for a breakfast. This he did, and within an hour he was back at his camp enjoying his venison. He had no salt and pepper with which to season it: but what of that, he was as hungry as a bear and the meat was good and well cooked

-that is, well for an amateur. Then there was enough left for his friends when he should find them later in the day.

Breakfast over, he gave his pony a good drink, saddled and bridled him, hung the unused portions of the deer to the saddle, bade farewell to his "canon hotel," as he called it, and was about to set foot in the stirrup when he heard the crackle of a branch just above him on the mountain side. Turning in the direction of the sound, he looked straight into two of the ugliest faces that he had ever seen, peering at him just over the edges of a rock.

(To be continued.)

HEADACHES JES' FORE SCHOOL.

MAURICE CLIFFORD JOHNSON, IN CHICAGO CERONICLE.

I guess my health is gittin' poor, Er somep'n er the kin', Fer every mornin', jist as sure (Espechully if it's fine), I git sich offul shootin' pains At ma says: "It's jes' cru'l Ter make at poor boy study with Sech headaches jes' 'fore school."

Ma thinks my mind is breakin' down
From learnin' of so much.
She puts wet towels on my head,
An' chopped up ice' an' such
An' tries ter get me off ter bed,
But pa says he's no fool,
He thinks birch oil's the only stuff
Fer headaches jes' 'fore school.

An' teacher, too, don't symp'thize
'Ith boys wots feelin' bad,
Fer, soon's she sees mopin' in,
She says: "Now, ain't 'at sad
Ter make them sufferin' children work!
Young man, set on 'at stool
An' do them sums." Huh, she makes fun
Of headaches jes' 'fore school.

'Tis kind'r funny, though, how soon
I'm over bein' sick,
An' me an' Jim (Jim, he gits cramps),
We sneak off down t' the crick
An' go in swimmin'. Gee! We got
A bully divin' pool
An' spring board. Gosh! you bet they cure
Them headaches jes' 'fore school.

An' fishin', too. We got a raft An asnu, too. We got a rait
An' dandy hooks and lines;
Ketch bullheads, lots—an' sunfish. Say!
Down underneath them pines
They bite like thunder! Settin' there,
Feet swashin', nice an' cool.
Pains, nothin'! Say, d'you ever git
Them headaches jes' fore school?

HOW TO BUILD A CANADIAN CANOE

In the March number of this paper we shall present an article by Kenneth M. Pansom. Captain of the "Gazelle," on "How to Build a Canadian Canoe." The article will be accompanied by drawings that will make the process plain.

Madame Modjeska as the Boys' Friend

MARY H. McCoy

Attractive as Madame Helena Modjeska is as an artist before the footlights, the really beautiful traits of her character endear her more strongly to those feel that everything belongs to you, and Not a very great while ago a mountain same charming woman, who, as an actwho enjoy an acquaintance with her in private life. Among the many splendid qualities of her mind and heart, there is none, to my thinking, more noticeable than her attitude toward boys. I have seen her in the home of a friend where there are four boys between the ages of eight and sixteen, and seldom have I een anything prettier than when, upon her necessarily rare visits, she greets these four lads, always by name, and with a genuine and manifest interest in each. There is not the slightest suggestion of a stooping from her supreme level to theirs; not the least visible effort to think of something that will interest them; but a spontaneity of comradeship, without for a moment losing her own queenliness, that fairly captivates their gallant young hearts. Her auch Ime a subtle, added charm, that is beautiful to look upon. Her heart lingers on her lip, and glances from her eye, and speaks through the pressure of her hand as she says, "You must come to see me at Arden."

And the lad thus invited to Arden, who, for any reason, cannot accept the invitation, feels himself defrauded indeed. For I believe there never lived a boy to whom Arden would not prove a veritable fairyland of delights.

presses it who sits near me as I write, 'just dandy." And this same boy, when asked what, to him was the most delightful feature of a visit to Arden, replied, "Oh, there's so much room up there! And you can catch the pretty little speckled trout, and swim in the big reservoir, and breathe the pure air, and drink the cold, pure water, and hunt. and ride, and then, you know, Madame Modjeska and Count Bozenta make you you can do just as you please." so it is a real boys' paradise to the favored ones who possess the esteem of the charming woman who is queen there; for Madame Modjeska is as discriminating among lads as among men and wo-Arden is Modjeska's summer men. home now, and by and by, when the footlights can no longer tempt her from the comforts of her own fireside, she looks forward to a quiet, restful life amid the eternal hills, with only those about her whom her heart holds dearest. Arden is situated in Southern California. twenty five hundred feet above sea level. in the fastnesses of the Santa Ana Mountains. It is a truly lovely spot. The estate embraces several thousand acres. The available level, or gently sloping lands, have been set with olives, oranges, rapes and walnuts, besides many kinds of fruit for home use. Immense reservoirs have been built for irrigating purposes. But the greatest attraction is nature undisturbed and unadorned. The spreading live oaks and sycamores, the lofty mountains, the babbling streams, the pure air and the delicious water, with that inexpressible restfulness and sense of freedom, combine to make a visit to Arden a pleasure to linger in memory for aye. The house, a rambling, delightful one, typical of country com-In the first place, the trip thither by fort, with big open fireplaces, cozy wincarriage, over mountain roads, and dow nooks, and many book cases filled across mountain rills, is, as a boy ex-| with books of every country, is nestled hundreds, almost, to drink at the foun- live Modjeska."

among big live oak trees at the foot of a towering mountain, that stands like a sentinel over it. TALES OF YANKEE ENCHANTMENT

THE BURRLESS CHESTNUT

A Story of Two of the Laziest Boys in the World.

Copyrighted, by CHABLES BATTELL LOOMIS, 1900

Mason and Jason Nason were just about as lazy as boys could be. They really had enough laziness to supply a whole family, but they preferred to use it all themselves. They were so lazy that instead of walking down hill to school in winter, a perfectly easy task, for it was only a half a mile straight ahead, they coasted down on their sleds, and as winter at Loudon Hill always sets in on the first of November and lasts until the first of April, with snow all the while, they, of course, coasted every day. Then, instead of pulling their sleds up the hill again, they were so lazy that they would wait for the mail sledge, which came along just as school was let out, and they would hitch on behind and be drawn home again. They were just the same on the ice pond that lay be-tween them and their grandmother's thoroughly lazy. On Saturdays they always took dinner with the old lady, and instead of walking over the ice to her house, a distance of three scant miles. these lazy boys would put on their skates and skate over.

Now it is a tradition among the country folk of Loudon Hill that every fall there is one chestnut tree loaded down with burrless chestnuts. But, as a matter of fact, nobody in the memory of the oldest inhabitant has ever happened to find the tree. The forests are thick around Loudon Hill, which might account for it, but, then, the forests are full of boys at chestnutting time, so it does seem singular that no one had ever come across the tree since Anderson Sanderson gathered five barrels of the

Of course, any of the boys would have been glad to run across the tree, but, bless you! the woods were always packed with the ordinary kind of burry chestnut, and after a sharp frost there were not many that needed opening.

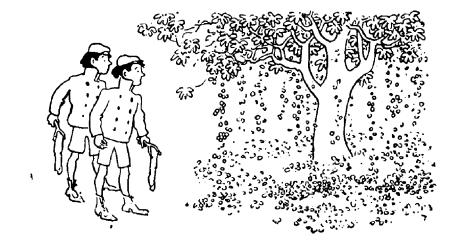

But you may be sure that the time that Mason and Jason became old enough to go chestnutting alone they determined to discover this tree and so save themselves the bother of opening any burrs

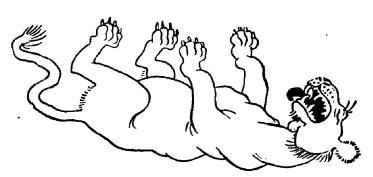

Crouching to spring at them was a panther

The morning after the first hard frost. just as soon as it was light, they got out of bed and actually dressed without washing, they were so eager to begin the search for the burrless tree. Forgetting to put on their blouses, although the air was nippy, they rushed out of the house with red worsted caps on their heads and their blue school down to the tree.'

enter the woods that morning. The enough, each boy got a pricker in his ing and waiting for the boys to step

And as soon as she fell every nut on the tree dropped to the earth.

squirrels were chattering orders to each | finger, because those particular burrs to get ahead of visiting giants in the shape of small boys.

Mason and Jason had not gone ten rods before they came on a great tree. almost bending beneath the weight of chestnuts. Now, boys who weren't so fearfully lazy would have tumbled over each other in their eagerness to get the bushels of nuts that lay upon the ground or clung to the open burrs as if they were afraid to drop, but these lazy bones both said. "Shucks. We wouldn't stop for that kind. Fancy having to climb up a tree and shake it to get some of them down." "And get needles in your hands," said Mason; "or perhaps slip out of the tree." said Jason.

So they pressed on. At first the squir-

rels shouted to each other when they "Look out! Here saw them coming: "Look out! Here come two humans," but after awhile they seemed to understand that the boys weren't after squirrels, but after burr-less nuts, and they chattered derisively at them as much as to say: "We've seen lazy people before, and they never got just what they wanted."

After an hour's fruitless-or perhaps I should say nutless—search the woods began to resound with the voices of other boys, who were taking advantage of Saturday holiday to fill up their bags and baskets and pails,

Bardwell Studwell, Stillwell Stockwell and Howell Newell came upon the two boys in the course of their wanderings. Each of the trio had a bushel bag half full of the nuts, almost as big as the Italian kind. "Hello, boys." said Bardwell Studwell. "Why ain't you picking up nuts; too hard work?"

'We're hunting for the burrless tree,' said Mason and Jason.

"Oh. chestnuts!" said Stillwell Stock-ell. "Every year some idiot kid does that, but it's just a hundred years this fall, my grandfather says, since the tree was found.

"Why, what more do you want than all these nuts?" said Howell Newell.

"Why, half the fun is knocking 'em out of the burrs," said Bardwell Studwell.
"Work isn't ever fun," chorused Ma-

bags in their hands. "If there are a they began to be awfully hungry, but lot," said each twin to the other—for if they were lazy they were also multhey began to be awfully hungry, but they were both twins-"we'll get papa ishly obstinate and they wouldn't go the tree out to the high road, some miles to harness up Ned and take a harrel back to get anything to eat. They ate a handful of ordinary chestnuts that reach of their house. They were actually the first boys to they deigned to pick up, and, queerly

other, for the winter storing began that were not quite open. This made them day and they foresaw a hard day's work more than ever determined to search for the burrless kind.

We'll make those boys look sick when we come home to-night with several flour barrels full of nuts." said Mason.

"Why not sugar barrels? They're larger," said Jason.

"Heavier to lift." replied Mason. Flour barrels will hold all we want.'

All the afternoon they wandered. They could hear the shouts of happy boys and could see their playmates staggering along under heavy loads of the finest nuts that ever grew around Lou-don Hill, but they still scorned to give up their errand and pushed deeper and deeper into the forest.

Once they saw a deer, who fled in a fright, and rabbits innumerable leaped across the path in front of them, while partridges and quail flew about in profusion. Finally the chestnut trees began to diminish. Oaks and pines there were in abundance, but they seemed to have passed out of the chestnut belt.

We've come too far. Let's go back." said Mason.

"No: it's more likely that the tree is not among the others." answered Jason. so they went on. But they were so tired. And so hungry. And so depressed. They had not walked as far in their lives, and their leg muscles swelled up in resentment of the task imposed upon

It must have been close to six o'clock; ertainly the beams of the sun were almost horizontal when Mason said, joyfully, "There it is!"

At the same instant Jason uttered a cry of fear, for crouching to spring at them was a panther. She had been lying on the outstretched limb of an oak, taking an afternoon nap, and she had awakened just in time to see her supper coming to her.

"Here's luck." thought she, and crouched to spring.

But if the twins were lazy, they were also plucky. And there were no boys on Loudon Hill who were such masters never saw so many in my life. Well, if in the use of the deadly sling. Both you must go, good luck, but you'll find boys sprang behind trees and drew out the help of a coal shovel, to fill seven it easier in the end to get what nuts their slings at the same time. They barrels with the nuts. He left the panyou see and not hunt for the other kind." always carried a pocketful of bullets, ther, because Mrs. Nason bated cats of and they lost no time in loading up.

There was the tree, just laden, so that it bent and creaked with the weight of son and Jason, and away they walked with eyes peeled for the burrless tree.

They had foolishly come away without any breakfast and long before noon needed but a tap on the trunk of the tree to liberate them all. And, better yet, a well defined wagon path led from distant to be sure, yet still easily within

But there was the panther still crouch-

from behind the trunks. I tell you that such plucky little fellows deserved to succeed, and as far as the panther was concerned they did. They watched their chance and just as she closed her eyes thinking she must have dreamed that she saw two little boys, and wishing to dream again, they slung their shots and the two bullets joined forces and penetrated her brain and she fell off that branch as dead as a door nail or even a window nail.

And as soon as she fell every nut on the tree dropped to the earth. Whether her fall jarred them off, or whether she was the guardian spirit of the nuts and at her death they were at the mercy of anyone who chose to gather them, will never be known, but there is no doubt that the boys ran gleefully under the tree and filled their blue bags in less time than it takes to say boo to a red-headed woodpecker, and you know how little time that takes.

Mason always carried a ball of very fine thread in his pocket and he took it out and tied one end of it to the tree and then they started for home, unwinding it as they went, so that they could find their way back. Just as they got half way home the ball gave out.

By a curious chance Jason always carried a ball of very fine thread in his pocket, and he tied his to the end of the other and they continued their home run and met their father just about starting to look for them with Ned and the big wagon.

"We've found the burrless tree," said both together, "and we killed a panther."
Old Grandpa Nason was standing in
the gateway. "That's just what An-

Unwinding it as they went.

derson Sanderson did the time he got the nuts. I've heard my father tell of it time and again. You're smart boys."

The barrels were soon put on the wagon and Mr. Nason whipped up old Ned, and following the thread, they came in course of time to the tree.

Mrs. Nason had thrown a few apples and a loaf of bread into the wagon, as she thought the boys might be hungry. She had not worried, as she had guessed what they were doing. The twins ate the food as if it had been a Thanksgiving dinner.

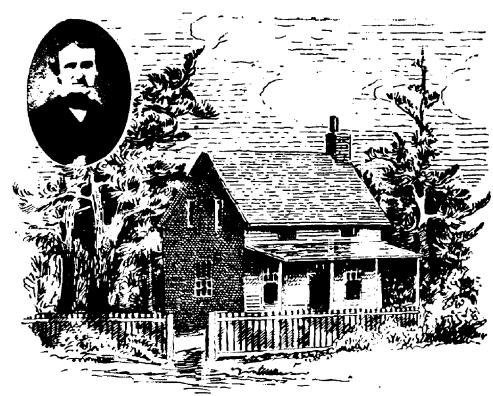

It didn't take Mr. Nason long, with ther, because Mrs. Nason hated cats of all kinds.

On the way home they met Kneeland Vreeland, and when he saw the seven barrels of burrless nuts he congratulated them. "Although my eight barrels are burrless now and I haven't a pricker to show for it, it's a great chestnut year."

The twins did not say that they had secured any prickers themselves were really too tired to say anything.

That evening their mother boiled and roasted a lot of the nuts and they were very good; no better than ordinary nuts.

(Continued on page 112.)

EDGAR ALLEN POE AND HIS BIRTHPLACE

erous, but from the many-sidedness of thrust aside. his character, they are conflicting in

Biographies of him are num- decorum outraged, of opportunities

Like all such men, in the few rifts

athwart his cloudy life, he felt all the wild thrill and exultation, which ofttimes has a glamour surpassing that which comes from the most serene happiness.

Probably of all the periods of his tempest-tossed career, Poe came nearer to knowing true bliss whilst sheltered by the lowly roof of the cottage amid the fields of Fordham. Here with his young wife, the charming Virginia Clemm, he lived, frugally no doubt, but happily. From first to last Virginia clung to him devotedly. She forgave his every fault, and lauded his toil and worshiped his genius and himself. Whatever illfavor Poe met and deserved from the outside world, he found nothing but sweetness and light at home-Virginia

'Picked out the true meaning from mistake.

Praised effort in the stumble, laughed, 'well climbed,'

When others groaned, 'none ever groveled so.

She died. The sweet bulwark that had intervened, if only for a time, between the poet soul and the wolf of the world, and Poe was desolate. I am not of those who find overmuch to pity in him; my sorrow and pity are all for her.

Yet Poe-as far as his selfish nature could—loved her. Thus he wrote in memoriam:

And the moon never beams Without bringing me dreams Of the beautiful Annabel Lee; And so all the night tide I lie down by the side Of my darling, my darling, my life and my bride-

In her sepulchre there by the sea, In her tomb by the sounding sea."

************ Boys and Housework

SUSAN BROWN ROBBINS, IN "GOOD HOUSE-EREPING,"

On the first morning of my visit, as we arose from the table, I was a little surprised to see the young son of the house, a boy of sixteen or so, quite as a the table. My wonder grew as I saw the through the dish-washing, and seemed and blankets on his bed and put the to call his own. to know where all the dishes belonged. His mother and sister were not very strong, and what he did for them was really a help and was always done cheerfully. One day his sister had a headache and as he saw her starting upstairs to make the beds, he said, "I have made my bed, so you won't have to go up to my room." As his room was on the third floor, this was a help, and his sister knew that the bed was made as well as she herself would have made it.

No doubt his cheerfulness and thoughtfulness resulted from his naturally good disposition, but the ability to do the work so that it was a real help and rehef could not have come by nature, but must have been the outcome of careful! training. The more I thought of it, the tione I admired that mother's wisdom it teaching her son to be a good houseke per, and I thought of the blundering w in which many men help about the ise.

i know of another case where a mother s in poor health and her four sons, all the housework, even to the washand ironing. What is more, they all w up to be exceptionally smart men. y it not be that a knowledge of houserk and the habit of doing it well is! tually a help to a man in his work the large outside world? It is often-le things that make the difference been success and failure, and houserk is something in which one has to careful about little things.

Probably many mothers think there is need to teach their boys housework. it it seems to me that it is more necesry than some of the studies they have go through with at school. Most men some time in their lives are called con to help in the house, and if they ii) wise training when they were young. they will be much more likely to give that help efficiently and without grumbling.

In families where there are more girls

than boys it is still well for the boys to know how to do certain things properly. such as making beds, sweeping, doing dishes, and cooking a few simple things. Even if there seems to be no prospect that such ability will ever be of use to the boy, the time may come when he will rejoice in its possession.

There is one thing which it seems to me that every boy should be taught to do as regularly as he wakes up in the matter of course, begin to help clear morning, and that is to open all the windows in his room, providing it does handy way in which he assisted all not storm, and spread open the sheets

pillows where they will air. Neatness and hygiene demand that this be done. and if he does it, it takes but a moment and it saves some one else a trip to his room for the purpose.

Every father will do well to give his boy a piece of land to cultivate, with the understanding that the returns shall be the boy's own, if he cultivates it well. Many a fine boy has left home and been ruined, simply because his hard-fisted father would not let him have something

A HAPPY FAMILY

CHILDREN OF SUPERINTENDENT OF STREETS WHEELER, OF BOSTON, AND THEIR DOG.

Photo by C. J. Horner, Boston.

main line to be clear so it could resume its progress. Halpin, the engineer, was making a cursory examination of the driving wheels, oil can in hand, while Kyson, the fire-

man, leaned indolently half through the open window. It was near mid-day, and a few buzzards floated in the upper air on apparently motionless wings. There was not a cloud in the sky, and not a whiff of wind to stir the palmettoes, which lined the track on either side. With one exception, the few loungers on the freight house platform had removed their hats and were now using them in a listless, desultory manner as fans. The exception was a boy of twelve or thirteen who was vigorously wheeling freight from the open platform back somewhere into the shadowy depths

"I do wish that boy'd quit workin' a spell," complained one of the loungers, irritably. "Seems like hit jest nachelly makes me tired lookin' at him. Folks no business workin' sech hot weather.

Most of the loungers nodded approval of this sentiment; then one of them took a short pipe from his

'No use wishin' that boy to quit work," he declared, conclusively. "He loves hit like we do our vittles. I 'low he don't get nothin' for rushin' that freight injest does hit out o' pure contrariness. Been here two weeks now, an' I ain't seed him sit down once like a sensible Christian critter-no, sir; not once! Plumb distracted to work from sun-up till night come, an' don't seem to make no pertic'lar difference if hit's pay work or no. Jest keeps naggin' at somethin' continual." He held up his pipe and looked at it in a puzzled, reflective manner; then, shaking his head as though giving it up, went on: "But hit cert'n'y is 'stonishin' how much pay work the chap do pick I have heerd he's laid by more'n two dollars

The conductor of the freight had been walking back and forth, glancing impatiently at his watch from time to time. Hearing the last few sentences, he stepped in front of the loungers with the air of a man seeking interest for enforced leisure.

"Who is the boy?" he asked.

"Prin Cottrell, he calls hisse'f," answered the at Palmetto, puffed impalounger, straightening up a little at finding himself tiently as it waited for the the center of attention; "that's all we know, 'ceptin' he's been here two weeks now an' steers for work like hit was jest nachelly the best fun in the world."

"I have heerd he was p'inted to meet his paw here. said a little sallow-faced man who sat somewhat apart from the rest; "least ways, that's what my sister, who pervides his vittles, says. She read a letter which come to him, an' which said his paw was jest out o' the pen'tentiary to Richmond, an' that the two was to meet here an' hunt for gov'nment land to raise oranges an' truck an' sech. The letter seemed to say the man was put in on somebody else's 'count, an' wa'n't to blame hisse'f."

"H'm! Did the boy show the letter to your sister?" asked another lounger, significantly.

The little man shifted his eyes from the group and allowed them to wander about uneasily until at last they became focussed upon some indeterminate object in the distance.

"No, he didn't," he muttered, sullenly; "folks as keeps folks should know somethin' about 'em."

At this moment a brakeman approached the conductor. "Something's been poundin' on the door of car No. 410," he said, hurriedly. "I reckon a tramp's 'lowed himself to be locked in so's to get a free ride."

"Oh, no; I reckon not. We looked the train over pretty sharp before we started. However we'll go

As they moved away there was a sudden rush and roar, and the through express flashed by and was almost instantly lost among the palmettoes. The conductor of the freight motioned to his engineer.

"Wait a minute," interposed the brakeman. "Let's see what that poundin' means first.'

"Well, hurry! We've no time to spare now. Here's the key to the car. If it's a tramp, fire him."

The brakeman caught the key, which was flung to him, and a moment later was sliding back the door of No. 410. And he was not very much surprised to find a haggard, unshaved face opposite his as the door moved back.

"Come! out with you!" he cried, roughly.

"Is this Palmetto?"

"Yes. Out with you, I say!"

A sudden transformation changed the haggard face into one of glowing, eager anticipation.

"Thank God!" Then apologetically, as he sprang to the ground, "I haven't a cent to pay you, but I couldn't help it. My boy is waiting for me here, and 1 could never have walked from Virginia, and there was no chance to work and earn the money."

But the brakeman only waved his hand impatiently. A shrill, warning whistle came from the head of the train, the brakeman sprang to his position, the conductor to his, and then the long train of heavily loaded cars began to glide slowly in the direction from which the express had come.

As the new arrival approached the freight platform there was a slight ripple of curiosity among the loungers. But above their unfavorable comments came a rapturous cry of "Father! oh, Father!" and the voluntary freight mover and the impecunious traveler were clasped in each other's arms.

But only for a moment, then there were a few hurried words of explanation, and the boy sprang like a deer after the receding freight. It was still moving very slowly, and little by little he lessened the distance between them. As he came opposite the rear car he looked up at the conductor, who was standing in the open doorway of his caboose.

"Here's - something - toward - father's fare." he shouted, as he threw a small package into the car past the conductor. "I'll pay—the—rest—sometime." Then the train began to gather headway, and the boy was left behind. When he was out of sight the conductor picked up and examined the small package. It contained two dollars and eighty cents in silver and three coppers.

An Incident in the Life of General George Washington

It was the spring following "Valley Forge," and the Continental army was moving out of winters quarters. And what an army! Some without shoes, some without hats, all without proper clothing: yet they marched with heads erect and with martial air as only men can do who are fighting for their homes and their liberties. In the hearts of these rugged men through a century and call our forefathers.

One of this heroic band was above the ordinary in culture and refinement. He had at the first call given opened his eyes to find before him the benign face his wealth, and finally, when he had nothing more to of the Commander-in-Chief of the Continental army, with honor when peace was declared.

give, had offered himself in the cause of his country. He was without shoes, bareheaded, and bent under the weight of a heavy flintlock. His face showed determination in every line. His eyes were of clear came feebly: "General, I have been sick, and for two bluish-gray, looking out from under heavy brown days I have had no food; I am starving to death. I His hair, which was dark brown, long and having a tendency to curl at the temples, was caught with a bit of ribbon into a queue behind. His name was Phineas Davis, and he was but a type of the patriot of his day.

Private Davis was ill. Weakened and half-starved. he staggered again and again under the weight of his gun. His comrades relieved him of the burden, and for a time he kept his place in the line, but as the day flowed the lifeblood of a nation yet unborn. These advanced his strength gave way and he fell exhausted are the men whom we are proud to look back to under a tree by the roadside. For a time, he knew not how long, he lay unconscious; then he was aroused by someone touching his shoulder. He

As if by instinct, his wasted hand was raised in salute. Washington smiled, and in his kindliest manner asked why he was so far behind the column. The answer am not afraid to die, but I would prefer the field of battle."

"My man," said Washington, "I will gladly divide my rations with you," and taking from his pocket some grains of parched corn he gave them to the private, with a sip of wine from his flask. Then lifting the emaciated form onto his horse, together they journeyed until they came up with the army.

On that short ride Washington came to know the man whose life he had saved and recognized his noble character. As soon as Private Davis was strong enough to leave the hospital, where General Washington had placed him, he was given clerical work under Hamilton, remaining there until discharged

FEBRUARY 15. 1898: DESTRUCTION OF U. S. BATTLESHIP MAINE IN HAVANA HARBOR. The Maine, under command of Captain Charles D. Sigsbee, on a friendly visit to Cuba, while anchored in Havana harbor, was blown up by what was afterward proved to be a torpedo fired from the shore. The number of officers and men who lost their lives was 26. Relations between the United States and Spain had been somewhat strained owing to the barbarous treatment of the Cubans by the latter, and the destructon of the Maine

Watt had recently improved. Studled in Paris for a number of years and invented a torpedo, which was rejected by both the English and French governments. The U. S. government at first looked with favor upon his invention, and appropriated \$5,000 tor further experiments, but finally concluded that it was of little importance. In 1807 he, with the aid of Robert R Livingston, perfected his steamboat, and in September of that year the Clermont made a successful voyage from New York to Albany and back. Steam navigation was thereby proved a success. He afterwards built ferry-boats to run across the North and East Rivers, as well as several vessels for steamboat companies. The U. S. government appointed him, in 1814, to superintend the construction of floating batteries, and he built the first war steamer, called the Demologos, which attained the speed of two and a half miles an hour. After Fulton's death, she was named Fulton the First and was used as a receiving ship at the Brooklyn navy yard until 1829, when she was accidentally destroyed.

FEBRUARY 6, 1778: ALLIANCE BE-TWEEN THE UNITED STATES AND FRANCE. The treaty of alliance directed against England was signed at Paris by Benjamin Franklin. Silas Deane and Arthur Lee, Commissioners on behalf of America, and by the Count de Vergennes, tepresenting France.

FEBRUARY 6, 1862: GENERAL TILGH-MAN SURRENDERED FORT HENRY TO THE FEDERALS UNDER GENERAL TO THE FEDERALS UNDER GENERAL GRANT. This victory, in which the Union sunhoats under Commodore A. H. Foote played the most important part, was of considerable importance, as it opened the way to the capture of Fort Donelson and the probable breaking up of the Confederacy in Kentucky, Tennessee and Missouri. The Federal casualties were two killed and thirty eight wounded, twenty nine of the latter being scalded with steam by a shell piercing the boiler of the gunboat Essex.

DEBRUARY 8, 1861: JEFFERSON DAVIS CHOSEN PRESIDENT OF THE SOUTHERN CONFEDERACY. In January projous he had resigned his seat in the Societe and had thrown in his fortunes with the Confederates. In the following No. mber he was elected President for six house, but in April, 1865, he was forced to flow Arrested in Georgia, he was taken to Fortress Monroe and confined on a charge of high treason. He remained there for two house, was then released on bail, but was was then released on bail, but was be - r tried.

FURRIVARY 9, 1867: NEBRASKA AD-METTED TO STATEHOOD. President Johnson vetoed the bill, but it was passed to both houses; in the Senate by a vote of Party to nine, and in the House of Rep-matrices by a vote of one hundred and by new to forty four. to nty to forty four.

EBRI'ARY 9, 1873: GOVERNOR JOHN GEARY DIED. He was a civil enters in the Mexican war. Was first mander of the City of Mexico after its ture. Subsequently went to California he was appealed for property of Yangas. he was appointed governor of Kansas. k of brigadier general, and at the con-don of Sherman's march to the sea was mole military governor of Savannah. He melected governor of Pennsylvania in

LEBRUARY 12, 1809: ABRAHAM LIN COLN BORN IN LORNE COUNTY, KEN-TUCKY.

General Taylor was only 5,000 men. Mexican loss in killed, wounded and captured was 2,000, while the Americans lost 746. The son of Henry Clay was among those slain.

The had constructed a "cradle" for twenting grain in the field. His first letent for an improved reaper was taken in 1834, and in 1845, 1847 and 1858 other letent for an improvements were patented. The son of Henry Clay was among those slain.

FEBRUARY 24, 1815: ROBERT FULL TON, ENGINEER, DIED IN NEW YORK. Born in 1765 and received a common-school education. Learned miniature painting studied engineering and familiarized himself with the steam engine which James

FEBRUARY 16, 1862 FORT DONELSON CAPTURED BY THE FEDERAL FORCES UNDER GENERAL GRANT. There were captured of the Confederates 13,500 men. 3,000 horses, 48 field-pieces, 17 heavy guns and 20,000 muskets, besides a large quantity of military stores. The Confederates also lost in killed and wounded 1,237 men, while the Unionist casualties were considerably more.

casualties were considerably more.

FEBRUARY 17, 1815: TREATY OF PEACE BETWEEN THE UNITED STATES AND GREAT BRITAIN RATIFIED AT GHENT, BELGIUM. Russia's mediation was refused by Great Britain, which offered to treat for peace directly with America, which was agreed to. After several months of discussion the treaty was signed by John Quincy Adams, James A. Bayard, Henry Clay, Jonathan Russell and Albert Gallatin on behalf of the U.S., and Lord Gambier, Henry Goulburn and William Adams, Commissioners for Great Britain. Britain.

FEBRUARY IS, 1865: GENERAL ROB-ERT E. LEE APPOINTED GENERAL-IN-CHIEF OF THE CONFIDERATE ARMIES. President Davis had inter-fered so much in the military affairs of the Confederacy that the project was seriously mooted of making General Lee dictator. Davis was saved this humiliation by the appointment of Lee to the supreme command of the armies of the South.

FEBRUARY 22, 1722; GEORGE WASH INGTON BORN.

INGTON BORN.

FEBRUARY 22. ISID: FLORIDA PURCHASED BY UNITED STATES FROM SPAIN FOR \$5,000,000. The interference of Spain with American citizens in Florida, and her manifest partiality for Great Britain, shown in sheltering her subjects, inciting the Indians to war and allowing an expedition to be fitted out at Pensacola against America, was a source of great irritation to the latter country. General Jackson had entered Florida to put down the Seminole Indians, and being assured of the encouragement given the Indians by the Spanish governor of Pensacola, entered and took possession of that town. Spain protested, but Jackson was upheld by his government. An inquiry was instituted, but pending the result Spain signified tuted, but pending the result Spain signified her willingness to settle the matter by a sale of the territory.

FEBRUARY 22, 23, 1847; BATTLE OF BUENA VISTA MEXICANS UNDER SANTA ANA TOTALLY DEFEATED BY GENERAL TAYLOR. Mexican army numbered 20,000 men, while the force under General Taylor was only 5,000 men. Mexican loss in killed, wounded and captured was 2,000, while the Americans lost 746. The son of Henry Clay was among those slain.

FEBRUARY 25, 1888; HOUSE OF REP-RESENTATIVES VOTED TO IMPEACH PRESIDENT JOHNSON. The vote stood 126 to 37. There were altogether eleven articles of impeachment, consisting of usurpations of office and violations of law. The Senate sat as a High Court of Im-peachment, with Chief Justice Chase as president. The result of the trial was acquittal by one vote less than the two thirds majority which was necessary for conviction

FEBRUARY 26, 1869; FIFTEENTH AMENDMENT TO THE NATIONAL CONSTITUTION ADOPTED. The amendment is as follows: "Article XV., Section 1. ment is as follows: "Article XV. Section 1. The right of citizens of the United States to vote shall not be denied or abridged by the United States, or by any state, on account of race, color, or previous condition of servitude. Section 2. The Congress, by appropriate legislation, may enforce the provisions of this article."

FEBRUARY 27, 1874: WOMEN'S WHIS-KEY WAR. In order to suppress the liquor traffic, the women of New York, Ohio and throughout the country congregated on the streets and entered saloons, where they prayed and sang hymns. Much excitement was caused by the unusual proceedings.

WHAT BOYS ARE DOING

A Musical Prodigy.

Maurice A. J. Warner, a six year old boy, is creating a furore in musical circles in Kansas City, Mo., where he lives, on account of his wonderful skill with the violin. The lad has been practicing only two years. His teacher is W. von Rola Macielinski. The boy shows wonderful talent when not in his master's presence, but when in his presence his work is marvelous. There are those who think that the wonderful results are accomplished by mental telepathy. Those who have seen the two together say that there appears to be a sort of hypnotism exercised over the boy. When playing he stands erect, his eyes fixed on his master, his movements following every idea expressed by the teacher's eyes. The teacher gives no explanation of the phenomenon.

The boy's musical education was begun by his mother, and the story is told that when two years of age he could read

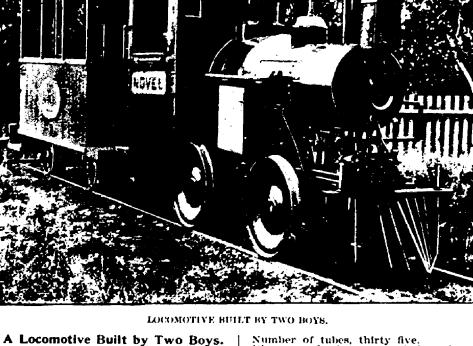

MAURICE A. J. WARNER,

music and play some simple melodies. Two years ago Macielinski became paralyzed below the hips and had to be carried from room to room. At about that time he went to live in the home of Mr. and Mrs. Warner, parents of the boy. He then undertook the education of the little violinist, with the result as stated. His influence over the child has been of gradual growth.

The boy's teacher, in a personal letter to THE AMERICAN BOY, says that there is no mesmcrism about the case. He says: "I explain it as the influence of a very strong mind and inspiration over a less powerful but, believe me, a

Young Warner made his debut before a Kansas City audience the evening of December 5, in the Academy of Music, and the newspapers pronounced the child wonderful. During the performance the child's master sat beside him on the platform and never took his eyes from the boy's face. His best number was the Concerto No. 6 (First Movement) by Rode, a long composition every note of which had been committed to memory. In passages where strength and expression and precision were demanded, the bowing was remarkable.

It is useless to attempt to predict the future of such a boy.

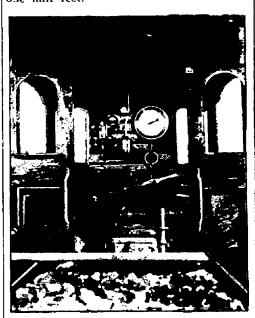

Edwin 11. and Ernest C. Warren, the former sixteen years of age and the latter seventeen, are two Yankee boys af Montvale, Mass., with a decided talent for making things. They first rigged up an elevator in their father's barn, and then other contrivances were thought of and successfully put into operation. Then they conceived the idea of building a lecomotive. As the tracks of the Boston & Maine Railroad ran back of their home, they were acquainted with a good many railroad men. From them they got some cast-off parts of engines. From a street railway company they got the wheels of an old borse car. They found the boiler of an old stationary engine, which they covered with felt and sheet iron, and then they secured a small oscillating engine from a machine shop, which was geared onto the forward wheels by means of a chain. Then they built a tender which carried water and coke in its forward part and in its rear part passengers. Steam brakes were constructed, which worked perfectly. The street car company loaned the boys a lot of old rails, and finally engine. They ounger brother acts as conductor, while the older one cent for four trips. The younger brother acts as conductor, while the older one runs the engine. They carry sometimes as high as twenty passengers at one trip, and on holidays have been known to carry as many as two hundred and fifty persons. It takes three bushels of coke to supply and on nonaxy nave been known to carry as many as two hundred and fifty persons. It takes three bushels of coke to supply steam for one afternoon, and the engine can travel at the rate of ten miles an hour. Here are some of the dimensions:

Length of engine and tender, twenty two feet

Length of engine alone, fourteen feet, Height to top of cab, eight feet three

inches.
Length of boiler and smoke box, seven and one half feet.

Diameter of boiler (outside), two and one half feet.

INTERIOR OF CAB.

Number of tubes, thirty five. Diameter of tubes, one and three fourths

Inductor of tubes, one and three fourts inches.

Steam pressure, fifty pounds.

Brakes, steam brakes.

Diameter of wheels, four.

Gauge of track, three feet.

Width of cab, four feet six inches.

Weight of engine and tender when empty, three thousand eight hundred pounds.

It ought to be said that the boys started to build the engine when the younger was thirteen and the older fourteen, and in the three years that have elapsed since they started they have rebuilt the engine almost entire two or three times.

Youngest Street Railway President.

Onolaska. Wis., claims to have the youngest street railway president in the United States in the person of Earl Pooler, president of the Onolaska and La Crosse street railway company. The young man has just attained his majority. The company operates a street railway in Onolaska and a trolley line to La Crosse, a distance of four miles.

Four Year Old Campaign Singers.

The four year old twin sons of Mr. and Mrs. James Clarke, of Columbus, Ind., have the distinction of being the youngest campaign singers in that state. The boys possess remarkable talent, being able to sing by note almost any song at sight," says the New York World. Their voices are of singular strength and volume. They also play the guitar, organ and harp. They were campaign uniforms and sang at most of the Bryan and Stevenson rallies in their

A Vice President at Thirteen.

Cornelius J. Simmons is but thirteen years of age but he is vice president, so the Chicago Journal says, of one of the street railway companies of the United States, viz., the Collins Park Railway Company of Atlanta, Ga. He not only attends to the many duties of his office. but is also practical enough to be able to operate a motor car, and has worked on a car both as motorman and conductor. He had served for some time in the shop, and has a thorough knowledge of the complicated machinery which makes up the plant. He takes a special interest in mechanics and electricity. At the last meeting of the railway company he was regularly elected to the position of vice president. His father is head of the company.

A Boy Electrician.

Herbert W. At-kinson, of Grand Rapids, a boy of fourteen, began when he was eleven years old to study electricity out of books which he got from the Grand Rapids Pub-

he got from the Grand Rapids Public Library By this means, and with the advice of a friend who is an electrician, he has attained to considerable efficiency in electrical work. He has fitted up a workshop for himself in his father's house, where he has installed several electric bells, and other electrical appliances, which e given perfect satisfaction. He is ten called upon to replace or repair the operfect work of older workmen. He has aulte a neat little sum put away. The lower workmen as anything of the kind he ever work. The boy expects to go to college at take a course in Electrical Engineer—He stands well in his studies, is someting of an athlete, and is an excellent amist. In other words, he is a typical Merican boy.

down the street, and knew that in a moment it would endanger the lives of two small boys. Without assistance he runshed to where the boys were sitting, near the curb, unconscious of danger, and pulled both just out of the course of the runaway.

The act was bravely done, and none too soon, for the vehicle attached to the runaway. The injury was slight, however, and in a short time the young man had recovered. His action was witnessed by only a few people, but those who saw it say that Ryan is a young hero.

Two Bright Boys.

Two Bright Boys.

The Work of the Public Education Association in Supporting Boys' Clubs.

An organization in New York City, known as the Public Education Society, supports boys' clubs, which meet in two of the public schools in the tenth ward on Saturday nights. Each of the clubs has about 150 members, the boys varying in age from 12 or 13 to 20. They are typical children of the east side, and have few chances for diversion except at these clubs. The association is supported by very small dues from the members and by voluntary contributions. At the club rooms they are furnished with means of enjoyment in the way of athletic exercises, basket ball heing the principal game.

East Boston Boy's Daring Deed in the Face of a Runaway.

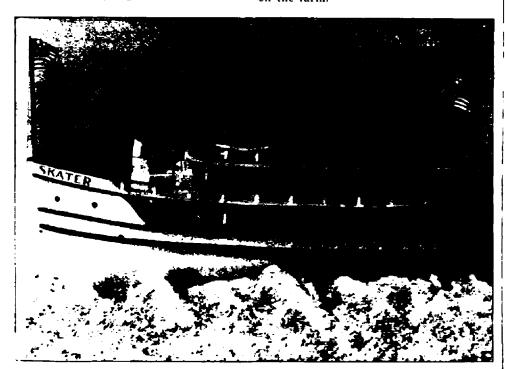

A brave and fearless heart beats within the breast of a young East Boston lad named Edward Ryan. Recently, while standing near the foot of Liverpool street, he saw a runaway horse dashing down the street, and knew that in a mo-

Here are two bright little fellows whom we are sure will make their way in the world. The older one is J. Willard Bailey. He is twelve years old. During last summer he sold water cress at three cents a bunch. He worked odd days on a farm at fifty worked odd days
on a farm at fifty
cents a day, getting up at five in
the morning and
going out on his
wheel from the
city to the farm
before breakfast.
He earned altotis way Next sum-

gether ten dollars in this way. Next sumgether ten dollars in this way. Next summer ne will earn more.

The other little fellow is Louis Elkins, who is five years old. He was adopted when but three months old by Willard's uncle and aunt. He was then a neglected, forsaken little waif. The little fellow, however, has made his way into the hearts of every one. Young as he is he makes himself useful, doing errands, hunting leggs, feeding chickens, and doing numberless little things that a small boy can do on the farm.

A MODEL BUILT BY A BOY.

Rodel of a Boat Made with a Penknife by a Boy.

his pretty model of a lake passenger at consists of three hundred and ten ces, every one of which is either mortised glued to its place. Neither nail nor pin is used. The model is two feet long and the shalf inches wide. The height of the boat ten inches; of the pilot house four and half inches; of the doors two inches, windows are real glass; the smoke-ack is of brass tubing, and the railing of he windows are real glass; the smoke-ack is of brass tubing, and the railing of the deck is of screen wire. The model is inted in drab and white. The builder is thest Redmond, a grocery clerk, whose me is at Ashtabula, O. He sold the model to twenty dollars and is now at work on her penknife inventions. He has made me money working at odd moments in its way.

"I guess that ain't me," said little talph as he gazed earnestly at a photo-raph of himself. "What makes you think it isn't?" asked his mother. "Cause it's standin' still too long to be me," was the reply.

An Anti-Cigarette League.

The boys of the sixth grade of the Carlton School, Wichita, Kas., have organized an Anti-Cigarette League. All the boys in the grade have signed the pledge, the principal part of which forbids the smoking of cigarettes. The boys have elected officers and will hold meetings, incidentally learning something of parliamentary practice. The officers are:

President-Harry Brown. Vice-President-Albert Oliver. Secretary—Douglas McNicol. Treasurer-Fred S. Whitlock.

THE ORDER OF THE AMERICAN BOY

A National Non-Secret Society for American Boys. Under the Auspices of "THE AMERICAN BOY"

Object:—The cultivation of manliness in muscle, mind and morals.

The object more definitely stated: To promote mutual and helpful friendships among boys; to give wider circulation to high class boy literature; to cultivate in boys physical, mental and moral courage, and develop them along social, intellectual and moral lines; to cultivate purity of language and actions; to discourage idleness, and encourage honest sport and honest work; to cherish and emulate the examples of great and good men; to inculcate lessons of patriotism and love of country; to prepare boys for good citizenship; to cultivate reverence for the founders of our country, and to stimulate boys to all worthy endeavor.

Object, Plan of Organization, Etc.

Object, Pian of Organization, Etc.

We refer readers of this paper to its January number for an outline of the plan of The Order of the American Boy. The following is a brief summary of the important features:

The Order of the American Boy is a National, non-secret society for American boys under the auspices of THE AMERICAN BOY. All the members of the Order in a State comprise a Division. Divisions are divided into Companies. A Company is comprised of five or more boys, one of whom is the Captain. Each Company selects its own name, to which the Executive Officers of the Order add a number. Any paid-up yearly subscriber to THE AMERICAN BOY may organize or become a member of a Company. Existing societies, whether for literary, athletic or business pursuits, may join in a body, retaining their present names. The Order as a whole is governed by three Executive officers and an Executive Council made up of men and women. The Executive Officers are a President-General, a Secretary-General, and a Registrar-General. The Executive Council will be at Put-in-Bay, Ohio, July 5, 1901. The "Officers of the Line" are boys. The highest office is that of General-in-Chief. The next grades are Brigadier Generals and Major-Generals. The offices are filled by appointment, the Executive Officers having the appointing power. The Officers of the Line named are chosen from among boys who distinguish themselves as scholars, workers, inventors, athletes, orators, travelers, scientists, heroes, etc. The Division officers are Commanders and Lieutenant Commanders, These are also appointed from among the boys of the Order. The Executive Council is empowered to confer degrees, just as do societies among men: as, for instance, a degree, for good scholarship; a degree, for good scholarship; a degree, for manly deportment in every day life, etc., etc. The January number of this paper gives the list of degrees a boy has appears by the figure in parenthesis after his name where it is mentioned in these pages. The number of degrees a boy has appea

mer of 1900; Herbert Botsford (6), Grand Rapids, Mich., Hero of reservoir disaster July 2, 1900. Major-Generals—Ted Chalfant (6), Wei Hien, China, a little hero in the "Boxer" outbreak: Alfred Smith (5), San Francisco, Cal., heroism: Dennis Weiss (5), Detroit, Mich., heroism, spring of 1900; Jno. E. Swearngen (6), Cedar Springs, S. C. A. blind boy of splendid schol record; Ambrose Steinert (5), New York city, heroism, Sept. 2, 1809; Wm. W. C. Torrance (5), Atlanta, Ga., a boy genealogist; John R. Hayes (5), Farmington, N. H., builds a steam engine; George Lewis Ferry (5), Kenosha, Wis., heroism, March 16, 1900; Miss.

How to Form a Company.

A company may consist of any number of persons, young or old, more than four, and each member of the company must be a yearly subscriber to THE AMERICAN BOY. If you can find five boys in your neighborhood who are already subscribers to THE AMERICAN BOY, you can at once form a company. If you cannot find that many who are already subscribers, go out and find boys who are not subscribers and induce enough of them to subscribe to make up your five. Call a meeting at some convenient place, and select a captain from a mong your number and a name for the company. This is all you will need to do at the first meeting. The Captain must then send to Wm. C. Sprague, at Detroit, Mich., the names of the members of the company, with their street addresses, and advise him as to the name selected for the company. He will then give the company a number, to be used in connection with the name, and will send to the Captain a charter for his company enabling it to act as a part of the Order of The American Boy. He will at the same time send to the Captain of the company the articles, documents, etc., mentioned in the next paragraph. The company will then be ready for work, as laid down in the monthly programmes to be furnished by the Executive Council. One boy can very easily interest four of his friends and establish a company. A company may consist of any number

What "The American Boy" Will Do.

What "The American Boy" Will Do.

The Order of The American Boy is founded by the publishers of THE AMERICAN BOY for a purpose partly selfish and partly unselfish. The publishers expect to gain an advantage from it, but they expect to give an advantage equally great to the boys of America. The Editor of THE AMERICAN BOY is the official head of the Order, and the publication will serve the Order in every possible way to further its ends and make it a power among boys. THE AMERICAN BOY will give free to every company, as soon as it has received the name and address of its Captain and members and a statement as to the name selected, the following:

A badge for each member of the company, and a special badge of distinction for its captain; a charter signed by the National officers empowering it to work as a company; a facsimile copy of the Declaration of Independence, with signatures; a small handbook on Parliamentary Law: a copy of a suggested Constitution and Bylaws, to be adopted or not, as desired by the company, and during the year a programme for each month (furnished two months in advance); prizes for best work done by companies in various lines of activity; suggestions as to athletics, books and reading, exhibitions, debates, military drill, charity work, etc.

at least four more boys to form a company and get ready for the work to be mapped out in the succeeding numbers of this paper. We want 1.000 companies organized during the year 1901.

We expect to make The Order of The American boy the most powerful and popular organization of boys that the world has ever seen. With just a little effort you can become a part of it.

Don't delay. Get in your Captain's name, and your members' names, and the name you select for your Company at once and be No. 1 for your state. Get as big a Company as you can.

We will print in each issue of THE AM-ERICAN BOY the news concerning the organizing and work of the Companies.

This is the sort of a society your parents and friends will approve of and they will assist you in getting members, selecting a meeting place, etc.

PRIZE OFFER—Every Company should have a good library of boys books. We shall send free of charge to the largest Company organized and enrolled by March first, next, ten splendid new cloth bound books for boys, costing at retail price fifteen dollars. These are not cheap, "blood and thunder" books, but first-class, up-to-date boys' books by reputable authors. Books new and handsomely bound and illustrated.

Look out for interesting news regarding the Order in our March number.

Let us report the organizing of your Company in our next number. Address all letters to

ters to
WILLIAM C. SPRAGUE.
Majestic Building, Detroit, Mich

Companies Organized.

Several Companies of THE ORDER OF THE AMERICAN BOY have organized and many more are in process of organization. The following have selected their captains and names and are ready for business:

PHILADELPHIA, PA.: STEPHEN GIRARD COMPANY, NO. 1, PENNSYLVANIA DIVISION, ORDER OF THE AMERICAN BOY, Charles II. Russell,

LITCHFIELD. MINN.: LITTLE CROW
COMPANY, NO. 1, MINNESOTA DIVISION, ORDER OF THE AMERICAN BOY,
HOWARD W. McClure, Captain.
HEBRON, NEB.: STOTTSENBERG
COMPANY, NO. 1, NEBRASKA DIVISION, ORDER OF THE AMERICAN BOY.
CAPTOIL KNODE, CAPTAIN.
OVEORD ALA: CENTERAL ION

Organize.

Every boy should now get to work and get at least four more boys to form a company ont in the succeeding numbers of this paper. We want 1,000 companies organized during the year 1901.

Boy was briefly stated in our last month's issue as "Manliness in mind, manners and morals." We have changed the expression to "Manliness in muscle, mind and morals." The result of manliness in these three directions will be manliness in manners and morals. A boy might be manly in mind, manners and morals, and yet lack health and strength of body, and this is one of the chief aims of the order.

Appointment of Commanders and Lieutenant Commanders.

Appointments as national officers are made as rewards for good work in various directions, as school work, athletics, travel, exploration, invention, etc. A list of these appointments was given in January. Appointments as Division (or State) officers are made as rewards for good work in getting subscriptions to THE AMERICAN BOY or increasing the membership of the order. Division officers are Commanders, and Lieutenant Commanders.

The following appointments have been

COMMANDERS.

Albert W. Fifield (3), Minnesota.
J. Lawrence Hirshland (3), Pennsylvania.
Chas. Gustafson (3), Illinois.
Woodford Kron (3), California.
Chas. Karkau (3), Michigan.

LIEUTENANT COMMANDERS.
Emerson T. Cotner (3), Michigan.

Change in Wording of Object.

The Object of the Order of The American
Boy was briefly stated in our last month's issue as "Manilness in mind, manners and morals." We have changed the expression to "Manilness in muscle, mind and morals." The result of manilness in these three are two of order horders, who wish to join a Company, it was to in a family, as, for instance, two or brothers, whish to join a Company, on the payment wish to join a Company, on the case of the will not be necessary for each to be a subscribers, which to obe a subscriber, will not be necessary for each to be a subscriber, will not be necessary for each to be a subscriber, will not be necessary for each to be a subscriber, will not be necessary for each to be a subscriber, will not be necessary for each to be a subscriber, will not be necessary for each to be nor the morth of the Company, in the one subscriber, but and they company on the other making up the five will in the payment of the morth is the same way, three or more in the same way three or more in the same way three or more in the same broad in making up the five will in the payment of the brothers, in the nu

Meaning, "Yours for manliness in muscle, mind and morals."

Washington and Lincoln Program.

PLAN AND PROGRAM FOR A COPANY MEETING FOR FEBRUARY

Every Company is expected to hold at least one meeting a month, at such time and place as it may select. It may adopt the program we furnish, or part, or none of it. We endeavor, however, to present a program interesting to young and old that will be worth a small charge for idmission, if the Company determines to make a neighborhood entertainment of it and sell tickets.

First, as to Meeting Place. This must suit the Company's convenience. Probably the best place will be a large room or the double parlors in the home of one of the

is often spoiled by dragging it into the night.

Third, as to Rehearsals. Be sure to have one or two good rehearsals. The Captain should have charge of these, and, if possible, have some man or woman present to make suggestions.

Fourth, as to Price of Admission. The Company may decide to charge admission for defraying expenses, or, if there are no expenses, to earn money for some Company project. Make the price reasonable. Better have twenty in the audience paying five cents than five paying twenty cents. You can get stiff paper and make tickets, or, perhaps, one of your number is an amateur printer; he can in an hour give you something nice.

Fifth, as to Performers. Give every member of your Company something to do, and if you are acquainted with any musicians, elocutionists or entertainers outside the ranks, get them to take a place on the program. This will be a good advertisement.

Sixth, as to Advertising. The editor of

tisement.
Sixth, as to Advertising. The editor of the paper in your town will gladly print free something like the following: "The boys of the Robert Livingston Company. No. 2, of the Order of the American Boy, will give an entertainment at the home of John Franklin, Thursday evening. February 22nd, at 7:30 o'clock. Admission, ten cents. Proceeds to help buy books for the Company's library." Other ways of spreading the news will suggest themselves to looys.

Seventh, as to Program. I. Salute. Promptly on time the Captain rises and taking the flag, holds it aloft, saying: "Company, attention." At these words, every member of the Company rises to his feet. The Captain then says: "Company, salute the flag." At this every member, including the Captain, brings his hand to his forehead, palm down, and lets it remain while they say in concert: "We will cherish with loving fidelity, and with unwavering patriotism, our flag." At this the Captain drops his hand from the position of "salute" and the members do the same. The flag is put in its place and all resume their seats.

resume their seats.

2. Regular Order of Business. [See under this head in another column. The "Regular Order" may be omitted, by vote

of the Company.]

"Regular Order" may be omitted, by vote of the Company.]

3. Music.

The Captain then says: "The month of February enjoys the especial distinction of being the month in which America's two greatest men were born. Abraham Lincoln was born February 12, 189, and George Washington February 22, 1732. The program for to-night has been so made as to honor these two great names."

4. Five Minute Biographical Sketch of George Washington.

5. Five Minute Biographical Sketch of Abraham Lincoln.

6. Music.

7. Lincoln's Gettysburg Address. [This may be read or spoken by a member. It contains only about 250 words. The text will be furnished free by the publishers of THE AMERICAN BOY to Companies adopting this program.]

will be furnished free by the publishers of THE AMERICAN BOY to Companies adopting this program.)

8. Sayings of Lincoln. (Slips of paper containing numbered selections from the sayings of Lincoln may be distributed (in advance of the meeting) among the members (and invited guests, if thought best), to be read at this point. The publishers of THE AMERICAN BOY will furnish the selections on application, free of charge.]

9. Music or Recitation.

10. George Washington, the Boy. [Divide among four boys the four articles on the front page of this number of THE AMERICAN BOY, and let them be read in their order.]

11. Address or Debate. Subject, "Which was the greater man, Washington or Lincoln?" [This may be a debate between two or four members of the Company, or may be an address or an essay by a member or, better still, an address by some man or woman prominent in the town or neighborhood. Boys can easily obtain the help of men and women in such a good enterprise as this. If a debate is chosen, judges should be selected and a decision rendered, or the decision may be left to the audience.]

12. Closing Remarks by the Captain, thanking the audience for attending and, if thought best, a few words telling of the organization of the Company, its plans and encouragement of all.

13. Announcements, if any.

14. Song: "America."

15. Salute. The Captain says: "Attention, Company," and the members stand. Then the command is given, "Salute." At this the members bring their hands to their foreheads, to remain there till the Captain has saluted, when the hands are dropped to the side. The Captain will then say, "The meeting is adjourned."

At all business meetings where the public are not invited, an adjournment can not be had without a motion to adjourn is made and seconded and carried, after which the salute is given.

The Athletic Department of the Order

of The American Boy.

members. Move the furniture so as to leave room for chairs in rows, with an aisle down the center. The Captain and the Secretary should each have a little table at the front, so that when sitting they may face the audience. No decoration is required excepting the American flag. This must be used at every meeting and should stand in a conspicuous place at the front. Second, as to Time. The Company should be such as to permit adjournment by 9 or 9:30 at the latest. A good entertainment is often spoiled by dragging it into the night.

Third, as to Rehearsals. Be sure to have one or two good rehearsals. The Captain should have charge of these lessons.

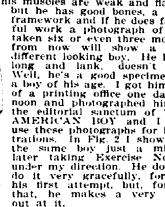

To all members of the Order, free of charge, free of charge, free of charge, free of charge, free of charge. The exercises own bedroom without inconvenience.

In cach issue of THE AMERICAN BOY, directions are given for each day for a month in advance. The exercises are given for each day for a month in advance. Exercises for February.

By the Physical Director of the Order of The American Boy.

I show you here the picture (Fig. 1) of an average American boy ready to take his first day's exercise. He is just like you; he has never taken systematic exer-cise and his muscles are weak and flabby.

Exercise 1.—Stand erect, heels together, feet at a little less than a right angle. Take a deep breath, raising the chest and depressing the abdomen, just as if you were trying to pull the ribs up to the

Fig. 2.

chin. Raise both arms parallel with the shoulders, palms of hands down. Now make the arms and fingers tense-stiff-so stiff that they vibrate—that is, tremble. Let on you are trying to squeeze an apple in each hand without the apple being there, making the fingers stiff and rigid, so much so that they

alse both arms parallel with the palms of hands down. Now make and fingers tense—stiff—so stiff y vibrate—that is, tremble. Let ire trying to squeeze an apple in it without the apple being there making the fingers stiff and rigid, so much so that they fairly ache.

The arm from shoulder to tips of fingers being thus tense and your chest elevated and full of air, bend the knees slightly as in Fig. 2, so that your weight is resting on the muscles and is not being supported mainly by the framework. Don't bend the back. Now, in this position slowly raise both arms till they nearly meet above the head (Fig. 3), and slowly lower them again to the horizontal position. Still holding the breath, do the same a second time, and a third time. Keep the mind on the arms and fingers and don't let them relax for a second; keep them tense and trembling all the time. You will soon find you do not meed dumbbells to make you tired and that your arms are about the heaviest things you have tried to lift in many a day.

See in the picture how our boy who is used to active exerting for the day of the Captain. ARTICLE V. DUTIES OF OFFICERS.

Section 1. It shall be the duty of the Captain to preside at all meetings; to enforce a due observance of the Constitution. By Laws, Rules and Regulations; to decide at all questions of the Constitution. By Laws, Rules and Regulations; to decide at all questions of the Constitution. By Laws, Rules and Regulations; to decide at all meetings; to enforce a due observance of the Constitution. boy who is used to active exertion, for he's a worker, is straining over it, and if the color of his face you would see something like the color of a lobster. And after a few trials he was puffing like a little steam engine.

Work for February.

Each morning, on arising, put off every particle of clothing, make slowly five of the arm movements described in Exercise of The American Boy.

The Physical Director of the Order of the American Boy will give instructions in the pages of THE AMERICAN BOY, with a sponge in the hand dash cold smergency, by unanimous consent.

The American Boy Basetali League.

The American Boy.

We want every baseball club among boys, that may be organized during the coming spring and summer, to join the Order of The American Boy and thus become never taken systematic exershis muscles are weak and flabby, but he has good bones, a good framework and if he does faithful work a photograph of him taken six or even three months from now will show a very different looking boy. He looks long and lank, doesn't he'. Well, he's a good specimen of a boy of his age. I got him out of a printing office one day at noon and photographs for illustrations. In Fig. 2 I show you the same boy just a minute later taking Exercise No. I. under my direction. He doesn't do it very gracefully, for its his tirst attempt, but, for all that, he makes a very good out at it.

1.—Stand erect, heels together.

Proposed Constitution, By-Laws, Rules, and Order of Business.

The following may be adopted as a whole or in part by Companies of the

Company Constitution.

ARTICLE I. NAME.

This Company shall be known as the Company, No. -, Order of The American Boy.

ARTICLE II. OBJECT.

The object of this Company shall be the cultivation of manliness in muscle, mind and morals.

ARTICLE III. MEMBERSHIP.

Any person worthy of confidence, who meets the requirements of membership in the Order, as determined by the Executive Council, may be admitted to membership by vote of the Company, as prescribed in the By-Laws.

ARTICLE IV. OFFICERS.

The officers of this Company shall be a Captain, a Vice-Captain, a Librarian, a Secretary and a Treasurer.
(Other or different officers may be provided for, though there must be a Captain.)

ARTICLE VI. ELECTION OF OFFICERS.

All elections of officers shall be by ballot. A majority of the votes cast shall constitute a choice. The term of office shall be six months, or until a successor, duly elected, shall assume office.

ARTICLE VII. AMENDMENTS.

Every amendment or addition to this Constitution and the By-Laws must be handed to the Captain in writing; he shall notify all the members thereof, and at the next regular meeting it may be voted on; in order to its adoption, two-thirds of the members present must vote in favor of it.

ARTICLE VIII. SUSPENSION OF BY-LAWS.

A By-Law may be suspended, in case of emergency, by unanimous consent.

Regular Order of Business.

1. Call to order, by the Captain.

2. Salute to the Flag.

3. Calling of the roil, by the Secretary.

4. Reading minutes of previous meeting. by the Secretary.

5. Proposals for membership.

6. Balloting on candidates.

7. Introduction of successful candidates and the giving of promise in Article IV. of By-Laws, by each candidate repeating it aloud after the Captain.

8. Reports of committees.

9. Secretary's report.

10. Treasurer's report.

11. Reading minutes of previous meeting. by the Secretary.

5. Proposals for membership.

6. Balloting on candidates.

7. Introduction of successful candidates and the giving of promise in Article IV. of By-Laws, by each candidates repeating it aloud after the Captain.

11. Reading of letters, circulars, etc., from the executive officers of the Order.

12. Miscellaneous business.

13. Literary program.

14. Adjournment.

15. Cali to order, by the Captain.

16. Balloting of candidates.

17. Introduction of successful and the giving of promise in Article IV. of By-Laws, by each candidates.

18. Reports of committees.

9. Secretary.

19. Caling of the voil, by the Secretary.

10. Treasurer's report.

11. Rea

Company By-Laws.

ARTICLE I. MEETINGS.

Section 4. This Company shall hold its unless otherwise ordered, on meetings,

Sec. 2. Three members shall be necessary to constitute a quorum.

Sec. 3. At the request of three members, the Captain shall call a special meeting. The notice of special meeting shall state what it is called for, and no other business than that stated in the notice shall be transacted.

ARTICLE II. INAUGURATION OF OFFICERS.

When an officer takes up his duties he shall say, in the presence of the members: "I do hereby solemnly promise that I will faithfully discharge the duties of my office to the best of my knowledge and ability.

ARTICLE III. ELECTION OF MEM BERS.

The election of members shall be by ballot; two dissenting votes shall reject. A candidate once refused admission can not apply again within six months.

ARTICLE IV. INITIATION OF MEM-BERS.

Every new member must affirm as follows: "I do hereby solemnly promise that I will faithfully conform to all the Laws, Rules and Regulations set down in the Constitution and the By-Laws of this Company, and do further declare that I entertain no ill-will toward any member."

ARTICLE V. DUES, ETC.

There shall be no initiation fee. There shall be monthly dues of — cents, payable at the monthly meeting.

ARTICLE VI. SUSPENSIONS.

Two-thirds of all the members present at a regular meeting may suspend a member for disorderly conduct, refusal or neglect to pay dues. Members suspended may be restored at any regular meeting by vote of two-thirds of the members present.

ARTICLE VII. RULES OF ORDER.

The Company shall be governed by the "Rules" and "Order of Business," hereinafter written. General parliamentary law shall govern when the rules do not apply.

ARTICLE VIII. AMENDMENTS.

Amendments to these By-Laws may be made as provided in Article VII. of the Constitution.

Company Rules and Regulations.

Company Rules and Regulations.

1. The Captain (or, in his absence, the Vice-Captain) shall take the chair at the hour of meeting and call the meeting to order by the words: "Company, attention."

2. The Captain may take part in debate, after calling the Vice-Captain or any other member to the chair.

3. When the meeting is called to order, each member shall be seated and shall not speak without permission of the Captain, which he shall obtain by addressing him thus: Mr. Captain. The Captain, in speaking of or to a member during a meeting, shall say: Secretary Jones, Librarian Smith, Private Anderson, all members not officers being known as privates.

4. No member shall speak more than twice on the same motion, without permission of the Captain.

5. When two or more arise to speak, the Captain shall recognize the one who, in his judgment, first addressed him.

6. Every question of order shall be decided by the Captain, but a member may appeal to the Company, who may, by majority vote, overrule the Captain.

7. No motion shall be debatable until it has been seconded.

8. Appeals and motions to reconsider or to adjourn are not debatable.

8. Appeals and motions to reconsider or to adjourn are not debatable.
9. When a question is being debated, no motion shall be received except to lay on the table, to postpone, to commit, or to amend

amend.

10. No member shall interrupt another while speaking, except to call to order, or, with the permission of the member speaking, to ask a question.

11. A motion to adjourn is always in order, except when another motion is being voted on.

The mover of a motion may accept

12. The mover of a motion may accept an amendment, but if he does not, and the amendment is seconded, the Company shall vote on the amendment first.

13. When a motion has been carried, it shall be in order for any member who voted for it to move at the next meeting its reconsideration.

14. Every officer, when he leaves office, shall turn over to his successor any moneys, papers, books or records under his charge, and belonging to the company.

15. All communications, written or printed, received by the Company officers from the executive officers of the Order, shall be read in the next open meeting of the Company after they have been received.

Regular Order of Business.

(Continued on Page 121.)

SOME THINGS BOYS CAN MAKE

CARDBOARD YACHTS.

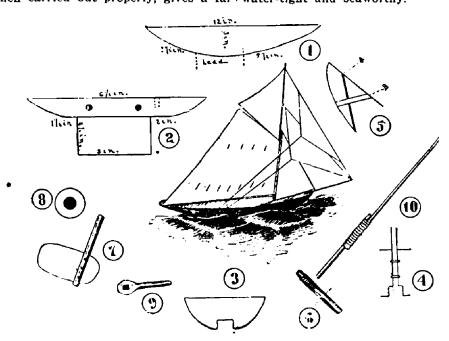

Model Racing Craft Made of Pasteboard-It is the Invention of the Modern American Boy and Can Be Readily Copied.

It is a very tedious piece of work to hollow out the hull of a toy boat with a penknife or gouge in the old fashioned way. The modern American boy has hit on a much better plan-one which taxes his patience less, and when carried out properly, gives a far water-tight and seaworthy.

of paper and lapping them over on to the hull of the boat.

Figure 8 shows a round disc of cardboard, which is intended to fit snugly over the rudder shaft and prevent it from slipping out of place. The tiller (figure 9) will, of course, be fastened firmly to the top of the rudder shaft. Figure 10 shows the manner of attaching the topmast.

Several coats of oil paint or white lead will make your boat absolutely

from following the older method.

Cut two pieces of cardboard, exactly alike, to make the two sides of your yacht. (See figure 1). The dimensions are indicated on the diagram. Use light, strong cardboard for these sec-A single sheet of Shamrock bristol board, which can be purchased at any stationery store carrying artists' materials, will furnish sufficient paper for your entire yacht. Sew the two sides together where the stitches are marked, making the seam as near the

edge as possible.

Figure 2 will be your next step. It consists of a piece of sheet lead two and one half by three inches, fastened between two flat stitches by means of copper rivets. The positions of the rivets are marked by black discs. Slip the lead through the aperture left for it in your paper shell and force out the sides of the hoat with braces made from a cigar box lid. (See figure 3). Small dabs of white lead will hold the braces and the parts (shown in figure 2) in place. The manner of stepping the mast is shown in figure 2. One of your braces must be placed exactly where the strain of the mast will come, and to this brace the mast is fastened. Bore four holes in the brace just back of the mast. This will allow you to run strings about the mast and so fasten it securely in place, as shown in the diagram. The end of the mast fits into a step, indicated by the dotted line in figure 2.

The rudder (figure 7) is made by fitting a section of stiff cardboard between the halves of a split stick and driving pins through. The pins must, of course, be afterward filed off even with the shaft of the rudder. Figure one of the well known meta devices for holding a rubber on the top of a lead pencil. File off the lower part of this where the dotted lines are marked. Figure 5 shows a section of the stern; B, a piece of cardboard held in place with white lead; A, the pencil holder through which the shaft of the rudder will run.

Before fastening down the deck attach the bowsprit to it by punching four holes and running strings about the bowsprit. See method of attaching the mast to a brace, (figure 4). Fasten down the deck by pasting to it pieces

better boat than could possibly result | HOW TO BRAID AND THROW A LARIAT.

Rawhide Is Rather Costly, But a Lad Can Make His Own Lariat and Become an Expert in the Cowboy Business Without a Teacher.

good rawhide lariat costs from eight to twenty five dollars, and is therefore rather too expensive for the average boy, but even if it were within his reach, it would be of little use to forty to fifty feet long, and far too is perhaps no possession of the cowboys more subject to variation than his lasso; what is exactly suited to one seems altogether unfitted for another. and without his own particular style of rope a man loses half his efficiency. I shall, therefore, in this article, suggest several styles of rope and each boy must select the one which seems best adapted to him.

Ordinary clothesline does not make a good lasso. It is rough and raw and frays too easily. If. however, clothesline is experimented with, use the slip longest, noose shown in figure 1, or better, splice A fine

Linen tape may be braided into a splendid rope and even cotton tape is an jackknife, who will take care to get i improvement on clothesline. Good Just like Fig. 2. It is spun with a string smooth cord will make a very fair around the middle, and if properly lasso. Figure 5 shows a five strand made will beat any of the single top braid, which is very strong and pliable. Take alternately each outside strand and cross it over the two following strands. The four strand cording shown in figure 6, to my mind, gives a better shaped rope than the one just described. The diagram itself is the best description I can give of four Arrange them as strand cording. shown, each strand under the one next to it, and then pull them tight. About twenty five feet is the best length for a beginner. To make the loop in a braided rope fasten the end back by means of the endless tie shown in figure 2. When the winding is completed put the end (B) through the loop (C) and pull the end (A) until the loop and end have entirely disappeared beneath the coil. Then cut off the end (A) and the endless tie is complete. In order to have the rope run smoothly cover the loop with canvas or some other strong cloth as shown in figure 4.

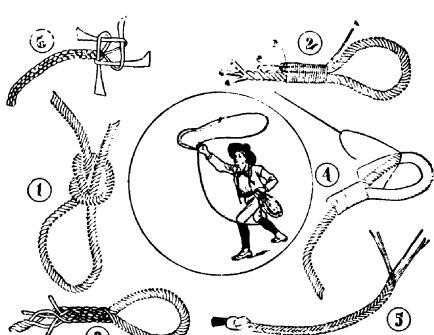

Real rawhide ropes are buried underground for some two weeks and afterwards greased with mutton tallow to make them pliable. Two weeks underground will not improve a line or hemp rope, but the greasing I would strongly advise; only be careful where you hang up your lasso when not using it, for grease has a very penetrating quality.

The art of throwing a lariat can not be reduced to rule. No two men do it alike. If you ask a cowboy to teach you he will say that every man must learn to do it for himself by practice, He will be quite willing to show you how he throws the rope, but his style will be quite different from the very next cowboy you meet, and is certain to be entirely different from the method you finally adopt. The illustration shows the characteristic position assumed at the moment of delivery; but it can only suggest; practice is the only master who can teach lasso throwing.

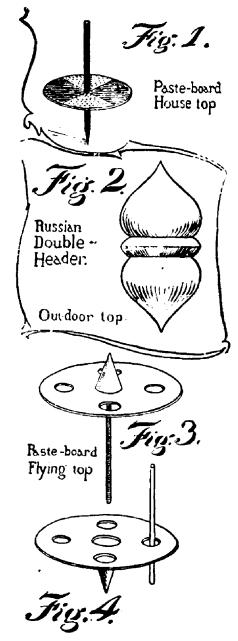

Tops-How to Make and Spin Them.

Any one can buy a top if he can get a few pennies from his father or mother. and any one can make far better and finer tops with a little trouble and industry. Here are some interesting tops him, for the regulation lasso is from that you can not buy anywhere, but which you can make with very simple heavy for a beginner to handle. There tools and cheap material. The simplest of house tops to be spun on top of a table, or some other smooth surface, is made simply by putting a sharpened stick through the center of a piece of pasteboard cut into a perfect circle. Care must be taken that hands, the top will fly up in the air and the wood is longer above the disk than below, so it will keep its balance. If the disk is decorated in water colors it will be prettier as it spins. Quite a game of tops may be played by making these tops for a number of children and letting them try who can make his spin

A fine outdoor top is the Russian

the rope back as shown in figure 3.1 double-header. It can be whittled on of hard wood by any boy with a sharp

you can buy. And then if you would like to make a top which will spin in air. take a bit of thin pasteboard, cut five equidistant oval holes in it, one in the center and four around it as seen in Fig. 4. Paste a small paper cone over the central oval (Fig. 3) and let it dry, when you have a top which can spin in various ways. You can put a stick with rounded end in the cone (Fig. 3) and, twirling the stick rapidly between the palms of your perform there. Or you may insert a stick into one of the outer ovals, (Fig. 4) and swing the top around until it is going rapidly, withdraw the stick and the top will spin in eccentric curves. If this top is colored in various stripes it will be even more interesting in its turnings and twistings.

The Burrless Chestnut.

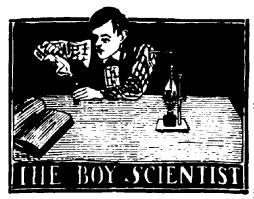

(Continued from page 104.)

but excellent, nevertheless. But, strange to say, the boys did not care to eat any. They may have been too tired to eat or they may have thought that such hard earned nuts deserved a better fate, but, whatever the reason, the nuts went begging as far as Mason and Jason were concerned, and so, after a few days, they were all shipped out west to a toothless minister, to whom a box of goodies was expressed every fall by the missionary

It would be pleasant to be able to say that the boys were cured of their lazy ways, but, as a matter of fact, they still coast to school and skate to grandma's as of old, so the lesson of the burrless nuts was lost on them.

Binders.

You cannot keep your copies of THE AMERICAN BOY in good shape without a binder. We sell a good, substantial one at \$1.00, delivered. Sprague Publishing Co., Detroit, Mich.

Be Put to Practical Use at Home.

The electric bell, buzzer, and battery are usually the first electrical apparatus out to dinner with his mother, at the that comes into a boy's possession. These are easily obtained and are excellent to start with. The boy sees the workman place batteries in the basement and realizes that they furnish held by a clamp to the dining table. the electricity to ring the door bell the wire running down under the table when the proper button is pushed. After through the floor. some thought he concludes that three' things are essential to make up an outfit of his own, a bell, a battery, and some wire. The dry battery is much the simpler as it is ready for use without preparing a solution.

How rich a boy feels when he starts home with his first bell rig under his arm. Bright prospects lie just before him.

He thinks he can master the bell bus-, iness and later he can make some money. Many people want bells and buzzers put in their houses, and offices, and there is no reason why he cannot get some of this work as he has many acquaintances.

HIS FIRST CIRCUTT.

On arriving at the kitchen table the whole outfit is carefully examined. On the bell there are two thumb-screws or binding posts as electrical people call them, the battery also contains two binding posts. It all looks plain, a wire must be run from a binding post on the battery to a binding post on the bell. A piece of wire about two feet long is cut from the coil of bell wire. an inch on each end is carefully cleaned and one end is screwed down tightly under a binding post on the bell, the other end is placed securely under a binding post of the battery. Now the bell and battery are fastened together by a wire and a boy naturally thinks mind. He will fix his mother a simi-clerk at the electrical supply store is that the bell should ring. Electricity lar rig and it will be so handy that she told of the trouble, and he states that won't run out unless it has a separate can't help buying it. path on which to pass back at the same instant.

After some effort to make the bell will help advertise his new business. ring with only one wire attached, the second wire is cut, both ends carefully cleaned, one end secured firmly to the battery and when the fourth binding post is touched by the other end the bell rings out sharp and loud.

The people hurry at the summons of a new bell, the young electrician has closed his first circuit.

If this last wire be put under the fourth binding post and screwed fast the bell will keep ringing until the battery is run down.

Another lesson is taught, another step is taken forward. The push but-ton simply yields to the wish of the person who presses it, and closes the circuit to the bell. When the pressure is removed a spring inside the push button pulls apart the circuit or path running from battery to bell, the current of electricity is compelled to stop opportunity to complete the job. flowing and the hell ceases to ring.

One wire is run up through the

THE PUSH BUTTON.

It is a very simple thing. A little with a small black or white button pro- cellar. jecting through a small round hole. This round button rests upon a light the hole in the kitchen floor, the end piece of sheet metal, which acts as a cleaned and fastened to the bell. This spring, under this sheet metal spring wire is tacked similar to the first, but is another piece of sheet metal, the wire far enough away to prevent tacks from from the battery is attached to one of touching each other as they might cut these pieces of sheet metal, the wire through the insulation on the wire and from the bell is attached to the other, if they touched they would let the cur-Pressure from the thumb or finger rent of electricity return without passpushes the two pieces of sheet metal ing through the bell. One metal tack together and the circuit from the bat- should never be placed over two bell tery to the hell is closed.

This will furnish capital to purchase

On going to the electrical supply store to get more bell wire and some double pointed wire tacks he is informed by the clerk that special pushes are made for dining room floors which are operated by the foot.

He concludes to use the push he has on hand and have mother hold it in her lap when at the table, at other times it can hang on a small hook under the table near mother's chair.

The bell is fastened up in the kitchen, a small hole is made in the kitchen floor, the dry battery placed on a beam or shelf in the cellar, in another part of the cellar under the dining table a small hole is made in the floor just at a seam in the carpet. Mother commences to doubt the success of the undertaking but concludes to put up with the inconvenience and give her boy every

two or more batteries are required when long runs of wire are used, as supplies for another job and mother the battery must push the current will help advertise his new business. | through the wires.

A new battery is purchased and placed in circuit, as in figure two.

On trial it is found that the hammer on the bell will not vibrate when the button is pushed.

This is very discouraging, but on inquiry it is found that one battery is working against the other instead of working in unison with it. When the connections of one of the batteries are changed and the button pushed the bell rings sharp and loud.

Two things have been well impressed upon the young electrician. One is that when wire is added to a bell circuit, extra battery power must also be added to make the outfit work well, and another is that two batteries can be so connected in a circuit that one will not allow the other to work.

When improperly connected they act opportunity to complete the job. like two boys of equal strength trying one wire is run up through the hole to push or pull each other along a path HSS

Special Offer For Boys. Earned in 3 Hours This tag This famous Octombian 800-Shot Magazine Repeating Air Riflo can be easily earned in three he nes by any boy introducing a few loxes of our High Grade Toilet Risps among his friends and neighbors. If You Must Bet, Bet on Yourself.

Can one afford to leave a farmer who is paying him \$15 a month and board to go to the agricultural college short course this winter? A Minnesota boy asks it. An editor of a farm paper answers: No, you can't afford to quit such a job if that is the height of your ambition; but if you want to be something more than a farm hand, if you want to master the business of farming (and it is the masters who win nowadays), if you wish to be equipped to do the best work, then get the best practical education you can. I faced this question when as a 17-yearsold boy I quit typesetting in Denver at \$35 a week to go into the best job printing office at \$6 a week. It gave me a chance to learn a branch of the trade I didn't know, but this apparent sacrifice. in order to master that trade, helped to develop a faith in myself that compensated many times over for the temporary loss in pay. Bet on yourself, young man, have confidence in your own grit, faith in your own abilities, and by work, training and education strive in every proper way to fit yourself to do your best. We either go forward or backward. There's no standing still. Qualify yourself to go ahead. The more thoroughly you do this, and the earlier in life you do it, the better your chances for health, wealth, happiness and usefulness, whatever your vocation may be. Such thorough preparation comes high-this young man, for instance, instead of netting \$15 a month must go to considerable expense—but the best is always the cheapest. If you haven't confidence in yourself, how can you expect others to have confidence in you? Courage, judgment, hard work, progress, pertinacity. clean habits, character, high purposedevelop these, and before you know it success is won. Everyone can cultivate these attributes—failure to do so in youth causes far more failures in life than bad luck, ill health, "trusts," or any of the excuses usually advanced by the unsuccessful. Whatever you are be a master of your work and of yourself.

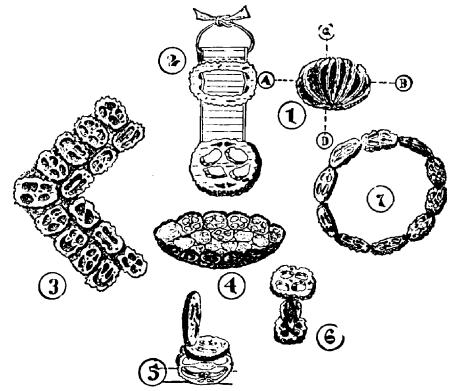

Charlie Boldt, Jr., is a thirteen year old merchant of the blacking brush. His stand is at 1000 Michigan avenue. Detroit. He began shining shoes a year and a half ago. In six months he was able to buy a

chair and stand. He now clears about two dollars and a half a week, buys his own clothes and saves a little money. The picture shown was taken by one of his customers.

Saleable Ornaments Made of Walnuts.

The suggestions offered in this article by no means exhaust the possibilities of ornamentation with walnuts; a dozen other forms must immediately suggest themselves to any clever workman; but it is hoped that the descriptions are sufficient to give a clear idea of how to handle this quaint material.

Figure 1 shows the nut. It can be procured in quantities at any grocery store. Place the nuts one after another in a vice and saw them into sections about one-eighth of an inch in thickness. If the reader is unfortunate enough not to possess a saw, any carpenter will do the work at a very moderate price; or if a boy is possessed of an ordinary amount of diplomacy a carpenter will let him use his vice without any charge. A saw is possessed by nearly every household.

at the top of the ribbon takes the place nish, is complete. of a snap hook.

either stiff cardboard or wood with a light the heart of any infant mother. coating of glue; sprinkling rice plentifully over this and then arranging the sections of nut as shown. Gild or shellac as preferred.

Figure 4, a delicate card tray, is extremely decorative. One of the wooden plates used by many grocers for hold-ing a small amount of butter will give own for sale.

Figure 2, a watch fob, is probably a form for this figure. Lay the plate the most easily made of the ornaments bottom side up upon a table and fit described. A nut sawed at right ansections over it, dropping a little glue gles to the ridges (A to B) will give at every point where their edges come the buckle, and a nut sawed parallel together. When the glue has set rewith the ridges (C to D) will furnish move the butter plate, and the card the charm. A small strip of shammy tray, with the addition of a coat of var-

HOW TO START A SCHOOL PAPER

FOR HIGH SCHOOL READERS H. OREN CUMMINS

Nearly every large preparatory school and all the colleges of this country have to-day their school papers, edited and managed entirely by the students, and out anything which he considers will from which they derive a great amount not be of benefit to the paper. The one of good. In their contributions to the elected to this office must be a pupil of paper the students learn to express their thoughts easily and rapidly, and as they know they are writing for publication. it is an incentive to put forth their best efforts. No matter what occupation one is to follow in life, the ability to use good English quickly is as valuable an accomplishment as a young man or woman can have, and in writing for such a paper this ability is greatly developed.

There are some high schools, also, especially in Massachusetts, which during the last few years have established such papers, and they have invariably proved successful, both from a literary and financial point of view. Any high school of a hundred boys and girls can easily support a paper, and it is the object of this article to show how to go about the establishing and managing of it.

EXPENSE.

A good size for a high school paper is eight by ten inches, and the cost for printing it on good paper, with twelve pages of reading matter, should not exceed twelve dollars for the first hundred and one dollar for each additional hundred copies. If, as is usually the case, the paper is published twice a term during the school year of three terms, the total cost of the six editions need not be more than eighty dollars, which amount includes the money for account books for the business manager, stamps and wrappers for the papers to out-oftown subscribers, and other incidental expenses.

Eighty dollars may seem quite a large amount of money to raise, but it only takes one hundred and sixty subscribers at fifty cents a year to pay the entire expense of the paper. This subscription rate is low enough so that there ought not to be any difficulty whatever in getting enough regular subscribers to run the paper in a school which has a hundred high school students. You can count on people outside the school for some subscriptions, that is, old graduates and friends of the school, who, although they may not at the time have any children there, still are interested in it and willing to help the students in anything of this kind.

THE START.

Get estimates from the local offices for printing a paper of the desired size. mass meeting, perhaps having the principal speak a few words in favor of it, for you will always find that the faculty will give you their hearty co-operation in a venture of this kind. There is nothing so convincing as figures, and with these at hand you can show the school that with the pledging of about a hundred and forty names for a year's subscription at the very low rate of fifty cents, you are in condition to start the paper. A year's free sub-

thusiasm and gets the school as a whole, interested.

MANAGEMENT.

There are four principal officers. The most important officer, and the one on ' whom the literary success of the paper must largely depend, is the editor in chief. It is his duty to look over all articles, stories, verses and whatever is handed in for the paper, and to throw good and mature judgment, popular with the students and thoroughly respected. It is a good idea for this editor to look over the proof of all matter which he decides to put into the paper with the head of the English department in the school, as probably no high school student is so well versed in English that he cannot get some assistance in this way. From this instructor he can also get the names of students who write well, and if the voluntary contributions do not come in fast enough he can give out some interesting subjects to these students to write up. The managers of the paper should all try. however, to work up such a feeling in the school that it will not be considered a article in the school paper.

There are two other editors, who though important in their special departments, do not require as careful consideration as the editor in chief. These are the local and alumni editors. The duties of the former are to look over and correct all locals brought in by the different class reporters, and get them in shape for the printer; he might also be expected to write a short edi-torial on some subject of general interest to the school, or to assist the chief editor, if necessary, in any of his duties. The work of the alumni editor is to get the old catalogues of the school and from them secure the names of graduates and find out what they are doing, and anything concerning any old member of the school which would be of interest to his former classmates. On the success of this department depends largely the number of out-of-town subscribers. It is a very good plan to make the alumni notes of the first edition of the paper as interesting as possible, and to mail a large number of sample copies to old graduates, with a note enclosed requesting subscriptions.

If careful and painstaking effort is made by the one in charge, both by making personal inquiries and in writing letters to graduates, this department ought not only to be very interesting, but to swell the list of regular subscribers by a goodly number of alumni.

The next office to be filled, and one which requires nearly as careful consideration as the editor in chi.f, is the business manager: for, as on the former depends the literary success of the paper. so are the business manager and his as-Then bring the matter up before the sistant responsible for its financial success. He must be a wide awake, energetic young fellow who has the time and is willing to put in some good hard work for the paper. In his arrangements with the local concern which is to print the paper, he should obtain a written contract, so in case of dispute concerning price, he will have this to fall back upon. It is his business to keep the books, to see to the mailing of papers to out-oftown subscribers, to see that the subscriptions are kept paid up by the students, and in short to attend to all the scription to the paper for the student little financial matters which may come who gets the largest number of sub-scribers both in and outside the school sume sufficient proportions, he can get is a good offer to make, as it lends en-rates from the post office for sending the series in the sum of the sum of the series in the sum of the series in the sum of the who gets the largest number of sub- up. If the out-of-town subscriptions as-

papers under the head of second class matter, which reduces somewhat the expense of mailing.

The minor officers of the paper are the reporters, and should include one from each of the four higher classes, and if the High School is run in connection with a graded school, there should also be a reporter to represent the lower grades. It is their work to write up all matters of interest in their classes, or in the school at large, and to hand in their reports to the local editor for inspection. If there is a lyceum in the school there should be a reporter for it, who would be given a short column in the paper headed Lyceum Notes, and he could make this quite interesting by giving abstracts of the best debates. Some schools have also an Exchange Department, the editor of which writes to other schools in the BIG PRINTING PRESS OFFER vicinity that have papers, asking them; for items of interest, and sends similar accounts to them.

In closing, I would say, there are several things which make one's high school life something pleasant to look back on and not merely a dull routine of study and recitations; these are the lyceum or debating societies, the gymnasium, the school battalion, and, judging from my own experience, one of the most important factors both as a source of enjoyment and in its usefulness in after life, is the School Paper.

"The Bomb" is published by Harry M. Konwiser, at 36 Barbara street, Newark, N. J. Judging from the frequency with which it is referred to in other amateur papers, all old amateur journalists are already acquainted with this paper. It contains much excellent matter, both from a literary standpoint and for the purpose of gratifying the special interest of amateur journalists. The only criticism we would pass upon it is that it, like a great many other amateur papers, devotes too much attention to associabore to write, but an honor to have an tion politics and is rather bitter in its criticisms of the acts of other members of the amateur journalists' associations. Of course, if the boys are going to indulge in politics in this way, the papers published by them will naturally have a good deal to say on their political ideas; but it would seem to us that they are thus neglecting the journalistic features of the associations, and while the art of politics has its value, we would not mix it with amateur journalism. It cannot help but retard the journalistic and literary progress of the members of the association that indulge in it to any extent. Don't criticise your associates so much, boys. That element of journalism is no longer found in the better professional papers, the editors of which always ascribe honorable motives to their fellows and try to use the best language possible in referring to each

ADVERTISE HERE FOR RESULTS

"O mamma!" cried little Bob one day. "when you stroke pussy's fur this way you can feel the electricity, and when you put your ear down you can hear her trolley!

Mother--Bobby, this is the third time I've caught you stealing jam, and I'm to wear her father's rubber boots to get getting tired of it.

Bobby—Well, why don't you quit hangin' 'round the pantry, then?

Sunday School Teacher: "What do we

learn from the story of Samson?"
Tommy (mournfully smoothing his ragged locks): "That it doesn't pay ter have women folks cut a feller's hair."

The mother of a little three-year-old had been away from home over night, and on her return asked:

"And how did my little boy get to sleep last night without mamma?'

"Oh," he replied, "papa twied to sing to me like 'ou does, an' I des went to sleep weal twick, so I touldn't hear him."

School Teacher: "Now, Bobby, spell needle.'

Bobby. "N-e-i-d-l-e, needle."

Teacher: "Wrong. There is no 'l' in needle."

"Well, 'tain't a good needle, Bobby: then."-St. Louis Christian Advocate.

"Mamma," said small Willie, "when sister Mary had the toothache you took her to the dentist and had it filled, didn't

you?"
"Yes, Willie," she replied. "Well," continued the little diplomat, "I've got the stomach ache; don't you think you had better take me to the candy store and get it filled?"

Benny was a new boy at school, and as the teacher enrolled his name in her book, she asked: "Where do you live, Benny?" "On Blinker street," he an-Benny?" "On Blinker street," he answered. "You should say 'In Blinker street.' That is considered the proper form now." "Yos'm." "You have lately came to town, have you not?" "Yes'm." "Where was your home before?" "Boonville." "Where is Boonville?" "In the Erie Canal, ma'am," said Benny.

Self-Supporting College Students.

"Most people picture the young man who earns his own expenses while at college as a long-faced prig who rooms in a garret, where he breaks the ice in his pitcher for water to wash with in winter, and tells himself how noble he is to persevere in spite of the sneers and snubs of his more fortunate classmates.' writes Jesse Lynch Williams, on "How kettle, one granite-iron (covered) stew writes Jesse Lynch Williams, on "How kettle, and some other tinware, costing a Young Man Can Work His Way in all about one dollar and fifty cents; Through College," in the Ladies' Home one two burner gasoline stove, which cost "If that type of collegian ever Journal. really existed he is now extinct. The modern self-supporting student is not snubbed nor sneered at by anybody, and he smiles occasionally. This is because there are more college men earning their living today than ever before, and because they earn a better living. Onequarter of the entire three hundred and one members of the last class graduated housekeeping. Each of the three had an at Yale supported themselves partly or equal amount of the work to do; and wholly; probably all of them ate three as each of us knew a little about cookmeals a day, and many of them were qu'te ing, we had no difficulty in carrying in the thick of college life besides. This through our undertaking successfully. point is emphasized, because I know that every year some boys think of going to college and then give it up, largelythough they may not confess it-because they hate to think of being 'queer' and 'out of things.' This is a natural feeling. but it is unnecessary. I recall no football team at my college (Princeton) in the last ten years that did not have at least one man working his way through. and invariably some of the most popular and influential men in every class are self-supporting."

Boy's Composition on Water.

Boys' compositions, if original, are almost always unique. This one on water,

is typical:
"Water is round everywhere, especially when it rains, as it did the other day, when our cellar was half full. Jane had onions for dinner. Onions make your eyes water, and so does horseradish when you eat too much. There are a good many kinds of water in the world-rain water, soda water, holy water and brine. Water is used for a good many things. Sailors use it to go to sea on. Water is a good thing to fire at boys with a squirt gun and to catch fishes in. My father caught a big one the other day, and when he pulled it out it was an eel. Nobody could be saved from drowning if there wasn't any water to pull them out of. Water is first rate to put fires out with. I love to go to the fire and see the men work at the engines. This is all I can think of about water-except the flood.'

A Professional Education for Four Hundred Dollars.

F. R. A.

Many young men look upon a college education as a luxury, obtainable only by the wealthy. That this is a mistaken idea, the writer knows from personal experience.

Three years ago, while a clerk in a Detroit business house, I began to think of the possibility of my being able to take a college course. I was anxious to study law, and after examination decided that the Law Department of the University of Michigan was the best and was the least expensive of the first class law schools of the country. Two months be-fore college opened I determined to attend. When I left for college in the fall I had saved sixty dollars. When I left college in June I had spent an additional three hundred and forty dollars making in all the sum of four hundred dollars for my college course.

My first expense was forty five dollars (thirty five dollars annual fee and ten dollars entrance fee). This left me with fifteen dollars for the balance of my year's expenses. How to make this sum do was a problem not easy to solve. None of my relatives were in a position to furnish me with the necessary balance, but several of my family could send me a small sum each week and this they gladly did.

was fortunate in making the acquaintance of two students from the do excellent work in college. same city as myself, who wished to do their own cooking, so we formed a partnership and purchased the following outfit:

One frying pan, one dish pan, one milk pail, one teapot, one water pail, one teakettle, one granite-iron (covered) stew kettle, and some other tinware, costing us three dollars and fifty cents. Thus our whole outfit only cost us five dollars. The dishes we had brought from home. We had a cosy corner in the basement of the house in which we roomed for our kitchen. The landlady gave us a table. and in an hour's time we had transformed a dry goods box into a convenient pantry and were ready to begin Our food was plain, but substantial, and we always had plenty of it. Our average expense for provisions for the college year was a trifle under seventy five cents per week for each person.

By getting to Ann Arbor a few days before college opened I managed to secure a small but pleasant steam heated cutting the expense to fifty cents for O. K." each. The next problem was that of

yearly outlay of thirty dollars being generally considered necessary. We decided that this was more than we could afford, so we consulted with several of the older students and found that the books we must have would cost about twenty dollars, and most of these we could rent from other students for about one fifth of their cost price. So by using the law library of the university and renting the books not readily accessible there, my expense for books has been from five to ten dollars a year. By this method I do not own the books, but, as a rule, these books are of little value to practitioners, because of their elementary character.

The railroad fare is a very necessary expense, my own, however, has only been about ten dollars a year. Laundry costs but little in a college town, owing to the prevalent use of the sweater, which saves both time and money. Most of my washing I could do myself, and several students I knew did nearly all their own washing.

There are a number of lecture and concert courses at Ann Arbor, which it is very desirable to attend, but which cost a considerable sum to one studying economy. But one who is willing to hustle has no trouble in selling a sufficient number of tickets to his student friends to secure tickets for himself and friend.

The following are my actual expenses for the first year:

College fees	\$45.00
Board of thirty six weeks	
Room rent	18.00
Railroad fare	8.00
Books	
Postage	
Laundry	
Incidentals	2.50

The second year differed but slightly, the only change being a more expensive room and a heavier outlay for books, and ten dollars less to pay in college fees; my expenses for the second year were one hundred and twenty dollars.

Total\$105.00

My third (and last) year I gave up my housekeeping venture and boarded at a students' boarding house, getting first class board for two dollars and fifty cents a week. Owing to this and to heavy graduating expenses I have paid out for this year's expenses the sum of one hundred and seventy five dollars.

Thus my college course has cost in all four hundred dollars. Many a young man could raise this amount the way I did, by obtaining small loans from a large number of friends, even if he could not get four hundred dollars at one time. Of course if a student has sufficient energy and pluck he can earn his way through college by various means; but if he does this he necessarily loses a great deal of time which he needs if he is to

In conclusion I would say that if a young man feels he can better his prospects by possessing a college education, he need not hesitate because of lack of the necessary funds. I firmly believe that if such an one full of ambition, pluck and energy went to Ann Arbor with fifty dollars in his pocket, to protect him against sickness or accident, he could take a four year college course, and, by taking advantage of the many opportunities open to students in a college town for earning their way, could come out at the end with his fifty dollars in his pocket and a very materially im-proved quality of "gray-matter" in his head. "The world belongs to the energetic."

We present herewith a picture of one of our boy friends in the Indian Territory, J. F. Kinnerty. Jr., of Chickasha. His father is a railroad agent on the Chicago, Rock Island and Pacific. The boy says: "My father J.F. KINNERTY, being a railroad agent has little time to look at

papers, but it didn't take him long to de-

The picture of the boy was taken last books. Law books are very expensive, a spring, just before his eleventh birthday.

CAN I BECOME AN ELECTRICIANS

Yee, you can. We teach ELECTRICAL ENGINEERING at your home by mail at a cost within the reach of anyone. No matter where you live, if you can read and write, we guarantees to teach you thoroughly. Our institute is endorsed by Thomas A. Edison, and other prominent men of the country. We teach also Mechanical Englacering, Nechanical Drawing, Electric Lighting, Telephony, Electric Railways, Electric Mining, Elementary Mathematics, etc., by mail. BOYS IN THE OFFICE, STORE, FACTORY, AND ON THE FARM

Cultivate an Honest Eye.

Frederick E. Burnham in "Science and Industry" has this to say about the eye as a revealer of character:

"I once devoted haif a day to the hiring of a man whom I needed in my business, and I wanted one who was willing to work. I advertised for him. The results were interesting.

"When I arrived at my office half a dozen men were already in waiting. One at a time I called them into the office, beginning with the first in the line. One glance at the foremost settled his case; he wouldn't look me in the eye. I told him I should not need him. I suppose he is still wondering why I was so short

"Next came a young man armed with a double-barreled recommendation from his pastor testifying to his good character and business ability. I looked at the youth several times, read the recommendation again, and finally came to the conclusion that either his pastor was no judge of human nature or the paper; was a fraud. Those listless, vacant eyes told me that we could never hope to get along well together. I dismissed

poorly dressed, though his clothes were his dignity. whole; his suit was at least two sizes too small. It was evident that his attire troubled him not in the least, for he held his head high, and as he approached my desk he looked me square in the eye. He said that he had no recommendation, and had had no business experience, but that he was willing to do his best to please me. In an instant it dawned upon me that before me was the man I was looking for. He had nothing to recommend him save an honest, bright eye and a pleasant face: but that was suffi- than he does himself. cient. I engaged him on the spot.

"Since then I have seen fit to advance adamantine texture, who can be taught him over the head of a man who has, been with me for three years. The latter grumbled, but there was reason for my move-the new man had proved himself worthy of promotion."

Instances might be indefinitely multi-

That kind of an wide stripes, daring cravats, violent eye is better than a hundred recommen- checks and is generally "horsey." dations."

Advice to Boys Who Are Hunting Easy Jobs.

A writer in the Missouri Valley Farmer savs:

There is in Emporia | ders. in the year of our three score boys learning trades. About fifty are figuring on | becoming lawyers;

editors, and a few hundred others desire to be clerks, bookkeepers, merchants, and what not; but where is the boy who has mason, a blacksmith, a plumber or a machinist, or a tinner, or a member of any other craft or trade? Yet there are a dozen starving lawyers in town and not over five good first-class carpenters. These good carpenters are never out of work. There are half a dozen half-fed doctors in the town, who do not live as well or hold the respect of the community nearly so surely as the first class

stone mason. There isn't a preacher in town who makes as much money as at least two plumbers make, nor who does more substantial good in the world than the plumbers do. A good machinist has a surer and generally a better living than the average clerk; a good tinner makes more money than the average merchant on Commercial street.

But the boys won't listen to talk of a trade. They want to go into business or the professions, and the reason why is this: They don't want to get their pretty hands dirty. They are afraid they will not be able to wear high collars and fluffy neckties. They can't do real work and abide in the primrose path of dalliance, going to moonlight picnics, swinging in hammocks, loafing on front porches, hopping about in parlors; and the boys whose mothers have kept them in starched duds until they begin talking bass, will have their mothers to thank for the ideals implanted in these boysideals which are leading the boys into lives of loafers.

These Should Be Discharged.

At a conference of the Chicago postoffice authorities, it has been decided to half as many would hereafter employ no boy who smokes like to be doctors; cigarettes or who is known to once have the same number been addicted to the habit. Thus one by hope to be preachers; one every door of opportunity is closing a few-and that's too against boys and young men who are addicted to this obnoxious habit.

Someone says that he thinks a farm an ambition to be a carpenter, a stone boy does less work in a year than the average clerk in a large store.

> A boy answered the question as to where Magna Charta was signed by saying, "At the bottom."

> Is a boy in apple-pie order when he is "crusty?

The Boy on the Farm.

A PRIZE ESSAY BY A BOY.

The boy. What is he? Is he simply a machine made to work? No, for was not Washington, Lincoln and other great men boys at one time in their lives? Though he should do his share of the work, he should should do his share of the work, he should be given some time of his own. The boy on the farm has often to be up early in the morning and sometimes late at night. What can a boy do? He can do his share of the chores, which are generally to get cobs and wood, tend chickens and milk. Besides this, he often has to go for water and help to tend the horses. Simply because he is a boy, he should not he afraid to do housework for his mother or sister. Should he have to work all the time? I would say no. He ought to have plenty of time for books and games.

CHARLES HAYNE.

The Writer of the Essay.

CHABLES HAYNE.

The Writer of the Essay.

Can a farm boy not get an education as well as a city boy? If he is allowed to go and finish at a common country school, he will have a fair education. I read of a boy who, at thirteen years of age, was an authorized preacher.

What should a boy have? Well, in the first place, he should have a room and a place for his things. He ought to have a pig or a calf. He might do as a boy in Kansas did. A farmer gave his boy a small potato and told him he could have land to raise the increase, thereof until the boy became of age. At the end of the fourthyear the boy had four hundred bushels of potatoes and the man wanted to be released from his bargain. Another man in the same state gave one of his sons two old hens and said he would feed the increase for four years. Two years have passed and the boy has two hundred chickens lessides sixty four dollars in the bank. The man says he is afraid that in two more years the boy will own the place and charge him rent for living there. You can give him a share of the garden truck. If he has a colt or a calf he is more apt to care for lt and the rest of them better. You can let him have a pair of skates, a gun, or a watch without missing the cost very much. If he wants to use the hammer, saw or ax, why, let him use them, but teach him to put them in their places when he gets through with them.

What advantages has a farm boy? Perhaps you say he has none. But does the city boy have all the sunshine and exercise that he needs? City boys usually exercise in a room that in all probability is dark. True, the city boy often wears better clothes, but he is not any happier. The city boy does not come in contact with nature as much as country boys. In looking over the list of great men, we find that many were born and raised on a farm. As farm boys are but small men, what would become of the town people if it were not for the farmers?

Compare the farm boy of to-day with one of lifty years ago. He did not get much schooling, generally went barefoo

What more can a country boy want? He has good reading matter, good exercise, good schools and a good living.

Short notes of personal observations are particularly desired for use in the A. A. department. Send illustra-tions when convenient. Questions are invited. Address H. R. BALLARD, Pittsfield, Mass.

A Wonderful Book.

In my hand is one of the most remarkable books. It was written, illustrated, printed, bound and published by an American boy of thirteen years. The title-page is:

CALIFORNIA SHELLS,

A Description of the Most Common Land and Water Mollusks of the Pacific Coast States, by

by Albion Doc. Illustrated.

Printed by The U. P. P. & C. Co., 3240 Briggs Ave., Alameda, Cala. 1900.

The text, seventy seven pages, consists of good descriptions in Mr. Doe's own collection.

The illustrations are the most remarkable feature of the book. The plates have been engraved with a knife on pieces of lead flattened out of old lead pipe. The paper was torn from cheap note books. Mr. Doe's collection includes nearly three hundred specimens of shells, most of which were found in California. Here is a hoy—who, by the way, is secretary of the Agassiz Association, Isaac Lea Conchological Chapter, of which Professor Josiah Keep is president—who, with only a bit of lead pipe, a jacknife, a cheap hand-press, and a head full of American ingenuity and perseverance, has produced a book far more worthy of study and preservation than many—than most—of the popular publications of the closing century.

The book has an excellent index, and is one of the most precious volumes in our library.

library.

A Question of Toads.

While on my vacation this summer at Lake Champlain, I found several toads not more than three-quarters of an inch long by three-eighths wide. They were of the same color and shape as the old toads, and did not seem to have any sign of the tadpole life. Did they develop from tadpoles or otherwise?—F. A. Haight, Lansingburgh, N. V.

singburgh, N. Y.

[Our correspondent evidently knows the general book statement that toads are developed through a tapole stage. Regarding particular questions like this, it is the policy of the Agassiz Association not to shut the door of personal observation, by giving dogmatical answers. We therefore must beg Mr. Haight to study these little fellows for himself, and let us know the result. He can catch some of these creatures and keep them in an aquarium, with a "dry land" attachment, and keep them until they lay their eggs. He can then watch these eggs until they hatch, when he will know in the most satisfactory manner whether they produce tadpoles, or fully formed toads, or frogs. He will also learn many other things incidentally, for instance, whether these little hoppers grow many other things incidentally, for instance, whether these little hoppers grow into big toads, or whether they already have their full size, and are therefore a distinct species.—Ed.]

How a Cat Purrs.

This peculiar sound is an expression of happiness, and is caused by the vocal chords being thrown into such a position that respiration causes a vibration of the larynx, that may be seen or felt on the throat of the animal.—H. C. Brown, Brandow Vt.

A Wise Old Cat.

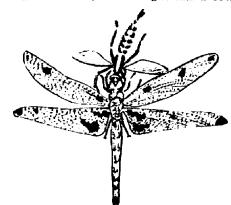

In July last my cat was happy in the possession of three two months old kittens. One Friday my pet, a black, was sick, and its mother was crying without apparent cause. Shortly after, on the same day, as I was at a neighbor's house I saw the cat going around a corner of the house with the two well kittens. This was the first time these kittens had been away from home. I told the old cat to go back, and she turned and disappeared. She was seen every day afterward, but not the two well kittens. On Tuesday evening the black kitten died. On Wednesday morning the other kittens were back in

their accustomed place. Didn't the cat know that the black kitten would die, and so keep the others away from it?—Benja-min Fernald, Winn, Penobscot county, Me.

IDid Mr. Fernald learn what became of the body of the black kitten? The question of the disposition of the bodies of dead animals is one of great interest. We offer a badge of the A. A. to any one who will send an account of animal burial, drawn from personal observation.—Ed.]

We give the following program of Chapter 132, Buffalo, N. Y., for the coming year, as an illustration of what our Association is doing, and as a suggestion to other Chapters:

One evening I heard a great buzzing, and soon saw a dragon-fly jumping around on the ground and buzzing with its wings, but it did not fly. Then I got down on the ground and found that a hornet had the dragon-fly by the head and seemed to be biting it in the eye. I thought this a cow-

DRAGON-FLY AND HORNET.

ardly way of fighting, and killed the hornet.— , Saratoga, Cal.

[This letter is unsigned. If the writer will send his address, we will forward the badge offered for an original observation, accompanied by a photograph or drawing. This offer, by the way, is still open to

A Big Snake.

Inclosed find a description of a snake which I saw while after nuts in the timber, two weeks ago. It was about five feet long, and as hig around as a man's wrist. Instead of crawling, as most snakes do, it curved its back. It was black, with yellow stripes on its back, running from the head to the tip of the tail. The under part was white. I should like to know what kind it is. I read the A. A. columns in THE AMERICAN BOY with great interest, every time it comes.—Robert E. Living-

REPORTS OF THE SECOND CENTURY, CHAPTERS 101-200, SHOULD REACH THE PRESIDENT OF THE A. A. BY FEB. 1, 1901. ADDRESS MR. H. H. BALLARD, PITTSFIELD, MASS.

Snow Crystals.

Crystals of snow and ice are as regular and beautiful as those of any other mineral or rock. Their fragility, smallness and quickness to melt increase the difficulty of collecting and studying them, but their infinite grace and variety repay the added labor involved. Snow crystals may be caught on black woolen cloth, and can then, with care, be examined by a glass, and even photographed through a microscope. We give a reproduction of a beautiful photograph thus made by a member of the Agassiz Association. The mercury at the time stood at 30°F., and the crystal is magnified 10½ diameters. The typical hexagonal form of snow crystals is well illustrated in the igure, together with the frond-like spicules which branch from cach main ray. Crystals of trost are modi-

A Wide-Awake Colorado Chapter.

H. H. Ballard, Pres. A. A.

H. H. Ballard, Fres. A. A.

Dear Sir:—I received the certificate and will try to send in a good report in March. Our drives and walks have taken on a new interest; we see so many things at which we have formerly given but a passing glance. Every common thing seems so wonderful now. How I wish all others were interested as well. I will do all I can to circulate THE AMERICAN BOY.—Mrs. Relle Olson Livermore Colo. Belle Olson, Livermore, Colo.

Blister Beetles.

On June 20, 1900, I saw in our garden a peculiar beetle or bug. There was a large number of them, and I took one home to the old folks. They said it was a potato bug, and I said it was a blister beetle. It was slender and nearly an inch long. Its colors were metallic green, the head and thorax of a coppery luster, the wing covers purple. Our potato plants were just peeping from the ground, and their leaves were not yet unfolded, so the beetles were feeding on weeds in the garden. Don't you think my name was the correct one? I send a drawing. I have studied a number of books, and have come to the conclusion of books, and have come to the conclusion of distortions, as I supposed them to be; but, to my surprise, last spring, when I opened the case, a large number of small files sprang out. I captured some of these, and upon examination found them to be

BLISTER BEETLE.

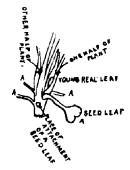

that this insect is Nuttall's Blister Beetle.—Alfred B. Overby, Park River, North Dakota.

[You are doubtless correct in identifying your beetle as Cantharis Nuttalli, or Nut-Agitall's blister beetle. But the "old folks" Cowere right, too, for blister beetles have Prolong been called "potato beetles," on ac-Ba

count of their attacks upon that plant; and before the advent of the Colorado potato beetle in the east, the term "potato beetle" meant one of the blister beetles. There is an interesting account of these insects in the Sixth Report of Dr. Lintner, late State Entomologist of New York, p. 130.—Ed.]

Strange Radish and Roses.

When this particular radish plant grew up I noticed at once how peculiar it was. It had four seed-leaves in place of two on an ordinary plant, and as it grew larger it divided above ground into two parts, divided above ground into two parts, where before it had been as one; but the root remained the same. Was the peculiarity in the seed, or did it occur during

RADISH. A represents positions of seed leaves

germination? Another thing I have noticed, but of which I can give no drawing. I had a rose bush which had one hundred and forty two yellow roses on it; the next year they were all dark pink, and this year there are dark pink and white roses growing alternately on the same stalk.—Jesse Warren, 66 Brent street, Dorchester, Mass.

Cophers.

Copher

find two gophers in the same hole. The gopher is very strong and has a tough skin. On its fore feet it has four sharp toes, which are used in digging. Large gophers weigh from twenty live to thirty pounds. They are found only in warm climates. During the winter they stay at the bottom of their holes. They feed upon peanut vines, cotton and grass. It is popularly believed that gophers never die, unless they meet with some fatal accident.—John F. Moseley, Columbia, Fla.

flies sprang out. I captured some of these, and upon examination found them to be about a quarter of an inch long and very much like a small wasp. Later I saw one puncture the bark of a weed, deposit an egg and fly away. I have since learned that these insects are galifies. Can you tell me the name of the stone inclosed? I found it in one of my mountain rambles.—Howard C. Pratt, Passaic, N. J.

If our correspondent will send us another piece of his mineral, we will try to determine it for him. The specimen he sent was lost in the mails.—Ed.)

Everybody is cordially invited to join the Agassiz Association. Reports of the Third Century Chapters 24, 29, should reach the President by March 1. Address H. H. Ballard, Pres. A. A., Pittsfleid, Mass.

EDITED BY JUDSON GRENELL.

THE AMERICAN BOY offers twelve prizes of Two Dollars each for the best Amateur Photograph received during the twelve months in the year, one prize for each month, also a second prize each month, of one dollar, for the next best photograph, the competition to be based month enricinality of the next best photograph, the competition to be based upon the originality of the subject and the perfection of the photograph. The contest is open to subscribers only. Photographs will be returned if stamps are sent for the purpose. All photographs entered in the contest and not prize winners will be subject to our use unless otherwise directed by the sender, and fifty cents will be paid for each photograph that may be used, the prize photographs in any event to be our own, without further payment than the payment of the prizes. Write on the back of the photograph its title, with a description of the picture, and the full name and address of the contestant.

INLET OF CONNEAUT LAKE. First Prize Photo, by G. R. Hehnboldt, Sharon, Pa.

if the amateur wants to have uniform success with his toning, there are several things he must do. After resolving to stop sing a combined bath, which only works list right occasionally, though very handy,

Winter Scenes.

"THE HAUNTED HOUSE." ONCE USED BY THE VETERAN ACTOR, JAMES E. MURDOCE, AS A STUDY. Photo by A. G. Gilmour, Lebanon, Ohio.

forth from its broad chimney a graceful curl of smoke, while the shadows of the towering pines spread softly across the great snowfields. There is the creek, which has danced and sung all the summer time around the boulders and over the flat stones and pebbly banks, flirting with tufts of grass, with reed and drooping bushes, now caught by winter and tied up so tightly that it fairly cracks to move a joint. Here and there appear broken masses of translucent ice, while just beyond its waters are changed by winters nagic wand into sparkling jewels, or are spread in smooth transparent surfaces where the sky above glasses her face. A scow is half beached; the reed and bushes are crested with snow, while in the near distance a mountain lifts its dark form as a background. And these beautiful winter scenes can often be found in the back yards of town folk, when the snow bends the shrubbery to the ground. Cultivate winter photography. The discomfort of the cold is nothing to the satisfaction of obtaining something worth preserving.

The January Photo-Era, with its illuminated cover and superb contents, will be a revelation to most amateur photographer. Will be a revelation to most amateur photographers of revelation to most amateur photographer. Will be a revelation to most amateur photographer. While taking a flashlight photograph in as aloon, in St. Louis, the powder exploded, burning the photographer, wrecking the saloon and breaking a couple of plate glass windows. All of which goes to show how careful you must be when using this kind of powder.

Two processes have been employed up to the present time in obtaining photographs in natural colors, but they are complicated, and not within the reach of the average photographer. There are still many difficulties to be overcome. Some of these color pletures are valuable only when shown by reflected light.

The amateur who does not try a ray filter will make a mistake. Though it is february, now, the winter is not over by any means, and there will still be plenty of snow

thing worth preserving.

Work for the Small Camera.

Though as a rule the small camera will not take a very large picture of a face, it is well adapted to figure work, at from six to ten feet, or less, and if the lighting is anywhere what it should be the result will be pleasing. Study your subjects. Put them in positions in which they feel most at ease; get them thinking of something else besides themselves and how they are going to look. Then you will not be disappointed. pointed.

Answers to Correspondents.

George Hollinger-Do not take any picture you would not want your mother to see. Coarse pictures are brutalizing.

Sidney Stanley—In taking pictures of extreme distances very short exposures are generally the best, if the ordinary plate is used. Many do not attempt these kinds of pictures unless with slow or orthochromatic plates. Use new developer.

Jerome Graves—One way to avoid double exposures on plates is to put a piece of gummed paper on the holder the moment the plate has been exposed. This will act as a shield seal. If you delay using the gummed paper you are apt to forget.

Walter Hillman—The use of the "squee-gee" is to get rid of all the air between the print and the mount. You can make one by using a smooth round bortle, put-ting a piece of common paper between the print and the bottle when pressing down.

Some Things One flust Do.

If the amateur wants to have uniform uccess with his toning, there are several hings he must do. After resulving to stop sing a combined bath, which only works ist right occasionally, though very handy, we must:

Keep his trays clean.

Wash the prints thoroughly before toning, several changes of water.

Rock the dish and keep prints in motion. Take out the prints before they are overoned.

Tone until shadows are toned, and then top into a salt bath.

Tone until shadows are toned, and then drop into a salt bath.

Drop the prints into the fixing bath one by one, so that all portions of the print will receive the effect of the bath.

Wash thoroughly either in running water for the better part of an hour, or in a discen changes of water.

Put away the prints to-day where they will be free from dust.

Pictures of smoking chimneys make good evidence when a smoke nuisance is asked to be abated.

Photographs from cameras attached to

Photographs from cameras attached to ites are steadily being perfected, until ow some very desirable pictures have been

shown by reflected light.

The amateur who does not try a ray filter will make a mistake. Though it is February, now, the winter is not over by any means, and there will still be plenty of snow pictures that will be greatly benefited by the use of the filter. They cut off the glare of the snow and give the scene a chance. They prevent over-exposure also, and when the plate is rightly developed, give details very hard to obtain in any other way. other way.

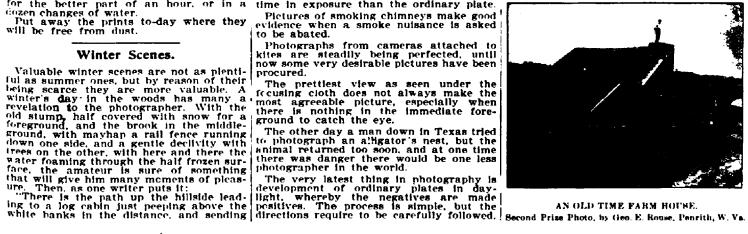

Some Excellent Pictures.

Two pictures of snow scenes have been sent in to this department, both above the average in excellence. "Vermont in Winter." by F. S. Harvey, St. Albans, Vt., and "The First Fall of Snow." by M. L. Ball, Bell, Deposit, N. Y., are the titles. Ivan J. McKenrich sends in "Path Through the Woods" and "An Old School House." Both were worth taking. "On the St. Lawrence River," by Robt. Martin, is a pretty bit of scenery, while the pictures by M. H. Maddern, of Oakland, Cal., and G. R. Hehnboldt, of Sharon, Pa., are worthy of honorable mention. It is to be hoped the glossy pictures will decrease in number, and that the dull finish will more and more press into prominence.

To Make a Portrait at Home.

If it is the picture of a lady you are taking, the position must be graceful; if of a man, it should be firm looking. A picture of a lady can be taken in a recining attitude, but that of a man wants to have an alert look. Put the chair the sitter is to occupy at right angles with the lens. When seated, turn the body slightly toward the camera. Then the head can be brought still farther around, but not full face, with the eyes gazing directly into the lens. Another position is to place the chair and sitter directly in front of the lens, and then with a quick motion have the sitter turn the head at right angles with the lens, without turning the body. This will give a profile that with some faces is very effective.

A good way to do is to examine photographs from galleries of good reputation, and carefully study the positions and lighting. It is not possible nor desirable to follow the positions exactly, for every sitter needs to be placed a little different from every other sitter; but many points can be picked up by a careful study of other people's work.

BOYS BOYS BOYS L KINGDOM®

Ants have brains larger in proportion to the size of their bodies than any other living creature.

found within a few hundred miles of the brain fever, was famous for two things, North Pole.

Butterflies can stand great cold and still live. Butterflies lying frozen on the snow and so brittle that they break unless they are carefully handled will recover and fly away when warmed.

Goldfish live to a great age. There are a few in the Royal Aquarium at St. Petersburg that are known to be one hundred and fifty years old, while the Chinese claim to have goldfish whose ages are counted by centuries. The great goldfish farm of the world is in Indiana, where thousands are reared and exported to England every year.

A poor African came to Moffat, the missionary, with the sad story that his dog had torn a testament to pieces and eaten some of the leaves. "He is no good to me now." "Why not?" said the missionary. "Why, the words of the book were full of love and gentleness, and after the dog has eaten them he won't want to hunt or fight for me any more."

Dawson City's Fire Dogs.

one of the most remarkable fire brigades in the world. The engine is drawn by a team of dogs. The dogs are not a bit less active and intelligent than are the fire horses, which every city boy knows are ready when the alarm sounds to jump into their places, acting for all the world like men. The instant the alarm sounds in the fire house of a Dawson City brigade, the dogs immediately spring into the place where their collars are ready to be snapped into position. In a few seconds they are dashing through the streets of Dawson City at full tilt. dragging the fire apparatus at their heels.

Do Dogs Think?

Sitting at his desk one day, a gentleman observed a dog starting to go across a street. When the dog had reached a point about one-third the distance across he found the mud becoming too soft and deep for comfortable walking. He stopped, looked ahead a moment at the sea of mud before him, then turned and went back to the sidewalk. Trotting along the sidewalk for half a block, he reached the paved cross-street, upon which he passed over dry shod and clean. How different would a man have acted? If a man were to do the same thing we would say that he acted from reason. Why not give the dog the same credit?

Boys and Birds.

Whatever you do, boys, don't practice shooting or throwing at birds. Birds have the same right to live that you have, and then, too, birds are your friends and your fathers' friends. They are friends because they please with their songs, because they make war on your the insects and the weeds. enemies, Now, if you don't want to pick potato bugs and pull weeds out of the ground, stand by the birds. If you want to eat apples without worms in them and do not want to pick the worms off the strawberries and the currants, protect the birds. Of course, the robin may take a cherry once in a while, the blackbird may take an occasional kernel of corn and the jaybird may be a thief on an occasion, but the good that these birds do far more than recompenses for the evil. Birds have their vices and their virtues just as do boys, so boys and birds should be friends.

Rajah, the Man-Killer.

By L. R. B., ONE OF OUR BOY READERS.

Rajah, the world famous elephant, Six species of butterflies have been who died but a short time ago with the first, for his size, being a trifle larger than the renowned Jumbo, and second, for his man-killing propensities, nine human lives being the awful record of his thirty seven years of life.

His last victim was his keeper. Fisher. Catching him in his trunk, Rajah dashed him to the ground, and then, kneeling, he crushed the unconscious man nearly flat with his broad head. He belonged to Lemon Bros.' circus, and was valued at \$25,000. His loss will be keenly felt by the management.

Strength of Insects and Animals.

A series of experiments made to test the jaw force and pulling and lifting strength of various kinds of insects gives some curious points for study. It has been found that a cockchafer can draw fourteen times his own weight and the common honeybee thirty times. From this it may be argued that, weight for weight, each of the above named insects is twenty one and thirty times respectively stronger than the horse, whose strength, as a rule, is taxed to its utmost in drawing its own weight as a "dead load." The editor of this depart-At Dawson, in the Yukon country, is ment of The Republic once experimented with a small hard-shelled beetle by putting him under a common table tumbler. The little creature, not more than onethird of an inch in length, was able to move the glass in any direction. After the experiment had been satisfactorily made both the tumbler and the bug were weighed, whereupon it was found that the little Hercules had lifted nine hundred and sixty times his own weight! He did not carry the weight, of course, but caused it to make some lively motions.-St. Louis Republic.

Baby Lions Going to Bed.

Baby lions, as well as baby boys and girls, need fresh air and sunshine, so, at the Washington Zoo the baby lions have summer quarters where they can run and stretch their limbs in a freedom somewhat akin to that of the jungle. So well do they like their outdoor quarters that they will not go in at closing time, although their big, tender mother urges them by all the ways of which she is mistress. A novel method has to be resorted to in order to get these big babies into their cage without hurting them, for gentleness is one of the rules at the Washington Zoo, and no animal is punished where humane treatment will answer. When the animals are called to their quarters the three baby lions poke their wrinkled noses close to the bars and settle themselves down as if to protest against going to bed. Then a watchtest against going to bed. Then a watchman approaches with a hose and shoots a stream of water close to their small, able prices. MRN. M. B. MLACK, Pueble, Cole. snarling faces. Then back go the kittens by the great rocks to the cavern-like door of the inner cage, followed every step of A. II. NVCE, verneeld, Pa. the way by the man with the hose. Finally, the three small heads disappear and the sliding door hides three pairs of eyes from glaring out into the darkness. Baby lions do not like water-at least, not on their smooth coats-and the animal keeper, who has noticed a kitten stop and shake a protesting foot on a wet pavement, has turned his observation to good account in getting these giant pussies to bed.

Reviews of Bovs' Rooks

All books reviewed are bound in cloth, unless otherwise stated. No book not worthy of a place in a boy's library will receive mention in these columns.

Books reviewed may be obtained of the ublishers of THE AMERICAN BOY at

SOUNDING THE OCEAN OF AIR: A. Lawrence Rotch, S. B., A. M. The book is made up of six lectures delivered by the author before the Lowell institute of Boston, and treats of atmosphere, clouds, balloons, ballonsoades for great altitudes, kites. 184 pps. E. & J. B. Young & Co.

JOHNNIE. E. O. Laughlin. Johnnie is a plain country boy and we follow him from the age of six till he is the father of another Johnnie. There is humor and pathos in the story. The book is prettily illustrated with reproductions of photographs from life. 227 pps. \$1.25. The Bowen-Merrill Co.

LITTLE BEASTS OF FIELD AND WOOD: William Everett Cram. The author takes the reader into the woods of New Hampshire and lets him see the life of fox, weasel, squirrel, mink, otter and muskrat, giving twenty four lively illustrations, Chapter 1 is on "Little Beasts and How to Find them" 261 pps. Small-Maynard Co.

NATURE'S MIRACLES: Elisha Gray, Ph. D. LL. D. This delightful primer of science treats of energy, sound, heat, light, and explosives. It is Vol. II. of a series, the first of which treats of earth, air, and water. It is popularly written, full of experiments, with loads of humor. A third volume, on electricity and magnetism, is promised, 243 pps. 60 cents. Fords, Howard & Hulbert.

THE WOODRANGER: G. Waldo Browne. The scenes here described are pictures of the region of the Merrimac, in what is known in history as "The Debatable Ground"—the uncertain boundary line for 100 years between New Hampshire and Massachusetts. The story relates the experiences of the pioneers of the Debatable Grounds. 312 pps. \$1.90. L. C. Page & Co. It is an interesting and exciting tale of adventure.

ADVENTURES OF PIONEER CHIL-DREN: E. Fenwick Colerick. This book is a portrayal of the part performed by the children of the early pioneers in establish-ing homes in the wilderness, relating acts of bravery and adventures with wild beasts and savages. The stories are gleaned from history, general and local, from colonial days down to the first settlements of the Northwest Territory. 256 pps. The Robert Clark Company.

DICKEY DOWNY: Virginia S. Patterson. The story presented is the autobiography of a bird, beautifully illustrated in colors. A Southern bobolink migrates to the North and tells his experiences. He makes his home in a millinery shop and ses how birds are used there. The result is, of course, a protest against the slaughter of birds at the demand of style. The introduction is by Congressman John F. Lacey. 122 pps. 60 cents. A. F. Rowland.

WARD HILL AT WESTON: Everett T. Tomlinson. This story is descriptive of American school life and is written by one

COMMENCEMENT PARTS: Harry CasLip Davis, If, at graduation, one must bave a model for his commencement oration, essay or address, he can get it between the covers of this book. Indeed, the lazy or incapable boy can here find it ready made. Then, too, there are speeches and addresses for holidays and other occasions—very good ones, indeed—all deriared to be original, that is, we suppose, written by the author of the book. Here the Valedictories, Salutatories, Orations, Essays, Class Poems, Ivy Orations, Toasts in goodly number, with some matter in the way of instruction intermingled. 626
pps. \$1.50. Hinds & Noble.

BEAUTIFUL JOE: Marshall Saunders. Beautiful Joe is a real dog. He at first had a cruel master, from whom he was rescued by one who gave him a pleasant home. It is a story that bears a relation to the dog kingdom, a relation like to that which "Black Beauty" bears to the horse kingdom. The story is delightful and ought to be widely circulated. It can do much good. Hezekiah Butterworth writes the introduction and commends it highly. 359 pps. 25 cents. Charles H. Banes.

AMONGST MACHINES. By the author of The Young Mechanic. The book is for boys and is as practical as its name indicates. It describes machines and appliances "used in the manufacture of wood, metal and other substances." It tells about wire-drawing, brass tubes, making of steel pens, pins, hair pins, screws, bolts, nuts, paper-making machines, glass making. The book, as stated, is for boys; it seeks to instruct them in the details of the more ordinary machines. 35 pps. G. P. Putnam's Sons.

Putnam's Sons.

THE YOUNG AND OLD PURITANS OF HATFIELD: Mary P. Wells-Smith. This is the last volume of the Young Puritan series. It gives the story of the experiences and adventures of twenty captives, largely young children, carried away by the Indians in 1677 from Hatfield and Deerfield to Canada, and the efforts to rescue them. It is a remarkable story, full of interest and founded on truth. The book is written in a style to interest old as well as young, and teaches much as to the hardships and the endurance of our forefathers. 352 pps. \$1.25. Little, Brown & Co.

\$1.25. Little, Brown & Co.

THE YOUNG GUNBEARER: G. Waldo Browne. This is a tale of the neutral ground, Acadia, and the slege of Louisburg. It is the second of "The Woodranger Tales," of which the book last above described is the first. The incidents of this story belong to the colonial history of the time of "King George's War." It was the French and Indians against the New England colonists. Acadia comprised what is known as Nova Scotia, and was known as the neutral country. The writer relates the causes that led to the despoliation of people of this peaceful region, cut as they were between two mighty powers, acting like a pair of huge scissors. 33 pps. \$1.00 L. C. Page & Co.

THE LAND OF TAWNY BEASTS:

L. C. Page & Co.

THE LAND OF TAWNY BEASTS:
Pierre Mail, translated by Elizabeth Luther
Cary, with fifty two illustrations. With ebgant pictured covers, large type, splendid
paper and its lively illustrations, this book
must meet with the favor of readers who
love adventures well told. The persons—a
Frenchman, an Englishman and an American woman, on a wager, set out to climb
the highest peak of the Himalayas. Their
exploits in the jungles and mountain passes
with savage beasts and men, and their
feats of mountain climbing, are remarkable. It is not a "Sunday school book,"
and some of the scenes are shocking to the
tiner sensibilities; but the book is clean, if
at times brutal. It is doubtless a clear
picture of the Land of Tawny Beasts.
290 pps. Frederick A. Stokes Company.

HELPS FOR AMBITIOUS BOYS. Will-

290 pps. Frederick A. Stokes Company.

HELPS FOR AMBITIOUS BOYS. William Drysdale. Within the covers of this splendid book for boys are 439 pages, a mine of treasure for aspiring youth. The author not only holds up the mark for boys to aim at, but tells how to aim at it and how to hit it. Copious quotations from great men of all time are mingled with his own words in judicious proportion, and all is presented in a practical, palatable way to hold the interest of readers, young or old, and inspire them. The book, in the hands of every boy, would lessen the story of future failures. There are attractive full page half-tone portraits of men who have become great in their respective fields.

