THE HERO OF MANILA: Rossiter Johnson. Illustrations by Clinedinst. The title of this little book shows for itself what it contains. It is a history of the life of Admiral Dewey, from the days of his early boyhood to the present, fully illustrated. The book is written for boys, and is one of the "Young Heroes of Our Navy" series. Every American boy knows how Dewey destroyed the Spanish fleet in Manila Bay, but comparatively few know the story of his early years and his training under Farragut. We hear in these pages of Dewey the schoolboy in Vermont. Dewey the midshipman, and finally of his part in Farragut's famous exploits on the lower Mississippi. 152 pps. \$1.00. D. Appleton & Co. pleton & Co.

June in American History

JUNE 1, 1888: EX-PRESIDENT JAMES BUCHANAN DIED. Born in Franklin County, Pa., April 23, 1791, he graduated from Dickinson College at the early age of eighteen years. Choosing the bar as his profession, he was admitted to practice in 1812. Two years afterward he became a member of the Pennsylvania Legislature. Mr. Buchanan's legal practice was so successful that, at forty years of age, he retired from his profession a wealthy man. Elected to Congress in 1821, he held his seat for ten years. From 1832 to 1834 he was minister to Russia and was a member of the United States Senate from 1834 to 1845. From 1845 to 1849 he was Secretary of State in President Polk's cabinet, where he displayed pro-slavery sentiments. Was United States Minister to England from 1833 to 1856. In the latter year he was elected by the Democrats, President of the United States and was succeeded by Abraham Lincoln, the champion of the Republican party, in 1860. Mr. Buchanan's pro-slavery and disunion sentiments freely expressed, no doubt helped to precipitate the Civil War. His moral character and private life were irre-proachable.

JUNE 2, 1785: FIRST AMERICAN MIN-ISTER APPOINTED TO ENGLAND. John Adams, who had already negotiated a commercial treaty with Great Britain, was appointed first United States Minister to that country. His reception by George, III. and his court was a cold one, and he returned shortly afterward to America.

JUNE 5, 1868: FIRST CHINESE EM-ISASY RECEIVED BY THE PRESI-DENT. Anson Burlingame, who had been minister to China, was appointed by Prince Kung, the regent of the Chinese Empire, special ambassador to the United States and the great European powers, to ne-gotiate treaties of friendship. He arrived in this country with many Chinese atten-dants and officials and was successful in carrying out his mission. carrying out his mission.

JUNE 8, 1845: ANDREW JACKSON

JUNE 10, 1801: TRIPOLI DECLARED WAR AGAINST THE UNITED STATES. The lack of sufficient naval force compelled the United States to subsidize the rulers of the Barbary States in order that American commerce might be unmolested by the piratical fleets, which swarmed along the Mediterranean. The Bey of Tripoli, not satisfied with his share of this "backsheesh," demanded more, and being resused, declared war. Commodore Dale, Commodore Morris and Commodore Preblewere at various time engaged with the nemy. The last named officer, however, doing the most damage to the enemy. It was under Commodore Preble that Lleutenant, afterwards Commodore, Stephen Peratur, carried out the daring and desperate act of burning the United States ship Philadelphia in the harbor of Tripoli. The war ended in June, 1806, when a treaty of peace between the two countries was concluded.

JUNE 15, 1775: WASHINGTON AP-OINTED COMMANDER-IN-CHIEF OF THE CONTINENTAL ARMY. He was rominated by Thomas Johnson, a member of Congress from Maryland. The result of the balloting showed a unanimous vote Washington's favor. Washington at that time occupied his seat as member of

JUNE 15, 1849: JAMES K. POLK DIED Pollock was the ancestral name of his amily, and the future president was of cotch-Irish descent. Mecklenburg County C. C., was his birthplace on November 2, 185. After graduating at the University I North Carolina and prosecuting the tudy of law, James Knox Polk was admitted to practice in 1820. His success in ublic affairs was rapid. A member of he State Legislature in 1823, he was sent into affairs was rapid. A member of he State Legislature in 1823, he was sent into affairs was rapid. A member of he State Legislature in 1823, he was sent into the territory to quell any uprising General George A. Custer, with a part of his force, consisting of hardly 300 men. In the state of his force, con

JUNE 17, 1872: GREAT INTERNATIONAL PEACE JUBILEE AT BOSTON. The special features of the occasion were a chorus of 20,000 voices and an orchestra numbering 1,000. Military bands of many other nations, including that of the British Grenadier Guards, also took part. The Jubilee closed on July 4.

JUNE 19. 1864: BATTLE BETWEEN THE KEARSARGE AND ALABAMA. The Alabama was manned and owned by British subjects and used as a Confederate privateer, plundering and destroying vessels and merchandise belonging to American citizens. The United States ship Kearsarge, commanded by Captain John A. Winslow, finally put an end to the Alabama's depredations off Cherbourg, France. The fight resulted in the sinking of the Alabama with a loss of nine men killed and twenty one wounded. Part of the remainder of her crew were rescued by the Kearsarge and part by the crew of an English yacht, called the Deerhound. The Kearsarge had three men badly wounded—one of them dying shortly after.

The celebrated "Alabama claims" arose on account of the damage caused by the Alabama to American shipping and merchandise. The tribunal of arbitration fixed the sum of \$15,500,000 as the sum to be paid by Great Britain in satisfaction of the various claims, which sum was paid over to the United States the following year.

JUNE 22, 1898: LANDING OF AMER-

JUNE 22, 1898: LANDING OF AMERICAN TROOPS IN CUBA. The army numbered 17,000 men, under the command of General Shafter. The landing place was Balquiri, some distance east of Santiago. As the Cubans had driven the Spaniards back into the interior, the landing was effected without opposition, and the troops immediately advanced upon Santiago.

JUNE 23, 1800: GREAT EASTERN ARRIVED IN NEW YORK, Until recently this was the largest ship ever built. She was constructed on the Isle of Dogs, England, in 1856. The dimensions were; Length, 692 feet; breadth, 118 feet; height, 70 feet. She had eight engines of 11,000 horse power; ten boilers, five smokestacks, and six masts. Her chief work was in laying the first Atlantic cable; otherwise she proved an unprofitable investment, and was broken up for junk in 1889.

JUNE 25, 1876: MASSACRE OF GENERAL CUSTER AND HIS COMMAND BY INDIANS. Congress dispossessed the Indians of a considerable part of the Black Hills reservation, which aroused their anger. A strong military force was sent into the territory to quell any uprising. General George A. Custer, with a part of his force, consisting of hardly 30 men. encountered Sitting Bull with a force of Indians five times greater. A terrible struggle engaged in which General Custer

Horn," from its having taken place there.

JUNE 27, 1873: HIRAM POWERS, section to Congress. He was defeated for the vice-presidency in 1840, but four learns later the Democratis elected him to the presidency. The chief events of iTesident Polk's administration were the war with Mexico, the establishment of an independent treasury system and the inauguration of the Department of the Interior. Mr. Polk's death took place only a few months after his retiral from office.

JUNE 17, 1775: BATTLE OF BUNKER HILL. One of the most important of the most important of the Revolution. Although it has come down in Revolution. Although it has come down in Revolution. Although it has come down in Revolution. The Market Hills of the Greek Slave is prob-

ably the best known of his creations, numberless casts and copies of it having been taken. Of famous Americans, he made a portrait statue of Washington for Louislana, of Calhoun for South Carolina, and of Webster for Massachusetts. His death occurred in Florence.

occurred in Florence.

JUNE 28, 1738: BATTLE OF MONMOUTH COURT HOUSE. The British
troops under General Sir Henry Clinton
were, after the evacuation of Philadelphia,
advancing as rapidiy as possible making
their way to New York with Washington
following, to give battle should an opportunity be presented. The battle was a decided victory for the Continentals, although,
owing to the disaffection, tardiness and
disobedience of General Lee, defeat at one
time was imminent; and only the presence
and stimulating example of Washington
made victory possible. In killed, wounded
and missing the Americans lost 228 men,
while the British left behind 4 officers
and 245 non-commissioned officers and men.

JUNE 28, 1836: JAMES MADISON DIED.

JUNE 17, 1872: GREAT INTERNATIONAL PEACE JUBILEE AT BOSTON. The special features of the occasion were a chorus of 20,000 voices and an orchestra numbering 1,000. Military bands of many other nations, including that of the British Grenadier Guards, also took part. The Jubilee closed on July 4.

JUNE 18, 1812: UNITED STATES DECLARED WAR AGAINST GREAT BRITTAIN. This, the "Second War for Independence," was brought about mainly by the dangerous political influence which Great Britain was exercising in American affairs. When the war finished American affairs when the war finished American affairs. When the war finished American affairs when the war finished American affairs. When the war finished American affairs when the war finished American affairs to the war for Independence was completely and forever accomplished.

JUNE 19, 1829: MAINE SEPARATED FROM MASSACHUSETTS. Maine was the twenty-third State admitted into the Union.

JUNE 19, 1864: BATTLE BETWEEN THE KEARSARGE AND ALABAMA. The

JUNE 30. 1834: INDIAN TERRITORY FIXED BY CONGRESS. The act stated that, "All that part of the United States west of the Mississippi River, and not within the States of Missouri and Louislana, or the Territory of Arkansas, shall be considered the Indian country." By formation of states and territories, this area is now greatly reduced.

area is now greatly reduced.

JUNE 30. 1898: LADRONE ISLANDS SEIZED BY AMERICA. These islands form part of the Philippine group belonging to Spain and were taken by America during the Spanish-American war. The Spanish Governor-General of the Islands only heard of the war for the first time from the officers of the United States ship Charleston, which made the capture.

JUNE, 1785: INTRODUCTION OF THE COTTON PLANT INTO GEORGIA. The seeds were obtained from the Bahama Islands, and its exportation was begun in 1788 by Alexander Bissell, of St. Simon's Island.

JUNE, 1900:: TWELFTH CENSUS OF UNITED STATES TAKEN: The population was found to be 76,236,220.

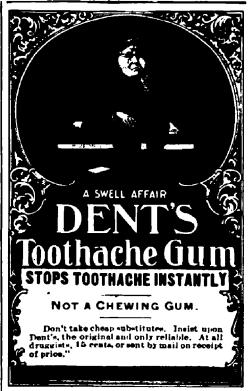

The oldest remedy, has a national reputation and has never been equalled for the instant relief and permanent cure of Catarrh, Cold in the Head, and the attendant Headache and Deafness. THE AMERICAN BOY is the only official organ of the Agassiz Association and should be in the hands of every member.

All correspondence for this department should be sent to Mr. Harlan H. Ballard, Pittsfield, Mass. Long articles cannot be used.

THE AGARSIZ ARSOCIATION velcomes members of all ages, and any one who is interested in any form of natural science is invited.

Established in 1875. Incorporated in 1892.

Short notes of personal observations are particularly desired for use in the A. A. department. Send illustrations when convenient, Questions are invited.

Address H. H. BALLARD, Pittsfield, Mass.

The Earliest Flowers; and a Prize.

You have a kindly feeling for the first flower of spring. If you haven't, you are different from everyone else I know. Enjoy winter as we may; winter with its Christmas holidays, its bracing air. Its miracles of ice and snow, its sleighing and its skating; yet, after all, in our northern states, it is the time of seeming death.

Trees stand bare of leaves, and show their cold but graceful skeletons. Brooks hide away under sheets of ice, and tuck themselves under soft blankets of snow, and only murmur softly in their sleep. Insects are cuddled away in warm chrysalids and no longer enliven the air with their color and music. And so, every one is glad of the first tokens of renewed life, which herald the coming again of spring and sumherald the coming again of spring and sum-

herald the coming again of spring and summer.

First, the sky takes on a softer hue and the clouds assume a kindlier tint. The sun rises a little earlier day by day, and night by night stays up a little later. Winds change to breezes. Snow and ice gradually pass away. The bark on shrubs and trees becomes more tightly drawn, and a swelling appears in the buds that have lain slumbering since last fall. The hardy sparrows that have endured the winter, chirp with a note of happy relief. Chanticleer sings his matin song in a less melancholy key. Even the crows caw with a triumphant cry of hope. By and by a flash of blue runs through the air, and a ripple of music announces the return of the first blue bird. Then it is that we are alert to find the first flower of the new year. What is this earliest flower? In New England the honor is not yet finally awarded. It is claimed by the trailing arbutus, which often opens her pink and white spiceblossoms under the edge of a dying snowdrift and fills the surprised air with Arabian perfume.

It is claimed by gentle hepatica, which

perfume.

It is claimed by gentle hepatica, which of brown and blue, and purple, in endless shading, intermingled with spotless white, and yielding to him whose senses are keen and expectant a breath of delicate fragrance.

and expectant a breath of deficate fragrance.

It is claimed by the virile and virid skunk cabbage, which hides its adventurous green blossoms deep among its spathes in the depths of chilling swamps. It is claimed by the brave little coltsfoot, the squire of Madame Dandelion, as he opens his starry eyes by the sandy roadside. These and others have claimed first place in the long procession of New England blossoms. But who in New England can tell what flowers are first awaited with eager expectancy in Virginia, in Texas, in Colorado, in Oregon?

To help us solve these questions, we confidently appeal to the readers of THE AMERICAN BOY. We invite every one who may read these lines—and that particularly means you!—to write a short account of what you think is the earliest flower in your own neighborhood.

of what you think is the earliest flower in your own neighborhood.

If you can give the date of its first appearance, so much the better. If not, you might make a note of it next spring. But at least be pleased to send us its name now. To every one who will do us this service we will send a badge of membership in the Agassiz Association. A drawing or photograph of the flower will be especially welcome, but that is not required.

WHAT IS ITS NAME!

and picture in the hope that some Kansas friend may

even print all the best letters. This is because we cannot use a great many on the same subject. We have enough letters on spiders alone to fill our space this month; but our readers cannot live on a spider diet alone.

We make this general explanation to all our correspondents, once for all. We shall continue, however, to send a personal let-ter in reply to every one we receive if we have to hire a roomful of clerks to do it!

Tree in a Mill Wheel.

Dear Mr. Ballard:—Near the place where
I live is an old mill wheel
lying flat on the ground,
and all covered with moss,
and in the center, where
the axle passed, is a small
mulberry tree growing. It
is six feet high and six
inches in diameter.
There are no other mulberry trees for miles
around, and no one planted
this one. How could it Lanesville, Conn.

this one. How could have come there?—G. M. Stack.

[To answer this question one must be able to "see through a mill stone" indeed. Probably the seed was dropped by a bird.—

Attidæ, or Jumping Spiders.

MULBERRY IN MILL WHEEL.

There is a fascination about spiders that induces one to watch their movements in spite of an intuitive shrinking. Why they should be more repulsive than other created animals is a question that I have often asked myself without receiving a satisfactory appear.

often asked myself without receiving a satisfactory answer.

One day recently, while employed in a basement, I observed a small black spider creeping along in the shadow of the doorcasing, some three feet from the ground. It came up on the corner of the board and hungrily regarded a bevy of files that were buzzing around in the sunlight and occasionally alighting on the casing, unmindful of the approach of their natural enemy. enemy.

The spider crouched low. and began

enemy.

The spider crouched low, and began slowly and almost imperceptibly to creep upon its prey. When within an inch and a half or so, it suddenly sprang forward and made a vicious clutch at the fly, who escaped by a hair's breadth.

Without the least show of discouragement, the spider continued its efforts, and about the fourth attempt, landed its prey, which it immediately trussed up in a kind of web shroud, made on the spot, and started out for another forage.

I am satisfied that the vicious little creature wielded some kind of psychic influence over the fly he was approaching, for, when within a certain distance, the victim seemed paralyzed and unable to move until the last moment, when it was often too late. One curious feature about the spider's tactics was the fact that in leaping at its prey, it would sometimes spring an inch or more from the perpendicular board casing with no apparent support.

I discovered on closer examination, that

Holton, Kas.

Mr. H. H. Ballard, President Agassiz Association.

Dear Sir:—I send a drawing of a plant which grows on the sides of cliffs in this State. It is a shrub with a queer odor, and there is a fine fuzzy hair on the leaves and it bears small red berries.

What is its name? — Elbert Holdren.

Joy, Ill.

Dear Agassiz Association:—
Enclosed find a sketch of a little creature, green tree frog, I think. I saw it last summer on the leaf of a lily. It has little round disks on its toes. I caught it and put it in a box with a glass front. It climbed up the smooth glass. How could it do that? In some parts it was almost olive green; the abdomen light yellow. Two yellow stripes run down the back.—
Carl Vernon.

[For this interesting

Ant and Caterpillar.

Westbrook, Me. Dear Mr. Ballard:—I saw an ant trying very hard to drag a caterpillar. It was the largest ant I had ever seen. I became interested. The caterpillar was quite a large one. After a little the ant became exhausted and left the caterpillar, which was now so helpless that it could hardly move. In a few seconds the ant appeared with another one. This time one ant caught the caterpillar by one end and the other by the opposite end, and they hurried it along pretty fast. I thought this rather rough treatment, so I picked up the caterpillar, carried it a few yards and laid it on the ground, and went on my way home.—Harold C. Hamilton. Westbrook, Me.

Snake and Frog.

Germantown, Pa., April 12, 1901.

1 was on the porch of my home one morning when I saw a snake about thirty inches long in the grass. Looking more closely I saw that the shake was swallowwas swallowing a good sized to a d alive. It was swallowing it

swallowing it head first, and the hind legs of the toad were hanging out of the snake's mouth. I watched until the snake had entirely swallowed the toad. I could see where the toad was in the snake's body by the swelling at a certain place. I killed the snake with a spade and cut it on each side of the swelling so as not to cut the toad, and also to see whether it was dead or alive, and to my surprise the toad jumped out of the part that I had cut and hopped away as well as ever.—Yours truly, Conyers B. Graham.

[This observation of Mr. Graham's, and his first drawing, may throw light on certain stories of "two horned" snakes, which we have received, and which appeared too "fishy" for publication.—Ed.]

Queer Creatures in a Cistern.

Gibsonburg, O.

Dear Sir:-I found some queer looking creatures in our cistern They had They naw long bodies and long about them 11 2 1 1 E

tails; but the queerest thing about them was that they ate through their tails. They cleaned the cistern perfectly and then disappeared as mysteriously as they had come. Can you tell me what the name of these creatures is? They looked like this cut.—Your friend, Clarence Stilson.

[Clarence himself was in the best posi-tion to study the creatures he discovered. He should have captured a number and kept them in a glass of cistern water cov-ered with gauze netting. Then he could have watched them closely day by day, and he could have noted any transformations that occurred. He might even have learned that they did not eat "through their tails," as they seemed to. Can any one tell us more about these little fellows?—Ed.]

Brattleboro, Vt.
While hunting in
a rocky ravine late
in the fall, I saw an animal such as I never had seen before. I chased it about a quarter of a mile in and out among the rocks. I fired five times at it and missed it every time. I was much mortified, as

were only one plant in America with a queer odor, fuzzy-haired leaves and red herries, like the ground cherry for example, that would be another thing!Ed.]

To Our Correspondents.

We receive ten times as many letters as we can print. If, therefore, you do not find your letter in THE AMERICAN BOY, you have no reason to think that we do not fully appreciate your kindness in writing it. As we have not room for all, we are forced to make a selection. We cannot

Barn Swallows.

Lakeville, Mass Mr. Harlan H. Ballard, President Agas iz

Lakeville, Mass Mr. Harlan H. Ballard, President Agas iz Association.

Dear Sir;—I send you the following coservations on the nesting of the barn swallow which I hope will be of interest other members of the A. A.

In this locality the barn swallow is our commonest swallow, the air being fairly alive with these graceful birds. They arrive from the south about April 29, and some begin nest-building as early as May 5. The majority, however, do not begin the work before May 15. The nest is made of mud and lined with hay and a few hens' feathers. It is rather shallow and is attached to the rafters of a barn or shed. The work generally requires about ten days, at the end of which time the eggs, four or five in number, are laid and incubation begun. In fourteen or fifteen days the young appear and are cared for by both parents.

One of the parents arrives at the nest with food in her bill, feeds it to the young and then hovers over them a moment to warm them. By this time her mate has secured a passing insect, which he brings to the nest, she slipping off at one side, just as he alights on the opposite edge. He then feeds and warms them just as she has done, she meanwhile being in search of more food. This is continued until the young are well enough feathered to withstand the cool air. After that the old birds seldom alight on the nest except at night (they feed the young while fluttering before the nest). The young remain in the nest about eighteen days.

After the young have left the nest they return each evening to the barn to spend the night. In about a week the female starts a new nest for the second brood, the male caring for the young about a week longer. They are then left to shift for themselves while both birds put their energy into the construction of a new nest and the raising of another brood. The second batch comes off toward the last of July and the young leave the nest about the middle of August. Old and young leave for the south about September first.

F. SEYMOUR HERSEY.

[Notice how many different

[Notice how many different states are represented in the letters on this page. In this regard they were taken quite at random from our desk.—Ed.]

Reports from the Seventh Century Chapters, 601-700, should reach the President by July 1.

Everybody is invited to join the Agassiz Association.

"Cramming" for Examination Not Approved of in Germany.

Darmstadt is menaced with a revolution arising out of a schoolboy's idleness. He was the son of a superintendent of education named Dettweller, and as he had neglected his studies, one of the gymnasium teachers, Dr. Ahlheim, "crammed" him for the examination. Young Dettweller was, however, not only lazy, but extravagant, and to obtain pocket money sold copies of his crammer's notes to several of his schoolfellows. Of course they passed their examinations brilliantly, rendering their more studious classmates justly jealous. It became known in the town how the black sheep of the gymnasium came out first on the class lists, and a complaint was lodged. An investigation was made, and Dr. Ahlheim was blamed for cramming young Dettweller and removed to another gymnasium. This punishment appeared too mild for the Darmstadt parents, and the campaign begun in the local press was continued. On Tuesday last the whole sitting of the Lower House of the Diet was devoted to a discussion of the incident. The Minister of State announced that a new investigation had been begun and promised to inform the House of the result when it was completed. But this did not satisfy the Diet, and a dozen orators vented their indignation. The galleries of the House contained a large audience, a most unusual occurrence in the Hessian Parliament.

IMPROVE YOUR LEISURE HOURS BY CAREFUL READING. IN ORDER TO COMMAND RESPECT, A YOUNG MAN MUST KNOW SOMETHING OF THE WORLD AND ITS DAILY LIFE, ITS PUBLIC AFFAIRS. AND ITS PUBLIC MEN, TO BE ABLE TO CONVERSE INTELLIGENTLY, YOU MUST READ GOOD LITERATURE.

Mechanics Institute, a Training School for Young Men.

The training school for young mechanics in New York City known as the Mechanics' Institute was founded in 1785 by twenty-two citizens of New York, its primary object being mutual aid, assistance in case of illness or distress, and care for the widows and orphans of those who should die without property. The scope of the institution has been broadened as its income permitted. In 1820 it added the Mechanics' school and the Apprentices' Library; in 1873 it inaugurated a course of instructive lectures; in 1886 it added reading rooms, and in 1889 it instituted free scholarships in the New York Trades School. Évening classes furnish free instruction to young men in free-hand, mechanical and architectural drawing, cabinet decorations and clay modeling. There are two new evening classes that have recently been established—a mathematical and elementary architectural class, dividing the architectural class into elementary and advanced. The modeling class is for young men, such as plasterers, stone-cutters and woodcarvers. An ordinary plasterer, for example, is taught to be a decorative plasterer or designer for raised star work. To encourage young men in acquiring practical knowledge of some useful trade, the society maintains twelve free scholarships in the New York Trades School and supports their holders for a Any mechanic or tradesman year. vouched for as to character is eligible to UDOD in membersnip payment of an initiation fee of \$1, which payment constitutes him a life member, there being no annual dues or assessments.

The aim of the society is to make it an institution where young men, by applying themselves for three or four years, may, upon passing the required examination, receive a certificate which will be of service to them in any place in the United States. The course of study was formerly limited to one year, but the regular courses are now three or four years, so that the students are turned out practical draughtsmen, ar-chitects or workmen in their special departments.

Only the Boys' Room.

Fiora Zoll Briggs writes wisely and entertainingly about "The Boys' Room" in a recent issue of the Woman's Home Companion. She tells how she had been led from room to room of a very pretty new home by a friend who was quite enthusisatic over the many attractions of the beautiful parlors, reception hall, dining room, bath room, etc. "Small wonder," says she, "for it was indeed a beautiful home." But lassing through the house I noticed at one side a door slightly ajar. Without thinking, I asked. "What room is that?"

"O, that is only the boys' room," she said, "You know boys don't care for pretty things." There was but one window, and that was covered with an ugly, faded curtain, evidently out of the old home. The woodwork and walls were painted dark—"for boys are so dirty, you know." The bed was comfortable, but not in the least attractive. The floor was covered with a well-worn carpet. There was but one chair, and that didn't look particularly comfortable. "But boys don't stay in their rooms long enough to sit down." she said, noticing a look of inquiry on my face. There was an old washstand, with the usual belongings, and a second-class mirror hanging over it. There were no bookshelves, no stove or fireplace, and, strange to say, no table.

This is a picture of the average boy's room. It is furnished with the idea that boys don't care for pretty things and that the boy doesn't care to stay in his room, so just enough is put there to serve his absolute necessities. Parents forget that the years from five to fifteen are the most important years in one's life. It is in these ycars that habits are fixed and the mind and thought and taste are turned into perma-

thought and taste are turned into perma-

nent grooves. Every one must admit that environment greatly influences the young, and this is true not only of girls but of boys. The mother usually takes great pains to have the girl's room attractive, but if the mother is to have refined sons she must see to it that their surroundings are of a refined nature. Much of the "don't care" in boys may be overcome. Food, shelter and clothing do not alone make a home. Give the boy a room that will be more attractive to him than the street corner; make it so attractive that he will want to invite boys to his own room rather than desire to meet with them elsewhere. Encourage the boy to feel that his room is his castle, and that he is master in his own domain. The entertainment of his friends is one of the boy's inalienable rights. It is certain that those inalienable rights. It is certain that those whom the boy invites into his own room will belong to a better class of boys than the ones who will entertain him on the street

ones who will entertain him on the street corner.

Let the boy choose his own pictures and other decorations. Let him have pictures of horses, dogs, ships, birds, and the like. Let him have a good table on which to write, read and play games. Give him a good light by day and by night, and a nice bookcase. If there are defects in the room, hide them with decorations. If possibir, let him have a fireplace, where on cold and rainy days he can have a cheerful glow. Such a room will have more influence on a boy's character than the mother can imagine. It is safe to say that mothers who think boys don't care for this or that, often have never in their lives given a serious thought to what boys really do care for such mothers are the ones who wonder why the boys don't like to stay home, but all the while home has never been made in the least attractive to them. the least attractive to them.

TO CUT THE PEEL OF AN ORANGE.

A YOUNG PORKER.

A PORTRAIT IN TWO MINUTES.

Small and very interesting objects can be made of orange peel. The materials for the purpose are simple, and consist merely of a very sharp penknife and a few splints of wood of different lengths.

of wood of different lengths.

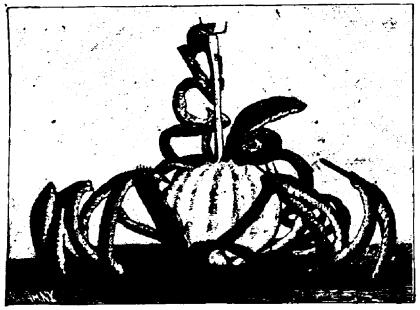

Let us take an orange, says Lectures pour Tous, a French periodical, and make four incisions in it at right angles, starting from near the base. With the thumb nail inserted under the rind, let us separate the latter from the fruit without tearing it. We thus obtain four quarters of peel united at the base. Now let us cut these quarters into thin strips by strokes of the knife blade given alternately from the free summit of the quarters to their point of junction, and from this point to the summit, taking care each time to stop at a short distance from the extremity. We thus form a ribbon interrupted by four small losenges, and obtain an entanglement of narrow strips. Let tain an entanglement of narrow strips. Let us arrange these upon the orange and wind a strip of the rind into a spiral and support it by a splint of wood thrust into the top of the orange. In this way we obtain an object that has somewhat the aspect of a pile of rocks upon which formidable ser-jot the orange.

What Can Be Made of Orange Peel. pents are erecting themselves in menacing attitudes.

If it be desired to obtain an animal less frightful than a serpent, carve the top of an orange, and here and there raise up a few bits of the rind, so as to form two pointed ears, four legs, and a little twisted tolly and head when the restaurance of the rind of the rind. tail; and, behold, we have a young porker that appears to be upon the point of grunt-

ing. Not content with being a carver of animals, the artist in orange peel may raise himself to the dignity of a portraitist. See himself to the dignity of a portraitist. See this simple fellow who comes into being in measure as the knife indicates his two round eyes, his flat nose, his widely spaced ears, and his thick lips. It would be possible in two minutes to form in this way the portrait of an old woman with her cap and spectacles, a clown with toupet and wig, or an old bewhiskered sailor smoking his pipe.

If a bouquet be desired, there is nothing easier than to make it. Place an orange upon a vase, and, in the entanglement of the strips of rind, insert here and there a few pansies, the beautiful, velvety tints of which harmonize well with the warm colors of the orange.

Going After a Position.

James A. Shaw, in the Chicago Times-Herald, taiking to boys who want positions, says: "Put an ad in some good paper, stating in clear-cut language your age, qualifications, and that you are willing and ambitious. Look through the best newspapers and pick out the ads that seem attractive and write a letter to each one. Call personally on the firms you would like to be with, carrying a letter of application composed and written by yourself. Try to impress upon those to whom you go the fact that you are just the boy they want, and yet don't make yourself obnoxious. Take any position you can get, just so it is an honorable one, for the possession of a position is the best recommendation you can have for securing another, should ou wish to. If you are out of a position when you apply, the person applied to may think that it is through your own fault. Take your hat off when you approach any one for a position so that he can see that you know what politeness is, and can also see your head at the same time. The shape of your head may not be just exactly the right shape; but if you have a pooriy shaped head and no politeness you are worse off than with politeness and a poor head. Men judge a good deal by the face and shape of the head. Dress as neatly but quietly as possible. If you can get letters of introduction it will enable you to get a hearing, which you might not be able to do if you didn't have them. When you have obtained the position, try to keep it on your own merits."

IDAHO FRIENDS OF THE AMERICAN BOY. Photo by Eddie Manion, Mountain Home, Ida.

Colgate Hoyt, one of the world's successful men, told some young men recently how, when he was a boy working in a hardware store, he wanted to quit when he was put at washing windows and the young girls he called on saw him at his menid occupation. The boy complained to his father, who advised him to do the washing and do it to the best of his ability. "If you do whatever is given you to do to the best of your ability." said the father, "your employers won't find it profitable to keep you long at window washing."

In choosing an occupation do not choose the one that first offers you the best position or salary, but choose one in which you would be willing to devote your life. There is nothing to be gained by jumping from one thing to another and working a few months here and there.

Every boy has a market value, just as surely as a load of corn or a bushel of potatoes has. Commercially, some boys are worthless, some worth but little, while others are very valuable.

THERE WILL BE TIMES WHEN YOU THERE WILL BE TIMES WHEN YOU WILL NEED TO REMAIN ON DUTY AFTER REGULAR HOURS. DO NOT MIRMUR OR SHOW ANY DISPLEASURE ON SUCH OCCASIONS. ACCEPT THE SITUATION BRAVELY. AND WORK WITH INCREASED EARNEST-NESS.

Boys should not make the mistake of thinking that it is easier to occupy a position in an office or a store than to work on a farm. The boy in the office who attends to his business will get just as tired as the boy on the farm.

The young man who would starve before he would do anything beneath what he con-ceives to be his dignity, is not made of the right kind of stuff to cut much of a figure

A successful man is an enthusiastic man. There are some other things required for the making of success, but enthusiasm must be under it all. Boys, be enthusiastic.

Elihu Burritt got the name of "The Learned Blacksmith" because he not only worked at the forge but he improved every opportunity to get an education.

A boy who is not willing to work is of no use to the world.

BOYS IN THE OFFICE, STORE, FACTORY, AND ON THE FARM

Small Potatoes.

Some years ago a gentleman visiting a farmer in Lolland, Conn., took from his pocket a small potato which, somehow, had got in there at home. It was thrown out with a smile, and the farmer taking it in his hand to look at it, a turious little boy of twelve, standing at his elbow, asked him what it was. "Oh," said he, "nothing but a potato, my boy; take it and plant it, and you shall have all you can raise from it till you are twenty one." The lad took it, and the farmer thought no more about it. The boy, however, not despising little things, carefully divided it into as many pleces as he could find eyes, and put them into the ground. The product was carefully put aside in the fall, and planted in the spring, and so on, till the fourth year, when the actual product was four hundred bushels. The farmer seeing the prospect that the potato field would cover the whole farm by another year, asked to be released from by another year, asked to be released from his promise.

Wanted a Job as Boss.

A boy of about fourteen, with well worn clothes and a face in which timidity and determination struggled for the mastery, entered the office of a shipping house on Front street one day last week, approached the desk of him whose appearance spoke the control of the establishment, and, catching his cye, said:

"Do you want a boss, mister?"

"What!" exclaimed the proprietor, surprised out of his self control.

"I want to know if you want a boss, sir."

"I don't understand you. What do you mean?"

"Well, sir, I've been looking for some-thing to do for three weeks now, and no-body wants a boy, so to-day I thought I'd see if somebody didn't want a boss. I'd like to be a boss."

"Well, well! That's not bad. Are you

"Well, well! That's not bad. Are you willing to work up to the job? It took me twenty five years to get it."

"Deed I am, sir, if you'll give me the chance."

chance.

To-day an earnest boy in jumper and overalls is struggling with bundles and lacking cases in the shipping room of the concern. He intends to be boss of the establishment before his side whiskers, which have not yet sprouted, are as gray as those of the present incumbent.

And the chances with his energy and

"The National Banker" says: "Never before was the call for trained men so loud as now. They are in demand everywhere, not only in the professions, but also in banks, business houses, and even on the farm they are in demand. There is an increased demand everywhere for college educated men. The market for brains and education is constantly widening."

Advice to Boys.

Someone connected with the Cleveland Window Glass Company writes the following on the subject of "A Boy's Deportment".

ment":

BE READY.—When waiting, be ready to catch the first sign of your being wanted; have your wits about you; be quick to understand what is wanted, move on the instant, and act with spirit till the job is done.

done.
ON AN ERRAND.—Keep to the right, and ON AN ERRAND.—Keep to the right, and be gentle about it; turn out to the right, if there is room, when you meet anybody; but don't lose time; dodge in and out wherever there's room. Keep a good lookout ahead. Don't go into a crowd; go round it. Give way to everybody; but get there quickly. Be active, springy, light on your feet. Get done with your errand. Be ready for what comes next. Don't dawdle.

Never go two and two. There isn't room or time in business for that.

On the Stairs.—Don't stop, keep to the right.

Don't slide on the rail; don't lean on it. You may put your hand on it, going down, for safety—nothing more.

Never go down two steps at a time. Step

Never go down two steps at a time. Step lightly.

CARRYING.—Carry things with care. Touch them as little as you can. Never toss them. Carry papers carefully. Don't put them to your mouth, or rattle them.

Keep a good lookout ahead.

NOISE.—Whether busy or not, don't whistle, or sing, or make any sort of noise, or talk without occasion.

When you need to speak, go near and speak low. Don't shout.

The Sprague Correspondence School of Law 500 Majestic Building, Detroit, Mich.

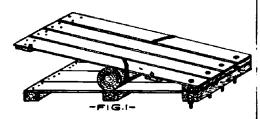

With the coming of summer, the healthy American boy puts an end to his indoor amusements and devotes his spare time to outdoor sports. It is this season of the year that his head is full of base ball and all kinds of athletics. The gymnasium affords him plenty of enjoyment during the winter and spring months; but when the warm weather arrives, he wants to get out into the open air. With a little work he can it up an outdoor gymnasium making the greater part of his apparatus himself.

The spot you wish to use it, and bank up carth until a gradual slope is made. from the ground to the top of the springboard.

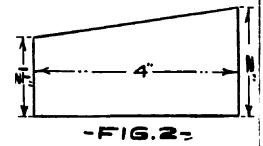

Hurdles may be made out of light lumber, so as to knock over readily. They should be constructed like saw horses, but do not need to be so firm. Make the body out of a piece of two-by-four, tapered on two sides as shown in

himself.

For practicing the high jump, you will find many boys leaping rail fences, boxes and solid objects which is exceedingly dangerous work. A boy is always likely to slip or be unable to clear the mark, and injure himself. Besides, the possibilities

of hurting himself, this method of practicing jumping is unhandy, as boxes of different sizes cannot be easily obtained. With a little work a pair of jumping stands may be made with which you can practice the high jump. Secure two two-by-two poles, each about ten feet long, and with a ruler measure off one foot from one end of both. Above these marks lay off each inch, after which bore holes at each mark, using a small bit or gimlet. With some black paint and a fine brush, mark off each foot by making a band around the pole, and letter them one, two, three, etc. When this is done, whittle a couple of wooden pegs to fit the holes, or, a couple of spikes the right size will be more serviceable. Sink the poles up to the first hole, about eight feet apart. Get a pine bar long enough to reach from peg to peg. With these stands there is no danger of injury as the stick will fall off the pegs at the slightest touch. For pole vaulting, a pole sufficiently strong of hurting himself, this method of prac-

to bear your weight should be procured. One end of it should be pointed so that it will stick in the ground and keep from

One end of it should be pointed so that it will stick in the ground and keep from slipping.

A springboard is good for practicing the high jump. For this obtain three pieces of two-by-four, each two feet long. Lay these upon the ground, parallel to one nother, one foot and one half apart, and hall flooring upon them. This forms a platform for the springboard. On one end it fasten a piece of two-by-four, after apering it from two inch thickness on one ide to one and one half inch on the other. See Fig. 2.] Secure a log two feet long and fasten it on the middle of the platform in farallel to the two-by-fours. Obtain some pieces of ash or any wood that is stout and limber, and make a second platform ix inches longer than the first one, aving about a quarter of an inch between ach board. Use two strips, as (a) and b) in Fig. 1. to strengthen them. Fasten he end of this platform to the first platform at the end where the tapered piece of two-by-fours is nailed. As there will be a great strain upon this end of the pringboard, nails will not hold. The best way is to use bolts long enough to go through the two platforms and project an inch or more beyond the bottom of the springboard. These ends will catch in the kround and hold the springboard in place. The upper platform should not be nailed to the log, but merely held to it by passing straps, diagonally around it and the log he end of this platform to the first platform at the end where the tapered piece of two-by-fours is nailed. As there will be a great strain upon this end of the pringboard, nails will not hold. The best way is to use bolts long enough to go through the two platforms and project an inch or more beyond the bottom of the Springboard. These ends will catch in the kround and hold the springboard in place. The upper platform should not be nailed the log, but merely held to it by passing to the log, but merely held to it by passing traps, diagonally around it and the log supon each side of the springboard, as is shown in the illustration of the completed springboard. These straps are to keep the upper platform from springing up. After completing the springboard, set it upon their places and slip the baskets into their places and slip the baskets into the platform to the first plates.

We were talking with a sixty year old farmer friend lately, and he said that when he was a boy on the old farmer friend lately, and he said that when he was a boy on the old farmer friend lately, and he said that when he was a boy on the old farmer friend lately, and he said that when he was a boy on the old farmer friend lately, and he said that when he was a boy on the old farmer friend lately, and he said that when he was a boy on the old farmer friend lately, and he said that when he was a boy on the old farmer friend lately, and he said that when he was a boy on the old farmer friend lately, and he said that when he was a boy on the old farmer friend lately, and he said that when he was a boy on the old farmer friend lately, and he said that when he was a boy on the old farmer friend lately, and he said that when he was a boy on the old farmer friend lately, and he said that when he was a boy on the old farmer friend lately, and he said that when he was a boy on the old farmer friend lately, and he said that when he was a boy on the old farmer friend lately, and he said that when he was a boy on the old farmer friend lately, and he

made out of light lumber, so as to knock over readily. They should be constructed like saw horses, but do not need to be so firm. Make the body out of a piece of two-by-four, tapered on two sides as shown in the cross section of Fig. 3. Nail the legs to the body and then brace them in the manner shown in the same figure.

manner shown in the same figure.

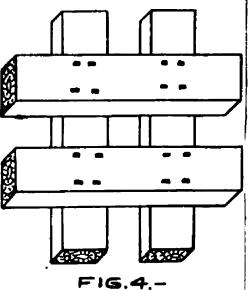

For a turning pole an old curtain pole may be used. One end of this should be fastened to the shed or house by making a socket similar to Fig. 4. and, after nailing it to the wall, slipping the pole into it. Sink a two-by-four in the ground at the other end of the pole and brace it firmly. A hole should be cut just large enough to admit large enough to admit the pole.

An old mattress is a

large enough to admit the pole.
An old mattress is a good thing to keep beneath the turning pole to prevent injury in case of a fall, and also to be used in practicing tumbling. However, if one of these cannot be had, a few potato sacks stuffed with shavings will answer the purpose very well.

If your yard is large enough, a running track can be made around it by simply banking up the corners with earth to enable the runner to turn readily. For short sprints the most common method of starting is upon all fours, as shown in the figure at the head of this article. A hole for each foot should be made in the ground a couple of inches deep, one about nine inches behind the other. An obiong strip of wood should be sunk sidewise in the ground, for a mark to jump from in the broad and standing jumps.

A very good set of goals for basket ball, the rules for which were given in the February number of THE AMERICAN BOY, may be made out of a pair of barrel hoops. With a gimlet, bore holes around each hoop about one inch apart. After doing this, make a netting by fastening cord from one hole to the hole opposite and then connecting the loops at every inch or so to form a perfect network. To keep the knots from slipping, it will be well to sew each one. Fig. 5 will give you an idea as to the depth of the basket. When the two baskets are finished, select a place at each end of the yard about ten feet above the ground, where you can hang them. They may be nailed to these places, but as nails are liable to split the wood when the ball is thrown into the basket, it is better to make some kind of a bracket to hold them. Fig. 5 is a form that has been used by the writer and has proven

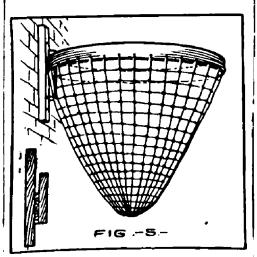

them. A large rubber football may be substituted for a basket ball.

A platform should be put up along the side of your fence for your punching bag. Make it about three feet square out of pine flooring, fastening the boards together by means of two pieces of two-by-four. When this has been firmly constructed, fasten a cleat upon the fence a little above your head, and nail one side of your platform to it. Support the other side with two two-by-fours, sinking the lower ends a little way into the ground. A swivel should be secured from a dealer in sporting goods and screwed to the under part of the platform.

For making this sort of a gymnasium, it is a good plan to organize an athletic club. With this club you can impose dues to defray your expenses, arrange con-

tests among yourselves, and carry on your athletics as well as any athletic association. In counting points in an athletic contest, the custom generally followed is to give the winner of each event five points, the person making the second best record three points, and the one who is third best, one point.

It may be that a great many city yards are too small to accommodate this gymnasium; but there are generally vacant lots near by, in which you can fit up your apparatus. Those of you who are fortunate enough to spend the summer months in the country, will have a splendid chance to try the outdoor gymnasium.

Let the Boy Sleep.

THE ORDER OF THE AMERICAN BOY

A NATIONAL NON-SECRET SOCIETY FOR AMERICAN BOYS. Under the Auspices of "THE AMERICAN BOY,"

(Twice Actual Size.

Object:—The Cultivation of Manliness in Muscle, Mind and Morals.

The object more definitely stated: To promote mutual and helpful friendships among boys; to give wider circulation to high class boy literature; to cultivate in boys physical, mental and moral courage, and develop them along social, intellectual and moral lines; to cultivate purity of language and actions; to discourage idleness, and encourage honest sport and honest work; to cherish and emulate the examples of great and good men; to inculcate lessons of patriotism and love of country; to prepare boys for good citizenship; to cultivate reverence for the founders of our country, and to stimulate boys to all worthy endeavor.

Boys desiring to Organize Companies may obtain a Pamphlet from us containing the Directions published in the January and February Nos. of this Paper. It is sent free.

A Name Well Bestowed.

The Company of The Order of The American Boy organized at Canonsburg, Pa., and named for Hon. J. Murray Clark, a respected citizen of that place has received from Mr. Clark the following letter, in response to a request from them to the effect that they be given the privilege of calling their company the J. Murray Clark Company:

Canonsburg, Pa., April 25, 1901. Lioyd Galbraith, Thomas Jones, Clyde Jacobs, Robert Taylor, Harry Auberle, George Estep, John Black, James Espy, Bert McKee, Clarence Edwards, Willis Craig, W. Estep, J. Clark Greer and others others.

craig, W. Estep, J. Clark Greer and others.

My dear young friends:—Your letter informing me that you have organized an American Boy Society, and asking permission to call it after my name, has been received. In reply, it gives me great pleasure to grant your request, and to express my high appreciation of the honor thus conferred upon me. Your object is improvement, and your model is the American Boy. In the choice of such an ideal you have shown good judgment, for, as there is no higher type of manhood than the American, so there is no higher type of boyhood than American boyhood. It would be neither patriotic nor in good taste for you, being Americans, to pattern after the French or the German or the English boy, and in your purpose to be strictly American boys, you deserve commendation.

You are to be commended also for a desire, as expressed in your letter, "to make the most of yourselves." Than this there is no worthier ambition, and you could not hetter direct your efforts than in striving to realize this high purpose. Such a course will command the respect and confidence of all good people, and it will be a source of ever increasing satisfaction to yourselves. However strangely it may sound, it is a true and important observation that the child is father of the man. If you make "the most of yourselves" as boys, you will pretty surely make the most of yourselves as men. If you improve your opportunities and achieve a noble boyhood, a noble American manhood will naturally follow. That each one of you may achieve this great distinction is my carnest wish, and if I should be able to assist you in any way in your endeavors, it would be of my highest pleasure so to do.

Be firm! One constant element in luck is genuine, soild, old Teutonic pluck

Be firm! One constant element in luck is genuine, soild, old Teutonic pluck. See yon tall shaft. It felt the earthquake's thrill.

its base and greets the sunrise

Stick to your aim. The mongrel's hold will slip,
Put only crowbars loose the buildog's grip.
Small as he looks, the jaw that never

Drags down the bellowing monarch of the fields.

Anectionately your friend, J. MURRAY CLARK.

The referees chosen by the companies in the April Feld Day contests did very satisfactory work. The boys chose in some cases their fathers, in others their mothers. One company chose the mayor of the town, another chose a lawyer, another a barber, another a grocer. One or two companies chose other boys, but we would prefer that the record be made and sent us by some one of mature years and judgment.

Where the weather prevents the contest taking place at ten o'clock on the morning of the Field Day, another date as near as possible to the date set should be selected.

Standing Long Jump Championships.

The Standing Long Jump Championships for boys over fifteen years of age in the contest between the companies of The Order of the American Boy that took place April 13, goes to J. Carroll Knode, Stotsenberg Company, No. 1, Hebron, Neb., his jump being 9 feet, 3½ inches. The championship for the boy under fifteen making the longest jump goes to a boy in the same company, namely, Minor Wasson, his jump being 8 feet, 4½ inches.

J. Carroll Knode is, therefore, proclaimed THE AMERICAN BOY Standing Long Jump Senior Champion, and Minor Wasson THE AMERICAN BOY Standing Long Jump Junior Champion. These championships will be held by these boys until the honors are taken away from them by winners in another contest for the standing long jump championship, which will probably be announced a year from now. Silver medals will be sent to these boys at once. at once.

ar once.
The standing of the winners in the various companies is given as follows:

The Poet-Scout Proud of the Honor.

Captain Lowe of the Captain Jack Crawford Company No. 1, Order of the American Boy, Division of New Mexico, wrote the Poet-Scout, advising him of the name chosen by the Las Cruces Company, and received a fine acknowledgment and a few lines of verse. The correspondence was as follows:

Las Cruces, N. M., March 39, 1901. Captain Jack Crawford, San Marcial, N.

Las Cruces, N. M., March 39, 1901.
Captain Jack Crawford, San Marcial, N. M.:
Dear Captain—We have the pleasure of informing you of the organization of the Order of the American Boy, and we also have the pleasure of calling our company The Captain Jack Crawford Company, in honor of our friend, Captain Jack, whom we heard recite his thrilling stories of the "Camp Fire and the Trail" in Las Cruces, N. M., some time since.

The object of the order is to promote mutual and helpful friendship among boys, to give wider circulation to high class boy literature, to cultivate in boys physical, mental and moral courage, and develop them along social, intellectual and moral lines; to cultivate purity of language and actions; to discourage idleness and encourage honest sport and honest work; to cherish and emulate the examples of great and good men; to inculcate lessons of patriotism and love of country; to prepare boys for good citizenship; to cultivate reverence for the founders of our country, and to stimulate boys to all worthy endeavor.

We have two club rooms, one an athletic room and the other the assembly room. We have a good start for a library, consisting of several papers, magazines and books. Every Saturday we go through the military tactics and manual of arms.

We remain,
Sincerely yours,
THE CAPTAIN JACK CRAWFORD COM-PANY.

JOE LOWE, Captain.

ceived). It is indeed gratifying to know that I have by my humble but earnest efforts in "Song and Story" won the respect and confidence of the boys of Las Cruces, and I thank you heartily for the honor conferred upon me by giving your Company my name.

The objects of your order which you enumerate are indeed excellent, and if carried out by your members must result in great good. I have only just returned from the San Andreas mountains, where I was doing some work at my lead camp, and my fingers are sore and stiff. However, I will try to write a verse or two on the objects of your order:

Promote a mutual helpfulness And friendship for each other; Be Damon-like and Pythias As brother unto brother. Read only high class literature, And cultivate the muscle; Protect the right in every fight And win in every tussle.

Use only language that is pure, Nor honest labor shirk. Discourage baneful idleness For God made man for work.

DO YOU BELONG TO A BASEBALL CLUB

WHAT POSITION DO YOU PLAY?

We offer a set of Baseball Buttons for the lapel of your coat, illustrating and naming each position in a club. For pitcher, a button with the picture of pitcher and word pitcher across the top. For catcher, a catcher, etc. Every hall player should have one. Every club should have a set. Rend us 5 etc. with the name of your position on the club and we send you a suitable button, postpaid. Bend us 25 cents and we will send you a set of nine buttons. Mt. Lewis Button Co., 620 N. B'way., Mt Lewis, Mc.

In clouds or sunshine, CAPTAIN JACK CRAWFORD.

Captain Jack Crawford to "The American Boy."

A letter has been received by the editor of THE AMERICAN BOY from Captain Jack Crawford, the Poet-Scout, dated San Marcial. New Mexico. April 27. From it we quote the following, showing his interest in THE AMERICAN BOY and in American boys:

regest in THE AMERICAN BOY and in American boys:

"Editor THE AMERICAN BOY,

"Dear Sir:—The enclosed clipping from the San Marcial 'Bee' regarding Captain Jack, The Order of the American Boy and the Captain Jack Crawford Company of the Order, explains itself. I have just received a copy of THE AMERICAN BOY itom one of the boys at Las Cruces. As I have been playing 'freeze out' for the last three years in the Klondike and only just recently returned, you will pardon me for my ignorance of the existence of The Order of the American Boy and the paper. THE AMERICAN BOY. I was recently notified that a Company of the Order that was formed in Las Cruces was named after me, and I know of nothing that has given me more general satisfaction than to know that such is true. Your paper is destined to do better missionary work than any paper ever published—especially among that class of boys who are much misunderstood and who become either outlaws or heroes, statesmen and presidents. I have talked to the majority of the prisoners in the penitentiaries of the United States, and I always tell them that I am one of them only I have never been caught; then I explain that I was a wild, reckless boy, and on account of my father's intemperance deprived of everything a boy should have; and it was because I gave my christian mother a promise never to drink that I never was caught—never was trapped by rum, or the dime novel. I am packing my trunk for a tour of the Santa Fe Raliroad, giving entertainments. One of the company has asked me to write something for THE AMERICAN BOY, and I will. Am just finishing a powerful boys' story that is just the story for THE AMERICAN BOY, etc., etc."

"CAPTAIN JACK CRAWFORD."

What the Boys Think of the Libraries.

Ellis J. Finch, Captain Excelsior Company, No. 3. Division of New York, New York City, N. Y., writes: The library received this morning. I was very much pleased with the books.

Harvey O. Chapman, Captain Theodore Roosevelt Company, No. 4, Division of Michigan, Chesaning, Mich., says: Library No. 4 received this morning in good share. I was very much pleased with them.

Company News.

Victoria Company, No. 1, Watervliet, Mich., Lester Sodusky. Captain, is the latest to take advantage of the Free Circulating Libraries.

Salt Lake Company, No. 1, Salt Lake City, Utah, has a library of forty books. It also takes Collier's Weekly and the Saurday Evening Post.

Clarence D. Vibberts, Meriden, Conn., has been given the appointment of Commander of the Connecticut Division of The Order of the American Boy.

The Captain of "Old Abe" Company, No.

Division of Wisconsin. Lake Geneva,
Wis., has resigned, and Harold Logan has
been appointed in his place.

Ora Baker, of William C. Sprague Com-pany, No. 1. Lebanon, Ore., has resigned the position of treasurer, and Eugene L. Smith has been elected in his place.

Cecil Overmyer. Captain of the Hayes Company. No. 4. Division of Ohio. Lindsay, D. has resigned, and Oliver Overmyer has been appointed to fill the vacancy.

The Israel Putnam Company, No. 1, Disision of Connecticut, Meriden, Conn., olds its meetings and drills every Wednesday evening in a beautiful hall in the enter of the city.

The Buffaloes Company, No. 8, Buffalo, N. Y., makes report on the Field Day contest through its Captain. The report should immade by a referee, or some one chosen by the Company outside the ranks of the

The largest Company thus far organized is the Israel Putnam Company, No. 1. Miriden. Conn. Captain Clarence D. Vibluris. This Company has at this writing twenty members, with a prospect of more in the near future.

Daniel Boone Company. No. 3, Wayne, Neh., reports that the Field Day record made by them in April was not what was nossible under more favorable conditions. The weather was bad and the ground muddy.

The Captain of Toronto Company, No. 1, Toronto, Can... lives in the central part of the city. On the roof of his home there is a large stereopticon and moving picture machine, which throws pictures on a wall for advertising purposes. One of the advertisements displayed night after night is the following: "Boys! Subscribe for THE AMERICAN BOY, the best boys paper published." Then follows Captain Warnica's name and address.

The Stephen Girard Company, No. 1, Displayed the city of the control of th

Warnica's name and address.

The Stephen Girard Company No. 1, Division of Pennsylvania, Philadelphia, Pa., Charles H. Russell captain, has adopted the constitution with a few slight modifications. This company is collecting a library. It holds its meetings on the second and fourth Saturday evenings of each month. It has three departments: Stamp and Coin Collecting. Amateur Photography, and Correspondence. This company would like to correspond with companies interested in collecting stamps and in amateur photography.

THE HAYES COMPANY NO. 4, DIVISION OF OHIO, LINDSAY, OHIO, ENGAGED IN ITS APRIL FIELD DAY CONTEST, STAND-ING LONG JUMP.

Announcements.

Companies should report their meetings to THE AMERICAN BOY as soon as possible after they are held.

There is a great deal of company news on hand that cannot be printed this month and will have to stand over until next.

Someone has asked whether there can be more than one company in a town. Yes, any number of companies; the more the merrier.

The next AMERICAN BOY Field Day will be June 8. All the boys of every com-pany will make a record that day on the Standing Hop, Step and Jump.

Some companies of the Order of the American Boy are very active in adding new members; others seem to be satisfied with a small club. The larger the club the more interest and the greater the variety of work and amusements that can be had.

of work and amusements that can be had.

Companies of The Order of the American Boy may engage in any kind of work or sport that is honorable. They can be literary societies, athietic clubs, correspondence clubs, collectors' societies, debating clubs, etc. Each company should determine for itself what line of work or sport it will follow

Any Company of The Order of the American Boy can have the free use of one of THE AMERICAN BOY'S free libraries, consisting of five cloth-bound books of the highest order—none of the dime novel character—by sending to the publishers of THE AMERICAN BOY 50 cents to defray the cost of packing and shipping. Every library is worth from four to seven dollars, the books averaging about \$1.25 each.

THE AMERICAN BOY Senior and Junior

the books averaging about \$1.25 each.

THE AMERICAN BOY Senior and Junior Baseball Leagues will begin their season June 15. Companies not enroiled at that date cannot belong to the League. Any boys' baseball club can belong to the League where five or more of its members are subscribers to THE AMERICAN BOY. Already a number of clubs have enrolled, and the list will be given in the July number. Splendid prizes will be given by the publishers of THE AMERICAN BOY at the end of the season.

the end of the season.

Several subscribers to THE AMERICAN BOY made jumps April 13 and sent in their scores, but as they were not members of The Order of the American Boy their scores did not count. One boy at Atlantic, Ia. Bert Laird, jumped ten feet, but as he is not a member of a regularly organized company of The Order of the American Boy his score did not count in the contest. This was the best jump of which there was any report. The championship, however, went to another.

Boys in Games and Sport

The Boy Trapper.

LEWIS ALLEN

THE AMERICAN BOY, with its large circulation, now reaches thousands of boys who have excellent opportunities for securing the pelts of wild animals and there-

When the balt is moved in the slightest degree it releases the sapling and the victim is secured, and suspended in the alr where wandering foxes cannot devour it. Figure 7 is the brick trap, made from five bricks. It is very simple and also very successful. Place four bricks on edge so that they will form a space not quite as large as the flat side of a brick. In the middle of the space drive a flat-topped peg, about an inch high. Cut a forked stick and flatten the end. Make another stick rounded upon each end and place these as in B, resting the fourth brick upon this arrangement as in A. Scatter grain, nuts or other bait in this place and you will doubtless secure either birds or squirrels alive. When opening the trap, first place the mouth of a sack over it, or your game will escape.

Muskrats, minks and other small animals living in or about the water, may be secured by setting a steel trap upon a rock or ledge projecting into the water. Drive a stake in the water and secure for bait a fish. Fasten this in such a manner that it cannot be reached unless the animal first climbs upon the rock where your trap is. Cover it with leaves, wet moss or thin reeds, and if there are any such animals about you will doubtless be successful. (Fig. 8.)

The last trap described in this article is who have excellent opportunities for securing the pelts of wild animals and there by adding to their incomes.

There is scarcely any commodity that remains as staple in price, or in such constant demand, as furs. The boy who has on hand a number of dressed pelts has only to procure the current number of any furrier's trade journal to learn just what he can get for them in cash. The good prices generally paid has always been an inducement to many to exert themselves in this direction, and the results are generally more than satisfactory.

There are many bright readers of THE AMERICAN BOY who could commence to trap with little or no expense other than the short amount of time needed to look after their traps.

Dressing or tunning the pelts should be no drawback, as many old trappers and other good authorities will tell you that all that is necessary to prepare the skins for sale is to remove every particle of meat and fatty substance from them. stretch them properly, and rub in a litle salt once or twice.

Successful. Place four drives of a brick. In the middle of the space drive a flat-topped peg, about an inch high. Cut a forked stick and flatten the end. Make another stick rounded upon each end and place these as in B, resting the fourth brick upon this arrangement as in A. Scatter grain. nuts or other bait in this place and you will doubtless secure either birds or squirrels alive. When opening the trap, first place the mouth of a sack over it, or your game will escape.

Muskrats, minks and other small animals living in or about the water, may be setured by setting a steel trap upon a rock or ledge projecting into the water. Drive a stake in the water and secure for bait a first climbs upon the rock where your trap is. Cover it with leaves, wet moss or thin reeds, and if there are any such animals about you will doubtless be successful. (Fig. 8.)

The last trap described in this article is

the water people, to capture which the Indian must learn to swim and handle a canoe. Number 10, the last, is the lordly buffalo, monarch of the plains and hunted only by the full-fledged warrior.

The bow shown in the diagram is made from the lower brace of an ordinary Japanese fan.. The arrow is a lead pencil. The animals should be drawn on a sheet of manila paper, three feet by two and one-half. The manila paper is suspended between two chairs by running strings through its corners. The players will stand some six or eight feet from the paper when they shoot. Three arrows are allowed for each turn. If a warrior fails with all three arrows to bring down the animal at which he aims, the animal gets away and he must lose a turn while he is tracking down to obtain another chance to shoot. If the game is brought down with the first or second arrow, the warrior may try for the animal next on the list. He who first proves himself a tried warrior by reaching and killing the buffalo wins the game and the right to wear a head-dress made of feathers or paper lighters. The bow shown in the diagram is made

FREE TO EVERYBODY. ROBT. H. INGERSOLL & BRO., 67 Cortlandt St., Ward 34, New York, N. Y.

BICYCLES AT FACTORY COST.

IT 18 NOT A QUESTION OF PROFIT but our desire to planta desire in the property of the United States, that makes us sell the property of the United States, that makes us sell the property high grade line of Bicveler at the regular direct factory compared by the property of the United States, that makes us sell the property of the United States, that makes us sell the property of the United States, that makes us sell the property of the United States, that makes us sell the property of the United States, that makes us sell the United States, the property of the United States, the property of the United States, the United States of the United States, and the United States of the United States of the United States, and the United States of the United

In Fig. 1, the dotted lines show where the cuts should be made in dressing or skinsing animals. Starting from the head, the skin should be turned off as you would remove a tight glove; that is, wrong side out. If the inclisions are made as in the cut there will be no difficulty in this, if care is used. The skins may be stretched, with the fur side in always, upon an adjustable stretcher like that in Fig. 2, which is made in three pieces (a, b and c). By sliding the stretcher like that in Fig. 2, which is made in three pieces (a, b and c). By sliding the renter-piece (b) up or down, the stretcher may be made large or small, to fit the skin. The primitive "hoop stretcher" may also be used with success. Take a stout ash or hemicok stick about the size of one's thumb, bend it into a bow, and slip it into the skin as in Fig. 3.

Fig. 4 consists of half a dozen slip nooses strung upon a wire or stout cord between two supports. Rabbits often become entangled in these, but they are more frequently used to snare quall, partridges and other game birds. Scatter plenty of grain about this trap and, if it is set in a locality where such birds are to be found, you will doubtless be rewarded for your trouble many times over.

Fig. 5 shows an excellent method for set-

a season, for which he will be paid as much as the trapper who makes that work a life business.

The Game of Bow and Arrow.

Any moderately clever boy can draw a rough outline on paper of the animals indicated in the diagram. Number 1 is the slow and easily captured porcupine. Number 2 is the fleet rabbit, more difficult than the porcupine to track and kill. Number 3 is the red deer, fleeter even than the rabbit. Number 4 is the wily opossum. Number 5 the most crafty of all beasts, the fox. Numpossible for any creature to secure the bait upon the end of the stick without putting his head through one or more of them.

William Bills and the Snake.

William Bills, of Farmer, N. Y., has just had a remarkable experience with a black snake. Bills had gone to Cold Spring, a resort nearby, and after reaching the place espled a large black snake basking in the sun. Bills made up his mind to capture it, but was a little surprised when the snake demurred, and almost turned the tables by capturing Bills. While the fight was in progress the snake wound itself around Bill's leg and began squeezing. Bills managed to get his foot on the snake near the head and pressed so hard that the snake ceased squeezing, and then Bills got a club and finished it. The snake measured seventy three inches in length and six inches in girth.

A Canine Fire Extinguisher.

The Fire Brigade Superintendent at St. Helens has a remarkable little Irish terrier who is virtually, if not actually and nominally, a member of the brigade. When the alarm bell is set ringing in the night time he at once bounds upstairs to his master's sleeping apartment and howls, his excitement subsiding only when the engine is turning out. In flames the dog positively revels, and nothing gives him greater delight than a burning newspaper, which he stamps on and snaps at till every spark is extinguished. The result of this weakness is that he is now a canine oddity, for he has no whiskers, and his nose is something of a cinder. To crown all, the other day he was caught worrying a live coal which by some means he had abstracted from the fire grate. The Fire Brigade Superintendent at St.

The Little Blue Wasp and the Cricket.

As I was resting the other day, I heard a peculiar buzzing noise, and looking downward, I saw upon the ground the little wasp and the cricket. I watched them and after waiting a little while I saw that the wasp was preparing to kill the cricket. When the wasp was ready for operations it pounced upon the cricket and stung it to death. Then seizing it by the feelers, the wasp began flying from clod to clod homeward, where it devoured the cricket at leisure.—Yours truly, Percival L. Bradford, Placentia, Orange county, Calif.

AN AMERICAN BOY AND GIRL AND THEIR PETS. Photo by E. D. Brabrook, Chicago, Ill.

E. D. Brabrook, of Chicago, has two Beigian hares, and he has named the buck "American Boy." after his favorite paper. The accompanying picture shows the boy and his sister with their pets. The boy made the hutch for them, and is now engaged in making a camera. He is nine years old.

Some Things Animals Teach Us.

The woodpecker has a powerful little trip

The jaws of the tortoise and turtle are natural scissors.

The framework of a ship resembles the skeleton of a herring.

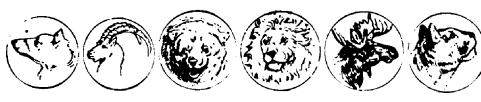

The squirrel carries a chisel in his mouth, and the bee the carpenter's plane.

The gnat fashions its eggs in the shape of a lifeboat. You cannot sink them without tearing them to pieces.

A porcupine's bill is strengthened by ribs.

in the same way that the iron masts of modern ships are strengthened.

The diving bell imitates the water spider. It constructs a small cell under the water, clasps a bubble of air between its legs, dives down into its submarine chamber with the bubble, displacing the water gradually, until its abode contains a large, airy room surrounded by water.

...THE QUADRUPED...

CHARLES BRADFORD.

DOMESTIC CAT.—St. John tells of a Highland shepherd whose cat brought him some edible bird nearly every day in the year.

TIGER.—A tiger with a glass eye is a feature of a menageric at Stuttgart.

PIG.—The domesticated pig is very intelligent, far more so than the cow or horse and not much less so than the cat and dog. I once observed a large mother pig help half a dozen of her children through a small hole in a fence, by various means. She dug away the earth to make the space larger; she pulled the little ones by the ears; she straddled their heads with her front legs and backed away as a locomotive would with a car, and she executed many other practical schemes, until, after a half hour's work, the litter were all free and bounding off with the joyful sow to a neighboring wood.

WOLF.—The wolf will destroy and de-vour any one of the pack that may be-come helpless.

MONKEY.-The monkey has been known to fall upon and drown one of its kind who is ill, possibly as an act of mercy.

ANIMAL BENEVOLENCE. — Baboons, elephants and buffaloes will risk their lives to save individuals of their kind. Even the tiger and lion are not safe from attacks by these benevolent species.

Hollow pillars are found to be stronger than solid ones. Nature teaches this, for a wheat straw, if solid, could not support its head of grain.

COUGAR EATS WILDCAT.-W. F. Hill, in camp along the lower White River, in Colorado, reports that he observed a mountain lion (cougar) devour part of a wildcat which the lion had slain.

AFRICAN LION.—The African lion is easier to kill than the grizzly bear, the jaguar, the puma or the leopard.

HIPPOPOTAMI.—The hippopotamus always sinks when killed in the water.

RABBIT.—English farmers who know it is against the law to use ferrets to drive out rabbits, insert in the burrow a rubber hose with a tin horn on the end that is put in the burrow. Then they blow the horn, and bunny comes out in quick order.

FIRST CATTLE IMPORTATION .- Columbus brought a bull and several cows to this country in 1493.

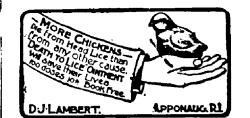

BISON.—There are six hundred bison in the United States. Charles and Joseph Allard, of Missoula county, Montana, have two hundred and tifty five healthy and fairly young animals; Austin Corbin has eighty two; Charles Goodnight of Petty, Texas, fifty; J. G. McNair, St. Elmo. Oregon county. Missourl, ten; D. F. Carlin, Leslie, South Dakota, thirty: Colonel William F. Cody, twenty four; Sir Donald A. Smith, of Winnipeg, fifteen, and William C. Whitney, thirteen.

Even the tiger and lion are not safe from attacks by these benevolent species.

HORSE.—"Some drivers try to teach a horse that "whoa" means everything. If you were a horse, there would be a good many more runaways."—C. S., in New York Evening Telegram.

CAPTIVE WILD GAME.—Thirteen bison ("buffalo"), twenty black-tail deer, and twenty antelope, captured in Wyoming, have been added to the zoological tract of William C. Whitney, at Lenoxdale, Mass.

POLAR BEAR.—The first polar bear born in this country and the first ever bred in captivity, came into the world in December. 1836, at the winter headquarters of Balley's Circus, at Bridgeport, Connecticut. There were two specimens, each weighing forty seven pounds.

Stamp Questions Answered.

B., West Somerville.-Your stamp is a German local.

R. E., Chicago.—Your stamp is a ten silber groschen Prussia, issued in 1866. It is printed on gold beater's skin and cat-alogues seventy five cents.

John H., Spokane.—Write Wm. Brown, St. Thomas square, Sallsbury, Eng., for a copy of the "Advertiser." This paper contains the advertisements of collectors and dealers in all parts of the world.

Roy C. Weston.-Of the sketches you submit, No. 1 is the two-cent brown of 1869 and is worth five to ten cents; No. 2 was issued in 1887, and No. 3 in 1883; No. 4 is a revenue issued in 1863; the last three are not worth anything.

Wilmington. O.-The revenues are errors occasioned by the sheet being misplaced in the press when sur-charged. Estimates of their value are jurely guess-work, but one should say fifty cents would be a fair price for the one-cent. The two-cent "R. I." are more common.

mon.

P. G. R., Colorado Springs, submits an envelope mailed from La Paz, Bolivia, in 1820, without stamps on it, and asks how it could come through without postage being paid. Between some foreign countries, the prepayment of postage is optional with the sender, and if not paid by him, double postage is collected at the destination. The envelope in question bears a postmark: "Due ten cents," the regular rate being five cents. The stamp you submit is worth about twenty five cents a thousand. a thousand.

P. McG., Rome.—The difference between Triangles 1, 2 and 3 is as follows: In Triangles 1, the horizontal lines forming the background run across the triangle and are of the same thickness in the triangle as without. In Triangle 2, these lines cross the triangle as in No. 1, but are thinner within it than without. In Triangle 3, these lines do not cross the triangle, which has a distinct white border around it. Embossing and grill are synonymous and consist of a number of indentations in the back of a stamp, to prevent the removing of a cancelation. They are usually in rectangular form.

The Pan American Series.

Promptly on the first day of May, the most beautiful set of postage stamps ever issued by the United States Government was placed on sale at the principal postoffices throughout the country. This series is issued in commemoration of the Pan American Exposition now being held at Buffalo, and will continue on sale until October 31st next. They will not displace the current set of stamps, but will only be sold when specially called for, and for this reason will probably not be as common as the Columbian and Omaha stamps. The Buffalo series consists of the following values and colors, the center being printed in black:

One cent—Green—Detroit & Cleveland steamer.

Two cent—Red—Empire State Express.

One cent—Green—Detroit & Cleveland steamer.
Two cent—Red—Empire State Express.
Four cent—Light brown—Automobile.
Five cent—Ultramarine—Bridge at Niagara Falls.
Eight cent—Deep lilac—Locks at Sault Ste. Marie, Mich.
Ten cent—Yellow brown—Ocean steamer.
In 1869, the government issued a set of stamps of which the four higher values were printed in two colors and which were very handsome; in our judgment, the issue of 1901 exceeds the issue of 1869 both in workmanship and artistic beauty. We should advise you to save all of these stamps you can get, for while the one and two cent ones will be common, there will always be a steady demand for higher values.

The Numismatic Sphinx.

Wyman McClintock, St. Ignace, Mich.—1858 nickel cent, face value. See answer to Jno. G. Wild.

Howard Porter, Atlanta, Ga.—A five dollar gold piece of 1800 sells for seven dollars and fifty cents. A 1795 half dollar, one dollar and fifty cents.

Oscar W. Hayes, Milford, Ill.—An 1843 quarter, if fine, is worth half a dollar. The Mexican silver coin is a one fourth real, and this design was used between 1841 and 1861. They usually bring fifteen cents. Mo is the mint mark of the city of Mexico.

Rexford Titus, Binghamton, N. Y.—An American half dollar of 1809 is worth seventy five cents, and an einreich thaler 1778 of Frederick II. (1740-86), of Germany, is worth two dollars. The "model penny" and the ordinary half penny and pennies of Victoria are all common.

Merle Rounds, Timson, Tex.—1849 dime, twenty five cents; 1806 half cent, twenty five cents. Your other copper rubbings are from common Canadian, English and French coins. The one you are more particularly anxious about is a French double tournois of Henry IV. (1590-1610), 1608, and is worth thirty cents. and is worth thirty cents.

Helen Hays, Seneca, Kas.-Your rubbing Helen Hays, Seneca, Kas.—Your rubbing is from an English half penny token John Wilkinson, an iron founder, 1787. There are many varieties of these Wilkinson half penny tokens. The reverses usually bear some foundry view. All are quite common. It is interesting to note that the celebrated chemist, Joseph Priestly, marginal devictions of the Lebitage. ried a daughter of this John Wilkinson.

ried a daughter of this John Wilkinson.

John G. Wild, Hanover, Mass.—Thinks, because the 1856 nickel cent is worth four dollars and fifty cents, his nickel cent of 1857 should be worth almost as much, because it is almost as old. It is not the age of a coin that makes it rare, but it is the small or limited issue. Coins of ancient Rome, fifteen hundred years old, may be bought for fifteen cents, while the 1856 nickel cent and the 1894 S. dime are worth dollars. The Roman coins and our 1857, 1858, etc., nickel cents were issued by the hundreds of thousands, and of the others but a few hundred or few dozen were issued.

H. H. P.—In reference to your communi-

H. H. P.—In reference to your communication, the coin editor would state that the Continental bill of 1778 for forty dollars. the Continental bill of 1778 for forty dollars, in fine condition, is worth fifty cents. The Confederate one hundred dollar bill of 1862, train of cars, is easily obtained for twenty five cents, and often as low as tentents. The other pieces are indefinite. Georgia never issued a forty pound note; five pounds is as high as ever issued by this state. There were, however, forty dollar issues, but all the Colonial money of Georgia is rare and brings good prices, when in good condition. There were several issues of five dollars, with leaves crossed, most all comparatively common. The Mexican dollar, or peso, of 1833, unless fine, is only worth bullion value.

Clayton Adams, Binghamton, N. Y.—

fine, is only worth bullion value.

Clayton Adams, Binghamton, N. Y.—
Sends us a sheet of rubbings representing some very interesting coins. An evening might be very pleasantly spent in studying the original pieces. We shall only locate them and give the value at the dealers: (1) Wurtemburg, medalice florin (around the edge "ein gulden") of William I., October 5, 1841, seventy five cents, intrinsic value thirty cents. (2) France, Louis XV. (1715-1774), 1753, one ecue, two dollars and fifty cents. (3) Peru, Lima, 1866, one soi, in good condition, one dollar and twenty five cents. (4) A poor rubbing of what appears to be a drachm of Alexander (the Great) III. of Macedon, 336 B. C. This coin exhibits the head of the kind in lion skin on obverse, and Hercules seated, holding an eagle on the reverse. (5) Brazil, John (1799-1818), 1816, nine hundred and coin exhibits the head of the kind in llon skin on obverse, and Hercules seated, holding an eagle on the reverse. (5) Brazil, John (1799-1818), 1816, nine hundred and sixty reis, two dollars. (6) England, George III., 1819, half crown, one dollar. (7) China. Canton dragon half dollar, one dollar. (8) A copper of the Byzantine empire, too poor to definitely locate. (9) United States dollar of 1798, thirteen stars, six facing, five dollars. (10) Bolivia, eight sueldos, 1834, one dollar and fifty cents. (11) England, florin of Victoria, seventy five cents. (12, 13) Coins struck for the Greek colonies of Rome, rubblings too indistinct to locate. (14) A mortuary medal of Prince Albert (the consort of Queen Victoria), 1849-61. (15) Angola, 1770, one macuta, one dollar. (16) Haiti, President Boyer (1818-43), anno 25 (1843), fifty centimes, fifty cents. (17) New Jersey cent, 1788, fifty cents. (18) Portugal, Maria I. (1786-1816), 1785, twenty reis, for the Azores Islands; thirty five cents. (19) Turkey, Abdul-Aziz (1861-78), 1277 A. H.—1861 A. D.—forty paras; twenty five cents. (20) A brass medalet of Victoria, of no account. toria, of no account.

THE AMERICAN BOY offers twelve prizes of Two Dollars each for the best Amateur Photograph received during the twelve months in the year, one prize for each month, also a second prize each month, of one dollar, for the next best photograph, the competition to be based upon the originality of the subject and the perfection of the photograph. The contest is open to subscribers only. Photographs will be returned if stamps are sent for the purpose. All photographs entered in the contest and not prize winners will be subject to our use unless otherwise directed by the sender, and fifty cents will be paid for each photograph that may be used, the prize photograph in any event to be our own, without further payment than the payment of the prizes. Write on the back of the photograph its title, with a description of the picture, and the full name and address of the contestant.

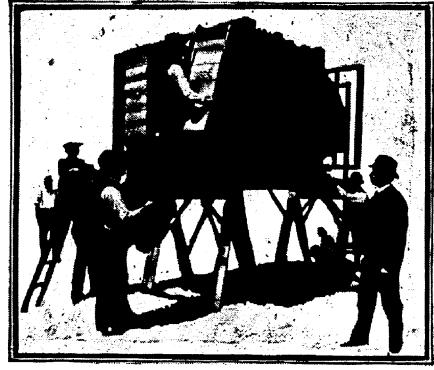

HARVESTING THE HAY CROP. First Prize Photo, he Herbert Post, Westbury Station Long Island N. Y.

Bird Photography.

Western Camera Notes is printing an interesting series of articles on "Bird Photography." In the March number of the magazine it tells about photographing the young in their nests, and remarks that with some knowledge as to "habitats." and nesting dates, the camerist can, if an ordinary observer, readily mark the parent birds either gathering or carrying food to their young, and especially from daylight until mid-afternoon. He continues:

"When once the nest is found it is necessary, as a rule, to work quietly. This is particularly true when the young birds have passed the first half of the nest period of their little lives, for it is a curious fact that young birds which, for the first few days after their eyes are opened, have no fear whetever of men, will speedily develop.

ear whatever of man, will speedily develop a marked fearfulness. As a rule, then, after the "pin-feathers" on young birds have begun to sprout, the camerist should work with great caution when taking near views. * * * It is always a wise rule, in this speed of work to make the first expected. after their eyes are opence work with great caution when taking near views. * * * It is always a wise rule, in this sort of work, to make the first exposure at some little distance—four or five feet—from the nest, provided the nest surroundings will admit. Any branches of wccd-stems that intervene between the camera and the desired focal point must be cut away or tied aside with most patient care, the speedily learns that many young birds become rapidly accustomed to that great unfamiliar creature lurching about or near the nest, so that if one refrains from touching the nest or young and confine him. touching the nest or young and confine him-self strictly to business, he may, by a little delicate and quiet wooing, work finally as close to the nest as his lenses will permit."

Biggest of All Cameras.

This is a photograph of a camera which has a special train to carry it. It is used to take views along the Chicago & Alton railicad, and makes the largest photograph plate in the world—eight feet long and four and one-half feet wide. The camera was constructed in Chicago under the supervision of Mr. George R. Lawrence, official photographer of the Chicago & Alton railinous company, by the direction of the passenger department of the company. It was lirst built to take photographs of special trains built for exhibition at the Paris Exposition. The instrument is carried from place to place on a flat car attached to a locomotive and requires a force of men to adjust it and place it on its supports when it "goes into action." The camera resembles an ordinary plate camera in shape and the bellows attachment, but everything about it is constructed on a mammoth scale. The plate holders weighs about half a ton. It took over two months to build it.

An estimate of its size can be gained when it is stated that over forty gallons of cement were used in the construction of the bellows alone. This was made of heavy rubber, the plates fastened over pleces of whitewood to strengthen it. The rubber is lined inside and out with black cloth to exclude the light. The bellows and lens travel on a mandout with black cloth to exclude the light. The bellows and lens travel on a dut with black cloth to exclude the light. The bellows is fully extended. The instrument is finished in cherry, and over six months were required to plan it and calculate on the sizes of the lens, etc. It is equipped with lenses which allow views to be taken at short and long distance, and ordinary or colored plates can be used as desired. To provide proper plates in the construction of the plate holders weighs about half a ton. It took over it wo months to ever wo months were used in the construction of the bellows and out with black cloth to exclude the light. The bellows and lens travel on a conservation of the plates fastened over

The Coming Paper.

The coming Paper.

The coming paper for photographers is platinum. Perhaps it may be more correct to say the paper that has come; yet while it is here, and being used more extensively every season, it has not achieved any such general use as its excellence and adaptability to produce the finest effects deserves. The trouble heretofore has been the cost of platinum paper. Its manufacture was practically monopolized by one firm, and there was such a difference between its cost and that of other papers that even professional photographers hesitated to discard other kinds. Now another firm has entered the field, and a healthy competition has begun that enables the amateur to buy this kind of paper at only a little above the cost of collodion matt papers—in fact, at about the same price as Velox and Argo. The effects that can be produced on Willis & Clemens's "Platinotype" far exceeds that of the old style paper, but the "Perfecter" and "Aristi" of the Camera Chemical Company is equal to that of platinum, to say the least, and at a reasonable price. And now a California manufacturer has placed on the market a paper he calls "Platinograph," for which he claims platinum effects. If amateur photographers wish to advance in the art, they must discard glossy papers. And it is a good thing for all of us that there is competition in photographic papers. A monopoly of anything is a bad thing for the public. A monopos, the public.

Something Worth Trying.

There is now on the market, for the ben-There is now on the market, for the benefit of amateur photographers, a combined developing and fixing powder called "Pyrocatechin." After the plate has been exposed in the camera, all that it is necessary to do is to place it in the developing tray, in the dark room, of course, pour on the developer, and by the time the plate is fully developed, it will also be permanently fixed. The manufacturers say the action of the fixing salt is retarded until development is fully completed, and, strangest of all, "will correctly develop a series of negatives or a roll of films of uneven exposures." Here is something that amateurs who have difficulty in determining when a plate is fully developed, should try. Careplate is fully developed, should try. Carefully follow the directions accompanying the powders, and give THE AMERICAN BOY the benefit of your experience.

Coloring Photographs.

Tinted photographs is becoming quite a fad. This is something that any bright boy can do, and do well, with a little patience, and the beautiful effects that can be produced is surprising. There is now in the market sets of colors made especially for this work, with the result that many a pleasing landscape, which is rather uninteresting as a photograph, becomes brilliant when properly illuminated. This is particularly the case with autumn scenes when the eye is fascinated by the reds and golds that appear everywhere, but which alas, when photographed, flattens out and is a disappointment.

Answers to Correspondents.

Willie Carrington—A camera that shows the picture on the ground glass right side must have a reflector.

Charles Warren—The very best printing aper on the market is platinum; and it a also the most expensive. Follow directions.

John Graham-You can get violent contrasts by using very strong developer. Plenty of water in the developer will make the negative soft.

\$28.85 WORTH OF SPALDING'S LEAGUE LUCKY BOY CLEVELAND

On July 1 next the baseball outfit shown in the accompanying pictures will become the property of the person who, during June, becomes a subscriber for one year to THE AMERICAN BOY, or sends us a renewal of his present subscription, or sends us some other person's subscription, and comes the nearest to telling where, within the United States (islands not considered), the thermometer registers the highest temperature at any time during the month of Junes in other words, boys are asked to tell where will be the warmest spot in the United States in June. In order that boys may have some guide to help them in making their estimates, we will inform them that the warmest spots, as recorded by the Government Weather Bureau for the month of June in several past years, were as follows: June, 1897, Phoenix. Arizona: June, 1898, Phoenix, Arizona: June, 1900, Yuma, Arizona.

EDUCATIONAL SCHEME,

The guessing contests published from month to month in THE AMERICAN BOY are educational in their effect. The February contest drew the attention of readers to the weather records of the different parts of the country. The March contest drew attention to immigration statistics, and thousands of boys heard about and asked about the subject of immigration for the first time. The April contest drew attention to the enormous business of the great Chicago Postoffice. The contest for last month drew attention to the business of our own postoffice at Detroit. These contests are not contests of mere guessing, for the thoughful, studious, inquiring boy will win. It is like offering a prize to the boy in school who spells down every other boy on words given happened. The boy who thinks reads and inquires offering a prize to the boy in school who spells down every other boy on words given haphazard. The boy who thinks, reads and inquires most will come the nearest to estimating the warmest spot in June. It is a contest of skill in estimating, and not a mere guessing in the dark.

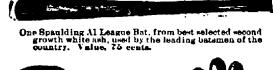

DESCRIPTION OF BASEBALL OUTFIT.

One Spalding "Official" League Ball. Value #1.25,

Spalding's Scoring Tablet. simple, convenient and accurate device for the record of runs and outs, made of celluloid to fit the vest rocket, used by Leagus umpires. Value, 85 cents.

One Spalding's First Basemen's Mitt, made of tanned calfskin, laced back, thoroughly made throughout. Value, \$5.60.

One Spalding's Infielders' Glove, made of selected velvet tanned buckskin, lined with finest felt. Value, \$2.50.

One Spalding's Catchers' Mitt, one of finest calfakin, Inced back, as used by League players. Value. \$6.00.

One Spaiding's Inflated Body Protector, made of best rubber, inflated with air, light and pliable, same as used by League catchers. Value, \$7.50.

One Spalding's Sun Protecting Mask of finest steel wire, extra heavy, black enamelled, with sunshade protecting the cost without obstructing the view. Value, \$5.00.

The base ball goods shown in the pictures are the very best, made by A. G. Spalding & Brothers, Chicago and New York, who have made National League baseball goods for many years. They are the best and most expensive articles offered by this well known firm. Every boy has heard of Spalding's balls and bats. The boy who wins this outfit will possess as good an outfit as is used by a National League Club.

THE CATALOGUE PRICE OF THIS OUTFIT IS \$28.85.

We have not been content to offer our readers a cheap outfit, but have gone to one of the best sporting goods houses in the country for the best and most complete.

WHO ARE ENTITLED TO GUESS.

1.—Any one sending us his own annual subscription to THE AMERICAN BOY.

2.—Any one renewing his subscription, whether it has already expired or is to expire in the future.

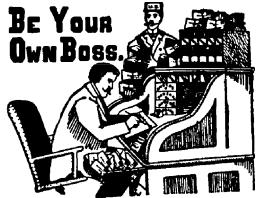

3.—Any one sending us the subscription of another person, in which case both the person sending the subscription and the person subscribing are entitled to guesses.

When more than one dollar is sent, a guess is allowed for every dollar. Regular premiums, selected from our premium list, on the sending in of new subscriptions, are also given as heretofore. If there are any ties the contest will be decided by the drawing of slips from a hat, some prominent city official of Detroit not identified with this paper, acting as referee. The name of the successful contestant will be published as soon as the Government record is made up-probably in the August number.

Any boy by hustling can get a good many guesses. He can renew his own subscription and get quite a number of new subscribers and for every one of the latter he will be entitled to a premium as well as a guess. When you send in your money send in your guess,

Don't forget to send in your guess when you send in your subscription, or your renewal, or some other person's subscription; and remember that you get a guess for every dollar you send.

THE BROWN BOOK,

oo and ioi Broad Street, Boston, Mass.

Do not believe that a boy is altogether bad because you have seen him make one

In the matter of character one may destroy in a minute what it has taken him long years to build.

Never before was the demand so great or the cry so universal for good, honest, upright, manly young men.

Judge Tuthill, of Chicago, is said to have declared that there are no born criminals. "If I believed that," says he, "I should lose my faith in God. Society makes criminals; environment and education make criminals, but they are not born so."

\$2,000

- 1,000

500

The character formed in youth is generally the character of a lifetime.