TALKS WITH MY BOYS: Wm. A.

over become great in their respective fields.

A comparing that boys will inevitably do the whole book breathes a healthy pirit. It inculcates a lesson of bravery in the defense of the right—moral courage. It shows that success is not easily won, and that to win it one must earn it. 336 pps. A. J. Rowland.

JACK THE YOUNG RANCHMAN. George Bird Grinnell. The author relates the actual experiences of a young relative of his, who, in 1879, and once or twice afterward, visited the far west—the great Central Plateau—of which little is generally known. The life described is the everyday life of the cow and horse ranch, before the extermination of the buffalo and the wild indian. Its pages are full of stories of the chase, simply and effectively told. 304 pps. Frodk. A. Stokes Company.

THE ORDER OF THE AMERICAN BOY

CONTINUED FROM PAGE 111.

How Boys of the Order Will Treat Women and Ciris.

How Boys of the Order Will Treat
Women and Giris.

Every boy in the Order of The American
Boy will best show how he lives up to the
motto of the Order by the way in which
he treats women and girls. The Order of
The American Boy is a chivalrous order.
It honors and respects womanhood. Every
member will hold his mother and his sister
as the purest and best on earth. He will
allow no one to question this fact. He will
allow no one to question this fact. He will
always be gentlemanly in deportment, but
particularly so in their presence. Then his
love and his care for his mother and sister
will lead him to respect and honor womanhood everywhere. This not only means
that he will not be positively rude to a
woman or a young girl, but that he will
cultivate delicacy in his treatment of them,
politeness in his manner toward them, and
consideration for their finest feelings at
all times. Some things which it is manly
for a boy to do in this connection are:

1. Touch your cap or lift it slightly when
speaking to one of the other sex.

2. Remove the cap from the head and
hold it in the hand when indoors—particularly in the presence of the other sex:
Politeness does not require the removal or
the cap in public elevators or other public
places where one is exposed to drafts and
the uncovered head may subject one to a
cold, but in elevators in hotels and private
houses, where there is no risk, remove the
cap in the presence of ladies. You need
not stand barcheaded in the street or in a
hallway. Rules of politeness give way
always to consideration of nealth.

3. Don't sit while the lady to whom you
are talking is standing. Don't hold your
hat and offer your scat; don't simply rise
and turn your back as if you really
enjoyed domg a chicalrous act, even if,
in fact, you do not.

4. Lend your hand to protect and assist
we mankind wherever you can—particularly
the aged. He quick to see a chance to
serve them, by carrying bundles, noting
their perplexity.

5. Never forget the respectful forms of

them precedence.

5. Never forget the respectful forms of "Yes" and "No."

6. Never speak disrespectfully of a wo-

6. Never speak disrespectivity of a woman.
7. Do not tell stories about women which you would not tell if your mother were the woman in question, nor listen to them.
8. Treat a homely girl as politely as you would a pretty one.
These are but a few of the many suggestions that might be made to the American there who wishes to grow up to be a gentle-

how who wishes to grow up to be a gentle-man in all that the term implies. May the Order of The American Boy become dis-tinguished for its delicate consideration for womanhood, and the bud of which it is the flower—girlhood.

A New National Officer.

A New National Officers.

In addition to the appointments of "Officers of the Line," as announced in our January number, we announce the appointment of David S. Humphreys, Jr. (5), of Greenwood, Miss., as a Major General. His recent exploit of organizing a cadet company among boys, and his patriotic offer to go with his company to defend the honor of his country, shows he is made of stuff out of which we make national officers of the Order of the American Boy. We have the assurance of Hou. L. P. Yerger, a prominent lawyer of Greenwood, that the boy is worthy of recognition. boy is worthy of recognition.

"Round Shoulders" on Boys.

Boys of the Order should watch them-selves lest they get what is called "round shoulders." A "round shouldered" man is not a very manly looking fellow, and round not a very manly looking fellow, and round shouldered boys become "round shouldered" men. Cure the tendency to round shoulders not by wearing shoulder braces, but by constant effort to keep the shoulders back. This will strengthen the muscles, while the braces weaken them. The exercises outlined for the boys of the Order will cure the trouble, sure, for they will develop the muscles of the back.

The Company Library.

The Company Library.

Every Cempany should elect a librarian and have a library. Each member should contribute to it such good books for boys as belong to him. And this can be done with the understanding, or by provision in the Company's By-Laws, that on the dissolution of the Company or his withdrawal from it, he may receive back what he has contributed. The Librarian shall then catalogue the books in a blank book and give each member a copy of the list. Each book should be catalogued by name and number, and some simple system be adopted for keeping track of books. We shall endeavor in our March number to present a simple plan for conducting the library. Five boys (the smallest number that can constitute a company) ought, without a cent of expense, to start with a library of twenty or more good books. Take pride in having no trashy stuff in your catalogue. We shall present plans for enlarging the library by the purchase of the latest books for boys, so that it will not be difficult for Companies to add one or two new books every month.

Members should watch "The Boys' Library" page of this paper for announcements of new and good books.

A Boy's Hunting Story.

ROLAND D. BOGAN, ATLANTIC CITY, N. J.

ROLAND D. BOGAN, ATLANTIC CITY, N. J.

For boys who like to hear about camping, I will tell the experiences of three boys, of whom I was one.

We had spent three days camping near home, and liked it so well that we determined to go again. About the lirst of November we each contributed eleven dollars toward expenses, and set the date of starting at Nov. 10. As the father of one of the party was a lumberman, we could readily get the framework for our tent, which was to be eight feet long by seven wide, with a gable roof. We did not nail the framework together, but took nails along so as to put it together at our camping place. For a cover we had an old sail which had been discarded by its owner. This we cut until it fitted perfectly, then hard-olled it. Another member contributed a good oil stove with two burners. There was some argument over whether we should take it, as one of the boys insisted that old trappers did not have such things. It was finally settled that we should take it, we having convinced ourselves that the only as one of the boys histed that our trappers did not have such things. It was finally settled that we should take it, we having convinced ourselves that the only reason why the old trappers didn't have them was because they couldn't get such things. We were afterwards very thankful that we took the stove along. We supplied ourselves with cooking utensils, and for each one a dish, knife, fork, spoon and tin eup. We each took two heavy blankets and tirearms. One had a shotgun, another a rifle, and the third a shotgun and a thirty-two calibre revolver. We paid out twelve dollars and fifty cents for provisions, ten dollars for canoes, ten dollars for wagon hire (five dollars each way), and then had fifty cents left, which we blew in for ice cream, root beer and cake just before we started.

At seven o'clock the morning of Nov. 10.

canoes, ten dollars for wagon life (fiver dollars each way), and then had fifty cents left, which we blew in for ice cream, root beer and cake just before we started.

At seven o'clock the morning of Nov. 10, a wagon could be seen wending its way along the lonely road about five miles from the town of Tuckertown. N. J., bound for a lake as yet twenty miles distant known as Lake Pohatcong. Three boys trudged along after it, two of them were sixteen years of age and the other seventeen. It was not until dark that we reached our camping place. One got supper while the others helped the driver unload our traps. We had killed five rabbits and two quall on our way. They tasted splendid to four hungry persons. We slept that night in an empty wagon. The next morning, after giving the driver to understand what would happen to him if he failed to appear at ten o'clock sharp on the morning of Dec. 10, we gave him a good-by volley from our guns and let him go. When he had gone out of sight we looked at one another in quite a melancholy way, but we soon got over that. After searching all the morning we found a high knoll right on the edge of the stream near the lake. There we erected our tent, which was a splendid little house, perfectly dry. For chairs we used our folded blankets, our only other furniture being a box on which we put the oil stove and in which we put the pots and pans. We had brought along a cupboard and table. We draped the walls with our extra clothes. Soon we had a roaring fire going, and one of the boys was out setting some muskrat traps. We used the common steel traps and chained them fast to small sapilings, putting them under the water in front of the muskrat's holes. We cut notches in all of the trees that the traps were fastened to. Then we had supper, and those rabbits were the best that I ever tasted. The coffee was strong enough to fight, but it came off second best. The next morning we found that we had caught slx muskrats in our trap, and during the time that we were at camp we caught two hund

over thirty dollars on our month's work.

The evenings were splendid. The full moon looked glorious on the water. One night we were much scared by the hooting of an owl, as we had never heard one before. That dreadful "whoo, whoo" sounded like the wail of a lost spirit. We spent the time fishing, tending traps, gunning, eating and sleeping. Sometimes one cooked, sometimes another. We killed rabbits, quail, hawks and a solitary duck. I spent a great deal of time shooting muskrats with my revolver, sometimes from cover and sometimes by drifting down on them in my cance. After supper we played checkers and dominoes.

On Dec. 10 the wagon came after us, and on the evening of the 11th we were at our homes recounting our adventures.

Every Boy Can Be His Own Iceboat at This

material a boy can make sails and spars that, when completed, will have the appearance of the skating sail shown in the illustration.

pine sticks an inch and a quarter square and twelve feet long, and two pieces five feet long and one inch square.

With a plane, shave the sharp corners from the sticks, making them slightly round, and taper the ends of them a little, but do not shave them to a sharp point. Wrap the sticks with linen line for an inch or two at regular distances of ten or twelve inches apart and paint the wrappings black.

Make a block six inches long, two inches wide and an inch thick, and into the ends of it bore holes and drive stout pins made of thick wire, as shown in fig. 1. This will be the separator.

To the middle of each five foot stick lash a block an inch square and four Inches long, having a pin driven into either end of it, as shown in figure, 2

Give all the woodwork several successive coats of shellac to improve its appearance, and then lash the ends of the yard arms or long sticks together with linen line.

Into the ends drive a large brass screw eye for the guide ropes, and the frame will be ready for the sails.

For the sail, two pieces of unbleached

A little practice will soon enable the sailor to become an expert, and it will be found quite easy to run into the wind and tack about in a successful manner.

When running before the wind keep the feet fairly close together, but when tacking they must be placed apart, and one ahead of the other, as experience will dictate.

J. HARRY ADAMS.

FIFTY GOOD GAMES

As Played in Brooklyn Public Schools

From Report by Jessie H. Bancroft, Director of Physical Training

No. II. BASKET BALL.

This game should be played only by boys known to be in good physical condition.

Teams may consist of five, seven or nine members, according to the size of the field of play.

OPPICIALS

The officials shall consist of a referee and

REFEREE.

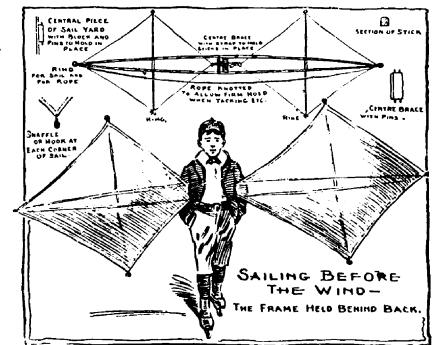

The referee shall put the ball into play by tossing it up in the center of the field, and shall judge of the ball and the players during the progress of the game.

SCORER.

The scorer should be appointed by the captain of the home team, and he should keep the record of the game in full view of the players and spectators.

CAPTAINS.

Captains should be appointed by each team, to represent the team in any disputes and to toss for goals; he should be responsible for team discipline.

muslin one yard and a quarter square will be needed, and have the edges hemmed over a stout piece of cotton line.

Bag snaps or curtain hooks can be sewed fast to each corner that, in turn, should be caught into eyes at the ends of the yard arm and cross sticks; and at the middle a strap and buckle must be provided to draw the inner ends of the sails together.

To rig up the sail spread the yard arms apart and insert the separator directly at the center, where two small holes have been made in each stick to receive the pins.

Two feet and six inches in from the yard arm ends place the cross sticks, so they will be held in position by the pins on the block that will also it into holes made in the sticks to receive them. Bind the center together with a strap to prevent the separator from becoming detached, and then snap or OWI

Find an old leather belt and sew three

hem in my cane. After support we layed checkers and dominoes. After support we layed checkers and dominoes. Find an old leather belt and sew three leather ears to it, one at the front and one on either side.

A skating sail.

A skating sail.

A skating sail to an be supported by dropping the hook into one of the leather sars on the belt in which a hole has been made to receive it. This will leave the hands free to guide the sail, or pull on the pars that, when completed, will have he appearance of the skating sail hown in the illustration.

For the frame get two selected clear is made when the ball is thrown or batted from between the center and end lines from between t

RULES FOR GAME.

1. The game is started by tossing the ball in the center of the field, at the beginning of each half, after each goal, or at any time when the ball goes out of play. The ball must first be touched by one of the center men after it has been tossed up by the reference.

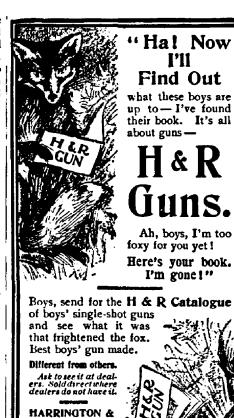

2. The ball may be batted or thrown in any direction. It may be hit with the open hand only. To strike it with the fist or to kick it constitute fouls. It may be thrown with one or both hands. The ball may be "dribbled." I. e., bounced on the floor and struck immediately with one hand. After "dribbling" the player must throw the ball to someone else to make a goal.

3. The ball may be batted with one open hand downward out of the hands of an opponent. To strike, pull or wrench the ball out of the hands of an opponent after may intercept the ball when thrown from or to an opposing player, but he must not run with the ball if caught, or keep it in his possession over five seconds.

5. There shall be no tackling, holding, pushing or interfering with the person of an opposing player in any way. To do so is a foul.

6. A goal is made when the ball is thrown referce.
2. The ball may be batted or thrown in

6. A goal is made when the ball is thrown or batted from the field into the basket.

No. 12. BEAN BAG RACE.

The players stand in lines (about twelve in a line), and bags are passed from child to child Each line should have about ten bags. The line wins that finishes first, i. e., bags. The line wins that inishes first, i. e., passes all of its bags to the end of the line. The game may be varied by having each child pass the bags from one hand to the other before handling it to his neighbor, or by raising the bags overhead, or touching them to the floor, first with one hand, then with the other, before passing.

No. 13. BEAN BAGS IN CIRCLE.

Children form an irregular circle, all facing inward. The bags are tossed from one to another, the object being to keep the bags going. As many bags as possible should be used.

(Others Games to follow.)

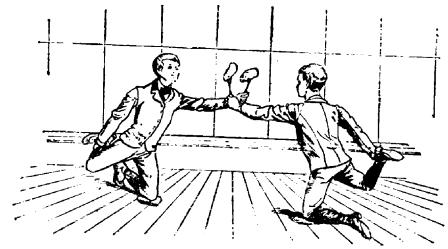

A POTATO JOUST.

Recreation for a Rainy Day, When Animal Spirits Must Be Worked Off.

rainy day is almost sure to be a tenous day to every healthy, normal Checkers, after a time, lose their mum and books cease to be of inter-The boy stretches, kicks out his legs impatiently and casts many wistfil glances out of the windows. He is 🖭 of sitting still. After holding is althy animal spirits in check for the ger part of a day they are likely to loose with a rush.

Few sports are better calculated than petato joust to amuse imprisoned heys. It has all the joys of a combat, at d yet, try as he will, there is no possibility for any boy to become rough.

In the potato joust each warrior is aimed with a fork, on the end of which is a potato. The combatants take their position in the center of the play-room, from each other. They should be sepacuted by not less than three feet. bach must lift a leg from the floor, as shown in the illustration. The fighters may use their own discretion as to which leg shall be lifted from the floor,

and may hold it up with either hand of the fighter as upon his strength. they like. A small cushion placed under the knee will add materially to the comfort of the contestants.

The battle is decided by one of the warriors knocking the potato from his opponent's fork. Toppling over three times is also counted as a defeat. If one of the knights is obliged to let go of his foot in order to keep his balance it is counted as a fall. Every time the battle is interrupted in this way either of the contestants is at liberty to change the foot he is resting upon. If one of the warriors falls against the other and upsets him it is counted against the one who is responsible for the tumble.

You are not likely to realize on your first introduction to a potato joust the amount of skill and practice required; to really become expert in handling the fork. A slight turn of the wrist, a quick push and the practiced knight will defeat the novice; so deftly, so easily that you are left wondering how he

Practice is the only way to learn how he did it. One or two axioms is all the help I can give the novice.

Move your fork as little as possible; long, sweeping strokes are more likely to throw off your own potato than to interfere with that of your opponent.

The most dangerous stroke is one from underneath; always maneuver to keep your potato below that of your antagonist.

A TERRIER FIGHT.

It is a Capital Bit of Rough and Tumble, and Consists of Three One-Minute Rounds with Thirty Seconds' Rest Between Each Round,

Rough-house is the expression used by the boy of to-day when he is describing a general scuffle, and he always smacks his lips over the word. But rough-house has its disadvantages as many sprains and bruises can testify.

Furthermore, a terrier fight is not brutal. No boy will hurt himself while engaged in this sport. As shown in the illustration, two boys are placed facing each other in the center of a room; hands clasped beneath the knees and a stick just under the elbows, as shown. Each contestant endeavors to push the other over; but as it requires considerable attention to keep your balance at all when in this position the attack is no easy matter.

To suddenly give way is a maneuver almost sure to upset your adversary, but unfortunately it is very apt to upset you at the same time and only after considerable practice will you be able to overcome a man in this way. The pivot, a sudden swing to the right or left, is safer, though not quite as effective. Always remember that the hest terrier fighter invariably makes his opponent throw himself. Give way at some unexpected point, and unless he is a skillful man he is sure to go over. Never try a hard push except in the last extremity when everything else has failed.

A terrier fight consists of three oneminute rounds, with thirty seconds' rest between each round. The one scoring the largest number of falls during the time set is accounted the winner.

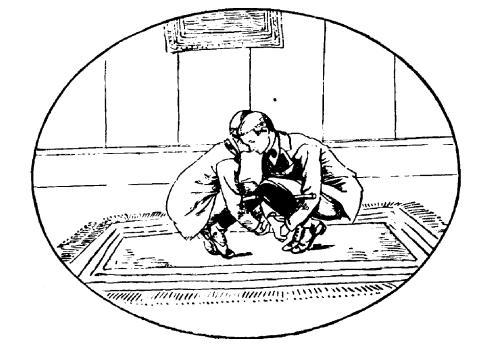

The American Bicycle Compay in Hartford is making a wheel for C. A. Stephens, the noted cyclist who intends to make a trip across the Sahara Desert. The bicycle will be built with a wider frame and a bigger fork than the ordinary wheel. will have a flat tire four inches wide. The wheel will be chainless.

Stephens is the man who rode from Seattle into Dawson last winter on a wheel.

The committee of professors from leading colleges who have been working to put a stop to the abuse of amateur athletics at college, have adopted the following important rules:

many sprains and bruises can testify.
and if the same amount of fun may be had from some less trying amusement.
an amusement, say, which is quite as energetic and quite as exciting, the boy of to-day will certainly adopt it in preference to rough-house.

A terrier fight is exciting, and it is funny—it is also energetic—and victory depends quite as much upon the skill

Varieties of United States Stamps.

One of the greatest difficulties met with by the young collector is that of dis-tinguishing the varieties in the issues of United States stamps from 1851 to 1882. The following descriptions may be of some

ne tonowing descriptions may be of some assistance:

One cent, 1851.—Of this stamp there are three varieties or types:

Type 1, so called, has over the words "U. S. Postage" and under "One Cent"a blue line, and the scrolls directly under T of cent and O of one have a ball at the end of each of them. This variety is very scarce, being catalogued at \$25 imperforate, and \$7.50 perforate.

Type 2 is the same as type 1, except that the scrolls do not end in balls.

In type 3, the curved line mentioned in type 1 is cut away in the center. The last is the common variety, and a careful examination will show the differences we have described.

There are two varieties of the three cent.

There are two varieties of the three cent, ISG.—The scarcer one has an extra line under the words "Three cents," and is called the "Outer line." It catalogues at

The five cent of this issue in the perforated set exists in three types, the first being the same as the five cent imperforate, I. e., there are projections in the center of the four sides of the stamp. In type 2, the projections at the top and bottom are partly cut away and in type 2 entirely so

bottom are partly cut away and in type 3 entirely so.
There are two types of each value of the 1861 series, but as the first type is of the greatest rarity, being in use but a few days, we will not describe it.
In 1867 all of this series were grilled, i. e., had a small punch of dots embossed on the back; this was to prevent cleaning the stamp. These grills are of different sizes, and a millimetre scale will have to be used to determine the size, all measurements in stamps being on the metric system. The 9x13 and 11x13 millimetre grills are the most common in the three cent denomination. common in the three cent denomination, and the 13x16 and that covering the entire stamp are the scarcest, the latter listing \$12.00. All of the remaining denominations grilled are worth more than those without

grill.
In the 1869 set, the fifteen cent is the only one in which there are two varieties; these are known as the picture with and without frame.

In the former there is a small diamond under the T of postage. This is missing in the latter which is the scarcer variety.

(To be Continued.)

Stamps as an Investment.

While the collecting of stamps is presumed to be pursued for the mere diversion, entertainment or knowledge which may be secured through their study, we cannot lost sight of the financial side of the subject. Probably not one-thousandth part of the number of people who collect postage stamps would do so were it not for the belief that the sale of the collection would return nearly, if not its entire, cost, or that the passing years would greatly enhance the value of the collection.

A thirty year endowment life insurance policy for one thousand dollars, at the age of twenty five, will cost about thirty dollars a year, or for thirty years, nine hundred dollars. The policy at the end of this time would be worth one thousand dollars, plus the dividends—probably in all fourteen hundred dollars.

If the same sum of thirty dollars a year were invested in stamps for a like period, we firmly believe the collection would be worth five thousand dollars. In making this statement, it is presumed that intelligence will be exercised in making purchases, and industry used in securing many stamps for little or nothing.

In making a collection with the investment object in view, remember one thing, that its value is greatly enhanced by the perfect condition of the stamps therein contained.

Never put a damaged stamp in your col-While the collecting of stamps is pre-

perfect condition of the stamps therein contained.

Never put a damaged stamp in your collection unless it is a rarity, and then only when slightly damaged, and replace it with a perfect copy as soon as possible. Damaged stamps are practically worthless and cannot, as a rule, he sold for one tenth of their catalogue value.

Another thing to be watched is the centering of stamps. A stamp is said to be "well centered" when the design is directly in the center of the paper, with an even margin all around. Stamps "off center" are worth much less than those in perfect condition, so that they should always be secured well centered, if possible. Heavy cancellations also decrease the value of stamps. All these things should be borne in mind when amassing a collection which will be a sure investment, and if our suggestions are faithfully carried out, we believe the predictions made above will be more than realized.

number and the date of issue of the March

number.
H. H. Parker, Mt. Airy, Ga., sends us one hundred and twenty five foreign stamps, which he says we may offer to the stamps, which he says we may offer to the boy sending us the largest number of subscriptions before the issue of the March AMERICAN BOY. This offer, in addition to the offer made by Mr. A. T. Cook, and the offer made by the publishers of THE AMERICAN BOY to give one-half of the toreign stamps received in their office before the issue of the March number, makes a very large collection of foreign stamps for the lucky boy.

Wilbur V. Haynes, Marion, Ky., sends us one hundred and twenty five foreign stamps which he wishes to add to the number of such stamps that we ourselves offer to the boy who obtains the largest number of subscriptions for us between February 20, 1901, and March 20, 1901.

South African Stamps.

Nothing is attracting the attention of stamp collectors at the present time more than South African stamps, and particularly those from the countries in which the war is at present being waged. Nearly every stamp paper you pick up contains at least a paragraph about them. Few collectors have a complete set from one of these countries, but would do well to hold what they have. After careful studying I make out the following table of the number of varieties of stamps issued by each country: Natal, eighty six varieties, forty one subvarieties; Orange Free State, fifty two varieties, twenty six sub-varieties; Transvaal, one hundred and fifty eight varieties, one hundred and eighty six sub-varieties.

The latest Orange Free State variety is the present issue surcharged "V. R. I.," and value in figures. The surcharge is printed in black with and without dots. The dotless specimens appear to come from the bottom row of the sheet of stamps. The "spotted" question seems to be a very interesting one to Tommy Atkins when not busy, as he and his friends talk of little else. I think I am safe to say that inside of a year the value of this stamp will increase 100 per

Another is a stamp used by the burghers to mail their letters. This specimen has no face value, as it was to show that the letter was from a soldier and was to be carried free. The inscription is printed in black on yellow paper.

Besides the mentioned varieties there are many other similar curlosities caused by the advance and successes of the British. A. K.

Answers to Correspondents.

David J. Daly, Pittsburgh, Pa.-A New Zealand stamp can probably be bought from any one of the stamp dealers who advertise in THE AMERICAN

J. B., Brooklyn, N. Y .-- There are several different green 3p stamps of New South Wales, the difference being in the water mark in the paper on which the stamp is printed. If you wish us to tell yon what a stamp is without seeing it you will have to describe it more minutely.

N. C. McG.—You fail to state which set of newspaper stamps you have; the first set was issued in 1865 and consisted of three values, five, ten and twenty five cents; the second set, in 1875, had values from one cent to sixty dollars, and the third, in 1895, from one cent to one hundred dollars. The use of the last set was discontinued about three years ago, but in response to the urgent requests of many stamp collectors, the government placed fifty thousand sets on sale at the postoffices, to the public, at five dollars per set. A little over half were sold and the balance called in and destroyed. They can now be bought of almost any dealer for five dollars or less. Write any dealer advertising in this paper and state which set you have.

THE BOY COIN COLLECTOR

Why the Old Half Dollars Are So Common.

So many inquiries are coming in from our boys regarding our early half dollars, that the coin editor presumes a few words concerning them may not be out of place. The turban-head Liberty half dollars were first issued in 190, and with the exception of the year 1816, when none were struck, were continuously issued up to and includiirst issued in 1897, and with the exception of the year 1816, when none were struck, were continuously issued up to and including 1836. All have the spread eagle on the reverse with the value expressed beneath, in exergue, 50 °C. Around the edge, in incuse or sunken letters, are the words ritty Cents or Half a Dollar. The question often is asked why are they so common and usually found in such good condition, for it is a fact that most of these pieces are common and found in better preservation than the later dates. The secret of this, no doubt, lies very much in the fact that in 1807 the Harmony Society of Pennsylvania, with headquarters at Harmony, Pa., made an agreement to place all their worldly wealth in a common fund. They sold considerable of their rich landed possessions, and were successful merchants, traders, manufacturers and farmers. The cash was placed in the hands of Father Rapp, their trusted leader, because they had no faith in the permanence of the bank bills or of the banks themselves; they turned their money all into silver and buried their hoards in the earth, for security. This continued for years and as one leader died the secret hoarding place was confided to his successor. All during the Civil War, when silver went to a high premium, it remained buried, and not until 1877-78, when silver went to a high premium, it remained buried, and not until 1877-78, when silver went to a high premium, it remained buried, and not until 1877-78, when silver went to a high premium, it remained buried, and not until 1877-78, when silver went to a high premium, it remained buried, and not until 1877-78, when silver went to a high premium, it remained buried, and not until 1877-78, when silver went to a high premium, it remained buried, and not until 1877-78, and the society became interested in the building of the Pittsburg & Lake Erie tailroad, was it exhumed and invested. Of the \$0,000 in buried silver, over \$10,000 of it was in early American half dollars, much of it passed to the coin editor, when ha

1. W. Durham, Charlotte, N. C.-The 1823 half dollar is worth seventy five cents. F. Tripp, Port Huron, Mich.—The 1853 cent is very common and sells at from five to ten cents.

Emmett Ford, Louisville, Ky.—A silver real, 1779, Charles III. (1759-1788), Spain, if good, is worth thirty five cents.

John Kelliher, Bradford, Pa.—The dealers sell a fine 1841 half dime for twenty five cents and an 1858 dime for thirty cents.

Orton G. Lea. Ashley, O.—You do not mention the date of your fifty cent gold piece. They usually bring from one dollar and fifty cents upwards. Your other coins have no premium.

Clarence Stifee. Allegheny, Pa.—A cent of 1799, in good condition, is worth at least ten dollars; 1798, iffty cents; 1803, 1805, 1807, 1812 and 1814, twenty five, fifty, fifty, thirty five and forty cents each, respectively. A good New Jersey cent of 1787 is worth fifty cents

Charles Eisenmaunx, Chicago, charies Elsemmann, Chicago, III.—The dimes and half dimes issued in the thirties, if in fine condition, are worth about twenty five cents each. The other pieces you mention have no premium. The H on the Canadian cents show that they were struck by Heaton, of Birmingham, England.

Mark Sloan, Martinsburg, Ind,—There are no premiums on the dollar (silver) of 1859, the two cent pleces of 1864, 1865 and 1867, or the small cents of 1858, 1860 and 1863. The half dollars of 1829 and 1832, if good, sell for seventy five cents each. The 1828 quarter is worth tifty cents. If you will again examine your plece of 1806, having all the indications of a half dollar, but with no value expressed, you will notice that around the edge the value is expressed as "fifty cents or half a dollar."

Leonard W. Liddle, Walker, Iowa.—Your rubbing is taken from a live frame piece of 1829. France, Charles X.; 1824-1830. B B after the date is the mint mark of Strassburg, which city, at that time, belonged to France. The dealers would charge you one dollar and seventy five cents for the coin. The dollar gold coins all are worth a premium, usually selling readily at from one dollar and lifty cents to one dollar and seventy five cents. An 1852 cent, if fine, is worth from ten cents upwards. A coln with a hole in it is usually worth only buillon value.

Howard Lammers, Heron Lake, Minn.—You have attributed your coin correctly, as from Bohemia, under Wencesias secundus (II.), A. D. 1278-1395. The coin is, according to the inscription, "Pragensis Grossi," or a groschen of Prague, familiarly called a prager groschen. There is no way of finding the exact date of its issue, only that it must have been struck between the years 1278 and 1395. The coins of Wencesias II. were a vast improvement over his predecessors, due to the fact that he employed the Florentine engravers, the best of this period. These groschen were issued in large quantities, and notwithstanding their age, are quite common today, selling in Europe for from fifty to seventy five cents, in good condition. Howard Lammers, Heron Lake, Minn

PICTURE OF YACHT ONE-NINTH ACTUAL SIZE.

THIS BEAUTIFUL YACHT MAY BE YOURS

N March I next the beautiful yacht shown in the picture will become the property of the person who, during February, becomes a subscriber for one year to THE AMERICAN BOY, or sends a renewal of his subscription, and comes the nearest to telling where in the United States (not counting Alaska or the Islands) the coldest weather is reported by the Government, through its regular stations or volunteer reporters.

DESCRIPTION OF YACHT :- Length at deck line. 3 feet 6 inches i water line, 2 feet 7 inches i beam, at deck. 1 foot ½ inch i at water line, 11½ inches. Draught, 8 inches a span, 4 feet 4 inches a boom, 3 feet 2 inches a hoist. 2 feet a gaft, 1 foot six inches. It carries mainsail, staysail, topsail, and jib topsail. It as worked with a sliding bulb fin and rudder. The hull is of while pine, the deck of gum wood. It is painted white enamel, with red at water line. Sails of Lonsdale cambric. Halyards, sheets and ropes are identical with those of a large yacht. Mast of white pine, varnished, fin ot brass and bulb of lead. Value, twenty five dollars. Pedestal goes with it-

In the water, or in a conspicuous place in a boy's room, it will command immediate admiration.

st telling what will be the coldest spot in the United States, exclus Alaska and the Islands, during the month of February, 1901, and who sends us either (1) an annual subscription to THE AMERICAN BOY for himself; or, (2) an annual sucception to THE AMERICAN BOY for someone else; or, (3) a renewal of his present subscription, whether or not it has expired. The guess and the money must be in our hands by the evening of February 28th. Where a person sends in another person's subscription both are entitled to a guess. Where more than one dollar is sent a guess is allowed for every dollar. Regular premiums are also given as heretofore. If several select a point nearest the coldest spot, or if the same temperature is recorded at several places, the ties will be decided by drawing slips from a hat, some prominent city official of Detroit not identified with this paper acting as referee. The name of the successful contestant will be published as soon as the Government record is made up, probably in the April number.

The Government receives reports from about three thousand regular and volunteer reporters. In 1900 the coldest spot was McKinney, in northwestern North Dakota. In 1899 the coldest was Fort Logan, Montana about fifty miles east of Helena. The coldest point reached in the last twenty eight years was in northeastern Montana.

Every boy, by getting a subscription or renewing his own subscription whether it has expired or is to expire in the future, sending us the money and the guess during February, has a chance to own this beautiful boat.

THE AMERICAN BOY

The Only Distinctively Boy's Paper in America.

(Entered at the Detroit, Mich., Post-office as second-class matter.)

The American Boy is an illustrated monthly paper of 24 pages. Its subscription price is \$1.00 a year, payable in advance.

New Subscriptions can commence at any time

Payment for The American Boy when sent oy mail, should be made in a Post-office Money-Order, Bank Check, or Draft, Express Money-Order or Registered Letter.

Expiration. The date opposite your name on your paper shows to what time your subscription is paid. Silver sent through the mail is at sender's risk.

Discontinuances. Remember that the publishers must be notified by letter when a subscriber wishes his paper stopped. All arrearages must

Returning your paper will not enable us to discontinue it, as we cannot find your name on our books unless your Post-office address is given.

Always give the name of the Post-office to which your paper is sent. Your name cannot be found on our books unless this is done. Letters should be addressed and drafts made pay-

THE SPRAGUE PUBLISHING CO. DETROIT, MICH. MAJESTIC BLDG.

> WILLIAM C. SPRAGUE, EDITOR.

GRIFFITH OGDEN ELLIS, ASSISTANT EDITOR.

Result of the Prize Offer for Last Month.

.The following cash prizes were awarded to the boys sending in the largest number of subscriptions between Dec. 15, 1900, and Jan. 15, 1901: Edwin Nicholls, Opechee, Mich....\$10.00 Claxton Munro, Newton Lower 10.00

Willie G. Sprague, 719 Cass Ave., Detroit. Mich. T. J. McDavid. Hillsboro, Illinois... I. W. Barrett, Mt. Etna, Ind..... Frank Wellman, Galloway, Oregon 3.00 Ornan Smart, Green Fork, Ind....

Alfred Dixon, Elk Garden, Cal.... The largest number sent in by any one of the foregoing was eight.

The Next Offer is \$50.

Fifty dollars will be distributed among the ten boys who send in the largest number of subscriptions between February 1 and March 1. The one sending in the largest number gets \$10.00; the second largest, \$10.00; the third largest, \$5.00; the fourth largest, \$5.00; the fifth largest, \$5.00; the sixth largest, \$4.00; the seventh largest, \$4.00; the eighth largest, \$3.00; the ninth largest, \$2.00; the tenth largest, \$2.00. The subscriptions must be annual subscriptions, and one dollar must accompany each subription. The prizes are not offered to those who retain cash commissions on subscriptions sent in. The sender of a obscription, however, is entitled to the premium or premiums offered in our remium list. In addition to the cash warded to the three who stand at the head, we will give to the one sending the largest number one half the foreign tamps accumulating in our office in the period named; to the one sending the second largest, one fourth the stamps; and to the one sending the third largest,

one fourth the stamps.

Experience has proven that solicitors find ready sale for subscriptions to THE AMERICAN ROY. The paper sells itself lay N. V. **\MERICAN BOY. The paper sells itself.** as every boy and every parent and friend of a boy sees at once its desirable qualities.

The Boy Who Earned the \$200.

ALBERT W. FIFIELD. Minneapolis, Who won the capital prize.

awoke to find in his stocking two hundred dollars sent him by the publishers of THE AMERICAN BOY for having sent in the largest number of subscriptions (102) to THE AMERICAN BOY during the year. Young Fifield not only received his two hun-

dred dollars, but he received premiums on every one of the subscriptionsenough, we should think, to fill a dozen closets. Albert W. Fifield is "only a boy." and no older than the average boy who reads THE AMERICAN BOY.

A Generous Gift to Detroit Newsboys

By HON, D. M. FERRY The millionaire Seedsman

HON. D. M. FERRY, head of D. M. Ferry & Co., the largest seed house in the world, believes in giving boys good literature. With the opening of the New Year, he has announced that he will present to every one of the four nundred boys of the Detroit Newsboys' Association an annual subscription to THE AMERICAN BOY. It is certain that the gift will be appreciated in four hundred homes where there is not a surplus of good reading matter for the little merchants.

The publishers of THE AMERICAN BOY have reason to be proud of the fact that THE AMERICAN BOY was selected from among many jappers as the best suited to boys, and that the choice was made without their solicitation, and solely on the merits of the publication.

Winners of the Flour Mill Puzzle Prizes.

In our December number we gave to our readers a puzzle which we designated as the Flour Mill Puzzle, and we promised ten barrels of flour as prizes for the first ten correct answers, one barrel for each successful contestant. The flour was offered by the Pillsbury-Washburn Flour Mill Company, the greatest flour mill concern in the world, located at Minneapolis. There were hundreds of answers received, and many of them were correct. The correct answer is "Seven." The prizes were won by the following: Earl Lenz, Kewanee, Ill.: Henry C. Brose, Plainfield. N. J.: Douglas Lacy, Old Orchard, Mo.: Robert P. Kenney, Brattleboro, Vt.; Worth Lightner, Colorado Springs, Colo.; William North, Rising Sun. Ind.: Harry Young. Pontiac. Mich.: Ralph F. Stevens, Whittier, N. C.; Elbert M. Moffatt, St. Joseph, Mich., and Warren E. Hoffman, Mt. Joy, Pa.

The barrels of flour have been shipped

to the lucky boys.

Many other boys gave correct answers but are not entitled to prizes, as their answers were not received in time to be listed among the first ten.

Cross-Word.

My first is in jump, but not in run.
My second is in bayonet, but not in gur.
My third is in scratch, but not in bite.
My fourth is in dark, but not in light.
My fitth is in semi, but not in half.
My sixth is in jolly, but not in laugh.
My seventh's in digging-but not in delve.
And my whole was commander in 1812.

No. 105. Charade.

My FIRST by Captain Kidd was used. In which to stow away his treasure: With strong men 'tis essential, and More strong the man, more great it's measure.

Pronounced by some, it is a game, Where brain and patience both are tried; Here comes, on somewhat smaller scale, The general's skill, on every side.

My SECOND really is my WHOLE, On winding thread 'tis often found, Or lies abundant—tempting—sweet, Upon the leaf-spread autumn ground.

And if It's lost, the wheelman may, if fortune has determined so. Be forced to trudge back home on foot, Perchance, ten miles he'll have to go.

My WHOLE'S my SECOND, as I've ob-

served.
And for It boys leave school in haste;
but put a horse before It, and
It loses all Its luscious taste.

—A. P. Payson.

No. 106.

My first is in laugh, but not in cry, My second in you, but not in 1. My third is in zig-zag, but not in straight, My fourth is in town, but not in state, My fifth is in stone, but not in tile. My whole is a large American Isle.

GEORGE PERCIVAL ROBERTSON, Park Hill, on Hudson, N. Y.

LEARN TO CREATE

OR every one boy or man who is entitled to be called an originator there are ten thousand who must be known as imitators. The world waits a long time—sometimes centuries—for some one to originate a very simple thing which works mighty changes imagines is too hard for him. in commercial and home life; then it takes a very few days for thousands to set to work imi- to thinking about making money. We are glad to amount to much who waits till some one tells tating the thing which they had

We want our boys to be originators—to be creators, and not mere automatons. I do not mean that every boy ought to set to work trying to invent a machine or a process. I mean, rather, that every boy should study to be original in thought and action, in even the little affairs of his daily life, so that when he comes to be a man he will not be dependent upon others to think for him and lead him.

not the skill to originate.

Parents have a great deal to do in the matter of cultivating originality in their children. When the boy wants to know how to do a thing, set him to work trying to do it of his own effort. Give him, perhaps, a suggestion as to how, but don't take him the whole way. Throw him upon his own resources. Make him feel, even when he is young, his own responsibilities.

The greatest successes—I almost said all the greatest successes -among men, have been successes in new fields of achievement, or in old fields by original methods. There are many virgin fields of effort still open to our boys, and I am asking that they be trained while young to so think for themselves and do for themselves that

enter these fields as explorers and creators.

biography as a stepping-stone to success. Perhaps it does no harm, and doubtless here and there it does inspire a boy to lengthen out his steps in order that his feet may fall in some great man's tracks; but studying biography will never make a boy great. Let him throw away his reading for a little while and sit down and think out a way, and then go and earnestly pull that we don't think enough; we wait till somebody pulls or pushes us. When the boy has a everything save how to make money. Some one

problem before him, as he has almost every day ought to establish a school to teach moneyof his life, in his work and in his play, cause him to sit down and think of a way out of it, and let | head full of logarithms and Greek and Latin him not, as soon as he gets into difficulty, run to his elders for advice and help, and whine over it until some one older than he puts shoulder to the wheel. Better that the boy should suffer a little than that he should learn to fall back upon others every time he finds something that he

when they grow to be men they will naturally of it. Money isn't everything in life, nor is it the celebrate, he invited in his friends, and they tochief thing; but three meals a day, good shelter, gether soon made a hole in the big yellow I have never had much use for the study of and good clothes go a long way toward making lump. After several days feasting on that buta man, and these things require money. Good ter it was gone. At the beginning of the next food, good shelter and good clothing have more to do with good morals than we have any idea folks couldn't afford to keep him there any of. Charitable institutions that look after boys longer. know very well that the first thing to do in bracing up a boy morally is to give him a good scrubbing and put respectable clothes on him.

Very few men know how to make money. for success. The trouble with the most of us is Less than five, it is said, in every hundred escape business failure in life. Boys are taught by very good witnesses:

making, so that when a boy has crammed his roots he can spend a year or two filling in the chinks with a few ideas of how not to fail financially. Maybe more boys then would escape the humiliation, and mental, and ofttimes moral, collapse that comes so often to men late in life as the result of not knowing how to make money.

We are receiving many letters from boys ask-THE AMERICAN Boy has stirred up many boys ing how they can earn money. No boy is going

> him how to succeed. Much can be taught a boy in this line, but no one can sit down and say to any particular lad, this or that is your way. This world of ours is so made that every little tub has got to stand on its own bottom. Every boy has chances which are peculiarly his. Let my boy sit down and think them out. Advice, perhaps, will not hurt him, but let him not put too much stock in advice. Remember that every creator of a new thing or a new idea starts out with the whole world against him. If a fellow is going to try a new thing, or an old thing in a new way, advice is pretty nearly the poorest capital with which he can start. Particularly is this so with the boy, for boys, they say, don't amount to much anyway. Very few people have time to give advice that is really valuable to them. Such advice is usually half-baked, and is almost always discouraging.

> Let me close by telling you two stories:

> One day a poor boy who was having a hard time getting through Harvard College received from his mother, who lived on a farm, a crock of fresh, fragrant butter. The boy hadn't tasted any good butter for a long while, so he was greatly pleased. To

term the boy didn't return to college, as the old

This story sounds true. Boys in college often get crocks of butter from home, and they often eat it. Boys often leave college, too, because their parents cannot afford to keep them there.

The following is a story that is vouched for

A poor boy at Harvard who was living on (Continued on Page 188.)

IN A FOREST PRISON

ISABEL HORNIBROOK *kaaaaaaaaaaaaaaaaaaaaa*aa

ES, the Maine wilds have been my playground for a good many years—ever since I got into a pretty miry scrape, and learned the most wholesome lesson of my life there,' Judge Havden. looking round upon a dozen of us young people who were gathered about him on the broad plazza of his Brooklyn home.

"I never told you about that trip, did I?" he went on, with a quicksilver sparkle in his deep eyes. "Here goes, then! You can pull me up if I'm too longwinded in summing up those old adventures. I wasn't eighteen when I first camped out in Maine with three other fellows—Neal Heatherington, Jack Ginn and Leon Ormsbee—Neal being our captain and leader, for he was twenty one, attended a technical school and understood the use of a compass-or vowed he

"We had decided to do our tramping and hunting economically, without a guide, for we could not afford his fees; and after ludicrous misadventures we found ourselves near the foot of Katahdin, camping by a lonely 'logon,' which curved into the forest from a small lake, called Fir Pond. On the bank of that tiny bay we discovered a deserted lean-to, just big enough for a man and his dog-with the dog outside. But we managed to make it shelter our four heads for a day or two, while we discussed the main object of our trip, which was, of course, to get a sight of that 'ignis fatuus of hunters,' the bull-moose.

We held a solemn pow wow around the camp fire on our first evening by that lonely water, 'talking moose' from different levels of inexperience. I was the youngest and most ignorant of the party, but I determined to shine at the council, for my pride was stung by the treatment I had received since we started as the 'kid of the camp.'

"I had been given the softest bed, lightest pack, and more than my share of the cooking to do, while Leon, at any rate, always 'jumped' on me if I ventured to offer an opinion about any phase of forest life. So that night I felt bound to assert myself, and went the wrong way about it. I 'talked fire,' as the Indians say-bragged outrageously-about my crack shots at deer and bear in the Adirondacks. You'd have thought the animal wasn't born that could get the better of me, and that I knew as much wood lore as any old woodsman. Neal and Jack only laughed at 'blowing.' But Leon got surly.

'For mercy's sake!' he growled at last, 'will somebody puncture that windbag?' pointing at me.

'And when we stretched ourselves on our bed of pine boughs, I heard him nudge Jack Ginn and whis-'Say, we'll have to give that young greenhorn a good scare or a licking to bring him to his bearings, or his company will be insufferable for the rest of the trip.'

"'Well, I guess you'll have to rise pretty early to get ahead of me,' I muttered, and went comfortably to sleep, knowing that I had kept up my end through all our misadventures, without any grumbling or 'playing down.'

Next morning we were all amiable, deciding to take it easy for that day and explore the shores of the pond, but they proved tame. About noon Leon,

Jack and I left Neal trying to photograph a doe feeding on lily pads by the water's edge, and filed off into the woods to bag some meat for supper. "Our

captain warnings after us that we were to stick together, and on no account to lose pond was far behind, and the sunlight of its banks had filtered down to a variegated green twilight, with sky-hiding, sorrowing pines overhead, and a muffling carpet of needles underfoot, varied by mysterious jungles of under-

when all of a sudden it struck me that the silence seemed more absolute than it had been five minutes before. I wheeled about and found myself-alone.

"I tell you a shiver, like a cold splash, went over me! For a while I couldn't shout; the stillness drugged my voice, so that only a husky little sound came when I gathered breath for a roar.

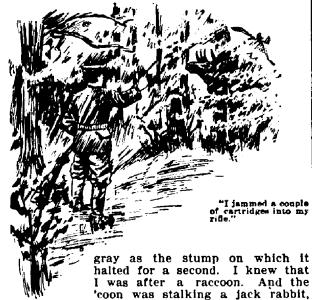

"The forest at that place was more dense and primeval than any we had yet struck, and the lone-liness was so terrible that it seemed to materialize and hem me in, until I had a desperate feeling of being prisoned by some jailor too intangible to fight. I asked myself in a cold ague what had become

of the other fellows. Had the needle-covered ground swallowed them? Or, had they melted into the cobwebs of September haze which drifted through a gap in the trees where a huge windfall lay rotting? I tell you it was a time for remembering all the fairy stories one had ever read and disbelieved! At last I got my voice free, and yelled. There was no answer, only a long, soft rustle of the pine crowns overhead. But somehow that enlightened me, 'as if the trees gave away the trick.

'I couldn't have lost them so suddenly,' I said to myself. 'I believe they're just hiding somewhere to scare me. Well, Jim Hayden, you've played at too many games to show them the white feather. You'll bag your own meat and find your way back to camp

without those jokers—or not at all.'
"At that unlucky moment I saw a stir among some bushes about twenty yards from the trail. All churned up inside with anger and excitement, off I bounded softly towards that tangle, which I was convinced sheltered a deer, forgetting Neal's injunction not to guit the line of spotted trees, forgetting everything but the reckless determination to show those practical jokers that they hadn't 'downed me.'

"No buck jumped out of the thicket, but I presently caught sight of a thing with pointed nose and hair

with as much strategy as a general. I got a glimpse of him now and again as I dodged on blindly, not halting even when the forest rang with anxious shouts, which told that Leon and Jack, frightened at the result of their trick, were doing their troubled best to locate me.

'Let them swallow their own joke,' I muttered savagely, and kept right on in my zigzag course. answering neither shout nor signal shot, till both died away in the distance.

"I think I found my sober senses at last where I lost my 'coon, on the bank of a tunnel-like stream. I knew that I had wandered a long way from the spotted trail, but I turned boldly enough to grope my way back to it. I walked-walked-walked. with intervals of stumbling and climbing, until my legs were stiff as ramrods, and my feet galled through the thin soles of my moccasins. But never a blazed' tree could I find.

My wind and my opinion of myself decreased together. I called myself a 'hare brained idiot,' for leaving the trail, and for being so vindictive as not to answer Leon and Jack when they tried to undo their thoughtless joke. Those fun makers were far enough from me now, for though I fired my Winsome former hunter, which extended for a mile or two into the forest. We followed it steadily will lowed it steadily will be standard to standard the standard to standard the standard to standard the standard to standard the s

lowed it steadily until the It took all the remaining starch out of me. I groped a little farther through the green-misted puzzle, came upon what I took for a mossy bank, and plumped down on it.

"Gracious! the next minute I saw stars. It gave way under me with a horrid crash of crumbling timber; and down I went, my legs, supported by a stiff crust of bark, waving upright, my jarred head just peeping out of the hole I had made. My bank, masked with living green, was a decaying old windfall.

growth.

"Well, I hauled myself out of that tree-trap, thinking that my back was broken. And if ever you saw ahead with much bravado, looking for the next blazed too shaken in mind and body to go farther. Then, Great Caesar! it makes me feel weak now to think of

tree—only every third or fourth one was spotted—| with a groaning glance at my watch, I realized that it was nearing five o'clock, that in an hour or two, not twilight, but night-black gloom would reign in At the same time I became conscious the woods. that I was ferociously hungry, and that some nice fruity smell was coaxing my nostrils.

"'I'm in the worst scrape of my life,' I said to my-'And it's ten to one that I won't get out of it alive! But if I could only find something to eat, and water, I'm not downed yet!'

"On I went again, letting my nose take the lead, and much puzzled by a queer noise which I heard far away in the forest. It was rather like a woodsman chopping at the trees with a blunt axe, only the sounds seemed too shifting and random to be made by anything human. So, afraid of drawing some unknown danger in my direction, I just forged ahead till I came to broader streams of light, like golden creeks, flowing into the gloom. Presently I found myself on the edge of a great stretch of open ground, bordered on either side by the forest, and far away by a pine-crowned ridge.

"Right before me was a patch of bushes, which looked rose-misted in the evening light, so rich were they with the wild raspberries which I had smelled half a mile off. Down I lay and feasted till the gap inside me was partly stopped, then went on to look

"I found it at some distance from the raspberry tangle, a tiny, shallow well, bubbling out of a mossy knoll, the ground around being soft and marshy. The little tin cup which hung at my belt came in handy; and I was just filling it a fourth time when from the forest on my right came a noise so wild and startling that it dropped from my hand and clinked on the pebbles at the bottom of the spring.

'What an unearthly sound! I couldn't describe it. It began something like the gentle bellow of a homing cow, swelling out into a plaintive roar. It rose and wailed, boomed and sank, while I just choked with bewilderment. At last it died in an appealing grunt, and was presently answered by a challenge from another part of the wood. I guess I snorted. like a buck on the jump, myself, while I stood and listened. Again I heard that strange noise, as of a blunt axe striking the trees, which had puzzled me before. It was nearer now, and accompanied by a smashing of twigs and undergrowth, as if an engine were tearing through the woods.

'Gracious! I thought, 'there are enough scares in these forests to keep a fellow's hair bristling all the time!' My eyes began to bulge. Among the disturbed shadows, just within the straggling outer line of trees, appeared a creature taller than a horse, with broad antlers, and broad nose upreared, sniffing the evening scents, looking like some strange animal of a former world. With a start in which I seemed to shake my indentity and jump back to pre-civilized times, I realized that this was the 'Jabberwok.' the bull-moose, and that it was his mate I had heard calling.

"I jammed a couple of cartridges into my rifle and fired, feeling as if I could not aim steadily enough to hit a haystack. But perhaps I grazed him, for the next thing I knew he had plunged boldly out from the trees and was coming for me full tilt, doubtless taking me for some new fangled, fire-breathing animal that threatened that musical cow. I dropped my Winchester and sprinted, making for a clump of hemlocks some hundreds of yards away. Before I could reach the first outstanding tree which I could climb, there was a broad patch of ground that looked as if it was carpeted in crimson velvet with here and there a dwarf spruce waving a dejected head, and

scolding myself for not re-membering that he was more

The moose had halted near the edge of the bog."

"At last I got my voice free, and yelled."

bog water, and I felt myself sinking—sinking in an pit. It trembled, but the roots held. oozy hole that had no bottom.

"In a moment I was up to my waist. The harder I struggled to get out the deeper I sank. I wonder now that my hair didn't whiten in the moment when I realized that the bog was a quaking morass, and that I was being swallowed out of sight and time forever in one of these treacherous 'spring-holes' of which I had heard woodsmen speak.

"I caught at the red lichens round me; they broke and squeezed like sponges. The horrible, oozing water was hardly a foot from my chin, when, with what I felt to be my dying sob, I flung out my arms and managed to clutch the branches of a weak sapling which the wind swayed towards me.

"Goodness! but it was a frail thing—seemed only

it-my feet splashed through a film of moss into black | a straw to stand between a fellow and the bottomless | had got a guide from another camp to help him.

With a sick breath I glanced round at the terror behind. The moose had halted near the edge of the bog, among the squirting pitcher plants. I guess in roaming the forest since he was a 'spike-horn,' he had learned more about quagmires than I knew. He sniffed to windward inquiringly. Just then from the piny ridge ahead came a banging volley of signal shots. I think he wheeled at the repeated thunder, and made for the woods, but I was concentrating my dregs of strength in frantic yells—just daring that fellow who was speaking with the Winchester to go away and leave me to sink wretchedly out of the world.

"Well, he didn't! It turned out to be old Neal who had been scouring the forest for me for hours. He

And together they hauled me out.

"Leon and Jack had suffered so much from him and their consciences that I forgave the practical joke which began my troubles, acknowledging that I had been a 'windbag,' but was cured of empty 'blowing' forever.

"After all I had a crow over them. For I had seen the 'Jabberwok.' And not once again did we come within sight or sound of moose during the whole trip," finished the judge, laughing. "But for the rest of the time I was content to be the 'kid of the camp,' having discovered how little I really knew of woodlore. And I resolved then and there that never again, on any occasion, should my talk be bigger than myself."

Roly-poly's Recitation

A Story for Little Boys and Their Friends

Louise J. Strong

His name was George Washington Willis, but that was so long a name for so short a boy that they put it away with his best clothes, and called him Roly-poly for plain every day. When he had grown into pants he meant to be called George Washington and nothing else, but that was a secret that he had not even told mamma yet.

It was all down on the programme, though, for sister Bess had given it to the teacher and asked her to please read it out real loud so that the visitors might hear what a fine, appropriate name it was for the rosy little fellow in brief skirts and big collar, who was to recite such a be-a-u-ti-ful verse about the Great George Washington.

The whole family, not excepting papa himself, had taken part in drilling him for the occasion; though the training of his mischievous brother, W. W. (William Wirt Willis), was rather confusing to the small mind in that he insisted on repeating a catchy parody, a combination of the verse and "Jack and the bean stalk," a story that Roly-poly was very fond of

hearing.

"W. W., W., you will spoil it with your mischief, I am afraid," mamma remonstrated.

But W. W. W. laughed carelessly, saying, "Oh, G. W. W. knows better than to repeat my nonsense."

Little Aunt May and big Aunt Helen, with mamma and an interested neighbor or two were all going to the

Washington's birthday exercises on purpose to listen to Roly-poly's recitation, it being his first appearance on the platform that they felt sure he was destined to grace in the future.

He was the very youngest and smallest speaker, too, and his sisters. Bess and Mabel, were very proud of his little curly head and big eyes, and even of the cunning lisp he had, he could not speak the long words quite plain yet; but it was all the more cute for that, they thought.

"Now say it once more, Pettikins," Aunt Helen coaxed after he was all ready, "big and loud like a little man."

And Roly-poly said it bravely without a single mistake and they all applauded and kissed him delightedly. Then W. W., standing in the hall, reeled off his parody in a sing-song that made Roly-poly laugh and they set out for the school house in a fine

Roly-poly felt so brave and independent, he wasn't going to be afraid, not at all; and he sat on mamma's knee and listened with close attention, so much absorbed that when the teacher called his name, George Washington Willis, very loud and clear, he just sat and looked at her and didn't remember that it meant him until Aunt Helen whispered, "Now, then, little man," and Auntie May leaned down and said the verse once more to him before he started to the platform.

The whole room smiled, he was so little and round and fat and pretty; and when the teacher lifted him upon the platform he stood looking about him, the smiles grew broader, and someone started to clap and then they all caught it and made quite a breeze of it before the teacher could stop them.

That confused Roly-poly and frightened him a little and he stood with his finger in his mouth, while sisters Bess and Mabel and aunties Helen and May made signs to him and whispered the first line to encourage

Bess was in an agony of apprehension. It couldn't be that he was going to fail! But it seemed so until, in looking about, he caught mamma's eye and she smiled and nodded and made the first words with her

Then the little face cleared, the scared look was chased away by a bright smile, and Bess drew a long breath of relief as he straightened up and put his chubby arms down close to his sides, as they had taught him, and made a stiff little bow that set his curls shaking.

"Oh isn't he too sweet!" Bess' seat mate murmured. And then, don't you think-Roly-poly lifted up his shrill little voice and said out as loud as he could, stumbling just a little over the big words, that par-ody of brother W. W. W.'s, which ran like this:

George Washington was a little boy, Oh, a little boy was he; He stuck his hatchet in his little red jacket, And he climbed that cherry tree. And he hacked and hacked, till that beautiful tree Was a sad, sad sight to see.

Dear! dear! The little sisters put their heads down and cried, aunties Helen and May looked out the window with very red faces; but George Washington Willis marched proudly back to his mamma and climbed into her lap with a very self-satisfied expression. And mamma kissed and cuddled him just as if he had not made such a blunder and set the boys to snickering behind their hands, and the visitors, too, passing their handkerchiefs politely over their faces.

When tearful Bess told the story at home, W. W. W. rolled on the floor and laughed, and papa ha-ha'd and said, "Well done for George Washington; he didn't cry anyhow," and he tossed the little fellow till his short skirts and yellow curls were all a flutter and he shricked with delight.

THE DARING DEEB OF A YOUNG FEDERAL, CAPTAIN C. FRANCIS CLARKE

The twelfth story of a series entitled "Stories of Boy Heroes"

ANNAH ROBINSON WATSON

After the terrible conflict of Shiloh, in 1862, the Confederates, reduced to thirty thousand men, retreated under General Beauregard to Corinth, Mississippi.

The Federals, under General Halleck, were gathered on the banks of the Tennessee river and numbered one hundred thousand. Generals Grant, Pope, and Buell, with their respective commands, were included in this number.

The Confederates were rallying for the attack which they felt must soon be expected from this magnificent force, for they knew that the outlook was a very serious one. They were not only reduced by the recent heavy losses of Shiloh, but their ranks were decimated by illness. Poor and insufficient food, added to unwholesome water had caused many cases of fever, and a large number of the troops were utterly unfit for

These conditions were carefully considered and then General Beauregard instituted the most vigorous measures for their improvement. The sick soldiers were sent home to recuperate for the summer cam-The work of building breastworks and fortifications around Corinth was commenced at once, and from the breastworks. They were ready, thousands scouts were sent out to secure information relating to the enemy, and couriers to other Southern commands asking for reinforcements.

Corinth, it was thought, would be the scene of a great battle and soon Generals Price and Van Dorn started upon forced marches to join Beauregard. They reached the scene of action in good shape, but even with their addition the Confederates only numbered fifty three thousand effectives, while the Federal army was now one hundred and ten thousand strong, composed of men in fine physical condition and most splendidly equipped for the encounter.

General Halleck, commanding this immense force. advanced cautiously. As yet it had been impossible for him to secure reliable information of the strength or purpose of the Confederates. Vague rumors of the most exaggerated nature were afloat, and he felt it wise to be, in a sense, on the defensive even while inviting the conflict.

On the evening of the 29th of May the Federals had approached within easy reach of the Confederate fortifications, but a halt was called and the troops went into camp for the night. It was believed that General Beauregard had collected the strongest force yet put into the field by the Confederates and that they would attack in the morning.

Night, ominous and portentous, settled down upon the camp and upon the town with its far reaching fortifications. The cordon of Federal sentinels took position in the space between, and every heart was burdened by a conscious apprehension of the probable carnage of the day so rapidly approaching.

It seemed that in the town no one slept. All night long trains appeared to be coming and going, and the wild cheers of men desperately in earnest broke the stillness over and over again.

"Reinforcements," said the Federal sentinels.
'We'll have the whole South to fight in the morning." At earliest dawn this information was carried to General Halleck: "They have been receiving troops all night and have collected an immense force behind the fortifications."

A little while later the Federal camp was all astir with life, the men were hastily preparing for battle, commands were being given and regiment after regiment advanced and formed in line expecting of stalwart hearts and arms, while flags waved, bayonets gleamed and all eyes watched for the first signal from the Confederates, but not a sound was heard, no signal was discovered, the stillness of death hung over the town. The Federals paused irresolute. It seemed that the enemy was waiting for them to come nearer, but this would have been probably to court wholesale slaughter.

Suddenly one of their young officers, Captain C. Francis Clarke, rode up to his General and said earnestly: "General, let me reconnoiter the ground! I'll find out what the enemy is doing!"

"What, ride across the open in face of the galling fire which would certainly greet you, and the death you would certainly meet?" asked the General.

"Yes, sir," answered the young hero, "we need the information and it can only be secured in this way.'

Consent was given and away dashed the young captain down the declivity. His horse flew like a captive bird released from the net, while the whole army watched breathless, expecting each moment to see both horse and rider torn into a thousand fragments by bursting shell or avalanche of shot.

Across the open they sped, a ravine was encountered, the horse made a gallant leap but missed the farther edge and came down with a shrill whinny of pain. The Captain was dashed to the ground, but in an instant the two were up again and on towards the fortifications which still were grim and silent.

The Captain did not check the reins until well in their shadow, then turning in his saddle he gave a wild cheer, rose in the stirrups and waved his cap to the waiting army which advanced and marched into Corinth, taking immediate possession of the city and all it contained without firing a gun. But counted among its valuables, were no Confederate soldiers.

General Beauregard, finding that an engagement would be most disastrous to his men, that his force would inevitably be annihilated by the overwhelming adversary, had retired during the night of the 29th, and so successfully had the strategic move been made that not the faintest suspicion of his intention had reached the Federals. The cheering of the Confederates and movement of trains during the night which was supposed to betoken the arrival of reinforcements, was ordered as part of the ruse and accomplished the purpose desired.

The heroic action of Captain Clarke was most enthusiastically applauded by his comrades, and it is none the less deserving of honorable mention and memory because the withdrawal of the enemy prevented a death which he and all others thought inevitable.

Later that same year the gallant young hero started with his command for Vicksburg. The first night out from Memphis he was taken ill. He was sent back to that city and it is said died there.

degree, an outcast from his own kind, skulking, yelping, only fighting when he cannot flee, and only recognized as a poor substitute for a dog where no better may be had. And yet, like the rare diamond among the outcast children of the slums, the poor brakje

Throw something sometimes rises so high above the disreputable level of his species as to be worthy of an honored place even among his noble kin, the St. Bernards and Newfoundlands. One day during the dry season of

the veldt, a party of traders were

crossing the hot, dust-yellow plain toward Kimberley. At noon they were near the summit of a small kopje, or hillock, and as this offered as much air as there was stirring, they dismounted and made preparations for the midday meal.

This kopje, like most of those they had crossed, had a straggling coat of karroo bushes, many of them but a few inches high; and among them was an occasional milk bush, with long finger-like leaves, and here and there a tuft of grass or a clump of prickly pears with uplifted, thorny arms.

Presently one of the party noticed a small animal

making directly toward them through the karroo bushes, and, as it came nearer, recognized the intruder as a brakie.

"Throw something at the cur, Dick," he called, irritably, to one of his companions; "we wouldn't mind feeding a decent dog, but we don't want any of these cowardly mongrels skulking about and maybe following us. Never mind if you do break some of his bones.

Dick caught up a stick and threw it with skillful aim, but instead of slinking away, as they expected, the animal dodged the missile and came nearer. Again Dick threw, and again the animal dodged adroitly aside, this time coming to within a few feet of where they were sitting, and beginning to whine piteously.

"Hold on, Dick," another man called suddenly, "never mind firing any more clubs. I believe the brute's starving. Toss him a chunk of meat instead-

Dick obediently selected a piece of meat almost half into the air to meet it. But the offering was too large for the brakje to grasp in mid air, and both dog and meat fell rolling upon the ground. Only for a moment, however, then the brakje was upon his feet. and, seizing the prize with a firmer grip, bounded away into the karroo bushes.

"Afraid to eat it in sight of us," the first speaker said, laconically; "that's the way with all cowardly brutes. They think somebody is trying to steal from them. This cur will sneak off into some solitary place and gorge himself. Well, if he eats all that meat he will not be hungry again for a day or two."

But apparently he was mistaken, for ten minutes later the brakje was again looking up into their faces and whining entreatingly. Several of the men whistled under their breath.

"Throw him a chunk of meat, Dick," one of them called facetiously; "don't you see the brute's starv- the broken shells of birds' eggs.

The brakje of South Africa is a little cur of low | ing? Whew! I've heard that a Kaffir could eat his own weight in food; now if this cur devours another piece of meat I can at least testify that a brakje is able to. Give him a good big chunk, Dick."

More meat was thrown to the dog, and, as before, he seized it with a strong grip and bounded away into the karroo bushes. This they supposed would be the last of him, but, even in less time than before, he was back again, bounding from one to another, and looking up at them with big, entreating eyes that almost seemed to speak. What little fear and hesitation he had first shown, was now wholly gone. He seemed to have read them, and to have given them his full confi-

"What a dog!" cried several, in wondering admira-tion; "what capacity!" and one of them added: "Here Dick, throw him some more meat; we must fill him up, even if we have to kill a bullock to do it.'

A third piece of meat was thrown to him; but this time the dog merely smelled at it wistfully, and then turned back to them, an urgent entreaty in his whine and eyes, and every motion of his quivering, eager

"He wants to tell us something, I do believe," exclaimed one of the men suddenly.

"But he's still hungry," declared another; "that is evident from the way he smelled the meat. There was a ravenous longing in his every motion."

Apparently the dog understood they were talking

of him, for he gave a quick yelp and bounded into the karroo bushes, then stopped and looked back at them. "He wants us to follow him," cried the man who had asked Dick to drive the cur away. "Come on!"

He started after the brakje, and the others followed. The dog, with a joyous, comprehending bark, rushed deeper into the karroo bushes and then bounded back. and again rushed on and back, and on and back, as though he would tell them to go faster, and that a great deal depended on their speed.

Up through the karroo bushes to the summit of the kopje they hurried; and then the dog swerved off to the right and bounded on for three or four rods, stopping at length near a clump of prickly pears. When they came up panting they found him licking the face of an emaciated Kaffir, who was apparently dead.

But a brief examination showed that the man was merely unconscious, evidently from loss of blood and suffering. His body was covered with wounds, already beginning to heal, and one of his legs had been fear-

surgery had been attempted, for the leg was rudely bound with leaves and grasses, now dry and withcred under the hot glare of the sun. They could see where he had dragged himself across the sand as though in quest of the pitiful bit of shade which the prickly pear afforded.

One of the men went back over the trail which the dragging body had made. When he returned, his eyes sought the Kaffir with an odd look of questioning respect.

"I found the body of a lion down there," he said, gravely. "It must have been killed a week or ten days ago, for the flesh has been nearly removed by birds and ants. There were evidences of a fearful struggle, a hand to hand encounter, I should say, for I found a long knife in the head of the ani-mal."

"You don't mean-" began one of the listeners, incredulously.

"Yes, I do mean just that. I believe this man and the lion fought together, and this man conquered and dragged himself up here, in the condition you see. And furthermore, I believe the little mongrel has since acted as assistant surgeon by licking the wounds, and as sole provider." He nodded toward where the dog was still licking the Kaffir's face. Near the animal and within easy reach of the man's arm, were the two pieces of meat; and scattered about them were the cleanly picked bones of small animals and birds and

The men's eyes sought these, and then each other. The one who had asked Dick to drive the cur away looked

around with a sudden tenderness in his face.
"Yes, I see it all now," he said, slowly; "the little brakje caught animals and birds in some manner which he alone can explain, and brought them to his master. He licked the wounds, and kept off birds and other intruders which might have been harmful. Of course he could not bring water, and the man's unconsciousness is very likely due to thirst. Probably he did not lose his reason until some time this forenoon, and then the dog hurried off in quest of food, thinking that the remedy needed. But when he brought the pieces of meat, and his master would not touch them, he must have realized that the remedy was beyond his power to provide; then he came and implored our assistance.

"And there is another thing," his voice becoming softer; "I believe the dog has been starving himself in order to provide for his master. See how thin and emaciated he looks, and remember how he smelled that third piece of meat in camp. I suppose he felt that his moments were too precious just then to be wasted in eating. I even doubt if he has tasted food since his master dragged himself up here."

They were all silent for some minutes, looking at the Kaffir and the dog; then some one asked:

"What shall we do with them?"

"Take them along, of course," promptly. "A man who has been cared for as this one has, must be worthy of further looking after. His wounds are apparently doing well, and I think we will have no trouble to pull him through. We will take him down to camp, and then carry him on to Kimberley. There I will put him in the care of the best surgeon I can find. We must save him for the dog.

And they did. Before the end of three months the Kaffir was nearly as strong as ever, and by that time they had learned he was intelligent above his class, and that he was trustworthy and brave. When they offered him the position of hunter for their party, he accepted the place with a broad display of teeth. And so the brakje became a fixture of the camp whenever they were on the march; and though, of course, his first affection was always for the Kaffir, he had enough for all the men of the party, giving perhaps the second place to the one who had asked Dick to drive him away.

THE next two numbers of "The American Boy" will contain some great hunting and fishing matter.

They were all silent for some minutes, looking at the Kaffir and the dog.

A Boy in the United States Congress

The writer of the articles that have been appearing from time to time in this paper under the title, "A Boy in the United States Congress," was a lad of thirteen at the time when he was an eye witness of the scenes he describes, and was a part of the stories he relates. He performed the duties of page in the National House of Representatives at Washington in the early seventies, during sessions of the Forty second and Forty third Congresses, which occupied some of the most exciting years of congressional legislation. The articles heretofore published appeared in the November and December numbers of 1899, the January, February and April numbers of 1900, and the February, 1901, number.

THE INAUGURATION OF GRANT AND WILSON.

I am not sure but that I was one of but two or three boys who saw the entire inauguration ceremonies that took place on March 4, 1873, when General U.S. Grant and Henry Wilson were inaugurated President and Vice President, respectively. My readers, generally, know that the President always takes the oath of office and delivers his inaugural address from a platform on the East front of the Capitol, in the presence of a great throng of his fellow-citizens and an imposing array of soldiery. Many, however, do not know that just prior to this public ceremonial, a more private but equally impressive program is enacted in the United States Senate Chamber in the North Wing of the Capitol, when the Vice President elect takes the oath of office in the presence of a very distinguished company.

The inauguration of the Chief Magistrate takes place on the fourth of March following his election: and by the time this number of THE AMERICAN BOY has reached its readers, preparations will be wellnigh completed for the second inauguration of President McKinley, and Colonel Roosevelt will be safe home, we shall hope, from his hunting trip in the Rocky Mountains, and be the center of another impressive scene in the Senate Chamber. By the time these words are read, thousands of persons, representing every section of our great country, will be hurrying to Washington to see another inauguration; but they will see only that part of the program which is enacted on the East front of the Capitol, and will then hurry down to some point of vantage on Pennsylvania avenue, that wide, historic street that runs direct from the Capitol to the Treasury Department and the White House, to see the great procession as it wends its way from the Capitol, with bands of music, thousands of splendid soldiers and sailors,a great moving kaleidoscope of color, in which will be great Generals and Admirals, Governors and Judges, Cabinet Ministers and Senators, and, most conspicuous of all, the President and Vice President. Then, in the evening, every one who can pay the price, will aftend the great Inaugural Ball, and afterwards go home fully satisfied; but not one in ten thousand of the visitors will see the quiet and impressive ceremony with which the business of the other side, but not a sign of disapproval was day begins, when Colonel Roosevelt will take the oath of office as Vice President.

Father told me that if no objection was made to it by those who had a right to object, I could see all there was to be seen on that day; so at an early hour on the morning of March 4, 1873, when the streets of Washington were alive with people, father and I presented ourselves at the door of the rotunda of the Capitol, which on ordinary occasions is the main entrance to the great building, but found the doors closed and received the announcement that we were to enter at one of the basement entrances under the Senate side of the building. On presenting ourselves at this door, we were confronted by saw that, after all, my hopes might be nipped in the bud. A little colloquy followed, in which the question arose as to my right to enter, under the strict orders given, and for a minute I trembled with uncertainty; but with a wave of the hand the guard motioned me to go along; and, once inside, I was free to breathe, though I had yet several points of difficulty to overcome.

It was 9:30 in the morning, and even at that hour the corridors and lobbies of the Capitol were alive with visitors, all of whom were more or less distinguished men, or bore special invitations from those who were distinguished.

The ceremony was not to take place in the Senate Chamber till nearly noon, and between the hour of 9:30 and noon both the House of Representatives and Senate would be lively bodies, for these were the closing moments of Congress, only a few brief hours remaining in which to finish up the

business of the session. I had never witnessed the death of a Congress, and I did not suppose it could be so exciting. The House of Representatives on the preciting. vious day had held nearly a continuous session, from eleven o'clock in the morning until way into the night, and yet it seemed as if, in the little time that remained before noon of March 4, nearly every one of the members had important business to bring before the body, which meant life or death for him to successfully carry through.

The hall of the House was crowded, for not only were the members present, but former members, in Washington to attend the inauguration, and new members who had not yet taken their seats, were admitted to the floor, and with them scores of other more or less important personages who were allowed The galleries were, however, nearly the privilege. vacant, for the general public were not being admitted to the Capitol. I will not describe these closing hours, but may do so later.

As the hands of the clock approached twelve, Speaker Blaine announced that on the adjournment of the House the members would form in a procession and march directly to the Senate Chamber, the Speaker, with two of the oldest members of the House, leading the procession. After some miscellaneous business, Representative Dawes announced that the committee appointed to notify the President had discharged its duty, and that the President had informed them that he had no further communication to make. Speaker Blaine then arose, very commanding and dignified, and made a graceful acknowledgment of the courtesies shown him by the members and thanked them for their kind expressions, closing with the words: "And now, gentlemen, with a hearty 'God bless you all,' I discharge my only remaining duty in declaring that the House of Representatives for the Forty second Congress is adjourned without day." Then there was applause, and every one sought the cloak rooms, while the Sergeant-at-Arms of the House and the members of his staff made their preparations for the little procession that was to make its way directly through from the North to the South Wing of the Capitol. where the Senate was in session awaiting its coming. In the meantime there were gathering in the Senate Chamber many distinguished men of the army and the navy and judicial service, foreign ambassadors and ministers, and others high in official station.

Father and I took a place in the procession that was formed within the hall of the House, and in a few moments were at the entrance of the Senate Chamber. I feared that I might find some little question here from the watchful doorkeepers, for on this side raised. Father nodded pleasantly to these usually stern officials, holding me closely by the hand, while I made myself just as little and inconspicuous and unimportant as possible.

The Senate Chamber is not a large room, and there are just seats enough to comfortably accommodate the senators at their desks, and perhaps fifty more who can lounge on the easy settees scattered along three sides of the room; but for this occasion temporary accommodations had been made for several hundred more persons by bringing in chairs and crowding them into every available space.

The Senate was still at work when the procession was filing in; but at fifty minutes after eleven the several guards, and from their appearance I at once Vice President elect, Honorable Henry Wilson of that we will see it four years from now.

Massachusetts, entered the Chamber, accompanied by the committee of arrangements consisting of Senators Cragin, Logan and Bayard, and was escorted to a seat by the side of the retiring Vice President, Honorable Schuyler Colfax.

Vice President Colfax then arose and delivered his parting words.

At the close of the brief parting address of the Vice President, the new Vice President, Mr. Wilson. "Senators, in assuming the position arose and said: assigned me by the voice of the nation, I am not, 1 trust, unmindful of the obligations it imposes. A service here, somewhat prolonged, covering a period crowded with great events, and an association here with nearly two hundred and thirty senators, many of them Statesmen of large and varied experience, has impressed upon me the exalted ideas of the responsibilities resting upon the occupant of this Chair, under the rules of the Senate, Parliamentary Law, and the Constitution. On passing, then, from the seat I have held for more than eighteen years to this Chair, I trust I comprehend something of its just requirements,-something, too, of the tone and temper of the Senate. In presiding over your delibera-tions I shall ever strive to be free from personal prejudice and partisan bias. A sense of public duty and the obligation of personal friendship alike require that I shall be as considerate, as just, and as impartial as the lot of humanity permits. To the judgment, generosity and friendly regard of Senators I trustfully appeal for that counsel and encouragement, that forbearance and indulgence which 1 am sure I shall often require as your presiding officer."

Vice President Colfax then arose and administered the oath of office to the Vice President elect, and then said: "The time for the expiration of the Forty second Congress having arrived, I declare the Senate of the United States adjourned sine die."

The procession is formed again and passes out of the Senate Chamber, escorting the President and the Vice President under the historic dome and out through the bronze doors into the glare of sunshine that breaks upon the splendid scene. The minute that the well known face of Grant appears a tremendous shout goes up from the multitude—a shout that continues until the entire procession, comprising now nearly a thousand distinguished men, has found its way onto the platform to seats provided for them. It's a small boy for luck; for, crowded out of a place near my father's side at some distance from the center of interest, I espy a seat left vacant not ten feet away from the august group made up of the President of the United States, the Vice President, the retiring Vice President, and the Chief Justice of the United States Supreme Court. As I look back upon it now I wonder at my temerity; but I remember that I was but a boy, and that from constant association with great men I had lost something of the awe usually felt in their presence; for did I not know many of them personally, had run errands for them and been joked by them until I could almost claim a familiar acquaintance? This very same General Grant whom the great multitude were gazing at had spoken to me once just like an ordinary individual, and the great Chief Justice, so sober in his robes of office, had once upon a time put his hand upon my head and in a joking way said, "You must have had a good mother." So I was not so awe-stricken but what I could see a good chair when it stood vacant before my eyes. Maybe I thought at the time that the boys of America needed a representative, on that platform, and if they did they didn't want him in any mean They wanted him up among the people that amounted to something. At any rate, while not one person out of ten thousand who stood throughout the taking of the oath of office and the delivering of the inaugural address could hear a word that was said, and while many who were even fifty feet away were unable to more than see the movement of the lips of the speakers, I got it all, even to the trembling of the hand that held the manuscript.

After all, the big thing about an inauguration is the people. The ceremony is brief and simple, but the crowds! The cheering! The flourish of trumpets! The marching and countermarching of countless uniformed men! The booming of cannon! The waving of flags! These are the things to strike the fancy of a boy; and then to sit where with one glance of the eye one could take it all in is to photograph it on the memory never to be effaced.

The brief ceremony over, the crowd disperses as quickly as possible, for the great procession is forming. Father and I hurry down one of the back streets to get away from the throngs; and, once inside the National Hotel, we are soon at our windows, which overlook the avenue, ready to witness the procession which passes hour after hour until it seems to be interminable.

I wish every boy could see, while a boy, an inauguration. I wish it were possible that he could see it under the favorable circumstances under which I saw it; it would be worth many days of schooling to him. Every four years, on the fourth day of March, the same scene is enacted. Many boys will see it in the next few days for the first time. We can all hope

(Begun In October.)

Review of Preceding Chapters: Jack Carroll, Frank Chapman and Ned Roberts, three boys whose homes are in a village in the far East, obtain the consent of their parents to go to Denver for a visit to Robert Sinclair, a friend of Jack's father, who is a painter of mountain and Indian life, and spends the greater part of his time among the Indians. They are accompanied on their journey as far as Chicago by Mr. Carroll, and are greatly delighted with the sights and sounds of the great city. On the train for Denver they meet Jim Galloway, a trapper, who tells them a true story in which his life is saved by a white man, who was living at the time with the Indians, and turns out to be Robert Sinclair, the artist, whom the boys are going to visit. The boys tell the trapper the story of Sinclair's life. The train on which they are traveling runs into a herd of Buffalo and Ned shoots one. On arriving at Denver the trapper leaves them and Sinclair and the boys buy their outfit and start on the trail for Pike's Peak along the foot of the mountains. The first evening in camp Sinclair tells the boys a story, and Ned's pony makes a dash for home, but is captured by Sinclair. The day following Frank is lost among the mountains. He kills a stag, and spends a night alone in a canyon. night alone in a canyon.

ETTING away was not to be thought of, so the boy just stood there almost paralyzed with fear at the sight of the two figures

that now stood out in plain view be-fore him. His first thought was of his rifle, but he was so unnerved he couldn't have lifted it had he tried; and then just as the Indians started to approach him the thought flashed over him that maybe they would

prove friendly, and that his best plan would be to meet them as such; so he let the reins fall over his pony's neck, quickly dropped his rifle to the ground, and took several steps forward to meet his visitors. They evidently mistook his meaning, for though he was unarmed, the Indians at once stopped and fingered their weapons as if undecided as to the next best thing to do. At this Frank extended his right hand, all the time walking forward slowly. The two Indians then advanced cautiously. Attracted by a movement behind him, Frank cast a quick glance towards the pony, and found a third Indian holding the bridle and in the act of picking up the rifle.
"Surrounded, by jove!" said Frank to himself.

Then the two Indians, refusing his proffered handshake or not seeming to notice it, proceeded quickly and deftly to take away from him his revolver, ammunition and hunting knife, and then to bind his hands behind him with deer thongs. All the time they said nothing to one another and made not a sound save now and then a grunt, evidently an expression of satisfaction over the ease with which they had taken their prisoner.

"lost;" "friends;" "me friend;" "me pay money." But not a sign of recognition came from the swarthy faces excepting a stealthy glance or two. Frank noticed that the Indians didn't look him square in the face once. About the only sign they gave of being communicative was a shrug of their brawny shoulders and an ugly "Ugh." Then Frank thought to himself, "I'll repeat Uncle Bob's name. Maybe they know him and that will gain their friendship; so just as the big fellow came alongside with the pony and the rifle Frank said, distinctly, "Robert Sinclair." They plainly showed they did not under-"Robert stand, and Frank's heart sank within him.

He was now placed in line with the three Indians.

given to understand that he was to march—where Frank hadn't the remotest idea; not that he hadn't time to think, for he really couldn't do much else; it was no use trying to talk, and the scenery didn't interest him much. Any motion that he made to leave the path made by the Indian ahead of him resulted in a chorus of "Ughs!" from the fellows behind him that boded no good. The Indian last on the line was leading the pony, and, so far as Frank could determine, the animal was about as contented with his new master as with the old one.

Their way led for a short distance along the banks of the little stream and then struck off among the rocks. The boy had not walked much in the heavy boots that he wore; and while they served a good purpose to keep his feet from being cut on the jagged rocks, they tired and hurt him severely after the first half hour. The Indians, shod in their buckskin moccasins, seemed to just glide over the ground. Frank thought that he had never seen such easy, graceful movements; they reminded him of the movements of

a cat, so still were they.

When they had reached a point near the top of the the mountain. Frank could see for miles to the east and south, and he strained his eyes to see if at any place he could discover his friends, but to no avail; and in a few minutes they were over the crest and plunging down a zigzag path into what appeared to be a broad, fertile valley. Several times the pony slipped on the rolling stones, but the Indian who was leading him adroitly held him from rolling down the mountain. Frank himself took several tumbles, in one of which he bruised his elbow, for he couldn't protect himself by his hands, which were tied behind him. He got no sympathy from his silent captors, who urged him on with grunts and grimaces and an occasional shove. At another fall he lost his hat and never found it again. He was now limping, his bruised elbow was bleeding, and his arms ached; but on and on they went with seemingly no lessening ot their speed till the poor boy was sick and faint, and big lumps forced their way into his throat, which threatened to break out in sobs. But Frank was game. He didn't cry out; he just set his lips tight and kept on.

Finally they came to the foot of the mountain and entered a patch of timber; and here the walking was easier and the Indians seemed more indifferent to what he did. An occasional syllable passed between them, and Frank guessed they were nearing camp. He guessed aright; for in a few moments through an opening in the trees he saw a village of some two score of tepees made of buffalo hides with little rings of smoke rising from among them, and at a little distance off some ponies quietly grazing. The Indian just ahead of Frank gave a prolonged call that sounded fierce to the boy, whose nerves were already pretty tightly strung, and then a motley crowd of dusky creatures came from the wigwams and from about the fires and rushed pelimell upon them, shouting, grimacing, talking and gesticulating, and more than one of them brandishing bows and arrows and tomahawks and knives. Old warriors with seams of maybe an hundred winters on their faces, ugly and wicked looking old squaws, young bucks-lithe limbed and many of them gaudily dressed, young squaws with papooses clinging to them, and Indian boys and girls with matted hair and tawny skin, almost without clothing, running about in great excitement or peering at the paleface from behind their mothers.

If Frank needed anything more to make him ill at ease this performance was enough. He felt at any Frank wondered if they knew any English, and moment that some of these savages would let fly an tried, with what little breath his fright had left him, arrow or a tomahawk. Indeed, in the few minutes to make them understand. He said, slowly: "Trail;" in which they were crossing the open space to the lodges he went through the torture of several killings at the hands of men and boys who danced about him aiming imaginary shots at him with bows and arrows and swinging their ugly tomahawks as if to throw them.

They marched straight up to a wigwam, which occupied a central position in the village, before which stood a stolid looking Indian of splendid physique and really commanding presence. With him were several younger Indians. This little group seemed to be waiting for him. The three Indians began at once in Indian jargon to tell their story. It didn't take long, for Indians are not given to long speeches. The big fellow whom Frank rightly sus-

by way of giving directions, and one of the young Indians stepped quickly behind Frank and with a slash of his knife set the boy's hands free. Frank could almost have cried out with joy at even this much of a release, for his arms were bleeding from their bruises and the stiff thongs had cut through the outer skin in places. The Chief made a further motion, accompanied by a few syllables, and the door of a wigwam was opened and Frank was led in and made to sit on the ground. He didn't need a second invitation to do this, as his legs were trembling from weakness. Several Indians entered with him and sat down on the ground, their legs tucked under them.

"What next," thought Frank; "going to try me, perhaps. There is one thing sure, I can't give any testimony, for there doesn't appear to be any interpreter in this court. I would just be satisfied for the present if they would give me a chance to lie down.

In a few minutes a wrinkled old squaw brought in a bowl of something hot and set it before him. Frank had some table manners, but without water, or fork, or knife, or spoon he didn't know how he could use them. Then he wondered if he ought to offer some of it to his silent hosts who were sitting about stolidly watching him. He was embarrassed; but thinking still that politeness was the best policy, he offered the bowl first to the Chief. That dignitary grunted, and indicated plainly his disapproval. Each Indian in turn did the same. Frank then dipped his fingers into the forbidding mess and transferred a little to his mouth. It was evidently some kind of a stew made from bear meat, but it didn't suit the taste even of a hungry boy. He wanted no more, and motioned to the squaw to take it away.

The Indians, who had lit their pipes, sat for what seemed to Frank, hours, until finally tired nature won out and the boy laid down with his head on his bruised arm. Then one by one the Indians withdrew. The old squaw replenished the fire, put a buffalo skin under the boy's head, and squatted down at the opposite side of the wigwam; and when Frank dropped off to sleep the two were alone and she was crooning a wild weird chant that sounded like this:

> Na-nisa-naau, na-nisa-naau, Wa-wan-a-dan-dia, Wa-wan-a-dan-dia, Na-nisa-naau, na-nisa-naau."

CHAPTER XIII.

When Frank awoke the next morning he found himself alone in the tepee. The fire had died down to a few smouldering embers. He made a motion to throw into its ashes the ends of a few sticks that lay about, unburned, and scarcely had he done so ere the leather flap that served as a door parted and the wizened face of the old squaw peered in. On seeing her prisoner awake she entered stealthily, with a succession of unintelligible grunts which might have said, "Good morning," or "How are you?" had there been anybody to interpret them. She bore in her bony hands the same bowl that had served the night before, and this she placed before the boy with a gesture to signify that he was to eat. He was ravenously hungry, and the odor from the unsightly mess, though strange to him, was not displeasing. The squaw disappeared after setting down the bowl, and in a moment returned bearing a gourd of clear water, which he stood in sad need of, and a handful of wild berries. These she placed before him; and then throwing some buffalo fat on the live embers, causing them to blaze up cheerfully, she squatted down opposite him on a pile of buffalo skins and gently rocked herself to and fro, all the time watching him closely through her little piercing eyes.

Frank would have been greatly annoyed at this, but something told him that the old squaw meant to be kind to him. He remembered how plaintive the tone of her chant as it sounded in his ears just as he went to sleep the night before, and there was a sort of a rude delicacy about the way in which she served him. He made up his mind that the old squaw had lost some one whom she greatly mourned, a son,perhaps, a young man about his age; and that she was doing her captive this kindness for the sake of the Indian boy.

While Frank was eating he became conscious that there was unusual excitement on the outside of the tepee. Indians and dogs were evidently running about, and by their whoops and yells arousing themselves to a state of frenzy.

Scarcely had he finished his rude breakfast before an ugly face looked in at him from under the leather flap. In a short time more faces appeared. At first they were the faces of squaws and children only, but later the cruel visages of young bucks and old warriors completely filled the opening. As the excitement increased the old squaw became uneasy, and finally drawing close to him she took his hand in both her withered hands and looked long and silently into its palm, all the time crooning a strange song and rocking to and fro.

"What can it all mean," thought Frank. "Is this the usual morning romp of an Indian village, or are

they preparing for some unusual event?

From the actions of the old squaw he could not help feeling that the latter was true. Were they getting ready to kill him? Was this to be his last day, one ahead of him and two behind, and by a push was pected of being the Chief, said something apparently and would be never see his home and friends again?

The thought almost unnerved him. He tried to think of everything he had ever read or heard about how to make friends with Indians, but he didn't seem to remember a single thing that he could put to use. The Indians had taken from him everything he owned save his trousers and hunting shirt; even his boots and stockings were gone. A proud young warrior, if Frank could have seen him, was stalking about the village in them, followed by the admiring gaze of half the squaw population. His jackknife, which has father had given him on his last birthday, and a few coins that he had carried in his pocket had been taken from him. Of course, his pony, bridle, weapons and ammunition had gone first; so there was nothing he could offer in return for his freedom.

"O, if only Uncle Bob were here!" he exclaimed

aloud.

The old squaw seemed to comprehend his fear. She rose from his side, and taking down a gourd which hung by a string of leather to one of the tent poles, she drew from its depths a piece of worn and dirty paper that looked as if it had been torn from a notebook and had been handled for a long time by dirty fingers. Gliding back to his side, she carefully unfolded it and held it at arm's length before his eyes, her own little black eyes, almost hidden in the stray locks of hair that fell over her forehead, fairly burning with earnestness.

All this time a dozen or more Indians, little and big, were peering in at the opening and the noise

without was becoming an uproar.

Frank saw, to his surprise, on the greasy scrap of what was once white paper, the outline of an Indian pony, and astride its back the figure of an Indian of superb physique and magnificent poise—a picture that no Indian could have sketched, and surely the work of an artist.

Frank almost trembled with joy.

"Who gave it to you?" he cried, almost springing to his feet and not realizing that he could expect no answer to the question.

The old squaw, burying her face in her hands, rocked to and fro, still clutching the dirty picture in her hands. Frank bent close over her to see if perchance the scrap of paper bore any name that would connect it in any way with his uncle, Robert Sinclair, the Indian painter.

No! But what was this? Down in one corner, almost obliterated by the frequent handling, appeared a strange combination of letters, spelling.

"Ma-na-ne-ah."

"This means something," thought Frank; "probably it is the name of the young warrior that this old Indian woman is mourning over. Perhaps"—an inspiration came to him—"perhaps it's the Indian name of Uncle Bob. I'll see."

The faces were still peering in at the opening, and the old squaw was still crooning her wild song.

"I'll see," said Frank. Then taking from the edge of the fire a small stick, which had been burned at one end so as to be like a chunk of charcoal, he drew with it a few lines on the sides of the tepee, picturing as well as he could the sharp outlines of Uncle Bob's clear-cut face, and turning, said aloud twice so that the old squaw and those at the door could

On they went, till the poor boy was sick and faint.

hear him, "Ma-na-ne-ah." At the same time he pointed, first away over the heads of those about him, as if to indicate something way beyond the mountains, and then pointed to himself.

The old squaw raised her eyes in surprise and wonder; then, bounding to her feet like a frightened deer, she scurried out of the tepee, and Frank was alone.

Had he failed to make her understand? Was he after all mistaken in thinking this was Uncle Bob's Indian name?

In a few moments the flap at the opening parted and three stalwart Indians crept in. They were decked out in paint and feathers as if for some important ceremony. Frank's heart sank within him as they motioned to him to rise and leave the wigwam. As soon as he reached the open air he saw that the inhalitants of the entire village were gath-

ered about him, all decked out and painted in their gaudiest colors. A wild shout went up as he appeared. It seemed to the boy that at any moment he would be caught by one of the hungry looking dogs that barked at his heels, or be transfixed by an arrow or tomahawk, scores of which were leveled or brandished at him.

To his horror, Frank found that he was being led to the foot of a tree that stood just on the edge of the village, where two sinewy Indians stood waiting them, holding in their hands several loops of leather cord. Reaching the tree, the three Indians turned him over to the two who had been waiting, and binding one cord about the boy's wrists, which were folded behind his back, wound the other one about his body in several places and passed it tightly around the tree. Then the Chief motioned to the crowd to fall back, and when there was some sort of order, he beckoned to five young Indian boys, who with bows and arrows took their stand before the crowd side by side facing Frank and at about one hundred feet distant from him. The Chief then made a speech to the company, which, of course, Frank couldn't understand—and indeed it is doubtful if he could have understood it had it been in English, for everything about him was growing dim and uncertain.

When the Chief had finished there were shouts and grunts of approval. The Chief stepped back. Frank felt his senses deserting him; he could only realize that he was to be the target for the iron-pointed arrows of these fierce Indian boys for the sport of the village.

The boys drew their weapons.

By some strange impulse Frank gathered his whole strength and shouted at the top of his voice, "Mana-ne-ah!"

At this there came rushing out of the midst of the motley crowd, pushing and elbowing her way and screaming like a crazy woman, the old squaw who had been his keeper. At one bound almost she threw herself before the Indian boys; then gliding like a welrd specter, her hair streaming and her arms spread above her head, and holding in her hand the dirty picture, she threw herself upon the boy with wild gesticulations, fairly hurling at the old Chief a torrent of words.

At this strange interruption the Chief stepped forward and the villagers crowded about partly silent now but with some rumbling of murmurs and ugly "ughs."

The Chief thrust the squaw aside, and standing before his prisoner himself pronounced the strange
name that had so excited the Indian woman. As he
said it he pointed his long, gaunt arm to the Southward beyond the mountains. Frank hurriedly repeated the name, and at the same time nodded his
head to mean "Yes." The Chief spoke a few words
to the crowd, and with a quick movement beckoned
to the two Indians, and they, with some reluctance
apparent on their faces and in their movements, cut
the cords that bound the boy to the tree.

Frank had guessed right. The strange name he had seen on the picture was the Indian name of his uncle, Robert Sinclair, the artist friend of the Indians, and it had saved his life.

642 BOYS OF THE INDUSTRIAL SCHOOL (LANSING, MICH.) AT A FAVORITE OCCUPATION,

THE INDUSTRIAL SCHOOL FOR BOYS

CHARLES RICHARD HAIGH

Many a boy imagines that the worst fate that could possibly befall him would be to be sent to the Industrial School, at Lansing, Michigan, or the "Reform School," as it is sometimes called; but, in fact, in

most cases that would be the very best place for him.
Nothing better, indeed, could happen to some boys.
Our pictures give a hint of how beautiful are the grounds and buildings of the Industrial School. Taken together, the buildings form three sides of a square, around which are broad acres, all under cultivation, of which the boys are very proud because they do the cultivating.

The boys in the school are divided into families of fifty, each family occupying a cottage, with a superintendent and matron-usually man and wife-and there are nine cottages, forming the little school village. In these cottage homes the boys sleep and do their school work; for every boy, be he big or little, must go to school at least half the day. The matron is the teacher, and while one half of her family are in the school-room the other half are in the shops and on the farm .

Every boy who enters the institution has a chance to learn a trade, if he so desires; and, with remarkably few exceptions, the opportunity is accepted. Everything in use on the grounds and in the buildings is made by the boys themselves. A boy may become a tailor, shoemaker, baker, carpenter, machinist, printer or painter, under the guidance of a competent instructor. The boys print and issue a monthly paper entitled "The Industrial Enterprise," and they do some printing for private parties, aside from the work for the school. In the tailor shop every garment worn by a boy in the school is made, even to the caps, underwear, socks and handkerchiefs. When I was there recently the boys were working on uniforms for the band, and they were going to be very fine. The band, I might say, has only been in exist-ence since last June, but it makes some excellent music for all that. In the kitchen and dining room are the greatest cleanliness and order. Think of six hundred and fifty boys sitting down to a meal at one time! And I have seen two boys make more noise and disturbance coming in to dinner than did these six hundred and fifty. Why? Because everything is done with military precision and on perfect time. At a signal, heads are bowed, a simple form of thanks is returned, and then-well, that is all any visitor is allowed to see. On Sundays the entire school attends chapel twice; in the morning, to study the Sunday school lesson, and in the afternoon, to listen to an address or sermon. The music is rendered by a boy choir of some thirty voices, and such a reputation has this choir made for itself that it has countless invitations to sing, not only in Lansing but in other cities.

The boys hardly know what sickness is. They are contented, too, so much so that in many instances boys have asked to be allowed to remain after their time was out. The superintendent, Mr. J. E. St. John, has been with the Institution for nearly twenty eight years. In that time he has learned a good deal about boys. He has what he calls his office hour each day. During this hour any boy in the school is privileged to consult him on any subject whatever. One boy has received a new handkerchief from home; another wants to be assigned to some particular trade; another has found a bird's nest with five eggs in it; another shows a copy-book upon which he has been complimented by his teacher. These, and an hundred other little things which an outsider would consider too trifling to be thought of, are held by the superintendent to be of paramount importance.

Corporal punishment is not inflicted; the boys are thrown on their honor. The result is that when a

boy undertakes to assert himself he is quickly brought to terms by the other boys. When the place becomes crowded boys are sent out on parole, and the parole system works well. Passing through one of the halls of the school building, a bright eyed little fellow wearing the shoulder-straps of the First Lieutenant saluted with the correctness of a West Pointer, "What do the straps indicate?" I asked.

Cottages 3 and 4. Boys' Dining Hall. Administration Bldg.

"He is one of the military officers."

Then you have military drill, too?" I asked. Yes, and it's being made more prominent every year. Twice a week our whole force is in line for battalion drill. The carpenter boys have made six hundred wooden guns, and they answer very well. I am fully convinced that the drill is beneficial to the boys, not only in assisting in maintaining discipline but in the matter of health."

With summer comes the baseball season, and the boys have gained a reputation for the kind of ball they put up, having on several occasions administered a stinging defeat to the teams from the Agricultural College.

The success of the school at Lansing is due to the fact, largely, that it is made a school of instruction and not one of detention. Mr. St. John says: "Every boy who comes here is brimfull of energy, and we simply undertake the direction of that energy, rather than attempt to create within him something which may be utterly foreign to his make-up. We strive to develop what good there is in the boy. We find out in what good direction he is inclined, and then develop him along that direction."

The superintendent expresses an earnest purpose to have every boy who leaves the institution so well fortified to fight the battles of life and to withstand its many temptations and trials that he will stand amid it all a credit to the Institution and an honor to the community and to himself.

THE AVERAGE NEWSBOY.

MAX SCHER.

Purty hard lot that a newsboy's got? Well, by gravy! I guess not! Tell you what, my job's red-hot And I am Johnny-on-the-Spot! Hot stuff! That's what!

Sellin' extrys 'bout the war, Coin comes in whenever I roar; Hain't got time ter be feelin' sore— Three square meals an' sometimes four! Happy as a bed-bug! Hip! Hurrah!

************** ...THE KID...

HARLE ORIN CUMMINS

"Say, Mister, what'll a piller of blue in white violets cost? We want a big one, biggest size you've got. The Kid's gone.

The florist looked over the counter at the ragged little figure standing opposite, then out on the street at the row of dirty, anxious faces lined up against the big plate-glass window, and, judging from the sober tone in which the question was asked that it must be something strious, he answered kindly, "Violets are pretty high at this time of the year, especially white ones; isn't there something else that would do just as well?"

No. the Kid allers was stuck on violets; never hearn him say nothin' 'bout any other kind of flowers. He used to stand in front of the big flower store windows on show days for half an hour at a time jus' lookin' at the violets. So, seein' as this's the last time he'll ever have any flowers, the fellers thought we might as well git what he'd like best. S'posin' we have a piller 'bout a foot wide an' two feet long, what'll it cost? We've got money enough to pay for it but we wants to save all we can for the Kid's mother."

Who is the Kid, anyway?" asked the florist: "I don't know as I've ever heard of him before."

"Course that wa'n't his real name. His real name was Jimmy Peters, but we allers called him the Kid 'cause he was so small an' sickly. He fell down stairs when he was 'bout four years old, an' didn't never grow much after that, and was allers ailin'. The Kid was bright though, led the class at night school, and allers had some book or other when he wa'n't shinin'. Well, Jimmy had been up aginst it lately. The wet weather had made his back worse, an' he'd been havin' Skinney Brow's beat up by the hotels so's he wouldn't have to walk lound much.

T'other day jus' as he was goin' home to grub he heard a racket behind him. He turned 'round an' seen a horse an' buggy comin' an' nobody in it but a woman an' a little kid. Seems the woman's husband had stepped out of the rig to speak to some one, an' left her

f his pocket.

holdin' the horse. Somehow it got scart an' started to run, an' course she bein' a woman didn't know what to do, but just dropped the reins an' hollered.

What the Kid was shy in size he made up in bein' quick, and when he seen that horse comin' up the street, it didn't take him long to decide what to do. He put down his blackin' kit an' waited till the horse fetched up to him. It didn't make no difference to the Kid that 'twas a big, ten-hundred horse, nor that he was comin' with his head down at 'bout a two minute clip. He flung off his hat an coat, an' when the horse came tearin' up long side he scooted out an' grabbed the

an' tried to shake the Kid off, but he] found it wa'n't no go. Then he put his head down an' tried sweepin' the streets with him. Jimmy's dad fit an' died in the war, an' I guess some o' the old man's blood mus' have been in him, for he stuck to that horse like a bull pup to a terrier. Purty quick the horse he slowed up a bit, an' begun to go kinder crooked like an' then, all of a sudden, he plumped right down flat, with the Kid under him.

There wa'n't never much to Jimmy 'cept skin an' bones, but when the crowd pulled that big horse offen him there wa'n't much of that. They took him to a hospital right off, an' Skoggy Murphy an' me follered quick's we could. I seen the doctor an' he said 'twant no use, the Kid was too bad shook up, he couldn't pull through, an' they sent me for his mother. Well, that's all there is to it. They tried an operation to fix his back, an' that an' what he'd been through was too much for him. The-Kid-diedlas'—night."

The little chap was winking hard to keep back the tears which would well up in spite of him, but he kept on bravely:

Now the woman's goin' to make it right with Jimmy's mother, so she says. I 'spose she thinks it won't take much money to pay for a sickly little kid like But we fellers is goin' to do som'thin' ourselves, an' we've raised thirty seven dollars. Course we can buy bout anythin' we want with that, but we thought we'd jus' git a piller o' them blue violets with 'The Kid' on it in white letters, an' we calc'lated you'd send round what was left after takin' out your pay from this here, when you send the flowers up.

He drew forth a dirty old wallet, care fully tied up with a long piece of cord to prevent the pennies, dimes, and quarters from bursting out. He laid down the treasure which meant the hard earned savings of many months, and hurried out to join his comrades, as if afraid to trust himself further.

The florist must have had a soft spot somewhere in his heart, for on the day of the funeral there came to the Widow Peters' house, a large box containing not only the pillow of blue and white violets, but bunches of roses and pinks in profusion, and when the Kid's mother untied the wallet, instead of being dimin-

ished, the thirty seven dollars had miraculously increased to fifty.

Sunday School Teacher: "What do we

learn from the story of Samson?" Tommy (mournfully smoothing his ragged locks): "That it doesn't pay ter have women folks cut a feller's hair."

"When I grow up, Gracie," the little boy said, "I'll marry you."

When you grow up. Willie," she replied, "you'll get down on your knees and ask me.

bit, pulled hisself up, an' took the horse by the nose with his other hand, an' begun pinchin' so's to shut his wind off. "First the horse threw his head up Boston Diction.—Teacher (of English)

-Michael, when I have finished you may repeat what I have read in your own "See the cow. Isn't she a pretty words. Can the cow run? Yes, the cow cow? can run. Can she run as fast as the horse? No, she cannot run as fast as the horse?" Future mayor (of Boston)—Git on to de cow. Ain't she a beaut? Kin de cow git a gait on her? Sure. Kin de cow hump it wid de horse? Nit-de cow ain't in it wid de horse.-Judge.

'A quarter, please."

raper just across the street.

ONCE came upon two boys who had stopped just before the door of a church at the hour for the convening of the Sunday school. I saw that there was an argument going on, and just as I reached them one boy turned on his heel and said: "It's too tame for me." The other pushed open the door and went

If this were fiction I would go on to tell how the Sunday school boy became a great and good man and the other boy became a failure and was buried in a drunkard's grave.

But this isn't fiction; and I don't want to leave the impression with my readers that a boy can neither be great nor good without going to Sunday school; for many a life has proven that a Sun' school training is not an absolute ' sity to the making of a great ?

I do not know that anybo. boys at any of these turr this way or that is r end right, or this wr sure to end wrong of "chance" in the very be the road ' a miser

goal first. So as a matter of pure business policy, I would advise the boy to hesitate before he leaves the Sunday school.

Now, I know just how boys feel and talk about the Sunday school. In the day school they have trained teachers, and they can see from day to day that they are accomplishing results. There is a rivalry between the classes and among the students; there is a class spirit, an inspiration from aspiring and ambitious comrades: while in the Sunday school. far too often, there are few trained teachers; the bible is taught in an indifferent way and with indifferent success; there is a lack of proper grading of the students, so that the big boys are thrown together with the little ones; the superintendent is a superannuated, easy-going fellow who has been selected because he is willing to serve; the music is in the hands of some one who leads, either because he is the only one who can lead. or because he has grown fast to the position from long service. There is no business sense used in the selection of teachers for this and that class of pupils; a fidgety old woman is put over a dozen mischievous, romping boys, and some sleepy old deacon has charge of a numgirls. The school is con-me plan year in and year ber of yeducted ' out.

Loyal to His Mother.

The late Dr. John Hall told of a poor woman who had sent her boy to school and college. When he was to graduate he wrote to his mother to come, but she sent back word that she could not, because her only skirt had already been turned once. She was so shabby she was afraid he would be ashamed of

He wrote back that he didn't care anything about how she went. He met her at the station and took her to a nice place to stay. The day arrived for his graduation, and he came down the broad aisle with that poor mother, dressed very shabbily, and put her into one of the best seats in the house.

To her great surprise he was the valedictorian of his class, and carried everything before him; he won a prize, and when it was given him he went down before the whole audience and kissed his mother, and said, "Here, mother, is the prize. It is yours; I would not have had it if it had not been for you."—Christian Standard.

(Continued from Page 129) cheese and crackers and dried beef, received a crock of fresh butter from home. This boy was not an imitator but an originator. He sold the crock of butter at a good price, bought a little good butter for himself and sent the re-mainder of the money home. Then he took orders for more butter, with the result that in a few months he had scores of customers, and the old home farm was kept busy supplying butter. The boy continued his studies, delivering his butter, making his collections. and prospered. He finished his course at Harvard, and when he received his sheepskin he had a thousand butter customers, requiring four wagons for the delivery of the goods, and had built up such a reputation that a New York concern had recently appointed him its

New England agent, at a fine salary. You will draw your own moral from these two stories.

I have just room enough left to say that any fool can play the mimic, and that there is just one way in which, above all others, man shows that he is made in the image of his Maker—he can create.

SUPPOSE there are plenty of boys who, like myself, would go a block out of their way rather than see two dogs fight. This is not "a bit sarcastic," but sincerely, and without intention of joking. There is something brutal and distressing in a dog fight. It a painful, I believe, to every nature with ense of true manliness and refinement. first impulse of nine persons out of ho see dogs fighting, is to part them, the disgraceful exhibition. The son, who wants them let alone, oats-over the fierce, clamorous him almost invariably the prayed moral nature. He and will act brutally on tell in a minute what n looking at, when ladog fight. And I nearly every case liged to witness been some boy as I to part he expense the of the

carefully observe the things that lead up to fights in general, whether among dogs or your own kind, you will find that the upper dog deserves the greater part of your sympathy. The upper dog is more likely to be in the right than is the under dog, because of the prevailing prowess of right feeling. At any rate, I would not make a custom of sympathizing with the worsted party. It isn't safe. and it isn't reasonable. In a great many instances the under dog gets what he deserves, and no less. He was in the wrong, and that was what carried him If he hadn't been carried down. he would be in the wrong oftener and more insolent than ever. He needed a drubbing; it was good moral medicine for him; and the upper dog was really the best friend he could possibly

Parents sometimes tell me, with a good deal of satisfaction, that they think their boys have the true knightly and chivalrous nature, because they always take the part of a playmate who is getting the worst of it. I always long to reply-and do, generally-that a boy who is getting the worst of it in a "scrap" is not necessarily the boy who deserves to win. I think it is a rather reckless and haphazard chivalry, to make a custom of helping or sympathizing with anyone who happens to be down, irrespective of the reason for his being down. Perhaps he ought to be down, for a time-long enough to teach him not to repeat the hing that caused his downfall.

Always find out, if you can, both sides quarrel before becoming a party to hat is a pretty good rule to follow. that may save unfortunate comand results. Remember that iog deserves a hearing as well Might does some right-there is no doubt mpathy ought not to be but discriminating an l to see a boy or girl heir feelings, but ! ick feelings kept and guidance of 'his is done, a of "slopping implicated st, at any ng with strike e he 80

The Cruise of the Yacht Gazelle: 6,000 Miles on Inland

and Ocean Waters#

KEPNETH M. RANSOM

This is the fourteenth chapter in the story of a six thousand mile cruise by four Michigan boys, in a that of their own construction. Setting sail from St. Joseph, the "Gazelle," by which name their craft was known, proceeded by way of lake, river and canal to the Mississippi, thence to New Orleans and the Gulf, along the gulf coast to the Atlantic, thence to New York harbor by way of the ocean, thence by river, canal and lake, home to Michigan.

CHAPTER XIV.

New Smyrna claims the honor of being the oldest town in the United States, and to substantiate that claim the inhabitants point with pride to the well-preserved ruins of the old Mission House, which they have records to prove was built prior to St. Augustine's oldest ruins. At any rate it's a very interesting place. The masonry is very well preserved, and the mortar between the algonquin rock, of which it is built, is harder than the stone itself. Besides this old ruin drainage canals built of this same rock are still doing service. Scattered about the country are numerous rock-curbed wells which were undoubtedly built by the earliest visitors to the continent.

We remained in New Smyrna three days, and were shown many kind attentions by the hospitable southern people.

One lady I met especially pleased me. I found that she was a sailor born, and

This is the fourteenth chapter in the story of a | the buoys marking the channel to the inlet. We rowed ashore and spent a very pleasant hour with the keeper and his wife. We learned that the bar across the inlet's mouth was considered very dangerous, as the old boiler of a wrecked steamer somewhat blocked the passage, and at best the waves broke with great force as they struck the bar.

We had wondered how we should celebrate the "Glorious Fourth," and we were pleased to know that a good bit of excitement would usher in the day, as we would try the bar for the outer ocean at daybreak.

At 12:05 a. m. our cannon boomed a salute, after which we retired for a few hours' sleep. When our alarm sounded at 3:30 it was just getting a wee bit light, so we dressed and, while Arthur prepared breakfast, Frank and I set up opposition to the thunder-like boom of the surf, and report after report sounded from our cannon in honor of "Old Glory," which proudly floated at our masthead.

As the sun rose above the horizon and the mist cleared away, the cloudless blue sky gave evidence of a fine day. The breeze was fairly strong and as soon as we had finished our repast and stored away the dishes we battened all tight, and, anxious for the excitement, soon ering headway on the other tack, fairly

It did seem so. We realized our danger and, helpless to do anything, we looked at one another as we drifted along toward the angry billows which were only a hundred yards off. I began to think what I would do when we should meet the rolling mass. I looked up at the stars and stripes hanging limp at our peak. Surely, I thought, our flag will not fall on Independence Day, and as my eyes rested on the beautiful fabric a cool breeze struck my face and the light bunting waved slightly as if ready for the battle. A moment more and we had passed the point. Then the breeze increased rapidly until our sails were filled and, bending under the pressure, our ship gathered headway and was once more under the control of the helm. We all gave a shout of joy, although the tide had so drifted us during our helpless condition that it was very doubtful if we could pick up the channel before reaching the breakers. We gave Gazelle a chance to do her best. however, but it seemed of no use. If I held my course I would certainly be dashed on the sunken boiler, and to tack ship was equally dangerous, for if caught broadside in the great swells our chances were small, indeed; but it must be done. We all realized this and stood ready for the result. I watched my chance and at the signal Arthur let go the jib; at the same time Frank eased the mainsail and I put the helm hard down. Love that craft? Well, I guess I do, if only for this one act alone, for she spun around like a top and, gath-

> tion into the deeper channel beyond.

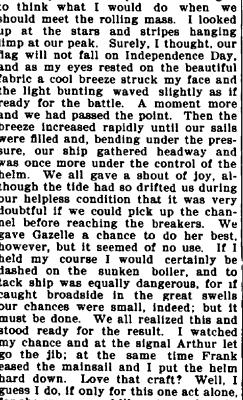

had no fear, for, although the seas were high and breaking, the vacht had been through many times larger ones with safety. So we steered a straight course down the channel, rose and fell on the three rows of breakers, and finally reached the long, easy roll of the open sea, and turned north toward St. Augustine.

All day long we sped on our way. What a splendid day it was! Sea birds hovered high in the air, now and then swooping down on some foolish fish which had ventured too near the surface; flying fish jumped from the bosom of the deep, while dolphins and porpoises played in great numbers about us. Now and then a huge sea turtle would come to the surface and breathe, then sink again into the depths below.

Thus our pleasures were great as our craft cut the water forward and danced along on this day of celebrations.

As night fell we found ourselves off the Matanzas inlet, but fourteen miles from St. Augustine, whose light we could plainly see in the distance. Not daring to run the risk of crossing the bar at the entrance to the harbor at night, we drew in toward shore and, when our lead registered four fathoms, we came to anchor in the open ocean, with the protecting hand of Him who "doeth all things well" to keep us through the night.

When sold, send us the \$1.00 and we will send by return mail the Watch or Ring as above for your trouble. Our Stick Pins are stone set and so pretty you can sell 3 or 4 to each person, and earn your Watch or Ring in a few minutes.

ANAWAN JEWELRY CO., I MAIN ST., NO. ATTLEBORO, MASS.

THE GAZELLE SPEEDING ON.

navigation was not worth while knowing. She gave me no end of information regarding the coast, which I afterward found was correct. What pleased me most, though, was that she and her husband had sailed a yawl rig yacht about Gazelle's size from Massachusetts to Florida, whither they came to find a new home. Very refined and highly cultured this lady possessed a calm, brave spirit which while wholly feminine was very Pleasing.

I was sorry that her husband was way with his yacht to the Bahama Islands for a load of sea shells. These be prepared during the winter for the

northern souvenir trade. On the evening of July 3 we said goodby to our friends, and, after putting our supply of provisions and water aboard, the latter coming from one of the old wells near the pier, we unfurled our ils and, with a light breeze and an bbing tide in our favor, moved to an anhorage just inside the inlet which joins

Cosquito Lagoon with the ocean. It was a beautiful night. The sky was lear and the heavens seemed crowded with twinkling stars. It was so grand find quiet save for the roar of the surf as it leat in regular time on the outer beach.

Nestling among several palm trees was the United States buoykeeper's cot-

what she did not know about boats and | had the yacht under full canvas; and as she gathered headway and rounded the point which until now had obscured the view of the ocean we were enabled to take in the situation.

The pass was narrow and at the place where the three rows of breakers rose high in the air we could see, a little to the left of the buoy which rose and fell on the monster billows, the black iron dome of the sunken boiler. We realized the danger was as great as the keeper had described. The seas themselves were dangerous to say nothing of the sunken demon.

Arthur stationed himself forward on the lookout firmly grasping the rigging. Frank and I remained at the tiller anxiously waiting to feel Gazelle rise on the first wave as it came thundering in from the ocean. The tide was strong and on the ebb so we were carried with much speed toward the breakers, but as we came under the lee of a sand dune at the inlet's mouth our wind semed to fail, and, slowly but surely the Gazelle lost speed until only the tide carried her along. As she struck the first swell we found that we had no headway over the tide, thus our steerage way was lost, for the wave struck Gazelle sideways and turning her half way around left us rolling with flapping canvas in the trough of the sea, but still drifting on with lage. Here lives the man who watches the outward tide. Was it our destruction?

A Young Railroad and Express Agent.

Fannon, a station on the Gulf, Western Texas and Pa-citic Rallway, boasts of havboasts of hav-ing one of the youngest rail-way and ex-press agents in the United States, in the person of Jas. Huston, who has just turned sixteen. The sixteen. The career of this boy is typical of that of many honest and enterprising boys throughout the

ing boys throughout the great West. Young Huston was born at Tuscumbia, Ala., Nov. 9, 1884. Afterwards the family moved to San Antonio, and from there to Wharton, Tex., where the boy attended the public schools, and began work as messenger boy for the Western Union Telegraph Company. At this time he was twelve years old, and his pay was seven dollars and a half a month. When fourteen years old he went to Gollad, Tex., as a clerk, where he remained a year. Returning to Wharton he was made telegraph operator by the railroad company, and in March, 1900, when a little over fifteen years old, he was made railroad agent and telegraph operator and sent to Fannon. His salary was fixed at sixty dollars a month. As indicated by the picture, Huston is a fine looking lad, and the fact that he occupies the responsible position named shows that he is honest, faithful and industrious. Northerners are accustomed to thinking of energy as belonging to the North. Southerners themselves excuse their lack of it by reason of the enervating climate. Here is a boy, however, who was born in Alabama, and has passed his whole life in the South, who is the very personification of industry and energy.

and energy.

Has Great Constructive Ability.

MARY P. SAYERS.

Edward Vanderfield, or "Ned," as he is familiarly known among his friends, is a twelve year old Grand Rapids boy of great constructive ability. At the age of five he built a toy barn, which he finished in the best possible manner. At ten ished in the best possible manner. At ten he built a trolley car complete, and laid a track on his father's back lawn to run it on. It was sufficiently commodious for several small boys at a time to ride in, and you may be sure that they took advantage of their opportunity. During last summer he built a house in a large

built a house in a large tree, where he sat and read, secure from in-terruption. 'I he house is twenty two feet from the ground and can be seen at quite a distance

In addition to all this "Ned" does fancy work, making very handsome embroidered pillow covers.

He leads the singing at school and is also quite proficient in playing instrumental

One thing that recommends him to all is his thoughtfulness of his parents.

The Lawton Debating Club.

The Lawton Debating Club, at Cumberland, Md., is composed of boys from fourteen to eighteen years of age. It was organized in December, 1899, with six members. It now has sixteen. It met at first at the homes of the members, but later it was allowed to meet in one of the rooms of the Young Men's Christian Association. The club has had two public debates, one on the twentieth of last July at one of the churches, the subject being, "Resolved. That the events that occurred in the territory now controlled by the United States prior to the year 1800, were greater and of more importance than those that have occurred since that time." The second debate was held on the 6th of December last in the Y. M. C. A. building. The subject was, "Resolved, That women should vote." At this meeting an admission of twenty five cents was charged, the price entitling the holder to refreshments. The music was furnished by the Y. M. C. A. orchestra. The Lawton Debating Club, at Cumber-

On the Make.

"Mamma," said four year old Harry, "if you'll give me a nickel to buy some candy I'll be real good."

"No," she replied, "I'm not going to pay you to be good."

"All right, mamma," answered the little fellow, "but you'll be sorry when I grow up good for nothing."

In Germany one man in every 213 goes to college, in Scotland one man in 520; in the United States one in 2,000, and in England one in 5,000.

WHAT BOYS ARE DOING

A Young Commercial Traveler.

Portland and Boston, and back to Bangor, Harry Dugan, the eleven year old son of P. T. Dugan, a Bangor (Me.) dealer in harnesses and shoe findings, was recently declared by a Boston paper to be the trips to Boston alone. He attends the

youngest commercial traveler in the United States. When he was one month less than nine years old he made a trip from Bangor, Me., to Aroostook, Conn., thence to Calai and St. Andrews, N. B.,

the fourth grade of the Grammar School of onth Bangor, and is in all respects a bright boy. trip The picture of him in his traveling cospon., tume was taken when he was less than B., nine years old.

A Chinaman for Coxswain.

Sas-Ke Alfred Sze is a young Chinaman who is being educated at Cornell. He is one of the best oarsmen in the university,

and did service for a time as conswain of the Cornell eight-oar crew. The boy was formerly private secretary to the Chinese minister at Washington.

A child, on being asked to illustrate a certain hymn, drew a woman carefully nursing a little bear; under it he wrote:

Can a woman's tender care Cease toward the child She-bear?

Three Boys Manage a Gold Mine.

Near the village of Anaconda, in the Cripple Creek district of Colorado, there is the smallest gold mine in the world, its owners and operators being boys. The company operating the mine is known as the "Yellow kid Mining Company," with a capital of thirty cents, and controlled by three brothers named O'Brien. Dan O'Brien, five years old, is the engineer and president; Bart is official ore sorter and treasurer; John is the general superintendent. The boys have sunk a shaft twenty five feet which has three levels. They have taken as a model of their plant the Morningglory Mine, which is situated near by, and have gallows frame, ore cars, buckets, bins, screens, dump, bell signals, shaft house, tools and implements exactly like those of the big mines in the district. The boys work twelve hours every day, and it is their ambition to succeed their father in the management of the Morning glory Mine.

Moral Bravery.

Many a brave soldier who has stood unflinchingly at the cannon's mouth, has not had the moral courage to stand firm in the cause of right when laughed at by his mates.

"We are told that when Coley Patteson was a boy at Eton, and captain of the cricket eleven, he was present one evening at a 'cricketing supper,' and one of the boys told a nasty, low story. Coley stood up before all his school fellows and said. 'If any more such stories are told in my presence, I resign my captaincy and leave this school.'

"His words took effect, and thus by the influence of one boy the tone of the great public school was purified and raised. The brave schoolboy became a brave martyr bishop, and laid down his life on an island in the far Pacific."

Results of a Study of American Boys by the United States Government.

by the United States Government.

The United States Bureau of Education has published the results of a study of more than one thousand American school children. We can do no more than give a brief epitome of some of the interesting results. Boys are more unruly than girls. Almost ten per cent of the dull boys are unruly. Boys of the non-laboring class are more unruly than are boys of the laboring class. Boys of American parentage are less unruly than those of foreign parentage. Boys of American parentage are six per cent brighter than boys of foreign parentage. Boys of the laboring classes show about ten per cent less brightness than boys of non-laboring classes. The highest per cent of laziness is shown by the dull boys. Boys of the non-laboring class are heavier than boys of the laboring class are heavier than boys of the laboring class are heavier than boys of the laboring class. Bright boys are in general taller and heavier than dull boys. Boys of American parentage, non-laboring class, are equal to the boys of American parentage, laboring class, in five studies, superior in nine, and inferior in none. Boys of foreign and mixed nationalities are inferior in average ability in one study, superior in eleven studies, and equal in two to boys of American parentage. The percentage of brightness decreases as age increases, in all studies except drawing, manual labor, and penmanship. The reverse is true of colored children. Boys with light hair and eyes are less sensitive to pain and less strong than boys of dark hair and eyes.

These are only a few of the facts brought out.

Maine's Youngest Engineer.

Georgie Steuber, fifteen years of age, and a resident of Gardiner, Me., is one of the youngest engineers in the country. He was employed in the capacity of engineer on the steamer "Glenn," which runs from New Mills, Gardiner, to the head of Pleasant Pond, when he was only thirteen years old. Captain Ollver, of the "Glenn," says: "Georgie is the best, most capable boy is know, and a good engineer. He takes to the work as naturally as a duck to water."

The boy's skill is by no means confined to engineering. He is a good musician, and for a number of years was a member of the boys' choir of Christ Church, of Gardiner He is the fastest bicycle rider of his agin his native town, and a good horseman Several years ago Mr. Libby, a Portland gentleman, gave a race at his stock farm and entered his pony. Nellie, and his trotting dog, Jack. Mr. Libby's nephew drove the pony and Georgie Steuber drove the dog. The dog weighed sixty pounds and Georgie, who was ten years old at the time weighed just forty pounds. The race was a very exciting one, and was won by the dog and Georgie.

Watch the newspapers for a week or two with an eye single to what boys are doing as told by the reporters. You will be sur prised to find what a large figure boys cut in the news of the day.

An Interview with Hezekiah Butterworth, the Famous Writer for Boys.

FOR "THE AMERICAN BOY," BY M. B. THRASHER

There are few boys in America-or men who have been boys during the last quarter of a century—who have not read some of the fascinating books written for boys by Hezekiah Butterworth. The readers of THE AMERICAN BOY will like to know right from Mr. Butterworth himself something of how he goes to work to write these stories.

Mr. Butterworth lives in a comfortable old house on Worcester Street, in the South End, Boston. This house has been his home for over twenty five years, although he owns a house and an orange grove in Florida, and the farm and farm house on the Rhode Island coast which was his boyhood home. Mr. Butterworth works in a big room, through whose three long windows the morning sun shines in. Like Whittier, he has a Franklin stove, the front of which can be thrown wide open, and in the winter evenings when Boston's famous east wind howls in the streets outside, he likes to heap wood on the fire and read the stories which the flames and the embers write out before him.

The walls of the room are hung with pictures-where they are not hidden behind cases filled with books. Many of the pictures and books are autograph copies from famous men and women with whom Mr. Butterworth's long life in the literary world has made him acquainted. There are also other interesting souvenirs. One is a massive gold medal set in a frame, which was given to Mr. Butterworth by the American Tract Society because one of his early books was thought to have done a great deal of good. Another is a beautiful stuffed specimen of that rare bird, the quetzal, of Central America, the sacred bird of the Aztecs. Mr. Butterworth tells in this article how he came to possess this specimen.

You ask me to tell you for THE AMERICAN BOY," said Mr. Butterworth, "how I write my books. Well, it was very largely on account of an American boy that one of my last books, "Lost in Nicaragua," was written.

"A certain young American thought he would like to go to Central America to become a coffee planter. I was planning to go there sometime, to visit San Jose, the beautiful capital of Costa Rica, the once terrible volcano of Irazu. and the wonderful hot springs at Cartago. The mother of the young man of whom I have spoken—she was a widow -asked me to look into the coffee raising business there, with a view to a possible purchase of a plantation for him if it seemed to be desirable. An experience which I had in the course of this search seems to fit into an interview for your paper so well that I tell of it here.

MR. BUTTEBWORTH'S QUETZAL, THE NATIONAL BIRD OF NICARAGUA. Photographed for "The American Boy."

"On the steamer on which I was going to Central America I got pretty well acquainted with the captain, an Englishman, who had known the country and the people for many years. One day I asked him what he thought about my buying a coffee plantation there for an

American boy. 'Not an American boy,' he said.

"'Yes,' I said. 'Why not?'

"'Because,' he said, 'your American boys are not brought up right to succeed in such a venture. They are educated all wrong for such a life. They are brought up to habits of extravagance. Besides, if they were successful at first, they would not stay on the place. It is the German boy who will succeed in such a place as that.'

'Why German?' I asked. "'The German boy is willing to wait for results. He will lay out a coffee plantation, and then settle down to live in the country until it is profitable. Your American boy is too impatient for results to secure complete success.

"Of course, this judgment should not be looked upon as applicable to every American boy, but as a general thing 1

country. And, by the way, I have often found these officials perfect storehouses of interesting tales and legends about the country in which they live. At one time it was death to kill a quetzal, and even now there is a fine of eighty dollars for taking one without government permission. I procured this specimen which I have from a taxidermist who had been employed by the government to prepare an exhibit for a national fair and for the Paris exposition.

"The breast of the trogon is a blazing, ruby red. Its head and back are a brilliant, iridescent green. The wings are green and black, with long white feathers beneath. The body of the quetzal is little larger than that of a robin, and yet its two slender tail feathers are often three feet long. The tail is green, and so lustrous that the two long feathers float out behind the bird like strings of emeralds.

"You ask me how I write my stories," said Mr. Butterworth. "When I am at home I study a great deal in the Boston Public Library upon any subject in which I am interested at the time. This is one of the best public libraries in the country for such work. Sometimes 1 write there, but more often at home. I get a lot of cheap paper and a good pencil, and write on a pad in my lap. Twenty five hundred words in a day is

The Boston Public Library makes special provision for such workers as Mr. Butterworth. There are some quiet

my 'stent.' A typewriter takes my copy and writes it out for me." suspect it has enough of truth in it to nooks provided in which persons can

HEZEKIAH BUTTERWORTH. From Photograph Taken for "The American Boy."

make it deserving of thoughtful consideration.

"On my way to Central America I went to Januaica, from there to Cartagena, in South America, and from there by steamer to Port Limon, the new seaport of Costa Rica and Nicaragua. Port Limon is reckoned a very unhealthy city, full of fever, but I found Americans -or people of any nationality--who have led correct lives, who go there and take due precautions, rarely have fever, or if they do have it, recover. It is the dissipated who fall ill most quickly and most often die.

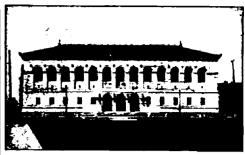

"While I was in the country I met a man who told me of a thrilling adventure which he had had in falling into a cave in the forest, and how he was rescued from what otherwise might by Sarmiento, who years ago was Arhave been his tomb. I learned that gentine's minister to the United States, there are a great many such caves and a friend of Sumner and Horace there. I became fascinated, too, with Mann in Boston. He believed that the the beauty of the national bird of Nic- education of the boys and girls of a aragua, the trogon, or quetzal, said once to have been the sacred bird of character. He is buried in the 'Recothe Aztecs. The legends associated with leta,' at Buenos Ayres, one of the most this bird are numberless.

in my mind a story in which this beau- his tomb is a bas-relief representing tiful bird figured, and in which the hero him surrounded by a throng of children. of the story should get lost by falling I do not believe there is any other great into one of these mysterious caves, and man in the world who has such a monuthen be rescued. When a story like ment, and I do not think any other that once gets started in one's mind it would have given Sarmiento so much almost tells itself. I had put a good portion of it on paper before ever I left the country. A consul whom I met the country. A consul whom I met there helped me with his stories of the lambda by whom I found in Argen-lambda by whom I found in Argen-lamb

work without disturbance, and to which books of reference are brought by the attendants.

Mr. Butterworth does not trust to books and libraries, though, for his authorities, as may be seen by his going to Central America. Not long before that journey he became interested in Swiss kindergarten methods and their development in some of the South American countries. As a result he went to Switzerland, from there crossed the ocean to the Argentine Republic, and eventually crossed the Andes mountains from Argentine into Chili. Fifty miles of the trip over the mountains had to be made on mule back.

"The normal schools in Argentine," said Mr. Butterworth," were founded country is the foundation of its national beautiful cemeteries in the world. The "There gradually worked itself out name means 'Remembrance.' Around

THE BOSTON PUBLIC LIBRARY.

tine. Perhaps their story may do to set against that of the English sea captain. Years ago a man and his family went from New England to California in a prairie schooner. He acquired considerable property there, but as he had a family of sons for whom it was his ambition to provide large farms, he emigrated again, this time going to South America. There on the plains of Argentine he and his family have developed an enormous tract of land into what may very well be called a 'cattle kingdom.' When I was there they had on the ranch ten thousand head of sheep and forty thousand head of cattle. The income of the place was said to be

fifty thousand dollars in gold each year.
"As for myself," said Mr. Butterworth, in closing, "I ought to say that I have confidence in the American boy. He may be educated wrongly, in some cases, and make mistakes, but in the long run I believe that he will come out all right. I have spent a great deal of time in writing for him, and it is a pleasure to me to know that he has liked to read what I have written."

"Goody-Goody" Books.

Reverend George A. Campbell, president of the Christian Ministerial Association of Chicago, wants all the old-time Sunday school books thrown out of the Sunday school libraries, and in their place good novels of the world's greatest writers, such as Ivanhoe, David Copperfield, Jane Eyre, and so on. He says the old-time Sunday school library is effeminated: that it is not only feeble, but is enfeebling: that the books are not true to life, making a good boy always get the rewards, which is not in accord with the world as men know it. He says the novel is the dominant feature of literature, and that the church should make more use of it.

Mr. Campbell is pastor of the Christian Church of Austin.

THE ORDER OF THE AMERICAN BOY

CAPTAIN'S BADGE.

Boys desiring to Organize Companies may obtain a Pamphlet from us containing the

Directions published in the January and February Nos. of this Paper. It is sent free.

Company News.

The Jefferson Pleasure Club of Chicago is about to become a Company of THE ORDER OF THE AMERICAN BOY.

The Winfield S. Schley Company, No. 2, Division of Maryland, New Windsor, Md., Edwin P. Kolb, Captain, is working to get the help of a number of gentlemen at New Windsor, and the idea is a good one. Two or three grown up friends of boys can be of great assistance to them in suggesting plans and carrying them out.

A new Company has been formed at Heron Lake, Minn., named after the late Senator C. K. Davis. The Company will meet every Friday evening at 7:30 o'clock, and have adopted the Constitution and Byluws printed in the February number of THE AMERICAN BOY. They have a room and are fitting up a gymnasium.

New Companies are being organized at Woodstock, Ill.; Watertown, N. Y.; Weir City, Kas.; Scottsburg, Ind.; New York City, N. Y.; Orange, Cal.; Providence, R. I.; Las Cruces, N. M.; Lindsey, O.; Lake Geneva, Wis.; Denver, Colo.; Belolt, Wis.; Athol, Mass.; Chicago, Ill.; Culloden, Ga.; Binghamton, N. Y.; and other places.

The Mckinley Company, No. 2 Division

The McKinley Company, No. 2. Division of Ohio, Niles, O., Clarence Stewart, Captain, has a fine club room, lighted by four electric lights, heated by steam and furnished with two tables, ten chairs, a library of fifty books and about two hundred papers. This Company will have ten more books when they have received the prize we sent them for getting the largest number of members.

The boys at Watertown, N. Y., who have formed a Company, say they have not yet found rooms sultable for themselves.

This should not deter boys from organizing. It doesn't require a great deal of room for the first few meetings, and a boy's own room in his own home will furnish sufficient accommodations for a while, at least, until the Company grows strong enough to get more commodious quarters.

The Major Fraine Company No. 1

enough to get more commodious quarters. The Major Fraine Company, No. 1, Division of North Dakota, Park River, N. D., Alfred B. Overby, Captain, is named for a hero of the Spanish-American War, who served in Company C. First North Dakota Regiment. The object of the Major Fraine Company is to train the members in speaking, reading, declamation, etc. They will use our programmes where suited to their purpose and adopt original features of their own. They meet every Monday evening.

A NATIONAL NON-SECRET SOCIETY FOR AMERICAN BOYS.

Under the Auspices of "THE AMERICAN BOY."

Object:—The Cultivation of Manliness in Muscle, Mind and Morals.

The object more definitely stated: To promote mutual and helpful friendships among boys; to give wider circulation to high class boy literature; to cultivate in boys physical, mental and moral courage, and develop them along social, intellectual and moral lines; to cultivate purity of language and actions; to discourage idleness, and encourage honest sport and honest work; to cherish and emulate the examples of great and good men; to inculcate lessons of patriotism and love of country; to prepare boys for good citizenship; to cultivate reverence for the founders of our country, and to stimulate boys to all worthy endeavor.

work, as indicated in the January number of this paper. In sending information of this character the Captains should refer us to some one or more men or women who will be able to vouch for the truth of the statements.

The Matter of Programmes.

The Matter of Programmes.

The Companies of THE ORDER OF THE AMERICAN BOY will select their own programmes. They will meet as often as they desire. Some Companies will wish their meetings to be literary in character; others will look only for amusement; still others only for business. The programmes that we give from month to month are only suggestions for such Companies as desire to use a literary programme. An athletic club will perhaps not wish to adopt the programme suggested; a baseball club will undoubtedly not wish to do so. A club of stamp collectors will want to discuss stamps. A club of young naturalists, formed under the auspices of the Agassiz Association, for instance, will wish to have papers and discussions on subjects of interest to them alone. Amateur journalists at their clubs will discuss questions relative to amateur journalism. Religious societies such as Epworth Leaguers, Christian Endeavorers, etc., will want a programme suited to their own tastes and needs. It is impossible, in view of the mixed character of the Companies comprising THE ORDER OF THE AMERICAN BOY, that any one programme shall be fitted to all Companies.

Let it be thoroughly understood that each Company may adopt its own method of procedure, holding its meetings as often as it may deem desirable and conducting them in a manner suited to its conditions and needs. The programme suggested, therefore, is only for such Companies as desire to do literary work, in the way of declamations, debates, etc.

THE JUNIOR ATHLETIC CLUB, OF GLEN ROCK.
PA.

This club has a library and a good start at a gymnasium outfit. How would you like to spend an evening with them?

evening.

The Hagerstown Boys' Company, No. 1. Division of Maryland, Hagerstown, Md., Clifford E. Hays Captain, meets on Saturday afternoons at the home of the Captain. This Company is especially interested in athletics. It is also interested in stamp collecting. It will gather together a library composed of good boys' books. This Company has adopted a salule, by which the members recognize one another on the street. The dues in this Company are ten cents a month.

I. Donald Davis, Captain of the Timothy This Company has adopted a salute, by which the members recognize one another on the street. The dues in this Company are ten cents a month.

J. Donald Davis, Captain of the Timothy Murphy Company, No. 1, Division of New York. Cobleskill, N. Y., is corresponding secretary of a debating club in the high school which he attends. He is also exchange editor of the high school paper called "The Students' Arena," and is president of the Mission Band of the Lutheran Church. Although attending school, he receives two dollars a week for work he does in a dentist's office, "and yet," he says, "I find spare time." He has won two degrees for speaking in the W. C. S. U. contests. The first time he ever spoke in public he won a silver medal. The next time, at Sharon Springs, he won his second medal, and the third time, at Middleburgh, N. Y., he won a gold medal.

of ship subsidies, the queetion for debate editor of the high school paper called "The Students' Arena," and is president of the Mish school paper called "The Students' Arena," and is president of the Mish school paper called "The Students' Arena," and is president of the Mish school paper called "The Students' Arena," and is president of the Mish school, he receives two dollars a week for work he does in a dentist's office, "and yet," he says, "If find spare time." The next time, at Sharon Springs, he won his second medal, and the third time, at Middleburgh, N. Y. he won a gold medal.

As to Degrees.

Captains of Companies are requested to send to the publishers of THE AMERICAN BOY in the Mish of the Mish school paper called "The States should be added to the publishers of the Mish school paper called "The Stablish a system of subsidies, the queetion for debate to five the following." Resolved, That the United States should be should be deather on the January number of this paper we defined to first class new cloth bound offered ten first class new cloth bou

EXERCISES FOR MARCH.

By the Physical Director of the Order of The American Boy.

Each morning, on arising, put off every particle of clothing, make slowly seven of the arm movements described in Exercise I (see February number, page III), with all the mind on them, holding the breath all the time if possible. Then wind your gown or towel about your loins and with a sponge in the hand dash cold water once or twice on the chest and arms. Rub briskly with towel till the riesh is aglow, then do a little drumming on the muscles of the arm and the chest with the palms of the hands. The whole operation will take but a few minutes. See how good you will feel. At night take the same exercise without the bath.

minutes. See how good you will feel. At night take the same exercise without the bath.

Do this for the first week in March, Sundays included. It's good Sunday work.

For the second week increase the number of movements to eight. For the third week increase to ten. For the fourth week increase to thirteen. Bathe all over in tepid water at least twice a week.

After making the movements of Exercise 1 as directed, make the movements of Exercise 1, excepting that the palms of the hands are turned up instead of down. During the first week in March make the movements of Exercise 2 every morning and night four times; during the third week, six times; during the fourth week, seven times. Counting the movements of Exercise 1 and Exercise 2, you will make every morning and evening of the first week a total of eleven movements; second week, fourteen; third week, sixteen; fourth week, twenty. You will find by the end of the fourth week of March you can make the twenty movements as easily as you made the five movements in the first week of February; in other words, you are growing strong.

Executive Orders.

Order No. 4. Captains must promptly report to us additions to or resignations from their Companies, and where a member resigns, his badge should be delivered to the Captain to be returned to us or held by the Captain subject to our directions.

American Base Ball League.

Every amateur base ball club should join the ORDER OF THE AMERICAN BOY. The publishers of THE AMERICAN BOY will print the scores made by the clubs of the league in its monthly issues. The full terms of our great prize offer to the champion clubs in the League will be described later. They will probably be base balls made of silver with the names of the champion teams engraved on them. When you organize your club in the spring, see that it joins the order.

Captains should keep us informed of their Companies' plans and doings. We wish to publish all news from Companies.

Degrees Conferred.

We confer upon J. Donald Davis, Cableskill, N. Y., Captain of the Timothy Murphy Company, No. 1, Division of New York, one degree for excellence in public speaking; one degree for excellence in literary work; one degree for habits of thrift; one degree for good work in behalf of THE AMERICAN BOY and the Order—four degrees in all.

Degrees have been conferred upon J. Car-

AMERICAN BOY and the Order—four degrees in all.

Degrees have been conferred upon J. Carroll Knode, Stotsenberg Company, No. 1.

Division of Nebraska, Hebron, Neb., as follows: One for good scholarship, his average grades last term being 97½, and up to this time this term 97 2-5; and one degree for skill in athletics. On the last field day between two high schools, of which the Hebron high school was one, he, at the age of fourteen, took the first prize on the running high jump, his jump being tour feet, nine and one quarter inches.

We have given one degree to Minor Wasson, of Stotsenberg Company, No. 1, Division of Nebraska, Hebron, Neb., for good scholarship. In the last two terms he averaged 96.6 and 95 14-53.

One degree has been given to Arthur Davis, Stotsenberg Company, No. 1, Division of Nebraska, Hebron, Neb., for his business enterprise. Last summer he cleared eighteen dollars raising and selling vegetables.

Edward Ryan, East Boston, Mass., has been given one degree for a conspicuous act of heroism.

The McKinley Company Wins on the

O'Callaghan's Boys," by Gulielma Zollinger. These books are absolutely new and are every one of them books that will be a credit to a boys' library. We hope thouse of the McKinley Company will get great good out of them.

HARRIET BEECHER STOWN.

GROVER CLEVELAND

COMMANDER WORDER.

March in American History

MARCH I, 1781: ARTICLES OF CONFEDERATION OF THE "UNITED STATES OF AMERICA" SIGNED BY DELEGATES. These articles which leagued together the original thirteen states existed for about seven years, when they were found to be defective and inefficient and were superseded by a National Constitution.

MARCH 3, 1821: MISSOURI COMPROMISE BILL AS TO SLAVERY PASSED. The debates on the bill to admit Missouri into the Union, which brought up the whole question as to the right or wrong of negro slavery were of the most exciting and acrimonious character. Southern members even threatening a dissolution of the Union. Ultimately a compromise bill, which has been generally, but wrongfully, attributed to Henry Clay of Kentucky, passed the National Legislature by a vote of 134 to 42. On account of the hostile attitude of the north toward slavery, President Monroe hesitated for some time, but finally signed this measure, which admitted Missouri into the Union as a slave-labor state. souri into the Union as a slave-labor state.

MARCH 3, 1894: GENERAL GRANT SU-PERSEDED GENERAL HALLECK AS GENERAL-IN-CHIEF OF THE UNITED STATES ARMIES. For his excellent services in the west and southwest, Grant had already been created a lieutenant-general and received a gold medal from Congress. As Commander-in-Chief he made his head-quarters with the Army of the Potomac until the capitulation at Appomattox Court House in 1865. The following year he was made General of the United States Army.

MARCH 3. 1885; PRESIDENT ARTHUR APPROVED THE ACT OF CUNGRESS APPROPRIATING \$1,880,000 TO INCREASE THE NAVY. This appropriation provided for the nucleus of the present splendid navy of America.

provided for the nucleus of the present splendid navy of America.

MARCH 5, 1770: THE BOSTON MASSACRE. The enmity between the British troops stationed in Boston and the citizens was greatly aggravated by a quarrel between the soldiers and rope-makers. The latter were severely beaten, and to avenge the outrage seven hundred citizens assembled with the intention of attacking the troops. Stones, pieces of ice and all kinds of missiles were used by the mob. A soldier, who was struck, fired his gun, and his companions, in error, fired also. Three citizens were killed and many wounded. These occurrences roused the citizens to fury, the alarm was sounded, and the streets of Boston were soon thronged with thousands of angry people. Terrible bloodshed was only averted by Governor Hutchinson issuing a proclamation that the offenders would be delivered up to justice. The troops were removed to Castle William and Captain Preston, who was in command, together with six of his men, were tried and acquitted by a jury of Boston citizens. The lawyers for the defense were John Adams and Josiah Quincy. The love of justice displayed in this trial greatly strengthened the argument of American sympathizers in England in favor of more consideration being granted to the colonists.

MARCH 8, 1874: M:LLARD FILLMORE

MARCH 8, 1874: M!LLARD FILLMORE DIED. Born in Cayuga County, New York, in 1800, his education was of the scantiest. After several years' apprenticeship to a fuller, his fondness for study caused him to begin the study of law. In 1821 he arrived in Buffalo with four dollars in his pocket, an entire stranger. Despite every obstacle he was admitted to the bar in 1823, and in a few years took rank among

JAMES MOVEOUR

the foremost lawyers of New York state. In 1828 he was elected to the State Legislature, serving three successive terms. In 1832 he was elected to Congress, and retained his seat until 1842, when he declined a renomination. Ability, integrity and industry marked his Congressional career. Defeated for the Governorship of New York in 1844, he was appointed Controller of the state in 1847. In 1848 he was nominated and elected Vice President of the United States, and on the death of President Taylor, Mr. Fillmore succeeded to that high office. On his retirement on March 4th, 1853, he left the country at peace with all nations, and every department of industry in a prosperous condition.

MARCH 9. 1882: CONFEDERATE RAM

all nations, and every department of industry in a prosperous condition.

MARCH 9, 1862: CONFEDERATE RAM MERRIMAC DEFEATED BY THE MONITOR. On the previous day the Merrimac had destroyed the wooden sailing frigates Congress and Cumberland, and the Confederates were jubilant at the prospect of the Federal navy succumbing to the prowess of the powerful ram. Matters looked exceedingly gloomy for the Federal navy when the Monitor appeared in Hampton Roads, commanded by Lieutenant John L. Worden. This vessel of peculiar appearance had been designed and constructed by Captain John Ericsson, to meet such an antagonist as the Merrimac, although a pigmy in size, compared with her rival. Indeed, the Confederates dubbed it in derision, a "cheese box." The fight which took place between the two vessels was of the fiercest description, the Merrimac throwing masses of iron, weighing two hundred pounds upon her enemy with a velocity of two hundred feet per second. These, however, glanced off the Monitor's deck like pebbles from a solid granite wall. The fight resulted, as stated, in the Merrimac being so much disabled by the accurate and terrible assaults of the plucky little Monitor, that she fied to Norfolk and refused further combat.

MARCH 9, 1888: CONGRESS APPROPRIATED \$50,000 for NATIONAL DE-

MARCH 9, 1898: CONGRESS APPROPRIATED \$50,000,000 FOR NATIONAL DEFENSES. In view of probable hostilities breaking out with Spain, the United States at once began to strengthen and increase her defenses in order to cope with and repel her possible antagonist.

MARCH 11, 1874: CHARLES SUMNER DIED. He graduated at Harvard in 1830. Published Sumner's Law Report, edited the American Jurist, and, in Judge Story's absence, lectured at Harvard Law School on constitutional law and the law of nations. His oration on the "True Grandeur of Nations," delivered before the city authorities of Boston, on July 4, 1845, was widely circulated throughout America and Europe, and occasioned much controversy because of its advocacy of arbitration instead of war as a means of settling disputes between nations. His faime as an orator spread and he was called upon to deliver public addresses throughout the country. As a friend of the negro he opposed the annexation of Texas in the belief that it would extend the slave-labor system. His staunch and earnest advocacy of emancipation continued until his death. In 1851 he was elected to fill the place of Daniel Webster in the United States Senate, and kept his seat there during the remainder of his life. He made many memorable speeches before that body, among which "The Crime Against Kansas" occupied two days in delivery. He was a strong upholder of the national policy during the Civil War, and his eulogy on President Lincoln in 1885 may be classed as one of his greatest efforts. While in MARCH 11, 1874: CHARLES SUMNER DIED. He graduated at Harvard in 1830.

England in 1872 he was nominated for governor of Massachusetts, but declined. His death occurred after only a few hours' ill-

MARCH 15, 1767: ANDREW JACKSON BORN. His birth took place in Mecklenburg. County, N. C. At the age of 14, he joined the Revolutionary forces. Began to practice law in 1786, was a member of the United States Senate in 1797, and Judge of the Tennessee Supreme Court from 1798 to 1804. Major-General of the Tennessee Militia from 1798 to 1814, he conducted the war successfully against the Creeks, and also against the Seminoles in 1817. Became Governor of Florida in 1821-22. In 1828 and again in 1832 he was elected President of the United States, the end of his administration being marked by prosperity in all America's affairs, both foreign and domestic.

MARCH 17. 1776: EVACUATION OF BOSTON BY THE BRITISH. Washington with three thousand meanly clad and ill-fed troops, had succeeded in occupying and thoroughly fortifying Dorchester Heights, overlooking and commanding Boston. The British Commander, Lord Howe, at this wholly unexpected move, which he saw no means of checking, called a council, at which it was determined to evacuate the city. For his success in delivering Boston, Washington was thanked by Congress and awarded a gold medal.

MARCH 18, 1837: GROVER CLEVE-LAND BORN. Caldwell, Essex County, New Jersey, was the place of his birth. Studied for the legal profession and was admitted to the bar at Buffalo, N. Y., in 1859. Shortly after he began to practice he was appointed Assistant District Attorney of Erie County. N. Y. In state politics he occupied the offices of Sheriff of Erie County, Mayor of Buffalo, and Governor of New York. Was Democratic President of the United States from 1885 to 1889, and again from 1893 to 1897.

MARCH 20, 1852: MRS. HARRIET ELIZ-ABETH BEECHER STOWE PUBLISHED "UNCLE TOM'S CABIN." This, the most famous work of the noted authoress, had already been published in the "National Era," of Washington, arousing great interest. terest.

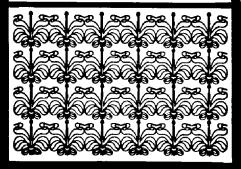

MARCH 26, 1882: WALT WHITMAN, POET, DIED, AT CAMDEN, NEW JERSEY. In his youth he had been successively printer, carpenter, journalist, and army nurse, during the Civil War. His more important works are "Leaves of Grass," for which he was dismissed from his position as a government clerk in Washington; "Drum-Taps," "Memoranda During the War," "November Boughs," and "Selected Poems." The title of "The Good Gray Poet" was applied to Whitman by William Douglas O'Connor.

How to Clake Your Own Tackle.

J. HARRINGTON KEENE.

There is no manly pastime which is so long enjoyed in life as fishing. It can be begun and learned earlier than any sport, and some of the most successful anglers are yet very young. It is usually continued long after the gun and baseball, and even the bicycle, are put aside; and many of the most devoted lovers of the gentle art are old and grayhaired grandfathers. It is the least cruel of all the pursuits of wild game, and from the fact that it brings us in close contact with every mood of open air nature, it is a school in itself, teaching observation and interested study of all pertaining to the flowing streams, still waters, shady woods and green meadows, and thereby helping us to attain what the first lady-angler (Dame Berners) writing in 1496 has prettily termed, "a flowering age, and a long."

Truly, however, it may be as "Fishin' Jimmy" Fig. 1. Guide for Tip of Rod. Says in Siosson's charm-

ing little book of that title: "I allers loved fishin' an' know'd it was the best thing in the hull airth. I know'd it larnt ye more about creeters an' yarbs an' stuns an' water than books could tell yer. I know'd it made folks patienter and common-senser an' weatherwiser an' cuter ginerally; gin em more fac'lty than all the school larnin' in treation. • • • I know'd it cooled ye off when ye wus het an' het ye when ye wus cold. I know'd all that o' course -any fool knows it. But will ye b'leve it? I was more'n twenty one years old, a man grow'd 'fore I foun' out why 'twas that way." The object of this and succeeding papers is to explain to even the youngest reader what "Fishin' Jimmy" did not find out till he was a "man growd."

With the bright days of early Spring and the disappearance of snow and ice, all the finny dwellers of the water begin to revive from their lethargy or sleep of the winter, and grow hungry. Not that many of them do not eat during winter, but that all their powers revive with those of everything living, at this season of the year, and more food is

needed to act as fuel for the increased energy, and their greater exer-Fig. 2. Guide Bing for tions. Probably one of the first to show

the approach of Spring is that real boy's fish, the brook Sucker. Hardly has the snow water passed away, when this fish begins his spawning, and will greedily take the garden worm at such time. Next in order of readiness comes the "salmon of the fountains"—the beautiful Brook Trout, and he is in condition for spise it. Procure an ordinary large catching, just as soon as the streams are open. Soon following after, come all the "pan-fishes" dear to the heart of the young angler—the perches, the sunfishes, the pickerel, and finally the basses, all in riotous profusion. And so the fishing season progresses to the full crop of the water harvest in the months that follow the "Ides of March."

But before the actual fishing season arrives, it is necessary for the young through the center with some pieces of angler to thoughtfully prepare his tackling. There can be no more interesting task than this, and the main object of this paper is to start with him at the very beginning of his career and show him how he can, without great study or

Fig. 3. Guide Ring in Pla

more than ordinary skill, make his own tackle. The most successful fishermen are those who can at any time, if needed, repair or even remake their rods or leaders or retie their hooks. No boy who would excel in this sport should omit to learn at least the first and most useful methods of tackle manufacture.

To those who can afford to buy shopmade rods and other useful things these last words do not apply. But supposing that you have no rod to begin with, and that you have no reel or other tackle at all;-go into the nearest copse and cut one of the straightest poles you can find!

A hickory rod is the best, and makes the | and then fold up the two sides as shown this very early in the season, and trim off the branches and set it by the stove not too near--to dry thoroughly. If you need to straighten it more, heat it over the warm stove, and suspend it in the

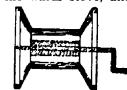

Fig. 4. Homemade Spool-reel.

barn with a weight to the lower end -- several flatirons will do. In a week you will find it greatly improved. Now sandpaper the knots and in-

equalities off, and if you wish to be very particular, carefully take off the bark. though this is, of course, not actually necessary. If you have chosen well, you will have a rod or pole quite good enough for ordinary practical fishing.

But you perhaps want something a little more like a "boughten" rod. In this case you can easily endow your rod with line guides and a homemade reel. For an efficient and ready tip guide, the ring of a large ordinary safety pin will well serve. Cut it off as shown in Fig. 1 (do this with a file or pair of cutter-pincers) and place it on the tip of the rod, which is indicated by the dotted lines. This is to be wound with waxed thread. Ordinary thread and a little cobbler's or shoemaker's wax should be used. Or if you can afford it silk thread is better, and a wax which will not alter the color

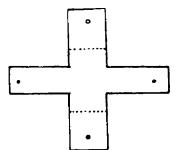

Fig. 5. Plan of Homemade Reel-plate.

of the thread can be made as follows: Resin two ounces, beeswax one quarter ounce, beef tallow one quarter ounce. Simmer in an old tomato can for twenty minutes, and then pour into cold water and pull it like you would candy, till cold. It will be a silvery white. You will need at least five other line guides on your rod at a distance of two feet or so apart, and these may also be made from the loops of safety pins. Bend the legs of the part of the pin you cut off. as shown in Fig. 2, and attach the guides to the rod as indicated in Fig. 3.

Your homespun rod is now ready for a rough and ready reel, and here let me say that it was with a reel just as I am about to describe, that I first began my fishing career, so let the novice not de-

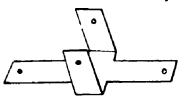

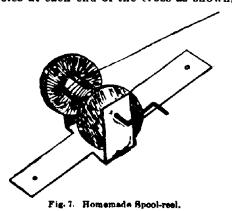

Fig. 6. Plate of Homemade Reel.

thread spool (Fig. 4) and fill up the hole rubber-old rubber eraser will do. Then take a piece of copper or brass wire and thrust it through the rubber filling as shown in Fig. 4. Let the extreme end protrude as shown, for it has to enter the reel plate, now to be described.

Take a piece of tin-that of an old tomato can will do-and cut it with shears in the shape of Fig. 5. Make holes at each end of the cross as shown.

toughest and most lasting weapon. Do in Fig. 6, at the parts indicated in Fig. 5 at the dotted lines. You have now (Fig. 6) a reel plate into the holes of the sides of which you first slip the handle. and then the end of the wire, making the finished reel to appear like Fig. 7. Nail it with a couple of tacks to your rod, and you have a reel quite as useful as a beginner needs, if not so elegant as he will afterwards want. After all is said and done the reel is only for the purpose of readily taking in or letting out line, and one costing forty dollars would not enable you to catch fish if you did not know how or where to find the fish. Tackle does not make the angler, but there is every reason why the angler should make the tackle, even if it be simple instead of ornamental.

(To be Continued.)

THE BOY ..JOURNALIST..

The Hand Press and How to Take Care of It.

SAMUEL J. STEINBERG.

Care of it.

Samuel J. Steinbergo.

When a salesman in some typefoundry assures the prospective purchaser that on a hand press one can do equally as good work as on a more expensive foot power press, he is generally met with an incredulous smile. Very few are ready to concede the possibilities of the hand or lever press. Even experienced printers share this prejudice. In fact, it is among the printers of experience that this prejudice generally exists. Yet some of the printing I have seen executed on a hand press were excellent examples of fine press work. It all depends on the boy in front of the press. Of course this does not mean that a boy with a two-roller hand press will be able to do as excellent work as the same boy with a three-roller foot power press. There are, however, no limitations to what can be accomplished with the average hand press, whether in plain printing, small book work, color or half-tone work, or even embossing; the only drawback is in speed. The hand presses being built to-day are uniformly good, being strongly put together and having a firm, rigid impression. There was at one time a feeling that a side lever press was weaker on the side opposite the lever than the other, but this idea was finally exploded.

One make of hand press on the market some years ago, advertised as a special feature of their presses that each chase had a patented bottom which prevented the type from failing out. I don't know whether this press is being manufactured now or not, but I want to caution purchasers about investing in one. Type that is put together so loosely or carelessly that it may fall out, will be pulled out by the rollers anyway. The inexperienced printer must set his type so carefully that every letter will be solid and secure.

A hand press, like other pieces of machinery, demands carreful attention. It is far better to wash the ink off the press when through with it than to scrape it off the disk with a piece of rule some days after. I take it for granted that few of my readers will need th

poses.

Keep your press clean—very clean. Dust and dirt will accumulate, but should not be allowed to remain.

There at one time existed a popular idea among professional printers that a clean press signified an idle one, and that the best way to indicate a busy establishment was to keep your presses dirty, and

the best way to indicate a busy establishment was to keep your presses dirty, and your floor unswept. But that theory has gone with the one that no apprentice could become a good journeyman printer until he was proficient in chewing and smoking tobacco, drinking and swearing.

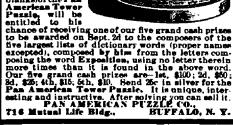

It does no harm to take a press apart occasionally and thoroughly clean the bearings. Grit and dirt from poor oil often accumulates to such an extent as to hinder the speed and smoothness of the press.

One way to protect a press is to keep it covered. If you are at all handy with a needle you can make a neat cover from a few yards of denim, ticking or cretonne. A number of the large printing offices always cover their job presses, and one time I saw twelve cylinder presses and six job presses all being arrayed in blue denim for the night. This man did not believe that clean presses indicated an idle establishment, or if he did believe it, he didn't care.

A Hill of Potatoes.

I. P. ROBERTS.

"notato" or tuber.

LANT a hill of potatoes. You can do it in the house. Plant in a box or a flower pot. Keep the box warm, and do not let the soil dry out. Plant whole tubers and pieces of tubers. Plant pieces

of various sizes. Plant some that have no "eyes." Plant shallow—so that the tuber is just covered with soil-and deep. Watch the results.

All plants are abundantly supplied with means for reproducing their kind: some by seed, some by multiplication at the crown or base or by roots, others by means of underground stems; and some, as the potato, have two or more means of reproduction. In its wild or partially improved state the potato is abundantly supplied with fruit, "seed balls," borne on the top of the stalks. The seeds of a single ball often will produce many varieties of potatoes and they cannot be depended upon to reproduce the parent stock. Farmers seldom attempt to raise potatoes from the seeds; when they do it is for the purpose of securing new varieties. The common method of reproduction is to plant a part or all of an enlarged underground stem, that is, a part of the

be performed again and again, until many plants suitable for transplanting in the open may be secured from a single eye.

Learn that the potato contains starch. This can be done by applying a drop of dilute iodine to a freshly cut surface of

the tuber: the starch grains turn blueblack. Five cents worth of iodine purcient for many tests. Dilute it about one-half with water. This starch, after

chased at the drug store will be suffibeing changed to sugar, supplies the

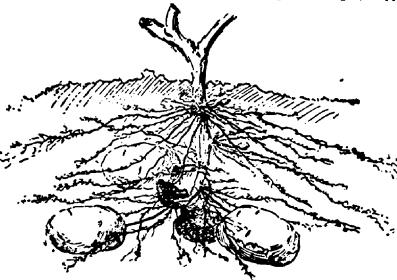

Fig. 1. Underground Part of Potato Plant in Mellow Soil.

When the soil is reasonably porous young plant with nourishment. Dig up and fertile, a strong root may start at the pieces you have planted and see the seed piece and descend more or less which start first, shoots or roots. directly into the subsoil. In most cases. however, the roots spread laterally. This is a good illustration of how plants may vary in their root habits in order to adapt themselves to their environ-ment. Notice where the roots form on the plants you are growing. Few farmers know where they form.

A single eye, with a portion of the tuber attached to furnish nourishment to the bud until sustenance can be secured from newly formed rootlets, may produce one, occasionally more, strong upright stems. A most interesting study of manifold reproduction may be made even in the winter time by planting in a fertile soil a piece of potato containing a single eye. As soon as the rootlets begin to start, divide each eye and piece into two parts and re-plant. in a few days after the rootlets have again started, divide the two pieces into four and re-plant. This operation may

The "potato" is an enlarged underground stem provided with numerous buds similar to those on the stems of

Illustrating Spiral Arrangement of the Eyes,

plants above ground. These buds are placed spirally on the underground stem or tuber with a considerable degree of uniformity. As on the stems of other plants, the buds are less numerous and weaker at the base and most numerous and vigorous at the top or upper end. On a smooth well developed long potato, the spiral arrangement of the buds may

be illustrated by sticking a toothpick or pin in each eye, beginning at the base or stem end, and connecting the pins with a string.

Having seen the potato growing in the house, some information may be given respecting its treatment in the field as a crop.

Potatoes are easily raised, even under adverse conditions, although they respond quickly to superior fertility and tillage. The average yield in the United States during the last ten years was 76.6 bushels per acre, although from three to four hundred bushels per acre are not uncommon under superior tillage when soil and climate are at their best.

The area devoted to potatoes during the last decade was two and a half mil-lion acres annually. Potatoes do best on a moderately moist and deep soil and in a climate relatively cool.

Since the period of growth is short. varying from three to five months, they should be planted in soil which has an abundance of readily available plant food. Notice in Fig. 1 that most of the underground stems which have produced potatoes leave the main stem about four inches below the surface and but a short distance above the seed-piece. This suggests that the seed should be planted about four inches deep. To produce three hundred bushels of potatoes requires the exhalation of over three hundred tons of water: therefore water or moisture is of quite as much importance in securing large yields as plant food.

It is best to prepare the land deeply, to plant deep, and then to practice nearly or quite level culture. The practice of hilling up potatoes, so common in most parts of the country, is to be discouraged, because it is wasteful of moisture and the tubers do not grow in the coolest part of the soil. For very early potatoes, hilling up may be allowable. Till the soil very often to save the moisture.

Making Money Raising Plants.

There are boys who have made money by raising plants for sale. One began with a stock in trade of ten geraniums (assorted kinds), six coleus and twelve begonias, assorted. In February he cut these plants all up into cuttings, which he started over a coal oil lamp in wet sand. He added to this collection two dollars worth of seedspansles, verbenas, asters and marguerite carnations. To this he added sweet alyssum and mignonette. The first day of May he hung out a little sign on the front porch stating that he had flowers for sale. The family laughed at him, but he had a customer before noon. In a few days he had sold all his begonia cuttings, which were thirty in number, at ten cents each. With the three dollars thus obtained he reinvested in more begonias. He sold all his begonia cuttings, which were thirty in number, at ten cents each. With the three dollars thus betained he reinvested in more begonias. He sold fifty geranium cuttings, twenty coleus, twenty five dozen pansies, five dozen verbenas and two dozen sweet alyssum for bedding. He potted the mignonette and marguerite carnations and sold them in bloom. The asters wold well in the fall. He invested all his earnings in stock, and from this he has built up a nice little business. Pansies sell readily from the time they are an inch high. Geraniums are always in demand. Something new and catchy must be added now and then to arouse interest. There is no pleasanter way of earning pin money, though it is not easy work. Selling cut flowers is a profitable branch of the business.

About Sweet Peas.

The best support for sweet pea vines is brush, two to six feet tall, setting rows about six inches apart. If brush cannot be obtained, poultry netting is advised, one foot or eighteen inches wide, fastened lengthwise on six-foot poles, set four or five feet apart. The best results are obtained from sweet peas by planting them four to six inches apart. Sweet peas are great drinkers, and should be watered frequently as well as syringed early in the morning, on clear days particularly, on the inner side of the leaves. Pick the flowers every evening, cutting the stems as long as possible.

We know of one person who made twenty five dollars selling sweet peas off a piece of ground six feet square.

April is the month for action in the garden. Get all tools ready.

We should like to have boys write us some of their experiences in gardening.

A WOMAN FLORIST

How to Build a Canadian Canoe

KENNETH M. RANSOM

The canoe has rightly been termed "The poor man's yacht," for its first cost and the expense of keeping it in firstclass condition are moderate.

I doubt much if millions will purchase a boat in which a boy or a man can have a better time. The tippy qualities of the log canoes and bark creations of our forefathers have cast a shadow of suspicion on this style of craft. It is the purpose of this article to describe a canoe that can be constructed by any painstaking novice, for a small sum, and that shall be of good design, light and graceful, yet steady and stanch. It is believed that the readers of THE AMERICAN BOY will hail with joy the opportunity thus afforded them to possess a first-class boat built by their own hands.

If each step is followed as below described in an orderly manner, each part shaped with care and patience, success will be certain.

First select some place to work. If you have no shop, any room sixteen feet long will do. There will be no danger of marring woodwork or doing any damage.

Get together all the tools at your disposal. The more you have the better, but you should have at least the fol-Square, saw, keyhole saw, lowing: brace and bit, chisel, block plane, screw driver, nail set, gauge, light claw hammer, jackknife, two iron clamps and an old flatiron to clinch nails on. If your saws are dull have them filed; grind and whet your plane and chisel, and keep them sharp while the work progresses. Make a bench upon which to plane up stuff and if possible get a bench vise. Add

to the foregoing a strong box to saw on. It is best to purchase all your materials before you begin, and here is a list of the needed articles: 2 pieces of 2x4 scantling 14 ft. long, 2 pieces of pine, 16 ft. x 4 in. x % in. dressed, 1 piece of pine 14 ft. x 2 in. x % in. dressed, 2 pine boards 14 ft. x 12 in. x % in. dressed, 1 piece select white oak 14 ft. x 1 in. x % in. dressed, 1 piece select white oak 14 ft. x % in. x % in. dressed, 2 pieces select white oak 14 ft. x 1 in. x 1 in. dressed, 2 pieces select white oak 12 ft. x 2 in. x ¼ in. dressed, 2 pieces select white oak 14 ft. x 5 in. x %in. dressed, 40 pieces select white oak 4 ft. x 1/2 in. x 1/4 in. dressed, 2 pieces clear white pine 14 ft. x 2 in. x 1/4 in. dressed, 75 strips clear pine or cypress 16 ft. x 34 in. x 14 in. dressed, 20 strips select pine 14 ft. x1/2 in. x 1/4 in. dressed, 2 pieces, 16 ft. x % in. ½ round oak moulding, 1 white ash board for paddle 9 ft. x 9 in. x 1½ in, 1 five gallon gasoline can with screw cap, 2 pounds copper clout nails % inch, 5 pounds 11/2 in. casing nails, 1 pound 1 in, brads, 1 pound % in. brads, 8 flat head stove bolts 2 in. x 3-16 in., 2 pounds 8 penny nails, 1 pound 20 penny nails, 3 pounds white lead, 1/4 pound beeswax, 3 pounds putty, 1 pint Japan drier, 3 dozen 11/4 in. brass screws, 4 dozen % in. brass screws, 1 ball cotton twine, 1 quire No. 3 sand paper, 1 quire No. 1 sand paper, 2 sheets of pasteboard and several sheets of heavy wrapping paper.

A good foundation is necessary in all things, so we will begin by making a good truss on which to build the boat and to hold the forms securely. Figs. 1 and 2 represent this truss. By careful study of the drawings my description construction will be easily un-

derstood. First cut your 2x4's exactly 14 ft. long and letter them a. This done lay them aside, and cut from one of your pine boards 16 ft. x 4 in. x % in. ten pieces exactly 2 ft. long; letter these b as in Fig. 1. In one end of six of these cut a notch 2 in. wide and 1 in. deep. In the remaining four cut a notch 4 in. deep and 1 in. wide. Now place the scantling on edge and nail one of the four pieces at each end (notch out), as if to make a ladder. Then cut two measuring sticks just 37 inches long, and lay them against the back edge of b; put another b piece up against the other ends, and nail with three nails in each end. This

will space them 37 inches apart; continue this way until all are on one side, as in Fig. 1. Then turn over and nail remaining set on opposite side, taking care to have all the notches come even. This done, stand frame notch side up and, with your saw, cut from notch to notch across the scantling and one inch deep, chiseling out. Also cut a 2 in. wide by 1 inch deep groove exactly midway between these, and chisel out the piece.

After completing the foregoing work cut from your pine strip, which is 16 ft. x 2 in. x % in., seven pieces 2 ft. long. Draw a line in the center 1 ft. from each end drive the pieces into the 2 inch grooves and nail them securely. These pieces are lettered g and should look as in Fig. 2. These crosspieces will support the forms securely. Cut two pieces 2 ft. long 4 in. wide and nail them across the ends in the notches forming piece marked f in Fig. 2. Now take your remaining pine board, which is 16 ft. x 4 in. x % in. and cut it so it will be 14 ft. and 3 in. long. Now set your gauge to mark 1½ inches and gauge a line from each edge of the strip. This will divide it into three sections, the middle one exactly 1 in. wide. Take two of your pine strips, 16 ft. x 1/4 in. x 1/4 in., and with 1 in, brads nail along the outer edge of these lines, thus forming a groove 1 in, wide and 1/4 in, deep along the entire piece. Place this piece on the top of your truss over the crossplece and fasten it in the middle, and securely, at places marked "Nail" in Fig. 1. Put in no nails between these points and the ends. Cut two blocks 4 in. long 3 in. high and spring the ends up and place them under as at d in Fig. 1; this will form the curve or rocker of the keel and is important, for it is stronger and does not hog like a flat keel often does. If the work has been well done, the even. Tack down and cut around the

you sight along it from end to end.

Your truss is now done, and should be nailed to the floor firmly, and so braced as to hold it perfectly vertical.

We are now ready to begin work on the boat. Be very careful in making measurements for we will now make the patterns and on them depends the boat's shape.

Study Fig. 3 very carefully, after which cut a piece of pasteboard 15 in. long and 12 in. wide. Be sure the corners are square and the edges true. With your square divide it into six equal parts, making separating lines 2 in. apart. Number the lines as in Fig. Then measure off on line 1 a point 6% in. from the left edge. Lay your square on line II and place dots at 6% in., 10% in., 12% in. and 13% in. from left edge. On line III place dots 6% in., 11% in. 13% in. and 14% in. On line IV. place dots at 6½ in., 11½ in., 14½ in. and 15 in. On line V. place dots at 5¾ in., 10% in., 14 1-16 in. and 14% in. On line VI. place dots at 4 in., 8½ in., 11% in. and 131/4 in.

Lay the pasteboard on a board and drive a 11/2 in. brad into each dot, leaving each nail about 1 in. out. Take a thin strip of hardwood and beginning at x bend it around the first row of nails as a guide and draw a line. Do this with each row and it will look like Fig. 3. Each curve should be perfect if properly done.

Now take a piece of wrapping paper and fold it from left to right, creasing down the seam. With a sharp knife cut your pasteboard around the outer line from x to z and withdraw the nails.

Lay your wrapping paper on the floor, seam to left; next lay the pasteboard pattern on it with left edges perfectly

groove will appear perfectly straight as edge again from x to z on the paper. Remove the pattern and by unfolding the paper you have a full sized shape of the middle of your boat. Letter this pattern m.

Cut around your next line from x to y. Fold another paper and proceed with this exactly as you did with the first This will give you another complete pattern which will be lettered n. Proceed with the remaining two in the same manner, lettering them o and p. It will be observed that pattern p is two inches higher than the rest. Tack these patterns on one of the pine boards 14 ft. x 12 in. x % in. and mark around the edge There will be two each of n, o and p After marking these out, cut out carefully with your keyhole saw. Mark the center of each where the crease in the paper comes. Plane up the edges smooth and round the edges of o and p slightly.

At the tinsmith's buy seven pieces of sheet iron 6 in. long and % in. wide Punch a hole in the center and one at each end of each of these and nail one at right angles with the form, on the bottom of each form exactly in the center so as to fasten them to the keel.

Lay these aside and make Fig. 4 on a piece of pasteboard 18 in. x 18 in., laying off into 2 in. spaces as in Fig. 3; and. as in Fig. 3, measure on line 1, 3% in on line 2, 2 in.; on line 3, 1 in.; on line 4, % in.; on line 5, 0 in.; on line 6, 3, in.; on line 7, 1 in.; on line 8, 3 in.; on line 9, 6 in. Drive your nails into the dots and bend your strip around from x to z as before. Mark and cut out, also cut across where indicated by the dotted line in Fig. 4. Tack this pattern on a piece of board 12 in. wide by % thick. mark and saw out. Name this plece "stern pattern."

Cut a piece of board 12 in. wide and 15 in. long. Divide in center by a line as in Fig. 5. Measure 7½ in. from the top along this line and mark a dot, and with a pair of compasses describe the half circle as shown, and cut this out. Name this piece, "coaming pattern." Pattern making is now done. To make the bow and stern posts is the most difficult work of all, as the wood must be steamed and bent to shape. The ribs and coaming must also be steamed, and for this reason we must have a boiler and steam box.

From any boards you may have make box 5 ft. long and 4 in, wide and 4 in. deep. This box or tube, for it has four sides but no ends, should have several little blocks nailed across the inside on the bottom to hold the wood up so the steam will strike all sides. Fill the cracks with thick flour paste. Воте а hole in the center of the bottom large enough to fit snugly over the hole in your five gallon can; fill your can three fourths full of water and set on a gasoline or oil stove to boil. This outfit will furnish all the steam necessary. Do not let can boil dry.

Nail your "stern pattern" to the floor At the upper part nail a block 1% in. from the pattern piece, thus forming a groove of that width between the two.

Next cut four pieces of oak from your pieces 14 ft. x 1 in. x 1 in., each 4 ft. long. Get up steam in your boiler, and put two of these pieces in the box and stuff the ends well with old cloth to hold in the steam. Steam hard for half an hour, then withdraw a piece with gloved hands, stick one end between the groove at top of pattern and slowly bend around the form, getting it as snug as possible and being careful not to buckle it. Have a helper ready to drive a nail to keep it from slipping back as you bend it. When it is all up tight leave it to set for half an hour while tring are steaming Refore taking the bent piece from the form nail a strip across from end to end to hold it from springing. Bend all four in this manner.

Set your gauge so as to mark ¼ in. Mark 1/4 in. from each edge on the convex side of two of these pieces and with your plane cut away the wood on a bevel so that the convex side will be ½ in, and the concave or back side 1 in-This bevel is for your plank to nail to. Now your stems are done when you cut them to length as in Fig. 4. The keel comes next. Take your piece 14 ft. x l in. x % in. and cut it just 12 ft. long. Now nali your strip of oak 14 ft. x 1/3 in. x 1/4 in. right down the center of this (Continued on Page 159)

Conditions Essential to Success.

Sir Andrew Clark was once asked what conditions he thought were essential to make a man a successful physician. His answer applies to success in any field. "Firstly," he said, "I believe that every man's success is within himself and must come out of himself. Secondly, a man must be seriously in earnest. He must do with all his might and with all his concentration of thought the one thing at the one time which he is called upon to do. If one says, 'I cannot do that—I cannot love work,' then I answer that there is a certain remedy, and it is work. Work in spite of yourself and make the habit of work, and when the habit is formed it will be transformed into the love of work; and at last you will not only abhor idleness but you will have happiness out of the work which then you are constrained from love to do. Thirdly, the man must be charitable, not censorious—self-efficient, not self-deficient. Fourthly, the man must believe that labor is life, that successful labor, with high aims and just objects, will bring to him the fullest, truest and happiest life that could be lived upon the earth.'

A Business Man's Complaint.

Standing, says a journalist, by the desk of a business man who employs quite a number of lads, I saw a boy of about fifteen come in and apply for a situation. The boy was well dressed, and by demeanor and accent indicated that he belonged to a good school. Without taking off his hat, or appearing to notice anybody who was present, he demanded, in a sharp, unpleasant voice: mister, are you advertising for a boy?

To Start

the work we will

send the first

week's supply of

Ten Copies

(without charge)

The business man looked at him for a second and answered: "I want an older! boy than you." "What?" "I want an older boy than you," answered the merchant in a somewhat louder voice. "Oh," answered the lad, as he swung around and walked out. "That," said the merchant to me, "is a sample of the manner of a modern school boy. In my business, you know, we depend almost entirely on politeness, quickness and adaptability of the young fellows we have behind the counter. My customers ask me why I change my boys so often. Certainly it is not to save money, for I would be will-ing to keep them if they were worth keeping. The first thing they ask me is what wages I pay, and the next what hours they will have to work. They never think about me or my business, all they want to know is how much money they can get out of me. Apparently they give me no credit for being able to teach them a profitable trade; they only regard me as a taskmaster, who is to be made to pay the highest price, give the shortest hours and accept the lowest quality of service.—Christian Youth.

United States Senator Beveridge, of Indiana, is thirty eight: United States Senator Butler, of North Carolina, is thirty seven, and Congressman Bailey, of Texas, who will probably be the next United States Senator chosen from that State, is thirty seven. Butler is seven months younger than Beveridge, and Bailey five months younger than Butler.

each week outside of school hours by selling THE SATURDAY EVENING POST.

We want to double this number in the thousands of towns where we have no boys. One boy in Minneapolis, who started three weeks ago, writes:

"Here is my order for 90 copies for next week. The Post is selling like hot cakes. Next week look for an order for 125."

Another boy in Dubuque, Iowa, writes:

"Since I started I have made over \$60."

THE SATURDAY EUENING POS

To be sold at 5 cents each. This will give 50 cents with which to commence. After that they will be furnished at the special wholesale price.

In addition to the profit on the copies sold we will give \$200 in Cash Prizes to the 50 boys who do the best work during the next month.

Write to us and the first week's supply of 10 copies will be mailed, together with full instructions, including a dainty little booklet in which 20 of our most successful boys tell how they did it.

The Curtis Publishing Company, Philadelphia, Pa.

BOYS IN THE HOME, CHURCH AND SCHOOL

The years from fifteen to twenty three Three Boys Whom Miss Willard Knew. are the most serious in the life of a boy.

A boy used to crush the flowers to get their color, and painted the white side of his father's cottage in Tyrol with all sorts of pictures, which the mountaineers gazed on as wonderful. He was the great artist Titian.

The Atchison (Kas.) Globe says that it is a grandmotherly notion that a man should be tucked in his bed at home every night until the day he marries and goes to a home of his own. Such hothouse treatment, it says, puts him in poor condition for the cold blasts he is bound to encounter later in life. A man gets training away from home that he needs in after life.

Tit-Bits-Old Gentleman-"Do you mean to say that your teachers never thrash you?" "Little boy—"Never! We have moral suasion at our school." Old gentleman—"What's that?" Boy—"Oh, we get kep' in, and stood up in corners, and locked out, and locked in, and made to write one word a thousand times, and scowled at and jawed at, and that's all."

It is reported that a young man, being examined preparatory to joining the church, was asked, "Under whose preaching were you converted?" "Under nobody's preaching," was the prompt reply; "I was converted under my mother's practicing." Did any preacher ever utter so powerful a sermon as the young man embodied in those few words?

Many boys neglect chances of mental improvement. They do not realize what it is to have an education till they get into a company of boys when something comes up for discussion and find that they must sit still instead of taking an active part. After an experience of this sort they usually bemoan their fate and say they had no chance to learn. Some boys leave school sooner than they ought to, either from choice or compulsion. It is usually the ones who stop from choice that grumble at fate. When a boy stops going to school from choice, the main cause nearly always lies in his not being industrious or caring what the future has in store for him.

The Half-Grown Boy.

In the life of every youth there comes a period when he is growing so fast that he is awkward, when his clothing hangs loosely on him, and his arms push through his sleeves with such haste that his mother wonders whether a day will ever come when his hands will look in proportion to his size. Patience, mother, and do not emphasize the little difficulties incidental to rapid growth, by your comments and criticisms. Tell the boy when he pleases you that he is your dearly beloved, and let him still have his share of the petting he likes; big boys need mother-love and kisses just as little ones do. But do not exclaim when he knocks down a chair in his clumsy progress through the room, and refrain from calling attention to any little forgetfulness of his, in company. If you have made him vour companion ar him as if he were a reasonable being, and his sister's equal, from babyhood on, you will not need to be fearful about his ultimate coming out just right. He will be fully grown one of these days, and a credit to you; and in the meantime make home happy for him, and devote yourself to his real interests with an eye to the future. If he likes athletics, so much the better. A boy whose physical life is upbuilt by healthful and regular exercise, will usually make a finer man, mentally and spiritually, than will one who is timid and shrinking, and who recoils from hearty outdoor sports.—Christian Herald.

Let me tell you about three splendid boys I knew once on a time. Their father died, and their dear mother was left to bring them up and to earn the money with which to do it. So these young fellows set in to help her. By taking a few boarders, doing the work herself, and practicing strict economy. this blessed woman kept out of debt, and gave each of her sons a thorough college education. But if they hadn't worked like beavers to help her she never could have done it. Her oldest boy-only fourteen-treated his mother as if she were the girl he loved best. He took the heavy jobs of housework off her hands, put on his big apron and went to work with a will; washed the potatoes, pounded the clothes, ground the coffee, waited on table—did any-thing and everything that he could coax her to let him do, and the two younger ones followed his example right along. Those boys never wasted their mother's money on tobacco, beer or cards. They kept at work and found any amount of pleasure in it. They were happy, jolly boys, too, full of fun, and everybody not only liked, but respected and admired them. All the girls in town praised them, and I don't know any better fortune for a hoy than to be praised by good girls, nor anything that boys like better.

They all married noble and true women, and to-day one of those boys is president of a college, goes to Europe every year almost, and is in demand for every good word and work; another lives in one of the most elegant houses in Evanston, and is my "beloved physiwhile a third is a well-to-do cian." wholesale grocer in Pueblo, Col., and a member of the city council.

I tell you, boys who are good to their mother and to their sisters in the house, always grow up to be nice men. Now I am not blaming you boys, nor anybody else. I know that any number of you are good and generous as you can be, and I know, too, that you haven't been taught to think about these things.-Miss Willard, in Union Signal.

Good Common School Education.

Every boy and girl that is educated should be able to-

Write a good, legible hand. Spell all the words in ordinary use. Know how to use these words. Speak and write good English. Write a good social letter.

Add a column of figures rapidly. Make out an ordinary account. Receipt it when paid.

Write an advertisement for a local paper.

Write a notice or report of a public meeting. Write an ordinary promissory note.

Reckon the interest or discount on it for days, months and years. Draw an ordinary bank check.

Take it to the proper place in a bank to get the cash.

Make neat and correct entries in daybook and ledger. Tell the number of yards of carpet

required for the parlor. Measure the pile of lumber in the shed.

the largest bin, and at current rates. Tell something about the laws of

health, and what to do in case of emer-Know how to behave in public and so-

ciety. Be able to give the great general principles of religion.

Have a good knowledge of the Bible. Have some acquaintance with the three great kingdoms of nature.

Have some knowledge of the fundamental principles of philosophy and astronomy,

Have sufficient common sense to get along in the world.—National Educator.

His Mother's Training.

Roland stopped and looked at the sign: "BOY WANTED."

It hung outside a large cutlery establishment, next to a store where there had been a big fire. He had made up his mind that he was old enough to look for work and try to relieve mother. Should he go in? He hesitated, then with all the courage he could command went inside. He was sent back to a room where men on high stools were writing in big books, too busy to notice him, but a tall gentleman did and questioned him so fast he could hardly answer.

"What kind of work do you expect to do? Don't know? Most boys do. Never worked out before? Suppose you think it's all play. Well," pointing to some steps, "go down there, and the man at the foot will tell you what to do."

Roland went down and found half a dozen boys at work, with their sleeves rolled up, cleaning and polishing knives. The man at the foot of the steps looked up and said:

"Come to try your hand? Well, three have just left in disgust; doesn't seem to be boys' work, somehow, but it's got to be done. You see," he said, picking up some knives and scissors and showing spots of rust on them, "the water that saved our building the other night injured some of our finest goods. If you want to try your hand at cleaning, I'll show you how. We pay by the dozen." "'Tisn't fair," said one of the boys;

'some have more rust on than others.' "If you don't like our terms, you needn't work for us." said the foreman, and the boy, muttering that he wanted to be errand boy and see something of life, left, while Roland went to work with a will. As he finished each piece he held it up, examined it critically, and wondered if mother would think it well done. When the hour for closing came, the gentleman who had sent him downstairs appeared, and looking round at the boys, said:
"Well!"

"There is the boy we want," said the foreman, pointing to Roland. "He will take pride in doing anything you give him to do. He has been well trained."

Again the tall man spoke quickly.
"That's what we want. 'Boy wanted' doesn't mean any kind of boy. Mother know you came? No? Well, take her your first wages and tell her there's a place open to you here. Then put your arms around her neck and thank her for teaching you to be thorough. If more boys were thorough, more boys would succeed in life."

"I guess, mother," said Roland, when he told her about it, "it was because I tried to do everything as you would like it. I forgot I was doing it because there was a 'boy wanted' "—The S. S. Advocate.

Will Interfere Next Time.

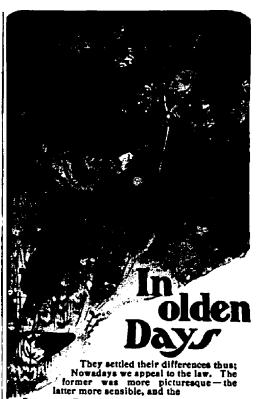

A Lewiston man was passing through a country district near the city one day, when off in a field he saw a boy throwing stones through the glass of a deserted house. The man's first impulse was to shout to him to stop, but then he thought that the boy's father should have taught him better things, and it was not his duty to chastise another man's children for their wickedness. So he went home that night and began to tell the instance at supper table. His boy, who had been out in the country hunting all day, began to turn colors and finally broke out:

"Well, pa, you needn't be so roundabout. You know it was me, and I guess Tell the largest number of bushels of the man who owns it knew, for I saw him running after me down the road

> Before that evening was passed, sure enough, the owner of the old house drove up and demanded the pay for the glass.

BOYS IN THE OFFICE, STORE, FACTORY, AND ON THE FARM

Tis common proof. ladder!-Shakespeare.

A boy who has special talent for some one thing which he can do as few others can, will always be in demand.

Never break a promise made to a boy unless for the best reasons, and then only after explaining to him the reasons.

Henry Clay, the "mili-boy of the slashes," was one of the seven children of a widow too poor to send him to any but a common country school, where he was drilled only in the "three R's." But he used every spare moment to study without a teacher, and in after years he was a king among self-made men. The boy who had learned to speak in a barn, with only a cow and a horse for an audience, became one of the greatest of American orators and statesmen.

"Let us be proud of our boys. farmer once asked, 'Is that house yours?' Yes,' said the farmer, 'and that's the finest house around,' 'Is that cow yours?' Yes, and the finest thoroughbred in all the county.' 'Is that dog yours?' 'Well, I should say, and the most intelligent setter in the entire neighborhood.' 'Is that boy yours?' 'Well, er—come to think of it, he is.' But not one word of praise. Do you know a boy, your boy? His name, age, language, manners, associates, his secret thoughts, his desires and difficulties? Does he like music, drawing, carpentry, farming? Do you really know your boy?

turn over to him all the tanneries and That lowliness is young ambition's factories of the firm. In order to run them he must have a thorough knowledge of the trade from the ground up.

My eldest son, Charles A., Jr., did the same thing, and my third son, now at school at the Polyclinic, will follow in their steps. When my boys got along in their teens my wife gave each a latchkey and trusted in their honor not to abuse the privilege.

'I do not say that they were more steady than other boys, but if they needed it I gave them counsel. I shall be proud when all are my partners."

The American Boy's Ideals.

It is not many years since the possibility of becoming president of the United States was held up as an incentive in our schools to persuade the American boy to persevere in well-doing. That it was always efficacious in its results is extremely doubtful, for the average boy knows that this high calling can be reached by very few, and it seems a far off goal—too remote to strive after.

A better idea is now taking its place -the thought of real fitness for a vocation or calling.

Not every boy of the present day desires to be president of this great Republic nor does he make that great office the end of his aim and ambition.

The strife for office and power has no charms for the boy who is a born mechanic, who loves to see things grow under his hand, who saws and planes and fits into grooves, and sees the com-

TONY RICE, WHO KEEPS A SHOP.

Honest Toil.

Charles A. Schieren, former mayor of Brooklyn, says:

I have three sons I am training to take my business. My eldest son is my junior partner, my second is scraping hides in my Tennessee tannery, and my

third is at school. He is only nineteen.
"My son Arthur," said Mr. Schieren, who is working in the tannery, is twenty two years old, and was graduated this year from Cornell University. He is a big fellow, a little over six feet high, weighing 180 pounds, and is an athlete. In college he studied to be a mechanical engineer. He is very fond of yachting, and is a member of the Connecticut Yacht Club.

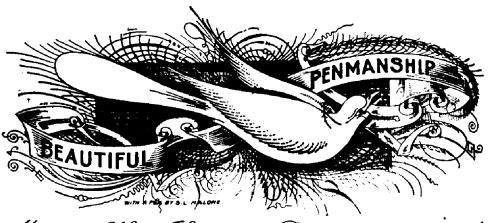

"But he has left all that behind and has gone down to Tennessee to learn the tanning business as if he had no to take charge of the mechanical part of my leather and belting business.

When he is fully equipped I shall tion to small things.

Boys Not Afraid to Soil Their Hands in | pleteness of his work in the numberless details that go to make up the perfect whole of whatever he has undertaken to do.

He wants to be a master mechanic. and if given the opportunity, will work with an eye single to that purpose. A boy wants to be a printer, and the noisy, busy composing room is the goal of his ambition. Perchance he may become a boss printer if he tries. What are chairs of state to him?

Through all the avocations of life whether of brain or brawn, the successful worker is he who recognizes his own peculiar fitness for his chosen work, and determines to master it in all its details. These are what we call "skilled workmen," and they are always in demand. The boy who takes pride in doing everything well, will here meet with the reward of well-doing, for it is in the finer, most unnoticed work that the college education and no expensive perfection of finish is attained. Longsports. He intends to prepare himself fellow's poem of "The Bullders" will help "our boys" to understand the value of this minute and conscientious atten-

Malone's Home School of Penmanship and Art

will thoroughly instruct you in the following branches without the aid of a teacher: Plain Business Writing, based upon perfect freedom of movement, Letter Writing and business forms in general, Old English German Text, Roman Marking and various other styles of lettering, Drawing, Free-Hand and Mechanical Designing, Off-Hand Flourishing of Birds, Swans, Quills and Scrolls.

In order to introduce this valuable and beautiful work, Mr. Malone will mail a copy to readers of "The American Boy," at \$1.00 for a period of thirty days. The regular selling price is \$2.00. Young Millionaires Not Afraid of Work.

When a young man possessed of millions gets down to hard muscle work in an endeavor to learn a trade, it is something unusual. Alfred Gwynne Vanderbilt, second son of the late Cornelius Vanderbilt, a young man possessed of millions, with enough more in prospect on the death of his mother to amount to not less than forty millions of dollars, is now working as a clerk in the office of the New York Central Railroad at a salary of ten dollars a week.

Young Vanderbilt's ambition is to follow closely in the footsteps of his father, and fit himself for the general management of the great New York Central system. He is said to be the sixth of the Vanderbilts who has served an apprenticeship and learned to do the drudgery. Not one of the six was unfamiliar with the construction of an engine. Any one of them could run one. Commodore Vanderbilt, the founder of the family, was a practical mechanic and engineer. William H. Vanderbilt served an apprenticeship for seven years. Young Cornelius Vanderbilt, brother of Alfred, has worked for more than a year in the machine shop for ten hours a day, and he is already a skilled engineer. Not only that, but he has invented improvements in locomotives which have been accepted on their merits, notably a new fire box more economical than any now in use. Alfred Vanderbilt has started to work at an earlier age than any other member of the family. He has recently graduated from college, and in order that he may make a success of his work he has, in a measure, given up the brilliant society of New York and Newport.

Superior to Seasons.

Superior to Seasons.

In the January number of THE AMERICAN BOY we published a Calendar of the Agassiz Assocation, which contained hints for the guidance of our members during the different months of the year. The rapid growth of the circulation of this paper and the lengthening of its monthly flight into all the states of the Union are rendering any such notice of the changing seasons too provincial for a society so wide spread as ours. A calendar calculated for Detroit, for example, is of no use in Southern California or Florida. A suggestion that January is a good time to study snow crystals loses its force in those regions where roses bloom throughout the year. We, therefore, advise our Chapters and scattered members to make their own calendars and programs of work, adapting them to local conditions and climate. We shall be glad to receive any such calendars, and particularly any constructed for use in the far west and south.

A Nickel-Plated Spider.

I captured conspider shown in the accompanying picture in our house one day house one day last summer. We left the door open over night, and when I got up in the morning I found this spider had spun a web from the door to the wall.

The back of the NICKEL-PLATED SPIDER. spider looks as though it was nickel-plated, only there

The back of the NICKEL-PLATED SPIDER. spider looks as though it was nickel-plated, only there are narrow black lines running across it. The under-side of the spider is black with yellow stripes running lengthwise.

I put it in a box and put several smaller spiders in with it, and I found that the large one killed the smaller ones, although I gave it all the files it could eat.

I had the spider about two weeks when it laid a lot of eggs of a bright yellow and about the size of a pinhead. Several hundred are laid in the shape of a ball. The ball of eggs is perfectly round, and not quite half an inch in diameter. When the eggs were laid the spider put a covering over them like cotton batting. I wish you would tell me what kind of spider this is. Edward Finnerty, Hitchcock, S. D.

[The spider sent by our correspondent is Argiope Transversa, Emerton, an orbweaving spider, which occurs throughout the United States. Ed.]

How the Agassiz Association Helps

We often have letters from our young people asking, "What good will it do me to join the Agassiz Association?"

To this very proper question the best answer we can give is to show what "good" has already come to some of our older members. In the first instance only, shall we venture to give any names, and in this case we violate our usual rule in the hope that we may thus enable some of our Chapters to secure the services of an interesting lecturer.

Fichburg, Mass., Dec. 17, 1900.

Mr. Harry L. Piper belonged to our chapter of the Agassiz Association, where he became interested in nature study, especially in birds; so much so that he pursued a special course in the Laurence Scientific school at Harvard. He is now president of our Chapter, and leads it in the study of birds. He has also classes in the neighboring towns with which he is eminently successful. He is lecturing now on Winter Birds, and is ready either to lecture or establish classes, or both.

Yours truly.

Yours truly, E. ADAMS HARTWELL.

The next letter is from a young lady who thus tells of the benefit she has received from the A. A.

Phe Agassiz Association.

THE AMERICAN BOY is the only official organ of the Agassiz Association and should be in the hands of every member.

All correspondence for this department should be sent to Mr. Harlan H. Ballard, Pittsfield, Mass. Long articles cannot be used.

THE AGASSIZ ASSOCIATION welcomes members

about. My two years' silence has not been from lack of interest in the Agassiz Association; rather from the keenest interest, which leads me to devote myself to work which will fit me to become, I trust, a worthier member."

Tribute to the Agassiz Association from a Prominent Physician.

We have hesitated long about printing the following letter on account of its per-sonal nature, but in the hope of inducing some American boy to follow the example of a successful and distinguished man, have decided to give a portion of it:

ir. H. H. Ballard, President Agassiz Association. My Dear Mr. Ballard:

[If the results shown by these three letters alone were all that the Agassiz Association had to show for its record, we should feel amply repaid for our efforts in behalf of the boys and girls of America. They make us proud and grateful and humble.—Ed.]

The Gray Memorial Botanical Chapter

Elizabeth, N. J., Dec. 25, 1900.

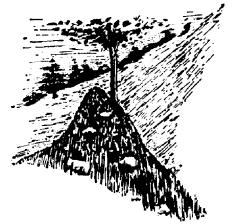

Elizabeth, N. J., Dec. 25, 1900.

Dear Sir—On an examination of our records, I am myself astonished at the success that has attended our efforts. The year closes with twenty three members. Our bulletins are issued by our division secretaries, and circulated so regularly that each member knows when to expect them, and how to add his own contribution and forward to the next.

Quite a number of strange plants, immigrant from abroad, have been discovered, among which I may mention Anthospermum hispidum, and Chaerophyllum aureum; also a strange domestic plant of the Club moss order, which has been classified as Lycopodium ad pressum, underwood, forma polyclavatum, McDonaid, of which I enclose a number of specimens. Having defrayed all expenses, we have a surplus with which to commence the new year. With best wishes for the future success of the Association, I am, dear sir, Fraternally yours,

WILLIAM H. McDONALD, Gen. Sec. Chapter No. 2, Agassiz Association. 122 Pearl street, Elizabeth, N. J.

of all ages, and anyone who is interested in any form of natural science is invited. Established in 1875. Incor-porated in 1862. Short notes of personal observations are particularly desired for use in the A. A. department. Send illustra-tions when convenient. Questions are invited. Address H. H. BALLARD, Pittsfield, Mass.

INDIAN MOUND, OR TUMULUS.

a creek. A few stones are sticking in the side of the mound. I found on it a piece of flint about as big as a walnut with a lot of nicks on it.

PAUL SHERIDAN.
312 W. Scott St., Youngstown, Ohio.

[We sent Mr. Sheridan's letter and sketch to Professor Putnam, of the Pea-body Museum of Archaeology and Eth-nology at Harvard, and he has courteously replied as follows:

Mr. H. H. Ballard, Pittsfield, Mass.

Mr. H. H. Ballard, Pittsfield, Mass.

6"Dear Mr. Ballard: I think the mound is a well known tumulus near Youngstown. If permission could be obtained to explore it, it should be done in a thorough manner. It is likely to be rather an important work. To explore such a mound properly would cost two or three thousand dollars, expended in labor, photographing, etc., and only an expert should undertake it. I inclose a little paper which may be of interest to your friends."

The paper inclosed is the report of a lecture delivered by Professor Putnam on "Methods of Archaeological research in America;" and as many of our young friends are likely to come across similar mounds in the west, we take pleasure in printing below that portion which deals with the

RIGHT METHOD OF OPENING INDIAN MOUNDS.

RIGHT METHOD OF OPENING INDIAN MOUNDS.

In exploring a mound a trench is first dug at the base of the mound. A slight vertical wall is made thereby showing the contact of the edge of the mound with the earth upon which it rests. Sometimes this trench has to be dug to the depth of several feet in order to find the bottom of the mound, as in cases where the mound is erected in an excavated area. This wall is the first section of the exploration, and its outline should be drawn or photographed and its measurements noted. For the latter purpose it is best to stretch two strings over the mound, one north and south and the other east and west, and to take all measurements from those. After this first section is made, the work is carried on by slicing; or cutting down about a foot at a time, always keeping a vertical wall in front, the whole width of the mound. Each slice thus made is a section, and whenever the slightest change in the structure is noticed or any object, found, that section should be drawn or photographed and measured, as at first, and the exact position noted of any object, ash bed, or change in the character of the structure of the mound. This method is continued until the whole mound has been dug away, and a thorough knowledge of its structure and contents obtained. Such work of course necessitates great labor and is expensive in proportion, but only such a method will give full results; all other methods are partial and consequently of little or no value. In fact unless such work is to be thoroughly done "About two years ago I sent in my last report, since which time you have occurred, since which time you have occurred to be a sent to you college course I have elected one scientific subject, entomology. One term was spent in physiology, anatomy and dissection. Then followed two terms of practical work in the construction of phylogenetic trees. Six or eight hours a week the blondeall of Blastrus.

I began last summer's vacation with the realization that ability to read scientific German was one of the necessities for even a pretender at science. So the spare hours were spent poring over derman hours were spent poring over derman thouse what the beetles and the "yellow-breeched philosophers" really were about. So far this year I have taken a general survey of oak insects from the conomic standpoint. Now I am to select the oak gail insects which I collected in the oak gail insects which I collected in

ADVERTISE HERE FOR RESULTS.

EDITED BY JUDSON GRENELL

THE AMERICAN BOY offers twelve prizes of Two Dollars each for the best Amateur Photograph received during the twelve months in the year, one prize for each month, also a second prize each month, of one dollar, for the next best photograph, the competition to be based upon the originality of the subject and the perfection of the photograph. The contest is open to subscribers only. Photographs will be returned if stamps are sent for the purpose. All photographs entered in the contest and not prize winners will be subject to our use unless otherwise directed by the sender, and fifty cents will be paid for each photographs in any event to be our own, without further payment than the payment of the prizes. Write on the back of the photograph its title, with a description of the picture, and the full name and address of the contestant. THE AMERICAN BOY offers twelve

AN AFTERNOON STROLL. First Prise: H. Osborn Knight, Box 201, Central Y. M. C. A., Chicago.

To Prevent Plates Frilling.

In hot weather, when developing plates, it sometimes happens that the film will frill. That is, the edges will peel oft, and before the developing is completed such incads have been made on the negative that it is ruined. It is very provoking to have plates act like this, and unless one knows just what to do, it practically stops all work. Some makes of plates are worse han others, but all are at times liable to trill.

A good way to prevent this is to act to the some content of the source of the sour

riil.

A good way to prevent this is to take a common tallow candle with you in the cark-room, and before immersing the plate in the developer run the candle lightly around the edges of the plate. This forms a protective band of grease, and the edge of the film cannot absorb any water, and conequently does not frill.

Amateur Ruby Lamps.

A writer in one of the photographic journals of the country says a very good ruby amp can be had by taking an empty hock bottle, and near the bottom make a nick with a file. Then with a red hot poker touch the bottle near this nick. This will start a crack, which by means of the poker can be led right around the bottle. Stand the bottle over a candle, and the ruby light is complete.

Photographing the Sun.

It is possible to get the sun in your negative without "faking." Care must be taken in order to do this. I have several negatives in which the image of the sun is quite distinct. They were made of sunsets, in which, just before the exposure was made. thin veil of cloud floated over the face of the sun, shutting off the brilliant rays, and making it look like a big ball of fire suspended in the sky.—Richard Hines, Jr., in Photo Era.

GUN FROM BATTLESHIP "KEARSARGE," AT STAMFORD, CONN. Second Prize Photo by A. V. Pillsbury, Reading, Mass.

Short Focus Preferable.

The battle of the long focus vs. the short focus lens still continues. Osborne I. Yellott comes to the defense of the latter, in the Photo Era, preferring it for the follow-

the Photo Era, preferring it for the following reasons:

1. Because we can get many views which without it would be impossible.

2. Because with it we have a lens capable of rendering pictures with an apparently greater number of focal lengths than any combination ever devised.

3. Because it is much faster than the long focus or narrow angle lens, at the same cost.

same cost.

A Clock That Takes Pictures.

A photographic time-clock has been invented that takes the picture of each employe of the establishment where it is used. It will take about 50 a minute, so that no matter how large the force may be, every-body can get registered in a very short time—almost as fast as a crowd would walk into any store or shop door.

As is well known, there are many devices on the market to keep track of the comings in and golings out of employes. The usual method is to have a key for each separate person, which is inserted into the lock, and the result is a record of the exact time the key is used. This new device takes a picture of the employe while standing a picture of the employe while standing before the machine, and also a picture of the face of a clock. The two come out together.

The machine uses a long film, capable of taking 288 portraits. By the use of this machine one person cannot use another person's key, and therein lies its utility—if it has any.

Thick and Thin Glass.

One of the disagreeable things about photographic plates as at present manufactured, is, that they are of so many thicknesses. Sometimes one set of a dozen plates will weigh twice as much as another set of the same size. The manufacturers seem to pay no attention to the thickness of the glass, but on the theory that "any old thing will do." coat the first thing that comes along. This is a nuisance, particularly when one has a holder that will not take the thick plates. The only remedy for this kind of nuisance is to stop using the plates of those manufacturers who do not try to keep the thickness of their plates within reasonable bounds. Write a letter to the manufacturers about it. Write another to the dealer. Write to your friends and ask them to write to manufacturers and dealers. It is a matter that can be remedied, and will be, if plensy of people write. One of the disagreeable things about

Backgrounds.

In taking pictures inside, a suitable background will be found a great help. On a pinch a simple white sheet will do, but this will not be found so satisfactory as a figured bedspread. What is better yet is to have

satisfactory as a figured bedspread. What is better yet, is to buy, or paint, on cotton cloth a background about five feet square, dark at one corner, and diagonally across light at the other. But the supply houses now keep them in stock, and any amateur can get one at about what it will cost him to make it himself. It will permit of the face showing a light background or the contrary, and it can be turned so as to produce almost any desired effect. With one of these backgrounds and a sheet so held as to light the sitter, a new and valuable use will be found for the amateur's camera. Especially will this be the case when there are old people in the house, who cannot very well visit a regular gallery.

Non-Cockling Paste.

The following formula for non-cockling paste is recommended in E. & H. T. Anthony & Co.'s "Professional Pointers":

Nelson's gelatine No. 1.... 4 ounces. Glycerine 1 ounce.
Alcohol 5 ounces.
Water 16 ounces.

Dissolve the gelatine in water, add the glycerine, and then the alcohol.

Final Light Picture in a Mine Near Siocan, B. C., by Watch if wished, will be sent you by return mail.

CRESCENT TEA CO. DEPT. 92. Springfield. Mass.

Photographing Nature.

Snow still lays over the landscape of much of the United States, but the sun is beginning to ride high, and it will not be long before the trees everywhere, as they already are in the south, will be covered with leaves, and the velvety grass will have clothed the bare earth with a green carpet. So it is none too early for the amateur photographer, loving nature, to begin to think what he will capture in the way of pleasing pictures. In fact, one cannot begin work too early. If the woods are loved, the early spring affords a splendid opportunity to procure fine scenes. For then the leaves have not had time to grow large, shutting out all the light, but the sunshine rollickingly darts in between the gently swaying branches, and lightens up what would otherwise be too dark nooks and corners.

The picking out of beautiful landscape

the gently swaying branches, and lightens up what would otherwise be too dark nooks and corners.

The picking out of beautiful landscape views requires more study than the average amateur realizes. The eye must be educated to know what will appear as beautiful in the completed picture as it does on the ground glass. Beware of a great tree in the foreground that is so oppressively plain as to prevent you seeing anything else. And, too, beware of a dreary waste of foreground that has nothing to relieve the monotony of mediocrity. Between the two there is a happy medium.

When in the outing beware of over-exposed plates, and in the woods be careful that you do not under-time. In the first instance the chances are that your camera cannot be made to work too quick, when the lens has not been stopped down, and in the other case it will be found that a second or two—even more—gives the best results. No one can sit at his desk and tell another just how long to make an exposure. There are a score of things that will require the time to be longer or shorter. This knowledge can only be gained by experience, and now that cameras and plates are quite reasonable in cost, it will pay to always be provided when afield with the means of gratifying a desire to photograph a scene, by not being without a camera. Slowly, but surely, the eye will be educated to know the possible from the impossible, and when the lesson is learned it will never be regretted, no matter at what cost of time and plates. Those who laid their cameras away during the winter—which really was not the best thing to do—should immediately get them out, wipe off the dust, and prepare to cnicr into a vigorous campaign for prize pictures.

Answers to Correspondents.

Walter Parke—As soon as the hypo is discolored, throw it away. A pound will fix a great many plates and prints.

Charles King-Films give better cloud definitions than ordinary plates, if carefully handled. Follow directions exactly.

Karl Erb-Platinum paper is costly, but it gives beautiful results, and perhaps in the end is cheaper than less expensive paper.

Abdeo S. Ging—The Nodark camera is hardled by the Anthony Company, Fifth avenue, New York City. Write them for a catalogue or circulars.

Palmer L. Kaser—When you buy your paper, directions will be found with it that tell you just how to tone it. There are as many different ways as there are different kinds of paper.

Willie Watson—It is possible to take a better picture of a building in the shade than in the sunlight, because the violent contrasts can be done away with. Only the house in shadow takes a longer exposure.

Harrison R. Hathaway—Your velox prints are very bad indeed. It looks as if they were under-exposed and over-developed. Try an exposure of twenty seconds, and then put a few drops of a ten per cent solution of bromide of potassium in your developer. developer.

THE MINER AT WORK.

Getting Rid of Spots.

Sometimes a good negative will be almost spoiled by being covered with little pin-holes, the result of either dust on the plate before exposure, or of some foreign substance in the negative that prevented the developer properly flowing over the plate. A good spotting medium, to be applied with a fine camel's-hair brush, can be prepared by scraping off the dense portions of old negatives and placing the dust in a small bottle with a little water and a few drops of acetic acid. Dissolve by means of heat. This makes a thickish paste which has the same properties as the negative to be manipulated.

Photographic Notes.

The Weno is said to be the only pocket camera having a pneumatic release.

The Photo-Era for February conta specimens of beautiful snow pictures.

remove hypo stains from fingers or negatives, moisten and dip in persulphate of ammonia one per cent strong.

It is said that the Pan-American Exposition managers at Buffalo, N. Y., will afford every opportunity for amateurs to get pictures of buildings and surroundings.

A number of progressive colleges have adopted photography in the regular course of study, as part of their curriculum, and twenty five more are contemplating doing the same

Most of the regular camera companies have improved their output for 1901, and a new company, the Century, of Rochester, N. Y., will have a new line of cameras on the market in the spring.

Formalin, which some milkmen use to preserve their milk from souring, is used by photographers to harden the gelatine It has a bad effect on the skin, and when used the hands should be rinsed often.

When the amateur gets a timely picture of a local happening of importance, there is profit in immediately offering it to the local paper. But don't delay. Pictures in which there is a streak of fun are more acceptable to an enterprising paper than almost any other kind.

A German publication says the best way to save an under-developed negative is to immerse it in equal parts of aqua ammonia and distilled water, leaving it there for a shorter or longer period, according to the degree of intensification wished to be obtained. Then wash it, and place it in a bath composed of absolute alcohol, one thousand parts, bromide of cadmium, one part.

The Lop-cared Rabbit.

CHAS. B. BOVIER,

There is at the present time so much being said and written about Belgian Hares that one would almost think they were the only variety of rabbit worthy of attention; but this is not true. Many choice and interesting varieties have been almost lost sight of. Among these is the Madagascar Lop-ear, sometimes called the English Lop-ear, sometimes called the English Lop-ear, sometimes called the that nearly all the improperly so. This misnomer undoubtedly originated in the fact that nearly all the importations to this country were from England. But the Lop-ear is a native of the island of Madagascar, and was among the earliest, if not the very first species, of rabbit to attract sufficient attention to be domesticated and bred as a pet and fancy variety.

Until within a very few years it was the most popular fancy rabbit, and is still a great favorite with many, attracting much attention both in the rabbitry and in the show room.

show room.

CHARLES B. BOVIER, JR.

Age. 13: Junior Partner in the Highland Rabbitry. Denver, Colo., and "Dom Pedro." One of His Prize Lop-eared Rabbits.

In weight they are about like the heavy weight Belgian, ranging from nine to fifteen pounds. Some are recorded to have weighed as high as eighteen pounds, but from ten to twelve pounds is a fair average. Their skin fits very loosely, thus giving them the appearance of being much heavier than they really are

than they really are.

There is no standard of color, but they are most frequently found in fawn, sooty or smoky fawn, mottled or tortoise and

In habit they are more sluggish than the Belgian, consequently more easily domesticated, and they become very fond of being

They breed only about four times in a year, and as they are natives of a warmer clime, the summer months are most favor-

Their ears are of very great size, some-times measuring twenty five inches from tip to tip, and six and one half inches in width, although twenty inches by five inches is considered good measurement, and

inches is considered good measurement, and anything over seventeen or eighteen inches fair. They droop very much like those of an elephant, from which peculiarity they derive their name, Lop-eared.

The development of the ears is the one great aim of the fancier, as their enormous size always excites the wonderment and comment of spectators. The meat of the Lop-ear, like that of the Belgian, is white, like the breast of a chicken, aitho not so firm or compact, and is a little more juicy.

The accompanying picture is of Dom Pedro, an imported buck, with an earage of twenty one and one half inches by five and one half inches; weighing about twelve pounds. He was very docile and a great pet, always seeming to enjoy a caress, even

pct, always seeming to enjoy a caress, even from a stranger.

Many who have met him in the show room, during the past three years, or at our rabbitry, will feel sorry to hear of his death in August last. He was three years and four months old, and was greatly mourned by his young owner, who had him "embalmed" by one of our leading taxidermists.

Yellowstone Park must be a very interesting place. There are in the park between sixty and seventy buffaloes, seven or eight hundred antelope, between three and four thousand deer, a number of mountain sheep, and from sixty to sixty five tame elk. Tourists see herds of elk almost daily. There are also many coyotes, wolves and mountain lions which prey upon the deer and elk, but these are being killed by the soldiers as rapidly as possible. When a dead elk is found the scouts poison the fiesth, with the result that the wild animals that eat it die. The cooks at all the big hotels in the park dump their garbage at a certain hour every evening at a convenient place. The bears then come down from the mountain and from the forests and eat their supper in the presence of a large audience of tourists. Many of the bears have become quite tame, and persons with kodaks can often approach within eight or ten feet of a group of bears at this meal.

The Value of Toads and Bats.

As a result of experiments with toads and bats, it has been demonstrated that a house, or even a community, can be rid of various troublesome insects, including flies and mosquitoes. These experiments were made by Professor Clinton F. Hodge of Clark University, Worcester, Mass. Professor Hodge's first experiment was with the toad. "I constructed a small pen in my garden," he said, "and in it, in a pan of water, installed a male and female toad. To attract food for them I placed within the enclosure bits of meat and bone. The results were as satisfactory as they were unexpected. The toads spent most of the time sitting within reaching distance of the bait, and killing the flies attracted by it. watched one toad snap up eighty six house flies in less than ten minutes.

"One day I gathered a quantity of rose bugs in a tin box and began to feed the bugs to a toad. At first I did not count, but finding his appetite so good I started to count. When I had counted over eighty bugs and the toad showed no signs of wishing to conclude his meal, I picked him up. Previous to my beginning to count he had taken anywhere from ten to twenty bugs. I found the toad equally greedy for rose beetles, canker worms, ants, caterpillars, moths, June bugs, weevils, snails and many other insects. So, too, in a house, a room may be cleared of cockroaches by leaving a toad in it over night.

"A single toad may destroy over two thousand worms during the months of May, June and July, and one of these harmless creatures may well do a gardener service to the amount of nineteen dollars and eighty eight cents each season, and yet he can raise twenty thousand dollars worth of toads at an expense of not more than twenty cents.

'Farmers in England buy them, paying as high as twenty four dollars per hundred, for use in their flower beds and gardens. For household purposes a small number of toads could be given homes in an aquarium. At night the toads could be let loose to kill bugs, while in the day they could kill flies. I have built a sort of cage or wire screen, a foot wide and two feet long, the top of which is kept open. It is only necessary to put in two or three toads, provide them with shelters, a dish of water in one corner, and then keep it supplied with bits of raw meat and other refuse matter calculated to attract flies."

In speaking of the bat, Professor Hodge said: "We have no animal more interesting and probably none more valuable, and certainly none less understood and more abused than the bat. They are easily tamed, absolutely harmless when gently handled, and make pets as funny as tiny monkeys. As destroyers of many of our most pestiferous night-flying insects, like mosquitoes, the bat is almost our sole dependence, and, as he is known to hunt insects afoot as well as on the wing, he is also of some value for larvae that do not fly.

"My attention was turned to the bat through the codlin moth, the insect to blame for most worm-eaten apples. In an orchard near my home I found nine of the grubs of this insect in a minute. Chancing to go into another orchard, hardly a mile away, I found only four of the grubs in an hour's search. There is an old barn near by, in which live a colony of between seventy five and one hundred bats. The owner informed me that his apples were always free from worms.'

A Handy Little Poultry House.

cost much,

tost much, according to a writer in the "Poultry Monthly," to furnish a poultry yard with a nice little house for the chickens. The one shown in the illustration is five feet square, five feet high in front and three in the rear. The door in front is two feet wide, four feet high, and twelve inches from the ground. Inside the board door is a wire door of one inch mesh wire netting, so that the board door may be left open in hot weather. The windows should be about two feet square (single sash), and about two feet square floor and hinged at the bottom. It should be covered with one inch mesh wire netting, to keep out vermin while open. The little entrance near the bottom is eight by twelve inches. It has a slide door on the inside to shut over it. There should be a intic entrance near the bottom is eight by twelve inches. It has a slide door on the inside to shut over it. There should be a little door in the back next to the floor, about ten inches high, running the whole length of the back and hinged at the top. Instead of having the floor nailed to the sills it should be nailed to three strong cleats and hinged to the sill at the back so it can be raised in front, thus allowing the whole contents of the floor to be dumped out at the back, leaving the floor as clean as if it had been swept. The sides of the floor can be made of seven eighths matched lumber, the roof of rough hemlock wood with two or three thicknesses of tarred paper, or building paper tarred or painted over. The sills may be two by three inch stuff.

stuff.

Such a house can be easily moved from one place to another. It can be used as a roosting coop for growing chicks in summer and fall, or as a brooder house for a single brooder or for setting hens. It will accommodate two large broods of early chicks, with hens, by making a partition in the center. It can be used for a small breeding pen. A yard can be conveniently arranged about it with a few pieces of one by four inch stuff and wire netting.

A Little Poultry Advice.

Give water three times a day in winter. Leghorns and Brahmas cannot thrive together.

To kill lice, dust insect powder in the feathers.

One half the chicks and young turkeys die from lice.

More damage is done by overfeeding than by underfeeding. Good, warm shelter saves food, and the better the shelter the cheaper it is.

Young chicks do not eat often. Do not omit a meal. Feed at regular hours.

Salt seasoned to taste is excellent for poultry, but when fed to excess is injurious. A boy can pay his way on the farm many mes over, if he is given a chance at the

Cut clover hay is good feed in the morning. Meat and bone and mixed grain is good at night.

poultry.

Don't give water to chicks so as to allow them to get their bodies wet. Dampness is fatal to them.

Linseed and cottonseed (cake or meal) is excellent food, but all oily foods are liable to cause moulting.

Do not keep food before the hens con-tinually. Make them work. An idle hen is never a good layer.

Beans and peas cooked and thickened with bran and fed twice a week make an ex-cellent food for laying hens.

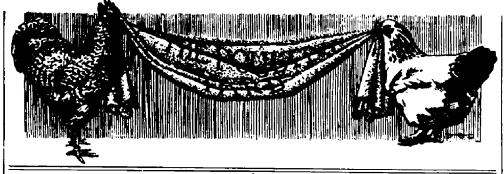

Thirty thousand dozen eggs were recently received from a single steamer at New York. They came from Germany.

Egypt last year exported 39.761,000 eggs. This year the egg exports promise to reach 70,000,000—two thirds going to England.

If the hens have a range in the summer they will need no food at all. It ought to cost nothing to produce eggs in summer.

A fat hen is a poor layer. Eggs from fat hens often fail to hatch, and sometimes when they do hatch, produce deformed and weak chicks.

Be careful that you have no cracks or crevices in your poultry house where draughts can come in. Don't be too anxious for ventilation in winter. You will have more difficulty in keeping the cool air out than in letting it in out than in letting it in.

Squab Raising.

J. A. SUMMERS.

AISING squabs for market purposes has been found so profitable that profitable that many young men are making nice incomes thereincomes there-from. It is a clean business, with very little hard work attached to to it. A boy of fourteen years can very easily manage hundreds of pigeons and make several hundred dollars a year on them. Poultry raisers are adding pigeon breeding as a side line, and find it

iline, and find it.

A place suitable for a pige on house can readily be found; some portion of the barn or stable, the upper part of a shed than be unused can be unused to please the birds can exercise themselves, get gravel to pick at, etc. Squabs are a dainty dish when properly prepared, and are quoted regularly in the markets at from two dollars and forty cents a dozen in summer to almost double that price in winter. Fancy club houses have them daily on their bill of fare. In fall they very often are served instead of quali. There is always a demand for them, and no danger of the markets becoming overstocked, although in summer with larger numbers the prices are lower, but seldom less than forty cents per pair. There is the percentage of profits, considering the first capital invested. I have been in the business for years and made money, and their young is but a few cents per pair. There is the percentage of profits, considering the first capital invested. I have been in the business for years and made money, and their young is but a few cents per pair the profit can be seen. The birds must not be too old and each pair must be mated. To mate put equal numbers of cocks and hens in a loft or building and their young is but a few cents per pair, the profit can be seen. The birds must not be too old and each pair must be mated. To mate put equal numbers of cocks and hens in a loft or building and they will find their own mates. They will always stay mated until death takes one and their s

weeks. In the outside cage have a vessel

for water. This must be fresh every day, and in hot weather give a fresh supply severaly times daily.

As to feed, the pigeon breeds better if given a variety of grains. It does not require meat, ground bone, clover or green foods, as do poultry, but lettuce or chickweed is given as green food and oyster shells as grit. Many pigeons are fed upon nothing but corn all the time, but pigeons fed so are slow and poor breeders. The grains adapted for pigeons are wheat. Canada peas, hemp seed, millet, buckwheat, corn (cracked), oats (hulled), stale bread, etc. Salt must be given them at all times; it is best to put it in boxes and keep it before them. A salt codfish tacked up somewhere in the rooms will also be appreciated. In gathering up the squabs select only ones four weeks old, full feathered and fat. Too many are killed before they have attained the right size for eating. After the squab is dressed throw it into cold salt water for half an hour, then throw into fresh cold water. Wash off feet and mouths and hang up in pairs until ready for market. The safest and quickest method of shipment is by express. In summer, of course, they must be iced when packed. If living near a city and quickest method of shipment is by express. In summer, of course, they must be leed when packed. If living near a city better prices can be obtained from private families or restaurants. If these cannot be secured ship to a good game and poultry dealer in preference to commission men, as better prices are received. The best stock, for squab birds are Antwerps, homers or Duchesse; their squabs are always nice and fat and plump, and seldom turn dark after dressed as common birds are liable to do. If common ones are to be used, select only white, red or blue ones, and dispose of all white, red or blue ones, and dispose of all having dark squabs when dressed.

Poultry Houses.

As it costs so little to build a poultry house there is no excuse for not furnishing comfortable quarters for our fowls. A square box made of boards and covered on the outside with cheap building paper held in place with plastering laths, will make a good house. One eight by twenty feet will cost not over ten doilars. Strong muslin can be used in place of glass in the windows. Such a house was built by two boys one spring and used until winter, when the boys tacked newspapers all over the inside, putting on several thicknesses and tacking them so as to make a complete covering over sides and top. Fowls were kept in this house for two years and were never touched by the frost. During some very cold weather, the boys rigged a frame around the pullets and covered it with some old carpet so as to make a sort of a bedroom, and the hens laid right along through the winter. winter.

Profit and Pleasure Combined.

No one who has not tried it knows how much pleasure there is to be derived from poultry raising; indeed, to many persons profit is not the main attraction; but when profit and pleasure are combined, it is a wonder more persons are not engaged in it. Many persons, particularly boys, require something to occupy their minds and keep them out of mischief. Nothing better for a boy can be devised than the poultry yard. Poultry raising calls for the exercise of both mental and physical powers. It requires no great outlay of money. It does not tend to the keeping of either late hours or bad company. It keeps boys at home. It is safe, and often develops from a recreation into a business. It offers something definite as an object to work for. It is beneficial to health. To lovers of animals it is a fascinating employment.

Every boy should own something. Nothing fills the bill better than a flock of poultry. It cultivates a sense of care and business management. Better give a boy a flock of chickens than a colt. No one who has not tried it knows how

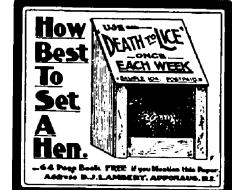

We should like to have boys write us some of their experis in poultry raising.

FIFTY GOOD GAMES

As Played in Brooklyn Public Schools From Report by Jessie H. Bancroft, Director of Physical Training

No. 14. DUCK ON A ROCK.

No. 14. DUCK ON A ROCK.

The players decide who shall be "it," or guard, by throwing their bean bags, called "ducks," at an Indian club placed at a distance of about twenty feet, and the one whose bean sack lands nearest the mark is "it," or guard. The guard piaces his duck (bag) on the club, and the other players try to knock it off with their ducks, throwing in turns from a line fifteen or twenty feet from the stake. As long as the guard's duck is not knocked off, he may tag anyone who advances to recover his duck; whether the duck is recovered or not, the player is not safe until back to the throwing line. If the guard's duck is knocked off, all the ducks may be picked up until the guard replaces his duck on the stake. The guard must continue to be guard until he has tagged someone, and even then must get his own duck and run to the throwing line before the player tagged can get his duck on the stake. The distance of throwing line or "home" from the stake may be increased, to add to the interest of the game.

No. 15. SLING SHOT.

Form a large circle. One player stands in the center and whirls a rope, with a bean bag on the end, under the feet of those in the circle, who jump as it comes to them. Whoever is caught by the rope must exchange places with the one in the center.

No. 16. BEAN BAG BOARD.

An inclined board, having two holes, the lower one about the size of the bean bags, the upper one a little larger, is placed ten feet from the throwing line. Each player has five bags. Bags thrown into the larger hole count five, those thrown into the smaller count ten. The player scoring the greatest number of points wins.

No. 17. BEAN BAG BOX.

Fasten a small box inside of one about twice the size, and that in a third, leaving at least six inches margin between the boxes. This, inclined, is placed ten feet from the throwing line. Each player has five bags. Bags thrown into the smallest box count five points, into the middle box ten points, and into the outside box fifteen points. The player scoring the largest number of points wins.

No. 18. SKIPAWAY.

The players stand in a circle, taking hold of hands. One player, who is "it," runs around the outside of the circle, and tags another as he runs. The player tagged runs in the opposite direction to the first runner. The player who first reaches the place in the circle left vacant by the one tagged, wins. The one left out becomes runner.

No. 19. SLAP JACK.

Same as above, except that when the two who are running meet, they must stop and shake hands, or courtesy.

No. 20. NUMBERS CHANGE.

The players are numbered and stand in a circle. The player who is "it" stands in the center and calls two numbers. The players whose numbers are called must change places, while the player who is "it" tries to get one of their places. The player who is left without a place becomes "it."

No. 21. SLAP CATCH.

The players stand in a circle, holding both hands out in front, palms down. A player in the center, who is "it," trys to tag the hands of players in the circle, who may move their hands sideways, or bend their wrists, but may not draw the hand away. When a player is tagged, he changes places with the player in the center.

first time his elders consent to treat with him as a grown man. He is free from the restraint placed upon him as a boy. Too often his early discipline has not been of the kind to awaken and strengthen his own sense of responsibility.

No. 22. SQUAT TAG IN A CIRCLE.

One player stands in the center of the circle, and tries to tag someone in the circle, who must "squat" to avoid being caught. If tagged before he squats, he must take his turn in the center.

No. 23. DROP THE HANDKERCHIEF.

A player holding a handkerchief runs around the outside of the circle and drops the handkerchief behind someone. The player behind whom the handkerchief is dropped tries to catch the first player before he gets to the vacant place in the circle. If caught, he must be "it" again; if not, the second player is "it."

(Continued on Page 155.)

A Boy Nimrod.

There is a six year old boy in California who can outhunt many a man. The plucky youngster is Austin Otis. His home is in the wooded hills, about fifteen miles back of Cozadero, where his father owns some five thousand acres of land. The boy has lived among the hills all his life. He went hunting recently with no companion but a half-breed fox-hound. Within two hours he had killed a young buck weighing sixty five pounds. He can bring down a deer with as clean and pretty a shot as can any veteran hunter in the country. He has a keen eye and a stout heart.

EXERCISE AFTER SWIMMING. Photo by C. W. Stokes, Smith's Mill, Mins.

Electric Dancers.

of flannel the electricity generated will

cause the figures to rise and fall, as if

A Defense of Athletics-in College Life. A writer in a recent issue of the Atlan-

tic. shows how athletics play an impor-

tant part in keeping young men steady at a critical point in their lives. In brief,

for almost the first time thrown upon his own resources and possessed of an

unfamiliar freedom of action. For the

first time his elders consent to treat with

strengthen his own sense of responsibility.

in athletics may serve to employ him

and tide him safely over the period of transition. The code which surrounds a college athlete is none the less effective because its enforcement is a matter so

largely voluntary. Those who enter into the emulation of athletics have some-

thing to do outside of the school curriculum, and they have certain standards of conduct to follow. They must keep themselves in condition, and that means reasonable hours and good habits. They must not "break training." They have a

two-fold protection against temptations

It is at just this point that his interest

The youth who leaves a preparatory school and enters a college, finds himself

in the act of dancing.

he says:

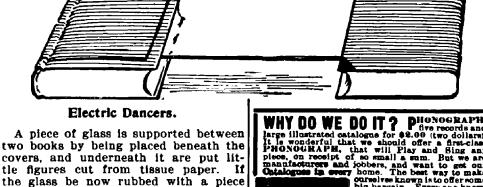

to revelry-physical health and the pressure of the college sentiment. If their youthful spirits forbid their knuckling down to the grind of intense study, this excess exuberance is taken up in a natural and wholesome way.

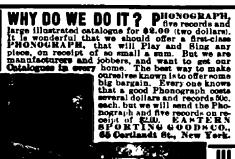

In short, college athletics, in addition to its influence in building up robust manhood, seems to be playing a necessary and useful part as a factor in moral development. The athletic work of course may be overdone; no doubt at times the conduct of athletes has been marked by excesses and abuses. At the same time it is doubtful if all these evils taken together are to be seriously considered as weighing in the balance against the advantages of the system. The moral value of athletics as a helpful influence during the transition from school to college must be taken into account.

Good Coasting.

There is a spot in the Swiss Alps where a sled or a toboggan runs a mile in seventy seconds. The winter sportsmen of Europe take great pleasure in the Cresta run, as it is called, at St. Moritz. The toboggan season begins there about the middle of November. The condition of the run is not left to chance, but the slide is prepared under the directions of a committee. The Swiss toboggans are raised on runners shod with iron or steel. The rider lies prone upon the toboggan, head foremost, both hands grasping the framework at the sides and both feet employed in steering. Iron spikes are secured to the toes of the boots, and by trailing one or the other foot along the ground the big sled may be guided.

If you will make the hull of your toy boat from a piece of celluloid, put in a deck of cork, and above the cork an upper deck of blotting paper, and then saturate the edge of the blotter at the stern of the boat with ether, or some other highly volatile chemical, the boat will propel itself about in the water at a rapid rate. The motion is due to the transforming of the liquid into gas which pushes the boat.

Bafe, Satisfied Elders last year. Safe, because their wheels were fitted with the MOEEOW COASTER BRAKE. Wheel always under control. Satisfied, because the MORROW COASTER BRAKE did just what we claimed it would, "Ride fifty miles, but pedal only thirty-five miles."

## 

ନ୍ତି ବିଦ୍ୱା ପର୍ବତ୍ତର ବ୍ୟବଦ୍ୟ ପ୍ରତ୍ୟ ବ୍ୟବଦ୍ୟ are some illustrated by Mr. J. Frank Bacon, of Cambridge, Mass., who is one of the best fancy skaters in the coun-

First, master plain skating and sculling both forward and backward. Then attempt the fancy figures, first, the outside edge roll forward. Start on the

outer edge of the right skate with the

left shoulder thrown throwing the left shoulder forward, describe a curve to the right. After continuing on this curve for a short distance, place the outer edge of the left skate on the ice, give a thrust as light as possible with the right foot, and gradually throw the right shoulder forward, describing a curve to the left. The left shoulder is

then back again in position to start once more on the right foot. Then try the cross-roll. This is simply a variation of the outside edge roll, the difference being that the unemployed foot is swung across the employed and placed on the ice in front and outside of it going forward and back, and outside of it going backward. The cross-roll may be skated to place as an eight by holding the edge until a complete circle has been traversed and then placing the other foot on the ice and making another circle in juxtaposition.

There are four ways of doing figure threes, although they all make the same mark on the ice. Those four ways are. Outer edge forward to inner edge back; inner forward to outer back; outer back to inner forward; inner back to outer forward. Perhaps the simplest of these is the first named. Start on the outside edge right foot with left shoulder well back. Grad-

There are many skaters who would | ually throw left shoulder forward, and like to be able to do fancy tricks. Here throwing weight still on toe of right foot allow skate to turn to the inner edge, and you will find you have made the three and are traveling backward. Then start on outside edge with left foot, right shoulder well back. Gradually advance right shoulder and turn left foot to inner edge back.

There are a great many grapevines. The simplest grapevine is the best known and is about as far as the ordinary skater gets. Assume that the skater starts back, and, gradually facing north to get up a slight momentum. Start forward with the feet slightly apart. Let the left foot pass in back of the right, crossing the line made by the right, and bring it out again to the side of the right, as at first. Now throw the left shoulder forward and make a cusp, or point, with the toe of

each skate (these cusps pointing east) and allow the body to continue turning until facing south. He is still progressing north, but going backward with the feet side by side. Now let the right foot take the lead again, the left crossing the line made by it, as before, and coming out by the side of the right. Throw the right shoulder forward and make a cusp with the heel of each skate (these

cusps point west) and allow the body to continue turning until you face north, and going forward with the feet in the same position as at the start, when he is ready to repeat the figure. It is necessary for a beginner on the grapevine to get up a momentum before starting, but after learning it he will be able to create his power while doing the figure, as an expert will skate it in such a manner that it is impossible to see where the force is applied.

(Continued from Page 154.)

No. 24. FOX AND FARMER.

The players form a circle, the one chosen The players form a circle, the one chosen as "fox" standing in the center, and the "farmer" standing outside the circle. The farmer sees the fox in his vineyard, and says, "What are you doing in my vineyard?" The fox answers, "Stealing grapes." The farmer says, "I'll send my dog after you," and the fox says, "I don't care if you do." Then the fox runs in and out between the players in the circle, the farmer following in exactly the same track. If caught, the fox goes to his place, and another is chosen; if not caught, another farmer is chosen and the fox may be fox again. again.

No. 25. THREE DEEP; OR, THIRD MAN.

No. 25. THREE DEEP; OR, THIRD MAN,
The players arrange themselves in two circles, one circle within the other, the players some distance apart from side to side and each one in the outer circle immediately behind the one in the inner circle: all face inward. Two extra players, for whom there is no place in the circle, stand on the outside as chaser and runner. The latter may save himself from the chaser by standing in front of any two players (i. e., inside the circle), thus making a line three deep. He then is safe; but the outer one of the three is then "third man," and may be tagged. To save himself, he must run and take a place in front of another couple, but not the couple adjacent to him on either side. If a player is lagged, he becomes chaser, and the one who tagged him the runner. The game may be varied by having the two circles face each other, with a space between them for running. The runner, in seeking refuge, places himself between two seeking refuge, places himself between two players, and the one toward whom he turns his back may be tagged. The runners and chasers may dash through the circle, but must not pause in it, except when the runner takes refuge.

### No. 26. CAT AND RAT.

The players form a circle with hands clasped. One is chosen for cat, who stands clasped. One is chosen for cat, who stands outside of the circle and tries to catch arother in the center, who is the rat. The players forming the circle try to help the rat by raising their hands to let him run under them, but try to keep the cat from breaking through the circle. When the rat is caught he joins the circle, the cat becomes rat, and a new cat is chosen.

No. 27. HAVE YOU SEEN MY SHEEP?

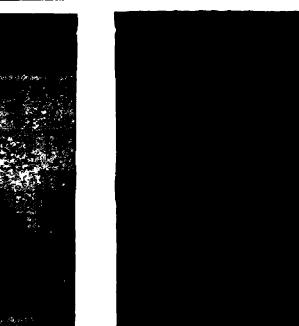

The players form a circle. One player walks around the outside, and touching someone on the back, asks, "Have you seen my sheep?" The one questioned answers, "How was he dressed?" The dress of some player is then described, who, when he recognizes himself, must run around the outside of the circle and try to reach his own place before he is tagged by the questioner. If tagged, he is "it," and the questioner takes his place in the circle.

### Answers to Correspondents.

F. W. R., Philadelphia, Pa.—The stamp you enclose is a German local.

L. M. S., Paterson-The 10 pf. Bavaria and 2½d Great Britain are of no value.

F. B., Knightstown, Ind.—There is no premium on the stamps you enclose, which are very common.

H. Y., New York—The 2½ penny Tobago, 1883 issue, unused, lists at ten cents, and the ½ penny, 1885, \$3.00.

A. J. M., Waterloo, Ia.—Your stamps are all common and worth but a few cents. The Petersburg local is a counterfeit.

Addison, Mich.—The one cent stamp you enclose is not the \$25 variety. It is the re-engraved type of 1882, worth about fifty cents a thousand.

M. W. Jr., Kansas City, Neb.—See above answer for value of Guam stamps. The three cent Centennial envelope is worth from ten to fifteen cents.

I. K., Hebron, Neb.—The three cent blue United States stamp with locomotive in the center is of the issue of 1869, and is very common. Catalogued at two cents.

W. C., Minneapolis—The stamp you describe is a label, not a postage stamp, issued by the city of Bamberg in Bavaria, and is used on return letters. It is not of material value.

W. R. R., Springfield, Ills.—The mark you describe on the half-penny green, Gibraiter, is probably due to a slight defect in the plate. We do not consider this stamp worth any more than the ordinary variety.

W. G. H., Sloux Falls, S. D.—If you do not desire to mutilate the envelope or card in order to remove the stamp, lay a wet blotter on it a few minutes and the stamp can be easily removed without injuring the envelope or card.

Miss H. R. B., Lewiston, Pa.—Almost any stamp dealer advertising in THE AMERICAN BOY will purchase cancelled United States and foreign stamps, if they are not too common. Describe fully what stamps you have when offering them for sale.

E. O., Newark, Ills.—The one cent stamp you enclose is the re-engraved type of 1882, but is unused, in which condition it lists at ten cents. We do not buy stamps. Almost any dealer advertising in this paper will buy any stamps you have if they are of any value.

D. W. R., Watervliet, Mich.—The two cent black Jackson head, U. S. stamp, unused, lists at 45 cents. Five cent documentary revenue stamps used through the Civil War are worth very little. What other varieties or denominations have you in revenues? Some of them are valuable.

G. W. Montpelier, O.—The private proprictary stamp you describe was issued by Young, Ladd & Coffin, and used on bottles of Lundborg's perfumery. It is catalogued imperforate on white paper at forty cents, and on pink paper at \$1.50. It is generally sold at about half of these prices.

ington's head are common. There are five varieties of the twelve cent black with Washington's head. These catalogue from 35 cents to \$1.75, according to the variety.

J. R. B., Ferndale, Pa.—The six U. S. stamps you send for valuation are very common. The one cent blue with figure in each corner is worth five cents in good condition. The six cent proprietary green with head of Washington in black lists at \$1.25. The two cent black and orange is not worth anything. The two cent Jackson without grill lists at five cents. Envelope stamps, if cut square, have a list value, but are not worth as much as the entire envelope.

### Varieties of United States Stamps.

(Continued from last number.)

(Continued from last number.)

In 1870 the beautiful issue of 1869 was superseded by an entirely new series, of different design, which continued in use with some changes and additions until 1890. Probably no set of United States stamps presents as much difficulty to the collector as this series. There are five different sets aside from the reissues and special printings which, being of great rarity, we shall not refer to in this article.

The first contract for the printing of these stamps was made with the National Bank Note Co., of New York, by whom two different sets were made; the first had Impressed in each stamp a "grill" similar to that used on the previous issues of 1863 and 1863. This grilled set was in use but a few months when the embossing was discontinued, and has never been used on United States stamps since. With the exception of the one, two and three cents, the grilled stamps are quite scarce, the twelve and twenty four cents being of great rarity. The issues of the National Bank Note Co. were printed in bright colors on thin, crisp paper, which will snap like a new bank note. In 1873 the contract for printing the stamps was secured by the Continental Bank Note Co.; this company used the same kind of paper as the National, but engraved on each stamp from one to lifteen cents a "secret mark" to distinguish them from the previous issue.

The following is a brief description of the secret mark on each value:

One cent—A small crescent in the first white ball at the left of the top of the strip left of II. So a small disagnal line at the left of the scroll at the

One cent—A small crescent in the first white ball at the left of the top of the figure 1.

Two cent—Under the ball of the scroll at the left of U. S. a small diagonal line. This can seldom be seen without the aid of a good magnifying glass, and is the most difficult to find of all the secret marks. Three cent—Under the top point of the ends of the ribbon under "Three' a heavy line of shading. Ir. the National print this line of color is very light.

Six cent—The four vertical lines of shading on the extreme left of the ribbon under "Six" have been deepened and are much darker than in the National print. This stamp also differs in color from the first print, the National being a carmine and the Continental a dull pink.

Seven cent—At the ends of the two indentations in the design in the lower right hand corner there are two little semicircles, which in any ordinary specimen, are very plain.

Ten cent—In the scroll under the "E" of

plain.

Ten cent-In the scroll under the "E" of

Ten cent—In the scroll under the "E" of postage there is a small crescent.

Twelve cent—The balls of the figure 2 in 12 are cut into and form crescents.

Fifteen cent—At the bottom of the triangle in the upper left hand corner two lines have been made heavier; these two lines join at the bottom of the triangle and form a V.

It is believed that secret marks were also placed on the twenty four, thirty and ninety cent, but they have not as yet been positively determined.

bottles of Lundborg's perfumery. It is catalogued imperforate on white paper at forty cents, and on pink paper at \$150. It is generally sold at about half of these prices.

E. G., San Marcos—If your one cent buff stamp with head of Franklin was used in 1830, it is probably the one catalogued at 60 cents. A close examination will probably reveal a few little dots on the back which constitutes the "grill." This stamp was reissued in 1875 and 1880 without the grill, but it is nearly always found in unused condition.

C. T., Waco—There are sixteen varieties of one cent blue U. S. stamps on all of which is the head of Franklin, varying in value from one cent to twenty five cents. We cannot tell which one you have. All of the three cent green stamps with Washington's head are common. There are five varieties of the twelve cent black with Washington's head. These catalogue from 35 cents to \$1.75, according to the variety.

It is generally sold at about half of these cent, but they have not as yet been positively determined.

In 1875 the American Bank Note Co. secured the contract for printing the stamps. No changes were made in the plates, in fact both the National and Continental plates of at least one denomination, the ten cent, were used by the American Bank Note Co. The difference between this printing and the two preceding is in the paper, which is moderately thick and soft and provide will be necessary to detect these difficulty will be necessary to detect these difficulty will be experienced in distinguishing the varieties.

The secured the contract for printing the stumps. No changes were made in the stamps. On the contract for printing the stamps. No changes were made in the stamps. The stam

MISS F. B. BROWN 144 La Grave Stre GRAND RAPIDS, - MICHIGAN.

### The Numismatic Sphinx.

Willie Burns, Woodville, O.—Your coins have no premium value.

Elijah I., Gaylord, Mich.—The ordinary alf dollars of 1854 and 1858 command no premium.

Harry Cavanagh, New Glasgow, Nova Scotia.—The dealers charge twenty five cents for an 1831 dime in good condition.

D. E. Strouse, Baltimore, Md.—A crisp, new ten cent note of 1864, portrait of Washington, and value in gold at the sides, is worth thirty five cents.

Clifford Johnson, Bellvue, Wash.—The 1883 V nickels hardly command a premium. Certainly we know of no one who wants to pay over face value for them.

Bradley Crary, Larrabee, Ia.-Your coins are all very common. A coin so old that the date is worn off and the inscription illegible is rarely worth the keeping.

Harold A. Painter, Muncy, Pa.—A dollar of 1796 is worth three dollars. One of 1798, good as your drawing seems to infer, two dollars and fifty cents. The 1811 half dollar sells for eighty five cents.

Jack Dickinson, Newark, N. J.—Your English half penny with date 1700 must be one of William III., 1695-1702. The reverse shows Britannia seated. If the piece is in good condition it is worth half a dollar.

Loyd Bittenbender, Ponca, Neb.-Your 124 half dollar is worth seventy five cents. The trade dollars of 1878 unless uncirculated bring no premium, and the same may be said of your 1854 quarter and 1875 twenty cent piece. cent piece.

Harold A. Stone, Troy, N. Y.—Your rubbing is from an old Roman coin, but is not distinct enough to be classified. If you will send it to us with a prepaid envelope to your address, we will return it with the information you ask.

Hay Barnholt, Lancaster, Pa.—A Good 1810 cent is worth half a dollar; 1811 cent, one dollar and a half; 1826 and 1828 cents, twenty five cents each; 1850 half cent is worth twenty cents. Your other pleces while nice for a collection, command no premium. premium.

Elmer C. Foust, New Albany, Ind.—Your rubbing is taken from a Bank of England dollar, 1804. This was struck during the reign of George Ili., and, as far as we know, is the only purely English coin with the word dollar on. It is worth two dollars and fifty cents. and fifty cents.

A. I. Boyle, Jr., Pittsburg, Pa.—The cents of 1800, 1803, 1805, 1807 and 1808 are worth respectively, one dollar, twenty five, seventy five, fifty and sixty five cents; 1818, twenty five cents; 1831, thirty cents; 1837, 1845 and 1847, fifteen cents each; 1850, 1851 and 1853, five cents each. These prices are for the coins in good condition. five cents each. These coins in good condition.

Wm. E. Croumbe, Chicago, Ill.—To make a rubbing of a coin: Place the coin on some flat surface and place over it some smooth, thin, white paper, then with the coin and paper held firmly, rub with the flat end of the lead pencil over the coin. Many of the impressions of coins we receive made in this way are most admirable. ceive made in this way are most admirable.

Howard Parker, Carthage, Ind.—The 1875 half dollar commands no premium. Your copper piece is a store card of Alfred Willard. 149 Washington street, Boston, Mass. The store cards were issued for advertising purposes, and are not, properly speaking, coins. Some collectors make a specialty of them, one we know having upwards of two thousand varieties of them. them.

Roscoe Stotter, Forest, Ind.-Your draw-Roscoe Stotter, Forest, Ind.—Your drawing is taken from a coupon cut from a confederate bond of Feb. 20, 1863. These coupons represented the accrued interest on the bond, and as they became due they were clipped off and cashed. This coupon (January, 1865.) was the last presented for payment; when the next one became due (July, 1, 1865.) the Confederate States of America were no more.

Harry U. Higgins. Three Bridges, N. J.—Has twenty one half dimes of 1853 and reads in the August AMERICAN BOY that they are worth twenty five cents each. This is the price he would have to pay a dealer for a good 1853 half dime; of course they will buy of him as cheap as they can for that is their business and they expect to make a good profit in it. He will notice the addresses of dealers in coins in the advertising columns. ing columns.

Don Griswold, Sherman, Mich.—Sends a list of some of his coins. While he has some nice pieces for a collection, his list shows nothing rare. All the American half cents are desirable and sought after. The Franknothing fare. All the American half cents are desirable and sought after. The Frank-lin or "Fugio" cent of 1787, if in good condition, is always interesting. If a good rubbing of the old Roman and Egyptian coins could be sent, perhaps we may tell you more about them, but if poor and illegible it will be hardly worth the trouble.

legible it will be hardly worth the trouble. Meade R. Wells, Huntington, W. Va.— You have quite a variety of nice coins for a collection, yet nothing of any particular value from a selling standpoint. The true collector, however, collects for the satisfaction and knowledge obtained by possession, rather than the possible premium he might obtain. We hope you are one of this class. Your coin with Diez Centimos is Spanish, not English, and your confederate ten dollar bill must be dated 1863, and not 1813.

Cornelius M. Smith, Baltimore, Md.—There are two varieties of the 1836 half dollar, one has "E pluribus unum," 50c., and lettered edge; the other has no motto, reads 50 cents, and has milled edge. The former sells for seventy five cents and the latter for three dollars, in good condition. 1893 Columbian half dollars are selling for seventy five cents at the dealers.

Merle Rounds, Timson, Tex.—(1) Egyptian coin dated 1293 A. H. (2) Turkey, two para nickel of 1293 A. H. These two pieces are odd, but not scarce, usually sold at ten cents each. (3) A good half cent of 1806 like this is worth thirty cents. (4) This rubbing is from a double tournois of Henry IV., of France, 1608, and worth thirty cents. (5) Switzerland twenty in nickel, 1844, worth ten cents. (6) A Roman third bronze of Constantine, A. D., 306-337, which, though old, is a very common coin, easily duplicated for a quarter of a dollar.

rated for a quarter of a dollar.

Paul Wentz, Sharon, Pa.—Never use strong acids or alkalis in cleaning coins. Usually all that is necessary is washing thoroughly in soapsuds to remove all grease and dirt, then drying and rubbing with whiting and lastly chamois skin. Anything left after this had better be let alone. We saw a few years since a lot of ancient Greek and Egyptian coins that had been cleaned with acids and polished. They were clean, to be sure, and how they did shine with the lustre of their two thousand years, but to the numismatist and archaeologist their glory had departed never to return.

## THE NUMISMATIST

\$500.00 in Gold will be given to the agents doing the largest business this year. BOBINSON THERMAL BATH COMPANY, 700-785 Jefferson St., Tolede, O.

## This Splen Printing Outfit May Yours Er Your

NOT A TOY, BUT A 200 POUND OUTFIT,

Capable of Doing the Job Work of a Regular Printing Office. A Money-making Present. Value, \$50.

On April 1 next the splendid printing outfit shown in the accompanying picture will become the property of the person who, during March, becomes a subscriber for one year to THE AMERICAN BOY, or sends us a renewal of his present subscription, or sends us some other person's subscription, and comes the nearest to telling the number of immigrants landed from steerage (immigrants who come in the steerage of vessels) at the Ellis Island Immigrant Station, New York Harbor, for the month of March. The Government, in making its record of immigrants, counts only steerage passengers as properly such, although many immigrants arrive as cabin passengers, claiming to be visitors or tourists.

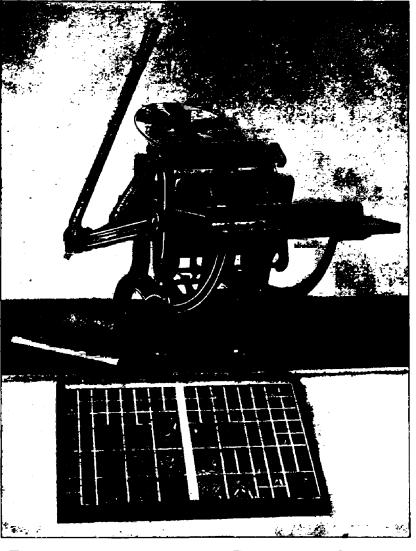

In order that boys may have some idea of the number of immigrants landed at this station, we will say that for the year ending June 30 last the number was 341.712; and in the twelve months ending June 30, 1899, the number was 242,573. Those who make guesses are to guess on the total for one month—THE MONTH OF MARCH, 1901.

Boys must guess upon the number of immigrants landed, and not on the number of immigrants arriving and not landed. Many are returned for the reason that they are afflicted with disease, or are likely to become public charges, or have been convicted of crime, or have come under contract for labor. Under the law, such persons are returned to the countries from which they come and are not allowed to land. The guess is on the number regularly inspected and landed. The figures for 1899 and 1900, as given, include only such as are landed. We have arranged with the Immigration Bureau so that we shall receive the names of all persons applying for information concerning the number arriving in March, and these names will be sent to us so that we will know who really guessed and who did not,

## Description of the Printing Outfit.

The press, of which a photograph is given, is a new PILOT PRESS, manufactured by the Chandler and Price Company, of Cleveland, Ohio, one of the leading printing press manufacturers of the United States. It is one of their most popular styles of presses - strong, easily operated, and thoroughly practical. All ordinary job printing can be done upon this press, the size of form printed being 6½ x 10 inches. The regular price of the press is thirty five dollars. It has a perfect bed and platen, with all parts adjusted so as to guarantee good printing and long life for the machine without need of repairs. Hundreds of them are in use, and the press has never been known to give dissatisfaction. A young man or boy with one of these machines and a lair assortment of type can make money. It is not a toy as it weighs over 150 pounds. With the press goes two rollers, a chase, metal quoins and key for locking the form in the chase, and "furniture a new type case full of new type and all the parts necessary to work. With such a press a boy can earn money and learn a trade. He can do all the ordinary printing of a job office.

No such chance was ever offered to the Boys of America to get a Printing Outfit.

## Who Are Entitled to Guess.

- 1.—Any one sending us his own annual subscription to THE AMERICAN BOY.
- 2.—Any one renewing his subscription, whether it has already expired or is to expire in the future.
- 3.—Any one sending us the subscription of another person, in which case both the person sending the subscription and the person subscribing are entitled to guesses.

When more than one dollar is sent, a guess is allowed for every dollar. Regular premiums, selected from our premium list, on the sending in of new subscriptions, are also given as heretofore. If there are any ties the contest will be decided by the drawing of slips from a hat, some prominent city official of Detroit, not identified with this paper, acting as referee. The name of the successful contestant will be published as soon as the Government record is made up-probably in the May number.

Any boy by hustling can get a good many guesses. He can renew his own subscription and get quite a number of new subscribers. and for every one of the latter he will be entitled to a premium as well as a guess. When you send in your money send in your guess.

This is the finest scheme ever offered to boys, as it gives them not only something that would otherwise cost them fifty dollars, but it gives them something that will enable them to make any amount of money for themselves and gives them an opportunity of learning a valuable trade.

Address, THE SPRAGUE PUBLISHING CO., DETROIT, MICH.

of the keel piece and place the whole several places to hold it firmly. Now nail two 4 in. pieces on ends of truss, as lettered b in Fig. 6, and carefully nail on the stem posts as indicated in the drawing, Fig. 6, with three 1½ in. casing nails. With brad awl bore holes for each nail so as not to split the wood. Brace up the stems by nailing to b. and brace them down to the end crosspiece on truss, stem down to end of f,

(Continued from Page 146.)

exactly straight up and down. Measure 21 in. from back of b, along keel, and put a mark; from this, measure off the rest of the keel into 21 in. At the center line fasten form m, at next line form n, then o, then p. Brace each of these down to crosspieces g with short strips. Be careful to have each at right angles with the keel and straight up and down. Nail one of your strips along the top of each form ex-

one on each side. Be sure that they are

ONE OF KENNETH M. RANSOM'S CANOES.

actly over the center line, also to ton of each stem post as in Fig. 6. If all is well this piece will be perfectly straight. Next nail a strip from stem to stern around the top edge of each form. The shape of your canoe will now be well defined. A side view will now look like Fig. 6. Be sure to keep all forms well braced so the shape will be true.

Before we begin to plank make your "dope" as follows: Put your white lead and one and one half pounds of putty into a basin with your Japan dryer: set this into a pan of boiling water on the stove and stir thoroughly until the putty and lead are all melted. Melt your beeswax in another pan and stir it into the lead, etc.; stir this thoroughly and let it cool, if it is too thick add a little Japan dryer.

With great care fit the garboard strake, as the one next to the keel is called into the 1/3 in. groove. This will be made out of your 14 ft. x 1½ in. x ½ in, pine strips. After putting them under the braces shove them into the groove up tight against the center piece of the keel. Fig. 9 shows a cross section of keel and first, second and third planks, and how they should be placed. Nail temporarily in the center and at ends twist up to bow post and clamp into place. It may be necessary to cut the under edge a little on the bevel, as it turns up, to make a tight fit. When it fits well nail along the keel every four inches with % in. brads, also nail securely on stem posts, holding your iron on opposite side as you do so. Use % in brads. Trim off around bow post, but do not cut flush. After the two sign, Fig. 7. garboards are in make a dozen clamps as follows: From your % in. x 1/4 in. stuff, cut twenty four pieces 6 in. long and twelve pieces 3 in. long. Next separate two 6 in. pieces by inserting a 3 in. piece at top. This will make a sort of clothes pin. Nail firmly and your clamp is made.

well done, it is the lightest and strongest used. Each strip is nailed with 1½ in, casing nails on top of the other, thus making a very strong construction which does not check as when wide \*\*\*\*.

Now take the canoe off the truss and after planing the rough ends smooth and after planing the rough ends smooth and after planing the rough ends smooth and after planing the stems, coat all with a good to dope and strips of cotton.

Fit on the outer bow posts which are to any subscribers of THE AMERICAN BOY sending the best description of circumstances under which he labored, together with photograph of finished canoe. A hand-with the strip is nailed after planing the rough ends smooth and after planing the other with photograph of finished canoe. The plane of the control of circumstances under which he labored, together with photograph of finished canoe. The plane of the control of circumstances under which he labored, together with photograph of finished canoe. The plane of the control of circumstances under which he labored together with photograph of finished canoe. The plane of the control of circumstances under which he labored together with photograph of finished canoe. other, thus making a very strong con-struction which does not check as when wide thin plank are used.

After coating the edge of garboard strake well with dope, in which a piece of twine has been pressed from end to end as a calking, pin on a strip with your clamps, and with great care nail through edgeways into garboard as shown in Fig. 9. Work from the center toward the ends; the nails should be four inches apart. Do not drive the nails crooked so they will come through the plank on either side; if you do, remove them.

It is apparent that it will take more stern and nail it into the planking with piece leaving a 1/3 in. space on each strips to fill form m, then the smaller 1/3 in. finishing brads. Next spring one side. Cut this off 6 in. from each end form p. For this reason after you have to this, nailing edgeways with 1 in. strips to fill form m, then the smaller & in. finishing brads. Next spring one three strips on each side, you will begin nails same as you did with planking. keel in the groove on truss, nailing it in to taper your strips. Nail two pieces together so as to cut two at once. Mark the center, and at 21 in. from this, both ways, begin to taper by cutting with your plane the upper edges. When the ends are finally reached your taper should reduce the width at ends to 1/4 in. The middle point of the strips must always be at form m. Continue to build 12 ft. x 2 in. x 1/4 in. oak. This bends up one strip on the other in this manner around the "coaming pattern." until the sheer strip running around the that the joints where the ends meet on top of forms is reached marked sides will be at center side block. Screw s. Fig. 6; build up at ends with this coaming at ends and on side blocks short pieces, cutting the ends of each so as to form a nice, true curving sheer. As you go around the curve you will have to bevel the under side of each strip a little. Put plenty of dope and a string between each strip. It is also well to nail the strips temporarily to the forms, using leather washers on the nails so they can be easily withdrawn. If you can see through the cracks do not be alarmed, but get them as tight as you can.

> The ribs come next, and should be spaced five inches apart. They are made from your 1/2 in. x 1/4 in. oak strips. Steam well and while hot bend in inside of boat. Get some one to help on one side. Mark where each rib is to go on keel and when you push it into place nail it at keel with two 1 in brads. Next hold the rib in shape for a minute, after which nail in several places with 5% in. brads from inside to outside clinching on the outside. After ribbing in between the forms cut all the ends which stick up flush with sides and nail a few strips across to keep the boat time and put a rib in its place. In the bows, where the angle is too acute to make the bend, use half ribs, putting one on each side. Now that the ribs are all placed, they must be permanently nailed. Beginning at keel, bore holes with your brad awl from inside to outside 21/2 in, apart; watch where the end comes out, and stick a copper clout nail any desired color. The deck and coamin the hole; drive through and carefully ing may be finished natural in varnish clinch on inside. Do this all over the boat and when this is completed the hard work is done.

The gunwales will next be put in. These are made from your % in. square oak and are nailed at the deck line on the inside of the ribs. Begin in center and nail toward ends, one nail at each When you reach the sheer at ends rib. spring carefully to conform with plank This piece should take a true curve, and any little uneven places in your planking can be made true by cutting it flush with the wale.

Now fit in block a (Fig. 7) and deck beams as indicated in same figure, nailing at ends through the gunwale. The deck beams are cut rounding, the top having a curve of 3 in. in 3 ft. A notch is cut 1 in. wide and 1/2 in. deep at the middle point of each of these into which a center piece running from a to d is nailed. The pieces which form the end of the cockpit, marked b, in Fig. 7, are cut from 1/2 in. pine board. While the blocks marked 1 are 1 in. pine, 6 in. long and 3 in. wide. Nail on as in de-

joins keel so it will fit nicely; then with your stove bolts, bolt it securely to the real or inner bow post. Begin to bolt at the keel and end at the top. Bevel to ½ in. at outer edge and flush with the planking. Set the boat again on truss and paint all under the deck beams two heavy coats of gray lead paint before putting on the deck.