The boy who is constantly crying out that there is no chance for him is destined for the rubbish heap of oblivion.

Go at what you are about as if there was nothing else in the world for the time being.—Charles Kingsley.

THE AMERICAN BOY

The Only Distinctively Boy's Paper in America.

[Entered at the Detroit, Mich., Post-office as second-class matter.

Pa., 34,623; Leroy A. Metcalfe, Plainville, Mass., 34,776.

There was a great variation in the estimates, some estimating that less than one thousand would arrive during March, while others estimated as high as 300,000. There was no excuse for these extreme estimates, inasmuch as we published in our March number, in connection with the offer, a statement that in the whole year ending June 30 last. 341,712 immigrants had landed, and in the whole year preceding 242,573. It was plainly stated that these figures were figures for a year, and not for a month. To arrive at the average for a month one need only to divide by twelve. Dividing the total number arriving last year by twelve, we have an average of about 28,500. The majority of the estimates were in the neighborhood of this figure. The successful boy, however, figured that there would be an increase in immigration this year, so put his figure at a little over 34,000, and he was right.

We made a duplicate of this offer in our April number, the result of which will be announced next month. See also our offer for this month of a baseball outfit, appearing on page 254.

"Acting Commissioner General."

By reference to the estimates sent in, we find that Albert A. Fels, of Swanton, O., on March 5, sent us a subscription, stating that he estimated the number of immigrants landing from steerage at Ellis Island during March would be 34 476. This was the closest estimate made, and came within

THE CRADLE OF LIBERTY

J. L. HARBOUR

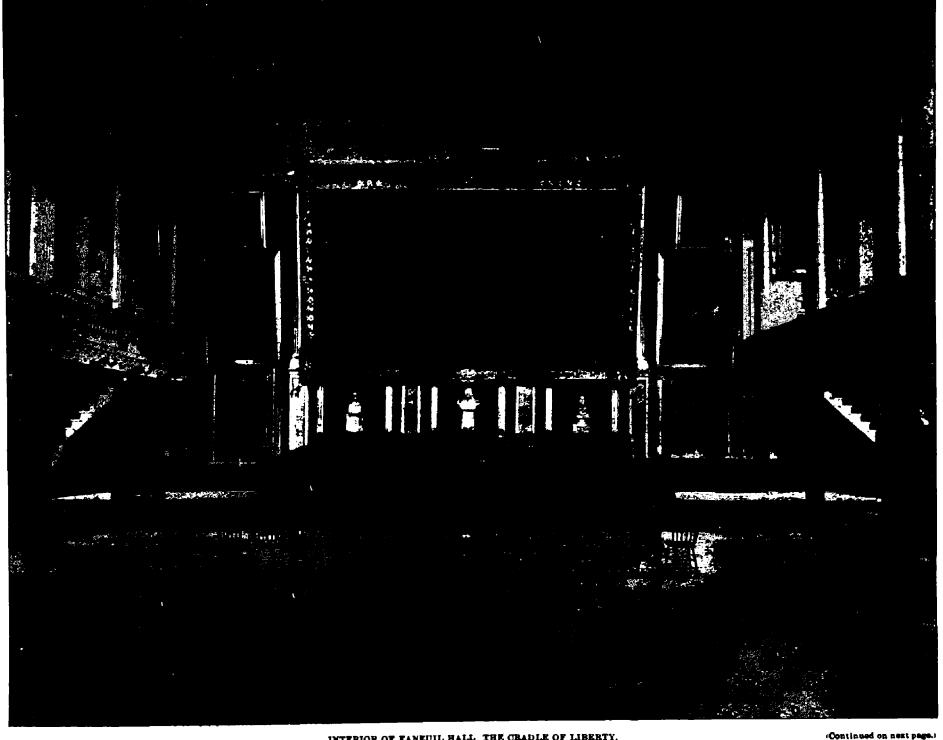

T was because of their persecution as French Huguenots that the

first members of the Faneuil family came to America on the revocation of the Edict of Nantes in 1685. Some members of the family tarried in New York state, while others found their way to Boston, where they and all other exiles who were persecuted "for righteousness' sake" were sure of a warm welcome. The Faneuils were not so poverty stricken as were most of the exiles, and they soon became people of prominence in their new home. Among the exiled Faneuils was one named Benjamin, who married a French lady named Anne Bureau, and who made his home in New York city, where he died and was buried in Trinity churchyard, where one may read on the horizontal slab over his grave: "Here lies buried the body of Mr. Benjamin Faneuil, of the city of Rochelle, France, who died the 31st of March, 1719, aged 60 years and 8 months."

This one of the pioneer Faneuils in America had a large family, the oldest of which was Peter, who was born in New York in the year 1700. Peter went to Boston with his brother Benjamin after the death of their father, and the two brothers soon became men of prominence in

their new home. Four of their sisters soon came to them from their New York home, so that Boston was pretty well peopled by Faneuils. The children had in Boston a wealthy uncle named Andrew Faneuil, who had no children and who decided to make his nephew Benjamin his sole heir on condition that Benjamin never married. Benjamin was foolish enough to agree to this condition at first, but it was not long before Cupid made him break his compact by causing him to fall in love with a Miss Mary Cutler, whom he married. For this he was cast off by his uncle, who then made Peter his heir on condition that Peter remain a bachelor. Peter became so calloused that the darts of Cupid had no power over him, and when his wealthy Uncle Andrew died in the year 1738, he inherited nearly all of his fortune, while Benjamin was cut off with but five shillings.

Peter had been very industrious and thrifty, and | market house and hall were entirely completed, and | quarrels between the "Britishers" and the "Towners," had already accumulated quite a fortune of his own before the death of his uncle so that, when he had added his uncle's fortune to his own, he was one of the wealthiest men in the town. He now began to live in grand style, and was quite lordly in his man-Then as now deference was paid to the rich, and it is said that Peter enjoyed the poor homage his wealth brought him, although it is not recorded to his discredit that he was arrogant or that he was ever unjust to those in his employ. He was generous to the poor, and his friends found a kindly and hearty welcome in his fine home. But he did "put on style," as we would say in this day. He rode about in a coach that was something like a chariot, and he dressed elegantly, but he was not selfish and he hearkened to the cry of the poor. His sister Mary Ann became his housekeeper, for he did not marry after he had secured his uncle's fortune by remaining

In the year 1740 Peter Faneuil conceived the idea of building at his own expense a fine large market house and presenting it to Boston, "provided the town would pass a vote for that purpose and lay the same under the proper regulations, as shall be thought necessary, and constantly support it for the said use.' There was much opposition to the building of the market by many who thought that it would work injury to those who made a living by peddling from door to door, or by selling on the street corners; and even when it was agreed that the new market house should not interfere with street peddling there was still so much opposition to the proposed market house that out of over seven hundred votes cast those in favor of the market had a majority of but seven votes.

This did not discharge Peter Faneuil, for he felt confident that many of those who were opposed to the building of a market would in time come to see that it would be of great value to the town. Then it was that Peter Faneuil decided to make the market house include also a fine large hall for the use of the city, as the hall in the old Town House was not now large enough to meet the requirements of the city. John Smibert, a popular artist of that day, was the architect of the new hall. On September 10, 1742, the

Peter Faneuil handed over the keys to the selectmen of the town of Boston. It was at the suggestion of Thomas Hutchinson, who afterwards became the royal governor, that the hall above the market was named Faneuil Hall. The first meeting held in the hall was on the sixteenth day of September in the year 1742. On the third of the next March Peter Faneuil died suddenly in his home, and he was buried with much ceremony and, later, a memorial service was held in the hall bearing his name. Since that long ago day many, many distinguished men who have gone the way of the earth have had memorial services held for them in the famous old hall that was

to play such an important part in our country's history.

Peter Faneuil made it a condition that the hall should be forever set apart for the use of the people without charge, and this generous rule holds to this day. No money is ever received for the use of the hall, and all kinds of public meetings are held in it.

On the thirteenth of January, in the year 1761, a great fire swept over the part of the city in which Fancuil Hall was, and the building, that had now become the pride of the town, was destroyed, nothing but the four brick walls being left standing. The hall was rebuilt and re-dedicated in March, 1763, on which occasion James Otis gave the address. It was not long after this that meetings began to be held in the hall that gave it the proud title of the "Cradle of Liberty." The first little var clouds that were the forerunners of the great Revolution were seen on the horizon. These ominous clouds grew larger and larger, and Faneuil Hall began to resound to the voices of bold and fearless men resisting oppression. When the Stamp Act was passed the resentment of the people found expression in Fancuil Hall.

Imagine, if you can, the indignation of the people when seven war ships came into the Boston Harbor one day in the fall of 1768 and Faneuil Hall was demanded for the use of the king's soldiers as barracks! The request was promptly refused by the selectmen of the town, but those in higher authority granted the request, and for several weeks the hall was used for the purpose for which it had been demanded.

On the fifth of March occurred the famous "Boston Massacre," which was a culmination of many petty

as the people of Boston were called. The riot was begun by a boy twitting one of the British sentinels. It ended in a general quarrel, in which five persons were killed. The utmost excitement prevailed. A mass meeting was held in the hall and adjourned to the Old South Church, where there was a larger audience room. The funeral of Crispus Attucks, one of the victims of the riot, was held in Faneuil Hall Other meetings in which the fire of protest and indignation ran mountain high were held in the hall During the siege of Boston the hall was used for various purposes by the British. They held entertainments and gave plays in it, and were not in the least mindful of injury done the hall during their diversions. Had they known that it was to be recovered by the Loyalists they might have destroyed it altogether.

The first meeting held in the hall after the evacuation by the British was in the shape of a great dinner given by John Hancock to Count D'Estaing, the French admiral, and several hundred of his men. George Washington, Lafayette, John Adams and many other men of note were banqueted in the hall at different times. In 1805 Faneuil Hall was rebuilt and greatly enlarged at a cost of about sixty thousand dollars. Since that its walls have resounded to the stirring eloquence of Daniel Webster, Wendell Phillips, Charles Sumner, Edward Everett, and many other famous men who speak no more in this world.

When Wendell Phillips died his body lay in state in Fancuil Hall on the platform on which he made his maiden protest against the sin of slavery. Many Presidents of the United States have spoken in Fancuil Hall, and no other building in America has been more closely associated with the important political and social events in our history.

In 1898 it became necessary to again reconstruct the building, and this was done at an expense of about one hundred thousand dollars, without, however, altering the outward appearance of the building It has been made as nearly fireproof as in any way. possible. The interior is just as it was before the alterations were made. The same fine old paintings of noted people are on the walls and there are many things to remind one of days of long, long ago.

THE HOUSE BOATS.

THE HENLEY REGATTA

KARL EDWIN HARRIMAN

When the calendar in England is turned a page to mark the beginning of July every boy on the little Island of Britain who may, rushes for the river. Little regattas are held all up and down the narrow, ditchlike stream that Mr. Izaak Walton, in the old days, was wont to term the "Noble River Thames." All these little regattas are in imitation of the greatest water event of the year, held up the stream at Henley, where, each July, the last three days of the first week, crews from the different colleges of Oxford and Cambridge row against each other and such foreign oarsmen as wish to enter.

One who has been present at the Henley regatta can never forget the sight, as he turns into the High street of the quaint old town of Henley, and approaches the bank of the stream. There before himif, indeed, he be an early arrival—are hundreds upon hundreds of boats, filled with gaily dressed ladies, and men and boys in white or striped flannel.

The river presents a picture gaudy with color. Along the left bank, as you face down stream, are the house boats, purely English contrivances, but very little known here in America. An English house boat is a flat scow with a cottage built upon it. And for the regatta week these tiny houses are covered, from the water's edge to roof, with flowers. The blossoms may not in all instances be Nature's—indeed they may have been manufactured of paper in the shops at the east end of London-but the effect is the same. They are lighted at night by strange little lamps, similar in appearance to our incandescent electric lights, but different, in that each tiny globe holds a candle.

The first day at Henley is "getting ready day," as it is called. Every train from London unloads its human fraight at the little ready.

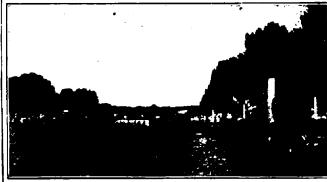

LUNCHEON TIME.

little stations near at hand between London and the water-point. Every inn is full; tents are put up; the house boat throng arrives, and the river becomes alive. There is no general rowing, for such means of aquatic locomotion could not be used in the river, crowded as it is with small boats. All the long low craft are propelled by punts, a process made possible by the shallowness of the stream at this point. The punter operates with a long pole partly shod at the lower end with a band of thin steel. The punter, with his pole in hand, stands—or he may sit—at the back of the flat-bottomed punt, and dropping the pole into the water, pushes the craft along wherever he will. The performance appears easy, but it is often a risky undertaking for an amateur.

There are a few little, short, fat boats, built after the general plan of rowboats, only shorter, that bob about on the surface of the water like the butter plates of wood that grocers use; and there are still fewer canoes. But the one boat of Henley during "Henley week" may be truthfully said to be the punt, which is built to accommodate four or six.

All "Henieys" are the same; so if you have been there once of recent years you may consider that you have been an annual visitor. Midway down the length of the course taken by the contesting rowers, logs are chained to form a boom and thereby an inner river. It is up this inner stream that the long, arrow-like shells of the collegians are rowed by the eight men. and urged on faster and faster by the little heered coxwains who manage the rudder at the back, and, leaning forward, shout and yell, and—save the mark! -often swear like young well-bred pirates, at the struggling crew.

I remember one race that was really won by the little coxwain, a mite of a chap, who used his lungs to such good effect that his boat, at last, though it had been a length behind all down the course, shot ahead and won the race. And those big college rowers understood that the race had been won for them by their little coxwain, for when they grounded their shell and stepped up on the lower bank, they formed a circle around the tiny chap and lifting him upon their shoulders marched back up to the starting point with him, yelling his praises at the top of their lungs.

THE START.

fell back before the eight men holding the little fellow away up in the air, and many were the roses and other blossoms with which he was showered.

It was one of the most impressive sights I have ever looked upon-those eight big men and thirty thousand people cheering a tiny chap—and undersized at that—who could not by any possible chance have been more than eleven years old. And the little fellow took it all as coolly as you please. He knew he had won that race for his crew and he bowed to the waving handkerchiefs, quite as some great national hero bows to the men and women lining the streets through which he passes.

Down the river, past the last house boat, and very near the upper end of the course, where the starting point is marked by two white stakes, are the various rowing club houses of England, each with its band. They are set back from the bank, and the lawn stretching down to the water's edge is filled with chairs for the use of members and guests of the club. The pictures these lawns present of an afternoon during the regatta are most astonishingly full of color. The men are dressed in cool, white flannel, with gaily ribboned straw hats, while the gowns of the ladies are gay with color. Both banks of the river along the length of the course are dotted with band stands, and during the races, and between, scores of bands play and lend to the affair the air of a great out-of-door fete, a garden party, to which all, who can afford it, are invited for, let me tell you, it costs to see "Henley" after the approved fashion of English society. There are man: Englishmen of aquatic proclivities who moor a house boat near the course as early as May and live in it until regatta week, when, for the three days, they may receive, if they care to rent their house boat, some such a sum as five hundred, or even a thousand pounds There was one little house boat rented last year to a diamond millionaire from South Africa for three thousand dollars in our good American money. His lease allowed him the use of the boat for three days. This seems absurd to the average American who has never been present at a Henley regatta, but to one who has man freight at the little station of Henley or the other | The great throng lining the river on the green bank | been there, who has observed the enthusiasm of the crowd and how the affair is really a national sporting gives way to luncheon. I remember one night, as the | a few hours at Henley let me advise him to be there fete. it does not seem so absurd. And too, you must know that the little town of Henley makes enough these three days to keep itself alive all the rest of the A glass of "lemon squash," as lemonade is called in England, costs you four pence in Henley in May or June, or at any time before or after the regatta, but go up to the taproom of the Royal George during "week" and ask for a glass of "squash." You will then pay for it the sum of two and six, that is to say sixty

As I have said, many of the ladies and gentlemen who come to the regatta, live in the inns that are scattered from the race-point down the river for a distance of six miles. They are driven up to the course each morning in the inn tally-ho or brake, or they punt themselves up in their own boats. Of course these people do not drift back down to their inns for luncheon They bring innumerable baskets with them, great hampers and boxes and crates, and at one o'clock they picnic on the banks of the river. One day it was estimated that fifteen thousand persons were picnicking on the left bank at noon. And they are no commonplace picnics of cold meat and that. The great stores of London have received, beforehand, hundreds of orders to have luncheon for any number, from two to thirty, at Henley on the noon train, and as the train pulls in at the little station there is found awaiting it an army of butlers who seize the parcels of especially and freshly prepared food and bear it away. All sport

punt in which I sat drifted down the river in the moonlight, I was attracted to tiny bobbing things on the surface of the water. I asked my host what they were. 'Corks," he said. And sure enough they were. There must have been a million of them. It was the second day of the regatta and the great crowd at Henley was

finding itself and settling down to enjoyment. They were not all champagne corks, though—to tell the truth many of them were—soda corks, cider corks, milk corks, and corks of every other kind of bottle, I think, on earth.

If one visiting in England in July has only time for

the last night of the regatta. Then the river all along the course is illuminated, as are all the boats, including the small craft, which are strung with lanterns arranged upon a canopy contrivance. The night scene is beautiful, infinitely more so than at Venice; and the constant shower of fireworks in the heavens only tends to accentuate the beauty.

On the last night of Henley last year there were over fifty thousand persons on the river; on the whole length of the course you could cross the stream anywhere, from boat to boat, without wetting your feet. In and out, among and between the punts, were propelled the boats of the minstrels, who, masked, played guitars, mandolins and in some instances tiny little pianos, and sang for the benefit of the crowd-afterwards, of course, passing the "collection bag" at the end of a long fishpole, so that those on the outermost rim of the throng could be reached for money.

In the midst of the spectacle, with the river alive with motion and colored lights, and vocal with the shouts of laughter and songs, a band away up the course struck up "God Save the Queen." Another fell in, and another, and so on, until every one of the hundred bands was playing the national air of England; and at the first strain every man and woman on that river stood up; a hush fell over the crowd; hats were removed, nor replaced until the tune was finished. Then a great shout went up, a telegram was sent the Queen, and the Henley Regatta was over.

* A ZEBRA HUNT *

ELI R. SUTION

HERE is a part of South Africa called "the Upper Karroo," on account of the bush which overgrows the whole region. It was on this upper Karroo that a party consisting of 80n

Governor Pingree. of Michigan, his Joe, Walter Sutton, my brother, Alex. Mellish, a young colonial official, Mr. Michau, a Boer farmer, upon whose lands we went hunting, and myself, rode out to get a shot at some zebras.

It was just five o'clock one morning in April last, that we were aroused from a sleep, which had not been free from dreams of mountains, rocks and wild animals, by a Kaffir who brought in coffee, and told us that the "Baas," meaning the Boer farmer, was already having the horses saddled. The best horses in the country had either been commandeered by the British, or taken by raiding Boers, so we were obliged to content ourselves with the mustangs which the farmer found, and some

inferior animals which the cammandeering officers had rejected as unfit for service. The way these rejected nags got about caused me to think that their owners had learned the trick, which many of the farmers practice, of driving a small nail into the hoofs of their horses, making them so lame that the inspectors are glad to let the farmers keep them. I know that the horse the Boer farmer rode was as smart and frisky as any I ever saw.

We had been fortunate enough to induce the commandant at Cradock to loan us a couple of horses, and enough military rifles to equip our company; so we set out at sunrise well armed and well mounted, with a good flanking force of Kaffirs, whom we took along to beat the bush if necessary and drive out the game.

As we galloped down the valley, green with blossoming veldt, springbok were grazing about within easy range of our rifles, but on this day we were reserving our fire for more royal game. At the end of the valley, a "kop," or circular mountain rises almost perpendicularly to a height of about three hundred with a colt; the one we killed was her mate. She is so feet. Its summit is encircled with an immense ledge of overhanging rocks. On the top is a vast plateau, which widens out into a broad, uneven plain. These lofty regions are inhabited by the zebras. We had to climb the mountain in some way to get at them, for these animals seldom descend into the valleys. We not only had to climb the mountains ourselves, but we must take our horses with us, because it is idle to hunt zebras without horses. I supposed, of course, that there would be a road, or a trail, leading up the mountain; it never occurred to me that man or beast could climb over the bowlders and the brush wheeled his horse and dashed up the foothills. I presume it took us an hour to zigzag our way to the Over the body of the too loyal mare zebra we held

top. Although our ponies performed miracles in the way of climbing, we were obliged to dismount when about a third of the way up, and lead them the rest of the journey. No one but a Boer would have attempted to take a body of "tenderfeet" up to the plateau above the encircling crown of crags, but he found, by instinct it seems, for he had never gone by this route before, a narrow passage, worn by cascades, through the beetling cliffs, and without injury to man or beast, we gained the summit just in time to see a drove of zebras and a whole flock of wild ostriches scurrying towards the horizon.

I said no one was injured. I do not mean that no one was bruised by falling over rocks; nor do I take into consideration what happened to my derby hat. The fact that it was caved in on all sides seemed to amuse the rest of the party; they had insisted that I was the first man who ever went zebra hunting in a derby hat. Michau, the Boer, was the first to gain the summit. Governor Pingree was so far down the mountain side that we could not see him. Joe's horse had lain down to rest, and he could not get him up until most of the party were on top. With the exception of the Governor, I think, I brought up the rear.

There are always noises on the sides of steep mountains. The tread of a springbok or of a bush buck will sometimes loosen a bowlder and send it crashing into the valley below. Baboons are garrulous animals when they are disturbed, and they barked and whistled at us from behind rocks, making so much noise that I do not understand why the ever vigilant zebras had been surprised by us. I know that just as I reached the top, Michau brought down what seemed to me the handsomest zebra stallion in the drove. It must have been the leader of the zebras, for they seemed thrown into a perfect panic and scattered in every direction, some of them mixing with the wild ostriches which bore off towards our right in better order. Zebras, as I afterwards learned, will follow a leader in single file, no matter how many of them there are, whenever they scent danger; but when hat leader is killed they are thrown into confusion, not knowing what to do. Whether our Boer picked out the leader of the drove, or aimed at the beautiful stallion by accident, I do not know.

At the time, what most concerned me was to get on my horse and keep up with the rest of the party. wish I could picture that zebra, as it lay quivering on the grass, bleeding its life away. It was too weak to rise, but no madman in a lunatic asylum ever had such wild anguish in his eyes; they seemed actually to be melting in fear.

As my horse bounded over the stones, I noticed that a female zebra, followed by a young colt, lingered on the horizon. With head thrown back, and tail erect, she would proudly prance back and forth, with the little colt close behind her, while the rest of the drove were assembling in a little kloof about three miles upset about it that you can get a crack at her!" Away we went, and sure enough, the widowed zebra mother paid the penalty of her devotion. Either Joe or Walter killed her, for both fired about a dozen shots. I did considerable shooting myself, but I never took good aim. How the colt managed to escape all our bullets was almost miraculous, for it would not desert its wounded mother until we had approached within at least fifty yards. The Boer had done no shooting. since landing the stallion in the morning, which accounts perhaps for the fact that the baby zebra made its escape. When it finally concluded to abandon its which lined the mountain sides, until our Boer mother, it glided over the rocky surface of the plateau with all the grace and rapidity of a springbok.

a council of war, or rather received orders from the Boer, who was a natural leader of men. "You must have another shot, boys, to redeem yourselves for missing the colt. Yonder are the zebras on the kloof. If we go in that direction they will bear to the right. Having no recognized leader they will scatter into small droves, but I think they will assemble again in the little valley near the place where Walter Sutton is boring a well for the government. I know zebras pretty well, and I think I know what they have decided over yonder. Now. Walter, take these boys over to the place where your drill is, and post them under the hill. The governor and I will ride in the other direction, and as the wind is right, I think you will have good shooting." Walter, Joe, Mellish and myselt galloped along in the direction indicated for about an hour, when we came to a little valley containing a few large shade trees. Among the trees is the tent Walter sleeps in while engaged boring for water. Dismounting, we tied our horses' heads down to one of their forelegs with our halters, and turned them loose to graze on the veldt. Then we secreted ourselves among the rocks at the brow of the hill and waited for

Our ponies performed miracles of climbing

the zebras. We heard a noise and saw what looked ing along to within twenty steps of where I was. For a flock of wild ostriches. They must have detected too frightened to that hated human smell, for they suddenly lifted their I could see its wings and tilted off to the left. We might have shot response to the some of them, but we feared that in doing so we would little wild heart. alarm the zebras, which we thought would be following close behind. All at once we saw, through the trees, down the valley, what looked like the manes of As rapidly and as secretly as we could we scrambled down the ravine, and got within gunshot of the—horses! They were horses "lame horses," belonging to farmers, so we hied ourselves back to our post near the water drill. I was ahead this time, because I had fallen behind when we were chasing the horses. Just as I came to the top of the kloof I heard a gentle stir among the stones, and wow! the zebras were upon me. They were headed right over the place where I sat; and they could not have been thirty steps away, when their new leader scented human taint, and dashed over the edge of the ravine to my left. Every one of the drove had a broadside exposed to my rifle for fully a minute. I could count the stripes upon their sides as they glided by one after the other, and I think I did more counting than trying to shoot them. Walter and Joe were fully two hundred yards back of me, and were blazing away, right over my head at the zebras, some of the shots whizzing uncomfortably close to my ears. One zebra stumbled, having been wounded by one of the boys. It scrambled to its feet and dashed after the others. Then I landed my first shot, for I aimed at the flashing eye of the wounded zebra, and afterwards found my bullet had passed clean through its neck. I started to run to where it lay, when all at once the little zebra colt, which now, fatherless and motherless, was left to keep up with the drove as best it could, came leap-

HAL'S FOURTH OF JULY "HUMMER"

AMANDA L. GROCKER *************************

The Wagners were a patriotic family. The father, now gray and bent with years, still wore the honors of a brave lieutenant of the Civil War; and the eldest know the reason. Hal happened to know; and as he son, Carl, now in Porto Rico, had gained distinction as a brave boy in blue.

But the members of the Wagner family were not a unit as to just how the "Glorious Fourth" should be celebrated. Mother Wagner rejected the wicked Chinese invention two years before, when Hal set fire to his new suit of clothes, burned his face, and nearly put his eyes out with gunpowder.

Lying on his back under the old apple tree, Hal winked slowly at the patches of blue sky showing throught the branches, and cudgelled his brain as to how he was to get firecrackers for the coming celebration. The boys of his crowd were going to have "swads o' crackers," while he had not as yet enough for even a decent fizz.

In three days more the old anvil at Beecham's would wake up the town at three in the morning. Later on the flags would wave, the drums would beat, the people would march to the grove, and there would be a speech by Colonel Weir and music by the band;

then would come the firecrackers in the evening. bothering her head over such in-

lonesome little brother," the letter said. among the Wagners."

old enough to be trusted with firecrackers? Carl stairs for the hidden treasure.

wants the boy to have a hummer next week, and I don't know of a thing that can make a day hum as they can."

Hal, who was just on his way past the window heard his father laugh. "He wouldn't laugh if he knew his son was planning to steal eggs, would he?" The boy shrugged his shoulders at the thought.

A few hours later Howard Somers, sister Margaret's beau, met Hal at the gate. Margaret's smiles had been rather chilly of late, and Howard wanted to was talkative that morning, Howard got the information he wanted. When they separated Howard tossed a shining silver piece toward Hal, saying, "There's a half a dollar to help celebrate." Gleefully Hal gobbled up the windfall. "Now I won't have to-

"Won't have to what?" asked Howard, noting Hal's confused manner.

"O, ask for an extra allowance," exclaimed the boy, turning a handspring and making a grimace worthy

"I'm awfully ashamed." Hal said to himself as he gathered the eggs that night. "I'll never tell anybody about it, for old Speckle tempted me and nobody could ever understand.'

Jack Hoffer leaned on the counter for a moment's meditation before he shut up shop. He could not help thinking of those Wagners. Now, there was the licutenant himself, heretofore rather sparing in his purchases of Fourth of July gimcracks, who had simply outdone himself. Then mother Wagner had purchased a fair lot, and after that Hal had come in at a Old Speckle went by him singing merrily and not time when he ought to have been in bed and asked for a half dollar's worth of the "wickedest busters in the

Before Hal Wagner crawled into bed that night he managed to get his package upstairs and into his room. "I'll poke 'em under the bed," he said. "It isn't stealing; it's only being proper careful." Then he knelt and thanked Heaven for financial help, and a moment later had dropped off to a sleep full of dreams of flags, processions, and overflow meetings! where crackers flashed, popped, fizzed and burst,

"Merciful goodness, who was that coming into the room? Mother! Had she found him out? Did she mean to find those crackers?

Hal stuffed the corner of the pillow in his mouth to keep from screaming. The apparition put something on the chair by the bed and went out again. His t and out and smuggle eager fingers reached for it. Yes, he liked flags, espeto the meeting on the cially the stars and stripes. "As dear as life," he had

The anvil at Beecham's broke the stillness of the July morning, and Hal sprang out of bed. His first be the wiser, not even the boys thought was for the hidden treasures. Hastily dressing, he rushed downstairs, arousing the household as Mother Wagner was reading Carl's he went. He felt that he had the American eagle by last letter which father Wagner had his wings this blooming Fourth, and father Wagner just brought from the postoffice. "Poor, remarked, half awake, "There's another soldier

"Make his Fourth a hummer, for my, All day long Hal was full of patriotism, marching sake, mother."

In the long, dusty procession, cheering when the Mother Wagner looked at the "lone-crowd did, whether he knew why or not. After tea, some little brother" and wiped her eyes. just when the drum began to beat on the green call-"Father," she said, "I wonder if Hal is ing the overflow meeting together, Hal slipped up-

"Hal," called his father from the foot of the stairs, "come here a minute; I want to make a proposition to you."

"Shades of a picket guard, what is it now?" Rebellion surged up into Hal's throat in great lumps. He wouldn't agree to a solitary thing under the flag, that would keep him from the green. Nevertheless, he went down to hear what the hateful thing was.

> the lawn." "He's found the busters," thought Hal, and this was his way of saying, "Now, my boy, I'll fire them off while you look on, to pay you for your smartness.'

"Son," said his father, kindly, "we haven't had much of a Fourth

for quite a while, so I thought we would have something nice out on

> "We have fixed un a little jollification, mother and I," went on the father, "and I want you to invite the boys to come and help us celebrate. I'll promise you a lot firecrackers, and besides" and then he smiled to see Hal's eyes growing-"I have a side-show of my own worth see-

ing. Now if it's all right dust around, bring in your friends and we'll have a hummer."

"We haven't had much of Fourth for quite awhile."

Of course Hal "dusted," and in a short time some twenty boys, including the Juvenile Martial Band, filed onto Wagner's side lawn. Everything was ready for them. Chinese lanterns in red, white and blue hung here and there among the trees merrily swinging their lights athwart the scene. Seats had been whisked in from somewhere and a place of honor arranged for the band boys. By flank movements and two or three feints Hal had made a detour and returned with the "wickedest busters" as an addition to the hummer. Surely this was to be an overflow! And only four adults to keep it down!

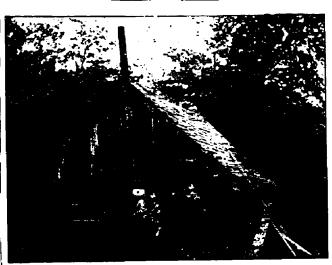

Enthusiasm rose and rose. Father Wagner was like a boy in knee pants. Mother Wagner sat quietly by thinking of Carl, while Somers was jollity itself. Surely Howard ground his axe successfully, for Margaret was smiling away the barriers without doubt. The band played the National airs as it never played them before. Then, at father Wagner's request, they gave "Marching Through Georgia," and father Wagner made a little speech. He told the boys how he had been in that very march, and how he had seen the sweet potatoes climb out of the ground in good shape.

Then the celebration began in real boy style, and every one of the crowd overflowed in good shape.

After the firecrackers had cracked and the busters had busted amid deafening huzzas, a group of boys found that they had burned their clothes and fingers, singed their hair, and yelled themselves hoarse.

"Honors don't amount to much without scars," said father Wagner, significantly. Then he set the pin-wheels going, shot off the Roman candles, and sent up the rockets.

The pink stars rained down and the eagles flapped their red and green wings until this overflow meeting was without precedent. Father Wagner declared that there was not as much enjoyment to the square foot anywhere in the United States on that Fourth as on Wagner's side lawn.

A BOYS' CAMP IN THE BACK WOODS OF MAINE.

There were just four boys in the town of Hard Luck, if one could call some twenty five or thirty log and slab cabins and half a dozen tents a town. These shabby looking cabins and weather-stained tents were hidden away in a rocky and narrow gulch in the great Rocky Mountain range. Hard Luck was the not inappropriate name some one had given to the little mining camp because those who had come to it in expectation of discovering phenomenally rich veins of gold and silver in the granite mountain walls had been greatly disappointed. The man who had staked out the first claim and built the first cabin had discovered a promising vein of silver in a claim he had called the First Find, and a rumor had gone forth that a new and rich silver belt had been discovered. An incipient "boom" followed, and several hundred prospectors were soon at work up and down the narrow length of the gulch and the little town of Hard Luck had sprung up. But no discovery equal to that of the First Find resulted from all the digging and blasting and drilling that the eager prospectors did, and some one had changed the name of the camp from Camp Hopeful to Hard Luck.

Not even the First Find had realized the expectations of its owner, for it went through a process vulgarly called "petering out" before the end of three months, and the other claims that had been located and developed to some extent were of little value. Thus it was that there were hard times in Camp Hard Luck, and the men who had been drawn thither in the hope of "striking it rich" were grievously disappointed, and they said very uncomplimentary things about the camp.

Some of them were confident that there were rich veins of silver hidden away in the gray mountain walls if they could only be discovered, and they went on trying to discover them.

Very few of the men had brought their families to Hard Luck with them. They told the truth when they said that a place like Hard Luck was no place for women and little children. Mr. Joseph Dilly had brought his boy Ted to the mountains with him because the boy had shown some slight tendency toward lung trouble in his eastern home, and the doctor had said that a summer of "roughing it" in the mountains would do him good. The two Lee boys, Joe and Dick, boys of fifteen and seventeen, had lost their mother early in the spring in Denver, and their father knew of no one with whom he was willing to leave them and he was too poor to send them to some good boarding school, as he would have liked to have done.

He decided to take them to the mountains with him for the summer, in the hope that he would at least strike it rich enough to send the boys to some good school in the fall. The fourth boy in Hard Luck was Larry Lawson, a merry lad of sixteen, whose father and mother had come to Hard Luck to take charge of a little hotel of four rooms that bore the high-sounding name of the Astor House. The decline of the boom was bad for the hotel business and the proprietors of the Astor House found themselves without any patrons. Mr. Lawson determined to remain in the mountains prospecting during the summer, and if his luck did not change he would leave Hard Luck for some more promising field in the early fall.

It was one day during the last week in June that Larry Lawson said to Ted Dilly, while they were walking toward the Lee cabin to get Joe and Dick to climb to the summit of old Baldy mountain, "just for the fun of the thing.'

"Say, Ted, has it dawned upon you that next Friday is the glorious old Fourth of July?"

'No, it hasn't. Holidays don't count for anything

in a place like Hard Luck.'

"Well, let's make the good old Fourth count for something. You want to be 'patterotic,' don't you, boy?'

"How is a fellow to be 'patterotic,' as you call it, when there isn't a flag or firecracker within fifty miles of this place, I'd like to know?"

we can make a noise well. any quantity of powder in the camp, and us four boys all have good lungs. As you say, there isn't a flag or a firecracker in the place, and not even a lemon for the lemonade that is the lawful beverage of the multitude on the Fourth. But my great-great-greatgreat-gran'daddy on my mother's side was one of the signers of the Declaration of Independence, and I'm not going to let the Fourth come and go without doing something to mark the day. Let's talk the matter can always think up something."

to beat you thinking up things with fun in them,' said Ted.

This was true. Larry had a very fertile imagina-

contribute to his own enjoyment and the enjoyment of others. He had a real boy's fondness for fun and a good time generally, and his dreary surroundings did not depress him in the least. He and his three comrades had really had "no end of fun" in the mountains thus far that summer.

"But we want to do something out of the common," said Larry, when he and Ted had been joined by Dick and Joe and they were toiling up the rocky slope of Baldy Mountain over a narrow and winding trail. One cannot very well talk and climb steep mountains at the same time, and when they had gone a quarter of a mile Larry said:

'Let's sit down here on this shelf of rock in the sunshine and talk over our plans for the Fourth. I have thought of something while we have been climbing the trail.'

'What is it?"

"Well, let's get hold of all the powder we can and shoot off the biggest blast ever shot off in this gulch. Let's make the earth tremble. Let's make this old canon rip and roar. Let's make those that don't know anything about it think that it is the crack o' doom. Let's celebrate!"

'Where would you do all this blowing up?'

"Oh, we can go away up into the gulch some place. We can find some good place where there are a lot of fissures in the rocks that we can chock full of powder. Perhaps we can find some place where a prospector has drilled holes for a blast he has not set off for some reason. There are plenty of places. All we want is a place where we can make a booming racket in honor of Old Glory!"

They found such a place before they went back home that day. It was part way around the moun-firing off their charge. Mr. Dilly and Mr. Lawson tain in a narrow part of the guich. They had all of examined the work of the boys carefully and decided the "fun" they could have climbing old Baldy and that there was no usuger, as the flace of perfect safety were coming down the trail when Larry, who was on ahead, stopped and called out:

"Here's a good place for our Fourth of July blast! Just come and see all the fissures ? in and around this big old bowlder. Yes, and some one has been drilling around here to set off a blast. We can bring some drills up here and make the holes deeper and we can blow this old bowlder higher than a kite. My! how the stones will fly and how the old gulch will roar with the

to show our real 'patter-The other boys came up and they agreed that the spot Larry had found was a

good one for their Fourth of July blast. "We can get all of the blasting powder that we want. I'll be responsible for five pounds, any-how," said Larry.

The other boys said that they would each get a like amount and the rest of their talk while on their homeward way was of the fun they would have "making a racket" on the Fourth. Ted thought that it might be a good idea to save a part of their powder and send off some smaller blasts

and thus prolong the noise. But Larry protested. "No," he said, "I think that it would be more fun to just send off one old snorter of a blast and see how big a hole we can make in the ground.

The other boys finally concluded that this might be best, and this plan was finally decided upon.

Powder was about the most plentiful staple in Hard Luck, and the boys had no difficulty in securing all that they wanted. It was a little more difficult to secure a fuse long enough for their purpose.

"You see, we will have to skedaddle quite a distance to a place where none of the flying rocks can give us a whack after we have lighted our fuse," said Larry, who was a kind of a self-appointed master of ceremonies.

Finally an old miner who had been given the sobriquet of The Judge, because of his solemn look and shiny bit of rock he had caught sight of. He held it his quiet manner, gave the boys a long piece of fuse, up to the light, saying as he did so: saying as he did so:

"I kind o' like the idee of a little o' somethin' bein' done to mark old Independence day, so you youngover with Joe and Dick and see what we can do. Dick sters go ahead and make all the racket you can. I'll in always think up something.
"He'll have to get up before breakfast if he wants to your racket. If you don't object, I'll come up an'
best you thinking up things with fun in them," see and hear your big charge go off."

"We'll be glad to have you," replied Ted.

tion when it came to "thinking up things" that would would go up into the gulch and see what the boys were "up to." Offers of powder for the big blast were made until the boys had fully thirty pounds.

"Let's use every grain of it for the one big old

shot," said Larry.

The boys visited the big bowlder several times before the Fourth. They carried drills with them and deepened the holes they had found and made several new ones. Very early on the morning of the Fourth they set off for the gulch, having announced in the camp the day before that the explosion would take place at ten o'clock sharp. It was a cloudless day, with the sun shining brightly and the boys were in high spirits as they left the forlorn little camp behind them. They reached the place that was to be the scene of the explosion in about an hour and at once began to fill the holes and crevices with the powder. They laid their length of fuse very carefully and decided just where they would run to a place of safety behind a great bowlder farther up the guich. Larry got on a big rock and rehearsed a patriotic little speech he planned to give "just before the thing went off," and he regretted that they could not have had a flag to wave.

"If I could have got hold of the good old Declaration of Independence I would have learned every word of it to recite before we make the earth tremble around here," he said with the fire of boyish patriot-

ism flaming high in his breast.

The boys were surprised to have as many as twenty five of the men from Hard Luck appear before the time of the explosion. The fathers of Joe and Larry had thought it advisable to come up and see that the boys were in no danger of injuring themselves in that there was no danger, as the fuse was long enough some time before the explosion would take place after the fuse was lighted.

As Larry had originated the idea of celebrating the day in this way, he was accorded the privilege of lighting the fuse and this he did at exactly ten o'clock. The spectators had all found places of safety and they were peering out from behind ledges of rock and great bowlders, watching Larry as he knelt and lighted the fuse. The instant he saw the fuse burning he jumped to his feet and "skedaddled" to the great bowlder behind which the other boys were waiting in a fever of excitement for the great explosion to take place.

"I'll bet you it will be a snorter!" exclaimed Larry as he scrambled in almost breathless haste behind the

protecting bowlder.

racket of it all!

It will be one

grand old salute

What if the blast should loosen this old bowlder and send it reeling over on to us?" asked Ted.

'Stuff!" retorted Larry impolitely. "No danger of that. And if it did we would never know what had hurt us. But now, look out, boys!"

They waited with tense nerves for the explosion to take place.

"I'm afraid the fuse has gone out," said Larry, when fully three minutes had gone by and there was no

"Well, you'd better not go down there to see if it has," retorted Joe. "But it hasn't gone out. It burns slowly, as every fuse should burn. I wouldn't go down there to investigate if it didn't go off for two hours. My! won't that stick of dynamite that The Judge brought up and laid in one of the crevices help things along a lot? I'll bet you that-

The sentence was never finished. Suddenly there was a deafening sound and the air was full of vibrations. The mighty bowlder behind which the boys stood really shook. There was a fearful and prolonged roar up and down the canon. Great pieces of rock shot far up into the air and bits of gravel fell around the men and boys.

"Hooray! Hooray for George Washington, old Abe Lincoln and all the rest of 'em! Hooray for the day we licked the redcoats! Hooray for the good old Fourth!" shricked Larry, jumping out from behind the bowlder and tossing his cap high in the air. "Wasn't that a ripper, boys?"

"Some of the pieces of rock went two hundred feet into the air!" exclaimed Ted. "Listen! the old canon is still roaring! I tell you that was a dandy old shot!"

The boys and the men now came forth from their places of safety and went down to where the great bowlder had been. They found it rent in twain, while one half of it had rolled nearly a hundred feet down the mountain side and lay in the gulch below The ground was torn up to a depth of three or four feet beneath where the bowlder had rested.

Larry jumped down into this hole to pick up a

"Isn't that a beauty of a specimen? See how it shines! I must put that away with my collection of specimens."

Larry's father had come up to the edge of the hole make you a present of five pounds of powder to add in which Larry stood. He caught sight of the bit of rock in Larry's hand and he said:

"Let me see that, Larry."

Larry tossed the bit of rock over to his father. Mr. Other men in the camp concluded that they, too, Lawson looked at it for a moment; then he jumped rather hurriedly down into the hole besides Larry saying as he did so:

"Let me see if there is any more of this here.

A little search revealed three or four pieces as bright and sparkling as Larry had found, and Mr. Lawson suddenly cried out: "Hurrah for the boys! Their big blast has

brought to light a mighty fine vein of silver ore, or I am mightily mistaken!

The Judge took one of the shining bits of rock and looked at it closely for a moment. Then he took out his knife and scraped one of the shining particles.

"No, you're not mistaken, Dan Lawson; that is the Simon Pure stuff, as sure as you are a living man. And this hole in the ground isn't on any claim that is staked out, because it has always been thought that there was no min'ral on this side of the mountain. We want to see to it that the right and fair thing is done by the boys, and I propose that we go right to work and stake off a claim around this hole for these youngsters. All in favor of that say 'aye!'"

There was a ringing chorus of ayes, and a regulation mining claim was staked off with the hole in which the mineral had been found about in the center of it.

"Now for a suitable name for it," said The Judge. "What do you want to call your find, boys?"

"I say, boys, let's call it the 'Little Independence,' seeing that we discovered it on Independence day," said Larry.
"All right," said the other boys.

"A firstrate name," said The Judge. "And I hope it will make all of you independently rich. There's ore in there as sure as you're born!"

The Judge was right. The Little Independence developed into one of the best mines in that locality, and other good mines were discovered on that side of the mountain, so that Hard Luck began to be a misnomer for the little camp on the other side of the mountain. Prosperity came to the little camp and to the youthful owners of the Little Independence. Within two weeks they were offered ten thousand dollars for a half interest in the claim. In the early fall the four boys left Hard Luck rather regretfully to enter school in Denver. Their fathers remained in the camp to look after the Little Independence, which grew in value as it was developed. Long before the winter was over it became certain that the four boys were

Great pieces of rock shot far up into the air.

owners of a mine that would give each of them a thorough education and start them out in life "mighty well fixed," as The Judge expressed it.

"You see that it pays to be 'patterotic,'" said Larry to the other owners of the Little Independence, and they were sure that he told the truth.

THE CINCINNATI HOUSE OF REFUGE

The Cincinnati House of Refuge is one of the many, but not too many, great institutions throughout the country devoted to the saving of boys and the making of men. Over ten thousand boys have been cared for, educated and trained here since its founding in 1850. There is no room in THE AMERICAN BOY for an adequate description of the work of this great institution. A long article could be written on each of its departments. Much could be said with reference to the military training given there; and pictures could be given showing the boys' battalion on parade that would stir the hearts of young and old. Much might be said in praise of the work of the printing department of the institution, where the boys publish their monthly journal, "Our Companion," which gives all the

news of the institution and weks to spread its good influence abroad; and we might tell about the bakery. where boys are instructed in making bread, pies and cakes, and about the shoemaking and tailoring de-

partments. One of the works of the institution is finding homes for children. Twelve hundred and sixty one destitute children have found their way through the House of Refuge into good homes. Regarding the Sloyd department, where manual training is taught, we must content ourselves with simply calling attention to the illustration accompanying

this short account, which is from a photograph of this department. The first les-

suggest that the heroes of the navy should be remembered in a pecu-liarly appropriate way. To Mrs. Armitage S. C. Forbes, of Los Angeles, Cal., the country is indebted for the idea of decorating the watery graves of departed seamen by strewing upon the bosom of the ocean fragrant blossoms. No sooner had Mrs. Forbes made the suggestion than she set about carrying it

out. We are enabled to give some very interesting pictures showing the observance of what has now come to be a custom at Los Angeles.

Among those who expressed approval of Mrs. Forbes' suggestion was Captain Jack Crawford, well known by reputation to the readers of THE AMERI-CAN BOY. Captain Jack, as usual, falls into verse:

"Scatter the fairest flowers of spring Upon the waves, while children sing A requiem with the murmuring sea, For men who died to make men free."

A Story Concerning Cornelius Vanderbilt

It has been said that the late Cornelius Vanderbilt was the best of the Vanderbilts. The following story is told of his boyhood:

One day he told his mother he was coming to New York to look for a place. He came, and went first to the Shoe and Leather Bank. He asked the porter if he could see the president. The porter pointed him out. The young lad watched the head of the big bank as he went to his private office, and following respectfully, told him he was looking for something.

His only recommendation was a note from his teacher. The bank president read the letter, and asked the boy if he was related to Commodore Vanderbilt.
"He is my grandfather," said the boy.

"Why didn't you get him to introduce you?"

"Because I didn't want to ask him for anything,"

was the reply. Perhaps it was his independence, perhaps his nest. comely and, withal, earnest appearance, that weighed in his favor, but he was employed. He started at the lowest rung of the ladder, as a messenger. And here

it was that he began to show the qualities that made the man he afterward became. He was punctual, prompt, clean-cut, discreet, and as hard a little worker

as they had in the bank. One day the president of the bank happened to be in the office of old Commodore Vanderbilt and mentioned to the Commodore that he had a Vanderbilt in the bank. The old man was astonished, and soon sent for the young man. He asked him why he had not applied to his grandfather if he wanted a job. The young man looked straight into the eyes of the old

man and replied: "I made up my mind that I would never ask you for

anything.

There was something about that answer that pleased the Commodore, and it is said that this influenced him to add the codicil to his will providing that an extra \$1,000,000 go to the grandson of whose independent, self-reliant spirit he had had so complete a proof.

It was while he was employed at the bank that his grandfather was first attracted to this one of his grandchildren, who had succeeded fairly well in escaping his notice. One day, when he was still employed in the bank, his grandfather stepped in to see him, and pro-

posed a trip to Europe. This astonished the young

man, whose life had hitherto been confined strictly to business.

'I am going myself," said the Commodore, "and I'll

take you along if you want to go."
"And give up my salary?" said the young man. "Well, I don't suppose it will go on while you are

gone," replied the Commodore, grimly,
"Then I guess I'd better stay," said the boy.

Benjamin Franklin borrowed books he could not buy and sat up all night to read them, that he might return them to the bookstore in the morning.

THE GLORIOUS FOURTH.

(Begun in October.)

Review of Preceding Chapters: Jack Carroll, Frank Chapman and Ned Roberts, three boys whose homes are in a village in the far East, obtain the consent of their parents to go to Denver for a visit to Robert Sinclair, a friend of Jack's father, who is a painter of mountain and Indian life, and spends the greater part of his time among the Indians. They are accompanied on their journey as far as Chicago by Mr. Carroll, and are greatly delighted with the sights and sounds of the great city. On the train for Denver they meet Jim Galloway, a trapper, who tells them a true story in which his life is saved by a white man, who was living at the time with the Indians, and turns out to be Robert Sinclair, the artist, whom the boys are going to visit. The boys tell the trapper the story of Sinclair's life. The train on which they are traveling runs into a herd of buffalo and Ned shoots one. On arriving at Denver the trapper leaves them and Sinclair and the boys buy their outfit and start on the trail for Pike's Peak along the foot of the mountains. The first evening in camp Sinclair tells the boys a story, and Ned's pony makes a dash for home, but is captured by Sinclair. The day following Frank is lost among the mountains. He kills a stag, and spends a night alone in a canyon. He is captured by Indians, taken to their camp, escapes death by its being discovered that his captors are friendly to Uncle Bob, the Indian painter. He makes friends with the Indians, who adopt him as one of their tribe. He goes on a buffalo hunt with them, and is saved from being run down by a buffalo bull by a shot from the rifle of Uncle Bob, who suddenly appears on the scene. Uncle Bob relates how he, Ned and Jack searched for Frank and finally found him. They leave the Indian camp, and after a day's travel come upon bear tracks and they have an adventure with a bear and her cubs. Jack's pony is bitten by a rattle-snake and dies. The little party meets a drove of wild horses and Jack captures a pretty one after an exciting chase and Frank is in

CHAPTER XX.

The next evening the little party pitched camp for the night in a deep canon. With great alacrity the boys set about making preparations for the night, being tired from the hard travel of the day and anxious to get rest, particularly as Mr. Sinclair had informed them that the following day would be the Fourth of July and that he had a surprise awaiting them in the way of an Independence Day celebration. The boys had lost all track of time; they knew only that day followed night and night followed day; so when Mr. Sinclair said, "Boys, to-morrow is the Fourth of July," they fairly jumped with joy, for the very mention of it brought visions of good times and recalled to their minds home and its associations which now seemed so far away.

"What shall we do to celebrate?" asked Ned, with

an inquiring glance at Mr. Sinclair.

Never mind, my boy; no American boy fails to celebrate the birth of American independence, and I know you boys well enough to know that if I should let the Fourth go by without giving you notice you would never forgive me. Now, I have done more than give you notice, for I have planned a celebration, and you must wait and see."

'Hurrah for Uncle Bob and George Washington!" cried Jack, and everybody, even Uncle Bob himself,

swung his hat and huzzaed.

The next morning—the morning of the Fourthdawned clear and beautiful and the company was early astir, Mr. Sinclair carrying about with him an air of mystery and the boys wondering what was coming and commenting upon the possibilities of a celebration without flags and firecrackers and bells; but they had great confidence in their leader and were certain that something would happen.

They had not gone more than a mile along the bed of the canon, which seemed to grow deeper and darker as they proceeded, before the command was given to

"Hobble your ponies, boys, and bring along your guns and ammunition, for we are going to celebrate," said Mr. Sinclair.

disappointment in every feature.

Sinclair. not? answered Mr. your grander place for a celebration than in this magnificent highway through the heart of the eternal mountains? We can just imagine these great bowlders and columns of rock that stretch themselves to the very a stage whisper. sky to be the Washingtons, the Jeffersons, and the Adamses of 1776-those men hewn, as it were, from

goes an eagle, mounting toward the flag. Grand symbol of American strength and freedom! Can you symbol of American strength and freedom! Can you want anything more fitting? Now, don't you feel and plains, with their populus and tin horns? Just count yourselves the luckiest boys in all this great country to-day."

Each of the three boys felt the spirit of the words, and, their hearts catching the patriotic glow, they shouted: "Three cheers for the grand old mountains! Now, three for the blue sky, and three more for the American eagle."

"Now, boys, for a climb; we'll leave the ponies and baggage here. Bring your guns and follow me," said

In a moment the little company was making its way up the side of the canon—a difficult and dangerous task. At times they could proceed only by dropping on all fours; then they joined hands and braced and held one another as they swung around narrow ledges or climbed along slippery paths. Once when near the summit they looked back over the path they "What! In this dark place?" asked Frank, with had come; accustomed as they had become to mountain climbing, nothing before had given them such a feeling of insecurity; they fairly became QIZZY patriotism to be daunted by a little shadow? What their eyes searched the uncertain depths below them. Their ponies seemed like rats, and the bottom of the canon like a narrow dark thread running in and out.

"To celebrate," he answered. "Come on!"

After another hard climb they reached what apthe solid rock of principle—who stood for liberty peared to be a little depression in the side of the against the thunders and lightnings of oppression's mountain and near its top. It proved to be the mouth forces just as these stern old walls of granite have of a little cavern. Entering it, they proceeded for a opposed the storms of centuries. Then there is that short distance to find that they had come suddenly patch of Colorado blue sky hanging above us that up against the solid rock, while above them appeared needs only the imagination of an American boy to a hole in the rock roof, through which a patch of transform it into an American flag. And see! Yonder blue sky showed itself. It was a strange freak of

nature. But they had not been its discoverers Against the side of the chimney-like opening a rude ladder had been placed by adventuresome hunters and there left. Uncle Bob appeared familiar with the place, and at once motioned to the boys to climb up. Frank went first, and after him Jack, Ned and Mr. Sinclair.

Slowly, and with many cautioning suggestions from Mr. Sinclair below, the little party made its way toward the patch of blue sky. The boys said nothing The novelty of the adventure and the dizzy height

awed and silenced them.

Frank reached the mouth of the hole and climbed out and the others quickly followed. Then all stood motionless on the tiptop of one of the giant mountains of Colorado, just as the sun, full orbed, was casting his shafts of white and gold against the eastern slopes of the great rocky barriers.
"By jove, this is grand!" cried Frank.

"But wait," said Uncle Bob; "one more step or two and then for the celebration." Then with a few rapid sorry for the boys in the cities and towns of the hills strides he led the way around a rock against which they had been standing, and there, right before the very eyes of the three boys, across a mighty cavern. stood in all his grandeur the giant of the Colorado mountains—peerless Pike's Peak.
"Comrades, salute Pike's Peak," exclaimed Mr. Sin-

clair, and following the spokesman's example the

boys lifted their hats.

It was fully a minute before the boys could get breath enough for an expression of their surprise and gratification. The mountain on which they stood was a high one; the boys thought as they climbed it that it could be no higher; but now before their eyes one lifted its head far, far above them-so far that even under the July sun its summit was covered with snow that glistened and sparkled in the morning sun. Great shadows lay across its face, showing the wrinkles in its sides, and about its base were the somber tints of forests and green slopes. Surrounded by mountains themselves great, this leviathan of the Colorado ranges outtopped and outshone them all.

'Did you ever imagine it was like that?" asked Ned of his companions, as they threw themselves down on the bare ground beside Mr. Sinclair to view the panorama before them at their leisure.

"It's a hundred times grander," said Frank.
"I am glad to hear you say so," remarked Mr. Sin-"Many-indeed the majority of persons-who come to Pike's Peak express disappointment.'

"I don't see how they can," broke in one of the boys. "I can only account for it in this way," said Mr. Sin-"They come west with exaggerated ideas. Pike's Peak is pointed out to them from the train or the trail, as they approach it, from a distance of many miles. They come up to it gradually and it grows imperceptibly. But you came upon it face to face, at close quarters, and unexpectedly; hence your surprise and delight.

'There is another thing about getting acquainted with this old mountain—the oftener you see him the grander and more majestic he looks. From my cabin window down yonder in Cheyenne Canon I can see him each morning as I rise from my bed, and I never begin the day without first bidding good morning to my big neighbor; and every time I look from my window on his gray old sides and his top lit up by the sun or bathed in clouds, I think-Bigger and more beautiful than ever!""

'That's because you are an artist, Uncle Bob!" re-

marked Frank.

"Not a bit of it! It's the experience of every dweller in these regions. This mountain never growold. Its beauties are to even us old settlers ever new and changing. That's the reason we love it. It is so human in its moods and yet at heart it is old Pike's Peak, rock-ribbed, and ancient as the sun! I have seen it all aglow with sunlight; I have watched it when the thunders careened and bellowed from crag to crag, and lightnings wrote their flery story acrosits face; I have seen the clouds swallow it from sight and then I've seen it arched with rainbow colors such as only the clear atmosphere of these regions makepossible, and amid all it is the same imperturbable monarch of this mountain world. So is it typical. boys, of our great Republic. A mighty upheaval o. noble sentiment brought her into life, and now shrears her head among her companions as their leader The sunshine of peace and prosperity has played about her, and storms of war and conflicting forces have engulfed her, but through it all the Republi has endured triumphant."

"Why, Uncle Bob, you are as eloquent as a politician out for votes," said Ned, laughing.

"But my eloquence, if you choose to call it that answered Mr. Sinclair, "springs from somethin: deeper than does the kind that is usually let off on the stump, my boys. We have a great country and "Where are we going, Uncle Bob?" asked Frank in nobody is prepared to love it till he has seen it. One should breathe the free air of these mountains for 4 time to get the true American spirit."

"Say, I am just full of it myself," cried Frank.

springing to his feet. What can we do?"
"I'll tell you what," said Ned. Let's sing 'America"

We learned it in school, Uncle Bob, and I just feel like singing it now." "Agreed," said Mr. Sinclair. "Let's all stand, take

off our hats and sing. Here goes-Then four voices rang out upon the top of the mountain, two sweet, boyish voices carrying the air | big many bass bringing in the harmony:

> 'My country! 'tis of thee, bweet land of liberty, Of thee I sing; Land where my fathers died! Land of the Pilgrim's pride! From every mountain side, Let freedom ring.

"My native country, thee, Land of the noble, free, Thy name I love; I love thy rocks and rills, Thy woods and templed hills; My heart with rapture thrills, Like that above.

"Let music swell the breeze, And ring from all the trees, Sweet freedom's song; Let mortal tongues awake, Let all that breathe partake, Let rocks their silence break, The sound prolong.

When the song was ended, Uncle Bob brushed a big ! tear out of the corner of an cyc and said, "Now, boys, ! for a volley. Ready. Fire!"

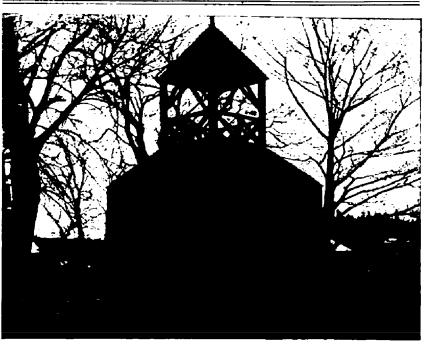

Four rifles cracked in unison, three lusty cheers and "tiger" rolled down the sides of the mountain, and the celebration was over.

When it was time to go the boys cast about them for mementos of the day and the occasion; nothing better presented itself, so they each took from the ground a few round pebbles and stowed them carefully away in the pockets of their hunting shirts.

As they turned to go down the mountain Frank of the grand old hymn, with one clear tenor and one said, "Uncle Bob, I believe I'll be a better man for this celebration; and, do you know what I'd like to do? Plant an American flag on the top of Pike's Peak." 'And you will before you are two days older," an-

(To be continued)

swered Mr. Sinclair.

THE OLD BELFRY. Here hung the hell which Paul Revere set a-ringing.

Free to "Shut-ins

Do you know of a boy who cannot work and play as do boys generally—that is, a boy who is sick or crippled and compelled to remain indoors from morning till night, day aller day-one who will probably be confined to his home for months or years to come? If so, send us his name and address, and we will give him an annual subscription to THE AMERICAN BOY free of charge.

This offer is not made for the sake of those who are temporarily sick, but for those unfortunate boys who have nothing to look forward to excepting a long stretch of weeks, months and years within the four walls of their homes.

TURNING POINTS IN A BOY'S LIFE

Ninth Article: Going into Society

when mere boys, him. to imitate their ners. At about the time a boy the part of his hair and show discrimination in social pretensions and aspirations. Boys - healthy

boys—from a very early age enjoy boy company and prove the definition of man as being a "social animal" to be a correct one.

The boy also early learns to eschew the society of girls, but his ostracism of, his little petticoated playmates is not for long; and soon the needle of his afposition and the girls are in favor again. This is a marked period in the life of the boy, easily recognizable. With it comes a special regard for his personal appearance and a disposition that tends strongly to long trousers, standing collars and a watch chain. Watch and you will see the boy who despised the girl essaying to tip his cap to her. He will finally usher himself forth spick and span, and in a mysterious way saunter forth on errands which his heart alone understands. He walks past a certain house at nightfall, turns at the next corner, retraces his steps, passes again, returns, and in a moment of surprising self-confidence rings the bell, and is "in The schoolroom now transvisions of something other than stern masters and tedious tasks. An incentive to good scholarship and good deportment suddenly transports the boy terrible harvest. into a world of aspirations. As he walks

Here is a fine formula for health and longevity:

Leave work before you are tired. Stop eating before you are stuffed.

Think less of the troubles of the world and naught of your own. Let nothing come between you and

your God. And last, but not least, in the words of the immortal Irishman, "If you can't be aiey, be as aisy as you can.'

Edison passed through one dramatic situation after another- always masterforms itself, for within its four walls are the impure there is in human hearts thing. Then, let the boy go out among ing it—until he has attained, at an early age, the scientific throne of the world. When recently asked the secret of his success, he said he had always been a and, too, he will know how to be its total abstainer, moderate in everything but work.

A Talk About Independence Day

M. G. SPRATLEY

Harold, Vance and Barry, with their delphia muffled bells tolled a funeral grandfather, while she spent the evening with some friends. The boys were studying, when suddenly Barry looked up at the clock and yawned.

"Grandpa, tell us something about the Fourth of July-how it began; you promised to do so some time."

the other boys, slamming shut their books.

Grandfather Dean seldom! refused a request from these three boys, so readily consented.

"Well, we'll begin with England's great victory over France and the Indians-the French surrendering, in 1762, all claims in North America east of the Mississippi River, excepting New Or-leans. The American colonies were then under the British government."

"Where was the United States then,

grandpa?" asked Barry.
"Nowhere, my son. There were thirteen colonies which became the United States later, on Independence Day. England had incurred a heavy war debt fighting the French and Indians and, to pay that, unwisely taxed the colonies. This aroused the Americans.'

"But, grandpa, if they were subjects of Great Britain, that was right," said

"Not a bit of it!" The Americans fought bravely for the mother country, lost about twenty five thousand men, and the burdens of the war were very heavy on them. They were deeply in debt and while they had given money freely to the crown, they were not willing to be taxed without their consent. Taxation without representation was regarded as a form of tyranny. In 1765 the Stamp Act was passed by the British parliament, although William Pitt. afterward Lord Chatham, Colonel Barre, Lord Camden and other able statesmen. opposed it with all the powers of their eloquence."

"What was the Stamp Act, grandpa?"

Vance inquired.

"A revenue stamp had to be put on clearances at custom houses, and bills of lading; they were even required on diplomas given to graduates of colleges. These stamps had to be paid for by those who used them, and the money was sent to England. Dr. Franklin, who was in England on a mission relative to the Stamp Act, wrote to a friend in America that the sun of liberty had set, and that they must light up the lamps of industry and economy. His friend replied that other lights would be lighted to resist unconstitutional measures.

"I guess he meant the fires of revolu-

tion," said Harold.

populace and destroyed, and others were not even permitted to land. Many of the stamp officers resigned, while others were glad to get off with their lives. A society was organized called the 'Sons of Liberty,' which was a power in arous-Mrs. Alden had left her three boys, ing public opinion. In Boston and Philapeal; and in New York a copy of the months.' Stamp Act with a death's head attached to it and a placard having this inscription: 'The Folly of England and the Ruin of America.' was paraded through the streets,"

"They were terribly in earnest," re-

marked Harold. "Yes, as all true patriots will be, when their sacred rights are imperiled. When the women, as well as men of America, refused to use imported goods, the Brit-governor's consent. The people were ish merchants were hurt and uttered a placed under military law, and the town loud protest. fluences, caused the repeal of the Stamp Act. Americans had many friends in England, and so great was the rejoicing over there, as well as here, that London the lead in resisting those arbitrary acts. was illuminated, the ships on the Liberty and independence were the Thames displayed their colors and a ray watchwords heard from pulpit, press of hope beamed on the colonies. This and public speeches. It was like wilddid not last long, however, as very soon duties were laid on tea, glass, paper and paints. Again the people were alarmed, and so bitter was the opposition to this taxation, that duties were removed excepting that on tea, which scarcely amounted to anything, but there was a principle involved, so Americans would drink no tea."

"Oh, I remember that in history!" exclaimed Vance, "and how they threw the and ammunition at Concord, about ninetea into Boston harbor."

"Yes, about sixty men, disguised as Mohawk Indians, armed with clubs and Massachusetts, heard of it, he secretly tomahawks, marched silently through sent eight hundred men to destroy them. the streets to the wharves, followed by

"That was it. Excitement ran so tion they boarded the ships, brought up 1 miles from Boston, to warn the people, high, when ships arrived with boxes of the chests of tea from the holds, and stamps, they were seized by the enraged emptied their contents into the water. British vessels were all around, but no one interrupted the strange aborigines in their work of destruction. No warwhoop, not a sound was heard and silently as they came, they marched back followed by the wondering crowd. It was said that the following night was the stillest Boston had known for many

"What did the British think of that?" asked Vance.

"Of course they were indignant, and vials of wrath were poured out on Boston. Several bills were introduced into parliament-one to shut up the port of Boston and remove the custom house to Salem; another to deprive the inhabitants of all civil rights, and even prohibiting town meetings held without the This, with other in garrisoned with British troops. Riots were frequent as, naturally, there were clashings between the soldiers and citizens. Massachusetts and Virginia took fire sweeping with resistless force over a western prairie. Revolution had come. Warlike meetings were held, "minutecollected.'

"What were 'minutemen,' grandpa?" Barry inquired.

"Men ready to fight at a minute's warning—and the warning came pretty soon. The Americans had stored guns teen miles from Boston, and when General Gage, who was then governor of Swift messengers, among them Paul

and a church bell sounded the alarm at the still hour of midnight. The pastor, Rev. Jonas Clark, with other patriots armed with their old flintlock guns, stood near the church waiting for the British. Day dawned before the sound of drum was heard announcing their approach. Very soon the redcoats were seen advancing, led on by Major Pitcairn, who. waving his sword, ordered the Americans to throw down their arms and disperse. The 'villains,' as he called them, stood motionless as statues. The British then fired into their ranks and there, on Lexington green, on the nineteenth day of April, 1775, the first blood for American independence was shed.

"Did they go on to Concord?" asked

Vance.

"Oh, yes; but they destroyed only a few stores, as the provincial soldiers were after them and they had to hurry back to Boston. In their retreat many were picked off by sharpshooters concealed in the woods and behind stone walls which guarded the fields on either side of the road. They would have been cut off at Lexington had they not met reinforcements of more than a thousand men. About two months later, the battle of Bunker Hill was fought, Charlestown laid in ashes, and the whole country thoroughly aroused Men left their offices, workshops and nelds and, with men' were organized and firearms were old shotguns, rifles, pitchforks or whatever they could get hurried to the dcfense of Boston.'

"Those were certainly stirring times,"

said Harold.

"Indeed they were," replied Mr. Dean, smiling at the animated faces of the boys. "In a few days an army of sixteen thousand men had come together, for all the colonies were in sympathy with Boston. About a year previous, at the Colonial Congress in Philadelphia, Patrick Henry had declared that there were "Yes, do," said an astonished crowd. Without opposi- Revere, were sent to Lexington, eleven no distinctions between Virginia. Pennsylvania, New York and New England; that British oppression had effaced the boundaries of the several colonies and that he was not a Virginian, but an American. A fellow-feeling bound them together in the cause of liberty. When Congress met in Philadelphia the following May, the army was organized and George Washington, who had won dis-tinction in the war with France and the Indians, was chosen to fill the responsible position of commander in chief. It was a perilous undertaking, but Washington was the man for the place. At that time the population of the colonies was not more than three millions, they had no disciplined army, no navy nor military stores, while Great Britain was stronger on land and sea than was any other nation on the globe. It was like a pigmy starting out to fight a giant, but Providence, boys, was with the pigmy that time. While Congress decided to organize an American army, many were still loyal to old England and wanted peace.

"I suppose they were the Tories," said

Harold.

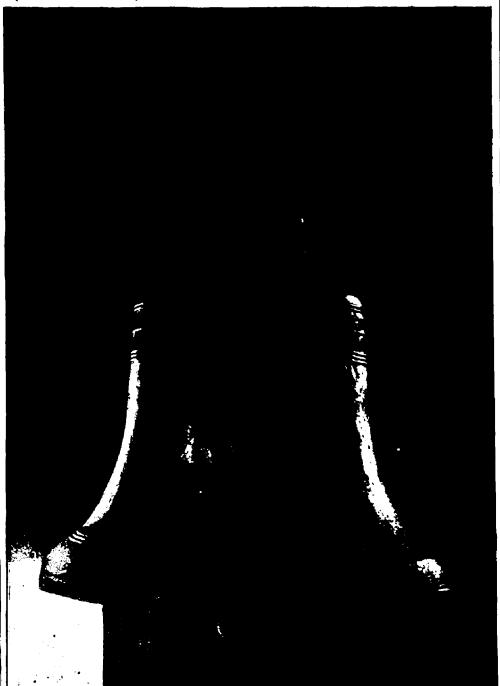

"Yes, and those who were for American independence were the Whigs. A petition to the king, and an address to the people of Great Britain, was voted for in Congress, but the blood on Lexington green could not be wiped outnothing could stop the flood-tide of revolution.'

"Who was king of England then grandpa?" asked Vance, "and how long did the war last?"

"George III., an unwise, self-willed man was king then. The war lasted seven years. It began with the battle of Lexington and virtually ended with the surrender of Lord Cornwallis to General Yorktown, on the 17tl Washington, at of October, 1781. Peace was not definitely settled, until the 3rd of September, 1783.

"But, grandpa, I want to hear about the Fourth of July," said Barry. "Why, my boy, I had to relate first

what caused Independence Day; and now that we have come to that, I shall have to take you to the memorable Continental Congress which met in Philadelphia in July, 1776. Richard Henry Lec. of Virginia, offered a resolution which was seconded by John Adams, of Massachusetts, that 'These United States are.) and of a right ought to be free and in-

dependent.' This was the foundation of | said they did it as with halters around the Declaration of Independence, writ- their necks, not knowing what the reten by Thomas Jefferson, and revised by sult would be. There was a grandeur himself, Adams, Franklin, Livingston in their courage and self-abnegation and Sherman. They discussed it all day worthy of the memory of their posterity, with closed doors, and the burning elo- for whom they risked life, honor and quence, the wise and prudent proceed- worldly possessions. Had they failed, ings of those grand old patriots, won the admiration of the whole world and should never be forgotten by their descendants. Jefferson wrote the Declaration of Independence, but John Adams was also a power in that important affair, and was called by Jefferson their Colossus-their great pillar of strength. It was a remarkable coincidence that these two friends, who so ably advocated that bold measure, died on the Fourth of July of the same year, 1826. When the vote was cast to ratify or reject the Declaration, six colonics were for, and six against it. John Morton, who represented Pennsylvania, had the odd vote and, as he favored its adoption, the question was settled-the die was cast. His vote formed the keystone to the arch of liberty-and that is why Pennsylvania is called 'The Keystone State.' "

"Hurrah, for old Pennsylvania and John Morton!" cried Vance, with enthusiasm. "That was the most telling vote of all."

"And I say, hurrah for the Declaration and all who signed it!" said Harold.

Mr. Dean. "The adoption was carried ence was passed on the second of July, out with prayers to the God of Nations. after another of these fifty five patriots day."

They had a pretty hard time, though, and a solemn stillness reigned as one which is celebrated as the nation's natal

they would doubtless have been hung as traitors to the mother country. In the State House steeple hung a bell that had been brought from England, on which was engraved the strangely prophetic, 'Proclaim liberty throughout words: all the land unto the inhabitants thereof.' Its mission was indeed fulfilled."

"That was old Liberty Bell!" exclaimed Vance.

"You are right; and it was understood that when the bell sounded it would proclaim the birth of a new nation—the United States. All day the grayhaired bellman waited. The vast multitude, outside listened with awful suspense, as it was indeed a momentous event that was to give freedom or slavery-life or death. At last the old bell sounded, proclaiming liberty throughout all the land to the inhabitants thereof! The anxious crowd in the streets went wild with enthusiasm. The news was sent to General Washington, who was then in New York. He had the regiments marched out to hear it read, and we can imagine how they made the welkin ring with "Yes, Pennsylvania's vote turned the hurrahs for the United States of scale for free government," continued America! The resolution of independ-1776, but its adoption was on the fourth.

INDEPENDENCE HALL, PHILADELPHIA.

before independence was a settled fact," Aunt Em's Talk said Harold. "I remember how the American army suffered when it went into New Jersey, and at Valley Forge and other places."

Yes, indeed; their hardships were unnaralleled. At one time Washington had four thousand men unfit for service from sickness and want of clothing. Few har shoes, and tracks of blood were often left on the frozen ground. General Green said at the battle of Eutaw Springs, hundreds of his men were almost entirely destitute of clothing, and carried tufts of moss on their shoulders to keep from being galled by their muskets. A British officer once went into General Marion's camp to see about exchanging prisoners. He had heard so much about the daring 'Swamp Fox,' and his surprise was inexpressible when he beheld a small man clad in a threadbare homespun suit, instead of gay regimentals. He was invited to dinner, and his astonishment was greater still when only potatoes served on a large piece of bark, was placed between the General and himself, as they sat on the trunk of a fallen tree. He was, however, charmed and deeply impressed with Marion's conversation, and when he returned to his own command he wore a very serious look. When asked the cause, he replied that he had seen an American general and his officers, without pay, and almost without clothes, living on roots and drinking water—and all for Lib-and the later of the store and look again at the sweet, wholesome stories. Have you ever read any of the Deerfoot series, by Edward Ellis? Get "Deerfoot, the Shwanoo." It's fine: I can fairly hear the crunching and the rustie of dead leaves in the forest as that splendid Indian glides along.

I wonder whether any of you, my dear boys, ever tried to make up a story of your own? Let your imagination work. Will ishment was greater still when only

Dear Boys: If I were to ask each of ou, as I did a little boy this morning, 'What sort of books do you enjoy the est?' what would be your answer?

best?" What would be your answer?

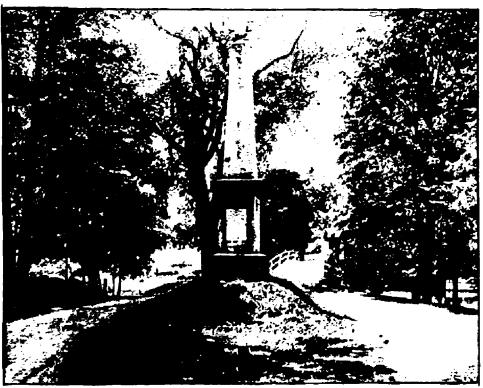

Just supposing that you and I were in a big bookstore, and had plenty of time to go through it, and what is very important, a full pocketbook. Which side of the room would we enjoy the best, I wonder? On one bookshelf we would see pretty bound books—entitled "Oliver Optic Series," or "The Ellis Books," or "Luck and Pluck Series." Series.

Across the room we might see a very attractive sign, "All on this table five cents each." I am very sure you would follow the attractive sign, and look carefully over

the attractive sign, and look carefully over what certainly at first glance seems to be a bargain counter of books.

But, stay, what do we see here? "The Poisoned Onion, or the Candy Woman's Revenge." "Tom Russell, or the Pioneer Thief." "Dick, the Cowboy, or a Leap in the Dark." The binding of these books would not be very pretty. The covers would not be very pretty. The covers would be thin paper but the gay pictures printed on the outside might attract you with their gaudy colors.

You might think that mamma would be pleased to nave you buy a book which is

BRIDGE, MONUMENT AND MINUTEMAN, CONCORD, MASS.

a condition," said Harold.

"It was for their sacred rights, my boy they were determined to die rather than submit to tyranny. We are now enjoying the fruits of those hardships

enjoying the fruits of those hardships and, I fear do not value, as we should, our blood-bought legacy."

"It strikes me that way, sir," answered Harold, "and I shall feel like celebrating the Fourth of July more than ever."

"Oh, grandpa," cried Barry, in an excited voice, "please buy us a real little cannon and some fireworks, so that when it comes we can have a jolly old time!"

"All right, my son. You understand now all that your grandsires did to establish this great nation so be true to

now all that your grandsires did to establish this great nation, so be true to their memory. Remember that American boys should love their country, honor its natal day and stand by its

Wishes to Be a Boy Again.

"From what I have seen of your paper I consider it the best and most complete periodical of its kind published in America. It almost makes one wish to be a boy again.—Worthington Knight, City Editor, Chicago Chronicle."

erty! He believed they had no chance against such men; and it is related that he was so struck with Marion's sentiments, he threw up his commission and retired from the service."

"I don't see how they fought in such against such ments, he come to you, wave them into a story. Make it as real as you can. Have it so interesting that the street rest such as the services."

wake it as real as you can. Have it so interesting that we cannot rest satisfied until we know the end.

Be sure and leave out anything that might hurt us (like those dreadful paper-covered five cent books would certainly do).

Just show me what you can write, will you?

for early devotions overneard these boys to say:
"Gee, that fellow (meaning the sexton) is easy mutton. Now, all we's got to do is to swipe the change from the poor-box and then do a quick-step."

Before they had succeeded in so doing, a policeman was secured, and these would-be-famous-bandits were taken by somehody else's quick-step. On one boy was found a self-cocking revolver and a box of 38-calibre cartridges.

bre cartridges.

What sort of books do you suppose these poor, misguided, wayward boys had been reading?

cating:
Let me hear from you soon.
Cordially yours,
"AUNT EM."

ISAIAH THOMAS,

THE BOY WHO HELPED START THE REVOLUTION

FRANK ROE BATCHELDER

We have but few authentic records of the part tuken by individual boys in making the American colonies tree and independent

the American colones (rec and independent states, although we believe that all the boys of that time were as true-hearted lovers of liberty as are those of to-day. There was, however, one boy of the "times that tried men's souls" who has left us a most interesting record of the part he took in helping to start the American Revolu-tion.

This boy's name was Isalah Thomas. He was born in Boston, January 19, 1749, and was destined to become an ardent patriot and one of the greatest printers of his time—a friend of Benjamin Franklin, and second only to him among American masters of to him among American masters of

ISAIAH THOMAS.

When he was only six years old, in 1755, Isaiah Thomas was placed by his widowed mother, a poor woman, under the care of Zacharlah Fowle, a printer, in Boston, and he began at once to learn how to set type. The little printer was so small that a special bench had to be made for him to stand on so that he could reach the type in the case. In those days it was the fashion to print ballads and hawk them about the streets. Mr. Fowle engaged in this business, and a copy of one of these ballads—the first type Isalah Thomas ever set—is still in existence.

At the age of seven, Isalah was regularly

existence.

At the age of seven, Isalah was regularly apprenticed to Mr. Fowle to learn the printer's trade and serve until he was twenty one. Mr. Fowle was an honest man, but neither a very good printer nor a wise master. For a time, however, he had a partner who knew much more of printing that Mr. Fowle, and from this man, who dealt kindly with the young apprentice, and from other printing offices, which he visited, Isalah gained a thorough knowledge of the art, so that in a few years he was a better printer than the man for whom he worked. He was exceedingly industrious, and, among other things to which he turned his hand, he made more than a hundred woodcuts which were used in flustrating the ballads and other publications issued by Mr. Fowle. At that time there was but one other person in Boston—a negro—who could do this work. Isalah was his own teacher, and his cuts were rude affairs, but they were as good as any then made in the colony.

Mr. Fowle did not treat his young appren-

Mr. Fowle did not treat his young apprentice over well, and Isaiah finally made up his mind to run away and go to London, where he hoped to learn more about printing and become a master of the art. So, in 1765, he made his way to Halifax, Nova Scotia, hoping from there to get passage to London by "working his way" on a sailing vessel. But no opportunity for doing this presented itself, and he entered the employ of a man named Anthony Henry, the publisher of the Halifax Gazette. Isaiah was only sixteen years old, but he was a skillful printer, and as Mr. Henry was an indolent man, he soon allowed his new workman to take entire charge of the paper, while he enjoyed himself fishing and hunting. Mr. Fowle did not treat his young appren-

hunting.

The boy was fully competent to edit and print the paper, but he very soon got both himself and his employer into trouble. Great Britain had passed the obnoxious Stamp Act and trouble was brewing in the American colonies. Isaiah had imbibed in Boston an ardent hatred for the oppressions of King George, and now that he had a newspaper at his disposal, he lost no time in airing his rebellious sentiments. Among other things he said in the Gazette: "The people of this Province are disgusted with the Stamp Act." This aroused a great commotion, for Nova Scotla was the most loval to Great Britain of all the colonies, and Mr. Henry, the owner of the Gazette, was called to account by the Governor of the Province. He was warned not to repeat the light of a candle stuck in a beer bottle, he taught the boys. Afterwards he opened larger quarters, giving sleeping accommodations, consisting of rough boards, to the home-

the offence, but he was very fond of the boy to whom he had entrusted the editing and printing of the paper, and was disinclined to do any work he could get someone else to do for him, so he still allowed Isalah to manage the paper.

At that time all newspapers were required to be printed on "stamped paper" brought from Great Britain. In estamp was printed in red link on a corner of the sheet and showed that the publisher had paid the tax levied by Parliament. Isalah cut the stamps from a number of reams of the paper—their whole supply for several months' use, and then printed in the Gazette an announcement that, "as all the stampt paper for this Gazette is used up, and no more to be had, the publisher will supply his customers as usually, at twelve shillings a year;" that is to say, there being no stamped paper, the Gazette would be issued without it. This was a flagrant violation of the Stamp Act.

But he did more than this. He had learned

Stamp Act.

But he did more than this. He had learned in Boston to make woodcuts, so he carved a rude imitation of a stamp, only, instead of the arms of Great Britain, he used a skull and crossbones. He printed this on the margin of the Gazette, in the place where the British stamp should have appeared. The Governor and his council were very angry when this appeared, but they were furlous when Isaiah made a new cut which rudely represented a devil with a pitchfork in his hand, and to it added the words; "Scorn and contempt of America pitching down to destruction there followed the regular stamp). D—ils clear the way for B——s and STAMPS."

"B——s" meant "Bernards," an allusion to Francis Bernard, the hated royalist Governor.

isalah filled the paper with news of indignation meetings and the burning of royal governors in effigy, which he copied from newspapers in the colonies where the Stamp Act was creating the greatest disaffection, and added sharp comments of his own

Stamp Act was creating the greatest disaffection, and added sharp comments of his own.

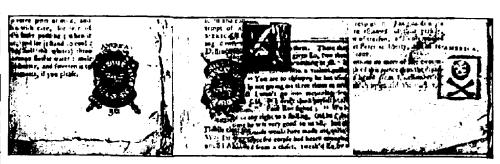

Of course, this could not go on. The royal officers threatened the boy printer and his employer with imprisonment, so Icalah was obliged to leave Halifax, after being there seven months, and went back to Boston. In those seven months, however, he had shown what kind of a boy he was—filled with patriotic spirit and a high order of courage. He was one of those who openly declared that the oppression of Great Britain must be resisted, by force, if necessary, and the articles he printed in the Gazette had much to do in stirring up the people to active resistance.

For a short time Isalah remained at Mr. Fowle's printing office in Boston. Then he went to North Carolina, working all the time as a printer, and never failing to encourage the people he met to resist the oppressions of the mother country.

In 1770, just after he reached the age of twenty one, he returned to Boston and went into partnership with his old master. Mr. Fowle. Isalah's experience with the Halifax Gazette had shown him how great a power for liberty a newspaper could be, so in July, 1770, he began with his partner the publication of the Massachusetts Spy, which was to become a great organ of liberty. After a time he bought out Mr. Fowle and continued the publication of the Spy in his own name.

The commotion he had aroused in Halifax was nothing as compared with the storm he created among the royalists in Boston by the stinging articles he printed in the Spy. Governor Hutchinson tried ineffectually to have him indicted for treason. He was threatened with the destruction of his printing office and the loss of his life, but still he kept on printing more and more

THE BRITISH STAMP ON NEWS-PAPER.

CUT OF A DEVIL USED BY ISAIAH THOMAS.

IMITATION OF BRITISH STAMP, MADE BY ISAIAH THOMAS.

violent articles, which had a great effect on public sentiment and fanned the flame of patriotism to a fierce heat. The Spy was read with the greatest eagerness all over the colonies and was looked upon as a beacon-light of liberty.

a beacon-light of liberty.

For more than four years Isalah Thomas continued to print his patriotic paper in Boston; but he knew that a crisis was at hand, so in the night of April 16, 1775, he stealthly removed his pr ss and types across the Charles River, under the very noses of the British soldiers in Boston, and started with his outlit for the town of Worcester, forty two miles inland, where he thought he would be safe from interruption in printing his paper.

Ifaving seen his press and types well on the road to Worcester, he returned to Boston, and on the night of April 18, 1775, was one of those who helped to "Ride and spread the alarm

"Ride and sprend the alarm Through every Middles x village and farm."

The British soldiers were starting on their march to Lexington and Concord. At last the time had come which the boy printer had foreshadowed when in Halifax, ten years before.

cars before. He was one of the Sons of Liberty, and many of their secret meetings had been

rie was one of the Sons of Liberty, and many of their secret meetings had been held in his printing office in Boston. As a minuteman, also, he now took a musket in hand and on April 19, 1775, helped to drive the British back to Boston.

But he was more needed in his printing office than in the ranks. On April 26 he started again for Worcester, and in that town he resumed the publication of the Spy on May 3, printing in that issue an account of the battle of Lexington, and at the same time exhorting all patriots to tally in the great struggle for liberty. From that day to this the Spy has been regularly published in Worcester.

Throughout the Revolutionary War, and especially at times when the American cause seemed almost hopeless, Isalah Thomas and his newspaper encouraged the

patriots to renewed efforts. He had sub-lime faith in a final victory and rendered inestimable services in helping to bring it

about. He endured many years of hardship, and struggled under difficulties that would have vanquished one less courageous; but he was resolved to succeed in whatever he undertook, and succees did crown his efforts in the end. He became the master printer that as a boy he had longed to be, and owned the largest printing office in America. He printed the first folio Bible ever published in this country, and the first music ever printed here from movable music type, as well as many other books, magazines and almanacs. almanacs.