Your deck will be made out of your ¼x¼ in. strips. Beginning at the outer edge spring a strip around from bow to

Let the ends v together where they meet. When the whole deck is done the seam where the strips v together will be covered by an oak piece ¼ in. thick. This piece will be 2 in. wide at the coaming and tapering to 1 in. at the stems.

Next steam and bend the coamings. which will be made from the two pieces Cut so with 11/4 in. brass screws. Have a blacksmith make six braces to be

screwed from coaming at side blocks with 11/4 in. screws to rib on side of These will support the side deck. Set all the nails carefully, dress off all the rough places and sandpaper the whole boat until smooth and even. This is a mean job, but the more you do the better the canoe will appear. Use coarse sandpaper (No. 3) at first. Scrub across the grain, after which rub with the grain. The brading 1/2 round oak moulding will now be screwed on to finish the sheer. Use 34 in. brass screws.

Putty all the cracks and nail holes. and if any large seams are seen calk with spun cotton. Thicken your dope with putty and use this for the cracks. from springing. Remove one form at a Let the putty harden a day, after which you will be ready to paint.

Clean up your shop so as not to have the dust on your work. Keep the canoe on the truss and paint the inside thor oughly with three coats of good white lead paint, gray being the best color.

Let each coat dry three days. After this is done paint the bottom three coats or painted. If the former is desired, use only spar varnish, for all others will discolor when wet. One coat of wood filler and two coats of spar varnish will be enough.

While waiting for the paint to dry cut 8 strips ¾ in. x ¼ in. x 8 ft. for your floor, and paint them thoroughly, as you did the inside of the boat.

Also cut your paddle from the ash board as in Fig. 8. The blades should be ¼ in. thick at the ends, gradually thickening at the center and handle. A leather collar on the handle, as indicated in Fig. 8, will keep the water from dripping on one while paddling. Copper tip the ends, sandpaper smooth, and finish with three coats of spar varnish.

When all is dry, nail in the floor strips, I in. apart. and the little craft is done, and you will be very proud of her. This canoe will safely carry a load of

500 pounds.

## Mr. Ransom's Prize Offer.

Of course, every wide awake boy will join The Order of the American Boy. Why would it not be a fine thing to have a Canoe Club as the leading feature of some of the Companies.

As an inducement to painstaking effort. I offer as a prize to any

tion and drawings are very plain, I will cheerfully answer all questions when the request for information is accompanied by a two cent stamp. For the benefit of prospective builders I make a special offer to furnish all materials for the work as described at a very low figure. See offer in advertising columns of this issue.

### A Prize Winner.

Charles Karkau, Lansing, Mich., earned fifty dollars and numerous premiums by obtaining subscriptions to THE AMERICAN BOY during the year 1900. He stood sixth in the list of lifty two, who won a total of one thousand dollars. In acknowledging receipt of the money he says: "I was very much surprised this morning when I received your check for lifty dollars. I did not time for Santa Claus. You can be sure that I will work all I can for the interests of your paper. I hope that your paper will prosper all the coming years."

### The Yacht Offer.

Thousands of guesses were sent us in the competition for the yacht described in our February number. The winner cannot be named until the Government Weather Bureau gets in all of its reports. Some guesses were faulty in that the guessers did not designate the "place" having the coldest weather, in a sufficient-

to every reader of this paper for selling twenty packages FLOWER SEEDS

Don't send any money; only send your address on a postal, and we will send 20 packages and premium list of best premiums ever given away. When seeds are sold send money, and we will send premium you select. Order quick, U. S. SEED CO., BOX 1840 DOSTON.

S. SEED CO., BOX 1540, BOSTON, MASS.

ly definite way. For instance, some said:
"The northern part of Minnesota;" others,
"Northwestern Montana." Such guesses
cannot be considered. The guess coming
nearest to locating the "place" registering the lowest temperature, of course, referred to a city, town, or postoffice. One
might as well say "Montana" as to say
"Northwestern Montana." Manifestly
such guesses are unfair guesses.

### The Flour All Delivered.

The ten barrels of flour offered as a prize in our December number have all been de-livered to the boys who won them, and by this time have all disappeared into hungry mouths in the shape of bread, ple and cake. Here 's hoping that no stomach ache and no dyspepsia resulted! Would that we could print all the letters of acknowledg-ment received. Here are three:

Old Orchard, Mo., Jan. 21, 1901.

Dear Mr. Sprague—The barrel of flour reached here today. I have been watching for it ever since I got your letter. I think I was the happiest boy in Old Orchard today. I think THE AMERICAN BOY is very good to give such a big prize to such a little boy, and I am very proud of it. My mama thinks the Gold Medal flour is the best flour made, and I think my mama knows, because she makes the best bread in the world. I enjoy THE AMERICAN BOY so much, and I think you must know all about boys. Thanking you very much for the flour, I am,

Your little friend,

DOUGLAS LACY.

Brattleboro, Vt., Jan. 26, 1901.

Brattleboro, Vt., Jan. 26, 1901.
Gentlemen—I was very glad to receive the flour, and it came on my birthday. I have not tried any of the flour, but I have heard that it was good flour. I like THE AMERICAN BOY better than any other paper, and I always look forward to its coming. I will try to get some subscriptions.

Yours respectfully,
ROBERT KENNEY.

respectfully, ROBERT KENNEY.

Pontlac, Mich., Jan. 27, 1901.

Sprague Publishing Co., Detroit, Mich.:

Gentlemen—After a delay that seems almost discourteous, I have to acknowledge both your courteous and generous treatment of a boy who is an admirer of and ardent reader of your "AMERICAN BOY."

Your letter was promptly received, informing me of my success in the prize contest, and to say that I was surprised as well as delighted is putting it pretty tamely. The "Pillsbury's Best" has arrived, all charges prepaid, and I only wish, Mr. Editor, that you could have joined us as we discussed our first "batch" of biscuit and honey. Whenever we have "Pillsbury's Best" we will remember your enterprise and generosity, and commend THE AMERICAN BOY to any who may partake with us, as long as it shall last. I was almost as greatly delighted with the opportunity for studying the complicated workings of a modern flouring mill as with the prize itself. It will pay for "THE AMERICAN BOY" several years. Long may it live to spur the ambitious boyhood to honesty, industry, frugality, and a heroic manhood.

Yours with kind wishes,

HARRY YOUNG.

## THE GENTLEMAN

NUMBER of incidents in my experience, of late, have made me question whether boys are as gentlemanly now as they used to be in "the good old times." As I was coming up the street, the other day, I saw two nicely dressed young fellows, of perhaps fourteen or fifteen, standing on the corner. A gentleman passed them who had a slight limp in his gait. He was neatly

but rather poorly dressed, and had the air of a man whom life had used hardly, but who was bravely breasting the wave and making the best of adverse conditions. He was not a jaunty, sleek, self-satisfied, well-conditioned man, but refined of face and unobtrusive in manner. The well-dressed boys eyed him closely as he passed, and when he was a few rods away one of them threw the core of the apple he had been eating so that it struck the gentleman in the back; then he unconcernedly resumed his conversation with his companion.

THAT little incident made my blood boil. Yes, I am not ashamed to confess it, boys, it made me downright mad—to use a term that we employ when we care more about being positive than about being correct or elegant. I would have thoroughly enjoyed stepping up to that insolent youngster and giving him a forcible lesson in good manners. But, unfortunately, the time of life had passed with me when I could do this without being considered a maniac, or being arrested for assault and battery.

THE trouble with the average boy of to-day, who assumes to be a gentleman, is just this—that his gentlemanliness is apt to be only a superficial gentility, whose roots are in the clothes rather

than in the heart. It is a kind of tit-for-tat gentlemanliness—well-dressed politeness to the well-dressed, deference to the able-bodied and fine-appearing, courtesy to the sleek. Instead of respecting weakness, it respects only strength. There is something meanly aggressive about it, that reminds me of the disposition of a cur, holding in his bark while a man goes along the street with a firm, steady step, but bursting out spitefully and tauntingly, if the man happens to slip or trip or stumble. I think it was that gentleman's limp, chiefly,

that brought the apple core flying after him. The limp was an evidence of weakness, of misfortune, of inability to retaliate. It placed the man outside the boy's class of "gentilhood," as old Chaucer calls it, and therefore subjected him to the contempt and insolence of the superficially polite.

LET me relate another instance of the same kind, that occurred while I was camping, or rather "cottaging," the past summer.

Not far from our cottage was the summer camp of a large and fashionable boys' school, located in New Jersey. Two of these boys came over, one day, and began firing a rifle near my host's premises.

They seemed trying to shoot as close to the house as they could without hitting it. My host's

sister was sitting out on the veranda, and finally a bullet whizzed over her head and grazed a corner of the cottage.

My host, who was working in his garden, immediately started out and ordered the boys off the land.

"See here, old duffer," was the cool reply, "I want you to understand that we're from N' Yawk. We're gentlemen, and we didn't come up here to be bossed around by

any old farmer." But when my host quietly called to me to bring his Winchester from the gun rack, these self-styled "gentlemen" changed their minds and departed.

house as the sist and head head head head with

T HOPE there are not many boys of the sort I have described; and yet I am afraid that the shallow, pretentious kind of gentlemanliness is increasing, in these modern days, at the expense of the good, old-fashioned, sincere, chivalric kind, that went clear down into the heart, and was pitiful and sympathetic and helpful as well as courteous, and gentle as well as graceful. I would a thousand times rather see a boy awkward in his manners and noble in his instincts and feelings, than polished in manner and selfish and insolent in heart. I love to see a boy deferential

to weakness of any kind, but I don't care a straw how obsequious he may be in the presence of strength and superiority. Even wolves are polite to lions. That sort of politeness does not count for much. Be a gentleman at heart, I say, if you claim to be a gentleman at all. Respect the burden, respect weakness, respect even inferiority—respect anything you can help. That is the Christian notion of a gentleman; and he who conforms to it is the only one who ought to bear such a beautiful and suggestive name.

### THE BOY WHO RODE A MOOSE

A Vacation Incident in the Maine **♦** Woods

<u> Xaaataaaaaaaaaaaaaaaaaaaaaaaaaaaa</u>

HAT boy's heart has not thrilled at the highly-colored account of the prowess displayed by some daring hunter in the Maine woods—his invariable battle with a moose, which, by a sudden coup de main, is always

vanquished? Sometimes in early life there is an inclination—usually deepening into a resolve—in the breast of every American boy to some time visit this sportsman's paradise. Such a desire was strong within me when I left college—so strong, in fact, that nothing short of a miracle could have deterred me

from my purpose. Fortunately, I was saved from plunging alone into this great wilderness by Jack Angleton, my college chum—"Lazy Jack," we called him—who expressed his intention of accompanying me if only, as he put it, to protect me from the ravages of wild beasts.

For two years, now, Jack and I had made an annual pilgrimage to the big forest in the neighborhood of Moosehead Lake, hoping devoutly that we might have an opportunity to display our skill on a moose. But aside from a half-grown deer, a silver fox, and several gaunt loup-cerviers, no game had come our way. The fall of '97 found us again ready for our vacation, determined to have our moose or languish in the hot, stuffy city ever after, as far as hunting was concerned. We had decided at the conclusion of our previous sojourn that our next would be in a different locality. In fact, our guide, a Winnebago Indian, rejoicing in the cognomen of James Otterfish, recommended Cauquomgomoc Lake as an excellent hunting ground, and there, after due deliberation, we decided to emigrate.

We proceeded by rail to North Twin Lake, thence up the Penobscot's west branch to Chesuncook Lake. The Cauquomgomoc River connects Chesuncook Lake with Lake Cauquomgomoc, the intervening distance being twelve miles. Up this river we paddled, and found ourselves, on the twenty ninth day of September, encamped on the west shore of the lake, with a pretty, sandy beach bordering the water immediately in front of us.

Cauquomgomoc Lake is a pretty sheet of water, about seven miles in length, with a width varying from two to three miles. As a whole, the scenery hereabouts is wildly picturesque. The forest-clad mountains, which overshadow the lake on the northwest side, prove an effective barrier between the water and the scorching sun on warm days in the summer and early fall.

We were itching to plunge at once into the woods, but the moose season would not open until October 1st, two days off, so we busied ourselves making a comfortable encampment. Once Jack, with an impatience that ill became a lazy person, suggested our striking out regardless of the game laws, but Jim Otterfish pointed a bony finger across the lake, where a canoe containing two figures was moving idly along the shady bank.

Who's that?" queried Jack, with some astonishment.

"Moose warden and him guide," replied the Indian, in his quaint English. "Him catch you shootin' moose to-day, you be fined."

Not only would a fine have been imposed,

but an everlasting disgrace, as well, for no true sportsman will disregard the game laws.

The long-looked-for day arrived at last, and after a hearty breakfast of fish, which our guide had hauled from the pool the preceding day, we struck into the woods. Aside from our rifles, which we carried ready for use, our belts contained revolvers, hunting knives and an abundance

of cartridges, while upon the broad shoulders of Jim body, his shovel-shaped antlers and prodigiously Jim was close behind and he, too, sped over the line carried a birch-bark moose horn suspended from one appearance. of his belt.

We were warm on a moose chase within two hours. Before that time had elapsed Jim declared that he saw fresh signs of a moose. To illustrate, he pointed to a tender sapling some distance off.

"Sapling been bent," he said; "moose eat leaves off."

A close observation proved this beyond a doubt, and a more careful scrutiny revealed hoof-prints at the base of the tree, where the ground was nearly devoid of grass.

The Indian, with the characteristic sixth sense of his race, was soon engaged in ferreting out other signs of the animal. We followed him perhaps a mile, when he suddenly seized his moose horn, which he applied to his lips. Immediately there echoed but the weight of the young athlete to tear it from though his heart would brea through the forest an unearthly sound, which gradually reached a high pitch, then died away beneath the boy, and Jack, without further ado, no one to say, "Go it, Tom."

It is a great error to call too often, experienced moose hunters will tell you, and Jim allowed at least fifteen minutes to elapse before calling again. The second call of the strange horn brought no response, and after a sufficient period had elapsed, the Indian sounded a third call. No sooner had the sound died away than an answer echoed through the woods, and so greatly did it resemble the call of the birch horn, we marvelled at the skill and ingenuity of the inventor of such an instrument.

Otterfish gave a grunt of satisfaction, then remarked that, as we were to leeward of the animal, success might crown our efforts. One more call brought the animal so close that we could hear him crashing through the bushes. Just as our guide had motioned us to conceal ourselves in a thicket near at sight of him again. But after traversing half a mile hand, a fine bull moose burst through the undergrowth and stood revealed to our admiring gaze. With his thick neck, long legs, and short, round

Vainly trying to pitch his burden into the water.

Otterfish was a bundle of provisions. Our guide also long and ugly head, he presented a rather formidable a little ahead of Tom, but enough to give him second

had started, as the moose hove Bignt, Jim's command and conceal myself in the thicket, but stumbled over a fallen branch and fell. At the same instant Jack's rifle spoke, and the moose jumped suddenly into the air with a loud bellow. was evident that the bullet had found its mark in some portion of the bull's anatomy, though whether in a spot that would cause any serious effect we could not yet determine.

The wound transformed the moose into a furymaddened beast, and instead of turning to flee, he gave evidence that he was ready for battle. He bore down full tilt upon Jack, who dropped his rifle and sprang for a low-hanging branch of the nearest tree. The branch proved to be partially rotten, and needed but the weight of the young athlete to tear it from though his heart would break.

care," and, fortunately, in full possession of his presence of mind.

At the same instant the branch struck the infuriated animal a sharp blow on the back, and he shit into the undergrowth on the other side of us, Jack clinging instinctively, and very tenaciously, to the base of his big antlers, and bouncing up and down like a tenderfoot on a Texas broncho. Jim Otterfich held his sides while his fat cheeks shook with laughter, and though it was a time of fierce excitement, the incident presented such a comical aspect that I. too, was forced to guffaw loudly.

It was several minutes ere we recovered sufficiently to start in pursuit. I picked up Jack's rifle and slung it across my back. At first we feared the moose would make such rapid time that we would not catch or more, we came to a small clearing, where a stream flowed swiftly through the forest.

Here stood the moose, beliowing fiercely, vainly trying to pitch his burden over his head into the water. But Jack had no longing for such a fate, and he clung fast, though the flerce bouncing had already made him lament that he had gorged himself with fish before leaving

camp. As soon as we put in an appearance, he shouted at the top of his voice:

"Shoot him! Shoot him! I'm pretty near the end of my rope, so you fellows will have to do something!'

"Enjoying yourself immensely, aren't you?" I could not help taunting. Then, after a moment's survey of the situation, I continued:

"Look sharp, Jack! I'm going to try a shot at his hind quarters!"

Jim nodded his approval to this declaration, and dropping on one knee, I took careful aim and fired. Just what happened I cannot say, for the smoke obscured my view for an instant, Then I saw Jack shoot into the air, describe a beautiful high arc, and plunge headfirst into the stream. The moose, weak from the loss of blood, rolled over on his side, and after a few convulsive kicks, expired.

Jack immediately came to the surface, puffing like a porpoise, but he uttered a shout of joy when he observed the fate of his late enemy. The moose proved to be one of the largest ever killed in the Maine woods, and his antlers now serve as a hat rack in the hall of my home. while Jack often lies on the beautiful rug he had made from his hide, that he might remember more vividly the time when he was the boy who rode a moose.

It may be well to mention that he is rather wary of tree branches.

### <del>┍╏╸╏╸╏╸╏╸╏╸╏</del>╍╏╌╏╌╏╌╏╌╏╌╏╌╏╌╏╌╏╌╏╌╏╌╏╌╏╌╏╌╏╌╏╌╏╌╏ GO IT, TOM

FLORENCE MILNER

Tom belonged to a settlement school and the school had furnished most, if not all the real happiness he had ever known. Here the good in him was developed until somehow he began to forget the bad.

He was a sturdy little athlete and won most of the races and other contests of strength Through various winsome traits he had found his way to the heart of his teacher and she was always interested in his success.

One day arrangements had been made for a foot race. Several boys were to run, although everybody was sure that Tom would win.

The preliminaries were settled, the race started, and the boys were off over the course. Tom led clear and free for about half the distance, then, to the surprise of everyone, Johnny began to gain upon him. Jim was just behind Johnny and running vigorously. Tom's feet seemed to grow heavy and Johnny steadily decreased the distance between them, until finally he shot past Tom and, with a sudden spurt. gained the goal fully five yards in advance.

place and to leave Tom out of the race.

Tom, what was the matter?" teacher as the defeated boy came toward her with the tears streaming down his face.

His only answer was a sob.
"Tell me what happened, Tom."

Tom dug his knuckles into his eyes to dry his tears and tried to tell his story.

"I started all right, you know—
"Yes, you led them all."

"But when I got half way there the boys began to call, 'Go it, Johnny, you're second.' 'Hustle, Jim. you're gaining.' 'Run, Johnny, run; you're most up to him.' But nobody said, 'Go it, Tom,' and some how it got into my legs and they wouldn't go;" and Tom, dropping to the ground in a heap, cried as

Moral:-Many have failed in life because there was

## The Men of Might, or The Lusty Nine

VIBOINIA PAUL

I YI! there fellows, wait a minute!" Frank Man-ning was running down Elm street, ki yi-ing at every swing of his long, ungainly legs. The group of High School boys paused in their aimless shuffle along the street and waited for Frank to overtake them. "Well, Shorty, (this was because he measured only six feet two, in his stocking feet), inquired Punk, (this, because he early expressed the conviction that some day he should be 'some punkins'), what is on your mind? You look excited." Shorty was breathless from his tong chase; but, as he recovered his

wind, he hung over the nearest picket fence and fairly tied himself into bowknots with laughter. When his contortionist exhibition had succeeded in waking up the boys to a proper degree of curiosity, he ejaculated: "Oh such nuts, such nuts!"

"Say fellows, I have got a scheme to teach her "Royal Highness" the rudiments of knowledge; sort of bring her up to date you know; kind of show her that boys have the same rights as those wishywashy girls."

"Why, in what way has her Majesty offended you?" inquired the Tucker boy, long ago dubbed "Little Tommy Tucker.

She has not offended me, at all; but she is new, and has had things her own way so far, and she'll think we are a lot of softies if we don't spunk up and do something pretty soon.

That's so," assented Punk, "we really have not initiated her properly; but she has been so sort of pleasant and has such an easy way of talking to a fellow that I had really forgotten that we owe her a duty. They say she just more than 'flaxed out' that tough set of boys at Granby," he added reflectively.

Flaxed out," sneered Shorty, "I don't see how she could 'flax out' anything, she isn't much bigger than a ball club.'

'Correct, my son," responded Punk, "your comparison is a good one-but, by the way, were you ever hit by a ball club?

The boys all laughed; but Shorty, whose imagination was yet in a very undeveloped state, exclaimed: You don't mean that she ever really tackles a fellow, to try to shake him up, do you?

Tommy Tucker joined in with the suggestion, that there might be more than one way to shake a fellow up. The discussion became general, and waxed somewhat warm, until Punk, who really was a youth of much inborn chivalry, said:

Well, Shorty, let's have your scheme; if it is not

anything really mean, I am in for it."

While the "men of might," or "the lusty nine" were huddled together and completely absorbed in their mischievous plot, which by the way, could not have been very mean, if one may judge by the genuine merriment of their boyish laughter, her Royal Highness pa-sed by. To her cheerful "Good evening, boys," nine hars were doffed from nine somewhat sheepish heads, and nine somewhat uncertain "Good evenings," quavered forth from nine shaky and tremulous voices.

Miss Gibson was the new High School principal in the thriving town of Dorsey. She was a tiny woman in stature, with two of the keenest, brightest eyes, and the sunniest smile, and the sweetest voice that

could be well imagined.

At the end of the first week under her management whom for obvious reasons the boys had always called existence. Their faces began to glow; it did not seem "Sulks," graciously conceded that Miss Gibson was nearly so funny as they had expected. not so bad as she might be. The boys all admitted that this was a great deal for Sulks to say.

With all her graciousness, Miss Gibson possessed a certain quaint dignity, which led the boys to call her "the Queen," or "her Royal Highness." There was not one among them who did not like her decidedly, and, maybe for that very reason they concluded to see if her "spunk," as they called it, was equal to her manner.

Every Friday afternoon was devoted to rhetorical exercises. A president and critic sat upon the platform, and in a very dignified manner presided over the meeting; called the various speakers to the rostrum. ushered in any chance visitor; led the calisthenics and took care of things, generally. The principal herself had nothing to do except to keep the best of order.

Now there was a certain time-honored custom in the

all, approve; but as yet she had not thought it wise to attempt any change. From the founding of the school, the girls had been allowed to bring their crocheting or any other bit of fancy work with which to busy themselves during the rhetorical exercises.

The schoolroom was large and airy and when all the pupils were assembled for their literary work, they numbered about two hundred.

On the Friday afternoon following the conference of the "lusty nine," as the boys filed into their seats, preternatural gravity was on the brow of each "lusty niner" and a small, neat package was in his hand.

The president and critic took their respective chairs and proceeded to open the exercises after the approved fashion. The girls took out their embroidery or other work, and everything seemed about to follow the usual custom.

Soon Miss Gibson's keen eyes discovered Little Tommy Tucker very quietly undoing a package, the contents of which he carefully spread out on his desk. It proved to be the squares and triangles that make a block of patchwork. With laborious difficulty he managed to thread his needle, and after putting on a huge iron thimble, he began to sew the bright-hued bits of cloth together.

In the meantime, Shorty had unfolded his package, which contained a long white cotton stocking set up on four knitting needles, and nearly ready to be "toed off;" a huge ball of cotton yarn accompanied his work, and he proceeded to go through the motions, at least, of knitting.

Hickory took out a tidy of most complicated design, and, armed with a crochet hook, which he handled in much the same way that he would a pitchfork, he began to get his sister's pretty piece of fancy work into a hopeless tangle.

Several who evidently could not get hold of anything strictly unique, had brought spools and yarn, and began to knit that long cord which runs through a spool, and that every child knows how

to make.

was pretty large, Punk's bundle and it took him some time to get it unfolded without making any noise; really exposed to but, when it was be a big white sheet, view, it proved to which he at once began to hem. Sulks had brought his darning; and the holes in the socks which he spread out over his desk, were so immense that he heaved a long sigh, as he began his self-imposed task.

Miss Gibson had grasped the situation instantly and, while realizing the gravity of the situation, and how easy it would be for uproarious confusion to grow out of the ludicrous spectacle, secretly she was much amused.

Every eye in school was directed toward her, to see what she would do. With an almost imperceptible gesture, she signed to the girl nearest her to fold up

her embroidery. She did so, and soon without a word being said, every girl had quickly laid aside her work, and was giving the most profound attention to the rhetorical exercises

Which he at once began to hem.

The boys who had not been invited to join the "lusty nine" in their work of proving to Miss Gibson that they were not "softies" but "men of might," conceived the brilliant idea of not even seeming to see the unusual occupation of their neighbors. If it had all been planned in advance, the school could not have responded more readily to the cue which Mis. Gibson's unperturbed manner gave them. Such attention to the essays, orations and declamations, the somewhat conscious performers had never before received.

Miss Gibson inwardly hoped that no member of the school board or interested father or mother would stray in to spend the afternoon. A heavy rain soon set in, and no one came.

The "lusty niners" worked away steadily, with an occasional side glance to see how matters were going. What could it mean! No one was seeming to see them; the very worst boy in school, a sullen, hulking fellow, even Miss Gibson herself was totally oblivious to their

Punk began to feel that his sheet was making him horribly conspicuous; he could not fold it up, so he began surreptitiously to stuff it into his desk. Tommy began surreptitiously to stuff it into his desk. Tucker slid his patch work into his pocket. Sulks held firm and darned away all the afternoon without making any perceptible impression upon a single hole; a few others, to keep him company, continued their work. But something, the very stillness of the room, told the "lusty niners" that the end was not yet.

Just before time for the dismissal bell, Miss Gibson

arose and, in her most engaging manner, said that she had been pleased to see the industrious spirit manifested by the young men in the senior class; that it is true that nature does not endow all alike, and yet she always compensates; upon those whom she deprives of brilliant intellectual possibilities, she graciously bestows mechanical skill; that she regretted the lack of time which

Dorsey High School, of which Miss Gibson did not, at | prevented a place in the school curriculum for sewing, embroidery, etc., but that she was ready to give instruction along those lines, out of school hours; and then, reading off the names of the red-faced "lusty nine," she respectfully invited them to remain at the close of school for an hour's work in her sewing and knitting class.

The school smiled but did not laugh aloud. 'lusty nine'' were in doubt; she had not said that they must stay, but she had respectfully invited them to stay. Now, what did that mean? Shorty who sat in front of Punk, started to go out with the school; but Punk whispered to him: "Remember that 'ball club,' Shorty; you'd better sit down." So Shorty sat down.

After the school had gone, Miss Gibson said: "Now, young men, we shall adjourn to the recitation room, and I shall show you how to get started with your work, so that when next Friday comes, you can employ your time to better advantage.

She opened the door for them to file in. They sat down in a row upon the recitation bench and waited. She seated herself behind a little table and placed a chair beside her. Then she said: "I see some of you have gotten your work in a sorry tangle; you must straighten it out; some of you do not know how to tie knots in your thread, or even thread your needle properly. As I call you to me, one by one, in order to show you how to do, the rest of you may be going right on

with your work and getting as much done as possible."

The funny side of it all struck most of them, and they went cheerfully to work. But "Sulks" had his reputation to sustain and he settled sullenly back, looking very grotesque, with his hands full of shockinglooking socks; but evidently determined not to do as he was bidden.

Miss Gibson did not seem to notice him, but she called Punk and his sheet to the seat of honor, by her side. "Now, Mr. Lee," she began, "when you are going to hem your sheets, you must either use a tape line to measure your hem or a little piece of card board. You should turn your hem nicely and evenly before you begin to sew, or you will have a very poor piece of work; this is the way." Then she turned and measured and basted a few inches; then she made Punk practice tying a knot until he could curl a thread around his forefinger and slide it off in a smooth little ball.

Next came Tommy Tucker with his patch work. She praised it and said that his mother must have taught him how to sew. He used his thimble awkwardly and had trouble in threading his needle. She had him practice awhile, and then called the next. Hickory with his tidy explained that he had not really ventured to do more than go through the motions of crocheting, because the pattern was too much for him. Miss Gibson quite agreed that it was too intricate a piece of work for a beginner, and breaking off the thread, she soon had him busily engaged in crocheting a chain, which he found that he could do nicely. So it went, down the line: every one seeing the funny side of it and taking hold cheerfully, because, he was beginning to admire Miss Gibson's spunk.

But all were intensely interested to see how Sulks, who had not taken a stitch, would come out.

'Now Mr. Murray, it is your turngand we shall have our hands full if we finish those socks to-night."

Sulks never stirred, but he sullenly muttered: "I haint done nothing to be kept an hour after school for, and made to darn socks, and I shan't darn 'em neither. Before Miss Gibson could say a word, the gallant Punk had sprung from his seat and excitedly exclaimed:

"Miss Gibson, if Sulk Murray won't darn his socks, we'll make him darn 'em; won't we fellows?" "Yes

we will," came back a united chorus.

Miss Gibson smiled and said: "Thank you Mr. Lee, but Mr. Murray wants to learn how to darn, I know," and then turning to him she said again, "Now Mr. Murray—" Sulks looked down the line of faces, that scowled dark-

and concluding that disthe better part of valor, shuffled along to the he was drawing the ly through the hole, and sunshine of the beamed upon him, ly obliged to melt.

now that it was time for the lesson to close, Miss Gibson said: "It is all right boys, I understand; I quite agree with you that the girls should not do fancy work on Fridays, but you really did not need to take this means to effect a reform. However, with your help, Friday henceforth be treated with the respect due them. "Good night, now."

The boys thrust their work into their pockets and rushed out. Once off the school grounds they shouted with laughter, and voted unanimously that the "initiators" had been "initiated."

On the following Monday, under the leadership of the gallant Punk, each offered a personal apology to Miss Gibson for his foolishness; and the subsequent history of the Dorsey High School shows that the "men of might" composing the "lusty nine" did not again try to

establish their prowess.

## The Great Bicycle Race at Pultney

~~~

The Juniors of the Pultney High School had challenged the Seniors to a bicycle race and had appointed a committee of three to deliver the challenge and represent them in making the arrangements. The two upper classes of the Pultney High School were unfriendly, and especially so since the corner stone which the Seniors had bought and had prepared to lay in the foundation of the new school building had been spirited away by the Juniors and sunk in the bottom of a neighboring creek, as was generally supposed. The Seniors had good cause to suspect the Juniors, but had no evidence. The result was bad feeling that showed itself on every oc-

When the president of the Senior class called his classmen together and read the challenge, there went around the room a murmur of displeasure. Jack Edwards was the first to speak, and he declared emphatically that, in view of all that had happened, the challenge was a downright insult. Others said the same, until it seemed probable that the challenge would either be ignored or sent back with a curt refusal to have anything to do with the Class of '99. Then Bob Phillips suggested that the class could not afford to appear afraid of a race, and that a victory in an open, honorable contest would do more to humiliate the under classmen than anything that could happen. Then, too, there were in the Senior class J number of good athletes and several excellent riders, and these fellows were quick to show their spirit at the meeting and demand a chance to show their prowess; so by a good big majority the Senior class accepted the challenge and appointed a committee of three to act with the Juniors' committee to arrange the details.

In due time the six boys met and chose a seventh member and went to work. The committee set as a date a Saturday about a month away. Rules and regulations were drawn up and signed. Each class was to select five men for the race. The wheels must be of the same gear and must be approved by the committee. The track was to be laid out on the ball grounds back of the college, elliptical in form, a half a mile in circuit, and the contest was to be one of skill and endurance. The contestants were to go on the track at one o'clock and race till four, and the one covering the most ground in the three hours was to be the victor. Starters and judges were chosen and all preliminaries were settled and thoroughly

The challenge was a downright insult.

understood. Then each class chose its five representatives. The Juniors found no trouble in picking out their five for they were a husky lot of boys; but the Seniors, much to their chagrin, found some difficulty, ful day drew near the Class colors of '98 and '99, the for shortly after the challenge was accepted. Ned Burformer of pink and blue and the latter of crimson and and two Seniors, and the excitement was running roughs, their crack bicyclist, had been summoned gold, adorned everything. There was not a wheel in high. At a quarter to four three were flying around home by the illness of his father, and Bud Thomas, town that did not bear streaming from its handleanother good one, had got a sprained ankle that stubbornly refused to mend. What was to be done? It was too late now to back out of the contest. It had been advertised in the papers and college spirit was running high. To withdraw now was to incur lasting disgrace. At a meeting one night about two weeks previous to the day of the race, the class solemnly debated what to do. Some were in favor of withdrawal. It would not be a disgrace, in view of the sudden illness of Ned's father and Bud's sprained ankle, things which could not have been foreseen. There were more, however, who took the opposite view, and the atmosphere of the little room was heavy with gloom and disappointment. Finally a to prevent the riders from cutting across lots or steal- the track and the little Senior was going like the

Spent most of his time folling on the campus grass.

slight, almost frail looking boy arose and was at once recognized as Alfred Wilson, the most studious boy in the class—a boy every one called "preacher" because it was known that he intended to go, after graduation, to a theological seminary and study for the ministry. He was a close student—too close, for his health. He had never been seen on the ball grounds and was the last man whom the class would have chosen for a contest of physical strength. The boy's face was pale and his eyes shone with peculiar lustre.. "Fellows," he said, "I'll take Ned's place. It's been some time since I rode much, but I would like to try for the honor of my class. I may not look very strong, but two weeks' practice will make a lot of difference. You know I have spent my vacations down among the hills, and I have done some pedalling over roads that tire the best riders, and I am not sure but my legs can stand a three hours' run with a good deal bigger fellows. Put me down for one and I'll do my best anyway. They shall never say that the Class of '98 was afraid."
"Hurrah!" shouted every boy in the room. "Bully

for Alf Wilson! What's the matter with Alf? He's all right. Who's all right? Alf Wilson."

To tell the truth, every boy in the Senior class had the profoundest respect for the quiet, unassuming, determined fellow who led the class in grades and kept himself clean in manner and habits and was going to be a minister. So it was decided that Alf

The Juniors laughed and sneered. "The preacher," they said, "will be the first one to drop out of the race. It's easy," they boasted; "we've got 'em beat already. It's all done but the cheering. Hurrah for '99!"

Wilson should be one of the five.

Then the fives went to work. They read everything they could find about the proper things to eat when preparing for a test of physical strength. They spent every spare minute exercising. When not on their wheels spinning around the tracks or on long pulls over the country roads, they walked and ran to improve their "wind," and wrestled or battled with the punching bag till they were almost exhausted. To tell the truth, they almost overdid the matter. The Juniors strutted about conscious of their apparent superiority in physique, and Jed Andrews, the big, lanky Junior who was expected to win sure, spent most of his time lolling on the campus grass telling how easy it was going to be for him. The Seniors, as if by common consent, recognized the master mind of their pale faced classman, Alf Wilson, even in this matter for which he seemed so little fitted; and when he counselled moderate exercise, early retiring, and careful eating, they obeyed and imitated him.

The townspeople grew interested, and as the eventbars long ribbons to denote the sympathies of the owner. Parasols, canes, buttonholes, all bore little knots of ribbons betokening loyalty to one wide or the other. The Juniors, being the younger class, had the most friends, but the Seniors were not without theirs, and many a young girl wore the pink and the blue, "because," as she said, "the Seniors have lost their best men, you know, and I feel sorry for them."

ing ground. The spectators were allowed within the circle made by the ropes, but not outside, save a certain number of friends of each side who were to render such assistance to the riders as was required in case of accidents or unforeseen occurrences, together with the starters, timekeepers and judges. The teachers were there, and every pupil, of course. The townspeople turned out en masse. Among some of the rougher element, it was reported, there was some betting, but no one was found who had seen it. To tell the truth, nobody tried very hard to prove that there was, for it was said that one of the Seniors had said that if there was any betting he would retire from the race.

It was a pretty scene, for from every post along the track the class colors streamed; hundreds of pretty girls in their natty bicycle costumes and their gayly bedecked wheels were there; and to add to the excitement the Pultney brass band played Sous.'s marches and two-steps till it looked for a while as if the field was a great ball room and that at any moment one might see couples whirling away like fairies over the green sward. Then the five Seniors came from the little tent which had been erected as a dressing room, and a shout went up that caused many a farmer working in his fields a mile or more away to look up and wonder. They wore sweaters, knee breeches and low shoes, and each propelled at his side his wheel—sleek, clean and shining—almost a breathing thing, so graceful and so beautiful.

In a moment more appeared the Juniors, similarly attired, and another shout went up louder even than the other, "Hurrah! There they are! They are the fellows! See that big Jed Andrews! What sinewy legs! Nothing can beat that fellow! Hurrah for

Then the ten mounted their wheels for a little trial practice to stir the blood. No one attempted any spurting, until, passing a crowd of his admirers and urged on to show his speed, Jed Andrews bent his back and away he went around the track-once, twice, three times, cheered by his friends and admired by everybody; and he would have kept on going had not the starters signalled for the racers to line up. Positions were assigned by the starters and all were ready. Each man bent over his wheel listening intently for the pistol shot that was to be the signal, 'Go.'

Bang! Away they went-slow at first, for this was not to be a dash for victory but a long contest in which every man understood, or ought to nave understool, that the racer is wise to husband his strength.

Alf Wilson had made a study of his opponents and well knew that the most dangerous one among them was Jed Andrews. He knew, too, that Jed was reckless and thoughtless, and that if he was to be beaten it must be by superior generalship; so he watched him. He saw at once that the fellow relished popular applause, that he was proud of his strength and of his wheel. He saw with a degree of satisfaction not unmixed with surprise the performance of the big fellow as he pedalled fast and furious around the ring before the signal for starting. Inwardly he felt that his only hope for the success of his class lay in the foolish vanity of this rider. He laid his plans with the shrewdness of an old general. He instructed each of his brother riders to watch a chance and whenever possible to lure Jed into a spurt—to give him a good run, then fall back, take it easy, and let the next one take him.

The plan worked admirably. It was honest, too. for it had been agreed that skill in maneuvering as well as ability in holding out was to count. Round and round they went. An hour went by and showed little advantage for either side. Jed had been drawn into three or four lively spurts, and when each time his opponent dropped back, as he purposely did, Jed kept on at a terrific clip for a half mile more just to show the cheering crowds, who were with him now almost to a man, that he could beat his opponent and have strength to spare.

Alf saw this with his eager, watchful eyes and kept plodding along reeling off the miles. He caused no comment or enthusiasm—scarcely a remark, except now and then some one would say, "how pale that boy looks. I think he ought to leave the track."

During the second hour three boys left the track. one, a Junior, having taken a tumble, and the others. Seniors who were played out. One of the latter returned after being rubbed down, but he stayed only for a short time; he was out of the race. At thirty minutes of four there were on the track two Juniors the ring, two Juniors, Jed Andrews and another, and one Senior, Alf Wilson. The ropes barely held the people away from the tracks as they pushed and urged and shouted. "Go it, Jed!" "Good boy, Jed," shouted the Juniors, and it was noticed that the tougher element among the young men from the town were urging the big racer as if big stakes hung on the outcome of the race. Two of these fellows ran away to the farther side of the track and were seen to run along with Jed a few feet and call to him. next time he came along he slowed up and they passed him a sponge which he took between his teeth. He was losing ground; his strength was failing him. He and the pale faced little rider were now alone on

wind. Jed heard some one calling, "Go it, Jed; five minutes more and you win. Keep it up!

Jed's legs felt like logs of wood; they refused to obey his will; the pedals kept turning, but for the life of him he could not send them faster. He was approaching the two men again. They passed him a small flask. Jed took it, took a good swallow and, throwing it away, bent over his bars and pedalled like a young demon. The crowd saw it. whispered some; "Shame!" cried others.

One more lap and Jed would win. The little rider was close behind him. Jed's brain fairly reeled, and those who looked on saw his wheel stagger, but it kept on. The little Senior was within a few feet of him. The crowd almost to a man was now with the smaller boy. "Go it, Alf. You've got him. Isn't it glorious!"

One last spurt and it is over.

The crowd was massed about the finish line. The riders are one hundred feet away. One last spurt and it is over. The pale face of Alf Wilson is set rigid as iron, and as noiseless and steady as the sweep of a bird his pretty machine with its streamers of pink and blue sweeps down upon the big rider. Jed has a look on his face no one ever before saw, and as his wheel glides over the line a half a length ahead of Alf's, the half-hearted cheer that goes up is a sign that Jed Andrews has won the race, but lost his good name.

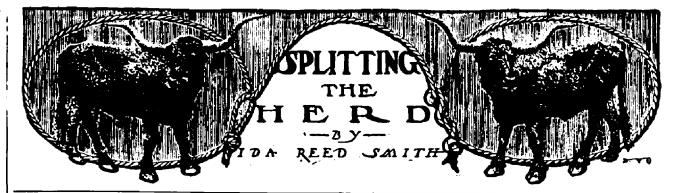

That night there were four candidates to be initiated into the Adelphian Society of the Pultney High School. Jed Andrews and Alfred Wilson were two of them. At one point in the initiation the candidates stand around an altar on which incense is burning. The candidates pledge fidelity to one another as brothers—they promise to prefer one another, and in all their dealings with one another to be true.

The candidates were saying these words over aloud in concert, when, suddenly, Jed Andrews stopped. "Hold on, brothers; I can't go on with this thing any further till I say one thing. I finished first in the bicycle race to-day. I did it unfairly. A fellow offered me fifty dollars if I should win, and when he saw I was losing my strength he gave me whiskey and I took it. I didn't win that race. Alfred Wilson beat me. I shall not go on with this business till he says he'll forgive me for my cowardice, and if he does that I'll return the money to the fellow who paid me, and I'll see that my class does not claim the honor Alf Wilson won for '98."

The lights were out in the room; there was just the fickering glow on the altar. Not a boy dared to

speak. Jed Andrews held out his hand and Alf Wilson took it.

The initiation went on. The Class of '98 won the bicycle race. The Class of '99 did the square thing. The High School at Pultney never saw happier days, and the bicycle race did it.

EVERAL years ago Gard Stuart spent the summer vacation at Fort McKinney in western Wyoming, the guest of his uncle, the commandant of the fort. The time was brimful of excitement and adventure of the kind that boys like best, and Gard's recol-

lections of the time are, in the main, delightful; but there was one "bad quarter of an hour," the memory of which is still strong enough to give him an occasional attack of nightmare, when he lives over again the sensations he experienced while "splitting the herd."
It happened in this wise: Gard and Ron Gilmore,

a boy of about the same age, from a ranch ten miles away, started out one morning for a day's chicken shooting. Mounted on their tough little ponies they left the fort and struck across country for a certain valley said to be much frequented by the birds, taking with them a dog belonging to one of the lieutenants, warranted by the owner to find birds, if birds were to be found at all. They reached the valley after an hour's brisk canter, and picketing the ponies to nibble on the bunch grass and sage brush if they felt so disposed, the boys went through the ceremony of putting the dog on the scent and then followed patiently as he led them up hill and down, over level stretches of ground and into tangles of weeds, right, left, forward and back; but never a speckled feather fluttered to gladden the eyes of the young hunters.

"That dog isn't worth the powder that'd send him to dog-heaven, or I'd ticket him straight through," growled Ron wrathfully as the dog ceased snuffing among the weeds and came towards them, wagging his tail in complacent consciousness of having done his best. "Get out, you blamed overgrown poodle! Make tracks for home and chase the cats. It's all you're good for. Now, Gard, we'll try our luck without any incumbrance. Let's strike for that little gully over yonder. I remember getting two brace of hens there last year."

Crawling through a barbed wire fence that separated them from the ravine, they pushed on toward it until suddenly Ron stopped in his tracks with a low whistle of dismayed surprise.
"What's up?" asked Gard, and for answer Ron

pointed across the gully saying sententiously: 'Horns, my friend. Look there."

Gard looked, and half a mile away he saw a great herd of Texas cattle. Even at that distance their long, sharp-pointed horns had a wicked look, and it was not in the least reassuring to discover that they were coming down the slope towards the boys. They were not moving rapidly, but their heads were up and it was quite evident that they had seen and resented the approach of the hunters.

"Guess we'd better be getting back to the horses," remarked Ron; "those Texas brutes haven't any use for a man on foot.'

The boys turned and put back for the fence, but as soon as the cattle saw the movement of retreat the advance guard began to bellow and with heads lowered, the herd, six hundred strong, broke into a canter and swept down the hillside, a veritable avalanche of

dull red hides and sharp white horns.
"We're in for it," panted Ron as he and Gard took to their heels after crawling through the fence, "maybe the ravine'll stop 'em, but won't do to take any chances. Hope to goodness we didn't drive those pins in too deep.'

Gard glanced over his shoulder as they raced for the horses, and he declared afterward that his cap blew off because the raising of his hair lifted it from his head. The cattle did not stop for the ravine. The

leaders charged down one side and up the other, the herd hard after them, their horns clashing together with an odd, clicking noise, bawling like mad all the while, a deep, thunderous bellow impossible to describe but awful to hear.

"The fence!" gasped Gard as he bent over his picket pin and wrenched it loose; "won't the fence stop 'em, Ron?

"Not much," said Ron grimly, glancing back at the terrible red sea surging towards them as he sprang upon his pony. "They're past caring for a few pricks. A ten-footstockade wouldn't stop 'em now. Up with you, Gard, or we'll be under their hoofs in less'n no time. Even as Gard swung himself upon his pony the herd struck the fence and it went down before the charge,

wire, posts and all borne flat to the ground. Turning his pony, he was about to ride for his life up the steep hillside when he heard Ron yell frantically: "No, no! They'll run you down before you can get to the top. It's our only chance to split the herd. "Come on."

With a shout Ron put spur to his pony and rode straight at the wave of glistening horns that was so perilously near, and Gard followed, hardly knowing what he did. Nearer, nearer, swept the infuriated herd, until the boys could see their eyes, bloodshot with rage. They were barely twenty feet from Ron and his wiry little pony when, as he fired his gun over their heads and came dashing at them with a yell that would have done credit to a Comanche, one of the leaders swerved to the right and another to the left. As though split by a wedge the herd divided to follow one or the other, and into the gap thus made rode the two boys, striking this way and that with their clubbed guns, yelling like mad at every step.

A minute or two and it was all over. The two halves of the herd swept off to either side, leaving the boys coughing and sneezing in a dense cloud of dust. And, now that the danger was over, conscious how great it had been. Gard tumbled from his pony and flung himself flat on the ground without a word. Perhaps it was not all dust that choked him. Ron made a pretence of whistling as he tightened his saddle girth, but his fingers shook and his lips refused to pucker, so he gave up trying to do either. Neither of the boys had any desire to resume their hunting, so after awhile they mounted and rode off towards the fort, saying little but thinking much. For some distance their way lay in the wake of the left half of the divided herd, and it did not raise their spirits in the least when they came across a trampled mass of blood-stained brown fur, all that remained of the worthless but well-meaning dog who had vexed them only a little while before. He had not been quite quick enough about "making tracks for home."

At last Gard said:
"I've always prided myself on having presence of mind, but I flunked cold this time. It makes me sick to think what would have happened if you hadn't come to the front. That thing back there—" Gard come to the front. That thing back therebroke his sentence in two, but the shudder that ran

over him made his meaning clear.
"Oh, pshaw!" replied Ron, with boyish dislike of praise or thanks for a brave deed; "you were off your range. It wasn't to be expected you'd know that cowboy trick. If we'd been caught by a blaze in one of your city sky scrapers, now, likely I'd have lost my head and you'd have had to carry me down the fire escape.'

'Don't believe it." said Gard, "but if I ever do get caught in such a tight place on my own range—well. I hope I'll know it as well as you do yours, Ron Gilmore; that's all."

bearing upon the subject.

(Begun in October.)

Review of Preceding Chapters: Jack Carroll, Frank Chapman and Ned Roberts, three boys whose homes are in a village in the far East, obtain the consent of their parents to go to Denver for a visit to Robert Sinclair, a friend of Jack's father, who is a painter of mountain and Indian life, and spends the greater part of his time among the Indians. They are accompanied on their journey as far as Chicago by Mr. Carroll, and are greatly delighted with the sights and sounds of the great city. On the train for Denver they meet Jim Galloway, a trapper, who tells them a true story in which his life is saved by a white man, who was living at the time with the Indians, and turns out to be Robert Sinclair, the artist, whom the boys are going to visit. The boys tell the trapper the story of Sinclair's life. The train on which they are travelling runs into a herd of Buffalo and Ned shoots one. On arriving at Denver the trapper leaves them and Sinclair and the boys buy their outfit and start on the trail for Pike's Peak along the foot of the mountains. The first evening in camp Sinclair tells the boys a story, and Ned's pony makes a dash for home, but is captured by Sinclair. The day following Frank is lost among the mountains. He kills a stag, and spends a night alone in a canyon. He is captured by Indians, taken to their camp, escapes death by its being discovered that his captors are friendly to Uncle Bob, the Indian painter. Indian painter.

CHAPTER XIV.

HE Indians were now as friendly toward Frank as they be-fore had been unfriendly. They vied with one another in their efforts to please the boy and atone for their intended cruelty. One by one the young warriors who had divided among themselves his belongings, brought them to him until he found himself in possession of his pony

and even of his bootsthe latter being restored with evident feelings of

disappointment on the part of the dandified young buck who had been strutting about the camp in them much to the gratification of his pride and the discomfort of his

Frank soon found that his escape from death at the hands of the Indians did not mean his release and return to his

friends; the Indians evidently had no such thing in mind. It was going to be a case of adoption, and his foster mother was to

be the old squaw who had been the means of his deliverance. Her joy at the turn of affairs was manifest—not so much in her expressionless face as in the quickness of her movements and the incessant crooning of weird songs that sounded like psalms of thanksgiving, very unlike the mournful tone of her chants of the night before.

The boy was led with much ceremony, followed by the entire village, to the tent of the old Chief, which he was bidden to enter. Then a half dozen of the older warriors, with their Chief, crept in and silently seated themselves in a circle; a long pipe was produced, lighted, and passed from one to another, each in his turn taking a few vigorous puffs. Frank found this a trying experience. The pipe and the smokers were none too clean, and the boy was not accustomed to the taste and smell of tobacco. He did not hesitate, however, to take the pipe and go through with the ordeal, for he recognized the act as one of courtesy and as indicating the friendly feelings back of it. Then a bowl of antelope meat was brought in and each Indian in turn, giving precedence to Frank, drew from it with his fingers a portion and transferred it to his mouth. Then there was more smoking, and the Chief stood up to talk. Frank would have given much to know what he said, but from the Indian's gestures and his occasional repetition of the word "Mananeah" he knew that Uncle Bob and himself were the subjects of the discourse. Two or three other Indians followed in short guttural responses, and Frank wondered if he was not listening to after-dinner speeches as eloquent as any the white man hears. Then the accompanied by the old squaw, who kept at a respectively. Some of the men and women, too old for walk-

company lapsed into profound silence and finally broke up, the Indians quietly, one by one, withdrawing, until he was left alone with the old Chief. He was curious as to what was next to happen, and was not long in ignorance, for from beneath a pile of buffalo skins the Chief drew a collection of sketches, on each of which appeared the Indian name of Mr. Sinclair, and handed them, with evident concern for their safety, to the boy. Frank looked at each and nodded his approval and pleasure, and the old Indian grunted and grimaced. There were pictures of Indians on horseback decked in gaudy attire; strong limbed young warriors astride untamed ponies dashing after a herd of buffaloes; old warriors sitting in solemn counsel smoking the pipe of peace; an Indian camp depicting the domestic life of the red man; and one particularly striking sketch of an Indian boy taking his first lesson with bow and arrow.

Frank handed back the pictures to the Chief with a smile and nod of recognition and gratitude, and then waited for the next move in this strange interview. The Chief quickly returned the sketches to their place, and then turning to a pile of buffalo robes he selected one of the best-that of a buffalo calf, with dark, well matted hair, soft and warm. With evident pleasure he laid it at the feet of his guest. Frank guessed instantly that it was as a present to him, and that the Chief had given him his choicest possession. Quick as his boy wits could work, he made up his mind to return the favor; so, taking out of his pocket several bright coins he held them out to the old warrior, whose eyes twinkled with delight.

Frank now knew that he had a friend on whom he could depend.

The Chief, after sitting for a long time smoking and gazing at the boy and turning over the pieces of metal that, bright and beautiful, lay in his dark, bony hand, finally stepped to the door of his wigwam and, ushering in an Indian youth, indicated that Frank was to follow him. The Indian boy was about eighteen years of age and Frank judged him to be a son of the Chief—and in this he was right. He was as straight as an arrow, and in his face was a look that seemed to defy fear and yet was neither coarse nor cruel. His carriage was superb, and as Frank walked behind him from the old Chief's wigwam he envied the Indian's free and unfettered manner of life. He felt that in a contest with that sinewy fellow he would be a mere plaything. Frank determined at once to cultivate the friendship of the young Indian; and as they approached the wigwam which had been his prison of the night before, and from now on during their stay in these parts was to be his home, he slipped from his finger a ring, which he recalled he had traded a jackknife for one day in school, and handed it to his companion. The Indian boy's face lit up with an innocent expression of delight which seemed ill-befitting the savage blood in his veins, and Frank had made another friend.

They were now at the tent of the old squaw who was to be his Indian mother. She was an ugly, unkempt creature, but she had been kind and had saved his life, and that was enough to appeal to the boy's heart, so he was not sorry to find himself again in her hospitable home—rude and uncomfortable as it was. The old squaw had been making things comfortable for him. Buffalo robes had been carefully spread about a fire that burned briskly in the center. sending up a volume of smoke through the tiny hole at the apex of the tent roof. Spread out on one side was a motley array of Indian gewgaws and fantastic wearing apparel-moccasins, and feathers, and strings of beads made of the teeth of animals, braids of horsehair beautifully woven, several strong bows and an assortment of arrows, a lasso and several stone tomahawks, and some rude garments of skins.

Were all those trappings for him? The thought flashed through his mind that henceforth he was to be an Indian and that the old squaw had brought together this motley collection for him to wear. He was right; and as he had started in to please these people and gain their friendship, he wisely made up his mind to do what was expected of him, so without much formality he began to don the Indian finery. The moccasins felt good to his feet, but as to the other things, he scarcely knew how to use them; and when he had succeeded, somewhat to the amusement of the Indian youth, in putting them on, he felt awkward and not a little confused.

The result was remarkable, however, on the Indian lad, for he at once signified a desire to parade the

table distance, and in and out among the wigwam3 Frank was led—a sort of performance he did not relish-with eyes peeping at him from every side and a dozen or more young warriors bringing up the tail of the procession as a sort of guard of honor.

During that whole afternoon Frank was a target for observation and remark on the part of the village. If he mounted his pony to race with his supple young Indian friend, every young Indian did the same; if he tried to shoot with his bow and arrow at a mark, every Indian in the village looked to see how near he came to hitting a bull's eye, and grunted his or her delight or disapproval at his varying success! if he ran a race with one of his young companions, the whole village came shouting after

When night came and he lay down on his bed of skins, he was so tired he fell asleep at once, but not without a homesick thought of his parents and his friends, and a big-sized wonder as to what was to become of him. Then came dreams in which he became a great chief and marched all of his tribe back to the States and introduced them to his school friends; and just as he had accepted all of his old friends as members of his band and they were about to set off again for the hunting grounds of the west. his father appeared on the scene with a policeman, and he woke up to find it was morning and the whole Indian village astir with unusual noise and confusion.

CHAPTER XV.

When Frank emerged from the tent he found the Indian women busily engaged, some in taking down the wigwams, others in gathering together their scanty effects and binding them upon the backs of their ponies, while children of all ages were running to and fro playing with the dogs and dodging in and out amid the confused crowd of men, women and horses, shouting like young savages that they were. The old Indians were standing in groups at a safe distance from the busy scene, or sitting singly, placidly smoking. One big fellow was standing over a squaw, shouting at her in a loud and rasping voice. The young Indians were astride their horses, riding like mad in a circle about the camp, brandishing their weapons as if in pursuit of an imaginary foe, their long hair streaming behind them and their nearly naked bodies glistening in the morning sunlight.

Frank saw that at their head rode his lithe companion of the day before, his body erect and motionless, his shapely legs clasping the sides of his pony. The young Indian rode without saddle or bridle, and yet so much a part of the seemingly untamed animal was he that the two appeared animated by one spirit. A rabbit darted out from the sage brush as he passed, and quick as thought an arrow sped from the young warrior's bow. Inclining his body far over to the left the boy shouted to his pony, which turned with scarcely a perceptible checking of its speed, and then. with one hand grasping the long mane, the agile youth swung himself almost to the earth, and rising again as quick as a flash, held high in the air the victim of his deadly aim. Frank stood amazed at the exhibition of horsemanship no less than at the splendid picture of physical strength and grace.

The old squaw had prepared a breakfast for him. This he ate heartily, for he was becoming accustomed to Indian fare, while the squaw busied herself taking down the tent poles and strapping them upon the sides of a pony in such a way as to let one end of each pole drag behind the animal, making a sort of litter on which she piled her few belongings. Frank wondered if he ought to help her, but finally decided that old as she was she probably could best do it alone; and, as he saw every other male inhabitant of the village taking his ease, he strolled out to get his pony. which had been hobbled not far distant from his lodging place.

Frank wondered what was the cause of the breaking up of the camp. Were the Indians going on the war path? Were they about to seek better grazing for their horses, or better hunting grounds, or were they afraid his friends might find him if they remained long in the neighborhood? He made up his mind to try to communicate with his young Indian friend and find out the meaning of it all; so, as soon as the camp was in motion, he rode up beside the youth and by signs succeeded in making known his perplexity. The young Indian was quick to grasp the situation, and, pointing to a badly constructed figure of a buffalo marked in the flesh of his forearm. and drawing his bow as if to shoot, he conveyed the information that the camp was about to move into the buffalo country on a hunting expedition. news half pleased the boy, though he realized that every 'step they took bore them farther away from his friends, who must by this time be searching the country for him.

The idea that he was to actually hunt buffaloes with a band of Indians was so much beyond anything of which he had ever dreamt, that he even dared to hope once or twice that his friends should not find him-at least until the adventure was over.

The camp on the march was a curious sight. boy expected to see some sort of order kept, but there was absolutely none. The line of warriors, old and young, pack horses, squaws, children and dogs straggled along until some were, it seemed to him, miles away before others, through feebleness or laziness. young man through the village; so, out they went, had started. The squaws walked, while their spouses ing, sat upon the queer drags drawn by the pack horses, and a score of papooses traveled in the same way, while here and there a puffy little red face looked out from a hole in its bandages from the side of a pack horse to which it was securely strapped.

The young men rode flery young horses and spent the greater part of the time racing ahead, or plunging off to the side in pursuit of game that chanced to stray within view. The whole company pitched camp that night in a hollow near flowing water, and here, as at starting, the women did the work, while the men sat about the fires and smoked.

The next morning early the camp was again on the march, As the sun approached the meridian, two riders who had gone ahead as scouts, came galloping back signaling that buffaloes had been seen over the second rise of ground beyond. Immediately the line of march was turned, and a detour was made to bring it around so that the wind should blow away from the buffaloes toward the hunters, and thus not advise the animals of the impending attack.

A half hour later a camp was located and the squaws set to work putting up their tents preparatory to the feast and celebration usual when the trophies of the chase were brought in. All the male Indians, young and old, gathered at the foot of the slope, a short distance beyond which it was reported there was a herd of buffaloes. On the march the most of the older Indians had ridden their poorer horses, leading their better ones. Now the poorer ones were turned over to the boys or to the squaws, and the hunters sat astride their better mounts, which were as impatient for the chase as were their riders.

Frank found himself, through the kindness of the Chief, mounted on an untamed, tough little beast, without a saddle, and with a rude rope of leather for a bridle. He was afraid to refuse the proffer of a fresh pony, and he did not know how his own pony might act in the presence of buffaloes. He concluded he could trust the Indian pony to keep him out of danger, and he wasn't so sure of his own.

As he saw the Indians moving off in little squads up the slope, Frank began to grow excited. His Indian boy friend motioned for him to follow, and away they went at a swift canter straight ahead. At the top of the hill he expected to see game, but to his disappointment all he could see was little, swift-moving spots of color made by the Indians riding swiftly through the grass. On they went, saying not a word, every

rider swaying to the motion of his animal and every eye fixed ahead. The boy felt the spirit of the occasion, and his heart fairly leaped into his mouth as beyond a low knoll, upon the brow of which he had just drawn rein, he saw a few old bulls scampering out of harm's way. Pushing ahead and keeping up as best he could with his daring companions, he in a few moments noticed, at a point beyond, the waving of blankets which he judged to be the signal that they were in the neighborhood of the herd. Soon the entire band was in a dense crowd riding like the wind, but finally they separated, nearly half of the number riding away to the right as if to make a circuit and

FRANK OPENED HIS EYES AND SMILED.

come upon the game from the other side, while the remainder halted. The halt was but for a few minutes, to allow those who had left to reach their point of attack, and then the horses were set again in motion up a slight rise of ground, and a moment later all stood looking down into a little valley, where a sight met Frank's eyes which caused him for a moment to lose heart. Before him appeared a dense mass of moving objects that seemed to have no end or beginning. And this little band of horsemen were to charge directly into it-perhaps be trampled to death by it!

The boy at once determined that he would remain at a

safe distance and watch the chase from the high ground where he now stood; but scarcely had he formed the resolution ere a shout of defiance rang out on the air, every horse gave a bound, and amid a cloud of dust that whirled up from the animals' hoofs the excited hunters rushed directly upon the solid phalanx of shaggy forms.

Frank's horse proved to be a perfect demon; it threw its head toward the earth and galloped like mad, while its rider was as powerless to direct or control it as if he had been a fly upon the animal's back. Almost in the same instant with the shout of his companions, an echoing shout came from the other side of the valley, and the poor beasts were between two fires. They broke at once and ran singly, or in twos and threes, but the greater part in a confused mass, while the wiry little horses dodged in and out among them barely escaping a goring at every turn, and arrows flew thick and fast. It seemed to Frank's excited vision that every arrow went straight to the mark, as one by one he saw buffalo cows drop or go tottering away, bellowing with pain, to die in some out of the way place. The dust was stifling, and the noise of the bellowing bulls and the shouts of the Indians made the scene a veritable pandemonium.

Frank's practice with bow and arrow had not been sufficient to give him confidence in these weapons, so throwing away his bow he grasped his gun, and, selecting a big fellow that was somewhat separated from the rest, he gave chase. For several hundred feet his pony gained on his awkward prey. and finally coming abreast with the animal the boy took as good aim as his unsteady position permitted, and fired. The bull shook its great head, bellowing deflance, and turned upon the pony that had now come up alongside; at once both rider and horse seemed to realize their danger, for the latter jumped like a frightened rabbit at the charge of the great shaggy monster, and then began a race for life. The boy's gun was now useless, for it was all he could do to hang on to the mane of the frightened pony. Leaning over upon the neck of the animal he called to it to go; he pleaded with it, then shouted and dug his moccasined feet into the animal's sides; but do what he could, the tired horse was losing ground. and Frank had almost given himself up for lost when suddenly a ravine opened before them. Down this they plunged, the maddened brute following. Across its stony bottom they rushed, and then with one wild plunge the gallant little horse threw itself against the steep bank on the other side. Frank urged the animal with all the strength

he could command. The horse slipped—it had not reached the top-it was falling back-then a shot rang out on the air, and horse and rider lay bruised and bleeding under the bank. Almost upon them lay the buffalo, dead.

A white man bent over the boy to revive him. Frank opened his eyes and smiled, while his lips repeated the words, "Uncle Bob."

"Yes, my boy, Uncle Bob, and you are safe. The next time you go buffalo hunting you will go with

(To be Continued.)

The Charlestown Navy Yard and a Visit to an Ocean Liner.

WAYNE M. SHIPMAN, AGE 14.

Navy Yard.
The writer
with a boy
friend made a recent visit to the yard. As we took the

we took the electric car we told the conductor to let us off at the main entrance on Water street, which he forgot to do, and carried us by to another entrance. Here the guard told us that no one under sixteen can enter, so there was nothing to do but to walk back to Water street.

to Water street.

The yard is surrounded by a wall about fifteen feet high, and is about a mile long and haif a mile broad. Upon entering, the guard saluted and said "all right," and there we were in the Navy Yard. On the left the first thing noticeable is Admiral Sampson's residence, which is a very pretty

Liner.

and attractive house. Next we came to the barracks of the marines. At nine o'clock every Saturday morning they drill, and when we saw them we said, "No wonder Uncle Sam can defy his enemies with such soldiers as those." Near here were seen two tame goats playing around the commandant's office. On the right is a large stone building which contains a drug store, library and a museum. In the latter are oil paintings of many of the old seafarers, and also almost anything from Chinese weapons to small trinkets from some other remote part of the world which have been collected by sailors. The next object which drew our attention was the drydock, in which was the gunboat "Vicksburg." This dock was begun in 1823 and completed in 1869. Near here is the wharf where we took the cable ferry-boat to the "Wabash." which dropped anchor about fifty feet from the shore and is now used as a training ship. The officer in charge provided us which dropped anchor about fifty feet from the shore and is now used as a training ship. The officer in charge provided us with an escort, with whom we went about the ship. He told us about the models of the old ships, which are numerous, and answered all our questions. The ship is kept very neat and clean, which speaks well for the sailors. As we came on shore again we made our way to the "Constitution." While on board we thought of Hull, Decatur and the "Guerriere." It is said that only a small part of the original ship remains, and only a few men who have repaired the ship know where it is.

"Close by were anchored some of the modern war-ships undergoing repairs. Among them was the cruiser "Olympia," the gunboats "Machias" and "Peoria" and the dynamite cruiser "Vesuvius." On the gangplanks leading to these ships was the sign "No admittance," but upon one who has a "No admittance," but upon one who has a "in the did not know, and so we walked up the dock. He replied that he did not know, and so we walked up the gang-plank and put the same ques-

permit from Admiral Sampson to visit the "Olympia" such a sign has no effect. The ship-keeper took the pass, remarking that we could go "anywhere except the engine room." As we got on board and wandered between the decks we saw the site of Admiral Dewey's cabin. Being on a real warship made us want to get up to the top; just as high as we possibly could. We climbed up to the pilot house, and after ascending a very steep flight of stairs we found ourselves on the bridge. Then as we passed around the turrets we desired very much to see what was inside. We inquired of the boss painter if we could get into one of them. He kindly showed us into the after turret, where we saw the two eightinch guns which had really fired shots at the Spaniards. Down in the hold, almost to the water-line, are the torpedo tubes in which we took great interest. Soon after we each picked up a souvenir and left the ship.

tion to the officer in command. To our great delight he repiled in the affirmative, and we stepped aboard. Upon entering the cabin we noticed the grand stairway leading below to the state rooms. We then went into the first cabin. This was richly furnished and a dome of stained glass let in light from overhead. We came up and walked around the promenade deck. Looking over the side of iron and steel we saw the water between thirty and forty feet below us. Much to our regret we could not get on to the hurricane deck. The staterooms were furnished in rich wood, and in the first rate contained a single bed and a bureau. We then passed down a long alley-way to the stern of the ship. As we went by numerous open doors we saw the kitchens and the engine-room 'way down in the hold. The ship which we were on is six hundred feet long and is sixty broad. She draws forty feet of water, and is manned by a crew of two hundred and manned by a crew of two hundred and thirty five men. On our way home we thought "how nice it is to live near Boston."

A Story of Irish Magic

^ Lazy Jack.

SEUMAS MACMANUS, Author of "Donegal Fairy Tales," Turf Smoke," Etc. "Through the

(Copyright 1901 by Seumas MacManus.)

Once there was a widow woman, and she had one son, called Jack, a very, very lazy fellow and good for nothing, and a fool.

When he had grown to be a young man his mother, one day, sent him to the town to get a needle for her.

When Jack went to the town and bought the needle he saw passing a cart of hay, which was going as far as his mother's house, so he said to himself: "That's a fine and easy way of getting home the needle," and he stuck the needle into the cart of hay.

When he reached home his mother asked him where the needle was, and he told her it was in this cart of hay, and began to look for it. And if Jack had been looking from that day to this, of course he would not get the needle.

His mother gave him a scolding and a good, sound thrashing, and told him

WHEN JACK FOLLOWED DIRECTIONS.

he was always a fool, and would never be anything else than a fool to think of sticking a needle into a cart of hay. "Oh, mother," said he, "how should

I carry it?" "You should have put it inside the breast of your coat," she told him.

'All right," says Jack, says he, "you'll never find me making a mistake more, and after this you'll never find me a fool more.

Next day his mother had men working, and had no butter for their dinner, so she sent him into the town to buy butter.

Jack went in, bought the butter, and when he got it he put it inside the breast of his coat and buttoned up his

And when he reached him, says his mother: "Jack," says she, "where's the butter?"

"Oh, mother," said he, "I didn't know how to carry the needle yesterday, and you said I was a fool; but I'm not a fool to-day. I put it just where you told me-inside the breast of my coat." And he opened his coat and showed where the butter had melted and run down all over his clothes.

His mother got into a terrible rage. and scolded him and thrashed him soundly.

"Oh, mother," says he," how should I have brought it?"

Says she: "You should have carried it in a docken leaf."

"All right, mother," says Jack, says

this in this you'll never find me a fool more."

Next morning his mother wanted milk for her breakfast, and she sent Jack into the town to buy milk, and when Jack got the milk he put it into a docken leaf and started for home.

But Jack had not gone far until he had not two spoonfuls of milk left in the docken leaf, and when he reached home there was only just the track of the milk on the leaf.

Says his mother to Jack, says she: Where's the milk I sent you for?'

"Oh, mother," says Jack, says he: "1 did as you told me yesterday, and I put it in the docken leaf," says he, "an' it's all run away on me."

His mother flew into a wild rage, and again she thrashed poor Jack till she almost thrashed the life out of him, and told him he was always a fool, and he would never be anything else but a fool. Didn't he know that he should have carried it in a can?

His mother had a lot of sheep, and they were very hard to mind, so she said she must have a dog to watch them, and sent off Jack to bring her home a sheep dog.

Jack went away, and when he got the sheep dog he got the loan of a lit-tle can, and he tried to put the sheep dog into the can, but he could not well get it in, for the dog always bounded out again. So Jack killed the dog and stuffed him down in the can and started for home to his mother, and emptied out the dog at the door.

When his mother saw this she flew into a great rage again, and she scolded and she thrashed him very, very soundly, and told him he was always a fool, and would never be anything else than a fool. "And what should I have done, mother?" says he.

Well, you know, you fool, you." says his mother, says she, "that you should

have led it home by a string. "All right," says Jack, says he, "after this you'll never find me a fool more." Very soon after his mother sent Jack

into the town to buy mutton. Jack first got a good, long string. and when he got the mutton he tled the mutton to the string and started for home, drawing the mutton after him.

And when his mother saw him coming up to the door drawing the mutton this way, she went out to meet him, and scolded him and thrashed him as she had never scolded and thrashed him before, and she said: "You were always a fool, and you'll never be anything else but a fool, and I'll not have you about my family."

So she turned poor Jack out, and sent him away, never to come back.

Jack wandered away and away before him until he came to a graveyard and there was a statue of a man in the graveyard; and as it was a very

DRAGGING HOME THE HAM.

JACK'S WEALTH.

rainy day, the rain was running down the face of the statue.

"Oh, my poor fellow!" says Jack, says he, "it's no wonder you're crying when you are out in such rain as that without a coat on you."

So my poor Jack took off his owr coat and put it on the statue, and as Jack was trying to button the coat or the statue, didn't he pull the statue over, and there under it what does he find only a bed of golden guineas.

For, under this statue, a great miser, who was in that country, used to always hide his gold, thinking that no one would ever discover it there. And as Jack was fingering the gold, who should come up but the miser. He was alarmed to find that Jack had dis covered his gold, and he agreed, if Jack would promise never to tell anybody how much gold he had or where he hid

it, that he would give him half of it all. Poor Jack, as you may well suppose was only too glad to consent to this and the old miser gave him half of the gold in a bag, and Jack went home to his mother with this.

And when he come home with the gold, you may be sure his mother was glad, and welcomed him.

And with this gold she built a grand house and dressed up Jack like a young prince, and he made such a fine, handsome young fellow that when he went courting the king's daughter she fell in love with him, and they were married. He brought her home to his mother, and the three of them lived happy ever after.

Got It Done.

An intelligent-looking boy walked into a grocer's shop the other day, and reading from a paper, said:

"I want six pounds of sugar at six and one-half cents a pound."

"Yes," said the shopman, "that will be thirty nine cents." "Eleven pounds of rice at six cents a pound."

'Sixty six cents." "Four pounds of tea at fifty cents a a pound."
"Two dollars"

Two dollars." And so he continued: "Five pounds of milk at ten cents, four tins of tomatoes at nine cents, eight tins of sardines at

fifteen cents.' The shopman made out the bill and handed it to the lad, saying: "Did your mother send the money or does she want them entered?'

"My mother didn't send me at all," said the boy, seizing hold of the bill. It's my arithmetic lesson, and I had to get it done somehow."

Alexander P. Simpson, superintendent of the Boys' Parlors Association of German-town, Pa., writes us that he encourages his boys to become subscribers to THE AMERICAN BOY.

Touching Act of Herolsm Witnessed in a South African Camp.

"One of the most touching incidents of the Boer-English war came to my knowledge just as I was leaving for America," said a missionary delegate from South Africa to the ecumenical conference. "Of course, there have been many brave deeds and many acts of selfsacrifice on both sides, but none has seemed to me as affecting as that of the little ten year old lad who give his life protecting the man who had befriended

"It was during the siege of Ladysmith, and the British army had its base at Spearman's Camp—perhaps I should say General Buller's base was at Spearman's Camp—when one evening a little boy struggled into camp, and when questioned by the soldiers said he had come from Ladysmith. He was of English parentage and said that his father had been killed at the very beginning of the hostilities; his mother had been buried the week before, and he had left Ladysmith determined to join the English army. How he had managed to slip through the Boer lines was the question which most puzzled the English soldiers, for at that time it was not thought possible for a bird to pass unnoticed, so strict was their watch. This child said he thought he had been shot at, but he must have been 'too little to be hit.'

"He was such a weazen-faced slip of a child that the soldiers, recognizing the truth of his surmise, dubbed him "Too-Little-to-Be-Hit' Blunt, his real name being Jimmy Blunt. He knocked about camp and finally attached himself to Major English of the Second Dublin Fusiliers. He became the major's shadow. eating, sleeping and moving about with him on any and all occasions. It became a joke among the soldiers the way 'Too-Little-to-Be-Hit' followed their major.

"Finally came the action of Venter's Spruit, when the major, leaving his company, walked a short distance ahead to see 'how the land lay.' He was shot down and a deadly fire from the Boers, who had been in ambush, followed. The firing was so hot that no attempt was made by the soldiers to go to their officer and when they saw 'Too-Little-to-Be-Hit' making the attempt he was ordered back coffee at twenty five cents, seven tins of He did not obey the command, that much the soldiers knew , but he was forgotten until the close of the engagement, when. on collecting their wounded and dead. they found he had managed in some way to drag his wounded friend from the open to the cover of some brush wood 'Too-Little-to-Be-Hit' was lying by the major's side, apparently asleep, but when the soldiers lifted him up they found that he was dead. He had bled to death from a wound in the fleshy part of the arm. So, after all, he was not too little to be

Almost all who enter upon courses of crime do so between the ages of eight and sixteen.

HIS weather is enough to freeze the milk of human kindness in a warmer breast than mine," remarked the Potato, as he leaned against the frosty cellar wall.

"I am sure that you must suffer from the cold next to those icy stones," responded the Carrot, "but you can congratulate yourself on the possession of a good warm Jacket; now I am so thin-skinned that at the first of Jack Frost's

touches I become shrunken and positively ugly."

"Yes, my dear Carrot," answered his friend, "your beauty certainly has suffered; but after all your blood is thicker than mine, why actually I haven't an Eye, but what has grown lacklustre and dim. Now there is the Cabbage"-

"Don't talk about me," snapped the Cabbage, "my Head aches so, with being shut in this close, dark place that i have no Heart for anything; I almost believe that this red-headed Beet beside me has gone to sleep!"

'No, I haven't," sweetly responded the Beet, "I was just thinking how much better off we are here than out in the cold, frozen ground, we"-

"Please do not class us all as under-ground vegetables," interrupted the Cabbage, "some of us, remember, are accustomed to sunshine and fresh air.

That is so," declared the Apple; even if we all cannot boast of growing on the topmost branch of the highest tree in the orchard, as I can.'

'I would rather be a Cabbage and

rest on the very bosom of my Mother Earth, than to run the risk of Living So High and being at the mercy of every breeze that chances to blow."
"Well," replied the

Apple, "I am glad that you are satisfied, that is a great point to attain in this world; I fancy that I should feel much happier if that odious Onion would turn about so as not to blow his breath directly in my face; really, it decomposes my feelings.

Probably more than your feelings will be decomposed before Spring," in-dignantly ejaculated the Onion, "while I. who am grudged even the air I breathe, will be healthy and Strong."

'You are strong enough now," sighed the Apple.

The Turnip rolled over impatiently.
What is the trouble?" inquired the

Potato, "I see that you are a trifle uneasy. "I guess you would not feel much like

arguing if you were in such pain as I am." groaned the Turnip. "Why my friends, I have been scalped!"

'Scalped!" cried the Cucumber, from the briny deep of the pickle barrel.

Yes; the top of my head chopped right off with a hoe, before ever I was put into this dungeon, and now I have the wound, and I shall cola in "Try one of my poultices," suggested

the Potato.

"It wouldn't do any good," moaned the Turnip."

"He ought to be bled," insisted the

"You can't draw blood from a turnip," piped the Cucumber, "let him try salt water

baths."

arose over the various remedies that it was with difficulty that the Turnip made himself heard.

"If you do not stop this wrangle," he declared, "I am sure I shall have an attack of brain fever, I am bathed in perspiration now.'

"Wish I could say the same," remarked a voice from the potato bin, but perhaps the Squash will deliver a short lecture, by way of instruction to us in general, and to quiet Brother Turnip's nerves in particular.'

The Squash straightened his crooked neck and cleared his throat.

"You see," he began, humbly, "I am a person of little education, and perhaps my remarks may not be very instructive, but ever since I felt a strange inclination to burst my seed coat, I have done my best, and I shall always

have to, if I fulfill my mission in this world.''

"A squash pie," sneered the Cab-"That is a great

deal more hightoned than sauerkraut," marked the Turnip, severely. "Will you please go on, Brother Squash; really, I feel better al-

"What my mission eventually is to continued the Squash, "I do not know any more than any of the rest of you know yours, but if I am patient and make the very most of all my circumstances, I shall find out in time.

ready.

'When I felt the air of heaven upon my leaflets, I thought that I was created to absorb the yellow sunbeams, so stretched out my leaf hands, and took in so many that I soon grew hearty and strong.

"All the vines and plants that were up before me were soon left behind, and proudly waved my golden flowers above them.

"What can be so beautiful, I thought, as these silky bells, surely it was for these I was created.

"One bright morning I was quite chagrined to discover that they had all wilted, and there were only small, hard green balls left.

"Now, I thought, my youth and frolic are over, and all my energy must be devoted to the care of these balls; who knows but they may be good for something some day?

"Day after day I watched them increase in size, while my glossy leaves grew faded and sere; but I had now ceased to care,

"There is not much more to tell, but repartee.
before the Autumn rains had filled you "I have thought before the Autumn rains had filled yon cistern to the brim, or the Frost had fettered everything with iron bands, I was brought in, and I heard the farmer say that he would save my seeds for

Spring planting, so I am content.
"It is dark here, but life cannot be all sunshine. It is oftentimes damp and cold, but it is these shadows which teach us to appreciate the sun-gilt spots in life.

"Every time the farmer's wife comes down to the cellar, I expect she will take me, for several times she has Such a discussion now looked at and felt me.

"When I am taken I shall be cut open; that will not be pleasant, but I cannot always remain thus.

"My thick, yellow flesh will make food, and, perhaps, eventually may be assimilated into brain power and evolved into noble thoughts which may make men wiser and bet-

"My seeds will grow up into plants such as I once was, and thus my life and theirs will prove but links in that mystic chain called Life.

"Listen! There are footsteps on the stair.

"I feel that my time has come, and I shall say farewell! Remember that life's highest ambition is not comfort or worldly ease, but rather to make the world as much better for our having lived,' as our circumstances and abilities allow."

The steps had now drawn near, and, sure enough, the Squash was seized and carried upstairs.

Blows from the wood-shed floor soon announced to the occupants of the cellar that the executioner's axe had

been laid upon the neck of the Squash.
"He's done for now," sobbed the Cucumber. "I wonder if anyone would cry for

me if I were to go," coyme if I were to go, coyly inquired the Onion.

"No," was the Sour Apple's retort, "but we'll cry if you stay."

"Poor, dear Squash," sighed

the Carrrot, "that was his last blow;

it makes my blood run cold." "I am composing an epitaph to his memory," tearfully remarked the Potato,

"how does this sound?

Our Brother Squash we'll see no more, He is gone from us forever; Until we meet on some other shore Where blows shall ne'er us sever."

"That does not express our grief at all," wailed the Cabbage; "why, I loved him 'like a brother.'

When shall such genius illuminate this dark age, or such sympathy soften for us these hard times?"

Here the sweet, clear tones of the

Beet were heard, saying:
"Do you not think, friends, that it would have been vastly better, if we had told the Squash himself of our kindly feelings while he was yet among us, and not waited to do it by epitaph or vain mourning?

"I, myself, have been to blame, and I ask, is there a vegetable in this cellar who has ever so much as hinted to the departed Squash, I love you, or, my sympathy is yours?"

Here the Beet paused, but not a voice answered.

"Whether we grow on branch or vine or underground, we all belong to the same great kingdom, and should be

brothers, but instead of trying to make the best of ourselves and each other, we have all seemed intent upon grumbling, and not a few have inlulged in not

about this a great deal of late, but have never had the courage to speak of it, and the idea has occurred to me that these cold, dark days would be less dreary

if we were to unite and form a 'Sunshine Club.'"
"'Ear, 'ear," cried the Corn, enthusi-

astically.

"You can always catch more files with molasses than with vinegar," remarked

the Maple Sugar Cake, speaking for the first time.

"Oh, No! No!" cried the Beet, in a pained voice, "that is not the idea at all; we must be sincere above all things; our lives are too short for pretence of any kind.

"The idea of a 'Sunshine Club' has been moved and practic "y seconded," said the Celery, apparent / waking up, and lifting his curly head from a bed of sand. "Perhaps the Beet can suggest a short constitution for us to live up to, for the Land only knows how Our Own

has been undermined," he added crispily.
"I think I can," replied the Beet timidly, "for it has been in my mind for some time.

"Perhaps you may not approve, but will those who do please say 'Amen' heartily when I finish?

"It is only these four lines:

A kindly word instead of a sneer. A pleasant smile while our friends are near, A gentle act ere the chance has fled To show our love ere our friends are dead."

"Amen," answered every voice so heartily that the listening walls echoed Amen also.

And Sunbeam, the good little fairy, with the gauzy wings and crown of fluffy, golden hair, who had swung back and forth unnoticed in a cobweb hammock, gave her wand one more little shake, scattered another handful of the precious Jewels of Kindly Thought all about and then flitted out at the open door.

The Cruise of the Yacht Gazelle; 6,000 Miles on Inland

#and Ocean Waters#

KENNETH M. RANSOM

'inuation of the story of a six This is a committee of the story of a six thousand mile ruise by four Michigan boys, in a boat of their reconstruction. Setting sail from St. Joseph, the 'Gazelle,' by which name their craft was known, proceeded by way of lake, river and canal to the Mississippi, thence to New Orleans and the Gulf, along the gulf coast to the Atlantic, thence to New York harbor by way of the ocean, thence by river, canal and lake, home to Michigan.

CHAPTER XV.

The navigation of the Georgian creeks proved very pleasant, for the scenery was new to us, the winding in and out among the tide water meadows, rank with marsh grass that seems to thrive on the sea water, kept one very alert to follow the ever changing and narrow channels, and to explore the small creeks in quest of game and fish without danger of losing sight of the yacht, whose high sails could be plainly seen above the level sea of green grass.

The country was here very thinly populated, and we sailed many miles without seeing a human habitation.

We were glad and yet sorry when we reached the Savannah River and, with a favoring tide and a brisk wind, held our course for Savannah city. Sorry, because we had enjoyed the wilderness. but glad because we were soon to be again among our fellow men, and in one of the most beautiful cities of our country. Gazelie sped along in fine shape, and though it was late in the afternoon when we entered the river, before six o'clock we were safely anchored off the metropolis of Georgia. Hundreds of darkies were being ferried across the river from their work on railroad improvements, to their homes in the town. They seemed so glad and merry that their day's work was done, and to the accompaniment of the dip of the great oars which gave motion to the flat boats, hundreds of voices gleefully joined in singing a southern darky melody which the buildings on the shore echoed back. It was all so beautiful as I looked about and saw the sun going down behind the funnels of a great ocean steamship lying at the wharf, and a thousand other things as grand in the splendor of the passing day.

We spent several days in Savannah, and I like it most of all the southern cities we visited. We arrived in the heart of the watermelon season, and never will I forget those luscious, big fellows we bought for a few cents apiece at the docks, where the darkies landed their boats loaded down with hundreds of the crisp fruit only a few hours from the patch.

Just before we were ready to resume our journey, a huge English tramp steamer, under her own power, came down the river on her way to the ocean. Aft, on the highest part of the ship, stood a man. I don't know why, but some way my attention was turned toward him. Just as the vessel came abreast of us, I was startled to see him lift his arms high above his head and with a tremendous spring dive headfirst into the river. Arthur saw him also, and being nearest the Nibs, which was towed astern, he jumped into the boat, and with all haste pulled toward the place where the man had disappeared.

It took but a moment to row to the spot, but before Arthur reached him the man came to the surface and, with several yells for help, again sank. mate had seen him, however, and when he again rose to the surface he was so near that the man grasped the boat, and hung on for life, while the oarsman dragged him up to the dock. Quite a crowd had by this time gathered to see what was the matter, but evidently those on board the big steamer were not aware of any man being overboard, as it was now almost out of sight. A big, burly policeman pulled the man from the water. Arthur told his story, and by this time the man had so recovered himself as to speak. Questioned, he said: "I left England on that ship, having signed a contract for the round trip. I

stay; but they watched me so close aboard the ship that I had no chance to leave. At last we started, and I tell you it made me sick to have to return to my old life across the sea. As I stood on the ship, coiling some rope, I made up my mind to be free even if I died in the attempt. I could not swim, but I hoped I would be saved, and, knowing, this was my only chance, I ran the risk and dove in, and please do let me stay. Oh! do let me stay!"

It was indeed pathetic to see this man who had risked his life for the pleasure of living in the land of the free, begging not to be returned.

Here was a hero, for the chances in favor of even a strong swimmer saving his life under the circumstances were small, for the vessel was running seven miles an hour, and the water, where he dove, was boiling from the churning of the wheel. As he raised his hands and sprang into the foam, his heart no doubt re-echoed Patrick Henry's words, "Give me liberty or give me death."

This incident furnished a topic for the conversation of the afternoon as we sped down the river at a lively clip. Consulting the charts we found that by turning

and Frank turned in for a little rest.

At half past eleven o'clock I sighted the Charleston lighthouse, which is visible for seventeen and one half miles, and by half past two was abreast of the light-ship, which is anchored several miles off the entrance to the harbor. It was still a few hours before dawn, so I held out to sea for several miles until the light-ship was in a position nearly to leeward. This was just right, for I now put out a sea anchor forward, and with my mizzen hauled taut aft, the yacht was headed into the seas, and rose and fell on the great waves like a cork. I wanted to let the seas carry me slowly back to the light-ship, which I figured would be reached about daybreak. In this I was right, for as the first streaks of dawn began to show we were within half a mile of the beacon. Calling the boys, the drag was brought on deck, the canvas restowed, and it now being toward daylight we experienced no difficulty in picking up the buoys on our way to the city. Coming to anchor at quarantine I went ashore and presented a clean bill of health and was allowed to proceed to an anchorage off the city.

How interesting it all was! is Sullivan's Island, where Colonel Moultrie, in his fort of palmetto logs, defeated the British and made it possible for Sergeant Jasper to make his name immortal. Here also on our left, as we speed along, is Fort Sumter, now quite antiquated, but still interesting as we

BULL BAY, SOUTH CAROLINA.

to port into a sound which connects Port Royal Sound with the Savannah River, we could save many miles and a whole night's sailing on the open ocean, so we took the cut and sailed along until darkness fell, when we came to an anchorage well inside the sound.

Next day we were under way early, but the wind and tide were against us, and it was late in the evening before we crossed the bar at Port Royal Sound and headed our course north for Charleston.

The barometer had been falling during the afternoon, but as it was very slow, we resolved to make the run to Charleston during the night in hope of reaching that city safely before the storm. It was a fine night on the ocean. The wind was from the southeast, strong but steady, and the sea, though high, was long and easy, and as we squared away with a somewhat free sheet we simply tore along from wave to wave, leaving the water hissing from our quarter. It was just glorious, boys, to see Gazelle go, and the air so crisp and pure, with a tendency to give a fellow one of those "wish-for-more-meals-a-day" feelings. We soon found, however, that we were making too much speed, for at our present rate we would be up with Charleston light by midnight, and as we did not dare to try the harbor channel by night we lowered the mainsail and, putting it in a gasket to hold it snug, we continued on under our mizzen

think of its history and the part it played in our civil war. In strange contrast are the modern batteries with their up-to-date guns and equipment that now guard the harbor.

At last we reach the city and, finding ourselves among other yachts, feel quite at home, as we drop anchor off the battery park. Our predicted storm seemed near at hand, but it mattered little to us now, for the harbor was secure, and a change from the almost unbearable heat of the past days would be welcome.

CHAPTER XVI.

After getting things in shape aboard we in turn took shore leave and, the day being Sunday, was spent in a quiet walk about the city. Charleston is a somewhat quaint place, with its narrow streets. One is impressed with a feeling of being in a foreign country, but I liked it very much.

About three in the afternoon we had all returned to the vacht and were seated in the cockpit under our awning. I proposed that two of us take our pillows and row over to the opposite shore to some woods, which had a cool look, to get some quiet rest. Frank said he did not care to go, but Arthur was glad of the chance, so we set out.

The grove we had seen surrounded a typical southern plantation mansion.

As we walked up the path and stopped at an old well, over which hung "the old oaken bucket" suspended from a the place; and as I was about to help myself to a drink I was touched on the shoulder, and turning about I beheld a negro servant in white duck. Bowing, he said, "The massa says 'Tell de gentlemen dis yah's a private estate and dat no trespass is allowed."

I said "All right," but requested that I might see the proprietor. The servant led the way. When we reached the great balcony, he bade us be seated and called his master, who soon cante out. I introduced my companion and myself, and explained that after being tossed about on the waves of the ocean in our little boat for twelve hours, we had come ashore in search of a cool quiet place to rest, and assured him that if we had known the customs of the country we would not have intruded. I did not expect it but the gentleman immediately took a great deal of interest in us and not only gave us the liberty of the plantation, but sent a servant to show us about and point out the principal places of interest. It was very interesting, the farm being one of the largest and richest estates in the south. The principal crop was sea-island cotton, but almost everything that will grow in this climate, in an agricultural sense was cultivated. The darkies lived in the little cabins, as of old, each with a patch of land. Sunday being their only holiday, they were dressed in their best, and enjoying life in their own happy way.

When we returned to the boat the tide had fallen, leaving it high and dry. The evening was cool on land, so we decided to wait until ten o'clock, when the tide would again be flood, and we could launch the skiff without wading up to our middle in the mud. Our evening was well spent, for the negroes had started a fire down the shore a ways and. seated around it, they were making merry wth songs and stories of interesting happenings of the present as well as of bygone days. We drew near enough to hear their talk without being observed. and thus we saw the true negro life without company manners. It was interesting to hear their yarns in plantation dialect, and half past ten came almost before we knew it. The tide now being flood, we jumped into our boat and rowed to our craft, which we recognized in the darkness by Frank's signal light, a white above a red lantern.

When we awoke next morning the storm was on. Heavy wind, accompanied by rain, ushered in the day and continued until nightfall, when it moderated; but for two days longer we were unable to move, so we enjoyed ourselves looking over the city, etc. We were glad when, with a rising barometer, we said good bye to the place and continued our journey. The previous heavy wind had caused a severe sea, but the wind was now very light, and it took us from early morning till nearly dusk to make Bull Bay, some forty five miles distant from Charleston. We decided to 1 an into this harbor, which is a splendid one, and spend the night. It was lucky we did, for during the next three days a very unusual calm reigned and we were unable to leave the anchorage.

There was no habitation anywhere about so we were, indeed, "monarchs of all we surveyed." We had a real good rest and general good time, nevertheless. exploring the land and shore in quest of shells and curios, etc. An old demolished lighthouse graced the point and, while looking over these ruins, Arthur found a large projectile imbedded in the sand. I should say, judging from its looks, that it was fired at the lighthouse during the civil war.

We had not counted on such a long and as our appetites were 2001. our food began to get low. It was decided, therefore, that the cook should spend the afternoon cooking a good supply of pork and beans as emergency provisions against the time when we again got to sea and were unable to cook because of the roughness.

Our stove, which the cook called the outrigger, was born of necessity and showed decided ingenuity of construction. Sometime previous we awoke to find we had no oil with which to cook. had heard of America and I did long for and jib.

Sweep, which like the well surb was liberty, Mr. Policeman. When I reached With reduced canvas it was easy to here and found it so nice, I wanted to handle the craft and, not feeling at all whitewash, we were gazed at in wonder-

fish was made, I became desperate, with | even after his dip his hair was full of | the result that our galvanized water bucket had a little door cut in its side near the bottom, and a heavy iron plate, after being punched full of holes, was put in as far as the cone-like shape of the pail would allow, forming a partition or grate just above the cut in the side which would act as a draft. A fire was built on the grate of short pieces of wood, and the outrigger was a pronounced success.

It was on this contrivance that Arthur had just set our very best and largest kettle filled with our entire supply of army beans, and all our pork, except a small piece reserved to grease the griddle for flapjacks. We took turns keeping the fire going, and soon the cook announced that they were "beginning to get done."

The outrigger had been placed out on the after deck, the sea was smooth and no one dreamed that it might upset. Way off in the distance we could see the smoke of a small steamer coming up the hav. As it approached nearer we saw it was a small stern-wheel affair that had left St. Augustine for Washington via the inside route the day before we left there. We had thus beaten them so far, by two days. We were glad to see them and they seemed pleased also. In the moment of excitement during the exchange of greetings the cook forgot his cooking, and the swell caused by the passing steamer did the rest, for outrigger, kettle, beans and pork went overboard. Luckily the kettle struck the water bottom first and floated. The cook, who was much excited, determined to save the beans, and with one mighty grab he leaned far out, but, alas! He lost his balance and fell in headfirst. Frank and I were standing on the cabin roof and saw it all. We nearly died laughing. Soon he came to the surface and grabbing the rail of the boat he blurted, "Have they gone?" Of all the funny sights he was the funniest, as his head had gone right into the bean kettle, and

beans. Of course, the kettle sank and we felt disappointed and not a little hungry during the next day, but the thing was so funny it paid to have it happen. During the early evening a breeze sprang up, and making sail, we were soon following the channel by moonlight, leading out on the ocean.

Between Bull Bay and Georgetown there is a dangerous reef, extending several miles out into the ocean, known as Cape Romain. Although a good light covers this reef we had been warned to keep a good distance out. Frank was sailing the yacht and the mate and myself were fast asleep below, when I was awakened by Frank calling, "Hey, Cap!" I jumped up, and going on deck, asked: "What's wanted?" "Look sharp," said Frank, "what is that to leeward?" "Breakers!" I cried, and at the same time our ship rose on a mighty wave which broke with a deathly hissing roar under our very bow. "Tack ship," I cried, at the same time letting go the jib sheets. Frank was cool and collected, and executed the order with care and promptness. The Gazelle responded, but just as we were beginning to fill away on the other tack another coamer struck us broadside, and the heavy boom, striking me with great force, shoved me from the deck. Arthur, who had been rolled out of bed by the shock, was now on deck, and for a moment the boys thought I was overboard. When I felt the boom strike me, however, I grabbed it and hung on for dear life; and although I swung out over the water it was not difficult to again reach the deck when the sheet was cleated down and we were once more in motion. We were in a dangerous situation yet, for the swells still rose high and broke wildly about us, proving that we might strike bottom at any moment. We could only hold our course, and, fortunately, we soon were once more in deep water and away from the treacherous bar.

We now had time to laugh over my mishap. I'll admit that I couldn't see the laughable part of it, but maybe I did look funny, now I think of it, swinging out over the water on the end of the boom with my long legs protruding from my night robe.

Arthur called me clumsy, and I admitted that perhaps I was, but that my head never got full of beans, and, at this he kept still and went below while Frank and I laughed as we crunched away on hardtack.

At daylight we were off Georgetown. South Carolina, but being anxious to reach the Cape Fear River we sailed right by.. The wind petered out during the day and we made but little headway, but the breeze freshened toward night, and by early morning the Cape Fear light was well in sight, and by seven we had crossed the bar and, an hour later, were anchored off the little town of Southport, about three miles up the

Again Dame Fortune smiled upon us. for no sooner had we made thingsenicely ship-shape than the wind went around into the northeast, and for a whole week we were obliged to remain at our anchorage while the ocean was lashed into a raging mass of billows. Notwithstanding our long captivity here we had a very good time. The little town was full of old seamen and pilots, with whom we became acquainted, and we would sit by the hour in the pilot office and listen to queer yarns of sea life and hairbreadth escapes.

The Cape Fear catboats are noted for their speed and we had great sport sailing with friends in these on the river. Clam hunts, fishing parties and long tramps inland were thoroughly enjoyed by all. Letters were written home, and ere we left, mail which had been forwarded to us arrived, so our stay was one of pleasant experiences.

(To be Continued.)

able reading and practices?

Does he talk most of those boys best known to you?

all right.

And, too, what do other boys think of your boy? That is a good test. Boys are discerning little animals. What sort What sort of boys keep away? Is your boy welcomed into the company of boys day or so with a scratch and a blubber, and a talk of ill usage? What do other boys think of him? Are they his friends? If not, why not? TURNING POINTS IN A BOY'S LIFE

SIXTH ARTICLE OF A SERIES

CHOOSING HIS CHUMS.

SUPPOSE no boy sits down and | teen when he ought to be a noisy, obactually chooses his chums; they just naturally grow into his lifeexactly how and when, no one perhaps can say. The boy, indeed, often has no chance to choose his companions, but must take such as chance or circumstance throws in his way; in his case, it is these chums or none.

To think of a boy voluntarily going without chums is simply impossible. And how unhappy and unfortunate the boy who lives out his boyhood without boy friends! Some of the most pitiful boy letters I have ever read, and I have read many, are letters from boys in the far West and occasionally one from some ostracized little fellow in a fashicnable city flat, who tells me that he wishes he could do something to help circulate THE AMERICAN BOY among other boys, but that there are no other boys in his neighborhood and no one he can reach. I just read between the lines a heart hunger on the part of that boy for boy companionship, and I almost feel the gratitude rising to my lips because of the fact that when I was a boy I ate with boys, I slept with boys, I fished, I hunted, I swam, I skated, I played shinny, base ball, hare and hound, with boys-I swarmed with them, so to speak, and shared in all the healthful fun that a crowd of boys can conjure

I feel oceans of sympathy for the poor little fellow who is kept away from boys for fear of contamination, who is dressed in such a way as to invite their ridicule, who is taught he is too good for them, and brought up on a diet of

streperous, vigorous, healthy, young animal, he is a pale, three-syllabled, little

Give the boy a chance, and if it is within the range of possibility he will attract a chum; and where it is possible for him to select certain ones for his intimates it is an interesting study to watch him during the operation. Sometimes he will make the most curious combinations and give the most curious reasons for them. Often boys of the most diverse dispositions attract each other like opposite poles of the magnet; and, again, two boys seemingly of the same nature will seem to repel each other. My boy went around the corner and a block away for a chum, passing by a dozen or more boys who live within speaking distance of us. I asked him why he chose this particular boy for his best friend, and he answered with all the understanding of a boy of seven, "I don't know, but he's so joyful." What he meant by "joyful," I suppose, was good natured, happy, playful. I could not help hoping that throughout his life he might go on secting his friends from among the joyful sort of people.

A great deal can be learned of a boy's innate character and the bent of his mind and heart by watching his chumming habits. These develop early, and they mark his tendencies very clearly. Let the parent for a moment seriously question why his boy "chums" with this boy or that boy, in preference to other boys, and he may quickly learn what in other boys most attracts his own. Does he follow admiringly the bully, the bragger of the neighborhood? Does he grown folks until at the age of four- hide away in secret from other boys with him true and attractive manhood.

some sneaky-faced youth who does not look you in the eye when you address him? Does he leave the healthful, harmless sports of the many boys to follow one or two who plan and plot to do mischief in the neighborhood, and who perhaps, taught by example, at home, find their keenest pleasure in question-

If so, watch that boy.

Does he, of his own accord, choose boys of good breeding? Does his talk indicate that he admires the nobler sort of boys-the honorable, fair-players?

Then, be of good heart; your boy is

of boys hang around your premises? generally? Or does he come home every self the serious question, why.

My point is, watch the boys' chumin your hands to mold.

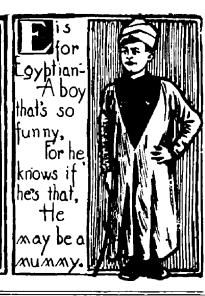

and sending them adrift without prep care in the matter of their companionthem and a sin.

THE OLD CAMEL BACK BRIDGE,

Taken by R. B. Levegood, of Harrisburg, age twelve. The bridge, which spans the Susquehanna River at Harrisburg, Pa., is seven-eighths of a mile long, was built in 1809, at a cost of nearly one hundred and ninety three thousand dollars, and is the only bridge of its kind in the United States. Charles Dickens, in his American Notes, speaks of having to hold down his head to prevent striking its rafters.

Boston Boys Again Marching.

Boston Boys Again Marching.

Something happened in the city of Boston on February 5 last that reminds us of the day over one hundred years ago when the boys of Boston marched to the head-quarters of the British, and complained that their sport on Boston Common was being interfered with by the British solidiers. It seems the Boston boys nowadays are not very much unlike the Boston boys of one hundred and twenty five years ago. On the day stated in February last about three hundred Boston bootblacks marched to the State House to appeal to the Legislature in favor of a law allowing the boys to shine shoes on Sunday. The boys assembled at nine o'clock in the morning and formed in line, the smallest at the front and the big ones in the rear. They were all neat and clean and their sweaters looked fresh from the washtub. At the word "March" the line quickly took step, and with three ringing cheers they marched up Boylston street headed by three little lads hand in hand, each not over seven or eight years old. The enthusiasm of the boys oozed out at every pore. They danced one another into drifts, joilied the bystanders and cheered all the time. Nine of the boys had been chosen to make the speeches. Their names were. Tony Lepito, Simon Levi, Aaron Kedauski. Dominico Dinnattes, Antony Scotti, Bernard Sousa, Amos Wixen, David Michael and Samuel Rosen.

These boys appeared before the committee and asked that it should be lawful for bootblacks to work on the Lord's day until eleven a. m. Eighteen of the boys were conducted into the office of the Governor and were kindly received by him. The little fellows made good pleas, which appealed very strongly to the hearts of the committeem of the boys appeared before the committeem of the boys and that his lather and mother were both sick and that he had to support them, and that Sunday was his best day; that on week days he carned from twenty to thirty cents, and of sundays from sixty to seventy cents. An eleven-year-old said that he was the eldest of six children, and it was nec

An Episode.

An Episode.

I was on a visit to my birthplace and birthplace of many of my name—writes a noted correspondent of the Western Press hat I might see once more the scenes of my childhood and breathe my native air. I had risen early that I might get a look the sea at sunrise as I had seen it so nany times as a boy—a sight so glorious, that even as a youngster. I used to standed gaze at it with bated breath and expanding eyes. From the little village hotel where I had found lodgment for the night, the road rose in easy elevation for a mile and then ran gradually downward to the meadow levels, and the shore bordered by tottages and trees. I had strolled leisurely oward, stopping ever and anon to hear the singing of the birds and inhale the elicious odors that arose from earth and krass, from shrubs and flowers and the new mown hay in the dewy fields, and now ood at the point from which the splendor the coming sunrise might best be seen, here, expectant. I waited for the red orb's oppearance, the signs and signals of whose occoming were already flashing their shifting splendors on level sea and arching sky. Suddenly I saw far down the road a bit of color flying toward me, and in an instant I realized that a little girl was wheeling up the grade as one speeds onward when loy or hope or fear gives energy to motion. Onward she came like a bird of color flying with set wings. In an instant she was light, and, seeing me, suddenly slowed her stand with set wings. In an instant she was high, and, seeing me, suddenly slowed her sneed and jumping to earth, exclaimed: "Oh, sir; can you tell me where Dr. Blackman lives? My mother is suddenly taken sick and father fears she is dying."

And I, catching her fear as if her errand was mine, quick as her panting breath, answered:

answered:
"A mile ahead—a straight run—the third house beyond the little brook—the grade runs downward even to his door."
A glad cry, a little run, a leap and she was in her seat again and speeding downward and away for love's sweet sake, and to bring quick help to mother.
And I, climbing the old fence, forgot the sunrise at my back and stood gazing after the sweet messenger of love and life, as she, her little heart in her mouth, flew onward.

sne, her little heart in her mouth, new onward.

"God give thee strength to keep thy pace, dear child, and may each wire and part hold true and strong," I murmured as I stood gazing, "for greater need or stronger cause of speed I have not seen since I was born."

And yet some say that the bicycle is

And yet some say that the bicycle is losing its place in the hearts of the people.

Meetings are held monthly. The pledge is as follows:

hereby promise by the help of God to abstain from the use of all intoxicating liquors, such as wine, beer and cider, and from the use of tobacco in any shape or form, and from all profanity." Each boy of the sixty has taken the pledge.

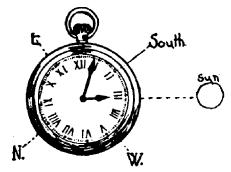

He Was Up to the Limit.

A young society woman tells a story of a very little newsboy who so appreciated her kindness to him at a newsboys' dinner that he went to the extent of great suffering for her sake. At least she thinks it was appreciation, but others have doubts. At all events, the young woman who, with a number of others, was engaged in serving the boys, noticed this

THE DANCING BEAR. The picture was sent us by G. E. Heniken, Grayville, Ili,

Earl V. Perkins, Niles, O., McKinley Company, No. 2, O. A. B., tells us how to find the points of the compass with a

watch, as follows: Point the smaller hand of the watch toward the sun, and half way between it and twelve o'clock is always due South, at any time of the day.

An Anti-Tobacco League.

Henry Ritchie, Jr., a New Glasgow, N. S., boy, writes us that he belongs to an Anti-Tobacco league. Its name is the United Church Anti-Tobacco league. It was organized Nov. 9, 1836. Our correspondent is secretary. There has been on the roll since its organization sixty boys, forty four of whom were under thirteen years of age at joining. At present there are thirty eight members.

little boy way off at one end of the table. Many of his larger fellows were already hard at work on the various good things, but this little fellow had evidently been neglected. Clearly here was a case of urgent charity, so the amateur waltress flew to his side, and for an hour she saw to it that he did not lack for anything. Plate after plate of turkey was literally showered upon him. Finally, as she set another piece of plum pudding in front of him, he rolled his eyes meekly toward her and said in muffled tones:

"Well, miss, I kin chew, but I can't swaller no more!"—New York Sun.

No TROUBLE-No WORRY

"You're a nice lad," remarked the minister to a boy who was chopping wood. "Does mother give you anything for chopping firewood?"
"No," replied the boy, with a meaning look; "but I get something if I don't do it."

The Farm Boy's Reading.

The Farm Boy's Reading.

"The printing press is a fountain of evil as well as of good," says Wallace's Farmer.

"The farm boy of to-day, if he reads novels without an older head to guide him, is likely to receive mental, if not moral, injury. Deterioration, marks the latter day novel, and much of the current magazine and newspaper literature falls into the farm boy's hands. A modern historical novel is unquestionably unadulterated trash and of very little historical value, misrepresenting historical characters and giving false ideas of the times. Thirty years ago dime novels, circulated on the siy, sent boys with bad blood in them away from home. The modern historical novel is simply the old dime novel made fashionable by being put in a good dress. The farm boy whose growth of mind depends so much upon his reading should avoid the so-called modern historical novel and the yellow journal with its sensationalism. If he reads novels let him read Walter Scott and his like. Let him read novels true to nature. Let him confine his newspaper and magazine reading to the best, and not to the cheapest."

What Boys Should Have.

Boys like good stories of travel and history. This is one reason why the Henty books prove so interesting to boys; they mingle history, travel and story so entertainingly. There are young men serving long sentences in gloomy prisons who would never have entered on careers of rime but for bad books. A bad book is a very subtle poison. A boy should not be willing to read a book that he could not fearlessly and openly read aloud to his parents and his teachers.

Reviews of Boys' Books.

All books reviewed are bound in cloth, unless otherwise stated. No book not worthy of a place in a boy's library will receive mention in these columns.

Books reviewed may be obtained of the publishers of THE AMERICAN BOY at prices stated.

DRAKE AND HIS YEOMEN: James Barnes. Illustrated by Carlton T. Chapmon. This is a story of Francis Drake, than whom there is no greater hero in the eyes of boys. The book is beautifully illustrated, printed in the very best style and handsomely bound, and contains 415 pages, every one of which is replete with interest to an active, stirring boy. The frontispiece of the book is a work of art, being a marine view in colors. \$1.50. The Macmillan Company.

Walter S. hillips This is a story of the life of a Western boy who grew up along the shores of a little Western river. He is a manly, true and keen boy—just such a boy as interests other boys. He is actual flesh and blood, and is good company. 232 pp. Herbert S.

THE IRON STAR: John Preston True. The fuller title is The Iron Star and what It saw on Its Journey through the Ages From Myth to History. The illustrations are by Lillian Crawford True. The Iron The Iron Star is a wonder book, aiming to give young people historical stories so connected as to suggest the growth of civilization from the times of the Cave men down through the various ages to the days of Myles Standish. It is intended to awaken a taste for historic reading. It does this by following the fortunes of fragments of a meteorite the iron star, which are assumed to have been "Not my fingers."

handed down from father to son for century after century. The pictures of the Cave boy and his brother, who worked as slaves in the smithy of the Viking are so full of interest that even grown persons will find pleasure and profit in the reading. 146 pp. Price \$1.50. Little, Brown & Co.

pp. Price \$1.50. Little, Brown & Co.
CAPTAIN OF THE CADETS: I. T.
Thurston. This book is by the author of
"Boys of the Central" and "A Frontier
Hero." It is a number one story for boys,
introducing the military element and teaching bravery and good morals. It is full
of interest and deplets characters of
marked individuality. The hero is a manly
fellow, whose sturdy pride forbids his accepting help in getting an education or in
caring for his invalid brother. He makes
his way through school by hard work and
becomes the popular captain of the school
cadets. His well-deserved success will stimulate boys. 314 pp. Price, \$1.25. The Pilgrim Press.

SAILING ALONE AROUND THE

grim Press.

SAILING ALONE AROUND THE WORLD: This is one of Captain Slocum's best books, illustrated by Thomas Fogerty and George Varian. The title indicates the nature of the work. He follows the fortunes of the "Spray" in his journey around the world, touching at many interesting points and meeting with all sorts of experiences, many of which are fully illustrated. It is a handsome book in style and vigorous in manner of treatment. 294 pp. The Century Company. tury Company.

SIMPLE EXPERIMENTS FOR SCIENCE TEACHING: John A. Bower. This book is published under the direction of the General published under the direction of the General Literature Committee of the Society for Promoting Christian Knowledge. It is, as the title indicates, a book of experiments, most of which are simple and require no expensive apparatus. The book is divided into lessons, each of which contains ten experiments. The character of the book may be indicated by the titles of the lessons, a few of which are: Standards of Measurement; Standards of Weight; How a Candle Burns; What Happens When Substances Burn; The Form of Flame, etc. There are fifty four illustrations and 161 pp. E. & J. B. Young & Company.

SOME BIRDS AND THEIR WAYS: A. C. Webb. This is one of the most delightful

SOME BIRDS AND THEIR WAYS: A. C. Webb. This is one of the most delightful bird books that we have ever seen. The illustrations are very handsome, some of them being in colors. The author was formerly superintendent of drawing and penmanship in the Nashville public schools. He knows what young people need and want. It is not a treatise on ornithology, but simply a collection of sketches giving a life history and description of some of the common birds. It is written in simple language and in a way to be interesting. 141 pp. B. F. Johnson Publishing Company. THE BEST FOOT FORWARD: Francis J. Finn. Mr. Finn is the author of several popular books for boys. The story is a school story in which a number of characters enter, and the value of hard work and discipline in the life of a boy is fully filustrated. 244 pp. 85 cents. Benziger Brothers.

Brothers.

Gulielma Zollinger. This book is replete with interest, the little Irish boys being full of Irish wit and industry. One doesn't tire of following the experiences of Mike. Pat and Tim and is well repaid in reading it, whether the reader be boy or man. Fully illustrated. 297 pp. \$1.25. A. C. McClurg & Company. : Company.

"Are you hungry, my child?" asked Oliver Wendell Holmes of a little girl next to whom at a refreshment table he was seated. "Yes, sir," she replied, bashfully. "Yes, sir." she replied, bashfully.
"Then why don't you take a sandwich?"

"Then why don't you take a sandwich?" he asked.
The little maid responded, "Because I haven't any fork."
The autocrat quoted, smilingly, "Fingers were made before forks," and to his intense

Boys Exchange.

Wayne Seely, Sterling, Ill.—I will exchange foreign stamps for old United States coins.

George Woodward, Elsmere, Del.—I will exchange two pairs of pigeons for one pair of rabbits.

Frank Glover, 1714 Buckingham place, Chicago, Ill.—I will exchange seventy two birds' eggs of many varieties, including an egg worth two dollars, for curios, stamps, Indian arrowheads or other relics.

George E. Hyde, 1816 Chicago street, Omaha, Neb.—I will exchange a four dollar game board, including twenty games, or stamps catalogued at four dollars, for a fifty pound dumb-bell, photographic goods or Indian relics.

Kent B. Stiles. Stonington, Conn.give two volumes of papers published monthly in 1820, 1821, 1822, 1823, 1824 or 1825 for the first nine numbers of THE AMERI-CAN BOY, or one hundred United States and foreign postage stamps for each num-

'HE BEST PAPER FOR YOUNG

The Law Student's Helper, published by The Sprague Publishing Company, the controlling owners of the Sprague Correspondence School of Law, is beyond question The Best Young Men's Paper in America.

Sprague Correspondence School of Law, is beyond question The Best Young Men's Paper in America.

As its name implies, it treats largely of the law, but in ruch a way as to make it of the greatest value and great est interest to men and women who are not study, ng law as well as to those who are. It averages forty pages to the month. It's editor is WILLIAM C.SPRAGUE, Pres. of Sprague Correspondence School of Law; asst. editor is GRIFFITH OGDEN ELLIS, Vice-Prin. of that school. It treats of all current events in the law and political world from the standpoint of the lawyer. Its departments, 'Questions Asswered and Difficulties welf for Students of Law," and "The Self Examiner," which gives questions from bar examinations, with their answers, have proved very valuable, while the miscellaneous matter is always unique and highly interesting. The rule of this paper is, once a subscriber always a subscriber. Its subscription list has grown to be the largest that can be claimed by any legal or semi-legal journal. We speak of this to show how it stands among those who know what good journalism is. It appeals to the young men who are in the busy walks of life, in that it treats of current events in a simple concise manner, and one does not have to read through pages of trash to get at the substance of what he wantstoknow. It is to-day necessary to intelligent citizenship that one give attention to passing events and be able to view them from an intelligent standpoint. This paper supplies what no other paper gives, an opportunity for a brief, condensed, philosophic review of the world of law.

ඁ෧෧෧ඁඁ෧෮෧෧෧෧෧෧෧෧෧෧෧෧෧෧෧෧෧෧ඁ Another Noted Boy Soprano.

Reuben Manley is a new favorite in Chicago's musical world. He has been singing for the past three years in St. James' Episcopal Church, where he has wen distinction as a soprano soloist. He has a range of over three octaves, taking high C with a tone as pure as a bird's. Reuben is now thirteen years of age and has been under the careful train-

REUBEN MANLEY.

ing of a choir master for the last four years. Several months ago he made his debut with the Magnus Concert Company and has received personal letters of congratulation from many distinguished musicians. His services have been in demand among society people in Chicago. He sang every Sunday evening during last winter in the home of Mrs. Edward Ryerson. He has appeared on several ocasions at the home of Mrs. Emmons Blaine, and recently sang at the mariage of her niece. His work has also een recognized by Mrs. Valentine Turner. A little while ago St. Peter's lathedral invited the St. James Church to furnish music for a festival service. In that service Reuben Manley sang, in Stabat Mater, the Inflammatus, completely winning the immense audience. The boy plays the piano well, in many cases playing his own accompaniments. He has made a great success with the plece specially written for him, entitled The Choir Boy's Dream." The boy has been held back somewhat in his studies owing to a gunshot wound which he received in the Streeter Riot on the Lake front last spring. He is said to be an unassuming little fellow, and this is some-thing quite unusual with a successful boy singer, the petting that he receives soon spoiling him.

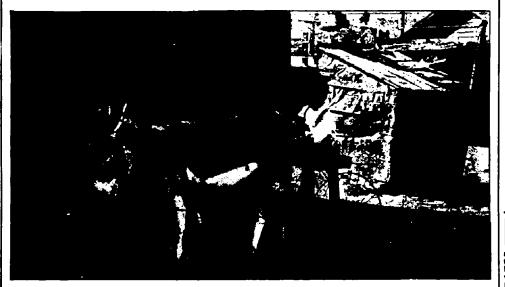

A picture of Morgan Southworth Kimbrough, a nine year old American boy of Greenwood, Miss. which was taken when he was hunting in Arkansas. You will see his gun fastened across the pommel of his saddle, and his hand clutching a dangerous looking weapon. At the feet of his p. ny are the carcasses of a deer and a wild boar. With him stands an Indian hunter dressed in buckskin hunting thirt. The photograph is furnished by his cousin, J. S. Yerger, of Greenwood. Miss., a valued young friend of This AMERICAN BOY.

AN INGENIOUS LITTLE DENVERITE

A. Edgar

It is creditable enough for a boy ten years old to build a wagon or sulky when he has a kit of tools, but little Elmer Ashton deserves great praise and his parents are to be congratulated for having such an ingenious son, for, with only a broken hammer and an old steel table knife he built a very neat little sulky. His materials were a soap box for the body, some old carpet for a seat, two small fence rails for shafts, and two iron braces ter tub. Jennie, Elmer's long eared friend.

ELMER'S HORSELESS CARRIAGE AND HIS BARN.

from a baby carriage to stiffen the frame; the wheels are also the remains of some discarded baby carriage. The whole makes a substantial and practical little rig.

While on his vacation at Victor, Elmer took a fancy to a donkey and bought it out of his own savings, and his father was kind enough to send it to Denver when the boy returned for school.

His first mechanical feat was to build a stable in the rear of his home on Lafayette street. It is pretty nearly square; that is, as near so as one could get it without a level and a square. The frame is built of fence poets and the sides are patched together with old pieces of sheet tin and soan lox covers; the door is made of two old fly screens, and the manger is an old but-

The Little Lace Maker of Maplewood.

Harry Affelhoy, of Maplewood, a little suburb of Malden, Mass., is perhaps one of the most accomplished lace makers in the country. Crippled for life, and orphaned from infancy by the death of his mother and the desertion of his father, he was early forced to seek some means of employing his time. He is now twenty two years of age, and is but little over four feet in height and weighs only forty seven pounds. His physical de-formity prevented his taking up ordinary means of gaining a livelihood. By the time he was eight years old he had become an expert with a crocheting needle. While other boys were playing on the streets and engaged in boys sports, he was occupying his time learning, with brave heart, how to take care of himself, should his kind friends, Mr. and Mrs. Affelhoy, who had taken care of him from infancy, be taken from him.

Harry became interested in needlework by seeing Mrs. Affelhoy and her neighbors knitting. Getting a knitting needle and some thread, he began to work; and what is more, he stuck to it until he had acquired a reputation as a lace maker. At the age of twelve he was sent to school, and in five years, so rapid was his progress, he graduated from the Maplewood grammar school. In school he earned a reputation as an artist. Whenever there was a competition in drawing, Harry Affelhoy always took the prize. After two years in the high school he was forced to leave. Then Mr. Affelhoy bought a little store for him and stocked it with pencils, blank books, blocks, marbles, account books, candy, etc. But this was not to his liking. The store was sold, and Harry went again to his work at lace making and drawing and painting. The result is that he is the inventor of a great many original lace designs. Some of these designs would make the Brussels lace makers grieve with envy. Much of his work is done with ordinary white thread. Occasionally he uses colors, blending them in an artistic way. When he was quite young a favorite pastime with him was to secure a newspaper picture of a new crochet design, and then figure out the stitches and make an exact reproduction. He has a crochet book containing pieces of his early work.

Lace making is not Harry's only accomplishment. He is interested in printing, and often visits a little shop near his home and sits at a type case. He can play on the piano very nicely. For some time past he has been collecting After the Maine was Harry took his two thousand stamps and put them together, making a view of the Maine as she sailed into Havana. It took him months to do it. He cut the stamps into strips a little more than a sixteenth of an inch in width, and pasted these strips together. Then he blended the colors carefully; and when the whole was completed, which was after nearly seven months, he had done something which was counted a marvel, for every line in the ship was complete. To show how minute was the work he did, the United States, flag, blowing out from the masthead, contains twenty five pieces, though the flag is but five-eighths of an

is now valued at one hundred and fifty dollars.

Harry expects soon to issue a small book on lace making. The Boston Sunday Journal, of date April 1, 1900, gave photographic reproductions of some of the boy's lace work.

Sells His Curls for Thirty Five Dollars

Ralph Jones La Selle, of Norway Village, Me., is a newsboy, but selling newspapers is not his sole dependence. for once a year his fine long curls of brown hair are sheared and sold to a wig maker for thirty five dollars. boys who used to poke fun at Ralph for his curls are envious of him. The closer his curls are cut the more they grow; and as Ralph is at no care or expense to grow his crops, he is a lucky lad. He is the youngest of four brothers, but strange to say, he is the only one possessing such hair. He is now twelve years old and has had six crops, and there are promises of many more.

Doubled His Pay Twice.

The "Sunday School Evangelist" tells

the following interesting story:
"A few years ago a large drug firm in New York City advertised for a boy. Next day the store was thronged with applicants, among them a queer looking little fellow, accompanied by a woman, who proved to be his aunt, in lieu of faithless parents, by whom he had been abandoned. Looking at this waif, the

advertiser said:
"'Can't take him; places all full. Be-

sides, he is too small.'
"'I know he is small,' said the woman,

but he is willing and faithful.'
"There was a twinkling in the boy's eyes which made the merchant think again. A partner in the firm volunteered the remark that he 'did not see what they wanted with such a boy; he wasn't big-ger than a pint of cider.' But after consultation the boy was set to work.

A few days later a call was made on the boys in the store for some one to stay all night. The prompt response of the little fellow contrasted well with the reluctance of others. In the middle of the night the merchant looked in to see if all was right in the store, and presently discovered the youthful protege busy scissoring labels.

'What are you doing?' he said. 'I did

not tell you to work nights.

"I know you did not tell me to, but I thought I might as well be doing some-

"In the morning the cashier got orders to 'double that boy's wages, for he is willing.

"Only a few weeks elapsed before a show of wild beasts passed through the street, and, very naturally, all hands in inch by one-quarter in size. The picture | the store rushed to witness the spectacle.

A thief saw his opportunity and entered at the rear door to seize something, but in a twinkling found himself firmly clutched by the diminutive clerk aforesaid, and after a struggle, was captured. Not only was a robbery prevented, but valuable articles taken from other stores were recovered. When asked why he stayed behind to watch when all others

quit their work, he replied:
"'You told me never to leave the store when others were absent, and I thought

I'd stay.'
"Orders were immediately given once more, 'Double that boy's wages, for he

is willing and faithful."
"To-day that boy is a member of the

The Cross-Cut Path to Riches.

There is a certain fascination to every energetic young man in perilous journeys through unknown lands where a single stroke of the pick may reveal a great heap of yellow nuggets. With dreams of sudden fortune his imagination is stirred, and to withstand the temptation of risking all he has hitherto gained and joining the mighty army of prospectors requires no small degree of will-power. He considers the few dollars he manages to lay aside each month from his salary of slight consequence when compared with those barrels of gold of which he has read. Thus he is often lured into the short road to wealth only to be deceived.

Though all admire the ambitious spirit and the high courage that prompt him to brave the dangers of the far North-that realm of buried hopes-the chance of success is so slight and the probability of losing his health, or even his life, is so great that it seems by far the surest and safest way to wealth lies in close application to legitimate business pursuits and rational economy. Little is to be gained by seeking fairer fields. To re-main at home and be content with one's To relot may not in every instance prove the profitable course, yet it nearly always brings the most happiness.

The poor young man of fixed purpose, of good habits, content to bide his time. who endeavors to please his employer and who is fairly economical, almost invariably finds himself at the prime of life in a prosperous condition. He has, it is true, followed the long way around, a way devoid of all the allurements of sensation, yet which at last proves the surest and nearest highway to prosperity. What seems the short road to riches usually ends in poverty, and the one who has the courage to remain steadfast and rely upon thrift and industry is almost sure to achieve financial success.-Herbert Bashford in the Saturday Post.

April in American History

APRIL 2, 1865: BATTLE OF FIVE FORKS. The Confederate army under General Lee had strongly entrenched themselves and had gallantly maintained their position against General Sheridan, who was in command of the Federal forces. But the continual severe fighting had weakened the Confederates and Sheridan pressed upon them with his cavalry. Lee's men fought stubbornly, but the repeated furious charges of the Federal cavalry forced them to surrender. Many gave up their arms, while the remainder took to flight. In addition to a large number of killed and wounded, five thousand Confederate prisoners were taken. The Federal loss was about one thousand, including killed and wounded.

wounded.

APRIL 2, 1872: SAMUEL FINLAY BREESE MORSE DIED. He graduated from Yale College in 1810 and studied painting in England. Opened a studio for portrait painting in New York, and organized and was first president of the National Academy of Design. The University of the City of New York elected him professor of the Literature of the Arts of Design. It was on his return from Europe in the ship Sully, in 1832, that Morse conceived the idea of an electric recording telegraph. His intimacy with Professor J. Freeman Dana had already made him acquainted with the subject of electro-magnetism. Proceeding to make his idea practicable, he, in September, 1837, exhibited to his friends most satisfactory results produced from a mile of telegraph wire. The same year he filed a caveat in the Patent Office and appealed to Congress for assistance in building an experimental line. Although a favorable report was made, nothing was done at the time. For four years he struggled to ensure the interest of European powers as well as to press the United States government. The last hours of the session of 1842-43 were slowly passing, and there were one hundred and eighty bills to be acted upon before his would be brought forward. He was in despair, but next morning was informed that at almost midnight Congress had ordered thirty thousand dollars to be placed at his disposal. Work was at once commenced and in the spring of 1844 a line was completed from Washington to Baltimore and the first message was sent by Professor Morse, the words being most appropriate: "What hath God wrought:" The first public message to be flashed over the wires was the announcement from the Democratic National Convention, sitting at Raltimore, that James K. Polk had been nominated for President. Honors and testimonials crowded upon Mr. Morse, not only from his own admiring countrymen, but the crowned heads of Europe viced with each other in evincing their appreciation of the magnitude and value of his discovery and took the first "sun picture" ever made in

APRIL 3, 1866: PRESIDENT JOHNSON PROCLAIMED THE CIVIL WAR TO BE

AT AN END.

APRIL 4. 1841: GENERAL W. H. HAR-RISON DIED. Son of Benjamin Harrison, Governor of Virginia; educated at Hamplen-Sidney College, and began to equiphimself for the medical profession. Abandoning the science of healing for that of arms, he received an ensign's commission from President Washington in 1791. He left the army in 1797 with the rank of captain to take the position of secretary of the Northwest Territory. The office of Governor of Indiana Territory as well as Superintendent of Indian affairs, which he held for many years, marked his ability and statesmanship. The battle of Tippercance gave him considerable reputation as a general, which was further enhanced by cance gave him considerable reputation as a general, which was further enhanced by the prudence and bravery he displayed during the war of 1812. In 1814, having resigned his commission, he was employed in making treaties with the Indians for their lands. He sat in the lower house of Congress as member from Ohio from 1816 to 1819, and was United States Senator from 1825 to 1828. In the latter year he went to the Republic of Colombia as United States Minis-

ter. He was elected to the Presidency of the United States in 1840, took up his duties on March 4, 1841, and died at Washington just one month thereafter.

Just one month thereafter.

APRIL GAND 7, 1862: BATTLE OF SHILOH. This was one of the most sanguinary battles of the war. General Beauregard had said at a council meeting on the evening of the 5th: "Gentlemen, we sleep in the enemy's camp tomorrow night," and this boast was almost at one time made a reality. Additional Federal troops, however, having arrived during the night of the 6th, the Confederates, despite a most stubborn resistance, were forced to retreat in great disorder. Both sides lost heavily, that of the Confederates being ten thousand men, while that of the Federals, in killed, wounded and captured, numbered nearly lifteen thousand. General Johnson, of the Confederates, and General W. H. L. Wallace, of the Union army, were among the killed.

APRIL 7. 1862: TREATY BETWEEN GREAT BRITAIN AND THE UNITED STATES FOR SUPPRESSION OF SLAVE TRADE. Signed at Washington, D. C. President Lincoln's proclamation of emaintents. cipation rendered any action under clauses of this treaty unnecessary.

clauses of this treaty unnecessary.

APRIL 8-15, 1838: STEAMSHIP GREAT
WESTERN FIRST SAILED FROM BRISTOL TO NEW YORK. In 1819 the steamship Savannah had crossed from New York
to Liverpool, being twenty six days on the
voyage. The Great Western's time was
eighteen days, and from that time the
regular navigation of the Atlantic ocean
has been kept up, until the "greyhounds of
the Atlantic" can now speed from New
York to Liverpool in less than seven days.

APRIL 9 1865. LEE SUPPENDERED

York to Liverpool in less than seven days.

APRIL 9, 1865: LEE SURRENDERED TO GRANT AT APPOMATTOX COURT HOUSE. With an army of sixty five thousand men, decimated by starvation, sickness and death to less than half that number; with his retreat cut off and no way of escape possible, it only remained for him to give up the hopeless struggle and make the best terms possible with his victorious enemy. Grant and Lee met at McLean's house and completed the surrender. The terms were af unusual generosity and leniency. The Confederate officers were allowed to retain their side-arms, baggage and horses, on pledging their honor not to fight against the United States government, and the cavalrymen who possessed their own horses were told to retain them, General Grant remarking that they would be needed for tilling the fields.

APRIL 10, 1816: UNITED STATES BANT

be needed for tilling the fields.

APRIL 10, 1816: UNITED STATES BANT CHARTERED BY CONGRESS. The charter of the first United States bank expired in 1811 and failed of renewal for various reasons, one being the multiplicity of local banks, which gave great advantages to the communities. The year 1815—close of the war-found the country insisting upon another United States bank, because of the suspension of specie payments by the local tanks and the consequent financial depression. President Madison signed the charter of the new bank. Its capital was thirty five of the new bank. Its capital was thirty five million dollars, of which the United States subscribed seven million dollars, the re-mainder being furnished by individuals.

APRIL 13, 1861: FORT SUMTER CAP-TURED BY THE CONFEDERATES. Ma-for Anderson, the commandant of the fort, kept the enemy at bay during the preced-ing day and night, but realizing the hope-lessness of defense, and in order to save the remnant of his little garrison, he gave up the contest. This was the opening scene of that great tragic drama which only ter minated four years later.

addition of one star for every state in the Union. The flag at this time (1901) displays thirteen stripes and forty five stars.

thirteen stripes and forty five stars.

APRIL 15, 1861: PRESIDENT LINCOLN ISSUED A CALL FOR 75,000 MEN. Fort Sumter's attack and capture made it absolutely imperative that violations of law and acts of rebellion against the republic should be suppressed by force, if necessary. The proclamation stated the purpose of the call to be to suppress the combinations which were opposing the laws and to cause the laws to be duly executed, and for these purposes the forces thus called would be used "to repossess the forts, places and property which had been selzed from the Union." Union.

Union."

APRIL 15, 1865: PRESIDENT LINCOLN DIED. Shortly after ten o'clock on the night of the 14th, while the President with Mrs. Lincoln and a small party of friends, was seated in a box in Ford's Theater, Washington, enjoying "Our American Cousin," he was shot in the head by John Wilkes Booth. The President only lived nine hours after his assassination. The whole nation was profoundly affected. From European governments and distinguished men everywhere came tokens and expressions of grief and sympathy. The remains of President Lincoln rest in Springfield, Illinois.

APRIL 18, 1847: MEXICANS DEFEATED.

field, Illinois.

APRIL 18. 1847: MEXICANS DEFEATED BY GENERAL SCOTT AT CERRO GORDO. This strong fortress, situated on the slope of the Cordilleras mountains, commanded the high road to the City of Mexico, which General Scott was desirous to reach. Santa Ana had twelve thousand men, with many batteries of guns, in and around this stronghold, while the attacking force numbered only eight thousand. Skill and bravery, however, obtained the victory, and Cerro Gordo was captured. Santa Ana, with eight thousand men, fied to the mountains. The victory cost the Americans four hundred and thirty one men, while the Mexican loss was twelve hundred killed and wounded and three thousand prisoners taken, with forty three cannon, five thousand stand of arms and other munitions of war.

APRIL 19, 1775: BATTLE OF LEXING-

cannon. Nee thousand stand of arms and other munitions of war.

APRIL 19, 1775: BATTLE OF LEXING-TON. General Gage, in command of the British troops at Boston, received information that a quantity of arms and ammunition had been received by the colonists and deposited at the village of Concord. He sent out eight hundred troops under Lieutenant-Colonel Smith and Major Pitcairn, to seize them. The expedition became known and church bells, musketry and cannon roused the patriots to action. When Major Pitcairn with his troops arrived at Lexington he found himself opposed by Captain Jonas Parker and seventy of his comrades. Pitcairn at once commanded them to throw down their arms and disperse. The order was refused and the soldiers fired. Eight minute-men were killed, several were wounded and the others dispersed. The effect of this engagement was to rouse the people everywhere to resist with the utmost determination the oppression of Britain, and the war for independence had commenced.

APRIL 23, 1898: PRESIDENT McKIN-LEY CALLED FOR ONE HUNDRED

dependence had commenced.

APRIL 23, 1898: PRESIDENT McKIN-I.EY CALLED FOR ONE HUNDRED AND TWENTY FIVE THOUSAND VOLUNTEERS. Spain having refused to accede to the American demand, that she at once relinquish her authority and government in the island of Cuba, and withdraw her land and naval forces from Cuba and Cuban waters, this government at once proceeded to enforce its demand by sending a fleet to blockade Cuba and by raising an army to expel the Spanish from that island.

APRIL 27, 1822: GENERAL U. S. GRANT

APRIL 27, 1822: GENERAL U. S. GRANT

BORN.

APRIL 30, 1803: LOUISIANA PUR-CHASED FROM FRANCE. This territory of the valley of the Mississippi was discovered by the French adventurer La Salle and was named by him in compliment to the French king Louis XIV. It was ceded by France to Spain in 1762, but was retroceded in 1800. Napoleon Bonaparte at this time contemplated sending an expedition to capture New Orleans, which, if carried out, would seriously interfere with the commerce of the western people. Negotiations were at once commenced for the purchase of the territory. The treaty of purminated four years later.

APRIL 14. 1818: PRESIDENT JOHNSON APPROVED OF ACT ESTABLISHING A UNITED STATES FLAG. By resolution of the Continental Congress on June 14. 1777. the flag of the United States was declared to be "thirteen stripes, alternate red and white; that the union be thirteen stars, white, on a blue field, representing a new constellation." At Brandywine river the new flag was first raised in battle, and Great Britain saw the stars and stripes unfuried in London on the day when George III. acknowledged America's independence. As new states were being added to the Union, a revision of the flag was found necessary, and the committee appointed for that purpose recommended the retention of the original thirteen stripes with the

HOW TO MAKE YOUR OWN TACKLE AND SOMETHING ABOUT FISHING

J. HARRINGTON KRENE

(Begun in March Number.)

The next thing you must provide is a line. Now you cannot make a reel line, but one of fifty feet of good strong linen or even silk twist does not cost more than a trifle. You will have to buy this, and when you are saving your pocket money for this you should include the purchase of a dressing for it. This consists of half a pound of paraffine wax and one ounce of resin, which must be melted together over a slow fire in an enameled agate saucepan. When it has

Fig. 8. Way to Loop in Leader.

simmered for fifteen minutes, take it off the fire and immerse your line. Let the latter remain till the mixture begins to cool so that you can handle the line without burning yourself. Then take this out, and rapidly draw it thrugh a wet rag, so as to remove the superfluous dressing. Stretch it between nails on the wall, and rub it with the rag till you have a smooth surface. This is the easiest applied, and smoothest dressing for all kinds of lines, with which I am acquainted, and it is a perfect preservative from rotting.

The next part of your tackle to be considered is the leader. This is a transparent line from two to three feet long connecting the snell or gut line on which the hook is tied, with the main or dressed line. Now a leader should be made of silkworm gut strands, which are bought by the hundred from the tackle stores, but may be difficult for my young friends to get. In this case horsehair will serve in its place, and even to this day in some parts of England, the stout strands from a gray or white horse's tail are used in preference to the silkworm gut. Take two or three hairs and steep them in a little lukewarm water. This softens them.

Then form a loop with one end of them, and

Fig. 9. Way to Join a Leader. make a single knot like Fig. 8 and draw it tight; snip off the stray ends with a sharp pair of shears. (I advise taking two or three strands, so that the strength of the leader may be sufficient.) To join this length to another, the knot shown at Fig. 9 is thus tied. Take the two ends together and tie one single knot, and pull tight. Cut off the loose ends as before. Continue this tying till you have made your leader say three feet. Then tie another loop, in the same way as be-fore (Fig. 8) and you have finished this piece of tackle. The hook is tied on the silkworm gut all ready for fishing and sold by the tackle stores, but you can buy the hooks separate and tie them on

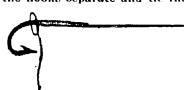

Fig. 10. Way to Tie on a Hook.

hair yourself, if you choose. Two or three strands of hair should be used. One end is tied in a loop (Fig. 8) and the other is pleased on the walls. other is placed on the under side of the hook shank and wound tightly round with waxed thread or silk. To tie this thread a loop should be formed at the finish of the winding and the end slipped through it in what is known as a "half hitch." This should be repeated for security, and the waxed binding is to be varnished, with white shellac varnish-though this is not absolutely necessary. White shellac varnish is made by dissolving the bleached shellac in alcohol, but a small quantity can be obtained for a few cents at any paint seller's.

water. A very simple and effective

sinker can be made by any THE PROPERTY OF THE PARTY OF TH from boy piece of lead

Fig. 11. Load Wire Sinker. wire. He can even cut a strip from a flattened piece of lead pipe, and form it with his jackknife. Having a piece of three or four inches long, he winds it corkscrew-like around a stiff wire, until it assumes the shape of Fig. 11. The line is passed into the coils as shown in the diagram and the end loop of the coil is then closed in on the line, holding the line and

sinker in position. With the foregoing simple tackle the young angler need not be afraid to approach the stream for any of the fishes within his reach.

Every angler welcomes the month of sunshiny smiles and rainy tears, for in it trout-fishing begins, and the French people say that the trout is the poisson d'Avril-the "fish of April"-in very truth. In some states it is true, the middle of the month is reached ere the law permits angling for this fish, but in the meanwhile the lowly but toothsome brook sucker, and the greedy pickerel serve the young angler as a relish for the trout fishing ahead, and the user of the rod is not therefore without occupation in the interval.

Whether the season for trout opens on the first or the fifteenth, according to locality, the date can make no difference to the fascination of the sport. All through the dreary winter months the angler has been looking forward to his first day with the beautiful "salmon of the fountains" (salmo fontinalis) and now it has come, or is near, it is time to recall some of the primary rules which should govern the young fisher who would follow the example of his elders and "a-trouting go."

Most of the fishing done by my young friends will be in the many streams wherein trout delight, and the rod suitable for these fish and waters should not be difficult to obtain or make for oneself according to the directions given in the March number of THE AMERICAN BOY. It is well that this rod or pole or wand-for it is so named in different localities-should be light and as long as may be compatible with the reach of the angler. It is best as long as may be, for this reason: The farther the angler stands away from the water the better is his chance of being unseen by the trout, and as that Nestor of anglers. Seth Green, used to say, "when angling you don't want the fish to know you are in the same county." The rod is best to be light in weight, as every one knows when he is trudging home at night with a load of fish. The lighter the rod at

that time the better. The great painter, Opie, when asked what he mixed his colors with to produce such wonderful pictures, replied, "with brains, sir!" and when the question of how tackle and baits are applied to catch trout, a similar answer may be made. It is not the rod or the other tackling or even the bait, so much as it is the brains with which they are used that do the business. So do not be discouraged if at first you cannot afford a fine rod and reel, but do your best by observation and watchfulness of the habits of the fish to deserve them. You will no doubt obtain them in good time.

The line should be either of linen or silk, and the reel of the homemade pattern will serve admirably. Attach thereto the leader as described above, and let your hook be of the same size honed on a piece of emery stone, or filed with a little file.

Fig. 12. How to Bait Hook.

The bait you will use in all probability in the early part of the season, is the common earthworm, that you dig up in sheltered places. Now do not wait till you actually need these angle-

sometimes also for them-a sinker is them at least a week before you want the may be abroad roving for food, but wanted to carry the line down in the them. Have a good large receptacle so that they will not be crowded, and spread on the bottom of it, a thick layer of damp but clean moss. Place the worms on the top of this, and as they crawl down into it, they will be cleansed of all dirt and impurity, and become tough and lively, and of a semi-transparent pink or coral hue. A trout is always tempted more surely by a worm prepared in this way. If you are fishing with one who prefers his bait un-cleansed and dirty, you will have a chance to test the superiority in the day's result, of this process of prepara-

> The way to bait the hook is shown by Fig. 12. Always enter the hook at the head and the worm will slide on with ease. If you wish to use a large worm, as compared with the size of the hook, break off a piece of the worm or loop it. A large worm is sometimes the only kind of bait that will attract a large trout.

When you find, as is sometimes the case, that the fish are only nibbling at

Fig. 13. Three-hook Tackle.

the bait, and that you do not hook them with any certainty, it is a good plan to tie three hooks about half an inch above each other on the snell, and loop on the worm as shown in Fig. 13. Very often the biting trout takes all three hooks and swallows them. You will then have some trouble in getting them free, but not if you use a simple little tool termed "disgorger," Fig. 14, which is easily made by cutting through each side of a willow or alder stick of about the thickness of a lead pencil, and passing the groove (at A) down to the bend of the hook, and so forcing out the barb from the flesh of the imprisoned fish. A careful study of this tool (Fig. 14) will show its utility wherever a hook cannot be detached by the fingers alone from the throat of the fish.

When you have caught a fish do not strike it on the head to kill it, but do it humanely in this way: Take it tightly in the left hand below the gills, then place the ball of the thumb of the right hand in the roof of the fish's mouth, and with a sharp click break the neckbone. This destroys sensation at once and surely kills without pain. A very large fish must, of course be killed in the ordinary way, as its neck bone is too strong to be dislocated by means of the

Fig. 14. Disgorger.

thumb. Always keep your fish covered from the light and air, and if you want them to retain their beautiful colors till you can show them to your friends, take with you some fine tissue paper, and roll each fish up in it as it is taken from the water. You can wash off the paper, and the fishes will emerge at the end of the day, in all their pristine beauty.

Where to fish, may fitly conclude this article. Assuming you are brook fishing, the following rules are worth "pasting in your hat." Never pass a deep hole, without giving it at least from ten to twenty minutes close searching. In early spring trout are more sluggish than they are later, when the water is warmer, and are therefore apt to be in deep water. Do not pass by trouty spots because they are apparently impossible to get at. Rather wind your line around the tip end of 'your rod till only the hook dangles from it, and carefully approaching so as to make as little noise as possible, thrust the tip through and uncoil the line by turning the rod till sufficient is freed to enable you to reach the envied spot. Then having hooked the largest fish of the day, do not lose your presence of mind, and get your line hung up and tangled in the bushes where you have jerked out the fish, only to see the latter wriggle down into the water again with a flip of the tail and-good bye!

Especially try with care all nooks and crannies near bridges and sunken logs. Wherever there is room for the trout to In angling for all fish but trout—and worms, before digging them, but procure hide, there he will be. At certain times

he seldom does this. The trout is a solitary and quiet natured fish, and usually watches from his covert for food to come to him. Randal Holme in that wonderful old English book, "An Acad emy of Armory," says of this fish 'Trout are emblems of quiet calm and gentleness, such as love not to be in troubled waters, or to be tossed to and fro by the blustering of wicked and malevolent spirits, but rather live quiet at home than enjoy abundance through labor and trouble." If this be so, then surely the trout may teach us all a lesson to avoid strife, and "go a-ang

THE AMERICAN BOY is the only official organ of the Agassiz Association and should be in the hands of every member.

All correspondence for this department should be sent to Mr. Harlan H. Ballard, Pittsfield, Mass. Long articles cannot be used.

THE AGASSIZ ASSOCIATION velcomes members of all ages, and any one who is interested in any form of natural science is invited.

Established in 1875. Incorporated in 1892.

Short notes of personal observations are particularly desired for use in the A. A. department. Send illustrations when convenient. Questions are invited.

Address H. H. BALLARD, Pittsfield, Mass.

Sentiment and Science.

What is called "popular science" in these days is in danger of being spoiled by senti-ment and imagination. Our most popular writers and lecturers know that people can be made to feel more easily than they

can be made to feel more easily than they can be led to think.

There is strong temptation, therefore, to secure popular interest in animals, and even in flowers, by fancifully investing them with human sensibilities and human powers of mind. Some even translate the growls and the howls of bears and foxes into human speech, and tell tearful audicnces what the dear wild creatures say to each other in their homes, and on their travels; and breathe so much poetry into their narrative as to raise the death of a marauding wolf into a pathetic tragedy of love and sacrifice.

This temptation the Agassiz Association

This temptation the Agassiz Association has strongly felt, but consistently resisted. The aim of science is truth. The purpose of scientific education is the development of the power of clear seeing and accurate

Poetry and emotion are good in their Poetry and emotion are good in their clace, perhaps they are better and more enduring than knowledge; but poetry and science do not mix well. If it be true that "Christian science" falls because it is "neither Christian" nor science," it is equally true that poetical science must fail, because it is neither poetry nor science. The kindergarten is in greater danger of failure on this account than on any other. Children are shown a white pebble, and Children are shown a white pebble, and are encouraged to call it a "dear little white lamb," or a "pale little princess," or anything in the world except what it is—a

white lamb." or a "pale little princess." or anything in the world except what it is—a white pebble.

"Societies for the prevention" rarely escape this peril. The sufferings of bereaved mother birds and butterflies are placed on an equal footing with human grief. A curious phase of this excessive sentimentalism is its exaggerated regard for beauty. We are taught that it is cruel to kill a butterfly or an eagle because they are so beautiful; while a caterpillar and an English sparrow may properly be killed because they are ugly. Yet the butterfly is the parent of the caterpillar, and if caterpillars are to be destroyed, it is both economical and merciful to make the single death of the parent render needless the destruction of many of its offspring; and the homeliest lamb of the farmer's flock deserves as much consideration as the eagle that tears it in pieces. These are but a few illustrations of the evils of unthinking emotion. They are seen on a broader scale in the senseless opposition to vaccination, and the ignorant outcry against vivisection.

We yield to none in devotion to all deeds of mercy, gentleness and love, but these virtues are not best promoted by telling

of mercy, gentleness and love, but these virtues are not best promoted by telling

The Little Red Ant.

Yesterday afternoon, while the sun was quite warm. I noticed ants busily spreading grains of sand about. Two hours later I noticed the ants coming up out of their hole and carrying the sand down with them. I think they took the sand down to warm their underground house.—Percival S. Bradford, Placentia, California. [Will Percival kindly observe the ants in one of the hottest kindly observe the ants in one of the hottest days of midsummer, and see whether they do the same thing then? Ed.]

Trilobites.

I think the question in the February number of THE AMERICAN BOY about trilodites has not been answered. Webster says, "Any one of numerous species of extinct arthropods, so named from the three lobes usually seen on each section." Leslie G. Davis, Sleepy Eye, Minn.

Snake and Catfish.

Walking on the shore of a mill pond near lake Winola, I saw a big water snake with a catfish in its mouth. When the snake got to shore it began to shake the fish.

the snake and let the fish go, but it had a hole in its side where the snake had bitten it.—William J. Wilcox, 112 Linden street, Scranton, Pa.

Animal Burials.

I saw on your page in THE AMERICAN BOY that you wished an account of an animal burial. I had a cat with four kittens. One died, and I watched the cat carry it to a shed—and eat it.—Karl Bicker, 1209 Washington street, Kansas City, Mo. A small pug dog gave birth to seven pups, and when they were one day old, I saw her breaking their necks. I did not interfere, but watched to see what she would do. After killing one she carried it off to a hole she had dug. This was repeated until she had killed them all and put them in the hole. She then covered them up.

About two days after she was seen eating one of the pups. She continued this until they were all gone, although she was well fed all the time. This is the truth.—R. Emmet McCann, Mena, Arkansas.

PUTTING TAGS ON LIVE FISH.

Each Tag Numbered and a Record Kept So That the Fish May be Identified.

FROM THE WASHINGTON TIMES.

It seems rather an odd idea to fasten metal tags to marine fishes and then let them loose in the ocean with the idea of identifying them as individuals in case they

them loose in the ocean with the idea of identifying them as individuals in case they happen to be caught at a future time; but this is what the United States fish commission is doing Just now with cod, 1,500 of which have been duly tagged and released this year. No two tags are alike, the markings on them being stamped in a series of letters and numbers, record of which is kept in a book in such a manner that if a tagged codfish turns up a moment's reference to the memoranda will furnish the history of that particular specimen, with date of liberation, weight, etc. Only "brood fish"—that is, spawning females—are tagged. They are bought from fishermen, stripped of their eggs at Wood's Hole, Mass., and liberated in the waters of Vineyard sound, after having the tags attached to them. The tag is a small piece of copper, securely fastened by a wire passing through a fin near its junction with the body. The tag is very light, and its attachment in the manner described does no harm whatever to the animal. During the last few months the fish commission has distributed a circular all along the coast of New England, requesting that whenever a cod with a tag comes into the hands of a fisherman or other person, he shall remove the piece of metal and send it to the commis-

England, requesting that whenever a cod with a tag comes into the hands of a fisherman or other person, he shall remove the piece of metal and send it to the commission stationed at Wood's Hole, together with a brief statement as to the date on which the fish was caught, where it was captured, its weight before dressed, its length and the condition of its roe.

The object of the tagging is to ascertain the rate at which a cod grows, the frequency of its spawning and the extent of its travels in the ocean. There is reason to believe that the future of the cod fishery off the New England coast must depend mainly upon artificial hatching. The hatching of cod eggs and the planting of fry in those waters have been carried on for several years, and already the fishery shows a notable improvement, apparently due to this work. During the present year, the work coming to an end April 1, there were planted in New England waters 250,000,000 cc dfish.

Forms of Snow and Ice.

This snow crystal (Fig. 1) was seen Feb. 9, 1901, at Troy. Temperature 20 above zero; direction of the wind was north, but there was not much of it.—H. Bosworth McChesney. 2446 Fifth avenue, Troy, N. Y.

avenue, Troy, N. Y.

The following illustration of a snowflake (Fig. 2) was drawn Feb. 15, 1901. As
I was about my morning work I noticed
a very large snow-flake on my coat sleeve.
It was a very curiously-shaped
one. I thought, for I had not
noticed one in particular before.
I carried it into the shed and
carefully laid it on a woolen
blanket. The weather was very
cold, so it did melt. I got my
magnifying glass and examined
it with care, and found that it
had six points, each very curiously shaped.
At the time when I found this snow-flake
the wind was blowing from the north, but
not very hard. The temperature was five
below zero.—Yours truly. Arthur P. Woods.
Bath, N. H.

El Reno, Okla., Feb. 12, 1901.

H. H. Ballard, Pittsfield, Mass.:

Dear Sir—On a recent trip to the South Canadian River, I noticed under the trees a great many plant-like forms of ice, which lifted up the leaves which covered the ground and held them up on their light will you kindly return them? J. R. P.

They were or fourteen tops. They were twelve or fourteen inches high and spread out something like celery tops. They were about a mile from the river, and in a soll which was sandy for a great depth. I broke them depth. I broke them off two or three inches below the surface, but this gave no indication of how leep they might extend.

There were thousands of them and well deserved a photograph but I can only send

deserved a photograph, but I can only send you a drawing (rig. 3).—Preston A. Murray, El Reno, Okla.

Enclosed find the drawing of a snow crystal (Fig. 4) I caught this morning (Feb. 22) on a black cloth. The temperature was 26 degrees F. The general direction of the

wind was toward the northeast. It was not blowing hard. My cousin also saw one (Fig. 5).—Harry K. Dick, 106 S. Ninth street, Reading, Pa.

Rearing Moths and Butterflies.

1427 Nixon St., Allegheny, Pa., Jan. 24,1901 Mr. Harlan H. Ballard, President, A. A.:

Dear Sir—Last summer we had sunflowers in our yard, and I noticed some caterpillars on them. I placed sunflower leaves in two pasteboard boxes. Next I caught some of the caterpillars, called the "woolly bear," from the innumerable brown hairs, which cover the body (Fig. 1). Later

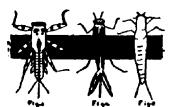

found a caterpillar like the one shown in I found a caterplilar like the one shown in Fig. 2. This was green, and proved to be the larva of the Hawk moth (Fig. 2). It was thick-bodied, covered with little protuberances, and had on each side whitish stripes, edged with red or yellow. After some days the larvae of the Tiger moth (Fig. 1) wound themselves up in cocoons consisting largely of their outer hairs. Yours truly, John A. Musgrave.

WaterInsects—Who Will Name Them?

Watertown, N. Y., Sept. 24, 1900.

Watertown, N. Y., Sept. 24, 1909.
Dear Mr. Ballard:
I send you herewith two pages from my notebook. You will see that they are drawings of three insects. As I had no magnifying-glass with me, I could not observe them very closely. While walking along the stony bed of a sluggish creek I turned up a stone which lay in the water and found a number of these curious creatures

crawling along on the under side of the rock. Nos. I. and II. were particularly odd, walking on six feet, but when in the water, waving their tails like a fish. On each side of No. I. were two paddles (you might call them) which kept continually waving. No. II. had a tail of three fin-like parts. No. III., I thought, was in an undeveloped state and would in time resemble the others. The bodies of all these were somewhat transparent. When I replaced the stone, a number of minnows flocked to the spot, thus showing (I thought) that the three insects were part of their food.

Whether these observations are definite enough, I know not, but I hope they will entitle me to admission into the association.

Report of the Secretary of Chapter 132, A. A., Buffalo, N. Y., for 1900.

The year past has been a prosperous one in the history of Chapter 122. The meetings have been well attended and many interesting lectures were given by friends of the chapter. chapter.

chapter.
At a special meeting held on April 15th, between the officers of the Chapter and those of the B. S. N. S., the custody of the Crosby Collection of Minerals was formally given over to the Society of Natural Sciences by the director, Dr. Amadeus W. Graban, thus relieving the Chapter of all responsibility in regard to letting them out to the public for use.

Five new members have been added dur-

to the public for use.

Five new members have been added during the year.

The Chapter was represented by Miss M.

A. Fleming at the International Geological Congress, held the past summer in Parls.

Excursions were frequent during the spring and fall, the Chapter joining forces with the Naturalists' Field Club. A special excursion to Windmill Point was made possible by the kindness of Maj. T. W. Symons in placing his boat at the disposal of the chapter. It was a most enjoyable occasion and much valuable information was gained.

gained.
It is to be hoped that the new year will be even more prosperous than the past and that it will witness renewed activity among the members with the birth of the new century. Respectfully submitted, Imagene C. Strickler, secretary. January 10, 1901-

Everybody is cordially invited to join the Agassiz Association.

Reports of the Fifth Century, Chapters 401-500, should reach the President by May I. Address, H. H. Ballard, Pittsfield, Mass.

BOYS IN THE HOME, CHURCH AND SCHOOL

Aunt Em's Letter to Little Boys

The readers of THE AMERICAN BOY in the early part of last year will remember "Aunt Em's Letters to Little Boys." These "Aunt Em's Letters to Little Boys." These letters stopped quite suddenly, and the reason for it was that "Aunt Em" had gone to Europe and was too busy traveling about and seeing the sights to think of the hundreds of little boys who had formed her acquaintance through the pages of this paper. Now that she is home again she evidently feels some remorse over her neglect. We shall doubtless hear from her often now neglect. Worten now.

Dear Boys:

As you will read from the following letter, I have a faithful friend in Bob, who wants to become your friend as well. He wants to know you, and learn something of your school life. I think he has been very good to write so fully about his, don't you? What I want you to do, if you will, is to write me just how far you think Bob is right in what he says. Will you? Then, next month, I will have your letter published—or the best one of the many I hope to receive.

Bob told me that he "really would very much like to know of your idea as to how schools in the West should be conducted, and just how far a fellow can put up with the way principals run their schools."

You see, he don't seem to remember that many times the poor man has to do what his Board of Trustees plans for

Now, dear boys, let me hear from you soon, and I shouldn't wonder if we might do real good to the teachers and principals of eastern and western schools if they hear honest opinions from earnest boys.

It seems a long time since I last wrote you, but having returned from Europe, I hope to give you more time. Write me "care of THE AMERICAN BOY, Detroit Mich."

With many good wishes, I remain, Your sincere friend, "AUNT EM."

Dear Aunt Em:

I have, at your request, written this brief account of my school. I live about lifteen minutes' walk from our institute and my school sessions begin at nine

and my school sessions begin at nine o'clock.

First comes the chapel exercises, and we take advantage of this period to study our Latin from papers concealed in our song books. Once my teacher discovered me doing this and justly allotted to me an hour's time in which to think over my wrongdoing after school. There is always a basket ball game or something of that nature that deserves your interest and makes you wish you had been better. It you happened to be staying after school that day. Or, sometimes school studies demand our attention, such as an unfinished grammar or arithmetic test, a spelling lesson not learned, and many other things.

Our teacher is very kind to me and to show her that I appreciate her kindness, but more, I am afraid, for a safe guarantee of a free afternoon, I have tried to be very good lately.

We have an hour's time given to us to eat our lunch, but most of us hurriedly gulp down a sandwich or a piece of cake and throw the rest away and hurry down to the gymnasium, where we are sure of having a good time. I and several other boys have been prohibited from entering the gymnasium as the result of tossing a "grind" in a blanket.

There exists a deadly enmity between

rine gymnasium as the result of tossing a "grind" in a blanket.

There exists a deadly enmity between a public school around the corner and my school, and I cannot tell what caused it; neither can I tell who started it, but it will suffice to say that it is there, and when will suffice to say that it is there, and when the fellows from the public school come on the premises of my school, nothing short of a "cop" can stop the fight. I have, from bitter experience, learned to swallow my wrath and wait until it is safe to battle with the fellows without bring seen by the piercing eyes of the professors, who report to the principal.

I would like to have a western boy tell me about his school and school life, as I am an easterner of eleven years and a half and hope a boy of my own age will answer.

Very truly yours.

"BOB."

Study in the evening is not good for boys. It usually breaks into the sleep habit; it tends to gorge the brain with blood. It makes dreams. If a boy is nervous lock up his books at four o'clock. Let him play and romp and then go to bed.

Nearly Correct, We Should Say.

McLeansboro, Ill., Feb. 2d, 1901. ir. Wm. C. Sprague, Editor, THE AMERICAN BOY, Detroit, Mich. Dear Sir:

It is plain. I think, that the masses of the American people do not attend church; and the statement was made a few years ago by no less an authority than the New York Christian Herald that eighty five per cent. of American boys between the ages of twelve and twenty one do not go to church or Sunday school. Please inform me, if in your opinion, the latter statement is approximately true. If not, correct, please give the per cent. of boys from twelve to twenty one that you think do not attend church and Sunday school.

Stamp enclosed for reply.

Very respectfully,

GEORGE K. EDWARDS.

How Some Boys Were Taught Reverence.

The irreverence of his choir and Sunday school was a sore worry to a certain rector. Exhortation and expostulation seemed to be in vain. So long as he was present to keep order in choir and Sunday school, there was outward quiet. But when he was absent, things were done which tried his heart. Matters culminated one day in the breaking of the credence table, beside the altar, by the choir boys "playing tag," running through the chancel, jumping on the credence, and thence leaping over the partition into the ambulatory behind the altar. Of course no one with authority was present at the time. Something had to be done. Mere angry rebuke had proved useless in the past. It might stop particular acts, but the rector realized that he would go on haranguing for one misdeed after another, all his days, unless somehow he could convert the spirit of the boys into reverence.

He thought, and he prayed. He began at once quietly but firmly. He established a rule for all the Sunday school and choir: On entering and leaving church, they must bow to the altar. They practiced it in Sunday school, and the choir on Sunday began it, going in and out of service. There was some protest. Some of the con-The irreverence of his choir and Sunday

GENERAL LAWTON'S SON, WITH HIS PET AND A FILIPING SERVANT. Photograph by Professor Dean Worcester, of the United States Philippine Commission.

A Boy With a Kind Heart.

The other day a horse was trying to get a very small quantity of oats from the depths of a very small nosebag. In vain the poor fellow tossed his head and did his best to gain his dinner. At last, just as he was settling down to dumb and despairing patience, a bright-faced boy of perhaps ten or twelve years of age happened along. Seeing the dilemma of the horse, the little fellow stopped and said: "Halloa, can't get your oats, can you? Never mind. I'll fix you!" And straightway he shortened up the straps that held the bag in place, and with a kindly pat and a cheery word which the grateful horse seemed to appreciate, went his way. I would like to be the mother or the aunt or even the first cousin to that boy. I would rather that he should belong to me than own a Paganini violin or a first-water diamond the size of a Concord grape. Bless his heart, wherever he is, and may he long centinue to live in a world that needs him. Kindness of heart, and tenderness, consideration for the needs of the helpless and the weak, and the courage that dares to rentions of heart, and tenderness, consideration for the needs of the helpless and the weak, and the courage that dares to be true to a merciful impulse, are traits that go far toward the make-up of angels. We need tender-hearted boys more than we need a new tariff to bring up and develop the resources of the country."—Our Dumb Animals.

If you have any fault to find with any one tell him, not others.

The chances are that a boy who leads in school will be a leader in after life.

Let Man can run about ten miles an hour and d. jump about twenty three feet at his best.

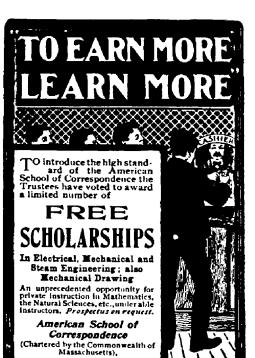

gregation sneered, others criticized. The rector said nothing, but he kept on with his plan. Twelve months passed, and at the end of that time, the priest joyfully recognized that he had found a solution for the problem of irreverence. To-day without fear he would leave his boys and girls alone in church, or Sunday school, if need be. Not one would dare enter the chancel, where that awesome thing is, to-wards which they bow—the only thing in their lives, as young Americans, to which they ever had to pay reverence. And talking in church has become at most a subdued whisper, in the presence of that solemn, mysterious altar that commands their obeisance. their obeisance.

The rector is not particularly a ritualist, but there is one bit of ritual he would not relinquish for any price—and that is bowing towards the altar.

BOYS IN THE OFFICE, STORE, FACTORY, AND ON THE FARM

..........

Be Worth It.

The reason for the clerk not getting a larger salary is mostly his own fault. He so fears doing more than he is paid for, that he continually stands in his own way of promotion. In the cities of thirty thousands and and less the merchants are unable to hire a man specially for the writing of advertisements. He who takes care of the ad. part must also help in any other manner which may present itself. He must be clerk. Why not reverse it? Why not manner which may present user. He must be clerk. Why not reverse it? Why not clerk become ad. writer during his leisure hours? It will bring business to his store— increase the income of his employer. The proprietor in time cannot fail to feel the increased worth of the clerk. When he proprietor in time cannot fail to feel the increased worth of the clerk. When he realizes that the increased value of the clork is a permanent affair, up go the wages of the ambitious one. The fellow who finds time to complain of his compensation is not he who will get higher on the ladder of financial success. Don't wait. Push ahead. Make your presence felt. The advertising world has use for you, if you will only show your worth—prove your ability. Owing to the lack of the clerk's ambition, the merchant is not getting the necessary aid at present in his advertising. He goes to the newspaper with which he reades and they must help him to keep his ad, in their columns. Otherwise the ad, will not pay the merchant. Think of it, the time is not far distant when every country daily from necessity will have an adwriting department. The newspaper will not get extra pay for the service—the clerk will. Which shall it be, clerk or newspaper? You want the extra few dollars. Get in and get it. It's yours, if you only accept it. "Where there's a will there's a way." Remember that success comes from service—not otherwise.—Shoe and Leather Facts.

A Good Reference.

John was fifteen, and very anxious to get a desirable place in the office of a well-known lawyer who had advertised for a boy, but doubted his success, because,

boy, but doubted his success, because, being a stranger in the city, he had no reference to present.

"I'm afraid I'll stand a poor chance," he thought, despondently; "however, I'll try to appear as well as I can, for that may help me a little."

So he was careful to have his dress and

may help me a little."

So he was careful to have his dress and person neat, and when he took his turn to be interviewed, went in with his hat in his hand and a smile on his face.

The keen-eyed lawyer glanced him over from head to foot

m head to foot. Good face," he thought, "and pleasant

ways."

Then he noted the neat suit—but other boys had appeared in new clothes—saw the well brushed hair and clean looking skin. Very well, but there had been others there quite as cleanly; another glance, however, showed the finger-nails free from soil.

"Ah! that looks like thoroughness," thought the lawyer.

"Ah! that looks like thoroughness," thought the lawyer.

Then he asked a few direct, rapid questions, which John answered as directly. "Prompt," was his mental comment; can speak up when necessary Let's see your writing," he added aloud.

John took a pen and wrote his name. "Very well, easy to read, and no flourishes. Now what references have you?

The dreaded question, at last!

John's face fell. He had begun to feel some hope of success, but this dashed it again.

'I haven't any." he said, slowly; "I'm

almost a stranger in the city."
"Can't take a boy without references,"
was the brusque rejoinder, and as he spoke
a sudden thought sent a flush to John's

neek.
"I haven't any references," he said, with esitation, "but here's a letter from mother just received. I wish you would read it." The lawyer took it. It was a short letter: hesitation.

My Dear John: I want to remind you that wherever you find work you must consider that work your own. Don't go nto it, as some boys do, with the feeling that you will do as little as you can, and yet something better soon, but make up our mind you will do as much as possible, and make yourself so necessary to your employer that he will never let you go.

You have been a good son to me, and I an truly say I have never known you to hirk. Be as good in business, and I am ure God will bless your efforts.

"H'm!" said the lawyer, reading it over the second time. "That's pretty good advice, John—excellent advice. I rather think i'll try you, even without the references." John had been with him six years, and last spring was admitted to the bar. "Do you intend taking that young man into partnership?" asked a friend lately. "Yes, I do. I couldn't get along without John; he is my right hand man!" exclaimed the employer heartily.

And John always says the best reference he ever had was a mother's good advice and honest praise.—Sacred Heart Review.

Some one has said that the young man who wants to marry happily should pick out a good mother and marry one of her daughters any one will do.

"Work, Work, Work!"

Chauncey M. Depew has been an employer at times of as many as thirty five thousand men, and has been in close touch with institutions which employ a hundred thousand more. He says:

Most men fail in life from their own fault in not seizing the opportunities which come to them. What I mean is just this: I was in a large law office down town recently, and I said to the head of it, 'You are working yourself to death.' The head of every concern in this country is working himself to death because he cannot get the proper assistance. He said, 'Yes; and for this reason: look at that office full of clerks, every one of them watching me to see when I am out, so that they can fool away their time, and every one of them watching the clock to see when the time comes for them to leave. If there was among that body of young lawyers out there, and of clerks studying to be lawyers, any one who was willing to take up any work that I would send out there, and stay here all the afternoon and all the evening, and all the night if need be, as I did when I began, that man in a few years would be my partner; but there is not one, not one.'

"It is the rarest thing in the world to find a man who is taking wages or taking a salary who is willing to do any more than he knows he is hired to do. When you ask him to do anything outside of that, he wants to know if you are going to raise his wages or give him extra pay for it.

"You take any large counting house; you take any large factory; you take any large employment anywhere, and you will find that ninety nine out of every hundred, if the hour for quitting is five o'clock, at half past four have their eyes glued on the hands of the clock. you find among them one man who, when one of his fellows is sick says, 'Very well. I will do your work,' or when the work of the office has fallen behind, goes to the head of the office and says, 'All right. I will stay here until that is finished up, that man is certain to walk ahead and climb the ladder, if he keeps his health and stays where he is.

"If any one should ask me what is the

Thoroughness the Corner Stone of Success.

In the civil war times, when the entire financial interests of this country underwent sudden transition, a young man came very suddenly into a very commanding banking position. His influence was widely felt, and his remarkable ability quickly made him a power in money affairs. Added to stalwart honor and industry that knew no pause was his mastery of all the details of his business. But this knowledge was not a sudden acquisition. As a boy in a country bank, doing errands and attending to the office, he lost no proper opportunity to make himself familiar with every detail of the bookkeeping, the routine of all the bank business, and as a boy, before any responsibilities of an important character had come to him, he was thoroughly posted in all that could be learned in the limited sphere of a country bank. Thus began a distinguished and successful career.

That boy was father of the man he came to be. Intense application is needed always in the creation and maintenance of a business position. It demands the highest and most persistent devotion, second only in its obligation to religion. God first, business next, should be the aim of every young man struggling for place and promotion. A study of the careers of successful men is always most interesting, and I would suggest that there is no more profitable knowledge to be acquired by a young business man. But there should always be the limitation that comes with a proper definition of success. There are great and successful men, as the world goes, who may serve as models for work, but whose aims in life are so utterly unworthy-men who make money their god—as to be frightful examples of the debasing power of success, when money and position become an end and not an incident of life. Money is a good friend if rightly used. Power and influence are blessings when their use is controlled by lofty purposes. But money, power and influence, when controlled by selfishness, becomes a curse that debases the mind and corrupts the heart. Therefore, study men, but study them intelligently.

Robert C. Ogden in the Saturday Evening Post.

Never do a wrong thing to make a friend or keep one. A friend made in such a way is dearly purchased.

secret of success in life, I should say, 'Work, Work, Work,'" P. D. Armour said: "An American boy counts one long before his time to vote."

FIVE AGES OF A FILIPINO.

About a year ago a Filipino dramatic company came from their native land to America and, after playing to small houses in several cities in the far West, were stranded in San Francisco, and had to be taken care of at the expense of the city. Finally enough money was raised to send them back to their native islands. Here is a picture of five out of the seventeen in the company. That little fellow at the end of the line ought to have been attraction enough to have supported the troupe.

Grand Central Station

New York.

The president of one of the great universities of New York says of it:
"Permit me to congratulate the company upon the marvelous transformation of Grand Central Station. I did not suppose there was any wand that had sufficient magic to bring out of the old station anything of such perfect adaptability and beauty."

This new palace, located in the very heart of the metropolis, is the New York terminal station of all the

New York Central Lines.

No wonder so many travel by this route. These lines comprise the New York Central, Boston & Albany, Michigan Central, Lake Shore, Big Four, Pittsburg & Lake Erie and Lake Erie and Western Rallways.

Copy of the Illustrated Catalogue of the "Four-Track Series," New York Central's books of travel and education, will be sent free, post paid, to any address on receipt of a postage stamp, by George H. Daniels, General Passenger Agent, New York Central Railroad, Grand Central Station, New York.

CAN I BECOME AN ELECTRICIAN

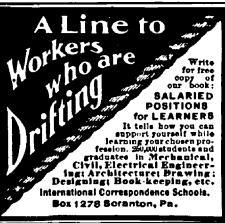

Yes, you can. We teach FLECTRICAL ENGINEERING at your home by mail at a cost within the reach of anyone. No matter where you live, if you can read and write, we guarantee to teach you thoroughly. Our Institute is endorsed by Thomas A. Edison, and other prominent men of the country. We teach also Mechanical Engineering, Steam Fingineering, Mechanical Brawing, Electric Lighting, Telephony, Electric Hailways, Electric Mining, Elementary Mathematica. etc., by mail. CAPTAIN'S BADGE. Twice Actual Size.

Boys desiring to Organize Companies may obtain a Pamphlet from us containing the Directions published in the January and February Nos. of this Paper. It is sent free.

Letter from Headquarters of the Order of the American Boy to be Read

Before Each Company at Its March Meeting. The following letter was mailed to every Company Captain on or about its date:

My Dear Captain and Brothers of the Order:

I wish to congratulate you upon the suc-cessful organization of your Company, and urge you to do everything in your power to make the Company a large and prosperous

make the Company a large and prosperous one.

The Order of The American Boy is only a few weeks old, but has already met with popular endorsement, so as to encourage me to believe that it will be the largest and best organization of boys the world has ever seen.

I think you ought to be proud that your Company was one of the first to be organized, and in coming years you will recall with a great deal of pleasure this fact.

Already there are more than forty companies organized, some of them with more than a score of members. There are com-

panies organized, some of them with more than a score of members. There are companies in far off Alabama, Maine, California and even Canada, showing that the Order is going to be a national one in every sense of the word.

I am going to write a letter to each Company once a month, which letter must be rend at the first regular meeting of the Company after it has been received. In this letter I will tell you some things which I may not be able to tell you publicly in the pages of THE AMERICAN BOY, which paper is read by so many thousands of boys who are not fortunate enough or energetic enough to be members of companies.

I send you with this letter your Company charter, which I would advise you to have framed, and hung on the wall of the room where you meet.

where you meet.

I also send you with this letter a pamphlet containing much that you have already read in THE AMERICAN BOY, and some things in addition:

FREE LIBRARIES.

bound paper books that are sold at a few cents, but are in every case handsome, cloth bound books, beautifully illustrated,

that sell from seventy five cents to three dollars and fifty cents each.

If you cannot go out among your boy

Detroit, Mich., March 1, 1901.

circulation to high class boy literature; to cultivate in boys physical, mental and moral courage, and develop them along social, intellectual and moral lines; to cultivate purity of language and actions; to discourage idleness, and encourage honest sport and honest work; to cherish and emulate the examples of great and good men; to inculcate lessons of patriotism and love of country; to prepare boys for good citizenship; to cultivate reverence for the founders of our country, and to stimulate boys to all worthy endeavor.

> friends and induce them to become members of the Order of The American Boy and Join your Company with such a chance of getting reading at almost no cost to them, then I do not know what you could offer them that would build up your Com-

> pany.
> This free circulating library scheme is going to cost us considerable money, but we are bound to make the Order of The American Boy something that every boy in America, and every parent and friend of a boy, will approve of and delight to support.

port.

Another thing I take pleasure in announcing is the following:

THE ORDER OF THE AMERICAN BOY

A NATIONAL NON-SECRET SOCIETY FOR
AMERICAN BOYS.

Under the Auspices of "THE AMERICAN BOY."

Object:—The Cultivation of Manliness in Muscle,
Mind and Morals.

The object more definitely stated: To promote mutual and helpful friendships among boys; to give wider circulation to high class boy literature: to cultivate in want to promote mutual and helpful friendships among boys; to give wider circulation to high class boy literature: to cultivate in want to pumper another trial at once. The contestant must not carry weights in making the jump. He must start with both heels just touching the line. If there is a tie, the persons tied should jump until the tied score is beaten. When each of the contestants has had three trials, the umplre will forward to me, over his signature, the name, age, address and measurement of jump of the boy over fifteen, and the name, age, address and measurement of jump of the boy over fifteen. He will give the jumper another trial at once. The contestant must not carry weights in making the jump. He must start with both heels just touching the line. If there is a tie, the persons tied should jump until the tied score is beaten. When each of the contestant must not carry weights in making the jump. He must start with both heels just touching the line. If there is a tie, the persons tied should jump until the tied score is beaten. When each of the contestant must not carry weights in making the jump. He must start with both heels just touching the line. If there is a tie, the persons tied should jump until the tied score is beaten. When each of the contestant with both heels just touching the line. If there is a tie, the persons tied should jump until the tied score is beaten. When each of the contestant with both heels just touching the line. If there is a tie, the persons tied should jump until the tied score is beaten. When each of the contestant with both heels just touching the line. If there is a tie, the persons tied should jump until the tied score is

We do not want the records of all the

will give the ages of the two boys.

We do not want the records of all the jumpers.

When we have received the records of all the Companies, giving the best jumps made in each Company, we will compare them, and confer on the two boys of each Company who have the best records one "degree" each, and to the boy over fifteen years of age making the best jump made by any boy (over tifteen) of the Order throughout the United States and Canada we will give a silver medal and the title, "American Boy Standing Long Jump Champion." To the boy under fifteen years of age a silver medal and the title, "American Boy Standing Long Jump Junior Champion." The records of the winners in each Company and of the championship medals will appear in THE AMERICAN BOY, with their portraits, if we can get photographs. Now you have over a month in which to practice and I want every boy in the Order to get on his jumping legs and go to work. Of course, there will be some long-legged boys who will have the advantage, but I have known some short-legged fellows who have surprised themselves and their friends with the way they could stretch out when they tried. If I were a boy, in years, as I am in heart, I would practice every day from now on until April 13th.

The third Saturday in May will be 'he

nica.

American Boy Field Days

Third Saturday of Every Month

UNDER THE AUSPICES OF

The Order of The American Boy

April Field Day is April 13th

Contest: Standing Long Jump

AMERICAN BOY FIELD DAYS.

The third Saturday of each month will be known as "American Boy Field Day." On that day in every month all the Companies of the Order will compete for a prize. The next field day will be Saturday, April 13th. At ten o'clock on the morning of April 13th, the members of every Company in the Order will assemble at some convenient place to be selected by the Company, and there in the presence of some grown person, man or woman, each member of the Company will try his skill at the standing long jump. The man or woman selected will act as umpire and keep the record of the jumps, decide all points of difference, establish the line from which the jump is made, take the measurement of each jump, and see that the contest is fair in every respect. Each member entering the contest will make three separate trials, a few minutes apart. The contestant will stand heel to the line, and the measure will be taken from the line to the point where the heel of the hindmost foot marks the earth, when the jump is made. If, on lightling, the contestant falls backward, the measurement is made from the line to the point where his hands strike the earth. It will be well to have some soft earth on the ground at the point where the jumper lights, so that the mark made on lighting may be distinct. If there is an honest doubt in the mind of the umpire as to where the jumper lights, he The third Saturday of each month will FREE LIBRARIES.

It tells you about the free circulating libraries which are going to start out from Detroit to visit the Companies, and which we hope will visit every Company in the United States. We have now ten of these libraries ready to be shipped, and just as soon as there are six Companies in any State, we will start the libraries into that State. You will see that all a Company has to pay to get the use of four libraries of five books each for a total of eight months is fifty cents on receiving notice from us that it is ready to be shipped, and the express charges on the books from some near-by point, which should not amount to more than from twenty five to lifty cents. If there are two Companies in one town, and I hope that will be the case in many towns, this charge for expressage will not be made, as the libraries can be delivered by hand from one librarian, or captain to another.

Ohto will doubtless be the first State to organize six Companies. To-day we received news of the organization of the fifth Company in that State, and within the next few days we shall receive notice of the sixth, as they are coming fast

This circulating library scheme is the greatest scheme ever put into operation for the benefit of boys. Just think of it! for a total of not over forty cents a year for each member of a Company, or even less than that, per member, if there are more than ten, each boy in the Company will have the opportunity to read in the course of a year over twenty five dollars' worth of the very latest and best of boys' books. These books are not the cheap-bound paper books that are sold at a few cents, but are in every case handsome, cloth bound books. beautifully fillustreted

May Field Day, and a contest of some kind for that day will be announced in my next

letter.

We wish every Company, whatever the Company may be organized for, to take part in this contest, as every boy needs the advantage to be gained from the exercise thus to be obtained.

In conclusion let me hope that your Company is harmonious, and that you are not

In conclusion let me hope that your Company is harmonious, and that you are not allowing any quarrels, or any strife, to enter. Let there be honorable rivairy, and much of it. When once you have elected officers, be loyal to them, and support them to the best of your ability. Above all, get a big Company.

Succeeding numbers of THE AMERICAN BOY will contain much more of interest to the boys of the Order than heretofore, as Companies are rapidly organizing, and we are getting news that is of great interest to the members, all of which will appear in the monthly issues of the paper.

Accept for each one of yourselves my great regard, and believe me.

Yours for M. M. M. M.,

THE PRESIDENT-GENERAL.

[Later—To readers of THE AMERICAN BOY. Since the foregoing letter was sent to Captains, the number of Companies has increased to nearly sixty, and New York has proven to be the first State organizing six Companies and, therefore, the first entitled to the free libraries. Ohio will doubtless be recond.—Editor.]

Degrees Conferred.

The Executive Council of the Order of The American Boy confers degrees on boys this month as follows:

James Huston, sixteen years old, Fannon, Tex., one degree for industry and devotion to duty; one degree for habits of thrift; one degree for unusual originality and enterprise; total of three degrees.

Edward Vanderfield, Grand Rapids, Mich. Edward vanderneid, Grand Rapids, Mich., one degree for unusual originality and enterprise; one degree for manly deportment in everyday life; one degree for unusual musical skill; total of three degrees.

Harry Dugan, Bangor, Me., one degree for skill and experience in traveling; one degree for excellence in business; one degree for unusual originality and enterprise; total of three degrees.

George A. Steuber, fifteen years old, Gardiner, Me., one degree for skill and invention in use of tools and machinery; one degree for skill in athletics; one degree for unusual musical skill; one degree for excellence in business; total of four degrees.

Charles B. Bovier, Jr., age thirteen, Denver, Colo., one degree for skill in care and culture of animals, and one degree for excellence in business; total of two degrees.