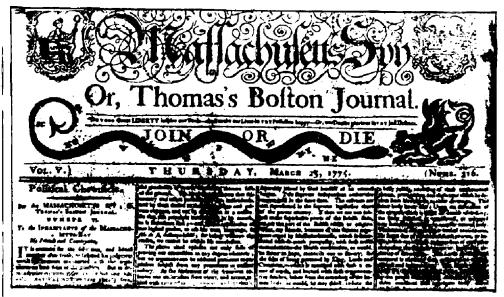

Benjamin Franklin admired him as a printer and a patriot and spent some time as Isalah Thomas's guest at his home in Worcester. When Franklin became the

Worcester. When Franklin became the first postmaster-general, he appointed Isaiah Thomas postmaster of Worcester. George Washington highly appreciated his great services to the cause of liberty, and when he visited Worcester in 1789, he said to a young nephew of Isaiah Thomas: "Young man, your uncle has set you a bright example of patriotism; and never forget that next to our God, we owe our highest duty to our country."

Isaiah Thomas died in 1831, at the age of eighty two. Though he had touched almost

Isalah Thomas died in Isil, at the age of eighty two. Though he had touched almost the extreme of hardship and linancial disaster, after the Revolution he became a wealthy man, for his day. He devoted his later years to the writing of a "History of Printing," a voluminous work of great accuracy, and to the accumulation of a library, which he bequeathed to the American Antiquarian Society, whose founder he was.

Certainly no boy of whom we know played a greater part in helping to start the American Revolution; and few men rendered more substantial services to the cause than the patriot printer, who, as a boy of sixteen, refused to use British stamped paper and defied the authority of King George.

Spurring to Success.

"There's nothing like giving a boy a little encouragement once in a while," said a wealthy down town merchant the other day. "I know I owe a great deal to a remark a crabbed old farmer made to me when I was quite small.

"I was trying to split a cross-grained hickory log, and as our wood pile was close by the roadside, my efforts attracted the notice of a farmer, who stopped his team.

"I was greatly flattered by his attention, because he was the crossest and surliest man in town, and never took any notice of us boys, except to sit in his orchard with a shotgun in his hand when the apples were ripe. So I put in my best licks, and covered my hands with blisters, but the log refused to split. I hated to be beaten, but there was no help for it. The old man noticed my chagrin.

"Hump! I thought you'd hev to give it up! he said with a chuckle.

"I made no reply; but the way that axhead went into that log was a revelation to me. As I drove it into the knots they yielded. There was a cheerful crackle, the gap widened, and soon the halves lay before me and the farmer drove off discomfited.

"But I never forgot that scene. When I first went into business I made mistakes.

"But I never forgot that scene. When I first went into business I made mistakes, as every young man will do. But whenever I got caught in a doubtful enterprise I remembered that my friends were standing around waiting for the chance to say: "I thought you'd hev to give up!" "In spite of himself, that old farmer gave me the keynote of my success. "So you see that, if a boy has any grit in him, he is bound to profit by the right sort of encouragement; and in that connection, I may remark, a well placed sneer is often worth more than a barrel of taffy."—Puck.

Learn to Do Something.

Boys should learn to do something. A boy without knowledge of a business trade or profession is liable to become a loafer. Parents who neglect a boy's training and fail to prepare him for an active place in the world are laying up for themselves a heavy share of blame. When a boy grows to be a man and finds that he knows nothing and is able to do nothing well, there will come a sad reflection upon those who had charge of him in his early years. The modern Diogenes with his tantern is not only looking for an honest man, but for a proficient man.

A Boy's Fortune.

READY FOR BUSINESS.

THE DEADLY THRUST.

"Frogging."

Any boy has a profitable source of income ready to his hand if he knows of a good place to go "frogging." It will only cost a boy twenty cen s, the price of a "frog spear," to start in business. He will soon have his regular customers. Guy Perkins, the boy in the accompanying pictures, has made over five dollars a week, in the season, getting fifty cents a dozen for "frogs" legs." Of course, it takes patience and perseverance, like most work worth doing, and there is not much fun to be gotten out of it, but it pays.

When it was suggested to Guy that the brook where the pictures were taken was too dry at this season of the year, he remarked with all a "professional's" scorn for one who doesn't understand the business, "I've speared frogs where it was lots drier than that." So a very small brook may be a good "frogging" ground.

NEW MONEY MAKER

For Agenta. A household neces 70,000 sold in Minneapolis. Costs mity. 7c, sells for 25c. Agents making \$7.00 per day. Millions will be sold. You show what it will do and it sells itself. People borrow money to buy it. Beats everything as a money maker. Send Domestic Mfg. Co., Minneapolis, Minn.

A PLAN TO SAVE MONEY.

Just a little box. Say four inches long, two inches wide, three inches deep. A locked door in front; a slot in the top; a handle to carry it by. Just a little box—but it can do great things.

It can make you economical, forehanded, thrifty. It can lessen the evils of sickness or loss of work. It may sometimes even prevent them. It can help you to get ahead in the world. It can help you to save money. It means education, a good start in life.

Only the few become rich by a stroke of luck. Most successful people have become so by practising economy and saving the surplus. The habit of saving, persistently practised, soon becomes settled thrift.

Saving is hard with most people—at first. It is hard to find a surplus when wages are small and wants many. Unless you can get it into the bank right away, the money burns holes in your pocket. You miss it, but you don't know where it went.

To make saving easy, use the box. It will take what you can spare a cent or a nickel, or a dime at a time—until there is enough to deposit in bank, or you have time to go to bank. It will serve you when the saving impulse is upon you, and protect your savings-even from yourself when you begin to weaken.

To get the good of the box you must give it a chance. Place it in plain sight—on the mantel shelf in the living room or on the bureau in your bed room. If you have a coin you don't really need to use, drop it in the slot. Repeat this operation at intervals—the oftener the better.

Most banks pay interest upon savings accounts. They welcome small savings accounts.

Money at interest works three shifts a day—Sundays and holidays, too. The more you add to it the better it works, and the more it carns for you.

Money in bank is more than money; it is character. The boy with a bank account is seldom out of work. His thrift is recognized. It makes him a good workman. If a boy is to be selected for promotion, the boy with a bank account is apt to be chosen. He is looked upon as a reliable boy. He makes a good citizen.

EVENING POST

Vacation Spending Money

> About 3000 Boys will be liberally supplied with spending money this summer through an offer made by

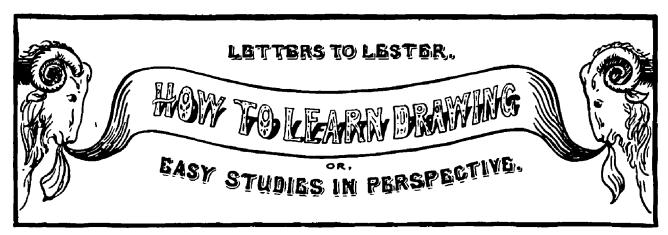

THE SATURDAY EUENING POST

We are going to double that number and any boy writing now may have his name added to the list.

To any boy who wants to represent the Post and will give a few leisure hours to the work we will send 10 copies of The Saturday Evening Post ENTIRELY WITHOUT CHARGE, to be sold at 5 cents each. This will give him 50 CENTS capital with which to start. After that the copies will be sent at the special wholesale price, with the privilege of sending back any unsold copies at the price paid for them.

IN ADDITION to the profits on the copies sold we will give \$200 in Cash Prizes to the 100 Boys who do the best work next month. On request we will send the first week's supply and full instructions, including a dainty little booklet in which 25 boys tell just how they made successes. Address

CIRCULATION BUREAU THE CURTIS PUBLISHING COMPANY, PHILADELPHIA, PA.

Part Second-Copyright 1901 by Stansbury Norse, Potsdam, N. Y.

My Dear Lester:

A whole month is a long time to remember anything, so I hope that before you begin a new letter of mine you will get out the last one and read it over

In trying to learn anything it is important to know why things are so. If you attempt to do a thing in a certain way just because your teacher wants it done that way you gain very little. But if you know why you ought to do it that way then you have a standard of your own that you are trying to reach, and when the teacher tells you how to correct the work you know he is right, and the effort you make is of value to you. Now, I am going to tell you why certain things are as they are, and why we draw in a certain way, and I hope you will try to thoroughly master the reasons I give you.

Here is a picture of the eye (Fig. 9). It is not necessary for me to go into this matter very deeply be-

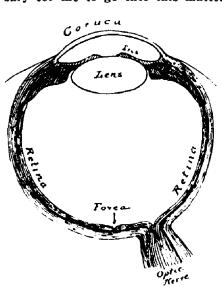

Fig. 9.

cause you can find out from any good physiology book all about it, but I want to call your attention to it for a moment. The rays of light which pass from an object through the lens (just as they do in your camera) are what make the picture of that object. In the camera the picture is on the In the plate. eye it is upon the retina. But you will see, in the drawing, an arrow pointing at

a spot called the fovea. This is the spot which sees

best, so to speak, of any part of the retina.

Let's try it. Get a letter and pin two pages of it up against the wall side by side. If you look directly at one page you cannot read the other though you can see it is there and that it has writing upon it.

distinctly if looking at the other, nor can you tell whether it has writing upon it. That is because only the fovea sees distinctly what is before it, but the retina "feels" it to be there.

This discussion brings us to the point I want to make—that we must have some central point for every drawing, and must group all our objects around that point so as to bring them where the retina would be conscious of them. And it shows us, too, that anything which is so far away from this central point that the retina will not even "feel" it does not belong in our picture.

The accompanying circular diagram (Fig. 10) shows you why this is so. The little dot at the center of the circle is our "station point," and here we stand and, turning around, look in six different direc-Keep turning the page around and look in the directions in which the arrows point. If you look at the big tree you see the landscapes on each side indistinctly, though you realize that they are there. Each picture, in turn, is in what is called "true perspective," but you cannot keep changing from one to the other and have the different perspectives agree—at least not on a flat surface like this page. So you see it is necessary to fix your vision in one direction and

then make each part of your picture agree with the point which you thus select as its center.

Now, this is a very important point; it is called our "center of vision," and upon its proper use de-pends the accuracy of all the drawings you are going to make. There is one thing you must always remember regarding it—that it is always located on the horizon line. If you will consult the next draw-

ing (Fig. 11)

you will see

this illustrat-

ed in the ar-

tist at work.

H. L. repre-

sents the hor-

sketch with relation to it

and to his

making

Fig. 11.

"center of vision." You will see that I have drawn a circle around his center of vision which takes in all he ought to have in his sketch. This circle, embracing all that we ought to put in a picture, is called "the field of vision." In the drawing you will see that this field leaves out some of the trees on each side, and also a portion of the pile of stones on the right. The artist has decided that these things are outside of his field of vision and leaves them out of his sketch.

What does he do to settle this question? He fixes his eyes upon a certain point in front of him and then he holds his head perfectly still while he turns his eyes about. Anything he cannot see without moving his head he decides is too far away to come properly inside of his field. To turn his head would be to have another center of vision, and only one will answer his purpose.

You can make this clearer to yourself by stepping to the window and looking out. Mark with a piece of soap a small spot opposite and level with your eyes. Draw a straight horizontal line through this spot which will be your center of vision, and this line will Put the pages farther apart and you cannot see one represent your horizon line. Now look at the place

in the distance exactly behind the spot. See how distinctly you see it, and how faint other things look growing fainter and fainter according to their distance away on either side. But these things which appear hazy (as long as you keep your head perfectly still) are within your field of vision and you are obliged to turn your eyes to see them clearly. If you only drew what you could see behind your center of vision the picture would be very small and meagre.

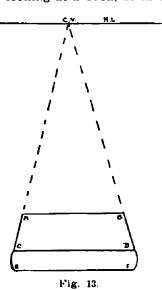

When we have come to understand all these points thoroughly we are ready to advance another step, and that step is the study of vanishing lines. To make this clearer I will say, that we must learn to realize the difference between a fact and the appearance of a fact. A fact, in drawing, is the thing as we know it to be, while the appearance is what it looks to be. For instance, in this drawing (Fig. 12) we have the out-

Fig. 12.

line of a box, or we may call it a cube. If it is a cube then all its sides are equal squares. These are the facts, but when we look at it we see the top looks very different from the front face. We know the top is a square, but it appears to be a trapezoid, that is, a four-sided figure which has only two of its sides parallel. Put a square box in front of you on the table and you see how this is true.

This should make it clear to you that the best method to follow, when you wish to draw anything. is to look it over carefully and decide for yourself what the facts are, and then how they change to the eye as you change the position of the object or your own position with relation to it. If, for instance, you were looking at this cube you could say to yourself. 'The fact (the top) is a square, but it appears to be a trapezoid." And the same plan should be followed when looking at a book, as in the diagram (Fig. 13).

In this case we would say: "The upper surface of this book is an oblong, with right angles at the corners. but it does not appear to be that at all. It appears to a trapezoid. be The lines A B, C D. and E F, are horizontal lines which do not change their position to the eye and are drawn horizontally. The lines C to A, and D to B. are horizontal lines. too, but they do not appear to be such. They appear to be oblique lines converging at C V.

A B, too, although just as long as C D, appears to be much shorter; and, though A B and C D are really on the same level, the first appears to be higher than the second.

Having analyzed our subject thus we are then prepared to draw it, and our drawing, made intelligently, will look like this. (Fig. 14.)

There are some foolish people who oppose this way of teaching pupils to think things out for themselves. They argue that it is not necessary, because students can learn to do the thing easily and acquire the principles afterward. But I am sure that you would much

rather know "the why and wherefore;" the and I know that the doing of the thing comes much easier to those who understand why

Fig. 14.

who do not, so I hope you will follow my plan care-

There is an expression used in the study of perspective which I want to explain before I go any further because it will be necessary to use it continually. You mark out upon a board, with a piece of chalk, a circle or a square and we call these "plane figures We see by this that a plane figure is one marked out upon a surface of some kind, and, as the word "planmeans what you would call "flat," then our plane figure must be on a flat, not a curved, surface.

After a while we learn to separate plane figures from plane surfaces, in our minds, and then we think of "planes" as something indefinite in extent in which these plane figures will lie. For instance, suppose our board was so large that we could not see its boundary lines. It would then represent a plane. and our plane figures would lie in that plane. If we stand the board up straight then the figures are in a vertical plane. When the board is in a hori-zontal position then they are in a horizontal plane. This drawing (Fig. 15) illustrates the subject per-definite extent—that is, it might extend up to the fectly. The bazaar poster is a plane figure upon the sky, down to the center of the earth and each way to

plane surface of the wall. The face of the wall is a the horizon line. So Lockwood's poster, again, is in a plane surface which lies in a vertical plane of in-

face of the wall.

But the billboard which has fallen upon the ground, as billboards often do, lies flat, level, horizontal, so we see that it lies in a horizontal plane.

Then, when we look at the board leaning against the wall, we see that it is neither vertical nor horizontal. What must it be then? When a line, figure or surface does not stand up straight, or lie down level, then we say it is oblique. This must, therefore, be an oblique plane figure, representing an oblique surface. And if we imagine this surface extending in every direction like an immense pane of glass, then we see how our oblique plane figure lies in an oblique plane.

Now, let us go back to the drawing of the book for a moment. If you put a book on the table in front of you and hold out your finger so you see the tip of it against the nearer edge of the book, and then against its farther edge, you will realize that the latter appears higher than the other. That is to say, the plane surface of the book, which is really horizontal, appears the appearance, again, opposed to

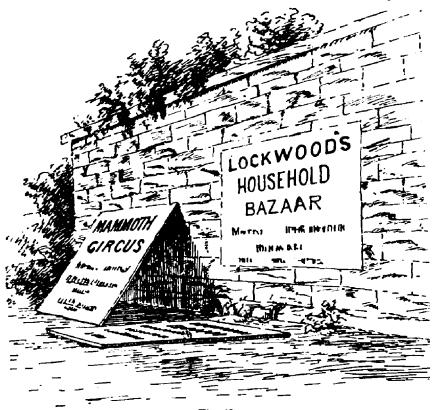

Then, in our drawing, take the lines which represent the edges of the book. Those which lie in the upper surface all lie in a horizontal plane, yet only two of them-A B and C D-appear horizontal. The others have a different direction.

Here we come back to the point from which we started—the study of vanishing lines. To fully and understandingly discuss these I had to make a digression so the terms we must use may be understood. Take the lines C A and D B, for instance. They lie in a horizontal plane, but if you will put out your hand and raise the farther edge of the cover a little you will see that the surface is no longer horizontal, and so your lines, C A and D B, are now in an oblique plane. The other lines, A B, C D, do not change at all, they still remain horizontal. The first two, the ones which change, are called vanishing lines.

There is a very important point to be considered in connection with vanishing lines—and that is their direction. I will begin my next letter at that

Meanwhile, my dear Lester, I want to see whether you, and your many comrades who read these letters in THE AMERICAN BOY, are interested enough to try to learn from them how to make good drawings, drawings correct as to perspective. If you, or any reader, will go out into the street or road and make a little pencil sketch of what you see, when you stand exactly in the middle of the highway and look along it, I will be glad to see the sketch and criticise it for you. Do not draw anything but the outlines of things and leave out anything very difficult. Put your drawing with your name and address upon it in an envelope, inclosing a stamp for an answer, and mail it oblique. Here you have the fact and to me at Potsdam, New York, and I will reply at once. Your friend.

STANSBURY NORSE.

The American Boy is a Paper for Boys Who DO Things

Letters of George Washington Jones

EAR AMERICAN BOY: I live in Q--- and always

have. My pa's name is Mathew and my ma's is Matilda. We live in my pa's house in the middle of the town. Pa's a big man in these parts, 'cause he's president o' th' school board. Ma's got fifty chickens an' five cats; pa's got two horses au' five cows, an' I've got a dog wot's good for huntin' coons.

There's about fifty other houses in the town be-

sides th' church an' school house an' store. Right next door on th' east is old man Beckwith's house. He's the maire an' head o' th' town council. Next, t' his house lives Henions wot keeps th' store. Next t' his'n is Deacon Blueberry's house an' then comes Si William's who's constable. Jus' to th' west of our house lives th' Browns, an' Jim an' Dick Brown 's my chums. Then there's Charlie Cromwell who lives a few doors down, an' I clean forgot th' new boy wot came from N' York an' don't do nothin' but read, an' wear high collars an' shiny shoes. 'Cross th' street lives Widder Crawford, an' Miss Newman th' school teacher an' Parson Walker board there. Next to Widder Crawford lives Dr. Burbank wots jus' come from some college in N' York (I think they call it th' P. & S.) an' wot bought out Dr. Pittsfield.

That's all I've got t' say 'cept that some big city dude is building a big house bout a mile from town part o' th' year.

Goodby. GEORGE WASHINGTON JONES.

P. S.—In my next letter I'll tell you about a cook hunt we had.

NO. 2.

Dear AMERICAN BOY:

The other night me an' Jim an' Dick an' Charlie went huntin' coons. Our pas didn't want t' let us go so we agreed to wait till midnight an' then meet at th' cross-roads about a quarter of a mile away.

Jim an' Charlie each had a gun wot they won for sellin' soap. Dick had his pa's shotgun an' I took fishin'.

pa's gun wot he used in th' civil war an' wot hangs up in th' best parlor. That night I made off go t' bed but instead I sat in my room readin' a story on how t' hunt coons. After awhile I heard pa comin' up t' see if I was in bed so I turned out th' lamp an' jumps inter bed jus' 's I was. Pa he comes in kinder foxy like an' looks around, but I'm a snorin' at a great rate so he closes th' door an' goes out. I waits till I hears him an' ma lock th' house an' go t' bed an' I jumps up an' gets th' gun an' shot. Then I opened th' winder an' slid down th' water pipe. Next thing I fetched th' dog an' started off. When I reached the cross-roads th' other fellers were there with er lantern. We started off for Deacon Blueberry's woods an' it wasn't more'n fifteen minutes before that dog o' mine, wot Charlie said looked like a pointer with his legs cut off at th' knees, got on a scent an' started off like sixty. Us fellers tried t' keep up for a while but it wasn't any use trying, so we used th' lantern t' foller the prints his feet made in th' mud. We must a kept that up for a couple o' hours before we came upon the dog sittin' under a tree a barkin' like thunder. Dick said he see th' coon an' he told us where t' aim.

Charlie fired first an' missed by about a foot so Dick said, for the rest of us couldn't see nothin'. Then Jim fired, but his hand shook so he didn't hit a thing 'cept a tree. My turn came next an' I took a hold o' that trigger an' gave it an' awful yank, but it wouldn't budge. Charlie, he said he'd pull while I held th' gun. But he couldn't do no better. Then Jim and Charlie both took hold an' pulled. They pulled so hard the gun kept goin' 'round in circles. "Now," says Charlie, "one, two, three, and away we go." An' we did go, too, for th' old gun kicked an' sent us all flyin'. Th' old thing went off jus' when it was pointed at th' dog an' it cut his tail clean off. He let out a series o' howls wot sounded like th' new soprano at th' church, an' sneaked for home, so Dick says, for I was just then flyin' through th' air. That old gun must be th' kind wot you commit suicide with for it pretty near killed me. I landed in th' brook about ten feet away an' my arm felt as though it was broke. Charlie, he landed on th' lantern an' put it out, an' Jim went head first inter Dick's stomach as though he was playin' foot-ball. Dick doubled up an' they both fell down. After awhile we picked ourselves up an' started for home.

When we reached the cross-roads we all separated an' went home alone. I shinned up th' water pipe an' when I crawled in th' winder I walked right inter pa wot was awaitin' for me with a horse strap.

Goodby. GEORGE WASHINGTON JONES.

P. S.—In my next letter I'll tell yer how we went

The American Boy at Home

{------

T. Perrin Orchard, of Ogden, Utah, is an enthusiastic reader of THE AMERICAN BOY. He says he enjoys most the page on photography. As an evidence that he has been trying to do something himself in this line he sends a picture of his room, or rather, as he terms it. "A favorite corner of my den." He has named the picture "The American Boy at Home." He says the work of taking the photograph and doveloning it is he can with taking the photograph and developing it is his own, taking the photograph and developing it is his own, with the exception of touching the button. Speaking of his den, he says: "If there is any one thing a boy loves, next to eating, it is a den of his own. It doesn't always go that the boy with the most money has the joiliest den. Mine contains all the things I have had during the twelve years of my life. Mother lets me keep the room just as I want it. I have only one rule with reference to my den, and that is 'only good company gets in here.' Mother is the only girl that gets in, but she's just like one of us, and always reads THE AMERICAN BOY with me. Will you please call for pictures of boys' dens? It would be nice to exchange ideas, and maybe there are some boys that have no dens and don't know what they are missing. I hope I have not taken too much of your valuable time."

A letter of this sort does the editor of THE AMERICAN BOY a great deal of good, and he now follows out the suggestion made and asks the readers of THE AMERICAN BOY to send us pictures of their rooms. We shall be glad to display them in an early number of our paper, and we know our readers will look forward to seeing them with interest.

Written especially for the "American Boy."

The American Boy

MARCH AND TWO-STEP.

By HARRY H. ZICKEL,

Composer of the popular successes, "Black America," "Girl of '99," etc.

Martin Jacob Fry, 1632 Briar place, Chiago, III.: I will exchange stamps or stamp papers for amateur papers.

Fern and leaf impressions in rock and orystals, to exchange.—Wilbur Brundage. 97 N. Pine street, Hazelton, Pa.

Fred J. Poyneer, Williamsburg, Ia.: I will exchange white Fantall pigeons for Indian relics or utensils of any kind.

Howard M. Sloat. Stamford, Conn.: will exchange carrier pigeons for black homers, Belgian hares or common pigeons.

Joseph T. Kraus, 12 Miller St., Auburn, N. Y.: I have four thousand finely mixed stamps to exchange for curios or best offer.

win exchange moths and cocoons, seven-teen year locust shells, and bugs, for silver tumble bugs and stag beetles, large and perfect.—Walter E. Bain, North Chatham, N. Y.

Charles Poitras, 1145 First Ave., New York City, N. Y.: I will exchange a hand printing press, used a few times, for a respective all rile. peating air rifle.

Edwin Roddy, South Amboy, N. J.: I will exchange volumes 6, 7, 8, 9 and 10 of the ARGOSY for a printing outfit or a large magic lantern.

Owen Gilliand, 520 South Jackson Ave., Clinton, Ill.: I have all kinds of reading matter to exchange for stamps or printing outlits or parts thereof.

William Halper, 128 E. One Hundred and Twenty Third St., New York City, N. Y.: I have some rare stamps which I would like to exchange for coins.

Edward G. Michael, 112 No. Plum St., mond, Va.: I will exchange a shell from Chesapeake Bay and a piece of mica rock for the best offer in curios.

G. H. Purvis, Renfrew, Ontario.-I will exchange 125 foreign stamps for a camera. Must have feeder. Will also exchange a camera for a printing press.

Henry C. Saulnier, Media, Pa.: I have four full-grown, pink-eyed, white buck rabbits which I would like to exchange for four full-grown does, any color or breed.

Butterflies — Admiral, mother-of-pearl, nymphs, and cleada shell, for foreign butterflies or large bugs, named and mounted. -Howard C. Bain, North Chatham, N. Y.

J. Laird Cross, Box 406, Bangor, Mich.: I will exchange stamps and reading matter for Vol. 1 of THE AMERICAN BOY, excepting Nos. 8 and 11. I also want Golden Days before Vol. 17, and bound books.

Orval M. Hixon, Box 394, Richmond, Mo.: I will exchange Vol. II., No. I. and No. III. of Camera Craft for unmounted four by five prints. Please write description of same on back of each with a lead pencil.

Clarence A. Reece, Watt Ave., Ben Avon, Pa.: I will exchange twenty five fine stamps, worth seventy cents, and a copy of the Pittsburg Bulletin for the first five numbers of THE AMERICAN BOY, in good condition.

Rafael Mora, Jr., 101 Hillside Ave., Newark, N. J.: I have a small two by two camera and postage stamps which I will give for small type in good order (lead). Will also exchange stamps with other boys, or will give stamps for Indian relics.

Clyde L. Wilson, Sciplo. Ind.: I will exchange six indian arrowheads, two pieces of Fools gold, eight seashells, all different, one Indian tomahawk, worth three dollars and sixty cents, for a good Remington 22 target or single barrel breech-loading shotgun, twelve gauge, in good order.

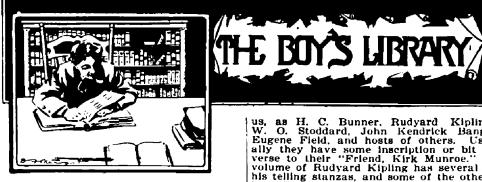

Paul Alexander, Letart, O.: I will exchange five arrowheads, one hundred and twenty five stamps, one shell from the Atlantic Ocean, two relies, one very fine cent dated 1855, one dollar in Confederate money, and either of the following books: "Tom Jones" and "How to Box," for best offer.

Bennis Puterbaugh, Baxter Springs, Kans.: I will exchange foreign and United States stamps, one catching mitt, several boys' books and papers, for stamps not in my collection, or football, or striking bag, or boys' books or Indian relics, or copies of the first six numbers of THE AMERICAN ROY CAN BOY.

Edward Clark, 29 East Second St., Jacksonville, Fla.: I will exchange leaves from Florida, such as bay, orange, magnolia, palmetto, persimmon, prickly ash (thorns on the trunk of this tree), and various other kinds of leaves common to Florida, for stamps and United States coins. I would also like to trade stamps with any boy.

Harry Roberts, Letart Falls, O.: I will exchange one Indian arrow for ten foreign stamps if two cents is sent for return postage. I will also give one alligator tooth, one Indian celt, one Indian hammer stone, five dollars in C. S. A., two very old postal cards, one very old paper, and fifty cents in cash for best offer on a printing press and outfit. and outfit.

Charles D. Snead, 123 Harrison St., Lynchburg, Va.: I will exchange a Baltimorian printing press with chase four and one half by six and one half, self inker, and one font of type (script) worth three dollars and about five dollars worth of other kinds, for a camera which takes a picture four by five inches, in good condition. Send sample pictures.

A Writer of Boys' Stories.

FRANK H. SWEET.

I wonder if there is a boy or girl between twelve and eighteen who does not know Kirk Munroe—through his books, I mean; and in this connection I say "girls" designedly, for my experience is that girls like wholesome, stirring boys' stories about as well as the boys themselves.

By Courtesy of Harper & Brothers

KIRK MUNROE.

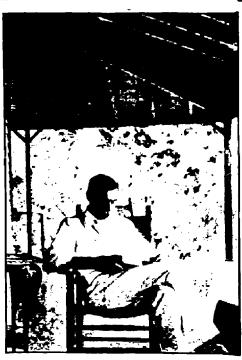

Kirk Munroe, or rather "Mr. Kirk," for

Kirk Munroe, or rather "Mr. Kirk." for that is what the men, women and children call him down here in this quaint, isolated little Florida village of Cocoanut Grove—is as breezy and entertaining as his books, and as much of a boy as the most exuberant of his readers.

"Mr. Munroe?" the villagers will repeat, looking at you blankly in answer to your question; then a broad smile of good nature will spread over their faces. "Oh, Mr. Kirk, you mean? Yes, we know him, of course. Yonder he is, running down to his boat;" or, "There he is talking to a boy who has caught a red bird, bargaining for a release of the captive;" or. "That's him

who has caught a red bird, bargaining for a release of the captive;" or, "That's him with all those boys on the pier—pianning some kind of lark, most likely."

And so it comes to you from all sides. Whatever is identified with the welfare of the village, and especially with the welfare of the village young people, Mr. Kirk "has a linger in," as they express it. Just now he is the head and sinews of a village library which started with a hundred books, mostly from his own private store, and now contains one thousand volumes of up-to-date literature housed in an extremely pretty little building, recently completed, and the first of its kind to be erected in the state of Florida. There is a peculiar fascination in looking over these books, for many of them are presentation copies, and upon their fly-leaves we find names which are household words among

us, as H. C. Bunner, Rudyard Kipling, W. O. Stoddard, John Kendrick Bangs, Eugene Field, and hosts of others. Usually they have some inscription or bit of verse to their "Friend, Kirk Munroe." A volume of Rudyard Kipling has several of his telling stanzas, and some of the others have lines which are charmingly identified with the names scrawled below them. Kirk Munroe's house is small, but it is surrounded by broad, cool-looking verandas, and there is an orange tree which snuggles some of its branches in under the front veranda roof, and there are lemon trees on one side and a confusion of fruit trees and flowers which peep at one from somewhere behind. But, for the most part, the ground in front is open lawn, stretch-

trees on one side and a confusion of fruit trees and flowers which peep at one from somewhere behind. But, for the most part, the ground in front is open lawn, stretching to the water and affording an unobstructed view across the beautiful Hiscayne Bay, to a long line of inclosing reefs or keys in the distance. Down from the house is a well-worn path leading directly to a pier and boathouse; and here, except when away on one of its many pleasure or fishing excursions among the keys, may be seen Mr. Munroe's fine yacht and its good-natured, ebony-faced keeper. The surroundings are picturesquely wild and tropical. Palm trees abound; and in the woods or "hammocks" are wild oranges and lemons, and limes and figs. Clumps of giant bamboos are seen along the path which leads through the hammock to the house, and all about is a growth which is unfamiliar and curious.

If we go into the house we find Mrs. Munroe, who is a daughter of Amelia Barr, the novelist, very cordial and entertaining, and if we evince an interest in her husband's work she will show us English reprints of his books which she smillingly declares are her own especial property; and she will speak of certain hours in the morning when he is not to be disturbed, and of his new book which is soon to be issued by the Scribners, and of the proofs of a story he is revising preparatory to its coming out in serial form. Before we know it, half an hour has slipped by, and we go away with as much interest in the author's personality as we have hitherto felt in his work. Besides being an author, Mr. Munroe is the most successful orange grower of Dade county and has, for three years in succession, captured the first prize for oranges at his county fair. He also takes prizes for roses.

He is a member of many societies, including the Author's Club of New York

oranges at his county fair. He also takes prizes for roses.

He is a member of many societies, including the Author's Club of New York city, but is perhaps most proud of being associated with Theodore Roosevelt as honorary vice-president of the Florida Audubon Society.

\$00000000000000000000000 Reviews of Boys' Books

THE BENNETT TWINS: Grace Mar-THE BENNETT TWINS: Grace Marguerite Hurd. This is a rose-colored picture of art student life in New York. The twins, brother and sister, painter and musician, get leave to try their luck for a year. They learn a little, fail a little, starve a little, succeed a little, and then go home triumphant for a summer's holiday, having established their right to go on. 313 pps. \$1.50. The Macmillan Co.

SIR TOADY LION: S. R. Crockett. Illustrated by Gordon Browne. As the title page has it, the book contains the surprising adventures of Sir Toady Lion, with those of General Napoleon Smith—an improving history for old boys, young boys, good boys, had boys, big boys, little boys, cow boys and tom-boys. It is full of pretty illustrations and easy reading for the young. 314 pps. \$1.50. Frederick A. Stokes Co.

THE CHILDHOOD OF JI-SHIB, THE OJIBWA: Albert Ernest Jenks. Bound in cloth, printed on good paper with wide margins, and illustrated with sixty four pen sketches, this story of Indians is well worth its price. The lives of the simple-minded and nature-loving natives of America are full of interest. The author displays deep insight into Indian character, describing the red child in his own wigwam. Many white children will read the story of the passing race with supreme interest. 130 pps. \$1.00. The American Thresherman. Thresherman.

Thresherman.

AN ELEMENTARY HISTORY OF THE UNITED STATES: A. C. Thomas, Professor of History in Haverford College, Pa., author of "A History of the United States." It is the aim of this work to set forth the main facts of American history in such a way as to attract and interest pupils of the earlier grammar grades. Most of the book is given up to biographical sketches with the idea that history is best approached through biography, lives being chosen for these sketches that would best illustrate the most important phases of our nation's growth. At the end of each chapter is an outline to summarize what has been said, and a few questions are added in the line of suggestions. The book is well illustrated with twenty two maps, made as simple as possible for the sake of clearness. 338 pps. 60 cents. D. C. Heath & Co.

HOW TO MAKE COMMON THINGS; John A. Bower. This is a book written 1 or boys under the auspices of the Society 1 or Promoting Christian Knowledge. We can do no better than quote some of the things the book shows how to make: A hat-radia box; a pair of stillts; shelves for books forms of joint; swing, summer-house, steps; ladder; door; fence; pen-tray; paper-knife; book-slide; trays; picture-frame, book-bindings; yacht model; wire-wordfire-screen; simple apparatus for expenients; electrical appliances. In these das all young people want to make somethics. fire-screen; simple apparatus for experi-ments; electrical appliances. In these da s all young people want to make something. This book shows you how. 240 pps. \$1... E. & J. B. Young & Co.

SCOUTING FOR WASHINGTON: John P. True. This story is, as its name indicates, a story of a boy who followed the fortunes of Washington. Its contents my be judged by some of the chapter headings. In the Tent of the General: Squirrels and Redcoats; King George's Crop of Pigweed; Wanted at Headquarters; What General Washington wanted of Stuart Schuyler: The Chase of the Cowboy Troop; How Stuart Became Lieutenant Colonel Tarleton's Horseboy, etc. The story is a strring military and historical story for young people, and will help very much in the study of the history of the American Reviolution. The book describes many novelincidents and exciting adventures. Six illustrations by Clyde O. DeLand. 311 pps. \$1.50. Little, Brown & Co. SCOUTING FOR WASHINGTON: John

NATURE'S MIRACLES: Volume I. World-building and Life, including a study of Earth. Air and Water. Elisha Grav. This is Volume I. of Familiar Talks on Science by the great scientist, Elisha Grav. who spent over forty years in the laboratory. The author really sits down with the boys in this book and doesn't hold them at arm's length, as authors do in books for men and women. He uses the language of common life, his object being to reach thousands of readers who have no scientific education. The author was a farmer's boy, a blacksmith's apprentice, a shipjoiner and carpenter, supported himself while taking a college course, became interested in electricity, and finally an inventor famous throughout the world. He was at one time president of the Congress of Electricians, and has had decorations and degrees conferred upon him without number. 243 pps. 60 cents. Fords, Howard & Huibert. NATURE'S MIRACLES:

THE YOUNG CITIZEN: C. F. Dole. The author realizes that the presenting of a book on Citizenship to boys and girls such as will not prove too much of a task for them to read is not an easy thing to do He realizes that in order that he may retain the attention of the reader on subjects which are in themselves somewhat dry, he must awaken interest and keep it awake by the method of his treatment. Fully realizing this fact, the author has succeeded admirably in attaining his purpose, that of instructing as well as interesting children on subjects concerning the citizen and the state. Several chapter headings will indicate something of the value of the book: What the Children Can Do for Their City; The Policemen, and What They Are For; The Courts and the Judges; Voting, or Choosing Our Leaders; The People's Money; A Model Town; The Army and the Navy, etc. There are nearly eighty illustrations on the 194 pages that comprise the book. 90 cents. D. C. Heath & Co. THE YOUNG CITIZEN: C. F. Dole. The

WOOD-WORKING FOR BEGINNERS: C. G. Wheeler, Illustrated. The aim of this book is to suggest to amateurs of all ages many things which they can properly make of wood, showing boys pleasant and useful ways of working off some of their surplus energy. It shows how to use tools. The treatment is neither general nor superficial, but elementary, aiming to be thorough and specific as far as it goes. Care has been taken to include only what can be done by an intelligent boy of from ten to eighteen. Although the book is addressed particularly to boys, it applies also to men who are beginners, or wind need to be talked to as if they were be son the subject of Carpentry. Part I. treats of tools, wood, laying out work, fitting the shop; Part II, gives directions and illustrations for making such things as toleasgans, sled, gymnasium apparatus, because dog houses etc.: Part III, treats of cases dog houses etc.: Part IIII treats of the cases of the trations for making such things as tobeligans, sled, gymnasium apparatus, hoodcases, dog houses, etc.; Part III. treats of simple house building, camping house, hoat houses, etc.; Part IV. treats of helt building, and Part V; gives descriptions of common tools and their uses; also such subjects as bending wood, boring, dor frames, rounding sticks, etc. 549 pps. \$1.1.6.

THE VEST POCKET PARLIAMENTARY POINTER

This little Book answers at a glance the intricate questions of Parliamentary Law, without diagrams or retrience marks to confuse or mislead. It is so small it is be concealed in one hand, and referred to during a meeting without attracting attention. It contains about 22 pages, and measures 25 x 4 inches. It uses a system of abbreviations, condensing parliamentary rules in the smallest space.

25 CENTS, POSTPAID.

July in American History

JULY 1 AND 2, 1898: BATTLES OF EL public and sent a petition to various governments. Spanish troops occupied these places to prevent the American forces reaching Santiago. In the engagements the Spaniards were everywhere driven back to Santiago with considerable loss, of certain place. While engaged in the manufacture of the large of the lar and the siege of that city was commenced.

JULY 2, 1881: PRESIDENT GARFIELD ASSASSINATED. James Abram Gartield ASSASSINATED. James Abram Gartield was born in Cuyahoga County, Ohio, No-vember 19 1831. Orphaned in childhood, his early youth was spent in hard manual labor vember 19 1831. Orphaned in childhood, his early youth was spent in hard manual labor with but little time to obtain an education. He had, however, indomitable courage and perseverance, and, notwithstanding the seemingly insuperable obstacles in his way, was able to enter Williams College, Massachusetts, in 1850. That same year he recorded his first vote and spoke in favor of the Republican candidates. In 1859 he became a member of the Ohio State Senate. He also entered the military service and during the initial years of the Civil War proved his soldierly qualities in Eastern Kentucky. But it was as a statesman that Garfield showed his great ability. As representative of the Western Reserve district he entered Congress in December, 1863. Every topic before that hody was handled with masterly skill. In 1859, while a member of the National Congress, he was nominated and elected to the Presidency of the United States. Commencing his duties on March 4, 1881, his administration only lasted four months when he was stricken down by an assassin's hand. After a lingering illness, he died at Elberon on the New Jersey shore on September 19, 1881. The whole civilized world mourned his death.

JULY 3, 1844: FIRST COMMERCIAL TREATY BETWEEN THE UNITED STATES AND CHINA SIGNED.

JULY 3, 1863: BATTLE OF GETTYS-BURG. The fighting began on the morning of July 1st and continued until the evening of the 3d. Of the battles of the Civil War, it may be said that Gettysburg was the most important as well as farreaching in its results. The losses on both sides were exceedingly heavy; that on the Federal side, including killed, wounded and missing, being 23,186, while Lee's loss has

JULY 9, 1819: ELIAS HOWE BORN. Spencer, Massachusetts, was his birthplace. While engaged in the manufacture of cotton mili machinery at Lowell, he invented the sewing machine, which he patented in 1846. His troubles in connection with his invention were very great, as he had not only to fight against poverty, but against the gross violations of his patent which everywhere sprang up. His indomitable courage, however, never forsook him, and it is pleasant to record that he finally obtained complete victory over his detractors and fully established his legal rights. His career thereafter was so prosperous that in 1867, when his patents expired, he had a fortune of \$2,000,000. He was a most generous contributor to the Union during the Civil War, and himself served as a private in a Connecticut regiment. His death occurred on October 3, 1867.

JULY 9, 1850: PRESIDENT ZACHARY TAYLOR DIED. He was born in Orange County, Virginia, September 24, 1784, and the following year his family removed to a plantation near Louisville, Kentucky. Here the future President was engaged in farming until he received a lieutenant's commission in the United States army in 1888. During the War of 1812 he was actively engaged in the west and reached the grade of Major. He resigned his commission in 1815 to pursue the peaceful art of farming, but his country required him and he was recalled to the army. His subsequent military career included the Black Hawk war, the second Seminole war and the war with Mexico.

Mexico.
During the Mexican war he was again and again promoted until he attained the rank of Major General. It was during this war that he received the name of "Old Rough and Ready." from his plain appearance and simple manners. The Whig national convention of 1848 nominated him as President of the United States, and he was elected and inaugurated on March 4, 1849. Kindliness of manner and pleasant, agreeable and homely nature were prominent characteristics of this soldier president.

WANTED-A boy who does not

know more than the foreman.

part in many of the battles of the Mexican War. Received a captaincy in 1853, but resigned the following year and settled in St. Louis. The opening of the Civil War found Captain Grant among the lirst to offer his services. He became Colonel of an Illinois volunteer regiment, but by his ability was soon promoted to the rank of Brigadier General. His splendid work in occupying Paducah, breaking up the Confederate camp at Belmont, and capturing Forts Henry and Donelson, earned him the rank of Major General. In the west and southwest he showed ability and general-ship of the highest order. In addition to receiving the rank of Lieutenant General, Congress awarded him a gold medal. As General-in-Chief of the United States armies he issued his first order on March 17, 1864. He made his headquarters with the Army of the Potomac until the capitulation at Appomatox Court House on that memorable April 9, 1865. In 1866 he was made General of the United States army. General Grant was elected President of the United States in 1868, and re-elected in 1872, retiring from office March 4, 1877. His tour round the world, which he undertook, was one continuous ovation, being everywhere received with the highest honors.

JULY 24, 1847: SALT LAKE CITY FOUNDED BY MORMONS.

FOUNDED BY MORMONS.

JULY 24, 1862: EX-PRESIDENT MARTIN VAN BUREN DIED. Born at Kinderhook, New York, December 5, 1782. Educated at the village schools. Studied law and was admitted to practice in 1863. His political career began when he was eighteen, being a member of a nominating convention. Between 1868 and 1818 he held various political offices including the attorney generalship of New York State. The Albany regency was organized and Mr. Van Buren was its leader. He was chosen United States Senator in 1821 and again in 1827. He was Governor of the State of New York in 1828 and the following year was Secretary of State in Jackson's cablnet. His nomination as minister to England in 1831 was rejected by the Senate, but in May, 1832, he was nominated and elected Vice President of the United States. In 1836 he was elected President of the United States and was inaugurated March 4, 1837. He was a staunch upholder of anti-slavery principles, and took a decided stand for the Union at the beginning of the Civil War.

JULY 25, 1863: SAMUEL HOUSTON DIED, Lexington, Virginia, was his birth-place. While he was very young the Cherokee Indians adopted him into their tribe. In the Creek war he distinguished himself under General Jackson. Resign-

JULY II, INM: DUEL BETWEEN AARON EURR AND ALEXANDER HAMILTON. The quarrel originated through some disparaging statements made at a political meeting by Hamilton as to Burr's sultability as a candidate for Governor of New York. In the subsequent election Burr was defeated and he chose to ascribe his defeat to Hamilton's influence. Unwise expressions of Hamilton, although uttered in private, were conveyed to Burr, which increased his anger. Several letters passed between the principals and Hamilton made every honorable apology. Nothing, how between the principals and Hamilton made every honorable apology. Nothing, however, would satisfy Burr but a duel, and Hamilton could not refuse. They fought at Weehawken, New Jersey, the weapons being pistols. Hamilton would not discharge his pistol, but Burr fired and his antagonist fell mortally wounded and died the same day. So great was the public excitement and indignation at Burr's dastardly act that he was forced to become a fugitive from justice.

a fugitive from justice.

JULY 12, 1892: CYRUS W. FIELD DIED.
Born at Stockbridge, Massachusetts, November, 13, 1819. Was a prosperous and
enterprising merchant. His great claim to
fame is the fact that he made ocean telegraphy practicable. The discouragements he
met with in his undertaking were enormous, but he had a glorious triumph when
on July 27, 1896, permanent telegraphic communication between Europe and America
was assured. Honors flowed fast upon Mr.
Field. Medals and decorations from his
own admiring countrymen, as well as from
the nations of Europe, were bestowed upon
him. The Prime Minister of England declared that if Mr. Field had been a British
subject, the government would have rewarded him with the highest honors.

JULY 13, 1832: DISCOVERY OF THE

JULY 21, 1861: BATTLE OF BULL RUN. In this battle the Federals in their retreat left behind them over 3,000 men in killed, wounded and captured, together with twenty seven cannon, thousands of small arms, ammunition and hospital supplies. The Confederate loss was over 2,000 men. The result of this battle was to greatly swell the ranks of the Confederates, while for a time the Federal army was much disheartened.

JULY 23, 1885; U. S. GRANT DIED. Born at Point Pleasant, Ohio. Entered West Point and graduated in 1843. Took

ing army life he became a lawyer, and, ening army life he became a lawyer, and, entering politics, was member of Congress from 1823 to 1827. In the latter year he was elected Governor of Tennessee. On his emigrating to Texas he speedily became conspicuous in its public affairs and in the victorious fight for independence he was one of its chief supporters, and became the first President of Texas. When Texas was annexed to the United States he was chosen its first Senator and subsequently Governor. Sternly opposed to the Confederacy, he resigned his office rather than take the oath of allegiance to that body.

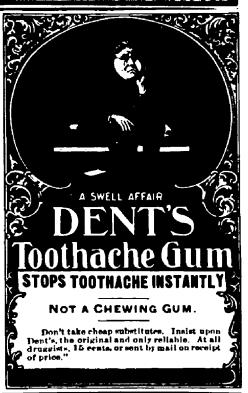

JULY 26, 1838: SPAIN SUED FOR

JULY 26. 1898: SPAIN SUED FOR FEACE. The French ambassador to the United States was Spain's intermediary in the preliminary negotiations for a settlement of matters between that country and America. A board of commissioners afterwards met in Paris and signed a treaty of peace between the two countries.

peace between the two countries.

JULY 31, 1875: EX-PRESIDENT ANDREW JOHNSON DIED. Was born at Raleigh, North Carolina, December 29, 1888. In early life he became a tailor, caring for his mother and teaching himself to read. At Greenville, Tennessee, he married, and his wife taught him to write. Entering politics he held many offices, Among them being Alderman, Mayor, member of the Legislature, Presidential Elector, State Senator and member of Congress. He became Governor of Tennessee in 1853 and held that position until appointed United States Senator in 1857. After being Military Governor of Tennessee for two years, he was elected in 1861 Vice President of the United States. In 1865 he succeeded Abraham Lincoln as President. His quarrels with Congress were almost continuous. Being impeached with almost continuous. Being impeached with the commission of "liigh crimes and mis-demeanors," he was tried but acquitted in 1868. He resigned his high office in 1869. The University of North Carolina honored him with the degree of LL, D. in 1866.

A Newsboy's Turnout.

John Hess is a newsboy in Omaha, Nebraska, who owns a donkey and wagon, with which he does delivering. He saved the money with which he bought the donk-y from his profits in selling papers on the street. He made the wagon without assistance and collected discarded pieces of harness from his friends until he had a complete set for his own use. He makes a neat sum of money every week in addition to his profits from the sale of papers, by hauling ice, cinders or any other work his customers may have for him. His parents are not wealthy, but have a comfortable living. John is very energetic and ambitious and will no doubt have a business of his own some day. Many persons laugh at him as he passes along the steet, but he does not seem to care for that in the least. He will, perhaps, ride along the same street in a fine carriage of his own if he continues his life as he has comm-need it.

What Have You Cost?

The editor of THE AMERICAN BOY would like to receive letters from boy readers of this paper telling him what, in the opinions of the writers, they have cost their parents from the day they were born, and what they will probably cost their parents by the time they are 18 years of age. Figure up what you eat and wear, your school expenses, your doctor bills, the value of the work that is put in by your father, mother, brothers and sisters in taking care of you, etc.

You will probably be with your parents until you are 18, at least. The elitor just wants to know what your idea is about what it costs to make a man out of a boy. He has a little boy of his own, and he wants to know The editor of THE AMERICAN BOY

man out of a boy. He has a little boy of his own, and he wants to know what he has to look forward to in the way of expenses.

Make an Early Start.

Charles M. Schwab, President of the United States Steel Corporation, talked one evening in May to three hundred school boys, students of the St. George's Evening Trades School in Baltimore. Mr. Schwab said in part:

"From my long experience I am led to believe that many boys make the mistake of depending upon influence to obtain for them positions of profit. This is a serious drawback to any boy, for even if he have the talents necessary to advancement, other boys, his competitors, will say that his success or partial success was due, not to merit, but to influence. Go yourself to seek work in life and depend upon your own exertions and merits. Merit must count and merit must win. The boy who depends upon influence is handicapped sadly from the start.

"No matter what business you enter, the

"No matter what business you enter, the

"No matter what business you enter, the essential feature to success is that you perform your tasks better than anybody else. This alone will command attention. Everybody is expected to do his duty, but the boy or man who does a little more is certain of promotion.

"Success is not money-making alone. And I want to state that of the truly great men I know in industrial and manufacturing lines, not one is a college-bred man, but they are men who received an industrial or mechanical education and who worked up by perseverance and application.

"Let me advise you all to make an early start in life. The boy with the manual training and the common school education who can start in life at sixteen or seventeen can leave the boy who goes to college till he is twenty or more so far behind in the race that he can never catch up. This, however, does not apply to the professional life. The other day I was at a gathering of forty successful business men-men in life. The other day I was at a gathering of forty successful business men—men in industrial and manufacturing business—and the question gross as to how many men of the authorities of Distances. industrial and manufacturing ousiness—and the question arose as to how many were college-bred men. Of the forty only two had been graduated from colleges and the rest of the forty had received only common school educations; had started in life as poor boys. So I say, as parting advice, start early."

WANTED-Boys who would scorn to tell a lie, who neither smoke nor chew, can find ready employment.

A Young Reverend.

Talmage Witt, of Jennerstown, Pa., is preparing to attend a Lutheran theological seminary at Pittsburg. The country folk about Jennerstown speak of him as Reverend Witt. Four years ago Talmage, then nine years old, was asked to take charge of his Sunday school class in the teacher's absence. The boy displayed such a remarkable knowledge of the Bible and such control over the pupils that when someone was wanted to read the scriptures at a prayer meeting in the neighborhood the boy was called upon to do so. The little Lutheran congregation was too poor to have a regular pastor; and some of the older people, noting the boy's ability, asked that he be allowed to read regularly to them on Sundays. It was but a short step from this to preaching, and for two years he has delivered sermons—crude in their way, but interesting. He makes a strange picture as he stands in the church puljit, before the gathering of farmers and villagers, Bible in hand.

A member of the Evangelical board at Pittsburg happened to be at Jennerstown

the expense of the authorities at Pittsburg.

Be Courteous, Boys.

"I treat him as well as he treats me," said Hal.

Maid Hal.

His mother had just reproached him because he did not attempt to amuse or entertain a boy friend who had gone home.

"I often go in there, and he doesn't notice me," said Hal again.

"Do you enjoy that?"

"Oh, I don't mind! I don't stay long."

"I should call myself a very selfish person if friends came to see me and I should pay no attention to them."

"Well, that's different; you're grown up."
"Then you really think that politeness and courtesy are not needed among boys?"
Hal, thus pressed, said he didn't exactly mean that, but his father, who had listened, now spoke:
"A boy or man who measures his treatment of others by their treatment of him has no character of his own. He will never be kind, generous, or christian. If he is ever to be a gentleman, he will be so in spite of the boorishness of others. If he is to be noble, no other boy's meanness will change his nature."

will change his nature."

And very earnestly the father added:
"Remember this, my boy, you lower your
own self every time you are guilty of an
unworthy action because some one else Is. Be true to your best self, and no boy can drag you down."—Christian Work.

Important Questions for Boys Who Want to Seek a Fortune in the City.

Every country boy, whose ambition is to "go to the city." should ask himself the following questions:

First. I am going to the city in the hope of making my fortune. Is there any duty at home on which I shall turn my back when I go—any duty weightler and more urgent than that of making my fortune? Second. For every dolar to be earned there are at least ten competitors in the city for one here in the country. What qualities have I that will insure me success over the other nine?

Third. The Jack of all trades, or "handy man, who can turn his hand to anything." is not wanted in the city. He is speedily trampled out of sight. Success is to be won only by the men best trained in their own trades or professions. What trade or profession have I? What proof have I given of special ability in any trade I have in mind, or that may seem attractive to me?

Fourth. Have I energy, skill, pleasing

me?
Fourth. Have I energy, skill, pleasing manners, tact to win a place where the crowd and the competition are so great? Or is my only qualification for town work discontent with home and village life and unitness for work in the country?
Fifth. At home I have the good will and friendship given to my family and to me by people who have known me since I was born. This is a valuable capital, out of which happiness can be made to come. What is there in the city to atone for the lack of it to a poor, friendless boy? Isn't there some occupation in the village or the country town that I can secure, or can not tarming, with energy and industry, be made to give me an adequate livelihood?

to give me an adequate livelihood?

These questions, if gravely considered, may lead a boy or girl of common sense to a wise choice at one of the great turning points of life.—The Man With the Hoe.

Boy Orators Win Prizes.

master in elocution or a very captions critic could have found flaws in the declarations of the young orators, it was no easy task for the judges to select the young gentlemen whose efforts entitled them to the honors of the even-Walter A. Mulvihill, for his dramatic rendering of the sollloquy entitled "The Soul of the Violin."

Wants to Be Something.

A little Italian bootblack pushed his head through the door into the office of superintendent Harris, of the public schools. Mr. Harris called upon the Rescue Mission, and Superintendent Madison, after hearing the facts and seeing the boy, offered to give him a home. Then the members of the Board of Education took up a collection and learn how to grow up to be a school and learn how to grow up to be a good American like Teddy Rooseveit. I'm fired o' bein' called a ginny, an' I thought much be you could gimme a show."

Thus boy was Ernesto Cerecello, twelve years old. Three years ago his father brought him to America, leaving the mother somewhere in Italy, the boy doesn't tendent Madison's family at the mission,

ERNESTO CERECELLO AS A BOOTBLACK AND AS A SCHOOL BOY.

know just where. After three or four months his father, failing to get employing ment, returned to Italy, leaving him with his uncle in Poughkeepsie. After a while the uncle went to South America and the boy was left to shift for himself. He went out on the streets with his blacking box, and for a year he earned barely enough to pay his board with a poor woman whose sympathy he had aroused. When the boy saw the picture of Teddy Roosevelt in the papers and heard about him it set him thinking. He said to himself. "Mebbe there's a chance fer a kid like me."

The chief of police closed his desk, put on the papers and heard about him it set him thinking. He said to himself. "Mebbe there's a chance fer a kid like me."

The Small Boy on "War."

"War is a Cruel Thing. It makes the wimmen Widders an the Small Boys Orphants. But Maw says some of the Men what gits Killed Ain't worth killin'. Widders gits a pension sometimes when their Husbands is Killed. Pa has been in the war twice, but Maw says looks like he never will get Killed!"—Atlanta Constitution.

Start Right.

There is nothing like starting right, and the time for men to start right is when they are young. A wrong start may be, and often is, corrected, but the risk is too great to be taken by the young men of our times, when the rush for places in the front ranks is so great that those who are compelled to "begin over again" are almost certain to be left behind in the race. The young man of wavering views is doomed to be side-tracked in this positive age. The young man who holds views of his own, expresses them courageously, and sticks to them loyally will lose no friends in the long run even among those from whom he differs.

Never play at a game of chance.

The Youngest Court Bailiff.

What would you think of a boy of twelve years opening and adjourning court? Well, there is one who has done that very thing. He is William C. McDonald, a Colfax (Wash.) boy. All last winter he served as court balliff in the Superior Court of Whitman county. Wash. He was, undoubtedly, the youngest court balliff in the United States. The boy writes us, in answer to our inquiry about himself: "Like many boys, I am fond of pets. Father gave me a beautiful colt named 'Clipper,' and I have nine

WILLIAM C. MCDONALD.

Belgian hares. I enjoy riding 'Clipper' and caring for my hares as much or more than opening and adjourning court and listening to lawyers dispute. I feel that my pets are always true and never attempt to deceive. From what I have seen in court, I don't think I can say as much for some lawyers. I expect to go prospecting in Idaho for a gold ledge this summer; and if I find what I am going to look for, I will be the youngest gold mine owner in the country, and THE AMERICAN BOY will hear from me."

Clarence: The Boy You Saved.

Last June we invited readers of THE AMERICAN BOY to contribute the sum of sixty dollars for the purpose of rescuing a boy from the slums and putting him into a good home, the publishers agreeing to contribute from their own treasury a like sum for the purpose of saving another boy. Readers of THE AMERICAN BOY to the number of several hundred contributed their pennies and nickels sufficient in amount to warrant our taking a boy from the slums of Baltimore and putting him in the safe keeping of the National Junior Republic, at Annapolis, Md. We gave a picture of the boy, Clarence by name, in the July number of this paper;

TO-DAY.

and now, nearly a year later, we are able to give another picture of him, so that those who contributed to the improvement in the lad may see some evidence of it and feel the satisfaction to be derived from the do-ing of a good act. The Superintendent of the National Junior Republic writes us as follows:

Clarence has been with us nearly a year now. His selection proved a happy one. He has developed into a happy, self-reliant, energetic, truthful boy. There could have been no case in which so little money could been no case in which so little money could have done more good; for his previous home life was a terrible ordeal for any child. He has done well with his studies. He has charge of milking the cows, and proves himself very reliable in this responsible job. He will make a good man, I am sure."

A Young Vice President of a Railroad. | •••••••

Five years ago Cornelius Simmons, of Atlanta. Ga., then a lad of eight, begun going to school against his will, but his father, the president of the Atlanta Rapid Transit Company, compromised with him by saying: "If you will keep up your lessons I will let you spend your play time in the

Company, compromised with our lessons I ing: "If you will keep up your lessons I will let you spend your play time in the repair shop."

Cornelius, partly satisfied, strapped his books, threw them over his shoulder and started for school. Saturdays and holidays, and hours after school were spent among the big machines. Cornelius wanted to know how the cars were started and stopped, and how the motors were put to-

OORNELIUS J. SIMMONS, JR.

gether. He took up the study of electricity. The mechanics in the shop taught him the use of various tools. He learned how to be a motorman, and how to repair a car whose mechanism had gone wrong. Finally he could figure out the cost of operating

cars.

About a year ago the office of vice president of the road, of which his father was president, became vacant. A director, who was familiar with the boy's progress, suggested, laughingly, that Cornelius be elected to the position, and he was chosen, his father giving consent on condition that the boy be allowed to complete his course of study. So this thirteen year old boy is actually vice president of one of the most important street railway companies of the south, having general supervision of the repair work and car movements.

CHARLES H. BETTS. WITH THE DEERING HARVESTER COMPANY, CHICAGO, ILL., WRITES THE EDITOR OF THE AMERICAN BOY, UNDER DATE OF MAY 27, 1901, AS FOLLOWS: "ENCLOSED PLEASE FIND A LETTER PROM MY AMERICAN BOY, GIVING YOU THREE NEW SUBSCRIBERS TO YOUR VALUABLE PAPER. I WISH TO CONGRATULATE YOU ON THE SICCESS YOU ARE MAKING, AND ONLY WISH EVERY BOY IN OUR LAND WAS ON YOUR LIST OF SUBSCRIBERS. YOUR PAPER, IN MY OPINION, IS AN I'P TO DATE, BRIGHT, INTERESTING SHEET, AND EVERY BOY WHO READS IT REGULARLY CANNOT FAIL. TO HAVE HIGHER IDEALS AND ASPIRATIONS. TRULY YOUR MISSION IS A GRAND ONE, FOR ON THE AMERICAN BOY OF TO-DAY THE FITURE PROSPERITY OF OUR COUNTRY DEPENDS."

The Lights of New York 250,000,000 Candle Power.

Manhattan Island is the most brilliantly illuminated tract of land of its size in the

New York turns on every night about 250,-New York turns on every night about 250,-000,000 candle power of lights. The figures themselves, though dazzling, fail to give any idea of their value. The light of but 700,000 candle power which was once displayed at the top of the Eliffel Tower was visible for 110 miles. According to these figures, if all the lights of New York were combined in a single flame it should be visible—but for the curvature of the earth and impurities in the air—for about 600 miles. miles.

The streets of Manhattan Island alone are lighted by 18,511 gas lamps of sixteen candle power each, 739 naphtha lights and 2,850 electric lights of 1,200 candle power each

2,800 electric lights of 1,200 candle power each.
There are something over 900,000 incandescent electric lamps in New York. Their combined light is about 15,000,000 candle power. Add 8,000 arc lamps.

To operate these lamps 200 dynamos are required, each with a capacity of forty lamps ranging from 1,000 to 1,600 candle power each. The arc lamps have a combined candle power of about 10,000,000.

New York has not only the best lighted streets, but the most brilliantly lighted shops, offices and homes. The most brilliantly lighted interior is of the Metropolitan opera house, with 10,000 incandescent lamps. The Hotel Waldorf has 4,500 incandescent lamps alone. The Hotel Majestic has 500 such lamps. The Manhattan Trust Company has 3,500 lamps. The American Tract Society building has 3,000 lamps.—
New York World.

Boys in the Office, Store, Factory, and on the Farm

One cannot expect a successful career if he tries to avoid everything that is likely to cost him any effort.

It is not possible for one man to follow in the footsteps of another. Each must work out his own destiny.

Prize a boy's friendship and confidence less for the good you see in him than for the evil you can take out of him:

Hang on the walls of a boy's room good pictures. The influence of a good picture is incalculable. A boy's environment will tell on his future.

WANTED--Truthful, honest, upright boys who would like good positions in the city or country.

'Georgie," said his mother, "I will not whip you this time if after this you promise to be a good little boy like Willie Jones." "Mamma," said Georgie earnestly, "whip me, please."

MAKE YOUR EMPLOYER'S INTER-EST YOUR INTEREST. AIM TO DO YOUR TASKS IN THE BEST MANNER POSSIBLE. BE SURE THAT YOU UN-DERSTAND YOUR EMPLOYER'S WISHES, AND THEN DO YOUR BEST TO COMPLY WITH THEM.

Every young man should have a watch which is a good timekeeper; one that is nearly right encourages bad habits, and is an expensive investment at any price. Wear threadbare clothes, if you must, but never carry an inaccurate watch. Pushing to the Front.

Promptness is the mother of confidence, and gives credit. It is the best possible proof that our own affairs are well ordered and well conducted, and gives others confidence in our ability. The man who keeps his time (i. e., is punctual), as a rule, will keep his word. -Pushing to the Front.

Boss: "I don't know whether to discharge that new office boy or raise his salary.

Manager: "What has he been doing?" Boss: "He rushed into my private office this morning and told me there was a man downstairs who would like to see

Manager: "Who was it?" "A blind man."—Tit-Bits. Boss:

WANTED-A bright, clean-faced honest boy with good manners for messenger service. One who will not fool away his time peeking through a knot-hole in the fence at the ball park, and who does not smoke cigarettes.

Mr. Vreeland's Advice Taken.

Recently Mr. H. H. Vreeland was making a speech to young men and spoke very emphatically on the question of personal emphatically on the question of personal manner and outward appearance. "If you are looking for a job and have one in sight," said he, "and have but twenty four dollars in the world, spend twenty dollars for a new suit of clothes, three dollars and fifty cents for a pair of shoes, tifty cents for a hair cut and shave. Then walk where that job is and ask for it like a man." The boys applauded.

job is and ask for it like a man." The boys applauded.

The next day a spruce looking young man walked into Mr. Vreeland's office. "Please give this card to the president," he said. Mr. Vreeland looked at the card when it reached him. On the same were these words: "I have paid twenty dollars for this suit of clothes, three dollars and fifty cents for a pair of shoes, fifty cents for a hair cut. I have walked from Harlem. I would like to have a job as conductor on your railroad."

He got his job.

A Profitable Vacation

If you expect to go to work in the Fall you can-not use your vacation more profitably than in not use your vacation more profitably than in preparing for a position that will pay good wages from the start and enable you to gain valuable experience at the same time. We have helped thousands of young men to secure positions. Many of our students have gone from school into drafting rooms at good salaries where they have continued their studies and advanced to even better politions. We can do as much for you; our catalogues tell how.

A Window Bookcase.

A window bookcase and writing desk is a novel and useful piece of furniture for almost any room, and while it may seem an odd idea for the embellish-ment of a window, its adaptability can readily be appreciated from a glance at the illustration, which was drawn from a case actually made and in use.

This is a piece of furniture that any carpenter can make from clear pine or white wood at a nominal cost and it may be painted or stained and varnished as a matter of choice.

An inexpensive one can be constructed from boxes and boards with matched edges, a few feet of cornice moulding. some hardware and with the tools to be found in most any home.

Two boxes of equal size are selected for the base, and to the open sides coors are attached by means of hinges. These boxes are placed on end so as to upport the desk ledge and bookcases.

Three boards are driven together and placed across the upper ends of them and made fast with screws.

The bookcases can be two long shoe boxes of even size, and arranged with shelves somewhat as shown in the drawing.

Across the top a shelf is placed and made fast, this will bind the cases together and prevent them from moving while at the same time the bottom of each box can be made fast to the desk top.

Simple curtains of some light material are fastened at the top and halfway down at the front of the cases by means of light rods and rings, so that when desired they may be drawn across to hide the shelving and hooks.

Drawers can be made in the lower cases to accommodate writing materials, and the closets below them will be quite large enough to harbor magazines, pamphlets, etc.

Half way from the desk ledge to the top of the window a shelf can be ar-

ranged to hold two or three glass bowls from which growing vines can climb on the curtains or on fine wires strung across from case to case.

The shelving in the cases should be placed the proper distances apart to accommodate books of various sizes, the smaller volumes at the top and the larger ones at the bottom, as shown.

To Represent Cadillac's Son.

The French citizens of Detroit have selected Antonio Bedard, twelve years old, son of Captain Joseph A. Bedard, of Detroit, to represent Cadillac's son during

the Bicentennial celebration of the found-ing of Detroit, which will take place in the last week of this month. Cadillac's son is supposed to have been about the age of twelve when the noted Frenchman landed at what is now Detroit. Antonio, who is to impersonate the little

French lad of two hundred years ago, is a bright boy, born in Detroit, educated at St. Joachim's school, and an excellent pianist. Having attended a French school, he speaks the Parisian as fluently as the Canadian French, which the family use in their home. The boy is eager to act the role of the son of the discoverer, and with a boy's quick imagination has already conjured an ideal of the part. He is reading everything bearing on the life of young Cadillac that he can find, and there will be no more enthuslastic Frenchman in the entire pageant than he.

Antonio's father was born at Charleburg, near Quebec, in 1851. When Pope Fius IX, issued a call for one volunteer from each Catholic parish for the Papal army to act as a special guard against the encroachment of the Garibaldians, Bedard, then nineteen years old, was chosen from among the young men of his parish. He reached Rome in October, 1869, and was assigned to the Fourth Zouave Battalion, and served in many important engagements. After the surrender of Rome, Bedard returned to Montreal, and from there removed to Detroit. This was twenty two years ago. He has been appointed First Lieutenant of the Cadillac Guard for the celebration, and will command the company of French soldiers in the landing of Cadillac to take place July 24.

Target Practice during vacation time will take you out in the open air, sharpen your eyes and steady the nerves. You will enjoy a fascinating sport and acquire an art that may be of value in years to come.

Marcus Whitman Company, No. 1, Division of Idaho, Boise, Idaho, Captain Fisk

James B. McPherson Company,

Van Dusen.

Under the Auspices of "THE AMERICAN BOY."

Object:—Tre Cultivation of Manliness in Muscle, Mind and Morals.

The object more definitely stated: To promote mutual and helpful friendships among boys; to give wider circulation to high class boy literature; to cultivate in boys physical, mental and moral courage, and develop them along social, intellectual and moral lines; to cultivate purity of language and actions; to discourage idleness, and encourage honest sport and honest work; to cherish and emulate the examples of great and good men; to inculcate lessons of patriotism and love of country; to prepare boys for good citizenship; to cultivate reverence for the founders of our country, and to stimulate boys to all worthy endeavor.

The new Company at Allentown, Pa., of which we made mention in the June number, is the Eagle Athletic Company, No. 6, and the Capitalin is Warren B. Davis, instead of Norman H. German, as stated Boys desiring to Organize Companies may obtain a Pamphiet from us containing the Directions published in the January and in that number. February Nos. of this Paper. It is sent free.

Fred Stewart, Captain of the Prairie Creek Company, No. 1, Division of Arkansas, Rogers, Ark., says that they have adopted the proposed constitution and bylaws. This Company has a debate at every meeting. The Captain writes us that they are going to give an entertainment soon for the benefit of the Company.

Rufus Adams, Captain of the General Sam Houston Company, No. 2. Division of Texas, Comanche, Tex., says that his Company is working to get six companies in Texas so that they can take advantage of THE AMERICAN BOY'S Free Circulating Libraries. This Company will celebrate General Sam Houston's birthday every year. U. S. Grant Company, No. 6, Division of Hinois, Chandlerville, 1li., Captain Elmer R. Abbott.

Buckeye State Company, No. 5, Division of Ohio, Athens, Ohio, Captain J. Pratt

Libraries.

There seems to be a misunderstanding of the matter of THE AMERICAN BOY Free Circulating Libraries. Some months ago we announced that when there were six companies in any State we would be ready to furnish to any one of these six companies a circulating library, under certain conditions. We afterwards withdrew the condition that there should be six companies in a State, and offered to send one of the libraries to any company who manifested a desire to have one, provided it send us lifty cents to cover expense of boxing, etc., and would pay freight charges on the box when received. Each circulating library contains five excellent books—not paper-bound, cheap books, but books that will average one dollar to one dollar and lifty cents each. These books are loaned by us to a company for two months, at the end of which time we order them sent elsewhere, the companies sending them back or forwarding them to another company without expense to itself in so doing. We make no money out of the circulating library scheme, the fifty cents which it is necessary for the company to pay us being eaten up by the expense of handling the libraries here. Every company in the country should make it a part of its business to ge these circulating libraries. As a company is entitled to a library for two months, it will be ena part of its business to ge these circulating libraries. As a company is entitled to a library for two months, it will be enabled to get six libraries a year, or thirty of the best boys' books in the land, at practically see expense.

tically no expense.
Is your Company ready for one?

The July "American Boy" Field Day Contest.

The Field Day contest for July will be for championships in the Running Hop. Step and Jump and in Swimming One Hundred Yards. We offer Senior and Junior championship medals to the two members of The Order of the American Boy who make the best Running Hop, Step and Jump without weights, and Senior and Junior championship medals to the two members of The Order of the American Boy who make the best time in Swimming

American Boy Field Days

Third Saturday of Each Month UNDER THE AUSPICES OF

The Order of The American Boy JULY FIELD DAY IS JULY 20th CONTESTS:

Running Hop, Step and Jump, and Swimming

James B. McPherson Company, No. 7, Division of Illinois, Ravenswood, Ill., Captain Arthur Barker. Atlantic Company, No. 1, Division of Iowa, Atlantic, Iowa, Captain Bert Laird. Hebron Athletic Company, No. 1, Division of West Virginia, Hebron, W. Va., Captain Latimer P. Jones. The Little Egypt Company, No. 8, Division of Illinois, Mt. Vernon, Ill., Captain Fletcher Poole. Kentucky Prince Company, No. 1, Division of Kentucky, Louisville, Ky., Captain R. R. Ross. John A. Bingham Company, No. 6, Division of Ohio, Deersville, Ohio, Captain Gustle McMillen.

Company News. George Seaman, of the Buffaloes Com-any, No. 8, has gone to the Adirondack Mountains for a few weeks.

Sidney J. Dunn, Captain of the Buffaloes Company, No. 8, Buffalo, N. Y., sends us a birdseye view of the Pan-American.

George H. Stone, Captain of the General N. P. Banks Company, No. 3. Division of Massachusetts, Waltham, Mass., has re-signed, and Albert Minster has been ap-portant in his stead pointed in his stead.

The Andrew Carnegle Company, No. 3, Division of Pennsylvania, Allegheny, Pa., held an entertainment at the S.xth Ward School Hall, May 24. The proceeds go to fixing up their club room.

Sidney J. Dunn, Captain of the Buffaloes Company, No. 8, Order of the American Boy, Buffalo, N. Y., wrote us a very nice description of the grand parade which took place at Buffalo on May 20.

The boys of the Winfield Scott Schley Company, No. 2, Division of Maryland New Windsor, Md., use in their correspondence a printed letterhead containing the name of the Company and the list of officers.

The Hayes Company, No. 4, Division of Ohio, Lindsey, Ohio, held an interesting meeting May 4, followed by an entertainment and debate. This Company also held an ice cream social and drill on Decoration

Alfred Ellison, Captain of the Badger Company, No. 3, Eau Claire, Wis., writes us that this Company holds its meetings weekly. They have secured a hall which is twenty by forty feet, and intend to fit up a gymnasium in it.

Sidney J. Dunn, Captain of the Buffaloes Company, No. 8, Buffalo, N. Y., who lives at 96 Grant street, says if there are any members of the Order at the Pan-American will be pleased to have them call on

The Winfield Scott Schley Company, No. 2, Division of Maryland. New Windsor. Md., has a nice room on the second floor of a large building. The floor is carpeted, and the walls are decorated with pictures and flags. This Company has a large flag which was presented to it. It meets on Monday evenings, and always has a literary program. The dues are three cents a week. It also has a library of about twenty five volumes.

Burt T. Anderson, Captain of the Conger Company, No. 2, Division of Illinois, Galesburg, Ill., says this Company holds its meetings every Tuesday evening at the club room. There is a tax of five cents a month on each member, and out of this money all expenses are paid. All the members have contributed toward a library, and they now have about forty of the best books. The Captain writes us that Minister E. H. Conger, after whom the Company was named, recently spent a week in their town. On Thursday, June 6, the Company held a pienic at Knoxville, about five miles from Galesburg; they stayed all day and had a fine time.

One Hundred Yards. The conditions of the Field Day contests have been published heretofore, but it is well to repeat them. On the third Saturday in July, that is. On the third Sat

THE ORDER OF THE AMERICAN BOY

A NATIONAL NON-SECRET SOCIETY FOR AMERICAN BOYS.

There seems to be a misunderstanding of the matter of THE AMERICAN BOY Free Circulating Libraries.

A National Non-Secret Society For American Boys.

There seems to be a misunderstanding of the starting line to the point where the hindermost heel strikes the earth. In case Circulating Libraries. Some months are it is jumper falls back the measure to be made from the matter of THE AMERICAN BOY Free Circulating Libraries. Some months are it is jumper falls back the measure is taken to be a misundermost heel strikes the earth. In case the jumper falls back the measure is taken to be a misundermost heel strikes the earth in the correct to the point where the point the jumper falls back the measure is taken from the point where his hindermost hand strikes the earth; and in the case of the Swimming contest the referee shall, see that the one hundred yards is correctly measured and that each swimmer starts on the line and swims to the end of the course, keeping and noting accurate time. After the contest is over the referee should send to the publishers of THE AMERICAN BOY the score of the winner who is over fifteen years of age, and the score of the winner. who is under fifteen years of age, in each case noting the ages of the winners. Every member of a Company should enter the contest if possible, no matter how poor his abilities. One purpose of the contests is to develop boys physically. If there are but a few members of a Company who are able to enter into the contests let them do so.

Reports should be sent to us promptly, and the Captain of each Company should see that the referee, in making his report fulfills the requirements as we have laid them down. They are simple, and no one should go astray in meeting them.

Date for Field Day Contests Changed.

Heretofore the Field Day contests of The Order of the American Boy have taken place on the second Saturday of each month. This has proved to be an unsatisfactory time, as it does not give the boys time enough for training after the announcement of the contest in the pages of THE AMERICAN BOY. Hereafter the contest will take place on the third Saturday of the month.

Standing Hop, Step and Jump Championships,

The June AMERICAN BOY Field Day Contests resulted in the Standing Hop Step and Jump Senior Championship going to Ray Venettisch, of Pueblo, Colo, and the Junior Championship to Howard W. McClure, of Litchfield, Minn. The scores sent in to date are as follows:

Notice and Warning

The referces, in sending in their reports of the May and June jumping contests, failed, in some cases, to give the ages of the contestants, so that their records cannot be taken into account in the determining of the prize winners. The referee should remember that we choose a prize winner from the contestants under lifteen years of age, and a prize winner from the contestants over tifteen years of age. When a boy's record is sent in without his age being given we cannot enter him in either class, and the record counts for nothing. If your jump is not recorded in the published score, it is because the report is irregular.

Round Shoulders on Boys.

Archie M. McNeil, New York City, refers to our paragraph entitled "Round Shoulders on Boys" that appeared on page one hundred and twenty one of the February number, and says: "I have studied physical culture, and am led to say that instead of trying to keep the shoulders back let the boy throw back his head and breathe from his chest; that is, expand his chest every time he breathes. I have found this to give good straight shoulders and increase chest expansion."

chest expansion."
"Another good exercise," he says, "is to hold the arms out straight or level with the shoulders, in front. Hold light dumb bells in each hand, and swing them back as far as possible. Keep this up until tired, which will, at the beginning, be very soon."

The Juvenile Volunteer Fire Company.

There is in Chicago a unique organization known as the Juvenil? Volunteer FireCompany, the youngest member of which is eight years old, while the oldest is James Kirkley, thirteen years old, who is chief of the company. Young Kirkley is the grandson of Fire Department Chief Swenie. The chief has placed at the disposal of the juvenile company a large vacant room in Engine House No. 5. The company owns

FIRE CHIEF JAMES KIRKLEY.

its apparatus, hose, patrol, and chief's cart. The patrol is painted a bright red, with gold trimmings, having come to the company through two of its members. Charles and Milton Shepard, to whom it was given by their father, Edward Shepard, who is superintendent of the Fire Insurance Patrol. Each boy has a uniform and a full outfit. Every day after school the members report at the engine house and are drilled. On Saturdays they clean their quarters and their wagons. Captain Foley of Department 5, has given the boys considerable attention, and, by way of practice, a still alarm is often given for the boys' benefit, when a run down the street is taken, to the amusement of the passersby, who line the sidewalks to watch and applaud their efforts.

The company comprises the following members: James Kirkley, chief; W. J. Fitzsimmons, captain; Albert Sauter, lieutenant; Charles Shepard, Milton Shepard, Henry Rosenbark, Otto Bitters, Isadore Jacobson and Henry Peachey. We are indebted to the Chicago American for photographs. its apparatus, hose, patrol, and chief's cart.

From an American Mother.

Gaylord, Mich., April 27, 1901.

To the Editor of THE AMERICAN BOY, Detroit, Mich.

Detroit, Mich.

Dear Sir.—In renewing my son's subscription to THE AMERICAN BOY, I take this opportunity to express my thanks to one who is doing so much to benefit the boys and youths of our country, in publishing such a wholesome, sympathetic, and entertaining lot of literature as your paper contains. Had such a paper been published and circulated freely twenty five years ago. I dare say that a great many worthless specimens of manhood of the present day would have been noble, ambitious men today, instead of what they are. If cheap, trashy literature can make bad boys, certainly the reading of THE AMERICAN BOY is sure to inspire the boy who reads it to try to be all that is noble and good. You may never realize the vast harvest that will spring from your inspiriting words, but may your reward be great, is the sincere wish of A MOTHER OF AMERICAN BOYS.

Every Boy Should Endeavor to Organize a Company of THE ORDER OF THE AMERICAN BOY

'The American Boy's" Free Circulating Library.

"Watervilet, Mich., May 17, 1901.
"Mr. William C. Sprague,
"Majestic Building, Detroit, Mich.
"Dear Sir:—We received the library yesterday and were well pleased with it. The books are at the librarian's house ready for use. We think you are doing a grand thing, and we are going to take good care of the books. Yours for M. M. M. M., Lester Sodusky, Captain."

Company A, Epworth Guards, Allegheny, Pa.

Every boy shown in the picture is a subscriber to THE AMERICAN BOY. The captain writes us that he took several copies of the paper along with him to the camp where the picture was taken as healthful reading for the "natives." Captain Archie J. Holman says that if any of our boys desire to go camping this summer and wish to ask him any questions along this line, he will be glad to answer them. The cost of the outing of two weeks to Company A, Epworth Guards, was five dollars a boy, which included car fare and all expenses. The camp's name was Camp Epworth, Arnold, Pa.

O REPORT

A NAME WANTED

BOYS IN GAMES AND SPORT

How We Started Our Athletic Association.

Guy Crump, age fifteen, 101 West Seventy seventh street, New York City, writes THE AMERICAN BOY, telling how an athletic association was started in his school. He says: One morning a few weeks ago at the close of the session, Mr. K—arose and said that all boys interested in athletics were invited to stay after school that afternoon, as he intended to organize an athletic association. When school closed there was a large company of boys gathered in the assembly hall. Then Mr. K—arose and made a speech, in which he stated that while there was not much room in New York for athletics, still if a boy wanted to exercise very much he could find a place. He said there had been some objection made to athletics in schools on the ground that it interfered with a boy's lessons, but he said that he would never allow it to be so managed. He ended by telling the probable cost of the field, etc.

The boys applauded heartily, and then

field, etc.

The boys applauded heartily, and then Mr. D—, the head teacher, took the floor. He had charge of the baseball department of the school, and the moment he took his place we cheered him lustily. Mr. D— recounted a number of incidents in his baseball career, and closed by favoring the forming of the association.

After the speeches the boys formed in line and signed their names to the list. They were so enthusiastic about it that there was an actual crush at the table where the signing was being done.

The association is now well under way. A kind citizen has taken the responsibility of patron, as the Board of Education forbids dues being collected from school children. In the course of time we expect to make good the money loaned by this gentleman.

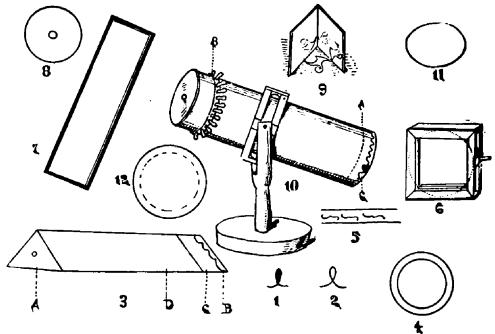

Any school can start a club of this kind

Any school can start a club of this kind by getting one of the teachers interested. There are many noble minded citizens who would be glad to loan money.

Some day I will tell you more about our appointment.

Experiments With a Homemade Kaleidoscope.

Any boy who has not experimented with three strips of glass made into a triangle will find a new field of indoor sport opened to him in this article. Figure three, the simplest form of kaleidoscope I know, is made from three strips of ordinary window glass. The strips are mounted on black paper as shown in figure seven, and bound together in the form of a triangle by pasting strong paper about them. A is a triangle of cardboard fitted into the end of the kaleidoscope. A small hole is cut in the center of this piece. Over the end B, tissue paper is pasted. C is clear glass. D is the paper which surrounds the triangle. A few bits of colored glass rattling

about at the end B. will give a myriad of beautiful color designs when viewed from the end A. If one of the glasses from a pair of spectacles, see figure eleven, be litted within the triangle, where C and D meet it will prevent the bits of glass from falling down into the kaleidoscope. Figure eleven shows a clever little device often used by designers to give them ideas. It consists of two small pieces of looking glass fastened together in the form of a right angle. If any small object be placed within the angle formed by the mirrors it will be represented as a regular design, often a very pretty one.

Figure ten shows a rather more complicated kaleidoscope. It is made from an ordinary tin can. Ginger snaps are often sold in cans of this variety. Fasten within the can, in the form of a triangle, three strips of glass which have been previously mounted on black paper. This can be done very neatly with sealing wax. Cut from soft pine a disc of wood with a diameter which is one-half inch larger than that of the can. In this disc cut a hole just large enough to admit the can; see figure four. Fasten this disc at about the center of the can with either glue or the ever useful sealing wax. For a few cents a glazier will cut for you a circle of glass just large enough to fit in the can. Fasten this where the dotted lines are marked at A. Figure six is a framework, built about the circle of wood. This will hold the can firmly in position and yet allow it to turn either to the right or left. Figure twelve is a ring of cardboard covered with tissue paper, the dotted line indicates the inner edge of the cardboard. This may be used at A, figure ten, if the glass cannot be obtained. B is a series of small handles made by wrapring wire with thread. Put the sharp ends of the wire through a plece of tape at regular intervals. Figure five shows the underside of the tape. Figure two shows the underside of the tape. Figure two shows

one, the wire after it has been wrapped with thread: Broken glass, bright candy or small bottle filled with colored water must be placed in the space between the glass A and the tissue paper C. If the whole affair is gilded it will make a very pretty parlor ornament.

A True Fishing Story.

TOLD BY CHARLES T. TOPPING, FLORENCE, KANSAS. AGE. TWELVE. One

last spring when I was hoeing my peanuts and popcorn near-ly half a mile from home, a storm came up. I thought it was just a came it was just a rain storm. and I went home to get the cows which were across the creek. Iknew if I didn't get them at once that the creek would not get them. They were three, the could not get them they were three, they were three, they were three, they were the terms.

CHARLES T. TOPPING. could not get them. They were three-quarters of a mile from the house, so I hurrled and got my pony and galloped after them. Soon it began to rain and blow harder, but I got the cows in just a few minutes before a full fledged tornado struck us, and I looked every minute to see the buildings come down. Then it began to rain and hail. After that the sun shone very bright. I went out-of-doors and heard the creek roaring and saw water everywhere on the ground. The next morning my father went down to see if his water gaps were gone, and on the way stepped on something that splashed, and looking down, saw a fine fish. Later he found more. I was in the barn when I heard my father calling me, and going out I asked him what he wanted. He asked me for a string. I got one, and then father and I strung the fish, some of which weighed as much as ten pounds each. We found one cel about a foot long. Father told me to ride around the fence to see if it was all right. At one point I found a great round hole in which the water had settled like a lake Right in the middle of this I saw a large fish lying in a hollow place which he had made in the mud by floopping. I tied my pony, and, being barefooted, went after it. It was a buffalo, that is, a scaly fish, which a great many people do not like because it is tough. I pulled him up by the gills and landed him on dry ground. Then I saw a lot of catfish on a small island and succeeded in pulling them out of the mud and pilling them out of the mud and pilling them out of the mads and went after more fish; a neighbor's boy went with me. We found at one place about two hundred catfish, big and little. These we plied into the wagon and went after more fish; a neighbor's boy went with me. We found at one place about two hundred catfish, big and little. These we plied into the wagon and the ned or of the catfish weighed from eight to eleven pounds each. We then put some hay and lee in the bottom of the wagon and piled in the fish, put a blanket over them and drove to t A flandkerchief Tussle.

Look at the diagram and see if you can discover a way for the boys to get apart. Two small boys of my acquaintance rode home in a street car tied together in this fashion, slept all night over it and did not guess the riddle until after breakfast next morning. The antics which they cut up furnished entertainment not only for themselves, but for a whole room full of people. To make it really exciting, a number of couples should be set going at once and a prize offered to the pair who get apart first. Such a wriggling and twisting into all sorts of absurd positions as this will

Fun and Profit With Homing Pigeons.