One degree each is conferred upon the

One degree each is conferred upon the following boys for good work in behalf of THE AMERICAN BOY:
Walter B. Phillips, Seattle, Wash.; Ward Bassetts, Bay City, Mich.; John McDonald, Mobile, Ala.; Curtis B. Knighten. Ennis, Tex.; William H. Leach, Cuba, N. Y.; Percy Foord, Rio Vista, Cal.; Howard Martin, Stamford, Conn.; Otis B. Volz, Connersville, Ind.; Arthur Lynch, Michigan City, Ind.; Harris K. Hoage, Lacota, Mich.

Organize.

Every boy should now get to work and get at least four more boys to form a company and get ready for work.

We expect to make THE ORDER OF THE AMERICAN BQY the most powerful and popular organization of boys that the world has ever seen. With just a little effort you can become a part of it.

Don't delay. Get in your Captain's name, and your members' names, and the name you select for your Company at once. Get as big a Company as you can.

More than one Company may organize in a town or city.

More than one Company may organize in a town or city.

The regular premiums are allowed on subscriptions you take for new members. These premiums may go to the boy or boys who get the new members' subscriptions or may go to the Company—as you may want to take books for your Company library.

library.

We will print in each issue of THE AMERICAN BOY the news concerning the organizing and work of the Companies. This is the sort of a society your parents and friends will approve of and they will assist you in getting members, selecting a meeting place, etc.

Look out for interesting news regarding the Order in each number of THE AMERICAN BOY.

Let us report the organizing of your Company in our next number. Address all letters to William C. SPRAGUE, Majestic Building, Detroit, Mich.

THEY WILL FORM A OLUB FOR THE AMERICAN BOY JUNIOR BASEBALL LEAGUE. ONE OF THE WEE ONES WILL BE MASCOT AND THE OTHER WILL CARRY WATER AND ABNICA

Company News.

The boys in Buffalo are organizing, and will call themselves "The Buffaloes."

The Governor Roosevelt Company, No. 5, physion of New York, Binghamton, N. Y., write that they are greatly pleased with their charter, badges, etc.

A Company is forming at Point Mills, Mich., to be known as the General Custer ompany. This will be the first Company rgan.zed in the Upper Peninsula.

The Ethan Allen Company, No. 5, Division of Massachusetts, Worcester, Mass., reently had the privilege of hearing an address by Harry Steele Morrison, General-m-Chief of the Order, who spoke in Workers

The Andrew Carnegie Company, No. 3, Division of Pennsylvania, Allegheny, Pa., will hold its meetings every Thursday. Dues ten cents a month. This Company will take up the work of collecting curios, stamps, etc., and the programmes will be directed to these subjects. All are working to get new members.

to get new members.

The Cushman K. Davis Company, No. 2, Division of Minnesota, Heron Lake, Minn., has twelve members. It meets in a nice lodge room, has a gymnasium and library of about sixty books. The lodge room is decorated with bunting and flags. They have a drill master in the person of a man who was in the Cuban war. Captain dessell thinks they will soon have a uniform. uniform.

uniform.

Captain Garrett, of Professor C. B. Willis Company, No. 3, Division of Ohio, Ada, O., says: "The library scheme is a good one. I think we will take all the different sets. I don't think you could have made a better choice of books. I don't like the idea of meeting at one another's homes. I hope we will soon get a room in which we can hold our meetings and put our library table, etc. We will have two more boys who will join our Company in about three months."

Toronto Company, No. 1, Division of Ontario, Toronto, Ont., held its March meeting March 7. The programme was as follows:

1. Reception.
2. Vote for Secretary and Treasurer.
Willie Watson elected.
3. Initiation of new members.
4. Payment of dues (five cents a month).
5. Preparation of programme for next meeting.

6. Roll call by Secretary.
7. Talk on rules to be adopted.
8. God Save the King.
Captain Warnica says he is doing all possible to forward the interests of the Toronto Company, Division of Ontaria.

Toronto Company, Division of Ontaria.

The Major Fraine Company, No. 1, Division of North Dakota, Park River, N. D., held its February meeting the evening of February 22, and Captain Overby reports it to have been a success. They used the February programme laid down by the Executive Council of the Order. The Company had a basket social and entertainment March 22, the proceeds of which are to be used in forming a library. At its February meeting the Company gave twenty prizes for work done by the members of the Company. The following won irst prizes: Oscar Olson and Hylda Borgeton. The Captain says that the Company had a letter from the County Superintenent of Schools, who said that This AMERICAN BOY was the cleanest and best boys' paper he had come across. The Superintendent asked that Captain Overby try to organize companics in several of the schools of the county, and he is going to try to do so.

"The American Boy" Baseball League.

We want every baseball club among boys that may be organized during the spring and summer to become a member of The American Boy Baseball League. When you organize your club, send in an application for membership, giving name of club, captain and members. At least five of the regular players must be subscribers to THE AMERICAN BOY. Prizes will be offered by the publishers of THE AMERICAN BOY for the best records made by clubs of the League, and results of games will be published from month to month during the season. Boys should organize clubs early, so that players can take preliminary practice in gymnasiums or at home, as suggested by the Physical Director of the Order. There will be two leagues, a Junior and a Senior; the former for boys of an average age of less than sixteen; the latter for boys of an average age of sixteen or over; to be known as Junior and Senior Leagues respectively. We want every baseball club among boys

Growing Companies.

The following Captains report additions to their Companies since the issue of the March AMERICAN BOY:
Captain Warnica, Toronto, Ont.; Captain Bierhaus, Vincennes, Ind.; Captain Kolb. New Windsor, Md.; Captain Read, South Hanson, Mass.; Captain Lundy, Lacota, Mich.; Captain Randall, Watervliet, Mich.; Captain Gessell, Heron Lake, Minn.; Captain Davis, Cobleskill, N. Y.; Captain Bowne, Poughkeepsle, N. Y.; Captain Bowne, Poughkeepsle, N. Y.; Captain Overmyer, Lindsey, O.; Captain Stewart, Niles, O.; Captain Russell, Philadelphia, Pa.; Captain Phillips, Seattle, Wash.; Captain Olson, Lake Geneva, Wis.

We are receiving letters from boys asking whether subscribers to THE AMERICAN BOY can get the Order of The American

No badges. We are cobadges are We are compelled to answer. No. These badges are only for members of Companies of the Order of The American Boy.

A Junior Baseball Team That Will Enter "The American Boy" Baseball League.

We present a picture of the Junior Baseball Team of Wauconda. Ill., which was organized in the spring of 1900, and managed by Orton Hubbard, a university man and athlete of some note. The boys average about fifteen years of age. Last season they played with many older teams, the closest contested game being that at Barrington, Ill., resulting in a victory for Wauconda after ten innings with a score of ten to nine. The nine practised every afternoon possible during the season and kept in fine shape. They lost but four games. Fred Griswold was the principal pitcher, and, for a boy, was a very clever and, as the baseball men say, "heady" one. These boys expect to play next summer in "The American Boy" Baseball League. The photograph is furnished by Elmer Duers.

A Shrewsbury (Mo.) boy is working up a Company. He has found a little house in which there is an empty room. It was once used as a cobbler's shop, but the cobbler has moved out and the boys will probbaly scriber.

Halph L. Steele, Gibsonville, N. Y., asks if a three months' subscriber may be a member of the Order of The American Boy. No; the subscriber must be a yearly subscriber.

Exercises for April.

By the Physical Director of the Order of The American Boy.

For the first week in April, go through each morning and evening Exercise 1, described in the February number of this paper (page 111), fourteen times; also Exercise 2, described in the March number (page 142), eight times; also Exercise 3, described below, three times.

The second week in April go through each vercise, increasing the number of times for each by one; third week, the same, increasing by three.

EXERCISE 3.

Stand as in Figure 2, described on page '11. February number, with heels together, feet at a little less than a right angle, taking a deep breath, raising the chest, with both arms parallel to the shoulders, the palms of the hands to the front, instead of downward as in the picture. Make arms and fingers tense. Having taken a deep I reath, slowly bring the hands together immediately in front of the face, and then return them to their original position, as shown in the picture. It is exactly the

the Friend of Man.

GEORGE W. DITHRIDGE, IN THE NEW YORK SUN.

Earthworms belong to the order of Oligochaeta, the name meaning that they have only a few hairs or spines; for although the earthworm to the eye seems to be nothing more than a naked intestinal canal, it really has the rudiments of feet, which, when retracted, give it a powerful grip on the walls of its home.

In the early spring the Lumbricidae (red-blooded earthworms), like the bears, are hibernating a foot or more underground; but when the warmth of the high-mounting April and May sun reaches them, they waken up and bore their way to the surface to enable them to breathe freely. For although the earthworm has no lungs, its red blood is oxygenated through the pores of its skin. When the sun heats down with a too great fervor on the flagged sidewalks they are compelled to come out and migrate in great numbers, at which time millions perish before they reach a congenial spot at which again to set up their lares and penates.

The earthworm has no marine or aquatic qualities; it is absolutely terrecolous, and if its earthy habitat be flooded it drowns.

It burrows a cylindrical canal deep enough into the earth always to have access to water or moist earth. If the surface becomes dry it goes deeper, but always keeps open its communication with the open air. It enjoys life best after a soaking rain has softened and moistened the surface, at which time it lives near the outlet of its burrow, and at night comes to the doorway to reach out after choice morsels of food, for while the earthworm feeds upon the humus of the soil, taking in much of the soil itself, it much prefers more concentrated vegetically most to be discounted. at night comes to the doorway to reach table matter in a state of dissolution. If a bit of old manure be lying on the surface of the ground, within a few inches of the burrow of an earthworm, it will reach a long way out from its portal to get at the toothsome morsel. Having no eyes, it will not trust itself to come all the way out, but keeps a firm grip on its base; and when disturbed making a quick, back-action into its subterrene quarters.

I feed my colony of domestic lum-bricidae upon the household parings, buried in the garden for their benefit. These they consume in a brief period, and keep a sharp lookout from their airholes for the next installment. They are practically free from anxiety about the food supply, and they multiply galore, taking no thought of the morrow.

In the autumn they are admonished by the shortening days and cool nights to prepare for their winter sleep. The parent worms descend deeply out of reach of frost, while the baby worms go below also, curling themselves up like a watch spring and encasing themselves in a lump of plastic earth, previously ingested, and quietly fall asleep in full confidence of a resurrection with the mounting sun of the following year. When in this condition, if the earthly cyst be broken open, the tiny spiral worm may be awakened by the warmth of the breath.

Though the humble worm be little more than an animated alimentary canal it is ever at work promoting the food supply of his pampered relative, man. The crude vegetable matter of the soil is converted by its agency into a soluble form that is eagerly absorbed by the roots of plants. The rich, luscious, green growth of our vegetable and flowergardens is largely due to our voiceless coworkers.

In my flower pots for winter indoor plants I always introduce a couple of earthworms, and keep them awake and at work all winter.

Ruthlessly to step upon and destroy a worm is to commit partial homicide, for the worm is a survival of the same cell differentiation on the road over which man has traveled through unnumbered ages.

Though the worm be but an alimentary canal, yet it has organs; the rudiments are there of limbs and its annular segments are the analogues of the ribs of the vertebrates. Its blood is reddened with iron, like our own, and it derives oxygen from the air by branchiate organs dis-

Earthworms-The Boys' Fish-Bait is | tributed underneath its investing dermatose membrane.

> The lowly earthworm has a most interesting life history; its cycle of life runs in analogous grooves with that of man. Its infancy, its growth, its loves, its alarms and instinct of self-preservation, its pursuit of sustenance and the tragedies which mark the close of its brief career, whether from the spade of the husbandman, the hook of the angler, the bill of the domestic fowl or that of its numerous aerial enemies, all typify the life-history of its more highly developed brother, Man.

> For lo! these many centuries man has been directed to the ant for wisdom, and to the bee for emulation in industrial activity; but from the worm may many a lesson be drawn that is lacking in the living texts of our conventional instructors.

With this introduction of the suburbanite to his neglected and despised subterranean relative, I dismiss the earthworm, commending it to the tender mercies of all under whose power it may hereafter come.

A Horse's Long Swig of Paint.

Pedestrians and guests of hotels in the neighborhood of Wabash avenue and Jackson boulevard, Chicago, were amused one afternoon by the strange drink a horse took. Some men who were painting the new Illinois theatre left a bucket of white paint on the edge of the walk in front of the structure. Nearby stood a horse attached to a delivery wagon. Spying the bucket, the horse walked forward and stuck its nose into the paint to investigate the contents. The paint was evidently pleasing to the horse's taste, for, when it withdrew its head a few minutes later, the paint had disappeared from the bucket, and the animal's nose was coated with white. Persons who were attracted by the occurrence

Pet Squirrels.

R. C. Clark, Meridian, Wis., twelve years old, writes about pet squirrels. He says: "The right time to look for them is in the early part of May. They can be found in holes in old trees. I have found them there both black and gray in the same nest. They should be fed milk reduced with one-third water for a few days. A cage can be made from a dry goods box, having the open front covered with a wire screen, a door being cut in one end. A nest can be made from a small box which can be nailed to the top or side of the cage, a hole being cut through which the squirrel may easily enter. A few dried leaves should be put in the nest.

Buffaloes.

There are only about one thousand buffaloes left in the United States and Canada, and these are in private collections, city parks, zoological gardens, and a few government preserves. and these are in private collections, city parks, zoological gardens, and a few government preserves. Two hundred or more are running wild to the west of Great Slave Lake in Canada. Formerly they numbered millions, roaming over the plains in immense herds. Horace Greeley, in a journey across the plains in 1859, saw one herd in which he estimated that there were over one million animals. They were numerous enough in the early 70's to delay trains on the Kansas Pacific Railroad. The boatmen on the upper Mississippi used to complain that they had to "tie up" for several hours to allow the great numbers which were swimming across the river to get out of the way.

Next to the Indian the buffalo was the most picturesque feature of the West in early days. Both of these are being swept away by the rising tide of civilization.

A BOY'S PIGEON HOUSE.

Sea Monsters in Deadly Combat.

Just outside the Golden Gate a few days Just outside the Golden Gate a few days ago, in plain view of hundreds of pleasure-seekers who were in yachts and launches, a fierce fight took place between a big whale, a huge thrasher and a swordfish. The battle lasted a half hour and ended in the complete defeat of the whale, which was so badly hurt it sank like a wrecked ship, crimsoning the water for many yards around. The thrasher, or fox shark, was fully thirty feet long and it kept up an incessant attack on the whale. It leaped into the air and descended head first upon the whale, beating and biting the leviathan. the whale, beating and biting the leviathan.
After several of these attacks the whale
sank, but was forced to the surface by the savage assaults of the swordfish. Again and again this was kept up until the whale began to show distress by spouting blood. Finally it spouted and then sank like a foundered ship.

To Save the Life of a Dog.

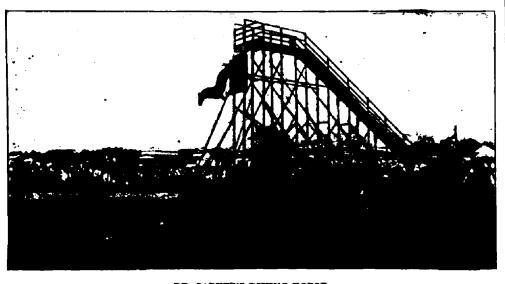

Joseph M. Ryan, of Worcester, Mass., risked his life to save a drowning dog, and received from the Massachusetts Society for received from the Massachusetts Society for the Prevention of Cruelty to Animals the Society's silver medal. Young Ryan plunged into the water, swam fifty yards, and though exhausted and thoroughly tired when he reached shore, he saved the dog. The dog, which by the way, was not a valuable one, but an estray, seemed to know that the boy had saved him, and all the way to the shore tried to lick the brave hand that was keeping him from death.

A Butterfly Farm.

William Watkins, of Eastbourne, England, owns a butterfly farm of three quarters of an acre. Here butterflies, both British and foreign, are born, bred and sold in tens of thousands, and you can buy specimens at prices varying from six cents to one hundred and fifty dollars. If you want a very rare butterfly you can go as high as fifteen thousand dollars for a specimen.

A Suffering Dog Begs for Morphine.

An Irish setter owned by Dr. J. W. Snowball, of Atlantic City, was recently run over and had his back severely injured. Feeling sure the dog would die, the doctor began to experiment with morphine. One morning he forgot to give the dog its injection. It crept into the office and lay at the doctor's feet. He was unable to understand its queer antics. Finally it crawled to the medicine chest from which he had taken the morphine, and, looking up at the chest, it began to whine. Dr. Snowball wondered if the dog was really trying to make him understand that it wanted its injection. He took the injector and morphine from the chest. When the dog saw the implement it barked gladly and lay on its back, whining for the doctor to inject the drug.

DR. CARVER'S DIVING HORSE. A picture taken at the Iowa State Fair in 1890 by Herbert M. Harwood, Des Moines, Iowa.

Good Fishing.

Harry E. Martin, Stafford, Ohio, age thirteen, tells us about a fishing excursion which he cnjoyed last summer while he was visiting his grandfather in a small town on the Ohio river. "In the morning, he says, "we went after bait, procuring small toads, minnows, crawfish and potatoes. In the afternoon we set a line two hundred and fifty yards long, which reached nearly a third of the way across the river Attached to this line were seventy five good strong hooks. I sat in the stern of the boat and steered it while grandfather baited a line. A little before dark we took in the line, finding that we had caught two catfish and a perch, each weighing about a pound. A little later we looked again, and found about one-third of the way out a fine large eel four feet long. The next morning we looked again, and when grandfather took hold of the line he remarked that there was something pulling on it. A little way out there was a great splashing and there seemed to be something six or seven feet long moving about. We kept pulling at the line, and just as we thought we had our big fish, it made a desperate try and got away. We caught, however, threficats, a perch and a bass. Shortly after breakfast we looked again, and landed a German carp. Grandfather put it under one of the seats and we started for shore. It flopped so hard it threw the seat off and nearly tipped grandfather into the river. Then we put the dip net over it. On reaching the house we found that it weighed fifteen pounds. In the evening we caught more, among them a mudcat weighing six pounds. In all we caught about thirty fish. I am going to try it again the coming summer."

Georgia's Big Hog.

A hog has been killed at Waldosta, Ga.. that beats all records, having a gross weight of 1,260 pounds. Georgia has also beaten the record on watermelons, one having been raised in southern Georgia which tipped the beam at one hundred and fifty pounds.

AUSTIN'S RANCH ON THE NIOBRARA.

Roy Austin Tells of His Mother's Experience in Raising Chickens Under Difficulties on a Western Cattle Ranch.

Ma's Old Dominecker.

About a year ago some friend of pa's back East somewhere, sent him a copy of a big poultry paper, and when Coyote Bill brought it over from the postoffice, pa tore the wrapper off, looked at a few of the pic-

to ma, saying: "Here, mother, I guess this must be intended for you. I'm not interested in chickens and ducks."

Ma took the paper and commenced to read it, just like it was a letter from home. She became awfully interested in some article, for she was a-readin' it when I went to bed, she was a-readin' it again when I left the ranch the next morning with Bill, to help round up some cattle for pa, and when we came home to dinner I'll set this ranch afire if she wasn't tryin' to hold the baby, cook, set the table, and read that old paper at the same time.

For a whole week after that ma didn't do much 'cept read about chickens and ducks and turkeys, and one night I heard her a-beggin' pa to let her send to Indiana for some settin' eggs. said he thought she must be losin' her mind to talk like that, saying:

"Do you suppose for a minute that you could send away back there, have the eggs shipped here, and hatch any of 'em?"

Ma said that was just what she could do, and to prove it she got the paper and read a piece about some woman who lived in Kansas, who had sent to New York for eggs, and it told how she had raised eleven nice chickens from thirteen eggs.

"Now, if that woman tells the truth," said ma, "and she has it right here in black and white, you can make up your mind that I can do as well as she did. We've never had anything about the ranch but a lot of old scrubs, and it would be so nice if we could get some eggs from thoroughbred fowls and surprise the natives."

Pa hummed and hawed about it for a whole week, before he'd give in and consent to let ma send to Indiana for the eggs, but she finally won him over, and me and Bill went to the postoffice the next morning to register the letter that had pa's five dollar bill in it.

"You might just as well throw that money in the stove, burn it and be done with it," said pa, "for that's all the good it will ever do us."

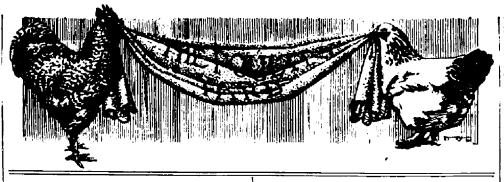

'Don't you worry about that part of remarked ma, "for I'll show you that when I make up my mind not to be outdone by another woman, and a Western woman at that, I'll accomplish something worth talking about."

Three weeks after we mailed the letter, me and Bill rode over to the railroad station, and as luck would have it we happened to get there the same day the eggs arrived. They were shipped in a nice little basket, and on one side of the tag it said, in big letters, "Eggs for Hatchin." Handle Careful." Me and ill talked the matter over, and Bill lowed it would never do for us to try and carry them home on our ponies, cause the jarrin' would certainly crack he eggs, and they'd be no good.

There we were, nine miles from the wouldn't walk no nine miles for all the eggs he ever saw, 'specially as long as he had a pony to ride, but I knew ma would be awfully put out if we went home without 'em.

"You ride home and lead my pony," I said to Bill. "Tell ma I've got the "ggs, and if a blizzard don't overtake me I'll be along in a couple of hours."

Bill 'lowed I was a bigger fool than he thought I was, but ma once saved

ket as gently as if it was a glass globe for the parlor lamp.

When ma saw me a-comin', about a tures, and handed it to most me and handed it had a most me an to meet me, and I do declare she would a-mashed them eggs sure when she hugged me if I hadn't set 'em on the come, I heard something a-squawkin'. ground 'fore she got to me. We carried strings there was thirteen of the nicest the nest and leave her chicks. and whitest eggs I ever laid eyes on, excuse me a moment, won't you?" each one wrapped in thin paper and packed in some kind of stuff that looked soup sometimes, only it wasn't so big saw? A great big timber wolf dashed called it 'celsior, but I don't know what they use it for.

Ma had an old speckled dominecker that had been a-settin' on the nest for ers a-flyin' in all directions. three or four days, and when we took | the eggs out to the barn and ma put the old hen, you'd a-died laughin' to far away I couldn't reach him. When her slide 'em under her, kinder see rattle 'em, so's to get 'em just right, the little chicks, ma cried like a baby. and then she clucked and clucked, just as if she thought they was a-goin' to hatch right away.

Pa had been out all day looking after some calves, and when he came home in the evening he said to ma:

"Well, Bill tells me that you got the eggs. Where are they?"

Ma said she had already set 'em, and in three weeks she'd show him some of ing home, and as she ran out to meet the finest chickens he ever laid eyes on, but pa didn't take much stock in that kind of talk, saying:

"You'd better get 'em out from under the old hen, cook 'em for supper, and let us have some good out of them. "What in the name of goodness has They'll never hatch; I'll bet you a new happened?" pa inquired, ready to burst dress on that."

Ma said she'd remind him of that bet in three weeks, then she went out to the barn two or three times after supper, to see if the old hen was a-tendin' to business, and when she went to bed that night she was the happiest woman in Nebraska.

For the next two weeks ma spent the most of her time during the day in watching the old hen. The old dominecker would generally come off the nest every day long bout noon, to get pa said: something to eat and drink and shake her feathers, and while she'd be a-doin' that ma would stand 'side the nest and watch them eggs, to see that the rats didn't carry 'em off. A few days before they were due to hatch, ma sent me over to Bill Phillips' ranch, and then over to Snowden's, with notes to the folks, tellin' 'em to come over to our ranch on a certain day and see some fine chickens, which ma said would beat anything ever seen in Nebraska.

The evening before they were due to hatch, me and ma went out to see how back of pa's rockin' chair, and when the old dominecker was gettin' along. we'd be eatin' they wanted to roost on and ma said, as she put one of the eggs to my ear:

"Just listen, Roy! Tell us we don't surprise the natives in the morning. Why, every egg's got a young chick in it."

ranch, and nothin' to do but either! The next morning, as soon as breakleave the eggs or one of us would have fast was over, ma asked pa if he o walk and carry them. Bill said he wouldn't stay at home and help entertain some company she was expecting, but pa said:

"I haven't no time to fool away monkeying with a lot of chickens and old hens. I've got to look after those C-Y cattle I bought yesterday.

Along about 10 o'clock the Phillips' came over, and pretty soon along comes the Snowden's. They hadn't more'n got out of the buggies before ma steered 'em into the barn, stuck her hand unhe thought I was, but ma once saved 'em into the barn, stuck her hand under the old hen, and showed 'em some of the chickens that had just hatched. Therefore, dispose of old hens and hatch of the chickens that had just hatched. One or two of the eggs hadn't hatched, for the ranch, afoot, carrying that bas
leg catalogue of novelities, tricks and jewelry fifth and under the old hen, and showed 'em some of novelities, tricks and jewelry fifth and under the old hen, and showed 'em some of novelities, tricks and jewelry fifth more in twelve months, beginning in September or October, than do old hens. Therefore, dispose of old hens and hatch new stock every spring.

One or two of the eggs hadn't hatched, new stock every spring. Pullets hatched about March 1 will lay in September, and Chapman Supply Co., Best 756 B. Bridgepert, Coan.

Chapman Supply Co., Best 756 B.

until after dinner, and then she'd make pa stay at home and poke fun at him for saying she couldn't send to old Sid

While they were all a-sittin' 'round the room, waiting for pa and Bill to

"That sounds like my old hen," said the eggs home, and when ma cut the ma, "though it's a wonder she'd get off You'll

Ma rushed to the back door, with me at her heels, and as we ran towards like the vermicelli that ma puts in the the barn-what do you suppose we around. Bill said that back in Ohio, out of the barn and went a-kitin' across where he lived when he was a kid, they the prairie as fast as he could, holding the old dominecker in his mouth, the hen a-flutterin' and a-squawkin' for dear life, her wings a-floppin' and the feath-

Poor ma, she almost fainted! I ran into the cabin after Bill's carbine, but one after another of the eggs in front of by the time I got back the wolf was so we went into the barn, to see about and the big tears came in my eyes so I could hardly see, as ma picked up the chicks one by one and put 'em in her apron. We carried 'em into the cabin and ma got a basket and put some cotton in it, and then she covered them with her apron and put them under the stove to keep warm.

Pretty soon ma saw pa and Bill compa and tell him her troubles, with big tears a-runnin' down her cheeks, and her eyes red from crying, pa thought sure something had happened to my little sister.

out crying too.

Ma told him how the old wolf had stolen her old dominecker off the nest, but that he hadn't got any of the young l chicks.

"You might just as well have given him the little ones, too," he said, "for you'll never be able to raise them without a mother."

Ma said she'd raise every one of them. if she had to wrap 'em in cotton and take 'em to bed with her at night, but

"Not much you won't! When you get to making a hen house out of my bed I'll emigrate, that's what I'll do."

Ma managed to raise the chicks all right, but they was heaps of bother to her. She let 'em run 'round the kitchen in the day time, and at night she'd wrap 'em up carefully in cotton and put em in the basket and keep 'em under the stove, where 'twas nice and warm. When they got so they could flap their wings a little they thought there wasn't any place as nice to roost as on the pa's shoulders and be fed. The most of em was roosters, and along about 5 o'clock the little things would come out of the basket, get on the backs of the chairs, and sing:

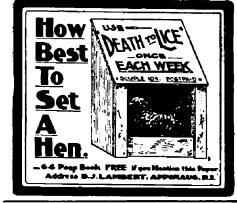

"What's der matter wid y-o-u? What's der matter wid y-o-u?"

They kept up such a racket every mornin' that pa ordered me to take 'em out to the barn, sayin' how he'd wring the neck of the first one that ever came inside the cabin again, but—he didn't.

This was ma's first experience with thoroughbred fowls, or, as pa says, 'Right there's where the trouble commenced.'

The Money in Chickens.

will pay a profit of fifty cents more the first year than April hatched pullets. May hatched pullets will not be well started till December. The average March pullet will lay fifteen eggs a month from October 1 to February 1, giving an average of sixty eggs, which at thirty cents a dozen, equais one dollar and fifty cents. A pullet hatched in March and well cared for should lay one hundred and sixty eggs in twelve months. These at twenty cents a dozen will bring about two dollars and sixty seven cents. Figuring the cost of feed at one dollar, there is a profit of one dollar and sixty seven cents. A part of the time eggs will bring more than twenty cents a dozen, so that the profit on a young hen should be that the profit on a young hen should be at least two dollars.

FIFTY GOOD GAMES

As Played in Brooklyn Public Schools

From Report by Jessie H. Bancroft, Director of Physical Training

NO. 28. TOMMY TIDDLER'S GROUND

The ground is divided by a line into two parts. Tommy Tiddler stands on one side of this line, the other players on the opposite side. The latter venture across the line, saying, "I am on Tommy Tiddler's ground, picking up gold and silver." Tommy may tag anyone on his ground: anyone so tagged changes places with him.

NO 29. ANIMALS.

Two spaces or pens are marked off in distant corners of the playground. One player, called the chaser, stands at one side of one of these pens; the others are in the pen nearest him. The players thus grouped are named for different animals, several of each kind. The chaser calls for certain animals, as "sheep" or "bears," etc., and all of that name run across to the other pen, the chaser running after them. Anyone caught before reaching the pen changes places with the center man, or chaser.

NO. 30. LAME GOOSE.

NO. 30. LAME GOOSE.

One of the players, the lame goose, retires to a space marked off as den; the others tease him to come out, saying, "Lame goose, lame goose, can't catch anybody." Lame goose runs out, but can take only three steps, when he must hop on one foot, trying to tag the others while hopping. All tagged become lame geese. If a lame goose puts his foot down while outside the den, after the first three steps, the others drive him back. The player last tagged wins the game and becomes the first lame goose of the next game. Care should be taken that the hopping is not always done on the same foot. the same foot.

NO. 31. CHINESE CHICKEN.

This game is played with small blocks of wood. These are placed in one or more rows a short distance apart. The players take turns in hopping over these to the end of the line and return picking them up. If a block is touched by the foot, or the other foot put down, or one of the blocks dropped in gathering them, the player goes to the foot of the line. Hopping always on the same foot should be avoided.

NO. 32. WATER SPRITE.

Players stand in two lines facing each other with a large open space, representing a river, between. The water sprite stands between and beckons to one to cross. This one signals to one on the opposite side, and they run across to exchange places. If tagged by the water sprite, the water sprite and the one tagged exchange places. exchange places.

NO. 33. HILL DILL.

One player, who is "it," stands between two parallel lines of players, and calls, "Hill Dill, come over the hill." The players then exchange goals, and as they run across the open space the one in the center tries to tag them. Any who are tagged assist him in tagging the others.

NO. 34. THE HUNT.

NO. 34. THE HUNT.

The ground is marked off as for Hill Dill, with two parallel lines at opposite ends of the ground, each separating a goal from a wide space in the center. The players are called by names of animals, as in the game of that name, and dodge across the open space to the opposite goal as their names are called by the hunter, who stands in the center. The first one caught helps the hunter to catch the others. The second one caught takes the place of the first, who either goes back to the animals or is put in a space called the cage, to wait until the game is over.

NO. 35. RED ROVER; OR, RED LION. One player, Red Lion, stands in a den. The others venture near to him, calling:

"Red Lion, Red Lion, come out of your den; Whoever you catch will be one of your men."

He runs out and tries to catch one. The first one caught joins hands with him, and together they try to catch others, each captive being added to his line. If the line is broken all must go back to the den, and the Red Lion starts a new line.

NO. 36. LAST PAIR PASS.

NO. 36. LAST PAIR PASS.

Players stand in twos, one behind the other. One, who is catcher, stands in front, with his back to the others, and calls, "Last couple out!" when the last two in the line run around to the front and endeavor to join hands before they are tagged by the catcher. They must run up on opposite sides of the line, and must join hands beyond the catcher. The one tagged becomes catcher; his partner joins the previous catcher and they take their places as first couple in the line. The catcher must not look behind him when the last couple run out.

(Other Games to Follow.)

(Other Games to Follow.)

We are led sometimes to exclaim, what will not boys do? In the picture given in connection with this article you will set five boys having the finest kind of sport in a swimming pool. The pool is a homemade one, built by four brethers by the name of Bernardi, who live at Pittsburg. Pa. The oldest one of the brothers writes telling us how they made the pool with which they have so much sport, both in winter and summer. "We had," said he, "quite a large space in the rear of our house, and one day we conceived the idea of making a pond. Our ages were at that time as follows: William (myself), fifteen; Walter, thirteen; Edwin, eleven; and Raymond, eight. With the consent of our parents we began work early in July determined to finish the pool before cold weather set in. The first obstacle was a large apple tree right in the place selected for the pool. After digging around the large tree to the trunk and roots into pieces. With the consent of of some neighbor boys we soon had a hole four feet deep. Then we hauled the brick from a house that was being torn down and made a brick floor. We found some old boards which we used for siding,

Purpose in Amateur Journalism.

Amateur Journalism is a fad or hobby, it is true, but it may be of immense value to any boy or young man who will follow it properly. He may make it of great value, or he may make it a great waste of time. It is not necessary to make the practice of this hobby a drudgery in order to make it valuable. In fact, we think that would be apt to lessen its value. The amateur journalist should get all the pleasure and fun possible out of the work, but he should carry it on with some serious purpose.

With most boys, when they go into amateur journalism, the pleasure to be obtained is the moving purpose, and that is all right. Get all the pleasure you can out of it, and that will be a great deal, but see that some of it is the pleasure of well-doing.

Now, as to whether a boy shall conduct Amateur Journalism is a fad or hobby, it

but see that some of it is the pleasure of well-doing.

Now, as to whether a boy shall conduct a paper with four pages, each four by six inches, like Geo. A. Dolan's Monarch, San Francisco, or The Magician, of Springfield, Ohio, or Young America, of Dyersville, Iowa, or a handsomely and expensively printed young magazine like The Interpolitan, Omaha; The Dewey, Twinsburg, Ohio, or Samuel Steinburg's The Dilletante, Alameda, Cal., or others of high excellence that we might mention, depends upon circumstances. Few have the means, and the younger ones naturally have not the experience or knowledge to qualify them to conduct a publication of the latter class. But then, it will be better any way to begin at the bottom, as it were, and develop Let your papers grow as you grow and as your mental powers develop and your experience and knowledge widen. Whether or not the publishing of an amateur journal will aid in the development of

AN AMERICAN BOY FISHING IN BOISE RIVER,

Picture taken by Eddie Manion, Mountain Grove, Ida

Picture taken by Eddie Manion, Mountain Grove, Ida. the young man's mind and serve to widen his knowledge, depends on the way in which he conducts it. Probably every amateur journal in the country comes to the writer's desk more or less regularly, and he is bound to say that some of them, while they may afford their editors pleasure, are conducted in such a way that they can be of no benefit to them. Some of them seem to have been prepared very carelessly, with no effort and with little thought. They look as if, the time for publication having come around, the editor had made an effort simply to get enough matter together to fill up the paper and then had run it through the press. An editor who prepares his paper that way is not fulfilling his duty either to himself or to his subscribers, if he has any. If a boy will properly conduct an amateur journal he will find the work as valuable as any of his courses in school; but to get that value out of it he must study and think and try to make each issue an improvement over the preceding issue. It is a waste of time and money to get out a paper merely because publication day has come around. It is no use to get out a paper unless you have enough matter of good quality to make up a paper. If you can't fill four pages each time with good matter, cut your paper down to two pages; but make those two good.

Another kind of paper that is of no benefit to its editor or to anyone else is the paper that is devoted entirely to politics. It may be a pleasure to the editor to publish such a paper and to criticise his fellow members of the various amateur journalists' associations, and to say things about them in print that if said to their faces would bring him a well deserved whipping, if the other fellow was large enough, but it is not journalism. It is not worthy of the junior world of letters. It does the editor no good and it hurts the cause of amateur journalism with prospective members of the associations—boys and young men who known little of amateur journalism as it re the young man's mind and serve to widen

really is and who are unfortunate enough to see such papers first. The editors of such papers are not amateur journalists in a true sense; they are merely amateur politicians.

true sense, they are merely amateur politicians.

A boy should not feel bad because he cannot publish one of the higher class amateur magazines, for if he will conduct his small paper properly it will be of immense benefit to him, and to the cause of amateur journalism in general, for the smaller papers seem better to fit the original ideas of the promoters of amateur journalism, and they are certainly the best mediums for recruiting the ranks of the various associations.

The theory is that amateur journalism is the junior world of letters; that its guiding principle is improvement in literary work. Will not the members of the various associations so conduct their publications as

ciations so conduct their publications as to make this theory s fact?

One of the Smallest Steam Railroad Trains in the World.

One of the smallest steam railways in the world is now in operation in Central Park, New York. The cars are five feet long, twenty-two inches wide, seating two passengers in each car, the grade of the track being twelve and five eighths inches. The boiler is built of steel, holding ten gallons of water. The engine is two feet high and five feet long. It runs on a double track, and is a formidable rival to the swan boats, goat carriages and swings which are among the attractions of the Park for people, young and old. It runs for a few blocks along Fifth avenue beside the Park. The average speed is ten miles an hour. There are two trains on the track. The road is operated by Messrs. Cague Brothers.

THE GAME OF PIRATE.

An Outfit for This Sport Is Easily Obtainable, and Is Played in Any Kind of Available Space.

The war of the pirates takes place between and about two rings which can be marked with chalk on an asphalt pavement or with a sharp stick on a level bit of turf. The size of the rings must be regulated both by the number of players who take part and by the space available. A diameter of from five to six feet will generally answer the purpose. The rings should be separated by perhaps thirty feet. I say advisedly that the game is played between and about the rings, for the primary object of every player is to keep himself out of, and get his opponents into one of these enclosures.

The outfit for the game is easily obtainable. Each player must be furnished with a guide, a straight stick three and one half to four feet in length. Boys should have no difficulty in picking up sticks to answer this purpose. An old curtain stick will do very well. Only one hoop is needed; the sort found on flour barrels is best.

Like most American games Pirate is begun by choosing up sides. The possession of the hoop is decided by a toss up. The side losing the toss up and so the hoop are allowed to choose the ring they will defend. The captain of the side to which the hoop has been granted takes a position midway between the two rings and begins play by placing his guide on the inside rim of the hoop and sliding the wooden circle rapidly towards the feet of one of his opponents or towards his opponents' ring. If he ning band.

succeeds in striking the feet of the man at which he aimed, the man is considered a prisoner and must enter his opponent's ring, helpless until liberated by one of his own side.

Any man at whom the hoop is directed may guard himself in either of two ways. He may jump into the air as in (fig. 3) or he may stop the hoop with his guide as in (fig. 2). The man who first places his guide within the hoop after a play has been made is "in possession," that is, he has the privilege of making the next play.

If during the play the hoop touches any part of a player except his guide, no matter how it occurs, he must enter his opponent's ring a prisoner. A play may be made either by kicking the hoop or by sliding it over the ground with the guide. "Babying," moving the hoop along by short kicks or pushes, is not allowed. Each play must be made from the spot where the hoop has been captured. No one must interfere with the play of a man who is "in possession," but the moment the kick or the push has been given the hoop may be stopped with a guide. Prisoners are liberated by playing the hoop into the ring where they are held captive. If any part of the hoop touches one of the rings it is counted as in. If a man, not a prisoner, for any reason steps within his opponent's ring he at once becomes a prisoner. If any one steps within his own ring he liberates all prisoners held there. After the hoop enters one of the rings, play is recommenced by the captain of the side guarding that ring.

The side first capturing all of its opponents is of course accounted the win-

Fishing for Porcupines.

The boys who live around Craige's Pond, in the township of Orland, Hancock county. Me., have a sort of sport that boys generally do not have the privilege of enjoying—that of fishing for porcupines. The hills about Craige's Pond abound in immense boulders and deep fissures, which are the favorite retreats of these animals. The boys call them "haidgehogs." Dogs are of very little account hunting porcupines. A very poor specimen of a porcupine can whip a two hundred dollar dog. Only an old and experienced dog knows enough to let porcupine alone.

Porcupine lishing is followed for the sake

old and experienced dog knows enough to let porcupines alone.

Porcupine ishing is followed for the sake of sport only, for no one ever thinks of eating a porcupine and it is very hard to discover of what use the animals are. Boys setting out on a porcupine fishing excursion take along a stout line, usually a cod line or a section of the family clothes line; and for bait anything from a bit of sait pork to a carrot, as porcupines will eat almost anything. The line is supplied with a number of stout fishhooks and bait. The baited hooks are carefully thrust as far done the entrance of a porcupine's hole as possible. Then the fisherman seats himself comfortably and waits for a bite. In a short time one and sometimes more animals, having scented the bait, will come out and, after a brief sniff, commence to gulp it down. If the hooks do not find secure lodgment in one or more of the struggling animals the fisherman is in bad luck. All the boys have to do then is to drag them within clubbing distance.

Porcupines have poor memories, so that

Porcupines have poor memories, so that

an hour or two after the boys have caught one they can go to the same hole and catch more, as the animals are rayenous and are not very much afraid of human

Chase Knight, Cuyahoga Falls. Ohio, has sent the publishers of THE AMERICAN BOY a number of foreign stamps, to be given to the boy who gets the largest number of subscriptions for THE AMERICAN BOY by the time the May number goes to

Here is a stamp used by the Central, Overland, California and Pike's Peak Express Company, whose business was formerly conducted in connection with the overland stage before the advent of railroads into Colorado. Express companies in those days handled all the mails. The stamp is a

handled all the mails. The stamp is a simple affair. In the space below the words "Express Company" the date was inserted in pencil or ink.

Answers to Correspondents.

F. R., Letart Falls—See answer to J. w. B.

E. G., Delaware—The \$1.00 foreign exchange 1867 lists at 2 cents.

G. W. P., Chicago.—We know of no stamp issued during the revolution.

J. M., Philadelphia—The 2-cent green U.
S. stamp is worth about 40 cents a thous-

L. H., Chicago.—Swedish stamps of the issue of 1886-91 all have a posthorn on the

Cook Ave., St. Louis—Your stamps are Cuban revenues. They are worth 2 or 3 cents each. E. S., Westerly-The cancelation marks you describe do not increase the value of

K. B. S., Stonington—Your stamps are locals, the first two being German and the last Russian.

C. D. C., Morristown.—The 3c Proprietary C. S. Internal Revenue stamp is worth

about eight cents. P. L. A., Manchester, S. D.—Your description of your stamps is too indefinite to estimate their value.

H. B., Faribault—Philippine 10c de peso Recargo" stamps are revenues. They "Recargo" stamps are revenues, have little, if any, value.

S. A. J., Pawtucket—The 5c de peso Cuba 1881 lists at three cents; the color is gray-blue; there is no 5c sepia of 1881.

V. B., Gallipolis—Almost any stamp dealer will sell a hundred all different foreign stamps for 10 cents. See advertisements on this page.

P. B., Kalamazoo—50c Conveyance lists, one cent; \$2.00 Conveyance, 10 cents; \$3.00 Manifest, 20 cents; \$5.00 Mortgage, 90 cents; \$2.00 red and black, 40 cents.

The large green seal, or Registered Letter stamp lists, 25 cents; the 5-cent Canada beaver lists, 4 cents. See also article on United States stamps in February and March numbers.

E. T., Prairie Depot—We do not buy collections. If you do not care for your stamps sell or trade them with one of your friends who is interested in stamps.

. F., Louisville-One cent blue Franklin 1861 lists, 5 cents; same stamp with "grill" on back, i. e., square of small dots, 75 cents to \$2.00, according to size of grill.

A. W. K., Chicago—Your envelope is one used before the prepayment of postage by stamps was compulsory, the payment being indicated by the postmark "3 Paid." It has no value.

G. N. D., Hamline, Minn.—The old post-mark "Paid" used on letters before stamps is not of any value. Your other stamps are Mexican official seals. They have no denomination.

denomination.

Mrs. Z. E. C., Woodward, Okla.; S. R., Westhampton Beach; G. L., Lewiston, Ill.; L. G. Fargo; C. S. F., Montpelier; C. E. Ir., Mexia, Texas—The stamps submitted or described are not worth anything.

C. S. H., Detroit.—Spanish stamps are very frequently found punched, and when so canceled, have been used in payment of telegrams. We do not remember having seen any Cuban stamps punched.

J. W. B., Hartsville—There are over 100 to have the privilege of selling the old set different revenue stamps of the issue of at a small fraction of its face value. Hence, 1863, and from two to four varieties each of most of these. Give us the denomination countries.

of your stamps, the wording on the bottom, and whether they are perforated or imperforated, and we will give you their value.

FINE LOW PRICED STAMPS

HAWAII 1962, 2c lilac rope, 25c; 5c blue, 4c; 1963, 2c rope

R. O. W., Perham.—Almost any dealer advertising in THE AMERICAN BOY will buy stamps if they are of any value. Do not spend any time saving one and two-cent current U. S. stamps; they are worth-less unless you have several hundred thousand, and for even this quantity you would get very little.

R. S., Blufton, Ind.—You neglected to state what the inscription is on the revenue stamps you found. As there are eleven varieties each of the two cent and one dollar denominations, varying in price from one cent to \$6.00, it is impossible to tell the value of the stamps you have. The postal card is not worth anything. card is not worth anything.

J. B., Warrens Corners, N. Y.—The ten cent Columbian lists at three cents; six cent Lincoln, two cents; five cent certificate revenue, one cent; ten cent green head of Webster, one cent; two cent black Jackson, unused, 45 cents; one cent Columbian, unused, two cents; four cent, with head of Lincoln, one cent.

H. C. L., Duluth—The letters in the corners of the English stamps indicate the position of the stamp in the sheet. Some collectors secure one stamp of each variety of letters and then arrange them as they were originally printed. These are called "reconstructed sheets." Your other stamps are German revenues and locals.

are German revenues and locals.

R. W. C., Orange—When the Indian troops went to China some difficulty arose in connection with the sale of stamps in the field postoffices. The India stamps were finally surcharged C. E. F. (Chinese Expeditionary Force), and sold at the rate of 4 cents to the anna, which was a little less than the anna was worth in India.

I. W., Lansing—We have no knowledge of such a stamp as the one you describe. We think likely it is one of the patriotic envelopes, of which large numbers were used during the Civil War. Several of these had a design on them such as you describe. They are interesting from a historical standpoint, but have no philatelic value.

O. R. I., Kalamazoo—Your stamp post-

O. R. I., Kalamazoo—Your stamp post-marked "Tonga" is from the Tonga or Friendly Islands in the South Pacific. It is catalogued at ten cents and the set to which it belongs is very handsome. The Columbian Exposition Registration stamp we do not recognize and have never heard of such a stamp. We think it must be merely a label merely a label.

L. K., Friendship, N. Y.—The stamp you describe was issued by the papal states in Italy, and if a genuine original is worth about fifteen cents, but as there are millions of reprints of this and the other papal states stamps in circulation, specimens of which are found in most every boy's collection, your stamp is probably one of these. If so it is of no value.

these. If so it is of no value.

H. L., Fairbury—One cent, 1857, United States ordinary variety lists, 12 cents; two other varieties of the same stamp list, \$1.00 and \$7.50, respectively; 3-cent black, from 8 to 50 cents, according to variety; 10-cent brown, from 1 to 15 cents; 7-cent red. 60c; 3-cent dull pink. 1 cent; 3-cent red Washington, 2 cents; 5-cent Garfield, 2 cents; 5-cent Taylor, 5 cents. See also article on United States stamps in February and March numbers. March numbers.

March numbers.

W. N. Victor, N. Y.—The two and six cent treasury department unused are catalogued at 35 and 20 cents respectively. A complete set of Guam is made up of the following denominations: One cent, two cents, three cents, four cents, five cents, six cents, eight cents, ten cents, fifteen cents, fifty cents, one dollar, and ten cent special delivery. They have been advertised during the past month at \$4.50 a set, but the price will undoubtedly be advanced very soon, as we consider them worth much more than this amount.

J. E. S. Dubuque—For a reliable book on

nuch more than this amount.

J. E. S.. Dubuque—For a reliable book on stamp collecting we should advise you to secure first a copy of the Standard Postage Stamp Catalogue, for 1901. This describes and prices nearly every known postage stamp, and contains several thousand illustrations. It also contains several pages of "hints for collectors," in which there is much valuable information. This book costs 58 cents by mail, and is the standard in this country. We should also advise you to subscribe to one or two stamp papers. There are two or three excellent weekly papers, which cost 50 cents per year. We do not know of any book published which tells how to get stamps from foreign countries, "not from dealers." For this you will have to rely largely on your own ingenuity. One of the most common schemes has been to apply to the various consuls of the World.

A. C., Allegheny—As a rule, unused atoms of the parts of the p

A. N., Denver—Your stamps are worth about five cents. Three cent Playing Cards are sometimes found on the backs of old photographs taken before 1870. These are worth about two dollars and fifty cents each.

H. H. Parker, Mt. Airy, Ga.—We are not aware of any particular value attached to the special tax stamps on the sale of liquors, tobacco, etc. Very few care to collect them. Your specimen is returned to you.

J. F. B., Saugatuck—The green stamp is a five lepta Greece, and the lilac, an Austrian newspaper stamp. Both are very common. The fifteen cent stamp with "Imp to Guerra" at the top is a Spanish war tax stamp, the latter word meaning war.

J. W. B., Hartsville—There are over 100 different revenue stamps of the issue of 1863, and from two to four varieties each 1864 are worth more than the same stamps used, though in some cases the directly opposite is true; notably in the stamps used, though in some cases the directly opposite is true; notably in the cases of those countries whose countries whose countries whose countries whose countries whose countries whose countries and the government to private parties, after having been made unavailable for postage. Nearly all Central American stamps are worth more used than unused. The malion New York, and hould have never seen the countries whose name they bear. Mr. N. F. Seebeck, of the Hamilton Bank Note countries whose name they bear of the cases of those countries worth in true, to private parties, after having been made unavailable for postag A. C., Allegheny—As a rule, unused stamps are worth more than the same stamps used, though in some cases the

1882, 2c lilac rose, 25c; 5c blue, 4c; 1883, 2c rose, 1c blue 12c; 1c purple, 14c; 1c green, 4c; 2c brown, 22c; 5c black blue, 22c; 5c green, 2c; 16c black, 36c; 12c black, 36c; 25c dark violet, \$1.00; 2c rose, 9c; 10c vermilion, 30c; 1894, 31 unused, 1c yellow, 2c; 2c rose, 18c; 16c black, 36c; 2c blue, 48c; 5c rose, 1863, 8c. 14awaiians are splendid stamps to buy now, because they are sure to advance very materially in value.

For YOUNG WRITERS

"HOW TO WRITE,"

Published by The Sprague Publishing Com pany, for the Sprague Correspondence School of Journalism, is beyond question THE BEST PAPER IN AMERICA FOR YOUNG WRITERS.

As its name implies, "HOW TO WRITE" treats of the practical side of literary work. Its columns are filled with short, instructive paragraphs of absorbing interest and great practical value to everyone who aspires to the josition of a successful writer. The paper is edited by WILLIAM C. SPRAGUE, the president of the school, assisted by other instructors in the school. This paper does not seek to occupy the field siready covered by other publications; it has created a field of its own among thousands of persons who need some direction and inspiration in their work. While not taking the place of a school, it calls itself "the little schoolmaster for literary workers." It will strive to be a kind and diligent instructor, and it asks your support.

AUBSCRIPTION PRICE: \$1.00 PER ANNUM; SINGLE COPY, 10 CENTS.

ILLINOIS SUPPLY CO., Knile Dept., Oak Park, III,

'HE VEST POCKET PARLIAMENTARY POINTER

This little Book answers at a glance the intricate questions of Parliamentary Law, without diagrams or reference marks to confuse or mislead. It is so small it can be conceated in the hand, and referred to during a meeting without attracting attention. It contains about 2 pages, and measures 24 x 4 inches. It uses a system of abbreviations, condensing parliamentary rules into the smallest space.

The Collector Publishing Co., Detroit, Mich. I having a hole in it.

A Successful Young Philatelist.

We present a picture of George W. Linn, of Columbus, Ohio, a young philatelist of some note. Besides being a collector and dealer in stamps he is the publisher of a little paper called the "Col-

which is issued monthly. He says the circulation of the March number of his paper will be five hundred copies, and that it will contain eight pages.

The young man is evidently prolific in ideas, as he suggests in one column of his paper that some stamp collector who is fortunate enough to become the father of a girl name her "Philatelia."

The Numismatic Sphinx.

E. F. Werdner, Philadelphia, Penn.—See answer to Chapin H. Hoskins.

R. B. Graves, Ellisburg, N. Y.-A fine 1852 silver three cent piece sells for fifteen

Edwin Youngberg, Chicago, Ill.—There is no premium on the five dollar gold piece of 1842.

John H. Morran, Steubenville, O.-A silver half dollar of 1895 is worth just fifty

Erie Knight, Benjamin, Mo.-An 1839 dime is worth twenty five cents. They were only issued from the Philadelphia and New Orleans mints.

Merritt E. Gill, Grand Rapids, Mich.—A good 1842 half dollar is worth seventy five cents. There are two varieties, viz.: large and small date.

Howard J. MacGarry, Port Leyden, N. Y., and H. R. L.-Riverside and others are informed that the 1857 and 1858 eagle cents have no premium.

Jelmer Mason, Sellwood, Ore.—It is pretty well acknowledged now that the 1883 five cent nickel piece, without the word cents, commands no premium.

Andrew T. Lundquist, Minneapolis, Minn.

The half dollar of 1893 has no premium.

When no mint mark is shown they were struck at the Philadelphia mint.

Joshua Welmer. New York, N. Y.—There are two varieties of the 1828 dime; one has thirteen stars around the seated Liberty, the other has none. The former is worth twenty five cents, the latter fifty cents.

A. M. Rood, Lincoln, N. Y.—Your 1828 cent, if in good condition, is worth ten cents. No premium on the ordinary 1864 cent. Your third coin is a base silver coin of Mecklenburg Schwerin, of no particular value.

Chapin H. Hoskins, Fond-du-Lac, Wis.—You do not state the size of your Peruvian silver coin. Columbian half dollars of 1893 are catalogued at seventy five cents each, and the 1892 date, though the rarer of the two, can be bought for the same price. See answer to F. W. Kellogg.

F. W. Kellogg, Battle Creek, There is no premium on the two cent pieces with the single exception of 1873. All others face value only. Your other rubbing is, as you suspect. a Norway 2 ore piece, and very common. The set contains the 1, 2 and 5 ore, and are sold, in mint state, for fifteen cents the set.

Robt. A. Jeffries, Louise, Texas—No. 1, Dutch East Indies (Nederlandsch Indie) onc. cent, 1857, is worth ten cents. Holland (Koningrijk der Nederlanden), 1878. one cent, very common. Your last rubbing is what is called a business card, and was evidently struck by P. G. Ballingall, of Ottumwa, Iowa, in celebration of the Coal Palace in that city in 1899. It has no value. See answer to F. W. Kellogg.

value. See answer to r. w. Kenogs.

Bradley Morrah. Mt. Carmel, S. C.—Mexican 8 reals or dollar struck at Zacatecas mint, 1838, unless fine, no premium. The same may be said of your other Spanish and Mexican silver coins. Good 1821 and 1829 dimes are worth twenty five cents each. Half dime of 1838 is common. We know of no bronze eagle cent of 1858. The each. Half dime or 1806 in the know of no bronze eagle cent of 1858 know of no bronze eagle cent of 1858 regular issue was struck in nickel, to which a very small per cent of copper was added. There were some struck, however, in pure copper, which are very rare.

in pure copper, which are very rare.

Merrill W. Rosenhauer. Butler, Ind.—A good five franc piece of Louis Philippe of France is worth \$1.75. The inscription which you fall to make out is "Roi Des Francais" (King of the French). You must be mistaken in date being 1852, for Louis l'hilippe was king only between 183° and 1845. The letter A signifies that 't. was struck at the Paris mint. Your second coin is a common Canadian Bank Token. The third coin is an Irish half penny of George III. (1769-1820). The harp is on the reverse of nearly all the coins struck for Ireland. Good specimens sell for twenty five cents. Your 1837 dime is spoiled by having a hole in it.

Boy Collectors.

George Shull, of Everett, Pa., writes re-George Shull, of Everett, Pa., writes regarding his collection of curios, that he has an old Indian tomahawk, an old drilling sword of Major Harshburger's, who drilled Generals Grant and Lee at West Point; fifty five Indian arrowheads, an old tin cup, which is ninety five years old: an old wooden snuffbox, an old home made sickle, and other old things. His mother has an old Revolutionary knee buckle which she has made into a belt buckle.

James K. Primm, Springfield, Ill.: I am very much interested in Natural History, and have a large collection of stones, shells, marine curios, fossils and Indian and war relics. I keep adding to it all the time and now have about two thousand specimens. I get my curios mostly from specimens. I get my curios mostly from friends, but also buy them. I invest my earnings in curios. I am acquainted with the State Geologist, and he does lots toward helping me out. I think THE AMERICAN BOY is the best paper I ever read. I never want to take a better one.

never want to take a better one.

G. W. Racey, Shawenee, Tenn.: "F. D. H.," in your September number, gives my views about collecting curios. I have lived in several States, but Tennessee is the only State I have lived in where Indian relics are to be found in numbers worth spending time to look for. I lived in Brown county. Kas., for six years, and found only arrowheads while there. I lived for a time in Kansas City, Kas., and one day when passing through a vacant lot I found two or three nice arrowheads. I afterwards did some digging in this lot and found other arrowneads. It pays to dig sometimes. Last spring, in a vacant field near here, I found an indian pestle of a rolling pin pattern fourteen inches long and finely finished. I have cound my Indian relics usually on high ground near water. I have one of the largest collections of Indian relics in this country. My smallest arrowhead is one-half inch long, and the longest seven and three-quarters inches. and the longest seven and three-quarters

Another Army Button Collector.

Sidney S. Wortsman, of Savannah, Ga. Sidney S. Wortsman, of Savannah, Ga., seeing an article in our October issue regarding collecting of United States army and navy buttons, says that during the Spanish-American war sixty thousand soldiers were quartered near Savannah, and that every day boys went to the camps and returned with half a dozen or more buttons each; that when the soldiers returned from Cuba and Porto Rico they gave the boys Spanish huttons, and that he himself had thirty five, which he had arranged on a belt. himself had thir arranged on a belt

EDITED BY JUDSON GRENELI

THE AMERICAN BOY offers twelve prizes of Two Dollars each for the best Amateur Photograph received during the twelve months in the year, one prize for each month, also a second prize each month, of one dollar, for the next best photograph, the competition to be based upon the originality of the subject and the perfection of the photograph. The contest is open to subscribers only. Photographs will be returned if stamps are sent for the purpose. All photographs entered in the contest and not prize winners will be subject to our use unless otherwise directed by the sender, and fifty cents will be paid for each photograph in any event to be our own, without further payment than the payment of the prizes. Welte on the back of the photograph is title, with a description of the picture, and the full name and address of the contestant. THE AMERICAN BOY offers twelve

Photography and Nature.

James F. Ryder is a veteran photographer who lives in Cleveland, Ohio, and who has been 50 years taking pictures. He encourages the amateur when he comes across cne, and is glad to get hold of their pictures, and talk about them to the makers. The other day a reporter met him and he gave some information of interest to all

The other day a reporter met him and he gave some information of interest to all who take pictures.

"Photography is too long a story to be told in a single chapter," said he. "The art is based upon the changes which compounds of silver undergo when exposed to light. The lens of the camera projects the image of whatever comes before it upon the prepared sensitive plate, but no trace of the image is visible until the process of development brings it out.

"The people like to be amused and instructed, and nothing in recent years has been given the people that equals in interest amateur photography. In the use of the camera we are brought in touch with nature. We see much that would hardly be noticed at another time. It is a delightful training to a novice to be set out in the fields and among trees. Pictures he never dreamed of are all about him, and he has only to take his choice. It is just a matter between nature and himself."

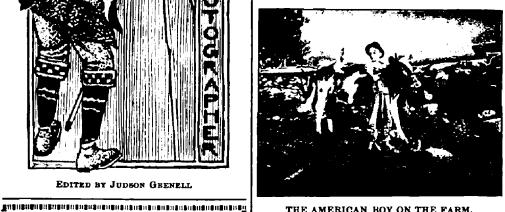

PLAYMATES.

Second Prize Photo by Paul Grau, Bowling Green, Mo.

Fixing the Negative.

A correspondent asks: "How long does it take to 'fix' a negative?" That is a very simple question, but it cannot be answered offhand. It depends on the plate and on the "hypo." If the plate is a double conted one, it will take much longer to remove the bromide, as seen from the back of the plate, than if it is only thinly coated. Then there is a difference in the plates of manufacturers. Some have more silver than others, and it takes longer to fix them. If

the hypo is clean and of the strength recommended by the maker of the plate, it should be left in the fixing bath at least five minutes after every trace of the whitish coating has disappeared. A few minutes longer than is absolutely necessary will do no harm. If it is not sufficiently fixed, the first time, the defect can never be remedied. When plates turn whitish after being dried, it is a sign that the hypo was never thoroughly washed out after being fixed. That is the next thing to do. Never think of washing a plate less than half an hour. If thoroughly fixed and sufficiently washed, it will keep an indefinite length of time it will keep an indefinite length of time without a particle of change.

THE AMERICAN BOY ON THE FARM. First Prize Photo by James G. Robinson, 374 Ash Street. Willimantic, Conn.

Preventing Halation.

Backed plates are quite the fad with some amateurs. They claim that with plates treated in this way they get better definition, and have no general haziness or chalky effects. The dealers now manufacture these plates, and the directions accompanying them are very full and explicit. But a writer for the Photo-Beacon tells how to make a cheap preparation that dries almost instantly. "In my dark room," says he, "there is a wide mouth bottle half full of fresco-painter's black—they call it 'distemper color' in the paint shops. It is ground in water and is quite soluble even when bone dry. I mix up a fifteen cent jar of this distemper black with enough absolute alcohol and honey to make a smooth paste. It dries almost instantly when spread on glass and does not rub off easily. What is best, it is absolutely matt black.

"When it comes to filling plateholders, I take a plate by the edges, glass side un.

matt black.

"When it comes to filling plateholders, I take a plate by the edges, glass side up, and rest one corner against my left side. With a swab of cotton I quickly daub the alcohol lamp black mixture over the back of the plate and without a second's delay insert it in the holder. It is all over in three seconds, and it makes no dirt or trouble, takes no space or apparatus, and it gives results much superior to those on naked plates.

"Plates backed in this way." he continues.

naked plates.

"Plates backed in this way," he continues, "are just as easily handled at the development stage as at the other. There is a slightly damp cloth on a convenient nail near my developing tray. I take a plate from a holder, wipe off the black with this cloth, taking no pains to remove more of the backing than comes easily. The black that sticks to the corners goes through all the baths, does no harm to any of the chemicals, leaves no dirt in the solutions, and finally comes off on the tuft of cotton used to clean film and glass prior to drying."

Excellent Work Being Done.

Two good cattle pictures are at hand. One is by Fred Ludlum, Wilmington, O., entitled "Resting at Midday," and the other is by John E. Wells, Johnstown, N. Y. The latter would be still more beautiful were it printed on dull finish paper. Try platinum. H. Osborn Knight, Chicago, sends "An Afternoon Stroll" and C. W. Cunningham, of Pennsylvania, "The Woodland Path," a picture with artistic merit. Other photos worthy of mention are Schiller Emmet's "A Caddie," W. W. Watson's flashlight of a mine, and Eddie Marrion's "Fishing."

Keeping the Hands White.

F. H. Glew, in a photographic almanac for 1901, tells of a simple method for preventing the fingers becoming stained in the developing chemicals. Before commencing developing, dip the fingers to be used, as well as the thumb, in a wide mouth bottle containing a little collodion. In a few seconds the collodion sets, forming a protective layer which does not impede the most delicate sense of touch, and yet effectually prevents the developer reaching the fingers or nails. When through with developing, the collodion can be quickly removed by means of a rag moistened with alcohol, or by simply dipping the fingers in another bottle containing equal parts of alcohol and ether. F. H. Glew, in a photographic almanac

Metal Mounts for Photographs.

Sometimes a photographer wishes to mount a photograph upon metal. It can be made to stick if the surface of the metal is thoroughly washed with hot water con-taining carbonate of soda. This is for the taining carbonate of soda. This is for the purpose of removing all traces of grease. After being rubbed dry with a clean rag,

further prepare the surface of the metal with the juice of an onion. This gives a sticking surface upon which the photograph may be mounted, with little fear R R R N N T F of it dropping off.

Answers to Correspondents.

D. Washington—Just send to the makers of the Ray camera for instructions as to how to work it.

Wm. Rayburn-Experts disagree as to which is the "best" camera on the market. Yes, the latest "Premo" is excellent.

Palmer L. Kaser—Gold is generally used for toning pictures. Any photographic supply house will give you a formula for

Albert R. Cooper—The Hammer specials are said to be extra fast, but other dealers claim their plates are just as rapid. It is a good plate.

Roy D. Hans—After you have printed, developed and washed your Dekko or Velox paper, dry as usual. Then trim, and before mounting drop it into water for a moment.

Leo M. Sullivan—Those white spots on your prints come from not washing them enough. You should use a dozen changes of water, or, if you have running water, keep them in it for at least half an hour. takes a long while to eliminate all the hypo.

Chas. Rossman-Most of the instructions coming with formulas for plate developers have also attached the needed strength of the various chemicals as shown by the hydrometer. Am not aware of any rule whereby any formula can be changed from weight to strength test as shown by hydrometer.

Willie Baker-You can put a piece of Velox paper in your camera and get a picture, but it will be light where it should show shadow, and dark where the light shines. There is no paper on the market by which you can take a picture direct, because there is no camera that can work it.

Photographic Hints.

The Photo-Beacon says the new adjustable Warnica plateholders are the best of the kind ever offered for sale.

As the outdoor photographic season opens. take plenty of pictures of animals, and send them to THE AMERICAN BOY.

Better develop your plates in almost total darkness than have a single ray of white light strike the plates during the opera-

Prints can be kept for a few days after being printed, but it is best to tone them as soon as possible, as they are liable to lose some of their brilliancy.

The "combined bath"—i. e., toning and fixing—is a delusion and a snare to the amateur photographer. It is only occasionally that the prints will not fade.

Many a print has been spoiled by being handled with dirty fingers. Be sure and wash the hands thoroughly before handling the paper, either to print or tone.

Intensifying under-developed negatives will help, but the resultant print will not be so satisfactory as being right in the first instance. Better far to over-develop if there is any doubt and then reduce.

AMATEUR PHOTOGRAPHERS

OFFER REPEATED BE YOUR AN

Owing to the Success of Our March Contest for the Printing Outfit, We Offer Exact Duplicate of the Same Outfit this Month.

THIS SPLENDID PRINTING OUTFIT MAY BE YOURS

NOT A TOY, BUT A 200 POUND OUTFIT, CAPABLE OF DOING THE JOB WORK OF A REGULAR PRINTING OFFICE. A MONEY-MAKING PRESENT. VALUE, \$50.00.

On May 1 next the splendid printing outfit shown in the accompanying picture will become the property of the person who, during April, becomes a subscriber for one year to THE AMERICAN BOY, or sends us a renewal of his present subscription, or sends us some other person's subscription, and comes the nearest to telling the receipts of the Chicago Postoffice during the Month of APRIL, 1901.

In order that boys may have some guide to help them in estimating the receipts we give the receipts for the month of April in other years. April, 1896, receipts \$447,233.58, 1897, \$435,849.78, 1898, \$476,398.22, 1899, \$528,234.74, 1900, \$571,353.46.

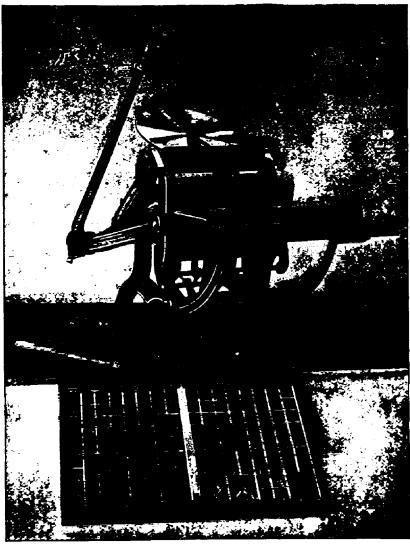

AN EDUCATIONAL SCHEME.

These guessing contests published from month to month are educational in their effect. The February contest drew the attention of the boys to the weather records of the different parts of the country. The March contest drew attention to immigration statistics, and thousands of boys heard about and asked about the subject of immigration for the first time. This contest draws attention to the enormous business of the great Chicago Postoffice. The contest is not one of mere guessing, for the thoughtful, studious, enquiring boy will win. It is like offering a prize to the boy in school who spells down every other boy on words given him haphazard. The boy who reads, thinks, enquires most will come nearest to estimating the receipts of the Chicago Postoffice for APRIL. It is a contest then of skill in estimating, and not a mere guessing in the dark,

Description of the Printing Outfit.

The press, of which a photograph is given, is a new PILOT PRESS, manufactured by the Chandler and Price Company, of Cleveland. Ohio, one of the leading printing press manufacturers of the United States. It is one of their most popular styles of presses—strong, easily operated, and thoroughly practical. All ordinary job printing can be done upon his press, the size of form printed being 6½ x 10 inches. The regular price of the press is thirty five dollars. It has a perfect bed and platen, with all parts adjusted so as to guarantee good printing and long life for the machine without need of repairs. Hundreds of them are in use, and the press has never been known to give dissatisfaction. A young man or boy with one of these machines and a lair assortment of type can make money. It is not a toy as it weighs over 150 pounds.

With the press goes two rollers, a chase, metal quoins and key for locking the form in the chase and "furniture" a new type case full of new type and all the parts necessary to work.

No such chance was ever offered to the Boys of America to get a Printing Outlit.

Who Are Entitled to Guess.

- 1.—Any one sending us his own annual subscription to THE AMERICAN BOY.
- 2.—Any one renewing his subscription, whether it has already expired or is to expire in the future.
- 3.—Any one sending us the subscription of another person, in which case both the person sending the subscription and the person subscribing are entitled to guesses.

When more than one dollar is sent, a guess is allowed for every dollar. Regular premiums, selected from our premium list, on the sending in of new subscriptions, are also given as heretofore. If there are any ties the contest will be decided by the drawing of slips from a hat, some prominent city official of Detroit, not identified with this paper, acting as referee. The name of the successful contestant will be published as soon as the Government record is made up—probably in the June number.

Any boy by hustling can get a good many guesses. He can renew his own subscription and get quite a number of new subscribers, and for every one of the latter he will be entitled to a premium as well as a guess. When you send in your money send in your guess.

This is the finest scheme ever offered to boys, as it gives them not only something that would otherwise cost them lifty dollars, but it gives them something that will enable them to make any amount of money for themselves and gives them an opportunity of learning

Volz, Connersville, Ind., three dollars; Arthur Lynch, Michigan City, Ind., three dollars; Harris K. Hoage, Lacota, Mich., three dollars.

The largest number sent in by any one of the foregoing was fourteen.

To Sunday School Workers.

The article entitled, "At the Door of the Sunday School," being one of a series entitled, "Turning Points in a Boy's Life," written by our editor, has met with considerable favor by Sunday school workers, and one has written us asking for the article in pamphlet form for distribution among Sunday school workers and boys. We have prepared the little pamphlet in convenient form, size 2, 3-4 x 6, so that it may be slipped into an ordinary envelope. We will send a supply of these pamphlets to any Sunday school worker asking for them, without charge. The gentleman who suggested the publishing of the article in pamphlet form said: "I think the article has great merit and will do great good. We have not seen anything in a lifetime to equal it for the good it will do." The article entitled, "At the Door of the

A Concealed Holiday.

A Concealed Holiday.

The names of several fishes, beasts and fowls are hidden in these sentences. When rightly guessed the initials—in the order given—will spell a national holiday.

"There, Fido, go get the stick," cried Freddie, "else you won't have any sugar." Off went Fido and soon back he came lugging a heavy stone with him.

"Now, look at that," said the little boy, contemptuously, "Fido, you ought to pay closer attention. I don't suppose you can tell a stick from a stone; but you ought to. A dog like you should have more sense. I never told a fib except once, but we won't talk about that, now. Oh here's a box with a new tomato can in it, and the can is empty, and here's an old rag—only you mustn't bite me instead of it, you know. Stop, Fido. You are as saucy and disobedient as can be. I say, a kick would do you good. Guess I'll give you one."

Fido ran off, however, before the boy could reach him.

Turning Points in a Boy's Life

Seventh Article of a Series

LEAVING HOME.

HAVE never made up my mind as to whether a boy who must leave home in his later teens is fortunate or unfortunate. It depends largely, of course, upon the kind of a boy he is and the kind of a home he has. There are homes that boys will

do well to leave—homes where they are coddled and petted and humored and waited on and made selfish, presump-

tuous prigs.

I once boarded; and among my fellow boarders was a family of three-father, mother, and son. The mother was a little, feeble, old woman; the son a tall, hatchet-faced dude. He slept every morning till nine, and then his little, old mother laboriously climbed two flights of stairs to carry him his breakfast; and I always suspected that she polished his shoes. From both his father's and his mother's side he had blue blood in his veins, and every boarder in the house felt deeply tempted to spill a little of it. That boy lived with the old folks till the mother died, and then after a few years of living off his erstwhile friends, he came to be practically a beggar on the street, with no ambition above puffing a cigarette. Better for that boy had he been forced out of the family circle when he was sixteen and compelled to learn to do something for himself.

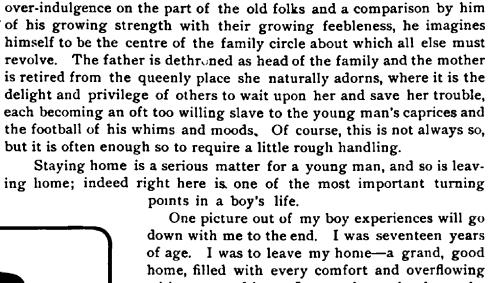

I know another boy—now full grown—who has been "keeping company" with a young lady for a dozen years, and the arrangement is that they will not marry until the boy's mother dies; so he lives at home. I think there must be something wrong with all three of these persons. I hope the wedding will never take place, for I don't have much confidence in that kind of affection. That mother ought to shove the boy out of the home nest, if for no other purpose than that he may fulfill the Divine will and get a nest of his own—lerhaps big enough to give her a cozy corner. I know what I would do if I were the girl; I would cuit keeping company with a boy and set my cap for a man.

You talk about filial devotion on the part of young men who stay at home with the old folks! Ity observation is that it is often filial devotion only by virtue of considerable poetic license. I

notice that too frequently the father of such boys very soon becomes the old man," sits at one side of the dining table, speaks when he is poken to, and carries the coal; and that mother becomes the valet duchambre, even to turning down the bedclothes and following the boy wound to pick up his dirty linen and keep his clothes brushed and nung in the closet.

I will chance it on the filial affections of that other boy who went out from home with a stout heart and a mother's blessing and won independence and came back surrounded by a brood of youngsters to grandfather's and grandmother's for a visit now and then.

Other numbers of the series: "Joining the College Fraternity" (Nov. 1800); "The Question of Going to college" (Dac. 1800); "Choosing An Occupation" (Jan. 1801); "Quisting School" (Feb. 1801); "At the Door of the numbers of the Sunday School" (March 1801); "Choosing His Chums" (April 1801).

The trouble with the boy who remains at home is that, through

with peace and love—I was to leave that home the next morning for a distant point—not for a visit, but as the begining of a permanent absence, save for visits at intervals. Family worship had never been instituted in that home, but that night my father got down the family Bible and read from its pages aloud, and then all kneeled while he offered up the most beautiful prayer I ever heard sent up to the Throne of Grace—a prayer for his first-born who on the morrow was to step over the threshold of home into the great world—a hard, grinding, restless, pushing, pitiless world—there to meet victory or defeat, to come back a blessing or a curse. I tell you I have seen that vision and heard that prayer in a thousand places, at a thousand times; and whether the prayer got its answer or not, it had strength enough to reach down through the years and save in many and many a crisis.

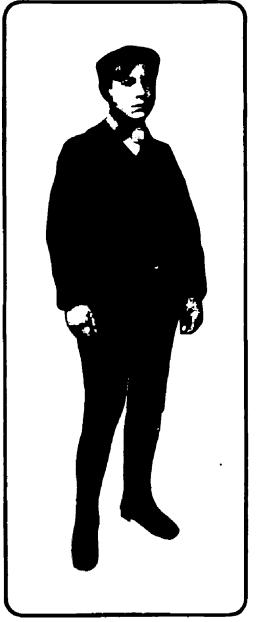

There are circumstances where a boy may well remain at home. If the care of the old folks devolves upon him and he can care for them well only by so doing, then by all means he should stay. If the father's business requires his assistance, and particularly if father and son look forward to the son's taking up the father's work, he may well remain at home, until he has found some one who is ready to help him found a home of his own; and then, barring again peculiar circumstances which may prevent, he should strike out for himself. But if he remains at home for any reason, good or bad, let him remember it is his father's house—not his, and that if ever in his life he owes the duty of service to the old folks,

the old man," sits at one side of the dining table, speaks when he is

May I venture to say that if circumstances require that the boy

bring into the paternal home a wife, he and all concerned will need the grace of angels to keep nicely balanced their varying interests. Were I the father or mother of a son who brought into my house a bride, I would, as I now view it, resign into their hands the reins of authority and, retiring into the background, study to keep the love and respect-of my children by living a cheerful and blameless life before them, and find my joy in their pleasures and their advancement.

I can imagine, too, a boy whose nature is such that to send him out among strangers would be suicidal to his morals and to his very life. Such a boy is the exception. He may need the watchful care of the (Continued on Page 208.)

THE BOY WHO WOULDN'T BE DUCKED

F. S. BALLARD

Everyone called him Little Jim, for, though nearly fifteen years old, he didn't look over ten.

But Little Jim was a weakling. He was an inch under five feet tall, and weighed not much over ninety pounds.

But if Jimmie Burns was weak in body he had strength of mind, and his well-shaped head held ideas in advance of his years. He was a sensitive, imagiyears, of what was commonplace and ordinary in the world, and a longing to excel—to be something great. He was all brain and nerves, and likely this was what ailed his little undersized body.

Naturally, such a boy felt keenly the insignificance of his appearance, and the slights and lack of respect to which it often led. It was a bitter subject with him-his size, and his self pride was often wounded.

To be jostled or presumed upon by boys younger than he, to be ignored or treated with exasperating condescension by young ladies with whom he fain would have been friendly, to have humiliating mistakes made concerning his age by his elders, these were some of the trials that he had to bear. The sight of a great big fellow, with bulging calves, and broad, square shoulders, filled him with a glow of admiration and made him despise his own littleness.

But one day Jimmie got hold of a little book, and the story it told was a true one. It told of a man who was born a wretched little specimen of humanity, so frail that his parents hardly thought it worth while to raise him, and there was so little of him when he was grown up that his conscience would not let him take out a life insurance policy; he felt it would be equivalent to defrauding the company.

But this man began a course of physical training which in a few years made him one of the strongest men in the country, and though but five feet four inches tall, and weighing but one hundred and twenty five pounds, he could pick up two men weighing one hundred and fifty pounds each, and trot with them on it was a fact that the inihis back a hundred yards.

No one but a boy like Jimmie could have gathered the inspiration from this book that he did. As he read he became convinced, and the strength of a great purpose took possession of him. He would do as this man had done, and maybe yet he could be something worth looking at; and he set about the task with the determination of a bright mind.

He fitted up a room at his home with the equipment of a small gymnasium, and with the sympathy and loving interest of his folks, he began his training.

Rarely was there a day that he missed the regular hour set aside for his task; and he trained intelligently. He followed closely the advice and instructions given in the little book which had put this new purpose into his life; interest in his work led him to

learn many things on the subject of physical culture. As his enthusiasm grew, from the very evident he was making. his system of training became still and his application greater. He aimed to develop harmoniously every body—to make himself a perfect little athsucceeded.

the task he had reach. ferent boy. His never, natur-ally, be otherwise; his natural paleness of features, himself. gave him a

##################################### | cate appearance that conveyed a false impression as | rare ability to his strength and age. He had increased in height to take care full three inches, his weight was now one hundred and twenty seven, and his strength was wonderful for one of his size.

He was now eighteen years old and had just entered Saybrook Institute to complete his education; Saybrook was a military academy.

The pranks, which it was the cadets' delight to practice on all newcomers, began at once. Jimmie arrived on a Friday, and on this night, each week, the monotony of the regular fare for supper was radically changed for a menu of baked beans and fresh fried doughnuts.

Fancying, from his youthful appearance, that it might be possible to impose upon him, Jimmie was approached that afternoon by two well-meaning and native boy, with a keen appreciation, for one of his serious-faced cadets, who gravely asked him if he had procured his bean ticket yet, explaining that it was necessary for him to have this ticket in order to be served with the regular rations of beans. Jimmie took no stock whatever in this bean ticket story, and deposited in the waste paper basket the ticket that they so generously gave him.

He was rewarded that night at the supper table by seeing a greenhorn cadet, who had likewise arrived that day, pass up his plate bearing an immense blue when sundry ticket calling for beans, to the huge delight of the cadets, even the instructors at the head of the tables marks began joining in the mirth which this incident, when successfully carried out, always excited. This was only one of the series of time-honored and well-understood jokes, peculiar to Saybrook, which each new arrival, had tried upon him.

But there was one other experience which a majority of the cadets had

gone through at some time, which was not so funny, and that was the initiation, as it was called.

Hazing was strictly forbidden by the rules of the Institute, but as the victim felt that he would lose prestige among his fellows if he made any complaint of the treattiation was still in force, and was inflicted on any cadet not wary enough or strong enough to resist the attack upon his person.

The Institute was situated on Lake Dunmore, and on the shore of the lake, two hundred yards to the south of the Institute buildings, a flat ledge of rocks projected into the water, known to the cadets as "dead man's rock." It was "dead here that the initiation took place.

Onto this rock the victim was hustled, pale with fear, or red and deflant with anger, as the case might be. He was progress that held by the legs and forced over the edge of the rock headfirst into

up and plunged under repeatedly, until the leader of more elaborate the band sang out in ceremonious fashion, "Cadets, has he swallowed a gallon of water?" If the reply was in the affirmative, and the victim looked as though he had and wouldn't be able to stand much more, he was hauled out soaked and nearly strangled, and informed that he was now a cadet in good

One of the chief actors at these performances was Phil Roche, the bully of the school. He was a big fellow, dull intellectually, with a disagreeable face, lete, and he and a coarse, rough way of doing everything. He was tolerated by the older boys, to whom he toadied in an For three effort to gain their good will, but was cordially years he stuck despised and feared by the smaller cadets, who spent determinedly to their time when he was around in keeping out of his

form was still cadets wary in keeping out of Roche's clutches. slight; it would Now, Jimmie was just the style of a boy w Now, Jimmie was just the style of a boy whom a fellow like Roche would take particular delight in annoying. Nothing is so dear to the heart of a genuine bully as to get hold of a little fellow who is sensitive and high spirited, and whose pride is outraged and sharpness by rough handling, but who is powerless to help

of himself, of which Roche was profoundignorant. Roche also felt instinctively the contempt which Jimmie had conceived for him, but there was something in Jimmie's bearing which so far had kept him from offering him any offence.

Jimmie had been at Saybrook about two weeks, meaning reto be passed among some of the cadets intended for his ears, such as, "It's about time something happened, isn't it?" or, "Somebody had bet-

* * gave Boche one grand shove

ter join the crowd and be one of us," etc., and Jimmie was not much in doubt as to the meaning of these remarks.

It was on a half holiday, allowed in honor of principal Huxton's birthday, that Jimmie, alone and in a thoughtful mood, was exploring some patches of woods which surrounded some muck ponds lying parallel with the shores of the lake. Coming out of the woods at the south, he found himself on the

shore of the lake directly opposite "dead man's rock.

On the far end of the rock were half a dozen cadets, and from their appearance Jimmie instantly divined that an initiation, of which he had heard was in progress.

In the center of the group was Cadet Beckwith a new arrival, who roomed in the same hall with Jimmie. His coat and vest had been stripped off. and his white face and helpless expression showed that the rough handling and serious demeanor of his captors had thoroughly demoralized him with fear and uncertainty as to what was coming.

As Jimmie watched, bully Roche on one side and Cadet Sedgwick on the other dragged Beckwith toward the water's edge, the other cadets closing in on them from behind. Holding him by the legs, and with the friendly advice not to kick or they would let him go, they forced him headfirst off the rock into the water.

A wave of indignation, mingled with contempt for the unresisting victim, swept over Jimmie.

Beckwith was hauled out and again plunged in headfirst; this was repeated a number of times, until haif helpless from the shock and strangulation, he was pulled back onto the rock, and informed that he was now a cadet in good standing at Saybrook Institute.

The tormentors had been so busily engaged with Beckwith that they had not noticed Jimmie on the shore. They now caught sight of him for the first time, and Jimmie could see that he was at once the subject of their conversation.

"Hey, Burns, we want to see you," shouted Sedg wick, moving toward Jimmie.

If they expected him to take to his heels, they were agreeably disappointed. Jimmle had not the least idea of fleeing. His pride and spirit of resistance had been aroused to the utmost by the sight of Beck with's humiliation, and with fast beating heart, and an expression on his face, which, had he been larger might have warned them to leave him alone, he awaited Sedgwick's approach.

"Come, Burns, you might just as well take your dose now as any time; we've all had to go through i you know." said Sedgwick, putting his hand on Jim mie's shoulder.

"Take your hand off my shoulder," said Jimmie, de terminedly, looking Sedgwick in the eye in a way that disconcerted the former in spite of his superior size.

"Take your hand off from me," repeated Jimmie and raising his hand he struck Sedgwick's arm aside and stepped back a pacc.

"Well, well, he's going to show fight!" yelled Roche who hurried up at this moment. "Let me take him Sedgie," and rushing at Jimmie, he threw an arn around his neck and endeavored to trip him and lay him on his back.

But Jimmie didn't go down. There was a lively tussle for a moment, and then Jimmie freed his neck from

the water. He was lifted muscle in his standing at Saybrook Institute.

undertaken, and Twisting their wrists, bending them over backat the end of ward until their spines were likely to crack, surpristhat time he ing them with sudden resounding thumps on the innate disposition to torture which made the younger

Roche was conscious that Jimmie was this type of somewhat deli- a boy, and he was, with the exception of possessing a Roche's grasp, and got a hand on both of Roche's wrist-

And then came Roche's first surprise. The arms that held his were stronger than his own. Little by little, in spite of a desperate strain that crimsoned his face. his arms were forced down and held against his sides.

Taken thoroughly by surprise at Jimmie's remarkable and unlooked for display of strength, Roche was quite willing to cease the struggle for a moment, and they lay up against each other panting for breath.

Then Roche gave a sudden wrench, but Jimmie was waiting for this. Roche did not succeed in freeing his hands, and Jimmie, still holding Roche's wrists, forced his arms about his thighs, and throwing all the strength of his three years' training into the effort, lifted Roche's feet clear off the ground.

Not a cadet had offered to interfere; the struggle had resolved itself into a personal duel between Jimmie and his larger antagonist. The initiation had been lost sight of. The instinctive spirit of fair play and admiration for Jimmie's unexpected resistance and remarkable display of strength, made them forbear to interfere, and they watched the struggle desperately interested.

Roche had not dreamed it possible, but as he was lifted clear off the ground, it dawned upon him that he was really in danger of being worsted by his smaller antagonist, ridiculous as it seemed.

than himself, Roche made another struggle, which brought him to the ground, and planting his feet in the sand, he endeavored with all his might to shove Jimmie backward. But Jimmie went back only a few steps, and then they rested again, both breathing heavily from their exertions.

Roche acted not a bit anxious to renew the struggle. but Jimmie didn't wait for him. He had never for a moment lost his grip on Roche's wrists, and again getting him about the waist, he half lifted, half dragged Roche forward along the rocks towards the water's edge.

Roche now realized Jimmie's intentions, and desperate with wrath and mortified pride, he struggled harder. But it was of no use; he had caught a tartar. In spite of his smaller stature, Jimmie was the stronger of the two, and Roche could not get his arms free.

Round and round they twisted and wrestled, and with each move Jimmie forced Roche nearer the edge of the rock, until finally, as they tottered on the very edge, Jimmie, gathering all his strength, gave Roche one grand shove and let go, and the bully of Saybrook, with a tremendous splash, disappeared in four feet of water.

Yells of derisive delight, from the cadets, broke the time, he left Saybrook for good.

Enraged at being lifted off his feet by one smaller, silence, as Roche went under, and there were exclamations of "Bravo, Burns," "Good boy, Jimmie!" etc.

The cadets' regard for Roche was a very thin thing at the best, and the sight of his discomfiture at the hands of his little antagonist was really keenly relished by every one present, while a generous impulse, coupled with genuine admiration and respect, caused them to applaud the victor.

Roche dragged himself out of the water. Not a word did he say, but busied himself wringing water from his clothes and endeavoring to straighten himself out.

In pairs and groups the cadets straggled back to the Institute, and the half suppressed snickers, and meaning smiles on all faces, added the finishing touch to the humiliation of the demoralized Roche.

Jimmie, as might be expected, had by his act at once established himself in the hearts of all the cadets, and he was from that time on the best fellow of them all.

As for Roche, his reign ended with his involuntary plunge in four feet of water. After the showing he had made, his bluffing and petty tyrannizing didn't go at all. He had sufficient discernment to realize this, and after existing under a cloud for a short

A Brave Mississippian

The thirteenth story of a series entitled "Stories of Boy Heroes"

ANNAH ROBINSON WATSON ăaaaaaaaaaaaaaaa

Among the families of note in Holly Springs, a little town of North Mississippi, there was none more highly esteemed at the breaking out of the Civil War than that of the Honorable J. W. C. Watson.

Coming from Virginia about 1845, the members of the home circle had brought with them that refinement and culture for which the people of the "Old Dominion" were conspicuous, and had established a home which for years was a center of the most charming and gracious hospitality.

The mother, Catharine Davis Watson, was one of the fairest of Virginia's daughters. She inherited many of the noblest traits of her English lineage, together with the tact, quickness of perception, grace, piquancy and beautiful religious fervor of her Huguenot ancestors.

The father, possessed of the blended characteristics of the best English and Scotch blood, was intense in his religious bent, firm and unswerving in the discharge of duty, and one of the most prominent lawyers at a bar noted for the brilliance of its members.

He was earnestly opposed to secession, but when his state decided upon this course, he went with his people and later was an honored member of the Confederate senate.

In the family circle were five children, a daughter and four sons. The eldest of the latter, William Taylor Watson, immediately upon the breaking out of hostilities, raised a company and went out as its captain. He was only twenty three years of age, but by his intelligence as a leader, and his many noble and attractive traits of character, he became the idol of his men.

He passed safely through many dangers and won distinction in many engagements, when, on March 5th, 1863, the fight at Thompson's Station, Tennessee, took place

Here, leading a charge and inciting his men to deeds of heroism and valor, he fell, mortally wounded. He died on the battlefield, and in all the fierce conflicts where fell the sons of Mississippi, there perished not one who was braver nor more deserving of an honored memory.

The second son, John Staige Davis Watson, had been a student at old St. Thomas' Hall, Holly Springs, the school which became well and favorably known under the management of Dr. Hawks, of New York. Later he entered the Dinwiddie Academy, Albemarle county, Virginia, and here became a warm personal friend of the brave Randolph Fairfax, a sketch of whose life has already been given in these pages. The record of these two young Southerners has much in common and ' the extracts from their diaries are remarkably similar.

The character of Staige Davis Watson was distinguished by an exquisite gentleness and delicacy of feeling, yet, when at the age of seventeen he entered the army, Company B, Seventeenth Mississippi Regiment, he was conspicuous from the first for an intrepid daring which showed him absolutely without fear. Though the duties of his position as sergeant major and adjutant of his battalion exempted him from the risks of actual engagements, he was ever in the front of the fight, where, in his opinion, a soldier's duty should lead him.

His reckless bearing and apparent insensibility to danger brought many warning words and expostulations from the officers, but he seemed completely selfforgetful when his company was in action.

The months dragged by and 1864 came. He was with the army of northern Virginia, sharing in all its vicissitudes and dangers.

From the little diary which came to the shadowed home a few months later, a few extracts are given that the present generation may look into the heart of this young American hero.

"Friday, February 19th, 1864," he writes. cold. Busy all day making out furloughs for re-enlisted men. Rations short. Read two chapters in the Bible.'

"Sunday, February 21st. Busy all day. Received orders to march to-morrow at 6 o'clock. Sent off all baggage on train. Have to sit up all night, it being very cold and my blankets having to be sent off. Tired. Read three chapters in the Bible.'

"Tuesday, March 1st. Rained all day. Cold. In standing by fire to keep warm we were drenched with rain. Move soon. Order came to send off surplus baggage. Read one chapter in Bible."

"Tuesday, March 22nd. Snowing all day. Fall nine inches deep. Rations out. Only ate one meal. Went to bed hungry. Every one talking of the good meals they have had. Sure sign of scarcity of rations.

"Sunday, May 15th. Enemy fell back. Recovered the remains of Captain Barksdale and performed the last sad rites for the body of so dear a friend."

"Tuesday, May 17th. All quiet to-day. Wrote home yesterday. • • Feel lonely. Miss Captain Barksdale. How thankful I should feel for God's mercy to me in having protected me through so many dangers.

Monday, May 23rd. Skirmishing commenced the other side of the river 8 o'clock a. m. At once formed a line of battle on river bank. Moved back a quarter mile about 12 a.m. and threw up fortifications. paid, for heavy cannonading commenced about 3:30 Shot and shell fly quite rapidly"

This is the last entry. On that day, only a little later, when the men were fighting in the trenches behind the breastworks, at Hanover Junction, again and again the brave young soldier was warned by his commander against mounting the embankment in full fire of the enemy, but he only thought of serving the 'Cause" he loved and of inciting his comrades to noble action.

Suddenly, springing upon an exposed point, cheering and lifting his beautiful young face transformed with enthusiasm and self-forgetfulness, the fatal shot came. He fell, pierced by a ball, and never spoke He was carried to Richmond, died at the Arlington Hotel there, and was laid to rest in Hollywood Cemetery, where sixteen hundred Confederates sleep.

In his last letter home, May 16th, were these words: "It is nearly night; I will only have time to say that I am still safe. * * I was struck with a spent ball, also grazed by another, but God mercifully watched over me and preserved me from death. We have been doing very heavy duty and all are nearly exhausted. We have marched nearly all night for three or four nights, since the battle commenced. * Should we meet no more on earth, I pray we may meet in heaven."

In the little Bible which was his constant companion were many marked passages. On a fly leaf, written in his own hand: "O, God, may I walk uprightly, knowing that my influence goeth abroad for good or evil. Grant that it may be for good!"

His commander, Colonel Holder, said of him: "He was one of the most remarkable young men I ever knew, equally distinguished for the gifts of his mind. the elegance of his manners, and the purity of his sentiments."

A Successful Boys' Club

WRITTEN BY THE CLUB'S 14 YEAR OLD PRESIDENT, JAMES MCGANN

What might properly be called The Boys' Elysium is the "Boys' Industrial Association" of Scranton, Pa. It was founded on Sept. 22, 1899, and since its doors were first thrown open to the Scranton boys it has been largely attended.

The club is located in the basement of the Troop Memorial.

The large front room contains tables on which the members play all sorts of games, which are kept by the Secretary of the Interior.

The office, opening from this room, contains the desks of the president and vice-president and the secretaries of State, Industry and Treasury, the Justice of the Peace, and the Attorney-General.

The Justice of the Peace is the dread of the boys, as his duty is to fine the wrong-doers.

There is a reading room also, in which the boys can read all kinds of magazines and papers, and a library where the boys may borrow books for ten days.

The Supreme Court is presided over by the Chief Justice, and the senior and junior judges. In the court a boy can bring a case up against another boy.

Nearly every boy in the club has a trade, and each boy has a company; the club is divided off into com-

panies named after the thirteen original states and has a special night in the week on which to meet.

This picture shows James McGann, President of the B. I. A., and his Cabinst. McGann is the center boy in the front row. The others are, beginning with the back row on the left: Becretary of Public Works, Atomer-General, Secretary of Industry, Secretary of State, Librarian. In the front row, beginning on the left: Becretary of the Treamyr, Vice-President, President, Cashier of the National Bank, Secretary of the Interior.

At these company, or state meetings, any one can make | three nights a week. suggestions for their Senator to bring up in the Senate.

There is a B. I. A. National Bank and the both the Senate meets every Saturday night; it is made deposit their money and receive interest on it.

up of one representative from each state. It makes all the laws for the club.

The trades that the boys have a chance to learn are chair caning, shoe cobbling, carpentry, printing, bookkeeping, architectural drawing, penmanship and telegraphy; and many a boy saves his mother some money by caning a chair, or repairing his own shoes.

Last of all comes the gymnasium, which is the delight of every boy in the club. It contains a trapeze, a stationary bar, a pair of rings, a ladder upon which the boys walk and strengthen their muscles, a punching bag, and many other articles used in a gymnasium.

The first night the association was opened, seven boys were admitted as members, and now there are five hundred and eighty four boys coming to the club. The gymnasium is the best feature of the club, and

all the boys like to go into it. Two teachers are employed there and teach the boys many interesting tricks. The boys behave very well during club hours and there is hardly ever any unusual noise made by them,

when they are playing the games. The club keeps boys from running around the streets after dark, as they can come into nice cosy

rooms and enjoy themselves. All the officers who are secretaries receive five cents and their assistants receive four cents, each working

How Three "Bikes" Made a City.

F.....

There were sixteen hundred persons living in Blufftown. Among these was the usual number of boys. There were five-only five-bicycles in Blufftown! Two of these were in a corner drug store labeled "For Sale," and the others belonged to boys who didn't pay much attention to wheeling and might as well have thrown their machines into the river, for all the good they were to them. The druggist couldn't sell his wheels, even although they were new and shiny and he had offered all sorts of terms on them. Funny place to sell bicycles, wasn't it? But the druggist took the agency because he thought it would help his courtplaster and liniment trade, forgetting that this would hardly make up for his lost sales of dyspepsia tablets and headache wafers.

Nobody in Blufftown wanted a bicycle because the six or seven streets of the town were almost impassable to four wheeled vehicles, at times, not to speak of two wheeled. Nobody-not even a reckless boywanted to risk his neck on Main street for more than a few minutes at a time, for if he missed a rut he was liable to run into a tomato can, and if he missed that he was sure to hit a broken bottle. There were no decent country roads near by; so what was a bicyclist to do?

Billie Cheadle * * got tangled up one day in a big limb.

Billie Cheadle, who owned one of the wheels, got tangled up one day in a big limb that had fallen from a tree right into the middle of Center street and had been left lying there. While Tom Simpson got a dozen punctures in one turn of his wheel, riding through a pile of refuse thrown into Main street from the Mayor's cellar about house cleaning time; and when Dud Noble fell over a cow one evening, just after dusk, while riding home with a basket of eggs from the grocery, it was unanimously declared by those three boys that there had got to be municipal reform in Blufftown—they would stand it no longer; in fact, the three boys were "mad."

Dud called a meeting of three at his house and forthwith there was formed

"THE BLUFFTOWN BOYS' REFORM SOCIETY—

OBJECT, TO CLEAN UP THIS TOWN."

But what were three boys to do with sixteen hundred people? Let us see. Dud suggested that they get three strips of muslin, print on them the words,

"THIS IS THE DIRTIEST TOWN IN THE STATE. PHIL. DOOLITTLE, MAYOR,

and attach them by wire framework to their bicycles: Billie thought the boys could be organized into a vigilance committee, and Tom suggested that they notify every householder that he must clean up or be exposed to summary vengeance.

The three plans met with decided favor, and the boys worked away into the night with pens and ink and paper, much to the worriment of several parents who didn't know what sort of a game was on foot.
The next morning, much to the dismay of several

citizens, they found pinned on their front doors, neatly folded and addressed notes, which they lost no time in opening and reading. Alderman Workem's note read as follows:

"Honorable Sir: The Blufftown Boys' Reform Society hereby notifies you that your cow is running at large in the streets of Blufftown against the law. Enough sald. "Vigilance Committee, "B. B. R. S."

Mayor Doolittle got the following:

"Your Excellency: The Blufftown Boys' Reform Society respectfully petitions that you move the rubbish heap from the street in front of your house and clean up or quit your job. We are ashamed of our town. "Vigilance Committee,

B. B. R. S."

THE AMERICAN BOY

"Shame! Shame! Shame!" he cried.

The preacher of the Methodist Church, Rev. Theo. Righ, read:

"Rev. Sir: The Blufftown Boys' Reform Society wants the ash heap removed from in front of your church by next Sunday. Yours for good, "Vigilance Committee, "B. B. R. S."

Mr. Needswhisky, of the "Wayside Inn," received the following:

"Dear Sir: The landscape in front of your 'Inn' would be greatly improved by the removal of the beer kegs that line the pavement. Your display shows enterprise and unusual business success for one of our leading industries, but we rather thought the throngs that line our streets on busy days might need the room.

"Vigilance Committee,"
"B. B. R. S."

Editor Little read this:

"Dear Editor: Please let national issues alone for a week or more and trim the trees in your front yard; they are shedding their limbs into the street to the discomfort of citizens who are too lazy to go around them. Please let politicians mend their own fences and give a look at your own. One whole section is about to fail down.

"Vigilance Committee,
"B. B. R. S."

A dozen or more boys that morning received invitations through the postoffice to join the B. B. R. S. During the day three bicycles cut the biggest sort of a figure on the streets of Blufftown. Everybody was on the sidewalks by noon, talking and laughing about

the strange "freak of mischief."

But the fellows who received the letters from the Vigilance Committee said nothing and did nothing. The result was that Alderman Workem woke up one morning to find a big muslin sign adorning his cow as she came home to be milked, reading:

"Alderman Workem milks me. Who milks you?" Everybody saw the point.

Mayor Doolittle found a signboard stuck up over

his rubbish heap, reading:

"Notice: Everyone may dump his dirt here. order of the Mayor." And some one had dumped two blocks away.

The preacher found on his church door the next Sunday morning this:

"Text for to-day: Cleanliness is next to Godliness. Ashes an exception."

Needswhisky and his neighbors found the beer barrels one morning stacked up in a great pyramid, and on them these words in big letters:

'Blufftown's Pride.'

Editor Doolittle was the only man in the lot who

fell down before the assaults of the Vigilance Committee. He was a good fellow at heart, but he had tried talking reform and cleanliness till he was tired out. He saw the inevitable result of the hidden forces now at work; so, as soon as he saw the lay of the land he went to his sanctum, turned the key in his door, threw off his coat, grabbed a pencil, and turned off the hottest editorial that ever left the sizzling brain of an editor. "Shame," "Shame," "Shame," he cried. "Blufftown, wake up! The boys are after us! Organize for work, for progress, for greater things!" And all this time men were up in the editor's trees lopping off dead branches, and the old fence was getting a straightening up that it had needed for a year.

In two weeks forty boys had joined the B. B. R. S. and every one had agreed to keep the street in front of his home free from rubbish and ruts, and use his best efforts to get his neighbors to clean up.

The druggist asked if he could come into the society; the boys said, "Not until you get a good assortment of bicycles, for we are going to have a bicycle club and ten of our members want wheels.'

The druggist got the wheels and the club was formed. And what do you suppose happened to the Alderman's cow? She failed to give milk for three successive mornings—at least the Alderman couldn't get any -and then she disappeared from the streets and some one said the Alderman had put her in good pasture. Soon after that the church had an oyster supper, the B. B. R. S. attended in a body, and from the proceeds

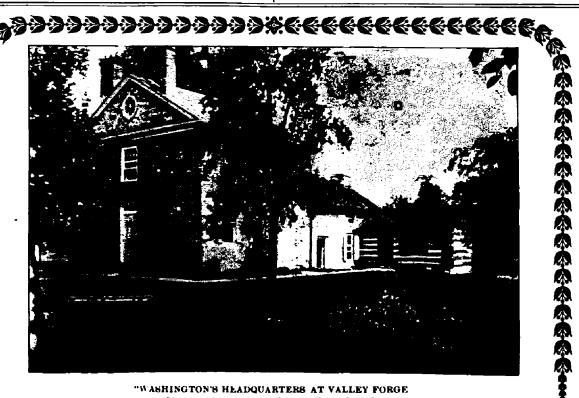

She failed to give milk for three successive mornings.

the janitor was paid his back wages and he didn't dump his ashes thereafter in the street.

The Mayor couldn't stand the pace and lost the nomination for the next term. All the members of By, the B. B. R. S., the editor, and the druggist, and every decent citizen were against him; and Dud Noble got or three wheelbarrow loads of cans and bones onto the job, becoming the youngest and best mayor in the Mayor's pile until it loomed up to be seen four America. The day he took the office there was a bicycle parade, and it was a hummer, and Dud, Billie and Tom led the procession.

The town council now to 'tes care of the streets, the people take care of their front and back yards, and the B. B. R. S. takes care that everybody else takes The druggist has quit selling pills to sell bicare. cycles in the prettiest town in a month's travel, for Blufftown boomed and boomed until now it is not Blufftown, but Noble City—a real flourishing

little city; and three "bikes" did it.

The Toughness of Peter

EDWARD MUMPORD

"Hi! Fight, fight!" The pushing, noisy groups filling the schoolhouse walk from door to gate took up the shrill cry as one boy, and joyously broke across the yard to the lot just beyond it. Those nearest the door paused only to pass the glad news to the boys still in the hall. "Hi! a fight, come on!" called the hall exultantly to the stairs. "Who is it?" yelled all those behind as they came on, and most of those in front shouted back as they ran, "It's Pete Ryan an' young Bradford. Come on, fellers."

In a few minutes the corner of the lot held a surging little sea of small boys, in the midst of which a bare red head and a tousled black one bobbed like a pair of corks. "Give 'em more room," demanded those on the outside of the ring; and those on the inside pressed still closer together, with loud encouraging shouts. Cries of "Good one, Billy," "Pitch into him, Ryan," filled the air.

The red head had gone down once, only to reappear above the black one, when the boys at one side of the ring were pushed aside. A young man strode into the ring, and amid disgusted exclamations from the onlookers, caught one of the fighters by the collar. "Here, you young turkey cocks, stop it," he said. "Can't you two youngsters keep your hands off each

other? Come, what's all this about?"
"Lemme go, Tom," cried Billy, struggling to free himself, his face as red as his hair; "lemme go, I say.

He sassed me, an' I tell you I won't stand it. I'll—"
"Yes, ye will," flung back his adversary, with as much scorn as his breath would allow him to express. 'Ye can't stuff me, Billy Bradford, an' ye can't lick me, neither. I'll-

'No, you won't, either of you." Tom broke in. "I'm

glad I happened along while there was still enough of you left to take hold of. But not another word now, or I'll put you both under the pump. It's pretty clear you haven't anything worth fighting over. You come with me, Billy." And a mid the jeers of the Ryan party the belligerent Billy was led down the road toward home.

"What did young Ryan mean by your stuffing him?" Tom demanded when

they had turned the schoolhouse corner.

Why, I was just telling the fellers about my white rabbit jumping through a hoop yesterday," said Billy. "An' it's true, Tom, you saw him yourself. Well, Pete Ryan made fun of it, an'—well, then I

got mad, an' punched him. An' I'll do it again, too."
"Well," said his brother, "I guess he is about the toughest person of his size in Solebury. But it can't be punched out of him, Billy. You mind your business, and let Peter mind his.

Mr. Porter, principal of the school, who had stood watching the affair, shook his head as he turned back to his deak. "I don't know what is to become or that Ryan boy," he said to another teacher; "he makes "I don't know what is to become of that me more trouble than any ten others in the school. Every day there is some new complaint about him.

"He comes of a bad lot," said the other, of the family have been in jail, you know."

'Yes, I know it," sighed Mr. Porter, "but I can't help thinking there's good stuff in Peter Ryan. He's no coward, for one thing. He pulled little Allen out of the pond last winter, you remember, when no one else would venture on the thin ice—and then swore at him for falling in. Most of the boys admire him so that they will follow him into all sorts of scrapes. He is tough, and dirty, and hard, and he won't study; but he has brains enough, and some day I hope to find a soft spot, and then-well, we'll see."

As they crossed the green, the Ryan partisans still talked loudly of the fight. "If it hadn't been for Bradford's big brother I guess you'd a' laid him out,

Pete," piped up little Allen.

"Yes, sir, he couldn't do nothin' to you," declared Aleck Brown, politely avoiding comment on the deep-

ening color around his hero's left eye.

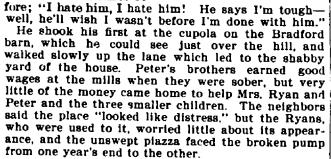

But Peter, beyond a brief remark that "mebbe that young feller wouldn't brag so much for a while," said very little. The truth was that although the affair had not been decided he had to admit, as he thought it over, that he had had a little the worst of it, and the idea kindled afresh the rage that always possessed him whenever he thought of Billy Bradford. The two had been enemies ever since Pete had come to Sole-

bury, three years before. The other boys, who liked his spunk, or else had a wholesome fear of his hard fists, admitted him to a sort of leadership, especially when any reckless mischief was on foot. But Squire Bradford's son, beyond being civil, had from the first refused to have anything to do with him. Billy's father was the richest man in Solebury, and his son's friends enjoyed the use of the biggest swimming pond, the best barn for private theatricals, and the most attractive orchard for miles around. In all this, Peter had been given to understand he had no part. Moreover, although he was known to be the best pitcher among the boys in town he had never been invited to join the school nine, of which Billy was captain.

Billy had "No, sir," said the last time it was proposed. "No, sir; this nine may get whipped, but it's going to play clean ball. If you want fellers on the team who'll get us the name of playing low, dirty tricks you can put 'em on, but you'll have to elect somebody else captain."

Peter could and did "lick" the boy who rashly repeated these rashly words to him, but he couldn't forget the words themselves, and he was thinking of them and others like them as he turned into his own

"I hate the stuck-up young prig," he was saying to himself, as he had said a hundred times be-

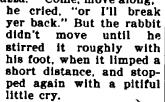

Peter's thoughts were still as black as his looks as he passed into the kitchen. Mrs. Ryan was upstairs, and Peter was improving the opportunity to help himself to some bread and molasses when a slight sound attracted his attention, and he glanced toward the other side of the room. Then he started with surprise, for on a table, calmly munching at some vegetables which lay there, was a large white rabbit. How it came to be there, a quarter of a mile from where it should be, Peter couldn't imagine. But he knew in a moment that it was Billy Bradford's-that it was, in fact, the very rabbit that had provoked the first time. fight that afternoon. He sprang toward it in a hot

'Get out of here, you little thief," he shouted, and with one angry motion of his arm he swept the rabbit to the floor, and out through the open door to the piazza beyond.

"There, I guess that'll teach you to come here stealin' other people's vittles," he said. "An' some day I'll give yer owner as good as that an' better."

Then he went into the house, laughing. To knock that rabbit over so was almost as keen pleasure as to upset Billy himself. "I only wish I'd a' killed the thing," he said flercely to himself. "I wonder if it's

He went out to see. The rabbit was still there, huddled up in a corner of the piazza. "Come, move along,"

Peter stood looking down at it, and the rabbit looked up at Peter.

"I guess I hurt it pretty bad," muttered the boy, muttered the boy, and he stooped suddenly and picked it up. He stood there with it in his arms, thinking, and somehow the revenge on Billy Bradford wasn't such a fine thing, after all. For Peter was naturally fond of animals. Horses and dogs would come to him without fear. The long spring afternoons when they missed him from school he spent in the

watch the chipmunks, or to follow the yellow hammer to its nest in some hollow tree. He knew nearly every bird by sight or by song, and could tell you where the muskrats had their hole down by Pilling's pond.

"Say, there ain't nothin' the matter with ye, is there?" he murmured, as he stroked the fine long fur. But the rabbit gave a sudden jump and a squeal of pain when he touched it, and Peter knew that one of its hind legs was broken. "Aw, say, I didn't go to do it, 'deed I didn't," he declared. Holding the injured animal very gently he walked toward the barn; and as he went carefully up the stairs to the loft there was a softer look on Peter Ryan's face than it had known for many a long day.

A great stir there was at the Bradford house that evening when Billy discovered his loss, and he was over the whole place a dozen times before he would give up the search. But the next day he had to sadly announce at school that "Whitey" had disappeared. The boys were nearly as sorry as he, for the rabbit and his tricks were to have been one of the star attractions at a circus they were planning to hold in the Bradford barn. Billy hoped that it had only strayed into the woods, and would come back. But the days went by, and the circus was given without the rabbit, and Billy was finally convinced that his pet had been killed by a dog.

But Peter, though he knew of the search that was being made, said nothing. With great care he had made a little wooden splint, and bound up the broken leg as his own had once been bandaged by a doctor. Then he built a pen in an unused loft of the barn, and every day fed and cared for the little animal.

"I hurt him, an' I'll make him all right again," he said to himself. Never an invalid rabbit fared more comfortably. Even when there was not too much to eat on the Ryan table Peter managed to save something for his patient, and all the pennies he could earn by odd jobs went for early fresh vegetables that he bought at the store and smuggled into the barn.

The rabbit soon came to know him, and would feed from his hand. One day, however, the bit of carrot

he was offering was refused. Peter searching for a reason, glanced from the rabbit to the carrot. and to the grimy hand that held it. The hand had not seen water that day, and that was nothing unusual. But it was unusual-for Peter to notice it. He turned it over slowly before him, as though seeing it for the

"I'll bet that rabbit don't like

the dirt." he said. And just there Peter had a new idea-an idea that no teacher had ever been able to give him. "Say, I don't wonder he shies at them hands," he mused. "I guess I ain't over pertickler." The new idea was planted. "An' mebbe that's the reason some other folks don't like me," he went on.

The new idea had taken a good root deep down in Peter Ryan. At least something seemed to have happened to him; for it was about that time that people began to notice a change in Peter. The old pump (which, by the way, he had mended) never worked harder than it worked now in the mornings when Peter made his toilet, and the result, in red hands and face, and slick hair, astonished the school. Mrs. Ryan, glad to see the new turn of affairs, patched the shabby clothes, and supplied clean shirts. Peter spoiled one of them in an interview with Aleck Brown, who had called him a "dude," but after that comments on his personal appearance were allowed to pass without notice. He even took to studying his lessons, moved up six places in the arithmetic class, and learned the capitals of all the States, from Maine. Augusta-on-the-Kennebec, down to Delaware, Doveron-Jones'-Creek, and beyond. And one Friday afternoon the school fairly held its breath while Peter Ryan, having volunteered to speak a piece, mounted the platform, put his well-greased boots firmly together, and with hands gripping tightly his trousers' legs recited "Casabianca" in a style which for shrillness and rapidity left little to be desired.

Still no one accused Peter of being too good to grow up. He made just as much noise in school and outdoors as he ever did; perhaps a little more, for he told himself, "I got ter let 'er out onc't in a while or I'll bust." But the boys noticed that . when he played games he played fair, and when beaten simply laughed and tried again, which wasn't like the old Peter. He began to make friends, and nearly every day now the captain would hear from some member of the team. "Say, Bill, Pete's all right. He plays square. Let's put him on the nine." Billy still shook his head, woods, where he loved to though it was plain to be seen he was weakening. But

THE AMERICAN BOY

Peter gave him little opportunity to become more! friendly. At first, with the rabbit at home there in the barn dragging himself about in pain, Peter was ashamed to look his owner in the face. And, then, as the broken bones joined and began to get stronger Peter had still kept away; for he had a plan, and the time for it had not come yet.

One morning early in June he had gone to the pen, and had carried the rabbit out to the chicken yard behind the barn. The little animal, delighted to be set free from his narrow quarters, was scampering around in high glee. Peter watched it for a while, then picked up an old hoop, and held it as the rabbit came near. Without even a word of encouragement it jumped cleanly through. Peter dropped the

hoop and stood up. "Hello!" he exclaimed, "that's neat. Billy said he'd do it, an' I didn't believe him, an' that's what we scrapped about that day. Come here, Whitey.

Peter lifted it up and held it close to him. "Well, I guess you're all right again, old feller," he said. "But me an' you's got ter be such good friends now that I don't-very much-want He buried his face in the soft fur a moment; then carried the rabbit in, and shut it in the pen.

When school was over that day Mr. Porter stopped Peter in the hall.

'Peter," he said with a dropping his on the boy's smile, hand on the boy's shoulder, "I've just been looking over your record for the month. You

haven't any wings sprouting here under your jacket. have you?

Peter only grinned, and ran his eye along a crack in the floor.

"Well," said the principal, kindly, "it isn't too good to last, I'm sure. And it pays, doesn't it, Peter?"

Peter still grinned, but he looked up. "Yes, sir, | I guess it pays," he said, and went out with a queer warm feeling under his vest that he had never noticed there before.

As he came whistling down the yard a little group of boys near the gate suddenly stopped talking. Here he comes now, Billy," said one of them.

Billy Bradford stepped out into the path, and Peter's whistle died away as he found himself gazed at in silence by all the boys.

"Well, what's up?" he asked, shortly.
Billy's face was white with anger. "What's up?" he repeated fiercely. "You know well enough what's up, Pete Ryan. You stole my rabbit!"

"I didn't," began Peter, "I-

But Billy broke in. "Don't deny it! Bert Paxson saw you with it this morning behind your barn. I always thought you were a tough character, Pete Ryan, and now I know it. You're nothing but a low

A quiver of excitement ran through the group of boys. No one had ever called Peter Ryan hard names without suffering for it. An ugly, dangerous look showed in his eyes, and his fist drew up to his chest. But then, at the moment when they expected to see him leap forward, the little crowd gave a gasp of surprise. For the fist fell slowly down again to Peter's side, and he stood simply looking his accuser steadily in the face.

"You're a-mistaken," he said. "I didn't take your rabbit."

And Billy Bradford, quite nonplussed by Peter's unexpected conduct, allowed him to walk away without another word.

"Well, there's something queer about it, anyway." he remarked to his friends. "If it's my rabbit we'll soon find it out."

But Billy's surprise then was nothing to what he felt that evening just after his supper. He was on the piazza at his home, and was just telling his brother Tom of what had happened in the afternoon, when who should open the gate but Peter Ryan, and under his arm a box with holes bored in the sides. He walked straight up to Billy.

"There's your rabbit," he said. "He was at my house; but I told you I didn't steal him, an' I didn't." looks very much like it, all the same."

Peter's face flushed, and Tom Bradford stepped for-

ward. "Come, Billy, let's have fair play," he said. 'Now, Pete, tell me how it was.'

Encouraged by the friendly tone, Peter finally told the whole story. "I was pretty mad," he said, "but when the little feiler suffered so I couldn't stand it. "I was pretty mad," he said, "but I might a' just put him over here in your yard some night, but I said I'd keep him and make him all right again,—an' he is. An' I was goin' to bring him this afternoon if you hadn't-

He looked at Billy, but Billy was loosening the lid of the box. As soon as it flew open, Whitey popped out. Dazed by the light and his sudden liberty, he stood trembling until he saw Peter, when he ran and crouched on the lawn close to his feet.

Peter bent over and smoothed his fur. "You see.

him every day,' he said apologetically, "an' so he knows me pretty well. He'll come to you if you whistle; an' I taught him some other tricks. I guess I'll miss the little beggar some. Goodbye."

He rose and handed the rabbit to Billy, who took it and stood feeling that something ought to be said, but not knowing what to say. The other boy was half way to the gate before he found his

tongue.
"Here, Tom, take Whitey a minute," he exclaimed, and then he ran across the lawn. Peter heard the steps and stopped as Billy overtook him.

"I want to take back what I said this afternoon," said Billy. "I'm sorry I kept you off the nine. an' I'm sorry I ever called you tough. You're a trump, Peter Ryan, that's what you are. There!"

Peter stood shuffling his feet in the grass, but as "Oh, you didn't, hey?" sneered Billy. "Well, it he took the hand held out to him his face broke into a radiant smile.

"Aw, g'wan, Bill," he said.

WITH FIFE AND DRUM.

E. E. FURLONG.

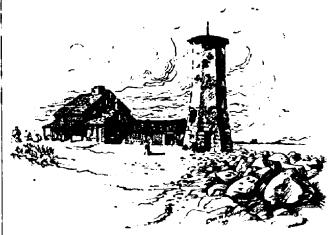

BOUT twenty seven miles from Boston, on the south shore, is Scituate Harbor, a quaint old fishing village. On the shore near the village stands a battered lighthouse, with dingy patches of brick and stone showing through its worn coating

of whitewash. Twice a day the regular steamers plying between Boston and Plymouth pass this grim sentinel; but probably not one in fifty of the excursionists aboard know of its historic associations. Near the lighthouse, several rods back from the shore, stands a small, weather-beaten cottage at | whose doors print hollyhocks stand guard. Some eighteen years ago one could often see stooping among the flowers in the garden that surrounded it a bent, wrinkled old woman. The time that she did not spend in the garden was mostly spent in one tiny front room of which the cottage boasted, rocking back and forth in a tall, straight-backed armchair. On a table by her side lay an open bible out of which for many years she had read one verse daily. The old woman's name was Rebecca Batesbut she was generally known as Beckie Bates. Many are the hours I have spent in that little front room listening to one story out of her childhood. This story never failed to fill my boy ears with the martial beating of drums and playing of fifes. My heart beat faster and faster as I could see in imagination the British bluejackets in full retreat; and many a time I slid down from the high-backed chair from which my feet dangled and pressed my face against the window-pane to peer out across the great ocean and catch, perchance, the glimpse of a British frigate. The story was as follows:

When Beckle Bates was a child her father was a lighthouse keeper, and she, with her younger brothers iters spent the days in wandering about the beach, gathering driftwood, fishing, rowing in the old dory and picking up shells. Troublous times came. such times as cause anxiety in children's hearts and put old heads on young shoulders. Rumors of British aggression filled the air, and reports of threatened invasion. Oftentimes the children strained their eyes to see the approach of a possible English vessel. There were no American soldiers in the vicinity to protect them against an attack, though the fisherfolk were ready to arm at an instant's notice. Time went on, the days stretched out peacefully and uneventfully, and in a few weeks after the first announcement of war everything had settled down again into

its regular routine. One afternoon the sisters, Rebecca and Abigail,

thought of fear at being the only occupants of the old lighthouse. Even the village itself was ungarrisoned, as the able men who were not serving in the lation peace, independence and honor. navy were all away in their fishing boats. Suddenly as the girls glanced seaward, their hearts stood still, for in the offing a British frigate lay hove to. Breathlessly the girls saw some of the British sailors lowering away a cutter and bending to their oars head away for the lighthouse point. Their intentions were only too clear. Believing that the village was ungarrisoned, they thought they could scuttle the fishing vessels which lay at anchor and forage and burn the village.

There was but one thing to be done. must deceive the English sailors into the belief that the village was garrisoned. There was not a moment to be lost. Rebecca and Abigail fairly flew to the lighthouse, seized a drum and fife which hung against the wall, rushed forth, and creeping along the coast hid themselves behind the huge rocks and sandhills. Though their lips were trembling and their hands shaking, they beat a lively tattoo, keeping it up bravely through moments that seemed like eternities. The British sailors, hearing it in the distance, mistook it for the beating to quarters of the town garrison. For a moment they hesitated; then hurriedly putting about, with long and steady sweeps they pulled their boat back to the frigate, and in less than an hour the British had sailed away, leaving the village unmolested.

This was the story of Beckie Bates—only one of a thousand instances of American pluck and valor in the early history of our country, showing how quick our forefathers were to grasp the situation, to structor.

BOBBY'S ARITHMETIC LESSON.

Schoolmaster—Bobby, how many are four and three? Bobby after looking under table—Seven, sir. Schoolmaster—You rascal! You counted on your fingers. You know better than to do that. Now put your hands behind you and tell me how many three and five are?

Bobby (after again looking under table)—Eight, sir. Schoolmaster—Good. Now how did you know that? Bobby—Please, sir, I counted on my toes.—Normal In-

The Children's Theatre in New York City

HARRY STRELE MORRISON

It is often said that city children miss many of the pleasures which come to boys and girls who live in the country, but it is also true that they have many opportunities for enjoying themselves which are never open to those who live outside the great centers of population.

Children living in New York city have been particularly favored during the past winter by having a theater of their own, where they could go on Saturday afternoons and witness a performance arranged for their special benefit, a performance in which many of the actors were not yet in their "teens." That they appreciated their unusual opportunity has been evidenced by the large attendance at each performance.

The performances at the Children's Theater began just before Christmas of 1899. The plan was so new and so daring that nearly every one predicted that it could not possibly be successful. A theater for children was something so unheard of that in the beginning people attended out of curiosity, and not because they expected to be interested; but the managers the enterprice knew what they were about. They also knew just what to provide to please the children they wanted to attract. In the first place, they arranged for as many children's parts in the play as possible. believing that the little ones in the audience would enjoy seeing other little ones on the stage. Then they trained an orchestra of boys and girls to play between the acts and occasionally during the progress of the play, and this proved to be one of the most attractive features of the theater. Every one enjoyed hearing the children's orchestra, and it was surprising how well they played. There were five boys and three girls, and not one of them was more than fourteen years old, some of them much younger.

The first play produced was "The Forest Ring," written in three acts by W. C. De Mille and Charles Barnard. It was an immediate success and was continued through the greater part of the season. Some of the characters in the play were fairies, some were animals, and some were human beings. The fairies seemed the most popular, because the little girls in the audience sometimes cried when the bears and other animals appeared and growled at each other in their native language. The following was the cast of characters in the play:

THE CHILDREN'S THEATRE

CARNEGIE LYCEUM.

SATURDAY AFTERNOON, MARCH 23, 1901.

"THE FOREST RING."

A Play in Three Acts by

WILLIAM C. DE MILLE AND CHARLES BARNARD.

CHARACTERS.

FAIRIES.

er, in love with
Aunt Sabrina | Cornelius Garrigat |
| | The gun does not go | off. |

SCENES.

ACT I-A Fairy Ring in the Forest by Moonlight.
ACT II-Front yard of Aunt Sabrina Watson's house next morning.
ACT II-The Fairy Ring, same day-evening.

It will be seen that there were five fairies, four animals and four human beings. The play describes the adventures of Jane Adams, a New York girl, during her vacation in the Adirondack Mountains. Jane is a very charming little girl, and one day she discovers that there is a fairy haunt near the place where she is staying. She makes friends with the Queen of the Fairies and is taught the language of the various animals of the forest. She makes friends, also, with Ursa, a mother bear, whose three children have been captured by a hunter, and she determines to aid the bear in finding her little ones again. From this time on the play is very exciting. The bear visits the home of the hunter who has captured the cubs, and eventually, after many adventures, and with the aid of Jane Adams and the Fairies, she succeeds in recovering her babies. But in order to accomplish this, she carries off a boy in whom the hunter is very much

interested, and when he comes to find him in the forest, he is told by the Fairies that he can never have the boy until the baby bears are returned to their mother. Of course, knowing it to be of no use to argue with Fairies, he returns the cubs, and everything ends happily.

There are several lessons in the play for the little tots who watch its progress. They are taught that animals have feelings as well as human beings, and that the mother bear missed her cubs as much as the boy was missed by his mother. They are also made to understand that it never pays to treat dumb animals unkindly, because some good Fairy is sure to punish any such act.

To the older persons visiting the Children's Theater, the most interesting thing about it was not the play, but the audience. It was worth the price of admission, most of them said, to see several hundred tiny boys and girls so thoroughly interested in the bears and fairies. Most of the patrons of the theater are so young they have to be accompanied by their nurses or their parents, but they never need any attention while the play is going on. They sit with mouths wide open and eyes that see nothing but the stage characters. and when the curtain drops at the end of each act they sink back into their chairs with a sigh of satisfied enjoyment. They are always generous, too, in applauding, and if an appreciative audience conduces to fine acting, the Children's Theater should become the ideal playhouse.

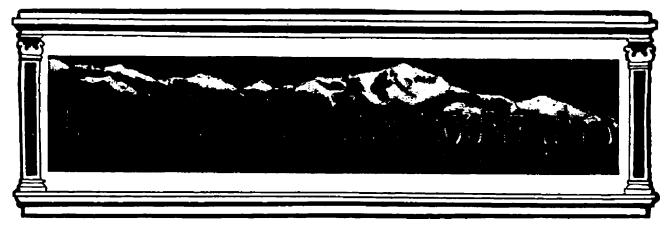

The second play produced last winter was called "The Clown and the Locket," and consisted principally of songs and fancy dances. In April Palmer Cox's Brownies were put on, and proved quite as successful as the other productions had been.

The permanency of the Children's Theater in New York is now assured, and hereafter the Saturday afternoons of a great many children will be spent at Carnegie Lyceum, where the performances are given. It is possible, also, that the little troop, with the children's orchestra, may be taken to some other cities

next winter, so that boys and girls in the west and south may make the acquaintance of the Fairies and the Animals who talk. And as parents are always glad to find healthful amusements for their children, the plays will probably be as successful elsewhere as in New York.

PLACES FOR BOYS.

Gov. Shaw of lowa says: "There is no visible opening for a boy in any field of effort. On the other hand, there is a splendid opening in every field for the boy, so long as he can do it better than it has ever been done before. One quarter of the lawyers of the country can try a case no better to-day than when they began in their practice; and there are women who can cook no better to-day than they could the day they were married."

(Begun in October.)

Review of Preceding Chapters: Jack Carroll, Frank Chapman and Ned Roberts, three boys whose homes are in a village in the far East, obtain the consent of their parents to go to Denver for a visit to Robert Sinclair, a friend of Jack's father, who is a painter of mountain and Indian life, and spends the greater part of his time among the Indians. They are accompanied on their journey as far as Chicago by Mr. Carroll, and are greatly delighted with the sights and sounds of the great city. On the train for Denver they meet Jim Galloway, a trapper, who tells them a true story in which his life is saved by a white man, who was living at the time with the Indians, and turns out to be Robert Sinclair, the artist, whom the boys are going to visit. The boys tell the trapper the story of Sinclair's life. The train on which they are traveling runs into a herd of Buffalo and Ned shoots one. On arriving at Denver the trapper leaves them and Sinclair and the boys buy their outfit and start on the trail for Pike's Peak along the foot of the mountains. The first evening in camp Sinclair tells the boys a story, and Ned's pony makes a dash for home, but is captured by Sinclair. The day following Frank is lost among the mountains. He kills a stag, and spends a night alone in a canyon. He is captured by Indians, taken to their camp, escapes death by its being discovered that his captors are friendly to Uncle Bob, the Indian painter. He makes friends with the Indians, who adopt him as one of their tribe. He goes on a buffalo hunt with them, and is saved from being run down by a buffalo buil by a shot from the rifle of Uncle Bob, who suddenly appears on the scene.

CHAPTER XVI.

Frank had only been a little stunned by his fall and in a few moments was, as he declared, "as good as His pony stood at a little distance seemingly quite dejected at the poor showing he had made in the hunt, while all doubled up in a heap the dead buffalo lay where it had fallen victim to the deadly aim of the white man's rifle.

Hardly had the boy time to regain his feet and express his surprise at seeing Mr. Sinclair, before Ned and Jack came galloping up, their faces fairly beaming with joy at the sight of Frank safe and sound, for they had seen at a distance the peril he was in and had followed Mr. Sinclair to the rescue, as fast as their ponies could carry them.

"Well, here he is, boys," said Mr. Sinclair with a mock display of sternness; "thought he'd turn Indian and get away from us. He has even thrown away his good clothes and taken to moccasins and feathers.'

"But I had to do it to please the Indians." remon-

strated the boy.

"Oh, that's very good! Ha, ha! And where is

Sleepy Sam?"

Frank explained that he had left his horse in camp and taken a buffalo hunter, instead, on the advice of the Indians.

'And how do you like the trade? The animal didn't seem to be hunting buffaloes when I saw him scampering over this bank with that bull in hot pursuit. I think you had better stick to us, hereafter, and not go roaming around hunting Indians, and adopting their clothes and swapping horses with them. Now, let us get back to somewhere and rest a bit for we three need it after chasing you up and down these mountain passes; then you can tell how you got away from us so nicely."

Then all four mounted their horses and, turning in the direction of the Indian camp, they rode away at a canter.

Away off on the horizon rose a great cloud of dust showing that the chase was still on, while here and there dotting the prairies were the shaggy forms of the victims, some motionless, others standing as if in defiance of mortal wounds, and others lumbering heavily through the grass tossing their heads and bellowing with pain, two, three, a half dozen arrows. bristling from their backs and sides.

The boys were not pleased with the spectacle as they saw the suffering of the poor beasts, and even the excuse that the hides of the animals were needed by the Indians for tent covering and blankets for the winter and the flesh for food, scarcely satisfied them that the ruthless sport was necessary or justifiable. At any rate they were glad to be out of sight of it, as they were soon, and to be seated about the foot of a great tree in the camp amid the women, children. dogs and superannuated old Indian warriors--too old to follow the chase-telling one another of the adventures of the days which seemed weeks since Frank had so suddenly disappeared from the Pike's Peak trail.

Frank, of course, had to relate his story first, and every incident of it sounded like a romance to Ned and Jack, who could scarcely help wishing that they

had been in Frank's place—excepting, of course, at that exciting moment when he was bound to the tree and about to be used as a mark for the arrows of the Indian boys.

Then Uncle Bob related how he and the two boys had succeeded in following Frank and finally res-

cuing him. "When I saw you galloping away from the trail that day," he began, "I had a misgiving that something was about to happen. We fellows in the mountains have strange presentiments and go a good deal; on signs and omens. Of course, I didn't know what was coming, nor did I say anything, but when I saw you gallop up the hill I somehow felt something was going to happen to you and, as you well remember, I called to you to be careful. So, when you disappeared around the hill, I stopped a while to await your return, expecting to see you every minute. You did not come; so I called to Ned and Jack, who were riding on ahead, but they did not hear me; for, as bad luck would have it, just then they had set off racing their horses and were soon out of hearing. I fired my rifle, thinking that would attract the attention of all three of you, but Jack and Ned kept on racing down the trail and no sign of Frank appeared. For a minute I didn't know what to do; by feasting, Mr. Sinclair and the three boys rode out then I put spurs to my horse and made up the hill of camp to resume their journey to Pike's Peak, which after Frank. Imagine my surprise when I reached had been so strangely interrupted. the summit to find him gone and no trace of him to be seen. I knew it was useless to think of setting off alone at haphazard to find Frank and leave Jack and Ned to take care of themselves, so I put about and be a little slower, yet would be more full of interest. rode fast down the trail. By this time these youngsters had stopped racing and could hear a shot from my rifle; so, in a few minutes, they were with me and I had hurriedly explained the situation. There was nothing to do but to return to the spot where I had last seen the runaway and examine the ground for footprints and signs of the direction Sleepy Sam had taken. This all took time, though at first before he had shot down a big elk, called to the boys the trick was easy enough. I could see where the and beckoned them to him. When they had come up pony had jumped aside, then follow his long, swinging strides down the slope to the creek bed and up its sides toward the mouth of the canon. Two or three times we missed the trail, but again found it, then coming onto the hard, beaten bed of the canon, we found ourselves perplexed beyond measure. I am sure it was at the first branching off of the canon that we lost the trail, for here there was absolutely not a scratch or a broken twig to give us the direction. We fired our guns at intervals, climbed every point of vantage, built fires at night, but it was all to no purpose. The boy had disappeared as suddenly and completely as if the earth had opened, swallowed him and closed again. Finally, the next day, Ned came the has left a part of the carcass and gone off to take running to me very much excited, exclaiming that a doze. Now, I have a plan to propose. Let us fol-

he had found the carcass of a deer and near it boot marks in the soft earth. And sure enough, there were footprints not many hours old and easily traced. We found your camping-out place that first night and unmistakable evidence that you had been there. We found, by searching, where you had taken an obscure path up the mountain with Sleepy Sam, and I knew at once that you did not take that path of your own choice, but that you had companions, whom I knew by my understanding of the Indian nature were Indians. We were now in hot pursuit and not much over a day behind you. We reached the Indian village just after it had started for the buffalo grounds and from that time on it was an easy matter to reach you. We came upon this camp a few hours ago, learned from the old men that you were with the hunters, and at once started in pursuit. No sooner had we come in sight of the game than we spied you running a race with a mad buffalo and there was nothing left for me to do but join in the race and save your life."

Mr. Sinclair looked very earnest as he closed his narrative—so earnest that tears came into Frank's eyes and as he arose to his feet, for the hunters were now returning laden with their spoils, he took Mr. Sinclair by the hand and said with emotion:

"And I will not forget that you did all this for me, Uncle Bob. I am only a boy, but maybe a boy can be of service to you some day. Indeed, I hope so."

CHAPTER XVII.

The Indians manifested their pleasure at seeing Mr. Sinclair by a chorus of grunts and ejaculations and, as he could speak their language enough to be understood, there was no time lost in their comprehending the situation and agreeing that Frank should go away with his white friends, though his foster mother was evidently greatly grieved at the loss of her new son. Mr. Sinclair, however, appeased her with gifts and she soon became reconciled.

After a day spent in watching the Indians preparing the hides and flesh of the animals they had killed. and in celebrating with them the success of the chase

Mr. Sinclair proposed that instead of going back to the trail they had originally chosen they should follow one of the mountain trails which, while it would This, of course, was readily agreed to by the boys.

Their path at first lay back over the way they had come. For several hours they rode on together looking out for small game and chatting over the incidents of the few days that had passed since they left Denver, when suddenly Mr. Sinclair, who had ridden a few yards away from the trail to where two days they found him examining the ground, evidently in search of tracks.

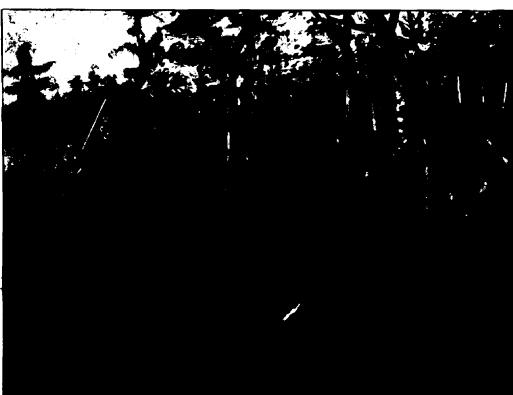

'What is it, Uncle Bob?'' asked Ned.

"Uncle Ephraim has been here or I don't know a bear's tracks. See here," and he pointed to great depressions in the soft, mossy earth that looked like

the marks of a giant's foot.
"Who's Uncle Ephraim?" asked the boys in a chorus.

"Oh, that's a name the old hunters give the grizzly. out of respect for him, I suppose. That fellow was here last night making a meal off my elk, and either being frightened away or satisfied with what he got

She was gaining rapidly on Ned.

low up his lordship or my lady, whichever the brute may be, and surprise him by a morning call. He's not expecting us, but we'll make ourselves at home, just the same.'

'Good!" cried the boys. "A regular bear hunt! What fun!"

'But some one must remain with the horses," said Uncle Bob, "and as Frank has had enough of adventure for a while we will leave him here. Now, don't go playing Indian again, but stay until we return, in perhaps an hour or so."

Frank obeyed with some reluctance and hobbling the horses he turned them out to grass while he threw himself down beside his gun at the foot of a tree prepared to make the best of his enforced idleness.

Uncle Bob, with Ned and Jack, took up the trail into the underbrush. For nearly an hour they pushed ahead up the side of the mountain, over fallen logs and around great bowlders, sometimes guided only by slight scratches on the stones, or broken or twisted branches, which showed the way to the grizzly's den. Mr. Sinclair was in the lead, his rifle in readiness, and his keen, practiced eyes and ears alert. Suddenly, just as he was about to step over a fallen log, he stopped and, turning half round, motioned to the hoys to halt. They listened. "Hear that?" he asked in a hurried whisper. The boys heard nothing but their own hearts beating against their breasts.

"What is it?" called Jack in a stage whisper, fu'll of fear.

"Cubs," answered Uncle Bob, "and they are just over there not ten paces away in that clump of bushes. Look out, the mother is probably with them and like as not the old man's not far away. Now, we're in for it. A grizzly will run if he has a chance, but we have him here at close range and then, too, that mother is not going to leave her cubs. You boys fire only when I tell you. One of you get on this tree and crawl up as far as you can and wait." And at trunk.

"You, Ned, go back a ways and take position be-

hind a tree and don't show yourself till I call. I will get around on the other side of the nest and we'll have the family surrounded. Now don't stir till I call, then be ready for business. Mind, now, if you must fire, hit between the eyes. The brain of a grizzly is as big nearly as an oyster can, and just think you are shooting at a tin can and you are all right. Goodbye. Now, be careful.'

In a few minutes Mr. Sinclair had crept noiselessly out of sight and the two boys held their stations breathless.

Soon they heard the crackling of dry twigs and a loud "ha, ha," and, looking in the direction of the sound, they beheld Uncle Bob approaching them holding in his arms two big. squirming balls of fur, looking like big Newfoundland pups, only heavier-two baby bears but a few days or weeks old at the most.

"The old folks are not at home, boys, so we'll take the babies."

The boys scrambled from their positions and in a twinkle were examining the little, clumsy bear babies.

"Beauties, aren't they?" said Jack. "Yes, but dangerous beauties, for if father and mother bear catch us kidnaping their children there will be the greatest kind of trouble around here." and hardly had Mr. Sinclair uttered these words than a fierce growl from the direction of the nest showed that some one was now at home.

At this the cubs set up a cry that was pitiful, at the same time terrifying to the two boys, and in an instant the great, shaggy beast burst into full view a few yards away.

"Run, boys," cried Uncle Bob, as Bruin rushed toward them with a speed that was wonderful for so clumsy and heavy an animal. Each of the boys held one of the cubs as he ran. Mr. Sinclair jumped behind a stump and, as the beast came on, fired-but the ball went wide. Down the mountain the animal that Jack mounted the fallen tree and on all fours tore after the boys, the cubs all the time crying and crawled as noiselessly as possible up its inclined the boys holding on to them with grim defiance, confident that Uncle Bob would shoot the bear, and they would escape with their precious prizes.

In an instant Mr. Sinclair was in hot pursuit. A shot from the rear could do little damage, but he hoped to thus divert the animal's attention, but two shots had no effect except to wound the animal and seemingly increase her rage. She was gaining rapidly on Ned, who was not so fast as Jack, having some trouble carrying his rifle and big, squirming bundle.

'Drop the cub," shouted Mr. Sinclair, and Ned did so just in time, for the mother bear was just at his heels.

Mr. Sinclair stopped and, posting himself behind a tree, watched developments.

The poor creature was evidently now in trouble. For a moment she stopped to fondle the youngster she had recovered, and then, hearing the cries of the other, she answered with a fierce growl and set off again in hot pursuit.

Here was Uncle Bob's opportunity, for, rushing forward, he caught up the youngster, whose cries; reaching the ears of its mother, brought her again to a standstill.

The poor thing now raised herself on her haunches and, throwing her shaggy head from side to side, became the very picture of despair.

Shall I say that Uncle Bob did what all hunters do in stories of mountain life-shoot the beast as she stood there distracted-or shall I tell the truth? The latter must do, though it may spoil the story for some. The man put the cub on the ground, knelt, took steady aim at the animal-lowered his rifle, and, turning, walked away giving the mother a wide berth. and in a half hour joined the boys, who had put a half a mile between them and the grizzly, told them his experience, and counselled that after showing the cub to Frank they leave it with the elk carcass where its mother could surely find it, and then go on their way.

The boys were at first disappointed in the tame outcome of their first bear hunt, but as they thought it over afterwards they were perfectly satisfied.

But this was not the only bear hunt they had in the mountains, as we shall see.

(To be continued.)

A Toothless Animal.

"Can any boy name to me an animal, of the order indentata that is a toothless animal?"

A boy whose face beamed with pleasure at the prospect of a good mark, replied:

''I can.''

"Well, what is the animal?"
"My grandmother," replied the boy in great glee.

A Very Rare Thing.

The aunt of a bright ten year old youngster had a fad of keeping an autograph album. Some appreciative friend wrote upon one page the quotation beginning: "What is so rare as a day in June?

The youngster in question was looking over the book for a place to put his name and noticed this. The next page was vacant, and he wrote, in the bold if somewhat scraggy chirography of youth, the answer as he saw it: "A youth, the answer as he saw it: ('hinaman with whiskers," and then signed his name.

His Mother's Boy.

The Crown Prince of Germany is so levoted to his mother that he will not permit her to be classed among ordinary ersons.

A clergyman was once explaining to the Crown Prince, who is twelve years ld now, that all men are sinners, vhereupon the little fellow asked him if his father, the Emperor, was not an exeption to the rule. "No, he is not," nswered the clergyman; "the Kaiser is

sinner, like every other mortal."
"Well, I'm sure of one thing," said the ittle Prince, "and that is that my mother s no sinner."

A Letter with Two Tummies.

A four year old Cleveland boy has strong talent along the line of comparisons. His parents have made no effort as yet to teach him the names of the The other day letters of the alphabet. he took a book to his father and pointed to a capital B.

I know what letter that is," he said.

"Well, what is it?"
The little fellow looked at it sharply tracing its shape with his chubby two

"I guess it's the letter wiz two tum-nies," he said.

He Swallowed the Money.

In a car a small boy was observed to ! be suddenly agitated. Soon the con- saw a boy, wearing the uniform of the ductor asked for fares. When he stood before the small boy, there was a slight pause, and the passengers were surprised to hear the following: "Pleathe to make a request: charge it to my papa; I've thwallowed the money."

MRS. McKINLEY'S PET HORSE

Mrs. McKinley appreciates the points of a fine horse, and takes her morning drives behind this beautiful and thoroughly trustworthy horse which answers to the name of "Jeff."

A Judge Thinks Newsboys a Nuisance.

In Philadelphia there is a judge who holds that newsboys are a nuisance. Nine little tots, the oldest of whom was 13 and the youngest 9, had been arrested people that he must pass on his way and brought before him charged with 'maintaining a nuisance," as the lawyers say. The policeman testified that a neighbor, seeing him, put on her bona paper. They all sell newspapers at the entrance of the Reading terminal, a big depot on Market street. The judge keep the peace.

A Loyal Boy Patriot.

A confederate soldier in the Civil War Union army, lying wounded in the hot sun. As the man looked pityingly at little son, who was traveling with him in the boy the little fellow gained courage a railway carriage. Quickly snatching

"Neighbor, won't you get me a drink of water? I'm very thirsty." "Of course I will." said the man, and

he brought the water.

Encouraged by this, the boy asked a time the father remarked: again: "Won't you get me taken to the

hospital? I'm badly wounded."

The man said: "Well, now, my boy. well, so that you can go home again, will you come down here and fight me and my folks once more? How about that?

It was a hard test for a wounded prisoner boy, but that boy stood the test. Looking his captor in the eye, he said. firmly:

mly: "That I would, my friend." 'I tell you," said the man, "I liked that pluck. I had that boy taken to the hospital, and good care taken of him."

An Example of Boy Bravery.

Emerson, in his essay upon "Heroism," says that characteristic of genuine heroism is its persistence, and tells the story of his son, Waldo, when he | needle. was a small boy. On his way to the village school, Waldo has to pass a house where a French family lived. The needle." boy had never heard any language but his own, and the strange talk frightened him; he could not understand it, and therefore felt that the people must be dangerous. Mr. Emerson decided that Waldo was old enough to go and come from school without attendance, and after talking the matter over with the boy, he said: "Now, Waldo, some one will go to school with you this morning, but you must come home alone."

When the school was dismissed, the boy thought of the house full of strange home ,and leaning up against the fence he began to cry. Miss Elizabeth Hoar, the "kids were always scrappin' to beat the band," and that they nearly knocked a man over in their eagerness to sell him you can walk with me." The boy looked at her a moment, and then said sorrowfully, "I don't think that was what my lectured them as to how to behave them. father meant for me to do"; and refusselves and held them in \$300 each to ing her comforting companionship, he trudged sturdily home by himself.

Whistle Again.

"George, George, mind; your hat will be blown off if you lean so far out of the window!" exclaimed a fond father to his the hat from the head of the refractory youngster, papa hid it behind his back.

"There, now, the hat has gone!" cried, pretending to be angry. George immediately set up a howl. After

"Come. be quiet; if I whistle your hat will come back again."

Then he whistled and replaced the hat if I get you taken care of, and you get on the boy's head. "There, it's back well so that you can go home again, will again, you see." Afterward, while papa was talking to mamma, a small, shrill voice was heard saying:

"Papa, papa, I've thrown my hat out of the window! Whistle again, will you?"

Cui Bono.

WILDER ELLIS AN AMERICAN BOY AT HELENA, MONT.

The Cruise of the Yacht Gazelle; 6.000 Miles on Inland

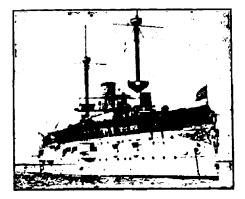

KENNETH M. RANSOM

This is the conclusion of the story of a six thousand mile cruise by four Michigan boys, in a boat of their own construction. Setting sail from St. Joseph, the "Gazelle." by which name their craft was known, proceeded by way of lake, river and canal to the Mississippi, thence to New Orleans and the Gulf, along the gulf coast to the Atlantic, thence to New York harbor by way of the ocean, thence by river, canal and lake, home to Michigan.

CHAPTER XVII.

The weather finally calmed down and we said good-bye to the many friends we had made in Southport, North Carolina, and continued on.

Probably there is no place along our Atlantic seaboard where more wrecks occur than on the Frying Pan shoals off the Cape Fear river. This sandy and rocky spit extends out into the ocean nearly twenty five miles. A great steel lightship is anchored near its outer extremity to warn the mariner and light him on his way. So great is the strain at times of this floating beacon that the great chain, weighing twenty nine pounds to the link, is broken and the ship goes adrift.

BATTLE SHIP "TEXAS," AT NORFOLK

Notwithstanding the precautions taken by the government, the shoals each year claim great ships as their own. We were very glad when we successfully passed this reef, by taking a short cut through a small and intricate channel known as the Corn-cake inlet.

It was six o'clock when we reached the ocean. Our next port was Beaufort, North Carolina, about one hundred and twenty miles distant. If we were successful in making this run we would have then triumphed over old ocean, for from there to New York, by sailing in sounds, canals and the bays, the necessity of ocean travel was at an end. We were in good spirits, therefore, having a fair wind, a beautiful night, and a high barometer to cheer us.

I was just falling asleep when a startled cry from the man at the helm "Down with your brought me on deck. helm!" I cried. "Hard down, Arthur!" The Gazelle responded and flew up into the wind just in time, for a schooner of some fifty feet in length shot by us, all but grazing us as she did so. At the same time the stillness of the night was rent by the shrill shrick of a woman's voice, followed by a frantic waving of a lantern, which up to this time had not been seen. My blood fairly ran cold as I realized our narrow escape. Both boats were running full speed under a cloud of canvas. The schooner was running on a tack and bearing at right angles with us who were sailing free. Had it not been for the quickness of our craft in stays, we would have certainly been cut in two. We reached port at nine next morning to tell the story of on our success. Seeing our wrecked rigour escape from being run down by a ging he rowed out to offer us assistance, a schooner without lights, evidently but we were already binding on an extra captained and sailed by a man who had slept at his post of duty.

As we crossed the bar and sailed up the channel to an anchorage off the city our happiness was great for we had left; the ocean and its dangers. Arthur was fairly beside himself with joy as he stood on the stern and, with almost childish glee, shook his fist back at the ocean.

Letters followed a telegram to our parents, telling of our success, and the day was spent in celebrating the event

Beaufort, we found, was the home of a jolly crowd of young people who enjoy sailing. The watermelons, too, were especially fine here. I was sitting on deck about one in the morning eating a nice cool one and thinking how quiet was the night, when from way off in the distance there floated across the water the sweet melody of a southern song. Nearer and nearer it came, and finally there glided near a graceful yacht, her well-filled sails plainly outlined in the watery background. It was all so pretty, and as I watched them approach and realized that this song had changed from the melody of the southland to the hymn of the republic, and at last in our honor melted away into "Michigan, My Michigan," and a cheer for the yacht Gazelle, my heart was full to running over.

We found the sounds along the coasts here interesting and pleasant sailing. The channels are narrow, but many beacons and finger posts, together with careful study of our splendid charts, made it easy for us to get along. The winds were quite fair most of the time and very strong, so we made excellent speed.

We had made a beautiful run during the forenoon, the wind being so strong as to require reduced canvas even to a triple reefed mainsail. It w. while running from one light to another, a distance of about sixteen miles, that the hardest squall I have ever experenced struck us. We expected bad weather for we were near Cape Hatteras, so noted for decidedly fussy weather, but oh, my! I didn't expect this.

A great yellowish black cloud overcast the sky. The wind had blown hard all day, but suddenly it broke with terrific violence, rain, driven in blinding sheets, filled the air, while our little craft groaned and creaked under the strain and bounded off before the gale. Our canvas could not stand it. Reefed as it was, the mainsail was torn from the gaff, which was snapped off like a pipestem. It became so dark I could not see my shipmates, who had lashed themselves to the rigging forward. Cannon-like bombs of thunder seemed to shake even the wave-lashed water, while lightning flashes rent the air as we flew along under bare poles. I braced myself and, with one hand grasping the tiller, I protected the compass with the other. I held a course which I hoped would bring us outside the lighthouse ahead, which I knew to be situated on the end of a dangerous, rocky reef, where destruction and death awaited us unless the good ship should weather the gale.

To say we flew along is putting it mildly. I could not see a rod ahead. The time dragged until it seemed hours. The anxiety was terrible, for I knew not at what moment we might strike the rocks and perish; but I held on, and at last the storm showed signs of letting up. The rain stopped and the wind lessened, and finally the sun began to peek through the parting clouds; the mist soon rose and there, on our port bow, not a quarter of a mile inside, was the pretty little lighthouse on the end of the rocky reef. So again we were safe.

The light keeper seeing us and knowing that we had ridden out the long squall, rang his bell congratulating us but we were already binding on an extra three-cornered storm sail and were again soon under way. Our friend, the light keeper, said it was the worst short storm he had seen on the sound for fifteen years. As it lasted one hour and twenty minutes and the distance we covered was nearly sixteen miles, you can judge how fast we were driven before the gale. We ran into Stumpy Bay, where a day was spent making a new gaff from material which we bought. Our journey was then resumed and in three days we had finished the great sounds, and night found us at the mouth | ceiving ship, anchored near by.

of the dismal swamp canal where we found four schooners and a sloop loaded with hundreds of watermelons which they were taking by canal to market at Norfolk, Virginia. This was luck for us, as we not only were glad of friends but we were not yet sick of melons, and the fact that a tug would be on hand to take us all through the canal that night at a low figure greatly pleased us. The sailors came aboard the Gazelle and each boat crew gave us several huge melons, so we had a good supply. The men were all good, kind-hearted fellows, and were very much interested in our collection of curios which we brought from the south, and did not seem to tire of our stories of adventure.

About half past nine o'clock the sharp, shrill whistle of our tug around the was heard, our anchors were brought on deck, and our tow lines passed from one to the other and secured. We, being light, brought up the tail end, and were "No. 6." When all was ready the word was called aft and again sent forward and the tug started.

The night was stormy, the sky being overcast by dark clouds; but now and then the light of the full moon broke through and lighted up the procession. It was strange to be on the tail end of such a long tow. It was like the old game of whipety-crack, with us at the end. When a sharp curve was made we had to be very careful not to get tripped.

This, then, was the famous dismal swamp of which Tom Moore wrote:

'And she's gone to the Lake of the Dismal swamp. Where all night long by a firefly lamp She paddles her white canoe.

And as I saw the glow from a decaying stump, and the myriad fireflies about us I thought of the other stanza of the poem:

"He saw the Lake and a meteor bright, Quick o'er its surface played-

Welcome,' he said, 'my dear one's light!' And the dim shore echoed for many a night,

The name of the death cold maid."

At last rain came and thunder and lightning added to the lonesomeness; it was, indeed, "The Lake of the Dismal Swamp." About twelve o'clock the tug stopped, and the order came aft to drop our anchors, as the night was getting dark and navigation was becoming risky. We were glad of this delay for it gave us

RECEIVING SHIP "FRANKLIN."

a chance to have a little rest and to change our soaking wet clothes. As soon as daylight dawned, however, we were again on our way and at eight were in sight of Norfolk. As we came nearer the city the United States navy yard loomed up in the distance.

What a sight it was for us, as we approached, to see several ships of our navy lay at their moorings and still in their war paint. To our joy we found tied to the wharf the much defeated Spanish ship, "Reina Mercedes," which had been brought from the scene of the We did not object to this, however, as a battle of Santiago, in Cuba, to Norfolk a few weeks before.

She was terribly battered and gave one a correct idea of the destructive aim of American gunners.

Beautifully modeled yachts, which were pressed into service at the beginning of the war and did such excellent work, were here, as also were the noted monitors, "Puritan" and "Terror," whose armoured turrets and great guns contrasted strongly with the old-fashioned wooden man-of-war of the "Constitution" type, Franklin, now used as a re-

All these interesting scenes were soon passed, and shortly we found ourselves in the splendid harbor at Norfolk. Going ashore we were informed that the quarantine, which had been in force for several weeks on account of yellow fever, was raised that morning. We were glad of this news, for it gave us the freedom of the city, which we found during our week's visit to be one of great interest and beauty.

We made many friends in Norfolk and Portsmouth, who seemed sorry to have

A BALTIMORE CLIPPER.

as the storm abated. we said good bye, and passing out through Hampden Roads and rounding Old Point Comfort, where is located the famous Fortress Monroe, we were soon in the Chesapeake Bay and holding our course for the Chesapeake and Delaware Canal. Head winds made our voyage up the bay slow but pleasant, and we enjoyed it greatly.

us leave, but as soon

Thousands of craft of all sizes are seen on this sheet of water. from the tiny clam fisherman's to great ocean liners and full rigged ships.

CHAPTER XVIII.

It was while sailing my trick on the second night out from Norfolk that I beheld the finest sight I have ever seen. It was a beautiful night with a splendid moon and starlit sky, a "spankin' good' breeze, and but little sea. I chanced to look aft, and off in the distance I saw a full rigged ship under full sail, even to studding sail. Her great yards, on which were stretched the cloud of canvas, were squared so as to make the ship careen gracefully, while the phosphorescent glow at her bows told of her speed, as also did the rapidity with which she overtook us and passed us scarcely a hundred yards away. It is a great treat to see a sailing ship under full sail nowadays, and so enthusiastic was I over the sight, that when I was relieved by the mate I sat up and spent my time in sketching the ship as I had seen it, that the sight might not soon fade away.

We soon passed the mouth of the Potomac River, leading up to our country's capital, and a day and night's good breeze brought us to Chesapeake City and the entrance of the canal, which runs from here to Delaware City on the Delaware River.

The rise and fall of the tide was here nearly five feet, and a hard bottom offered a splendid chance to beach the yacht. I was sure her bottom was covered with barnacles, and as they greatly impeded our progress we made up our minds to give her a thorough scraping. When the tide fell and left her high and dry, we found the whole underbody of the boat like a great piece of very coarse sandpaper, as the shell growth was fully three-quarters of an inch thick. It was an easy matter to scrape them off, and by two in the afternoon we were readto start through the canal.

I paid our canal fee of eleven dollars and our mule team was hitched on, and our trip began. It seemed funny to havfive mules to pull our little craft, when one would be plenty, but they insisted that we should hire a full team with a driver. This canal is the shortest onon the route and costs three times morthan any of the others. Our driver wa in a hurry to get to the other end, an kept the mules on the trot all the way took us to our destination before sio'clock.

We spent the night in Delaware City and next day at the beginning of flood tide we ran out of the canal into th Delaware River and held our course for Philadelphia, which we reached safely the following morning.

We saw the Quaker metropolis at its best, for the weather was perfect and the streets were beautifully decorated for the celebration of the reunion of the Grand Army of the Republic. son's fleet was here to take part in the naval parade. Thus, besides the general

beauty of the city, we found so much of interest that our four days' visit was a perfect whirl of sight-seeing.

Independence Hall, with the Liberty Bell, the original Declaration of Independence and many interesting souvemrs of early colonial days, came first.

The navy yard and Cramp's shipyard, with great warships in every degree of construction, was a veritable dreamland of pleasure for me; and one could not think of leaving without visiting the United States mint.

The immense shipping also attracted our attention, as we left the city and sailed up the beautiful river to Trenton, New Jersey, the place where General Washington made his famous crossing, amid the ice, with his entire army.

At Bordentown we locked into the Raritan Canal, where we were lucky to find a New York yachtsman on his way to the metropolis in his beautiful steam yacht named Cora. He took a great interest in us and kindly gave us a line, and what a pleasant voyage was our day's trip of forty five miles, with our kind

friends, through this favored country.

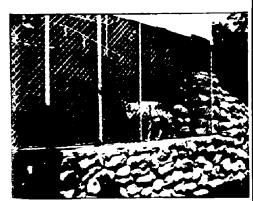

After locking out of the canal at New Brunswick into the Raritan River, we proceeded under our own canvas, and after a most interesting voyage of two days we turned out of the Arthur Kill River into New York Bay. It was early in the morning when we reached the bay. A haze was just lifting from the horizon and little by little in the distance was discerned the Statue of Liberty, and as we drew nearer the outline of the great city's sky-scrapers came into view. A good breeze soon brought us into the Hudson River.

What a Chinese puzzle it is! The water is fairly alive with boats, and every one has to look out for himself. Indeed, we found it true that all our experience was not a bit too great to aid us now. Ships, from our tiny craft to the Kaiser Wilhelm der Grosse, which, in company of six tugs, passed us on the way to her dock, not a stone throw off. It was pretty scary business sometimes, running between the ferryboats, but we finally issued from the busy part and came to anchor several miles up the river in a quiet place.

We visited the city for ten days, during which time we learned much of New

It would take a volume to tell all about the interesting places we visited, including Castle Garden, the Aquarium, Central Park, the great stores, the theaters, Brooklyn bridge, and the tenement districts, so interesting in the study of child-life and where much good work is needed for the uplifting of this part of American boyhood and girlhood. The docks and shipping must not be forgotten, for here are seen the greatest ships the world has yet produced.

The Oceanic, the ship whose stupendous proportions and power were so faithfully portrayed in THE AMERICAN BOY, made her maiden trip while we were in New York, and we had the pleasure of inspecting her as she lay at her dock. Great, indeed, is this greatest of ships.

AT THE NEW YORK "ZOO."

When we said good-bye to the great netropolis we voted that it was well worth coming so far to see, and as we got under way and headed up the beautiful Hudson, we looked back on our visit with much pleasure.

The day we started was bright and exhilarating, though somewhat chilly, and we soon found that the days of negligee costumes were over and we donned our Sweaters.

The wind being strong, we made good Soon the grand mausoleum progress. erected for the last resting place of General Grant was seen on our right.

On the left looms up the Palisades, great rock cliffs rising nearly perpendicular from the water's edge.

The New York Central Railroad, located along the shore, with its frequent trains, tunnels and threading curves, added greatly to the picturesqueness or the scene. Many splendid mansions nestling among the hills or standing out in bold relief upon the slopes of the mountains, attracted the eye.

We passed Sing Sing prison just in time to see a gang of convicts marched to their cells from the shop, in charge of their guards.

The day was nearing its close when we dropped anchor in Tompkins' Cove, a little sheltered nook at the foot of a lofty mountain.

A sort of blue haze, which seems peculiar to this mountain region, hung its gossamer veil over the highlands as we raised our sails, the next morning, and, with a light yet fair wind, again headed grand scenery. At about ten o'clock we reached West Point, the seat of the United States Military Academy, where so many of our nation's heroes have been grounded in the art of war.

The following morning we were off Poughkeepsie, seventy six miles from trip, as it gave us a chance to see the

beast and were gratified as we proceeded, at the rate of twenty five miles per day to note that plenty of good food and kind treatment were improving the animal instead of wearing her out. Some said she would drop dead after a day or two, but she didn't, and fourteen days

GAZELLE AND HER "ONE-HORSE-POWER ENGINE," IN THE ERIE CANAL.

northward, all enthusiastic over the after leaving Albany we reached Buffalo and gave our horse to a man who bought our harness for three dollars, thinking that the harness would be so lonesome without Step Lively.

This long tramp across the state proved one of the very best parts of the

GAZELLE IN WINTER QUARTERS, AT THE END OF THE 6,000 MILE CRUISE, AT UNCLE JOHN'S, ON THE CLINTON RIVER, NEAR LAKE ST. CLAIR, MICHIGAN.

strong, fair wind. It was my day at the cities and beautiful scenery unexcelled tiller, and Gazelle flew along as fleet as There are seventy two locks on this the light-footed creature for whom she is named. Soon the last of the mountains were passed and the scenery, though still engaging, became less attractive. The river, in some places, was filled with tall reeds and we had to follow the buoys, with care. Still we sailed on past towns and cities, outspeeding the steam and naptha launches that we overtook on our last swift sail up the Hudson. Night fell, but the Gazelle still held her way by the light of the moon, and at nine o'clock we arrived at the capital of the great Empire State.

Visiting the capitol, we secured our permits to go through the Erie Canal, and with this document we sailed up to the city of Troy, where Gazelle's sails and spars were removed and stowed and fifty two miles by canal to Buffalo.

It had been our intention to get a tow behind a canal boat, but these fellows, thinking that they were masters of the situation, demanded prices for the service which we could not and would not pay.

Life on the towpath would be a novel experience for us, I explained to the boys; so it was finally decided that we buy a horse of our own and do our own driving. A good old mare (bless her heart!) was purchased for ten dollars. We named her "Step Lively," but we often referred to her as Gazelle's onehorse-power engine.

Albany. Another perfect day, with a beautiful Mohawk Valley, with its large canal, but we passed through them without mishap, the lockkeepers being kind in letting the water in and out with care.

> It was now late in October and marine men said it was very risky for us to venture out on Lake Erie, but they did not know us. Gazelle's sails were again bent on; rigging was overhauled and made secure; and at last all was again ship-shape for the last run which would take us back again to our Michigan.

Before leaving we visited Niagara Falls for a day and greatly admired this beautiful piece of God's handiwork. At last we set sail with a fair breeze and Gazelle seemed glad to once more be on lake water. We were in the best of spirits, for we were going home. It had on deck for the voyage of three hundred long since been decided to put the Gazelle into winter quarters on the Clinton River, near Lake St. Clair, a few miles above Detroit, for here lived Uncle John, a jovial, jolly farmer, who would see to it that the little ship was well cared for during the winter months so near at hand.

Our course was up the Canadian shore and we made rapid progress to Port Stanley, where we stopped for a visit and were nicely received and feasted. From there on to Detroit we had much head winds and heavy seas, and the severe cold of late fall nipped our ears a bit; were full of joy over the now assured small, what is not a serious question !

We took most excellent care of the old | complete success of our undertaking. A little song I had written while on the ocean was very popular aboard these last days, and we sang it until we finally reached the Detroit River, where we again were entirely contented with Michigan.

> Ready about! and the helm goes down; Quick to obey, the ship comes round, And heading away on a starboard beat, We sing this song as we tighten sheet.

CHORUS.

Ye, ho! my lads, then heave once more. We'll heave her abaft and leave the shore.

Heave ho! again and cleat her down: Three cheers for the course that takes us home.

Eight bells are rung, first watch below! From sea to sea we merrily go. Tis midnight hour, yet light as day, And we bound along 'neath moon-

beam's ray.

CHORUS.

Then here's to the breeze that fills our sail, And careens our yacht to her very rail; While she flies like a bird through the ocean foam,

Hurrah for the breeze that wafts us home.

Detroit River has the only marine post office in the world, and as we passed up the river the mail boat delivered a large batch of letters from our friends, who were glad we were again nearly home. A short stay in Detroit, and we proceeded on up to Uncle John's. We found a splendid place to pull the boat out of water and with the aid of a huge tackle and Uncle John's big oxen, the Gazelle, after being entirely dismantled. was successfully hauled out and propped up for the winter.

Well had she behaved: true to the very last; always ready to obey her master at the helm's touch; the Gazelle had brought us home safe and sound.

As we turned for a last look at our little home, when driving away to the railroad station to take the train for St. Joseph, where, anxiously awaiting our coming, were our dear ones, a tear, not of grief, not of joy, but rather of genuine satisfaction, dimmed my eye, and I grasped the hands of my shipmates in token of the success that was ours.

Adieu, Gazelle; the year's cruise is over, but the memories of all your acts, in calm and in gale, merit our everlasting praise. Well hast thou done! Ever faithful, ever true!

THE END.

Leaving Home.

(Continued from front page.)

home folks until youth has settled into manhood; then he should stay at home. But for the average American boy, with his own way to make in the world, I believe it is necessary that he get out from the immediate influence of the home for a time. We have the example set by the birds No bird can learn to fly flopping about in its nest So no boy can get independence of character and action until unaffected by the flattery of partial critics and unaided or, rather, unhindered by paternal hands and voice and pocketbook, he gets out and hustles for himself in a world where the true temper of his steel will be tried.

A boy never comes to know himself till he gets away from home and measures himself alongside of others. At home he sees himself in the indulgent eyes of loved ones and frequently finds, looking in these mirrors, no flaws. He needs to be disillusioned; and a little contact with men as keen, perhaps, or keener than he is, will quickly do it.

s a refuge of and pocketbook behind them in case of failure are prone either to be slothful or indifferent, or to be foolhardy, unthinking and venturesome. Absence from the paternal roof, a closing up of the ever open pocket-book, has saved many a young man

But the subject is endless; and I have more than consumed my alloted space in what I have said. I stop where I started: It is a serious question-serious for the home that is to be left-serious for the boy who is to leave it; but, after all, in view of the eterbut we were getting nearly home and nal effect of every human action, great or

THE PLACE WHERE MAN LIVES

EVERETT MCNEIL

the bullfrog, was wise, and knew the Laws of the Marsh and Lake, and the

Rule of Four; and he should have known better than to go past the Great Black Rock which stands at the foot of High Hill, and marks the ending of the Marsh and Lake and the beginning of the Domain of Man. Chinchunk, the old turtle, met him at the Great Black Rock, and warned him that the Laws of the Marsh and Lake would not protect him if he passed by the rock; and called his attention to the Rule of Four, which, as every frog knows, reads:

"Never go far from the water; imp, when Man swings Jump, when Man swings his arm; (Proak, when the sun sets at evening; Dive at the hoot of the owl."

So Chofoo, the bullfrog, had learning enough and warning enough; and if he had had an equal amount of sense in his head he never

would have taken a leap beyond the Great Black Rock.

The morning was cool and the grass was wet with dew; and Chofoo felt in uncommon good spirits, and, therefore, venturesome. He laughed at the warning of Chinchunk, the solemn old turtle, stretched his long legs, and, by way of declaring his contempt of the caution, made a great leap past the Black Rock and landed in the Domain of Man. And then, just to show the endurance of his courage, he made another great leap, followed by three quick jumps, and stopped under a huge mullein leaf to look around.

Some six jumps to his right he saw a high stone wall, running in a straight line over the brow of a hill; and on top of the wall sat Chitkee, the chipmunk, eating a nut.

"Ho, ho, Chitkee," called Chofoo. "I go to see where this great monster, Man, lives whose tread shakes the hearts of all the people of the Marsh and Lake. Come with me?"

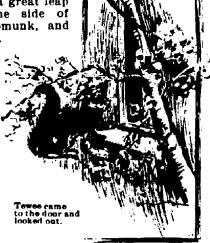

Chitkee, the chipmunk, dropped his nut and, darting quickly down from the wall, jumped upon a stump and looked at Chofoo. "Hi, hi, Chofoo," he called back, "I will go. It is a great sight, the Place where Man lives. But, wait a moment. I will ask Tewee, the mouse, to go with us. Tewee knows the way of Man. He lived with Man once," and, leaping from the stump to the ground, Chitkee ran to the hollow log, where Tewee had built his home, and scratched three times on the doorsill. "Come, Tewee," he called. "Chofoo, the bullfrog, and I go to the Place where Man lives. Come, go with us?'

Tewee came to the door and looked out.

"Yes, I will go, Chitkee," he answered. "But Man is dangerous, and we must move with caution. Man killed my father and grandfather and great-grandfather," and I very much fear in the end Man will kill me. It runs in the

family," and Tewee shook his head sadly. "Yet I will go, for it is a sight worth the seeing, the Place where Man lives. Where is Chofoo, the frog?' "Here, here," answer answered Chofoo, and with a great leap he landed by the side of Chitkee, the chipmunk, and

Tewee, the mouse. 'This we must do," said Tewee, "The great stone wall leads over the hill to the Place where Man lives. I, who have been there before, will run along on the top, and Chofoo can keep to the right and Chitkee to the left of the wall. In this way we can see danger in what-

OW a frog has brains as ever direction it approaches; and, if it comes too well as legs; and Chofoo, near, we can hide quickly underneath the stones of the wall."

"A good plan," said Chofoo. "Come on," and he gave a high jump and came down on top of the hollow log. "I can see far and jump high. Man will need to be sharp to harm me," and, puffing out the white of his throat proudly, he took a long leap from the top of the log.

"Hi, hi, Tewee is wise," cried Chitkee, the chipmunk, darting swiftly over the stones to his side of the wall. "Tewee is wise; and I am cunning and quick. Man can do no hurt while I guard," and Chitkee ran along to the left of the wall, keeping a sharp lookout for Man as he ran.

But Tewee, the mouse, kept silent and ran slowly over the flat stones on the top of the wall, his sharp black eyes glancing in every direction; for Tewee had been to the Place where Man lives and knew the might of the dread monster who dwelt there.

Suddenly, when near to the middle of the hill. Tewee uttered a sharp cry of warning and scurried behind a stone, where he lay looking out from beneath a corner of the stone toward the brow of the

"Hi, hi. Where? where?" shouted Chitkee, darting up the wall to the side of Tewee.

There, there; on the brow of the hill! Keep still, and lie close," answered Tewee, panting with excitement.

But Chofoo, the bullfrog, being low down where the grass was high, could see nothing. "Ho, ho," he thought; "I must know what is causing these timid fellows all this excitement," and he gave a long jump and landed on the top of a high stone.

Then from over the brow of the hill came a great monster, walking on two feet and swinging a huge club in his

"Tewee, is that Man?" asked Chofoo.

"No. that is not Man," answered Tewee. "That is the young of Man. Boy he is called. Man is much greater and has bunches of hair growing on his face. Down, Chofoo, down quick, and hide. Boy has seen you. See, he is bending over to pick up a stone. Get behind a rock quick,' and Tewee and Chitkee sought safety far down under the stones of the wall. Plooff!

laughed Chofoo. "Have no fear. My legs are long and strong. and I can leap high and far. Boy will not harm me. Plooff,' and, swelling out his chest proudly, he watched curiously the antics of the two-legged

quick swing and lurched violently forward.
"What now!" thought Chofoo, stretching up his

struck the stone on which Chofoo was sitting; a blinding shower of sparks and pieces of rock flew into his face; and he was hurled off the stone to the the sayings of the old ground, where he lay, flat on his back, too astonished

"Quick! Quick!" squeaked Tewee. "Under the stones, quick! Boy is coming!" and the brave little ness of a stone by fellow, running from the safety of the wall to where knocking their brains Chofoo lay half stunned on his back, thrust his sharp nose under him and attempted to turn him right side

Chofoo coughed and flopped over on his feet. "Did a word. the top of the hill fall on me?" he asked, blinking wildly.

"Plooff! I see Boy catching me!" and the throat of Chofoo began to swell proudly. "My legs are long Jumping snakes! what's that!'

Suddenly a great thing stood over Chofoo, and a mighty hand and arm reached down to grab him. He gave a wild jump of terror. There was a rush of huge feet after him; a crash like the falling of a great tree near his head; and, panting and trembling, he tum-

stone.

"Did the moon fall out of the sky and strike near my head, Tewee?" he panted.

"No," answered Tewee; "that was the young of Man, Boy. He struck at you with his club. Hark. you can hear him walking away. His tread makes the stones tremble."

"Plooff!" and Chofoo crawled out from under the stone. "Plooff! I was not afraid! Did you see how ! fooled Boy? My legs are long and strong and I can jump far. Plooff!" and he began to puff out his chest.

Tewee now ran on top of the stone wall. "Come," he called, "Boy has gone."

Then Chitkee and Chofoo went each to his side of the wall, and the journey was resumed.

When they came to the top of the hill they saw a level tract of land, and on the level tract of land were huge things, like great rocks, only they were not rocks, and smoke was coming out of one, and all had curious holes in their sides with something shiny in the holes.

"That is Man's nest," said Tewee, pointing to the one that smoked; "and those others are barns and sheds, where Man keeps cows and horses and other monsters which do his bidding. But the most curious of all is Man's nest. I once lived in Man's nest;

"Hi, hi," interrupted Chitkee. "See, there is a flat stone under the great tree. Let us sit there. It is much nearer to Man's nest, and we can see better."

"Good, good," croaked Chofoo. "Come on," and in ten long jumps and six short hops he reached the top of the flat stone. Chitkee and Tewee ran along after him, and sprang up on the stone by his side.

"See, see!" squeaked Tewee, "Man is coming out!"

A hole near the bottom of Man's nest opened, and a huge monster walking on two legs and with bunches of hair growing on his face and head, came out; and after him came Boy. The two monsters walked a little way, then they stopped, and Boy pointed to the flat stone. Man said something in a rough, loud voice, and Boy ran back quickly into the nest. In a moment he came out again with a long bright thing in his hand, which he gave to man.

"What ugly looking monsters," said Chofoo.

"I wonder why they walk on their hind legs when walking on all four legs is so much more comfortable," said Chitkee.

Man lifted the long bright thing to his shoulder, and pointed it toward the flat stone.

Chitkee stood up on his hind legs and watched Man curiously. Tewee gave a frightened squeak and jumped off the stone. "Quick, quick, hide!" he called. "Man has seen us!"

"Hi, hi," laughed Chitkee, "Tewee is timid. Man

can't kill by looking."
"Plooff! Plooff!" croaked Chofoo. "I am not afraid! Man can't swim. There is no web between his toes. Plooff! My legs are-

At that instant a bright flame leaped from the long thing Man held to his shoulder. There was a deaf-ening sound like a sharp clap of heavy thunder, a shricking in the air like the cry of thousands of demons; and Chitkee whirled over backward and rolled off the stone, his head nearly torn from his body by some awful unseen force. Chofoo leaped high in the air; and

"See, see!" squeaked Tewee, "Man is coming out!"

over stones and sticks and through brush and grass he tore, and never paused for an instant until he fell nearly dead with exhaustion and fear in the cool shadow of the Great Black Rock, where sat Chinchunk. the solemn old tur-

Chinchunk slowly nodded his head. against

up.

"No; Boy threw a stone. Quick, under the wall! Boy is after you!" and Tewee darted away.

and I--

post beautiful buildings in the world.

As we stand on Capitol Hill, with the Library on one side and the Capitol on the other, we behold a sight to make a boy's heart beat fast with patriotic pride.

We stand irresolute as to which to visit first, but if we watch the general

ARMISTEAD GRADY.

flow of people, it will not take long to see that the greater number go to the Library first; consequently we fall in line and wend our way

The first thing we see is the fountain at the foot of the lofty entrance. In the center old Neptune is

thither, also.

reposing, with a mermaid on either side of him riding on large sea horses. In the pond beneath them are turtles with streams of water issuing from their mouths and splashing on the horses.

The main stairway leading to the entrance is made of large blocks of granite. Ascending the stairway, we enter the building by one of the three bronze doors and find ourselves in a white marble hall of immense height, all glorious with carving and color, "a vision in polished stone." The hall is encircled by noble stairways of glistening white marble, at whose base stand Marting's bronze lamp bearers. Exquisite infant cupids of all nationalities, wreathed in flowers, are carved along the beautiful banisters.

From the center hall we go down the south corridor to visit one of the most beautiful rooms in the building, "Representatives' Reading Room."

This room is about two hundred feet long, furnished with six desks and three large oaken tables. At the end of this room is a mantel and fire-place. This mantel is one of the wonders of the building. On it are large mosaic figures representing Law, in all its majesty.

All books ordered or called for by representatives are brought to this room as fast as a messenger's legs can carry thom.

While I am writing of this room, I may as well tell how a book is gotten for the members of Congress. A card is made out in this way:

CENTURY VOL. 9, 10, 11, PAGE MORRIS,

This is taken to the Main Reading Room. An attendant from there then sends it through a tube by compressed an to the sixth deck, or floor, all bound periodicals being kept on this deck. The rrson on this deck no sooner sees the M C. (Member of Congress) on the card than all other work is forgotten for the time, and he rushes around to get these three volumes, as if his life (or position) were at stake. After finding them, he sends them out to the Reading Room, With Mosaic Panel of "Law," by Disiman.

The Library of Congress is one of the | and from there they are rushed to the Representatives' Reading Room.
The Senators' Reading Room is much

like the Representatives, only smaller men. and, if possible, grander.

twenty five newspapers and twelve Book' hundred periodicals kept on file. The best newspapers from each state are kept here, the smaller and more insignificant ones being kept elsewhere. No papers are ever thrown away, but all are preserved in neat bundles, dated, and put away for future use.

There are two kinds of newspaper files; one is called the standing rack, or! file, which is stationary. On it are kept; the best papers from the most important cities. The inferior file is the "Stick." This can be removed for reading, and the reader can sit down at a table, spread himself, his coat, his hat and his newspaper all over the table, almost | driving the messenger crazy, for it is part of his work to put the papers away. When the messenger tries to get a little room on the end of the table to put his papers, the exasperating reader spreads out his paper just a little more and gives his coat a little push the wrong way and knocks all the papers on the floor; he then rises and tries to help that furious messenger to pick them up and mixes them hopelessly.

The periodicals are arranged under subjects, excepting story magazines, such as Century, Harper's, McClure's,

Next we enter the South Book Stack, and go in on the seventh deck. There are nine of these floors or decks. On the first or top deck (the decks being numbered from the top down), the foreign newspapers are kept, and from the second down to the fifth the bound United States newspapers are kept. All papers are arranged alphabetically by states. and the papers under each state are also arranged alphabetically. The sixth deck contains all bound periodicals. The seventh deck has all the English fiction. directories of most of the important cities of the United States, and also army and navy directories. On the eighth are kept all current newspapers for a month or two back. Later they are sent to the bindery. The ninth and last deck belongs to the Copyright Division. Here

after they are stamped and recorded, and thieves. the music to the Music Division, the periodicals to the Periodical Division, the pamphlets to the Catalogue Division,

The stacks are strictly fireproof, there being at each end a large marble door which is shut and locked every night. The floors are of marble and the shelves of iron.

After we leave the Stack we find ourat one time, but often there are many that room desires, there being only one boy to deliver books to all the readers. The highest number of readers in one on a half holiday.

Around this room is a beautiful gallery decorated with bronze statues of Columbus, Fulton, Homer and other great

On leaving this room we come upon In the Newspaper and Periodical Read-ing Room there are two hundred and representing the "Evolution of the

GALLEBY OF THE READING ROOM.

The first picture shows men in the early stone age, partially dressed in the skins of animals and building cairns. These cairns were probably the first monuments ever raised by men.

The second picture is "Oral Tradition.

The third represents Egyptians carving on Pyramids. This carving was at first only rude pictures, but, as time passed on, the images became conventionalized and looked more like writing.

The next picture shows us the Indians writing with blood on the skins of animals.

The fifth is the monks inscribing on papyrus.

The sixth and last picture is the print ing press.

A few more steps bring us to the large hall from which we started.

On the second floor to the left of the

THE NORTH STAIRWAY.

THE BRONZE DOOR, "THADITION."

are kept copyrighted pamphlets, sheet grand stairway, we see all the old books music, and some periodicals; but most of and manuscripts. These are all kept in these are sent to the other divisions glass cases to protect them from dust

On the right is the Art Gallery.

The Library and Capitol are connected by a pneumatic tube for sending books between the two buildings, the books being sent in bags which look very much like dress suit cases.

Down on the basement floor we may take a look at the Bindery. This division is a long room full of tables and machinery. The Bindery is a new thing selves in the Main Reading Room. This in the Library. Up to a few months ago room is a large octagon. There are about all books had to be sent to a bindery two hundred and fifty desks and seats in outside of the building, and consequently this room, which are rarely all occupied it took a longer time to get books back than it does now. The largest bound more occupied than the messenger in book in the Library is about four feet by two and a half, and the smallest, one and one-half inches by one.

MESSENGER No. 6023.

DOUGLAS ZABRISHIE DOTY

It had been a hard day for No. 6023.

In the morning there had been a trip over to Brooklyn with a fifty pound valise; and right on top of that had come two hurry calls on his bicycle—one to a swell hotel and the other to a club. It was a cold blustering day and between the heavy valise and the baffling wind, poor No. 6023—familiarly known as "Shorty," was dreadfully tired by five o'clock.

He was twelve years old and small for his age, with a pair of steady blue eyes as deep in tone as his well fitting uniform.

Shorty was the biggest dandy in the office. How he managed to keep himself so neat it would be hard to tell. He was all alone in the world; and his home was a tenement-house room which he shared with a couple of "newsles."

His hair was always carefully brushed and his well worn shoes never lacked for blacking. Shorty's chief source of anxiety was his linen. He had never possessed more than three collars at any one time since he could remember. To make these three hold out through the week and yet always appear with a clean collar required a good deal of figuring.

always appear with a clean collar required a good deal of figuring. Poor Shorty! Often times he was obliged to resort to an ink eraser or a bit of sponge rubber to whiten up the edges of a soiled

collar.

All the other boys at the office smoked cheap cigarettes. But Shorty couldn't afford the luxury of tobacco. All his spare coin kept his hair cut and his boots blacked.

When he had returned from that second

when he had returned from that second afternoon call, Shorty sank down on the wooden bench with the half dozen waiting boys and promptly fell asleep on the shoulder of his companion, who was so enthralled with the adventures of "Diamond Dick" that he never noticed it. The telegraph instruments were buzzing away like

a merry bee hive and outside the elevated trains were rattling noisily by.
"Whirr! Whirr!" went the messenger call and the manager took down the address on a slip of paper and called "boy!"

call and the manager took down the address on a slip of paper and called "boy!" sharply.

"Say, but I'm tired!" muttered Shorty as he picked up the call slip.

The manager stared frowning through his glasses. He was a small young man with greasy hair and a bad complexion.

"You kids make me sick!" he said fussily. "You're lolling around here half the time and yet you complain about being overworked. Born loafers all of you!"

Shorty went out without replying. He knew better than to talk back. His destination was quite a ways farther down town so he took a car which was crowded with well dressed people. To-night he was fascinated by a collar worn by a gentleman who sat just opposite. It was of the style dubbed by Shorty as the "stand-upsit-down" variety. The set of the collar was superb and as white as the driven snow.

Then and there Shorty made up his mind.

Then and there Shorty made up his mind

he would own one of them with the next time an extra quarter came his way. "Forty-fourth street!" bawled the con-ductor and 6023 swung off the car. Shorty's practiced eye swept over the house as he mounted the steps and he utiered to himself "boardin' house! 'Spose it's some ole lady as wants me to carry her grip ter t' ferry!"

"Second floor back!" remarked the maid who opened the door and Shorty stumbled up the dark stairs and knocked on a door. "Come in!" said a woman's voice.

up the dark stairs and knocked on a door.

"Come in!" said a woman's voice.

"Crusty old bird!" was Shorty's mental comment as he entered the room and stood cap in hand. The lady who seemed quite old, had very sharp eyes. Her nose was sharp and so was her chin.

The lady sat rocking in a chair with her bonnet and gloves on.

"How old are you, boy?" she asked.

"I'm jes' twelve, ma'am."

Shorty watched those sharp eyes as they traveled over his slight little figure and he felt a thrill of pride as he thought that he had on a collar fresh from the laundry that morning.

morning

Who taught yer to be so neat?" jerked

"Who taught yer to be so neat?" jerked out this strange woman.
"I dunno! I jes don't like things dirty—that's all!"
"Live with your folks?"
"Ain't got any folks!" said Shorty.
"Humph!" muttered the lady. "Just like me. I haven't any folks, except some cousins, and we don't love each other.
There was a slight pause and then this

me. I haven't any folks, except some cousins, and we don't love each other.

There was a slight pause and then this temarkable woman asked dryly, "Did you ever take a lady to the theater?"
Shorty laughed.

"I say, ma'am!" he cried with a roguish grin. "What 'er youse given us, anyhow?"
The corners of the woman's thin mouth curled up slightly and her eyes gleamed for an instant.

"It's this way," she said. "I'm in town for a little visit and I thought I should like to go to the theater once. I don't like to go alone, but I don't care a pin for any of the shoddy people in this house."

"I'm fond of boys—if they have clean faces—so I rang for a messenger. Now, then, what would you advise me to see—I don't know anything about the plays.

Shorty looked thoughtful for a moment. "Dere's a bully three-ringed circus in town," he said suggestively.

"Just the thing!" cried the lady, "I hav'nt been to a circus since I was a girl. Let's go!"

A minute later this strange couple walked

A minute later this strange couple walked down the front steps and hailed a street

down the front steps and named a street car at the corner.

When the conductor came for fares, the lady pulled out a fat purse, but quick as a flash Shorty had laid a dime in the man's

"Dat's all right!" he remarked a trifle grandly. "I kin stand for de fares as long as youse is blowin' us off to circus tickets!"

The woman started to argue the point, but when she looked at the proud happy look in Shorty's bright eyes, she smiled rather gently and said nothing.

"Now first we'll want a good dinner!"

remarked the lady. "I'll leave it to you where we shall go."

remarked the lady. "I'll leave it to you where we shall go."
"Shall we be dead-game sports and go to a bang-up joint?" inquired Shorty.
"What?" asked the lady blankly. Then she smiled brightly. "Oh, yes; let's go to the best in town!"

The head waiter at Delmonico's felt the few hairs on his bald head rise in horror as he beheld a soberly clad woman and a tiny messenger boy enter the grand dining-room and make for a yacant table. room and make for a vacant table.

He flew to her.

"Madam!" he murmured, "ze boy!"

"Dat's all right whiskers!" put in Shorty
grandly, "I'm escortin dis lady and got de
dough to pay fer de grub. You kin bet on

dough to pay fer de grub. You kin bet on dat!"

"This young man is dining with me!" put in the woman quietly. "Please show us to a table." Which much against his will the head waiter did.

The other diners stared and smiled broadly or covertly according to their manner. But that did not embarrass Shorty or his companion.

In all his twelve years Shorty had never had such a meal. Oysters, soup, fish, roast entree. Shorty tackled the myallantly and heaved a heavy sigh of content after each course. That there could be such wonderful things to eat he had never dreamed, and even the lady admitted to herself that these queer French dishes were more "tasty" than the roast mutton and the pumpkin ple at home.

When the bill arrived on a neat silver salver Shorty had a handful of greenbacks which the woman had reased to him with the woman had reased to him

When the bill arrived on a neat silver salver Shorty had a handful of greenbacks which the woman had passed to him under the table. These he proudly deposited on the bill and when the change arrived Shorty picked out a dime and dropped jingling on the salver.

"There yer are, boss!" he remarked with the air of a man to the property of the property

the air of a man to whom money was no

the air of a man to whom money was no object.

The waiter colored slightly and looked loftly over his head.

"If you're too stuck-up to take a tip—say so—can't yer?" muttered Shorty, and he picked up the dime. Then when he had emptied his glass of water over the table cloth and the picked is not the table cloth and the interior technicals. cloth and the jar of toothpicks in his pockets, these two diners arose and no society belle ever attracted more notice than they

as they marched solemnly out.

But, oh! that circus! Was there ever such a wonderful pageant of marvels and beauty!

sheauty!

Shorty whooped and whistled his delight and even his companion found herself applauding vigorously with flushed cheeks and a sparkling eye.

"Boy!" she declared as they were going out, "I haven't had such a good time in years as I have had tonight."

"Nor me, neither!" put in Shorty, and there he sighed. "The worst of a good time is you're so sorry when it's over."

They were riding up town again in a street car when the lady asked suddenly, "If somebody were going to give you a present, what would you most like?"

Shorty considered a moment; his eyes on a well dressed man opposite. "I'd rather have a dozen collars, the stand-up-sit-down kind, than anything else," he said wistfully.

"You're a good how and I went you to

fully.
"You're a good boy and I want you to
visit me in the country this summer," said
the lady, as she said good-bye.
"Have you got a cow, and trees a chap kin

climb without a cop chasin' him?" ask...

emb without a cop chasm nimr ask...

Shorty.

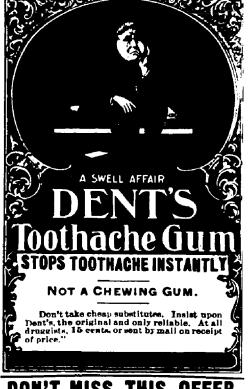

"Yes, said the woman and somehow he eyes had grown very soft and kind.

"It must be beautiful," murmured Short and then "thank ye ma'am, for a built bung time!"

The next day Shorty received a big boy and in it were two dozen collars and six

The next day Shorty received a big boy and in it were two dozen collars and say superb shirts gorgeously striped and figure in the most brilliant colors.

Shorty is general manager of the big company now, and he always takes Thanksgiving dinner with a certain dear old ladwho lives in the country and he always declares that those collars were the making of him.

To be continued.)

Mathuthenema.

GEM. VAUGHAN

An Indian chief and squaw had a little boy just about as old as Mathuthenema, and during an epidemic of fever this little boy died and his parents grieved over it very There is a custom

much, for Indians. among this tribe that whenever a member of a family dies another one is adopted in his place, although it is seldom that the one adopted lives with his new parents.

The bereaved parents soon began looking about the tribe to find a child to adopt in place of their little one; and it must be one of the brightest and best, for was not their child perfect? They came to Mathuthenema's hut and his mother and father listened patiently to their account of their loss. They asked for Mathuthenema, and he was brought in from his play and stood contemplat ing the visitors with all the self-possession possible. He looked as though he were angry about something but he really was not, for he frowned the most when he was thinking the hardest. At length, after sitting in silence for a long time, for so long time that white folks would surely have gone to sleep, the visitors said that they wished to adopt Mathuthenema and that their dead child would give him gifts.

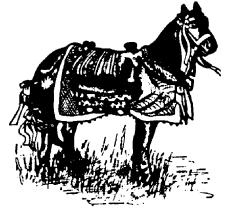

Mathuthenema's parents were well pleased, for an adoption among the wealthier Indians is quite a ceremony.

The day appointed was at hand, and the Indians who were to take part and those who were onlookers stood or sat about an open space near a wood. There was Mathuthenema, not in his little

every day calico shirt, as the first picture shows him, but decked out in great splendor-according to Indian ideas; a big silk handkerchief about his head, another one about his waist; his little calico shirt was trimmed with ribbon, and colored pieces of cotton goods were neatly pieced about the skirt. He had on beautifully beaded moccasins and leggins, while about his neck were strings of brightly colored beads.

Pretty soon a beautiful little pony was led up. On the bridle, tail and saddle were tied great bows of bright ribbon. The pony blanket was bound with silk and little bells jingled about it. tached to the saddle was a large bag full of gifts and yards upon yards of different kinds of calico. All were presents for the little Mathuthenema. It was quite a pretty sight, especially

when the child was lifted into the saddle and the pony's head was turned to the west.

Then came an old chief, who dipped his hand in a red liquid and imprinted a mark on the pony's right hindquarter, symbol of protection. The chief talked awhile, then the pony was turned loose, but as Mathuthenema was too young to drive, his mother mounted, held him and started the pony towards the west, where the Indians think is their happy hunting ground. After going a distance they stopped and there the spirit of the dead child met them and blessed Mathuthenema. They then wheeled about and rode back.

The new parents stood alone and waited for him. When he arrived they seemed very glad and greeted him in Indian fashion, giving him another bundle of goodies.

After it was all over, Mathuthenema took his new pony and other gifts and went to his own home and his adopted parents to theirs. He may seldom enter their home, but he always has a right to them and theirs, and they to him.

FIFTY GOOD GAMES

As Played in Brooklyn Public Schools ' From Report by Jessie H. Bancroft, Director of Physical Training

NO. 37. GATHERING STICKS.

NO. 37. GATHERING STICKS.

The ground is divided into two equal parts, with a small goal marked off at the rear of each part, in which six sticks are placed. Each player who reaches the enemy's goal safely may carry one stick back to his own goal, and may not be caught while carrying it back. If caught before reaching the opposing goal, he must remain a prisoner in the goal until touched by one of his own side; neither may be caught while returning. No stick may be taken by a side while any of its men are prisoners. The game is wor, by the side gaining all of the sticks.

NO. 38. PRISONER'S BASE-I.

Divide the ground into two equal parts, with a small base or prison marked off at the farther end of each division. From five to twelve players guard each side. They venture into the enemy's ground, and, if caught, are put into the prison, where they must remain until tagged by one of their own side who is free. Both prisoner and rescuer can be tagged and brought back to prison before reaching their own ground. The game is won when a free man enters The game is won when a free man enters the opponents' prison, but this can only be done when there are no prisoners there.

NO. 39. PRISONER'S BASE-II.

NO. 39. PRISONER'S BASE—II.

A large goal is marked off at each end of the ground, with a small base or prison adjoining the forward right-hand corner. The wide open space between the goals is neutral territory. The object of the game is to enter the opponents goal. The entrance of one player means victory for his side. As one player advances for this purpose, or gives a "dare," the opponents send cut a player to tag him, when the first side immediately sends out a second player to "cover" or protect the darer by trying to tag his opponent. The opponents side then sends out a second player to "cover" their first one. He is at liberty to tag either of the other two players. In this way any or all of the players may be out at one time, though it is unwise to leave the goal unguarded. Any player may tag any of the men from the opposite side who left their goal before he did. but none who came out after he did. Whenever a player inturns to his home goal, which he may do at any time, the man who went out to cover him must return also, and of course the man who went out to cover this second one, etc.

Any player caught (tagged) is placed in

the man who went out to cover this second one, etc.

Any player caught (tagged) is placed in the opponents' prison ("prisoner's base"), where he must remain until rescued by one of his own side. The prisoner may reach as far out of the prison as possible, so long as one foot is within it. He and his rescuer cannot be tagged while returning home, but the rescuer may be tagged before he touches the prisoner. One rescuer may free only one prisoner at a time.

Much finessing is possible by engaging the enemy on one side of the ground, while a good runner is held in reserve to dash into the enemy's goal on the other side. Each side should have a captain to maintain discipline, take general direction of the game, and decide with the opposing captain any disputed points.

In organizing the teams the two captains are elected, and they then take turns in choosing men for their teams.

This game is more complicated than the one of the same name previously described. It is well for beginners to start with the first game.

(Others Games to follow)

Upham, 36 Edgell Street, Gardner, Mass.: For best offer, will exchange two pairs of skates, numbers nine and nine and one-half, four cloth-bound books in excellent condition, entitled, "On the Amazon," "Five Hundred Dollars," "John Brown's School Days," "The Complete Works of Artemus Ward," Scott's Best Stamp Album with three hundred and fifty five stamps.

Boys and "Blood and Thunder" Reading.

WRITTEN BY CAPTAIN JACK CRAWFORD, THE POET

reading the vie trash which de-picts such Indian scenes as never occurred, and points out "bloodand-thunder" he-roes who never lived, and of such

CAPT. JACK CRAWFORD.

CAPT. JACK CRAWFORD.

a type as were never heard of in the west. If I had the power I would catch every dime novel publisher in America and confine him in prison for life, where he could not pursue his criminal work—for it is criminal—and leade as many bright have a rule and discovered. his criminal work—for it is criminal—and leads so many bright boys to ruin and disgrace. My name has never yet figured in one of these trashy concerns with my consent, although I have been offered quite large sums by publishers to allow my name to be used as the author of a western story which they would have had written by another, just as they do with other western characters whom I could name. It is a great trick on the part of publishers to endeavor to secure the names of noted scouts, hunters, and actors as authors of endeavor to secure the names of noted scouts, hunters, and actors as authors of the most ridiculous trash that was ever printed, and I regret to say that some western men are so foolish as to bite at their glittering bait. But a few weeks since in a New York publication I was pained and mortified to see an old picture of myself, published with others, with a flash story, and labeled, if I remember rightly, "Broncho Billy." Broncho Billy.

story, and labeled, if I remember rightly. "Broncho Billy."

The first desire of the average boy after reading a story of western adventure is to go "out west and kill Indians." To a western man this desire is so absurd and ridiculous as to be really laughable. Poor little innocent dupes! Of the many boys who have abandoned their homes to exterminate Indians, not one in a thousand ever reached the Missouri River, and those who did get beyond that stream invariably went to work in kitchens of hotels washing dishes, or served as lackeys in some subordinate position until their parents could send for them. The poor, blinded boys do not realize that to be efficient in the field as a scout, a man must have lived in the west for many years; must be familiar with every foot of the country, and acquainted with the Indians and their haunts and customs. Neither do they cast a thought upon the hardships and privations of the life of a scout; exposed to plercing cold; driving, blinding snow storms; drenching rains; starvation for days at a time; intensest heat and tongues parched for water in summer; always in danger of death and mutilation at the hands of an invisible and cruel foe—these and a thousand other hardships always fall to the lot of a scout on the frontier. The men who foliow such a life do not do it so much from a love of adventure as from a love of the big silver dollars which they receive

who follow such a life do not do it so much from a love of adventure as from a love of the big silver dollars which they receive in payment for their services.

Many of the young men in the penitentiaries of the western states and territories assert unqualifiedly that they were brought to their present shame and disgrace through reading dime novels. They longed to be heroes or highwaymen or noted robbers, and their first attempt at crime invariably led to their imprisonment for a long term.

crime invariants --for a long term.

Boys, take the earnest advice of a fronBoys, take the earnest advice of a fron-Boys, take the earnest advice of a frontiersman, and stay at home. To attempt to gain heroism by following the course pointed out by the publishers of vile novels will lead you to disgrace and death, just as surely as the night follows the declining day. Learn some good trade or profession, and stick to it, and you will grow up beloved and honored by all who know you and your names may some day be written high up on the glittering scroll of fame Future presidents of these great United State are now but boys, and you may be one of them, young reader, if you will apply yourself to study, acquire the principles of truth and manhood, and endeavor to fit yourself for the position. Try it, little friend, and avoid those miserable dime novels as you would a venomous, hideous rattlesnake. They are more dangerous.

"Say, mamma, how much am I worth?"
"You are worth a million of dollars to me,

my son."
"Say, mamma, couldn't you advance me twenty five cents?"-Time.

Jesus of books is more va veloping character than tha as biographical. And the reason is they describe life. The books boys enjoy most are those of travel, adventure, and war, by land or sea. Story books interest younger children, but as boys grow older they crave something stronger than mere story books. And from the boy's point of view the most interesting books are those or some person, the adventures are those of an individual, the battles are fought and won by men. The boy, while reading, identifies with the hero. If the book is American Revolution, he is one of the Green Month of the Green

mere story books. And from the boy's point of view the most interesting books are those that describe action. The travels are those of some person, the adventures are those of an individual, the battles are fought and won by men.

The boy, while reading, identifies himself with the hero. If the book is about the American Revolution, he imagines himself one of the Green Mountain boys, perhaps Ethan Ahen himself; or it may be that he is Marion, the Swamp Fox, or Gen. Greene. or even Washington. If he reads about Paul Jones, he too fights valiantly. Now this characteristic is valuable, for it stirs a boy up to put himself in the place of others greater than himself. It enables him to use these others as models, and it leads him to compare his own difficulties with those of other men. The boy will do all this naturally, without any suggestion, and in fact because he cannot help it.

Biography is the very best reading matter for boys and they should be encouraged to read it, for a man must attain some distinction in the world before an account of his life appears. Then it so frequently happens that the man has had to struggle hard and overcome obstacles and disadvantages that in this way it is helpful. When a boy discovers, for instance, that Christopher Wren, the architect of St. Pauls, was a foundling, or that Garfield and Lincoln rose from poverty and obscurity by hard and painstaking work, that Benjamin Franklin entered Philadelphia with a loaf of bread under each arm, he is ready to attempt hard things himself. If he is poetical he is interested to know that Keats was an apothecary's apprentice; or if artistic, that Murillo was once a slave and copied his master's work secretly. The fact that a graduate of his own school has risen in the world is an interesting bit of biography and leads him to try to do likewise. In fact, when hardships come and difficulties appear, like lions in the way, the boy who has read the lives of great men will at once think how this one and that one worked hard and prevailed over all

Select Good Books.

"Boys have an opportunity of exercising their will power in the selection of their books and thereby show what kind of char-acters they possess," says Frances Camp-bell Jewett. "We all know boys who will read under cover of their desks sensational, perhaps vicious books; and we know other read under cover of their desks sensational, perhaps vicious books; and we know other boys who would scorn such books as they would scorn a lie. A boy should choose for his library good sound books, not necessarily dry, prosy ones, for that may make a dull boy of him. He should choose books of adventure—adventure true to life, for horse like to read of stirring scenes. Such reading stimulates courage and manliness. Books of history ought to be chosen, too, for history is true and makes us like the good and hate the evil. Books of invention should be read because they help boys to be inventive. Books of nature study should not be left out because through them we get glimpses of God. By all means add books of poetry. Some boys think poetry is stilly and fit only for girls. A boy cannot afford to miss the inspiration to be gained from reading good poetry. Let the boy read "Hiawatha Shot the Red Deer," and if he is the boy I think he is, he will before many days have read all of Longfellow's fascinating stories of Hiawatha. After a few years of exercising the will power on the selection of good books, a boy will find that the other kind of books do not interest him, and he will have laid the foundation of a good character.

May in American History

MAY 1, 1898: BATTLE OF MANILA BAY. Immediately on war with Spain being declared, the United States Asiatic squadron under Commodore Dewey sailed from Hong Kong for the Philippine Islands to engage the Spanish fleet under Admiral Montejo. In the engagement the Americans sunk three of the largest vessels of the enemy, including the admiral's flagship, while others were destroyed by the Spanish loss of life was 400, while the Americans lost none.

THE MERRIMAC. Attacked by Ceneral Wool, and with Generals Burnside and McClellan menacing his rear and flack. General Huger, the commander of the Confederate forces in Norfolk, abandoned the city. Before leaving, a slow match was attached to the Merrimac, which blew the monster ram into fragments along with other shipping in the harbor.

MAY 10, 1863: "STONEWALL" JACK-SON DIED. This able leader of the Confederate forces, Thomas Jonathan Jack-

ADMIRAL DEWEY.

MAY 2, 1863: BATTLE OF CHANCELLORSVILLE. In this battle the Confederates sustained a great misfortune in the
loss of Stonewall Jackson, who, while making a reconnoissance during the evening,
was mortally wounded by his own men in
mistake for the Federals. During the series
of battles which took place between April
30 and May 6, both sides lost heavily, the
Confederate casualties in killed, wounded
and captured being 12,277, while the Federals
were crippled to the extent of 17,197 men, as
well as 13 heavy guns. 20,000 rifles, 17 colors
and a large amount of ammunition. Generals Berry and Whipple, of the Federal
army, were among the killed.

MAY 10 1775: CAPTURE OF FORT TI-

army, were among the killed.

MAY 10, 1775: CAPTURE OF FORT TICONDEROGA. This fortress, together with Grown Point, on Lake Champlain, were of great importance to the Colonists. An expedition consisting of less than one hundred volunteers under Ethan Allen, leader of the "Green Mountain Boys," arrived secretly at Ticonderoga early in the morning. So quietly did they approach that the garrisen was taken completely by surprise. Allen called upon the commander, Capturn Delaplace, to surrender, who asked by what authority it was demanded. "By the authority of the Great Jehovah and the Continental Congress!" replied Allen forcely. The terrified commander at once is reendered and the Colonists came into possession of large quantities of munitions of war, which were greatly needed. Two days later Crown Point was also captured a d an open door to Canada was thus obtained.

MAY 10, 1862: CAPTI'RE OF NORFOLK, VIRGINIA, AND DESTRUCTION OF

BTONEWALL JACKSON.

with other shipping in the harbor.

MAY 10. 1863: "STONEWALL" JACK-SON DIED. This able leader of the Confederate forces, Thomas Jonathan Jackson, was born at Clarksburg, Va., Jal. uary 21. 1824; graduated from West Point in 1846, and served with distinction in the Mexican war. Owing to i.l-health he resigned from the army in 1832 and was appointed professor in the Military Institute at Lexington, Va. The opening of the Civil War found him colonel in command of the Confederates at Harper's Ferry. He received the name "Stonewall" from an incident at the battle of Bull Run. The Federals had charged with such fury that the Confederates were forced to fly. General Bee exclaimed to Jackson, "They are beating us back!" "Well, sir," replied Jackson. "we will give them the bayonet!" General Bee, encouraged by these words, commanded the fugitives to halt and reform, crying out. "There stands Jackson like a stone wall." form, crying out." like a stone wall."

MAY 10, 1876: CENTENNIAL EXHIBITION OPENED AT PHILADELPHIA. To fittingly celebrate the one hundredth year of the life of the United States Republic, Congress passed a bill authorizing a centennial exhibition to be held. Philadelphia was appropriately chosen as the place to hold the great fair, because of the Declaration of Independence having been adopted there on July 4, 1776. The ground occupied was seventy five acres, and the cost of the principal buildings erected thereon was \$4.444,000. The exhibition was opened with grand and most imposing

QUEEN VICTORIA.

ceremonies by President Grant. Among the distinguished company present at the opening were Dom Pedro II.. Emperor of Brazil. with his Empress, together with a great number of representatives of foreign nations. Thirty three nations were represented by the products of their industry. The total admissions during the one hundred and fifty nine days it was open to the public were 9.910.966, and the total amount of cash receipts was \$3.813,725.50. There was no admission on Sundays. Appropriate and imposing ceremonies marked its closand imposing ceremonies marked its closing on November 10, 1876.

Ing on November 10, 1876.

MAY 11, 1846: CONGRESS DECLARED WAR WITH MEXICO. Mexico for many years had been a very unfriendly and mischlevous neighbor. The plundering of American vessels and the contiscation of the property of American residents in Mexican territory had been causes of much annoyance to the United States government. The climax of the trouble was reached, however, when the Mexican president declared Texas, which had a short time previously been annexed to the United States, to be a part of Mexico, and his determination to enforce his claim by arms. The war lasted until 1848 with disastrous loss to Mexico, when a treaty of peace was concluded bewhen a treaty of peace was concluded be-tween the two countries.

WILLIAM LLOYD GARRISON.

MAY 11, 1858: MINNESOTA ADMITTED TO THE UNION. The town of St. Paul was founded in 1842, and the Territory of Minnesota was created in 1849.

MAY 13, 1607: FIRST ENGLISH SET-TLEMENT IN AMERICA. Over one nun-dred Englishmen landed at a spot on the right bank of the "River of Powhatan" in Virginia about fifty miles from its mouth, and there established the first permanent English settlement in America. The vil-lage and river were named in honor of James I., of England. After various re-verses and hardships, the town was finally burnt down in 1676 and has never been re-built.

MAY 13, 1861: QUEEN VICTORIA DE-CLARED THAT GREAT BRITAIN SHOULD BE NEUTRAL IN THE CIVIL WAR.

MAY 13, 1882: MEMBERS OF THE GREELY ARCTIC EXPEDITION REACHED 83 DEGREES 23 MINUTES AND 8 SECONDS NORTH. The names of the intrepid explorers were Lieutenant Lockwood and Sergeant Brainard.

mirepia explorers were Lleutenant Lockwood and Sergeant Brainard.

MAY 16, 1801: WILLIAM HENRY SEWARD BORN. Florida, Orange County, N. Y., was the scene of his birth. A graduate of Union College, he began the practice of the law at Auburn in 1823 and speedily acquired prominence. He was State Senator from 1830 to 1834, and was twice Governor of New York. Elected to the National Senate in 1849, he retained his seat until appointed Secretary of State by President Lincoin in 1861. In that position he exhibited great wisdom and sagacity in dealing with foreign governments during the troublous time of the Civil War. On the same evening when President Lincoin was mortally wounded, an assassin forced his way into the house of Mr. Seward, who was confined to his bed by an accident, and stabled him three times in the neck and face. From this attack he never fully recevered, although he was lible to resume his official duties. He retired from publicative in 1865 and went upon a tour round the world, being everywhere received with marks of respect. He died at Auburn, N. Y., in 1872.

MAY 20, 1775; ACT OF PERPETUAL, UNION BETWEEN THE STATES.

MAY 20. 1775: ACT OF PERPETUAL UNION BETWEEN THE STATES. The first official announcement of the union was made to King George III., in July of this year.

MAY 24, 1879; WILLIAM LLOYD GAR-RISON DIED. Born at Newburyport, Massachusetts, December 12, 1894. His first Massachusetts, December 12. 1894. His first employment was as apprentice to a shosmaker, but afterwards became a printer. In 187 he edited a paper called the National Philanthropist, which showed sympathy for the oppressed everywhere. Subsequently he denounced in a Baitimore paper, of which he was assistant editor, the taking of slaves from Baitimore to New Orleans. He tallied it "domestic piracy," for which utterance he was fined and imprisoned. He began to publish the well-known Liberator in 1821. The best energies of his life were devoted to the cause of freedom for the negro, and he saw his labors rewarded in the Emancipation Proclamation. He was the founder and for many years the president of the American Antislavery Bociety. In 1860 he world's Antislavery Convention, and cham-Went to London as a delegate to the and instruction with his retain posters. World's Antislavery Convention, and cham-

ploned the cause of the American women delegates who were not allowed to take part in the convention. In recognition of his efforts in the cause of humanity, he was in 1866 presented with the sum of \$30,000 as a national testimonial.

MAY 27, 1813: FORT ERIE AND FORT GEORGE ABANDONED BY THE BRIT-18H. General Vincent, in command of the British garrisons, having suffered defeat at the hands of the Americans under Colonel Winfield Scott and Commodore Perry, abandoned Fort George. This alarmed the garrisons of Forts Erie and Chippewa, who also retreated, thus leaving the whole Niagara frontier of Canada in the possession of America.

MAY 29. 1848: WISCONSIN ADMITTED TO STATEHOOD.

MAY 31, 175; MECKLENBURG DEC-LARATION OF INDEPENDENCE SIGN-ED. The preamble declared that "all laws and commissions confirmed by or derived from the authority of the King and Parliament, are annulled and vacated, and the former civil constitution of these colonies for the present wholly suspended."

MAY 31. 1889; GREAT FLOOD AT JOHNSTOWN, PA. The bursting of the large reservoir, which supplied the city with water, caused the loss of 2,142 lives and property valued at \$9,674,106.

and property valued at \$5.64.105.

MAY, 1802: DEATH OF MARTHA
WASHINGTON. Born in New Kent County,
Va. When seventeen years of age she
inarried Daniel Parke Custis. He died
leaving two children and a considerable
fortune to his widow. Her marriage with
Colonel Washington took place in 1756 and
they took up their residence at Mount
Vernon. She was a very beautiful woman,
and though quick in temper, was of a
sweet and kindly nature, with perfect manners.

Boys and "Blood and Thunder" Reading.

WRITTEN BY CAPTAIN JACK CRAWFORD, THE POET SCOUT.

The first desire of the average boy after reading a story of western adventure is to go "out west and kill Indians." To a western man this desire is so absurd and ridiculous as to be really laughable. Poor little innocent dupes! Of the many boys who have abandoned their homes to exterminate Indians, not one in a thousand ever reached the Missouri River, and those who did get beyond that stream invariably went to work in kitchens of hotels washing dishes, or served as lackeys in some subwho did get beyond that stream invariably went to work in kitchens of hotels washing dishes, or served as lackeys in some subordinate position until their parents could send for them. The poor blinded boys do not realize that to be efficient in the field as a scout, a man must have lived in the west for many years; must be familiar with every foot of the country, and acquainted with the indians and their haunts and customs. Neither do they cast a thought upon the hardships and privations of the life of a scout; exposed to piercing cold; driving, blinding snow storms; drenching rains; starvation for days at a time; intensest heat and tongues parched for water in summer; always in danger of death and mutilation at the hands of an invisible and cruel foe—these and a thousand other hardships always fall to the lot of a scout on the frontier. The men who follow such a life do not do it so much from a love of adventure as from a love of the big silver dollars which they receive in payment for their services.

Many of the young men in the penitentiaries of the western states and territories assert unqualifiedly that they were brought to their present shame and disgrace through reading dime novels. They longed to be heroes or highwaymen or noted robbers, and their first attempt at crime invariably led to their imprisonment tor a long term.

Boys, take the earnest advice of a fron-

tor a long term.

for a long term.

Boys, take the earnest advice of a frontiersman, and stay at home. To attempt to gain heroism by following the course pointed out by the publishers of vile novels will lead you to disgrace and death, just as surely as the night follows the declining day. Learn some good trade or profession and stick to it, and you will grow up beloved and honored by all who know you loved and honored by all who know you and your names may some day be written high up on the glittering scroll of fame Future presidents of these great United State are now but boys, and you may be one of them, young reader, if you will apply yourself to study, acquire the principles of truth and manhood, and endeavor to fit yourself for the position. Try it, little friend, and avoid those miserable dime novels as you would a venomous, hideous rattlesnake. They are more dangerous.

'Say, mamma, how much am I worth?" "You are worth a million of dollars to me.

my son."
"Say, mamma, couldn't you advance me twenty five cents?"-Time.

Books Boys Enjoy Most.

Probably no class of books is more valuable in developing character than that classed as biographical. And the reason is that they describe life. The books boys enjoy most are those of travel, adventure, and war, by land or sea. Story books interest younger children, but as boys grow older they crave something stronger than mere story books. And from the boy's point

I wish I could sit down and take every dimenovel-reading littie boy in America by the hand and point out to him the destination he will reach lif he persists in reading the vile trash which depicts such indian scenes as never occurred, and points out "blood-and-thunder" heroes who never lived, and of such a type as were never heard of in the west. If I had the power I would catch every dimenovel publisher in America and confine him in prison for life, where he could not pursue his criminal work—for it is criminal—and leads so many bright boys to ruin and disgrace. My name has never yet figured in one of these trashy concerns with my con-

and in fact because he cannot help it.

Blography is the very best reading matter for boys and they should be encouraged to read it, for a man must attain some distinction in the world before an account of his life appears. Then it so frequently happens that the man has had to struggle hard and overcome obstacles and disadvantages that in this way it is helpful. When a boy discovers, for instance, that Christopher Wren, the architect of St. Pauls. was a foundling, or that Garfield and Lincoln rose from poverty and obscurity by hard and painstaking work, that Benjamin Franklin entered Philadelphia with a loaf of bread under each arm, he is ready to attempt hard things himself. If he is poetical he is interested to know that Keats was an apothecary's apprentice; or if artistic, that Murillo was once a slave and copied his master's work secretly. The fact that a graduate of his own school has risen in the world is an interesting bit of his graphy and leads him to try to do like. his criminal work—for it is criminal—and leads so many bright boys to ruin and disgrace. My name has never yet figured in one of these trashy concerns with my consent, although I have been offered quite large sums by publishers to allow my name to be used as the author of a western story which they would have had written by another, just as they do with other western characters whom I could name. It is a great trick on the part of publishers to endeavor to secure the names of noted scouts, hunters, and actors as authors of the most ridiculous trash that was ever printed, and I regret to say that some western men are so foolish as to bite at their glittering bait. But a few weeks since in a New York publication I was pained and mortified to see an old picture of myself, published with others, with a flash story, and labeled, if I remember rightly, "Broncho Billy."

The first desire of the average boy after reading a story of western adventure is to go "out west and kill Indians." To a western man this desire is so absurd and ridiculous as to be really laughable. Poor little innocent dupes! Of the many boys who have abandoned their homes to exterminate Indians, not one in a thousand

Select Good Books.

"Boys have an opportunity of exercising their will power in the selection of their books and thereby show what kind of characters they possess," says Frances Campbell Jewett. "We all know boys who will read under cover of their desks sensational, perhaps vicious books; and we know other perhaps vicious books; and we know other boys who would scorn such books as they would scorn a lie. A boy should choose for his library good sound books, not necessarily dry, prosy ones, for that may make a dull boy of him. He should choose books of adventure—adventure true to life, for beys like to read of stirring scenes. Such reading stimulates courage and manifness. Books of history ought to be chosen, too, for history is true and makes us like the good and hate the evil. Books of invention should be read because they help boys to be inventive. Books of nature study should not be left out because through them we get glimpses of God. By all means add books of poetry. Some boys think poetry is silly and fit only for girls. A boy cannot afford to miss the inspiration to be gained from reading good poetry. Let the boy read "Hiawatha Shot the Red Deer," and if he is the boy I think he is, he will before many days have read all of Longfellow's fascinating stories of Hiawatha. After a few years of exercising the will power on the selection of good books, a boy will find that the other kind of books do not interest him, and he will have laid the foundation of a good character. him, and he will have laid the foundation of a good character.

May in American History

MAY I, 1898: BATTLE OF MANILA BAY. Immediately on war with Spain being declared, the United States Asiatic squadron under Commodore Dewey sailed from Hong for the Philippine Islands to engage Confederate forces in Norfolk, abandoned the Spanish fleet under Admiral Montejo. In the engagement the Americans sunk three of the largest vessels of the enemy, including the admiral's flagship, while others were destroyed by the Spaniards to prevent their capture. The Spanish loss of life was 400, while the Americans lost none.

THE MERRIMAC. Attacked by Ceneral Wool, and with Generals Burnside and McClellan menacing his rear and flack. General Huger, the commander of the Confederate forces in Norfolk, abandoned the chips. Before leaving, a slow match the monster ram into fragments along with other shipping in the harbor.

MAY 10, 1863; "STONEWALL" JACK-SON DIED. This able leader of the Confederate forces in Norfolk, abandoned the shipping in the harbor. was 400, while the Americans lost none.

ADMIRAL DEWEY.

MAY 2. 1863: BATTLE OF CHANCELLORSVILLE. In this battle the Confederates sustained a great misfortune in the
loss of Stonewall Jackson, who, while making a reconnoissance during the evening,
was mortally wounded by his own men in
mistake for the Federals. During the series
of battles which took place between April
30 and May 6, both sides lost heavily, the
Confederate casualties in killed, wounded
and captured being 12.277, while the Federals
were crippled to the extent of 17.197 men, as
well as 13 heavy guns, 20,000 rifles, 17 colors
and a large amount of ammunition. Generals Berry and Whipple, of the Federal
army, were among the killed.

MAY 10, 1775: CAPTURE OF FORT TICONDEROGA. This fortress, together with
Crown Point, on Lake Champlain, were of
great importance to the Colonists. An expedition consisting of less than one hundred
volunteers under Ethan Allen, leader of the
Green Mountain Boys." arrived secretly
at Ticonderoga early in the morning. So
quietly did they approach that the garrison was taken completely by surprise.
Allen called upon the commander. Capturn
belaplace, to surrender, who asked by
what authority it was demanded. "By
te authority of the Great Lehovsh and
te Continental Congress!" replied Alien
I reely. The terrified commander at once
serrendered and the Colonists came into
passession of large quantities of munitions
of war, which were greatly needed. Two
days later Crown Point was also captured
at an open door to Canada was thus obtined.

MAY 10, 1862: CAPTURE OF NORFOLK.

MAY 10, 1862: CAPTURE OF NORFOLK, VIRGINIA, AND DESTRUCTION OF

STONEWALL JACKSON

with other shipping in the harbor.

MAY 10, 1863: "STONEWALL" JACK-SON DIED. This able leader of the Confederate forces, Thomas Jonathan Jackson, was born at Clarksburg, Va., Jackson, Was ground in 1846, and served with distinction in the Mexican war. Owing to i.l-health he resigned from the army in 1852 and was appointed professor in the Military Institute at Lexington, Va. The opening of the Civil War found him colonel in command of the Confederates at Harper's Ferry. He received the name "Stonewall" from an incident at the battle of Bull Run. The Federals had charged with such fury that the Confederates were forced to fly. General Bee exclaimed to Jackson, "They are beating us back" "Well, sir," replied Jackson. "we will give them the bayonet!" General Bee, encouraged by these words, commanded the fugitives to halt and reform, crying out. "There stands Jackson like a stone wall."

MAY 10, 1876: CENTENNIAL EXHIBI-

MAY 10, 1876: CENTENNIAL EXHIBITION OPENED AT PHILADELPHIA. To fittingly celebrate the one hundredth year of the life of the United States Republic. Congress passed a bill authorizing a centennial exhibition to be held. Philadelphia was appropriately chosen as the place to hold the great fair, because of the Declaration of Independence having been adopted there on July 4, 1776. The ground occupied was seventy five acres, and the cost of the principal buildings erected thereon was \$4.444,000. The exhibition was opened with grand and most imposing

QUEEN VICTORIA

ceremonies by President Grant. Among the distinguished company present at the opening were Dom Pedro II., Emperor of Brazil, with his Empress, together with a great number of representatives of foreign nations. Thirty three nations were represented by the products of their industry. The total admissions during the one hundred and fifty nine days it was open to the public were 9.910.966, and the total amount of cash receipts was \$3.813.725.50. There was no admission on Sundays. Appropriate and imposing ceremonies marked its closand imposing ceremonies marked its clos-ing on November 10, 1876.

WILLIAM LLOYD GARRISON.

MAY 11, 1858: MINNESOTA ADMITTED TO THE UNION. The town of St. Paul was founded in F42, and the Territory of Minnesota was created in 1849.

MAY 13, 1607: FIRST ENGLISH SET-TLEMENT IN AMERICA. Over one hun-dred Englishmen landed at a spot on the right bank of the "River of Powhatan" in Virginia about fifty miles from its mouth, and there established the first permanent English settlement in America. The vil-lage and river were named in honor of James I., of England. After various re-verses and hardships, the town was finally burnt down in 1676 and has never been re-built.

MAY 13, 1861: QUEEN VICTORIA DE-CLARED THAT GREAT BRITAIN SHOULD BE NEUTRAL IN THE CIVIL WAR.

MAY 13, 1882: MEMBERS OF THE GREELY ARCTIC EXPEDITION REACHED 83 DEGREES 23 MINUTES AND 8 SECONDS NORTH. The names of the intrepid explorers were Lieutenant Lockwood and Sergeant Brainard.

morepia explorers were Lieutenant Lockwood and Sergeant Brainard.

MAY 16, 1801: WILLIAM HENRY SEWARD BORN. Florida, Orange County, N. Y., was the scene of his birth. A graduate of Union College, he began the practice of the law at Auburn in 1823 and speedily acquired prominence. He was State Senator from 1830 to 1834, and was twice Governor of New York. Elected to the National Senate in 1849, he retained his scat until appointed Secretary of State by President Lincoln in 1861. In that position he exhibited great wisdom and sagacity in dealing with foreign governments during the troublous time of the Civil War. On the same evening when President Lincoln was mortally wounded, an assassin forced his way into the house of Mr. Seward, who was confined to his bed by an accident, and stabbed him three times in the neck and face. From this attack he never fully recovered, although he was able to resume his official duties. He retired from public life in 1869 and went upon a tour round the world, being everywhere received with marks of respect. He died at Auburn, N. Y., in 1872.

MAY 20, 1775: ACT OF PERPETUAL UNION BETWEEN THE STATES.

MAY 20, 1775: ACT OF PERPETUAL I'NION BETWEEN THE STATES. The first official announcement of the union was made to King George 111., in July of this war.

MAY 24, 1879: WILLIAM LLOYD GAR-RISON DIED. Born at Newburyport, Massachusetts, December 12, 1894. His first was no admission on Sundays. Appropriate and imposing ceremonies marked its clossing on November 10, 1876.

MAY 11, 1846: CONGRESS DECLARED WAR WITH MEXICO. Mexico for many years had been a very unfriendly and miscolievous neighbor. The plundering of American vessels and the confiscation of the property of American residents in Mexican territory had been causes of much annoyance to the United States government. The climax of the trouble was reached, however, when Ithe Mexican president declared Texas, which had a short time previously been annexed to the United States, to be a part of Mexico, and his determination to enforce his claim by arms. The war lasted until 1848 with disastrous loss to Mexico, when a treaty of peace was concluded between the two countries.

RISON DIED Born at Newburyport, and sheed its closs in a state of the states became a printer. In 1857, the edited a paper called the National Philanthropist, which showed symptomax the opposite of the opposite of the opposite of the opposite of the taking of slaves from Baltimore to New Orleans. ploned the cause of the American women delegates who were not allowed to take part in the convention. In recognition of his efforts in the cause of humanity, he was in 1866 presented with the sum of \$30,000 as a national testimonial.

MAY 7, 1813: FORT ERIE AND FORT GEORGE ABANDONED BY THE BRITISH. General Vincent, in command of the British garrisons, having suffered defeat at the hands of the Americans under Colonel Winfield Scott and Commodore Perry, abandoned Fort George. This alarmed the garrisons of Forts Erie and Chippewa, who also retreated, thus leaving the whole Niagara frontier of Canada in the possession of America.

MAY 29, 1848: WISCONSIN ADMITTED TO STATEHOOD.

MAY 31, 1775: MECKLENBURG DECLARATION OF INDEPENDENCE SIGNED. The preamble declared that "all laws and commissions confirmed by or derived from the authority of the King and Parliament, are annulled and vacated, and the former civil constitution of these colonies for the present wholly suspended."

MAY 31. 1889: GREAT FLOOD AT JOHNSTOWN, PA. The bursting of the large reservoir, which supplied the city with water, caused the loss of 2,142 lives and property valued at \$9,674,105.

and property valued at \$9,64,105.

MAY, 1802: DEATH OF MARTHA WASHINGTON. Born in New Kent County, Va. When seventeen years of age she married Daniel Parke Custis. He died leaving two children and a considerable fortune to his widow. Her marriage with Colonel Washington took place in 1759, and they took up their residence at Mount Vernon. She was a very beautiful woman, and though quick in temper, was of a sweet and kindly nature, with perfect manners.

300000000000000000000000004 WHAT BOYS ARE DOING **ිිවෙහිවෙහිවෙහිවෙහිව විද්යා**

"Teddy" Roosevelt, Jr.

"Teddy" Roosevelt, Jr., son of the Vice-President, is the exact opposite of the average boy. He is an original character, inheriting his father's positive disposition and emphatic ways. His tastes are mature. In winter Teddy slides down Sagamore Hill on his skis and his sled, and in summer fishes, bathes, rides his pet pony and takes walks through the woods. He is fond of gardening, and is a born naturalist. He owns some guinea pigs, and has a museum in which all the specimens are labeled. There are samples from far-off China as well as from near-by places. Among them is an owl, an ostrich egg, birds' eggs in all sorts of nests, and several choice birds. There are bats and lizards, which Teddy himself has stuck. His collection of beetles is large and beautiful. He has samples of butterfiles from China, each in a glass case by itself. There is a fragment of a Spanish flag taken from a Spanish ship, and a Spanish sword and several other Spanish trophles. He has a large collection of souvenir buttons, pins, pictures, etc. He is fond of swords and pistols, and often visits his father's gun room where Kit Carson's celebrated rifle and a large number of guns of every description are to be found. In this room are massive heads of buffalo and deer, and rugs made out of the skins of bears and tigers shot by the Vice-President. The boy is a good student and learns quickly. He takes lessons on the piano. Teddy is fifteen years old and has two brothers and three sisters, one brother, Kermit, being eleven, and the other. Archie, five. The girls are Alice, sixteen; Ethel, nine, and Quentin, three.

Has Saved Two Lives.

Donald Douglass, sixteen years old, who is living at Alblon, Neb., has the distinction of having saved the lives of two boys. Some time ago, while at Camp Douglass, five miles above Des Moines, on the Des Moines, on the Des Moines, on the Des Moines, he noticed a little fellow eight or nine years old sinking in deep water. Taking in the situation at once, the boy ran some forty rods, leaped into the river, reached the spot, dove, and, catching the little fellow, carried him to a boat near by. To Donald's presence of mind and his quickness of action was due the saving of the boy.

Some time later, while camping at the

and his quickness of action was due the saving of the boy.

Some time later, while camping at the same place, a little three year old boy jumped into the water from a boat moored some distance away. Donald heard the splash and turning saw the boy just as he disappeared beneath the surface. Swimming to the spot, he dove and brought out the boy and gave him to his excited mother,

A Very Young Composer.

Bruce Campbell, of Osawatomie, Kas., though only lifteen years of age, composes marches and two-steps that would be a credit to a man who makes a business of composing music. His first piece is called "Koonville Jubilee," a cake-walk. His second was "Banjo Mose." "Koonville Jubilee" has been purchased by a New York music company.

General Funston's Father Proud of His

When the news reached the Funston homestead near lola, Kas., that General Frederick Funston had captured Aguinaldo, the friends and neighbors of the general's father and mother called upon them with a band of music to congratulate them. General Funston's father made the following speech on the occasion:

"My Friends and Neighbors: I am sure that your presence here tonight is exceeding agreeable to myself and wife. It is the climax of our lives. And when I say that I do not forget my own life which has not been without its successes. But when the sun is setting low in the life of a parent, nothing brings such deep and unmixed joy to the heart as honors to one's child.

"I want to say for Fred that he has always been a good son. I do not mean that he has lived a life presoribed by his dear mother and myself, but that there has been no little meannesses in his life; his ideals have always been high. His as-

has been no little meannesses in his life; his ideals have always been high. His associates have been picked for their virtues and he has sought to accomplish something and he has sought to accomplish something in the world, something worth doing, not something merely that would bring notorlety. I know the boy's character thoroughly—and I say he was always a good boy. The success which has crowned his life might well teach a lesson to young men, to have an aim in life and make that aim high

aim high.

"And so this glorlous news comes to us and is doubly welcome. It is welcome to us because it has brought acknowledgment from you, his neighbors, and from the people of his state and country that you are proud of him. And furthermore, it is welcome because it comes on the happy birthday of his little mother, who to-day celebrates her fifty-eighth year."

LISLE C. RICHARDS, CUYAHOGA FALLS, OHIO. Who is an excellent reciter.

A Good Cricket Record.

FROM THE STRAND.

Master A. E. J. Collins, of Clifton, England, last year upset cricket records by scoring 628 runs not out, in a single innings. The score was recorded in a school match at Clifton. A Middlesex amateur

A. E. J. OOLLINS,

WHO MADE THE RECORD SCORE OF 628 NOT OUT. From a Photo by W. H. Midwinter & Co., Bristol.

up to that time possessed the unique record of 485 not out. Young Collins batted seven hours, his rate of scoring, therefore, averaging about ninety runs per hour.

Saved His Father's Life.

A Shick-shinny (Pa.) boy, aged eleven years, recently saved his father's life by his remarkable mind and his ability to put into practice a physiology lesson which had at h e learned

light a lamp, but did not notice that part of the head flew inside his dressing gown. The inflammable material was ignited in a moment. Loran discovered the flames and cried out: 'Papa, you are afire. Ile down quick!' Mr. Briggs was by this time enveloped in flames, but he obeyed his son. in fact, he was too weak to do anything for himself. Loran seized a rug and placing it over his father soon smothered the fire. Had it not been for his prompt action and presence of mind his father would have been horribly if not fatally burned.

"When asked afterward why he thought of this way of putting out the fire, Loran said he had learned it from the study of physiology at school, a chapter of his textbook being devoted to directions in cases of accident."

An English Boy Wins an Honorable Record.

FROM THE STRAND.

It is an honorable achievement for a boy whose school life has extended over a period of nearly cleven years, never to have missed a single attendance throughout the whole of that time, yet this is the unique record possessed by Master Abel Roberts, of Llangollen, England. He was admitted into the infants' department of

ABEL ROBERTS.

WHO HOLDS THE RECORD FOR SCHOOL ATTENDANCE, From a Photo by Lettsome & Sons, Llangollen.

the Board School in that town in 1888, the Board School in that town in 1988, when he was only three years of age. From the infants' school he duly passed into that of the seniors. Altogether, for ten years and nine months, he was present both morning and afternoon with unerring regularity and punctuality, not even being compelled to absent himself from his school dulles on one single occasion through ill. duties on one single occasion through ill-

Another boy in the same school boasts a similar record for six years. Can any of our American boys show as clean a record for school attendance?

The Youngest Hockey Players.

We present pictures of Tom and Jack Howard, aged six and one-half and four years, respectively, sons of Thomas A. Howard, hockey captain of the New York Athletic Club, New York City, who are perhaps the youngest hockey players in the country, if not in the world. Jack, the younger, skates well and handles his hockey stick in good style, and will as he grows older develop into a good hockey player.

he had learned at school.

LORAN DE WITT BRIGGS.

Loran DeWitt Briggs. He began attending the public schools at six years of age and has proven himself an apt pupil.

The newspaper of this boy's native town recently told an incident that shows of what material he is made.

"Loran Briggs, the young son of Forest W. Briggs, proved himself a hero Tuesday evening. His father is recovering from typhoid fever and was just able to walk about the room. He struck a match to

W/E respectfully announce the completion of the most W wonderful outdoor amusement for young people (5-18 years old) ever invented. Made of light wood, with thin metal wings. How to Make Money Raising Violets.

Many persons, aside from nurserymen and florists, have made money raising violets. It takes very little capital and not much experience, and the work is light and agreeable. If you have not a greenhouse, you can use a shallow frame of wood. This placed on the ground and covered over with a common the ground and covered over with a common glass sash will answer the purpose. Four boards will make a frame, and the sashes may be bought for one dollar and seventy five cents apiece. With these sashes you can grow violets all winter long. You can buy a pot or two of violets and multiply the plants by cutting off in the spring the off-shoots which put out from the center. Pot the offshoots separately and let them grow in a partly shaded place all summer, and in plants by cutting off in the spring the offshoots which put out from the center. Pot
the offshoots separately and let them grow
in a partly shaded place all summer, and in
September they are ready to be set out
under the sashes. The plants begin blooming in October. and the flowers are picked
every day until spring. Pluck them in the
afternoon late, if you are going to market
them the next morning. The demand for
violets always exceeds the supply. The
average plant will produce fifty or more
good violets during the winter, and they
will bring as much as two dollars and lifty
cents a hundred about Christmas, or during
the Easter holidays, and fine ones will
always fetch a cent aplece. Do them up in
bunches of fifty, wrapping them in paraffine
paper. Don't put water on them after they
are picked, as this takes away their fragrance. Professor Galloway, of the Department of Agriculture at Washington, says
that one hundred sashes of violets will yield
an annual profit of at least five hundred dollars. One person can easily manage that
many. When the blooming season is over
in May, take up the plants and set them out
in fresh plowed ground, which may then be
covered with sashes. The violets will begin
blooming again in the following October.
The plants should be watered and weeded,
and every day in winter the sashes must be
lifted a bit, though never taken off. Ventilation is necessary to prevent the plants
from being scorched. In cold weather mats
of gunny sacking lined with straw should
be laid over the sashes to prevent freezing,
while earth should be banked up around
the frames as an additional protection. In
the summer, screens of laths or brush suspended about the frames or posts, will defend the plants from too much sun. They
should be planted where the drainage is
good, and the soil should be a good loam,
with a mixture of one-fourth part of manure. Any land that will grow potatoes is
good for violets. When the runners begin
to appear on the plants they must be cut
off. One last thing to rem

The Boy's Use of Money.

The Boy's Use of Money.

A writer in the Mothers' Journal tells us some very plain truths about teaching children the use of money. "Many persons," she says, "seem to think children should not be trusted with money, but I think wise spending is the result of experience rather than theory. Men are benefited by a sense of responsibility and so are children. If a boy is allowed to buy his own tops, marbles and skates, instead of having them bought for him, he will enjoy them more and have a much better appreciation of their value. I know of parents who, from principle, refrain from hiring their children to do anything for them and teach them not to take money from others for their service, and the effect has been not so much loose notions of money as very strict ideas about manners. Many parents adopt the rule of paying their children so much every week, possibly for brushing their teeth, thus giving an incentive to perform the necessary duty; but whether for duties and favors or just for relationship's sake, I think it wise, as well as kind, that each child should have a certain sum each week that he may call his very own. Most people seem to believe that children, even after they have reached the age of discrimination, should not be trusted are almost invariably ruined. More harm is done, in my judgment, by an exactly opposite course. If children are not allowed to have money how can they possibly learn its proper use?"

Typewrites in Several Languages.

"One young man at our university," said a student, "is earning his living in a rather novel way. It seems that inventions have been perfected by which typewriting can be done in any language, and this boy, having a knowledge of Greek and Hebrew, supports himself by typewriting manuscripts for professors. He sent word to them that he was prepared to typewrite in Greek and Hebrew as well as the German

them that he was prepared to typewrite in Greek and Hebrew as well as the German text, and the orders began to come in fast enough to fill his depleted pocketbook. The convenience of the thing, as well as the young man's originality, appealed to the professors, and when he last confided his financial status to me he had a comfortable surplus of several dollars a week.

"He is going to add Sanscrit to his list as he makes his way along, and he says he would attach Chinese if Mr. Wu would give him a job to report his honor's speeches for the Pekin press. Typewriting can now be done in any language desired. It opens a new field of usefulness for impecunious students and saves busy professors with erratic handwritings a lot of trouble—to say nothing of the compositor's disposition and relieving the drain on his vocabulary. The attachments for writing different languages are inexpensive, he tells me, and one machine can be used with them all."—New York Tribune.

A Little Talk About Savings.

A distinguished economist felt that it was as necessary to teach a child to save as to train him to earn. He formulated a system of savings for the lower schools of France so wise and efficient that in ten years there were in France twenty one thousand school savings banks with four hundred and forty two thousand and twenty depositors, whose weekly average deposits of fifteen centimes had amounted to 10,248,226 francs, or over 2,000,000 dollars. The establishment of the banks was left to the voluntary efforts of the teachers. The children deposited pocket money only, and it was made a part of every Monday morting exercise.

and it was made a part of every Monday morting exercise.

The French cultivate the saving habit, Mme. Carnot gave a dinner to four hundred of the poorest children of Paris, and at its close gave to each one a bank book containing a credit of ten francs. When floods spread desolation and want in the south of France, the children of the schools of Bordeaux freely gave from their savings four hundred dollars for the relief of the four hundred dollars for the relief of the

There are some school banks in our own

There are some school banks in our own country; and when the penny depositors of the school bank of Long Island city heard of the great Johnstown flood, they sent four hundred and fifty two dollars out of their savings as their contribution. School savings banks ruin the trade of the neighboring candy shops.

Every boy, as soon as he is old enough to spend money, should be given a legitimate means of earning it, or a regular allowance, which at first may be made to cover his pleasures and gradually increased to include his necessities and charities. A boy ought to learn how to give as well as how to save, and so should give his own money to the church or Sunday school. Let the boy take care of his own money.

school. Let the boy take care of his own money.

Ida M. Bodman, in the Mothers' Journal, says, in writing on this subject: A child seldom has sufficient will to enable him to work for a distant object steadily. He lives in the present, but every time he denies himself some trilling, pleasant gratification in order to save a few dollars to buy something of real value, he has received a valuable lesson. Our primary object is not to persuade him to accumulate money, but to prevent him from spending it unwisely. In some cases in order to stimulate the boy to put aside his pennies for a specific object, it is helpful to promise to add a certain amount to the savings.

A Young Gardener.

Yutan, Neb., March 11, 1941.

Dear sir: I saw in the March AMERICAN BOY that you would like to have boys write you about their experience in gardening, so I thought I would write you about my experience. I am only eleven years old. Last summer I cleared five dollars out of a small plece of land. I did the work all alone, and I am glad to say one of the dollars went for a year's subscription to THE AMERICAN BOY, the best paper ever printed for boys. Yours truly, Guy Parmenter.

Not Afraid to Soil His Clothes.

A young man who is now well up the list of high-salaried officers of a big manufacturing company said several days ago, that he owed his first opportunity to show his ability to the fact that he was not afraid to soil his clothes. He was one of half a dozen young men just graduated from scientific schools who entered the shops of this company as students.

They were expected to show that they were practical workmen, but most of them preferred theory to practice. The manager of the company was a self-taught man, and he didn't take much stock in scientific schools.

schools.

The young man who has succeeded took

The young man who has succeeded took The young man who has succeeded took his measure accurately, and. putting on old clothes, went to work in the shops. Whether by accident or design, he was roticed by the manager one day stretched out on his back under a heavy casting, with a hammer and cold chisel in his hand working away as if he had no higher ambition. A week later the manager summoned him to the office.

"Didn't I see you under the casting several days ago?" he asked.

"Yes."

"Yes."
"Well, I find that we have a vacancy on our staff now, and you may fill it if you choose.

you choose.

The young man did choose, and his progress has been rapid. He does not have to soil his clothes now to prove his ability.

The steady saving of one dollar per week will amount, at a fair rate of interest, in thirty years to three thousand dollars, which is a larger amount than ninety out of every hundred persons possess when they die

What Shall He Do?

What Shall He Do?

Here is a boy typical of a very large class of boys in all our communities. He is seventeen years old and seeking employment. It is family are fairly well to do. There is a certain loudness about his dress, and more than a suspicion of tobacco about his breath. He attended the high school until he reached the second year, when he "graduated," as he had reached the point where he didn't need further study. He tried, for brief periods, work in a variety of places. He is now in a large city, with neither relatives, acquaintances nor money, seeking employment. He says he is willing to work. Every shop door, manufactory and mercantile house is closed to him, for he has no special training and no one to vouch for his honesty. He has never been taught to use horses, tools, or machinery. He is only one of thousands of boys between the ages of fourteen and twenty who are not trained to do well any kind of work: every community produces scores of them.

We say that the place for the boy is in school. But is a boy educated until he is fitted to earn an independent livelihood? How long shall be stay in school to be educated? Is it not the duty of the State to afford some sort of practical training to boys who do not choose to become brain workers, and who are naturally inclined to employments that require a specialized education? Boys of this class who drop out of school usually find nothing to do. They either find employment among strangers at nominals. It would seem that about the only schools conducted on rational lines are those founded for the criminal classes, where a boy is not only educated in mind but also in eye and hand.

inal classes, where a boy is not only e-cated in mind but also in eye and hand.

In ABOUT 3000 towns bright boys are earning money every week by selling

The Saturday Evening Post of Philadelphia

There are about 50,000 other towns where the same thing can be successfully done, but where no boy agents have yet been appointed. In every one of these there is a splendid opportunity for some bright boy to earn money outside of school hours and be independent.

To any boy who wants to make a start in business we will send the first week's supply of Ten Copies ENTIRELY WITHOUT CHARGE,

to be sold at Five Cents each. With the money thus earned the next week's supply can be purchased at the wholesale price.

IN ADDITION to the profit on the copies sold we will give \$200 in Cash Prizes to the One Hundred Boys who do the best work during the next month.

Any boy who wants to try the work should send a line addressed to the Circulation Bureau, upon receipt of which the first week's supply will be sent, together with full instructions, and a dainty little booklet, in which about twenty of our most successful boys tell just how they work and what they have accomplished.

THE CURTIS PUBLISHING COMPANY, PHILADELPHIA, PA.

real and the first of the head and made have been all the control of the control THE AGASSIZ ASSOCIATION

THE AMERICAN BOY is the only official organ of the Agassiz Association and should be in the hands of every member.

All correspondence for this department should be sent to Mr. Harlan H. Ballard, Pittsfield, Mass. Long articles cannot be used.

THE AGASSIZ ASSOCIATION welcomes members of all ages, and any one who is interested in any form of natural science is invited.

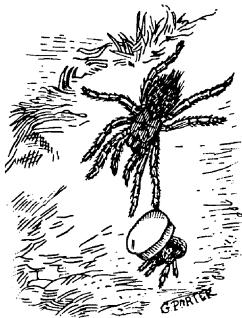

Established in 1865. Incorporated in 1872.

Short nates of personal observations are particularly desired for use in the A. A. degartment. Send Illustrations when convenient. Questions are invited.

Address H. H. BALLARD, Pittsfield, Mass.

Trapdoor Spider.

I have just received your excellent paper. I find almost everything that would interest the average American boy in it. I was especially interested in the bird article in the Agassiz Club column. Bird study is a real fad with American boys nowadays, and I think it should be encouraged; don't you? Apart from the interest in nature the study inspires, it has a tendency to make boys more thoughtful of, and less likely to wantonly kill, the little feathered songsters. I also take great interest in the illustrations, as I am fitting myself for an illustration and am ambitious to rise to tho top round of the ladder in the profession. Some time I mean to join the Ag-

TRAPDOOR SPIDER.

assiz Club, when I can find time to write an article and illustrate it from personal observation. But just now I am more anxious to gather information. I see you allow boys to ask questions. I would like to know all about the trapdoor spider of Jamaica; will some boy living in that section who has seen one, tell me about it its habits, etc.? I have an illustration which I will send. I have read they burrow in the earth, and fashion a trapdoor that exactly fits the entrance so that when closed you cannot tell it from the earth, and if you tried to raise it from the outside they would hitch their forefeet in the silken webbing of the door and their hindieet in the lining of the burrow and resist with all their might. Are they large, or is their strength wonderful in proportion to their size?—One of your American boys. Geo. D. Porter, Strong, main.

Salt Lake City, I'tah. Dec. 12, 1900.
To the "Agassiz Association":
One day last summer I was walking along the side of a hill, when a turtledove flew in front of me. It seemed hurt and fluttered along the ground, and I went after it in hopes of catching it, but after we had got a long way from where we started it flew up in the air. Afterwards I found out that it did this to lead us away from its nest. In the future I am going to write the names of the birds that do this. I sent a drawing of a male and female turtledove.

WILLIE JONES, age ten years.

What is It? A Badge for Each Correct Answer.

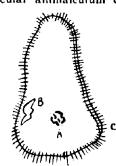

To each of our readers who shall send us the correct name of the creature de-scribed below, we will send one of the beautiful badges of the Agassiz associa-

beautiful badges of the Agassiz association.

Having learned of the A. A. through the columns of THE AMERICAN BOY, I wish to become one of your members, and will tell you of a very curious thing we found in our corn-crib. Its head and front legs, six in number, looked like those of a spider, but protruded from a small conical shell resembling an inverted sea-shell, the point of the cone being downward. The base of the cone—which is the upper part in this case—has ten sharp points or projections—six in clusters of three each, behind, and four in pairs in front. It is about one-half an inch long, and the shell is about one-fourth of an inch deep. The base is not round but oblong. Who can tell what it is, or to what family of insects it belongs?—Mrs. Belle White, Wyman, Page county, Iowa. Page county, lowa.

A Paramœcium's Dinner.

I had the decidedly good fortune the other day of watching a paramecium feed. It must take a good deal of patience on the part of the diner, as having no sense of taste whatever, it cannot discriminate be-tween digestible and indigestible matter. This particular animalculum took in sev-

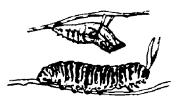

PARAMŒCIUM with food (a) in body and with contractile vesicle (b) and cilise(b) extended.

Butterfly.

I have taken great interest this summer in watching the transformation of the caterpillar into the butterily. I spent my vacation in the Catskills, and almost as soon as I got there I began looking around for caterpillars. I succeeded in finding some milkweed caterpillars, the kind ornamented with black, white and yellow stripes.

These I placed in a small box covered with netting, feeding them with fresh milkweed leaves every day. In a few days the caterpillar would begin to cover a small part of the netting with a sort of slik, which it spun, and then it began to fasten itself up in a somewhat curved position,

DEVELOPMENT OF BUTTERFLY.

with its head downward. Although I watched it carefully, I was never able to see the exact change which took place. The only apparent movement was a slow motion of the head from side to side, but in a few hours there would be a beautiful chrysalis in place of the caterpillar. The chrysalis was of a pale green color, ornachrysalis was of a pale green color, orna-mented with bright gilt spots. After re-maining in this about two weeks, there came forth a beautiful butterfly with orange-colored wings, bordered and veined with black, ornamented with white spots, called the "Anosia Plexippus," or Milkweed Rutterfly Butterfly

Next time you go to the country, boys, watch them; and be sure to take a magnifying glass with you; you will need it.—
(Miss) Margaret Brandt, 314 Rivington street, New York city.

THE LONG-HAIRED KINGS Latest Comic Song and Household Comic Song

Annual Report of Chapter 824

Fall River, Mass., Nov. 13, 1900. Mr. Harlan H. Ballard, President, Agassiz Association, Pittsfield, Mass. Dear Sir:—The Chapter organized March

14th with the following officers: Norman S.

Easton, president; J. Bion Richards, secretary. The meetings held March 23rd and March 30th, were for the consideration of the by-laws and the election of new members. It was decided to hold meetings the last Friday of each month. The subject of the meeting held March 30th was the "Aquarium;" April meeting, "Birds;" May meeting, "Flowers;" June meeting, "Insects;" July and August meetings were informal on account of it being vacation season. August and September meetings were devoted principally to "Botany." At the October meeting, the society was addressed by Dr. G. L. Parker, Assistant Professor in University Museum, Cambridge, his subject being "Some objects in forming a natural history society." We have now 109 members. Very respectfully,

BENJAMIN COOK, JR., Secretary.

Has any Chapter a larger membership than this of 824, Fall River? It has cer-tainly made a remarkable record for little more than half a year's work. We offer our hearty congratulations.

A New Chapter.

We cordially welcome to the Agassiz eral masses which were no sooner forced into the soft substance of the body than of Ridgewood, N. J. Among the officers they had to be rejected as unit. Still they seem to thrive happily and my "Jar aquarium" is rapidly being censely populated with this curious but highly interesting member of the animal kingdom.—H. Beckwith Regd. Sea Bright. New Jersey.

Association, the Henry Hales Chapter, of Ridgewood, N. J. Among the officers are: President, Miss Miller; secretary, Lucius Smith, and Corresponding Secretary, Mrs. Fitz Hugh. The ages of the children are from six to sixteen. The active membership is limited to thirty. Association, the Henry Hales Chapter, active membership is limited to thirty. The Chapter desires to study the local "Anosia Plexippus," or Milkweed flora; also birds and insects, and the geological formation of Ridgewood. This Chapter is the outcome of a plan to have a society composed of adults and children in about equal numbers. The elder will help and encourage the younger, and also learn much from their bright, sharp eyes, for children do see so much more than an ordinary grown person. The Chapter would like cor-respondents, who may address the secretary, Mrs. A. Fitz Hugh, Box 182, Ridgewood, N. J.

Annual Report of Chapter 125.

In accordance with the requirements of the Agassiz Association, I send the following report of the N. S. French Chapter, number one hundred and twenty five, of the Roxbury High School, for the past year.

The Society has held twenty six meetings, of which twelve have been outings to various places of interest in the vicinity, and fourteen have been regular meetings held in the school building. At the latter there have been some debates, and also papers read by the candidates for membership, in accordance with our recent regulations.

The Society has at present fifteen active members and seven honorary members; and is in a flourishing condition.

Very respectfully yours, SARA C. CROSBY, Secretary.

Yale's "Self Help Bureau."

An institution known as the "Self Help Bureau" is in existence at New Haven, Conn. It was started to assist self-supporting boys in Yale College to get employment out of study hours and during vacations. The manager of the Bureau puts himself in correspondence with summer hotel proprietors in the mountains and on the seacoasts, calling their attention to the fact that he has about five hundred Yale students who are looking for situations as hotel clerks, waiters, messengers, etc. He also corresponds with the street car companies of the various cities, offering young men as conductors and motormen. Many places are found through the Bureau for undergraduates who wish to teach during the summer. The introduction into our new territories of the American educational system makes an outlet for teachers, and this Bureau is taking advantage of the opportunity. The superintendent of education in the Philippines writes that applicants for positions as teachers in the Islands must be either college or normal school graduates, must be healthy and be able to stand a tropical climate, must be willing to go to whatever part of the Islands they are assigned, must agree to remain three years, and must plan to make teaching their life work. He says that transportation to the Philippines will be paid all teachers who are accepted under these conditions.

The employments by which Yale under graduates pay their expenses through Yale are numerous and varied. It is said that nearly a dozen members of the present senior class have paid their way through Yale by acting as professional pallbearers at fashionable funerals.

Chased by a President.

Chased by a President.

Mrs. McKinley is exceedingly fond of children. At Canton, before and after the election of 1896, the young boys and girls of the town, knowing the reception which they would find at the famous little house on Market street, had a way of running in quite informally to see the wife of the future President. One day during a rainstorm a ragged little fellow walked up the yard to the porch and tried to get in the door. In some way he had heard that Mrs. McKinley liked little boys, and he, too, wanted the honor of her caresses. And perhaps he should see and speak with the President himself—who could tell? So he marched bravely up, all by himself. But he didn't know how to ring the bell, and his little knockings brought no response. No one happened to hear him; he waited and waited, his heart sinking lower and lower under his torn, dingy jacket. After a time hope and courage failed him, as he started mournfully away, the tears gathering in his big brown eyes. Someone in the household saw him as he walked sadly down to the gate, and called the attention of Mr. McKinley to him.

Quick as a flash the President-elect ran out of the house hatless in the rain and brought the lad back with him where Mrs. McKinley's kindness and a big plate of ice cream rewarded him for all his trials.

It is not every poor boy that has had a President of the l'nited States chasing him bare-headed in a rainstorm.

No Place at Home for the Boy.

I met him on a street corner—a bright black-eyed lad of perhaps fourteen summers. I had seen him there evening after evening, and wondered whether there was no one who knew the temptations he encountered. I made friends with him, and won his confidence. Then I questioned him kindly in regard to his spending so much time in the streets.

"I know," he raid, looking up at me in such a frank, winning way, that I could not help thinking what a noble man he might make, "the street is not the place for a boy,, but you see there's no place for me at home."

I was surprised and pained at the answer. I met him on a street corner-a bright

might make, "the street is not the place for a boy., but you see there's no place for me at home."

I was surprised and pained at the answer. "How is that?" I asked.

"Well, I have two grown-up sisters, and they entertain company in the parlor every evening. They give me to understand that I am 'a third party,' and not wanted. Then papa is always tired, and he dozen in the sitting room, and does not like to be disturbed. It's pretty lonesome, you see; so I come down here. It was not always so," he went on. "Before grandma died I always went up to her room, and had a joily time. Grandma liked boys."

There was a quaver in the voice that told of a sorrow time had not yet healed.

"But your mother?" I suggested.

"Oh, mamma!—she is only a reformer, and has no time to spend with me. She is always visiting the prisons and workhouses, trying to reform men, or writing articles on how to save the boys."

"And her own boy in danger?"

"Yes. I am not half as good as I was before grandma died. I am getting rough I am afraid. There does not seem to be any one to take an interest in me, so it does not much matter."

It was hard, bitter truth; and yet I knew that this was not the only boy who needed a wise, gentle hand to guide him through the dangerous period.

Mothers! make home the brightest spot on earth for your children. Take an interest in their sports; make yourself young for their sakes.

I think the saddest, most hopeless thing I over heart from a boy's lins was that

I think the saddest, most hopeless thing I ever heard from a boy's lips was that sentence: "There is no place for me at home."—The Household.

A chicken is a stupid bird, and nothing about it seems more idiotic than the way it advertises to the whole world when it has laid an egg.

The Truncated Man Who Makes Toys.

Perhaps no one takes real pleasure in looking at deformed persons or pictures of them. Sometimes we have a feeling of curiosity that leads us to look too intently on some of our fellow men who have been deprived of some one or more of the parts of their bodies, but it is to be hoped that

THE TOILET.

TAKING AN AIRING.

What We Are Coming to.

Ten Rules of Politeness for Boys.

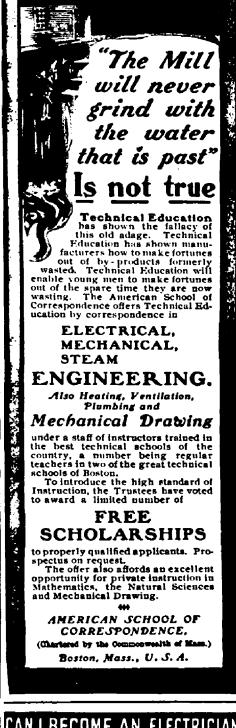

- 1. To be polite is to have a kind regard for the feelings and rights of others.
- 2. Be as polite to your parents, brothers, sisters and schoolmates as you are to strangers.
- 3. Look people fairly in the cyes when you speak to them or they speak to you.
- 4. Do not bluntly contradict anyone.
- It is not discourteous to refuse to do
- 6. Whispering, laughing, chewing gum or cating at lectures, in school or at places of amusement, is rude and vulgar. Be doubly careful to avoid any rudeness to strangers, such as calling out to them, laughing or making remarks about them. Do not stare at visuors.
- In passing a pen, pencil, knife, or pointer, hand the blunt end toward the one who receives it.
- 9. When a classmate is reciting, do not raise your hand until after he has finished,

10. When you pass directly in front of anyone or accidentally annoy him, say: "Excuse me," and never fail to say "Thank you" for the smallest favor. On no account say "Thanks."—Sacred Heart Review.

New York's Little Truants.

New York's Little Truants.

The New York Truant School, at 215 East Twenty First street. New York City, under the general supervision of Valentine M. Collins and twenty one assistants, is an interesting place. Boys who make a business of running away from school, and are otherwise so incorrigible as to disturb the peace of the regular schools, are committed to the Truant School, there to be held until the expiration of the school year. The superintendent is allowed, however, to parole the boy—that is, pardon him—and return him to the regular schools, if the boy shows that he deserves it. The principal of the regular school must consent, however, to his pupil coming back. A probation card is given to him when he is discharged, and he must present himself at the Truant School for inspection, at first weekly, afterwards semi-monthly, until finally he is wholly released. The superintendent is now looking forward to the erection of a Truant School in the country. If you compare the portraits of to-day with those of thirty or forty years ago, you will find that the necks of men and women are becoming longer and more slender. This is doubtless the result of wearing tight, high collars. If the fashiom lasts another two or three generations we shall be wearing collars from four to five inches deep and we shall feel quite comfortable in them.

CAN I BECOME AN ELECTRICIAN?

Yes, you can. We teach ELECTRICAL ENGINEERING at your home by mail at a cost within the reach of anyone. No matter where you live, if you can read and write, we guarantee to teach you thoroughly. Our Institute is endorsed by Themas A. Edises, and other prominent men of the country. We teach also Mechanical Engineering, Mechanical Drawing, Electric Lighting, Telephony, Electric Ruitsays, Electric Mining, A.-Raya, Elementary Mathematica. by mail. Write for our free illustrated book entitled. "Can I Become an Electrical Engineer."

HOWE MILITARY SCHOOL, FIRM Prepares thorougly for College, Scientific Schools, or Hushness, Seet advantages at moderate expense. Manual training (elective). Personal attention given to each boy. Fine athletic field and beautiful lakes. For illus, cat. address REV. J. H. McKENZIE, Recter. A boy can do some things better than a man-spin a top, for instance.

From birth to twelve years of age a boy changes from a bundle of instincts to a bundle of habits.

A writer in giving advice to boys as to how they should conduct themselves in the store and office, says: "Be quiet; be just as near nothing as you can." Bosh!

Business men want bright, ambitious boys around them prepared by their experience in humbler positions to fill higher cnes as they become vacant.

A boy in the store or office should be ready, quick to hear, quick to move, light on his feet, silent, respectful, faithful, good natured, pleasant voiced, and should keep out of everybody's way; but if he did, would he be a boy?

Every boy should aim to do all his work at least a little better than any one else can. He should give it thought, figure out how he can save time and money for the firm, and yet improve the character of the work done. He should study economy in the doing of that part of the firm's business that he is looking after—try to find shortcut methods that will save time and money. Suggestions are always in order. Suggestions are always in order.

Too many boys on entering business fall to realize the dignity of their positions, but elling to their boyishness and schoolboy pranks which seriously interfere with their work. Foolishness is not tolerated in business, and the sooner a boy learns this the better for himself and his employer. He need not assume the air of an old man, but he should attend to his work during business hours and lay aside nonsense. ness hours and lay aside nonsense.

The Keynote to Success.

The keynote to success is sounded by the ite Senator Cushman K. Davis in these

late Senator Cushman K. Davis in these sentences:

"I believe in superfluous knowledge, I have little faith in the thing called genius. I think any young man can attain success, and great success, by good, hard, studious labor, not intermittent labor, but conscientious, constant effort. The men who have achieved success are the men who have worked, read, thought more than was absolutely necessary, who have not been content with knowledge sufficient for the present need, but who have sought additional knowledge and stored it away for the emergency reserve. It is the superfluous labor that equips a man for everything that counts most in life."

He himself began life, first as a farm hoy and then as a telegraph operator. Of this latter occupation he said:
"I believe I was proficient in my line of work, but I was not content with being merely a good telegraph operator. I wanted to be a good citizen, and I qualified myself for that position by doing what I have called superfluous work. There is no such thing as making an opportunity—circumstances make the opportunity."

"He'll Do."

"He'll do," said a gentleman decisively, speaking of an office boy who had been in his employ but a single day.
"What makes you think so?"
"Because he gives himself up so entirely to the task in hand. I watched him while he swept the office, and although a procession, with three or four brass bands in it, went by the office while he was at work, he paid no attention to it, but swept on as if the sweeping of that room was the only thing of any consequence on this earth at that time. Then I set him to addressing some envelopes, and although there were a lot of picture-papers and other papers on lot of picture-papers and other papers on the desk at which he sat, he paid no atten-tion at all to them, but kept right on ad-dressing those envelopes until the last one of them was done. He'll do, because he is thorough and dead in earnest about every-

You may be naturally a very smart person; you may be so gifted that you can do almost anything; but all that you do will lack perfection. If you do not do it with all of your heart and strength.

Luck Comes to the Bell Boy.

"Luck." said a man, who believes in it, "comes to different people in different ways. I know a man who is now about as well ixed as most men would want to be whose luck came to him in helping a man on

ixed as most men would want to be whose luck came to him in helping a man on with an overcoat.

"He was a bell boy then in a hotel; and one day a big man, who was big and prosperous financially, as well as physically, and who had just got his overcoat out of the coatroom, turned to him and said:

"'Here, boy, help me on with this coat,' at the same time tossing the big coat over to him and turning away. The boy didn't begin to be big enough to do it, and, asking him to was just the big man's little joke, for he was a good-natured man; but the next minute the big man felt the coat going up on his shoulders all right. Turning round he saw the youngster stepping down from a chair which had been standing near and which he had grabbed onto the minute the man turned his back.

"This tickled the big man very much, and he took the small boy into his office, and practically the boy's fortune was made from that minute, for he had the stuff in him to make good as well as the brains to meet his luck half way when it came."

BOYS IN THE OFFICE, STORE, FACTORY, AND ON THE FARM

DO YOUR WORK PROMPTLY. THROUGH WITH AS MUCH WORK AS POSSIBLE IN THE EARLY PART OF THE DAY. ALWAYS SEE THAT HALF AN HOUR'S WORK IS DONE IN HALF AN HOUR.

George Sexton, who has charge of two hundred boys at Wanamaker's, says: "The great trouble with the American boy is he doesn't stick. After he has worked hard at one place for six months or a year, just as he is in line for promotion he throws up his prospects just because some firm offers fifty cents a week more; and so he starts all over again in a new house whose ways and business he must learn." ways and business he must learn."

Nothing commends a young man so much to employers as accuracy and punctuality in the conduct of business. And no wonder. On each man's exactitude in doing his special best depends the comfortable and easy going of the whole machine. In the complicated tasks of social life, no genius and no talent can compensate for the lack of obedience. If the clock goes fitfully nobody knows the time of day; and, if your allotted task is a necessary link in the chain of another man's work, you are his clock, and he ought to be able to rely on you. The greatest praise that can be given to the member of any association is in these terms: "This is a man who always does what is required of him, and who always appears at the hour when he is expected to appear."—John Stuart Blackie.

DO YOUR WORK CHEERFULLY. CHEERFUL SPIRIT AND AGREEABLE MANNERS PLEASE NOT ONLY YOUR EMPLOYERS, BUT ALL WITH WHOM YOU HAVE OCCASION TO ASSOCIATE.

The Hotel Boy's Opportunity. FRANK WALCOTT HUTT.

Frank Walcott Hutt.

A well known hotel man told the writer recently that a strong, willing boy who happens to be out of work, if he has good references, can almost invariably find employment in one capacity or another st some one of the large city hotels or summer resorts. He would say this to young, strong, capable and intelligent American boys who may have no other profession in view: Do not be afraid to begin at the foot of the ladder in hotel work. If the opportunity offers, don't be backward about accepting the menial duties of "front," elevator boy, bell boy, or kitchen boy, with the small wages that accompany them. The bell boy knows what is going on in a hotel, if anyone does. With his seat near the clerk's desk, his opportunities to observe, assist, make himself useful, and even to advance himself, are innumerable. If he is open cyed and painstaking, and goes into the hotel with the intention of being something more than a mere automaton, it will not take him long to know people as they are, to discover their likes and dislikes, their fads and folbles. Neither does it take the clerk long to discover the boy's capabilities, and to make seasonable suggestions to his advantage, if the boy really desires to advance.

The writer knows of a boy, who, begindesires to advance.

The writer knows of a boy, who, begin-

ning as "front" in a small hotel, soon obtained a place as the paper and magazine man in the same house. He was a careful saver of his pennies and he came to be a proprietor.

The summer hotels in the north offer hove constant concerning as the un-

The summer hotels in the north offer boys constant opportunities, as the unsteady and the dissatisfied are coming and going all the time. Then again, in the late summer and in the autumn there is always an opening to go south with new and old managers of "winter" hotels. The hotel boy who alms to become the successful hotel man should know that no profession, when honestly and sincerely served, is more respected than that of the hotel landlord.

AMERICAN BOYS.

Under the Auspices of "THE AMERICAN BOY."

Object:—The Cultivation of Manliness in Muscle, Mind and Morals.

The object more definitely stated: To promote mutual and helpful friendships among boys; to give wider circulation to high class boy literature; to cultivate in boys physical, mental and moral courage, and develop them along social, intellectual and moral lines; to cultivate purity of language and actions; to discourage idleness, and encourage honest sport and honest work; to cherish and emulate the examples of great and good men; to inculcate lessons of patriotism and love of country; to prepare boys for good citizenship; to cultivate reverence for the founders of our country, and to stimulate boys to all worthy endeavor.

Returns are not all in yet from the April Field Day contests, so that the names of the champion jumpers cannot be given before the issue of the June number. Returns already in show that the Companies pretty generally engaged in the Field Day exercises, as mapped out by THE AMERICAN BOY for April 13. Boys desiring to Organize Companies may obtain a Pamphlet from us containing the Directions published in the January and February Nos. of this Paper. It is sent free.

If you want to organize a company of the Order of The American Boy, write the publishers of THE AMERICAN BOY, Detroit, Mich., for a pamphlet telling you how to do it. In a few words, all that is necessary to do to organize a company of the Order of The American Boy is to get four boys, in addition to yourself, each one of

The Robert Lafoliette Company, No. 1, Appleton, Wis., is making good progress. It is a literary club, which heretofore has been meeting at the homes of the members but has now secured an office for a meeting place. This Company promises to have its picture taken, so that readers of THE AMERICAN BOY can know what the Company looks like

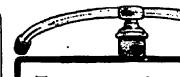

AMÉRICAN BOY can know what the Company looks like.

The William C. Sprague Company, No. 1, Lebanon, Ore., meets the second and fourth Saturdays of every month. Several of the boys in this Company belong to a base ball nine, which they have named THE AMERICAN BOY Base Ball Nine of Lebanon. The names chosen by this Company in its enterprises indicate great loyalty to THE AMERICAN BOY.

The Ernest F. Acheson Company, No. 5, Cannonsburg, Pa., has changed its name to the J. Murray Clark Company No. 5, as some dissatisfaction had arisen with the old name. This Company has been somewhat unfortunate in its choice of a name, as it first named itself after Andrew Carnegle, but as there was already a Pennsylvania Company by that name another choice was made necessary.

made necessary.

Fred Stewart. Captain of the Prairie Creek Company, No. 1, Division of Arkansas, Rogers. Ark., writes: We have chosen "The Prairie Creek Company" for our name, as we are all country boys and live on this beautiful creek. We aim to study the action of its waters, etc. We have a private swimming pool and will have a military drill. We have a boat, and can run it, too. We also have a good start at a library and gymnasium.

William Penn Company, No. 4. Division of Pennsylvania, Waynesburg, Pa., Captain Frank Hoover.
Sprague Company, No. 2, Division of Itah, Salt Lake City, Utah, Captain Joseph A. Barlow.
Old Glory Company, No. 4, Division of Nebraska, Harvard, Neb., Captain Malcolm J. McLellan. It is now time for boys to begin organizing base ball clubs, and get them enrolled as members of THE AMERICAN BOY Base Ball League. There will be two AMERICAN BOY Base Ball Leagues, a Junior and a Senior, the former for boys of an average age of less than sixteen, the latter for boys of an average age of sixteen or over. There must be at least five subscriptions to THE AMERICAN BOY taken in a club in order for it to be a member of the league. The prizes to be offered to the winning clubs at the end of the season will be well worth striving for.

Company News.

The Buffaloes Company, No. 8. Buffalo, N. Y., prints the notices of its meetings in the city paper.

The Winfield S. Schley Company, No. 2, New Windsor, Md., is organizing a base ball club for THE AMERICAN BOY Base Ball League.

General Nelson A. Miles Company, No. 9, New York City, occupies a nice room furnished with chairs and tables and lighted with gas.

Roger Wolcott Company, No. 2, Athol, Mass., has a room for its meetings and is getting together a good library. It holds weekly meetings in which there is much interest manifested.

The River View Company, No. 1. Rio ista, Cal., meets every Saturday at 1:15 p. m. at the home of the Captain. Monthly dues five cents. It has already established a nucleus of a library.

The Benjamin Harris

The Benjamin Harrison Company, No. Warsaw, Ind., holds its meetings every riday evening at 7 o'clock. This Company as also established a library. It has AIR RIFLE framed its charter.

framed its charter.

DeWitt Clinton Company, No. 6, Division of New York, Poughkeepsie, N. Y., held an election of officers in March, which resulted as follows: Harry D. Chichester was chosen treasurer and Harry G. Harper secretary.

James G. Blaine Company, No. 2, Augusta, Me., is organizing a base ball team. This Company charges its members dues of ten cents a month. It has a circulating ilbrary, each member keeping a book one week.

captain Huron, of the General Lawton Company, No. 3, Tipton, Ind., has been ill for some time, and Secretary Williamson has presided over the Company meetings. This Company meets every Friday evening in a good-sized room furnished with eight chairs and two tables. They have a library of seventy five standard books, nine of which were given to the club by Mr. Ralph G. Shook, who is now attending the Culver Military Academy and who expects to become a member of the Company at the end of his school term.

Sidney J. Dunn, Captain of the Buffaloes Company, No. 8, Division of New York, Buffalo, N. Y., says that his Company is made up of some very good young athletes. He wants to know if there is any reader of THE AMERICAN BOY who can take hold of a bar with both hands and puil himself up to his chin ten times without touching the floor once? He says that by constant practice he has become able to do this. There are some boys who cannot do it even once. Our correspindent challenges any boy under sixteen years of age to do it ten times, as described. It is what the boys call "chinning yourself."

Cushman K. Daris Company, No. 2,

Cushman K. Daris Company. No. 2, Heron Lake, Minn., has sixteen members, and is busily engaged in raising money for a library, gymnasium, flag, etc. Captain (Continued on Page 216)

RAPID RIFLE CO., Ltd. Grand Taring.

Boys who are not members of a Com-pany of THE ORDER OF THE AMERI-"AN BOY are sending in for badges. These are not given or sold to any persons who are not members of a Company. Badges are not sent to persons organizing Com-panies until the Companies are fully or-canized, when all the badges are sent at time. ne time.

As soon as there are six Companies of the Order in any one State, we will send from Detroit, on request from any one of such Companies, a library of five books that the Company can use for two months. The Company can use for two months. The Fee to be paid for the library is fifty cents. The value of the library is from six to eight dollars. There are six (or more) Companies in New York and Michigan. Any Company in either of these States may obtain a splendid library at once by sending is fifty cents.

The question is asked whether if a member loses his badge we will supply another me? We charge for extra badges ten cents

Companies of THE ORDER OF THE AMERICAN BOY are being formed in many localities—too numerous to mention.

Reports of meetings of the Companies of the Order should be promptly sent to the Publishers of THE AMERICAN BOY.

Companies should report to headquarters promptly the names and addresses of new members.

Order of The American Boy.

(Continued.)

Lammers and Private Fairfield gave a magic-lantern entertainment at the home of the former, charging five cents admission, and clearing one dollar and seventy five cents. Sergeant Johnson is handy with tools and has made wooden guns, with which the members drill. The Company has five dollars in its treasury, has a drum corps, and is organizing a base ball club to enter THE AMERICAN BOY Junior Base Ball League.

Degrees Conferred.

At the suggestion of Captain Davis, of the Timothy Murphy Company, No. 1, Cobleskill, N. Y., we have conferred one degree each on Eddie Vosburg and William Hutt for habits of thrift.

We have given one degree to George W. Linn, Columbus, Ohio, for good work in stamp collecting.

Linn, Columbus, Ohio, for good work in stamp collecting.
Degrees have been conferred upon Harry Affelhoy, Maplewood, Mass., as follows: One degree for skill in invention; one degree for energy and determination amd difficulties; one degree for industry and devotion to duty; one degree for excellence in amateur business, and one degree for unusual originality—in all five degrees.
One degree has been given to Reuben Manley, Chicago, for unusual musical skill.

One degree on Elmer Ashton, Denver, for skill in invention.

Exercise for May.

DIRECTIONS BY THE PHYSICAL DIRECTOR OF THE ORDER OF THE AMERICAN BOY.

For May, repeat the exercise given for April, increasing the number of times each movement is made by two.

The American Boy Field Day for May.

The Field Day for May is May 11. Follow the directions given for the April Field Day in the April mumber of THE AMERICAN BOY. The members will contest in the running long jump. No other directions for this contest are needed over and above those given for the standing long jump published in the April number. The contestants may take any length of run they please in making the jump. The referee should take great care that the jumper makes his jump from the mark and does not overstep it.

We shall be glad to have the winners in the Field Day contests in each company send us their photographs as soon as the records of the contests are sent in, as we can make good use of them.

can make good use of them.

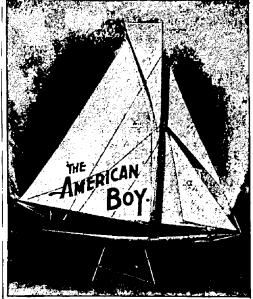

The Captain Jack Crawford Company.

The Captain Jack Crawford Company.

The only Company organized up to this time in New Mexico is the Captain Jack Crawford Company, No. 1, at Las Cruces, of which Edward C. Wade, Jr., is Captain. Captain Jack Crawford is known as the Poet Scout. We are personally acquainted with Captain Jack's secretary, and through him we have from time to time received interesting matter concerning this romantic character. Captain Jack is a rare example of a brave frontiersman, with a fine mind and a tender heart. His father was born in Scotland, was banished from Scotland because he advocated a free form of government, and fied to Ireland. Here he married a Scotch lassie. The elder Crawford was a joily fellow, a good equestrian and a reciter of Scotch selections. In 1854 he left Ireland for America, leaving his wife and five children, of whom Jack was the third. In Ireland. For four years the mother struggled to support them, receiving little assistance from the husband. Then she left the children with an uncle and came to America. Later the children were sent for, the boys going to work, on their arrival in the Pennsylvania coal mines. At the breaking out of the civil war Jack was picking slate at a coal mine at one dollar and seventy five cents a week. His father entered the Union army and was twice badly wounded. Jack enlisted when he was not quite sixteen years old, and was sent home twice because he was so young, but the boy persisted, finally joining the Forty eighth Pennsylvania Volunteers. He was twice wounded, and while at a hospital learned to read and write under the instruction of a sister of charity. Shortly after the war Jack was left an orphan. He promised his mother just before her death never to drink. In a letter dated February 26, 1880, Captain Jack writes to Colonel, as God is my judge, I have faithfully kept it and will, while I live and breathe."

Soon after his mother's death, Jack became anxious to try his fortunes in the west, and shortly afterwards we hear of him as a bold, honest and skillful scout,

Soon after his mother's death, Jack became anxious to try his fortunes in the west, and shortly afterwards we hear of him as a bold, honest and skillful scout, one of the earliest explorers in the Black Hills. In the Indian campaign of '76 he was second in command of General Crook's scouts, superseding Buffalo Bill as chief in August of that year. In July, 1876, in response to a telegram he rode from Medicine Bow to Rosebud and Little Big Horn, nearly four hundred miles, through a country peopled with savage Indians. He carried the New York Herald's account of the Battle of Slim Buttes to Fort Laramie—three hundred and fifty miles—in less than four days, receiving for this \$722.75. He has published one book of which we know, entitled "The Poet Scout; a Book of Song and Story." One chapter from this book will be found in another column of this number of THE AMERICAN BOY. With it appears the author's portrait.

ACTUAL LENGTH, 8 FT. 6 IN.

The Winner of the Model Yacht.

In our February number we offered to the February subscriber, or to the one getting a subscription during February, and coming nearest to estimating what point in the United States would have the lowest temperature during February, a Model yacht, whose length of deck line was three and one half feet, and whose value was twenty five dollars. Hundreds of estimates were received from boys all over the country.

The lucky boy is Iro Puder, Big Stone, S. D., 'who, on the ninth of February, guessed Pokegama Falis, Minn. a town five miles east of Grand Rapids, Minn. The United States Weather Bureau reported to us in March that the lowest temperature reported during February was that at Pokegama Falis, Minn., for February 6, the mercury registering 38 degrees below zero on that day.

The reports of the Weather Bureau for past years show that in 1897 the coldest spots in the United States were this same town of Pokegama Falis, and Leech Lake, in Minnesota.

A number of boys guessed spots in

town of Pokegama Falls, and Leech Lake, in Minnesota.

A number of boys guessed spots in Minnesota. Some guessed "Northern Minnesota." Such guesses, however, were of no value, as the contest required that the guessers select a "spot" or "point." It would be just as appropriate to guess "Northern United States" as "Northern Minnesota." St. Vincent, Minn., seems to have been the popular point with the guessers, as sixteen boys guessed St. Vincent. This was quite natural, as St. Vin-

THE BOY WHO EARNED THE YACHT.

cent is in the very northwestern corner of the state, right up close to the Canadian

The boys who made the next best guesses The boys who made the next best guesses after that of Iro Puder, were Barney Tolsman. Seattle. Wash.: Harold Thompson, Erie, Pa.; William V. Marmion, Harpers Ferry, W. Va.; Harold Lew. San Francisco, Cal.; Richard Pedrick, Peoria. Ill.; Alex, Freer, Peoria. Ill.; Glenn S. Patchill. Corning. N. Y., all of whom guessed Duluth; and George Fellows, of Vinton. la., who guessed Two Harbors, Minn., and Bruce E. McEntin, of Kansas City, Mo., who guessed Ely, Minn.

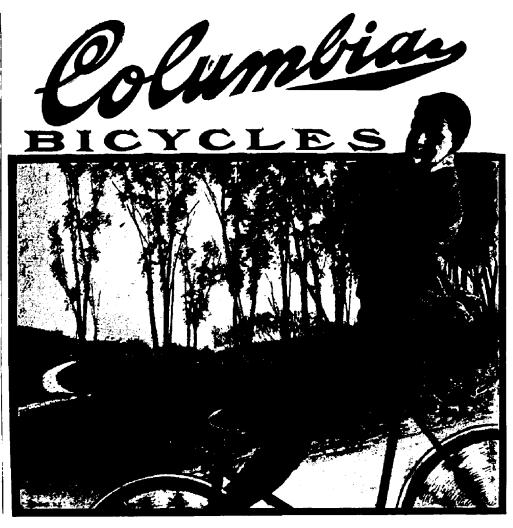

McEntin, of Kansas City, Mo., who guessed Ely, Minn.

The Weather Bureau at Washington writes us that during February they received a great many inquiries from various parts of the United States as to the lowest temperature reported during the month and that the bureau did not understand at the time the cause for the unusual interest displayed in February temperatures. The winner of the prize having made his guess on the pinth of February he could not winner of the prize having made his guess on the ninth of February, he could not have received information from the Weather Bureau at Washington of the temperature on the sixth at Pokegama Falls, and could not have known at the time he made his guess that the temperature at Pokegama Falls was lower than would be reported during the remaining twenty two days of the month.

As Big Stone, S. D., is on Big Stone Lake, the winner of the yacht wil have the opportunity to test its sailing qualities.

HE HAS RECEIVED HIS YACHT.

Big Stone. S. D. April 14, 1901.

BOYS AND POULTRY

Poultry Notes.

One quart of grain food per day for ten hens is considered liberal feeding. This is equivalent to five pecks a year to each hen. If grass and meat are fed, give only half the grain.

The biggest egg in the world is now in the olggest egg in the world is now in London. It was found buried in sand in Madagascar. The egg measures a yard in circumference and over a foot in length. Its capacity is equal to that of one hundred and fifty hen's eggs.

Such an egg is worth about three hundred dollars.

Every boy on the farm should be ambitious to have fine poultry. It does not seem right that the city fancier should monopolize all the fine birds. Farmers are too often busy looking after what they consider larger interests, and fowls are left to take care of themselves.

Give your poultry faithful care. Do not attempt to keep many fowls unless you have free range. On limited grounds you may do very well with fifteen or twenty fowls; where, should you attempt to double the number, you would keep them at an absolute loss. Fifty fowls in one flock will never do as well as twenty five.

Star Incubator

Two Successful Young Poultry Raisers.

May is a bad month for hatching.
Clover, with an ounce of lean meat a day, will soon compel a hen to lay. Another prescription is fresh meat and bone cut with a bonecutter.
Carbonate of lime is the cheapest powder in use for dusting over the floors and walls. Aim to get the solutions of the powders into cracks and crevices.

An excellent food for ducks and geese, and also for hens is cooked turnips or potatoes with chopped clover, and thickened with ground corn and oats.

Bran is injurious if fed raw, but if cooked or well scalded so as to soften it, bran makes good food. It is the best bone-forming element that can be given.

Separate the layers from the others. You cannot keep old hens, pullets, fat hens and lan hens together successfully, for they do not require the same food.

Eggs can be bought in China at from two to three cents a dozen. Large quantities are shipped from there to Australia, where they are sold at six cents a dozen.

Every one having a flock of fowls should endeavor to combine beauty and utility, as it will cost no more in the end to have beautiful birds than to keep scrubs.

To keep a hen in condition for laying, she should not be given all that she can eat Keep her hungry enough so that she will scratch and hustle about for herself.

One quart of grain food per day for ten hens is considered liberal feeding. This is

poultry raising.

Raymond Wales, Syracuse, N. Y., writes: I have been in the chicken business about two years. I started with twenty chickens. During the two years I raised more than eighty. I had my egg customers to whom I went around each week with eggs. They took from a dozen to two dozen each a week. At the end of a year I bought myself clothes, shoes and a number of other things and had a little money left. At the end of two years I killed off my stock and sold them at twelve and a haif cents a pound. The next summer I got some Golden Seabright bantams, paying five dollars for a dozen eggs. The chickens themselves and their eggs were so small that they didn't bring me much profit. I have sold all but six. Next summer I am going into the bee business. I hope all the boys will have good luck with their chickens.

Beverly T. Wren, Chilhowie, Va., says:

Chickens.

Beverly T. Wren, Chilhowie, Va., says: In the spring of 1896 I obtained fifteen scrub hens and a scrub rooster as a gift from my grandmother, with the understanding that if I succeeded I was to give her one-third of what I made. Well, the first year I didn't make much above expenses, but I got a lot of experience that was valuable to me later. I went on the theory that chickens raised themselves and you could give them any old thing for food once a day. I had many discouragements that first year. The hens would quit setting: the chickes would have the gapes, and I had much trouble to keep the weazels and other animals out. The next year I sold all my old chicks and bought ten fine Plymouth Rock pullets and an Indian game all my old chicks and bought ten fine Plymouth Rock pullets and an Indian game rooster. I thought I'd make my pile this time sure. I repaired my house and coops and fed regularly on cracked wheat, corn, buckwheat and shorts: also plenty of grit and water. By the middle of March I had over a hundred of as pretty chicks as I ever saw anywhere. By the end of March I had only ninety, but they were thriving. I sold eighty five fryers to a local dealer for twenty nine cents apiece, making a total of twenty dollars. I sold the old ones, paid all expenses, and had seventeen dollars left aitogether. I did not miss a day from school and did all my other chores besides.

NELSON G. MORTON.

Boys in Games and Sport

How to Camp Out.

LEWIS A. BROWNE.

It is possible some of THE AMERICAN BOY'S many readers may think, when they read the foregoing title, that anyone can camp out without either experience or instruction. If so, let them try it once, and they will learn from painful experience that they neglected to take many articles of actual need, while taking much that proved to be entirely useless.

Besides this, boys are not all situated alike, and what one can procure another will be unable to obtain; hence the following hints from one long experienced in camp life may prove of value to many who contemplate enjoying a few weeks in camp this summer.

this summer.

In the first place, there is no vacation trip, or outing, which will afford half the healthful pleasure of a lew weeks "near to nature's heart" in a camp.

Select some site near lake, pond or stream, if possible, where you can enjoy the threefold pleasure of fishing, boating and swimming. A party of three or four gives better satisfaction, and an A tent, at least 7x7 feet, should be used. If you cannot procure a tent, you should not give up the trip in consequence, for an Indian wigwam covered with bark and boughs, may be substituted, or, better still, a "leanto" covered with bark and boughs or sod, can be built. A boulder or embankment is necessary for this. (See illustrations.)

If you have a tent but cannot conveniently carry the tent poles, the accompanying illustration will show you how to do without them. Select a dry place for the camp, on a slight

a dry place for the camp, on a slight knoll, if possible, in order that the rain may flow off read-

The following lists are for a party of four boys making a three weeks' trip. If they do not have to him the boart the trip should not cost them over two dol-lars each for the entire three weeks.

them over two dollars each for the entire three weeks, counting what each one can take from his home. If a hoat has to be hired this will make the expense of the trip about three dollars each, or only one dollar per week each for a trip that will prove to be worth to each one an hundred times that amount.

Here are the lists; if you contemplate camping, copy them carefully: Four quilts, two blankets, two rubber blankets, two short-handied axes, plenty of rope, extra suit each of old clothes and underclothes, plenty of fishing tackle and a very large box of worms, target, rifle, camera, bathing suits, frying pan, two kettles, coffee pot, eight tin plates, four steel knives and forks, plenty of nalls and spikes, six spoons, two large spoons, two butcher knives, four pot hooks, five tin dippers—pint size, toaster, sheet-iron for fireplace, iron rod for crane, soap, towels, rags for dishcloths, cuts, etc.; thread, safety pins, needles, court plaster, ointment, Jamaica ginger, Epsom salts, five pounds cornmeal, four

double loaves of bread, two pounds of coffee, one-half pound of tea, four pies, four dozen doughnuts, four dozen cookies, four cans roast beef, peck potatoes, one-half peck of onlons, sait and pepper, five pounds of sugar, four cans of condensed milk, five pounds of sait pork, four cans of clams, four cans of baked beans, three pounds of crackers.

Pack these things in soap boxes upon which you have placed hinged covers. Four boxes should hold all but the tent and bedding, which you can make into one bundle.

bundle.

In preparing your camp, hang all the kitchen utensils upon nails driven into a large tree near your fireplaces. Nail two boxes, like cupboards, upon another tree near where you will eat your meals. In these place all the foods but the canned goods, which you can set on top of the loves.

boxes.
Keep your clothes in your tent or hut. Make a frame for an awning and place your rubber blankets over it. Under this build your tables of old boards or poles, together with seats. Stretch a rope to hang and dry your clothes upon and air your bedding there every pleasant day. Also dig a trench around your tent to carry off the rain. Arrange to fasten your boat securely and you will be pretty well settled.

carry off the rain. Arrange to laster your boat securely and you will be pretty well settled.

You can make tent pins as in figure 1 (a), or cut them in the woods as in figure 1 (b).

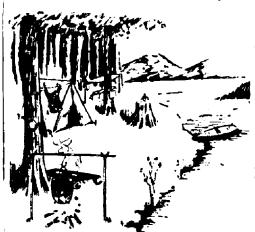

The most satisfactory bed is made by covering the ground two feet deep with pine needles, and over this placing a few light hemlock boughs. Cover this arrangement with your rubber blankets at night. Make your bed upon this and you will never be damp. If you prefer to sleep off the ground you can make a bed as in ligure 2, with small, springy poles, and cover these with boughs.

Figure 3 shows what to use in fleu of a tove, a piece of sheet from 18x24 inches. For boiling and chowders make a rack or crane as in figure 4. Have the cross rod, (a), of fron, gas pipe will do, as this will not burn off and drop your dinner into the fire.

When four go camping the best method in regard to work is to pair off, that is, let two do all the work one day and the other two do the same the next day, and so change about.

There are generally farmers living in the vicinity, of whom you will be able to purchase milk, vegetables, and other things you may need.

With these few hints the bright readers of THE AMERICAN BOY can make an ideal camp and thoroughly enjoy themselves for a few weeks this summer.

The Game of Three Bits.

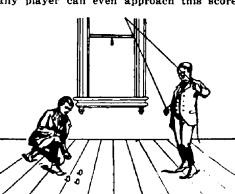

Fasten a small metal weight at one end of a string. Run the string so that it will move freely back and forth over a chandelier, or small brad driven into the celling. Next saw from an old broom handle three sections, each of two inches in length. These pieces are known as the bits. Let the weight hang straight to the floor. From the point it touches measure out three feet and on each side three inches. Inclose this space three feet long, six inches wide, by pinning tapes to the floor.

Each player is allowed three swings, and he governs the length of the string to suit himself. The player not at the string may set up the three bits in any position he chooses; but they must be kept within the space marked out by the tapes.

To knock all three bits down in one swing counts ten and allows an extra swing. To knock all three bits down in two swings counts five. To knock all three down in three swings counts three, or one for every bit knocked down. Forty is the highest count which can be made during one play of three swings, as only one extra turn is permitted. Ten plays of three swings each constitute a game. The player having the highest score, of course, wins.

There is considerable opportunity for developing skill in knocking over the bits. Usually a player may calculate to sweep down two of the bits with his swing and his endeavor will be to glance from one of them into the third piece.

The best possible score is four hundred; but it will take months of practice before any player can even approach this score.

RAMBLER SALES DEPARTMENT

CHICAGO

BOYS

At an auction of horses recently held in New York City an old stiff mustang, poor as a crow, was offered for sale. "How much am I offered?" shouted the

auctioneer

uctioneer.
"Five dollars," some one shouted.
"Seventy five," shouted another.
The auctioneer nearly lost his head in amazement.

amazement.

It was the horse Teddy Roosevelt rode at Santiago. The auctioneer didn't know it, but the buyer did, and he was a proud buyer, too, when he rode "Teddy," for that was the name given the animal, down the street, followed by the street arabs who shouted, "It's Teddy's horse; he rode it at Santiago." At the battle of Kettle Hill "Teddy" got a rifle ball in the shoulder and he still carries it. A Spanish saber ripped open a gash along his breast. His bones stick through his skin like the ribs of a wreck, and his hair has come out in handfuls; but whenever his owner rides him out people stand around and give the old mustang an ovation around and give the old mustang an ovation

The Homemade Menagerie.

Step up, ladies and gentlemen, we have on exhibit many rare and curious animals —animals from every part of the world. It costs only five cents to see the show.

(The clown begins his speech in the above

fashion.)

fashion.)
Figure eight shows the clown. He must wear a large shirt, which will be loose and baggy. The sleeves can be gathered with strings about the wrists. His trousers, figure ten, are made from any sort of cheap white cloth. The ornaments are cut from colored paper and pasted in place. The clown's hat, figure nine, is made by thoroughly soaking an old felt hat in water and then stretching it over a broom handle, as shown in the diagram.
The chown continues: I am the showman (clownus, menagerous), from nowhers in particular, and I am going to tell you about the animals.

in particular, and I am going to tell you about the animals.

My first wonder to which I shall draw your attention is the came! (Camelus-bactreanus) from Central Asia. The ship of the desert. You will please not approach too near, as the came! bites viciously. At this speech the came!'s jaw works vigor-

Two boys, one slightly taller than the ther must work up the camel together. ee figure sixteen. The boys may wear other, must work. See figure sixteen.

pajamas or wrap white cloths about their legs. In either case the strings, tied as shown in the diagram, will give the desired

effect.

The head, see figure two, is cut from a thin plank. Eyes, nose and mouth are put in with water colors. The ears, bits of leather or cloth, can be fastened on with tacks. The string which works the jaw must run down the neck inside of the bolster case covering the neck.

Attach the camel's head to a section of broomstick. The broomstick held in the outstretched hand of the first boy forms the camel's neck. The tail is made by stuffing an old umbrella case with bits of paper. It is manipulated by the second boy. A sheet thrown over both boys' heads, and, lastly, a small rug thrown over the sheet between the boys, completes the camel. camel.

My second feature of interest is an in-habitant of the barnyard, a domestic goose, probably a descendant of the grey or wild goose (Anseranser Linnacus). You will please notice particularly the tail and feet, which I believe you will find quite different from those of any other goose you have ever seen.

you have ever seen.

(The boy who plays the part of a goose will bend forward, and then have a sheet thrown over him, the two ends of which are tied about his ankles. The neck is the boy's arm covered with a stocking leg, and the bill is made from two cornucopias of yellow paper. See figure eighteen. These are placed one over the first two fingers and the other over the thumb. The strings shown in the diagram serve to hold them on the hand. The eyes are made of paper and glued in place. A second sheet is gathered over a short board to make the wings and tail. See figure thirteen.)

Before showing you my next attraction

wings and tail. See figure thirteen.)

Before showing you my next attraction I should like to call your attention to our signs. (A number of these are hung about, reading: Visitors will please not feed or annoy the animals. Ladies need not be alarmed by the presence of the white rat; he is well behaved, etc.) I will now show you something to amuse the children. A baboon (Cynocephalus babunis) from Central Africa. It is not customary to trust such large specimens of this animal outside of a cage; but I have reared this one myself and I can assure you that he is quite harmless.

(The baboon's face is shown in figure

quite harmless.

(The baboon's face is shown in figure one. It is made from ordinary cardboard. The mouth is drawn in with ink. Long. black or brown stockings cover the legs. A cape—monkey or sable fur will be the best—covers the shoulders. A pair of large gloves cover the hands. The tail is made from any sort of dark cloth. Sew two long strips together; turn them so that the seams will be on the inside, and stuff with paper.)

seams will be on the inside, and stuff with paper.)

This (figure fourteen) is our rough rider (Broncus billious) from Arizona. He is mounted on his famous bucking mustang. Vixen. We have offered a reward of one hundred dollars to any one who will ride that horse. Buffalo Bill has himself tried it several times, but always without success. (If there is in the house the remains of an old hobby or rocking horse its head may be used for the bucking broncho. Those who can not obtain a hobby horse may make the head as they did that of the camel, see figure three; light wood finished up with water colors. The mane and tail are made from frayed rope. The ears are bits of leather. A framework of two sticks. One running each side of the boy, makes the back, over which is thrown the blanket. A pair of trousers stuffed with old newspapers and a pair of old shoes will make the false legs, which hang at the bronco's side. An old felt hat and a whip complete the outfit.)

Our ostrich to which I will now draw

side. An our test income the outfit.)
Our ostrich, to which I will now draw your attention, belongs to the Struthlonidal family, and was captured in Africa. We pride ourselves on the plumes possessed

family, and was captured in Africa. We pride ourselves on the plumes possessed by this specimen.

(The head of the ostrich is made like that of the goose; but as no boy possesses an arm sufficiently long to make an ostrich's neck, the head will have to be fastened at the end of a stick. The neck, like that of the goose, is covered with a stocking leg. The body is a sheet gathered about the boy and stuffed out with newspapers. The tail and wings are feather dusters. Long stockings cover the legs.)

Gaze now upon the Indian elephant. (Elephas indicus.), largest and strongest of all animals which tread the earth. These creatures are in the prime of life at one hundred years of age. This one is probably much older.

(Two boys are needed to make the ele
(Two boys are needed to make the ele
(Two boys are needed to make the ele-

ably much older.

(Two boys are needed to make the elephant. Two pairs of pajamas caught together under the feet and stuffed out with paper make the legs. The boys must bend forward, the last boy placing one hand on his companion's shoulder. With the other hand he holds the tail. A sheet thrown over the boys will make the back. A pillow case, one corner of which has been turned in, will make the head. Make the eyes of paper and paste them on the pillow case. One arm of the forward boy in through a stocking will make the trunk. The tusks are long cloth bags stuffed tightly with paper. They can be sewed to the pillow case. The ears are palm leaf fans. A small, brightly colored rug is thrown over the back to give the

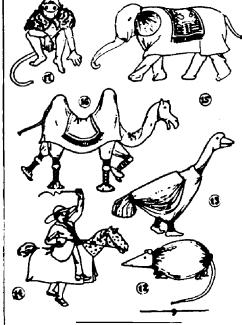

effect of the gaudy trappings of the circus. The tail is made like that of the camel.) I will now call your attention to the one animal of which the elephant stands in dread, the rat (Mus decumanus). Its nativity is unknown, but it is probably Asiatic. This is an albino specimen, and, as the sign has doubtless already made you aware, is well trained and well be

(A very small boy must be found to play (A very small boy must be found to play the part of the rat, figure twelve. The rat's head, figure five, is a large cornucopia of paper, on which eyes, nose and mouth have been painted. The ears, figure four. are bits of cloth or leather. The tail is made like that of the monkey. The body is a small sheet gathered about the boy and stuffed out with newspapers, as shown in the diagram.

and stuffed out with newspapers, as shown in the diagram.)

The last feature of my exhibit is the alpaca (A. Pacas), the fourth species of Auchinia. It inhabits the plains of the Andes. The skins make excellent rugs. The skin of this specimen, unless he injures it during the show, will very likely answer some time for a rug.

(Two boys, one slightly taller than the other, are needed for the alpaca. The tall one will stand upright; the other must bend slightly forward. A stick must rest on each shoulder of the shorter boy, the other ends of which are fastened under the arms of his companion. Black stockings must of his companion. Black stockings must be worn by both. The head is made like that of the camel. Last, a heavy fur rug is gathered about the boys, as shown in diagram eleven.)

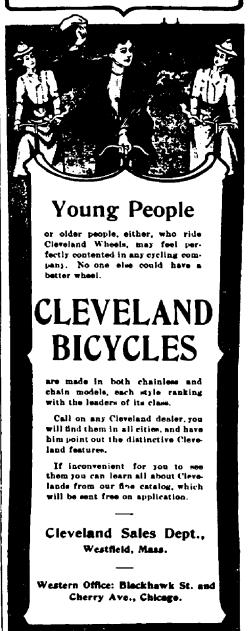

A Novel Method of Catching Monkeys.

The Indian of South America employs this peculiar method of capturing monkeys.

Taking a cocoanut he cuts a hole in each end just large enough to enable a monkey to insert its paws; puts some lump sugar inside, then places it in a promising spot and awaits the capture of his some and awaits the capture of his game.

Answers to Correspondents.

Hiram A., Salt Lake City.-The stamps you send are of no value.

G. O., Apollonia.—Your collection is too small to be worth anything.

Martin P., New York City.—Your stamp is a three cent 1861, and has no value.

T. T .- Your stamps are very common and in poor condition, and are worth practically nothing.

A. A. B.—The seven stamps you send drawings of are worth about five cents. They are very common.

P. B., Shrewsbury Park.—The two stamps you enclose are the three cent 1851 and the one cent 1875 American bank note print. Neither of these is worth anything.

H. W. T., Hastings.—Your one and two cent stamps are of the Issue of 1869. The first is worth about twenty cents and the second six cents. The two cent green envelope stamp with head of Grant is probably from a letter sheet. It is not worth over one cent. over one cent.

O. O. S., Moundsville,—In the Hartford die of the Centennial envelope the line under "postage" is single; in the Philadelphia die it is double. A stamp which has no cancellation, even though it had been used, should be worth more than a cancelled specimen. used, should be celled specimen.

M. S., Washington.—We know of no such stamp as you describe. A two cent red U. S. local was issued by Menant & Co., but it was nothing like the one you describe. Better send on your stamp for examination. It may be a fake; there are many such purporting to be U. S. locals.

H. S., Veo.—We do not buy stamps; but almost any dealer advertising in THE AMERICAN BOY will purchase your stamps if they are of any value. Many of the old revenues are very common, and some of the fifty cent and one dollar values can be bought for twenty five cents to fifty cents a hundred. The denomination of the stamp is no indication of its present value.

stamp is no indication of its present value.

J. A. H., Brooklyn,—The stamps you mention as being on the document are of little value, as they could be duplicated for thirty or forty cents; but the fact of there being so many on one document (194) makes it particularly interesting, and gives it some additional value. If you have or can secure the document, we should advise you to leave the stamps on it. The following are list values of stamps mentioned: Fifty cent mortgage, three cents; \$1 entry of goods, ten cents; \$1.50 In. Exch., fifteen cents; \$2 mortgage, fifteen cents; \$2.50 In. Exch., ten cents; these prices are subject to about fifty per cent discount.

The War Tax.

One of the last bills passed by Congress prior to its adjournment, was for the reduction of the war revenue tax. The tax was repealed on the following: Bank checks, notes, money orders, express receipts, bills of lading for export, express receipts, telephone and telegraph messages, powers of attorney, protest, warehouse receipts, charter party, leases, manifests, mortgages, insurance, bonds except indemnity, commercial brokers tax, certificates, proprietary medicines, chewing gum, perfumery and cosmetics. The tax on conveyances, foreign bills of exchange and passage tickets was materially reduced.

By this it will be noticed that all of the proprietary taxes have been repealed, so that no more private proprietary stamps will be issued.

Better make a collection of them, as there are only 29 varieties. They can be

Better make a collection of them, as there are only 29 varieties. They can be secured without much expense, and will be an interesting reminder of the Spanish

The Numismatic Sphinx.

There is no premium on the nickel, flying eagle, or Indian head cents issued 1857-1864. The Columbian half dollars of 1892 and 1893 are selling at seventy five and sixty cents each respectively. None were issued in 1894, The Columbian, or Isabella quarter dollar, issued in 1893, still holds its original price of one dollar; 40,000 were issued. The fractional currency, or "shinplasters," issued during and after the civil war, command no premium unless in fine or uncirculated condition.

no premium unless in nne or uncirculated condition.

The rarest United States copper cent is that of 1799, 1793, 1804, 1809, 1811 and 1796 follow in order of rarity. These cents were issued every year beginning with 1793 up to and including 1857, with the single exception of 1815, when none were struck. Sets of about sixty of the different dates, the early ones poor or fair, but with dates distinguishable and later dates fair and good, are often sold at \$5 a set. The cents from 1816 to the end of the series can be purchased in from fair to good condition for from five to ten cents each. Of the small cents, the nickel flying eagle cent of 1856 sells for five dollars, and the bronze 1877 cent brings ten cents. The two cent bronze pleces, with the exception of 1873, which was issued only in proof, have no premium. These remarks will answer many inquiries.

W. Raymond Evans, Yeadon, Penn.—An 1832 half dollar is worth seventy five cents. C. M. Scott, Harry Mahen and Ward R. Robinson—Your questions are answered in Robinson—You another place.

Delancey Donnalley, New York City, asks "To what nation does the forty wreaths belong?" We do not know.

M. P. Brooks, Sturgis, Ky.—A Spanish four real, or half dollar, of Ferdinand VII. (1808-33), 1810, worth forty cents.

Carl Holbrook, West Roxbury, Mass.— The half dollar of 1834 is worth seventy five cents. No premium on your other coins.

James Pollock, Cleveland, O.—A very com-mon English half penny, George 111, 1806. A good 1815 quarter sells at the dealer's for fifty cents.

R. S. Sherman, Rockland, Me.—A good 1799 dollar is worth from two to five dollars, depending upon which one of the three varieties it is.

French five franc piece of 1811 sells at the dealer's for \$1.50. An 1818 half dollar is worth seventy five cents.

Stoddard King, Northwood, N. D.—There is no premium on the modern English pennies or haif pennies. Your other questions are answered elsewhere.

Oliver Maxwell, Steubenville. O.—The coins you have are all nice for a collection, but are common. Notice what is said of the copper cents in another place.

Carl Robertson, Garden Grove, Iowa.—An 1853 three cent piece, if in good condition, is worth ten cents. Coins with holes in them as a general thing have no premium.

L. M. Sternbergh, Paterson, N. J.—Your rubbing is taken from a coin of Alfonzo XII. (1874-85), 1875. It is a five peseta or All. (1874-85), 1875. It is a five peseta dollar size, and the dealers ask \$1.50 for o

Arthur Watt, Chicago.—Your "ein kreut-zer, 1816," is an Austrian coin and very common. The cents of 1825, '26, '27, '29 and 56 are all common, selling at five and ten cents each.

Paul Gale Rhoads, Colorado Springs.—All the nickel, bronze and copper coins of the U. S. are struck in Philadelphia. None have ever been issued in New Orleans, as you surmise.

Leonard Vair, Ravenna, O.—The half dollars of 1819 and 1837 sell for seventy five cents each. Your other U.S. coins, unless fine, have no premium. Your foreign coin is a centime of Belgium. See the advertising eclumns.

Arthur B. Moss, New York city.—Your French and Italian coins are all common. The word Barre beneath the head of Emperor Napoleon is the name of the artist designer. The other letters, or initials, are mint marks.

Gevernment Relies—Guns, Swords, Revolvers, Saddles, Cannons, etc., from Government suction are now being sold at ridiculously low prices. Send for illustrated lists. Francis Bannerman, 678 Broadway, New York, N. Y.

EDITED BY JUDSON GRENELL

THE AMERICAN BOY offers twelve prizes of Two Dollars each for the best Amateur Photograph received during the twelve months in the year, one prize for each month, also a second prize each month, of one dollar, for the next best photograph, the competition to be based upon the originality of the subject and the perfection of the photograph. The contest is open to subscribers only. Photographs will be returned if stamps are sent for the purpose. All photographs entered in the contest and not prize winners will be subject to our use unless otherwise directed by the sender, and fifty cents will be paid for each photograph in any event to be our own, without further payment than the payment of the prizes. Write on the back of the photograph its title, with a description of the picture, and the full name and address of the contestant.

KNIGHT'S SPRINGS WATERFALL

This Fall is situated eight miles northwest of Georgeton, Tex. The water comes from a large spring on the to: of the mountain. A very large vegetable and fruit garden is irrigated by means of this apring. First Prize Photograph, by Homer A. MacDougie, Georgetown, Tex.

Answers to Correspondents.

Walter David-Write to the Eastman mpany, Rochester, N. Y., for a book of tructions on how to use their cameras, you have some other make, then write the manufacturer of that particular

Milton Jackson—A negative cannot be mide directly from another negative, but a positive can, and perhaps that is what you mean. While in the dark room put the film of the negative and the film of the unposed plate together, and place both in the printing frame. The exposure can be mide by lighting a match and holding it within a few inches of the face of the filme, moving the light around so as to kee the same amount of exposure to all pirts of the plates. Then develop as you would for a negative. If the timing has been right, the result will be a fine positive. Milton Jackson-A negative cannot ben right, the result will be a fine positive.

harles P. Hexom—If you want to vignite your picture, after the negative is in the printing frame, put over the front tissue paper sufficient to hold back it e printing over those parts of the picture to a you do not wish to appear. If you want to block out all but the figure, then carefully cover that part of the negative it at you do not wish to appear with an opaque solution, which is applied with a brush, and can be obtained at any photographic supply house.

The Dark Room.

Before the amateur photographer has been very long at the business, he sees that he needs a dark room all his own, where everything will be left just where he puts it. And he will begin to figure where he can place it, and how much it will cost. To be sure, all rooms at night are dark rooms, and the kitchen or bathroom can be utilized on occasion, but it is nice to have a corner all one's own, into which you can retire and indulge in the fascinating work of manipulating properly exposed plates.

The writer's first dark room was a ventilator shaft, about three by four feet. When the door was shut elbows touched the sides. In front was a shelf just hig enough to hold a couple of trays and a few bottles, and the light came through a hole six inches square, covered with a piece of ruby glass. There the operator melted in summer and froze in winter, but it was better than no exclusive room at all.

Since that time experience has been had with several dark rooms, until the opinion is now held that too big a room is almost as bad as one too little. A good place is in a dry celiar, especially if there is a furnace there. Then nothing will freeze, and it is cool in summer. If not that, take a closet, say three by six feet. If you can cut a hole through the side and insert a pane of ruby glass, and then put your white light outside of that it will be found more convenient than having the light inside. If this is not feasible, use a ruby light lantern.

A pail with a faucet to it will supply running water which can run into another

light lantern.

A pail with a faucet to it will supply running water, which can run into another pail under your sink. In summer it will then be easy to drop a chunk of ice into the pail, so that there will be little danger of frilling plates or even fogging them by using too warm developer. Do not have too many shelves. They only serve as collection agencies for useless material. Take a chair in with you so you can sit down while developing. Put a fastener on the inside of the door to keep people from rushing in while you are at work, for a single flash of light can easily spoil a day's work.

single flash of light can easily spoil a day's work.

An amateur developing outfit can be purchased for one dollar and fifty cents, but as a rule it is better to get larger trays than just big enough to hold a plate. Sometimes, when the exposures have been the same, a couple of plates can be developed at one time. The professionals sometimes develop a dozen or more plates in one tray at one time. So it is best to have good sized trays. One must be kept exclusively for developing. Never put "hypo" in it. Another is needed for fixing, and a third, a big one, for washing.

After the developer has been used once or twice, it should be put in a bottle by itself, to be used on over-exposed plates. Indeed it will do no harm to first try a plate with the old developer. If the picture comes up slow, or not at all, pour it off, and use fresh developer. Starting in this way many an over-exposed plate will be saved. One should always have handy a little bottle of saturated solution of bromide of potassium. This is to be used as a restrainer, in case of over-exposure. A drop or two to the ounce of developer will prevent the plate developing too fast, and without contrast.

If all white light is excluded, the amateur without contrast.

vent the plate developing too fast, and without contrast.

If all white light is excluded, the amateur will be surprised to see how strong the ruby light can be without doing any harm. It is not necessary to be in almost total darkness. But it is a good plan to keep away from the light when loading the plateholders, for then the plates are the most sensitive. With a little practice the holders can be loaded in the dark almost as rapidly as in the light. But after the development has commenced, the necessity for this extreme caution vanishes.

An ordinary boy can make his own dark room if a closet is not handy. Just what to do to have one complete in every detail was told in the issue of THE AMERICAN BOY for February. 1900. But if nothing so elaborate is needed, just get ordinary "ceiling." and if there happens to be a knot hole or two. stop them up with cotton. A wide board will serve for a shelf, and a cheap iron sink can be had for very little money. It might be best to buy the door, for in these days of machinery one can be had for almost the cost of the material. Once obtained, little by little "all the comforts of home" can be added to the dark room.

Photographic Notes.

Acid sulphite in your hypo bath will give the negative a good, clean color.

In the beginning, boys are advised to buy their chemicals ready mixed for it will be cheaper and give more satisfaction.

The backed plates that manufacturers are now putting on the market greatly aid in preventing halation, which, by some, is mistaken for fog.

Those who make their own developers cannot be too careful about obtaining pure chemicals. In this case the cheapest is sure to be not the best.

It is best not to have anything to do with copyrighted pictures in the way of copying them, though it is likely that if this is done just for the benefit of the amateur photographer, and not for sale, no notice will be taken of it. Keep your hands off other people's property.

Bright machinery will not photograph well, so to insure a good picture it is a good idea to mix white lead with turpentine to the consistency of thin cream, with sufficient lampblack to form a light slate color. After the picture is taken, the color can be easily removed with a bit of cotton moistened with turpentine or bensoline.

A WARNING.

Second Prize Photograph, by Oscar Jaeger, Dubuque, Ia.

Selecting the Camera.

In a very few weeks more the long school vacation will begin, and every boy in the country is looking forward to having a good time before the next school term. Each one

vacation will begin, and every boy in the country is looking forward to having a good time before the next school term. Each one desires to get as much enjoyment during July and August as it is possible to crowd into these two months, and it is evident to anyone who has given the subject a moment's thought that the camera will ald immensely in this. But as the makes of cameras run into the score, it becomes a serious problem which to select.

The camera having the widest range of usefulness is the one taking a 4x5 picture. It allows of good sized figures being photographed, while at the same time not being too expensive to run. Another good size is the one taking a picture 3½x3½. Those who do not like square pictures can very easily remedy the matter by cutting off that part of each print that is the least desirable, and as a rule most prints will be enhanced in value by this trimming. When one buys a camera that takes a smaller picture, the range will be found limited, and in many cases the negative will not be worth printing. The small camera has its uses, but it is a mistake to buy one expecting to make portraits as well as satisfactory landscapes and marine views.

After one has had a small camera for a year or so, and has not tired of it, his ambition will lead him to want something larger. Then the 5x7 camera will catch his eye, and he will wonder how he could have been so long satisfied with a little fellow. The possibilities of doing real portrait work will dawn upon him, and, too, he will see beauties in landscapes never perceived before. And he will find out that with the aid of a "kit," or a self-adjustable plate holder, he can still use 4x5 plates wherever the subject does not require the larger and more expensive size. After that comes the camera using a plate 6½x8½, to go beyond which is seldom advisable.

As to the particular make of camera most desirable, it is impossible to decide without knowing the characteristics of the would-be purchaser. One boy will be able to manipulate the most complica

simplest mechanism. Extra attachments to cameras are sometimes good and sometimes useless. One boy can use them and another cannot. So in making a choice it is well to keep this in mind and select one that can be worked without too great attention to minor details. All the cameras of the established houses are well made, and with fairly good lenses, so that the only point to be kept in mind is the mechanism, the size, the weight, and general appearance.

point to be kept in mind is the mechanism, the size, the weight, and general appearance.

No boy with a camera should be without a tripod. It is absolutely necessary in time pictures, and greatly aids even when taking snap shots; for it stands to reason that the steadler the camera is held while making an exposure, the less liability will there be to blurring. At any rate, only snap shots can be taken without a tripod, and with the larger sizes even this is almost impossible. A tripod is a little awkward to carry, to be sure, but it gives one the air of "meaning business," and well repays the trouble it involves.

As to "long focus." and "wide angle," and "tele-photo," and other lenses, attachments and things, it is well not to think too much about them at first. Some of the more important of these can be added later, if thought advisable, and the expense is not insurmountable. Just buy an ordinary all-round camera, and before it is worn out it will have paid for itself in enjoyment many times over.

Time pictures of crowds on a dark day will be more successful if taken with the very largest stop. With the crowd some distance from the camera, a second of time exposure will usually be ample strong developer to get contrast.

MAGNIFICENT CAMERA OUTFIT

AN OFFER THAT WILL APPEAL TO EVERY READER OF THE AMERICAN BOY

A PRIZE OF THE VALUE OF \$36

On June 1 next the camera and outfit shown in the accompanying pictures will become the property of the person who, during May, becomes a subscriber for one year to THE AMERICAN BOY, or sends us a renewal of his present subscription, or sends us some other person's subscription, and comes the nearest to telling the receipts of the Detroit Postoffice during the month of May, 1901.

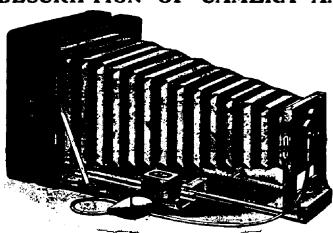

In order that boys may have some guide to help them in estimating the receipts of the Detroit Postoffice for the month of May, we give the receipts for this month in other years, as follows: May, '98, \$54,413.12; May, '99, \$61,771.49; May, '00, \$68,791.98.

EDUCATIONAL SCHEME