GEO. E WALSH.

he boy who lives in the city or country aid has never had a loft of homing pincons, has missed one of the rarest pleasures and sports of the day. There is hardly ures and sports of the day. There is hardly a boy who does not like pets of some kind, but usually he prefers one that can be put to some use. Thus he prefers a pony to a raobit because the former can be used as well as petted: a dog to a cat because the dog can be trained to point, retrieve or do other intelligent tricks, and even a donkey is preferred to some other quiet but useless pet animal.

is preferred to some other quiet out useless pet animal.

in selecting birds for pets, boys usually show the same good sense. Merely ornamental birds do not appeal to them. Those that can sing, whistle, mock other birds, talk, or do tricks are always preferred.

place for the birds on pleasant days. They like to go in and out of the holes while mating, and they can often be fed up there. Running from this box up through the wire netting should be a tower-like box for the entrance trap. Above the wire construct a simple door, with a trap spring, so that when a returning pigeon steps on the platform the door will open to admit the bird and close automatically as soon as inside. Such a trapdoor is necessary because some pigeons will return from long flights in the middle of the night, and they will learn to enter in this way.

Pigeons raised in this loft will always consider it their home, and they will always return to it. They must, when young, be taken a short distance from their home and released. They will then return immediately to it. They must be introduced to the trapdoor so that they will understand its use. Place the pigeon on the

grand where they can fly about every clear day.

In the center of this wire inclosure constituct the loft itself. This should be made of dry goods boxes, obtained for a small sum at any store. Purchase first as large a me as possible, and lay it on the roof for the foundation. Knock out one side and swing it on hinges so that it can be liked up and down. Saw out of this a square hole eight by ten, and put a pane of glass in it. This lower part of the loft is the indoor feeding place for the pigeons, and on stormy days the birds can go in and feed, while light will be supplied through the glass. If the door is fastened leaving a few inches open the birds can go in and out at will. out at will

out at will.

Out a hole about six inches in diameter in the roof or top of this big box, and when the second box, a little smaller, is placed or top the pigeons will have free access to the second story of the loft. This should be the breeding place of the pigeons. Cut do not be four sides, and put glass in all except one, which should open on the script or sunny side. Divide the place off by partitions, leaving a window in each do ision. A small doorway should lead from one nesting place to another. One side of this second story should open on thisges, so you can get at the nests to clean them out once a week.

Charles of this box put a third one much smaller. This should have several entrances, and should not be consected with the second story by an interior opening. This is intended for a promenade will show just how many inmates of the great advantage. It is one of the used to great advantage. It is one that the used to great advantage. It is one that the obtion, with a few cents at a druggit's. Get one that the botto

platform, and let it enter in this way several times before making it find its home. Then begin the training by releasing the young homer in the back yard. The bird will mount upward, and will enter by the trap door. Each successive flight should be made longer than the first, and in a few weeks the birds will be able to find their home if released miles away. The homing instinct varies in breeds, but almost any good bird can find its home when taken thirty or fifty miles away. The pleasure of this sport comes in when several boys of neighboring towns and cities keep lofts and make regular exchanges. Messages can then be sent back and forth marked with the time of releasing the birds. On some trapdoors there are clocklike arrangements so that the time of a bird's return is automatically recorded. In this way the exact time required to make a flight is obtained. Such registering apparatus can easily be obtained and rigged up by a boy with any ingenuity.

GILBERT GOSULICE, AGE ELEVEN.

"Uncle Ben, will you tell me a story, please?" said Freddie, one rainy day, to his uncle. "I feel so lonesome because it's raining, and I can't go out and play." What kind of a story do you want, witch, fairy, or-

'No, uncle, I'd like a true dog story. Uncle, do you know any real dog story?" asked Freddie.

"Oh, is that the kind you like. Well, I know one about my dog and-

"Oh, is he your dog you're going to tell me about?" said Freddie.

"You should have said, 'was he?' because he is dead now. Well, now to my

"One morning I was walking in Tucketon, Va. (it was nothing but a country place then) with my collie, Tiro. After a while he began to growl and then to bark a provoked bark.

"By that I knew that some wild animal was in sight when suddenly a fullgrown leopard leaped out of a neighbor-

'Straight at him did brave Tiro leap, and seized the leopard by the neck with such force that he threw him to the

'Then seizing my rifle, I shot the brute on the leg, although it was not my intended aim; it disabled him greatly.

The leopard desperately bit staunch old Tiro by the neck.

"Quickly reloading my rifle, I shot the

leopard through the head. After rolling madly a few times he stretched out slowly, and in a few mo-

ments the leopard was dead! "As for my affectionate dog, after many piteous yells, slowly sank, and with one last glance towards me, sank

dead." "Is this really true, uncle?" "Yes, my boy," said Uncle Ben, gravely.

Frog-Lore.

A writer in Modern Culture has some interesting things to say about frogs. He says: The frog's tongue is attached to the bottom of the mouth near its front, and when he springs open-mouthed at his prey, the tongue files out like a thin, bent spring, and gathers up the bug, ant or fly on its fine, upcurving, viscid point; then the mouth closes so quickly that, though watching closely, we have not distinctly seen the nimble tongue turn back to its place. The frog never drinks; he absorbs water through his skin. Most kinds of frogs have within their bodies a sac, which stores up pure water for a time of need. After a frog has been in a dry atmosphere a few hours he will, on being replaced in the water, double his weight in an hour. Before a rain storm the atmosphere becomes humid, that is, laden with moisture; this is perceived by the frogs, which then venture out of the water and whistle and croak their pleasure. The dampness of the air at nightfall also occasions much gratification to the frog community. Frogs may be caught with a long-handled dip net. Some catchers use a sort of rake, while others catch them in the hand. Boys sometimes use the same tackle for frogs that they use for fish, baiting with a live worm or winged insect; a bit of red rag is good for bait. Some use a small rifle or a five-tined spear. The hind legs of a frog are the parts generally eaten, though the whole bodies of the smaller frogs, freed from entrails and skin, are sometimes fried with eggs and bread crumbs.

There are two general classes of frogs known commonly as the tree frogs and A writer in Modern Culture has some in-

though the whole bodies of the smaller frogs, freed from entrails and skin, are sometimes fried with eggs and bread crumbs.

There are two general classes of frogs known commonly as the tree frogs and the water frogs. The former are of two kinds, the green and the brown. The marsh frog is mostly pale brown on the back and yellowish-white beneath, the lower part of the thighs being a bright orange yellow. It has a strong odor. Neither the tree frog nor the marsh frog is good for eating.

An Extemporized Aquarium.

A globe with goldfish makes a very attractive ornament for a room, but globes and goldfish are not always available, and so the extemporized aquarium may be used to great advantage. It is one of the great bottles that can be purchased for a few cents at a druggist's. Get one that holds about two gallons and put some clean sand in the bottom, with a few mossy stones, and anchor in the sand a few plants from some nearby brook. From the same brook can be secured snalls, tadpoles, salamanders and the tiny black-nosed dace. Here is an aquarium at almost no cost that is capa...e of affording a great deal of entertainment, and not a little instruction.

When the plants are growing nicely, giving off oxygen and feeding upon the carbonic acid gas in the water, the latter need not be changed oftener than once a week, unless too much animal life is introduced into the water. A little experience will show just how many inmates of the aquarium the plants will "balance." The upper parts are greenish-yellow

golden reflections and black spots. The sides of the abdomen and hind legs are reddish or orange; the under surfaces are a dull yellowish-green and spotted. The green frog needs to be two years old before it is marketable, while the builfrog should be three years old.

Frogs in winter burrow under wet leaves and into mud. About the time the farmers find the ground warm enough to receive seed, the frogs wake up and gather in the pools, greeting one another with a lively whistle and croak. Before the young plants in the fields are up very far, one may see transparent, jelly-like masses of the size of an orange, and thickly scattered through them several hundreds of frogs' eggs, looking like blackened birdshot; within a fortnight those eggs evolve into polliwogs. into polliwogs.

shot; within a fortnight those eggs evolve into polliwogs.

Frogs can breathe only with the mouth shut, their communication with the atmosphere being through the nostrils. The wind-reservoir for vocal purposes in the builfrog is the wide, yellow throat., Most other frogs have only a sac near each corner of the mouth for this purpose.

Aristophanes gives as the sound made by the Grecian frogs "brek-ek-ek-ek koax koax." The American leopard goes "chock. chock, chock." This sound can often be heard a mile away. The marsh frog gives a long grating croak, not very loud. The green frog often utters a solitary "kr-ruk." The piping frogs of the springtime whistle their peep, weep, in frequent chorus. The builfrog's voice takes a variety of sounds. "Er-rum, r-rum." is a cry that almost every one has caught. though sometimes it seems rather "More rum, r-rum," "jug o' rum, r-rum." In New York and the Middle States the schoolboys have it that these frogs say "Blood an' ouns." "Blood an' hounds." or "Blood an' ouns." while unstable farmhands, laboring homewards late of a warm evening from the grocery at "the Corners." have sometimes heard, along the marshy pools, the deriding cry, "Ga drunk, ga' drunk"; when several other voices near together would become more specifically derisive or threatening, and bellow out. "Jug an' all, jug an' all, dr-roonk! bloonk, kebloonk, oonk."

Spider and Sixpence.

FROM THE SYDNEY BULLETIN.

A correspondent sends us a remarkable instance of adaptation of instinct in a trap door spider. Says the writer: "A friend of mine noticed near his camp a trap door spider run in front of him and pop into its hole, pulling the 'lid' down as it disappeared. The lid seemed so neat and perfect a circle that the man stooped to examine it, and found, to his astonishment, that it was a sixpence! There was nothing but silk thread covering the top of the coin, but underneath mud and silk thread were ccated on and shaped convex (as usual). The coin had probably been swept out of the tent with rubhish." Commenting on this, a contributor to "Nature" says: "As is well known, the doors of trap door spiders' burrows are typically made of flattened pellets of earth stuck together with silk or other adhesive material. The unique behavior of the spider in question showed no little discrimination on her part touching the suitability as to size, shape and weight of the object selected to fulfil the purpose for which the sixpence was used."

WARS and 60, 4c; Arg. Rep., 7 va., 6c; Bolivia. 4 va., 6c.

Agta, 60 and 60k. WHITE, Box 187, Lewiston, Mo., of stamps sent us by collectors.

Some years ago the writer received a letter from our consul at Freetown, Sierra Leone, in which he stated that the people of this country seemed to think a consul was appointed simply to gather postage stamps; he said that every mail brought numbers of requests for stamps with which it was impossible to comply. Occasionally a good lot will be secured in this way, but as a rule, the stamps received could be purchased in this country for less than the postage and time expended. These stamps can be secured from abroad by exchanging with other collectors in foreign the postage and time expended. These stamps can be secured from abroad by exchanging with other collectors in foreign countries. Some European stamp papers consist almost entirely of these exchange advertisements, from collectors in all parts of the world. In the majority of cases, however, you have no knowledge of the standing of your correspondent, who often retains the stamps you send him and makes no reply. Thousands of dollars worth of stamps have been lost through this method, though, on the other hand, very advantageous exchanges are often made. In the opinion of the writer, profitable exchanges can be made with collectors abroad, if care is used in picking your correspondents. Dealers buy the bulk of their foreign stamps abroad at wholesale, there being many dealers in Europe, and other parts of the world, whose business is almost entirely of this class.

The so-called Paris exposition stamps are not stamps, but simply labels having on them pictures of the different foreign buildings. They have no intrinsic value, but are generally sold at a cent apiece.

Answers to Correspondents.

 ${\bf A.\ N.\ P.,\ Hartwell-Your\ stamps}$ are not worth anything.

G. L. R., White Cloud-Your two Mauritius stamps are worth one cent each.

C. H. S., Lincoln—The stamp you send was issued by Bolivia in 1897. It is worth was issued by Bolivia in 1897. one cent.

W. W. P., Grand Portage—Your stamp is a two cent Jackson of 1862, and is worth four to five cents.

T. O., New Bedford—We do not know of any postage stamp such as you describe. What inscriptions are upon it?

W. P., Ralla—A one cent Columbian envelope stamp is worth two cents; the rest of your stamps are not worth anything. Ed M.—United States "official seals" will be found on page 13 of Scott's 1901 catalogue. The Canadian and Japanese official seals are not catalogued.

W. B. K., Chency—The five cent Canada registered is worth two cents; six cent Columbian, five cents; five cent Garfield, two cents; the others are worth nothing.

R. P., College Springs—Your collection is too small to be worth anything—one hundred and fifty different foreign stamps from all parts of the world can be bought for ton conts. for ten cents.

R. J., Hastings—Your stamp is a Philippine revenue. While interesting, it probably has no value. Thousands of these revenue stamps are being brought home by our returning soldiers.

by our returning soldiers.

V. B., Prairieville—Your two cent Jackson is worth about twenty cents, and the one cent unused, about the same; the latter would be worth more if it was not damaged. The others are valueless.

Henry H., Seventy eighth street, N. Y.—The English stamps you mention are very common and will never have particular value. English stamps of 1841 can be bought now for lifty cents a hundred.

Ralph W. P., Portland, Me.—Think your stamp is from Bhore, one of the native Indian states, but do not believe it is a postage stamp, as no such stamp is catalogued. It is probably a revenue.

A. S., Sheboygan—Your Pomeroy local is a reprint. The two dollar bill you send is a specimen of the, old "wild cat" currency. Thousands of these old notes are still in existence, and they have but little value.

Dan B. Washington, Prairie—The five cent playing card is worth about twenty five cents. Old photographs are an excellent place to find stamps, the two cent orange proprietary, and the three and four cent playing cards, all of which are rare, being occasionally found on them.

The Jackson Cents or Hard Times Tokens.

There is a class of coins, or more properly speaking, medals, that, judging from the many inquiries addressed to the coin editor, is giving our boys quite a bit of trouble and annoyance in their efforts to understand them. Their fathers can tell them of the immense flood of "war tokens" and "store cards" that came in with our Civil War period, but their grandfathers have evidently forgotten the many political tokens of the thirtles, which largely usurped the place of the big copper cents and passed by suffrance at the time as lawful coin. There has probably been no time in the history of our country when political feeling ran higher, when vituperation and invective entered into politics more than during the time when Jackson and Van Buren. Democrat-Republicans, Whigs and Locofocos, fought bitterly for political supremacy. These "tokens" served a double purpose—a vent for exuberant political feelings and to supply small change during the hard times of the period. This has given them the name of "Jackson cents" or "Hard Times" tokens. Numismatists divide the issues of the time into two classes: political medals and store cards. The latter were issued for advertising purposes, are usually dated and, like the politicals, are mainly in copper the size of the old copper cent. They begin with 1832, during I'resident Jackson's administration (1823-36) and entered into President Van Buren's term, who, as the tokens state, followed in the footsteps of his illustrious predecessor. Lyman H. Lew, of New York, who has delved deeper in this branch of numismatics than any other, catalogues seventy one varieties of the political medals and linety store conde There is a class of coins, or more properly matics than any other, catalogues seventy one varieties of the political medals and ninety store cards, all within the period 1832-1844. Limited space prevents us from going into detail regarding any particular specimen. We can only call attention to their general character.

The Numismatic Sphinx.

Boys must not become impatient if their questions regarding stamps and coins are not answered promptly, as we are receiving a great many letters of this kind every day, and cannot possibly publish the answers as fast as they are received. Watch future issues of the paper for answers.

Eldin O. Walsh, Vermontville, Mich.—See answer to Maynard Williams.

Harry McKeever, Winsburg, O.-. 1826 cent is worth twenty five cents.

G., Sloux Rapids—Your stamp is known as the Canada map stamp, and is very com-

Cieveland Thomson, Waco, Tex.—A Denmark skilling of 1716 is common and sells for fifteen cents.

Maynard Williams, Exeter, N. H.—An 1824 half dollar, if in good condition, sells for seventy five cents.

Sumner Lowrey, Ft. Smith, Ark.—A good 1839 dime sells for twenty five cents and an 1851 cent, ten cents.

Alfred J. Robinson, Harlem, N. Dak.The C. C. (Carson City) dime of 1875 has no
premium. The same may be said of all
Canadian silver.

John K. Barnes, Wellsboro, Pa.—An 1838 half dollar is worth seventy five cents; 1853 dimes, quarter with rays and 1839 dime, face value.

Charles T. Abbott, Stockport, O.—The half dollar of 1858 commands no premium. The motto, "In God we trust," first appeared on our half dollars in 1866.

T. Sleszynski, New York.—The 1853 half and quarter dollars with arrow points and rays are worth just face value. The ones without the rays and arrow points are rare,

J. L. S. Mexia—The four cent brown proprietary is worth about ten cents. The other two stamps you mention are of no value, the Heligoland being probably a reprint.

still in existence, and they have but little value.

J. S. R., North Clarendon—There is no premium on the old three cent red stamps of 1851, 1856 and 1861, except some of the type varieties and the grills. Old envelopes without stamps and marked "Paid 3," etc., are not worth anything.

W. P. Roswell, N. M.—Your description is rather indefinite, but we think your stamp must be of the issue of 1883 of Austria.

This has two eagles with the figure of value in the center and the inscription: "Kais. Konigl, Oesterr, Post."

Dan B. Washington, Prairie—The five cent playing card is worth about twenty five cents. Old photographs are an excellent place to find stamps, the two cent orange proprietary, and the three and four cent playing cards, all of which are rare, being occasionally found on them.

Leslie Wilde, Walker, Iowa.—Russian, two kopeck of Alexander I., 1801-25, second coinage; Austria, one kreutzer. 1801; France, 1871; Spain, two reals, Charles II. (1759-88), 1773; Spain, two reals, Charles III. (1759-88), 1773; Spain, t

cent playing cards, all of which are rare, being occasionally found on them.

When boys send in stamps asking for a description of them, they should send postage for their return, if they wish to have them returned; otherwise they will not be responsible for the safety of stamps sent us by collectors.

THE AMERICAN BOY

EDITED BY JUDSON GRENELL

g a destination destination of the design of the design of the second of THE AMERICAN BOY offers twelve prizes of Two Dollars each for the best Amateur Photograph received during prizes of Two Dollars each for the best Amateur Photograph received during the twelve months in the year, one prize for each month, also a second prize each month, of one dollar, for the next best photograph, the competition to be based upon the originality of the subject and the perfection of the photograph. The contest is open to subscribers only. Photographs will be returned if stamps are sent for the purpose. All photographs entered in the contest and not prize winners will be subject to our use unless otherwise directed by the sender, and fifty cents will be paid for each photograph that may be used, the prize photographs in any event to be our own, without further payment than the payment of the prizes. Write on the back of the photograph its title, with a description of the picture, and the full name and address of the contestant.

A MOUNTAIN MILL First Prize Photo, by T. P. Honner, Jr., Bryson City, N. C

Beware of Dirt.

The amateur who thinks it makes no difference even if he does use the same tray for both developing and fixing, is making a great mistake. The loss of two or hree negatives by there being a trace of hypo in the tray used for developing will do more actual damage, in the way of oss of material, than the cost of two or three trays, let alone the loss of pictures that in all probability can never be repoduced. To the developer hypo is dirt, and dirt is a great enemy to the photograpier. There is other dirt, and all is but the mixing of trays, or the using of rays for various purposes when each one should be kept for its particular use, is should be kept for its particular use, is

one should be kept for its particular use, is the worst.

Do to not the lens may cause fog by reflection; on the plate it causes pinholes, on the prints it prevents the toning solution doi: gits proper work; on the mount it prevents the print laying smooth; and prevents and benches where there is any possibility of dust accumulating. In a room used daily it should be done every morning.—Photography in Colors.

While dirt is so bad, yet it can easily be onquered. Wash your trays, your lay is, your graduate; dust your plates and because the print laying smooth; and benches where there is any possibility of dust accumulating. In a room ing.—Photography in Colors.

Photography in Colors.

Pictures Worth Taking.

Pictures Worth Taking.

Amateur photographers living along the St. Clair river, had a wonderfully unusual opportunity this spring to get rare pictures. For the first time in many years the heavy ice of Lake Huron floated down, urged by the prevailing north winds, faster than the river could take care of it. In consequence it was jammed in so tight that it stopped both the water and navigation. Above, where the ice filled the river from top to bottom and from side to side, the water was very high; below, it was very low, this lack of water to float the big freighters extending all the way past Detroit to Lake Erie.

So the strange sight of seeing the river full of ice, while the gazers had on their summer clothes, and even parasols were in demand, was worth all the plates and time the amateur could spare. And it is reported that a number of "camera flends" were sharp enough to take advantage of the situation and send their pictures to the papers, getting a good round sum for

the papers, getting a good round sum for

them.
The amateur photographer who is quick The amateur photographer who is quick; to take advantage of such situations is the one who gets his fun for nothing. That is, he is in a position to sell enough of his pictures to pay for the material he uses for his own pleasure. And such happenings are likely to occur to all. It may not be an ice blockade, but what about a cyclone? or a flood? or, mayhap, a great fire? The wise amateur keeps his camera always loaded and in good order for just such scenes.

Cleaning and Using Old Negatives.

When old negatives accumulate, it will sometimes pay to carefully go over them, and after putting away those that may prove of value in after years, proceed to clean off the emulsions of the other ones in

clean off the emulsions of the other ones in the following manner:

Prepare a bath of water, one gallon; bichromate of potash, three quarters of a pound; and sulphuric acid, one ounce. Let the plates remain in this over night, with a little piece of wood between each, so that the bath can get in its work. This will loosen the emulsion, and it will almost run off of itself. Keep your hands out of it, as it is strong enough to "bite," and will take the skin off as well as the stuff on the glass.

After the plates have been washed and After the plates have been washed and dried, they can be dipped in albumen and prints squeegeed on them. Then put another glass over the print and bind both together on the edges with strips of some appropriately colored paper.

Remedying Over-Printing.

Cyanide of potassium as a reducer for developing paper is recommended by a writer in a photographic journal. "I tried it the other day," he says, "and it worked beautifully. It was used after they were fixed and a strong solution seems to work on the high-lights more energetically than on the shadows. Why wouldn't this be a good way of making a weak print more contrasty? I can't say what the effect would be on its permanency, but it seems if hypo and other chemicals can be removed, cyanide should. Its action just cats up the metallic silver. Don't carry it as far as you wish the finished print, as it works on while washing somewhat." Cyanide of potassium as a reducer for

Drying Plates Quick.

Sometimes the amateur wants to get a print off his plate as soon as it is developed and washed. He is not willing to wait until it dries naturally, but wants to see the result of his work in a minute. Too much haste in this matter has spoiled

Too much haste in this matter has spoiled many a plate, particularly when it has been placed too near a hot fire.

The best way to do is to put the plate in wood alcohol immediately after it is washed, letting it remain about five minutes. Then set it in front of an electric fan, and in ten minutes it will be dry. But if neither alcohol nor fan is handy, then dry the plate as well as possible with a blotter, and then gently wave it in front of a fire. In this way it can be dried in less than half an hour—often in fifteen minutes.

An Excellent Cleanser.

When old developers and some other chemicals have been for quite a time in a bottle, the bottle becomes foul, and water seems to have little effect on it. The best way to clean such glasses is to fill them over night with a solution of citric acid, and all the discolorations will disappear by morning. Then rinse well in warm water. warm water

Dusting the Dark Room.

or onquered. Wash your trays, your har is, your graduate; dust your plates and ket your hands clean.

Ornate Cards are Not Artistic.

The more ornate the card, the more it diviles the attention with the picture. The Professional and Amateur Photographic puts it in this way: "Scrolls, fancy tutus and all manner of ornamental (?) double printing are monkey business that detract from the value of the real work."

Photography in Cotors.

Do we expect to reproduce the natural colors. The problem is not yet solved, yet we see announcements and discussions almost every week concerning the discovery at last of "Photographs in the Colors of Nature." This leads the non-expert or layman to believe that the colors of nature are recorded in one operation and the direct image so received is visible to the gunshot of it; no nearer than in the early days of the daguerreotype.—George G Rockwood.

Some Excellent Pictures.

"An Old Swimming Place," by Roy McCann, Rose Hill, lowa, is well taken, and nicely printed, but it would have had a more artistic look had it been printed on something else than a glossy paper. Chas, H. Moore's "Lily Pond," Lake Como, and "Minnehaha Falls in April," St. Paul, Minn. are complete pictures. Also worthy of mention are Arthur R. Wenzel's "Curtis Creek Bridge," Quincy, Ill; Frank J. Sobotka's "Great Falls of the Potomac," Washington. D. C., with its odd border; and W. S. Haskell's "Boys in the Water," Fruitvale, Cal., though this latter would have been improved had the boys been splashing round and having a good time.

Ouestions Answered.

Charles G. Lockwood—The green tone comes from overtoning. You cannot be too careful in following directions.

John C. Lockhardt—Dust your plates be-fore putting them in the holder, and the chances are that you will have no trouble with "pinholes."

Llewellyan Hemingway—With a second exposure your plate was probably over-exposed, and it is thin because you did not leave it in the developer long enough.

Alex G. Atworth—Instead of reading "under-timed or under-exposed," it should have read "under-timed or under-developed." These slips will occur, Sometimes the text itself brings the correction.

Jo Wall—You made your exposure right against the sun, and that white spot on the lower left hand corner of the print is caused by the sun shining into the camera. The next picture you take, have the sun at your back, or on one side.

Archie McMahon—It is hardly worth while to spend much time over an under-exposed plate if you can get a shot at the same scene over again. If this is not possible, then buy some one of the intensifiers to be found on the market,

Joseph Greene—You will get more satisfaction out of platinum paper than of any
other kind, and though the first cost is a
will little more than papers that have to be
the the toned, in the long run many photographers
insist that it is the cheapest. Warm tones
and
and

Will T. Wells—The camera and lens are all right. You tried to do the impossible. Buy a tripod and use it for time pictures, or at least put the camera on something that will not move. Pictures taken from a fast train of nearby objects will have that same blurred appearance.

Frank Buddington—It is impossible to name "the best camera on the market." A camera may be "best" for outdoor views, and another the "best" for interior work. Look at several kinds, and then take the one that suits your temperament and in-clination "best."

clination "best.

Clarence Corp—Photographs that were inished in 1888 and have not yet faded, are liable to keep their tone indefinitely. But this wouldn't justify you placing them in strong sunlight. Try a small quantity of formaldyhide in your paste. That is oderliess, and is a great preservative.

D. J. Noland—The editor is not sufficiently acquainted with your tastes and capabilities to advise you what camera to buy. All the standard makes have good points. The lens is of more importance than any other one thing, yet a good lens alone, without the accessories for making it effective, would not satisfy you.

Harry Yates—Metol is very powerful, and its best use is by being mixed with some less energetic chemical. If your plate "turned black." It was either because it was over-exposed, or the developer was too strong. Sollo paper is apt to remain red when the toning bath is too acid. Write to Anthony & Co., Fifth avenue, New York City, in regard to the Harvard camera.

Worthy of Commendation.

"Nesting time." taken by Elisworth Harrold, of Leetonia, O., and sent to TilE AMERICAN BOY, is a very fine picture, but it could have been improved by toning out more of the red. A great Indian mound, entitled "Graves of original American boys," taken by Evelyn Barlow, Quincy, Ill., has some artistic touches, "Little Niagara," by D. A. Morrison, Eau Claire, Wis., is a gem. Will F. Fachner's, "Starting for a cruise," Appleton, Wis., is just right. "Recreating," by Ernest Titsworth, of Floresville, Texas, is printed a little too dark for reproduction.

A JOLLY PARTY. Second Prize Photo, by Clare W. Ounningham, Lines-ville, Pa.

"THE BROWNIES' THEATRE."

Miniature stage made and photographed b George Hicks and Earl Hopkins. Sioux City, Iowa, each aged fifteen. The stage is two feet deep the opening being fourteen by sixteen inches. The scenes are painted in water colors on bristol board. It was photographed standing on a table, under a Welsbach gas lamp. Exposure, thirty minutes.

Photographic Notes.

In mixing chemicals—even in using hypo-a hydrometer is strongly recommended.

Velox paper printed by daylight seems to give more detail than when exposed to artificial light.

Amateur photographers will find an interest in making some of their autumn landscapes a "sepia" tone.

Fresh hypo acts as a hardener to the film, and it is well to change it often, therefore, during the summer.

Small prints on thick platinum paper do not need to be mounted; or, if mounted, only the two upper corners need be attached.

When running water is used in washing prints the prints should be shifted by hand occasionally, to insure all the hypo being washed out. When amateurs using small cameras take

a particularly lovely scene, it will pay to have it enlarged to a five by seven or even an eight by ten.

Do not hesitate to cut out those parts of a print that are uninteresting; it may be foreground, or sky, or perhaps the side of a building that obtrudes.

Such an improvement has been made in "blue print" paper the past few years that many prefer their photographs printed on it to the glossy prints on the paper in common use.

WRESTLING FOR BOYS

The following is the substance of an article by George Bothmer, the champion wrestler, on the subject of "Wrestling for

wrestler, on the subject of "Wrestling for Boys:"

A great many people are averse to boys taking up wrestling because they regard it as a too violent exercise for any but grown men. Now, this is an entirely mistaken notion. Of course, when you start out you must be very careful not to overexert yourself any more than you will begin to pitch at your extreme speed the first day you play baseball next spring. If you were so foolish, you would expect to strain yourself, and so it is in regard to wrestling. Go slow at first and gradually accustom your muscles to the new and unwonted exercise, and before you realize it you will be in trim to undergo a hard bout.

There are two or three important points to which I wish to call your attention before we "get down to cases." Don't exercise too soon after meals. At least two hours should elapse before taking exercise on the mat. Another thing—don't try to do too much at first. Many of my pupils become interested in their work and think I don't let them do half enough, but if allowed to keep it up they would soon become "stale," as athletes term it. Ten or fifteen minutes of exercise on the mat should be the limit for the beginner, and you can increase the length of time you wrestle as you get hardened. But above all things remember what I have already said and go slow.

If you have never done any gymnasium

go slow.
If you have never done any gymnasium work previously, or at any rate for some time, you would better practice with the pulleys and the chest weights and other such exercisers before going in for work on the mot

such exercisers before going in for work on the mat.

If possible, get to work under a good instructor who can teach you the various holds, how to apply them to the best advantage and how to avoid and break those attempted by your opponent. When wrestling with your companions, choose those of about your own weight and strength, as a heavier man is likely at any time to do you an injury until you have attained a certain amount of ability and experience.

There are different styles of wrestling in vogue, but the most ancient and the one most practiced in America is the catch-ascatch-can. Certain fundamental rules are essential in all styles, and of these you must be master before you can hope to become expert.

weight. This will serve the double purpose of preventing him changing his position and will help to wear him out by allowing him no rest.

When you have determined on a certain line of action, go through the motions quickly and with vim, whether on the offensive or defensive. Slowness is a fatal fault in a wrestler. Keep your opponent if possible in ignorance of your intention until it has been effected.

When you have the misfortune to be the under man and are on your hands and knees, keep on moving constantly, thus not only preventing your opponent from securing a hold with care, but also, if possible, enabling you in the change of position to secure a hold on him.

Feinting is an art in which the successful wrestler must be an adept. While you are apparently securing one hold on your adversary, against which he is defending himself, suddenly change your attack and go at him in an unexpected and consequently unprotected manner, remembering always that he also is trying to deceive and catch you at a disadvantage.

Be very careful when over a man who is on the carpet not to dangle your arms or allow them to hang loosely over him. If you do, he will have an opportunity to selze one of them and draw it under him as he rolls down on his side. He can then easily pull you under him into a position from which it is simple to secure a fall. Always keep your elbows close to your sides. Failure to do this will give your adversary an opening for the most dangerous holds. Keep your eyes constantly on the move, watching every motion of your man. When you can't see him, the sense of touch must be relied on to keep you informed as to his actions.

move, watching every motion of your man. When you can't see him, the sense of touch must be relied on to keep you informed as to his actions.

Your muscles and poses must never be rigid if you wish to be quick, and keep every part of your frame supple and ready to respond to your instant demand. There is no pastime in the world which requires such instantanelty of action between thought and deed, nor is there another in which the slightest mistake or inattention is likely to be so costly.

It is, of course, impossible in a short space to explain the many holds, besides which a few minutes of actual wrestling will teach you more than a whole page of written instructions. Be sure to learn at the outset the right way in which to make and break each hold. As in everything else, a right start is a great advantage.

Remember that it is far better to practice on the mat for a few minutes each day than to do an hour's work once or twice a week.

FIFTY GOOD GAMES

As Played in Brooklyn Public Schools

From Report by Jessie H. Bancroft, Director of Physical Training

NO. 40. RELAY RACE-SINGLE.

The children stand in two or more lines at one end of the ground. The first one of each line, carrying a flag or handkerchief, races to the opposite end of the ground, touches the fence or wall with the flag, and runs back, handing the flag to number two and passing to the rear of the line. Number two starts immediately, and upon returning hands the flag to number three, ctc., until all have run. The line whose last man returns first wins the line whose last man returns first wins the

Those at the head of the line whose turn

Those at the head of the line whose turn it is to run next must stand with the toe on the line, but not beyond it. They cannot advance to meet the returging racer. If the flag is dropped, the one dropping it must return and pick it up before continuing the race. Anyone not touching the terminal wall, must go back and touch it before finishing the race. It is well for each line to have a captain to see that rules are observed, and there should be an umpire to decide which line wins.

wins.

NO. 41. RELAY RACE-DOUBLE.

NO. 41. RELAY RACE—DOUBLE.

The general idea of this game is the same as in the foregoing. The lines face each other from opposite ends of the ground. There should be at least four lines. Instead of touching the goal or terminal wall, each racer hands the flag to the leader of the line facing him, and passes to the rear of that line. The leader who thus gets the flag runs to the line facing him, from which number one came, and passes to the rear of that line. Each player thus runs only in one direction, instead of in two, as in the single relay race. This variation of the game is adapted to a very limited yard area and large classes.

NO. 42. STRADDLE CLUB.

Players stand in two or more lines, one behind another, with the feet apart in straddle position. At a signal the leaders of the lines each slide an Indian club between the feet, from the front toward the rear of the lines; the last one in each line, when he receives the club, runs with it to the front, takes position at the head of the line, and starts it in his turn. The line wins whose leader returns first to the front. If the club stops on its way to the rear.

be master before you can hope to become expert.

The successful wrestler must be a master of strategy, for it is often by taking advantage of the mistakes of one's opponent that a fall is won. Remember that the proper time to throw a man is when he is exerting his strength in the direction in which you wish to topple him. His resistance will be least then. Here is where strategy comes in. But at the same time care must be exercised not to be caught napping oneself.

It is very important to keep your adversary unaware of your intentions. Try to deceive him as to your real point of attack until the latest moment and thus hold him at a disadvantage. When you have your of preventing him changing his position and will help to wear him out by allowing him no rest.

When you have determined on a certain NO. 43. BELL CHASE.

The players stand in two lines, facing each other, at a considerable distance A dumb-bell is placed on the ground in the center of the open space between the lines. The end players opposite each other start upon a signal, to get the bell; the one reaching it first must pick it up and return to his place before his opponent can tag him. If he does this, the opponent becomes his prisoner, and must stand behind him. If he is tagged before reaching his place, he becomes the opponent's prisoner, and must becomes the opponent's prisoner, and must stand behind him.

(Others games to follow.)

Two Boys Receive Medals from Uncle Sam.

We present pictures of Wedworth and Ralph Penoyar, Jr., two brave Bay City, Mich., lads who saved the life of a little girl from drowning at the imminent risk of losing their own, and who are to receive medals from the United States government for distinguished bravery.

The Annual Convention of the United Amateur Press Association.

The next annual convention of the United Amateur Press Association will be held in St. Paul on the 8th, 9th and 10th of July, with headquarters at the Windsor Hotel. The officers of the Association feel confident that this will be the largest and most successful convention "The United" has ever held. Aside from the large number of westerners who will be in attendance, a party of fifteen or twenty will go from the east, starting from Buffalo, special arrangements having been made with the transportation companies for the round trip at a very low rate.

FLOYD R. SWITZER,

President of the United Amateur Press Association.

It is expected that the members will reach St. Paul some time Sunday, so as to become acquainted before the first session of the convention, which will be held at 10 o'clock Monday morning. The afternoon will be devoted to an excursion to Fort Snelling, or some nearby resort, and the evening will be spent at a theater or in some form of entertainment. The election of officers will take place on Tuesday. The final session will be held on Wednesday, to be followed by the annual banquet. The Twin City Amateur Press Club, which numbers twenty five to thirty enthusiastic amateur journalists, has general charge of the arrangements.

Amateurs desiring to attend can get full information by addressing Floyd R. Switzer, 7 Steuben street. Utica, N. Y. the President of the Association, or Frank J. Kearns, 190 Fourteenth street, St. Paul, Minn.

Am Enterpressing Elements.

An Enterprising Firm of Boy Printers.

Gould & Hall, Printers, 208 Madison street,

Gould & Hall. Printers. 208 Madison street, Brooklyn, N. Y., appears at the top of a letter recently received by us. Irwin Gould and Alvin Hall, the members of the firm, are two enterprising Brooklyn boys, and they have worked up a business that brings them considerable money. Their example might be followed to advantage by other boys, and would by no means be limited to the amount of money to be gained thereby. The firm's plant consists of a Caxternette press, the chase of which measures two and one half by four inches, and about fifteen fonts of type. The samples of work they have sent us are excellent and would do credit to much older and more experienced printers. With so small a press, of course, they cannot do a very great variety of work, so they make a specialty of business and visiting cards; but they have worked up some regular customers, who give them orders for small billheads, programs, etc. They have shown a great deal of ingenuity and enterprise in working up their business, much of which has been obtained through agents. They show samples of their work mounted on dark green bristol board. Storekeepers in the neighborhood who display these in their show windows receive twenty per cent commission on the work they thus obtain for the boys. Their boy friends also act as agents.

The Wolverine Amateur Press Association.

This association was organized in March last, and desires to enroll every Michigan amateur journalist on its list of members. James H. Smith, 1312 Woodside avenue, Bay City. Mich., is president; Donald R. Heath, 157 Washington street. Monroe, vice president; Ralph K. Noble. corner Second and Macomb streets. Monroe, secretary; Elbert M. Moffatt, 1401 Forrest avenue, 8t. Joseph, treasurer; James S. Hitchcock, 109 S. Grand street., Marshall, manuscript manager; and Roy Marshall, 114 cock, 109 S. Grand street.. Marshall, manuscript manager; and Roy Marshall, 114 Jones street, Dowagiac, official editor. As Michigan contains some of the brightest and brainlest amateur journalists in the country, if we may judge by their work, this association should meet with great success. Membership blanks can be obtained from any of the officers named. A convention will probably be held in July.

FOR YOUNG MEN

The Law Student's Helper, published by The Sprague Publishing Company, the controlling owners of the Sprague Correspondence School of Law, is be oad question The Best Young Men's Paper in America.

Sprague Correspondence School of Law, is be one question The Beat Yesus Men's Paper in America.

As its name implies, it treats largely of the law, but in such a way as to make it of the greatest value and great set interest to men and women who are not studying law as well as to those who are. It averages forty pages, the month. It's editor is WILLIAM C. SPRAGUE, Pres. of Sprague Correspondence School of Law; asst. editor is GRIFFITH OGDEN ELLIS, Vice-Prin. of that as 1000. It treats of all current events in the law and political world from the standpoint of the lawyer. Its denar, ments, "Questions Amswered and Difficulties Met for Students of Law," and "The Self Examine," which gives questions from bar examinations, with their answers, have proved very valuable, while the miscellaneous matter is always unique and highly interest, ing. The rule of this paper is, once a subscriber newsys a subscriber. Its subscription list has grown to be the largest that can be claimed by any legal or semi-legal journal. We speak of this to show how it stands smong those who know what good journalism is. It appeals to the young men who are in the busy walks of life, in that it treats of current events in a simple concise manner, and one does not have to read through pages of trish to get at the substance of what he wants to know. It is to day necessary to intelligent of itzenship that one give attention to passing events and be able to view them from an intelligent standpoint. This paper supplies what no other paper gives, an opportunity for a brief, condensed philosophic review of the world of law.

SOMETHING NEW!

An Effort to Teach Boys to Do Business

HE publishers of *The American Boy* announce a new departure, for the purpose of holding its subscribers and interesting new subscribers, and for the purpose of doing boys a genuine favor.

Heretofore, we have announced a guessing contest in each number of The American Boy. We now have something better.

We propose, between the first and fifth of August, to send to fifty boys one dollar each. We shall choose the fifty boys from among those who, during the month of July, send us one dollar to renew their own subscriptions, or send us one dollar for a new subscription, either for themselves or for others.

We can, of course, display no favoritism in the choice of the fifty boys, as we shall not be personally acquainted, perhaps, with one out of five hundred of them. We do not know at this writing just how we shall select them, but probably it will be done haphazard. We shall endeavor to get boys from various sections of the country and from city, town and country.

The one dollar that we shall give to each of the fifty boys will be something in the nature of a loan, although, as will be seen, we do not in all cases require the dollar to be paid back to us.

We ask that each one sending us one dollar during July, and who wants to be selected as one of the fifty, shall 208 E. Fourth St., agree with us that he will keep an accurate account of what he does with the money. We expect him to invest it in some way so as to make money out of it. We also ask him to agree that on the first day of October he will account to us for it, that is, tell us what he did with it. If he made money out of it so that on the first day of October he has more than the dollar, we shall expect him to return us the one dollar and keep what he made. If, however, he has spent the money or lost it in some business venture, we shall not expect him to return it to us. If he has spent part of it and has less than one dollar left, we shall ask him to return to us what he has, In other words, boys will be entitled to keep all over and above one dollar that they make out of the dollar, and if on October first they have not a whole dollar left, they are to send to us that part of the dollar which they may have. In no case will any boy be compelled to pay us back one dollar where he has not made more than one dollar out of it

In sending in your renewal or your subscription during the month of July, please, therefore, write on the back of the subscription blank, or incorporate in your letter some place, the statement enclosed in the border.

Perhaps some suggestions can be made as to how a boy may invest a dollar to advantage. Buy two or three chickens and sell the eggs; buy a hoe, and agree to keep your own and your neighbors' lawns free from weeds at a certain price per weeks buy twenty copies of The American Boy with the dollar and go out and sell them at ten cents each, or buy copies of your local paper or any paper or magazine at a wholesale price, and sell them at a retail price, using your capital over and over again every week or month. Buy seeds or plants and grow them for sale; buy pencils at wholesale, sharpen them nicely and sell them at retail, or invest in any little articles that you can buy at wholesale price and sell them again. These and many other things will suggest themselves to a live American boy.

F you select me as one of the fifty who are to receive a dollar from you, I agree to invest the dollar in some money-making scheme, on the conditions published on page 287 of your July number. I will report to you on the first of October what I did with the money.

We have little patience with a boy who says that he cannot make money. There are few boys so situated but that they can turn a penny to good use in the way of increasing it

When the fifty boys have reported on the way they have used their money, we shall publish, in an early issue of The American Boy next fall, an account of what the fifty boys have done, from which thousands of other boys may learn lessons of thrift.

Remember

Once more let us say that we will send each of fifty boys one dollar, the boys to be chosen by us from among those who send us one dollar during July, either to renew their own subscriptions or for a new subscription. We shall select boys only from

among those who will, in sending us the one dollar, agree to invest the dollar, keep an account of their receipts and expenditures, and report to us on October 1, sending us back the dollar if they have added to it, sending us what they have left if they have only a part of the dollar left, and sending us nothing if the dollar is all gone.

Yours for wide-awake American boys, and to wake up those who are asleep

Albert A. Fels, the Boy Who Won the Printing Outfit.

We present herewith a picture of Albert A. Fels, of Swanton, Ohio, the fourteen-year-old boy who, by coming the nearest to estimating the number of immigrants landing from steerage at the Ellis Island Immigrant Station. New York, in the month of March, won the fifty dollar printing outfit. In a letter to us of June 6, he says: "You want to know how I made the guess. I took the immigration from the year previous, as given by you, and divided it by twelve, and also took the number for the preceding year, as given by you, and

divided it by twelve. This gave me the average per month for each year, and showed me the average gain per month. I found that the average gain per month of last year over the year before was 8.281. I figured that the immigration in March could not be so great as it would be in other months, so I only added 6.000 instead of 8.261."

Young Fels was born in Swanton. Ohio, October 11, 1887, so is less than fourteen years old.

The Barefoot Boy

JOHN GREENLEAF WHITTIER.

Blessings on thee, little man, Barefoot boy, with cheek of tan! With thy turned-up pantaloons, And thy merry whistled tunes; With thy red lip, redder still Kissed by strawberries on the hill; With the sunshine in thy face. Through thy torn brim's jaunty grace; From my heart I give thee joy,— I was once a barefoot boy! Prince thou art—the grown-up man Only is republican. Let the million-dollar ride! Barefoot trudging at his side, Thou hast more than he can buy In the reach of ear and eye,— Outward sunshine, inward joy: Blessings on thee, barefoot boy!

O, for boyhood's painless play, Sleep that wakes in laughing day, Health that mocks the doctor's rules, Knowledge never learned of schools, Of the wild bee's morning chase, Of the wildflower's time and place, Flight of fowl and habitude Of the tenants of the wood; How the tortoise bears his shell, How the woodchuck digs his cell, And the ground-mole sinks his well; How the robin feeds her young, How the oriole's nest is hung: Where the whitest lilies blow, Where the freshest berries grow, Where the groundnut trails its vine, Where the wood-grape's clusters shine; Of the black wasp's cunning ways, Mason of his walls of clay And the architectural plans, Of gray hornet artisans! For, eschewing books and tasks, Nature answers all he asks; Hand in hand with her he walks, Face to face with her he talks, Part and parcel of her joy,-Blessings on the barefoot boy!

O, for boyhood's time of June, Crowding years in one brief moon, When all things I heard or saw, Me, their master, waited for.

I was rich in flowers and trees, Humming-birds and honey-bees; For my sport the squirrel played, Plied the snouted mole his spade; For my taste the blackberry cone Purpled over hedge and stone;
Laughed the brook for my delight
Through the day and through the night,
Whispering at the garden wall,
Talked with me from fall to fall;
Mine the sand-rimmed pickerel pond,
Mine the walnut slopes beyond,
Mine, on bending orchard trees,
Apples of Hesperides!
Still as my horizon grew,
Larger grew my riches, too,
All the world I saw or knew
Seemed a complex Chinese toy,
Fashioned for a barefoot boy!

O, for festal dainties spread,
Like my bowl of milk and bread,—
Pewter spoon and bowl of wood,
On the door-stone, gray and rude!
O'er me, like a regal tent,
Cloudy-ribbed, and sunset bent,
Purple-curtained, fringed with gold,
Looped in many a wind-swung fold;
While for music came the play
Of the pied frogs' orchestra;
And, to light the noisy choir,
Lit the fly his lamp of fire.
I was monarch; pomp and joy
Waited on the barefoot boy!

Cheerily, then, my little man, Live and laugh, as boyhood can! Though the flinty slopes be hard, Stubble-speared the new-mown sward Every morn shall lead thee through Fresh baptisms of the dew; Every evening from thy feet Shall the cool wind kiss the heat: All too soon these feet must hide In the prison cells of pride, Lose the freedom of the sod, Made to tread the mills of toil. Up and down in ceaseless moil: Happy if their track be found Never on forbidden ground; Happy if they sink not in Quick and treacherous sands of sin. Ah! that thou couldst know thy joy, Ere it passes, barefoot boy!

A Holiday Adventure

L. M. MONTGOMERY

girls, while Fred hunted up Curtis. Uncle Will turned up just as we were leaving and scanned the sky critically. Pretty stiff breeze, don't you think, Fred?

We

Not too stiff. It's fair for going over and it'll be calm enough by coming home time, likely."
"Well, don't stay too late, and look out for the reef,"

said Uncle, as we started.

There were eight of us in all-Aunt Ray and my three cousins, Muriel, Bert and Curtis, Miss Seymour, the Westmount school teacher, who boarded at Uncle a second later we all joined in. We laughed until Will's, Edna Woodward, a girl who was visiting every hoary old beech and pine on Glenn's re-echoed. Muriel: Fred Grant and myself.

We soon reached the shore and were rowed out our spirits went up with a bound. in a dory to Fred's boat, "The Belle,"

which was anchored off the point. She was a big two-master, and, although a fishing boat, was as daintily neat and clean as she could be. Fred saw to that, for she was the pride of his heart.
"Mind the reef, Fred," shouted his

father, a tanned old salt who was popularly supposed to have forgotten more about the bay than his mates ever knew, "and don't stay if you find it blowing up any stronger. "Tain't safe to fool with a wind from that quarter."

Fred shouted, "all right," and we settled down to enjoy our sail. The wind was fair and steady and "The Belle" flew before it with a speed and grace that were simply exhilarating.

We had a clear course with the exception of Glenn's Island reef. The bay was studded with islands, the largest of which was Glenn's. They were all uninhabited save for a few weeks now and then when fishermen camped on them.

Glenn's lay about halfway between Westmount and Clifton and a long rocky reef ran out from its southeast corner. To get around this reef required considerable knowledge and skill, but Fred possessed both and we were soon past it.

The picnic was in full swing when we reached Clifton and the members of our party soon became separated. I fell in with some town boys I knew, and the time passed so swiftly that it was four o'clock before I again caught sight of Fred, who was prowling around with an anxious look on his face.

"I've been looking for you," he exclaimed. "We must hunt our crowd up and get right off. and get right off. The wind is rising to a gale. We don't feel it here in the shelter, but if we don't get away soon we'll have more of a picnic than we bargained for before we get home.

After some time we found Aunt Ray and Miss Seymour, and later on Curtis and Bert turned up, but Muriel and Edna were nowhere to be seen. Finally someone told us they had gone with some friends for a drive.

There was nothing to do but wait until they got back. With all this delay it was now five o'clock and Fred had altogether given and Albiert by the state of the s altogether given up talking, which I thought was a bad sign.

When the girls came back he hustled us off uncerewas too green a hand to be a good judge, I did not like the look of it.

"Think we can do it, Fred?" I asked.

"We'll try," he answered, determinedly. "The folks over home will be wild if we don't turn up tonight. Don't scare the girls. There's no fear of our getting upset. It's the reef that worries me. If we can't get around it we'll have to come back, that's all."

At first we got on well enough, thanks to Fred's skill. The rest of our party did not appear at all alarmed. They were accustomed to the bay in every mood and had perfect confidence in Fred. Bert was guying Curtis about some girl with green ribbons in cream; Aunt Ray and the girls were tormenting poor Miss Seymour about some old widower who had been making up to her at the picnic; they all seemed to be getting a great deal of fun out of their jokes and it kept them from thinking of danger or noticing Fred's silence.

We managed to get around the reef, but our troubles had only begun then. Everybody wakened up to the seriousness of the situation when a big wave broke clean over the boat and drenched us well.

"Fred, what are you doing with us?" shouted Curtis. We were in a sort of whirlpool and it seemed to me take the big as if "The Belle" must capsize with every plunge. I boat and all looked around and thought we must be the worst scared crowd anybody could imagine. Everyone was as white as a sheet and Fred was the only cool on of the lot. "We can't go on," he shouted. "We'll be drowned

if we do. There are two tides setting around the island and we're caught between them. There's nothing to do but put back and land on Glenn's till the wind goes down. Lend a hand, boys."

Curtis and I sprang to his assistance and we soon had "The Belle" put about. A few minutes later we Bert and I hurried to the house to tell Aunt Ray and the reached comparatively calm water in the lee of the headland and anchored. There was no obliging longshoreman with his dory to land us now. We boys had to wade out in the water and carry the dripping girls ashore.

There we were, cold and wet, and with the cheerful prospect of staying on Glenn's all night. We looked at each other glumly. This was a nice wind-up to our

The reaction from terror and anxiety had come and

"I'm sure I don't know what there is to laugh moniously. The bay was very rough and, although I, about," gasped Edna at last, as she wiped her eyes. "but you all look so funny and forlorn.

We're like a lot of drowned rats," said Bert. "Curtis, if that green-ribboned divinity of yours were to see you now she wouldn't own you."

"Don't you wish Ethel Brander were here?" put in Muriel. "She's everlastingly talking about 'new experiences.' If this wouldn't satisfy her I don't know what would."

We all made some flimsy joke in turn and even began to think that being half-drowned and stranded on Glenn's for the night was quite romantic; but Aunt Ray and Fred kept us down to practical things.

What's to be done first?" asked the former, "Haveher hair whom the latter had been treating to ice a grand rummage for matches," responded Fred. "If we can get a fire and dry ourselves we'll not be so badly off.'

We had our "rummage" and then looked at each other. Not a match in the crowd! Fred whistled. Well, come on! It's too windy to stay here. If I'm not mistaken there are two old fishing shanties up above somewhere. They'll be shelter at any rate. Accordingly we scrambled up the steep, wet bank, getting considerably daubed with mud in the process. picked our way for some distance through brush and undergrowth and at last found the two shanties built in a sheltered spot under the pines. They were wretchedly small and shaky but, as we all cheerfully agreed, better than nothing. Aunt Ray and the girls took the larger one and we boys crowded into the

A sort of rude shelf ran around three sides of the room, so leaving the door open for ventilation-for the wretched little place was only a few feet square and had no windows-we stretched ourselves out on the shelf, hoping to get a wink or two of sleep for it was now dark and we were thoroughly tired out. Vain hope! In a few minutes the silence was broken by a grunt from Curtis, followed by a vigorous slap. Bert fellowed suit. The mosquitoes of Genn's had found us

"Great Scott!" grouned Fred, sitting up and laying about him in a lively fashion. 'This is the last straw. Curtis, shut the door-do."

Curtis did so, but matters were not improved thereby: The mosquitoes were in and meant to stay. We slapped and squirmed, and Curtis growled that he had cut his finger on a nail in the door and began groping in his pocketbook for a piece of court plaster. Suddenly be gave a shout: "I've got a match-here in my pocketbook, dry as a bone. One solitary match! Who'll take , the responsibility of lighting it? I won't, that's certain."

"Fred's the man," I said, and in a second we were all outside, picking up bits of brush in the gloom and searching for birch bark. When we were ready Fred knelt down and struck that precious match, cuddling the feeble blaze in his hands while we watched anxiously. Presently a tiny tongue of blue flame darted around the bark,

quivered and flickered for a moment. then shot up in a burst of light. We gave a shout that made the woods ring and brought the girls out to see what

was the matter.

In a few minutes we had a jolly fire and were basking contentedly around it. Overhead we could hear the wind thrashing among the tree tops and far out the boom of waves on the reef, but we were safely sheltered. It was quite a picturesque scene-the ruddy firelight streaming up to the dark crests of the pines, the army of shadows that skulked in and out among the trees. and the circle of laughing faces around

the blaze. We told stories and sang songs for an hour or two, until we were thoroughly warm and dry. Then we crawled back to the shanties and as the smoke of our fire had banished the mosquitoes we soon fell asleep.

I was awakened by someone shaking my shoulder and opened my eyes to see Fred grinning down at me, while through the open door I saw clear blue sky and fresh morning sunshine slanting athwart the trees.

"Get up, Lazybones." said Fred. "It's five o'clock and time we were off. The wind has gone down and it is a glorious morning."

The others were soon aroused and in a short time we were again on heard "The Belle." It was still very rough. but we had a fine sail home and reached Westmount in safety about seven o'clock, a very hungry crowd indeed.

If "all's well that ends well" our adventure must have been well too, for nobody was any the worse for it, and it is something to be laughed and talked over every time we meet.

As Edna says, "Well I'm glad I had

the experience, but I wouldn't want to have such another."

It seemed * * as though "The Belle" must capsize at every plunge

An Engineer's Story

F. O. JONES

¹0-00-00-00-00-00-00-00-00-00-00-00-0

"No I never had many exciting experitime, for the past thirty one years, has been spent in a cab.

neer's answer to my query.

of the story, I will simply state that an important Empire State. We were wreck.

After sending two messages,

interval of waiting. Sauntering on past the smoker, baggage and mail cars, I found the engineer, a well-built and well-preserved

man of about fifty, taking advantage of the delay to carefully inspect and oil his engine.

The exchange of a few words soon put us on friendly terms. To my delight, I learned that his was both the fastest and the most powerful passenger engine on the road. If western connections were late or other divisions lost time, No. 927 was expected to straighten out matters. In the two years since she came from the shops she had never failed to perform her part, and railroad men knew the "unavoidable" had happened if she did not roll into the division terminal on time.

An interesting chat of a few minutes naturally led up to the question which brought forth the answer at the beginning of this

story.
"No," continued the engineer, after closely inspecting an oil cup to make certain that it was properly working. "it's about the same, year in and year out. There isn't much room for accidents where one is always careful. It's the habit of taking chances which leads to so many railroad horrors.

"Of course, occasionally a stray animal gets on the track or foolish people race with the train for a crossing, but these are minor things, and do not greatly disturb the nerves of the average engineer. I do not recall but one 'nerve-destroyer' in my own experience, and that was several years ago. Guess I'm not likely to forget it, however, for every time I approach the spot, the same awful feeling begins to creep over me.

I intimated that I would very much like to hear the story.

Well, as we are likely to stay here some time, I don't mind telling you about it. I see Joe, my fireman, is busy pitching quoits, so come up and have a scat in the cab; it will be more comfortable than standing around.

It happened in the latter part of April, '94. Perhaps you can recall the damp weather of that spring. Hardly twenty four hours passed without some rain falling. The

ground was pretty thoroughly soaked, and people began to think another '88 season was at hand.
"My run then was wholly after dark, beginning at

seven fifteen o'clock and ending at nine thirty hve. for water. Everything had been working finely, and On that particular day the train had been very slowly, we had gained ten minutes on our schedule. I conbut just as surely, losing time, largely caused by the added weight of two extra coaches containing delegates returning from some convention.

five minutes late. That I would be expected to make around a high hill, passing from one valley into anup this lost time was a foregone conclusion. Officials other. The grade was in our favor, so that it was are not apt to worry themselves about such trifles a comparatively easy matter to get the train under a slippery track and air

damp enough to smother the fire.

walting for me. It wasn't the first time, and I knew rested an instant on the clouds, like some monstrous there was something special on his mind. Years ago. we were boys together, so there was none of that constraint which often exists between employer and

employee.
"'Bill,' he said, 'there's a party of railroad capitalists on board to-night, and I want to give them an nothing nearer than C—, fourteen miles away; be-eye-opener. The best we can do, you will pull out sides, it was too narrow and too brilliant to be proeye-opener. The best we can do, you will pull out twenty three minutes late; shall I have an extra made, duced in such a manner.

my train and all the credit. 'Guess No. 927 won't some curious reason, I felt concerned us. need any help, though it's going to be a mighty hard i

'All right, old man,' I said. 'Just keep a clear line and I will 'tend to the rest.'

"This was a hint for him to watch the dispatcher's office a little, for I knew there were three heavy freights out on the line ahead of us, and they are apt ences, though most of my to be slow and delay other trains on such nights.

"When I arrived at my engine, I found it already coupled on and Joe busy in the cab.

n cab," "Well, Joe, you will have to keep her red-hot to-This was a veteran engi-night,' I said. 'There's a special party on board, while the superintendent is on particular nettles. We've got To be as brief as possible to squeeze the schedule to the tune of twenty three though she meditated jumping the track. with the uninteresting part, minutes if 927 goes to the shops to pay for it.

"After testing the air brakes and using more than my customary care to make sure that everything was business engagement had all right, I settled back on the seat with one hand made me a passenger on resting on the throttle lever. Gazing down through one of the "flyers" which the interminable lights of the yard, I could see that traverse the length of the the main line was clear, ready for our coming.

"The signal to 'go ahead' had scarcely been given being delayed at a small ere I had the train under motion, and we were soon country station by a freight rushing through the night like a meteor.

"Though the rains were frequent, there had been no reports of seriously high water along the line, and I began looking around for I did not apprehend any danger from that source, bered that, less than half a mile around the hill, a something to while away the The clouds hung low and the darkness was intense, single-span iron structure one hundred and forty feet

"There was no bridge visible. Instead, I could distinguish nothing save a yellowish expanse which I knew was water."

but every foot of the track was familiar to me, and felt no hesitancy about crowding on steam.

"About fifty miles out we were compelled to stop gratulated myself that we were in a fair way to run cut the engine loose so she won't be a drag, and then into Bon time.

From the watering station the track runs straight When the train reached my division, it was twenty for nearly four miles; then the road swings sharply

beadway again. "We had gone hardly more than a mile when sud-At the station, the superintendent himself was dealy a ray of light shot up from behind the hill and ghostly finger. Then it disappeared, only to reappear again at irregular intervals. This struck me as being rather strange. I knew it could not be produced by opening the door of a fire-box, for the operator at the watering station had just told me that there was

"'No,' I replied, for I didn't fancy losing a part of watched the play of that finger of light, which, for "Telling Joe to keep a sharp lookout for signals, I

"Now, when I was a young man, I had an idea had no difficulty in learning most of the particulars.

run. Besides, an extra would be dangerous in this that I might want to be chief dispatcher some day, weather.'

"I know you will do your best, Bill, and don't but the work was too confining for me, so I went on need any urging, but don't fail this time of all others.'

the road. I might have forgotten all about it long ago, but I formed the habit of occasionally strolling into telegraph offices to try my luck at reading.

'After a moment's pause, the flashes were resumed. This time I easily recognized the Morse alphabet. You may imagine with what intense interest I slowly

read the message.

"Three short flashes, s; one long flash, t; two separated short flashes, o; five short flashes, p. Stop.

"What could it mean? I hardly breathed, though No. 927 gave tremendous lurches from side to side as

One long flash, t; one short flash, two short flashes, r; short flash, long flash, a; two short flashes, i; leng flash, short flash, n. Train.

"One long flash, three short flashes, b; one short flash, two short flashes, r; two short flashes, i; one long flash, two short flashes, d; two long flashes, one short flash, g; short flash, e. Bridge.
"Two long flashes, one short flash, g; two sep-

arated short flashes, o; long flash, short flash, n; short flash, e. Gone!

"What, the bridge gone? The possible import of the message quickly dawned upon me when I remem-

> long carried the tracks over a small stream. Yet it was twenty feet above the bed of the stream, and surely safe from any flood. Then, too, the message was so strange, so uncanny, that I hesitated the smallest fraction of a second before, with the instinct born of caution, I shut off steam and threw on the brakes to bring the train under control.

> We could not have been making less than seventy miles an hour, and were still going like a thunderbolt when we swept around the hill. Then I beheld a scene which burned itself upon my memory and aroused every nerve in my body. The ray of light had left the clouds and rested where the bridge ought to be, but there was no bridge visible. Instead. I could distinguish nothing save a yellowish expanse which I knew was waterwater up to the very base of the rails-water where no one would have dreamed it pos-

"With hardly more than a single movement I turned the air brake lever around to the emergency notch and sanded the track. Then there remained nothing for me to do except to watch that death-spot in the tracks. I could see large trees and even buildings borne along on the flood with as much ease as chips, and its awful roar already smote on my ears.

'It is no easy matter to stop a heavy, vestibuled train, even under favorable conditions. We seemed to be pushed along by an unseen power behind, though a blaze of sparks from each side of the track testified to the terrible grinding of iron which was

going on.

"If you have never been borne along toward some danger with no power to help yourself, you cannot possibly imagine my feelings. I had no fears for my own safety-I could easily jump and escape—but the thought of the two hundred helpless passengers made me break out into a sweat of agony. A muttered prayer, a shriek or two, and then all would be over-drowned like

"So far, Joe had manfully stuck to his post without a word, but now he came over on my side.

"'For the love of life, Bill, can't you stop her?'

"Turning for an instant, I caught an expression of horror on his face which I hope never to see again. 'Impossible,' I answered. 'And may God help the passengers, for they are beyond human aid. But there is no call that you should stay any longer, Joe. Quick, save yourself.

'Brave as he was. Joe didn't need a second invitation, but as he disappeared over the tender he hesitated long enough to shout back:

'Jump, Bill, jump!'

"The speed of the train was fast lessening, but it appeared impossible to avert the impending disaster. Reasoning that I might be of service in the work of rescue, and having done all that could be done in the cab, I swung myself off.

"Of course, I expected to see No. 927 at least disappear from sight, but no, she balked with her nose actually poked out over that seething torrent. Hastily climbing back into the cab, I backed the train a short distance for safety, and then did a very unmanlike thing-broke down and cried like a baby. But I guess there were other moist eyes when they saw how narrowly we had escaped.

"The next afternoon, I visited the scene with the superintendent and some of the other officials.

"It seems that earlier in the evening a cloud-burst hand engine and dynamo somewhere. With the aid had occurred somewhere up the valley, and the or- of some books and at the expense of a great deal of dinarily harmless stream quickly became a young experimenting, he had managed to construct a sort of Niagara. Wooden bridges, out-houses, barns and every kind of wreckage were piled against the railroad bridge, while immense trees and logs acted as battering rams to drive the mass together. In ten minutes, astonishment of everybody else. the jam was simply indescribable.

"There could be only one result. The company's bridge had to go, and go it did, leaving behind an unbridged, foaming torrent which would have easily engulfed our whole train.

"Across the stream on a knoll stood the house of a farmer by the name of Jenkins. Among his sons was a young man of eighteen with a decidedly mechanical turn of mind. All of his spare time and money went into mechanical study and experiments, much to the old farmer's disgust. A short time previous to that fateful evening, he had secured a second-

a search-light. This was provided with a sliding shutter, which enabled him to throw flashes of light on distant points, greatly to his own amusement and the

"While watching the havoc wrought by the flood with the aid of his search-light, he discovered that the bridge was gone. Already our train was due. It was folly to think of crossing the stream, for every bridge within miles had been swept away, and no telegraph office could be reached in time to warn us. He was just on the verge of despair when an idea that was hardly less than an inspiration flashed through his mind. Why not signal with the searchlight? Providentially, among the useful things which he had picked up during spare moments was the Morse aiphabet.

"Once conceived, he lost no time in putting the idea into execution. Not knowing that I understood telegraphy, his hope was that the operator at the watering station might notice and catch the message in time to prevent our leaving. It was a forlorn chance with no alternative. When it had apparently failed, he threw, as a last resort, the light so that it illuminated the scene of destruction. The final result you already know.

"Did the company give him a handsome reward? No; they did what was better. After finding out that he was honest and of good habits, they gave him an opportunity to show the stuff that he was made of. He is in the dispatcher's office now, and I'm no prophet if he doesn't top off as general superintendent or president one of these days. It was his industry and quick wit alone which saved the world from being shocked by the most awful railroad accident ever known."

THE WAY OF THE TRANSGRESSOR

FANNY FORBES

"Judge, that's a curious watch charm you wear. I've often noticed it. May I ask as to its history, if it has one?"

"Yes, it has a history," the judge answered, "and a most peculiar one. See the date?" he asked, holding up the silver dime, which formed the charm in question, "'1860,' just forty years ago. The year it was coined it came into my possession through what I've always termed my first case, and I've kept it all this time as a trophy of youthful prowess."

"Will you give me your gun?"

"Well, let's have its history, if you are not too tired fter the trying day in court."

"No, I am not tired," he replied slowly, "but I swered.

hated to pronounce that sentence: ten years hard labor is pretty stiff, even for wanting another man's money, isn't it?"

"Well, it's the way of the transgressor," I replied,

carelessly. "How about the charm?"

"When I was fifteen years old," began Judge Barry, "living on my father's farm, I was fonder of hunting than I am now. On the farm next to ours was a boy about my own age, and we were inseparable. He was a fine fellow in many ways, but had a hot temper, and with it a dogged both front legs of the rabbit and, sure enough, there determination to succeed in anything he undertook. was one forefoot gone. It was the ghost rabbit and All our spare time was given to hunting, and to making and setting traps for game, which in that locality I looked, he quietly reached for his gun, which lay

was plentiful. There was one point on which we differed; he was great on shooting, while I preferred to trap my quarry. There was to me a fascination in the uncertainty with which I would approach my traps and snares in the early winter morning, and when from a distance I could see the trigger down-well, every boy knows how it feels. Tom and I had hunted one particular rabbit with more fervor than I would now hunt a gold mine. This rabbit was a veteran, and in doubling, turning and eluding, he was a pastmaster; then he had a knack of shedding cold lead that was something uncanny; in consequence we named him the ghost rabbit. It finally came to be a test of skill between Tom and I as to who should get that rabbit. I had shot at him, and Tom had shot at him; each vowing the shot had gone through without turning a hair. Tom came nearest to victory when he cut one forefoot off, but this did not seem to interfere with either the speed or ingenuity of the ghost

"'I'll get him,' said Tom one day after a hard, though unsuccessful chase; 'I'll get him, if he is a real flesh and blood rabbit.'

"'Don't look much like it now,' I replied, 'for all you're a crack shot.' Tom's superior skill as a marksman was a sore point with me.

"'What will you give me if I get him?" he asked, his quick temper taking fire at the taunt. 'Will you give me your gun?'

"'No, I'll not give my gun, but I'll give you a tencent piece if, before the week is out, I do not get him.

"'How? Not with that gun; why you couldn't hit an elephant with that,' he said, contemptuously.

"'That's all right, but I'll get him just the same,' I replied.

"'You'll never trap him, if that's what you mean; he's too smart.'

"'I'll (rap him,' I answered.

"'You can't do it! I'm so sure that I will make you this proposition: If you bring me that ghost rabbit, mind, with one forefoot gone, I'll give you a tencent piece and I'll give you'-and he paused to give the offer due emphasis-'I'll give you my gun be-

"'My, you must be sure, to offer that precious gun of yours,' I said.

"'I am,' he answered shortly, and something in his face struck me as being very near an angry scowl.

"'Well, you needn't get angry about it; we haven't either of us got him yet,' I said, turning away.

"That day I set all my surest traps in the most likely places, selecting my best bait, and waited with no little anxiety for the next morning. It came, and so did two or three more mornings, but they brought no success. Tom had no better luck, though he hunted eagerly all day long. The eventful week drew to a close; only one more day remained. I carefully looked over my traps, baited them anew, and set them carefully, while Tom started out bright and early with his gun.

"'You might as well give up, Ned,' he called out, passing our yard; 'if it had snowed you might hope to catch him, but not now. Bring over your money early, I want to use it.'

"'I will, when I come over to get your gun,' I an-

"'That night I did not sleep much. Next morning, with the first gray streak of dawn, I was up and on my way to my traps. I had visited all but one which was in a thicket about half a mile from the house. The light had grown brighter, and as I neared the spot I could see distinctly; the trigger was down, and there kneeling in front of the trap was Tom, just in the act of taking out a rabbit. I stopped aghast; he is going to bring it to me, I thought. As I watched him from the corner of the thicket he carefully lifted no mistake; but what was he going to do with it? As

beside the trap, and started swiftly in the direction of his home. Was he, my friend, going to steal the prize from me? With a bound I was after him. 'Tom,' I cried, 'what are you doing? Were you going to steal my rabbit?' He turned quickly, his face set and resolute, his eyes dogged. 'Your rabbit?' he asked; 'how do you know it's yours? Haven't I traps, too?' 'I saw you take it from my trap not two minutes ago, and if you don't give it to me I'll take your gun, for it is now mine,' I cried, seizing his gun by the barrel and pulling it with a jerk from under his arm.

"'Look out, it's loaded,' he cried, dropping his

"'Give me that rabbit,' I demanded, laying hold of it, while it gave a shrill cry of terror.

"Here, take it, and take the gun, too, they're yours; you caught it fair. And here is the money,

"'What were you going to do with it?' I asked, taking the rabbit, but turning away from the gun and money. 'I was going to shoot it and bring it to you,' he answered, sullenly. 'I didn't want your money, but I couldn't bear to have you beat me. I would have told you after awhile. Here, take the gun; it's yours.'

"'I don't want your gun or anything belonging to you,' I replied, 'but I do want that ten-cent piece. I want to keep it to remember you as a thief, Tom Ramsay.' "

"Tom Ramsay!" I cried, "why, that was the name

as he slowly detached the coin

from his watch chain, and tossed it into the water, "and

he had the same expression on his face

to-day as I sentenced him that he had

the morning he handed me that coin."

How Two Grouse Saved Their Home

ROBERT B. BUCKHAM

AST fall, while spending a month in one of New England's village communities,

I formed the acquaintance of a good-natured fellow, familiarly known among the villagers by the name of "Hank," who at that time was going about on crutches. He was a typical back-

woodsman, long and. lank, with an insatiable fondness for tobacco, and for roaming the woods with his muzzle-loading fowling

der, in search of "game," as he said—quite a talkative individual, withal, and, as I am convinced, strictly honest.

It was from him that I secured the facts which form the thread of the following no good, for as a incident, and, although I cannot personally vouch for its spection it was strict truth, yet my informant's finally accepted apparent veracity in other mat-

ters which came to my observation lead me to believe last putting that he told the truth.

He related his story one evening as we sat before the roaring wood stove at the village grocery store, plot which between long whiffs from a huge briar pipe filled with they had so a generous supply of tobacco, such as the resources long been of the establishment afforded, and from his account planning. I gathered the following facts:

In a sheltered glen in the depths of a pine wood back of the village, there lived a pair of grouse. Food here was sufficient at all times of the year blackberries and blueberries in the summer, and wintergreen berries in the winter; so that Mr. and Mrs. Grouse lived in comfort and even luxury in their woodland home.

But one annoyance they had, one which preyed considerably upon their happiness of mind; every autumn a great, lank individual. armed with a fowling piece, whom the reader will doubtless recognize as "Hank," came prowling through the woods, driving them from their comfortable retreat, and firing after them with his gun, with such a noise as to cause them to tremble with fear for hours afterward.

One morning as the reddening of the maple leaves warned the pair that autumn was again at hand, the dreaded time of the gunner's return, Mr. Grouse remarked to his wife that they must now begin to plan new tactics by which to escape the shot of the terrible gun.

"So far," said he, "our schemes have trap, and incl-worked very well. There, for instance, is the old | dentally to try one more shot at the grouse in the hemlock; how many times have we flushed behind it and saved ourselves by flying away under the protection of its thick branches! Then, too, there is the tall spruce at the head of the glen; I presume we have escaped discovery at least a score of times by hiding in its lofty top. That was a lucky thought of yours. too, dear wife, that we should skurry away on noisy wing at the first sight of the gunner, and hide in the thick bramble patch, where he is not able to follow and discover our whereabouts. But it seems to me that his visits are becoming more and more frequent, every year, and that we must either extend our list of tricks to escape him, if we would preserve our lives for another season, or else move away from here at once, and this is altogether too pleasant a home to be abandoned."

responded Mrs. Grouse, feather on my body creep, just to think of that dreadful man with the gun! How I do wish we could dis-

pose of him in some way!"

'I declare! I never thought of that before," said Mr. Grouse in high glee, strutting about and flashing his many colored ruff in the sun. "A bold plan, never attempted by any grouse that ever lived as yet, I imagine; but why should we not try it? Why should we not do away with him, instead of his doing away with us?"

From that day forth the two grouse were constantly on the watch for some means of ridding the glen of the hunter, puzzling their wits day and night in the hope of some day hitting upon a plan for ac-

prowling up the gully, gun in hand.

One dull, chilly day, late in November, as he came of beating about for the birds, as usual, he went down into a little ravine by the brook, and after thrashing about there for some time, finally departed. Meanwhile Mr. and Mrs. Grouse, out of sheer curiosity, had crept noiselessly up and were watching him from behind the friendly shelter of a fallen log; but not once did he notice their sparkling eyes, or as much as suspect their presence.

No sooner had he disappeared in the bushes than the two grouse advanced to see what he had been doing. Now, it so happened that on one of his excursions in search of the grouse, "Hank" had noticed a muskrat's trail in the ravine by the brook. This challenge was more than his hunter's instincts could withstand, and inasmuch as his luck with the grouse had been "poor" that fall, he determined to have a bout with the muskrat.

He had no trap of his own, but inquiry among his neighbors at last brought to light a very old and very rusty one. It was a bear trap, not a muskrat trap. to be sure, with two powerful springs and huge teeth well as physical suffering. He only remembered that on its jaws, but "Hank" regarded it as better than in some way he got hold of the fastenings of the chain nothing; and this it was,

which after a great deal of

pulling and hauling and poking with a leavy stick, he had managed to set in the ravine. grouse The spected it carefully for a long time, going around and around it, but not venturing too near. They evidently came to the conclusion that it was intended for result of their inas a means of at into operation the long been made another lunge.

glen. Now, Mr. and Mrs. Grouse had arranged all their plans for his undoing with great care, and had been awaiting his coming for some time, ready to put them into execution.

On the follow-

ing day "Hank"

came wandering

along through

the woods on his

way to visit the

Suddenly out from under a thickly matted clump of hemlocks flew Mrs. Grouse, with as loud a noise of wings as she could possibly produce, thereby setting the dead leaves swirling about in quite a little cloud behind her. The unsuspecting hunter, carelessly sauntering along with his gun over his shoulder, was taken completely by surprise, and although his piece belched forth its terrible roar, as usual, yet his aim was poor and the shot went raking through the treetops far in the rear of the flying grouse.

It was now Mr. Grouse's turn to play his part. The single barrel shotgun was empty, and, consequently, knew it; at once into the path directly before the hunter, tossing and tumbling as though he had been severely wounded by the charge from the gun. "Hank" was completely deceived, and with a shout of joy dropped his gun and rushed forward to seize his prize.

The grouse struggled just beyond his reach, and a little farther down the path, trailing one wing as though broken, and limping badly. "Hank" made another lunge, but just missed his mark again, and thus the two went down the path, the bird hobbling and fluttering along with difficulty, yet managing to keep just out of the reach of his pursuer.

complishing their wish, for again and again he came enough to flutter over the concealed trap without coming in contact with it. In another instant there was a click and a snap followed by a foud cry of pain creeping through the solemn, silent woods, instead and anger, and wily old Mr. Grouse took wing and flew away to join his bright-eyed wife and tell her

that their plan had worked to perfection.

Meantime, "Hank," caught fast in the trap, struggled and wrenched to get himself free, but all in vain. The two powerful springs were altogether too strong for him, encumbered as he was, and at every turn the ugly teeth sank deeper and deeper into his flesh, causing him intense pain.

Gradually the light faded and darkness came on, and still he lay and moaned, and shouted for help in vain. Slowly the long hours of the night passed away; it grew intensely cold, and some snow fell. Again and again he could hear the stealthy tread of some unseen denizen of the woods as it crept up to inspect him, and doubtless gloat over the feast which was expected to follow, as soon as he was too weak to defend himself.

How long the captive remained in the trap he could not definitely state. His mind was more or less a blank on that point, so intense was his mental as

> of the trap, and by a powerful pull finally succeeded in drawing the staple. A little way at a time he then dragged himself out of the woods to the road, the trap tearing his flesh vindictively with every move that he made, and was at last discovered by a neighbor, who carried

> For two months he lay in bed, suffering terribly from his wounds, blood poisoning having set in; and, indeed, the doctor informed him that he was exceptionally fortunate to have escaped lockjaw, from the cuts of the rusty

> "Ever since, I've been a-goin' on crutches," he concluded, "and if it hurts so much as all that to be trapped, I believe I'll confine my huntin' to rare flowers and such like, and let the harmless beasts go."

> Thus Mr and Mrs. Grouse saved their home, and are doubtless living in peace and contentment still, in their secluded haunt.

ANY MORE FOR SLUMBERLAND.

There's a boat that sails at half-past six From the busy port of Play. And it reaches the haven of Slumberland Before the close of day.

The boatswain whistles so low and sweet (Like a mother's lullaby)
That the travellers smile and close their To dream of angels nigh.

Sometimes the travellers tarry too long
In the busy port of Play,
And the anxious boatman coaxes and calls. And grieves at their delay.

The name of the boat is the Rock-a-bye, And it's guided by mother's hand, For she is the patient boatman, dear, Who takes you to Slumberland.

Now what is the fare a traveller pays On a Rock-a-bye boat like this? Why, the poorest child can afford the price, For it's only a good-night kiss!

Henry Clay was one of the seven children of a poor widow. He secured his education without a teacher. He delivered his first speech in a barn, with a cow and a horse for an audience.

A MISSOURI BOYS' CAMP

Down into the glen they went, then down the ravine coths. Mo. Van is locking toward us in the picture. He says the "kid" toward the brook, the crafty bird rising just high the right.

HOW HARRY PR HE WAS NOT WILL S. GIDLEY HOW HARRY PROVED HE WAS NOT A THIEF

WILL S. GIDLEY

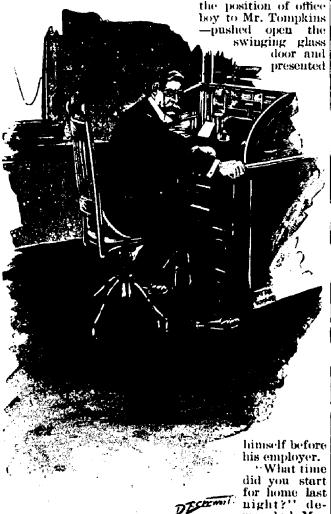

Thaddeus Tompkins, counselor-at-law, occupying rooms 99 and 100, Skyscraper building, New York City,

He sat down in his spring-back chair, slammed back the cover of his roll-top desk, and shouted forth the | andone word:

was in a state of mind the reverse of calm and agree-

"Harry!"

"Yes, sir," responded a frank, boyish voice from the adjoining room, and a second later the owner of the voice-Harry Wilson, a lad of fifteen, who held

sharply. "At the usual time-six o'clock," was the unruffled reply.

DECEMIT

manded Mr.

Tompkins,

looking up

"Did you remain in the office all the time after I left until six?'

"Are you positive you didn't go out at all?"

* * And shouted forth the one word, "Harry."

"Yes, sir; I was busy all the time copying the letters you left and getting them ready for the mail.

"Did you have any callers after I went home?" "Yes; I believe there were three."

"Who were they?"

"A messenger boy came in with a letter for you, which I signed for and left in the usual place on top of your desk; then Mr. Edwards came in and said he would like to see you in his office at 10 to-day; I made a memorandum of it, and put it under the paper weight with the letter; and the last caller was a stranger who had a model of a new invention that he wanted to show you and see what you thought about getting a patent on it."

"Did he say who he was or make any appointment to call again?'

'No, he took the model out of his satchel and said at first he would leave it and call in to-day and see you after you had looked it over; then he changed his mind and said he was in a hurry to have it attended to and would hunt up some other lawyer."

And this man was a perfect stranger to you?"

"Yes, sir."

"Did you leave the office while he was here?" "No, sir."

"You're sure, now?"

"Yes, sir."

"And no one else called?"

"No, sir: those three were all."

"Well, young man, I'll tell you why I have been not a night prowler after all. asking all those questions. It was raining when I So he dropped his nightly book until I reached the ferry, and then I remembered ployer's property. leaving it in my overcoat. Instead of coming back as | More than a month had passed, and Harry was be-

I ought to have done I borrowed some change and [ginning to think that his detective abilities had been went on home; and now I find I shall have to borrow some more and buy an overcoat; and this isn't the first thing that has disappeared from that closet, either. You remember my gold-handled umbrella walked off in the same way about a month ago. Begins to look as if there was a thief somewhere in the building, doesn't it?"

Harry turned pale.

mered.

"Just as sure of it as I am that I am sitting here. And now I'd like to know how you account for it?"

"Perhaps some one has a key that fits the door,

"And comes in at night after we are both gone, eh? Not at all likely; and besides, if you remember, the umbrella disappeared while I was out at lunch one noon and you were here alone." Harry colored up. "Yes, I remember that," said

he, "but I don't know how it could have happened. There were several callers in that noon, but I didn't notice any of them near the closet. I will keep a sharper lookout after this."

"You'd better if you want to keep your job. There is something very mysterious, not to say suspicious, about the disappearance of that umbrella and overcoat, and if anything of the kind happens again I shall have to let you go. I hate to do it, on your mother's account, but—well, don't let it occur again if you value your situation; that's all!"

And having delivered himself of this piece of advice, Thaddeus Tompkins, counselor-at-law, turned to his desk and began his day's work, leaving his youthful assistant in a decidedly unenviable frame of mind.

Harry Wilson was the only son of a widow in poor circumstances. She had formerly held a position as forewoman in a small cloak factory, but a year before our story opens she had been compelled to give up the place on account of failing health. Then, though only fourteen years of age. Harry had left school and stepped bravely into the breach as the wage earner of the family.

He was a bright young fellow, and his employer paid him more than most boys of his age received, still there was very little of his weekly salary left after paying the rent of the two rooms they occupied in an East side tenement and the other expenses of himself and mother.

The greatest calamity that could happen to him, he imagined, would be the loss of his job. He dreaded to even think of such a thing. And to lose it through suspicions of his honesty would make it ten times worse. How could he ever carry such news home to his mother? One thing was certain: if he lost his sit-uation it would be through no fault of his. He had no idea what had become of Mr. Tompkins' umbrella and overcoat, but he made up his mind that nothing more would disappear from that closet-while he was present, at least-without his knowing something about it.

Hereafter it would be part of his business, when his employer was absent, to keep an eye on the door of that closet. In other words, Harry proposed to play the part of detective, and capture the thief if he showed up again; or at least prevent him from steal- well take ing anything more and getting him into any further trouble.

That night when Harry was eating his supper he

suddenly asked:

"Mother, do you mind if I stay at the office nights for a week or ten days? I have something to attend to there evenings for awhile, and it will keep me so late I think I'd better do my sleeping there. There's a good leather couch that I can sleep on like a top, but of course I will be up and home in time for breakfast every morning.'

"I don't object to your sleeping there if it is really necessary for you to work so late. Harry," answered his mother. "But I shouldn't think Mr. Tompkins would require you to work like that."

"Oh, Mr. Tompkins doesn't require it, mother. I am doing it on my own account," exclaimed Harry. 'It's something special; but I'd rather not tell what it is unless you insist on it."

"I will not insist; only don't be getting into mischief, Harry.

No fear of that. I can't afford to get into any mischief as long as I've got the dearest and best little mother in the world to take care of," said Harry, playfully.

As soon as he had eaten his supper Harry went ack to the office, and for a number of nights thereafter he slept on the couch near the door, and "kept sides you haven't seen Mr. Tompkins yet about that one eye and both ears open for sneak thieves," as he expressed it afterward. But somewhat to Harry's disappointment none of these gentry called, and he was finally forced to the conclusion that he was on the wrong scent; that the rogue who had undermined his peace of mind and threatened his job was ing and tried another tack.

So he dropped his nightly vigils and resumed his started for home yesterday, so I wore my old storm-1 regular routine of duties, but the warning words, Let me out and keep mum and I'll give you five dollars coat, leaving my best overcoat hanging up in the 1"don't let it occur again, if you value your situation." cash down. What do you say to that?" closet here, with my purse containing about fifteen kept running in his mind, and he never ceased to keep dollars in one of the pockets. I didn't miss the pocket- a sharp lookout for possible appropriators of his em-

expended to little profit, when his vigilance was finally rewarded by having the fish walk right into his net, so to speak.

It happened one day during the noon hour. Mr. Tompkins had just stepped down to the restaurant in the basement, for his lunch, when a stranger opened the door and walked in. He carried a satchel, and Harry's heart jumped into his throat, as he recog-"Are you sure the—the coat is gone?" he stam- nized him as the same man who had called with the model the day Mr. Tompkins' overcoat had vanished and a pocketbook containing fifteen dollars along with it!

He was wearing an overcoat which to Harry's quick eyes looked suspiciously like the one his employer had lost, though it was somewhat shorter than that, and the velvet collar was of a different shade from that of Mr. Tompkins'.

Harry kept at work copying documents at the letter-press in the corner of the room, and although his back was partly turned to the caller, every sense was on the alert and he was keenly alive to all that was going on.

"Mr. Tompkins in?" inquired the stranger, glibly. "No; he has just stepped out to lunch," replied Harry.

"Sorry; get a work here I thought he might like to look over," said the caller, opening his satchel and taking out a small book.

It struck Harry that the size of the satchel was entirely disproportionate to the size of the book, but he kept at work and said nothing.

"Perhaps I'd better wait for him a few minutes," went on the caller, helping himself to a chair and sitting down at the farther end of Mr. Tompkins' desk, next to the clothes closet. The desk was now between Harry and the door of the closet, and although the desk completely hid the movements of the stranger and the lower part of the closet door, the upper part was still plainly visible.

Harry kept rattling away at the letter-press, apparently too busy to notice anything, but in reality he was watching that door with the vigilance of a cat lying in wait for a mouse.

Presently he saw the top of the door begin to move and swing slowly outward until it stood half way open. Harry's heart thumped like a trip hammer as he dropped his work and noiselessly glided across' the room. He reached the corner of the desk without being heard, and then with a quick spring he slammed the closet door shut and bolted it, with the enterprising caller snug and safe on the inside. "What the dickens do

things easy, Mister. I've just rung the electric bell for the janitor, and if he comes and finds that door kicked down he'll be apt to make trouble for you. work you wanted him to look over."

While he was talking, Harry had kept his foot pressed tightly against the door to offset the force of the blows on the other side, and seeing that his struggles were useless the imprisoned man ceased his kick-

Say, young fellow," said he, coaxingly, "I see I'm in a box and I'm willing to pay well to get out of it.

"Not for five hundred!" responded Harry, promptly, "I've got something at stake in this matter as well as you.

"I thought you had some sporting blood, but I see

you haven't," growled the voice on the other side of |

now I'd advise you to keep quiet for a minute; I hear ! plunder and I captured him." someone at the door.'

turning from his lunch.

"In the closet—with a man inside of it!"

"What do you mean?"

"Just what I said. The overcoat is there, and the "Thanks for the compliment," said Harry; "and thief inside of it. He came back after some more

When a policeman was found and the man in the The newcomer proved to be Harry's employer re-closet brought out and placed under arrest, it was found that Harry's surmise was correct. The over-"Well, Mr. Tompkins, I've found your lost over-coat the visitor had on was the very garment stolen has before him the pleasing prospect of steady and lucracoat!" was Harry's greeting, as he entered the room. from Mr. Tompkins' office six weeks before. It had tive employment for many years to come. He has grown "Where is it?" inquired Mr. Tompkins, looking been fitted with a new collar and altered somewhat to greatly in his employer's estimation since the day he suit the present wearer; but unfortunately for the captured the sneak thief, and is still growing; and the

owner's name, which was plainly stamped on the inside of each pocket.

The prisoner, when arraigned, was recognized as a clever sneak thief who was "wanted" by the authorities for other jobs; and he is now doing more useful work than he ever did before, with every prospect of steady employment for some years to come. Harry also thief, he had overlooked and omitted to remove the best of it is, his salary seems to grow as fast as he does.

ALLAN ROSENERANS kammanammana kammana k

A game of ball could not possibly arrive at a more exciting crisis than this one between the "Dewey nine and the "Schley" nine. It was the final half of the ninth inning, with the "Schleys" at the bat. The score was nine to eight. Two players were out. Perry Price was dancing around third base, and Harry Hughes was hovering near second. Amid a pandemonium of shouting, George Grant came to the plate. He rubbed his palms vigorously on

He rubbed his palms vigorously . . . and firmly grasped the willow.

afresh. The catcher crouched close behind the bat. Twice flew the whizzing sphere while George struck make good his boast. The moments passed, and he in vain; but his third effort caught the ball fairly, and did not come up.

slow, good-natured boy who never did anything scarcely at a faster than snail's pace. Now, however, the good angel that presided over the Dewey destinies seemed to have infused speed into his whole being. The ball came to the home plate with incredible speed, and while Perry's hand was reaching for the beyond, goal in a mighty head-first slide, the catcher touched. The boys quickly placed him face downward across goal in a mighty head-first slide, the catcher touched him out.

To lose the game so nearly won was too much for Perry's self-control and he raged against the umpire. Clark Carr, applying to the latter the stock epithet of 'robber." Now, Clark was eminently quick, fair, and firm, and so far in this game, and in fact in all games before, his decisions had given excellent satisfaction.

The umpire remained calm amid the tempest. merely saying, during a brief lull, that Perry would i be sorry for his anger and his words. Soon the nines gathered their outfits and left the field in regret at the unpleasant ending of an otherwise fine game.

A week passed and Perry remained sulky and distant towards Clark. The second Saturday following. a swimming excursion had been arranged and, at evening, a dozen boys, among them the two named, went to a deep pool where a crib of logs had been built to protect the bank from the teeth of the flood when the spring freshets ran. Quickly disrobing, one after another, the boys ran out on the strong plank that projected from the top log of the crib, and, leaping out, went head-foremost into the stream, vanishing from sight to reappear on the far side of the pool; then swimming about a while they returned for another dive and swim.

Clark had been first off, and Perry came last. As the latter stood on the plank end he cried:

"Boys, I'll dive deeper and come up farther away than any of you. Watch me do it."

Then he leaped high and disappeared beneath the

surface.

The boys, seated on the crib, watched to see Perry

Suddenly Clark Carr sprang to his feet with a gasp: ming under water, opened his eyes,

his fears became reality.

The boys had known of the old log, buried by the sediment of some great flood, but now projecting into the water near the bottom of the pool. Perry had gone deep and

But the brave rescuer grasped the imperiled boy, pulled him out, and rising with his burden to the surface called for help. The others quickly swam about the two, and among them, Perry was borne to the crib and then to the green sward

> a large log, and vigorously rolled him until the water came out of his lungs. Then as he was laid on the green grass he opened his eyes and looked wonderingly around.

Fritz Fossler was the first to speak:

You got fast under the old log, Perry, and Clark dived and pulled you out.'

Perry looked at Clark with wondering eyes, then held out his hand.

"You told me that I would be sorry for abusing you. Clark," he said, "and I am. Will you forgive me?"

The offered hand was quickly taken.

"Don't mention it, Perry, I never laid it up against

Thus came to pass the pleasant sequel of a put-out on an umpire's close derision.

to the right field it winged its flight. Like a flash, almost, the batter sped to first, while, "Boys," he cried, "he is fast under the old log;" Perry came tearing down the home stretch like a instantly the rescuer leaped from the plank and disflyer on the rail. But a wonderful thing occurred, appeared where Perry had vanished. As Clark, swim-

"Don't mention it, Perry; I never laid it up against you, anyhow."

"The American Boy Will Start Fifty Boys in Business

On September 1 next the publishers of The American Boy will distribute among fifty boys 1,250 copies of The American Boy-twenty-five copies to each of fifty boys. The publishers will select the tifty boys from among the boys who, in the month of August, send us one dollar each for his own subscription to The American Boy or to renew his subscription, or for the subscription of some other person. We shall select the names of boys living in various localities, and will only select such as will agree, on the first of October following, to report to us what they did with the papers.

The papers will be sent absolutely free. The boys will use them in any way they may select to make the most money out of them, provided that they are not to sell them for less than ten cents each. If they wish to do so they may give the papers away, but if they sell them they must sell them for at least ten cents each. All that they get out of the sale of the papers they may keep. The boy who succeeds in selling the twenty-five papers at ten cents each will have two dollars and fifty cents. We will not ask him to send us any of the money; he may keep it and do what he pleases with it. We will hope, however, that he will use it as the foundation for further business enterprise. If he sells only part of the papers he need not return any of the remainder to us. Each boy who is selected must agree to report to us on October 1 what he did with the papers. We expect that these reports will prove interesting reading, as no doubt many of the fifty boys will sell their papers and will tell us how they did it and what they did with the money.

Remember, then, that from the boys who send us one dollar for themselves or for somebody elseeither for a new subscription or the renewal of an old one during the month of August, we will select fifty boys, to each of whom we will give twenty-five copies of The American Boy, absolutely free, which they may sell or dispose of as they please, provided that they do not sell them for less than ten cents each, and that the boys promise us that on October 1 they will advise us what they did with the papers.

In sending in the one dollar the boy should write us as follows: If you select me as one of the fifty who are each to receive twenty-five copies of The American Boy from you September 1, Lagree to tell you on October 1 what I did with the papers, the understanding being that I am not to pay for the papers, nor am I to sell them at less than ten cents each.

Yours for wide-awake American Boys, and to wake up those who are asleep The Sprague Publishing Co., Detroit, Mich.

WHY TIM MISSED THE CIRCUS

W. HULL WESTERN, 1

Tim Peddy was in a rebellious mood, and closed the kitchen door behind him with a bang as he made his way to the woodshed; he wanted to be alone to think the situation over.

It certainly was a very unsatisfactory world for little boys, so far as he could see. Think of it! Almost every boy in Hub Hollow was going to the circus but himself. Their folks were not afraid their boys would get run over by the chariot racers, or eaten alive by the wild tigers and bears, or trampled upon by the giant elephant, just because they were not along!

Suppose the great man-eating lion (Tim had seen him with his own eyes in the street parade) should whistling light-heartedly he started into the dense chew the bars off his cage and get out? "Great underbrush. Caesar!" The possibility of so much excitement sent the blood through Tim's veins at fever heat. Couldn't he run, same as other boys? I just guess!

The reflection, however, brought little comfort to Tim as he seated himself upon the chopping block

ingly out upon the road past ran Peddy homestead.

Presently a little figure came swinging down the highway, whistling merrily. Tim knew it was Bob Harms without even looking, and hurried to meet him. "Where'r

goin'?" he asked, though Bob's face told the whole story.

"To th' circus, 'course!" came the reply, as Bob left off whistling and buried his

hands deeper into his trousers' pockets.

Tim's eyes blinked unsteadily. "Can't y'r go?" Bob questioned.

Tim draw his sleeve across his face.

Tim shook his head. "Mother won't let me," he

replied, swallowing the lump that seemed to leap in | limb.

"Won't let y'r?" repeated Bob incredulously.

Tim nodded affirmatively.

"Did y'r ask her?" inquired Bob.

Again Tim nodded, but weakly, as though ashamed to admit the fact.

"Jimmy, y'r a smart one, you are!" Bob's manner said quite plainly that he didn't think it necessary to consult his mother about going to the circus or anywhere else; then something suspiciously like tears started from the corners of Tim's eyes.
"Come on!" urged Bob. "Y'r don't need no money."

Tim drew his sleeve across his face and stole a furtive glance up at the window where his mother usually sat at her mending. The familiar figure was there, and Tim fancied he could even see the big hole in his new pair of stockings growing smaller and smaller with every movement of the quick fingers as they moved tirelessly back and forth. He didn't want to be disobedient, but he did want to go to the circus protested noisily. very badly.

its appearance on the country road at the entrance to town he had seen in lively imagination the big white then good little boys don't want to catch squirrels tents reared in the twinkle of an eye, and had kicked the sawdust in great clouds as he raced with his companions around the mammoth ring; bravely he had poked the sleeping lions to hear them roar, and had laughed aloud in his sleep as he stood in fancy before the monkey cage and watched their comical

Numberless, too, were the hairbreadth escapes that came in these same dreams by day and night as the 'gang" crawled singly and by twos and threes as circumstances best permitted beneath the huge canvas, in deadly fear of the wrath and rod of the attendants on guard. Now that the circus had really come to town it seemed hard, indeed, to have to miss it. For an instant Tim wavered.

"You're afraid!" exclaimed Bob with a sneer.

"Am I?" retorted Tim, his eyes snapping fearlessly.

"Y'r don't dare!" continued Bob boldly, feeling certain that Tim could not withstand such a challenge. And so it happened, for Tim at length promised to meet him where the road turned sharply toward town,

as soon as he could steal away unobserved. After Bob Harms had gone Tim made his way care-

lessly around to the back of the house. More than once he glanced back at the window of the sewing

room to see if mother was watching; for the thought that he was doing wrong bothered him more than he cared to own, even to himself. Bob's taunting words, however, still rang in his ears and spurred him on to do what he knew from past experience he would eventually be sorry for.

Once back of the barn, however, and safely out of sight all thoughts of turning back were abandoned. Drawing down his cap more tightly Tim cut across the cornfield that lay between the Peddy place and a thick woods which turned until it met the road close to where he had planned his rendezvous with

Many a time he had been through this same woods with Tom, the hired man, after nuts, but his mother had always cautioned him against attempting to make his way through it alone, for it was a very large woods and one might easily get lost in it.

"It does look awfully dark in there!" Tim exclaimed, pausing an instant for breath as he dashed out of the cornfield and saw the thick woods before him. "Pshaw!" he continued, "who's afraid!" And

Bravely Tim beat his way, stopping only at long intervals to give the "hulloo" which would tell Bob Harms that he was coming, or listen to the sharp "Caw! Caw!" of a flock of crows as they flew high overhead toward the fast ripening cornfield he had and gazed long- just left behind. Suddenly he spied a big grey squirrel running up a tall hickory tree that stood directly that in his path. Now, if there was anything in all the the wide, wide world that Tim had envied Bob Harms, above his three-bladed jackknife and sail-boat with a real lead keel, it was his pet squirrel. How often he had resolved to catch the first one he saw and build a cage for it like the one Bob had made, with a big wheel at one end and all nicely painted.

Tim drew his breath in short, quick jerks and crept stealthily up to the tree. In an instant he had forgotten his rendezvous with Bob and all the fine

sights to be seen at the circus.
"Hullo!" he cried, gazing up at the squirrel who was for the moment at least safely out of his reach.
"Hullo, yourself!" replied the bunch of grey cheer-

Tim's eyes bulged! Never in his life had he heard

of a squirrel that could talk.
"Oh!" he gasped, softly, and all a-tremble with ex-

"What can I do for you?" asked the big grey squirrel genially as he curled his fine tail up over his back and looked down at Tim calmly.

"I-I-I want to catch you!" replied Tim frankly, for he could think of nothing but his desire to possess the fine fellow.

The big grey squirrel laughed so heartily at Tim's reply that he nearly lost his balance on the hickory

"Well, well!" he cried, after a pause; "I wonder what Mrs. Squirrel and the children will say to that!" squirrels came trooping out from the family nest at louder and pushed on the faster. the base of the limb where it joined the trunk of the tree.

"Gracious!" exclaimed the mother squirrel in vexed tones, "why don't you shake the house down and be done with it?" Then she looked hard at Mr. Squirrel. The baby squirrels had not yet learned to talk, but it was plain by the way they opened their big brown eyes that they, too, had been alarmed for the safety of their home.

Tim stood looking up at the tree, dumb with amazement and surprise.

"Here is a little man who wants to catch me," explained Mr. Squirrel, in mock alarm.
"Indeed!" cried Mrs. Squirrel, evidently much

amused at the idea, while the three baby squirrels

"He looks like a good little boy," went on the big Long before the gaily colored bandwagon had made squirrel, cocking his head on one side in a humorous fashion that he might get a better look at Tim; "but

and take them away from their family.

Tim hung his head. He had not thought of it in that way before.

"True," ex-Squirrel, looking bad boys who want to do such things—boys who play truant who disobey their mothers."

rim * * crept stealthily up to the tree. "I didn't mean to hurt y'r," blurted out Tim, "an' 'sides, I was goin' to make y'r a big cage, like Bob Harms

it at one end, so as you could spin round in it, like fun. whenever y'er wanted to."

The baby squirrels looked much relieved at Tim's protestations of good intent, and Mr. Squirrel seemed quite interested.

"That is all very well, my boy," said he, frisking his bushy tail in a friendly way, "but a cage, even with a big wheel in it, wouldn't be as nice as this fine woods.

besides, who would care for my little ones?" Here Mr. Squirref gazed tenderly at Mrs. Squirrel and her little ones stretched along the limb behind him. Tim hadn't

thought of that either. How selfish he had been in his wish to catch the big squirrel and keep him caged up at home for his own amusement! How Mrs. Squirrel and the baby squirrels would have wor-

ried and mourned if papa Squirrel had not come back to them! Besides, who would there be to get food

for the many hungry mouths?
"Well, Mr. Squirrel," exclaimed Tim, "I wouldn't catch y'r now for anything, even if you'd let me—but I'll tell you what I would like to do."

"What is that?" chorused the squirrels.
"Well," continued Tim earnestly, "I'd like to fetch you some of the fine nuts that me and Bob Harms gathered here last winter-if you'll take them?"

"Thank you, my little man," said Mr. Squirrel; 'we will be glad to get them. I know they are fine nuts because I gathered quite a store of them my-self."

"I knew he was a good boy," said Mrs. Squirrel in a low tone, but loud enough for Tim to hear, and the three baby squirrels, who seemed to understand perfectly what Tim said, frisked their tails and jumped about, greatly pleased, no doubt, at the feast in pros-

Tim laughed heartily, and, after bidding "good-bye" to them all many times, started reluctantly on his way toward home, for it was now too late to think of meeting Bob Harms as planned. On he trudged, his head full of his strange adventure with the squirrels. while the sun sank lower and lower in the west. Tim soon noticed the fast deepening shadows, but consoled himself with the thought that it could only be a little way farther to the edge of the woods, and once out of the thick underbrush he wouldn't mind so very Just as he spoke Mrs. Squirrel and three tiny baby much if it did get real dark. So he only whistled the

Suddenly Tim's heart seemed to give a great leap into his throat and stick there, for almost within reach of his arms was the identical tall hickory tree where he had bid "Good-bye" to the squirrels. As frequently happens to those who try to find their way out of a thick woods, he had been walking in a circle, and had brought up at the same spot from which he had started.

Tim was now thoroughly frightened. What if he had to stay in the woods all through the dark night that was fast coming on. How earnestly he wished that he had not listened to Bob Harms and stolen away from home. To be sure he hadn't gone to the circus, but Mother Peddy would surely think he had, and would imagine that all the dreadful things likely to happen little boys unattended had really befallen him.

In the midst of his perplexity Tim chanced to glance up. There was the big grey squirrel looking down at him questioningly.

"Hullo!" cried Mr. Squirrel, as soon as he had caught Tim's eye, "I thought you had started for home?

"I'm lost!" gasped Tim hopelessly.

"Lost?" exclaimed the squirrel incredulously.
"Sure," replied Tim, much abashed, but trying to

smile cheerfully.

"Well, I declare!" broke in Mrs. Squirrel, who had heard the murmur of voices and had come out of the claimed Mrs. family nest to investigate as to the cause.

Tim explained matters as clearly as he could, and anxiously at the then the two squirrels drew their heads together and three tiny squir-chattered away seriously for several seconds. They rels, "it is only talked very low and Tim could not hear what they said, but somehow he knew they were discussing his plight and how best to help him.

Presently Mr. Squirrel looked down at Tim search-"Are you sure you don't want to catch me?" ingly.

from school and he shouted.
who disobey "Sure!" answered Tim truthfully, and he crossed his heart solemnly.

"And you say you live in the large red house on the

other side of the cornfield yonder?"
"That's right!" explained Tim.
"Good!" commented the big squirrel. Then, with has for his squirrel, with a big wheel in a whisk of his tail he turned and ran nimbly up the

tall hickory tree until he reached its very top. must have fallen asleep in the warm sunshine, as There Tim could just make him out as he looked first he sat on the chopping block and dreamed it all. in one direction and then in another. Presently he came down again and smiled pleasantly, evidently well satisfied with the result of his observations.

"If you will follow me, my little friend, I'll show you the way out of the woods, but mind, you must not try to catch me."

Tim promised gladly, and bidding "Good-bye" again to Mrs. Squirrel (the baby squirrels were by this time all fast asleep in their little beds) started off through the gloom with his strange guide.

Wouldn't Bob open his eyes when he told him about it all!

Diligently the big grey squirrel led the way, now running along the ground, now leaping lightly from tree to tree, and Tim had all he could do to keep him within sight. Finally there came a break in the surrounding darkness, and it was plain that they were almost out of the woods. Tim's heart beat fast as he quickened his pace, and when at last the welcome cornfield back of the Peddy place came suddenly into view he could not contain himself any longer.

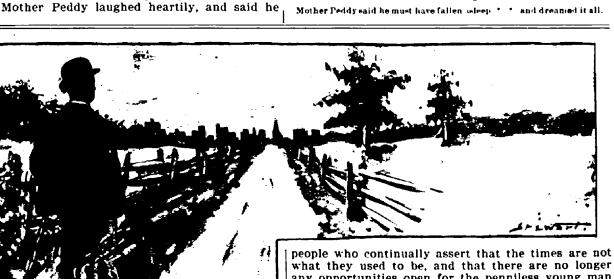

With a loud "Hurrah!" Tim dashed out into the open. Then he looked about for Mr. Squirrel, but there was no trace of him to be seen in any direction.

'He might have waited until I thanked him," exclaimed Tim regretfully as he started off through the cornfield toward home. "Never mind," he reflected, 'I'll thank him more'n once when I bring him the "My! wasn't those baby squirrels fine!"

When Tim told of his strange experience in the woods, Mother Peddy laughed heartily, and said he,

he sat on the chopping block and dreamed it all.

WHEN THE COUNTRY BOY GOES TO THE CITY

By Russell Sage, the Wall Street Millionaire, for the American Boy.

Every year thousands of country boys leave their homes and flock to the great cities of our country. Most of them go with the avowed intention of making their fame and fortune, and the majority of them fully expect to become millionaires before many years have passed over their heads. Some start out right and keep in the straight way, and these are almost sure to attain some measure of success. Many start their work with wrong ideas and wrong ideals, and these are almost sure to fail. They would better have remained in the country, where the temptations are not so open and where the contest for place and position is not so keen.

It is in one way a good thing that so many country boys seek the large cities. If it were not for the his summer vacation, and all day of the time when re-enforcements of country strength and training his work will be over. He should be willing, if it is which our cities are continually receiving, they would necessary, to work overtime in order to finish the soon cease to be great. It is a proven fact that after four or five generations of city life a family is practically degenerate, and it is evident everywhere that the country boys fill most of the prominent positions in every city. That is because they have learned to work while on the farm, or in the little town, and because they have not been raised to a life of luxurious indolence. Many things are in favor of the country boy when he starts out to make his fortune, and if he keeps himself straight he should make some kind of a success.

I often hear people say that there are few chances nowadays for boys to become rich or to make a name for themselves in some profession. There are a lot of best deserving of promotion when the time comes.

any opportunities open for the penniless young man to push himself upward. Such statements are palpably absurd. There are certainly not such chances to-day in the building of railroads and in some lines of trade as there were formerly, but for every business which is worked out, a new one springs up in its place. The United States are now so far developed that there is no longer the chance for great engineering schemes which formerly existed, but there are our new possessions in the East and West Indies, where there will be as much to do as there ever was in our great West. The boy who wants to be a pioneer now has to go farther from home than his father did, but he stands just as good a chance of succeeding. And then there are the great new fields of electricity and telegraphy which are being more and more developed every year. There is no telling what the future will bring forth in the realm of electrical machinery. I believe that we have seen only the beginning of what is to come, and the young fellow who fits himself to become an electrical engineer is making no mistake.

Even in the well-established wholesale houses in our cities there are still chances for young men to rise. We read every day of men being made partners in business firms who started in as office boys, and we don't hear of half the cases which actually occur. Down in Wall street messenger boys become members of brokerage firms, and in retail stores the former cash boy is now managing partner of the concern.

All these things occur as often to-day as ever, and the boy beginning life in the city needn't be discouraged by the men who say differently. But if he wants to attain such success for himself he will have to do as every self-made man has done, settle down to work hard and late. He mustn't think all spring of work with which he's entrusted, and, above all, he should do everything in the best way possible. Competition is very keen, even in small positions, and the boy who works the best will be first promoted. If I were starting out to-day to make a place for myself I would strive above all else to consider my employer's interests before my own, and be constantly on the lookout to make myself more useful. Boys sometimes have an idea that their efforts are not appreciated and that it is useless for an office boy to exert himself to please. No idea was ever more mistaken. I have a pretty good idea of the work done by every man and boy in my employ, and I know who is

If a boy is living alone in a city he should seek, first of all, to connect himself with some church, and to be always as much as possible in the company of good people. Some employers are prejudiced against boys who are alone in large cities, but I wouldn't hesitate to hire one whom I know is a good church member and who has the right kind of companions. Some young men in business think they have a right to do as they please when outside the office in which they work, that they can gamble, play the races and spend their nights in dissipation. Of course, they can do these things if they like, but they shouldn't be surprised if their employer refuses to trust his affairs to their management, for no gambler is trustworthy.

In starting out, a boy shouldn't expect to make too rapid progress. He must remember that there are others ahead of him, and that he must prove his ability before he's promoted to a higher place. If he is persevering and patient, and works energetically for his employer's interest, he is sure to be rewarded in

RUSSELL SAGE.

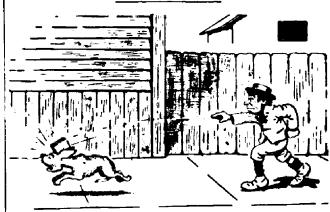

time, and he will probably feel that his reward is worth working for. Employers are not so unjust as some persons try to make out. They are usually cor-

rect in their judgments, and it isn't often they pro-

mote the wrong man.

Every boy should realize in starting out that he can never accumulate money unless he acquires the habit of saving. Even if he can save only a few cents at the beginning it will be better than saving nothing at all; and he will find as the months go on that it becomes easier for him to lay by a part of his earnings. It is surprising how fast an account in a savings bank can be made to grow, and the boy who begins one and keeps it up stands a good chance of spending a prosperous old age. Some people who live up to every cent of their income are always bewailing the fact that they haven't become rich. They pick out some man who is known to have earned a fortune, and speak of him as being "lucky." There is no such thing as luck in business, and the boy who depends upon it to carry him through is very likely not to get through at all. The men who have made a success of their lives are men who started out right when they were boys. They studied while at school, and when they began work they didn't expect to be paid wages for loafing half the time. They weren't always on the lookout for an "easy snap," and they forged ahead without waiting always for the opportunities which never come, and bewailing the supposed fact that times are no longer what they used to be.

There is always a place in town and city for the boy who is willing to work. He is needed everywhere, and he need never be without a position. But he who comes to the city with the idea that he can get on without perseverance and pluck had better have remained at home, for he will soon be snowed under by those who know better. The American boy of today has greater opportunities than any other boy in all the world, and he has only himself to blame if he doesn't take advantage of them.

DOG DAZE.

(Begun in October.)

Review of Preceding Chapters: Jack Carroll, Frank Chapman and Ned Roberts, three boys whose homes are in a village in the far East, obtain the consent of their parents to go to Denver for a visit to Robert Sinclair, a friend of Jack's father, who is a painter of mountain and Indian life, and spends the greater part of his time among the Indians. They are accompanied on their journey as far as Chicago by Mr. Carroll, and are greatly delighted with the sights and sounds of the great city. On the train for Denver they meet Jim Galloway, a trapper, who telis them a true story in which his life is saved by a white man, who was living at the time with the Indians, and turns out to be Robert Sinclair, the artist, whom the boys are going to visit. The boys tell the trapper the story of Sinclair's life. The train on which they are traveling runs into a herd of buffalo and Ned shoots one. On arriving at Denver the trapper leaves them and Sinclair and the boys buy their outfit and start on the trail for Pike's Peak along the foot of the mountains. The first evening in camp Sinclair tells the boys a story, and Ned's pony makes a dash for home, but is captured by Sinclair. The day following Frank is lost among the mountains. He kills a stag, and spends a night alone in a canon. He is captured by Indians, taken to their camp, escapes death by its being discovered that his captors are friendly to Uncle Bob, the Indian painter. He makes friends with the Indians, who adopt him as one of their tribe. He goes on a buffalo hunt with them, and is saved from being run down by a buffalo bull by a shot from the rifle of Uncle Bob, who suddenly appears on the scene. Uncle Bob relates how he, Ned and Jack searched for Frank and finally found him. They leave the Indian camp, and after a day's travel come upon bear tracks and they have an adventure with a bear and her cubs. Jack's pony is bitten by a rattlesnake and fles. The little party meets a drove of wild horses and Jack captures a pretty one after an exciting chase and Frank is in i

CHAPTER XXI.

The prospect of climbing Pike's Peak and planting thereon an American flag kept the boys in a fever of excitement for the twenty four hours following their unique celebration of the Fourth of July. Mr. Sinclair fanned their interest by relating to them stories of early attempts to climb the giant peak, many of which were unsuccessful and all of which were attended with great danger. They were particularly interested in the relation of the story of how Mr. Sinclair had made his first successful attempt to climb; the mountain and had come near losing his life in a great snow storm that overtook him before he had reached the top.

"But it's different now, boys," said he; "the danger is not nearly so great. The paths are pretty well marked out, and I have been over them times enough, so that, while I can promise you a hard climb, I don't

expect you to suffer in life or limb."

On the evening of July Fourth the boys found themselves in Mr. Sinclair's cabin, near the base of Pike's Peak, the happiest trio of boys in the world. There they found letters from home awaiting them, those postmarked of late date indicating some uneasiness on the part of the folks at home at not hearing from them promptly; so each boy at once set about relieving anxious minds by writing letters, to go by the next pony express. And such letters they were! Each boy tried to tell all that he had done, but with very poor success, for long before the stories were finished their hands, hardened by work and unaccustomed to the pen, grew very tired, and each boy ended his letter with something like, "Well, you'll have to wait till we get home, as I can't begin to tell you every-thing we've done. We are having the time of our lives."

Mr. Sinclair's cabin was a rude but comfortable affair. Its site was a picturesque one, for it stood perched on a steep slope just across the valley from the foothills of Pike's Peak. This little valley, or rather basin, was enclosed on its three sides by precipitous rocks, and into it converged three canons, down one of which, Cheyenne Canon, flowed a clear, sparkling, mountain stream. Not a quarter of a mile away, and just opposite the cabin, arose the first slopes of the great Peak, with a glistening summit that stood guard over all.

You could not imagine a more appropriate spot for the home of an artist. Here Mr. Sinclair had lived for ten or more years, being, indeed, one of the first white men to settle permanently in the region. Hunters, miners, fortune seekers and desperadoes of every description had come and cast eyes full of momentary interest on the wonders of this mountain amphitheater and then had gone away; but once the artist set foot within it he was bound captive hand and foot. Here he pitched his camp, or rather built his cabin, and from it he made frequent excursions into the wil-

derness of mountains and plains on either side; here he met and entertained the Indians with whom he soon made friends, and gave refuge to many a poor emigrant, or sick and stranded hunter or adventurer on the Cheyenne trail.

The cabin was a veritable museum. Scarcely a square foot of wall space was without its mementoes of the hunt. An immense pair of antlers crowned the door, while on the wall opposite, a great buffalo head looked down, and skins of mountain lions, bears, wolves and foxes lay in profusion on the floors or hung upon the walls. The gay plumage of birds, Indian ornaments, clothing and utensils, with rugs made by the Mexican Indians of the south, lent color to the scene; and among them all, in great profusion but with strange harmony of arrangement, were products of the artist's brush—pictures of mountain and animal life, and Indian studies in all stages of completion. Fishing poles and an assortment of weapons of all descriptions hung overhead—the whole making a

"Come on now, young un!"

strange confusion of barbaric and civilized comforts perhaps no where else to be met with.

An old Indian squaw kept house for Mr. Sinclair and jealously looked out for his safety and his comfort, stealing in and out about her tasks in her moccasined feet seemingly oblivious of the presence of strangers. Mr. Sinclair called her Minne, and on their arrival she was brought in and introduced to the boys and told that she was to look after them and see that they wanted for nothing that the cabin afforded. She managed to grunt out a consent, but the boys thought they had never seen so expressionless a face.

The following day they spent in roaming about in the neighboring canons, taking an occasional shot, but the greater part of the time observing the advice of Mr. Sinclair to take it easy and rest preparatory to the arduous work that was to follow

At nightfall they were lying at full length on the ground before the door of the cabin. Their talk reverted to the big trapper, Jim Galloway, whom they had met on the train on the way from Chicago to Denver; and just as Mr. Sinclair was saying "I half expected to find him here on our return" a prolonged 'hello" came up from the valley, and the man sprang to his feet and quickly cast his eye over the trail as it wound to the east along the bank of the mountain stream below. His eye finally rested on an object at a distance moving toward them, and an answering 'hello" went echoing down among the rocks. " Galloway!" shouted Mr. Sinclair, "See yonder?" Galloway!" shouted Mr. Sinclair, "I don't see him," said Ned.

"Nor I," echoed the others.

There, just beyond the bend in the stream. Now he's crossing. Here, Minne, bring my glass," he called in Indian tongue to the old squaw.

Quickly the squaw emerged from the cabin bearing field glass, which Uncle Bob soon adjusted to the boys' vision. After a look they shouted with joy and clapped one another on the back, almost turning somersaults of delight at the prospect of having the big trapper as a companion on their mountain climb.

Soon, by a zigzag course among the rocks, Galloway, astride of his horse, was with them. Mr. Sinclair gave him a welcome in true western style, set before him a hot supper, lighted for him a good pipe, and told him the story of their experiences since the day they parted in Denver, then invited him to join them in their adventure of the morrow.

CHAPTER XXII.

Early the following morning Mr. Sinclair and the trapper began their preparations for the climb, the boys looking eagerly on, their impatience growing with every moment. As the morning was warm, it was with considerable wonder that they saw the two men strapping on the backs of the horses heavy coats and blankets. "Never you mind, young fellers; you'll be mighty glad you've got 'em afore we're through with this lark," said Galloway, a remark that tended to give the boys a chill in advance.

A short time after sunrise the party mounted and began finding its way, single file, down the mountain side into the valley, each member astride his pony, and carrying a gun and ammunition, a stout staff, blanket, and a heavy coat. The two men carried extra baggage in the way of a small tent, cooking utensils, some faggots, a supply of dried buffalo meat, bread and coffee, and what to the boys seemed a surprising amount of rope.

Once in the valley, they quickened their pace for a few hundred feet along the creek till it branched. Following one of its branches that came tumbling down a wide ravine, the boys realized that they had at last set foot on the big mountain which before the next morning they were to conquer. It was easy at first; the trail was plain, the music of the brook re-freshing, and the shade of the trees under which the way ran delightful. At noon they rested, and made a corral for the horses in which they left them to feed on the grasses which were now becoming a little scant. Orders were given to unstrap the baggage, for here the animals were to be left, as the climb from this point must be on foot. The men loaded upon their own backs the greater share of the burden, despite the protests of the boys, who each declared that in the bracing air that now filled their lungs they felt strong enough to carry even their horses if need be. But their elders knew what they were about, and gave to each boy only what was absolutely necessary for the climb.

"Forward, march!" cried Mr. Sinclair when all was ready. "Now, go single file, follow your leader, and don't lose sight of him for an instant. I will go first, then Ned, Frank and Jack in that order, and Galloway will cover the rear. Don't stumble or slip. A rolling stone has been the death of many a brave mountain

An hour's climbing brought a decided change in the appearance of things about them as well as in the feelings of the boys. They had ceased to become eager for more freight. Frank was seen frequently to shift his gun from one position to another, and Ned had grown less and less talkative till now he had lapsed into absolute silence. It was growing more and more difficult to breathe in the rarefled atmosphere into which they were coming, and a frequent rest became necessary.

"That last hundred feet was a corker," declared

But that's no more than a starter, young un." said ! Galloway with a grimace. Something in Galloway's looks made the boys think they were engaged in a serious business.

in another half hour a long halt was necessary while Galloway returned over the trail for some distance to fetch some cold water to bathe one of Ned's atkles which he had sprained. Night was now rapidly coming on and they had just reached the timber limit. Their final resting place for the day was under the last few straggling, stunted trees beyond which With this the agile hunter began the climb of the no vegetation appeared, excepting here and there a steep slope, using hands and feet to keep from slipthe gathering dusk appeared great masses of bowlders and frowning peaks and buttresses barren and forbidding in aspect.

Shall we go any farther to-night, Uncle Bob?" asked Frank, with a voice in which there was more

than a trace of fear.

Certainly, my boy; night's the time for mountain climbing. It will be moonlight and a glorious night. To-morrow morning we'll see the sunrise from the top of Pike's Peak.

There was no answer to this from any of the boys, but each took a new grip on his courage, as they heard again the command, "Forward, march!

Ned found when he regained his feet that his sprained ankle would not bear his weight.

I can't go any farther, Uncle Bob," he declared, pitifully. "I'll stay here while you go on; you can | un, are you there? Hold on! I'm coming." pick me up on the return. I'm awful sorry, but I just can't walk."

"Yes you can; I'll help you." said the big trapper. You'll git over it. Just use that leg as much as you can, and when you can't, lean your weight on me," and Galloway put his strong arm under the boy's and fairly lifted him over the ground. "If we git into a tight pinch you can git on my back. I carried a sick Injun nearly all day once and you ain't half a load."

Ned protested, but obeyed because he couldn't help

it, and thus they proceeded.

The moon was just rising over the horizon when, rounding a spur in the mountain side, they heard just ahead of them a deep, ominous growl which brought them to a standstill.

'A mountain lion!" whispered Mr. Sinclair. "He's going to dispute our passage. He's probably just in our path and he's heard or smelled an enemy coming. and Jack climb on that ledge of rock up there, and Galloway and I will mide just behind that angle of rock and meet his Royal Highness when he comes, and if he don't come we'll go after him."

It was all done in a moment. Not one of the little party dared draw a breath as they waited in the darkness for the approach of the beast. He was surely coming, for they could hear his low guttural growl coming nearer and nearer. Another roar resounded among the rocks-this time a mighty one that seemed to come from not ten feet away, and ...en another one from farther up the mountain.

Two, by jove! We've got to fight our way," said Mr. Sinclair in a whisper, and just then a dark moving mass came around the angle of rock and two flerce eyes shone out in the darkness.

A splendid mark for two expert hunters and not

twenty feet away.

'Bang" went two guns at once, and the boys saw the dark mass tumble headlong down the mountain side. 'Now, look out for the other," shouted the trapper;

"he's probably following. I'll go on ahead and meet him halfway.

"Let me go, too," shouted Jack, as he jumped from his hiding place, and before a word could be said to stop him he was off up the trail after the trapper.

The two went on in silence for a while, each with eyes and ears alert and gun cocked.

Suddenly Galloway paused and said. "That feller is just behind them rocks. We'll climb up there and git right over him."

With this the agile hunter began the climb of the

little tuft of hardy mountain lichen. Above them in ping and thus starting an avalanche of rocks. "Careful, young un; look out for yourself.'

"All right, sir; I'm right behind you," answered Jack, promptly. Then his foot slipped, the little twig to which he was holding gave way, and the boy was rolling down the side of the mountain, his gun and staff flying ahead and a veritable shower of stones following.

The trapper at the first sound sprang to his feet. But what could he do? He shouted: "Young un, hold Dig in your feet-stop! stop!" but he might on! as well have called to the winds. Then all was still.

The trapper called again: "Young un!" "Young

un!" No response. Then taking his lasso from his belt, he tied one

end to a bowlder and cautiously let himself down the steep side of the rock, crying at every step, "Young

When he had reached the length of his line he stopped, peered down and listened. He thought he heard a voice calling-faintly, but surely a voice, and a boy's voice! From what point it came he could not determine. Again he shouted: "Hold on; I'm coming." Then digging a foothold in the hard earth with ing." his hunting knife. he stood upright and vigorously shook and twisted his lasso until it loosened itself from the rock above and came tumbling down after him. Tying one end to his belt, he tied to the other a small stone and threw it down in the direction of the voice, crying, "Catch hold, young un!

The rope paid out till it was taut, and the trapper

listened and waited.

'Take hold!" he shouted, but no answering pull from the rope indicated that the boy could reach it. Then with his knife he cut another step as far down as he could reach and planted himself in it. Again he Quick. Frank, hide behind this bowlder. Ned, you shouted and waited, but there came no response. He lowered himself to a new foothold, and so on, step after step, until, nearly despairing, he felt suddenly an answering pull on the rope and knew that he had reached the boy. "Come on now, young un!" he shouted, at the same time bracing his feet firmly and catching the rope with both his strong hands.

The rope was stout, and the trapper was good to hold a ton. The vibrations of the rope indicated that the boy was on the way, slowly but surely. "You're safe, young un; come on. Hold tight!"

The man did not need to urge, for Jack, though wounded, and bleeding and weak, was pulling himself hand over hand, slowly but surely, knowing that it was his one chance of safety.

At last he lay at the side of Galloway, breathless and faint. Tying one end of the lasso about the boy's body and the other close up around his own, the trapper began the rest of the perilous climb to the trail above. With knife in hand he laboriously cut step after step, dragging the boy's now unconscious body after him.

At last the man's strength gave way. To go farther with his burden was impossible, and to stand there a matter of great peril. If he could only fire his gun and bring assistance! But the boy's gun lay in a hundred pieces at the bottom of the rocky steep, and the trapper's was in the path above where he had left it before starting on his dangerous mission.

The trapper then halloed, but got no response. To make matters worse, it was growing cold. Something like snow or fine sleet fell upon his bare forehead. He stooped over and rubbed the boy's hands and face, and fearfully felt of his pulse and halloed again. The boy's form moved slightly, and his voice came feebly.

'Mother! I am glad to be home. Yes, we've got him. See his two fiery eyes! Hold me closer, I am falling. Uncle Bob, did we put the flag on Pike's Peak?

Hardened old Jim Galloway wiped the moisture from his eyes and stroked the boy's head. "Young un, it's all right! We're all here, young un. We're holdin' on to you and you're safe. We'll put the old flag up there sure, and you'll be the one to do it.'

Again the trapper called the long "Hello, hello" of the mountains. Away in the distance came an answering shout. The man then gathered the boy close in his arms to keep him warm and talked to him as a mother talks to a sick child.

Soon Mr. Sinclair's voice was heard from above. Throw us a rope. Bob," cried the trapper; "we're down here holdin' on for dear life."

At once the whiz of a lasso was heard, and its noose fell almost over Galloway and his burden.

Quickly the trapper adjusted the noose about his body. Holding the boy with one arm and with the other clinging to the earth he called, "Pull, Bob," and at last laid his living burden at the feet of Mr. Sinclair.

"Bob. I've been in a hundred ticklish places in these mountains, but I never felt skeered till this last half hour when I heerd that boy go rollin' down, and when I saw him growin' numb in my arms and talkin' about his mother and that flag. Fer a minit I was a coward, an' I ain't agoin' ter do any more braggin' about my never turnin' the white feather.'

"Jim, dear fellow, It wasn't cowardice. You never were braver in your life, and if I could do it without danger of our all tumbling down the mountain together I'd give you a hug that would remind you of the day that grizzly got you up on the "north branch." You are a big. noble-hearted fellow, and I love you for this night's work.

"No. Bob; don't say that. I told you once I'd pay you back fer savin' my life that day 'mong the Injuns. I'd a saved this boy to-night for his own sake and his mother's, but I want to tell you that the biggest pay I git out of it is to lay him alive at your feet an' think I've done suthin' thet pleases you.

"Have it as you will, Jim; the score is more than even. Now, to get this boy back to where Ned and Frank are and get him into shape to travel. He's all right, but for some bruises. We'll rest a little while and try to make some coffee and get up circulation. We must move on, though, for there's no place here for an all-night camp, and from the feel if it we're likely to be caught in a snow storm, and that'll be worse than mountain lions.'

With this he picked up Jack and bore him as if he were a mere infant back to the rendezvous among the rocks.

(To be continued.)

Letters of George Washington Jones

No. 3.

EAR AMERICAN BOY:

In my last letter I told you un he let out a war whoop. how I would tell yer 'bout our fishin' party un now

I'm agoin' to. Bout a couple o' weeks after our coon hunt Charme un said how he'd seen some big fish in Rattlesnake mill pond wot be-

When we tole th' other fellers they said they'd go, but we didn't have no boat. "Why not make a raft." says Dick, wots jes been readin' Robinson Crusoe. We all liked that un said we'd meet on Wednesday afternoon. We took Wednesday 'cause we was agoin' t have a xamination in history on that day.

Saturday night we went t' the house wot that city dule called th' Hon. L. B. Colby, un wot ad th' al-Di abet after his name, built un got a lot o' boards un things wot we carried t' th' woods near th' mill pond. Next day we met in th' woods 'stead o' goin' t' church. un made th' raft, un hid it in the leaves. Pa asked th preacher if I was to church un when he found out I warn't, he give me un awful licken.

Wednesday mornin' pa's horsewhip bein' handy I out o' season he's madder un a wet hen un gives me a

took it un a couple o' pins un started out. Th' other fellers was awaitin' with some poles un string un pins. When th' fellers seen me comin' they started t' get th' raft, but they'd forgot where we left it un it took em 'bout un hour t' find it. Jus' 'fore we got started Charlie swung his line un caught Dick's ear

We dropped our lines over un waited for a bite. lot o' little fellers bit, but we had t' trow 'em back. Dick said there was better fishin' round a bend o' th' pond so we went ahead un hadn't been there more'n five minutes when I had a bite. There was quite a lie Cromwell came up t' little current where we was un th' old thing kept goin' with it. It pulled so hard that two o' th' fellers had all they could do t' stop th' raft from goin', too. Charlie un me pulled on that horsewhip like everylongs to a man named thing. All of a suddin th' thing come up. 'Stead of a Casby wot lives over at fish it was part of a mattress un we would a' laughed Rattlesnake tavern. Rat- only th' raft tipped so all th' lunch floated away. tlesnake tavern is bout a That is, all 'cept a pie wot Charlie's sister, wots couple of miles away un a learnin' t' cook, made. That sunk like lead.
man named Marleyownsit. We tried t' catch th' lunch for a while un had

ular game o' tag, but we gave it up un went hungry.

Long 'bout three o'clock we heard a noise un seen Si Willums, th' constable, comin' after us in a scow. We hustled un "got under way" as Jim, wot says he's goin' t' be a pirate, says. There's a lot o' stones un things 'n th' pond un we kept dodgin' round 'em 'gainst a stone un knocks Dick 'n th' water. We hus-tles away un jumps on shore un Si stops t' get Dick' wots hollorin': "The bloodsuckers have got me!"
"The bloodsuckers have got me!" "Wow!" (There's (There's bloodsuckers 'n th' mill pond.)

When pa finds he's got t' pay th' fine for fishin' cloth t' put on a couple o' crosspieces on th' thing.

fierce lickin' un don't let me have nothin' t' eat for a week but bread un water. But ma give me doughnuts un things when he warn't here. Jim un Dick ain't as lucky as they was last week. I hey can't sit down.

Things in town are 'bout th' same. That city dude is comin' t' town in three or four days.

I got t' stop now un feed th' chickens.

Goodby. GEORGE WASHINGTON JONES, Quodunk.

P. S.—In my next letter I'll tell yer how we got even with Si Willums.

No. 4.

Dear AMERICAN BOY:

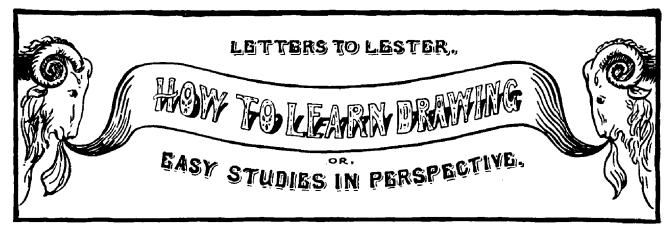

In my last letter I tol' ver how I would tel ver 'bout our gettin' even with Si Williams un now I'm a goin'to. 'Bout er week after we went fishin' I met th' fellers un we agreed how we'd get even with Si for catchin' us. He's er great one fer readin' dime nov-

els bout detectives un cowboys un so forth. Un it makes him mighty skeery.

Charlie voted fer dumpin' Si 'n th' pond, but we was afraid what he'd do when he got out. Jim wot's goin' t' be a pirate, says why not tie him t' er tree 'n th' woods un make b'leve ter shoot him. Dick wants t' get er long pole with a head on th' end un put with Si shoutin' all th' time. We kept that up for it up t' Si's winder some night un make him think it's 'bout 'n hour till all o' a suddin' th' old raft goes bang a ghost. We likes Dick's plan best un fixes Friday fer th' night.

Thursday afternoon we meets 'n Charlie's barn un makes th' thing. Dick had a couple o' clothes poles wot we tied together. Then Charlie took a piece o' white cloth un filled it with straw. I swiped a table-

Part Third-Copyright 1901 by Stansbury Norse, Potsdam, N. Y.

My Dear Lester:

A month is a long time to remember a thing we have not yet learned thoroughly and if you have not studied the former lessons very carefully I would advise you to get out your AMERICAN BOYS and look them over before beginning this one.

We were talking about lines in different planes, and how the appearance of a line or plane often differs from the fact. We find this occurs continually in drawing objects, and I cannot say too much to impress it upon your mind. Suppose you see a man, whom you know to be six feet tall, a long distance away, so far away that he looks to be a mere speck. You know what the fact is, and yet, see how the appearance differs from the fact!

Now, retreating, or vanishing lines are simply lines which differ in appearance from the facts in the case. If you will stand at one end of a hall or long room, and hold out your finger (the arm at full length) and

"sight" it against the bottom of the wall close to you, and then follow the line with the point of the finger, you will see how you have to raise your finger to keep it coincident with the line. Sight once more the end of the finger against the upper edge of the wall close to you, and follow the line to its farthest end, and you will see that your finger drops down, down, down all the way. Keep the arm stretched its full length while doing this and the lesson will be thoroughly impressed upon you. Do not sit still and try to imagine the operation, but try the experiment and then you will remember it much better.

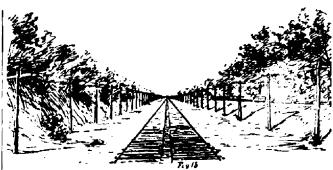

These lines above and below the eye have what we call their "direction." We speak of the retreating lines above us as having a downward direction, and the retreating lines below us as having an upward direction. But if you will test the lines which run across the hall at the bank you will see that you simply move your finger from side to side, and that it is about the same distance from the eye all the time. This proves to you that these lines remain horizontal to the eye and that you should draw them so.

The drawing of the three men (Fig. 16) will illustrate these points still further. Suppose that you are standing behind the man with the pole and that the other two men are each twenty feet on either side of him. Now, we will imagine them to be walking

away from you on paths that are exactly parallel and twenty feet apart, the man in the middle carrying the pole so that the top of it is always exactly ten feet above the ground. Let us think what would happen. As they receded from you the distances between them would appear to grow less, their height would diminthe pole would apparently become shorter. (Fig. 17.) The farther they got away the smaller everything would become. What was below the eye would rise to the horizon and what was above the eye would come down to the horizon, until a little speck would be all you could see of the procession. Yet, if you could go to them you would find them as tall as they ever were, the pole still ten feet high, and the distances between the men exactly twenty feet.

Let us change the picture to that of the railroad and the telegraph poles (Fig. 18), and you have the same principle worked out again. Here we see that the distances between the parallel lines of poles and of the rails, appear to diminish exactly as they did between the men, for the poles and rails, to use a metaphor, are "traveling" away from you along parallel paths. The wires, which start from points far governs us in the same way, as the real one.

above your head, do the same thing, appearing to come down to the level of the horizon line.

All this diminishing of spaces and sizes, this approaching of the lines and objects toward each other, we call "vanishing," and the lines are said to converge and to vanish at the same vanishing point, which in this case is the center of vision.

But a little study of the next drawing (Fig. 19) will convince you that lines do not always vanish at the center of vision. Here we have two sets of lines beginning at the corner of the street and running to the right and left. As they are horizontal lines they must vanish on the horizon line, and each set must have its own vanishing point.

These drawings illustrate another point. Where all the lines, as in Figs. 16, 17 and 18 vanish at one point we say we are drawing in parallel perspective. Where we have two or more vanishing points, as in Fig. 19, we call it angular perspective.

The first thing, then, when you wish to draw any-

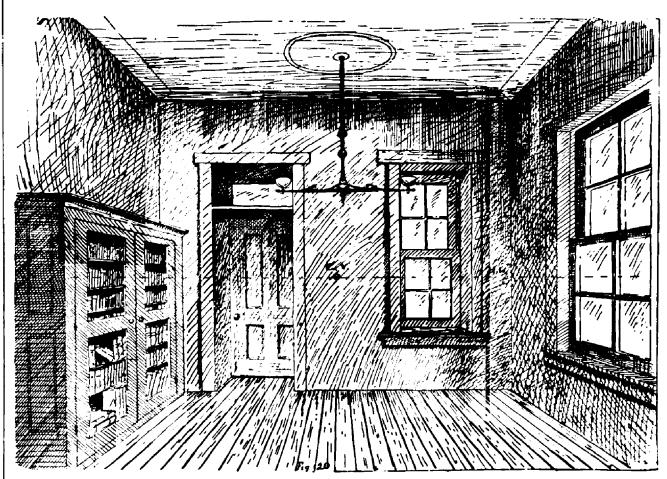

You will remember how I proved to you, when we went up to the top of the lighthouse, that the horizon line appeared to go up as we ascended, and how it

always seemed level with our eyes. If, then, we have an artificial line, an imaginary line, to take the place of the real one, it, too, must be level with the eye. We may go to the end of the room and draw a line from side to side upon the wall, or we may simply imagine it to be there, but either way we must consider it level with our eyes. If we were about to draw the room shown in this picture (Fig. 20) it would make a difference whether we drew it standing up or sitting in a chair, for, as we have already seen, the horizon line rises and falls as we rise or fall. If I stood up to draw it, the center of vision (c. v.) would come above the level of the middle of the door, but if I sat on a low stool (Fig. 21) it would be much lower, because my horizon would be lower. If I climbed upon a table and stood up my horizon would come near the ceiling and Fig. 22 shows how the room would look to me and where my center of vision would be placed. Remember that C. V. is the place where all the parallel retreating lines vanish. when drawing in parallel perspective, and unless we get the horizon line right we cannot locate C. V. properly because it is always on the horizon line.

A very neat little experiment will prove to you. once more, how the horizon and center of vision change with every change in position of the eyes. Sit about twenty feet away from a wall and get some one to mark a point exactly the same distance from the floor that it is from the floor up to your eye. Then have him stand half way between you and the wall and hold out his finger so that it hides the mark, which is your center of vision. Now, rise from your seat and you see at once that the mark on the wall has to be moved up, and the finger of your friend has to move up also, to accommodate things to each other as they were before.

Coming back to the drawing of the room, I want you to take a ruler and test the lines. Put the edge

thing, is to decide which way you will draw it, in parallel or angular perspective; or, if you have to make a picture of a group of objects, whether you will draw them all one way or the other or both ways. Equally true is the rule that when you wish to sketch from nature you have to decide what objects must be drawn in parallel and what in angular perspective, as you cannot then arrange things to suit yourself but must draw them as you see them.

Our horizon line, as I have been talking about it so far, has always been out of doors-the real horizon line. But we can substitute an artificial line for the real one. This is, of course, an imaginary line, but it is governed by the same rules, or rather it

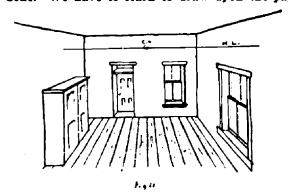

of the ruler to each horizontal vanishing line and you will see that it vanishes at C. V. Try the other lines and you will see that they are not vanishing lines, but are horizontal or vertical lines. I thin. you can readily perceive from this why it is necesary to know all these rules in drawing when you attempt to do correct work, for, supposing you made a drawing of a room without such knowledge, any good draughtsman would be able to pick it to pieces and make you feel ashamed of your work. There is such a thing as doing "approximate" work—that is. work which is said to be approximately correct. But if you will look this long word up in the dictionary you will find that it means getting near to a thing but never quite reaching it. That is the way some

people learn to draw, but they never quite "get there" because too indifferent or too lazy to study properly.

We must remember all the time that there are two ways of drawing things we see. We have drawn this room in parallel perspective, let us now consider how we would draw another room in angular perspective.

But first, let us see exactly what is meant by "angular," as distinguished from "parallel." If you go to the window and look out through the glass you can trace upon the latter, with the end of your finger, every line you see in the things outside. If your finger made marks upon the glass you would then have a picture upon the plane of the glass and it (the glass) would become your "picture plane."

Then, again, if you could hold up a sheet of paper and see through it you would have no trouble getting your picture, because the paper would be your picture plane and the lines you traced upon it would represent the objects you saw. But these things cannot be done. We have to learn to draw upon the paper,

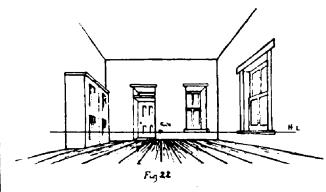

while it is down on the table, just as if we held the paper up and saw through it.

Our drawing must be made quickly and must represent what we see correctly, and the only way this can be done is to refer everything to the picture plane; that is, our drawing must be as correct as a tracing

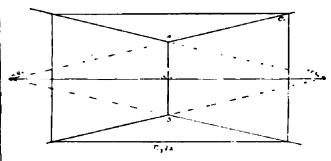

When we draw the horizon line and fix our center of vision and vanishing points for a drawing we are simply preparing our picture plane. In drawing Fig. 18 the lines appear to run off to a great distance, but they really do nothing of the kind. They are drawn on the picture plane to C. V. and that gives them this appearance. Fig. 19 is in angular perspective and the vanishing points being fixed first, the lines run off on the picture plane to the right and left to

we do everything, but now we are only getting a few i easy lessons in perspective and I cannot tell you all the rules, as space will not allow. I think I have

demonstrated how our paper is our picture plane, and how the drawing in which we draw the lines according to rule, is really the same as a tracing upon the pane of glass.

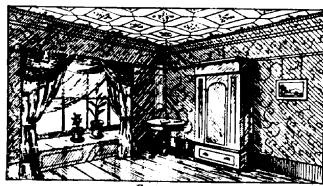

We will now go back to the room which we wish to draw in angular perspective. Take a blank sheet of paper and draw your horizon line. Fix C. V. Measure from C. V. each way and fix V. P. (vanishing point) No. 1 and V. P. N. 2 at equal distances from C. V. Here you ask me, "H'w, far away?" The answer is, "As far away as you are from the corner of the room." "But," you relly, "I am ten feet from the corner of the r. m." r, perhaps, "twenty feet, and I cannot get these vanishing points any such distance away on my paper." That is true, but we can draw our room "on a small scale," or, in other words we can make our drawing by planning that each inch, or half inch, or quarter inch shall represent a foot as it really is. Suppose we agree upon a scale of one quarter of an inch to each foot, then,

those points. These "vanishing points" are only if you are twenty feet from the corner of the room points where lines which are parallel will appear to meet. Perhaps I may show you some day, if we ever study scientific perspective, how and why which would be five inches.

Remember that we are drawing in angular perspective, so you must sit facing the corner and not the side of the room. With the paper before you, properly prepared, you ought not to have much trouble making the drawing. Figure 28 shows us how to draw the lines. All those retreating lines on the right side of the room will vanish at V. P. No. 1 and those on the left at V. P. No. 2. Draw your first vertical line, A. B., at C. V., and make its length proportional to your distance away from the corner. That is, if you are twenty feet away, and the room is ten feet high, the line A. B., should be a little less than half as long as the distance from C. V. to V. P. 1 on your drawing, which is two and a half inches. It should be less, because if you had a pole ten feet high at your chair and moved it away to the corner it would grow shorter in appearance, and the corner of the room grows shorter in the same way, So we will make it two and a quarter inches high on the drawing, and mark the ends A and B.

You know that the line which represents the upper

edge of the wall on the right (A. C.) vanishes at V. P. 1, and you know that it begins somewhere near you and goes to the point marked A, so all you have to do is to lay your ruler on V. P. 1 and A, and draw the line backwards from A towards C. Follow the same plan with the other lines and the drawing can be completed in a few minutes so far as the main lines are concerned. The details can be filled in upon the same plan, and the finished drawing of a room, shown by Figure 24, illustrates this method fully worked out. It would be an excellent exercise for you to make a careful tracing of this drawing and transfer it to a large sheet of paper, after which you could find the horizon line, C. V. and V. P's, by drawing the long lines to the places where they meet and then testing the shorter ones. Every good drawing could be so tested.

STANSBURY NORSE.

Battleships Slide on Soap and Tallow.

"It costs from \$4,000 to \$8,000," said the manager of one of our biggest shipbuilding yards the other day, "to launch a battle-

manager of one of our cases and taller ship.

"The building of ways for the ship to slide down is the main item, and then comes the greasing. Every inch of timber over which the vessel slides must be covered with a lubricant. Soap and tallow form the main ingredients. We use a layer of beef tallow and a layer of soft soap. From one to one and a half tons of the stuff is required to move the average battleship.

"The tallow is spread on first to the depth of about three fingers and the worknien use big flat trowels to make the surface as smooth as possible. Then they pour over the soft soap, which is just thick enough to run, or about the consistency of tar.

enough to run, or about the consistency of tar.

"The double coating answers admirably, and the ship glides into the water quickly and easily. If it sticks, it is likely to spring some of the vessel's plates, and accidents of that kind are so costly that nothing is spared to avert them."

Some Stories About Money.

Charles J. Allen, a farmer living near Ogden, Ia., one day while doing some work removed his coat and vest and placed them on a fence. They fell from their resting place to the ground, and a goat happening along nosed six five dollar bills out of the vest pocket. When Mr. Allen replaced his vest he found the money had disappeared. Someone suggested that the goat had eaten them, so the goat was killed. Sure enough, the bills were found in a little lump in the stomach. The lump was forwarded to the Treasury Department at Washington, and when the experts took it in hand they found it resembled anything but money. The browned mass was soaked until the minute particles separated. Then skillful fingers took the pieces and made out of them, in the course of several hours, six five dollar bills, and these were sent to the proper official of the department for redemption. A Michigan tax collector stored eight hundred dollars in a tin can and placed the can under his house. The family goat was seen the next morning coming from under the house chewing the remnants of a twenty dollar bill. Of course the goat was killed and the pleces of money collected from the stomach. These being sent to Washington, within ten days were replaced by new, crisp bills.

rithin ten days were replaced by new, crisp

The regulations of the department require that at least three fifths of a bill shall be recovered before the Government will pay for a mutilated bill.

A farmer in St. Clair County, Mo., dropped his purse into a pig pen, with the result that his pigs had to be killed and a part of the contents of their stomach sent to

that his pigs had to be killed and a part of the contents of their stomach sent to Washington.

Burned money is the hardest for the experits to work on. By the way, the experits to work on. By the way, the experits are all women. Recently a clear box full of charred money was received at the department in such condition that the experts almost despaired of doing anything with it, as there was hardly a piece left big enough to cover more than the head of a pin. Three women, by the aid of the magnifying glasses, soon brought out four iffty doilar bills and recommended that they be redeemed.

Recently an elderly German woman came to the department with the charred remnants of what she said was the savings of forty years. She thought there was at least five hundred doilars in the original roll. On the evening before, as she knelt at her prayers, a lamp toppied over and set fire to her dress skirt, in which the money was concelled. See brought the money to the department, and in a room near where the experts were at work she rocked to and fro and cried and sighed until, after three hours, three hundred doilars in the original roll.

Fun at the Carpenter's.

The carpenter had put down his tools and gone for his luncheon.

"It is a little board myself," said the Auger.

"I'm a little board myself," said the Auger.

"I'm a little board myself," said the

and gone for his luncheon.

"Life for me is a perfect bore," said the Auger.

"I'm a little board myself," said the Small Plank.

"There's no art in this country," observed the Screwdriver. "Everything's screwed in my eyes,"

"You don't stick at anything long enough to know what you're driving at," interjected the Glue.

"That's just it!" said the Screw. "He never goes beneath the surface the way that Jack Plane and I do."

"Tut!" cried the Saw. "I go through things just as much as you do. Life's stuffed with sawdust."

"Regular grind," said the Grindstone.

"I agree with you," observed the Bench.

"It doesn't make any difference how well I do my work. I'm always sat on."

"Let's strike," said the Hammer.

"That's it!" cried the Auger. "You hit the nall on the head that time."

"I'll hit it again." retorted the Hammer, and he kept his word but he hit the wrong nall. That is why the carpenter now wears his thumb in a bandage. It was his thumb nall the hammer struck.—Chicago Bulletin.

Why He Failed.

Boys and the Bible.

Why He Failed.

A young man who had failed by only three publics in an examination for admission in an examination for admission the man examination for admission the man examination for admission the man as "creating" of his Keyresentative in Congress for assistance, and together they went to see the Secretary of the Navy in the hope of securing what is known as a "rerating" of his Keyrestry long. "This is your third time." And before the young man had a chance to answer the Secretary continued: "How do you expect to get along in the world when you smoke so many charetters Your do you expect to get along in the world when you smoke so many charetters Your of your growth and let me see your diagras. There, see how yellow they are; 'jointing to the sides of the first and second lingers. There, see how yellow they are; 'jointing to the sides of the first and second lingers. There, see how yellow they are; 'jointing to the sides of the first and second lingers. There, see how yellow they are; 'jointing to the sides of the first and second lingers. Before the young man found his tongue to offer an explanation, the Becretary asked will you need in a while," was the sheepish will yo once in a while," was the sheepish offering to do everything that he could consistently, added: "I am sick of trying to make anything of these boys that are loaded with cigarcite smoke and thought to the strength of the streng

AUGUST IN AMERICAN HISTORY

AUGUST 5. 1883:
DEATH OF GENERAL
PHILLPHENRY SHERIDAN This distinguished American soldier was born at Somerset, Perry County, Ohio,
on March 6, 1821. In 1853
he graduated from West
Point and was actively
employed in Texas and
Oregon, arranging and
settling differences
with the Indians, May,
1861, brought him promoiton to Captain, and
in December of the
same year he was appointed chief commissary of the army of
the southwest,
As Colonel of a Michigan
regiment of cavalry he defeated the famous
guerilla chief. Forrest, on June 6, 1802, and
followed up his success, repulsing and defeating merille. However, the promoted to the rank
of Brigadher-General, he commanded advision of the Army of the Ohio, and ledanother division at the bloody battle of
Perryville. In recognition of his ability
and gallantry at Stone's River, he was
granted the rank of Major General of volunteers. At the battles of Chickamauga
and Missionaries' Ridge, he rendered may,
rifficent service. Transferred to the Army
of the Potomac as chief of cavalry, his
raids on the Confederate lines of communication were of the utmost importance.
In the Shenandon's Valley he defeated the
Confederates in the battles of Winchester,
where his famous "Ride" took place,
Fisher's Hill and Cedar Creek. In the
concluding battles and sleges of the war,
notably against Petersburg and Richmond,
he assisted largely in
their success. In 1809
he was made Likeu.

notably against Peter he assisted largely in their success. In 1869 he was made Licutenant General, and became General of the United States Army on June 1, 1888.

Army on June 1, 1888.

AUGUST 8, 18.9:
FIRST RAILWAY
LOCOMOTIVE OPERATED IN AMERICA. Horatio Allen
was sent to England
in 1828 by the Delaware and Hudson
Canal Co., to procure
locomotives and railway supplies, and the
first locomotive railway was run from
Honesdale to the
company's mines. In
the following year
Peter Cooper built
the first American
locomotive. The total
mileage of passenger railways in America in 1830 was 23. as
compared with 232,060 miles in 1897.

"The American Boy's" Correspondent on a Trip Around the World.

Harry Steele Morrison, whose name has become familiar to the readers of THE AMERICAN BOY, first through his series of articles that appeared in Volume I., entitled "The Boy Traveler," and afterwards through his letters written from the Paris Exposition, set sail last month for a 1rip around the world on the army transport "McClellan." He will visit Madeira, Gibraltar, Malta, Egypt, Singapore, Ceylon,

the Philippines, China, Japan, and the Hawaiian Islands. Young Morrison will work his way the entire distance, and confidently expects to return to San Francisco with more money than he had at the sict. He takes his camera with him, and will act as correspondent for THE AMERIC NO BOY. Writing letters to the readers of his paper describing his trip in a way to interest old and young.

Pencil Drawing by a Bot Who Reads "The American Bot.

Making Money by Lawn Mowing.

George Hill, Los Angeles, Cal., age eleven, tells how he makes money. One year ago he began taking care of lawns, working during the summer vacation. He continued his work after the school term began in the fall, doing his work before and after school hours. From July

16, 1900, to May 18, 1901, he made twenty one dollars and ten cents, a part of which he used in the purchase of a bicycle. This summer he bought a lawn mower. He has summer he bought a lawn mower. He has a little book in which he keeps an account of all he earns, and he now has twenty eight customers on his book.

How One Boy Makes Money.

A recent newspaper item is authority for the statement that Donald G. Keeler, an eighteen year old St. Louis boy, cleared over two hundred and fifty dollars last summer by taking contracts for keeping weeds from growing on lands. The boy got a regular list of customers and did his work well. Business grew on his hands so fast that now he is employing men to do the actual work of weeding, while he devotes his own time to securing contracts and superintending. He charges for his services by the front foot, the price varying from four cents a foot on small jobs to two cents a foot on large ones.

For a boy of eighteen to be carrying on business with men, hiring laborers and making contracts, means the mastery of business details. Young Keeler does not intend to follow this business through life, but is making it a stepping stone to somerecent newspaper item is author-

but is making it a stepping stone to some-thing better. Whatever he decides to do, he has received a training in this work that will prove of great value to him. In every town and city where there are grass and weeds to be cut, enterprising boys ought to be able to find employment.

The Advice of the Richest Man in the World.

Recently, John D. Rockefeller addressed the students of the University of Chicago, to which institution he has given more than nine million doilars. He spoke in

to which institution he has given more than nine million doilars. He spoke in part as follows:

"Students of the University of Chicago, what can i say to you that will enable you to make the best use of your opportunities? You look out upon the world with bright prospects and from a standpoint far more advantageous than that of many who preceded you.

"Whatever your station may be hereafter, do not fail to turn gratefully to your families and friends, who have stood by you in your time of struggle for an education. Many of them toiled incersantly through long weary years that you might be possessed of advantages which they were unable to secure for themselves. I entreat you not to forget them.

"In the end the question will be, not whether you have achieved great distinction and made yourselves known to all the world, but whether you have fitted into the niches God has assigned you, and have done your work day by day in the best possible way. We shall continue in the future, as in the past, to need great men and women, to fill the most important positions in the commercial and professional world, but we shall also need just as much the men and women who can and will fill the humblest positions uncomplainingly and acceptably.

"The vital thing is to find out, as soon

guard the approach of any toe to your

guard the approach of any toe to your well-being.

"You will do well not to underestimate the strength of such a foe. How many a young man whom I knew in my school days went down because of his fondness for intoxicating drinks! No man has ever had occasion to regret that he was not addicted to the use of liquor.

"So much has been said of late on the subject of success that I forbear making particular suggestions. The chances for success are better to-day than ever before. Success is attained by industry, perseverance and pluck, coupled with any amount of hard work, and you need not expect to achieve it in any other way."

Careful saving and careful spending invariably promote success.

Young Money Makers.

Two brothers at Cohoes, N. Y., have been working since last December with a view to laying up one hundred dollars by September. They say they are going to be millionaires some day, and when they are they are going to send THE AMERICAN BOY to every boy who wants to be something. They are seiling papers. Every minute they can spare they devote to this work, selling from seventy five to eighty five papers a week. They drive their neighbors' cows to and from pasture. These boys do not "run the streets" except on business errands. They now have sixty, five dollars. One of them, Donald Bogar, is ten years old, and his brother Roland is eight.

How He Earned His Dollar for "The American 3oy."

Bennie E. Hildreth, aged fourteen, living at Ticonderoga, N. Y., tells how he earned his dollar for THE AMERICAN ROY. He bought old rubbers, brass and rags and sold them to a dealer, and out of the money he sent one dollar for THE AMERICAN BOY, and he says, "It is my most precious possession."

Why He Missed the Circus.

Adin R. Miller, Canton. Ohio. wanted very much to go to the circus. When he was getting ready to go his father said, "I will give you fifty cents if you will stay at home," and his mother said, "And I will add fifty cents to it." Adin stayed at home and sent the one dollar for THE AMERICAN BOY, so that he may have a circus all the year round.

Another Money Maker.

Russell Mundhenk, Arcanum, Ohlo.-I make money by painting small jobs and raising chickens. Last year I made sixty dollars lacking five cents, and the man that I sold them to gave me that, making the sixty dollars.

The average young man of today is inclined to habits of extravagance and wastefulness.

Look Out for This Boy.

Pear: Thomas, eleven years old, son of Superintendent E. B. Thomas of the Lindsey (O.) school, has an eye to business, and has shown what an indus lous boy can do to make money during the summer vacation. Linesey is about two miles from

the humblest positions uncomplainingly and acceptably.

"The vital thing is to find out, as soon as possible, the place in life wherein you can best serve the world. Whatever position this is, it is the highest position in the sight of good men and in the economy of God. I tremble to think of the failures that may come to some of you, who are possessed of the brightest intellects and capable of the greatest accomplishments.

"I shall expect to see many who are here present among the slow, methodical, plodding ones, who are not at all distinguished for brilliancy, go forward till at last they are found occupying positions of the greatest honor and responsibility.

"Some of the foes which threaten your success may not be apparent to you until it is too late. If you are to succeed in life is a young hustler, and is a studious."

it will be because you master yourselves, pupil in school. Pearl is an enthusiastic and if you continue masters, and not subscriber of THE AMERICAN BOY, and la a member of the Rutherford B. Hayes to you here to-day that you must jealously company Order of the American Boy, and guard the approach of any toe to your at the recent election of officers was honored by being chosen secretary.

J. H. Hale, a farmer's boy in Connecticut, left in the world to make his own way, began in 1880 the growing of peaches on the red hills of the old farm, borrowing money to make a start. In a comparatively short time he became the owner of the finest fruit farm in New England. Then he bought a tract of 1.260 acres in central Georgia, where he now has 250,000 peach trees and gives employment to 800 persons. When he began operations on the home farm the boy peddled the fruit in a push cart.

Hawalian Islands, Mexico, Cuba, China, Spain, Peru. Costa Rica. Chili, New Zealand, United States ten and fifteen cent stamps, and United States Confidence of the confidence of

Benjamin Franklin testified that a little tattered volume of "Esmay to Do Good," by Cotton Mather, read when he was a hoy, influenced the whole course of his conduct, and that if he had been a useful citizen "the public owes all the advantages of it to that little book."

Provide a boy with a good library, and so cultivate his taste for pure literature that he will never care for evil books that exalt crime and idealize criminals.

For Name and Fame; or, Through Afghan Passes; by G. A. Henty.

Afghan Passes; by G. A. Henty.

To say which of Henty's books is the most interesting, would be a difficult matter, but one of his best stories is, unquestionably, "For Name and Fame"—a book which from its initial to its final chapter possesses an absorbing interest for the reader, be that reader boy or man; and in this power to win and hold the interest of young and old lies the indisputable proof that lienty is a first-class "story teller"

"Once upon a time," in old England, a certain gentleman, Captain Ripon by name, causes the arrest and imprisonment of a gypsy fellow who has stolen twelve spangled dorkings, the special pride and delight of the captain's pretty young wife. The gypsy, too, has a wife who loves her vagabond husband with all the strength of her untamed nature. Tearfully, she pleads with Captain Ripon not to appear against her husband, but her entreaties are refused, and with a baleful flash in her big, black eyes that quickly dries her tears, the gypsy woman swears to be revenged upon the captain, even if it takes a life-time to accomplish her purpose.

to be revenged upon the captain, even if it takes a life-time to accomplish her purpose.

Time goes on, and one day, the beautiful baby-son, the idol of the Ripon household, disappears, and all efforts to find him are unavailing. At last, by a certain sign the heart-broken mother and father know that the gypsy woman, whom they have long since forgotten, has kept her vow by stealing their only child. With a sickening sense of misery the parents realize that this woman will naturally vent her long-cherished spite upon their delicately nurtured darling.

The bleak wind of a January night wails dismally around the poor-house of the little Cambridgeshire town of Ely, and occasionally, a snowflake flutters carthward. Mrs. Dickson, the wife of the poor-house porter, awakening suddenly, thinks she hears a child crying, outside. Arousing her husband, good Mrs. Dickson sends him out into the wintry storm to see if she hears aright, and in a few moments the porter returns, carrying in his arms, a sturdy boy, seemingly about two years of age. The next morning a gypsy woman is found frozen to death, a few yards away from the poor-house, and, naturally, it is supposed that the poor little castaway found the night before, is the gypsy's child Good Mrs. Dickson, who becomes a mother to the new foundling—to whom the poor-house guardians give the name of William Gale—stoutly maintains that the beautiful, English-looking child of the poor gypsy. I'rder Mother Dickson's care William Gale—stoutly maintains that the beautiful, English-looking child of the poor gypsy. I'rder Mother Dickson's care William Gale—stoutly maintains that the beautiful, English-looking child of the poor gypsy. I'rder Mother Dickson's care William Gale—stoutly maintains that the beautiful, English-looking child of the poor gypsy. I'rder Mother Dickson's care William Gale grows up a good boy, and by nature he is brave, honest and a gentleman. At the age of fifteen, he leaves his poor, but happy home, at Ely, and goes out into the big world as a 'prentice lad

inson Crusoe life on a desolate island, and subsequent stay among a tribe of friendly Malays; and his rescue (by means of a quick-witted and daring piece of stategy) of an English brig, the Sea Belle, bound for Calcutta—these are the most important adventures of William Gale, the gallant young hero of "For Name and Fame." for two years after he leaves his Cambridgeshire home.

As a reward for the service rendered the

for the Victoria Cross.

By one of those strange chances which happen both in and out of fiction, Captain Gale, by an act of great heroism, saves the life of his unknown father, Colonel Ripon, now an officer in the India-British army. A warm friendship naturally springs up between the two officers, and in the course of time Colonel Ripon discovers that William Gale is his long lost son.

In this review I have given you, boys, an outline of the story, "For Name and Fame," one of the most interesting in-

nutline of the story, "For Name and Fame." one of the most interesting, instructive and well-written books I have ever read, and one that in tone, is as healthful and fresh as the breezes of its hero's native land. ALEXANDER JENKINS.

Many boys and men who appear before criminal courts ascribe their downfall to impure reading.

THE DELAHOYDES: Colonel Henry Inman. "The Delahoydes" is a story of boy life on the old Santa Fe trail. The characters in it are all drawn from life. The localities are geographically true and the incidents real. For boys who like the study of camp life and life in the mountains and among the Indians, the book is full of thrilling interest. 283 pps. \$1.00, Crane & Co.

BEFORE HE IS TWENTY: This book treats of five perplexing phases of the boy question. Its five chapters are written in their order by the following: Phase One, The Father and His Boy, by Robert J. Burdette; Phase Two. When He Decides, by Frances Hodgson Burnett; Phase Three, The Boy in the Office, by Edward W. Bok; Phase Four. His Evenings and Amusements, by Mrs. Burton Harrison; Phase Five. Looking Toward A Wife, by Mrs. Lyman Abbott. The book contains portraits of these five authors. 104 pps. 75 cents. Fleming H. Revell Co.

cents. Fleming H. Revell Co.

WITH WASHINGTON IN BRADDOCK'S CAMPAIGN: Edward Rogans. This book tells the experiences of a Virginia boy, liarry Farquhar. He was an aide to Washington, sharing with him the dangers of those early expeditions in the forests of Virginia and Pennsylvania. The background of the book is history. The author describes vividity the adventures of Washington and his companions in that stirring period of American history. He tells about the treachery and the devotion of the Indian, midnight attacks on the settlements, battles, raids and forays. 233 pps. \$1.25. George W. Jacobs & Co.

CHARLEMAGNE, The Hero of Two Na-

\$1.25. George W. Jacobs & Co.

CHARLEMAGNE, The Hero of Two Nations, by H. W. Carless Davis. The book is one of the "Heroes of the Nations" series, edited by Evelyn Abbott, M. A. In this book the author has endeavored to give some idea of the personality and influence of the first Western Emperor. She has dealt with institutions and social and literary developments only as they threw light on the career of this giant of medieval history. The narrative is based on a study of the chronicles of the literature of the period, a period that is interesting not only to the student of history but also to the general reader. Maps and engravings from old pictures form a very interesting part of the book. 331 pps. \$1.50. G. P. Putnam's Sons.

It is possible for any onepecially for a youth-to read himwelf to death in a bad book in five

IN THE DAYS OF ALFRED THE GREAT: Eva March Tappan, Ph. D. Illustrated by J. W. Kennedy. The near approach of the one thousandth anniversary of the last year of the life of Alfred the Great makes a story book for boys, founded on the life of this great English ruler, appropriate at this time. Alfred has been called "The Blameless King." He was a man in whom it was hard to find a flaw. The chapters are devoted to Alfred's carly home, his life on the Manor, his going to London, and then the various incidents connected with his reign. It would be difficult to conceive of a more interesting subject for boys than the life of Alfred the Great. The book before us is beautifully illustrated. 296 pps. Lee & Shepard.

ruly illustrated. 296 pps. Lee & Shepard.

THE BOYS' BOOK OF EXPLORATIONS: Tudor Jenks. This book contains stories of the heroes of travel and discovery, chiefly during our own time, in all parts of Africa, Asia and Australia. Mr. Jenks has a thorough knowledge of what interests a boy. It gives a boy information, too. as to what has been done in the way of opening up new countries. It gives him new ideas about geography and the natives of these countries. It gives him interesting stories based upon fact, and pictures of the resolute men who risked their lives in the cause of science and civilization. It is profusely illustrated and handsomely printed on the best book paper. 41 pps. \$2.00. Doubleday, Page & Co.

PHE BEST PAPER

The Law Student's Helper, published by The Sprague Publishing Company, the controlling owners of the Sprague Correspondence School of Law, is beyond question The Best Young Men's Paper in Amarica

Sprague Correspondence School of Law, is beyond question The Best Young Men's Paper in America.

As its name implies, it treate largely of the law, but in such a way as to make it of the greatest value and greatest eat interest to men and women who are not studying law as well as to those who are. It averages forly pages to the month. It's editor is WILLIAM C. BPRAGUE, Pres. of Sprague Correspondence School of Law; asst. editor is GRIFFITH OGDEN ELLIS, Vice-Prin. of that school. It treats of all current events in the law and political world from the standpoint of the lawyer. Its departments, "Questions Answered and Bifficelities Met for Students of Law," and "The Self Examinar," which gives questions from bar examinations, with their answers, have proved very valuable, while the miscellaneous matter is always unique and highly interesting. The rule of this paper is, once a subscriber always a subscriber. Its subscription list has grown to be the largest that can be claimed by any legal or semi-legal journal. We speak of this to show how it stands among those who know what good journalism is. It appeals to the young men who are in the busy walks of life, in that it treats of current events in a simple concise manner, and one does not have to read through pages of trash to get at the substance of what he wants to know. It is to-day necessary to intelligent citizenship that one give attention to passing events and be able to view them from an intelligent standpoint. This paper supplies what no other paper gives, an opportunity for a brief, condensed, philosophic review of the world of law.

Arthur Did Not Buy a Shotgun.

AUNT LUCY.

My boy friend, Arthur, age twelve, was very anxious to learn to shoot, that he might kill quail enough to buy a shotgun with which to kill more quail and get money to put in the bank, and then to buy a sawmill.

with which to kill more quall and get money to put in the bank, and then to buy a saw-mill.

As Arthur's father was a poor man with six little ones to provide for, the money with which to buy ammunition, small though it was in amount, was a matter of some concern; therefore Arthur and I made a contract, wherein I agreed to furnish traps with which he was to trap gophers, for which he was to receive three cents each. In this way Arthur earned sixty three cents, with which he bought loaded shells. Then we made another agreement. Arthur was to have the use of my gun, provided he gave me one quail in every twelve. The boy was naturally of steady nerve and quick eye, and in a short time became a very fair marksman. During the season he was fortunate enough to bag thirty eight quall, one hare, and three cottontail. He gave one of the cottontail to his mother, and traded one to me for a quail. For his three dozen quail he received nine dollars, and for his hare fifty cents. At a family council, in which I was included, it was decided that the shotgun was not an absolute necessity, but a new suit of clothes was. Arthur cheerfully accepted the condition and bought himself a new suit of shells, he had twenty cents left, which he laid by for a nest egg.

That's how Arthur didn't buy a gun.

An Interesting Experiment.

hatives of these countries. It gives him interesting stories based upon fact, and pictures of the resolute men who risked their lives in the cause of science and civilization. It is profusely illustrated and handsomely printed on the best book paper. 41 pps. \$2.00. Doubleday, Page & Co.
FIGHTING THE DONS: Gordon Stables, C. M., M. D. This is a story of the Spanish-American war dedicated by the author to brave boy readers. British and American. The book is beautifully illustrated and handsomely bound. The author tells about the adventures of several young fellows who as sailors took part in the Spanish-American war. He tells about the destruction of the Maine, the battle of Manila Bay, and the smash-up of Cervera's fleet. It is a spirited and distinctly American story that would stir to read of the sea. When we have a story of the sea, mingled with a description of historic events on sea and land such as the events of the late unpleasantness with Spain, we have a book that every boy must be eager for. 329 pps. \$1.25. George W.

Good in Composition.

Kimpton Ellis, a thirteen year old Colum-Kimpton Ellis, a thirteen year old Columbus, Ohio boy, received first honorable mention among the boys of the Grammar Grade of the Columbus schools in a composition contest conducted by the Ohio State Journal. Young Ellis wrote on the subject "Kanaka Boys," the native boys of the Hawaiian Islands. He says of these boys that they can swim before they can toddle straight, and that "steamer days" are events of great consequence to them. "Long before a vessel from 'Frisco,' China or

KIMPTON ELLIS. COLUMBUS, OHIO.

Australia is moored at the dock, these urchins' black heads dot the surface of the blue water waiting expectantly for passengers to throw coins into the deep; then like sinkers these chaps drop. They do not dive as we do, but draw up their knees and sink, their object being to get beneath the coin and selze it in their hands as it is going down. Often money is not captured until it has reached the bottom of the ocean. On rising from a drop the captured coin is held high above the head to view, then clapped into a grinning mouth for a safety deposit. I remember a nickel was several times thrown to a chubby baby near the coast, too small to venture, farther, but numbered as a diver. Each time his wee head went under only a few inches. Larger boys took the coins, until finally the tears rolled down the little fellow's cheeks and mingled with the ocean brine. Then a boy shouted: 'He no can swim much. He just learn. Me fix him.' At this he handed the child a coin from his mouth and the baby boy's lately sorrowful eyes lit up brightly. He had shut the coin up in his mouth and was contented. These coin divers vary in age from twelve to four years, the greatest number being about five years old."

NAT MARKESON,

Harvard University recently won a victory over Yale in the annual debate between the two colleges. This was the eighth vic-tory for Harvard in the eleven years dur-ing which the debate has been conducted. The victory for Harvard was won by R. C. Bruce, a colored boy, and son of Blanch K. Bruce, of Louisiana, ex-United States senator and ex-register of the United States treasury.

Roscoe Wike, of Canton. Ohio, age thirteen, writes us expressing his approval of THE AMERICAN BOY. Roscoe has a large hound and a pair of rabbits. He takes pleasure in a flower bed, and a vegetable garden in which he raises plants for sale.

Boys in the Home, Church and School

Manual Training.

It very frequently happens that a boy who is slower in acquiring a knowledge of his lessons and is more backward than his school fellows, try as he may to excel them, becomes discouraged, dull and moody. Let this boy have the opportunity to go to a workroom for an hour and try his hand at making a box or planing a rough piece of board, and he will perhaps find that he can do either or both better than the brightest boy in his school. By this means you have given him an impulse of self respect that may be of untold benefit to him when he returns to his studies. He will certainly be a brighter and a better boy for finding out something that he can do well. Manual training is one of the few good things that are good for everyone. It is good for the rich as well as for the poor boy, to teach him to increase his faculty for handling tools, and in the case of the latter it is of inestimable advantage, as tools are the things he will probably have to handle for a living. It is good for the studious boy, as it draws him away for a time from his books, but more especially is it good, as we have pointed out above, for the well-intentioned but dull boy, as it shows him that there is at least something he can do well.

Huxley's Definition of a Liberal Education.

"That man, I think, has had a liberal education who has been so trained in youth that his body is the ready servant of his will, and does with ease and pleasure all the work that, as a mechanism, it is capable of; whose intellect is a clear, cold, logic engine, with all its parts of equal strength and in smooth working order; ready like a steam engine, to be turned to any kind of work, and spin the gossamers as well as forge the anchors of the mind; whose mind is stored with a knowledge of the great and fundamental truths of nature, and of the laws of her operations; one who, no stunted ascetic, is full of life and fire. but whose passions are trained to come to heel by a vigorous will, the servant of a tender conscience; who has learned to love all beauty, whether of nature or of art, to hate all vileness, and to respect others as himseii."

flany College Graduates Lacking in Good Manners.