The guessing contests published from month to month in THE AMERICAN BOY are educational in their effect. The February contest drew the attention of readers to the weather records of the different parts of the country. The March contest drew attention to immigration statistics, and thousands of boys heard about and asked about the subject of immigration for the first time. The April contest drew attention to the enormous business of the great Chicago Postoffice. The contest for this month draws attention to the business of our own postoffice at Detroit. These contests are not contests of mere guessing, for the thoughtful, studious, inquiring boy will win. It is like offering a prize to the boy in school who spells down every other boy on words given haphazard. The boy who thinks, reads and inquires most will come the nearest to estimating the receipts of the Detroit Postoffice for May. It is a contest of skill in estimating, and not a mere guessing in the dark.

DESCRIPTION OF CAMERA AND OUTFIT

The Camera offered is a new Tele-Photo Poco D, made by the Rochester Camera and Supply Company of Rochester, N. Y., and will be shipped to the winner direct from the factory. It is complete, with shutter, lens, and dry-plate holder, taking a picture 4 x 5. The camera has an extra long draw, which is very desirable and advantageous in taking distant views. Having a reversible back, either horizontal or vertical views may be taken without altering position of the camera. The camera has rising front, fine rack and pinion focusing movement, combined view-finder and level, and Unicum shutter fitted with Symmetrical lens and sole-leather case. The regular price of this camera at the factory is \$30.

We furnish also an outfit, including dark room lantern, three fiber trays, one bottle developer, one Poco lamp, one printing frame and easel, one pound Hypo soda, one dozen printing paper, one negative rack, one tube M. Q. developer, one jar paste, one paste brush, one dozen card mounts, one book of directions one squeegee roller, one graduate; also a tripod, the articles named being valued at \$6.00.

The Value of the Entire Prize is About \$36

We have not been content to offer our readers a cheap camera, but have gone to one of the best camera concerns in the country, the Rochester Camera and Supply Company, for one of their best instruments and most complete outfits.

WHO ARE ENTITLED TO GUESS.

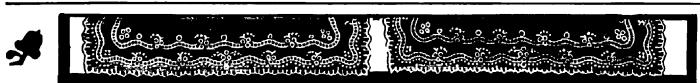

- 1.—Any one sending us his own annual subscription to THE AMERICAN BOY.
- 2.—Any one renewing his subscription, whether it has already expired or is to expire in the future.
- 3.—Any one sending us the subscription of another person, in which case both the person sending the subscription and the person subscribing are entitled to guesses.

When more than one dollar is sent, a guess is allowed for every dollar. Regular premiums, selected from our premium list, on the sending in of new subscriptions, are also given as heretofore. If there are any ties the contest will be decided by the drawing of alips from a hat, some prominent city official of Detroit, not identified with this paper, acting as referee. The name of the successful contestant will be published as soon as the Government record is made up-probably in the July number.

Any boy by hustling can get a good many guesses. He can renew his own subscription and get quite a number of new subscribers and for every one of the latter he will be entitled to a premium as well as a guess. When you send in your money send in your guess.

This is the finest scheme ever offered to boys, as it gives them not only something that would otherwise cost them thirty-six dollars, but it gives them something that will enable them to make any amount of money for themselves and gives them an opportunity for endless amusement and for learning photography.

For YOUNG WRITERS

"HOW TO WRITE,"

Published by The Sprague Publishing Company, for the Sprague Correspondence School of Journalism, is beyond question THE BEST PAPER IN AMERICA FOR YOUNG

As its name implies, "HOW TO WRITE" treats of the practical side of literary work. Its columns are field with short, instructive paragraphs of absorbing interest and great practical value to everyone who supines to the position of a successful writer. The paper is edite-by WILLIAM C. NPAGUE, the president of the sciolossisted by other instructors in the school.

This paper does not seek to occupy the field air-signorment by other publications: it has created a fiel of its own among thousands of persons who need a size direction and inspiration in their work. While not taking the place of a school, it calls itself "the little achoolmaster for literary workers." It will strive to reak kind and diligent instructor, and it asks your support-

The Law Student's Helper, published by The Sprague Publishing Company, the controlling owners of the Sprague Correspondence School of Law, is beyond question The Best Young Men's Paper in America.

accellen The Best Young Men's Paper in America.

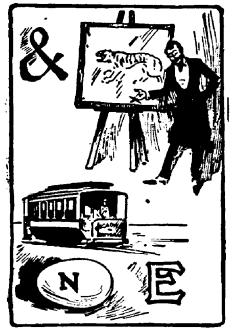

As its name implies, it treats largely of the law, but in such a way as to make it of the greatest value and greatest interest to men and women who are not studying law as well as to those who are, it averages forly pages to the month. It's editor is WILLIAM C. BPRAGUE, Pres. of Sprague Correspondence School of Law; asst, editor is GRIFFITH OGDEN ELLIS, Vice-Prin, of that school. It treats of all current events in the law and political world from the standpoint of the lawyer. It departments, "Questiess Answered and Bifficetities Met for Middents of Law," and "The Felf Examines," which gives questions from bar examinations, with their answers, have proved very valuable, while the miscellaneous matter is always unique and highly interesting. The rule of this paper is, once a subscriber always a subscriber. Its subscription list has grown to be the largest that can be claimed by any legal or semi-legal journal. We speak of this to show how it stands among those who know what good journalism is. It appeals to the young men who are in the busy walks of life, in that it treats of current events in a simple concise manner, and one does not have to read through pages of treat to free the semilar pages of treat of treats of current events in a simple concise manner, and one does not have to read through pages of treats of treats of the pound of the pound pages of treats of the pound of the pound pages of treats of the pound of the pound pages of treats of the pound of the pound pages of the page of the pound pages of the page of the pag it treats of current events in a simple concise manner, and one does not have to read through pages of treab to get at the substance of what he wants to know. It is to-day necessary to intelligent citizenship that one give attention to passing events and be able to view them from an intelligent standpoint. This paper supplies what no other paper gives, an opportunity for a brief, condensed, philosophic review of the world of law.

PRICE, \$100 A YEAR 10 Cents a Copy

YOUR COUNTRY WANTS

DVICE is cheap, and the boy deems it never more so than in June when, with diploma in hand, he steps down and out from school life into the world of action; and never is advice

so little in demand as just then, and perhaps that is the reason it is so cheap.

It frets the average boy who has gone to school faithfully up to the day of graduation, preparing as he thinks, to do battle with life, to be told that now that he is about to enter active life he needs advice. Then why all this schooling, why all this preparation, if, at the close of it all, he must be moralized over, and sermonized over and warned and advised by every Tom, Dick and Harry of an old fellow who himself, as a rule, shows very little evidence of having heeded his own warnings, followed his own advice, and practiced his own precepts?

It must look to the average young fellow as if we had very little confidence in our systems of education, if at the close of his school course he finds himself preached to like a child and made to learn by heart a lot of kindergarten "do's" and "dont's." His father tells him never to go into debt, and his rich uncle tells him that debt is a good thing to come to a young man; a friend tells him never to invest his money in life insurance, while another shows him where life insurance was a blessing of the rarest quality, and each cites pertinent instances that seem to close the argument. One man tells him not to marry until he can support a wife in comfort, and another tells him that a young man never begins to save till he marries and assumes the responsibility of a family. One man advises against secret societies; another, in their favor. One advises him against going into business on borrowed capital, and another, who did so and succeeded, urges the opposite

Thus, in a maelstrom of conflicting opinion, he enters upon life in just the mood to do as he pleases, and perhaps make failures and successes in about the same way as his father did before him.

Then, there is the stock advice of the graduating exercises, where the President of the School Board, in the presence of a proud and happy audience of the boy's friends and relatives, tells him to be honest, to be true, to be manly, to be loyal to duty and country, and the rest.

Yes, boys of America, you who stand this month on the threshold of active life, will do well to listen and heed these admonitions, threadbare as they are: and THE AMER-ICAN BOY would be, it believes, derelict in its duty if it did not add its | you-as an honest worker-as a competent worker-as a cheerful

voice to the volumes of advice-and it does so, kindly but earnestly. Graduates are told to have an aim in life, to set a goal and keep it in view, to allow neither friend nor foe, nor the allurements of pleasure or temporary advantage, to stay their efforts or turn their steps aside. They are admonished to keep in mind the vision of the youth in the Athenian races, who, stretching every muscle to win the laurel, keeps his eye ever on the goal.

THE AMERICAN BOY would emphasize this advice. If there is any one thing that Young America wants to learn at this time it is that his country wants him—and needs him; but it does not want him if he is incompetent, or indifferent, or not in earnest. It takes but a few years for the world to detect these faults in him, and as soon as they are discovered he is marked for a life of the commonplaceperhaps destined to fill the ranks of the discontented, the growlers and the pessimists, who spend their time prophesying evil and doing their best to bring it about.

Is there anything grander than the spectacle of the honest, industrious man, be he mechanic or lawyer, who, by attending faithfully to his own business has become an expert, never wanting in employment and honor? That man is the backbone of our national life—the hope of our country's future. Is there any spectacle so disgusting as the complaining, discontented, changeable man, be he mechanic or lawyer, who wastes his time and energy blaming others for his own misfortunes, who never becomes expert or competent in anything, and never has permanent employment and never gains permanent honor? These men are a menace to our personal and national safety.

These two classes of men are in every community. The great mass of ignorance, poverty and crime is among the men who have led changeable, fretful, impatient, lazy lives. Here is found the demagogue, the second-class politician, the street cor. ner loafer, the store box social reformer, and the blatant anarchist. Many college graduates are among them, for, to their shame, many colleges fail to teach the essentials of earnest, practical, successful living. Some of them graduate men, in whom they have planted the seeds of discontent, sending them out with glib tongues and cynical hearts to poison society and despise work.

Boys need to be taught that, in the words of President McKinley, work means wages, wages means contentment. Many have not content because they have no wages, and the greater part of those who have no wages are those who will not work,

or have refused to learn how to work.

Boys of America, learn above all things that this country wants

(Continued on Page 282.)

TIMMIE O'FLANIGAN

"Number 20"

Annah Robinson Watson

"Your name is Timmie O'Flanigan, isn't it?" asked the nurse who had paused beside one of the white cots

in the boys' convalescent ward of a great hospital.
"Yes'm, thets whut they calls me," replied the little fellow whose eager eyes were looking into hers.

"And what do you do when strong and able to run about?

"Well'm, I use ter he'p er street cleaner, but here lately I'se been gittin' up in the wurl er little. I's been er shinin' in the bes' sirclety, on Fifth avenue."

He moved his hand rapidly back and forth over the white coverlet and from this the nurse caught his

"Oh, you are a bootblack?"

"Yes, siree, thets hit; I'd jes stopped work, en wuz crossin' Broadway when, I dunno how, I got un'er er horse's foots, but I ain't knocked up ter hurt."

The nurse passed on to the next cot and Timmie was left to himself. He had only been brought to the hospital a few days before and everything was still new and strange to him.

He was now in a ward where twenty cots, ten on each side, stood against the walls. They were white and clean, and in every one was a boy who had received some kind of injury but was now almost well. They were so tenderly nursed and so generously fed that the place seemed almost like heaven to the poor little waifs

Over each cot hung a large white card. On the one just above Tim's head was written in black letters:

"TIMMIE O'FLANIGAN,

Number 20.

Broken leg, entered January 18th, 1900."

On the clean fresh shirt Tim wore was fastened a tag upon which was also seen "Number 20," for this was his hospital name, the children being known only by their numbers.

Tim was trying to spell the words on the cards hanging opposite. There was "Bill Fritzel, Number 9, broken arm," "Hans Battenberg, Number 10, fractured skull," and other similar records down the line.

In the cot next to Tim was a little Italian, the son of an organ grinder, and the two boys had been discussing the advantages of their respective callings, when interrupted by the "rounds" of the nurse.

"I'm goin' termorrer," resumed the Italian.

"Is yer glad?" asked Tim slowly, as if considering

the matter seriously.

'Well, not 'zactly; yer see, hits awful nice here."

"You bet," was the reply. "I'm goin' soon, too; doan' know but whut I'll git bruised up ergin jest er purpose ter come back."

"Spankings, 20. Equally distributed among patients."

It was now almost dark, the evening meal was served, the dishes cleared away, the night lamp lit and the boys expected to be quiet, but Tim was rest-

less and wriggled about in bed.
"You better keep still," said his friend. "She doan"

like thet."

"But I ain' been this still fur this long in all my life befo', en hits hard," replied Tim.

trying to touch the next cot.

'Can't do it," smiled the little Italian.

At this, as if a sudden thought possessed him, Tim jerked the pillow from under his head and threw it at his neighbor, with a burst of laughter.

The pillow went beyond the mark and struck the boy in the next cot, who, catching the infection of mischief as children do the measles or chicken pox, tossed it back again, then hobbled out of bed and called to the boy in the next cot, "Jine in! Jine in!"

In a moment all was merriment and confusion, every patient who could get out of bed was hobbling or crawling around, and some of those unable to follow the example were helped to the floor, while peals of laughter filled the ward and a general romp began.

The nurse came hurrying back from the dining room. She stood in utter amazement before the open door; such a sight had never before been witnessed in that hospital; then the situation quite overcame her gravity and she joined in the laugh, but called hastily: "Boys! boys! stop! get into your cots at hastily: "Boys! boys! stop! get into your cots at once. Nineteen, twenty, seven, eight, do you hear me! Get to bed at once, I say!"

Just at this moment the physician who was making his "rounds" came within hearing and hurried to the

"What is all this, Miss Johnston? It must cease immediately!" he said sternly.

'But I cannot stop it, doctor-at least not on the moment; the poor little chaps are feeling the effects of having enough to eat, perhaps for the first time in their lives, and of being warm and comfortable and clean. I'm glad to see that they are really children after all and can laugh."

"But discipline, discipline, my dear madam," replied the doctor solemnly. "This is disgraceful."

Miss Johnston waved her hand imploringly towards the cots and cast an appealing glance at the children. but neither had any effect and she turned towards the doctor.

"You will have to—to—spank them—my dear madam-spank them." he said grimly.

'Spank twenty children, one after the other? Why, doctor, I couldn't; I would need help! I never did such a thing in my life!"

"Probably not," he replied, walking out of the room in dignified silence. At the door he paused before the table where the tablet lay waiting to receive his to sleep.' orders for the night. He wrote in a quick, nervous hand then passed on without another word. The doctor had no children of his own but he had memories, and doubtless they had something to do with the order.

Miss Johnston came out as he departed and saw on the tablet:

"SPANKING, 20. EQUALLY DISTRIBUTED AMONG PATIENTS."

"Twenty spankings!" she gasped; "twenty spankings!" but there was no help for it. Miss Johnston was conscientious and could not disobey the order left by the doctor. She stopped a moment to think, while the boys, with a sudden suspicion of danger, hurried into place, each to his own cot.

Like a good nurse, Miss Johnston had observed her patients closely; she knew them all quite well and felt sure where the mischief began; that it was nervous, restless, impulsive Timmie O'Flanigan who started it, so she walked gravely to his side and turned down the sheet under which the little figure began to wriggle.

"Stop resisting, twenty, stop resisting!" she said, and in a few moments an old-fashioned chastisement, such as the doctor remembered, had been judiciously administered to Timmle O'Flanigan. He gave a shrill squeal, then another, and she passed on to "19," then to the next, varying the severity of the punishment with the nicest sense of justice, until, as she said, the boys were "well dressed" for the night.

Most of them soon fell asleep but Tim lay awake. He was restless and excited. He pushed back the she returned to the boys' ward. covers and lay with wide open eyes gazing about the room. Miss Johnston sat only a short distance away, just where the dim light of the night lamp rested full upon her face. Tim fell to watching her. It had been a hard day for the kind-hearted nurse, though he did not know it, and the unusual experience of the last hour had added to the weariness already burdening

"Looks sorry," said Tim to himself; "mose wush I hedn't er done it. She's been awith good ter me. Then he lay still a long time gazing at her, his poor little starved heart reaching out with a strange new sense of repentance and tenderness.

The nurse left her seat, passed down the ward, then back again and near Tim's cot, saw his bright, wideopen eyes gazing eagerly toward her, and paused.

"What is it?" she enquired kindly, coming nearer; 'what is it?"

"You ain't mad at me?" he asked nervously.

"Why, my poor child, no; what do you mean?" And she drew a chair close and sat down.

"Well, I done hit; I pitched my piller at him," jerking his thumb toward his next neighbor. "'T wuz er lot er trouble ter whup us all; 't wuz er big job; I's sorry I done hit."

"Well, if you're sorry, it's all right; don't think among patients."

"He reached his hand out from under the covers, about it any more, just go to sleep," and she smoothed the coverlet and tucked it in gently.

"Hes you got any boys uv yer very own?" he asked earnestly.

"No," she replied. "I had a little brother once but he went away a long time ago."

A tear gleamed in her eye and with quick sympathy Tim asked, "Ain't he comin' back?"

No, he isn't coming back," she replied softly. The poor little waif had touched a concealed door

"I'm goin' erway frum here soon, ain t Iy"

in her heart, and she took his hand saying again, "Go

But these ministrations were a new delight to Tim and he persisted with a wistful look on his face:

'I'm goin' erway frum here soon, ain't 1? "Yes, I think so; are you glad?"

"I ain't got no place in pertic'ler ter go ter," he answered slowly, "en I ain't got nobody pertic'ler whut'l be glad ter see me. Ef you ain't got no boy uv yer own I could guv myself ter yer-I'd be sho 'nough good."

There was a quiver in her voice as she replied, "Give yourself to me; why that's kind, but I wouldn't know what to do with you." Then, seeing the sudden tears rise, she added quickly, "Oh, well, I'll think about it. go to sleep. I'll think about it in the morning and see if I could take you.'

The nurse went back to her place near the lamp. the eager little face of the child still before her. place to go!" She could not banish his words from her mind nor the sound of the stifled sob in his voice. Poor little wayfarer," she thought; "sent back to the great wide world, lost in the crowds of Broadway, or the Bowery, to be again trampled under the horses' feet, or, worse still, drowned in the depths of sin and misery. To save even this one little soul would be a noble life work, and during the hours of vigil she asked herself again and again how could it be done. Then her thoughts went back to other days, to the little invalid brother who had gone away so long ago. and whose life had been so bound up with her own as to be its guiding influence even yet.

At last the hours of watching passed; she went off duty, and it was late in the following morning when

She saw that Tim was watching for her eagerly, and

that he, too, had been thinking. He looked wan and nervous as his eyes turned towards her full of enquiry. "Is yer goin' ter do it?" he asked quickly. "Is yer goin' ter take me? I's been dreamin' 'bout it all night.'

Yes, Tim," she answered gravely. "I'm going to take you. I've been dreaming about it, too, but we will not be together all the time."

A light as of a new world broke over the face of the little waif and was reflected upon her own; then the nurse passed on.

When the time came for Tim to leave the hospital Miss Johnston had a half-day off and the two left together. Tim was dressed in a new suit of clothes and looked quite a new boy. They crossed on the great ferry, took the train and went through many beautiful places before reaching the station where they stopped. Here they took a cart which was waiting and rode to a farm where Miss Johnston's mother lived.

Now at last Tim had a home of his own and he was surely the happiest boy in the State of New York. He always said he would have been a vagabond to the end of his life but for the prescription of the grim old doctor: "Spankings, twenty, equally distributed

MAM'SELLE LA BELLE

ANELIA WOFFORD

At nine o'clock of this clear, shining May morning, as usual Old Higgins and Annette were walking down Main street; and as usual Old Higgins was beery and mirty, and Annette fluffy, white and daintily clean as my lady's powder puff. They passed unnoticed till they reached B. & D.'s fashionable dry goods store, where a glad clamor of children's voices from a carriage at the curb greeted them.

Look! See, mamma, there is the pretty little trick dog. May we see her act? Let us call her here.

Nothing so pleased Old Higgins as notice of his pet, and, radiant, with an uncertain hand at his frayed, greasy hat brim, he advanced to the carriage.

The children would like to see your little dog act." said the mother, pleasantly. "You haven't made up your mind yet to let us have her?"

'No, mam; no, mam; she's sweetheart, daughter, and wife to me. But she's always willin' to accommodate the ladies, speshully the pretty ones. Come, Annette, and show the lady and little ones how the young lady says 'no' to her beau—that's one of her new tricks.

A crowd quickly gathered, and conspicuous in it was a man, dark of face and seedy and gaudy of dress, who pushed himself, aggressively forward. Annette's repertoire was exhausted, and the carriage was turning away, this man placed a hand on Old Higgins' shoulder.

"How will five dollars strike you for that dog?" he whispered eagerly.

Won't strike at all," Old Higgins answered, con-

"Come, think a minute."

"Fifteen? Come, think a "I'm a-thinkin', and fifteen

won't do it either.' "Twenty, then."

snapped the man. "Stop, think a minute. Twenty dollars ain't picked up on the street every day for just a dog.

Old Higgins stopped short and indignantly faced his persecutor. for so he counted him.

> dog?" "She's more human than half the folks that walk on two feet. No! five, ten, twenty fifteen. thousand dollars

can't buy her. Go," and he shook off the man's detaining hand.

Old Higgins had one very sad fault, an insatiable fondness for beer, and to-day the children's liberality enabled him to gratify it bountifully. He never committed the rash indiscretion of sleeping on the street, and when the last penny had been spent he betook himself to his customary sleeping place, a thread of an alley back of a deserted building. There he laid himself down to heavy slumber, with little Annette keeping an alert watch beside him.

He had not slept long when the dark-visaged man of the morning came gliding softly into the alley. Instinct with distrust Annette barked sharply, and fawned and leaped upon her prostrate master; but vain were her calls for help. Old Higgins slept on. One quick swoop of the man's long arm brought her into his grasp, one cruel twist of the slender silver collar reduced her to cowering submission, and with his prize upon his arm, the man stole away as swiftly and noiselessly as he had come.

Old Higgins' slumbers were in proportion to his tipplings. When he awoke the slip of sky was still above him, but not so brightly blue. It was past six licking tongue and toyful barks had always greeted touch, and he looked about him in fuddled inquiry.

"Annette, Annette," he called huskily. "Come. come, my girl. None of your tricks now. come," coaxingly, "I see you."

But no bounding form, no glad yelps answered his Astonished, he sat up, turning stupidly here and there, calling, whistling, but still no Annette.

Old Higgins scrambled awkwardly to his feet, and huffled down the alley, calling, whistling, coaxing. stopping to look back, then down at his feet, turning round and round in his search. Then up and down his arms dropped limp, and he stared before him with

his dead sleep and brought a horrible dream of her theft by the dark-visaged man, and now that face and dream thrust themselves together into his memory. "She's stole," he said hoarsely. "I never dreamt that. He followed me an' stole her."

To the police station he went, and to the first bluecoat he met he made his maudlin, pathetic plaint. But a tearful old vagrant and a lost dog were of no moment to this policeman, and Old Higgins was dismissed with the empty promise that the Chief would be told; that a sharp lookout would be kept for the dog and the thief; and that in the meantime he, too. must keep his eye skinned.

Unneeded advice! Up and down the streets Old Higgins shambled unceasingly, hoping, searching always. In secluded nooks and alleyways he would stand by the hour, trembling with delicious expectancy of seeing her pass; and in that moment of recovery he always pictured himself flying out upon that hated man, and wreaking upon him his just wrath. Every gamin he met had the promise of marvelous fortune if he should find the dog.

In this dreary, sickening search the long, pitiless winter passed, and spring came fresh and blooming. One morning in this sweet promising time as Old Higgins was wandering about, looking, hoping against a dread certainty, a boy thrust an advertisement into his hand. Mechanically he opened it: in the center, staring up at him, was the dark face of Annette's abductor. A glance at the bold black headlines told him that "Professor Mead's Troupe of Educated Dogs, The Wonders of the World," would give their first performance that afternoon at Twelfth and L streets. Clutching the bill fast in his hand he presented himself at the police station, eager, trembling, wild with excitement. "That's him," he said. pointing a shaking, grimy finger at the pictured face. "He stole my dog. Send a cop with me, an' I'll point him out. He's got my dog."

Oft hearing of that woful tale had not yet convinced the officer of Annette's importance, and again

he resorted to subterfuge.

"You might be mistaken in your man, an' if, and Old Higgins' call for help was answered. said. you were there'd be no end of a row, the newspapers jumpin' on to the force and all that. Now, you go out to the circus yourself, don't raise any trouble till you're sure you've spotted your man and dog, then holler, and the officer there will help you out.'

Old Higgins waited for no more. To the grounds he went, and all the morning he hung around, hoping for a glimpse of Annette. Fortunately his dusty pockets yielded sufficient money for the admission fee. His was the first ticket that was bought, and he was the first that passed under the tent. Close to "Dog?" Do you the ring he seated himself, every nerve taut, his face call her jist a quivering with excitement and emotion, his eyes now he asked melting into tears, now aftre with anger, now bright with expectancy.

He had no eyes for the lithe greyhounds whose coursing won rounds of enthusiastic applause. The coaching party of monkeys and dogs might have been i a funeral train, for all the laughter their drolleries drew from him. He had but one thought-Annette! Annette!

At last the ring master, he of the remembered face, o'clock, and homeward bound pedestrians made a announced that Mam'selle La Belle, the canine marsteady stream past the mouth of his alley. Annette's vel of the century, would now appear in her varied acts. Old Higgins gripped his hands hard and his waking, but now there was neither sound nor at the entrance; he was sure that Mam'selle La Belle was Annette.

"There she comes," a boy at his side exclaimed ecstatically. Old Higgins dashed his hand across his eyes; he could not see, his brain was in such a tumult. Now he made out a small figure in a trained pink silk, with a tiny pink parasol above its head-Annette! but Annette, thin and shrinking, with big frightened eyes that never left her new master's face.

Old Higgins struggled to his feet. "Annette! Annette!" he sobbed.

At the sobbing cry the curly white head was turned. the street he looked, calling, whistling. All at once the ears alert. The pink parasol was dropped, and with quick, glad barks the little pink robed figure

Second states of the pression —and up into her old master's arms she leaped, whimpering, barking, licking the tear-wet face, quiv-

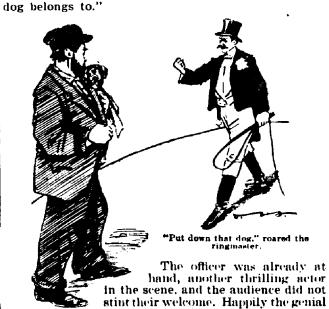

ering, sobbing, like a joy-mad human thing.
"Put down that dog," roared the ring master, strid-

ing forward, his dark face black with rage.
"She's mine. Stand off," roared back Old Higgins.
"You stole her, you thief! Don't touch me."

"He is one of the circus men. They always have a clown in the crowd," a woman whispered to her com-The whole audience interpreted this stirring realism to be an extraordinary bit of good acting, and gave it their generous applause.

"Call the police," blustered the ring master, not daring to approach the flery old man.

Yes, call him." jeered Old Higgins. "That's jist what I want. Bring him in an' let him tell who this

vagabond and his dog, as well as the "I don't know that we could send a man out." he story of her theft, were well known to the officer,

"This man is all right," the officer said, laying a friendly hand on the shaking shoulder; "and this is his dog. You let him alone."

The ring master gave way before the assured tone of the officer, but swagger he must to maintain his

"I bought her square," he said. "I can prove it, and I'll have him prosecuted for stealing my property."
"Do it," Old Higgins urged scoffingly. "That's jis That's jist

what I want. I'll be at the police court to-morrow.' Under the policeman's escort, amid a storm of appreclative encores, Old Higgins went out. The next morning he and Annette were at the police court. Annette, confident and happy as of yore, and old Higgins radiant, eager to prove his right. But the darkfaced man did not appear. In the night like the Arabs, and a wise man when tarrying is dangerous and flight is easy, he folded his tent and stole away for other and safer parts.

SOME THINGS THAT ARE NOT SO.

Cayenne pepper doesn't come from a pepper plant. nor Burgundy pitch from Burgundy. Jerusalem artichokes do not come from Jerusalem, nor turkeys from Turkey. Camel's hair brushes are made from the tail of the squirrel. German silver is not silver, and it was invented in China. Cork legs are not made of cork; neither do they come from Cork, Ireland. Prussian blue does not come from Prussia. Irish stew is not an Irish but an English dish. Cleopatra's Needle was set up a thousand years before that lady was born. Shamoy leather is not the hide of a chamois, but the flesh side of sheepskins.

CAPTAIN JACK BRIER'S TRIUMPH

FRANK B. TRACY

T WAS the night before the great baseball match, and Captain Brier, of Lonsdale Academy, was wide awake. Sleepless nights before and after an important match are not unusual to excitable and spirited boys. Their very earnestness spoils their rest, and what little sleep they may get is crowded with dreams of strife. But it was an extraordinary occasion which made Jack Brier roll from side to side that nightsomething beyond the mere suspense and anxiety over the result of the game. An acute problem had forced itself upon the young athlete and he was trying to solve it fairly and honorably. Right fought on one side and love of victory on the other; these two forces hope-lessly clashed and the battle caused Brier to toss and groan as he thought and thought.

The game on the morrow was to be the final match of the year between the teams of the two rival educational institutions, Lonsdale Academy and Greenfield Institute, situated in thriving western villages on opposite shores of a great lake. Two games had been played, each team winning at home, and the deciding game was to be played in the city of Tecumseh, neutral ground. The Lonsdale boys were hopeful and even confident of victory, practicing every pleasant day and using the gymnasium for exercise when it rained. The team was in excellent condition, working together as one man. But their hopes were rudely shattered when in an exciting game with the "scrubs' three days before the great match, Williams, the 'crack" pitcher, turned his ankle. Then panic seized the Academy and all sorts of schemes were suggested, from postponing the game to hiring a pitcher from Chicago. None of the substitute pitchers could stand more than three innings, and there was no time to develop a new one. Confidence had gone with the loss of Williams, and Brier felt that if the Greenfielders happened to make a few hits in the first inning his men would lose their heads and suffer a humiliating defeat. But there seemed no option in the matter and Brier was left to try the substitutes and hope for luck.

That evening had brought to Brier the exhibarating tones of hope. Oliver Reynolds, a leading member of the Athletic Association and President of the Senior class, suddenly burst into Brier's room, shouting breathlessly, "Have you heard the news? Harry Weldon is here and has agreed to pitch for us. He's in fine trim and we can just murder those Greenfielders with him in the box. Isn't it glorious? I guess we're having a share of the luck now."

With a whoop he was gone, leaving Jack almost overcome with joy. The captain leaped to his feet and was dancing a jig in high glee when suddenly the thought stopped and sobered him; "Isn't it against the terms of the agreement?" He turned heavily to his desk and drew out the well-thumbed paper. Soon his eye rested on a certain paragraph and he said

"Yes, here it says plainly, 'Every player must have been a regularly enrolled student at the beginning of the term'"; then he sank into a chair and buried his face in his hands.

> Harry Weldon was a famous pitcher, an alumnus of the Academy, a brother of one of Brier's classmates and a son of the resident trustee. It would be very easy to hide the facts. The initials of the brothers were the

same, and if a Greenfielder asked about the "new pitcher" the catalogue would be shown to him; and none of those his name on the score card." who would go from Lonsdale to attend the game would betray the team. What seemed almost to justify the deception was the suspicion, grown to without him." nearly an established fact.

paid by the Greenfielders. Indeed, it was hinted that the Greenfield faculty connived at the deception.

The temptation was very great. He was sure that if he had thought of it at the beginning of the season these articles would have contained a provision permitting members of the alumni to play on either of the teams. It was done in other schools. Harry was in reality "one of us," and there could be no comparison between his status and that of the Greenfield pitcher. Victory was very sweet, especially over a foe that had won its only game by fraud. How could he face his old chums if the team should be ter- fortunate situation more than ribly defeated when by doing a thing which was, to all you do, but it can't be helped.

and times, trying to devise some means of escape from the dilemma. From the outset he scorned the suggestion that he allow Weldon to pitch and throw the blame upon someone else. He hated a lie in any form. It was a miserable plight for the spirited, noble boy.

Suddenly a new thought seemed to come to him, for he leaped to his feet and began to walk rapidly and feverishly. Whatever the new idea was, it plainly involved many considerations for he often shook his head, mumbled sentences in an excited manner and several times stopped short as if some argument struck him forcibly. At length he turned to his bed and sighed aloud, "It seems the only thing left to do," and soon sank into a tired, broken sleep.

Next morning, after the practice, Captain Brier called the players into the club house. With a slight, tremor in his voice he began: "I have a very disagreeable matter to speak of. Nobody feels worse about the accident to Williams than I do and I am willing to do almost anything to fill his place. You have heard of Harry Weldon's coming and his kind offer to pitch for us to-day. Now, I don't want to be called a prig, but the agreement is squarely against such a case. It might have been provided for last spring, but it was not, and I doubt whether it would have been the right thing under any circumstances. How can we permit these rules to be violated, just to win one game? Boys, we've been fair and square so far. Let's keep up our record. We must remember that this is not the last year in which Greenfield and Lonsdale will play ball, and we must take care that our successors are not harassed by our work this year. Yes, I believe the Greenfielders are shamefully violating this rule, but we are not spying on them and will say nothing now. I know Harry seems one of us and it's hard to shut him out, but, boys, I've thought over the thing for hours and I can't see how we can let him play. He understands how I feel and will do what we say.

He took his seat amid deep silence. The boys sat looking at the floor and at one another. At length one of them said, "Well, who will pitch in place of

Brier's face crimsoned, and he replied hesitatingly: "That's the hardest part of the whole trouble for me. I-I have decided to try it. You see, every summer for several years I have pitched for our club at home, and I am in fairly good practice now getting ready for the summer. I've done no pitching since I came here because my work was not needed; but as I have taken the responsibility of declining Weldon's offer I shall try to fill his place. If I fail, Caldwell will be called in and if he succeeds, all the more glory will be his."

After a few moments of silence the catcher broke in cheerily: "Well, old man, if I'm going to catch you this afternoon, we ought to have some practice together." This little remark broke the ice and soon the players were gathered around the captain, endorsing his stand, but confessing that they had set their hearts on seeing Weldon "in the box."

The little town of Tecumseh was fairly overrun with students that day. They drove from Lonsdale and Greenfield in tallyhos, drags, coaches, omnibuses and all sorts of vehicles, while the trains were crowded and the roads filled with bicyclists. The carriages were allowed on the grounds, and it was a brilliant assembly which thronged the grand stand, stood behind the ropes and sat in the carriages, all decorated with old gold and blue ribbons, and making merry with school songs and yells. Both teams were given enthusiastic welcomes when they strode on the field for practice. Lonsdale came last and Brier placed Caldwell in his old place, left field, and was arranging signs with his catcher when Dan Creamer and Charley McJunkin, two of the most loyal of the team's supporters, pushed through the crowd and faced Brier.

"What does this mean, Jack," excitedly demanded Creamer; "isn't Weldon going to pitch or are you going to run him in after you get started? I don't see

Brier's heart sank within him; this was the sort of reproach that hurt him the worst. But he answered quietly: "No. Weldon is not going to take any part in the game. We found that it would be against the agreement and we've decided to do the best we can

"Oh, that's idiotic nonsense. Are you going to that the Greenfield pitcher humiliate us before this great crowd by was a semi-professional being whipped by these Greenfielders who who had never read a have run in a professional on us all season?

Then he sank into a chair and buried line of Latin and whose his face in his hands.

Then he sank into a chair and buried line of Latin and whose hoard and tuition was a fair play. Don't be a milksop board and tuition were and lose all your friends. Why, you Indeed, it was hinted that can't pitch against those fellows. We don't blame you for having a good opinion of yourself, but they'll knock you out in the first inning. Besides, a lot of us boys have some cash up and if you persist in this fool scheme, we are sure to lose.

Brier quickly but frankly replied: "There's no use being angry about this thing, boys. I regret my weakness and the unappearances, only technically wrong, he might have I'm sorry you've bet on the game

won? He rolled the matter over in his mind a thous- for its against the rules. But we are going to try to win and hope you will encourage us. That's all."

In a few moments the news that Weldon was not to pitch spread over the field and Brier was bitterly denounced by some of his best friends. Many ascribed his conscientious action to vanity and conceit, ex-

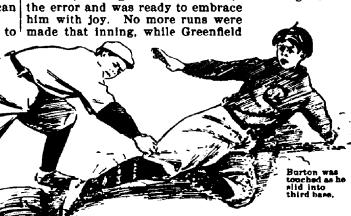

"What does this mean, Jack" excitedly demanded Creamer.

claiming: "He has just been waiting to get a good chance in the box. about ten minutes." Well, he'll get enough of it in

Greenfield won the toss and went into the field, while Lonsdale came to the bat. The first batsman was greeted with slight applause and struck out amid groans and shouts. No cheers for the second and third batsman who went out on weak hits.

Grim determination marked Brier's face as he stepped into the box and heard no friendly greeting. He thought to himself bitterly, "Is it possible that the whole school favors dishonesty and frowns on the man who stands up for the right, if by his stand he loses a point?" But the Lonsdale people were not so hostile as they seemed. Most of them were simply in despair and had not the heart to cheer. Brier faced Burton, his first batsman, with coolness and the first ball shot across the plate before Burton knew it had started. One strike was called by the umpire—and there were a few handclaps. The next one Burton struck at savagely, but it was a slow one and the spectators laughed derisively as the umpire cried, "Two strikes." But Burton was a good batter and the next two balls, wide of the plate, went by unnoticed. The fourth ball came directly over the base and Burton's bat met it squarely and drove it flercely into left field, where the substitute was. The ball bounded away from him and when it was returned to Brier, Burton had reached second base amid great applause. The next batsman went to first base on balls and several Lonsdalers left the grounds. "before the slaughter comes," they declared. But Brier showed his skill by retiring the next two batters easily. The fifth batsman sent a lucky hit just beyond the second baseman, which allowed Burton to score—and Greenfield's champions yelled with delight. Their joy was short for the lucky batsman was put out trying to steal second. The score now stood. Greenfield 1, Lonsdale 0.

Brier was the first batsman in the second inning He had an excellent record but luck seemed against him for his hard-hit fly went straight to the center fielder. The next two batsmen, however, sent out ringing base hits, and when Caldwell, the substitute who had made such a disastrous error, made a twobase hit, scoring the two on bases; Brier forgave him the error and was ready to embrace

made another one in her half. The score was now tied, two to two.

The crowd now began to realize that the match was to be no "walk away" for Green-

field, and as the third inning opened the excitement | was an exciting and menacing scene, but Brier conwas intense. It was nip and tuck until the sixth when, with two men on bases, Brier knocked the ball far over the right field fence, bringing in three runs and placing and motioning his players back said monotonous tones, "One strike," and the Lonsdalers with two men on bases, Brier knocked the ball far over the right field fence, bringing in three runs and placing and motioning his players back said monotonous tones, "One strike," and the Lonsdalers to the umpire, "Mr. Umpire, I believe you hand and cheered. Gibson was clearly needed and cheered and sharply to the umpire and solved first three runs and placing and motioning his players back said monotonous tones, "One strike," and the Lonsdalers with two men on bases, Brier knocked the ball far over the right field fence, bringing in three runs and placing and the said monotonous tones, "One strike," and the Lonsdalers with two men on bases, Brier knocked the ball far over the right field fence, bringing in three runs and placing and the said monotonous tones, "One strike," and the Lonsdalers with two men on bases, Brier knocked the ball far over the right field fence, bringing in three runs and placing and the said monotonous tones, "One strike," and the Lonsdalers with two men on bases, Brier knocked the ball far over the right field fence, bringing in three runs and placing and the said monotonous tones, "One strike," and the Lonsdalers with the said monotonous tones, "One strike," and the Lonsdalers with the said monotonous tones, "One strike," and the Lonsdalers with the said monotonous tones, "One strike," and the Lonsdalers with the said monotonous tones, "One strike," and the Lonsdalers with the said monotonous tones, "One strike," and the Lonsdalers with the said monotonous tones, "One strike," and the Lonsdalers with the said monotonous tones, "One strike," and the Lonsdalers with the said monotonous tones, "One strike," and the said monotonous tones, "One strike," and the said monotonous tones, "One strike," and the said monotonous tones, "One strik the right field fence, bringing in three runs and placing his team three ahead. Then the Lonsdalers, to whom disgust had given way to incredulity and incredulity to amazement and hope, forgot all their churlish suspicions and fears and screamed and the ever modest Brier. He simply felt that he would shouted in their delight. Grave professors slapped win. each other on the back, and Brier was compelled to doff his cap again and again before the crowd would be quiet. All Lonsdalers were now his sworn friends and denied ever having any other feeling.

No more runs were made until the ninth, when Lonsdale added another by hard hitting. Then came that nerve-testing, climacteric last half of the ninth on them. So it was that on that Tecumseh ball field, within five minutes after the inning opened, the scene had wholly and wonderfully changed. Now it was Greenfield which was shouting and Lonsdale which sat silent. By a combination of hits and errors two of the Greenfield team reached bases and were brought in by a rattling two-base hit from the pitcher. Brier was beginning to tire fast under the tremendous and unusual exertion, but he steadied down and the next

two men were retired on weak flies. Two men out, two runs in, one man on second, two runs to tie, three to win. The next batsman was Burton. Brier threw a ball wide of the plate, but Burton reached over and caught it on the end of his bat, sending it like a shot above the first baseman's head—the safest spot on the ball field. The man on base ran quickly home, while Burton dashed down the line, over first, on to second and turned toward third just as the right fielder, speeding as if with wings, came up and met the bail. A moment's fumble, just the least possible delay, and his arm swung true and Burton was touched as he slid into third base. Some one knows whether Burton reached the base before the ball touched him, but the Lonsdalers and the Greenfielders will continue to argue on that point for years. The umpire called, "Safe," and the Lonsdalers, who were just ready to pour out upon the field in the joy of triumph, cried out their anger and hissed and hooted the decision. The third baseman was terribly wrought up and the Greenfield players came running in to protest against being "robbed of the game." It

Then turning to the catcher, he coolly asked, "Simpson, how many runs do they need to win?" "Two," to the batsman," explained the umpire to Brier's inwas the reply. "Well, they won't get them," declared quiry. The next came squarely over the plate, but

The great crowd, just now so wrought up and torn with emotions which completely swayed their judgment, was as still as death when the players resumed their positions. Gibson, the Greenfield captain, now—this is the most critical moment in base ball. Both came to the bat. Although his club's best batsman, sides had now forgotten to cheer or hoot. No groups, he had done nothing as yet. "Now he's due for a as usual at the closing part of a game, stood by the hit," cried the coacher and all eyes were on Brier, exits, waiting for the last out. Every man was rooted in which many games are won and lost. The advanteveryone was saying under his breath, "A hit will tage is with the batsmen, for the fielders must await tie and a home run will win." The first ball came

Gibson swung at it fiercely.

rific force. The ball shot out toward the fence, but the Greenfield yells were suddenly hushed when it fell many feet foul-and Lonsdale gave a sigh of relief. The next ball curved quickly before it reached

Gibson and as he dodged it, the umpire called out in quiry. The next came squarely over the plate, but Gibson expected it to curve, and "Two strikes" were called amid great Lonsdale cheers. Gibson shouted angrily at the umpire and pounded the plate with his bat. The next ball was too high.

Three balls, two strikes, two men out, ninth inning to his seat. Brier poised himself carefully and threw the ball with utmost speed. Gibson swung at it what the batsmen will do and the strain is very great swift and true and Gibson's bat struck it with ter- fiercely, missed it and it shot in toward him and landed in Simpson's mitt-just a moment; but its speed and twist were so great that the ball wriggled out of the catcher's hands and rolled away while Gibson sped for first and Burton came thundering in with the score to tie the game. Simpson sprang after the ball and clutching it eagerly threw it with his might to first. His aim was true, the ball was held before Gibson could reach the spot and the game was over. The score:

Lonsdale Academy...... 0 2 0 1 0 3 0 0 1—7 Greenfield Institute..... 1 1 1 0 0 0 0 0 3—6

Why tell of the mad rush by Lonsdale to Brier's side, how they carried him off the field on their shoulders, of the speech he was compelled to make that night from the broad granite steps of old Lonsdale while the Principal cheered his sentences like a Freshman? The one thing in that speech which will ever remain in the school's traditions was Brier's closing words:

"I believe it always pays to be honest—and being honest doesn't mean being a milksop. We won this game fairly, but I would rather have lost it than won it dishonestly. Our greatest victory to-day was not in winning the game, but in trying to win it by fair methods. That's what makes this night so sweet to me."

That night as he lay sleeping in his dormitory his room-mate heard him mutter in his dreams:

"Well, I tell you, it was a good thing for us that we got that run in the ninth.

********************* PHIL KEARNY'S BUGLER

THE ROMANTIC STORY OF GUS SCHURMAN'S EVOLUTION FROM A BOOTBLACK TO BEING AN ADOPTED CHILD OF PRESIDENT LINCOLN.

He Was the Youngest Enlisted Soldier of the Union Army and Has Many Interesting Stories to Tell of His Life as General Kearny's Orderly and an Enchanted Expertence as Ted Lincoin's Playmete in the White House.

ALLEN SANGREE

Ž*********************

The pride of the First Division, Third Army Corps, was a drummer boy, named Gus Schurman. He is Union Army alive today. Wherever veterans of the Fortieth braves, bore an important part, until famous Red Diamond Patch foregather, this boy—now the northerners' retreat turned into mad flight. a thoughtful, gray haired man of 50—is met

with a wondrous cheering and accorded the seat of honor.

The story of Gus Schurman's evolution from a New York bootblack, to adopted child of the Lincoln family in the White House, is a bewitching gem of war narrative, the more interesting because of its historic accuracy. It is vouched for by documents in Mr. Schurman's possession, by the testimony of the surviving members of the Fortieth New York Regiment and by that of well-known veterans, such as Gen. Daniel E. Sickles who visited the White House at the period in question and were instrumental in having the drummer boy sent there. Mr. Schurman is now employed at the Customs House in New York and is prominent in Grand Army affairs.

In the early part of '61 Gus Schurman was drumming recruits in Chatham Square, to which honor he had arrived after vigorous training for two years at the Turn Verein Hall in Orchard street. His family being poor, Gus had left school and began to earn his living by working in a saw mill on Center street, the boss there being Mr. Block, now proprietor of the Congressional Hotel at Washington. When work was slack Gus took his station at City Hall Park with box and brush and competed with the bootblack brigade at three cents a shine. In the Turn Verein Hall he learned to drum so well that when war broke out he was taken into the Forty-second New York (Tammany Regiment). Being ill treated there he applied to the Fortieth, of

which his father was a member, and over which Mr. Gilder, father of Richard Watson Gilder, was chaplain. "Couldn't think of it," said Col. Riley, "you're too

young!" Schurman was only eleven then. When the colonel said "no," he relates, "I began to cry and turned away from the tent; but my father went and spoke to Col. Riley when he called me back and made me take a drum. All the men began to laugh because the drum was nearly as big as myself, but nevertheless the colonel said I would do, and I guess in all the world, at that moment, there was no one as happy as I."

The Fortieth, known as Mozart, left Yonkers for Washington on July 4. Though they did not get to Bull Run, they witnessed the retreat, and through the battles at Seven Pines, Malvern Hill and all the skirbelieved to be the youngest enlisted soldier of the mishes of that disastrous peninsular campaign, the Fortieth braves, bore an important part, until finally knew no such other one of reckless valor and indomit-

TAD LINCOLN AND GUS SCHURMAN.

FIGHTING PHIL'S BOY ORDERLY.

Schurman's chance to distinguish himself came sooner than he expected, however, and in a most unusual way. It was at Harrison's Landing, and Gen. McClellan had set a day to review the army. Gen. Phil Kearny, commanding the First Division, called for a drummer boy to act as his orderly for the occasion, and Corporal Brown, staff cierk, picked out 'Gus." This in itself was an honor, for Fighting Phil Kearny was the idol of the army. Mounted on his powerful gray charger "Moscow," seated firm as a Centaur, holding the reins on the stump of his right arm (a memento of the Mexican war), this true type of chivalric hero carried everything before him in a charge and inspired his troops with irresistible enthusiasm. He was one of whom it was truly said: "He would rather fight than eat," and the Union Army able aggression. So strong, that at Florence, Italy,

he danced through a masque ball clad in eighty pounds of chain armor, he knew no pity for himself physically and had little sympathy for signs of weakness in others.

This was the man to whom the twelve year old drummer boy presented himself and received in turn a kindly word, silver bugle and an immense white horse called "Babe," over whose back the lad could scarcely stretch his legs. His previous riding practice had been derived from taking the sutler's horse to water.

STORIES OF GEN. KEARNY.

In the course of the day's maneuvres the staff galloped over a rough field broken by an ugly ravine. Gen. Kearny, being a superb horseman, took this with a mighty bound and looked around to see if his aides were following. Dismayed at the jump, they had all skirted about the ends, all but one. Mounted on the white horse "Babe." a stable mate to Kearny's own horse, the mite of a drummer boy might as well have tugged at a railroad train. On and on the great charger came, ears back, nostrils all wide and eyes like coals of fire, to the edge of the precipice and there rose on her powerful haunches and shot into the air as though to leave earth forever, landing the new orderly pale and almost senseless.

"I slid clear up on Babe's neck," relates Mr. Schurman, "and holding on to one of the charger's ears with a grip that I did not loosen until Gen. Kearny looked at me and smiled grimly. I guess he knew that I would have given half my life to have

stopped that brute on the other side, but he said | that had formerly been ridden by Gen. Mosby, the | nothing, only when the others rode up, the hairs of his mustache stiffened like the bristles on a cat's tail, which was peculiar to him when angered or disgusted.

"In the evening I reported myself to him so as to return to my regiment, but he said brusquely: 'Go and bring your baggage to my headquarters and consider yourself my orderly in the future.' The jump on Babe seemed to have made me popular with him and from that day to the day of his death I was ever by his side. My task was not an easy one. In battle, Gen. Kearny used my back for a writing desk, scribbling off dispatches and cursing me roundly if I trembled. At the second battle of Bull Run he was writing orders on his knees, I steadying them the while. Minie balls and shells fell all around us and finally a piece of railroad iron, aimed directly at the general, struck right at his feet and threw the dirt in our faces. It made me shake in my boots, but not nearly so much as when he turned and demanded savagely what was the matter. 'Oh, nothing, sir,' I replied, with a gasp, 'only a little frightened, that's all.'

"'Never get frightened—never get frightened at any-thing,' he growled, as the bristles in his mustache began to rise heavenward."

The tragic death of Fighting Phil at Chantilly was felt by no one more than "Kearny's Little Bugler, he was now known throughout the division and the men made more of a pet of him than ever. The cook of a Maine regiment, camped nearby, felt it his religlous duty to feed the lad pancakes every evening for supper and see that his knapsack was ever bloated with crullers. "Many a poor wounded chap," says Mr. Schurman, "I have cheered up with Maine crullers."

MEETING THE LINCOLNS.

Kearny's little bugler served in succession for Generals Stillman, Birny, Stoneman and Sickles. He was present at Gettysburg when the latter lost his leg from a solid shot and it was while with Gen. Sickles at Bell Plains that he fell in with the Lincolns. The President, Mrs. Lincoln and Tad, then ten years old, came down to pay the commanding general a visit, and

noticed the young orderly strolling about headquarters. "Who is that child?" asked Mrs. Lincoln of Gen. H. E. Tremaine, chief of staff. "Oh, that's Gus Kearny's bugler boy," replied the officer, who, at Mrs. Lincoln's request, presented the lad.

Don't you think it's a shame to have such children In the army, Mr. President?" asked Mrs. Lincoln, with some feeling, but Gen. Sickles interposed. "Why, that boy is a great fighter," he laughed, telling of an incident when the bugler had been nearly shot down by a Union soldier, while aiding Gen. Stillman to rally a Pennsylvania regiment at Antietam. "He was Phil Kearny's boy. You know what that means!'

At that moment Tad Lincoln ran up and the two youngsters were soon chumming it boylike, calling each other "Gus" and "Tad." "As I look back now," says Mr. Schurman, "I can see that I must have been a subject of envy to Tad, for by that time I had become an accomplished horseman, could blow a bugle, beat a drum and swagger in true soldier style. The men had presented me with a roan mustang called Pompey,

guerilla, and on this I cavorted around until Tad could to West Point. I have set my heart on it. But as i stand it no longer and persuaded a cavalryman to lend | have no position or influence, I see no way of realizing him his mount for a ride. The horse had a sore mouth, however, and in a few moments was galloping wildly with Tad bouncing around on its back. When on the point of being thrown I overtook the runaway and saved Tad from a fall. When we returned, he told his mother of it, and she said to Gen. Sickles: "Now you must let him come," and Mr. Lincoln added, "Yes. general, we ask it as a favor."

AT THE WHITE HOUSE.

"My first night in the White House I shall never forget. We kept up our racket until Mrs. Lincoln called us and said that Mr. Lincoln was tired and wanted to rest. As she opened the door of the bed chamber where the President, Mrs. Lincoln and Tad slept, I saw the great gaunt head of "Abe" Lincoln peeking out from a long white night cap. The President was lying on his back, his hands crossed over his breast, and the picture made an impression on my mind that can never be erased.

'Tad slept in a crib alongside his parents' bed, and after he and I had 'tagged' each other good night, Mrs. Lincoln showed me into the guest chamber. The contrast of this splendor with my humble lodgings of the last year, when I had slept for the most part on the soft side of a hard board 'neath a water soaked tent, was so overwhelming that even now the thought of that guest chamber awes me."

THE PRESIDENT'S MILD TEMPER.

Tad was a generous, sweet tempered but inventive youngster. At times his budding genius took a distinctive turn, particularly on a certain Sunday afternoon when the rain prevented going outdoors, and Tad killed time by hacking at various pieces of furniture and finally sawed the bannisters of the main stairway. When this was reported to President Lincoln, he did not even scold, but took the boys into his room and entertained them by displaying his swords.

I recall once when Mr. Seward, Mr. Stanton and a number of other gentlemen in uniform were discussing something of great importance with the President, and as we let out an exceptional vigorous "whoop," some one said, "Mr. Lincoln, don't those boys annoy you?" But he, with a kindly smile said, "Oh, never mind, it's

"At the public receptions we were usually frolicking about Mr. Lincoln's chair, and I remember stumbling against the Grand Duke Alexis, who was paying the President a state visit. Great personages, however, were of little consequence to me at that time. I was interested only in army doings and my one desire was of the hospitals. The audience consisted mostly of to become a West Pointer. So when a well dressed soldiers from a Pennsylvania Bucktail Regiment, who young man handed the President a letter one day and were guarding the capital building. The price of adsaid something about West Point, I was 'at attention.'

"I remember thinking it odd that after presenting a letter of introduction and shaking hands with the President, the stranger should say in humble tones: Your excellency, may I have the honor to address you?' Afterward I observed that Mr. Lincoln's bearing awed his most impulsive visitors. "What can I do for you?' he asked the other.

"'Mr. President,' said the young man, 'I want to go my ambition.'

"'I am very sorry, young man,' the President told him. 'Your ambition is commendable, but I cannot help you. Each congressman, you know, has the right to one appointee, but the senators have no such privilege. I appoint ten cadets each year, but I must first look after the sons of fallen generals and senators."

"This conversation caused a lump to rise in the young bugler's throat, for he saw his own ambitions dashed to the ground. He wept salt tears and could not conceal his disappointment from his playmate, so at dinner Tad asked his father if Gus was not to go to West Point. 'It is my intention to send him there.' replied Mr. Lincoln, 'as soon as he is old enough.' '

One of the most dramatic incidents in Gus Schurman's visit to the Lincolns was his meeting with Wilkes Booth, the man who was to afterwards murder President Lincoln. Both Mr. and Mrs. Lincoln were fund of the theater, and at the table with the two boys often discussed stage doings, for Tad and Gus were also well informed. Hardly a night passed that they did not attend a play and this was a great treat to the poor bootblack, whose theater experience had been confined to occasional attendance of Bowery melodrama.

'We were known at every play house," tells Mr. Schurman, "and only had to show our faces to be ushered to the best seats in the theater, a box, if any were vacant. During the performance the stage manager invariably asked us back of the scenes, and there I met from time to time the well known stage folk of the day. Among them I recall Lucille Weston and Susan Dennen. Many a time we sat in the identical box in which Mr. Lincoln met his death.

One night the play at the Washington Theater or Groves, I am not certain which, was a stirring drama called the "Marble Heart," in which a dark, handsome man with brilliant black eyes took the leading part. Spellbound with his acting, Tad and I looked up his name in the programme. 'I'd like to meet that man,' said Tad. 'He makes you thrill.' So after the second act we went back and were taken to Mr. Booth's dressing room. 'This is President Lincoln's son,' said the stage manager, and the actor gave us each a hand with a very sweet smile. He continued with his make up, asking us how we liked the play, and we telling him the parts we most admired. On leaving, he handed us each a rose from a bunch that had been presented him over the footlights."

Gus Schurman's life at the White House ended as abruptly as it began. With the aid of Mrs. Lincoln, the two boys arranged an entertainment for the benefit mission was ten cents. Just as Mr. Lincoln entered the room a mud stained courier arrived telling of Lee's advance north, and in a moment all was confusion Among the messages which now came in every few moments, was one from Gen. Sickles ordering his bugler to the front immediately, and before midnight struck, Gus Schurman once more back in regimentals,

was hurrying on to Gettysburg.

Lafe, the Simpleton A BICYCLE STORY

AFE OWNED a bicycle. We call it a bicycle, rather out of courtesy to Lafe than for any other reason.

Where he got the machine no one knew. Some said he stole it; some, that he had

bought it with a few hard earned dollars; some, that he had found it in iunk heap; but no one sunposed for a min-

him as to where he got it, but to their questions, all of which were asked in a spirit of ridicule, Lafe never gave an answer. All that was really known about it was that Lafe Lafferty appeared one day on the streets of Blissfield astride a machine that set the town laughing. He at first peddled along unmindful of this, apparently taking little notice of the taunts that from time to time became positively abusive. "Hello, Lafe, where did you get the ice wagon?" "Get on to that scow!" These and an hundred other mocking expressions followed the awkward, half-witted boy as he rode, or rather worked, his strange looking machine through the streets of Blissfield.

It was an old two-wheeled vehicle, one of those homemade ones of wood and iron that used to be seen before even the days of the big high wheels; it had two big, lumbering wheels of wood, between which was a seat not far above the level of the axles, compelling the rider to push forward rather than push up and down as in the modern machine. The amount of work required to propel it was tremendous, and the effort made to steer it was great, as every time a push was given with the right foot the front wheel swerved off to the left, and every time a push was given with the left foot the wheel swerved off to the right.

The first time Lafe Lafferty was seen riding the thing he was going to the pasture for the cows; this, and driving the cows back to pasture was Lafe's chiet occupation-indeed, his only occupation outside of caring for his wheel.

Every one in town knew Lafe, and every one made fun of him on general principles. It was a shame, too, for he was half-witted and harmless, and did what he was able to do faithfully and well, and that is more than some whole-witted people do. He just lived to drive those cows backwards and forwards, ute that he had and keep his wheel clean. You could set your watch by his movements mornings and nights, as he went

nothing any one had ever heard.

As he went by the homes of the village in the early morning many heard the whistle of the boy and knew it was time to get up; and at nightfall as they sat around the supper table and heard the well known whistle somebody invariably exclaimed, "There goes Lafe." Strangers or visitors in the town, who spent any time there, without exception asked about the strange acting fellow, and were told that he was a boy of uncertain age and parentage who had, for years, been doing the same work-driving the cows. Some said the boy was really an old man, but you couldn't tell from his silly face nor from his deformed shape. Most people added, "He don't amount to any- ingly takes care of the helpless was over and around

thing; he's a simpleton, and don't know anything beyond driving cows.'

So, no wonder that when Lafe Lafferty came rattling down the street on that clumsy old velocipede, his back humped up, his big, dirty boots shoving on the wooden pedals, his foolish face twitching and grinning, he frightened horses and set the town laughing; nor did either horses or men get over it for weeks indeed not until the date of our story.

Now Lafe had sensibilities; he had a certain degree of pride; his feelings could be hurt; and many were the times he had chased a crowd of boys for blocks for calling him names, mimicking his gait and his whistle, or poking fun at his wheel. No one knew what he suffered. Simpletons are not supposed to suffer; at least, there seemed to be no one in Blissfield who cared much whether this one suffered or not.

Finally, Lafe tired of the ceaseless ridicule and ap peared no more riding on the main streets of Blissfield. Still, the boy loved his old wheel. It had been the only companion that had entered into his life. It alone had never laughed at him, or taunted him, or poked the finger of scorn at him. It, at least, had been faithful to him; and many a time the poor, witless boy, as he took the wheel to his garret room and Lafe was a simpleton and no ever accused him of on his daily errands to and from the pasture, whist-making anything, excepting faces. Many questioned ling his one peculiar, silly tune, that sounded like wooden spokes and handle bar and talked to it as he had never dared talk to a human being, laughing and crying, and finally falling to sleep with his arms linked in its spokes.

Lafe was human if half-witted; and goaded by abuse of himself and his wheel, he loved to take it and ride far out into the country at night, where no unfriendly eye and voice could disturb his enjoymen'. Many a long conversation he held with his wooden friend along the country roads, with no one to hear but the moon and the stars.

One night early in June Lafe rode far out on the river road. The night was dark and riding was difficult and dangerous, but the Divinity that seemthe strange boy and his strange vehicle. He rode for miles past farm houses and their sleeping occu- windows and voices called to him; but he rushed ou, beneath him. Again and again he fell, but only to pants, whistling his one silly tune to the time set

by the rattle of the pedals. There must have been some heads turning restlessly on their pillows at the unusual "clank, clank, clank" of the straining wood, and the weird whistle which sometimes broke into a wild song.

Some six miles up the river was a great dam, which restrained the waters of a rather jurbulent stream. The boy often stayed out fill night, sleeping under the open sky. On this particular night he found a deserted cabin, or covered pen, on the shore just below the dam, into which he crawled for shelter just in time to escape a storm, of which he had been warned by frequent flashes of lightning and increasing thunder. Dragging his wheel in with him, he sat upon the floor of the rude structure and listened.

The storm was fast gathering. The light was blinding at times, and the very earth trembled. Then the rain came like a mighty flood. The roof leaked, and soon was torn from its fastenings and whirled away in the wind. The boy was drenched, as he huddled up in one corner, tucking under him as best he could his beloved velocipede. Soon water oozed up through the great cracks in the floor. Lafe peered out between the cracks in the wall just as a blinding flash lighted up the surface of the waters, the wooded hills beyond, and the angry sky. The stream was raging against its banks, and tossing on its surface like chips rode great timbers. Another flash revealed to the wild-eyed boy that the dam had broken.

A cloud burst! In that wild moment it flashed across the mind of the half-wit of Blissfield that lives were in danger in the homes on the river bank below. Grasping his wheel, he crept out of his hiding place into the storm. Another flash of lightning revealed to him the road by which he had come, and stumbling up the bank, dragging his heavy burden after him, he reached it; then, mounting, he rode, hatless, and soaked to the skin, to spread the alarm. Here and there a light from a farm house showed him that its occupants were already awake and alive to their danger. "Up! Up! The dam!

The dam!" he shouted, as he sped by. Black darkness followed each flash of lightning. He slipped and fell, then rose, bruised and bleeding, but still shouting.

crying only, "Up! Up! The dam! The dam!"

It was a wild ride—the ride of a madman, amid rain, and mud, and rocks, uphill and down, with no help save the blinding flashes from the sky and the

rise again with the same cry on his lips. Where no

lights appeared at windows, his call, now more the shrick of a fierce animal than the call of a human being, awakened every man and woman to a sense of their danger.

The rising flood had reached the road in its low places and Lafe must wade, carry his wheel, a heavy burden even for a strong boy, and heavier for one weakened from wounds and exertion. Here and there great stretches of the way were sheets of water. Then he took to the hills back of the road.

"Up! Up! The dam! The dam!" Those who now heard the voice from the homes along the way afterwards declared it sounded like a hollow moan from the very waters themselves.

At last he reached the outskirts of the village, which, already warned of its danger, was taking every measure for safety. Suddenly his head dropped, his arms became pulseless, his legs stuck powerless upon the heavy pedals, and with one last effort, crying, "Up! Up! The——," he dropped upon the road.

Two men with a lantern, hurrying along the outskirts of the town along the river road, not two feet from the edge of the oncoming flood, found at midnight a form, hardly distinguishable as that of a human being, lying, face up, with one hand clasping the bar of an old velocipede, its parts broken and scattered.

The next day the story was told that not a life was lost on the Blissfield river road, and that the strange apparition that flew crying down the way warning the farmers of their peril was the cow driver-Lafe, the simpleton.

That Lafe Lafferty was sick with a fever for long weeks; that he was tenderly nursed; that a fund was raised to give him the best of medical care; that employment and a home were given him by the town authorities; and that a handsome new model bicycle was bought and placed in his hands as the gift of appreciative men and women who lived along the Blissfield river, goes without saying.

And now no stranger or visitor in Blissfield long remains in ignorance of this story, and boys and girls no longer laugh at Lafe, the simpleton.

"GRANDPA'S FIRST ATTEMPT."

A King on His Knees.

King James II. one day lost some important papers. He hunted for them until at last he got into a great rage because he couldn't find them. Then he a long time in his service, and charged him with the loss. Gib (that was his name) said that he knew nothing of them. But the king grew very angry, and said: "Gib, remember I gave them to you to take care of; what have you done with them?" Gib fell on his knees and declared that he did not receive them. Then the king kicked him, as he kneeled at his feet. Gib rose and left the apartment, saying: "I have always been faithful to your majesty, and I have not deserved such treatment. I canot remain in your service. I shall never be you again!"

Not long after, the person to whom the service keeps yeh warm. not remain in your service. I shall never see you again!"

king had actually given the papers, returned them. The king was ashamed of his conduct, and sent some one after the old servant. Very reluctantly Gib came again into the royal presence; when the king got down on his knees before him, met an old Scotch servant, who had been and said that he would not rise until he forgave him. the matter, and begged his master to rise; but he would not, till assured that the insult was fully forgiven.

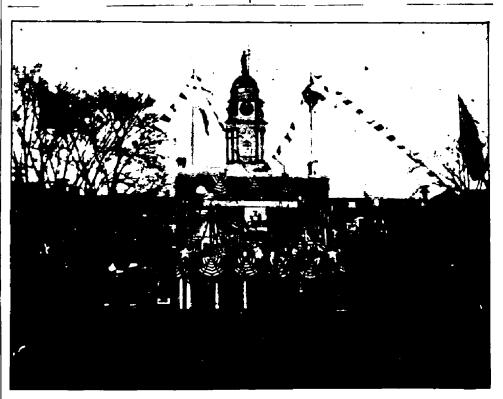

It is a maxim in a monarchy that "the It is pleasant king can do no wrong." to find one who, having done a wrong. was humble enough to confess it, and beg pardon, even of a servant.

Teacher—"Can any of you tell me why flannel is comfortable in winter?

Yankee Doodle in Europe.

John Quincy Adams once told how our National Air was introduced among Europeans. He and Henry Clay and three others were in Ghent, in Belgium, as commissioners of the United States, making a treaty with Great Britain at The bandmaster came to our band. commissioners and asked for our National Air. "It is 'Yankee Doodle,'-" said they. "Yankee Doodle? What is that? Where shall I find it? By whom was it composed? Can you furnish me with the

score?" Not much. They were at their wit's end. It was another kind of score they had come to settle. At last a happy thought came to them: Henry Clay had a colored boy with him for a servant, and, of course, he could whistle; and, of course, he knew "Yankee Doodle" by heart. So they sent for him and the the close of the war of 1812. There was problem was solved. The colored boy to be a big banquet, with the diplomatic whistled and the bandmaster jotted corps present, and the music of each nadown the air: "and before night," said tion represented was to be played by the Mr. Adams, "'Yankee Doodle' was set to so many parts that you would hardly have known it." And it came out the next day in all the pride and pomp and circumstance of a royal brass band, to the edification of the majesty and nobility of Europe.

Your Country Wants You

(Continued from front page.)

builder of your own fortune—as an optimistic philosopher, to spread content among your fellows.

You can only be what your country demands by attending to the business of making all possible out of yourself. Then make that your everlasting aim. If you do this, then under any system of government and amid any social conditions you will be safe; for the world must always want the competent man-the man who can do things better than can other men.

If you set out to be a lawyer, be a lawyer, and don't let the siren voice of politics, or speculation, or trade prevent your being the best lawyer in the community. No client is safe in the hands of a lawyer who locks his door and throws away the key at the mere suggestion of "office"; for politics and business were never successfully wedded.

If you set out to be a christian minister, preach Christ from the start to finish, and let others teach

the isms of the day, and leave to the theater and the with luxuriant manes and tails that swept the ground. rostrum the business of entertaining.

If you set out be a physician, heal the sick, and be not satisfied till day after day you have mastered and practiced the latest and best that science and discovery have attained, and this will keep you busy. Leave to others the work of the "quack."

If you set out to be a mechanic, be the best in your community, and be content with the honor and emolument this will surely bring.

Men who say there is no room for young men nowadays are deceivers. You will invariably find such men to be failures themselves-and men who under the very best of conditions would fail.

Providence sometimes throws obstacles in the path of young men, diverting their energies into strange channels; but, young man, be sure that the obstacles are the work of Providence. Generally they are not, for success in any field is a matter simply of overcoming obstacles.

There is no "bent" in one's disposition or talents that tends half so much to success as the back "bent" to the yoke of common, unremitting, contented work.

They were small but spirited looking animals. Most of them were quietly grazing, while others were capering about and playing like a company of school. boys.

For some minutes the four friends lay close in the grass on the edge of the mesa watching and admiring the beautiful sight, each boy choosing the pony that he would like to have and changing his mind as fast as his eye moved from one pretty fellow to another. Each boy was crazy to capture and own one of the animals. Uncle Bob was busy laying plans to get at least one to take the place of "Spareribs."

After a few minutes of whispered conversation, in which it was agreed that Frank should remain where he was with an eye on the baggage at the foot of the slope, and that the others should take the three horses and go for a chase, Mr. Sinclair and the two other boys ran quietly down from their hiding place and proceeded to unpack their horses, so as to leave them no encumbrance save their saddles, bridles and lassos, the boys wild with excitement and Mr. Sinclair keeping up a running fire of advice and suggestion to aid them in the chase.

CHAPTER XIX.

The boys had had some practice already in handling the lasso, but it was necessary for Mr. Sinclair to give them a little additional instruction, and particularly to warn them not to get in front of the drove after it was stampeded, as the danger of getting run over and trampled under foot was great.

When all was ready, the little company waved good-bye to Frank, and rode along the base of the slope in order to come up on the other side of the drove at a point where they could approach nearest to it without their presence being known. After riding a short distance Mr. Sinclair halted and dismounted, the boys following his example. They then led their ponies slowly up the hill, carefully picking their way that the crackle of sticks or the sound of noofs might not warn the wild horses of their approach.

When near the summit they mounted their horses again. Mr. Sinclair then directed the boys to take their lassos from the horns of their saddles, wind them about the left arm, and hold the noose in the right hand. These lassos were thongs of rawhide some fifteen yards in length, braided, and having a running noose fixed at the end.

When they had followed instructions and were ready for the start they gave the word to their ponies with a bound they reached the level together, not twenty yards away from the edge of the drove. Pausing not even for an instant, the three horsemen bounded forward, and at the same instant every horse's head in the drove was thrown in the air, and with snorting, rearing and plunging, the whole mass went galloping away. The riders spurred their horses to the utmost, driving directly after the flying host. Mr. Sinclair, after going an hundred feet. drove his pony to the right, hoping to outflank the flying drove and cause them to circle round, and thus keep them from running in the direction of Frank. whose hiding place was almost directly in line with the forward movement. Jack and Ned followed as best they could, and, when close upon the frightened animals, got ready to throw their lassos.

Ned singled out a black fellow of sturdy build that with flowing mane and tail made a pretty picture as on the very edge of the drove he plunged along. When almost abreast of his intended prize, the boy let fly his lasso, but the noose dropped on the back of the black horse and slid off to the ground. The time lost in gathering it in for another throw could not be regained, and the chase was off for Ned.

Jack had his eye on a pure white horse—a little beauty of splendid proportions. Nothing tempted him to let go his lasso for any other prey, after his eyes lit upon this beautiful animal. "I'll have you. my beauty," cried Jack at the top of his voice, as leaning far over his horse's neck he whirled the noose of his rawhide thong about his head. Then the white horse gave a plunge and for a moment was lost amid the struggling mass. Jack drove his own horse straight at the first opening that he saw in the flying forms, and, scattering them with his shouts. he soon came again alongside of the white horse. Unmindful of his danger, he was now almost suirounded by flying heads and feet. The dust from the mesa completely covered him, but the boy's eyes readily distinguished the glistening sides of the wild horse he was pursuing.

"Ah, there you are, old fellow; you can't get away again," he cried, and "whiz" went the lasso. For a moment the noose seemed to stand still in mid air: then it settled directly over the head and neck of the white horse. Jack's heart gave a great jump. He had caught his prize.

Mr. Sinclair was now giving his whole attention to turning the course of the frightened drove. By great effort he had forced his horse nearly abreast of the leaders, but not yet had he driven them one inch from the straight course. Wasting no time in catching horses, using his lasso for a whip, and yell-

(Begun in October.)

Review of Preceding Chapters: Jack Carroll, Frank Chapman and Ned Roberts, three boys whose homes are in a village in the far East, obtain the consent of their parents to go to Denver for a visit to Robert Sinclair, a friend of Jack's father, who is a painter of mountain and Indian life, and spends the greater part of his time among the Indians. They are accompanied on their journey as far as Chicago by Mr. Carroll, and are greatly delighted with the sights and sounds of the great city. On the train for Denver they meet Jim Galloway, a trapper, who tells them a true story in which his life is saved by a white man, who was living at the time with the indians, and turns out to be Robert Sinclair, the artist, whom the boys are going to visit. The boys tell the trapper the story of Sinclair's life. The train on which they are traveling runs into a herd of buffalo and Ned shoots one. On arriving at Denver the trapper leaves them and Sinclair and the boys buy their outfit and start on the trail for Pike's Peak along the foot of the mountains. The first evening in camp Sinclair tells the boys a story, and Ned's pony makes a dash for home, but is captured by Sinclair. The day following Frank is lost among the mountains. He kills a stag, and spends a night alone in a canyon. He is captured by Indians, taken to their camp, escapes death by its being discovered that his captors are friendly to Uncle Bob, the Indian painter. He makes friends with the Indians, who adopt him as one of their tribe. He goes on a buffalo hunt with them, and is saved from being run down by a buffalo buil by a shot from the rifle of Uncle Bob, who suddenly appears on the scene. Uncle Bob relates how he, Ned and Jack searched for Frank and finally found him. They leave the Indian ramp, and after a day's travel come upon bear tracks and they have an adventure with a bear and her cubs.

CHAPTER XVIII.

For several days after the events narrated in the preceding chapter nothing unusual occurred in the lives of the three boys. By easy stages they followed the mountain trail toward Pike's Peak, enjoying every inch of the way but keeping well together and running no further risks of accident and delay such as had already made their journey much longer than they had expected it would be. They had at the start planned to be at the home of Mr. Sinclair, in the shadow of the big mountain, in three or four days at the outside, and they had now been nearly two weeks on the way and had still some distance to go; but they were enjoying it, getting muscles like iron, faces and hands as brown as an Indian's, and appetites that could scarcely await the signal to pitch camp and

They had become hardened to the saddle, and had felt at home on the back of a bucking pony. It was no trick at all for any one of the three to draw rein, jerk his gun to his shoulder, and bring down a bird on the wing, or put a quietus on a jack rabbit that, frightened from cover, was making a streak across

One thing of somewhat serious interest happened several days after the little company had the experience with the bears: Jack's pony was bitten by a getting a new mount, having rattlesnake. The poor beast soon began to show the effects of the poison, and with all the poulticing and of the others and crouching in the grass, careful handling that Uncle Bob could give it, matters grew worse until it was evident the animal could go no farther and that it must be shot.

Jack was heartbroken, for "Spareribs" was a good horse, and being the first one Jack had ever owned he had come to love it, ugly though it was; so when

if he were talking to a human being, and then arose, turned his back, and ran out of the camp as fast as he could, so as not to hear or see when Uncle Bob ended the poor animal's misery.

With but three horses for four persons and a lot of baggage, the little party found itself in an unfortunate situation. The only thing to do was for each one to take a turn at walking, for on the rough and uncertain path up and down the sides of the mountains and along rocky ravines, the burden of two to go, at the same time spurring them forward, and riders on one beast was too great.

After the well-aimed bullet of Uncle Bob's gun had done its work, the boys rolled a big rock to the animal's head, and on it Uncle Bob put the words,

OUR FRIEND-"SPARERIBS," A GOOD PONY.

In the course of the day the company regained its usual good spirits, and then something happened that threw everything else for the time out of mind.

Uncle Bob said he saw indications in several places of the presence of a drove of wild horses. The travelers were just then ascending a hill that formed an approach to a mesa, or open table land, nestling between two ranges of mountains.

"Like as not we'll see a lot of them when we reach the level," said Mr. Sinclair; and, soon, Jack, who,

Leaving their horses at the foot of the hill, Mr. Sinclair, Frank and Ned went up the hill cautiously the moment came to put an end to its suffering, Jack to reconnoiter. Sure enough! There they were, of ing at his own horse and bringing down upon his threw his arms about its neck and said good-bye as all colors from jet black to milk white, some pied, rump the loops of leather cord, he dashed ahead to

of the lot."

conquered.

the saddle.

save the life of Frank, who lay concealed directly in the path of the oncoming avalanche.

But Frank had seen his danger. At first he was rooted to the spot by the excitement of the unusual tened a pair of hopples on the animal's fore feet and spectacle; then all of a sudden realizing his danger, ne looked about him for a place of safety. A great rock lay halfway down the slope part way embedded in the soil. Running to this, he crouched behind it just as the foremost of the struggling mass tore by him, sending the stones and loose earth flying in all directions. Wave after wave of flying animals thundered about him. His eyes were blinded, and his nose and throat were choking with dust, while his face and hands were bruised with flying stones.

When the last wave had passed he crept out from his shelter and ran to the place where the baggage had been left, to find it trampled into an indescribable mass. Just then, at the top of the hill, Uncle Bob appeared, hatless and horseless, waving his arms and shouting with joy on seeing him safe-if not sound.

In his anxiety Mr. Sinclair had forgotten Jack and Ned, so as soon as he had found Frank he hastened

JOE'S POINT OF VIEW

{}````````````````

CORA YOUNG WILES

Say! granpa, we've had lots of fun since school let out last spring.

We've swum and waded, fished and played, and done most ev'ry thing.

We had a gay croquet set, but we fussed 'bout ev'ry

We all got in our new chair swing together, just the game.

Ernest and me, we had a tent beneath an old pear

With sawdust floor and brickbat stove that drew quite bootailee.

We caught and cooked our own green frogs, our fish and crawfish, too,

And fried potatoes with fat meat like all the campers do.

The girls a really true play house had, with windows and a door,

cooked upon a truly range, with carpet on the

They mussed with ice cream, candy and with salad, cake and tea,

They made some smoky coffee and it suited Ern and

And, gee-mi-nee! just when we'd want a little time to play. We'd haf to rake and clean the yard and haul the dirt

away, And feed and water all our pets-our gold fish and

white rats-But Nettie in the kitchen always feeds the dog and cats.

And once, when all the family was visitin' the farm, I hoed potatoes, fed the pigs, picked beans 'n' gath-

And lots of other vegetabuls, ezackly like a man,

And folks all think I farm as well almost as farmers

And now we have a pony; ain't our papa just a brick? And all the time outside of school on pony's back we stick.

As four can't ride her all at once, each has a pony day

And gets to use Miss Nell alone 'cause turn about's fair play.

And soon we'll hunt our skates and sleds for Winter's very near,

We'll make snow men, go coasting—'tis the best time of the year.

At night we'll carve and draw and paste, be busy, ev'ry one.

And mamma'll read us stories—say! I'm glad old summer's gone.

TURNING POINTS IN A BOY'S LIFE

EIGHTH ARTICLE OF A SERIES

BEGINNING TO SAVE.

Comparatively few boys ever reach the point where they begin to save. Most boys, at some time in their lives, make spasmodic efforts in the direction of saving money; but as for acquiring the habit or making the thing permanent, they simply never do it.

The saving habit is not a natural one with boysnor is it with men. Occasionally a young fellow is By actual experience with children I know that the found who seems to value money for what it will bring prospectively as well as immediately; but as a rule boys value it only as it is measured in things to eat, things to wear, things to have fun with, now. The future value of a dollar as a savjor from want and the numerous burdens of middle and old age does not count for a moment with them as against its present value in things that make for to-day's enjoyment.

Now, in nothing are men but "children of a larger growth" more truly than in their proneness to enjoy be saved. A father may agree with his boy that he can begin to learn the necessity of saving part of the present at the expense of the future. We all take every time the boy lays by a nickel or a dime, or any what is given to him. the words of Holy Writ too literally in daily life in our taking no thought for the morrow. But there is nothing in the Bible that really teaches improvidence, and certainly everything in nature teaches against it.

Our sober sense, and the experience of mankind generally, tell us, also, that the boy who does not learn early to save a part of what he gets as against the needs of the future, is in a fair way to come to want, and that he is taking long chances, to say the least.

I suppose that any fair minded boy will admit that it is desirable to lay up money against a rainy day, but he will probably couple with the admission the assertion that as soon as he makes something beyond his expenses he is going to commence to save. Fatal assertion! Such a time seldom comes to boy or man. rightly used: and if a college education is not wanted so many and so frequent, with the word of counsel Experience shows that expenses grow with income, it will, if added to until the boy is able to go into and of warning. Teach boys to save.

and many a man utters the sad confession that he was happier and got along with less worry on his small for the establishment of a business. income of the earlier years than he does now with the greater income.

Then cautiously approaching the horse's head and

tightening the lasso as he went, Mr. Sinclair fas-

run a noose around its under jaw; then he loosened

the noose about the neck of the animal. So soon as

it got its breath again it reared and plunged until

its sides were covered with foam. The boys expected

every moment to see the horse throw itself over on

its back, but Mr. Sinclair firmly held it by the rope

hausted, Mr. Sinclair approached its head hand over

hand along the cord by which he held it; then plac-

ing his hands over its eyes he breathed into its nostrils—a method early adopted by the Indians for taming wild horses, and the beautiful animal stood

In another half hour the company was again on its

way, the boys riding and Mr. Sinclair leading the white horse, which as yet had not been broken to

(To be continued.)

When the frightened animal became well nigh ex-

attached to the noose about its jaw.

The habit of spending breeds itself until what at possible with one in his right senses.

It seems strange that parents who realize so forcibly their own mistakes in this direction should be so indifferent to the idea of money which their children come to have.

That the saving habit can be cultivated is certain. habit is speedily developed, and that nothing gives the young boy more genuine pride and pleasure than the seeing of his little accumulations grow from day to day, even though it be penny by penny.

It is not my purpose to point out methods of saving money or acquiring the habit of saving; these methods must differ with the varying circumstances of the individual. A boy may be taught that of any money that comes to him a certain proportion must sum, he will add to the deposit a like amount. The father will do well to start a bank account for his boy, depositing therein himself, in the boy's name, a dollar, two dollars, or more every Saturday. I know a father whose scheme is to deposit every Saturday five dollars for his five year old boy. Sometimes it troubles him a little to get the money into the bank, but he manages it somehow. At the age of sixteen, when the boy is ready for college, he will an old age of positive want. have to his credit, counting accumulated interest, over three thousand dollars, which, at even an extravagant estimate, should give him four years in col-

business for himself, supply him with ample capital

As to where to put money in safety, it is not my purpose to say. Most young men need to put their money where it will be as far away as possible from one time was an extravagance now seems a trivial the temptation of using it. A good bank paying a thing and, perhaps, a necessity; things are now done reasonable interest on deposits is generally considunhesitatingly which once were deemed silly and imered a safe place, but the temptation to draw it is constant. Investments in fluctuating securities, and certainly speculation in general, is a bad form of savings, as tending to create a speculative fever, than which nothing is more dangerous. Buying certain forms of insurance from long established old line insurance companies by which at the end of a stated period the investment returns to the insured with accumulations, is surely a good method, but care must be taken that the company is carefully managed and is safe. The putting of money into real estate appeals to some. The loaning of it on doubtful security is certainly to be condemned.

But the point I wish to make is that, as the productive period of life with most men ends early, the habit of saving should take root even in infancy. As soon as the little child learns what money is for,

There is no sadder reflection than that which forces itself upon us as we meet young fellows in the street exhibiting the habits of the spendthrift, and know that with the certainty of fate most of these very fellows are coming, unprepared, into the responsibilities of middle age, with wife and children, and often with father and mother, to share with them the bitter fruits of early extravagance, and later come into

O, to live life over again, with all the wisdom of experience!

But, as this is not possible, then we should live it lege and supply him with the education which, for over again, so far as possible, with the boys and the capital in life, is infinitely better than money, if girls, standing at these turning points in their lives

"Gallant John Pelham," The Boy Artillerist

The fourteenth story of a series entitled "Stories of Boy Heroes"

ANNAH ROBINSON WATSON

In the first great struggle of our nation, the grandfather of "gallant John Pelham" served as a major in Lafayette's command.

He was distinguished not only for intrepid bravery but for his kindly heart and generous, sympathetic nature. It is told of him that on one occasion at Valley Forge, when the American forces were in such sad plight, he took off the only pair of shoes he had and gave them to a poor fellow whom he happened to see walking through the snow in his bare feet, the major wearing only stockings until another pair of shoes could be secured.

From one capable of such unselfishness must descend a heritage of honor, and it was from such ancestors that the young hero, John Pelham, the boy artillerist, derived his inspiration.

His uncle, Peter Pelham, was a major in the war of 1812 and died in command at Pensacola, Florida, in

When the Civil war opened five Pelham brothers joined the Fifty first Alabama Regiment. Only two of them are now living. While all were notably brave and attained distinction, John, one of the five youngest artillery captains of the war, became justly famous.

He was born in Alabama on September 7th, 1838. and entered the Military Academy at West Point July 1st. 1856, when in his eighteenth year.

Here he quickly attracted attention by his intelligent and cheerful discharge of duty and his remarkable skill as an athlete. In fencing and boxing he was the superior of any cadet at the Academy, and his feats of horsemanship were considered marvelous. When the Prince of Wales visited West Point in 1860 he was specially interested in Pelham for his proficiency in these accomplishments, and his dash and soldierly bearing.

When the trouble between the States came he was still at the Academy. Just one week before he was to graduate and get his commission in the United States army he resigned and went South to take up arms for the people of his own section. Like the majority of his comrades, he was first Southern, then American, and sympathized with the soldier who declared: 'I would fight with France against any nation of the known world, but with Brittany against France.'

It is said that a fair daughter of Indiana assisted him to get through the lines into Kentucky. Succeeding in this, he went at once to Montgomery, Alabama, the first Confederate capital, and reported for

From Montgomery he was sent to Virginia, and at the first battle of Manassas his bravery and ability as a soldier were so conspicuous, that General Stuart had him organize for his command a six-gun battery. Some of his men were from Talladega, others were Frenchmen from Mobile, and these he placed in charge of the one Napoleon gun in the battery.

At Cold Harbor, when it was necessary to engage the Federals in a desperate skirmish that certain maneuvres might be effected, he dashed a third of a mile in advance of the force and, with only one gun, drew, the fire of an entire battery of the Federals.

At the second battle of Manassas he thrust his guns forward almost into the columns of the enemy and won a warm expression of appreciation from Stonewall Jackson, the silent, taciturn commander, who rarely gave either commendation or censure. It was here that Jackson said to Stuart: "General, if you have another Pelham, give him to me."

At Shepherdstown again he was in advance of the troops with one piece of artillery. When the enemy in overwhelming numbers were almost upon him Stuart ordered retreat. His men reluctantly obeyed the order, but Pelham seemed unconscious of the fact

that he was alone, and continued to load and fire his piece until the Federals were so close upon him that escape seemed impossible. Then he mounted one of the horses and started off with the gun. He had only gone a short distance when the horse was shot under him, but he cut its traces and mounted another. This, too, was shot, and then a third horse met the same fate, but he finally escaped with his gun through a blinding storm of shot and shell.

At Sharpsburg he showed the same superb courage and then came Fredericksburg and the climax of his glory. The little town with its cordon of hills stood ready for the baptism of blood and flame when, in November, 1862, Sumner's grand division of the Federal army moved toward it. Then two of Long-street's divisions hurried to its defense, and on the 21st they took their position on the crest of the hills. Next, Jackson's command came from the Shenandoah Valley, and, early in December, General Burnside approached with his immense force, and an attempt was made to throw a pontoon bridge across the Rappahannock river, that the troops might reach the town. The brave Mississippians, however, under Barksdale, kept up such a galling fire along the river front that they defeated nine different attempts of the Federals, and kept up the engagement until all the Confederates were in position.

On December 13th the battle opened. The Federals with their brilliant blue uniforms and glistening bayonets made a splendid appearance, while the grim veterans under Jackson, in their dull suits of butternut brown, mostly ragged and threadbare and their poor accoutrements, were in sad contrast.

The engagement opened on the Corfederate left, where Pelham stood ready with his six-gun battery. As the dense masses of the Federals advanced the artillery made great gaps in their ranks, but they still pressed on. Six desperate charges they made, all marked by the most unflinching courage and determination. Meagher's Irish brigade left its dead within twenty five paces of the wall behind which were lined the commands of Cobb, Kershaw and Ransom. John D. Renfroe gave this picture of the battle of Fredericksburg:

The flower of the South's young manhood was on the heights in double lines behind bristling and glimmering guns. Every soldier knew there was to be a fearful fight before the sun sank behind the western wood. Jackson, Stuart and Lee rode down the Confederate lines to the extreme right, followed by waves of cheers. Stuart called to Pelham and said something. Immediately he dashed down the heights, followed by one gun at a gallop. It was the "Napoleon Detachment" of Mobile Frenchmen. Onward they rushed, far down to the foot of the heights, where the road forks. There they halted, unlimbered and prepared for action. Soon they saw moving toward them steadily, with measured tread, a long, compact blue line, their bayonets glistening in the streams of sunshine. There was a flash, a boom; the earth shook around Pelham's Napoleon. Then there was a shrill, hideous, indescribable shriek of shell as it swirled through the charging lines of blue. The surging mass recoiled, halted, hesitated; then, with a demoniacal yell, pressed forward toward the single gun. The yell ceased, and for a moment there was a ghastly hush. And then there came thundering through the air from across the Rappahannock boom on boom. From southeast to east, from east to northeast; then from the north, came huge shells whirling death in their arms. Pelham had drawn upon himself the concentrated fire of half a dozen batteries-twenty four guns-yet his gun continued to roar and never failed to slaughter. No other gun on the Confederate side had yet opened, but this lone war-dog howled on. And in the half lull between the booms of the cannon there floated above the noise a sound that seemed strange on that day of multitudinous terrors-the Napoleon Detachment singing the Marseillaise as they fought their gun. Like infernal imps in tophet they flitted about in its smoke. Two armies looked on while the Mobile Frenchmen wrote history with Time wore on. Still the gun roared, and the sound of its roaring thundered through the air. General Lee said: "It is glorious to see such courage in

one so young." In his report of the battle he spoke of no one but Pelham below the rank of major-general terming him "the gallant Pelham!"

At dark the Federals withdrew, the ground was heaped with their dead and dying, and the day ended for them in most disastrous defeat.

John Pelham was now only twenty four, but the service of this great day had made him a lieutenant colonel. The order was issued but had not gone into effect when the fight occurred at Kelly's Ford, on March 17th, 1863. Here he saw a regiment wavering and dashed forward in their lead, shouting: "For ward, boys! Forward to victory and glory!

In this gallant action he fell, his brain pierced by a fragment of a shell. He died in a few hours.

General Stuart telegraphed the event, saying: noble, the chivalric, 'the gallant Pelham,' is no more. How much he was beloved, appreciated and admired let the tears of agony we shed and the gloom of mourning throughout my command, bear witness. His loss is irreparable."

In Stuart's general order announcing his death to

the division, he said:

"His eyes had glanced over every battlefield of this army, from the first Manassas to the moment of his death; and, with a single exception, he was a brilliant actor in all. The memory of 'the gallant Pelham,' his many virtues, his noble nature and purity of character are a sacred legacy in the hearts of all who knew him. His record was bright and spotless, and his career brilliant and successful."

He was calmly and recklessly brave, and saw men torn to pieces around him without emotion, "because his heart and eye were upon the stern work he was performing."

The body of the young hero was carried to Richmond; there it lay in state at the Capitol, and was then taken to the old home at Jacksonville, Alabama. for burial. The spirited lines of A. Sidney Morton deserve a place in any record of this young hero:

> "Into the hurtling storm of shell, Into the gaping mouth of hell, Pelham the dauntless dashed— Out from the meager line of gray, Out to the bloody fringe of fray, Where thousand thunders crashed.

"Lashes to straining horses plied, Cheers of defiance as they ride Under the eyes of Lee. Out of the day and into night, Clouded in smoke they ride to fight, Glorious sight to see!

"Out of that Bedlam Freedom speaks, Hear it in Pelham's Parrot's shrieks. Pelham! 'tis bravely done! In the concentring, deadly hail; Daring to die but not to fail, Pelham still fights his gun!

"What is that sound? 'Tis not a cheer-There, yet again—list! Comrades, hear! Hark, 'tis the hymn of France! Rising, the lofty anthem swells, Over the din of countless hells, Freedom defiance chants!

"Never was witnessed braver deed, Bringing of praise its richest meed, Making a deathless name— Courage sublime in one so young!'— Words from the heart of Lee he wrung, Crown of immortal fame!"

The "gallant John Pelham" had a cousin who served as private in Terry's Texas regiment. He fell while charging the enemy at Dalton, Georgia, and the Texas Legislature enacted that as he, "a hero in more than one hundred battles, had died leaving no one to bear his honored name," the child of his sister should receive it, and be called Charles Thomas Pelham, in order that so noble a name should not fail to be perpetuated.

BURIED TREASURE.

An Amusing Game Where An Old Tin Can is the Only Paraphernalia Required to Play It.

It is probable that on some occasion a number of boys were idly kicking a can about, and the game of buried treasure just evolved itself without any particular effort on their part. It is certainly a good game, and those whom I have watched play

the seem to enjoy themselves immensely.

The equipment for the game is not difficult to procure; cans are always available.

Decide by counting out who shall be "it."

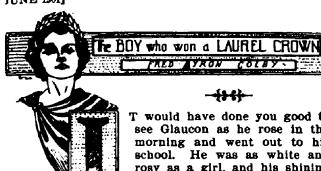

or the miser who must guard his treasure.

The miser will take a position directly over the can, his treasure, one foot on each over the can, his treasure, one foot on each side. At least, this is the position usually chosen as being the best suited for guarding the can. There is no rule, however, about this, and some boys prefer other defenses, as standing just behind the can or continually moving about it.

The other boys are brigands, and circle about, attempting to get the treasure, or in other words, kick it away without being tagged. If one succeeds, another immediately kicks it, and away goes the car down the street with a crowd of yelling brigands after it, doing their best to prevent the poor miser from regaining his position over the treasure. If the miser succeeds in tagging any boy who has kicked the can before another boy kicks it, the boy tagged becomes the miser and must stand over the treasure.

Of course, the boys who are attempting to get at the can will help one another One should attract the miser's attention in front, while another creeps up from behind, or vice versa. If the distracted guardian of the treasure turns his attention to the man behind him, the boy in front will immediately dart in, and so on. I think you will find that the game, simple as it seems, offers numerous chances for judgment and quick maneuvering.

T would have done you good to see Glaucon as he rose in the morning and went out to his school. He was as white and rosy as a girl, and his shining golden curls fell down upon his neck and shoulders, making him

look still more like a woman. He had taken a bath and anointed his skin with oil, and his graceful white tunic, which had no sleeves and was belted at the waist, left a good many bare spots on his lithe. olive-colored body. He wore no shoes, only a pair of sandals, which were mere soles fastened upon his feet with straps.

He did not stop for breakfast; Greek boys know of no such meal; they eat only twice a day, at noon and at night. So he went down into the court, with its splashing fountain, which was used for the family sitting room, where he found his mother at work with her distaff, or perhaps making some fine embroidery. using gay-colored crewels which she drew through tight linen meshes, making a border of red and yellow and purple flowers.

"Good morning, Glaucon, did the gods give thee a pleasant slumber and sweet dreams?" asked the lady, to whom the boy bore a marvelous resemblance, having the same dark eyes, soft pink flesh, and curling golden hair. She wore a sleeveless robe buttoned upon her white shoulders by heavy golden clasps, and her head was crowned, after the fashion of Athenian dames, by a silver ampyx, which gave her a tall, stately appearance.

"Oh, thank you, mother, yes; and how beautiful Aurora decked the sky this morning!

Glaucon was thirteen years old, and for several years his education had been given him by male tutors. He lived away from his mother in the men's apartments, but every morning he came down to see the beautiful woman who had been his earliest teacher. It was a beautiful thing for him to do, and his mother appreciated it.

Eurigine, wife of the great archon Callimachus, regarded her son with a loving gaze as he stood before her in the morning light.

"Thou art growing handsome, Glaucon," she said. "Soon thou wilt be a man, and I shall have a boy no longer.'

She kissed him upon his brow. "And thou wilt be a brave man, too, Glaucon. All the men of thy house have been heroes. I shall be proud of thee some day. 'Shall I be as great as Alcman was?" asked the lad, with an eager face. "That would be fame indeed."

"Yes, perhaps as great as Alcman himself, who knows, if thou art brave and faithful and true!" answered his mother.

Glaucon walked to a corner of the open court where among others stood the bust of his heroic ancestor who died fighting the Persian foe at Marathon, the face of a grave, stern man.

Glaucon glanced at the shadow of the sun in the courtyard; it was time for his music lesson, so he kissed his mother good-by, drew his himation over his shoulders, and passed out to go to his schoolroom.

These lessons he took from an Ionian singing master, learning how to play both on the lyre and the harp. He was already a good singer and could accompany his harp with his voice in many difficult pieces. Every day, too, he spent several hours in the gym- Alpheus, and stretched his limbs by a short run then, he fails. A dozen rods only intervene. They

This was a pleasant change after poring over the abacus and strumming on the lyre, and he entered into it with all the enthusiasm of a young Greek.

No race ever held the physical training of its youth of so much importance as did the ancient Greeks. They had high ideals of manly beauty and vigor, and their standards could be reached only after the most exacting training. For three years, until he was sixteen, Glaucon spent the larger part of his time in the gymnasium. There were no weeks in his school year. The Greeks cut their month into decades instead of weeks. The only vacations he had were the regular festivals, of which there were quite a number in ancient Athens. At some of these there were games and gymnastic exercises, and there it was Glaucon first discovered his abilities as a runner. He easily won a race over all the practiced athletes, and received a crown of flowers from the hands of the fairest maidens of his "city of the violet crown," as the poets termed Athens.

He was now over seventeen, a strong, sturdy youth, with the limbs of a young Apollo and the endurance of a deerhound. It was very important to be a good runner, for war was the great occupation of the ancient peoples, and a Greek army always ran into battle shouting a grand pæon; and to be a famous runner and win prizes, that was something to be proud of. Glaucon now began to take special training, for he had made up his mind to contend for a prize at the Olympic games.

The Olympic games, which took place once in four years at Olympia, in the Peloponnesus, was the great national festival of Helias. Their splendor and importance can hardly be understood to-day. The victors at these games won not only deathless fame, but glory was reflected upon their native cities. On more than one occasion the walls of a city were pulled down to admit a conqueror at the Olympic games, to signify that, with such a champion inside, no walls were needed as a defence. Scarcely inferior to the fame of a Miltiades or a Pausanius was that of a victor in these games.

The month of the one hundred and seventeenth Olympic festival was at hand, and everyone was wending his way to the Peloponnesian city. Among others went Glaucon, accompanied by his father and a crowd of Athenian citizens. It was bright summer weather, and as they approached Olympia, crowds from other Greek cities met and intermingled. It was noticeable that no women were to be seen among the gay processions; they were not permitted to grace the festival with their presence. Every city of Hellas (which included many islands) and the cities of Magna Grecia, in Italy, and of Cyrene, in Africa, sent representatives to the games, and if there happened to be war between two cities, a truce ensued so that each could go peaceably to the festival.

Beautiful was Olympia in the summer time, nestling in the valley of the Alpheus, under the grim shadow of Mount Cronium. The vast concourse of people gathered there made it seem like a gay and splendid camp. The whole valley teemed with life, and the thousands of voices made of it a Babel. Gay Ionians and stern Dorians met as brothers of one family, and the victors of former contests were welcomed with an enthusiasm that was denied to kings. Next to the old-time heroes, attention was directed to the young athletae who were to contend for the prizes. Glaucon found himself an object of interest to many a keen-eyed, supple Greek, and he heard whispers: " He is to contend in the racing match day after tomorrow. He is the son of Callimachus, one of the archons of Athens."

A group of Spartans passed by; they eyed the Attic champion with bold and critical eyes.

'A strutting turkey cock," exclaimed one. "We'll pull out some of those gay feathers of his before he goes back to the violet city. He hasn't got the wind, and his legs are too long."

Glaucon looked at the speaker, who was a strong, sturdy Dorian, magnificently formed, and wore his hair long in the Spartan fashion. Glaucon's own locks were shorn, and only short, crisp curls adorned his head. The Spartan returned his gaze with a scornful toss of his head and passed on, but the young Athenian afterwards learned that he was to be one of his competitors in the coming race.

The first day of the festival was mainly devoted to sacrifices and to preparations for the games. All went to worship in the great temple of Olympian Zeus. There Glaucon saw the great statue of the god, carved by Phidias, which was one of the wonders of the world. "Hail to Zeus!" was the cry of the gathered thousands, and the Athenian lad bowed before the majestic Loure of the Cloud Compeller, towering forty feet high on his lofty throne. Many costly libations were poured, and the choral hymns swelled in praise to the gods. The running race was to take place on the second day. The judges had previously been selected, consisting of ten venerable citizens of Elis, who were distinguished by their purple robes. They were to oversee all the games, pass judgment upon the contests, and award the prizes.

Glaucon slept finely the preceding night, and awoke

nasium, practicing boxing, wrestling and running, among the olive groves. Scarcely had he eaten his and other athletic sports with boys of his own age. morning meal of bread and radishes when the heralds morning meal of bread and radishes when the heralds announced the opening of the foot race. The grave, gray-haired Callimachus laid his hands upon his son's shoulders and wished him godspeed, or, in other words, asked great Zeus to bless him. Glaucon simply answered, "Thou shalt not be made ashamed, my

> The next moment he was pressing forward with the other contestants to draw lots for places in the foot race. These lots were in a silver urn, and those who drew the first four numbers took their places upon the course for the first race. Glaucon was one of this number and took his place with three others at the head of the course.

> The convenience of the Greek dress is now made apparent, for the boys have only to unfasten their chitons at the shoulder and letting them fall, they

The Spartan passed on with a scornful toss of his head.

stand in a condition to start at once in the race. They are perfect in form and condition; their flesh is round and hard, and their very skins shine with the healthy glow of youth. They have been in training for months and years. No slight effort will fatigue them.

Glaucon glances over the faces and figures of his rivals. There is only one that he recognizes. It is the Spartan youth who taunted him. He makes up his mind that the struggle will lie between the haughty Dorian and himself; so he nerves himself for the supreme effort.

The course for the runners embraces a mile, the whole length of the stadium. The starting point and the goal are each marked by a square pillar. The line of starting is formed by a rope which restrains the impetuous runners, who stand abreast eager to commence the struggle for renown before the mighty assembly. The heralds of the Hellenodicae proclaim the name and country of each competitor. First they name Glaucon, of Athens; next Cleon, of Corinth; then Lyxes, of Argos; and last, Diagoras, of Sparta. Our young Athenian knows at last the name of the foe who is to try his endurance. He has no time, however, to scan critically his formidable competitor.

The signal is given at last, the rope falls, and the competitors spring forward like winged messengers of the gods. Each does his level best, but before the distance is half covered it is apparent to the crowd of spectators that the struggle for victory lies between two-Glaucon, the Athenian, and Diagoras, the Spartan. They have left the other two far behind, and are rushing with flying feet towards the goal. Side by side are these two. Neither one seems to gain an inch upon the other. Set grimly are the Spartan's lips. He is straining every muscle to its utmost. The perspiration glistens on his bright, naked body. Glaucon, too, is quivering all over from the effort he is making.

Two-thirds of the distance is passed, and neither has gained upon the other. Glaucon is doing his utmost, but the dogged persistence of the Spartan is not to be overcome. He can feel his own heart beat like a sledge hammer striking an anvil, and his head feels light as air. He hears nothing but the panting breath of the struggling Spartan and sees only that straining, magnificent form. Just before him now is the goalthe square, white pillar of stone, beside which sit the solemn judges looking like kings in their purple robes. It towers like a mountain, filling the whole space before him. He must reach there first or die. To him it is not merely a contest between his strength and that of Diagoras. It goes beyond mere personal rivalry. Athens and Sparta stand opposed, and as the representative of the violet city he must not with a thrill of expectation in the early light of the suffer defeat or win a dubious victory. At the very summer morning. He bathed in the waters of the last he will make a supreme effort; if he fails, why the vast crowd. There is no shouting. Not a single whisper these words in my ear, and under their in- are now as great as Alcman, thy great grandfather, voice cries "Glory to Athens!" or "Renown to Lace- spiration I darted forward and won the prize, half my Go and praise the gods, for through them thou didst daemon!"

straining figures leaping over the sand. Men hold their breath in the excitement of the moment. Which will win, the supple Athenian or the sturdy Spartan? A hundred thousand anxious hearts watch and wait. The suspense is soon over. A rod before the goal is reached the expectant thousands see the lithe young Athenian shoot forward half his length as if moved by some invisible power. The next instant his hand is on the goal. At the same instant the Spartan falls forward upon the ground, blood pouring from his mouth and

A roar of applause proclaims the triumph. When it subsides the heralds of the Hellenodicae proclaim the name and country of the victor, which is followed by a deafening acclaim from the enormous crowd. Glaucon is raised aloft on the shoulders of half a dozen Athenian youths, who carry him out of the throng to his father, the laurel crown of an Olympian victor upon his shining golden hair.

Can you imagine how the boy victor was received at Athens when the throngs returned home from Olympia? The gates were pulled down to admit Callimachus and his son, for the former had won a chariot race with his four black horses, and the air was vocal with the cheers of the populace. Garlands were spread before them, and the well-trained chorus sang the triumphal ode. But after the sacrifices and the banquets Glaucon sought his motner,

in the room where she sat with her maidens.
"My dear mother," he cried, "I owe it all to you, and to your training. It was your words, courage, faithfulness and honor, that saved

are still side by side. A breathless hush comes over | me. At the last moment I seemed to hear some one | Every eye is fastened upon these sinewy, length ahead of the bragging Spartan.

Shoot forward as if moved by some invisible power.

"And, my son," answered the proud mother, "you Go and praise the gods, for through them thou didst win thy victory."

The Farm Boy.

A song for those who a-roving go. And a song for those who linger By the cross-roads gray, where the guide-post tall

Lifts its homeward-pointing finger. And brave is he who, in untrod ways, Dwells 'mid alien scenes and faces; But a hero, too, makes his home-bounds sure

In the happy old farm-places.

trove

The farm boy hears, in the summer noon, Over hill and over valley, How the siren Fame hath her treasure

Where the fortune seekers rally; But the true heart turns to the waiting plow.

To the well-loved commonplaces; And he knows no joys like the smiles that shine

On the welcome homeland faces.

A song for those 'neath the apple trees, On the open meadows toiling, Where there comes few claims of the world-unrest,

Peace of mind and home despoiling. Their fathers' share in the well-worn glebe

Guard they well from alien races; And the farmland blooms through the smiling length

And the breadth of the dear home--F. W. Hutt. places.

A That Larkin Boy A

LIDA MAY SMITH

"Be somebody! There is room enough for every boy to have an honorable place in the world. He only surroundings are, boys, you can rise above

them if you only will." These words of Dave Larkin's teacher were ringing in his ears while he was doing his evening chores. Dave's home was a miserable affair, but it was the only home he had ever known. Dave's father was a drunkard. His mother was a good, honest, hardworking woman; but with ten mouths to feed and only one pair of hands to work with, it was no wonder that the family was considered shiftless.

"Dave Larkin is a nice boy," said his schoolmates, "but we can't ask him to our homes, you know, because he is so ragged, and his father is a drunkard."

But in spite of his old clothes Dave had truthful eyes. If you looked sharply into his face you would see that underneath all the show of poverty and neglect Dave was a good boy. He was naturally ambitious, and many and many a time had vowed that he would not be like his father but would try to be a good and great man.

The encouraging words of the teacher fanned the spark of ambition in Dave's breast into a flame. "I will—I will be some-body!" he said to himself. "Nothing shall hinder me."

There was something of the sublime in the resolution of that ragged boy, made with clenched fists and tightly compressed lips.

Dave said nothing about his determina-

tion to any one, but every afternoon after school as he brought the cows home he quoted with no decent clothes to wear and you would all be bursting into the room.

sweeping gestures from the speeches of Daniel Web- ashamed to have me speak."

The little woman put ster and Henry Clay, and every evening that he could get away from home he spent at the parsonage reading the books the minister gave him. At school he you will succeed." worked hard, and if he didn't stand at the head of the class he came near enough doing so to make every-

body respect him.

were intensely excited over a prize debating contest. A gold medal had been offered for the best oration. The winner was to be sent at the expense of a philanthropic gentleman to the State Oratorical Contest,

which was to take place in another city on New Year's "I know you are going to try for the medal," said Dave's teacher to him one day. "What, me?" asked Dave, reddening to the tips of needs determination, to win it. No matter what your his fingers. "I'm afraid I can't, sir. You see, I have speaker before him had been greeted with flowers

'Never mind the clothes, my boy. Go into the contest, and go in to win! Do your best, and I believe

theme the lives of men who, by their own efforts, had ody respect him.

Just then the pupils of the Glendale High School evening, with old "Bossy" for an audience.

Dave was ashamed to tell his schoolmates that he was going to try for the medal, for he knew that they would only laugh at him. When the evening of the contest came he did not go forward with the rest but sat in an obscure corner. He felt that there would be no welcome for him, with his old patched clothes, in a conspicuous place among the welldressed boys and girls.

Dave's name was the last one called. Every

and applause. Dave stepped upon the platform and a murmur went throughout the audience that sounded very much like disapproval.

What a shame for the teacher to let him speak!" whispered one.

Then a clear ringing voice told of the great men whom the world loved to honor-men who had worn shabby clothes—who had known what it was to be poor and hungry. The speaker seemed to forget everything excepting that he was living with his heroes. His voice was earnest, appealing, enthusiastic. Before he had said a dozen sentences his audience was with him. They soon forgot about his clothes. They felt only the burning earnestness of the speaker. They failed to applaud his eloquent periods lest they might lose a word. They felt that they were in the presence of genius, and at his closing words, "Let us not be bound by poverty and misfortune, but let us make our own lives so pure and noble, so full of good deeds that the world will honor us for what we have done," the audience broke into a storm of applause.

Dave won the medal; and when some one proposed "Three cheers for Dave Larkin," every man, woman and child in the audience joined in the hurrah.

With sparkling eyes and burning cheeks Dave ran all the way home, where a tired little woman with aching eyes sat patching a well-worn coat.

"Mother, I have won the medal," he cried.

The little woman put down her sewing, took the pretty ornament in her hands and, baptizing it in a

flood of tears, pinned it on the breast of her boy.

And when "Old Man Larkin," as the village called Dave went to work with a will. He took as his him, heard what his boy had done, and saw the prize he had won, he said:

"Wife, I'm going to quit. A fellow that's got a boy like that had ought ter be somethin' himself."

My Mother's Pumpkin Pie. THURMAN HATTON, AGE 19, LAS CRUCES, N. M. Often when I sit me down. To think of things gone by, My thoughts will often wander To my mother's pumpkin pie. Of all happy situations, I will often give a sigh. And will wish I had a slice, Of my mother's pumpkin pie.

V. hen Christmas time was coming. And the turkey had to die, I kept thinking of dessert, And my mother's pumpkin pie.

Often when we were kept in, On account of a cloudy sky, Nothing tasted any better Than my mother's pumpkin pie. My little sister Mary Doted on the bread of rye. But rye bread was not in it To my mother's pumpkin pie.

You may go down to the bak'ry, And purchase sweet meats—but my! The bak'ry's pies ain't in it To my mother's pumpkin pie.

When I was a little mad, Then began to scold and cry, Oh! nothing soothed me quicker Than my mother's pumpkin pie.

Talk about jams and jellies That you've got to go and buy. They are nothing to compare With my mother's pumpkin pie.

How Boys Make Money.

Harper Annat, Wooster, Ohio—I have ound out a new way of making money. I go to houses of our neighbors in the norning when it snows and shovel off the snow. They pay me five or ten cents.

Merritt C. Stark, Livermore, Iowa-I make money by trapping. I have got twenty traps. I have made about eight dollars. This winter I caught fifteen muskrats. I have got a double-barreled shotgun and go hunting quite often.

Paul Wolf, Pleasantville, N. Y.—A while ago you asked the boys to write and tell you what we did, so I think I will tell you what I do. I have a paper route and sell about one hundred papers a night. I make about two dollars and fifty cents a week, and my father is going to save it and buy me land by and by. me land by and by.

Raymond Moore Remick, Philadelphia, Pa., age fifteen, says: "I have read in your paper of a boy who made eighteen dollars last summer selling vegetables. With a piece of ground about twenty five by thirty five feet, which I planted with parsley, I made fifty dollars over and above my expenses, which were ninety cents. I sold the parsley at restaurants in Philatelphia."

Henry C. Brose, Plainfield, N. J.—You want to know how I make money. Well, I go for milk every evening for a man, and I get seventy-five cents a month. I don't have to go very far, and I get some exerise that way. For the last two years I have been selling soap. In the summer I cut grass and do odd jobs, and make money to pay for the subscription to THE AMERICAN BOY.

Eugene H. Blake, Greenwood. S. C.—I wish to say to the "boys" that one of the best and easiest ways of making a little money is the planting and selling of vegetable plants, such as cabbage, tomato, pepper, eggplant, etc. Last year I tried the business and had great success, although a man in the same town was in the business aiready. Select good seeds, and a good spot in the garden near a fence or wall, where your plants can get plenty of the morning sun. You can get any seed attalogue that will tell you how to prepare and make a good hot-bed for your plants, so as to protect them. Work them often and keep them well watered, and you will have success. Never ask too much for your plants and people will buy them readily. They will sell well at ten cents a liozen, except the cabbage plants, which bring from twenty to twenty five cents per second of the second

Senator Depew to the Young Hen.

Senator Depew to the Young Flen.

Senator Depew is reported recently to have said: "Society is ruinous to young men. The young man needs all his energy all his vital force for his career. A few days ago I was in the office of a lawyer—tine lawyer—one of the most distinguished men in New York, and he and I were dissussing this very subject. He has two-ons who are very popular in society. They are clever young fellows, were great avorites at college—foot ball and all the st of it, you know—and now are simply verwhelmed with social attentions. In their ither's office is a young man who is studying law. He is about the same age as the inwyer's sons. Being very poor, he comensates for his opportunity to study by usting the office furniture, etc. I noticed hat an industrious, capable fellow he as, and spoke to the lawyer about it, and come than agreed with me in admiring the young man's spirit. "What worries he,' he said, 'is the thought that when I me gone he will probably be at the head of this business and my sons will be in is employ—if he cares to employ the mentions of the proposed of the lawyer about it, and the really spoke as if there might be serious question whether his sons would be worth employing."

You see what society can do for a young man.

A boy at seventeen can practically de-termine for himself whether he will be a leech on society or whether he will be detected and successful man.

Home is the first, the most important and most enduring school of character.

JAMES A. GARFIELD ON BOYS

I FEEL A PROFOUNDER REVER-ENCE FOR A BOY THAN FOR A MAN. I NEVER MEET A RAGGED BOY OF THE STREET WITHOUT FEELING THAT I MAY OWE HIM A SALUTE, FOR I KNOW NOT WHAT POSSIBILITIES MAY BE BUTTONED UP UNDER HIS SHAB-BY COAT. WHEN I MEET YOU IN THE FULL FLUSH OF MATURE LIFE, I SEE NEARLY ALL THERE IS OF YOU; BUT AMONG THE BOYS ARE THE GREAT MEN OF THE FUTURE: THE HEROES, STATES-MEN AND PHILOSOPHERS OF THE NEXT GENERATION.

Part First-Copyright 1901 by Stansbury Norse, Potsdam, N. Y.

My Dear Lester:.

to me about learning to draw, and I believe every boy should want to understand the subject as But our be earnestly as you do. If other boys knew what a field lighthouse. for enjoyment such knowledge would open up for them they would be just as anxious to know how to draw as you are-just as much so as they are to play marbles. When I see a boy going about with a camera snapping it at this and that, I always feel like telling him to learn to draw and he will get a great deal more of real enjoyment out of the pictures which he makes himself. Which is the more enjoyable—to bring home a lot of photographs, or a lot of your own bright sketches from a summer's vacation? I know what you think about it, anyway, and I am going to write you a few letters showing how it can be done, and then, if THE AMERICAN BOY publishes them for the benefit of its readers, I feel sure there will be hundreds of other American boys who will think as you do before very long.

Of course, it is necessary to know something about drawing before one can understand perspective. Every boy who goes to school to-day learns a little, and with that little, my dear Lester, added to what I am going to tell you, you can learn all the principles necessary to enable you to draw objects upon your table, or to make a sketch from nature out of

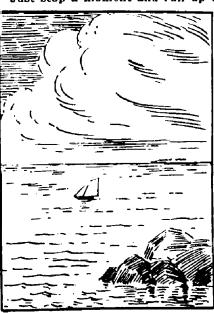

The first is called "Still-life Drawing," the second just what I have called it, "Sketching from Nature;" so in the future you will know what I mean when I use these terms.

The first thing to do is to learn all about the horizon line. Very few artists know how important this is. Everybody knows, if he stops to think, that there can be but one visible horizon line. When you look out of your window, off there, where there are no houses, you see apparently, a line where earth and sky seem to meet. If you look in another direction you will see the same thing, and if you can follow the line along from place to place you will see that it is the same horizon line. You cannot see another above it or below it, because such a thing is impossible. Yet I have seen pictures by good artists which would have, if all their drawing in the pictures was considered, two, three, and even four horizon lines to each picture. How this could be we will see later on; I only want, now, to impress upon you the great importance of this foundation line in drawing.

Many have never seen the sea, but almost everyone has seen a lake, or at least a pond. You know how level the surface of the water is and how, if you look away off yonder, this level surface seems to touch the sky.

Now, let us imagine that we are at the seashore, and that we see, far away in the distance, a lighthouse which we are about to visit. Before we enter the boat, let us look at this great tower. See how it looms up against the sky, and there is the horizon line just touching the rock upon which it is built, close down to its base.

Just stop a moment and run up the bank with me,

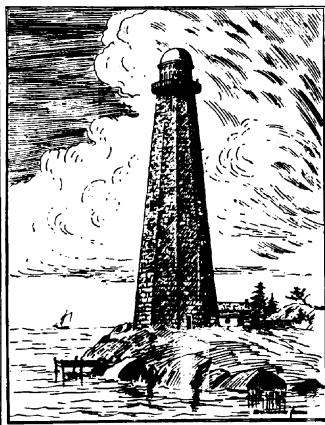

and look at our lighthouse from there. Now we are higher up and can see farther away over the water. This makes the horihigher, while horizon appears, now, remember-

anywhere. Put your face close down to the ground, I have been very much interested in your letters and you will realize how low your horizon becomes and how much less you see than when standing up.

But our boat is waiting for us—let us start for the While rowing out to it we will look around a little. See how the waves dance up, sometimes high above the horizon; but they come down again to the general level, often making a hollow far below it, thus preserving the ordinary surface practically unaltered.

We notice another thing, away off on the very horizon line itself a little yacht is sailing along before a gentle breeze; perhaps it is the "Gazelle" about which we have been reading so much lately and in which we are all deeply interested. When we get to the wharf at the foot of the lighthouse and scramble up on it, and then climb still higher up on the rock, we look again, and, behold! the "Gazelle'

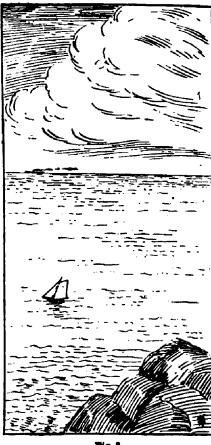

is no longer out on the edge of the water, but appears to be surrounded by the element in which she floats. Just as the horizon line moved up the lighthouse so has it moved up the mast of the yacht, and now we see the ocean far beyond her. (Fig. 1.)

And how about ourselves? Before we started, the tower, at whose base we now stand, was "away off there" at sea, and now it and we are in the center of a great circle—the water all about us, bounded everywhere by the horizon, which is just as far away from us here as it was when we started. Thus we see how things change to us according to our changing positions, and how important it is that we should recognize this fact. When we looked at the lighthouse from the shore it was a small affair, smaller than your little finger; now it towers away above us, and we have a hard climb before us-up, up, up its zon line seem winding stairs to the lantern.

Let us continue to watch the "Gazelle" as we travel the tower does upward, peeping at her from the little windows in not move. so the sides of the tower upon the stairway. As we rise the line of the higher we find the horizon line appears now at the top of the mast, now a foot above, now many feet, until the little yacht seems to have moved half way above the rock, from it toward us. (Fig. 2.) But we know she is not upon the side sailing in our direction, because her side is toward of the tower us all the time, and we can only conclude that our This gives us view has broadened. When we step out upon the bala great point cony, having reached the lantern, the little yacht seems almost at our feet, while the water around her the higher we has grown to an immensity, stretching away for miles are the higher beyond her; and a great ocean steamer, which we the horizon line did not see at all when at the foot of the tower, is now, appears. You in its turn, "away off there" on the horizon, appear can test this ing a mere speck in the distance.

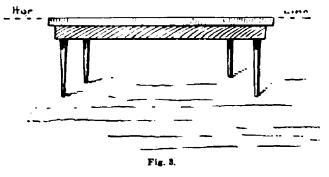

How straight the line which divides sky and water appears. I will hold out this stick for you and you will see, you "sight it" against the line, that it seems just as straight as the stick: and while doing this we notice. too, that it (the stick) is perfectly level.

Now, let us sum up what we have learned so far, that it may not be forgot-First, the horizon line is. apparently, line where earth and sky seem to meet, Second, it retreats from the eye as the latter goes upward, giving us more and more of the earth's surface as we rise above it. Third, it is

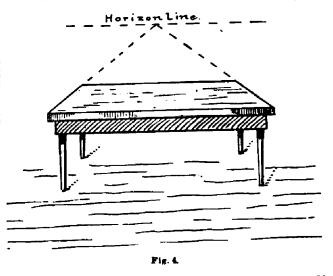

always a level line. So much for this wonderful line, but we are not done with it yet. We must learn just how it controls us in our drawings, for, whether we know it or not, everything that is properly done is (or may be) referred to it to prove its correctness.

Let us suppose that in this glass house on top of the tower, which is called the lantern, we find a large table perfectly level. They do have such tables in some of the lanterns, and they are kept level by adjusting screws, so the light will burn properly when placed upon them. (Fig. 3.) Now, if we bring our

eyes down to the edge of this table and look across its surface we can see the horizon line through the window, and can see that it coincides exactly with the upper surface of the table. If we stand up the

horizon line appears above the table. (Fig. 4.) If we stoop down and look under the table, down goes erious lina three accompanying views of the table show us these different relations of the horizon to it. (Fig. 5.)

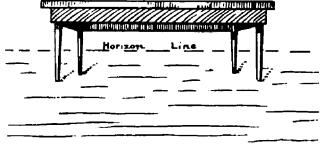

Fig. 5.

The point I want you to notice is this: That the | do not appear so. This is evident, because if C D is | diagrams with every drawing, we only need to know level surface of the table, although we are so high up in the world, if it could be carried out any distance, say a mile or two, would appear to go to the horizon—or, in other words, the horizon seems to have "come up" level with the top of the table. Thus we see, that if we carried this level table with us down the stairs, and looked over it through each window, the horizon line would appear level with it always. But we do not need a table to learn our les-When we look over the table it is really the level of the eye that we are considering—the horizon ine appearing always level with the eye, no matter where we are. The level of the table merely proves this. Any other level, such as an engineer's or a carpenter's spirit level, would answer the same purpose. We must fully realize that a level line from the eye, say a string stretched out straight and level, would always appear to touch the horizon at its farther end.

Having learned so much about the horizon line, we must now learn about the other lines we have to deal with when we are drawing. First, there is the vertical line one which is straight up and down, like the sides of the doors and windows. We always draw such lines "up and down" (at right angles to the horizon line), because if they slant the least bit the drawing will always appear askew.

Then there is the horizontal line, which is the name for one parallel to the horizon. Do not confuse horizon and horizontal. They have the same position (level), but the first is always related to the eye, while the second is always related to the first. Suppose you sit at a table with me a moment, and try to understand this matter thoroughly before we go any further, for it is a little difficult. Here is the nearer edge of the table. You can easily see that this is parallel with the horizon, because if you raise the table up, not tipping it in the least, until level with your eye, it will coincide with the horizon. Then there is the opposite side of the table, which is parallel to this one and must, therefore, be parallel to the horizon.

If you went around to the end of the table you would find the same relations—the ends would be parallel to the horizon just as the sides were, and these would be horizontal lines. But we cannot look at all these lines at the same time from these different positions. We must keep one position when we are drawing and draw just what we see from that place. If you sit back a little way from the table and hold out your finger, and "sight it" against the nearer edge and then against the opposite side, you will see that you have to raise your finger from the first to the second position. This proves that the back of the table appears higher than the front. And if you will hold out a stick and measure the apparent length of the nearer edge, and compare it with the opposite side, you will see that the opposite side appears the shortest.

Now let us make our first simple drawing—one of the top of the table. Here is the diagram we would get. A B is the nearer edge of the table; C D is the farther edge, which appears higher up and shorter. So far, so good. But how about A C and B D? Here we have lines which Fig. 6.

we know are horizontal but which

shorter and higher up than A B, then we are forced, in order to join them, to draw these lines toward each other and upward. We know they are horizontal, but they do not appear so, and we cannot draw them so.

Let me give you another example of the same thing. Suppose you were standing at one end of a long hall and looking down to the other end. Now you know the hall is the same size from end to end. The floor is level (horizontal) and the ceiling is also horizontal. So the long lines which "go from you," marking the top and bottom of the walls on each side, must be horizontal, too. But the hall looks smaller at the other end, the lines in the ceiling appear to run down, while those in the floor appear to run up, and thus, to draw the hall we would have to draw these horizontal lines which "go from us" as slanting lines.

I want you to notice this expression, "lines which go from us." These we call "retreating" lines—they retreat from the eye, exactly like boys who are frightened and take care to get out of danger by retreating from it. They have another name, too, a very important one, and one we shall use a great deal-they are called horizontal vanishing lines.

We have now learned something about a few of the different kinds of lines, for there are many more, and ought to be able to understand each other when we talk about the drawings which are to follow. I have tried to make this all clear to you, and if you will practice drawing some things, just like those I have mentioned, you will readily see for yourself how they look, and how these rules I have given you apply to everything. You cannot get a "Gazelle" and compare it with a lighthouse, perhaps, but chairs, and books and tables are plentiful, and with a little thought and care you can get a great deal out of what I have told you.

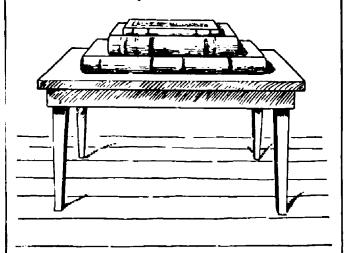

Fig. 7.

Take, for instance, this drawing of the table with a few books upon it. I have selected large books because they show the lines better. It looks like an easy matter to draw such things, and it is easy when you know the rules. The diagram given along with the drawing will explain it fully; but we don't make

how to make them. With such knowledge drawing becomes easy.

But what is the use of making such a diagram if we cannot analyze it-that is, discuss each line and point in connection with it separately? The power of analysis in one case brings the power to do similar things in another case. By selecting the different lines and telling all about them we learn how to draw lines of a like nature. Here we have four numbered sets of lines. Nos. 1, 2, 3 and 4 are absolutely vertical lines-always drawn vertical. Nos. 5, 6, 7, 8, 9

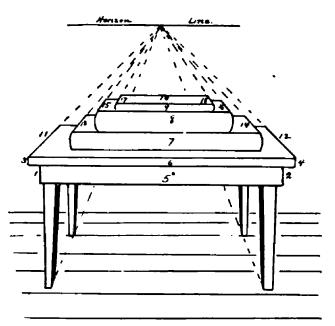

Fig. 8.

and 10 are horizontal lines, which appear horizontal and are therefore drawn so. Nos. 11, 12, 13, 14, 15, 16, 17 and 18 are horizontal lines which do not appear horizontal, but seem to rise toward the horizon line and to converge (that is, come together) at a point. If you follow the dotted portion of the lines you will see that when extended they do meet. This point where they meet is called a vanishing point. We will learn all about vanishing points before long.

In addition to these three sets we have a fourththe curved lines. It is always easy to get these right when they join the ends of straight lines.

Besides these four sets we have the lines of the table legs—which are oblique, as the legs are wider at the top than at the bottom; and also those which show the cracks in the floor, which really belong to the horizontal set.

Now, my dear Lester, if you will sit down and study these things, as I said before, you will learn a great deal about drawing, that you can build on when I write you my next letter. But it requires practice and plenty of it. Do not be too sure of yourself. It is always well to get someone older to explain anything you cannot understand. I hope you will come to your next lesson with this one thoroughly learned. Your friend,

STANSBURY NORSE.

CUP DEFENDERS.

A New Came That Requires Good Judgment Yet Has Enough of the Element of Luck to Make It Amusing.

Who shall have the honor of defending the cup? Every American boy may enter his boats on the course shown in the diagram. A little clever work with a penknife will make four or five miniature boats; but this is considered too much trouble. Buttons, such as those shown in figure 1, will answer very vell.

Figure 2 shows the four little fates which contend in the life of every yachtsman. They are wind, tide, fog These fates are nothing and rocks. more than four bits of some branch of n tree, which has been split down the center. They should be about five inches long and from one-half to quarters of an inch wide.

Hold them in the hand, as shown in gure 3, and then toss them upon the

The count runs as follows: Four white (fair wind and tide,) 4. Four black (a gale,) 5. Three white (good wind.) 3.

Two white (light breeze,) 2. One white (drifting.) 1.

Whenever a gale is thrown it entitles the player to a second chance.

It is part of the duties of a captain, during a yacht race, to hunt for his

of a course. Let each young navigator, B. then, see what fortune his four fates have in store for him.

A preliminary toss decides who shall play first. The yachts, four or five of which are entered by each player, enter the course at the disc, just above the open circle marked A, and travel on

The air never moves alike on all parts around the circle toward the open circle

Each player must state before he makes a throw which yacht shall be benefited, or otherwise, by the play, and he can not change his mind after the play has been made.

The open circle B is the first turning point in the race. If your throw allows

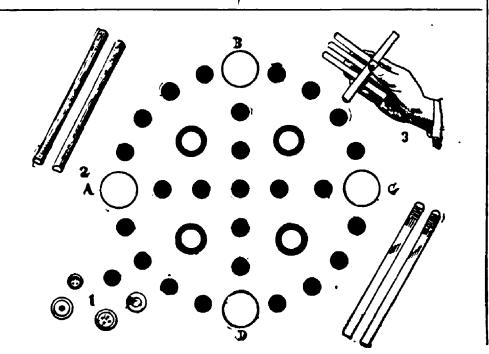

a boat to just land on this circle, the captain may, if he choose, turn into center of the course and reach the finish by following the short course, that is, towards D, to the center, and then straight in to A, the finish. To do this, however, he must risk the rocks, the four circles with heavy black boundaries.

If a gale, four blacks be thrown for any boat within the circle of black discs, the unfortunate craft is immediately blown upon the rocks and can only be liberated when a fair wind and tide is thrown for the same boat. When a vessel is liberated from the rocks she must begin the course anew.

At the open circle, C, a yacht has the opportunity, if the throw allows, of turning into the course and clearing straight away for home. If, however, she overthrows the circle, C, she must around unfortunate as to land on the circle D, she must turn into the course, risk the rocks and take the longer way in.

If a yacht lands on a disc occupied by a rival, the latter is said to be blanketed and cannot be moved until the last arrival pushes on. If a third boat lands on the same disc it blankets both the others, and so on; the last boat to arrive always holding the rest in check.

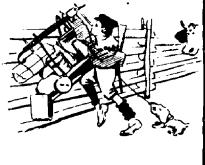

There is really more of an opportunity offered for good judgment in this game than the first glance would lead one to believe. Try it and be satisfied of this fact

JOHNNY'S TRIP TO THE NORTH POLE.

The Daily Life of a West Point Boy.

VIEWS OF THE ACADEMY GROUNDS.

lived secured the appointment of a boy in the town to a place at the West Point boy become a person of great consequence in the eyes of the other boys. it must be given up to work and study. We had very erroneous ideas regarding the boy's future life at West Point. Somehow we thought that he would have nothing to do but to walk around with a gun on his shoulder, and "pop away" at people and things as he pleased. We had the impression that he would now be forever free from any of the duties that most boys dislike so heartily. We thought that he was done with everything implied in the word "chores," and that hereafter there would be far more play than work in his life. If the boys of to-day have this impression about the life of a boy at West Point they will find out how mistaken that impression is if they will take the trouble to read this article.

It may interest you to know at the outset, that the United States Military Academy at West Point is the finest military school in the world, and that it will have been established one hundred years next year. Its graduates are the best trained of any military graduates in the world. They are subjected to the most severe discipline, and are made to understand that the duties for which they are in training are very serious duties indeed.

The moment a student at West Point enters the Academy his training begins. If it is summer time he must get up exactly at five o'clock in the morning, and in the winter he must get up at a quarter before six. The instant he hears the first note of the reveille he must jump from his bed. There is no turning over more slumber," as might be the case if he were at home. It is a serious infringement of the rules for a boy to lie

I remember that when I was a boy the sounds. And the moment he is up his Congressman in the district in which I duties begin. Every minute of the time before him until he goes back to his bed at night is apportioned by rule, and he Military Academy. Immediately that can call but an hour and forty minutes of that time his own. All of the rest of

The cadet is allowed fifteen minutes in which to wash and dress himself. Then a bugle note announces "police call," which means that the cadet must make his bed and put his room in order, and this must be done by rule. He cannot give his bed or his room "a lick and a promise." He must make his bed in a certain way, and nothing but absolute perfection in the way of neatness and thoroughness will be tolerated in the sweeping and cleaning of his room. The blankets of his bed must be folded

THE PARADE GROUND.

in a certain way. His mattress must be rolled up in a certain way. Nothing must be left lying around. A place for everything and everything in its place is the unalterable rule in a military academy. The boy who is inclined to be for just "a little more sleep and a little slack or slovenly in his habits must overcome those habits or he must leave the academy. His cap must be hung on just one particular nail, and it is a vioin bed even five minutes after reveille lation of the rules to hang it any other

place. A keen-eyed inspector comes around every day. He peeps into clos-ets or drawers or boxes, he takes note of the way the books belonging to the cadet are arranged on the table. He is on the alert to discover a little dust or a garment out of place, and if he makes such a discovery the cadet will hear about it, and it will affect his markings at the academy.

When the cadet's room work is done he marches to breakfast "according to rule." He sits down to breakfast at a certain minute every morning, and he gets up from breakfast at fifteen minutes after seven. A bugle call regulates his every movement. After breakfast he may have fifty minutes in which to do as he pleases within certain limits. He need not work nor study during that time. It is his recreation hour. When it ends at eight o'clock the imperative bugie calls him to his studies. There is no chance to shirk here, and study or recite the cadet must until one o'clock. Nothing but actual illness will be accepted as an excuse for failure in one's recitations. If a cadet cannot stand the severe test to which his studies subject him he is regarded as unfitted for military work, and he must leave the academy. He must study civil and mining engineering, natural and experimental philosophy, geology, drawing, chemistry, law and history, military signaling and telegraphy, modern languages and mathematics.

In addition to all this he must do a great deal of work in the gymnasium, and he must make himself familiar with a great many bothersome little details that are not to be overlooked no matter how triffing they may seem. He works harder than any boy on a farm or in a factory works, and he has less time that he can call his own. It is hard for him to understand at first what a great part of his study and work has to do with his future duties as a soldier, but the time comes when he sees how important even the most trifling detail of his training has been.

From his studies the cadet marches to his dinner for which he is allowed forty minutes. Uncle Sam knows the value of good food, and the cadets have the best of everything to eat, but there is very little "fancy cooking" done for them. They have the best the market can afford in the way of good, nourishing food, and their hard work gives them an appetite for a substantial diet.

After dinner the cadets have twenty minutes more for recreation, and then they again "pitch in" to their studies,

until four o'clock. At ten minutes after four begins the regular military drill (the day on the drill grounds, and thilasts until half past five under the mosrigid discipline. Dress parade follows the drill, and the cadets have from half past six until seven o'clock in which to eat their supper. After supper the cadeis are allowed half an hour for recreation. When the time is up the sound of the bugle is heard, and the cadet must go directly to his own room and remain there for the rest of the evening. But there is not a minute's time for idleness during the evening. Indeed, he sometimes wonders how in the world he is to get through with all of the study that before him waits. There are so many hard lessons to be studied for the following day, and so entirely by rule is everything regulated, that if the cadet gets through with his lessons he cannot make up his bed and get into it until he hears the bugle call that gives permission for him to do so. He hears this call at exactly half past nine, and then he proceeds to unroll his mattress, spread out his sheets and blankets and get into bed. At ten o'clock the bugle calls again, and instantly all lights go The cadet must stay in bed until the sound of the reveille is heard in the morning; then he "pops out" and goes through with it all again with no variation excepting on Sundays, but even then he must do everything by rule. He is not allowed to lie in bed a little longer because it is Sunday. He gets up at exactly the same hour every day in the week. But there is no hard, grinding study on Sunday. The cadet's room must be spotless and in simply perfect order on Sunday, for it will receive special inspection on that day.

At half past ten on Sundays he, with his fellow cadets, march to church, and there he stays until noon, when he marches back to his quarters and from there to dinner. Sunday afternoon is given to him as a time of rest and quiet. in which he may read or write letters or do as he pleases until dress parade at half past six. But he goes to bed at the same hour as on other evenings of the

The cadets remain four years at West Point, during which time they receive lessons in obedience and in military discipline such as they can never forget.

When they enter the army they are far better prepared to fill positions of special trust and importance than the soldier who has not had their training.

The boy who thinks that he would like to enter West Point because of the good time he can have there would do well to remain where he is, for West Point is a place of hard and almost unceasing work that only an exceptionally strong and determined boy can endure.

A "HOMEMADE" INDIAN.

The accompanying picture represents Will G. Halsey, of Chicago, a subscriber to THE AMERICAN BOY, dressed in an Indian headdress, hunting shirt, leggin moccasins, belt, etc., all made by himsels, with the exception of the blanket. He collects Indian relics. He has pottery, tomahawks, knives, builet pouches, knives sheaths, etc. These he hangs on the walls of his room.

The Only One.

Tommy's mother—Why is it, Tommy, that you are always fighting with Willie Simpkins? I never heard of you quarreling with any of the other boys in the neighborhood.

Tommy—He's th' only one I can lick.

No. 12. He lands in Canada after a swift and safe voyage.

No. 13. Has an argument with the custom-house officer.

No. 14. In the virgin woods of Canada. No easy job.

No. 15. Reaches Hudson's Bay. Takes observations. Lat. 8247 Long. 817; Temp., 30 above. (To be Continued.)

WHAT THE BOYS SAY

99000090000000000999990909

30000000000000000000000

Edward H. Cost, Xenia, O., wants to see plans in THE AMERICAN BOY for a dog

Dwight Morrison, McKenzie, Tenn., wants to know how to make a camera and where to buy what one cannot make.

Hugh A. Norman, of Chicago, s that we print directions for bui racing yacht about two feet long. building a

Vincent B. Miner, 428 E. Sixth street, Plainfield, N. J., wants more articles in the line of instruction in printing for ama-

Rolla Eliason, Elburn, Ill., thinks a few suggestions on the care of shotguns and rifles and how to shoot them would interest a good many boys.

Vincent H. Godwin, Newport News, Va., wants to know if it is possible for a student to get into an observatory. He aspires to be an astronomer, and is willing to begin at the bottom.

Ross Toney, Berrien Center, Mich., asks our opinion of the book entitled "Cast Up by the Sea."

The Editor has not read it. Have any of our subscribers; and if so, what do you think of it?

Eugene Martin, Shelbina, Mo., says that a Methodist preacher in his town has organized a lodge by the name of "The Order of Kindness," with sixty one members. The object is to get in the boys who loaf on the streets. There will be a library, gymnasium, etc.

Vincent Newcomer, 225 East Seventeenth street, New York City, wants to know if there is a book published in the United States concerning model yachts. He says that in his school, the Nautical Academy, Easton, Md., he is taught boat building, horsemanship, how to sail boats and run gasoline launches gasoline launches.

Master Paul A. Mastenbrook, Grand Haven, Mich., age thirteen, sends a very nice pencil drawing of a balloon rising above the earth. On the balloon in large letters is "The American Boy." Under the picture he writes: "The American Boy never fails to rise."

Had this been drawn with pen and ink we might have found room for it in the paper, but as it is we shall have to return it.

William G. Taulon a Norman (P. 1)

William G. Taylor, a Newport (R. I.) boy, suggests that it would be well for neighboring boys who keep poultry, pigeons, rabbits, etc., to form a Company of The Order of the American Boy with the purpose of learning all they can about nets and animals.

pets and animals.

We approve of the plan. Nothing could be more interesting to a company of boys than the study of animal life.

than the study of animal life.

Chauncey Poer, Gwynneville, Ind., suggests that THE AMERICAN BOY include a department devoted to music. Our friends do not realize, perhaps, the limitations under which we are working. It is manifestly impossible for us to accept of a small part of the suggestions made, and yet we welcome them. There has been some complaint that the departments already established have crowded too much the story department, and if we were to add further departments we certainly would be in danger of leaving out much that is of general interest. We will do the best we can to meet the boys' expectations, but realize constantly that there are some things which a boys' paper should include that we cannot find space for.

are some things which a boys' paper should include that we cannot find space for.

Here is how two boys made the dollar for their subscription to THE AMERICAN HOY. The boys are Earl and Carl Keller, of Bear Valley, Cal., aged thirteen and nine, respectively. Their father, in cleaning up a bunch of gold in a mine, had some quartz that was run over, or not thoroughly worked. There was some gold left in it. The father did not want this wasted, and told the boys they could have it if they would mortar it up. They had to do it by hand, and this is not a very easy job. They first put the rock and dirt in a large mortar, or iron pot, and with a long iron pestie they pounded the rock to a fine sand, putting in only a small quantity at a time. When they got enough fine sand to fill a gold pan, which is a pan made of sheet iron, they took it to a tub of water, dipped it in the water, and shook it continually. By this process the gold settles to the bottom of the pan. They then washed the dirt from the top of the pan, which speedily catches up all the gold, and tone squeezed the quicksilver through a thick cloth, the gold staying in the cloth. This does not remove all the quicksilver from the gold, and to do this it must be burned off. When the gold was finally obtained they sold it at the rate of eighteen dollars an ounce. This was hard work, but the boys made several dollars at it. It was harder for Earl than ordinarily, for last summer the boy lost his right hand. out the boys made several dollars at it. it was harder for Earl than ordinarily, for last summer the boy lost his right hand, and he had to do all of his work with the left.

The letter from which the foregoing is taken was written to us by the mother of the boys, who says in closing, "I must say this: THE AMERICAN BOY is the best paper I ever read for boys, and we sincerely hope it has come to stay."

A man down south writes: "Let the young man about to be out of a job try a year on the farm. Plowing behind a brindle mule will give him a new constitution, take the kinks out of his top-knot, the frog out of his throat, the gas off his stomach, the weakness out of his legs, the corns off his toes, and give him a good appetite, an honest living, and a sight of heaven."

A Successful Young Journalist.

DRY GOODS, FURNISHINGS, FANCY GOODS, PROMPT SERVICE. SEND FOR SAMPLES AND PRICES. PERFECT SATISFACTION.

J. Lee Robinson, of Cambridge, Mass., though only twenty years old, has been actively engaged in journalism for nearly four years. He obtained his education in actively engaged in journalism for nearly four years. He obtained his education in the public schools, graduating in 1897 from the English high school at Cambridge. While in this school he turned his attention to writing, his first contributions being given to the school paper. He also became the correspondent for his school for the Cambridge Chronicle, the foremost weekly in the city. Finding the work congenial, he did not stop at the "copy" for which he was responsible, but regularly which he was responsible, but regularly sent in accounts of entertainments and other matters having a news interest, doing this work without compensation, but

J. LEE ROBINSON.

not without result, for immediately after his graduation from school he was offered a position as reporter for the Chronicle, which offer he accepted. Since then he has been actively connected with the Chronicle, and about a year ago was promoted to the position of city editor. He, at the same time, became one of the Cambridge reporters for the Boston Daily Journal, and is now its chief Cambridge correspondent. As Cambridge is the seat of Harvard University, and has nearly one hundred thousand inhabitants, this position is one of great importance, and is certainly a great honor to one so young. The secret of his success is contained in two words—energy and thoroughness. Of the former he has a boundless amount, while he considers the latter quality the more necessary of the two. He believes that to succeed one must not be afraid to do more than one's share of work because of the fear that someone else will not do his full share. He is the youngest person connected with a Boston newspaper, doing editorial work. He is an accomplished typewriter, preparing all his copy on the machine. He does not use shorthand, but has a system of abbreviations which, though scarcely intelligible to the uninitiated, enables him to report a speaker with unusual accuracy. At school he was active in his class and debating societies, and is now president of his class alumni society. He is an American boy of to-day and has shown himself the possessor of the practical present-day qualities that insure success. not without result, for immediately after

Starting an Amateur Paper.

One of our subscribers in New Jersey has one of our subscribers in New Jersey has written us saying that he desires to start an amateur paper shortly and asking for advice and information, especially as to how he can get advertisements. We are always glad to publish anything that will help our readers, if it is possible for us to

do so.

We would advise you to identify yourself

""" amateur fournalists' assowith one of the amateur journalists' asso-ciations. The leading associations are the United Amateur Press Association, which United Amateur Press Association, which is the older amateurs. The secretary of the United Amateur Press Association is

Guy N. Phillips, Morningside, Sioux City, Ia., and Warren J. Brodie, 478 The Arcade, Cleveland, O., either of whom will be glad to give prospective members any information they may desire. Through these associations, or either of them, you will get in touch with a large number of amateur journalists, who will be glad to help all they can and will exchange papers with you. This will prove profitable in many ways, but will not bring you any money.

For making money out of your publication you will have to depend principally upon local subscribers and local advertisers. If you make it a paper of interest to the boys of your neighborhood or of your school, you ought to be able to sell quite a number of copies of each issue. A good way to do this is to make it a sort of school newspaper, giving the news in regard to the boys, their doings, and their interests, just as the professional papers treat the news and interests of grown-up people. In this way you should bring in enough to pay for the expense of publishing the paper. Then, too, you will be able to get some local advertising, especially from the dealers patronized by your family, and you can also get some subscriptions from grown-up people on the score of friendship, who will be glad to help you along. From ten to twenty five cents a year, according to the size of the paper published, is about the average subscription rate for amateur papers.

In addition to the news items, you should

papers.

In addition to the news items, you should have one or two literary articles—for instance, a story, an essay and a poem. If you join the amateur journalists' associations, their manuscript managers will send you stories, poems and essays written by members of the associations, as each member who does not publish a paper of his own is expected to write at least one article a year, and either publish it in some magazine with which he is connected or send it to the manuscript managers of the associations; the managers then parcel out the manuscripts so received among the amateur papers, thus giving the editors acceptable matter.

If you get out a good paper, so that it be-

amateur papers, thus giving the editors acceptable matter.

If you get out a good paper, so that it becomes well known among amateur journalists, and your advertising rates are low (they shouldn't be over five cents an inch), you will get some advertising from other places than your home town, because amateur journalists are a very enterprising set of boys and young men, and many of them are engaged in some little kinds of business on the side, which they advertise in the amateur magazines. The receipts from this source will not amount to a great deal, but they will help pay expenses.

Now you will want to send your paper through the mails at regular newspaper rates, which are one cent a pound, for it would be too expensive to put a one cent stamp on each paper; but you have to get a paper admitted to this privilege before you can mail it under the newspaper rate. Your local postmaster can give you all the information that you desire about mailing the paper. You will have to obtain some regular subscribers before you can get this privilege, however.

If you go into the publishing of an ama-

privilege, however.

If you go into the publishing of an ama If you go into the publishing of an amateur paper for the mere purpose of making money, you may be disappointed, for you cannot make very much out of it, though a properly conducted paper will pay a profit. The conducting of an amateur paper, however, is an education in itself and you will find it well worth your while to publish your paper for that purpose alone; though, of course, you should try to make it pay expenses. It will be a waste of time and money, however, for you to try to get what is known as general advertisers—for they would not consider a paper of so small a circulation as an amateur papers is that so many amateurs seem to lack the strength of purpose necessary to him out a paper received. or and they get three and quit either for a time or permanently. In the course of time, however, you may develop your paper into a good property and make a profes-sional publication of it, and you can then get business from the general advertiser and the large advertising agencies. Quite a number of successful professional publications of to-day started out as amateur papers. Start your paper in a small way, enlarge it and improve it as your facilities increase set it out resultant and you may

enlarge it and improve it as your ractities increase, get it out regularly, and you may one day have a valuable property.

An article entitled "How to Start a School Paper" appeared in THE AMERICAN BOY for February, 1901, at page 115. That article might be read to advantage in connection with the foregoing.

CARBORUNDUM

This is not a free offer.
You do not have to solve any puzzles.
You do not have to subscribe to any magazine.
No cash prizze or sums of money are to be distributed.
You do not have to canvass, nor appoint agents, nor sell any perfume or soap.
But if you want a Carborundum Pin made from a genuine Carborundum Crystal, send us 15 cents and we will mail you one of these pins.

Price per Dosen, \$1.50; Price per hundred, \$12.00. Carbernadum is next to the diamond in hardness. With this pin you can write your name on glass as easily as with a pencil on paper. The pin is handsomely mounted and presentes brilllancy and luster well worth your admiration. This pin makes a handsome gift for a lady or gentleman. To obtain one of these pins send 15 cents to the CHICAGO CARBORINDIM PIN MFG. CO., Dept. B., Hox 878, CHICAGO, ILL.

tiend no more Exchange Notices for the present. We have more ikan we can use.

Reviews of Boys' Books

A NOAH'S ARK GEOGRAPHY: Mabel Dearmer. This is a delightful book for children by the author of "The Book of Penny Toys." The pictures are all full page and in colors. The type is large and easily read. As a gift book for a little boy or girl nothing could be more appropriate or meet with greater favor. It gives a true account of the trials and adventures of "Kit", "Jum-Jum" and "The Cockyolly Bird". 221 pps. \$1.50, Macmillan & Co.

PITMAN'S TWENTIETH CENTURY BUSINESS DICTATION: This book contains forms of business letters, legal documents and miscellaneous work. It is a BUSINESS DICTATION: This book contains forms of business letters, legal documents and miscellaneous work. It is a complete manual of dictation for the use of schools, colleges, teachers, law stenographers and students of shorthand and typewriter, with chapters on Spelling, Punctuation and Characterization, and matter counted for speed practice. 240 pps. \$1.00 in cloth, 75 cents in boards, Isaac Pitman & Sons.

STORIES OF PIONEER LIFE: For the law to read about animals. The here is "Mishook." an

STORIES OF PIONEER LIFE: For young readers. Florence Bass. This is a book of stories about real people who lived many years ago. From the table of contents we learn that it treats of Our Land—Present and Past; The Coming of the White Man; Marquette, Missionary; Daniel Boone: The Early Flat-boats; Blockhouses and Forts; The Early Settlers of Ohio; Story of Frances Slocum; Story of the Early Life of Abraham Lincoln, and so on. It is replete with illustrations. 136 pp. 40 cents. D. C. Heath & Co.

NATURE'S MIRACLES: Vol. III. Sub-NATURE'S MIRACLES; Vol. III. Subject, Electricity and Magnetism. In Volume I. of Nature's Miracles Professor Elisha Gray talked on Earth, Air and Water, and in Volume II. on Energy and Its Manifestations in Heat, Light and Sound as Explosives. Professor Gray in the third volume-takes up Electricity and the third volume-takes up Electricity and Magnetism, in which he stands among the first authorities. He has spent forty years in the laboratory. Professor Gray tries to give such a simple explanation of these forces that the general reader gets a clear understanding of the subject. 248 pps. 60 cents. Fords, Howard & Hulbert.

Sample Illustration (reduced).

BLACK BEAUTY: Anna Sew-ell. Who is there that has not read "Black Beauty." that admira-ble story of ble story of the life of a horse as a horse as told by him-self—a book that has done more to win for horses kind treatkind treat-ment than any other book ever written? It

has passed through many editions and is still delighting thousands of readers. The publishers have gotten out a very handsome publishers have gotten out a very nandsome edition with illustrations of great beauty worthy of the story. The illustrations are by Winifred Austen, a lover of horses. We wish that every reader of THE AMERICAN BOY might read "Black Beauty," a book for young people. Twenty five full page drawings. 200 pps. \$1.25. L. C. Page & Co.

GOLD SEEKING ON THE DALTON TRAIL: Arthur R. Thompson. This book describes the adventures of two New England boys in Alaska and the Northwest Territory, and contains eleven illustrations. The boys in this book were accompanied by their father and uncle on a trip to the Klondike. They hunted and fished, took long mountain tramps, and lived a healthful, vigorous out-of-door life. It is a record of personal experiences in which the boys shot ducks, rabbits, bears and carlbou, crossed wild mountain ranges, forded rivers, took long trips on snowshoes, and searched for gold. The book is not only interesting but full of information. 352 pps. \$1.50. Little, Brown & Co.

SUNDAY AFTERNOONS: For the children; A Mother Book. E. Frances Soule. This book is an attempt to assist the mother who wishes to train her children to keep the Sabbath and yet make it a day of brightness. Time is apt to hang heavily on the hands of the children during Sunday afternoons. This book suggests some simple methods of busying the brain and hands of restless children. It is full of

good sense and is of a very sweet and tender spirit. It contains also a collection of hymns and poems for the little ones. The book will be a boone to many a perplexed and weary mother. 162 pps. 75 cents. Fords, Howard & Hulbert.

CATTLE-RANCH TO COLLEGE: Russell Doubleday. This is said to be a true tale of a boy's adventures in the Far West twenty five years ago, telling of his amusements, his trials, his work and his play. The author tells the story in a boy's own words. This book ought to be of interest, not only because of its novelty but because of its truthfulness. The story of a boy who has passed through the stern training. of its truthfulness. The story of a poy who has passed through the stern training of a frontier life to occupy an honorable place in an Eastern university ought to be acceptable to boys young and old. The book is replete with lliustrations, many of them from photographs. 347 pps. \$1.50. Doubleday & McClure Co.

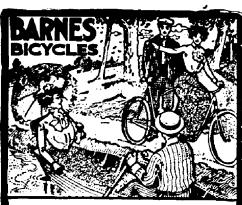

> THE ADVENTURES OF A SIBERIAN CUB

THE ADVEN-TURES OF A SIBERIAN CUB: Translated from mals. The hero is "Mishook," an orphan-bear. His adventures are all told in an in-teresting and pa-thetic manner, in much the same

THE OREGON TRAIL: Francis Parkman. A sketch of prairie and Rocky Mountain life. The book before us is a beautiful product of the bookmaker's art, containing seventy-five illustrations by Frederic Remington, the great sketch artist. This popular book is a classic. It has been read by thousands of young and old with delight. It describes a journey among the Indian camps and the Rockies by Francis Parkman in 1847. Mr. Remington's striking pictures of Indian camps, buffalo hunts, etc., lend great charm to the narrative. Boys will like it. In pictures and in text it gets as near as possible to the truth of Indian life. 411 pps. \$2.00. Little, Brown & Co. & Co.