President Eliot, of Harvard, in an address to Miss Hazard on the occasion of ber inauguration as President of he hoped that women's colleges might unheeded. The boy does not believe that be able to inculcate manners with more an attendance at Sunday School paves the success than the old colleges had done, way to fame. Squire Martin in the old This remark created some comment; and Dr. Edward Everett Hale, writing in the Boston Christian Register, takes up the cudgel for President Eliot, say- uncertainty as to the spirit in which Billy ing: "May it not be fairly asked if some of our children do not grow up with an impudent self-conceit, nursed verse: and bred by our declamations about If I eat all my crusts like a good little public education? Fools, speaking to them on anniversaries, tell them that they are the most important beings in the world. They know that the State Who Won First Prize in Drawing, Grammar Grade Department, Columbus Ohio: Public Nchools, in Contest Conducted by the Ohio State Journal.

They know that the State But there were dark moments when taxes itself for their training as it does even the trustful heart of female infancy not for armies and navies, and the danger is that these little gentlemen and ladies shall come to think that they belong at the head of the board, and that the unfortunates who teach them, who feed them, who clothe them, are quite unworthy of any respect beyond what a one important thing in teaching a dog tricks is never to allow him to come to the end of a trick without orders from you; less they can make men out of boys. First of all, boys and girls should know who they are, what they are to live for. They are to know that they are in a world where each lives for all and all for each. If they

can grow to this knowledge under the touch of their teachers, good manners are secured. A girl may direct a letter upside down, but the letter will say the right thing. She may use the wrong fork at the dinner table, but she will be sure to thank God for the dinner.'

Dr. Hale gives some glaring instances of ingratitude and ill-manners on the part of college-bred young men and young women. One of his friends paid THE PUPIL, AND NOT THE CLASS, the whole expenses of several young women selected as being specially fit for the "higher education." A dozen of them graduated at different colleges. Of that number, but one wrote him to thank him for his generosity and to in-

vite him to her commencement.

A man once said to Dr. Hale, "I think you will like to help young men in their education. But take care never to accept from them any written obligations. Here are two or three thick files of such obligations which I have taken, and which the writers have forgotten. It always makes me cynical to look at

The treasurer of a large educational fund, who had for many years sent from twelve to twenty checks annually to students who received the benefits of the fund, told Dr. Hale that in ten years' time he had never once had a receipt in acknowledgment of his payment. In the annual audit of his accounts he always had to present the checks which these young men had been obliged to endorse.

Mr. Memminger, a member of Jefferson Davis' Cabinet in 1848, uttered a remarkable protest against public education. He said, "It cuts the tap-root of gratitude. If the children receive these priceless gifts from the State, it will wean them from the love of their fathers and mothers." He prophesied that it would be destructive to the tenderness of home.

Dr. Hale does not endorse the sentiment of Mr. Memminger, but he says that the disagreeable incidents which we have quoted illustrate the remark.

The Boy's Rocky Road to Fame.

The way of the boy is hard, and his hopes of distinction wither in the blast. Tis but a short month since Governor Roosevelt denounced him as "not worth his salt," if he wouldn't fight; and now Mr. John Wanamaker comes along and tells him authoritatively that if he has broken the Sabbath day he will never become famous. It only remains for Admiral Dewey to say that unless he learns his multiplication table he cannot be a sailor, and for Mr. Rockefeller to announce that he need not aspire to the Presidency if he has ever been rude to his aunt, says Agnes Repplier in Life.

The salvation of the boy lies in the fact that he habitually disregards the remarks of grown-up people. Their easy Obiter Wellesley College, made the remark that Dicta statements are harmless because reading book tells Billy Freeman that turkey gobblers never run after children who obey their parents; but we are left in accepts this fable. A touching tradition of our own childhood was embodied in the

girl.

It will make my nose straight and make my hair curl.

But there were dark moments when was heavy with doubt. Perhaps a direct appeal to vanity was not the best method of promoting good behavior. It may be that a moral law should have some broader encouragement than a hope of fame.—Exchange.

a rauroac orders prohibiting cigarette smoking by its employees.

Here are the reasons:

- That the smell of nicotine from the breath of the employees is annoying to customers, and to other employees who are not users.
- 2. That nicotine demoralizes the em ployee and affects his honesty. 3. That cigarettes make the employee
- nervous. 4. That they stunt his mental growth, befog his memory, and prevent an alert
- intellect. 5. That they affect the employee physically, so that he cannot give the best service to the employer.

Boys in the Office, Store, Factory, and on the Farm

From Chore Boy to Millionaire.

The Chicago Chronicle publishes a four-column biographical sketch of James Oliver, the great plow maker, and from it we take the liberty of quoting freely.

James Oliver was once a farmer's "chore boy," working for fifty cents a week. He is today worth \$15,000,000. and proprietor of the Oliver Plow Works, the largest plant of its kind in the world. Mr. Oliver is a Scotchman. His father was a shepherd, and had no faculty for accumulating money. The boy had practically no schooling. Mr. Oliver gives his mother and a Sunday school the credit for the education he received when a boy. At the age of eleven he came to this country with one or two other members of the family. On a farm near Geneva, N. Y., he was given work as chore boy by a farmer, his pay to be board and lodging and fifty cents a week. At the end of eleven weeks he had saved five dollars, every cent of which he had to send to his brother, who was in need. At the age of thirteen we find him in Le Grange county, Ind., and a little later at Mishawaka, in the same State, working on his father's farm. Shortly afterwards his father died, and he again found employment as chore boy at six dollars a month. For four years he worked at anything he could find, picking up what little book knowledge he could. At the age of seventeen he was working in a grist mill at Mishawaka, and at about this time invested all he had (\$75) in a house and lot, agreeing to pay for it \$775. He says of this investment: When I look back upon it I feel that to it I owe, in a good measure, what success I have met with during my life, for to liquidate the debt I was forced to work hard and economize continually." At the age of twenty-one he married and went to live in a little slab house for which he paid \$18, adding \$11 for improvements. His wife gathered together a number of rags, borrowed a loom and wove a rag carpet, which he thought was the prettiest thing he had ever seen. He lived three months in this little slab house—the happiest months of his life, he says. He then learned the molder's trade and accumulated a little money. At the age of twenty-eight we find him operating a little foundry of his own at South Bend, Ind., where he made plows. After a great deal of ill luck and close study of the plow business-for he was trying all the time to perfect an implement that could be made cheaper and work better than any plow then madehe finally hit upon a chilling process, and the Oliver Chilled Plow, now known the first time. He tells how he invented the plow as follows:

"I had all along thought that an improvement might be made by chilling one-quarter of the moldboard of the plow, and so one day I got up a pattern, more apt to care for it and the rest of fitted it to my moldboard and chilled a few. I noticed that many of the mold-pair of skates, a gun, and maybe a watch, boards would crack. Then I tried chilling the entire surface, but found that the he wants to use a hammer, saw or ax let iron would dry on the damp surface. I discovered that by using hot water for warm- in their places when he gets through ing the 'chills' used in chilling the moldboards, the moisture in the flasks would dry; but in running the iron over the haps you say he has none; but does the surface of the moldboard the air would city boy have all the sunshine or exercollect into the melted iron and chill, act- cise that he needs? The city boy does ing very much like air under ice. To not come in contact with nature as much prevent this, I made creases in the chill as does the country boy. Compare the with the point of an ordinary ground file, farm boy of to-day with one of fifty and found that it successfully carried the years ago. Then he didn't get much air from under the melted iron. By mak-|schooling, generally went barefoot, and ing the grooves in the chill a little deeper, I had accomplished what I sought. The surface of the moldboard was soft and perfect, and by my annealing process the metal was deprived of its brittleness. I was delighted, and with all haste went to Washington and took out patents."

The success of this plow was instantaneous; and from the little foundry in which he was his own superintendent, office boy, bookkeeper, salesman and buyer, there has grown up a plant at

Over 50,000 of his plows have been sold in Scotland, the country from which he came as a penniless boy, sixty five years ago.

The Farm-Boy's Home Life.

There is always the old complaint about the boy leaving the farm, and it is usually leaving the farm, not the farmhouse. Perhaps a little of the trouble lies here—with the home life.

In many houses the boy does not even have a room that he can call his own, but must share it—and sometimes even his bed-with another, in some cases the other Being a hired boy or man, who may or may not be a desirable room-mate.

And in such houses there is usually a 'spare room' or two, furnished comfortably and kept for the use of guests who may come once or twice a year. Would it not be much better for the boy to have one of these rooms for his daily use, than to keep it closed, awaiting a sometime guest?

There is little more labor involved, for the boy will feel some pride in his possession and he will soon learn to keep it neat. Let it be plainly but comfortably furnished, and help the boy to add to it such decorations as he may desire.

This is only one of the ways that the mother and sisters of the farmer boy can help make his life pleasant and attractive to him. Let them get rid of the idea that anything is good enough for a boy, and learn that the boy as well as the girl likes and appreciates, not only bodily comfort, but beautiful surroundings; though his way of showing this appreciation may differ materially from that of his sister.—Farm Journal.

In Defense of the Farm Boy.

The following are extracts from a prize essay written by Charley Hayne, of Johnson, Neb., a thirteen year old boy, for a farmers' institute. The subject of the essay is "The Boy on the Farm." We quote only a few paragraphs from the remarkably good composition:

"Though he should do his share of the work, the boy on the farm ought to be given some time of his own. He ought to have plenty of good books and games. If allowed to finish at a common country school he will have a fair education. The boy should have a room and a place for his things. He ought to have a pig or a calf. He might do as a boy in Kansas did. The farmer gave the boy a small potato and told him he could have land to raise the increase thereof until the hoy became of age. At the end of the fourth year the boy had four hundred bushels of potatoes and the man wanted to be released from his bargain. Another man in Kansas gave one of his children two old hens, and said he would feed the increase for four years. Two years have passed, and the boy has two hundred chickens and sixty four dollars world over, went into the market for the in the bank. The man says he is afraid that in two more years the boy will own the place and charge him rent for living

"Give the boy a share of the garden truck. If he has a colt or a calf he is them better. You could let him have a without missing the cost very much. If him use them, but teach him to put them with them.

"What advantage has a farm boy? Pereven when snow was on the ground he had to put on a pair of old shoes that his brother wore the winter before.

"A boy should be thankful that he doesn't have to shuck corn barehanded and always take a down row; or bind wheat by hand. Who invented the machines for labor saving that are on the up to date farm; did the city boy invent these? The common country boy knows enough to 'make his head save his heels.

"What more can a farm boy want? He South Bend, Ind., covering sixty two acres, has good reading matter, good schools, twenty seven of which are under roof. good exercise, and a good living."

The American Boy's VACATION

If you expect to go to work in the Fall you cannot use your vacation more profitably than in preparing for a position that will pay good wages from the start and enable you to gain valuable experience at the same time. We have helped thousands of young men to secure positions. Many of our students have gone from school into drafting rooms at good salaries where they have continued their studies and advanced to even better positions. We can do as much for you; our catalogues tell how.

WE TEACH BY MAIL Mechanical, trical, Civil and Mining Engineering; Shop and Foundry Practice; Mechanical Drawing; Architecture: Architectural Drawing; Plumbing, Heating and Ventilation; Sheet Metal Work; Telephony; Telegraphy; Chemistry; Grammental Besign; Lettering; Bookkeeping; Stenography; Teaching; English Branches; Locomotive Running (for ongineers and firemen only); Electrotherapeutics (for physicians and nurses only). BOYS IN GAMES AND SPORT

BUCCANEERING.

The Jelly Game of Hand Ringing is Rapidly Becoming Popular.

Hand ringing is on the highroad to becoming a popular sport among American boys. Its excitement and variety, its call for quick judgment and a ready hand endear it to every lover of good sport.

The diagram shows the arrangement of a field, for buccaneering. Two stakes from three to four feet in length are set firmly in the ground. They should be separated by perhaps lifty feet. Around each stake mark a circle ten feet in diameter. This can be done with either lime or a sharp stick.

The game is played with a ring made, as

The game is played with a ring made, as shown in the diagram, of rattan, or any flexible vine bound together with twine and covered with canvas or some other strong cloth. The rings are from eight to ten inches in diameter.

To begin play, "choose up sides," and let the two captains take a position in the center of the field. When the ring is not "in play," each man must keep between the ring and the stake he is defending. Bearing this rule in mind the captains may dispose of their men in any fashion they choose.

The captain who has previously gained

dispose of their men in any fashion they choose.

The captain who has previously gained possesion of the ring by a toss may put it "in play," either by throwing it forward toward the enemies' stake or by passing it back to one of his own side for a run. If he throws it forward no one on his side may touch the ring until an opponent has touched it; but if he passes it back either side may gain possesion. To block a run it is merely necessary to touch a player who holds the ring. The moment a player in possession is touched by an opponent he must throw the ring in one direction or another. Always remember that to throw the ring forward means that your side must let it alone until at least one of your opponents has been "in possession."

If at any time during the game the man holding the ring calls time, play is stopped. Each side takes positions between the ring and their stake and then the man holding the ring starts the play as at the beginning of a game. No count can be made by the first throw after time has been called. If two men seem to pick up or catch the ring exactly the same moment and a dispute arises as to whom the ring goes to the side making the last throw and play is resumed from the point where the ring stopped.

If the ring goes out of bounds the side not responsible for the accident are accounted in possession and play is resumed as at the beginning of a game.

No player can on any account step within the circle which surrounds his or his opponents' stake. The violation of any rule counts one to the opposing side. To throw the ring within the circle of your opponents' counts two, to ring their stake counts ten The captain who has previously gained

NO. 44. STEP.

NO. 44. STEP.

The ground is marked off by two parallel lines, a wide distance apart. One player, who is "it," stands on one of these lines, with his back to the other players, who start at the other line. The one who is "it" counts ten rapidly, during which time the other players approach his line. As he says "Ten!" they stand still in whatever attitude they may be at the moment; he turns his head quickly and calls the name of any player or players whom he sees moving. Any thus caught moving have to go back to the starting line and begin over, while the counter repeats the count of while the counter repeats the count of ten and the players again move forward. The object of the game is to cross the counter's line without being seen in motion by him. The last one over changes places with the counter with the counter.

NO. 45. LADDER

A "ladder." or jumping frame, made of very thin strips of wood, about two inches wide, is laid on the ground. The players run over it, stepping in the open spaces without touching the wood; later they hop through it on both feet; on one foot, and then the other, etc., etc.

NO. 46. JAPANESE TAG.

This is like ordinary tag, except that a player who is tagged must place his left hand on the spot touched, whether it be his back, elbow or ankle, and in that position must chase the other players. He is relieved of his position only when he succeeds in tagging someone else. Several players may be "it" at one time.

JUMPING ROPE.

NO. 47. FOX AND GEESE (LARGE ROPE).

ROPE).

(a) Rope turned toward jumper
(b) Rope turned away from jumper.

1. Run under (a).

2. Run under (b).

3. Run in (a), jump once, run out.

4. Run in (b), jump once, run out.

5. Etc., continue to five jumps.

Repeat in pairs, threes, etc., as long as time allows. The players form in line and take turns. The first one to miss "takes an end," and the one relieved from turning goes to the end of the line. When jumping in pairs, the one relieved takes the place of the one who misses.

NO. 18. FANCY JUMPS (SINGLE ROPE)

1. Run in (alternate a and b), and jump three times with one of the following arm positions: 1. hands on hips; 2, on shoulders; 3, on_head; 4, circle arms over head.

A guard such as the one shown in the diagram can be made from light canvas or leather and will protect the hand in much the same way as does a base ball glove.

FIFTY GOOD GAMES

As Played in Brooklyn Public Schools

From Report by Jessie H. Bancroft, Director of Physical Training

A guard such as the one shown in the diagram on one foot; 3, en alternate feet; 4, rocking step.

3. Run in (a), turn half around in two jumps and run out on the same side; 2, turn all of the way around in two jumps and run out on the opposite side; 3, run in (b), jump three times as follows: 1, on both feet: 2, on one foot; 3, en alternate feet; 4, rocking step.

3. Run in (a), turn half around in two jumps and run out on the opposite side; 3, run in (b), jump three times as follows: 1, on both feet: 2, on one foot; 3, en alternate feet; 4, rocking step.

3. Run in (a), turn half around in two jumps and run out on the opposite side; 3, run in (b), jump three times; 4, call somebody in on the second jump, jump once together, and jump to five, call someone in on the first jump. This player should call someone in on the first jump, etc. There will be five in at one time. Run out on opposite sides.

NO. 49. LARGE DOUBLE ROPE-FRENCH ROPE.

Repeat Fox and Geese.
 Repeat Fancy Jumps.

NO. 50. LARGE SINGLE AND SMALL INDIVIDUAL ROPES.

(Ropes turn the same way.)

Stand in, jump five times, run out forward

Run under (a). Run in, jump five times, run out. Stand in, jump five times, run out backward.

5. Run in with individual rope, turning backward; jump three times and run out.

An English boys' periodical recently took a vote on the recreation its readers preferred. The result gave this order: Footlerred. The result gave this order; root-ball, cricket, cycling, swimming, gymnas-tics, reading, rowing, stamp collecting. There were twenty two recreations named; croquet came last and golf twentieth. We imagine that if such a vote were taken in the United States baseball would stand at the head.

at the head.

As a scientific experiment, not long ago, a Swiss doctor took two young athletes of equal prowess, and dieted one on vegetables and the other on every day food, giving him plenty of meat. After two months of this training, he made them wrestle. Neither could throw the other. He then placed each at a crank, and made them turn a handle. After seven hours of continuous work, the meat-fed athlete fainted. His fellow continued working for another four hours, when his hands became so blistered he had to desist. Otherwise he was none the worse, and after drinking a cup of cocoa he declared he felt as strong as ever.

There are 24,000 boys in the boys' departments of the Young Men's Christian Associations of the country.

How many bad boys does it take to make good one? One—if you treat him well.

THE ORDER OF THE AMERICAN Boy

A National Non-Secret Society for AMERICAN BOYS.

Under the Auspices of "THE AMERICAN BOY."

Mind and Morals.

The object more definitely stated: To promote mutual and helpful friendships among boys; to give wider circulation to high class boy literature; to cultivate in boys physical, mental and moral courage, and develop them along social, intellectual and moral lines; to cultivate purity of language and actions; to discourage idleness, and encourage honest sport and honest work; to cherish and emulate the examples of great and good men; to inculcate lessons of patriotism and love of country; to prepare boys for good citizenship; to cultivate reverence for the founders of our country, and to

The Lewis and Clark Company. No. 1, Division of Montana, Helena, Mont.. has adopted the proposed Constitution and Bylaws, with a few minor changes. This Company has decided to make athletics its main object, and will meet at the Captain's home on the second Saturday and last Friday of each month. each month.

salt Lake Company. No. 1, Salt Lake City, Utah, sends in fifty cents for one of the Free Circulating Libraries. This Company held its election of officers late in June, which resulted in a re-election of all the officers. One week after the election they held a banquet, and, to use the words of the Captain, "had the best time you can imagine."

The Hayes Company, No. 4, Division of Ohio, Lindsey, Ohio, held its election of officers June 7, with the following result: Howard L. Stierwalt was elected Captain, P. L. Thomas, Secretary, and W. Lamale, Treasurer. The Company dues are five cents

The Ensign John R. Monaghan Company, No. 2, Division of Washington, Trent, Wash., has adopted the Constitution and By-laws, with a few minor changes. This Company will take up literary work for the present.

At the lawn fete to be held by the Winfield Scott Schley Company, No. 2, Division of Maryland, New Windsor, Md., of which we make mention in another column, the orchestra will play THE AMERICAN BUY March and Two-Step, which appears in the July number of this paper. The Captain has written us for extra copies of the paper for use by the orchestra on that occasion, after which he says he will send them out as sample copies. as sample copies.

after which he says he will send them out as sample copies.

The Centennial Company, No. 1, Division of Colorado, Denver, Colo., has a nice cozy room in the rear of a shoe store, which is owned by the father of two of the members. The boys have papered the room and decorated it with red, white and blue bunting. They have a nice carpet on the floor, a large lamp, stove, etc. One of the walls is decorated with a large American flag, surrounded by the pictures of seven famous Indian chiefs. There are also a number of other pictures on the walls, among them "Paul Jones in a Sea Fight," "Birth of the American Flag," "Boys in Blue Remembering the Maine." "Columbla," and pictures of landscapes. This Company has a militation programme to test the bravery and courage of the candidates. They meet every Tuesday evening. The meetings on the first and third Tuesdays in each month are devoted to business, and those on the second and fourth Tuesdays to recreation, at which latter meetings the boys have a good time generally, playing games, etc. They have a library of fifty books and magazines, and Indian clubs and boxing gloves.

The Timothy Murphy Company No. 1

magazines, and Indian clubs and boxing gloves.

The Timothy Murphy Company, No. 1, Division of New York. Cobleskill. N. Y., held an excellent meeting July 11 at the home of one of the members. The meeting was opened with the salute to the flag, followed by the roll call, all members but one being present. Then came the election of officers which resulted as follows: Willard Hard was elected Captain, Newton Mann. Vice Captain; Adelbert Hard, Secretary: Frank Sawyer, Treasurer, and Donald Davis, Librarian. The boys have decided to put THE AMERICAN BOY for 1901 in book form. After the business part of the meeting the Company had an interesting programme, as follows: Debate—"Resolved, that women should vote," decision in favor of the affirmative. Then followed a dialogue by two of the members, Adelbert Hard and Donald Davis, and then a young lady visitor played THE AMERICAN 180Y March and Two-step, after which the boys sang "America." Next came a good paper on "Murphy as a Friend"—the hero after whom this Company is named, after which the meeting was adjourned. The boys expect to hold a picnic soon.

Journed. The boys expect to hold a picnic soon.

The Richard Yates, Sr., Company, No. 3, O. A. B. (Order American Boy), held their first open meeting June 21 with their Secretary, Barclay Wyckoff, at his home on West North street. The Company is of recent organization, being at present composed of five members: Captain, Roy Crampton; Secretary, Barclay Wyckoff, Librarian. Earl Richardson; privates, Harold Graves and Edward Mayer. The purpose of the Company is development in moral, literary and athletic lines.

A number of friends availed themselves of the kind invitation to be present and enjoyed a program given entirely by members of the Company. A social time was enjoyed, light refreshments served and the boys and their friends separated feeling that an excellent beginning had been made and hoping that the occasion might soon be repeated. The program was as follows: introductory sketch—Roy Crampton. Reading—Edward Mayer.

Sketch of life of Richard Yates, Sr.—Earl Richardson.

Extemporaneous speech—Subject, Our Company; Its Future—Barclay Wyckoff. Essay Harold Graves.

Sketch of life of Richard Yates, Sr.—Earl Richardson.
Extemporaneous speech—Subject, Our Company; its Future—Barclay Wyckoff.
Essay Harold Graves.
Debate—Subject, Resolved: That system of combination commonly known as the trusts is not injurious to public welfare. Affirmative, Roy E. Crampton; negative, Barclay Wyckoff.
Affirmative, Roy E. Crampton; negative, Barclay Wyckoff.
The George Washington Company, No. 2, Division of Michigan, Lacota, Mich., is very much 'interested in debating, and most of the time at its meetings is devoted to this feature.
The Lone Star Company, No. 1, Division of Texas, Ennis, Tex., has adopted the following yell:
"Hug-a-ha! Hug-a-ha!
"A. B., A. B., Rah! rah! rah!
"Who are we? Who are we?
"We're the boys of the O. A. B."
The Captain of this Company writes that the boys would like to hear from other Companies regarding their yells.

Object:—The Cultivation of Manliness in Muscle,

stimulate boys to all worthy endeavor.

CENTENNIAL COMPANY, No. 1, DENVER, DIVISION OF COLORADO.

The two standing are, on the left Captain Guy M. Laird, on the right Treasurer Henry Greenswald. Those sitting are, from the left, Librarian Wm. Greenswald, Private Julius Bradford, Secretary Harold Vieira, Private Courtland Vaughn. The company is enjoying its "Installation Banquet." Note the charter hanging under the flag.

Meeting of the Executive Council.

The Executive Council of The Order of The Executive Council of The Order of the American Boy, composed of fifteen ladies and gentlemen, together with the Executive Officers of the Order, will meet at Put-in-Bay, Ohio, July 27, and be in session at the Hotel Victory. Important plans respecting the Order will be formulated, and these will be announced in our September number.

Houston (Texas) Boys.

Our picture shows a group of Houston (Tex.) boys just returning from their annual Y. M. C. A. camping expedition at Clear Lake, one mile from Seabrook. Tex., where the boys had a fine time. The picture is sent by James Crate, one of the two companies—Company A and Company boys, who is an admirer of THE AMERICAN BOY, as will be understood from a group is James Crate, who sent the picture.

telescope at the moon and stars, the telescope belonging to Secretary Willie Watson's father. The boys are soon going to have an opportunity to look at some autographs that are coming from England which cost their owner two hundred dollars. The boys have elected five honorary members. They are going into camp soon, and promise some interesting news regarding their camp life.

The picture comes from Arthur F. Vey, who is librarian of the Company and Vice Captain of their baseball club.

A Captain of One of the New Com-

Captain Rudolph L. Marshall, of the George H. Marshall Company, No. 2, Division of New Jersey, O. A. B.. Trenton, N. J., is one of the cleverest basket ball players in Trenton. In 1899-1990 he scored twenty six goals, playing defense on the Trenton High School Junior team, of which he was captain. He carried this team to

CAPTAIN RUDOLPH L. MARSHALL.

victory in eight games out of nine, so that victory in eight games out of nine, so that it won the juvenile championship for 1839-1330 in Trenton. Later he was elected captain of the Trenton High School Schior team, and with this team captured the Schior championship pennant of Mercer County. Captain Marshall is good at foot racing, pole vaulting, and in track and field games generally. He is seventeen years old, five feet five inches in height, and weighs 142% pounds. He is a member of the English class of 1903, Trenton High School.

A Successful Boys' Baseball Team.

This picture represents the baseball team at Laingsburg, Mich., whose members are largely patrons of THE AMERICAN BOY. The average age is sixteen and one-haif years. The club has been playing two years, and out of fifteen match games

played has lost but two. In the first line, beginning at the right, are Fred Ripple, catcher; Clarence Tirrell, captain and second baseman; Howard Benson, pitcher; Ezra Morgan shortstop; Ward Tirrell, third baseman; and in the second line, beginning at the right, are Ray Putman, substitute for the first baseman, who is not in the picture; Charles Knight, left field; Garnett Wattern, center field; Emerson Allbright, right field.

Officers of Benjamin Franklin Company.

Archibald D. Andrews, Captain of the Benjamin Franklin Company, No. 2, Meadville, Pa., is thirteen years of age. His average grade for the past year in the high school has been 96. He has been at the head of his class for three years. He has a daily paper route and delivers 34s papers a week.

William Fixel, Vice Captain of the Company is thirteen years old. His average for the past year in the high school has been 96. He has also been at the head of his class for three years, and has a large paper route.

A Boy Rescues a Little Girl.

Little Ella Sweeney, a five-year-old, fell into the Delaware River at the foot of Monmouth street, Gloucester City, N. J., July 3. A fourteen year old young-

THOMAS MIDDLETON.

ster. Thomas Middleton by name, happened to see her white dress floating on top of the water and hear her single cry for help. Instead of running for assistance the boy took a long run and jumped head first into the water, caught little

Ella under the arms and brought her safely ashore. He stood her on her head, punched her in the stomach and rolled her around, just as he had seen men do who had rescued persons from the river, and when Ella told him that she was able to walk he took her to her home, where he left her without saying anything about the rescue. People found it out, however, and the sturdy little fellow is a hero in his neighborhood.

An Energetic Boy.

This is a picture of Arthur Jackson, of Minneapolis, Minn., an enthusiastic reader of THE AMERICAN BOY. Arthur has made a number of electrical devices, one of them being a telegraph line nearly three miles long, over which he talks quite well with his friend, Bert Reed, at the other end of the line.

He repairs the neighbors' electric bells, and is considered quite a genius. Arthur expects to be a photographer when he grows up, having made some very fine pictures, some of which he promises to send us.

FRED G. STANLEY. KALAMAZOO, MICH., A fifteen year old pupil of the Kalamazoo High School and the hero of several life savings, and a recent visitor to the office of THE AMERICAN BOY.

A Boy's Thoughtful Deed Rewarded. Walter Sun-

home when he discoverwhen

nearly due, he hurried to the nearest tower, nearly due, he harried to the hearest twell, mearly a mile away, and told the switch-man of his discovery. The boy reached the tower just in time to save the Atlantic Express, which was crowded with passengers, from a fearful wreck. The engineer took Walter's name and reported the brave deed to the superintendent of the division, who rewarded him in gold.

Earl Gulick, the boy soprano whose picture adorned the front page of our April. 1900, number, is reported to have completely lost his singing voice. His engagements have all been canceled, as specialists advise his parents that he may never again be able to sing. La grippe is named as the cause.

A PECULIAR SPIDER.

He Catches Birds as Big as Larks in His Mammoth Web.

Far up in the mountains of Ceylon there is a spider that spins a web like bright yellowish silk, the central net of which is five feet in diameter, while the supporting lines, or guys, as they are called, measure sometimes ten or twelve feet, and, riding quickly in the early morning, you may dash right into it, the stout threads twining round your face like a lace veil, while, as the creature who has woven it takes up his position in the middle, he generally catches you right in the nose, and, though he seldom bites or stings, the contact of his large body and long legs is anything but pleasant. If you forget yourself and try to catch him, bite he will, and, though not venomous, his jaws are as powerful as a bird's beak, and you are not likely to forget the encounter.

The bodies of these spiders are very handsomely decorated, being bright gold or scarlet underneath, while the upper part is covered with the most delicate slate-colored fur. So strong are the webs that birds the size of larks are frequently caught therein, and even the small but powerful scaly lizard falls a victim. A writer says that he has often sat and watched the yellow monstermeasuring, when waiting for his prey, with his legs stretched out, fully six inches—striding across the middle of the net and noted the rapid manner in which he winds his stout threads round the unfortunate captive.

He usually throws the coils about the head until the wretched victim is first blinded and then choked. In many unfrequented dark nooks of the jungle you come across most perfect skeletons of small birds caught in these terrible snares.

Nesting Habits of the Birds.

Miss Grace B. Beach, who has made a study of nest building, says:

We may have a bowing acquaintance with the birds, we may recognize them on the wing, but we never truly know them until we see them in their own homes, until we watch their nesting habits. A close examination of a nest will tell us much about its builder.

The robin is a mason in a limited degree, as are also his cousins, the thrushes. He seems to have got an idea of a fireproof structure, for while the outside of the nest is of grass, leaves, etc., and the inside of finer grasses or rootlets, he builds a mud wall between. If the robin's nest is rather a rough atfair, he shows a decided aesthetic taste Walter Sunday, of East Newport.Pa., was recently walk in many other beautiful fruit tree will suit him. Up above the level of the eye, saddled on a horizontal limb, he delights to place it. place it.

Phoebe uses mud, but with it quantibroken ties of moss, and is fond of placing her

> The chipping sparrow's nest is quite distinctive with its invariable lining of horse hair, whence one of its names, the hair bird. A compact, dainty little structure it is, placed trustfully near the dwelling of its brother man, sometimes in currant bushes and sometimes in the vine which shades your porch.

The eggs are pale blue gems, with a dainty circlet of dark spots on the larger end.

The catbird's nest is like a veritable scrap basket, loosely woven of coarse twigs, bits of newspaper, scraps of rags, still this rough exterior is softly lined and made fit to receive the four to six pretty, dark green blue eggs to be laid therein. It is often placed in a lilac or syringa bush, and frequently has a regular barricade of catbriar, which gives a thorny welcome to any intruder.

That the oriole understands his business thoroughly is shown by the toughness of the fibres used to fasten the nest to the limb. The beautiful gray material used seems to be the bark of the milkweed stem, frayed out into the finest floss, but strong and durable notwithstanding. An oriole will use almost anything which comes handy, from a lock of hair to pieces of string or gayly colored yarn. They have even been known to ravel out pieces of cloth for their purposes. High up in an elm or maple, out near the tips of the branches, where the winds will rock the babies to sleep, builds the oriole. He is a common nest builder along the village street. Perhaps one ought to say she,

for the female does the actual weaving. The orchard oriole builds a similar nest, which is usually not so deep and pendulous.

FOR YOUNG ANGLERS HINTS

"There is certainly something in angling that tends to produce a gentleness of spirit and a pure serenity of mind."-WASSITGTON IRVING.

CARE OF ROD AND TACKLE.—If your tackle is dried, frail or out of repair in any way, by having lain on a damp shelf, or been in an overheated corner, the misfortune should be a good lesson, and if you are a careful angler you will profit by the accident. It will teach you that which every practical rodster well knows—that it is better to spend an hour or two at the end of the fishing season in putting away your rods and lines, flies and leaders properly, than to spend days over them at the beginning of the season. The tailor knows that a "stitch in time saves nine." and the angler of experience is well aware that an hour's easy rubbing and wrapping in season will save days of real labor and expense later on. Hurry out your rod and tackle box in the spring, but do not hurry them back again when the fishing is over. Spend a little time in cleaning, repairing and packing them away. This is the "stitch in time."

A GOOD GENERAL FLY.—The March CARE OF ROD AND TACKLE.-If your

them away. This is the "stitch in time."

A GOOD GENERAL FLY.—The March Brown has the merit of killing everywhere. Fish with two flies of this pattern on the one leader—one ribbed with gold twist and the other without. The fish take these for the two sexes of the fly. When the natural fly is out upon the water, and fish are voraciously taking it, angle with three flies on your foot-line, varying them slightly in size and color. A light cast on a dull day, early in the season, should prove everywhere successful, and, whenever the angler is in doubt during summer let him fiall a March Brown.

HAUNTS OF THE TROUT.—Clear, swift

rail. He knew that this meant a bad wreck for the next train. Re membering that the second section of the Atlantic Express was nearest tower, die the switchboy reached the Atlantic Express was nearest tower, die the switchboy reached the the Atlantic Express was nearest tower, die the Atlantic Express was nearest tower, and large the Atlantic trout delight in the riffles, baby trout in the tiny streams ("feeders") that the trout delight in the riffles, baby trout in the tiny streams ("feeders") that the trout delight in the riffles, baby trout are found under tree roots that overhange tr hallower places.

CARRYING THE ROD .- Your rod should CARRYING THE ROD.—Your rod should be jointed only when you are upon the actual fishing ground, and taken apart again when you are about to leave for camp. Carry the rod in front of you, tip first, when angling along thickly wooded places; do not pull it after you. Let the hook be fastened on one of the reel bars, then thrust the rod's tip through or over

the branches and high grasses ahead of you, when you move along, casting here and there.

and there.

TO BRING THE FISH HOME.—Clean them carefully. Remove that dark blood streak along the backbone. Wipe them dry. Pack them in ferns separately and free from ice. Do not send them by express; take them with you. You cannot check a box, so put them in a small trunk on the top of your coarse outfit—rubber boots, landing net, etc.

FLY FISHING.—You cannot use too light a rod or let the fly fall too lightly in stream tishing. Do not merely drag the fly through the water; work it gently so that it will look like a living insect—not a mere bunch of hair and feather. In clear, smooth water let the fly sink a little, then move it along quickly.

quickly.

TO EXTRACT HOOKS.-When a

TO EXTRACT HOOKS.—When a hook becomes caught in your clothing or fiesh, do not try to pull it back over the barb. Cut it free from the snell and push it on through and bring the point out as near as possible to where it went in.

LANDING THE FISH.—Head the fish away from obstructions—bowiders, tree roots, etc.—keep the line taut, and do not nervously hurry the "play." Take your time; be calm; more fish are lost in a desire to land them too quickly after they are hooked than in any other way.

DEFECTIVE RODS.—Rod makers often

DEFECTIVE RODS.—Rod makers often put a knot purposely on one side of the wood where it will do the least injury; so do not switch the rod sideways.

WHEN LOST.—Follow down a stream and you will most likely come to a road or dwelling.

FEEDING TIME.—Fish are said to bite better between the new moon and the first quarter, or, between the last quarter and the change.

CLUMSY LURES.-Most trout files are CLUMSY LURES.—Most trout files are too large and coarse, and they serve more to frighten the fish than lure them. Buy your files from men who are practical fishermen, who cast the files as well as make and seil them. The ordinary artificial fly is a clumsy thing, made by persons who do not know a trout from a tarpon. They are pretty and would make nice wall decorations, but no practical rodman would think of offering them to the trout, the smartest fish in the world.

ANCIENT ANGLERS.—The best of the Apostles—Peter, Andrew. James and John—were fishermen, and parts of the Old Testament teach fish catching with both line and seine.

YOUR SHADOW.—Never let it fall upon the water when angling; face the sun.

Answers to Correspondents.

M. H., Detroit-Stamps with "Bayern" nd "K. Wurtt. Post" are from Bayaria and Wurtemburg.
G. W., Milfore—The stamp you describe

is the one cent Canada Jubilee. It is cat-alogued at two cents.

H. S., Shamakin—The stamp you illustrate is a twenty cent Belgium issued in 1866. It is worth one cent. 1866.

E. D. Van D., Delaware—The stamp you describe is probably the two cent of 1878 with head of Liberty. It is not worth anything.

W. A., Hackettstown—The stamp you send is one which was printed on checks in 1878—the same as at present. It has no value.

E. H. G., Pritsburg—"Perforation" is the small holes cut in sheets of stamps by means of which the stamps can be easily separated.

Gale B., Altoona—We do not know of any "St. Louis Expedition stamp." If you mean the two cent Omaha, it has no value at present.

I. E. B.—All of the stamps you describe common and worth very little. are common and worth very little. The envelope stamp is a Columbian, and the three cent locomotive was issued in 1869.

James H., Tonawanda.—The stamps you mention are of little value except the three cent green revenue; of the latter there are three values, viz, foreign exchange, proprietary and playing cards—the first two are worth three to five cents each, and the last from two to three dollars.

E. D. S., Mt. Sterling—The 1d lilac Great Britain is often found in slightly different shades. The letters in the corners of the one penny red indicate the position of the stamp in the sheet, each stamp having different letters, commencing in the top row, A. A., A. B., A. C., etc.

top row, A. A., A. B., A. C., etc.

Mrs. Z. E. C., Woodward—One, two and three cent stamps used twenty five years ago are still very common and can be bought for twenty five cents a thousand. Two cent Columbians can also be bought for this amount. There are several varieties of the two cent internal revenue stamps, such as are found on photographs, the difference being in the inscription at the bottom of the stamp. In the yellow series the certificate, express, playing cards and proprietary are worth saving, and in the blue series, the certificate, playing cards and proprietary; the others are not worth anything. Perhaps you can find some anything. Perhaps you can find some three or four cent playing cards on the backs of photographs. These are worth from \$1.50 to \$3.90, according to condition.

The Passing of Victoria.

On May 6, 1840, the first adhesive postage stamp in the world was issued by Great Britain. It was a one penny stamp, printed in black, and bore the head of the then young Queen Victoria. For sixty one years this same head has graced the stamps of Great Britain and many of the colonies. On those of the mother country through all these years no change has been made in the style of the head, the picture on the current series being that of the young were struck respectively.

all these years no change has been made in the style of the head, the picture on the current series being that of the young queen of 1838.

But this will soon be a thing of the past. The features of her late majesty will be replaced by those of King Edward VII. The question that is now agitating the minds of the officials is the position of the King's head. It will, as in the present issue, be placed within a circle, but a suggestion has been made from an influential quarter that the head should be reversed. It being the custom with coins, to make each succeeding ruler's profile look in the opposite direction to that of its predecessor; but there is no precedent to go by so far as stamps are concerned. It is urged that the reversal of the head would make his majesty look away from the address. This may appear to be a frivolous objection, but it is one to which the authorities are giving serious consideration.

Their ideas on the subject of a new issue will be embodied in a report which will be placed before the King, who will give the final decision.

It will be at least a year, however, before

final decision.

nnal decision.

It will be at least a year, however, before
the new stamps will be issued to the public.
There are eighteen different postage stamps
from one half penny to five pounds to be
changed, besides two series of embossed
envelopes, newspaper wrappers and postal
cards.

changed, besides two strates and postal envelopes, newspaper wrappers and postal cards.

The above, of course, applies only to Great Britain. Many of the stamps of the colonies will also be changed, though some of them have not confined the designs of the stamps to portraits of Her Majesty. This is a matter entirely in the hands of the colonial officials, but many of them will doubtless be guided by the action of the London department.

This will not be the first time Edward's nicture has graced a postage stamp. In 1860 as a boy in the suit of a Highlander, he appeared on the seventeen cent New Brunswick, and in 1868 the same picture was used on the one cent Newfoundland, which design continued in use with some modification and changes in colors until 1897. The ten cent Newfoundland of 1866 shows him as a young man, and the two cent Newfoundland of 1867 shows him as a young man, and the two cent Newfoundland of 1867 shows him as a young man, and the two cent Newfoundland of 1867 shows him as a young man, and the two cent Newfoundland of 1867 shows him as a young man, and the two cent Newfoundland of 1867 shows him as a young man, and the two cent Newfoundland of 1866 shows him as a young man, and the two cent Newfoundland of 1867 shows him as a young man, and the two cent Newfoundland of 1867 shows him as a young man, and the two cent Newfoundland of 1867 shows him as a young man, and the two cent Newfoundland of 1867 shows him as a young man, and the two cent Newfoundland of 1867 shows him as a young man, and the two cent Newfoundland of 1867 shows him as a young man, and the two cent Newfoundland of 1867 shows him as a young man, and the two cent Newfoundland of 1867 shows him as a young man, and the two cent Newfoundland of 1867 shows him as a young man, and the two cent Newfoundland of 1867 shows him as a young man, and the two cent Newfoundland of 1867 shows him as a young man, and the two cent Newfoundland of 1867 shows him as a young man, and the two cent Newfoundland of 1867 shows him as a young man, an

Ralph Balles, Portsmouth, answer to Herbert G. Brovnal. Will B. Grant, Goffstown, N. H.-A half cent of 1800 is worth rifty cents.

Wood Glover, Oakland, Ind.-An 1858 half dime, unless fine, hardly commands a pre-

Charles Miller, Friend, Neb.—A fine three cent piece of 1853 sells at fifteen cents. See answer to James Marsh.

Charles Clair, Detroit, Mich.—The cent of 1816 unless good is worth only face value; 2,820,982 were issued.

Kenneth Keener, Delaware, O.—Only the eagle cent of 1856 commands a premium. The 1857 and 1858 are common.

Arthur C. Collum, Saegerstown, Pa.—An 1852 dime and 1830 cent, if in good condition, are worth fifteen cents each.

C. L. S., Philadelphia, Pa.—An 1803 cent is worth twenty five cents, and an 1872 gold quarter not less than two dollars.

W. Howell Wynne, Temple, Tex.-1832 dime, twenty five cents; 1834 half dime and quarter, if fine, twenty five and fifty cents respectively.

Minn.—a Reuel Moran, Minneapolis, Minn.—A very common 3 pfennige of Prussia. The sets consist of four pieces, 1, 2, 3 and 4 pf. -All common.

Hugh Ellis, Lower Stewiacke, Nova Scotia.—A good 1853 gold quarter is worth two dollars. They were issued both round and octagonal.

Ora P. Willis, Albert City, la.—The half dollars of 1845 and 1856, if fine, are worth seventy five cents each. None of the two cent pieces except 1873 command a premium.

Herbert G. Broynal, Portsmouth, R The nickel cents with the exception of 1856 have no premium. A good fine two shilling, 1652, is worth from \$8.50 upwards at the dealers.

P. V. Fairchilds, Burlington, Okla.—Your rubbing is taken from an English two-pence of 1797 (not 1707, as you state, as the tail of the 9 has been worn off). See answer to Arnold Praeger.

1. E. D. asks the value of a gold dollar of 1852 and a dime of 1844. O mint. The dealers charge \$1.75 for the dollar, and there is no record of the O (New Orleans) mint issuing any dimes during 1844.

Harold E. Humphreys, New York.—The twenty cent pieces of 1875 and 1876, unless uncirculated, do not bring a premium. Those of 1877 and 1878 are the rare ones. They were issued only during these years.

Percy Lawrence, Cleveland, O.—Your drawings are from coins as follows: (1) Finland, 1 penni: (2) Switzerland, 2 centimes; (3) San Marino, 5 centesimo; (1) Holland, 1 cent. The San Marino coin sells for twenty five cents, the others, five to ten cents each.

were struck respectively.

Carl Kretschmer, Westcliffe, Cal.—Your rubbing is taken from a Hungarian 15 kreutzer silver piece of 1745, under Marie Theresa, 1740-80. The letters, K. B., are the mint mark initials of Kremnitz, where the coin was struck. The coin sells for fifty cents. fifty cents.

H. Earl Springer, California, Pa.—Your coin is what is properly called a colonial coin of England. It was struck for Virginia in 1773 and passed as half pence. It is an interesting piece to the American collector, and while tolerably common, sells for fifty cents.

Carl Christenson, Cherry Grove, Pa.— An 1849 gold dollar is not rare. Like all the other gold dollars, it commands a pre-mium and is worth \$2.00; 1849 was the date of first issue and the mints at Charlotte, Dahlonga, New Orleans and Philadelphia all issued them in 1849 to the number of 998 789

C. A. Straight. Findlay, O.—The rarest dollars issued at the United States mints during 1894 are those struck at Philadelphia, where 100,000 were issued. The popular impression that this date is scarce must therefore be an error. The other mints issued them during that year in large numbers.

G. L. Moore. Gibraltar, Pa., sends rubbings: (1) War token "Millions for contractors"—"Not one cent for the widows," 1863. This is satirical and is one of the hundreds of war tokens that passed by sufferance during the scarcity of small change at this period. (2) A common 2 real Spanish piece struck by Spain in her mint at Mexico in 1785, under Charles III. (1769-89). (1760-59).

(1760-89).

W. R. Flint, Eldon, Ia.—All the gold dollars now bring a premium; 1858 is worth one dollar and seventy five cents. The old Spanish silver dollars, unless in extra good condition, are hardly worth any premium. They are very common and have been so long used as pocket pieces that they usually show evidences of wear. A good two real piece of Charles III. of Spain is catalogued to sell at forty cents. Your other coins, face value only.

DOCEMBER (DADADA) DADADA DA DA DA DA ARRIVA AR DA DA

THE AMERICAN BOY offers twelve prizes of Two Dollars each for the best Amateur Photograph received during Amateur Photograph received during the twelve months in the year, one prize for each month, also a second prize each month, of one dollar, for the next best photograph, the competition to be based upon the originality of the subject and the perfection of the photograph. The contest is open to subscribers only. Photographs will be returned if stamps are sent for the purpose. All photographs entered in the contest and not prize winners will be subject to our use unless otherwise directed by the sender, and fifty cents will be paid for each photograph that may be used, the prize photographs in may be used, the prize photograph that may be used, the prize photographs in any event to be our own, without further payment than the payment of the prizes. Write on the back of the photograph its title, with a description of the picture, and the full name and address of the contestant.

A Vacation Pastime.

During the school vacation a boy does a

During the school vacation a boy does a great many things of which he would like to keep a record. Perhaps he does some things that are better forgotten, but of these we will not speak now. The Aztees had a way of recording the principal events of their empire in pictures, which the Spanlards reported as beautiful, but which unfortunately, they did not have the good sense to preserve.

Now, the boy with a camera might also preserve every important event of his vacation with a picture. If he goes away to spend the summer let him take a snap at the train on which he leaves—a depot scene, for instance. Then will come the place where he alights, and the house he goes to. And every day or two, as occasion offers, he can make a remembrance of a lishing excursion, or a picule, or a boating frolic, or a swimming scene, or a bicycle tour.

Think how nice it will be to have pic-

tour.
Think how nice it will be to have ple-Think how nice it will be to have pletures of new acquaintances, and of the circumstances under which they were first met. It will be better than a diary, for the disappointments are not apt to be recorded in photography, which is just the opposite with diary-keeping. And then some of the evenings that, during vacation, hang heavy on one's had can well be utilized in developing plates or films, and experimenting in the best way to mount them. mount them.

Photographing Living Rooms.

How cozy the sitting or dining room looks, How cozy the sitting or dning room looks, and how grand the parlor appears. Therefore it is natural that the amateur photographer desires to preserve a picture of his favorite corner, or of the family sliting in their usual places. But to take a satisfactory picture is a great deal harder than it looks.

In most cases the lighting of interiors is yeary bod, photographically considered. The

In most cases the lighting of interiors is very bad, photographically considered. The light should come from one side, if it can be so arranged, and it may often be necessary to draw down the blind of some window that will surely show halation if in the view. The greatest trouble, however, will be in under-exposure. Amateurs accustomed to take pictures out of doors, as a rule miscalculate the amount of exposure recessary for interiors. So the first thing to do, after arranging the lighting so that it will be even, is to set the camera in such a manner as to avoid windows, if possible, and then give it about four times as much time as your judgment—which is no judgment at all, hecause not founded on experience—calls for

In developing the greatest care should be taken. First get detail by starting with a superfluity of accelerator, and a shortness of pyro, or such other developing agent as is used. After all the details are

ness of pyro, or such other developing agent as is used. After all the details are out, then the developer can be made normal, to get strength. There is need of some shadows, but these should not be strong enough to hide the details.

Photography's Place in the Worlds' Progress.

George G. Rockwood, now of New York city, has been for over 50 years experimenting in photography, and he has done much to advance the art. In a four-column article in the New York Sun reviewing the past century's record of achievement in taking pictures, he winds up with the following paragraph:

My space is too limited to do more than mention a few of the many applications of photography to the arts. To sum up, it is used in portraiture, architecture, illustration, reproduction, criminology, astronomy, decogation, relief work, records, glass staining, pathology, and other ways in a larger degree in exact science and the useful arts than in its aesthetic application. It has created a new and mighty industry which will continually extend, as new fields and applications are constantly opening. It has lessened the cost of books marvelously and thus become a great educator. It has created what might properly be called a mighty kindergarten system of object lessons. By it our children have been made as familiar with scenes of interest in all parts of the world as old travelers. It brings to them and us noted people, objects of historic and artistic value and records of events. School children will identify a view of the Collseum of Rome as promptly as one taken of the Aquarium at the Battery. Thus it is a great educator, and I can close as I began by describing it as one of the great tricity of forces in the present era, electricity, steam and photography.

Lake And Sea Shore Views.

Amateurs accustomed to taking views of Amateurs accustomed to taking views of landscapes and in cities will be surprised at the difference in the lighting on the water. The absence of smoke, and the dazzling whiteness of the sunlight make it almost impossible to under-expose plates, unless the views are taken very early in the morning or late in the afternoon. Noon is no time to take pictures on the water. The sun is too high in the heavens, and the shadows are too short for effectivethe shadows are too short for effective-

The sun is too high in the heavens, and the shadows are too short for effectiveness.

With a great many water views the foreground is neglected. Just water alone will never do, except the waves are high, and the wind is catching the curl and scattering it in spray. Or, perhaps, the sun may be low on the horizon, partially hidden by a cloud. A good figure of some kind is generally needed. An old wreck is charming; so is a pretty group of children playing in the sand, the lapping waves almost reaching their feet. Equally pleasing is a boat. But whatever there is on land or water, there will still be something lacking if the sky has no clouds. Clouds add the finishing touches to all water views.

On windy days there are apt to be clouds, when, with a quick snap and a small stop not a single plate need be lost. Such pictures can be looked at for a long while without discovering all the beauties that lie hidden in their depths.

THE PASTURE BROOK. First Prize Photo, by Harry L. Morton, Burton, Ohio.

Photographic Notes.

The juice of a ripe tomato well rubbed to the hands will remove developing stains.

In taking out-of-door pictures, expose or the shadows, and let the high-lights take care of themselves.

There is talk of holding a convention of amateur photographers at the Pan-American Exposition this fall.

Th. Pentlarge gives amateurs good advice in The Camera and Dark Room by advising them to visit picture galleries and study the manner in which painters handle the masses in landscapes.

There are now so many photographic books on the market with formulas, that there would probably be no money in collecting them together for publication. Formulas alone would be a delusion and

summer, but it will answer the purpose on a pinch.

ENJOYING A HOT DAY.

Second Prize Photo, by Walter Hitysold, Easthampton, Mass.

These Are Worth Mentioning.

THE AMERICAN BOY has been favored

These Are Worth Mentioning.

These Are Worth Mentioning.

The American Roy has been favored the past month with a number of good photographs. Among them are several sets. One comes all the way from Mexico, and they were taken by Tomas Nelson Long, who lives in Silao, Guanajuato. They show Mexicans in various attitudes, and are very interesting, besides being well taken. Eddle Manion. M'thome, Idaho, sends four, two of them views of falls. The one of "The horseless carriage" brings a smile—a two wheeled vehicle, driven by a donkey. Bernard Kelley, Auburn, N. Y., was fortunate in all three of his views, probably the best one being that of a fire engine coming from a fire. The views by Herbert I'ost. Westbury Station, Long Island, N. Y., are very nice, only the ducks are too far away. Eugene Egerhardt, Newark, N. J., sends a picture of a failen willow tree. It makes a unique appearance and is worth preserving.

Quite a number of excellent pictures have been slightly overtoned. This makes them green. But the negatives are all right, and the defect can be easily remedied. "A June Picnic," by Paul Miller, Russell, Kan., should be a winner when properly printed. Both time and development are all right. There is plenty of detail, and yet the picture is not flat. Maurice Corey, of Jerseyville, Ill., sends a picture of two boys building a snow fort in March. It is also overtened. A railroad arch, by Fred Birchell, Glen Rock, Pa., is a pretty view, but slightly overtoned. So also are the others sent. Oscar Mummert, Alliance, Ohlo, sends a picture of "An Afternoon Stroll—Resting," If printed the least bit darker, it will be as nice as it can be made. "Pointing the Rabbit," by James Gardner, Augusta, Ga., is true to life, even to a colored "Aunity" looking out of the window and watching the dog and the rabbit. Indeed, the rabbit seems the only one unconcerned. In "A successful Hunting Party." taken by Odin Sanniers, Fergus Falls, Minn., where a little girl is holding up a dead bird that the boy has just shot—the dog manwhil

she is coyly objecting—but not objecting too hard.

But this list could be extended much further without saying all the good things about the photographs sent in. It would not be possible, however, to close without mentioning The Pasture Brook. 'by Harry S. Morton, Burton, Ohio; "A Relic of 1812." by Paul R. Morrison, Catskill, N. Y.; "A Southern Swamp Scene." by James Gardener, Augusta, Ga.; and "Enjoying a Hot Day in July," by Walter Hiltysold. Easthampton, Mass, All these latter are of superior merit, and some of them have drawn prizes.

There are now so many photographic books on the market with formulas, that there would probably be no money in collecting them together for publication. Formulas alone would be a delusion and a snare.

The Aristo self-toning paper that is toned with a pinch of salt, is made in Jamestown, N. Y. It is much more permanent than the combined bath as used on other paper, but it is glossy. This in some people's eyes is no defect.

Plateholders can be loaded in daylight without a dark room by taking the holders and the box of plates under a thick blanket, being sure that all the edges lie flat enough to exclude the light. It is hot work in summer, but it will answer the purpose on Among the others who have sent in photoproduced it.

Answers to Correspondents.

Wm. Watson.—Persevere and you will conquer. The camera you mention is not a difficult one to manage if you will only follow directions.

P. Kaub.—Your experience with the developer will be thankfully received. Will send you the name of the maker as soon as it can be found.

C. H. Deabler.—"Pyrocatechin" is being advertised in the photographic journals. Ask the dealer from whom you buy your photographic supplies to get some.

Charles Cunningham.—The white streaks across your negatives show that the camera "leaks" somewhere. The plates are light struck. Examine the bellows carefully for a crack.

Henry Robinson—Use the developer recommended for the Stanley plates, if that is the kind you are using; but you are not very definite on that point. The manufacturers know what kind of developer will best suit their plates. best suit their plates.

Herbert J. Harries.—When the tops of tall buildings lean toward the center of the negative, the fault is that the plate was not parallel with the building. A "swingback" remedies this.

Fred Birchall.—There should be no spots on your negatives after "fixing in acid fixing bath and washing thoroughly." But perhaps the developer didn't flow over the plate evenly in the first instance, or the plates were not left in the fixing bath long enough. Any one of half a dozen things might make some kind of a spot.

Making Shingles in the Old Way.

Boys here have the opportunity of seeing shingles made in the old fashioned way. The scene is in the southern part of Missis sippi. The timber in that section of the country grows very tall and straight, and consequently is suited to making nice straight shingles. The wood is cut into fourteen or sixteen inch lengths, after

which it is split into thin slabs by a tool called the shriver, which is put together like a corn cutter. It is a heavy tool with a very sharp edge. The slabs, one at a time, are put in place on what is called a shaving horse, and then with the drawshave are made thin at one end, just like the shingles made in a shingle mill.

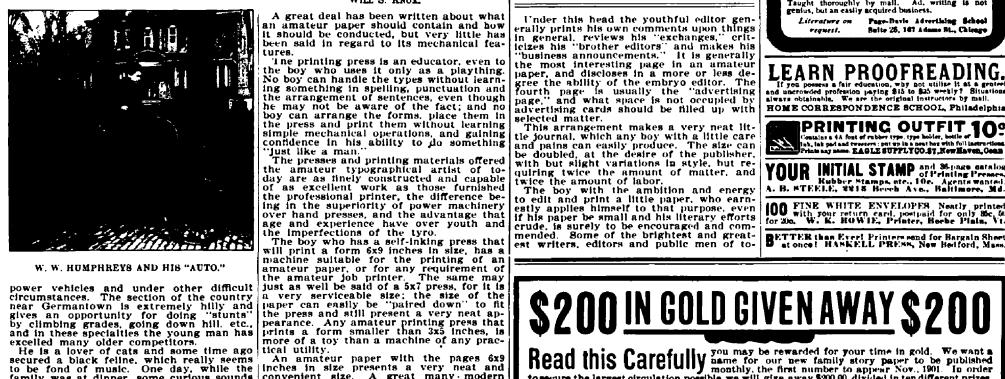

A Chance for Young Men in Kansas.

The opportunity for the young man of strong physique is in Kansas. The State has recently declared that 150,000 acres of school land in the western part of the State can be entered. The land is offered for sale in quarter sections—fifty dollars down, and the rest payable when the young farmer gathers his crop. The State guarantees that if he will put the one hundred and sixty acres in wheat he will raise one thousand five hundred bushels the first year. If he does not, the land companies will pay him one-half of that amount in cash. As the wheat would bring him about eight hundred dollars, he is sure of an income of four hundred dollars annually, and a farm besides.

It is said that thousands of young men in the east are taking advantage of this offer.

An Expert With the Automobile.

Even the boys of the country have become interested in automobiling and are endeavoring to establish records for speed and difficult feats. W. Westcott Humphreys is a young man of eleven years living in Germantown in the suburbs of Philadelphia, who has already acquired a wide reputation in that center of the sport for his ability to manage the lever and brake. Master Humphreys has a steam motor carriage which he successfully guides through the most crowded sections of Philadelphia, along the principal boulevards when they are thronged with animal and

Never lose your temper. Nobody wants it; all have enough of their own.

A Typical Young American Editor.

The Paterson (N. J.) Evening News boasts of a "city editor" but eighteen years old. The young editor, Harold Burdette Haines by name, was born in Altoona, Pa., in 1882. He was graduated with honors from the Altoona High School at the age of sixteen. While pursuing his post-graduate course in the same school he took up the work of reporter for a local paper, his work covering proceedings of the courts. Frequently when his fac.er thought he was in school, he was in the court house busy with his pencil. On his truancy being discovered he was sent back to school, but not for long. His capabilities in this line won him a permanent position on the staff of a newspaper. He wished to be present and

HAROLD BURDETTE HAINES.

report the famous Bosschiettor murder trial, but being under age he could not obtain permission to enter the court room until, on a special request to the presiding judge, he received a pass. He reported this trial unassisted, writing on an average of ten solid columns of brevier a day between the hours of 10 a. m. and 5 p. m., and his report of the case was unquestionably the best one published. In recognition of this work his salary was raised from eight to ten dollars a week, and a short time later he was promoted to the position of city editor. For the past seven or eight months he has been in entire control of this department, directing the efforts of four men under him. In addition to this labor he has acted as correspondent for a number of out of town papers, namely, the Boston Globe, the Philadelphia Times, the New York Commercial, the Cleveland Press, and the Hoboken Observer. His income is twenty five dollars a week. He is a close student, spending his leisure moments in his father's library among standard books.

How to Build an Amateur Paper.

WILL S. KNOX.

A great deal has been written about what an amateur paper should contain and how it should be conducted, but very little has been said in regard to its mechanical fea-

circumstances. The section of the country near Germantown is extremely hilly and gives an opportunity for doing "stunis" by climbing grades, going down hill, etc., and in these specialities the young man has excelled many older competitors.

He is a lover of cats and some time ago secured a black feline, which really seems to be fond of music. One day, while the family was at dinner, some curious sounds were heard proceeding from the parlor, where the piano was located. Investigation showed that the cat had jumped upon the top of the instrument and was pawing the strings. She seemed to enjoy it. West-cott is an adept with the banjo and has been endeavoring to teach his pet to "pick" it.

This size admits of making the columns the regular standard newspaper width—thirteen ems pica (a pica em is one sixth

of an inch), and permits the use of regular newspaper plate matter, cuts, electrotyped advertisements, etc. The type form for each page should be 4½x7½ inches in size, which will leave a margin of about three-tourths of an inch all around—top, bottom and sides. Should two pages be printed at one impression, there should be one and one half inches of margin between the two type forms. Between the two columns on the page, a pica brass rule should be used, the full length of the page; or, if it is desired to divide the columns with "white space" instead of a ruled line, a pica slug should be used. Your form being 7½ inches long, the rule or slug should therefore be 45 ems pica in length—one piece, if possible. Across each page at the top (except the first or title page) a cross rule should be run. It may be either a single or double line light face rule; if a double rule with a heavy and light line, it should be set with the heavier line uppermost. This rule will be four and one half inches (or 27 picas) in length, and gives the page a finished appearance. The name of the paper and the number of the page, either or both, can be carried in a line above this rule if desired, but should be separated therefrom by at least two or three leads.

Now for the first page. The name of the

double rule with a heavy and light line, it should be set with the heavier line uppermost. This rule will be four and one half inches (or 27 picas) in length, and gives the page a finished appearance. The name of the page a finished appearance. The name of the page and the number of the page. Either or both, can be carried in a line above this rule if desired, but should be separated therefrom by at least two or three leads.

Now for the first page. The name of the paper should extend across, or nearly across, the page, and can be set in any kind of type the printer may choose, a plain, neat letter, however, being preferable. Underneath this can appear the paper's "motto," if it has one. Then comes a light parallel rule clear across the page, cutting off the heading from the date line. The "date line," according to established custom, contains volume number, name of town where issued, date, and number of Issue; then another double cut-off rule across page. The following diagram is a very good example of an amateur newspaper heading:

THE DOVE:

| deditor of the local newspaper to allow him to conduct a department or column of school news, to be published say once a week in the regular paper. It was in this way that the writer, some sixteen years ago, got his first newspaper experience, and, although the writer, some sixteen years ago, got his first newspaper experience, and, although the writer, some sixteen years ago, got his first newspaper experience, and, although the writer, some sixteen years ago, got his irst newspaper experience, and, although the writer, some sixteen years ago, got his first newspaper experience, and, although the writer, some sixteen years ago, got his first newspaper experience, and, although the writer, some sixteen years ago, got his first newspaper experience, and, although the writer, some sixteen years ago, got his first newspaper to allow the the regular paper. It was in this way that the writer, some sixteen years ago, got his first newspaper experience, and, although the writ

BOYS' **PRESS** THE

BY BOYS FOR BOYS.

Vol. I. BLANKTOWN, OHIO, JULY, 1901.

The neatest arrangement for the first page is to start it with a short poem, following which should appear a story or essay long enough to fill the page or run over upon the page following. On the second page, continue what has overrun the first page, and fill up with short sketches or selections such as the editor fancies may please the tastes of his readers.

In a four page paper the "editorial" department would perhaps be more convenient upon the third page. There are a number of ways of arranging this page, but the following shows the style most commonly adhered to: The neatest arrangement for the first

the following show monly adhered to:

THE BOYS' PRESS.

A Monthly Amateur Publication for Boys by Boys.

JOHN E. FRANK . . Editor and Printer

Subscription Price 15 cents per year. Advertising Rates...... 2 cents per line.

Address all communications to JOHN E. FRANK, Blanktown, Ohio.

JULY, 1901.

Under this head the youthful editor I'nder this head the youthful editor generally prints his own comments upon things in general, reviews his "exchanges," criticizes his "brother editors" and makes his "business announcements." It is generally the most interesting page in an amateur paper, and discloses in a more or less degree the ability of the embryo editor. The fourth page is usually the "advertising page," and what space is not occupied by advertising cards should be filled up with selected matter.

This arrangement makes a very neat little journal, which any boy with a little care

THE AGASSIZ ASSOCIATION

THE AMERICAN BOY is the only official organ of the Agassiz Association and should be in the hands of every member.
All correspondence for this department should be sent to Mr. Harlan H. Ballard, Pittsfield, Mass. Long articles cannot be used.
THE AGASSIZ ASSOCIATION welcomes members of all ages, and any one who is interested in any form of natural science is invited.
Established in 1815. Incorporated in 1822.
Short notes of personal observations are particularly desired for use in the A. A. department. Send illustrations when convenient. Questions are invited.
Address H. H. BALLARD, Pittsfield, Mass.

Well, well, well: I have just been spending nearly two hours in looking over my AMELICAN BOY Agassiz Association mill, sorting out the most interesting letters, and what do you think? I have filled a large basket with those which for one reason or other I cannot use in this paper, and after the basket was full: I three another basketful into the open fire, where they at least morning, and I have left on my desk by actual count, exactly one hundred and fifty six, which are too good to lose! This is splendid. All the letters, those thrown may, so well as those kept, have been answered personally, and every one of the interest and the personal observation or letting them go has been that they have come too late. When the line and fire the which have been thrown away.

The chief reason for letting them go has been that they have come too late. When the line and line the receive a large number of excellent answers. The best of these are printed and credit given to the rest.

After this no further answers to that particular question can be printed. They are 'out of date.' So boys and girls, take as to be among the lift.

Another cause of rejection lies in the fact that a few of the answers to that particular question can be printed. They are 'out of date.' So boys and girls, take as to be among the lift.

Another cause of rejection lies in the fact that a few of the answers to that particular question can be printed. They are 'out of date.' So boys and girls, take as to be among the lift.

Another cause of rejection lies in the fact that a few of the answers have not been original answers drawn from personal observation or knowledge, but only material copied from some cyclopedia or large the properties of the propert

other book. In some cases, as in answer to a question for a name, this is all right, but when we ask for a description of an animal or a plant, or for notes of the habits of some wild creature, the copied observations of some scientific man don't

In a few cases the writing has been so careless that it has been almost impossible to read. Life is short—write plainly, Again, a number of letters are much too long. "Short and to the point" is our motto. Finally, a very few letters have been manifestly inaccurate in statement. The imagination has been allowed to run away with the truth. Creatures have been fully described which never could have lived "in the heavens above or in the earth beneath, or in the waters under the earth." So far as I know, we have not been "caught" except in one instance, and in that one case we cannot certainly say that our correspondent deceived us, but must leave the question to be settled between two persons, both strangers to us. The matter is this: In September, 1900, we published an interesting story of the finding of the nest of a Horned Owl, and now, comes the following letter, which speaks for itself, and leaves our former young correspondent in a very unpleasant situation unless he can explain. In a few cases the writing has been so

A Charge of Deception.

Fullerton, Cal.

Dear Sir:—Some time ago I chanced, while reading your valuable little paper, upon an article entitled "The Great Horned Owl." Now, as one who has taken uponatural science as a life work. I am deeply interested in such work, especially among the young. But this story is a fabrication from start to finish. He never saw the nest the mutions, therefore he did not find it, and could not have taken the young. Moreover, the nest was not in a dead tree, but in a small scrubby bush which clung to the face of a cliff about twenty feet from the ground.

I discovered the nest when it contained young, and informed the elder brother of your correspondent, and assisted him to get the young, which he raised and sold to a party in Fullerton. This owl is among the rarest of our raptorial birds, and while have been studying the avifauna of this region for nine years, I had not found a single nest of this species up to two years ago. The boy is young yet, and I trust this correction, given, as it is, in a spirit of kindness, may prevent him from further exaggerations.

Yours sincerely,

Cther names for this plant are "liver-wort" and "liver-leaf." The first one noted by me this year was on April 19.

A close second to the hepatica was the trailing arbutus, but I did not obtain any of the aprica. A close second to the hepatica was the trailing arbutus, but I did not obtain any of the story in June 7, 190.

The earliest flower that I could ind this last spring was the wild pansy, familiarly called Johnnie-Jump-up. I saw It about the 25th of March or the list of April.—

Arthur Engler.

H. H. Ballard—Dear Sir:—I cannot understand why, in the published accounts of the early blooming flowers, that the delicate little chickweed, stellaria media, sterile chickweed, stellaria media, sterile chickweed, stellaria media, sterile chickweed, stellaria media, other comparatively late bloomers.

The following record of my observations in what was part of Westchester County. N. Y., previous to 1899, and in this vicinity subsequen

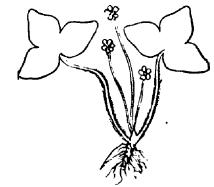

spirit of kindness, no., further exaggerations.
Yours sincerely,
H. H. DUNN.

How a Tree Frog Climbs on Glass.

West Bay City. Mich., June 1, 1901.

Mr. H. H. Ballard—In this month's AMERICAN BOY I notice Carl Vernon's I think note regarding the green tree frog. I think I can answer his question. Nature has provided this tree frog with a small cup in the center of the foot. When the mouth of this cup comes in contact with the surface of the glass it forms a vacuum. It is on much the same principle as that by which a fly crawls on the ceiling. Some which a fly crawls on the ceiling. Some animals have little pores in the foot which secrete a sticky fluid, which holds them to

Norwich, Conn., June 4, 1901.
This spring I noted that the round-lobed hepatica (hepatica triloba) was the first flower out. This hepatica belongs to the buttercup family; genus, hepatica; species, triloba.

ROUND-LOBED HEPATICA.

Of this plant, Mrs. Dana, in her "How to Know the Wildflowers," says: "Indeed, tnese fragile looking, enamel like flowers are sometimes found actually beneath the snow," etc. Although they bloom very early, yet I have found none quite so near a snowstorm as Mrs. Dana has, Other names for this plant are "liverwort" and "liver-leaf." The first one noted by me this year was on April 19. A close second to the hepatica was the trailing arbutus, but I did not obtain any of those in full bloom until about April 25.—Yours very truly, A. S. Brown, 53 Lafayette street, Norwich, Conn.

I found the chickweed, stellaria media, in bloom on March 10, 1895; February 6, 1896; February 20, 1897; January 9, 1898; February 12, 1899; March 6, 1900; January 27, 1901.

Clarence Brown, of York, Nebraska, says the first flower there was the Buffalo pea and that it came out about April.

Trees Struck by Lightning.

Many letters have been received in response to our request in the November number of THE AMERICAN BOY about trees struck by lightning. The following were some of the most interesting:

The tree in question was a cottonwood, about lifty feet in height, and stood among a grove of maple trees. It was struck about half way from top to base, being broken in two and its growth being killed. It was about live feet in circumference at the base.

Perchance, its being struck instead of the surrounding trees was about to the forth

surrrounding trees was due to the fact that it was the tallest tree in the grove.— R. Verden Bashore, Oakley, Kansas.

At my home in Shreveport, La., a tree was struck by lightning one night between eleven and twelve o'clock. It was a large oak mensuring about two and one half feet in diameter. The lightning struck the tree in three places and left it about five feet from the ground. The leaves began to wither in three or four days, and the tree died in about two weeks.—Charles W. Owens, Oakland street Shreveport La. Owens, Oakland street, Shreveport, La.

In a woods near our house a tall hem-lock was struck by lightning. The light-ning struck a branch near the top, and went into the tree staving it into pieces, none of which was larger than a cord wood stick.—Forest P. Blodgett, Bowdoinham, Me

We have a summer cottage near my grandfather's farm and there is a row of tall elm trees in front of the house. A year ago one of them was struck by lightning during a thunder shower. It caused a number of small limbs to fall, and made a seam in the tree by taking the bark off. The shock was very heavy in the house.—Nathan S. Weston, 7 Weston street, Augusta, Me.

of the early blooming flowers, that the delicate little chickweed, stellaria media, should be persistently ignored as the earliest bloomer, and the preference given to skunk cabbage, hepatica, bloodroot, and other comparatively late bloomers.

The following record of my observations in what was part of Westchester County, N. Y., previous to 1899, and in this vicinity subsequent to that year, may prove interesting and help to settle the mooted question, "which is the earliest blooming flower?"

I found the chickwood stellarts modio.

Lightning and Cyclone.

In regard to lightning striking twice in one place, I wish to inform the members of the A. A. that I have known of a large pine tree on my father's farm being struck by lightning three different times, and an

as chairs, pieces of cloth, bodies of dead chickens, cats, etc. I also saw an oven door of a cook stove that was blown about forty rods and imbedded half way through a cast Iron monument. I gathered some relics which I will exchange for shells or stamps.—O. D. Valentine, Oxford, Mich. Two trees struck by lightning noticed by Delton Minler, 1121 Church street. Port Huron, Mich. In the first case the tree that was struck was a poplar. The lightning struck the lowest limb and broke it off; then went down the side of the tree completely peeling the bark from it, and went into the ground at the foot of the tree, leaving only a small hole. The second instance an oak tree was struck. It was quite large and the lightning struck it about half way up and broke it off. This same tree was struck again not long after the first time.

Effect of Lightning on Various Trees.

of which eleven were either entires or not previously classified. In the previously classified and what I received the February Chemolem Very Interesting. We want about the Isome Struck at the top and split clear to the root. I once observed lightning split a large oak about twelve inches thick and throw it flat on the ground. The tree was a large dead red oak. It does not seem to split the live trees as badly as the dead once. I once saw lightning strike a large dead red oak. It does not seem to split the live trees as badly as the dead once. I once saw lightning strike a large wild cherry about thirty feet high and eighteen inches through at the butt. It broke off a dead limb about four feet long and threw it some feet from the ground. It split the tree from top to bottom, throwing chips and splinters four rods away. About two weeks later it struck the same tree again. This time it split off a plece about ten feet long and four inches wide and two inches thick. About a week after the tree was struck the second time. It began to die at the top and died gradually for two weeks. I also observed lightning strike a large cottonwood three feet thick at the bottom. It split off a large plece and threw it on the ground off a large plece and threw it to the ground time. It began to die at the top and died gradually for two weeks. I also observed lightning strike a large cottonwood three feet thick at the bottom. It split off a large plece and threw it on the ground the fill of a plece about ten feet long and four inches wide and two inches thick. About a week after the tree was struck the second time. It began to die at the top and died gradually for two weeks. I also observed lightning strike a large cottonwood three feet thick at the bottom. It split off a large plece and threw it to the ground the feet long and four inches wide and two inches thick. About a week after the tree was struck the second time. It began to die at the top and died gradually for two weeks. I also observed lightning strike a large cottonwood

While passing through a wood a few days ago I found a hickory sapling that had been cut off in a peculiar manner, and I think by a worm of some kind. The part left steading was about two feet high.

feet high.
Where it was
cut off it was
seven-eighths

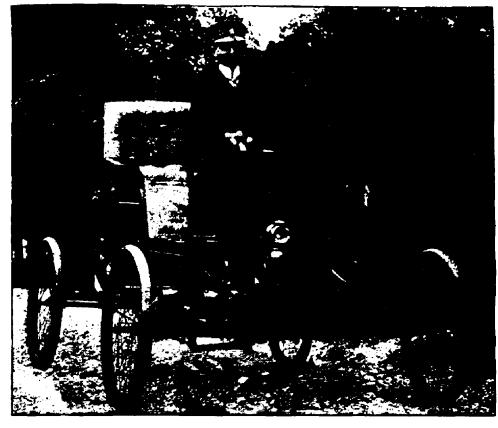

seven-eighths of an inch thick. The worm had gone through the bark and cut a circle one-eighth of an inch wide just inside the bark clear around; then started one-sixteenth of an inch higher and cut another ring inside the first one. Continuing in the same manner to the center, it cut the stick completely off except the bark, which was broken off, probably by the wind. The top was lying beside the stump, but somewhat decayed, having been cut last summer, I presume. The worm had started in on the fourth round. There was a ring of the dust in the first round. The center is about three-sixteenths of an inch higher than the outside. I enof an Inch higher than the outside. I en-close drawing, and would like to know if it is uncommon or not.—D. E. Host, Bowerston, Ohlo.

The Center of Arkansas.

Tom Cole, of Tom Cole, of Conway, Fault, ner county, Ark., sends a drawing of a tree which is on a high and rocky place called Mt. Pisgah. He says: "You can see the tree for miles, because it is a great deal miles, because it is a great deal higher than the others around it. This tree is the exact center of Arkansage."

How a Sparrow Teaches Its Young Ones to Fly.

While I was sitting at my bedroom window one day I saw a large sparrow on the roof of the house opposite. On the top of the shutter of the window at which I was sitting was a small baby sparrow which could not fly. The large sparrow flew to the shutter beside the young one and I could see that it had a worm in its mouth. The young one tried to get the worm but its parent flew to the roof across from the shutter. It was apparently trying to get the young one to follow it. The baby tried but was not equal to it and fell down to the fence. The older one then flew down beside it and then flew to the roof again. Again baby tried and this time went to an extension of the roof of the porch. The older bird again came beside the young one and flew back to the roof. This time, when baby tried, it was successful and was rewarded with the worm. How proud it was! It uttered a tiny squeak, ate the worm and went off for another lesson.—Horace B. Austin, 2319 N. Bourier street Philadelphia, Pa.

CARL E. L. LIPMAN AND HIS HOMEMADE "AUTO."

A Young "Auto." Maker.

Minta Rulon Roadhouse, Beloit, Wis., sends us an interesting item regarding Carl E. L. Lipman, Beloit, a wide-awake lad of sixteen years, who has made a unque automobile. The boy built the michine in three months, doing the work mostly alone. What he could not do he superintended. The picture of young Lipman and his "auto.," which we are enabled to give our readers, shows a very creditable vehicle. It has a long foot space in the body which makes it very comfortable to ride in It has a Hidro cablin motor, with three horse power, weighing only fifty-five pounds. The "auto." is of spider-like appearance, has no machinery near the body, no water is carried or needed for cooling the motor, and the fuel is carried under the floor of the carriage. A speed of thirty miles an hour can be made with it. It moves noiselessly, there being a muffer to prevent sound. It has an air-brake which will, if necessary, slide the wheel in twelve inches. Only one lever is needed to operate it. Carl claims that the rig, with all its attachments can be built to be sold much cheaper than can other automobiles, and that it is neater in appearance.

Carl, who is the son of one of the leading merchants of Beloit, is a quiet lad of unassuming disposition. He has no taste for mercantile pursuits, but spends his time when out of school in his little workshop. He is at work now on a larger machine, in which he intends to visit the Pan-American Exposition at Buffalo.

workshop. He is a position at Buffalo.

COMPANY A. Y. M. C. A., BOYS' BRANCH, ANN ARBOR, MICH.

Good Swimmers.

The interesting picture given in connection with this paragraph shows one of the eleven year old sons of Arthur E. Kiefer, of Detroit, Mich. Both of the twin brothers, Herman and Carl, are expert swimmers. A short time ago they swam a distance of three-quarters of a mile in thirty minutes. The feat was performed in North Lake, one of Michigan's larger inland lakes, in Washtenaw county. The water was rough and the wind high, but the boys were so far from being exhausted that they were so far from being exhausted that they were at once ready to do the feat over again. The picture shows one of the boys taking a dive from his father's shoulders. The a dive from his father's shoulders. The credit for their expertness in swimming is due to the efforts of Mr. Robert Gleny, an old settler of North Lake, where the boys spend their summers.

During a rain storm two years ago Walter Lane sought shelter under a shelving rock at North Guilford, Conn., and while stirring the ground up to ascertain what depth had been made by the decayed leaves, he was surprised to find an arrowhead. Renewed efforts brought out thirty five of them. Returning next day with spade and sleve he dug out twelve hundred specimens. From evidence found, it was doubtless a spot where arrowheads were made and laid away against a time of need. More than two thousand specimens have been taken from that spot. from that spot.

He Will See the Pan-American.

The Milwaukee Sentinel offered a free trip to the Pan-American Exposition to the ten boys or girls who should bring in the largest number of subscriptions. The eight successful boys were the following: Ernst Schultz. Charles Goetz, H. Willheim, A. H. Foote, Edward Koppelkamm, Walter Imse, Harry Ransom and L. A. Austin, There were two girls among the ten. The boy who heads the list is Ernst Schultz, who secured nearly one thousand subscribers. The boy is the son of Ernst Schultz, the assessor of the twenty first ward, Milwaukee, and is thirteen years old. He is a little bundle of energy and enterprise. A short time ago he earned a The Milwaukee Sentinel offered a free

ERNST SCHULTZ.

Who Secured Nearly One Thousand Subscribers for The Milwaukee Sentinel.

fifty dollar bicycle offered as a prize by fifty dollar bicycle offered as a prize by a concern manufacturing certain articles offered for sale through agents. This did not end his career as a business boy. Having now a bicycle he could cover more teritory and the firm engaged him on a cash basis. He has been earning money ever since and now has a nice little sum out drawing interest. By the terms of the offer of The Sentinel, the prize winners are permitted to take to Buffalo a relative or friend and remain there one week at the friend and remain there one week at the expense of The Schlinel. Young Schultz will take his mother; he will defray the expenses of his eleven year old brother.

Terry McGovern's Advice to Boys Who Would Be Strong.

Terry M'Govern, a pugllist of some note, gives in the St. Louis Post-Dispatch some instructions to boys who would be strong.

He says:
My_first_instructions_to_the My first instructions to the boy who would be strong are to place his feet tightly together, take a long breath and, while innaling as much pure air in one breath as his lungs will hold, slowly move the elbows remained until that are an a line with the upward until they are on a line with the shoulders.

Next raise the arms clear above the head, bringing them down slowly until the arms touch the hips.

While going through this exercise the entire body is kept under a high nervous tension with every muscle rigid. This movement brings all the muscles in the chest into misc.

play.

Twice a day he must go through these exercises, once in the morning before breakfast and in the afternoon about an hour after dinner.

fast and in the afternoon about an hour after dinner.

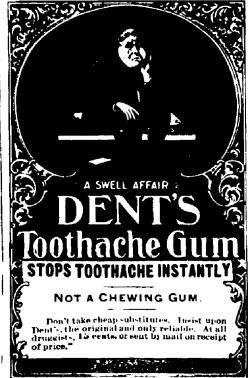

His muscles must be hardened and his chest expanded before he is made to do any real hard work. This will come later. He must drink no alcoholic liquors and mustn't use tolacco in any form. This almost goes without saying, of course.

My final instructions for the day to him are to take long walks after school and to swing his arms when walking as much as possible. This may not seem particularly graceful, but the swinging motion of the arms exercises the shoulder muscles, and its not grace, but strength and health we're after. When a boy gets these, he can be as graceful as he likes.

On the whole, growing boys who are in cossession of their health are built much alike. Boys who have been in the habit of taking plenty of outdoor exercise, will be more or less advanced in their muscular development and perhaps exercises a little more violent than I give here would be more suitable for them.

more suitable for them.

Always do a little

A CELEBRATED BOYS' CHOIR

......

OHOIRMASTER H. H. FREEMAN.

The surpliced male choir of old St. John's Church, Lafayette square, Wasnington, D. C., was organized in 1881, succeeding an octette of men's voices, which was stationed

which was stationed in the gallery.
The active membership of the present choir numbers thirty live men and hove.

boys. Master Harry Helwig (age fifteen), the soprano solo boy, has a wonderful

has a wonderful voice. His register extends from "middle C" to two octaves above. He sings with the greatest ease and always with feeling

C" to two octaves above. He sings with the greatest ease and always with feeling and expression.

From October 1st to May 15th, four rehearsals are held weekly, two for the boys alone, and two full rehearsals with the adult members. Before each rehearsal the boys are subjected to careful vocal exercises, for the proper development of pure tone-quality known as the thin or head register. Each boy is supplied with a vocal exercise primer, and in addition to the vocal exercises, they all receive short lessons in the rudiments of music, notes, rests, staff, clefs, time and key signatures, marks and words referring to expression, etc.

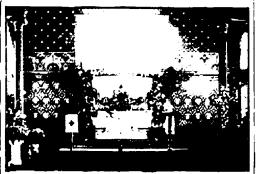

The choice of voices for St. John's choir is a matter which receives careful attention. The boys are chosen from the homes of respectable, honest, and God fearing people. Some parents are unnecessarily nervous about allowing their boys to sing in a choir. They say that the voice is too much abused by such confining work. But

ST. JOHN'S CHURCH, WASHINGTON, D. C.

experience shows that this is not the case. The boy's voice, though an immature organ of delicate structure, is capable of much work, providing only that its mechanism be rightly used and not forced. Singing, it should be remembered, promotes health. It does so indirectly by causing cheerfulness, a genial flow of spirits, and the soothing of the nerves, it does so directly by increasing the action of the lungs. So far as these organs are concerned, singing is a more energetic form of speech. As we sing we breathe deeply, bring more air into contact with the lungs, and thus vitalize and purify the blood, giving stimulus to the organs of digestion and nutrition. Dr. experience shows that this is not

Martin, organist of St. Paul's Cathedral, London, has had many years' experience in training choir boys, and he says that he has never known a boy to injure his voice or lose it through singing. It is a question of method; if the voice be used properly it will stand any amount of work. Dr. Martin has seen boys predisposed to

CHANCEL OF ST. JOHN'S CHURCH.

consumption improve in health after join-ing the choir. The medical man who de-clared that if there were more singing there would be less coughing, expressed ing the choir. The medical man who declared that if there were more singing there would be less coughing, expressed in a graphic way the healthful influence of vocal practice. Parents and guardians need never hesitate to allow their sons and charges to become choir boys under proper

choirmasters. They may be sure that nothing but good can come of the exer-

nothing but good can come of the exercise.

Among the many notable services which the choir of St. John's Church has rendered are the following:

Funeral of the Late Mrs. Tracy, wife of the Secretary of the Navy under the Cleveland administration, held in the East Room of the White House.

The wife of the late ex-President Harrison (a Presbyterian), was a great admirer of the choir and its music, and on the occasion of her funeral, which was held in the East Room of the White House, this choir rendered the musical portion of the service.

The funeral of Lord Herschell, formerly Lord Chancellor of Great Britain and Ireland. The funeral was held in St. John's Church and was attended by President McKinley and the prominent foreign diplomats in Washington.

The wedding of Miss Jane Fuller, daughter of Chief Instice Fuller, to Mr. Nethan.

The wedding of Miss Jane Fuller, daughter of Chief Justice Fuller, to Mr. Nathaniel L. Francis.

The wedding of Senator McMillan's son, Phillip, to General Anderson's daughter,

The wedding of Senator McMillan's son, Phillip, to General Anderson's daughter, Elizabeth.

The wedding of Miss Cecilia, daughter of Lieutenant-General Miles, to Captain Samuel Reber, U. S. A.

The wedding of Miss Lillian, daughter of Lord Pauncefote, British Ambassador, to Mr. Robert Bromley, of London.

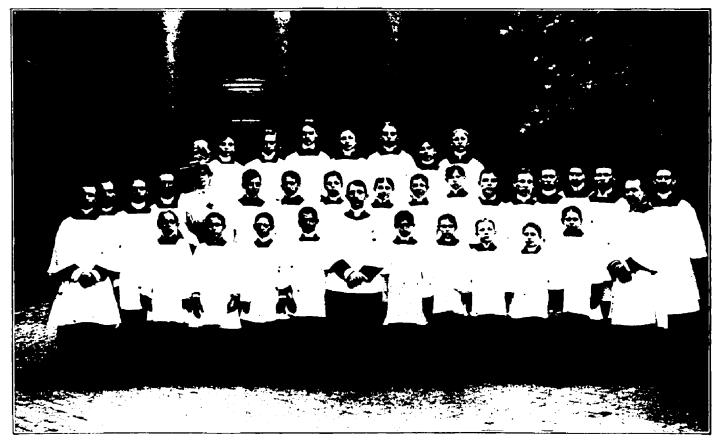

The official memorial service for her Majesty, Queen Victoria, in St. John's Church on February 2 of this year, held by direction of Lord Pauncefote, British Ambassador, and attended by President McKinley, the cabinet, Chief Justice Fuller and members of the United States Supreme Court, Lieutenant-General Miles and officers of the army, Admiral Dewey and officers of the navy, the diplomatic corps resident in Washington, and others in official life.

It must not be supposed that the choir boys never have any good times. Each July, Mr. Freeman, the choirmaster, takes all the boys on an outing of two weeks to Piney Point, Md., a summer resort on the

HARRY HELWIG, AGE 15. Soprano Solo Boy of St. John's Choir, Washington, D. O.

lower Potomac River, near Chesapeake Bay. The boys are quartered at the best hotel in the place, and boating, bathing, fishing, games, etc., are the pastimes which every one heartly enjoys.

THE BOY CHOIR OF ST. JOHN'S CHURCH, WASHINGTON, D. C.

THE AMERICAN BOY "SHUT-IN" SOCIETY

In our July number we offered to give to any boy who cannot work or play as boy generally do—that is, a boy who is suck or cripiped and compelled to remain the suck or cripiped and compelled to remain any one who is likely to be confined to the first home for morths or years to come an annual subscription to THE AMERICAN and the reads to show the very kind reception, as indeed it should. The following names have thus far been sent in, and these boys will receive THE AMERICAN BOY morth and the subject to the first hould. The following names have thus far been sent in, and these boys will receive THE AMERICAN BOY the time the must go on the first will not be the first with a very kind reception, as indeed it should. The following names have thus far been sent in, and these boys will receive THE AMERICAN BOY free of charge, as promised:

hurt the girls. I myself read it and talk it over with the boy for whom I take it."
Another says, glving a name: "This boy has been sick for two years with tuberculosis and is gradually failing. He is not able to go to school nor go out much. He enjoys the paper, and I know it will be a great pleasure for him to receive it."
Another says: "I know of a poor boy who has been ill for a long time, with no hope of recovery."
Another writes: "Here is a fifteen year old boy who has not walked for five years, He spends his days in a go-cart. He can use his hands, but not his legs."
Another says: "I send you the name of a boy who has been confined to his bed for twelve years—a hopeless cripple. He broke his leg, and in setting it his spine was hurt."
Another says: "Send it to a young cripple

was hurt."

Another says: "Send it to a young cripple about ten years old, who has been a little sufferer and confined to his bed most of the time. When he is up he must go on crutches. Much of the time he must have a ten pound weight fastened to his foot to relieve the pain." Another writes for himself: "I have paralysis in my legs and cannot walk at all. I may never walk again."

ten year old can only move in a wheeled chair. Another has been confined to his home for six years, and expects to be all his life. About his only enjoyment is read-

chair. Another has been confined to his home for six years, and expects to be all his life. About his only enjoyment is reading. Another boy has hip disease and has not walked for a long time. Another boy of twelve has creeping paralysis. Another, a motherless boy of fifteen who lives with his grandmother, a poor widow, is of the number. This boy has had a really unfortunate career. He has broken his right leg three times and his left leg and right arm once. He cannot go without crutches. Another boy has a dislocated hip and has been in bed for ten months, most of the time strapped to a bare board; yet he ipatient. Another boy has paralysis in both legs.

We do not intend to continue this sad story by describing the ailments of all the little fellows who will belong to the "Shut-in" Society of THE AMERICAN BOY. Enough has been said, however, to awaken the interest of every one in these boys. Now, will our readers pleasiput on their thinking caps and help uto plan some further means of makin; these boys happy? Perhaps letters from the boys themselves, telling us how the occupy their time, might be suggestive Let all our readers remember that our offer to send to shut-in boys a free subscription to THE AMERICAN BOY is continuous until further notice. We are not fearful that the strain upon our sympathy ma hurt our pocketbook.

Mother-How did your father's new book get in this state?
Freddy-Father said it was so dry mother; so I put it into the bath and turned the water on the water on

A Boy Makes a Great Discovery.

A copy of the Lord's Prayer has been found written upon a clay tablet in uncial Greek letters. It dates possibly from the second century and is certainly no later than the fourth century. It was discovered at Megara by a boy and purchased from him for a trifle for the museum at Athens, where it is now carefully preserved as a unique Christian document. This is the first clay tablet ever found with a christian inscription upon it. There is no doubt as to the auchenticity of the tablet, for boys do not forge documents of this character, and it bears the stamp of genuineness upon its face.

A Clear Right of Way.

This is the day of tremendous possibilities and the boys of our glorious country with the future still before them should thank God every day that they are alive and so fortunately situated. The cleareyed, healthy, honest, ambitious, energetic, wide awake American youngster, who is not afraid of work and delights in mastering difficulties has a clear right of way before difficulties, has a clear right of way before him and, though he may be now without a dollar in his pocket or a second suit of clothes "shall stand before kings; he shall not stand before mean men."

Take Care of the Minutes.

A famous American author, remarkable for his industry and methodical habits, used to enclose in all his letters a card whereon was primted:
"What does it matter if we do lose a few minutes in a whole day?"
"Answer—(Time-table: Working days in a year, 313; working hours in a day, 8). Five minutes lost each day is in a year 3 days 2 hours 5 minutes; 10 minutes is 6 days 4 hours 10 minutes; 20 minutes is 13 days and 20 minutes; 30 minutes is 19 days 4 hours 30 minutes; 60 minutes is 39 days 1 hour."

Give a boy address and accomplishments, and you give him the mastery of palaces and fortunes wherever he goes.—Emerson.

The bass drum makes a lot of noise, Anu agitates the land. But don't forget That you may bet 'Tain't the bass drum leads the band.

Never before in the history of our country did the future hold so much in store for boys.

Fall River (Mass.), a city of seventy four thousand, owns a building costing one hundred thousand dollars, devoted to the work of the National Boys' Club. Twenty one hundred street boys are members of this organization, paying a membership fee of five cents a month.

A little boy, scarcely more than a baby, living at Roxbury. Mass., has succeeded in taming a fierce St. Bernard dog that has been a terror to the neighborhood for more than a year past. Grown people could do nothing with the animal. He was savage at all times and used to attack the children as they were passing his master's home.

Statistics show only one conversion from the age of twenty five until death, to eleven conversions between the ages of eleven and twenty five.

A Fourth of July Prize Winner.

I had promised my three small sons a visit to old Mount Vernon if they would prepare a composition on the subject of the Fourth of July, nicely written and well punctuated. Inis is the extraordinary document which they brought me:

"OUR INDEPENDENCE DAY."

"We raised Hale Columbia this morning —me and Georgie and Dolph; we General Lee do when ma goes to Washington. Antoinette—that's our new bonny—ketched Dolph stealin' Greene Gage plums and Putnam in his pocket. She Randolph out of the house Tryon to ketch him, and me next, and George Third. Sech a Chase! Over Gates house Tryon to ketch him, and me next, and George Third. Sech a Chase! Over Gates and everything! Sne lost her Tarleton cap and tared a nevere off of her dress, and then she called old Henry to help her; but Dolph leaned over the banister and throwed a Pitcher of water on his head, and he stopped Stark still. We'd Dunmore, only we were Rahl out of breath; but Dolph dodged past him some Howe, and we runned through the kitchen, and hided a Wayne the Smallwood shed, where they couldn't find us.

the Smallwood sned, where they couldn's find us.
"Dolph says them two'll be Marion some day, My! I'd hate to Marle Antoinette. Henry's sech a Jay!"

The persons mentioned in the foregoing unique essay are Captain Nathan Hale. General Charles Lee, George Washington. General Israel Putnam. Peyton Randolph. Governor Tryon, King George III., Samuel Chase. General Gates. Colonel Tarleton, Paul Revere. Patrick Henry, Molly Pitcher, General Stark, Governor Dunmore. Colonel Rahl, General Howe. General Wayne, Colonel Smallwood. General Francis Marion, Marle Antoinette, John Jay.

reach the words "Thank you."

Thank you."

It is a sad thing for a boy to become so smart that he has to wait for the teacher to catch up.

A Junior World's Exposition

The "Juniors" of the Dayton. Ohio, Young Men's Christian Association have inaugurated a genuine novelty in the way of Exposition propositions. The boys of all lands, and their older friends, are invited to contribute specimens of the natural products of their respective neighborhoods for exhibition at Dayton during two weeks in September.

The responses have been so generous that this Junior World's Exposition scheme has outgrown the original thought of the youthful promoters, and is becoming quite an extensive affair.

ful promoters, and is becoming quite an extensive affair.

In the beginning an Exposition company was formed, the shares selling solely to members of the Dayton, Junior Department, an organization of boys from twelve to seventeen years of age, some three hundred in number. Disposing of the entire capital stock at par, the company organized with a full corps of officers and committees in the most approved fashion. Among the committees for preliminary work are the following: Care of Exhibits—Frank Congdon, Ralph Niedergall, Carl Congdon; Signs and Posters—Julius Tafel, Charlie Wilson; Photographs—Robert Pape; Decoration—Everson Welliver, George Ohmart; Correspondence—Carl Starkey, Frank Hale. This last committee is receiving much assistance from one of the local commercial colleges, whose students are furnishing many typewritten letters for the Junior Department, is serving as directorgeneral.

L'pon completing the organization, letters

natural product. Marseilles will exhibit products of the historic Riviera. Two dozen countries and islands, together with many States of the Union, will be represented, according to the latest returns.

This first exposition of its kind—managed by boys in the interest of boys—it is hoped will add definitely to the attractiveness of geographical study by the boys of Onio, many of whom will be privileged to inspect the exhibits. Many other boys, reading of this Dayton effort, may see new interest in the study of places and products, and in distant lands will start small collections or exhibitions in their homes or schools. Practical and fascinating business lessons will be learned by the boys taking this new form of correspondence study under the tutelage of the Dayton managers. The tirst consideration of the original request and the weighty problems involved, the subsequent correspondence with headquarters in America, the planning necessary to give their respective States and countries creditable showing, the preparation of the exhibit, the study of packing and shipping methods, and the dealings with cust mis officials, will be of real value to the youngsters, who may some day participate in more ambitious international shows. Then, too, there is a hope that the successful conduct of the affair may direct attention to work for boys among those who have the world's betterment at heart.

A striking educational feature of the Exposition will be a huge map of the world. The spices of Ceylon, the tea of China, and the cotton of the South will be mounted on this unique map, together with the characteristic products of other States and nations. The bureau of publicity is offering a series of prizes for posters in water-colors, to

Junior Department, is serving as directorgeneral.

L'pon completing the organization, letters were immediately sent out to many lands, asking for grasses, leaves, shells, and similar specimens easily obtainable by a boy. Unthreshed grains, crude spices, nuts, and cotton bails, as gathered in forcs: and field, were solicited, together with minerals and other products of the under-world.

The earlier replies were so cordial, and gave promise of exhibits so far beyond the criginal expectation of the lads that they have been led to seek a more representative and elaborate collection. All answers received are favorable endorsements of the idea and assurances of hearty co-operation.

The boys of Brussels wrote: "Be assured that we shall do our utmost to let our small Pelgium shine in your gigantic America."

An ostrich egg mounted on an orange-wood stand has already been received from the famous California farm.

The boys of the Dayton lads. The beyonch the tea of China, and the cotton of the South will be mounted on this unique map, together with the characteristic products of other States and nations. "This alone will be worth the price of admission."

Going Through College on His Muscle.

We present a picture of Merie Adkins, of Troy, Wis., a young man who is paying his collegt expenses at Beloit, Wis., with money earned by pitching ball for his college baseball team. Young Adkins has a State reputation as a pitcher, his nine having proved invincible in nearly every

MERLE ADKINS.

game played within the last three years. The boy has received very tempting offers from club managers in New York, Chicago, Milwaukee and elsewhere, but will not join the professional teams while at college for fear of losing interest in his studies. His mother, who is a devout Christian woman, has always objected to baseball, but now she says, "If only his strong right arm will hold out I shall be thankful, for were it not for baseball my boy could never have taken a course at college." taken a course at college."

An Eight Year Old Poet.

Here are a few verses that are pretty good for a boy of eight years. He wrote them on his slate in school, and his teacher copied them off and thought them good

enough to print, and so do we. The last verse is a little "off"-but what of that? The whole shows genius.

The boy is a son of J. A. Rose, of Rose, N. Y.

THE BUTTERFLY.

Pretty little butterfly Playing all the day In the fields and meadows, Every where she'll stay

Sleeping in the flowers All through the dark night, Waking in the morning Playing in the light.

Sleeping in the winter Under the snow. When spring comes again She will show.

There is a butterfly
Spotted with white,
Resting on the clover
-When she is tired,
Laying thy eggs
Then little butterflies come forth.

Just three tenths of a second are required for a signal to pass through the Atlantic cable, 2,700 miles.

The Best Swimming Method.

"Until recently no living swimmer, either amateur or professional, using the double over arm or Trudgeon stroke had been able to equal the best time made by side stroke swimmers at distance swimming." says the Philadelphia Item. "Now, however, the story is different, for on May 13, at Sydney, New South Wales, in an open all sail sail, water hath over a course measurat Sydney, New South Wales, in an open air salt water bath, over a course measuring a little over forty five yards, necessitating thirty nine turns, George Reed, a nineteen year old young Australian, swimming with Trudgeon stroke, won the one mile championship of New South Wales in the New World's record time of 34 minutes, 464-5 seconds."

For the benefit of those who are interested in the sport of swimming or are ambitious to learn the best strokes, we give herewith two outline cuts showing pretty clearly the positions assumed in the two methods of propulsion now used by fast, swimmers, as well as a terse description of how to perform each in proper manner. The description is given by J. H. Sterrett in the newspaper named.

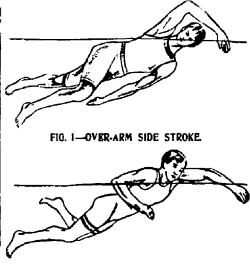

FIG. 2-DOUBLE OVER-ARM OR TRUDGEON STROKE.

Fig. 1.-Over arm side stroke-There are three positive and alternating actions in this stroke. While lying on the side, the limbs all extended, the first movement is the drawing down of the left arm, which is under water (providing, of course, that the swimmer is lying on the left side, and when swimmer is lying on the left side, and when on the right ride, these movements are to be reversed, or, in other words, the right arm, being under, is to be drawn down first); the second movement is the drawing down of the over arm and the raising and extending apart of the lower limbs, which are simultaneously executed; the third movement is the straightening out of the lower limbs and whipping them together, seissor-like, thereby getting three powerful and positive actions against the water, with only one negative movement—the drawing only one negative movement—the drawing up of the lower limbs—which is done slowly, to prevent stopping the impelus gained by

up of the lower limbs—which is done slowly, to prevent stopping the impelus gained by the other and more powerful movements. This is an easy, yet very scientific stroke, used for racing at both long and short distances and of service in all kinds and conditions of water, while being at the same time a very graceful stroke, the position assumed in the water, when correct form, regular and automatic breathing are required, being a natural and easy one to maintain, for any length of time.

Fig. 2. Double over arm or Trudgeon stroke.—This stroke is identically the same as the breast stroke with reference to the position of the body in the water, and the lewer limbs are similarly worked or kicked together, though many of the more scientific Trudgeon swimmers use a sort of a side stroke kick, rocking the body somewhat after the kick, while the arms are dipped in the water like oars, one alternating the other, but the kick being made as one arm reaches forward, and not on each arm reach, this giving a longer run to the stroke and not being as hard as a kick on each arm. Some Trudgeon swimmers carry the head and shoulders high up above the water and climb over the same, as it were, but this is usually done in short distance races and needs lots of strength, it being much less tiring, and more comfortable for longer distances to lay flat on the water, with the face somewhat buried, rolling the head about sufficiently on each stroke in order to clear the water water, with the face somewhat buried, rolling the head about sufficiently on each stroke in order to clear the water with the mouth for the purpose of breathing on each stroke, for nearly, if not all good swimmers breathe through the mouth by a quick inhalation, exhaling slowly under water until ready for another broath, which must not be missed between strokes, but taken regularly and with clocklike precision each time.

A Boy Hero.

It might have been a mistaken idea of boyish honor, that prompted him to do it, but who could not but admire the spirit of the little fellow who, while he lay dying in a New York hospital the other day, refused to tell the name of a companion who had pushed him from a freight car and brought him to his death. "Don't cry, mamma," he said after his crushed legs had been amputated, "It wouldn't be fair to tell. He didn't mean to hurt me." And with his hand clutching his mother's tightly, the boy who was true to his chum, even to death, passed away.

How to Mount Birds.

The study of taxidermy is one of the most important branches of Natural History; it is the basis of knowledge by which most important branches of Natural History; it is the basis of knowledge by which the birds and fauna of any country should be known. Yet the average person is ignorant of common facts connected with the free dwellers, by whom they come in contact daily. Few boys and girls are able to describe the birds that pick up the crumbs from the doorstep or carol the approach of day. The clear and perfect notes of voice is unheard, even the arrangement and shape of feathers is not attractive; the position of the feet, color of the eye and the poise of the head is lost to the careless observer. Plants, insects, birds and animals are all closely related; the plant dependent on the insect for the fertilization of its flowers, and the bird and animal dependent on both for food and shelter. Any one who spends time in this branch of study will not only acquire information, but enjoy nature in its fullest sense.

Many American birds and animals, especially the game, are disappearing, and the species that exist now will after a time.

clarly the game, are disappearing, and the species that exist now will, after a time,

species that exist now will, after a time, be extinct.

Specimens to be properly mounted should be secured, if possible, when the feathers or skin is in its prime. Skins may be cured, dried, packed away for any length of time, till desired to be mounted; then they should be relaxed by placing in layers of slightly damp sawdust for two or three days, till all parts are softened. A beginner in the study of taxidermy should experiment first in mounting small birds, and after experience is gained advance to large birds, then to the animals; however, the process is substantially the same in either. All work should be done in a room not accessible to children, or where specimens may not be handled by intruders. The material required is arsenical soap, arsenic powder, annealed wire (different sizes), penknife with file, tube points (permanent colors), white varnish, cotton thread (fine); glass eyes—these should contain black centers and the iris left plain to be colored as desired; blocks of wood for stand, pincers. The bill and feet of birds should be slightly colored to retain the fresh appearance; in animals the mouth and nostril should be retouched.

animals the mouth and nostri should be retouched.

The method here given for mounting birds is used by a taxidermist of the Smithsonian Institute.

Place the bird on its back on a table and separate the feathers on the breast bone; then from the neck cut the skin as far back as possible, loosen to the wing bone, which should be cut from the body at the should der. Follow same with both sides; also the legs, which should be separated from the body at the thigh. Carefully cut the ligaments at the tall and turn the skin wrong side out and back over neck and head. Remove eyes, brain, tongue and all particles of fat or meat possible; then dust with the powder or soap, and fill up cavities with cotton.

Make a body and neck of paper, not too leose, and wrap with the power with cotton; then

with the powder or soap, and fill up cavities with cotton.

Make a body and neck of paper, not too leose, and wrap with thread.

Also wrap all hones with cotton; then turn the skin right side out. lay in the reck and body, fasten the edges of skin together in front with pins; also pin the wings to body. Sharpen the ends of two wires, one of which must be twice the length of bird from foot to top of head; the second wire should be half the length of first. Pass longwise through the foot near leg bone, through body, neck and top of head. The short wire should pass through feot, leg and stop at point near center of body. Right here we bespeak the patience of the student; this stage has been called the drunken stage. But the most difficult part is past and the finishing should be done with much deliberation.

Fasten the wires at the feet to a block or stand; cut the wire at the top of head after the proper length of neck has been taken; put eyes in the head and straighten lids with point of pin; adjust the feathers in the natural position; tie the bill together, and wrap the entire bird with thread loosely.

Set aside for a week or more and place in case; then remove thread, touch slightly with color or varnish, also change any slight defect.

Birds occupy less space by omitting stand and laying in boxes lined with cotton.

Some specimens which have large heads, for example, the hooded duck, must have the back of its head crushed with pincers to allow its skin to be turned back, in extraordinary large heads the skin may be laid open at the back of head.

Birds with heavy wings should have the hones wrapped with wire, passed over body under skin and connected.

To remove any stain on the feathers, rub between fingers with dry flour.

Wear gloves in handling arsenic,

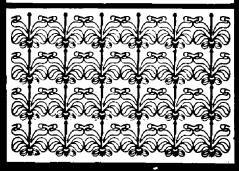

Wear gloves in handling arsenic.

(Continued from Page 299.)

(Continued from Page 299.)

When Friday night come, Si was 'n th' middle o' th' "Sign o' th' Four," (we could see him from our barn,) un it was 'bout two o' clock 'fore he went t' bed. We waited till all was still ('cept ma's cats) un then got th' thing up. Jus' as we got ready Charne had an idea. He got one o' ma's cats un put it under th' sheet un then we histed th' ghost up. We rapted on th' winder two or three times t' waks Si up. After awhite we heard him gettin' up un then we saw th' light 'n his room. He opened th' winder un looked out, but we had hid, un after awhile he went back t' bed. In 'bout ten minutes we rapted again un walted.

Si gets up again un pokes his head out th' winder. All at once we bobs th' ghost right up in front o' him un at th' same time th' cat lets out a yowl. Si gave one look un let out th' biggest yell I ever heard.

Some Interesting Facts About "The Constitution."

"The Constitution." the great yacht that is to defend America's cup, is an eggshell boat. In comparison with an eggher shell is equally thin, but it is so constructed that it can withstand tons of pressure. The thickness of the Constitution's hull is little more than one-fifth of an inch. The Constitution is nevertheless the staunchest craft ever produced by an American shipbuilder. She is a marvel. The yacht is ten times stronger than a section of the New York elevated railroad structure. Ten trains could pass on a structure no heavier than is the Constitution's hull. If an egg is held accurately, end to end, a strong man may strive in vain to break it. The principle of the construction of the Constitution was the same. The hull is so fragile that one might pierce it with a walking stick by a wisely applied blow, yet so strong in its entirety that tons of waves may assault it and avail nothing. She carries 14,400 square feet of sail, which is 1.300 square feet more than the Columbia carries. She is constructed of steel, and every onnce of unnecessary weight is climinated. An ounce of pressure on her sails is felt in every part of the yacht, and every part bears its burden of the strain. She cannot be capsized. Attached to her keel there are one hundred tons of lead, representing three-fourths of the total weight of the yacht. The plates which cover her framework are of bronze to just above the water line, where composition steel plating extends to the decks. The thickness of the bronze plates is a little more than six-thirty seconds of an inch. She is the highest type of a yacht which has ever slid from the ways of a shippard.

That man from N' York come here th' other day un yer oter see th' fun. All th' town turned out un th' school closed. We follered him clear t' his house wot he calls Glenwood.

George Washington Jones.

P. 8.—In my next letter I'll tell yer 'bout er compesition I rote.

[The author of the Letters of George Washington Jones is a fifteen year old New York boy.—Editor.]

Do not make the mistake of thinking that in order to get a position you must ask some man of influence to get it for you. Go yourself for it.

This makes a good race: Give a boy fifty yards start of you. Let him hop while you run. Let the whole distance to be covered by you be one hundred yards, and by him fifty yards. You may think you can easily beat him; but try it.

REPRESENTA-TIVES WANTED

THE publishers of THE AMER-ICAN BOY desire a representative—a man or a woman. woman preferred — in every city and town in the country.

This representative will look after the getting of new subscriptions, the renewing of old subscriptions, the putting out of sample copies, the reporting of boys' doings, and in general acting for THE AMERICAN BOY in various capacities relating to the business and editorial ends of the paper.

A bright, active young woman can find pleasant employment this summer and can make some money at congenial tasks, particularly if she is interested in boys and has a little influence in the community.

The publishers will from time to time make suggestions to their representatives as to what is wanted, and as to how they can serve the paper and at the same time serve themselves.

The employment is honorable; the remuneration is dependent upon the service rendered.

Everybody welcomes THE AMER-ICAN BOY, and any one representing it represents a popular, progressive and public spirited enterprise.

ADDRESS

THE SPRAGUE PUBLISHING CO., DETROIT, MICH.

The Only Distinctively Boy's Paper in America.

Entered at the Detroit, Mich., Post-office as second-class matter.]

The American Boy is an illustrated monthly paper of 32 pages. Its subscription price is \$1.00 a year, payable in advance. Foreign subscriptions, \$1.25.

New Subscriptions can commence at any time during the year.

Payment for The American Boy when sent oy mail should be made in a Post-office Money-Order, Bank Check, or Draft, Express Money-Order or Registered Letter.

Silver sent through the mail is at sender's risk.

Expiration. The date opposite your name on your paper shows to what time your subscription is paid.

Discontinuances. Remember that the publishers must be notified by letter when a subscriber wishes his paper stopped. All arrearages must

Returning your paper will not enable us to discontinue it, as we cannot find your name on our books unless your Post-office address is given.

Always give the name of the Post-office to which your paper is sent. Your name cannot be found on our books unless this is done. Letters should be addressed and drafts made pay-

ASSISTANT EDITOR.

Johnnie defines a centurion as "A feller what rides a hundred miles on a bike."

A Sollloguy.

Gentlemen—Here is a soliloquy which occurred this morning about renewing subscription to THE AMERICAN BOY: "I believe I will discontinue; the thing is quite too much of the military order for my Quaker blood. There is altogether too much blood and thunder in the air nowadays, dubbed "patriotism." If they would only tell the American boys about The Hague conference, the permanent court of arbitration, and that sort of thing, with as much gusto as the exploits of heroes, they would, instead of making mountain lions of them, be setting them on the path of uprightness and of Christlikeness." So I wrote "discontinue," and went about my business.

Didn't feel quite easy. Said to myself: my business.
Didn't feel quite easy. Said to myself:

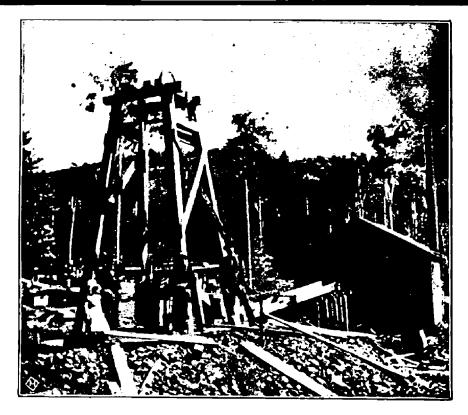

Didn't feel quite easy. Said to myself:
"I haven't read the paper so very thoroughly, anyway; don't know as that criticism is quite fair; ought not to expect everybody to see through my glasses, exactly; will look over written notice they sent a month ago. Found this: "Tell us what you like and what you don't like." I read again your article in the last number, entitled. "Your Country Wants You." Found it grand and wholesome; no "militarism" to hurt in that.

So here is the dollar for the paper another year, and here are the likes and dislikes. Yours faithfully, L. H. Osborne, Chestnut Hill, N. H.

Johnnie—I wish I could be Tommy Jones.
Mother—Why? You are stronger than he
is, you have a better home, more toys, and
more pocket money.
Johnnie—Yes, I know; but he can wiggle

STEVENS CRACK SHOT

A boy with a

 $\mathbf{W}^{ extsf{ERE}}$ designed for the boys and thousands have been made happy by the possession of one of them. What better sport for a boy than spending his extra time in the woods studying Nature. Here he comes into contact with all kinds of small game, and where once indulged in, shooting is a sport that is very fascinating. Target shooting is a good practice, as it educates a boy to have control over his nerves. This rifle is an accurate one and is made to shoot either a 22-short or long cartridge. Has a 20-inch barrel and weighs 4 lbs.

Why don't you buy one and enter our RIFLE CONTEST announced in the June issue of this paper Thousands of boys are already supplied with targets. Send 10 cents in stamps stating calibre of your rifle, if a STEVENS, and we will mail you conditions and 12 official targets.

Nearly every dealer in Sporting Goods carries a full line of our FIREARMS, but if you cannot find them we will ship, express prepaid, upon receipt of price. Send for our complete catalog.

PRICE, \$1:00 A YEAR 10 Cents a Copy

The Mission of "The American Boy."

HE mission of this paper is not merely to entertain boys—it is to lead, inspire, develop them along all right lines.

It aims to educate boys—educate them in the true sense, not so much by pouring knowledge into them, as

by leading them out, stimulating their powers, arousing their aspirations. It aims to furnish to boys the stimulus to better and higher living in thousands of homes where such stimulus is lacking.

Our own conception of the paper's mission has broadened greatly since its first issue. Twenty two months' constant observation and study of boy life has produced in our minds an overwhelming conviction that the most important and at the same time most subtle problem of modern life is the boy problem, and that in its solution lies the solution of all great problems of society. We thoroughly believe that no great reform movements can accomplish lasting results that do not begin with the boys, and that until the great engines of social, moral and religious reform are directed on the boys, the same old problems will present themselves for solution generation after generation. firmly convinced that the way to improve the tree is to lop off the dead branches and dig up the ground about its roots-to cut away its unprofitable growths and enrich and water its beginnings. We are further convinced that modern reformers are wasting precious time and money in trying to purify the stream at its mouth, and that one tithe of the sentiment, the energy and the money wasted there, if applied to the fountain head would cleanse the waters.

In the boys' behalf we ask that the world shall keep in mind that while "boys will be boys" they will also in time be men.

This paper aims to stand for boys—to speak for boys—to work for boys.

It stands for the boy in the home. In thousands of homes, fathers and mothers, some by positively evil example, some by indifference, some by unconscious or conscious neglect, are driving their boys straight to destruction.

doors and merry click of glasses, were a score of churches, their doors barred and bolted, raising their steeples in ridiculous protest, weird figures dancing in the beams that fell through painted windows, and holding high revel in their glee at being the sole

It stands for the boys in the church. The religious life of the churches is generally distasteful to the growing, healthful boy. With all the tremendous wealth of the churches—a large part of which is idle capital—no adequate effort is made to meet his needs and his nature. We ask for rational and natural methods in church and Sunday school to appeal to and satisfy the boy.

It stands for the boys in the school. The schools are great funnels at which our boys may stand and feed till they are fat with knowledge, and from which they turn with untrained hands and powers and with-

out the ability to actually do one practical and useful thing thoroughly and well. What a commentary on our systems of education is the undisputed statement that out of every one hundred business men ninety seven

their families free from want. Is there not something wrong with the boy's preparation for life? We ask that the boy be trained for success, and not for failure, that methods that enervate the boy be supplanted by methods that shall give physical, mental and moral muscle and truly educate him for actual living.

It stands for the boys in the American town. The life of the boy in the American town and village is a life of negation. "Don't" is the word of counsel. No one says "do." He is told not to play cards, not to visit saloons, not to play pool or billiards, not to do this, and not to do that, but where in the whole scheme of advice is he told actually to "do"? There are associations of men and women for a variety of harmless purposes. There are whist clubs and twentieth century clubs and natural science clubs and missionary societies; there is a bird study club, a parliamentary law club, a municipal improvement league, but where is the town that will furnish us a society for the study of boy life and the improvement of its condition?

"Tell me, Mr. Sprague," earnestly asked a remarkably intelligent mother of two bright boys in an Ohio town of twelve thousand inhabitants, "what can I do for my boys here to keep them at home, to keep them occupied, to keep them pure and good? She had struck the boy problem in her own life, poor woman, and bright as she was the enormity of it staggered her. I looked about the town and over against the twenty saloons, open all day and half the night, with their glittering lights and open doors and merry click of glasses, were a score of churches,

(Continued on page 838.)

their doors barred and bolted, raising their steeples in ridiculous protest, weird figures dancing in the beams that fell through painted windows, and holding high revel in their glee at being the sole beneficiaries of Christian benevolence during six days of every seven. Over against the pool room was the door of a circulating library, patronized largely by women, where the vapid, ephemeral literature of the hour was eagerly sought and devoured. With over two thousand boys in the town between the ages of five and twenty, there was no public reading room, no gymnasium, no athletic club, no lyceum, no Y. M. C. A., no club or organization of or for boys, not an open door for their entertainment—not one single resort where a boy might find an hour of healthful amusement. This is a typical American town in one of the

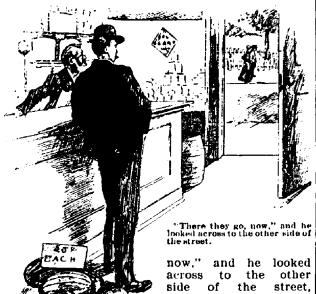

The Grocer's Gest

AGNES E. WILSON ^QD&&&&**&**

"What I want," said Mr. Philpotts, leaning over the counter of his own grocery in a confidential sort of way, "is a good, thoroughly dependable sort of a boy. He must be careful and obliging, accurate and quick at figures. Got any boys like that?"

It was the village schoolmaster to whom the grocer was talking.

"Two of them," came the reply. "There they go

"I don't need two." said Mr. Philpotts. "D'ye reckon I could get one of

gether.

where Jack Willis and

Charlie Crawford were

sauntering along to-

these fellows without the other?"

They aren't quite so inseparable as that," the schoolmaster said, laughing. "Either of them will suit you. Jack is the quickest at figures, but-You'll be safe in choosing either," he added, turning to go.

Mr. Philpotts scratched his head. "Now, how am I to know which one I want?" he said, in perplexity. "If he'd just recommended one of them, there wouldn't been any trouble. So Jack's the quickest at figures? That's one thing in favor of Jack; but let me see.'

Mr. Philpotts must have been in a brown study for as much as a minute. Then he went and weighed out fifty pounds of granulated sugar and twenty pounds of while he was doing it, and it was evident that he had hit upon a plan.

"And as sure as you live, sir," he said to himself,

rubbing his hands together, "if I mul they both do,

I'll hire 'em, sir; I'll hire 'em both."

Mr. Philpotts did not trouble himself about the possibility of not being able to get either boy. The privilege of clerking for Mr. Philpotts during the vacation was too eagerly coveted by the schoolboys

ford had been longing for the place. It was well known, however, that Mr. Philpotts usually made his own choice, and that there was little advantage in making application for the place.

But it was with a little thrill of excitement that Charlie replied to Mr. Philpotts' query that evening, as he went into the store on an errand for his mother.

"Are you in a hurry, Charlie?" the grocer had asked.

How Charlie wished that he were not!

Mother needs these things for supper," he replied, and I promised to hurry back. Was there something you wanted of me, Mr. Philpotts?"

He could not keep the eagerness out of his voice, and Mr. Philpotts understool.

"Only to ask you about something," he answered, indifferently. "Drop in, sometime when you are passing, if it isn't too much trouble, Charlie."
"I'll come in this evening," Charlie promised, and

was off like a flash.

"He wanted to stay," Mr. Philpotts mused. he was faithful to his mother's errand. That's one for Charlie. But Jack's quicker at figures, and that's one for Jack. Well. we'll see, we'll see." And Mr. Philpotts rubbed his hands and waited for Jack.

As luck would have it, it was not many minutes before Jack entered, also on an errand for his mother. "Are you in a hurry, Jack?" asked the grocer, weighing out the pound of tea which Jack had asked

"Not particularly," Jack answered.

"Doesn't your mother want this tea right away?" queried Mr. Philpotts sharply.

"Oh, I guess not, not for a little while, anyway.

Did you want something, Mr. Philpotts?" "I wanted a little talk with you," the grocer began. Jack's eyes sparkled. "To tell you the truth," Mr.

Philpotts went on, "I wanted to ask you about Charlie way a minute. I'll be glad to see him get it." Crawford."

"I notice you and he are pretty thick," the grocer continued, "and I have a notion that nobody knows so much about a boy as his boy friends. Now, I've been thinking about having him in the store with me this summer, and I thought I'd ask you if you could recommend him. I know I'm a queer old duffer, but I'd rather have your opinion than the schoolmaster's. You know Charlie better. Now, what can you say for your friend?"

It looked very much as if Jack could not say anything. How was he to know that Mr. Philpotts was leaves nothing. Faithful to his promise and faithful saying over to himself: "Faithful to his promise, and that's one for Charlie. But Jack's quicker at figures none is a pretty fair score. I guess I can wait a litbacon for an out-of-town customer. He chuckled that's one for Charlie. But Jack's quicker at figures and that's one for Jack. Maybe Jack's mother didn't tell him to hurry, so I won't call this delay one against Jack.'

Jack was silent so long that the grocer resumed his

questioning.

"Is Charlie neat and careful and courteous and

trustworthy?" asked he.
"Oh, yes!" Jack at last found his voice. "He's all that." Someway his words didn't sound one bit enthusias-

to render it likely that he could fail to secure the lad tic. He wanted that place so much for himself. he chose.

"And quick at figures?" the grocer pursued. "I'm very particular about that."

"He's fair," admitted Jack. "He isn't the best in the class.'

Never knew him to cheat in games, or do any mean little thing like that, did you?"

'No," Jack replied. You would have thought he spoke reluctantly. "Anything else you think I ought to know?"

queried the grocer.

"N-no," stammered Jack. "Charlie's a good fellow, but-

"But I see you don't want to tell me," Mr. Philpotts said, suddenly. "You are too loyal to your friend to finish that 'but.' I'm obliged to you, Jack, I'll make further inquiries."

Now Mr. Philpotts had not put the faintest trace of sarcasm into his sentence regarding Jack's loyalty. but some way Jack did not feel very happy, although he hoped that the "further inquiries" would turn Mr. Philpotts' attention to himself. He would have felt less happy had he known that the further inquiries were to be made of Charlie himself.

That evening Charlie called on the grocer. Perhaps he was disappointed when that individual began to inquire about Jack Willis, but if so, he had conquered his chagrin before it came his turn to speak.

"I'm sure Jack would just suit you, Mr. Philpotts," he said, and although his voice was quiet, it was enthusiastic still. "Everybody likes Jack, and he is so bright and quick. And he's a splendid scholar-the best in the class."

Mr. Philpotts went on with his searching questions, but Charlie became only still more spirited in his admiration of his friend. There was no faint praise in his words or voice. At last the grocer asked quite suddenly:

Wouldn't you like the place yourself. Charlie?" Charlie hesitated. Then he spoke the truth.

"Yes, Mr. Philpotts. But I wouldn't stand in Jack's

It has always been an unexplained mystery to Charlie why Mr. Philpotts answered as he did.

"The place is yours, Charlie. I was only testing you. I didn't have the faintest notion of hiring Jack. Charlie demurred a little.

'It will be you, or some other boy, not Jack," Mr. Philpotts said firmly. "I have my reasons."

Charlie never knew, nor did Jack, but Mr. Phil-

potts summed up his reasons this way:

'Quick at figures, that's one for Jack. Not true to his friend, that's one against him. One from one tle longer for him to do his figuring, if he's as loyal to my interests as he's shown himself to be to others

to-night.'

A Proper Penance

A small and not very strong looking woman and a girl of about seventeen years were moving about in the blackberry bushes on a stony hillside trying to fill the large tin pails each of them carried. It was an extremely hot day in August. The sun beat down flercely on the trecless hillside. Not a breath of wind stirred the leaves on the trees lower down the rocky The heat quivered in the dazzling sunlight. The girl took off her old straw hat and fanned her flushed face with it as she stood among the briers with scratched and bleeding hands.
"My! isn't it hot, mother?" she said.

The woman had sat down to rest for a few minutes on a heated rock. She fanned her own crimson

face with her slat sunbonnet as she said: 'Hot isn't any name for it, Lucy. It's by far the hottest day we have had this summer. I'm about tuckered out.

"Don't you try to pick any more berries, mother. You go down the hill and rest under the trees by the river, and I'll pick out this patch, and then we will go over to the other side of the hill. It will be shady there by the time I pick this patch out."

'Oh, I think I'd better stay and help you, Lucy. The berries are so small and so scattering this year that we will both have to pick pretty steady all day if we fill all the pails we have brought with us. I'd like to fill them if we can because berries are bringing a good price this year on account of their scarcity. If we can fill all of our pails we can get as much as four dollars for them at the big hotel over on the lake.'

"And four dollars will pay a week's board for Artie at the college, won't it, mother?"

"Yes, it will, dear. But I want you to take two dollars of the money we earn to-day and get you a dress pattern off that bolt of lawn we saw at the store in the village yesterday.'

"Oh, I think I'd better not, mother. My old blue, know that Artie said in his last letter that his expenses would be more this year than last. We'd better save the two dollars for him."

But your old gingham really isn't fit to wear to the Old Home Week reunion next week, and you ought to have some new ribbon on your hat."

"What reckless extravagance you are trying to lead me into," said Lucy with a little laugh. "You'll propose that I get me a pair of white kid shoes and a white silk and chiffon parasol next, won't you, mother?"

"You deserve them, Lucy, and a good deal more."

"That is just as good as having them. And when Artie is finally through school and earning all the money he is sure to earn, then I will have all of the clothes I need, and you shall have a black silk dress and a bonnet like Squire Horton's wife. There will be no more berry picking then."

"I shall be willing to give it up, and I shall not worry if I never have the black silk dress. I shall and at the same time do some studying." have all the reward I want when Artie has the diploma his father always wanted that he should have. You know that your father was always so anxious that Artie should have a good education. He said so many times before his death-that he hoped that at least one Ritten would be a college graduate and he was so glad when Artie showed such a taste for learning. I know that you have the same taste, Lucy, and it has always been a sorrow to me that you could not have better educational opportunities. I did hope that we could manage some way so that you could have a year at least at the Horton Academy. I am so sorry it could not be.'

"Don't you worry anything about that, mother. It was simply impossible for me to go there and for Artie | going.

to go to college at the same time. I have given up that ambition.

She did not say how hard it had been for her to give up that which had been the dearest hope of her life. She walked a few steps away that her mother and white gingham will do for this summer, and you might not note the suggestion of tears in her eyes, and she hoped that her mother had not noted the unsteadiness of her voice.

"Artie will owe you as big a debt of gratitude as any brother ever owed a sister," said Mrs. Ritten. "Not many girls would work as you have worked and make all the sacrifices you have made to help pay for a brother's education. You are a good daughter and a good sister, Lucy. What I'm sorry for is that you couldn't have had the good education I know you have longed for."

There is nothing I am so sorry for just at the present time as I am that Artie could not have come home during the summer vacation. Just think! is two years since we saw him and he must have changed a good deal in that time."

'I suppose that he has. I wish, too, that he could have come home, but then you know that the car fare for the round trip would have been twenty dollars, and he thought that if he stayed there in Woodvale he might get something to do to earn his board

"I know, mother; but I believe that I would have been willing to have gone out at housework to have carned his car fare just to have had the dear boy come home for a week. It does not seem to me that I can

wait another whole year to see him.' "We will have to be patient, dear, and our long waiting will make his home-coming all the more delightful when he finally gets here. And you know that I have set my heart on having you go to see him

"And I have set my heart on having you go, mother."

"It won't be possible for both of us to go, Lucy." "I know that, mother; and that is why I am not Lucy. How few berries there are on the bushes this dread that long walk home over the dusty roads! year. I think that we gathered fully three bushels on | "We'll rest often on the way, mother. How t this spot last year, and I do not believe there is a bushel here this year.'

"l am afraid not, mother."

They gathered the berries in silence for a few minutes, and then they went down the rocky hill to the edge of the timber, where they dropped wearily to the ground in the shade of a tree and began to eat the frugal lunch of bread and butter and cold meat they had brought with them, for they would have to spend the entire day picking berries if they went home with their pails filled.

Their conversation as they are was of the absent Artie, who was his mother's only son. He was a bright young fellow of nineteen who had been away at school for two years. His mother and sister were left alone in the old New England farmhouse when Artie went away. The old house that had belonged to generation after generation of the Rittens, and its few acres of stony and unproductive ground were all that Mrs. Ritten had when her husband died, with the exception of a pension of twelve dollars a month. Every dollar of this pension was sent to Artie. When the big shoe factory in the village two miles away was in operation Lucy worked in it, and nearly all of her earnings were sent to her brother. In the summertime Mrs. Ritten and Lucy gathered berries, and Mrs. Ritten even did washing for the summer boarders who came to the farm houses near her. She would have taken boarders herself, but the house was so old and out of repair and so scantily furnished that boarders would not come to it.

Artie knew of the heroic sacrifices his mother and sister were making to keep him in school, and he wrote them letters of appreciation that warmed their hearts and made them willing to labor still harder for him.

"If we could only see him oftener," said the loving and devoted Lucy, as she and her mother sat under the trees eating their lunch.

"He probably wants to see us just as much as we want to see him," said his mother.

"I thought all of the time when I was working overtime in the factory last winter and you were driving to the village to take me home at ten o'clock those cold nights, that Artie could take the extra, twenty five dollars I earned and come home for his summer vacation," said Lucy.

"No doubt it is best for him to stay where he is, much as we want to see him," said Mrs. Ritten.

They never knew that, brilliant as he was in many ways, that there were some weak and shallow spots in Artie's mental and moral make-up, and that some of these weaknesses had grown greater while he was They did not know how he lacked the moral power to put under foot some of the weaknesses that put his budding young manhood to shame. He did make some attempt to be true to his better nature, but he was easily influenced and he yielded weakly to temptations that a stronger will would have rejected with manly pride and scorn.

There were times when he had an overpowering sense of contempt for himself, and those times were when the letters from home came breathing a spirit of love and loyalty and contained the money orders that represented days and days of hard and patient toil on the part of his mother and sister. He had an uncomfortable half hour the first time he was led into the extravagance of taking some of those hard earnings and spending the money for some articles of dress he did not need but that would add to his appearance. Love of dress and of luxury were inherent in him. He did not know just how strong this love was until he went to the large town of Woodvale and had for his associates the sons of comparatively wealthy men who could give their boys luxurious surroundings while they were at school, and clothe them in any way that the taste of the boys might dictate. These boys had money with which to indulge in expenditures far beyond the reach of Artie, and he soon found himself chafing under the restrictions put upon him because of his poverty. He was a merry, fun-loving and fun-making boy, who was very popular among his associates, and he was to theirs in many ways. His conscience gave him that he imposed burdens upon his mother and sister that he need not have imposed had he been true to that which he knew to be right and manly.

He promised himself again and again that when his college days were done and he was making the fortune that he was sure awaited him in the world, he would repay Lucy and her mother over and over again for all that they had done for him. He wrote them long and loving letters to this effect, without, however, giving them any intimation that he was indulging in needless extravagance. These letters were read again and again by Lucy and her mother and gave them strength and courage to work all the harder for the son and brother who was so dear

It was four o'clock in the afternoon before the great pails were full of berries.

"It seems to me that it is hotter now than it has and her hand was pressed to her wildly-beating heart to show him that we forgive him!"

"We will settle that matter when the time comes, been any time to-day," said Mrs. Ritten. "How I

We'll rest often on the way, mother. How torn your poor hands are! And you look so worn out. I shall not let you come another day when it promises to be as hot as it is to-day, mother. And you shall not lift your hand to do a thing when we get home, but you shall lie down in the hammock on the porch and rest until bedtime. Let me carry the two large pails and you take the two small ones.

Slowly and wearily they wended their way homeward over the dusty road in the burning sun.

'We'll get us a nice cool drink and take a long rest when we come to Crystal Springs at the edge of Lover's Lane," said Lucy.

There was a beautiful spring of mineral water at the edge of a strip of thick, cool woodland before them. and the dark and shady road through the wood had been given the romantic name of Lover's Lane. When Lucy and her mother reached the spring they set their pails down by the roadside and took deep and refreshing draughts of the cool, clear water. Then they sat down on the grass to rest. They had sat there but a few minutes when they heard the she was conscious of a feeling that it was unmanly sound of wheels in the wood and merry voices in song and laughter.

"Like enough it is some of the people over at the hotel in Deering out for a drive," said Mrs. Ritten. and give no sign that they were his mother and sister. I'm so comfortable I don't believe that I'll get up even if they do stop at the spring.'

Lucy, in whom there was not a particle of false within her breast.

as she said in a voice that was but little more than a whisper

"Artie!"

Both Lucy and her mother saw the boy change color, and they noted the look of surprise and dismay in his face. They had quick perceptions and they knew what Artie meant when he laid his finger on his lips and frowned slightly. There was no escape from the humiliating fact-Artie did not want his fashionable friends to know that the woman and the girl in the soiled, torn and faded garments and with the stained and bruised hands were his mother and sister.

One of the young fellows on a rear seat called out to Lucy:

"How much are your berries, my pretty fair maid?"
"Oh, do buy some, Harry." said the girl by his said the girl by his "They look larger and better than any berries side. have seen this summer, and the only time to eat blackberries is when they are fresh from the bushes. Are your berries fresh, my good woman?

The patronizing tone in which the girl spoke to her mother and the impertinent way in which she had been addressed caused Lucy's dark eyes to flash, and and even contemptible for Artie to allow them to be spoken to in this way. She had a sickening conviction that it was contemptible in her brother to sit there She feared that her mother would faint, her face was so pallid, and it had such a drawn look, while her "There is no reason why we should get up," said heaving breast told of the mighty conflict going on

> "Are your berries for sale, girl?" asked one of the young women.

> "They are already sold," replied Lucy with quiet dignity.

> One of the young men climbed down and filled a number of silver drinking cups with water, and the young people tarried for five minutes or more at the spring. Artie kept his face averted, and his mother stared at him with tearful eyes. The coach started on its way, and just as the wheels began to move Artie looked back over his shoulder and his eyes met those of his mother No mother's eyes were ever filled with more unspeakable love or more searching sorrow. Her pullid face was tear-stained and it wore a look of mute appeal. Artie turned from it trembling in every limb. The ceach had gone less than a dozen yards when Artic suddenly leaned forward and caught the driver by the shoulder.

> "Stop! stop!" he cried, in a voice of command.

> When the tally-ho had come to a standstill Artic stood up and faced his companions.

"Boys!" he said as he choked back a sob. "Young ladies, every one of you shame and scorn me! I deserve your utmost contempt! Listen to me! That girl by the roadside is

sacrificing sister that ever an undeserving brother had, and she is my sister! That woman there is the dearest and best mother whose heart was ever made heavy by an undutiful and ungrateful son, and she is my mother! Those berries that they have toiled all day to gather were to be sold and the money sent to me! I ought to get down in the dirt before them and beg their pardon for being ashamed to own them before you! They ought to disown me forever! I am a cad, a snob, a cur-anything contemptible that you want to call me! I ask pardon of my mother and sister for the most unforgivable thing I ever did in my life, and I ask pardon of you all for making you in any way a party to what they have

suffered! Drive on and leave me here!" He jumped from the coach as he spoke and ran toward his mother with outstretched arms, crying

"Mother! O, mother! Lucy, my sister!"

He had them both in his arms in a moment and his sobs were louder than theirs.

The driver was about to give rein to the horses when the young man who had spoken to Lucy about the berries said:

"Wait a moment."

He climbed wheel and over tne Mrs. Ritten with his hat in his hand.

"I cannot go on until I have received your pardon and that of your 'aughter for the way I spoke to

The girl who had sat by his side was now climbing down from her seat, and her eyes were full of tears as she said to Lucy:

"I was simply thoughtless when I spoke to you as I did. I am sorry. She held out her hand frankly, and Lucy took it

smiling, with the tears in her eyes. A handsome young fellow on the coach stood up and waved his hat and cried out:

"Three cheers and a tiger for Artie Ritten! He has done just what he ought to have done in owning up that he was wrong, and we will give him three cheers

pride. "I know that our clothes are torn by the briers and so are our hands and arms, but they are the marks of honest labor. Let us sit quietly here and take our rest. Perhaps they will drive on without stopping at the spring."

A moment later a very handsome tally-ho coach drawn by four prancing horses came around a curve foolish enough to attempt to adapt his style of living in the road. On the coach were twelve or fifteen young ladies and young gentlemen dressed in the more than one qualm while he was doing this, but the most fashionable summer outing garments. Lucy more he yielded the harder it was for him to resist half repented of her decision to sit where she was the next temptation that assailed him. Thus it hap- when she saw that the occupants of the tally-ho were ung people of about her own time to withdraw when she made this discovery, and she sat a little to one side of the road fanning herself with her old hat. No one had ever told her so, but Lucy was a very pretty girl with beautiful dark you," he said humb. eyes and a complexion that all of her exposure to the sun and wind had not ruined.

Her brown hair lay in damp ringlets on her white brow, and her flushed cheeks but added to her beauty. There was a smile on her face as she watched the coach draw near. The next instant her eyes were riveted on a fashionably clad young man sitting by the side of an extremely pretty girl in a dainty white dress, with a great white parasol held over her head. Lucy was too dazed for utterance when she saw that the young man by the pretty girl's side was her brother Artie. Mrs. Ritten had also recognized him

all of the occupants of the coach descended and insisted on shaking hands with Artie and his mother and sister, but when the coach finally went on its way Artie stayed behind and went home with his mother and Lucy.

"It was this way," he said to his mother and sister as they sat on the little porch before his home that evening. "One of the boys, Harry Larkin, invited me to be his guest on the coaching trip, and our coming ments, thought that it was not fair that she

The three cheers were given with a will, and then around this way was a plan that came up this morn- But she shall have her year there even if it does delay ing. That was how I happened to meet you. I supon without coming home if I had not met you. And now this is the penance I am to pay. I am going to stay at home for a year and Lucy is to have a year in the academy while I put my shoulder to the wheel and keep her there. I have, in my right and best mowork so to help keep me in college four years while could not have even one year at the academy.

my graduation for a year. My mind is made up. To pose that I would have been bad enough to have gone the academy Lucy shall go and I will do the berry picking and the working in the factory and all of the other drudgery. It is a very proper penance for one who has been as guilty as I have been.'

The best test of Artie's contrition and sincerity was the fact that he could not be moved from his purpose. and I think that you will all agree with him that it was a proper penance.

(Begun in October.)

Review of Preceding Chapters: Jack Carroll, Frank Chapman and Ned Roberts, three boys whose homes are in a village in the far East, obtain the consent of their parents to go to Denver for a visit to Robert Sinclair, a friend of Jack's father, who is a painter of mountain and Indian life, and spends the greater part of his time among the Indians. They are accompanied on their journey as far as Chicago by Mr. Carroll, and are greatly delighted with the sights and sounds of the great city. On the train for Denver they meet Jim Galloway, a trapper, who tells them a true story in which his life is saved by a white man, who was living at the time with the Indians, and turns out to be Robert Sinclair, the artist, whom the boys are going to visit. The boys tell the trapper the story of Sinclair's life. The train on which they are traveling runs into a herd of buffalo and of the trail for Pike's Peak along the foot of the mountains. The first evening in camp Sinclair tells the boys a story, and Ned's pony makes a dash for home, but is captured by Sinclair. The day following Frank is lost among the mountains. He kills a stag, and spends a night alone in a canon. He is captured by Indians, taken to their camp, escapes death by its being discovered that his captors are friendly to Uncle Bob, the Indian painter. He makes friends with the Indians, who adopt him as one of their tribe. He goes on a buffalo hunt with them, and is saved from being run down by a buffalo bull by a shot from the rifle of Uncle Bob, who suddenly appears on the scene. Uncle Bob relates how he, Ned and Jack scarched for Frank and linally found him. They leave the Indian camp, and after a day's travel come upon bear tracks and they have an adventure with a bear and her cubs. Jack's pony is bitten by a rattle-snake and dies. The little party meets a drove of which horses and Jack captures a pretty one after an exciting chase and Frank is in imminent danger of being caught in the stampede. The boys celebrate the Fourth of July in a unique fashion, and Un

CHAPTER XXIII.

It was with no little difficulty that Mr. Sinclair and the trapper, carrying between them the half conscious boy, finally succeeded in making their way back to where Frank and Ned, in a state of great suspense were awaiting them. The boys had heard indistinctly the trapper's calls for help and their minds were full of all sorts of direful forebodings; so their joy was unbounded when they saw the forms of their three friends approaching through the darkness.

Tenderly the two men laid their burden upon the ground and set to work to discover the extent of his injuries. They were not long in finding that, aside from a few bruises and cuts from the sharp stones upon which he had fallen, Jack was all right, though weakened by the strain upon his nerves and the severe drain upon his strength. A parley was then had as to what was best to be done. Galloway suggested that but a short distance up the mountain there was an overhanging ledge of rock under which needed, so that when at last, shortly after midnight, they might find shelter, make a fire, warm themselves. Uncle Bob shouted, "One more climb, boys, and we're with some hot coffee and take a bite of something to on top," they were almost inclined to break away eat. The suggestion met with everyone's approval, from the two men and make a run for the summit. for there was evidence of an approaching storm, and | They would have done so had it not been for the to be caught in the open under such circumstances trapper, who said very gravely, "Boys, I never break was not to be thought of.

The trapper superintended the preparations for the move, and gave the word to advance. This time the members of the party proceeded in single file as before, but all were fastened at the belt to a rope that extended from the trapper who acted as leader, to Mr. two together led the way up the last steep climb. A Sinclair, who brought up the rear. Each, with the rest or two, a hurried scramble on hands and feet, a exception of Jack, who had lost his staff in the slide shout of triumph which could only be heard a few feet down the mountain, carried a long staff which at every step he thrust into the earth as a secure support. should his feet slip.

down within its shelter than the storm, which had been impending, broke upon them.

"Lucky we got here in time," said the trapper, "for not even a goat could keep his feet out thar in thet storm. It's the worst night I ever seen in the moun-

To the boys, it seemed as if all the demons of earth and sky had broken loose. The thunders seemed to come from under their very feet, and the lightnings, which played incessantly about them, seemed at times to wrap them as in sheets of flame.

"Talk about being in a storm, boys, you're in one Mr. Sinclair. "If we get out of this safely, and I guess we will, you will never need to be afraid of a thunderstorm again."

Galloway was now doing his utmost to get a fire started among the faggots that he had carried all the way from the foot of the mountain, and finally, after repeated failures to keep the flame a-going amid the eddying currents of wind, his efforts were rewarded with success, and the cavern was lit up with a glow of light. Then the storm was forgotten in the ruddy glow of the fire and the aroma of good coffee, and even Ned forgot his sprained ankle and joined in the expressions of contentment. The coffee had a good effect on Jack, too, and, except for a feeling of soreness, he declared that he was as good as new and anxious to resume the march.

hour a glorious moon shone out among the scattering clouds; in that rare atmosphere, it looked like a veritable ball of silver rolling through the heavens.

"Come, lads, let's be on the move," cried Mr. Sin-"No time for sentiment now; we've got to reach the top before sun-up and we've no time to lose. The rest of the way will not be nearly so difficult. You will have some trouble in breathing. We shall have to make frequent halts to give you a chance to catch your breath, for you can't stand longcontinued exertion up here."

The boys didn't need this advice, for at every few paces they found themselves almost gasping for breath.

"The air is so rare," said Uncle Bob, "that you've got to get a good deal of it to satisfy you. The lungs don't fill up so quick. It's good for a fellow, I tell you makes him throw out his chest. You mustn't overdo arose each in turn held his cap high above his head. , however, for up here your blood gets to going like

a race horse and your head gets dizzy.' With every step the boys more and more realized that they were climbing into the upper air. At first they had to be cautioned to go slowly and stop frequently, but now there was no need of it. First one and then another of the boys threw himself upon the ground and declared, between short gasps for breath. that he must wait a minute. Their elders were patient with them and gave them all the time they a promise. I told this young un here," pointing to Jack, "as he lay in my arms down the mountain there thet he would put the flag up yonder, and he's goin' to do it. Gimme yer arm, young un," and with this the big trapper placed his arm within Jack's and the away in the thin air, and Jack stood on the topmost point of the grand old mountain waving in his hand a small, tattered flag, the only one of which the cabin A brisk climb of twenty minutes brought the party of Uncle Bob boasted. Uncle Bob's staff did service

planted the staff and marked the final step in their conquest of Pike's Peak.

"Now, boys, for an hour or two of sleep," said Uncle Bob.

'But where shall we sleep?" asked Ned.

"I'll take you to the house of the old man of the mountain," replied the other.

There was enough mystery and excitement in these words to induce the boys to turn with alacrity and follow the two men, who led the way down a gentle slope on one side of the summit to an old house built of rough stone containing but one room, which Mr. Sinclair declared had been built by mountain climbers and had served as a resting place for many a weary head. It was a rude hut scarcely deserving the dignified title of "house," but it served as a shelter, to some extent, at least, from the cold night air. The boys followed their leaders' example, bundled themselves up as best they could in their blankets and soon were fast asleep.

They had been asleep a short two hours when the voice of the trapper awakened them. As they arose they already saw through the chinks in the wall the approaching dawn. The trapper was standing in the doorway, pointing a long bony finger toward the

"Mornin's comin', young uns; git up an' see the only mornin' you ever seen in yer life. The sun god ain't a-goin' to wait fer ye, and he's on the way. He's just hitchin' up over the rim o' the earth yonder, now for sure, for we're right among the clouds," said and if ye hurry ye'll be the first American boys west of the Mississippi to see him.

Sooner than it takes to tell it, Frank, Jack and Ned were on their feet and had shaken off their coverings of the night. Mr. Sinclair had already left the cabin and was nowhere to be seen. Just as the boys stepped out of the door they heard the crowing of a rooster that seemed to come from a thousand miles away. They turned to one another looks of astonishment. Again there came the familiar "cook-a-doodle-doo," followed by a shout of laughter from behind a big bowlder, and Uncle Bob's absence was explained. A few brisk steps brought them to the very summit of the peak, where they sat down and prepared to await the coming of the sun god.

What story teller will attempt to describe the majesty of daybreak on Pike's Peak? What artist The storm was of short duration, for in half an will attempt to picture it so that the reader may get even a faint glimpse of its wonder?

The boys sat for the first few minutes awed by the impressive silence and the ghostly spectres of jagged peaks and ponderous bowlders that lay beneath them. They marvelled at the continuous change of color and strained their eyes in looking as little by little the great round earth at their feet began to take on form. They held their breath as the colors changed to the ruddy glow that betokened the near approach of the chariot of the sun. They beheld with wonder the great ribbons and streaks of color that shot off from the point on the horizon where the doors were opening to the day. The supreme moment had come. Uncle Bob, with the enthusiasm of the artist burning in his veins, arose to his feet and lifting his hunting cap high in the air, shouted:

"Up, boys, and salute the morning," and as they

'Welcome, glorious day, to all this western land,' cried the artist, and the trapper and the three boys, the latter with their hearts in their mouths, echoed the word "Welcome," just as the rim of the flery mass peeped above the horizon, and shot its golden larts full in the face of Pike's Peak's hoary summit.

"The flag, boys," shouted Uncle Bob. They turned, and behind them Old Glory, in the stiff mountain breeze, showed every stripe and star bathed in a flood of light, while beyond it as a background. were the dark shadows cast by the mountain. A

grander picture never fell upon mortal eyes. "Oh, it's worth it all, Uncle Bob," cried Jack.

"And I'd climb this mountain a thousand times to see it," echoed Ned.

"And you never told us what we were going to ' said Frank, reproachfully.

"My boy, who has ever described a Pike's Peak sunrise?" answered the artist. "I have never tried to do it, and I never shall. I just had to wait and let it tell its own story."

The greater part of the morning was passed by the boys in wandering about the summit, throwing shout of triumph which could only be heard a few feet stones into the depths below, filling their pockets with souvenirs, chiseling their initials on the rocks, trying to make out the courses of rivers, and guessing at distances.

When the word came that they must prepare to to the overhanging ledge. No sooner had they freed as a flag pole, and while Jack held it high above his descend the mountain they found it hard to obey the themselves from the rope and thrown themselves head the boys gathered a pile of stones in which Jack summons. The thought that they should never peras a flag pole, and while Jack held it high above his descend the mountain they found it hard to obey the haps again stand upon this favored spot of earth made them loath to leave. The suggestion, however, that they had better make the descent during the day, and that Minne, Uncle Bob's Indian housekeeper, would have a bounteous meal for them on their return, tended to make the leave-taking easier. The descent of the mountain was accomplished quickly and safely, and they were soon seated about the table in Mr. Sinclair's cabin as hungry a lot of men and boys as ever attended a feast.

The next morning the boys slept late. On arising they learned that the ponies had been saddled and bridled, and were standing at the door ready for an expedition, the nature of which was soon explained. It was the day for the arrival at the trading post, a few miles distant, of the pony express that was bringing the mails from the east, and Mr. Sinclair, the trapper, and the three boys were to ride over to the post and be on hand when the mail arrived. The boys had heard much about the pony express, so they eagerly swallowed their breakfast, jumped upon their ponies and cantered away in high spirits.

When they arrived at the post they found a curious crowd already assembled, made up of trappers, miners and Indians who lolled about on the ground, some conversing in monosyllables, but the majority silently smoking and watching furtively the movements of their neighbors. Mr. Sinclair and Jim Galloway were evidently well and favorably known to these rough fellows, for they received a welcome unusually cor-

Near the trail that ran by the trading post a Mexican stood holding by the bridle a tough looking broncho on whose back was a heavy military saddle. The horse looked like anything other than what the boys expected to find for the use of the men who carried the mails through this rough and dangerous country. The horse's head nearly touched the earth, and his eyes were closed. Indeed, he looked thoroughly dejected, as if life had no further interest for him; but the boys came to thoroughly respect the animal before many minutes had passed.

Soon, one by one, the men arose from the ground. Occasionally one put his ear to the earth and, then, shading his eyes, looked down the trail. Uncle Bob took out his watch and said, "Boys, in three minutes the pony express is due. See how much behind hand it is."

No sooner had he uttered these words than a little cloud of dust appeared on the horizon, and every man in the group was watching it.

"It's th' pony express, young uns," said the trapper, 'and it's comin' like the wind, for Antelope Pete is ridin', and there's no better and braver rider on th' trail.

The boys' attention was now attracted by the broncho whose sleepy appearance they had noticed a

few moments before. The Mexican, who was holding him, was having a hard time of it, for the animal was plunging from side to side and exhibiting life and excitement enough for a dozen horses. The broncho had heard the approach of the pony express and knew that its time for action had come. Like a

war-horse sniffing the battle, his blood was up, and duty could not come too quick.

Now the pony express was in full view, the rider leaning far out over the horse's neck. The animal which he rode came at a long swinging gallop, flecks of foam flying from his mouth and his hoofs beating a tattoo upon the hard trail. The animal did not check

its speed till it was abreast of the waiting group of men and boys, and then suddenly throwing itself upon its haunches, came to a sudden stop. In a flash the rider threw himself to the earth, seized his saddlebags. threw a packet of mail to the agent, received a small packet in return, slapped the saddlebags across the back of the fresh broncho, and with scarcely a word leaped upon the back of the restless animal and was off. It was all so quickly done that the boys scarcely had time to say a word or ask a question. They stood watching the rapidly retreating figures of man and horse until they were lost on the western horizon. Then Frank turned and found Mr. Sinclair reading a letter.

'Is there anything for us boys, Uncle Bob?" he asked, when the latter had finished reading.

"Yes, this is for you-or rather for all of us. Your father thinks that you had better come home, and he has invited me to return with you, and I've half a notion to accept."

"Hurrah for Uncle Bob!" shouted the boys, forget-ful of their surroundings. "And we'll take Jim with us," cried Jack, who had worked up a strong affection for the big trapper since the adventure on the mountain side.

"I wish I could, young uns, but I can't. I've got other bizness. You go back home and go to school; thet's th' place fer young uns. I wish I'd a tho't so when I was a boy. I'll go back to the mountains an' hunt a while, an' some day, somewhere about here, I'll die an' some feller'll come along an' find me an' say, 'Thet's ole Jim Galloway; he was nuthin' but a Mebbe I'll get a tombstone and mebbe I trapper.' wont. Them mountains is a good 'nough monyment fer the likes o' me. You young uns go back an grow up to be somethin'. Take an ole trapper's advice, obey th' ole folks, an' try to grow up an' do some good in th' world; and just one thing more I want ter ask, an'—an'—an' thet is—don't forgit me. You young uns an' Bob here is th' only things that has come inter my life in these forty years that I don't want ter forgit; an' somehow I don't want ter hand in my chips an' feel thet there ain't nobody in th' world thet wants ter ricollect Jim Galloway.

The boys pressed around the big fellow and coaxed him not to talk like that, promised that they would write him, and that they would never forget him, and that some day they would see him again.

Mr. Sinclair's voice faltered as he took the big hand of his friend-a friend whose life he had once saved. and assured him that he had not lived in vain, and that when he returned from the east he wanted to see him in the cabin at the foot of Pike's Peak, where they would form a partnership that would last for years to come, and where, if God permitted, they would lie down in their last sleep together.

Rob's Gymnasium Ticket. LEE MCRAE.

"Mother, can't I buy a ticket to the gymnasium for this summer?" asked Rob Royse, twisting the door knob and looking at her anxiously.
"How much does it cost?"
"Four dollars; but that includes baths and—and just lots of things."
"Could your little brother go in on your ticket?"

"No, of course not, but—"
"No, of course not, but—"
"Then I am sure we can't afford it, Rob," she said firmly.
"But, mother. I need it so! I'm all stooped over and weak-armed, and thin as a rail," he pleaded.
Mrs. Royse sighed, for what Rob said was true, and her great anxiety was to see her two boys grow strong and straight; still, they could hardly afford the four dollars just now, and she could not give to one and not to the other. So she answered quietly:
"Alden needs it too, dear," adding, after iswered quietly: "Alden needs it too, dear," adding, after

"I wonder if we could not have a gymnasium of our own?"
"If we had a big barn like Skillman's we could, but we can't stand up in our coalshed!"
"What about the limit of the l

with the apparents, fully.

"I know one already," cried Alden, "It's to put a tin can—an opened one, you know—on the end of a pole, and see how many times you can throw it up and catch it on the pole again. It takes lots of practice"

"If we had a big barn like Skillman's we could, but we can't stand up in our coalshed!"

"What about the back yard—an outdoor gymnasium?"

"That big, old, bare lot!" he exclaimed. "Yes: it needs to be big and bare, and the high fence around it is just the thing. In edad apple tree will make a fine hold for our swinging ropes, and we can easily fix up the place for basket ball, horizontal bars and all those things."

"And we'll have swinging ladders," put in Rob, suddenly all enthusiasm. "and Dollard Wright has a pair of saw-horses he'll give us. Say, mother, wouldn't it be nice to have Dollard in our gym?"

Mrs. Royse looked dubious. "We don't want a crowd of boys here—it would soon give us trouble; but three would make it nicer than two, so if you promise to ask no one else, you may have him in it."

"And between us we have money enough to buy our Indian clubs right off. Mayn't I go over and tell him about it?"

Away he bounded, leaving his mother smilling over her work and planning eagerity how to transform the ugly back yard into a first class gymnasium.

"I'll make them a floor mat by sewing together those two old mattresses in the boys are developing their muscles and they are in the open air at the same time, and are happy at home where I can be

with them. Maybe I will get a little physical culture myself!" laughed the wise little woman, patting the finished sewing as if it had originated the idea.

That night the charter members of the Royse gymnasium held a caucus, as Rob called it, in the family sitting room, and the most enthusiastic member of all was Mr. Royse himself.

"The first thing we must do will be to rake and clean the yard till it looks like new," he said, with a boyish laugh. "Then I'll see that the ropes are up good and strong, while you boys fix the other what-you-may-call-ems. If a punching bag doesn't cost too much, we will have one in the corner."

This was greeted with cheers, Dollard exclaiming, "Oh. let me buy that! Father was going to give me a gym ticket and I'll just take the four dollars to get apparatus. Isn't it lucky that school is out next week?"

"And that to-morrow's Saturday!" added Alden.

"We can invent so many nice games with the apparatus," Dollard said, thoughtfully.

"I know one already," cried Alden, "It's

Ists. No representation without taxation, you know," this from Dollard, of course. The result was some angry neighbor boys, but as two more private gymnasiums were started by way of opposition, it really spread the good work.

When fall came, Mrs. Wright kindly offered the use of her big attic for the winter, and here, though somewhat hampered by low rafters, the boys continued their muscle training.

winter, and here, though somewhat hambered by low rafters, the boys continued their muscle training.

"Are you satisfied with your summer's gymnasium ticket, Rob?" asked Mrs. Royse with a bright smile as she helped him gather up his school books on the opening day.

"Well, I guess so!" he exclaimed heartily.
"And it didn't cost four dollars either, did it?"

"No. Do you notice how sturdy Alden has grown during the summer? He looks like a different boy."

"Sure enough! And Dollard and I have got biceps like a blacksmith's. Just feel that! I tell you, mother, it's funny that every boy doesn't get up a gym of his own. Don't you think so?"

"ABOARD THE CHATTAHOOCHEE,

Going from Savannah to New Crimans

Notable Naval Cadets

ELIHU S. RILEY.

The honor man of the Naval Academy obtains his creditable position over an unusual array of hindrances. The naval cadets of the United States are a picked body of men. All, save ten of the three hundred and fifty, that, on land and sea, are under the curriculum of the Naval Academy, are chosen by congressmen who exercise their right of appointment, out of the two hundred thousand people who live in their Congressional Districts. Very frequently this choice is made by competitive examination, which is open to the whole district, so that the appointee comes with the brand of "excellent" upon him. Thus the cadet, destined to take the first honors at graduation, meets, when the class goes into the section-room for the first time, on October first of the year in which he enters the academy, the brains of every section of the Union in all its variety of talent.

Nor is the test of actual scholarship alone the criterion of merit. There are two things that determine standing in a class of naval cadets, that are not of the books. These are efficiency and conduct. The manner in which the cadet performs the practical duties of his academic course, counts for or against him in the efficiency column. If he is a captain in the battalion, it is the way in which he handles his company; if the captain of a crew, it is the degree of skill he shows in maneuvering his boat; if a private in the ranks, it is the way in which he executes the manual at arms; if the swabber of a gun, the care with which he wipes out the barrel; and, thus, in a thousand and one things the cadet must show his care, knowledge and profieiency.

The conduct test is more exacting and difficult to meet. Efficiency is technique materialized; conduct reaches to the untried and undisciplined mental and moral forces of a cadet, and to stand well in conduct, his mind must be so thoroughly equipped that he must know how a naval officer ought to act under any circumstances-expected or unexpected.

Some years ago a class of naval cadets was taken to Washington to witness an experiment in the Navy Yard. After the experiment was over and the cadets had enjoyed the collation that the wife of the Commandant of the Yard had provided for them, they sallied forth to see Washington without asking leave of the officer in charge. When they were reported for this breach of official courtesy, they pleaded that they did not think it was a violation of the regulations to go away without asking permission of the officer. The reply of the Naval Academy authorities was: "You reply of the Naval Academy authorities was:

ERNEST J. KING.

reported for "falling overboard in a lubberly manner," was not excused, although his companions had great difficulty in getting him back into the boat again.

The contest for position is one of marked interest and excites honorable ambition. The "best man," the end of the four years' course, last June, was Julius Augustus Furer, of Sheboygan, Wisconsin. Furer last year stood number three in his class of sixty seven members, but at the close of the present academic year, when the aggregate marks of the four years that constitute the full course at the Naval Academy were summed up, he was found to be the leader of the class in the order of scholastic merit. Cadet Furer shines in the academic constellation only as a scholastic star. He is neither a gymnast nor a social lion. He was appointed by Hon. S. S. Barney, of the Fifth Congressional District of Wisconsin, and received his preliminary education at the Sheboygan High School. He is the son of Rev. E. F. E. Furer. At the Naval Academy, Cadet Furer was one of the chief supports of the Academy Y. M. C. A., and it speaks well for the Association, that the three cadets who stood highest this year in the order named, Furer, Fogarty and Conway, were all active members of the Y. M. C. A., of the Naval Academy.

Naval Cadet William B. Fogarty, of Ohio, the second in order of merit at the Naval Academy, owes his appointment primarily to the fact that Candidate Bundy, the colored appointee from Cadet Fogarty's district, failed to pass his entrance examinations. This accident which has happened to some others beside Bundy, opened the door of the navy to Cadet Fogarty. He was born in Cincinnati in 1881, and is the son of James Fogarty. Cadet Fogarty was educated at the Walnut Hills High School, and is the appointee of Hon. William B. Shattuc. Cadet Fogarty stood first last year in four of the studies of the second class-a remarkable number in the sharp rivalry that exists amongst the "star" members of a class. Like the honor man, Cadet Fogarty does not excel in athletics—his bent being books, and his specialties, mechanics, mechanical drawing, international law, marine engines and mathematics. Cadet Fogarty is a strong supporter of the Y. M. C. A. This Association by the way, is an excellent force in the school, and does a good work in preventing the inhuman hazing of "the plebs," as the fourth classmen are called in the vernacular of the academy. Cadet Fogarty had a close rival for first place last year in Cadet Clarence A. Conway. In a possible mark of 228, Cadet Fogarty obtained 208.22 and Cadet Conway 206.22

Until recently it was customary for the academy authorities to bestow the honor of commanding the Cadet Battalion upon the ranking scholar. This rule has been changed of late, and the distinction of commanding the Cadet Battalion was recently conferred upon Naval Cadet Ernest J. King, of Ohio, who stood, at the time, number five in order of merit in the first class. He was a star member of the class and outranked Cadet Fogarty, the first man, in seamanship, mechanical processes and physics. Cadet King has the rank of Cadet Commander, the highest amongst the cadets, bestowed upon him, and is made, in academic parlance, a "four-striper," that is, he is allowed to wear four gold bands on the sleeve of his jacket as a mark of honor. All cadets, of whatever age, must keep to jackets until they graduate. Then with what haste they fly to quarters to don their first uniform coats, which they have ordered months before graduation, and have been laid up in waiting for the auspicious moment when they are given their parchments! Cadet King executed the duties of his office with that soldierly bearing and alertness of movement that distinguishes the Annapolis naval cadet. Cadet King was born at Lorain, Ohio, and was appointed from the Fourteenth District of Ohio by Hon. W. S. Kerr. The position Cadet King obtained shows that the superintendent of the academy held him in highest estimation, for it is a post on which much of the reputation of the academy with the public depends. The battalion of cadets is the mute witness to thousands of spectators of the perfection of the work of the academy. The Cadet Commander's skill and efficiency are reflected in the battalion. A competent and reliable cadet commander is essential to its proficiency. He must be an example of soldierly bearing, prompt performance of duty, exemplary conduct and loval adherence to the authority of the academy. Had he not these qualities Cadet King would have followed the footsteps of a cadet; commander who some years since was reduced to the ranks because he failed to report to the authorities several of his classmates who were intoxicated in his presence

Athletics have superior "rate" in the co-efficients of The institution itself holds four the naval cadets. world's records-the hitch and kick, and the fifty yards swimming, plunge start, being two of them; but it is football in which all athletic interests center, and this strenuous sport finds its climax in the annual match between the Army and Navy elevens. This game, now played on neutral grounds and for convenience of the meet, on Franklin Field, Philadelphia, is of national interest, because the two national military institutions are pitted against each other in friendly but earnest contest. Last year, on December 1st, the Navy made up for its defeat of the previous season, and the one man who contributed

WILLIAM B. FOGARTY.

most to this naval victory was Naval Cadet Orie W. Fowler, the captain of the eleven. Before the game, Mr. Cochran, of Princeton, who coached the Annapolis eleven, pronounced Fowler "the best of captains," a prophecy he admirably sustained, for though the first half ended, Army 5, Navy 0, Captain Fowler came on the grounds for the second half, undaunted, and led his men in such a skillful and masterly way that the game ended Navy 11, Army 5. Cadet Fowler played half-back and his work was full of vim and courage. Cadet Fowier is a "sprinter" of "first rate," and won, at the May meet of cadets this year, the one hundred twenty yard hurdle race. He graduated in June, being then twenty two years old. He is of slight build and has to make up in energy what he is minus in avoirdupois. He obtains his best mark in conduct, thus bringing out in bold relief his soldierly qualities 😅 caution and deliberation of movement, though on the gridiron he appears to have but one thought—and that one "to make his point." Fowler's special yell, when he has done exceptionally fine work, in the estimation of the cadet contingent watching the game, is:

'Ha! ha! we laugh; our spry young half—Fowler." Cadet Roger Williams, of New York, stands second in order of athletic interest in the academy, being the captain of the academy boat crew, and one of "the glorious eleven" that beat West Point last year. The academy crew ranks amongst the best eights in America, and gave this season a close call to Pennsylvania's eight. In a two mile straight away race, the time was: Pennsylvania, 10:33; the Navy, 10:34, and the victors were only thirteen and a half feet

ahead of the Navy at the finish.

Naval Cadet Sydney M. Henry, of New York, is also of this year's leading cadets. He stood, at graduation, number five in scholarship in his class. He saw

ROGER WILLIAMS.

service in the Spanish-American war, and gained an enviable reputation in the intercollegiate fencing match this spring in New York. After aiding in defeating two French teams that stopped in at the Naval Academy, and assisting in winning the intercollegiate championship of America for the naval cadet team, Cadet Henry secured the individual medal for the best work of any of the contestants in all of the American collegiate fencing teams.

The leading cadets are giants in the eyes of their fellows; and, although the "student" has his admirers, he must be content with a milder meed of adora-

SYDNEY M. HENRY.

ORIE W. FOWLER.

tion from the cadets. The man who plays football well, or excels in athletic sports of any character, is always the hero of the hour in the academy. "authorities," however, while giving enthusiastic encouragement to the captain of the eleven or the leader of the eight, deem that cadet best who, after all the additions and subtractions of the whole course are made, stands first in order of scholastic merit, and so, in the order of that standing, the cadets go on the roster of the Navy at graduation.

High standing, however, is not the result obtained from books alone, but from every act of a cadet's academic life. His conduct and his efficiency being co-efficients in the sum of results, a button off at the wrong moment, or a speck of dust at inspection, or a shoe in the wrong place in his quarters, counts 'off" in the grand total of a cadet's final mark that determines his standing on the rolls of the Navy.

This exactness of detail, in every word and act of the naval cadet's course of four years, runs through a day that begins with reveille at six a, m., and ends with taps at ten p. m. During these sixteen hours, the cadet has one hour and twenty five minutes that he may call his own. During all of the twenty four hours, at the demand of the Superintendent of the Naval Academy, the department of discipline must be able, at any moment, to tell where any one of the

two hundred and eighty cadets are, and not only must the department be able to put its hand on each cadet, but every one, when the report is presented to the superintendent must be in the place in which he is "as of right."

In the fifty five years of the academy's existence, no cadet has ever been excused from a recitation. "There can be but one reason," said a late superintendent of the Naval Academy, "why a cadet would ask to be excused—he is not prepared to recite." That, of course, could neither be pleaded, nor allowed to avail. By this and kindred measures, notable naval cadets are evolved and American naval officers

JULIUS A. FURER.

The Foochow Soldiers.

Harry Lacy, a Foochow, China, Amer-

Harry Lacy, a Foochow, China, American boy, sends us the following item regarding the Foochow soldiers, rightly thinking that it will interest American boys on this side of the great Pacific:

The Foochow soldiers would present a very queer spectacle to an American soldier. To see them drill is almost enough to make a very sober person laugh. The officer in charge always drawls out his command and in so doing it prepares the soldiers for what he is going to say.

They always "shoulder arms" on the left shoulder. In so doing they have to bring their guns from "order arms" to "present arms" and then to "left shoulder arms." When they "mark time" they bring their kness about up to their waists. In marching, they march the "goose step," only instead of swinging their arms up so that their hands are parallel with the shoulders they bring them up against their breasts. In forming lines of six or eight abreast, unless very well drilled, they get all confused and do not know where they belong.

where they belong.

The escort of the viceroy does not keep in step, they do not form straight lines and, an American, who had seen or read anything about American soldiers, would think that these men were nothing but stillings.

think that these men were nothing out civilians.

In summer time you may see these sol-diers wearing hats about two and one-half feet broad, from edge to edge, fan-ning themselves. Thus they present a very queer sight.

Imitative Tots at Play.

Wordsworth's lines of a child at play. "as if his whole vocation were endless imitation." were recently recalled by a conversation overheard in the children's ward at a provincial hospital.

A little girl, whose role was that of nurse, rang an imaginary telephone on the wall to talk to her companion at the farther end of the room, who played the part of doctor.

"Hello!" said the nurse, "Is that the doctor?"

"Hello!" said the nurse, is that the doctor?"

"Yes," answered her companion in a deep voice; "this is the doctor."

"This lady is very ill," he was informed. "Well, what seems to be the matter?"

"She has swallowed a whole bottle of ink," said the nurse.

The doctor, not flurried, inquired what had been done for the patient; but the nurse, too, was ready in emergencies.

She answered: "I gave her two pads of blotting paper!"—London Tit-Bits.

"THE MAD SEA"

THE SEA WAS VERY MAD INDEED; IT TOSSED ITS WHITE-CADS SO, - AND THEN 'TWAS FOAMING AT THE MOUTH THE SUPEST SIGN YOU KNOW. "I WONDER WHAT IT'S ALL ABOUT?" SAID BRAVE HORATIO. "PERHADS", HIS SISTER DEAR REPLIED.

'IT'S STUBBED IT'S UNDERTOE.

WILLARD BONTE

A Young Patriot.

H. C. Wood

While our soldiers were passing through Kentucky the other morning, on their way South, a small, barefoot boy, with a tin bucket in his hand, and a look of complete absorption on his face, was standing near the train, when it stopped a few

minutes at a wayside station.

The soldiers were taking a long ride, and had had nothing to eat since the night before; and they were quite a hungry lot. One of them called to the boy: "Sonny, what have you in your bucket?"

"My dinner."

"My dinner."
"I'll give you a dime for it," said the hungry soldier.
The lad quickly handed the bucket to the

the lad quickly handed the bucket to the speaker, but, when payment was offered, he shook his head.

"No, sir, I wouldn't charge a soldler for anything to eat. You are welcome to it."
And when the train moved off, one lad trotted dinnerless to school, but with a patriotic heart beating loudly in his bosom.

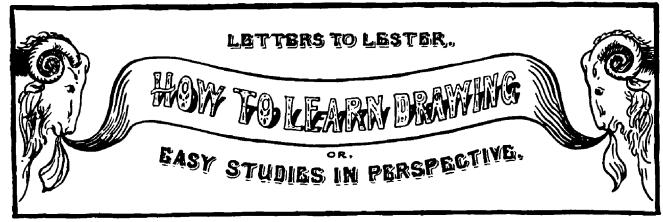

For the Boy Who is Scolded.

A Texas boy writes: "What is your best

A Texas boy writes: "What is your best advice to a boy who is told every time he says anything that he is teiling a lie, and whose mother is always mad at him and is always finding fault with what he does? I just want to know what you would do if you were in this position."

I would be first sure that I told the truth, and that I didn't deserve the fault-finding. Then I would try to show my mother and those about me by my patient, manly conduct when under fire that I had good stuff in me. A boy who is conscious that he is in the right need have nothing to fear. If he is so unfortunate as to have a scolding mother he can simply take it as one of the burdens of life which he must learn to bear. There is no one who has not his difficulties—no boy who has smooth sailing all the time. Just make a rule every day to do the best you can and learn to take the hard things of life with equanimity. Above all, don't lose your temper because others do. A good thing for a boy to learn is not to answer back. A scolding person will soon quit scolding if he comes to find that he is

The great World's Fair, to be held in St. Louis in 1903, is to be the centennial celebration of the acquisition of that great section of our country known in history as the Louisiana Purchase.

Part Fourth-Copyright 1301 by Stansbury Norse, Potsdam, N. Y.

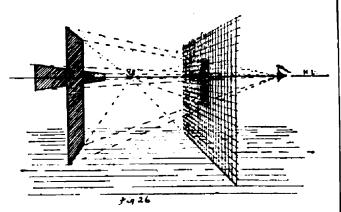

My Dear Lester:

My letter to you this month will consist mainly of pictures, because I believe that one remembers what he sees better than what he hears. That is why drawing is such an important study, and why it is being introduced into the public schools so universally. My first drawing will illustrate 'lines of sight."

Lines of sight are imaginary lines, supposed to be from the eye to any point. If you look up at the cor-

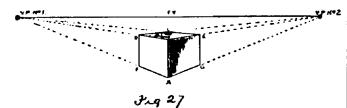

ner of the room, off to the lighthouse we have been visiting, or in any direction at any object, you can imagine a line from your eye to that object-like a string stretched tight. So you see that there could be any number of lines of sight. It is these lines of sight which really decide everything for us, so we have to think of them a great deal. If our line of sight goes straight to our center of vision, or to any point on the horizon line, it is a level line. If it is directed upward or downward it is an oblique line. So you see how you can tell just where your horizon line is. By looking along a level line, or what would be a level line if you could see it, and looking straight ahead of you, (not turning your head or eyes to either side), you can locate your center of vision at once.

In this diagram (Fig. 26) we have an illustration of the picture plane about which I have been talking.

The eye might be yours. As you look at each corner of the cross and see its outline you have a number of lines of sight. I have shown these by broken lines. Now see where these lines pass through the wire screen. At each point on the screen where these lines intersect it we fix a corner of the cross, and when we join these points by straight lines our picture is complete. Just so it is, or would be, with any object. If we could set up such an arrangement all the time between our eye and the object we wished to draw, we could be very sure of the drawing being correct. But that would be impossible, so we have to learn the rules of perspective. When we have done this and can draw by rule we get exactly the same results, and can then be equally sure of the accuracy of our work.

Fig. 27 is a drawing of a cube as it would appear on this same picture plane if we were looking at it in the

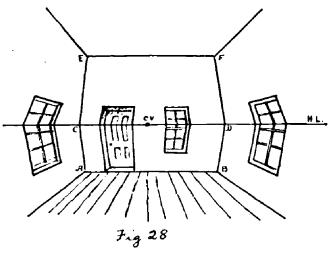

same way. But if you remember what I said about vanishing lines, which are parallel meeting at the same point, you will realize how I got the picture of the cube by the simple rules of perspective without a picture plane.

There is another way in which the picture plane helps us. It forces us to draw certain things as they

are in nature and not as we really see them, and thus it helps us out of many difficulties.

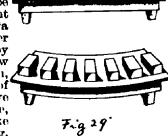

For instance, if you will stand in our long hall once more, or a large room, and hold out your pencil and measure the distance across the room on a level with your eye, and then compare that measurement with the edge of the same wall at the top and bottom, you will find the two last to be the shortest. That is because the last lines are farther from the eye and appear shorter. If, then, you were to make a drawing of the room on that basis you would get one like this diagram. (Fig. 28.) But when we place our picture plane before us we are obliged, when making the tracing, to follow the vertical lines straight up and down

the screen which gives us a picture that appears all right. Then, again, it is the same with horizontal If you will sit in front of a long table, first sticking pins in its edge every six or eight inches you will see just what I mean. Of course, the edge of the table is a straight horizontal line, and to represent it properly it must be drawn straight. Looking through the screen and tracing it you would be forced to draw it so, but if you take the picture plane away and look at first one pin and then the next one, going either to right or left, you will find that the pins get higher all the time, the second appearing a little higher than the first, the third higher than the second and so on. If the pins were then connected by the line which represents the edge of the table we would have a curve instead of a straight line.

Now, suppose each pin stood at the corner of a block of wood. To present these blocks to the eye, in a drawing, so they would appear as they really are, we

would have to draw them in parallel perspective, that is, according to the picthe right way, for we want to represent them as "a whole," true to one center of vision, and not block by block, in detail. If we drew them by the latter plan, having a new center of vision for each block we would get a curved table, all the blocks appearing like spokes in a wheel. (Fig.

The question of whether we ought to draw things in parallel or angular perspective is a very interesting one at all times and often requires careful thought and judgment. Suppose that a man owned some property on a street, living in the middle one of three houses, all of which he wanted me to draw, the drawing to

represent them in the most advantageous way so he could sell the property in some other city, or town. The three pictures I have given here show how the houses could be drawn. Fig. 30 shows them as they would look if I stood in front of the middle house and looked first to the left and then the right, drawing

what I really saw. Fig. 31 represents them as drawn in parallel perspective and Fig. 32 shows them in true angular perspective. Which do you like the best? To my mind the last seems to conform the closest to nature and to be the most artistic, but the owner might object because his property did not show up to the best advantage and would therefore prefer Fig. 31. Fig. 30 would be thrown out entirely because, though it represented what I really saw, it would not give a picture true to the real state of things. It would look like a street corner with a bent house for the middle

You have read something about oblique planes in one of my former letters, that is, planes which do

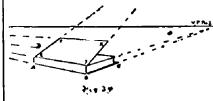

not "lie down flat" or "stand up straight"-planes that are neither horizontal nor vertical. Of course, if you were trying to draw such planes, you would want to know where to find the vanishing point for the oblique lines. Here are three or four drawings which will illustrate the point.

Suppose that you raise the cover of a book, putting something under it to hold it up, as in Fig. 33. Of course you could "make a stab at it," as my

son used to say to me, but you might make a bad job of it unless you knew just what to do. In Fig. 34 we have the principles all worked out. V. P. No. 1 is off the paper. Both that and V. P. No. 2 are on the horizon line—level with the eye. Before we raised the cover E. F., J. K. and B. C. were all parallel lines vanishing at V. P. 2. But the raising of the cover carries the V. P. for E. F. and J. K. higher up. As they are parallel to each other they must both have the same V. P. The question is—where is it? It is ex-

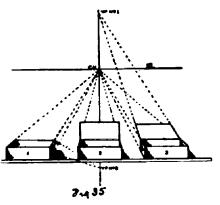

actly over V. P. 2. Thus we find that if we draw a vertical line up from V. P. 2 and extend the J. K. line to meet it we have found the vanishing point. Then draw

E. F. to the same point. Fig. 35 illustrates this further. The horizontal vanishing lines of all the boxes vanish at C. V., (the drawing being in parallel perspective), but none of the cover lines vanish there. That is because the cover of No. 1 is turned back until it rests upon the table, the cover of No. 2 stands up straight, and that of No. 3 is only turned part of the way back. If the

covers were level the cover lines would vanish at C. V., too, but you will see that V. P. No. 2 has moved down from C. V. and V. P. No. 1 has moved up.

Our last picture (Fig. 36) illustrates a great many points. Here, from some high roof, we are looking down upon a varied scene full of interest to one study-

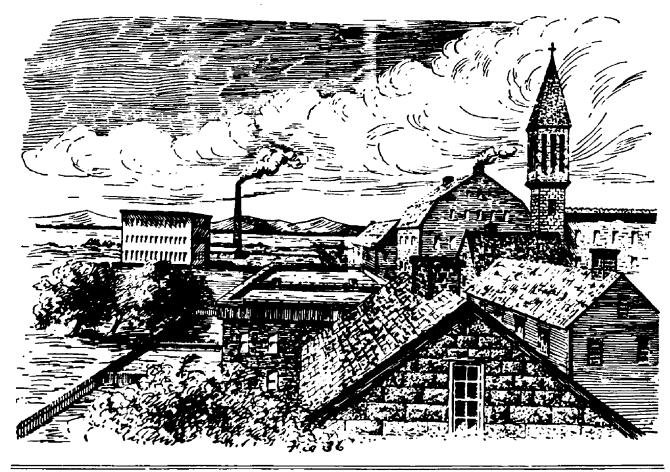

ing perspective. Before we begin to study it we must decide whether it is in parallel or angular perspective. We soon decide, as all the lines running from us vanish at C. V., (the little circle just above the farther shore of the lake in the center of the picture), that it is in parallel perspective. Remembering that in this case all lines parallel to the picture plane have no vanishing points we see why the edges of the roofs, which are oblique lines, do not converge though parallel. We see, too, that lines

above the eye run down to the horizon and those! below run up. The whole scheme proves to us, as it portance of this knowledge, and promising you some-presents a perfect view of such a scene, that without thing still more interesting. I remain, my dear Lesa knowledge of these rules we could not properly rep- | ter,

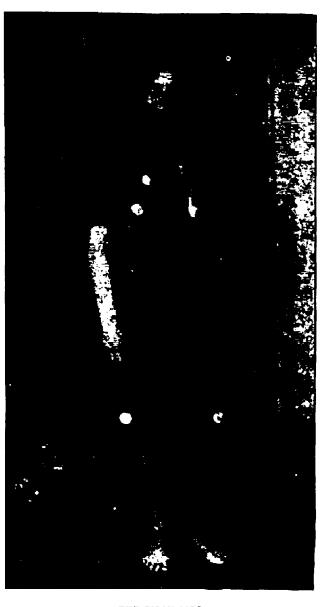

Hoping that you understand and realize the im-Yours to command.

STANSBURY NORSE.

HARRY STEELE MORRISON, "The Boy Traveler,"

Who is Captain-General of the Order of the American Boy, is on a trip around the globe, making his expense money as he goes. He will describe his trip in THE AMERICAN BOY. Next month will appear the first installment, written from Gibralter.

THE GIPSY GIRL Second Prize Photo by Howard S. Wheeler, P. C. Box 337, Rockland, Mass.

BOYS' BUILDING FOR A

At the St. Louis (1903) Exposition

The American Boy will make an effort with the Co-operation of its readers and the friends of boys everywhere to institute a novel feature at the Next World's Exposition.

HE publishers of The American Boy have filed a formal request with the management of the World's Exposition to be held in St. Louis in 1903, that among the Exposition buildings shall be one for boys, to be known as the "Boys' Building." More than that, they are using every means within their power to induce the Exposition management to favorably consider the request. The agitation will be kept up until a definite decision is made, and every boy who reads The American Boy, and every friend of boys is asked to aid in this undertaking.

No world's exposition has ever numbered among its attractions a Boys' Building. It will therefore be a novel feature. Boys are no unimportant element in the country's progress. Twenty years from now they will be the men in charge of affairs the world over. No one has properly estimated the importance of the boy and given adequate thought to the solution of the boy problem. No one who has not studied boys realizes the extent of their activities and the important figure they cut in our life as a nation.

Boys are coming into manhood at an earlier date than ever before in the world's history. Boys are found occupying important positions in every walk of life. They are inventing, they are constructing, they are traveling, they are teaching, they are influencing the world to a greater extent than anyone realizes. It is time that the boy be given his proper place in an exhibit of our country's progress. We suggest that the Boys' Building at St. Louis in 1903 shall stand for the boys of America as the Manufacturers' Building will stand for American invention and manufactures, as the Art Building will stand for the triumphs of American art, as the Agricultural Building will stand for the progress of American agriculture.

It will be no easy task for us to accomplish the result we are after. "Only a boy" will be the supreme objection raised. Now, we want the boys of America to show the Exposition management that they amount to something, and that what they go after they can get. We believe that by our own unaided efforts we could fill a Boys' Building at the St. Louis Exposition with an exhibit that would open the eyes of the world with surprise at the accomplishments of boys. What might not be accomplished could we enlist the co-operation of boys everywhere, and their friends, in making the Boys' Building a success!

WHAT IT MIGHT BE

No one has yet thought out in detail the project of a Boys' Building at the St. Louis Exposition. We have given it some consideration and can outline only what it might be. Boy architects throughout the country might be asked to submit plans, and a prize given for the best one offered. Boy painters and sculptors, of which there are many, might be asked to contribute to its adornment. It should contain an assembly room, in which boys' clubs, boys' organizations, state and national, and associations of adults for the benefit of boys, might hold meetings on stated dates. National conventions of boy photographers, journalists, collectors and amateur workers in every field might be scheduled for the Boys' Building in 1903. A congress of men and women who are interested in boy organizations and the improvement of boy life could assemble in the Boys' Building and there discuss the boy problem in its every feature. Then, too, sections of the building could be set apart for exhibits of boy work in the line of invention, manufactures, printing, stamp, coin and curio collecting, etc., etc.

CO-OPERATION ASKED

We want the readers of *The American Boy*, old and young, everywhere, to write us letters expressing their views regarding this project and making such suggestions regarding it as they may see fit. A little later we shall tell our readers how they may further the project more directly, and by bringing their combined influence to bear serve to accomplish the result desired. For the present we want suggestions—suggestions as to what the building should be, what it should contain. and how it may best serve its purpose to entertain, instruct and elevate boys.

We ask especially for the co-operation of men and women. We have no private ax to grind, and expect no special advantage from our taking the initiative in the movement. Our whole purpose is to serve boys and at the same time add something to the success of the next great American exposition.

Boys, do you stand with us? Friends of boys, can we count on your assistance? Write us freely and fully. Every number of The American Boy from now on will contain matter relative to this subject, until the Exposition management have definitely decided against us, if such is to be the outcome. We believe, however, thoroughly in our cause, and with this belief we do not anticipate failure.

BRAVERY THAT MADE HISTORY

FRANK H. SWEET

The United States, after a long series of depredations by the piratical powers of the Barbary coast, determined, in 1803, to punish them severely, beginning with Tripoli-the worst of the lot. For this purpose Commodore Edward Preble was sent to the Mediterranean with a squadron consisting of the frigate Constitution, the Philadelphia, a heavy frigate carrying forty four guns, and several smaller vessels. While Commodore Preble was making preparations to attack Tripoli, which was strongly protected by forts and ships, the Philadelphia cruised actively in the neighborhood of the town. While chasing a Tripoli-tan vessel on the 31st of October, 1803, the frigate ran upon a reef not marked in the charts, near the mouth of the harbor, and it was found impossible to get her

force, and after ordering the magazines to be drowned and the ship to be scuttled, Captain Bainbridge, her commander, was compelled to lower his flag. He and the whole ship's company were immediately taken to Tripoli and thrown into a dungeon.

But, unfortunately, the work of scuttling had been imperfectly done, and in a little while the Philadelphia, repaired and refitted, was lying at anchor before the Bey's castle, with the Tripolitan flag flying from her peak.

Not only was the loss of the frigate a severe blow, but the fact that she had been added to the enemy's force made the situation extremely awkward. But Commander Preble was fortunate in having among his captains five young men of extraordinary capacity and daring, all under twenty five years of age, and all later of marked service to the country.

Naturally, the common thought was to recapture or destroy the Philadelphia, but Commodore Preble was as prudent as he was brave, and sternly rejected the desperate schemes which were proposed to bring the frigate through so difficult and dangerous a passage as the mouth of the harbor at Tripoli, and would consider nothing except the destruction of the ship at the moorings. Finally a plan was adopted, and the execution of it entrusted to Stephen Decatur, a lieutenant commanding the schooner Enterprise. Decatur was at that time twenty four years old, tall, handsome, and known as an admirable seaman and a man absolutely without fear.

He had lately captured a Tripolitan ketch, the Mastico, which had been renamed the Intrepid. As it was intended to enter the harbor by stratagem, this ketch, which was of a build and size common in the Mediterranean, was to be used, instead of Decatur's own schooner, the Enterprise. The ketch, which was of about fifty tons and carried four guns, was to be disguised as a fruit vessel from Malta, and such of her officers and

men as would be visible, were to be dressed as Maltese sailors. Captain Stewart, afterward the celebrated commodore, was to sup-port the Intrepid with his little schooner

Syren. Though the expedition would be hazardous in the extreme, when Decatur mustered his crew and called for volunteers, every man and boy on the schooner stepped forward. From these he selected eighty two of the most active men. He had intended to take but one of his lieutenants, James Law-

rence—the Lawrence who lived to give the

feelings, changed his mind and took the other two, ing, adding that the ketch had lost her anchors in a ing act of the age." Thorn and Bainbridge, also. Besides these, he had a midshipman. Thomas Macdonough, afterward the famous commodore—and five midshipmen who joined | boat with a fast. him from the Constitution-Charles Morris, afterward Captain Hull's first lieutenant in his escape in another one was lowered from the ketch, commanded the Constitution from Admiral Broke's squadron, and later in his capture of the Guerriere-Izard, Laws. Davis and Rowe. The enterprise was one requiring desperate valor and the utmost coolness and intelligence, and better men could not have been found to

undertake it. About sunset, on February 16th, these men found themselves at the entrance of the harbor, with the grim pile of the Bey's castle frowning down at them. The chain of forts was in a semi-circle around the rocky basin, and so placed as to concentrate the fire of more than a hundred cannon on any point. Close in shore, under the protection of the heavy guns of the castle and the chain of forts, was the Philadelphia, fully armed and manned, with two small cruisers near her, and a number of galleys and gunboats.

ammunition and combustibles to destroy the frigate were on the Intrepid's deck, covered with tarpaulin. The men, armed and ready for the word, were concealed under the bulwarks. A few officers, in round jackets and caps, lay about the deck. Salvatore Catalano, the Sicilian pilot, was at the wheel, and beside him lounged Decatur, disguised as a Maltese sailor.

Presently the breeze fell, leaving the Syren becalmed in the offing, and unable to be of the slightest assistance; the ketch's motion on the blue water of the harbor also became almost imperceptible. But by this time she was close up to the black hull of the Philadelphia, and still moving onward slowly. The Tripolitan officers and men were lying about the frigate's deck, while the officer on duty, smoking a long pipe, hung over the side. The Tripolitan had noticed the Syren three miles away in the offing, and asked what vessel it was. Catalano replied that it was probably the Transfer, a transport which the Tripolitans had lately bought and were hourly expecting.

When the ketch got to within about two hundred

The Philadelphia's magazine blew up with a roar that rocked the castle and the shipe

watchword to the American navy, "Don't give up the ship"—but out of consideration for their ing, Catalano asked permission to lie by until morn- Nelson declared this to be "the most bold and darrecent gale. The request was unusual, and the officer hesitated, but presently said that he would send a

> As this boat was lowered from the Philadelphia. by James Lawrence. ing the fast from the Tripolitan boat, Lawrence rowed back to the ketch, and she was secured to the frigate by a hawser. The crew then roused upon the hawser and breasted along the frigate's side toward the port bow

This brought them directly under the frigate's broadside, and had their character been suspected the ketch could have been instantly blown from the water. But in the black shadow cast by the frigate the critical moments passed until they emerged into a broad patch of moonlight; then their anchors were seen upon the deck, with the cables coiled around them.

'Keep off!" shouted the Tripolitan officer; but it was too late, for the ketch was now grinding against ear her, and a number of galleys and gunboats.

But the crew of the Intrepid never thought of danlike magic upon her decks. The cry of "Americanos!"

Instantly the Americans were scrambling up the frigate's chain plates, through her ports, at every point on which a foot or hand could secure hold. Midshipman Laws would have been first in the ship but for the pistols in his boarding belt catching in the port, so Midshipman Charles Morris got ahead of him. Decatur was the next man after Morris to touch the deck. No orders were necessary here, for every officer and man knew his duty. The Tripolitans, through their hardy life of free-booting, had become celebrated for fierce and determined hand-to-hand fighting; but now they were struggling under the disadvantage of a surprise, and though their courage was reckless, they were confronted by men whom opposition only made stronger. Gradually they were driven below, and once between decks were cut down or forced to jump overboard. Within ten minutes the frigate had again changed hands.

But the Americans had not an instant to lose. So rapidly were the gunpowder and combustibles hoisted aboard and distributed through the ship, that fire was arising from the berth deck before the men in the off. Here she was attacked by a large Tripolitan yards of the frigate's bow, for which she was mak-hold had come up. Two eighteen pounders were

dragged amidships, and pointed downward to blow the ship's bottom out. In less than twenty minutes from boarding, Decatur mustered his men on the spar deck. None were missing, and only one slightly hurt. Then, like cats, they dropped into the ketch from the burning ship, carrying with them a wounded Tripolitan.

But now a new peril awaited them. The stern fast had become jammed, and the ketch could not get away from the frigate. although her jigger had caught fire from the blazing quarter galley of the Philadelphia. It was only by vigorous hacking with their swords that the officers at last cut loose;

then the men settled to their sweeps, while the sail caught the slight breeze that was to help them away. Meanwhile, the commotion had awakened attention on shore, and upon the cruisers and gun vessels. Boats were hurrying toward the ship. But before they reached her, the frigate suddenly burst into a roaring furnace of flame that ran up her rigging,

and enveloped her masts and yards. And in the fierce glow of the burning ship, the ketch was seen slipping out of the harbor under sweeps and sail. Instantly every available gun was turned on her, but the Americans, as Cooper says, "to give one last proof of their contempt of danger," stopped rowing, and rising to their feet, gave three thundering cheers, and then settled down to getting out of the way. Shot and shell from forts and ships and castle were whizzing around them, throwing up the spray on every hand, and the guns of the Philadelphia, which had been kept shotted, began to go off in all directions as the fire reached them. The Americans greeted all these dangers with indifference, and cheered with delight when the Philadelphia's magazine blew up with a roar that rocked the castle and the ships. Soon after, the hull, burned to the water's edge, drifted on the rocks. The crew of the Syren, at the harbor's mouth, saw it all, and the boats, which were manned and in the water to go to the Intrepid's relief, if necessary, now pulled back to the schooner.

When the news reached the United States, Congress passed a resolution of thanks, gave promotions, medals and swords to the officers and a liberal sum in prize money to the crew. Decatur was made a post captain, and his commission was dated from the 16th of February, 1804, the day of his splendid enterprise, so glorious for him, and so honor-

The Boy Who Won the \$36 Camera

In our May number we offered to the boy who sent us one dollar for a subscription for himself or for another, and who estimated nearest to the amount of

Detroit

Detroit

RAY GUTHRIDGE.

next nearest | estimate was that of Paul Wolf, Pleas-1 antville Station, N. Y., \$70,000. Other close estimates were those of Harold Williams, Kendallville, Ind., \$70,892; Clifton H. Bassett, Tonica, Ill., \$69,-875.50; Orville Rowand, Box Elder, Ia., \$70,451; W. B. McLagan, Detroit, Mich., \$70,654.63; Clarence Waaler, Manistee, Mich., \$69.852.98; Harold Sherman, Lake Geneva, Wis., \$70,391.78; L. E. Ladd. Middle Point, Ohio, \$70,900.01; W. A. Kesler, Daggett, Mich., \$70,521.64.

Ray Guthridge, who wins the elegant camera outfit, sent in his estimate on May 24, together with a dollar to pay for another boy's subscription.

In a letter to us of date July 7, young Guthridge says: "I have received the camera and outfit all O. K. and am very much pleased to get it. It is a fine one and comes up to my expectations in every particular. It was a great surprise, as I was not expecting to win it. I am seventeen years old and have one more year of school. I made the estimate on the receipts of the Detroit Postoffice by taking your statement as to the receipts for the month previous and adding two thousand dollars to that amount, as I guessed it would increase about that much. I send my picture, taken with my new camera. I made the picture myself. Everybody congratulates me on my fine camera. I want to

thank you again for it."

A letter from the Rochester optical A letter from the roomester operand camera company that furnished the camera outfit, of date July 17, congratulates the boy on his success. "We can assure him." they say, "and yourselves as well, that the camera in question is one of the best that we have ever manufactured."

The Story of Twenty Dollars.

Lawrence Henderson, Northwood, Ia. tells how he made twenty dollars and what he is going to do with it. "By driving cows to pasture, picking mustard, helping to load hay, mowing the lawn, and odd jobe, I have saved twenty dollars." he says. "My father has a park just outside of the city. I am going to buy with my twenty dollars a Hereford helfer, one that is with calf. I can have the hay that is cut in the orchard and all the oat straw and cornstalks for nothing, so that I will have plenty of feed. I will sell the sweet milk to the creamery, and they will give me back the skim milk I will sell the sweet milk to the creamery, and they will give me back the skim milk for nothing and I will give that to the calf. If I have good luck with the calf it will be worth twelve dollars in two months, but I will not sell it. In a few years I think I can get a start with a good breed of cattle. I can let my stock run in the pasture in the summer time, and I should not wonder if I could make considerable money in the cattle business with my twenty dollar start."

William Hartman, Albion, Mich., says that his father is going to let him have a garden next year and sell vegetables from it. He writes asking that we tell him how to start a good garden. It is a little early to take up this subject, but our young correspondent may look early next spring for some matter along this line.

There are about eighty newsboys in Minneapolis whose bank accounts aggregate \$2.6.7, and whose individual accounts range from \$281 down. Each account is drawing eight per cent interest, and there are at least three accounts above \$200.

These boys owe their start as bank depositors to F. H. Peavey, the millionaire grain merchant. It is said that Mr. Peavey carned his first dollar by selling newspapers; at any rate, he takes a very kindly interest in the present generation of newsboys.

carned his litst donar by sening newspapers; at any rate, he takes a very kindly interest in the present generation of newsboys.

Several years ago he announced that he would place \$1 to the credit of each of the first seventy five boys who after a given date would deposit \$1 each in a specified bank. This would double their account at once. The same offer was made on three subsequent dates in the year, and those boys who made the first deposit could take advantage of each of the others if they chose. In this way some of the boys ended the first year with an account of \$3, and to these accounts one of the local newspapers added another dollar.

This amount even, and the \$2 which some of the boys had, was sufficient to awaken a new interest in the most enterprising, and while some of them have, of course, dropped out of the list of depositors since, eighty have kept adding to their deposits and have a very fair nucleus for a business start. It is noted that the largest depositors of the present time are those who were the first to take advantage of Mr. Peavey's offer.

One of the boys has now entered the State University, and during the past year he has drawn out \$25 to purchase newspaper routes. These will bring him sufficient income to pay his way through the university. Besides this, he still has something more than \$25 on deposit.

The officers of the bank in which the boys keep their deposits take a special interest in this feature of their business. The high rate of interest which is paid the boys is by special arrangement of Mr. Peavey, as an additional inducement towards thrift.

towards thrift.

Earned His Way to the Pan-American.

In our August number we told our read-

In our August number we told our readers of a boy who, by obtaining a large number of subscriptions for The Milwaukee Sentinel, earned his way to the Pan-American Exposition. He was not the only boy who was so fortunate as to win the prize offered by The Sentinel, as there were ten of them. One of them was Harry Ransom, of Milwaukee, who succeeded in obtaining one thousand subscriptions in three weeks' time.

Harry was born at Fond du Lac, Wis, March 19, 1888. His father, Major A. E. Ransom, says of him: "From the time he was a small child Henry has been a great reader, devouring books in half the time taken by his elders. He is very fond of works on history and travel. He enters the eighth grade in school next fall. In 1899 he made a trip to Denver and became familiar with that beautiful city. His first work for a newspaper was in 1900, at Fond du Lac, where he had a newspaper route delivering and collecting." Harry's father, who was graduated from the University of

Saving for the St. Louis Exposition.

says he is sure that all boys who read THE AMERICAN BOY will want to attend the World's Fair in St. Louis in 1905. (They certainly will if the Exposition management determine to have a boys' building.) Edgar R. Bean, Fairfield, Ia., age twelve,

boys' building.)

Edgar says: "Now, I will tell you a plan that I am following, by which I expect to be able to attend that Fair. I save some money every week toward it. I save some money every week toward it. I am saving forty cents a week and have been for several months. I hope this will help a good many boys to St. Louis year after next."

Money Makers.

Harry M. Penny, Covington, Ky., in sending in his renewal subscription to THE AMERICAN BOY, writes: The dollar was earned by me on a milk wagon.

Carl Lemon, Corralitos, Cal.: The way I made the most money was catching gophers at five cents apiece. I made one dollar in about a week and was going to school too. school, too.

Harry H. Brown, Stark, Mich.: I am ten years old and have not had much experience in Euslness, but am anxious to become a business man. My father is in the rug business, and I help by ravelling carpet. I have in the bank twenty dollars and fifty cents which I have earned in this way. I also have a patch of potatoes which I am

raising for market.

James B. Rearwin, Fillmore, N. Y.: I will tell you how I invested one dollar one year ago now. I bought two hens and twenty chickens two weeks old for one dollar. The hens weaned their chickens and laid nine dozen eggs, which I sold at one cent each, making one dollar and eight cents, and I raised twelve of the chickens and two hens, which I sold for four dollars and fifty cents.

Wesley Elseman, Freeport, Ill., writes: I began to save my pennies when I was little. When I was ten years old I made money by selling fish; then I sold rags, copper, brass and other metals. Then I got a job in a bakery during vacation, getting one dollar and fifty cents a week. I am a delivery boy in a dry goods store now, and have a chance to work up to a clerk.

TURNING POINTS IN A BOY'S LIFE

Tenth Article of a Series.

HIS FIRST TRIP AWAY FROM HOME

A boy's first trip away from home is | around him, because, forsooth, he is only no unimportant turning point in his life. By his first trip I, of course, mean the first one taken by him after he reaches the age of conscious observation. On such a trip impressions, suggestions, ideas crowd in upon his plastic mind that ofttimes change the whole course of his boy thought and his boy energy. In that one experience, brief though it may be, his range of thought and imagination widens infinitely. Watch him, and you will find that his work and his play are all influenced by his experiences on that journey. His conversation, before that bounded by the limits of his little daily round of experiences, suddenly widens. He has leaped out of a little circumscribed world bounded by the confines of his immediate neighborhood into a new world peopled with new beings and new things. Someone has said that in the first years of a boy's life he grows horizontally, and in the later years vertically, by which is meant that at first he grows by the widening of the circle of things he sees, touches, tastes and hears, and later grows by mental processes, using as the material of growth the things that have come within the range of his observation. At first it is a growth from withont. Each new impression upon his senses is an addition to the breadth of his mind— a something added to the material from which he is afterwards to build. Later he is found building upon these impressions, comparing, adding, multiplying, reasoning, and this is a growth from within. By so much. therefore, as the first years are full of outward impressions, by so much will the later years be full of inward growth. A boy kept at home, allowed little or no contact with the great moving panorama of the world of men and things never sees the country; we pity the boy

a boy and should stay at home, or because he is too much trouble to care for away from home, or because he ought to stay in school, or because he is very comfortable and happy where he is and does not know what he misses by not goingthat boy is unfortunate, to say the least.

When the writer was twelve, his parents took him from school and allowed him to live for a winter with them in a Washington city hotel. It would have been perfectly convenient to leave him at home with a very willing relative, and he would not then have missed the winter schooling. So some of the relatives in the family thought; but not so the parents. The boy went. For four or five months he never opened a school book, while his boy companions were doing their regular stunts in the schoolroom. He was getting behind in his studies. He was losing his place in his class; yet he was going to school in a larger sense. He was studying geography on a grander scale; thereafter a mountain was not in his mind a picture and definition, but an indefinable reality. An ocean was not a definition-a great body of water separating the continents; it was a profound and mighty thing, with its surges beating into his ears and its billows piling up before his eyes. The launching of a ship, the transporting of men and freight, the building of great machinery, the making of laws, the varied life of a great city, the complicated movements of the machinery of government were thenceforth realities to him. When he returned to school he was a student of books as before, but he needed no illustrations, no pictures, no descriptions. His mind was sufficient unto itself for all these things.

We pity the country boy who never sees the city; we pity the city boy who

🛂 of the plains who never sees the ocean, and the boy of the seacoast who never sees the plains.

The writer thoroughly believes in the education of the boy through his contact with men and things. Books are well enough, but life is better. He himself never misses an opportunity to give his boy a journey, even if to do so is to take him from school. On the journey the father and son are companions, mutually instructing each other, asking and answering questions. The result is that the boy has a breadth of observation, a tenacity of memory, a constructiveness of mind that the father fondly believes is peculiar to his boy. He lays it to no special talent or special aptitude in the lad, but to the fact that he has given him, from the time that he was an infant, the material on which his mind could work.

The writer has little patience with the idea so prevalent, that the boy is a thing to be repressed, to be held in, under the mistaken notion that there is time enough for the boy to see things. The formative time in a man's life is the most important time of all, and that is the time of his childhood. It is then that impressions sink deepest, then that habits are the most easily formed, then that the whole drift of life is determined. Give a boy breadth of observation when he is young; set his wits to going early; let his aspirations begin to take root before the evil days come, and you will not find it hard to keep that boy busy or direct his energies in later life. Repress a boy, blindfold his eyes in his early years, and when he grows to be a young man he will see things whether you will that he shall or not, and he will see them alone, or with some one who may not be as conscientious in his guidance as you might have been. The father or mother who neglects the boy in the years of from five to fifteen, not only loses control of him when the time comes when he is at liberty to see the world, but misses the grandest opportunity for instructing him and some of the most pleasant experiences that can possibly come to a parent.

Did you ever make a traveling companion of your boy? If not, try it.

BOOKS The only Comprehensive, clean, safe and satisfying book published for boys from 6 to B years on the delicate, but most important subject relating to the sexual nature, is by STLVANUS STALL, D. HE BEST PAPER

Mprague Correspondence School of Law, is beyond question The Best Young Men's Paper in America.

As its name implies, it treats largely of the law, but in such a way as to make it of the greatest value and greatest interest to men and women who are not studying law as well as to those who are. It averages forty pages to the month. It's editor is William C. BPRAGUE, Pres. of Sprague Correspondence School of Law; saxt. editor is GRIFFITH OGDEN ELLIS, Vice-Prin. of that school. It treats of all current events in the law and political world from the standpoint of the lawyer. Its departments, "Questions from bar examinations, with their answers, have proved very valuable, while the miscellaneous matter is always unique and highly interesting. The rule of this paper is, once a subscriber always a subscriber. Its subscription list has grown to be the largest that can be claimed by any legal or semi-legal journal. We speak of this to show how it stands among those who know what good journalism is. It appeals to the young men who are in the busy walks of life, in that it treats of current events in a simple concise manner, and one does not have to read through pages of trash to get at the substance of what he wants to know. It is to-day necessary to intelligent citizenship that one give attention to passing events and be able to view them from an intelligent standpoint. This paper supplies what no other paper gives, an opportunity for a brief, condensed, Philosophio review of the world of law.

by studying the IDEAL ARITHMETIC. The book is practical and comprehensive, and may be used in connection with any other arithmetic. Sent on receipt of \$0.00. Address L. B. McKENNA, LL. D., Quincy, Ill.

The Boys' Library

The Ideal Arithmetic.

L. B. McKenna, LL. D., Quincy, Ill., is the author of a manual of self-instruction in arithmetic, which appears to be emin-ently fitted for the purpose of furnishing young people in every sphere of life with an opportunity of training their minds in ordinary business affairs. To present only that which is useful, and to present it in such a form as to be practical, seems only that which is useful, and to present it in such a form as to be practical, seems to be the purpose of the author. Most boys find arithmetic a very dry study. The ideal Arithmetic before us is really interesting. So practical is it that it should be within the reach of everyone, as it solves problems which meet men and women on every side in their daily occumations. occupations.

The Bullen Books.

If any American boy wants to learn all able little street-arab into a clean, straight and brave young man, and keep him strong and true right down among the rough crew of a ship's forecastle, he had better read Frank T. Bullen's record in "With Christ at Sea." The "Cruise of the Cachalot" has the high endorsement of Rudyard Kipling, who says of it: "It is immense. I've never read anything that equals it in its deep-sea wonder and mystery. It's a new world that you've opened the door to."

Boston Librarian: "Ah, ha, my little man; another big book, eh? Well, well, you are a genuine prodigy. That's the way our Massachusetts statesmen are made. Do you read them all, every word?"

Codwalter McBean: "No, sir. I take them home and sit on them at table."

Roy Kramer, Urbana, O., sends us a very good pen and lnk sketch of the monument over the grave of Simon Kenton, to

be seen at Urbana.

Henty vs. Munroe.

author for boys. I do not agree with them Harold Wheeler, Providence, R. I., says he was pleased to see an item in THE AMERICAN BOY regarding his favorite author, Kirk Munroe, "I have read," says he, "all but two of his interesting books, and there are thirty two of them. Many of them I have read three times. Many boys think Mr. Henty is the best history in story."

author for boys. I do not agree with them. Mr. Henty uses many strange words, and there is generally a fight in the middle of each book. Mr. Henty's books are about English boys, while Mr. Munroe's are about good, healthy American boys. Henty deals a good deal in English history, while Mr. Munroe tells American history in story."

MEMORIAL TABLET OF THE BATTLE OF LONG ISLAND

The battle of Long Island was one of a long series of engagements between the British and Colonials during the Revolutionary period. It was fought on August 27th, 1776, and as the British numbered 15,000 well armed, finely equipped and disciplined men, as against less than 8,000 ill-fed, poorly clad, raw and inefficient militia, the result was the retreat of the latter to New York, at that time General Washington's headquarters.

HIGH GRADE BOYJ.

LEA SMITH, HAMMONTON, N. J. st record, 6th grade, Hammonton Central School,

A Poor Boy Outstrips the Sons of Wealth.

Wealth.

In an examination of candidates for Annapolis, Angelo Fesano stood the highest, though pitted against him were sons of wealthy parents who had provided privatitutors for their boys. Angelo is seventeen years old and the oldest of six children of Mr. and Mrs. Vincent Fesano, who live on the top floor of number 119 Mott street, New York City. He was graduated from St. Patrick's school. New York, in June, 1900, and has just completed a year's study at La Salle Academy. Congressman Cremer recently decided to hold a public examination of all who wished to try for an appointment to the Naval Academy from his district. The result was as stated. After leaving La Salle Academy Angelo found employment in a plumbing establishment, where he earned a small salary which went to help swell the family purse, never too full. Angelo will now go before the Examining Board of the Academy and, if successful, will be admitted as a naval cadet.

They Stand at the Head.

Boys in the Home, Church and School

The Cost of a Boy.

In our July number we asked for letters from boys telling us what, in their opinions, they had cost their parents from the day they were born, and what they would probably cost their parents by the time they were eighteen years of age. The answers have been many and interesting. Here are some of them:

J. C. Boyer, Cumberland City, Tenn. says that his father has informed him that he will have paid for himself by the time he is eighteen years old.

Paul Stewart, Nebraska City, Neb., says he has cost his father \$3,129.75. He thinks by the time he is eighteen the figure will be \$6,259.50. Paul must have done some pretty close figuring.

Ben Montgomery, Petersburg, Ill., says that he is twelve years old, and that he has cost about one thousand four hundred dollars so far and thinks that he will cost "dad" three thousand dollars before he is of age.

dollars so far and thinks that he will cost "dad" three thousand dollars before he is of age.

J. A. Himmelt, New Orleans, La., gives some statistics, the reliability of which we cannot vouch for. He says the average cost of bringing children to maturity is six hundred dollars. Up to five years of age it costs three hundred dollars. As for himself, he says that he has cost (and he is twelve years old), about nine hundred dollars.

Charles W Senseman, Mt. Holly Springs, Pa., figures out one hundred and thirty dollars for the first five years, and one hundred and fifty six dollars for the next four. Beginning with his ninth year he went to work on a farm for his board and clothes. From his ninth to his fourteenth year he cost his father fifty dollars, since which time he has paid all his own expenses, besides paying for a course in school.

Frank Buckshaw, Woodlawn, Ala., twelve years old, gives his mother as authority for the statement that during the first five years of his life he cost twenty five dollars, the next two one hundred and twenty dollars; and that during the next six, until he is eighteen, he will cost about eight hundred and forty five dollars, or a total of one thousand one hundred and ninety dollars.

John Bent, Mapleton, Vt., has the computation down fine, making a total for

ninety dollars.

John Bent, Mapleton, Vt., has the computation down fine, making a total for the eighteen years of \$4.6%. He has neckties figured in at one hundred dollars, and candies, ice cream, etc., at another hundred. Just think, boys, of two thousand dishes of ice cream at five cents each! Wouldn't that freeze you?

By the way, here is a picture of Johnnie, and you can tell he is a bright boy and wouldn't have much trouble with those two thousand dishes.

JOHN BENT AND HIS DOG.

P. B. Nonim, McKenzie, Tenn., says that after conference with his father and mother he figures out that from birth to eighteen years old he will have cost two thousand dollars. He adds a few words regarding himself that may not be unin-

teresting. "I am," says he, "running a soda fountain for my father." He says that when he began he drank up the profits.

Chester A. Werts, Weiser, Ida., fixes his cost for the full eighteen years as four thousand nine hundred and five dollars. Chester is nineteen years old. He began school at the age of seven, and at the age of fourteen entered the Weiser Academy. After he was sixteen he worked on a farm and took the architectural course at the International Correspondence

a farm and took the architectural course at the International Correspondence Schools at Scranton, Pa. He is the editor of a little four-page amateur paper entitled "The New West."

Fred D. Grant, Jr., Austin, Ill., says it costs about five hundred dollars to bring a boy from babyhood to ten years of age. He says that from ten to twelve a boy should be able to pay for his own books, amusements, and other small items; that from ten to eighteen a boy will cost about seven hundred dollars, and that from eighteen on he should care for himself, He says: "It costs a good deal to bring up a boy, but what is the cost when it is compared to the joy a parent must have if his boy is honest, truthful and maniy?"

The Mission of "The American Boy."

(Continued from front page.)

most beautiful and prosperous parts of our great country. God help the boys of American towns!

This paper stands for the boy who is neglected—the boy with good parents who miss their opportunities—the boy whose father is busy—the boy with an up-to-date mother—the boy whose nerves are a quiver for action and with nothing to do—the boy whose parents conceive of nothing more for him than that he shall grow, escape the smallpox and go to school.

We propose to enter upon a conscience-stirring campaign that shall awaken men and women to the enormity of their responsibility in reference to the boy problem, and thus contribute something to the improvement of one of the least considered problems of American enterprise—the

DAN RICE AND THE BOYS.

Why He Let Two Hundred of Them Into His Circus Tent.

Dan Rice, the famous circus man, was

Dan Rice, the famous circus man, was fond of boys, and always wanted to see a lot of them in his audience. He never gave a performance, says the Cleveland Leader, when the nooks and corners were not filled with youngsters that had come in free.

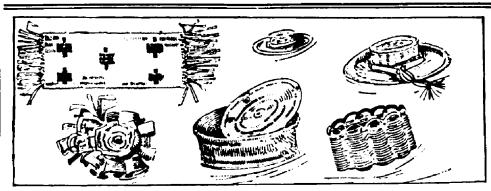

One story of this sort is told by Capt George J. Grammer, traffic manager of the Lake Shore railroad. At the time of the occurrence, Grammer, who lived in Zanesville, Ohio, was standing one afternoon with a crowd of other boys, looking longingly into the tent, but not having the price of admission.

It was Mr. Rice's custom to stand at the door until the first grand entry of the circus people, when he would leave on this occasion he saw the hungry look on the faces of the boys, and called them around him.

him.
"You want to go in, don't you, boys?"
"Bet yer life!" shouted back the young-

"Het yer hie: shouted back the youngsters.
"I'll tell you what. All the boys who
are back here in ten minutes with clean
faces and hands get in."
The words were hardly out of his mouth
before there was a dash for the Muskingum river, and in less than seven minutes
two hundred clean faces and hands came
back to the tent. The boys went inside
with a rush.

11. I. Baumgartner, an Elkhart (Ind.) boy, sends in a very pretty piece of music which he composed, entitled "March of the American Troops."

Teachers from twenty one States are receiving instruction in the Fine Arts Building in Chicago, that they may teach children in the schools the same lessons that were given to little Indian boys before public schools were thought of. In parts of the country children are to be taught in the schools to plait braids of straw and weave them into baskets, hats, rugs, etc. It is said that this simple handiwork will take precedence in the different branches MANY FATHERS WHIP BOYS TO 6 In the schools to plait braids of straw and give parents who have heretof to the time given by children weave them into baskets, hats, rugs, etc. 6 It is said that this simple handlwork will weaving and clay modeling a take precedence in the different branches the value of manual training.

JOHN HAGERTY.

picked up his knowledge of telegraphy by watching the telegraph operator at the depot. Old operators say that he is a depot. Old ollittle wonder.

A Young Poet.

At Frederick, South Dakota, lives a little fellow who bears an honored name and for whom we believe there is a bright future. His name is Thomas John Butterworth. He is a son of Rev. Joseph Butterworth, who is connected with the Board of Home Missions of the Presbyterian Church in the United States, and nephew of Hezekiah Butterworth, the well-known

THOMAS JOHN BUTTERWORTH.

writer for boys. Thomas is eleven years of age. He began writing little rhymes when only seven years old. Several of his verses have been published in local papers. His little brother Hezeklah also writes verse. Thomas sends us one of his latest poems; It is entitled "Our Old Homestead" and is worthy of reproduction. We print it without attempting to correct it in any particular:

OUR OLD HOMESTEAD.

The homestead I remember still,
The place that years have worn;
The little cottage on the hill,
The place where I was born.

Familiar scenes I seem to see; Myself in jacket torn, The garden wide, the willow tree, The place where I was born.

The horses I remember, too. The cow with crumpled horn, And in my mind I often view The place where I was born.

They still are there; the meadow green, The fields of waving corn. And by the roadside may be seen The place where I was born.

The bedroom where I slept at night, And rose again at morn;
The lamp that lit with hallowed light the place where I was born.

The kitchen small, the little stove;
The rusty dinner horn:
I'll ne'er forget where'er I rove
The place where I was born.

My mother baked a punkin pie On each Thanksgiving morn; Then we would fill with joyous cry The place where I was born.

We'd sit and read beside the light
The Bible old and torn,
And pray that God would keep at night
The place where I was born.

These are the scenes that come to me As I arise at morn, But last of all I seem to see The place where I was born.

The boy whose picture appears on the front page of this number of THE AMERICAN BOY is Paul Miller, Russell, Kas. He is a prize winner, having won the first prize in the one hundred yard race at the close of school, time 141-3 seconds.

Boys in the Office, Store, Factory, and on the Farm

On the Alert for Opportunities.

On the Alert for Opportunities.

In no other country in the world are the possibilities for successful careers so great as in the United States.

If you want more salary, all you have to do is to make yourself worth more: fill your place so full that it will run over, and you will soon be in a larger place. Do your work so efficiently that everybody about you will remark it, and be sure that your superior will soon find it out. The man whose ambition is just to do a fair day's work will never get very high up in life. It is the man who tries to see how much he can do, how well he can fill his place, that rises.

Every employer is on the lookout for marked merit, and even if he does not recognize your superior effort others will, and you will soon find your proper place.

"No Trouble to Show Goods."

The merchant who hangs this motto in

The merchant who hangs this motto in his establishment, or, better still, insists on his employees adopting it, makes use of an excellent advertising system. One customer well served usually brings others. "Have you any red sweaters?" asked a young man of a clerk in a large store. "No," was the reply. From his manner, the customer had evidently asked for a red sweater just for a "starter," not having absolutely decided on that color. But the clerk's emphatic "no" seemed to take from his mind all thought of asking for another color, so out he went, probably not to return.

another color, so out he went, probably not to return.

"Why didn't you show him some other colors?" asked the floor-walker.

"Why!" answered the clerk, in surprise, "he asked for a red one."

Perhaps It is some "trouble to show goods." but what else is the clerk there for, and what else are the goods for?

Instructed as to His Duties.

A young clerk in a wholesale house has been spending a large portion of his salary for the last few days buying presents for friends who are "on" to a joke that was perpetrated on him. His employer engaged a new boy and as soon as the boy came to the establishment he was instructed in his duties by our friend, who had been promoted to the position of assistant bookkeeper and given a small office by himself. About an hour after the boy started in, the "boss" came around and seeing him working, asked:

"Has the assistant bookkeeper told you what to do?"

"Yes, sir," was the prompt reply; "he told me to wake him up when I saw you coming around."—Albany Journal.

Sowing Wild Oats.

Said a young man: "That will do well enough for a grown-up man, but a young fellow like me must sow his wild oats." This is Bob Burdette's answer: "No, young man, it does not hurt you a particle to sow your wild oats. Go ahead and sow as you like. But it's the gathering in of the crop that will make you how!. And you have to gather it, too. If you don't, it gathers you in, and one is a great deal worse than the other."

Master Details.

Master Details.

Business is made up of details, of little things; and whoever attempts to shirk them will fail. Of course, it is disagreeable to spend a large part of one's time on the dry, uninteresting items of the routine of business. They are tedious; but no great success was ever built up without close and careful attention to the little principles upon which success depends. There can be no system without details, but an effective system once formed, disagreeable, dry drudgery disappears, and doing business becomes a pleasure instead of a bore. However, while we urge the most careful attention to trifles, we would enter a word of warning against becoming a slave to them. We know men who are all detail; who spend nearly all their time in little things and never get time to do great things.

The Honest Man Wins.

The world at large soon recognizes the honest man in business, and it is quick to give him its approval. "Why do you deal with Mr. Jones?" asks one person of another. "Because he always deals squarely with me," is the reply. Such a reputation soon becomes widespread. Nobody wants to be cheated of the least farthing, and so everybody flocks to the place of business of him who gives value for value, and who trades according to the tenets enunciated in the Decalogue. An honest business man is not only the noblest work of God, but he is the crowning triumph of struggling humanity. The world at large

Too Much.

"You say you think your boy has too great an appetite?" said the physician to an anxious mother. "Do you realize how much a growing boy can eat?" "I should think I ought to if anybody

does," returned the boy's parent. "I'll just put the case to you, doctor.
"Where we were, up in the mountains, the waitress would come in and say to my boy, 'We have fried fish, steak, liver and bacon, baked and fried potatoes, rye biscuit, mutfins and dry toast.'
"And that boy Ned would say, 'I'll take it all, please—and some eggs.'"

The On-Timers Tribe.

The On-Timers Tribe.

We have received the fourth anniversary number of Punctuality, the neatly printed organ of the punctuality reform movement started in Colorado in 1897, known as "The On-Timers' Tribe." Revs. W. G. Templeton and Richard W. Lewis were the promoters of this unique society, whose object is to correct the bad habit of tardiness among young people and impress upon them the inestimable value of time and the importance of keeping engagements promptly. From numerous testimonials presented in Punctuality it is seen that a widespread interest has been taken in the movement throughout all the States and Canada. A simple riedge is taken to be on time and a silver O. T. pin is worn as a reminder of the piedge. So general has been the growth of the On-Timers' Tribe that pins and piedge cards to the number of twelve thousand four hundred and four have been sent out from the home office at Denver. Each card is numbered and registry books are kept containing the names of all those who have agreed to make punctuality one of their very commendable characteristics. Superintendents, teachers, pastors and many others having to do with the training of youth testify as to the merits of the On-Timers' Tribe methods. As a practical corrective of tardiness it can not be excelled. The general agent is William G. Chamberlin, Jr., Box 45, Denver.

Making a Hole in a Single Stroke.

Nearly every beginner at golf asks if it is possible to make a hole in a single-stroke from the tee. The accomplishment of the feat is by no means rare.

Howard Roalf and His Yacht.

Howard Roalf, Keene, N. H., with some assistance from his father, has built a little yacht that he claims can beat any other boat of the same size anywhere. The yacht's name is "Alva." Howard is

fourteen years old, sings in the Episcopal choir and sells daily papers. He is in the ninth grade in school and his ambition in life is to be a naval constructor; and here's that he may be!

boat, such as I shall describe, cost but a few dollars, and can be built by amy boy handy with a hammer, saw

A large cabin boat is, of course, the plaything of the wealthy, but no boy ought to be deprived of a glorious sport, when by working a few days he can earn all that is necessary for a boat such as I describe. Just ask your fathers, boys, and

describe. Just ask your fathers, boys, and see if you can't become captains.

The best place to build a boat is in the backyard. The more room you have when commencing to bend the sides, the better. But to start the boat:

Take a piece of oak one inch thick. eighteen inches long, and two inches wide. Bevel the sides until the width on the narrower side is one inch. This is the stem.

For sides get two clear pine or cedar boards, fourteen inches wide and thirteen feet long. The best thickness is three-quarter inch. Cut them with a saw as in figure 1.

For sides get two clear pine or cedar boards, fourteen inches wide and thirteen feet long. The best thickness is three feet long. The work will now resemble a large to to make a perfectly flat joint. Smear it with white lead, soft putty, or pitch, and over all nail a triangular cutwater, make a perfectly flat joint. Smear it with white lead, soft putty, or pitch, and over all nail a triangular cutwater, make a perfectly flat joint. Smear it with white lead, soft putty, or pitch, and over all nail a triangular cutwater. The work will now resemble a large to the board. The town should now look like figure 4. Now lay your V on the ground. Near the center place a wide board four feet sides of the board. The town should now look like figure 4. Take a good stout rope and pass it around both side pleces. The it with a square knot, put a stick between the pare. Have your common drives all of the sides where they are. Then untwist your rope and do the same thing over again, until the board in the board in the board. The board is the board in the series of the boar

and three-quarters of an inch thick. Of

and three-quarters of an inch thick. Of course they ought to be smooth.

Begin to plank at the bow, being sure to have your joints tight. Let your boards project slightly, say one inch, at the sides. When your boat is all planked in, saw off this projection and plane the ends down to a smooth curve.

For a keel, take a board four inches wide and about fourteen feet long. One inch is a good thickness. Point the end to correspond to the bow, and drive one or two nails to hold it in place. Then bend it to the curve of the bottom and nail.

You are now ready to place your boat

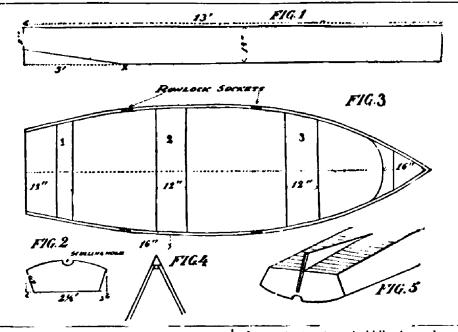

Inside put in four seats as shown in figure 3.

The center of the seat marked 2 should be four and one-half feet from the stern; No. 3, four and one-half feet from the

THE ORDER OF THE AMERICAN BOY

CAPTAIN'S BADGE. Twice Actual Bize.

A NATIONAL NON-SECRET SOCIETY FOR AMERICAN BOYS.

Under the Auspices of "THE AMERICAN BOY."

Object:—The Cultivation of Manliness in Muscle, Mind and Morals.

The object more definitely stated: To promote mutual and helpful friendships among boys; to give wider circulation to high class boy literature; to cultivate in boys physical, mental and moral courage, and develop them along social, intellectual and moral lines; to cultivate purity of language and actions; to discourage idleness, and encourage honest sport and honest work; to cherish and emulate the examples of great and good men; to inculcate lessons of patriotism and love of country; to prepare boys for good citizenship; to cultivate reverence for the founders of our country, and to stimulate boys to all worthy endeavor.

about fifteen miles from Cuiloden. The Captain writes us that they fished with nets, set hooks and a trout line, and caught all the fish they could eat, and brought a string home with them. The Company had rather a tough experience one night. They had taken shelter for the night in a cotton seed house with some seed in it. About twelve o'clock it began to rain very hard; the roof leaked, and it wasn't long before they were almost floating. The Captain says they caught hold of each other and toughed it out. The next morning they built a large fire and dried their clothing, then two of the boys fell into the pond, but, fortunately, were rescued by a companion. The Captain closes by saying, "We all had a nice time, though, and enjoyed it." Boys desiring to Organize Companies may obtain a Pamphlet from us containing the Directions published in the January and February Nos. of this Paper. It is sent free. Company News.

James Duane Doty Company, No. 5, Division of Wisconsin, Neenah, Wis., holds its meetings every Thursday evening. Dues twenty five cents a month.

The Buckeye State Company, No. 5, Athens, Ohio, held a meeting June 19, at which time new officers were elected. This Company holds its meetings weekly. Dues are fifteen cents a month.

In our July number we gave the name of the Kentucky Prince Company as having been recently formed at Louisville, Ky. This was an error on our part; it should have read "Kentucky Prima."

have read "Kentucky Prima."

Toronto Company, No. 1, is very much interested in photography. The Secretary writes us that they have a chemical experiment about once a month, and at every meeting have about six hints in photography for the benefit of that department.

David Wilmot Company, No. 7, Division of Pennsylvania, Macedonia, Pa., has adopted the proposed Constitution, with a few minor changes. It holds its meetings every Wednesday evening at its club room. Monthly dues ten cents each. This Company is very much interested in athletics.

letics.

"Old Abe" Company, No. 2, Division of Wisconsin, Lake Geneva, Wis., held its election of officers July 5. Lawrence Olson was again elected Captain; Harold Logan, Secretary, and Ralph Barr, Treasurer. During the summer this Company has been meeting but once a month. After the first of September, however, the boys will meet every Friday evening at seven o'clock.

The Oglethorpe Company, No. 1, Division of Georgia, Cuiloden, Ga., held its election of officers recently. The Captain says they are fixing up their club room the best they can. Dues of five cents are paid at every meeting. This Company has adopted red, white and blue as its colors. The Captain suggests that these colors be adopted by all the Companies of the Order.

all the Companies of the Order.

William L. Marcy Company, No. 11, Division of New York, Troy, N. Y., sends us the following report: Fees, ten cents per week; fine of five cents for stealing, smoking, chewing, lying, card playing, late for meetings; fine of ten cents for absence from meetings, unless a good excuse is furnished; books overdue, two cents a day; for disorderly conduct, fine of from one to five cents; hours for meetings, 7:30 to 9:15. to 9:15.

Winfield Scott Schley Company, No. 2, Division of Maryland, New Windsor, Md., held its second election of officers July 15, with the following result: Edwin P. Kolb was re-elected Captain; Walter Abbott, Vice-Captain; Chester Bankerd, Secretary; Forrest Otto, Treasurer, and Frank Roberts, Librarian. This Company has ordered thirty new books for its library, to be paid for out of the proceeds of the lawn fete, of which we made mention in our August number. August number.

August number.

Benjamin Franklin Company, No. 2, Division of Pennsylvania. Meadville, Pa., has, at this writing, a membership of seventeen, with prospects for more. At their semi-annual election held recently the following officers were elected: Captain, Ralph Kightlinger; Vice-Captain, Arthur Stem; Sccretary, Archibald D. Andrews; Treasurer, William Flxel; Librarian. Stanley Brown; Sergeant-at-Arms, Carl Maxwell. The duty of the Sergeant-at-Arms is to take care of unruly members during the meetings, and this he does by inflicting one mark upon a member for any kind of

Degrees Conferred.

Degrees Conferred.

Degrees are conferred on the following boys: Barkley W. Wyckoff, Jacksonville, Ill., one degree for industry and devotion to duty; A. G. Spring, Trent. Wash., one degree for skill and experience in travel, one degree for purity of conversation and habits, and one degree for habits of thrift; William H. McVay, Trent, Wash., one degree for energy and determination amid difficulties, and one degree for purity of conversation and habits; F. E. Canfield, Trent, Wash., one degree for purity of conversation and habits; Carrol Sankey, Trent, Wash., one degree for skill in athletics; Willie Sperber, Trent, Wash., one degree for skill in athletics; Willie Sperber, Trent, Wash., one degree for good scholarship, one degree for energy and determination amid difficulties, and one degree for good work in behalf of THE AMERICAN ROY and the Order; Stanley Taylor, Jamestown, O., one degree for unusual musical skill.

Running Hop, Step and Jump Senior and Junior Championships.

The July AMERICAN BOY Field Day contests resulted in the Running Hop, Step and Jump Senior Championship going to Rudolph L. Marshall, Trenton. N. J., his record being thirty nine feet and one-fourth inches, and the Junior Championship to Oscar Everett, Trenton, N. J., with a record of thirty eight feet three and one-half inches

inches.

SEPTEMBER FIELD DAY CONTEST.

Potato Racing.

has, at this writing, a membership of seventeen, with prospects for more. At their semi-annual election held recently the following officers were elected: Captain, Raiph Kightlinger; Vice-Captain, Arthur Stem; Secretary, Archibald D. Andrews; Treasurer, William Fixel; Librarian. Stanley Brown; Sergeant-at-Arms, Carl Maxwell. The duty of the Sergeant-at-Arms is to take care of unruly members during the meetings, and this he does by inflicting one mark upon a member for any kind of misconduct. When ten marks have accumulated this member pays a fine of tencents. The captain writes us that they find this method is very useful. This company is greatly interested in base ball. The Captain says that "Field Day" is one of their nolldays, and each event is closely contested. The boys are contemplating a camping trip in the near future. The Oglethorpe Company, No. 1, Culloden, Ga., went on a camping expedition a short time ago. They camped at Lamar's Mill,

BASEBALL TEAM OF BENJ. FRANKLIN COMPANY NO. 2, Pennsylvania Division, Order of the American Boy, Ralph B. Kightlinger, Captain.

them. The referee should send us the name and age and time of the boy over fifteen who makes the run in the shortest time, and the same particulars as to the boy under fifteen years of age who makes the best run. To that boy over fifteen who, in all the Companies of THE ORDER OF THE AMERICAN BOY, makes the best time, as reported by the referee, we will give THE AMERICAN BOY SENIOR POTATO RACING CHAMPIONSHIP; and to the boy under fifteen, THE AMERICAN BOY JUNIOR POTATO RACING CHAMPIONSHIP.

Medal presented to J. Carroll Knode, Hebron, Nebraska-by the publishers of "The American Boy," for the best standing and running broad jumps made by a momber of the Order of the American Boy in the May Field Day contests of the Order. A like medal for junior championship went to Minor Wasson, of the same place.

the libraries of five sterling books
for boys by sending fifty cents to
the publishers of THE AMERICAN
ROY ₿ воў.

Minor F. Wasson, Captain of the Stotsenberg Company, No. 1, Hebron, Neb., writes us under date of August 10: "We received the library this morning and think the books are very nice."

A First Medalist.

A First Medalist.

The Christian Herald and Signs of Our Times, New York City, has awarded to William Rohrer, of Delta, Pa., a medal, in recognition of his brave and humane act in rescuing Oliver Weiser from death.

On January 4 last, at the close of school, a number of children repaired to Ramsey's Pond, near Delta, to skate. The pond was eight to ten feet deep. At some distance from the bank the ice gave way, and Oliver Weiser was submerged up to his chin. He struggled to climb upon the ice, but as it broke under his weight the hole widened. Young Rohrer, a lad of fourteen, threw himself flat upon his stomach and began to crawl toward the drowning boy, directing his comrades to catch him and each other in turn by the feet until a human chain was formed to

WILLIAM BOHRER

the bank. It was a desperately hard and dangerous task, but the boy was saved. During the progress of the rescue, Rohrer was in imminent peril. At times he was

During the progress of the rescue, Rohrer was in imminent peril. At times he was partially submerged, and it looked as if he too would be lost under the ice, but he never once lost his grip on Oliver.

What adds to the value of the noble and unselfish deed is the fact that the two boys had theretofore been opponents and antagonists. In the hour of danger young Rohrer forgot all personal differences. William is a manly little fellow, and when not at school is working to help support his mother and sisters.

"The American Boy Shut-in Society"

Every boy who is sick or crippled and compelled to remain indoors from morning till night, day after day-one who is likely to be confined to his home for months or years to come-may have a free subscription for one year to THE AMERICAN BOY. Such a boy is entitled, also, without any cost to himself, to be a member of THE AMERICAN BOY SHUT-IN SO-CIETY.

Names of New Members of "The American Boy Shut-in Society."

New members received since issue of August number:

Scott, Walter Ford, Robert H. Spence, John Shavers, D. Olin Billings, Albert Schanze, Ira Anderson, Ernest Avery. Ira Anderson, Ernest Avery.

Feed for Thought.

Here are some things for the shut-in boys to think about:
What would be a good motto for this society?

Is there a botter name for it than THE AMERICAN BOY SHUT-IN SOCIETY? What can the members do for one another.

What can the members do for one another?
What would be a good design for an emblem or pin that the boys may wear?
If you were asked to name colors for the Society, what would you select?
What suggestions have you to make for the benefit of the Society and its members?

The total number now in THE AMERI-CAN BOY SHIT-IN SOCIETY is eighty five, and the Society is just sixty days oid.

The editor of "The Shut-in Friend," Flushing, N. Y., noticing that we are furnishing THE AMERICAN BOY free to all shut-in boys, writes us a letter offering to supply us with the names of shut-in boys from his list, and we have accepted the offer.

W. Gilbert Stover at His Desk.

This is a picture showing W. Gilbert Stover, an AMERICAN BOY "shut-in" who has not been able to walk for three years. He says that he passes his time in reading, writing stories and poetry, playing on a guitar, zither and harmonica. He has charge of the telephone, a desk 'phone, which stands on his desk, by which he helps his father in his business of growing about five years ago.

Always Willing to Take Orders.

Here is another oft-neglected opportunity. How many customers could be retained by a prompt willingness to be obliging?

"Whenever we received a call for an article foreign to our stock," said a clerk. "we immediately offered to get it, and, if it could be procured in the neighborhood, the customer was always willing to wait a few minutes for the accommodation; otherwise, we procured and delivered it. Thus our store won name and fame, and the neighboring stores felt the effect, though they knew not the cause.

"I intended asking you to get it," a new customer would often say, "for I've been to several places in vain, and have heard that you can get anything in your line which you haven't in stock."

This simple method, however, which is a benefit to the merchant as well as to his patrons, is one that is seldom strictly observed.

Answers to Correspondents.

G. D. R., Baden.—The stamp you send is worth about ten cents a hundred.

C. G. P., Honor.—The ten cent certificate and fifty cent Entry of Goods are worth one cent each.

Milton B. C., Chicago.—The three stamps you mention are of the current issue of Cuba and are worth about five cents.

Edward C. H., N. Y.-The two cent black Andrew Jackson is worth from three to five cents, and the three cent locomotive one to two cents.

Alfred G., Suisun, Cal.—Your inquiry is not very clear, we hardly think it likely the prices you mention are those asked for the stamps, as they are worth quite a little more than that.

Ira G., Sloux Rapids. There are several different one cent and five cent Chile stamps; the current one cent green and five cent blue are very common and only worth a cent each.

Eugene T., Prairie Depot.—The one cent newspaper of the 1885 issue is catalogued at twenty cents, and the twelve cent of the same issue \$1.25. They generally sell for about half of these prices.

G. L., montezuma.—There is no three cent Hong Kong surcharged twenty cents; the thirty cent violet surcharged twenty cents is catalogued at one dollar, and the twenty cents on thirty cents vermilion is catalogued eight cents.

S. C. S., Lansing.—Used Heligoland stamps are rare for the reason that this island has an area of but a few square miles and a population of from two to three thousand consequently. a population of from two to three thou-sand, consequently comparatively few stamps were used. The unused Hellgoland stamps generally seen in boys' collections are reprints and of absolutely no value. German stamps are now used on the island. Your idea of organizing a stamp club was excellent, and we hope the interest will continue. We will try to enlighten you on any more difficult questions which come up. up.

Samuel R., Galveston.—The stamp you describe is the ten centime Alsace, and is catalogued used at six cents for the upright net work and twenty five cents for the inverted net work. The latter variety is that in which the points of the lines in the ground work point towards the bottom of the stamp. These stamps have been extensively reprinted and are found in a great many collections; the reprints are all of the inverted net work variety and can also be told by the size of the word "Postes," which, in the originals, is 12% to 13 millimetres long and in the reprint is only 11 to 12½ millimetres long. Galveston.-The stamp you Samuel R. only 11 to 12½ millimetres long.

Stamp Catalogue is published by the Scott Stamp and Coin Co., 18 East Twenty Third treet, New York.

H. C. L., Duluth.—Pen cancellations on stamps as common as the two cent Canada Christmas do not increase their value. The five rin Japan 1900 and 1 anna Indian revenue are both very common. British stamps have been used by the British army in South Africa and China, and if these are on the letter, or show the postmark clearly, we think them worth much more than those used in England. The variety of one cent envelope you mention more than those used in England. The variety of one cent envelope you mention is caused by a surplus of ink on the plate and is of no value. The current two cent red U. S. is probably found in as many, if not more, distinct shades than any other U. S. stamps. Some of these in the future may be scarce. An interesting addition to your collection and one to be made at little or no cost would be a collection of shades of this stamp. The two India envelope stamps are worth about six cents.

F. H. B., Woonsocket.—The best way to secure a list of current postage stamps is to obtain a copy of the Standard Postage Stamp catalogue, which costs by mail fifty eight cents; this gives a list of all and the price of nearly every postage stamp ever issued, obsolete as well as current. We do not believe you would obtain very satisfactory results by sending money to postmasters abroad as they very frequently demand a premium for stamps desired; as a rule the ordinary collector can buy stamps here in the United States to better advantage than he can by sending abroad to un-F. H. B., Woonsocket.-The best way to A PACKET OF STAMPS to bors who will sell our stamps at 60% commission. Send reference.

Notice to Correspondents.

Notice to Correspondents.

Before writing the coin editor letters of inquiry it would be well if our correspondents would look over these columns in the back issues to see if their questions have not been already answered. Again, remember that we have a great many letters of inquiry and that at least two months must elapse before replies can be expected to be published. There are some letters that we could not be expected to notice; for instance, one wants "to know the premium on a nickel cent that is so old and worn that the date is gone," and possibly he encioses the cent, which is not worth the postage one way; another wants to know the value of an 1804 dollar, 1815 cent or 1804 S dime that he has not got, and is never likely to see, and another will send in a long list of his coins, almost a catalogue of his collection, and ask us to quote prices on each one. While the coin editor has a great deal of time and patience, it is quite probable that such communications will receive no attention in these columns. Where a quick response is necessary, the coin editor will be pleased to give prompt attention if a self-addressed and stamped envelope is sent with the inquiry.

The Numismatic Sphinx.

R. C. Brode, Newcomerstown, O .- No premium on your coins.

Hjalmer Hedine, McPherson, Kas.-The

dime of 1850 has no premium.

C. Garvey, Buffalo. N. Y.—Your coin is a common one, Kreutzer of Austria.

L. A. Richards, Evant, Tex.—There is no premium on an 1857 half dollar.

Ben Elliott, North Platte, Neb.—There is no premium on the quarter dollar of 1856. Geo. W. Wagar, Titusville, Pa.—The two cent pieces of 1864 are only worth face value.

Ray Griggs, Madison, Wis.—A good 1834 half dollar sells at the dealers for seventy five cents.

Frank Carey, Canajoharie, N. Y.-Your 32 half dollar the dealers sell at seventy five cents.

Herbert K. Eilber, Crediton, Ont.—Your rubbing is from a common cent of the Netherlands.

Jos. B. Champlin, Hartford, Conn.—A good 1802 cent sells for fifty cents. Your others are very common.

Harry G. Kenmark, St. Anthony Park, Minn.—The dealers charge one dollar for a gold quarter of 1871.

Glen Morgan. Traverse City, Mich.—A half dollar of 1854 O (New Orleans mint) commands no premium.

Ashley W. Kendrick. Saratoga, N. Y.—You have some nice coins for a collection, but all are quite common

but all are quite common.

Elwell F. Jackson, Trenton, N. J.—Your 1807 half dollar, Liberty head with flowing hair, is worth eighty five cents.

Hamilton C. Ballagh, Staunton, Va.—A good Hawalian half dollar 1883 (only date of issue) sells for seventy five cents.

H. Conrad. Biairsville, Pa.—No. 1, Hungarian two Kreutzer; No. 2, Spain diez (10) centimos of Alfonzo XII. Both common.

Benjamin C. Harris, Jersey. Ga.—An 1817 cent in good condition sells for fifteen cents. If it is the fifteen star variety, fifty cents.

Wallace Black, 1809 Williams, Omaha, Neb.—A two cent piece of 1864 has no pre-mium. Only the 1873 date brings any premium.

Graham Liser, Montezuma, Iowa.—A half cent of 1832 if in good condition is worth lifteen cents. Your other coins only face

Ford Penn. New Market, Ind.—Your half dellars of 1854 and 1855 command no premium unless they are in at least uncirculated con-

Robert Chase, Millstadt, Ill.—A Jackson token or cent of the hard times period and quite common. See answer to Maurice Underwood.

Geo. V. Bedford, Emerson, Manitoba.— Your coins, while nice for a collection, bring no premiums to speak of. You have them all correctly located.

Arno Stein, Sheboygan, Wis.—A five-france plece of Louis Philippe (1830-1848)) of France. In good condition it is worth at the dealers one dollar and seventy five cents.

Philip C. Cody, Lansdowne, Pa.—All the early California gold halves and quarters bring a premium, usually selling from one to two dollars, depending upon date and condition.

Ralph W. Hallinger, Akron, O.—No. 1 is a half crown. 1831, of William IV. (1830-37). England, and worth a dollar; No. 2, English half penny, George I. (1714-27), 1720, worth half penny, C twenty cents.

L. W. Lugar, Derby, Iowa.—The dealers charge \$2.50 for a fine 1878 dollar with eight feathers in the eagle's tail. The 1853 silver coins with arrow head each side date are worth only face value.

Floyd H. Wenks, Portsmouth, O.—Your paper money is so badly worn that it is worth only face value. The banks redeem such at face value. The editor does not buy coins or paper money.

Howard F. Barber, Warsaw, Ind.—Your rubbing is taken from a common cinco (five) centimos of the Spanish Republic 1889-76, and represents a brief, but interesting, period in Spanish history.

Howard F. Barber, Warsaw, Ind.—Your pieces are all common. The only small cents that command a premium are the flying eagle of 1856 (issued only in proof) and 1877 Indian head. The dime of 1853, with arrow points, only face value.

Everett Anderson, New York.—You have your coins all correctly named. All are, your coins all correctly named. All are, however, comparatively common and worth less on account of their only fair condition. Any dealer would sell you the three pieces in good condition for half a dollar.

Maurice Underwood Common and was a selection of their or their and the selection for half a dollar.

Maurice Underwood, Corning, O.—Your rubbing is from a Jackson token of 1837. The phrase, "millions for defense, but not one cent for tribute," is given to Charles Cotesworth Pinckney, our minister to France in 1796. See comments in this column July issue.

Howard Watt, Toronto, Ohio.—No. 1 is an Austrian thaler or dollar of Francis II. (1.92-1806), 1795. When in good condition worth \$1.50 at the dealers. No. 2, a five franc piece of Louis Philippe of France. See answer to Arno Stein. Your other coins quite common. quite common.

Arthur H. Parker, Ellsworth, Me.—The dollar of 1799 sells for about two dollars, and the 1877 trade dollar, if in uncirculated condition, is worth the same. The Columbian half dollar of 1893 sells for sixty cents. Your "Union Forever" is a common war token. No premium on the others you men-

Gus Miller, Oakland, Cal.—An 1855 half dollar is worth fifty cents. Your Delaware colonial bill for one shilling, dated Jan. 1, 1776, if fine condition, would sell for half a dollar. There were eight denominations of this series and date ranging from one to twenty shillings. All sell now at the same price. same price.

John B. Blain. Framingham, Mass.—Brazil xl reis of Maria I. and Peter III. (1777-86), 1784. This coin is counterstamped with the arms of Portugal, as was a common custom at this period. Sells at the dealers for half a dollar. A common habitant token of Canada. One cent of 1798, worth twenty five cents. Spain, two reals, Charles IV. (1789-1898), 1799, of no value.

Elmer E. Lacey, New Rochelle, N. Y.—Your rubbings are taken from coins as follows: Russia, Catherine II. (1762-96), 1793, five kopecks, worth thirty five cents; Russia, for Siberia, Catherine II., ten kopecks, 1767, worth at the dealers \$1.25; half a dollar 1819, seventy five cents; Chinese cash of Hslea Feng Dynasty (1850-62), of little value; 1839 cent sells for ten cents.

Biggest Moose Head in the World.

An Indian hunter of the Hudson Bay country has killed a moose whose antiers have a spread of six feet two inches. They now adorn the country house of Mr. Olcott, a New Yorker, at Bernardsville. The moose is said to have stood in life some twenty two or twenty four hands high, weighing three thousand to thirty five hundred rounds. high, weighing three five hundred pounds.

Fritz and His Pets.

There are some very young boys who enjoy THE AMERICAN BOY. The fact is
that they share this enjoyment with their
fathers is shown by the following letter
to THE AMERICAN BOY from Fritz's
father, who is the pastor of the Methodist
Episcopal Church at Daytona, Fla.:

Fritz to a Florida boy. His father is a

Episcopal Church at Daytona, Fla.:

Fritz is a Florida boy. His father is a Methodist minister, so he gets to see many places, with their ever varied scenery and objects of interest. Fritz is a subscriber to THE AMERICAN BOY. But he never reads it. He is only five years old. He can read the meaning of the pletures quite well, though, and enjoys hearing his papa read the interesting items about boys and animals.

His pets are not ponies, nor cats, nor pigeons, nor goats, but he has a dog with which he spends many happy hours every day.

His pets are not ponies, nor cats, nor pigeons, nor goats, but he has a dog with which he spends many happy hours every day.

The pets to be told about are all "wild." Fritz's home is in Daytona, a beautiful little city in the woods, and the squirrels live here by the thousands Fritz finds acorns and corn and the squirrels come cautiously down from a tree to pick up the nuts flipped onto the ground for them. Sometimes they steal his nuts and grains of corn off the veranda; and one little fellow slipped up one day and touched his finger with its wiggling little nose. A favorite attitude of the squirrel when eating is to climb up on the side of a tree and hang by the hind feet, head down, holding a nut with its fore paws.

When bunny is not hungry, if you give him an acorn he will bury it for future use. But first he nibbles a little hole in the acorn. On examination it is found that he has taken out the plumule—the part that sprouts (or germinates) to make the young oak. This he does so the acorn will not grow. Further investigation of Mr. Bunny's treasures shows that he always burles the acorn with the hole downward. If the hole was up, then it would fill with water when it rained and the acorn would rot. Wise bunny!

Another of Fritz's nets was the Florida Jay (Aphelocoma floridana).

These he had when he lived one hundred miles south of his present home. They would come from the trees and scrub when called, light on his hand to eat bread and crackers, and if a piece of cracker was too hard, Mr. Jay would sometimes get up on Fritz's head and peck the cracker to pieces, holding it in his claws. Fritz was only two or three years old then and the jays would sometimes rob him of the bread and butter given him to eat, and then he would have a cry over his "lost treasure."

Once Fritz enjoyed the quiet companion-ship of two alligators. They were very droll pets for they never did much that

once Fritz enjoyed the quiet companionship of two alligators. They were very droll pets for they never did much that was interesting, except to refuse for weeks and weeks to eat anything. Sometimes they would grunt like a tiny pig or hiss like a goose and appeared to like attention from their master.

If the editor admits this to a place in his excellent paper may be Fritz will have something more to say in THE AMERICAN BOY some day.

OUT FOR AN AIRING. Photo by Julian H. Gist, 2214 Normal Street, Codar Falls, Iowa.

What We Owe the Cow.

milk to the value of nearly one thousand dollars. During the same period she has brought into the world ten calves, worth, at six months old, two hundred and seventy brought into the world ten calves, worth, at six months old, two hundred and seventy five dollars. A twelve hundred pound animal will give the butcher dressed beef worth seventy five dollars. Her hide tanned and made into shoes will bring nearly two hundred dollars. The hair will sell for something, that on the tail being the most valuable, it being used with horse-hair for stuffing sofa and chair cushions, and for wigs. From the short hair felt is made, used in making blankets, roofing felt, coverings for boilers and for steam pipes. The value of her hair, we will say, is one dollar and fifty cents. From the interior of the horns a pith is taken, which goes to the glue pot. The hard portions are used by comb manufacturers and button makers. A pair of horns will make four combs. We will count the horns at twenty five cents. Mouthpieces for pipes are made from the tips of horns. Count these at one dollar and twenty cents. The large bones of the animal are made into knife handles and toothbrushes, the smaller into buttons and a score of other small wares. The waste is used as a fertilizer or to make animal charcoal or ivory black and bone naphtha. The hoofs are used to make glue, gelatine and isinglass. The tailow and grease will make soap and crude glycerine. The sinews are made into catgut. From the parings and cuttings of the hide is made a product from which prussic acid is obtained, while from the marrow of the larger bones, a pomade is procured.

Someone has figured up that the grand total which we own the decided and total which we own the court is given but the

procured.

Someone has figured up that the grand total which we owe the cow is sixteen hundred dollars.

BENNETT O. CLARK

Tricksey and His Tricks.

Bennett C. Clark.

Bowling Green, Mo.: When I was a very little boy I saved up my money until I had

five dollars, with which I bought a calf. Now I own a Shetland pony worth about one hundred and fifty dol-lars, a Jersey cow and calf, and have be-tween twenty five and

thirty dollars in money.

D. W. Fisher, of Franklin, Mass., owns two-year-old cat that does almost everything short of talking. For nearly! the whole of the two years his owner has been training him. It was not long before Tricksey could rear himself on his hind legs and go through all the paces of a regular track pedestrian. Then he learned how to waltz, and does it quite gracefully. He has learned the manly art of self-defense, and his poses would not discredit a pugilist. His latest achieve-ment is riding a bicycle. Mr. Fisher would not part with him for a hundred dollar bill.

The trouble with most young men is that they do not learn anything thoroughly, and are apt to do the work committed to them in a careless manner. Forgetting that what is worth doing at all is worth doing well, they become mere drones, and rely on chance to bring them success.

how the nome for wait dogs came to be founded.

Now the door bell is apt to ring at any moment, and standing out upon the sidewalk you may see some freckle-faced urchin with a decrepit canine under his arms. "And if you please, ma'am, is this the lady that takes care of the dogs? Cause if you is, here's one." This is how many of the waifs "ave been brought to the Kennedy home, which is a large and hospitable one. With each doggie's advent into the home, there is a long tale of woe, of sticks, tin cans, bones, and beatings galore. The fame of the home for the waif dogs has spread, and at times there are as many as forty to fifty dogs enjoying princely hospitality such as they never dreamed of in their dog lives.

In the ten years, which is about the number during which the average cow is of food, and then a box of straw for midavailable for dairy purposes, she produces day naps. Each has his bed, each his sep-

The name of the street is Music street.

If any in the open door comes a medicy of the open and the street is music street.

If any in the open door comes a medicy of the open and the open door comes a medicy of the open d

said a visitor recently. Said the chatelaine of the household. "and it doesn't work. There is too much red tape to begin with. and far less thanks. Besides, there are any number of homes for children, and I be-lieve there is no other refuge for dogs." "There's the pound," said the other

Ugh, it is enough to make one shudder,

Ogn. It is enough to make one shudder, this pound.

As Mrs. Kennedy says, no one with any feeling whatsoever would resist looking after a child that needed care, but only one in a hundred would give a second thought to a waif of a dog.

ALL READY? LOOK PLEASANT! Photo by Earle A. Bannister, Thompsonville, Mich.

THE AMERICAN BOY offers twelve prizes of Two Dollars each for the best Amateur Photograph received during the twelve months in the year, one prize for each month, also a second prize each month, of one dollar, for the next best photograph, the competition to be based upon the originality of the subject and the perfection of the photograph. The contest is open to subscribers only. Photographs will be returned if stamps are sent for the purpose. All photographs entered in the contest and not prize winners will be subject to our use unless otherwise directed by the sender, and fifty cents will be paid for each photographs in any event to be our own, without further payment than the payment of the prizes. Write on the back of the photograph its title, with a description of the picture, and the full name and address of the contestant. THE AMERICAN BOY offers twelve dress of the contestant.

Answers to Correspondents.

Charles A. Otis—Address the Stanley Dry Plate Co., Newton, Mass.

Hal Martin—Tell your local dealer in photographic materials to write to a wholesale house for the article.

Peter Y. Smith—Hold your camera perfectly horizontal, and then your buildings will not look as if they were falling over.

Harold Earl—Solio paper will stand the toning bath spoken of in another article in this number of THE AMERICAN BOY.

Charles Heritage, Will tell you all about

Charley Heritage—Will tell you all about Pyrocatechin as soon as the editor can get some to experiment with. Until then THE AMERICAN BOY prefers not to advise

MARION S. TISDALE, SLATTON, MINN.,
Age 10, on his Indian Pony, "Bob," in a Fourth of July
street parade.

With a Comment or Two.

Herbert Post, Long Island, N. Y., sends "A Day on the Beach." Some city folks have come down for a day's outing, and he has taken advantage of the occasion to get a picture of them and their traps. It is nicely printed. "After the Storm," by Charles P. Tuttle, New Haven, Conn., shows an old elm tree partly blown down over a stream, its dead branches being thrown into a confused tangle. The reflection of the bank in the water is very effective.

tillowin that a confider tanger. The reflective.

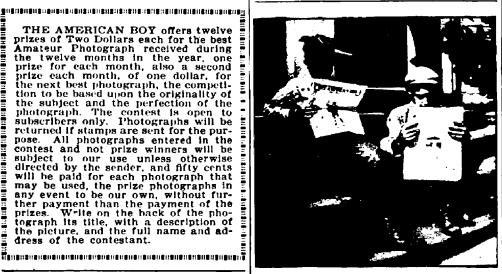

"The Noonday Meal," by Charles H. Otis, Ann Arbor, Mich., shows a tent, in front of which are three boys "chawing" their "rations." It could have been improved if printed a triffe darker. "David and Jonathan," by Edvan S. Hitch, Waycross, Ga., is a remarkably good piece of photography. It shows two white horses in the foreground, lovingly caressing each others' necks. There is an appropriate background of trees, and the clouds in the sky show finely. The toning is also just the right color—a purplish black. The other picture by the same person, "The Man With the Hoe," is good, but does not equal "David and Jonathan."

"Camping," by Benjamin Martin Washburn, Bethel, Vermont, is a group of merry boys and girls in the woods. There would have been more detail, probably, if the developer had not been quite so strong: but these wood pictures are usually hard to develop up evenly and acceptably. Doubtless every one of the group will want one of the prints. Herman Lick's "Beauty"—a boy holding a fine large cat—is very clearly taken. Herman lives in Denver. Col.

"A Mississippi Steamboat," by Ernest

Col.

"A Mississippi Steamboat," by Ernest Nichols, Rock Island, Ill., showe one of these great boats loaded with an excursion party. It is evidently a very fine negative, but the toning has been carried a

"READING THE AMERICAN BOY." Photo by Harry D. Best, Jr., 220 Alabama Street, Mem-phis, Tenn.

little too far, giving it a green tone in one place. Perhaps it was toned in a combined bath. If so, Ernest will have better results by doing this in two instead of one operation. "A Feathered Monarch," by Harold J. Woodman, Chicago, Ill., shows a great swan in the water. It is nicely focused and well timed, but if half of the foreground is cut off an improvement is immediately seen. Don't be afraid to use the knife freely in trimming. "Up the Stump," by Rollin L, Hopkins, Kalamazoo, Mich., Is as sharp as can be, and shows the grain of the wood finely of an old stump, in the middle of which is a great round hole, through which a friend has thrust his head. The picture shows what queer things nature will sometimes do in the way of getting around or over natural difficulties. The tone of this print is excellent.

AMERICAN BOY prefers not to advise about it.

Wm. Williams—Dark spots on your pictures may be caused by light apots on your negatives; uneven development. Be sure that the developer flows evenly over the plate the very first thing.

Grant Lippincott—The paper you mentimes blisters are caused by sudden changes in temperature; for instance, taking the print from a cold hypo bath and puting it in water many degrees warmer. A good way to prevent blistering is to put a hardener in the fixing bath, say an ounce or two of hardener to twenty ounces of fixing bath.

Mich., is as snarp as can be, and snow the grain of the wood finely of an old stump, in the middle of which is a great fround hole, through which a friend has thrust his head. The picture shows what queer things nature will sometimes do in the way of getting around or over natural difficulties. The tone of this print is excellent.

Some of the pictures above mentioned would be entitled to prizes almost any other month. But when there are so many good prints sent in, it is not possible to give all prizes. There has been a great improvement in the pictures forwarded to this office during the past year, and THE AMERICAN BOY is of the opinion that some of this improvement, at least, is due to the advice given and followed in this department. However, there is still too much glossy paper used for really artistic pictures; and in the landscapes there are not enough clouds. But the art of manipulating the dull finish paper and catching and properly developing the negatives for clouds will come in due time.

Prevent Curling Mounts.

We have received the following practical suggestion which we will give our readers the benefit of. "I have found the following remedy for mounted prints which have a tendency to curl out of shape and which has proved very satisfactory: Place the mounted print between the folds of a newspaper having two or three thicknesses. Then place on a hot stovepipe, having the back of the mount nearest the pipe and rub the hand gently over the paper which covers the face of the print. The mount will curl backward and can be made to curl the desired shape. This treatment in no way damages the print and the mounts will retain their shape. This treatment is intended for matt surface prints or where the amateur does not have a burnisher."—Photo Era.

Photographic Notes.

It is a mistake to think that rain water is pure water. The amateur photographer had better rely on distilled water when he

had better rely on distilled water when he mixes his chemicals.

Dissolve your old celluloid films in acetone and use the syrup to varnish your bottle labels. This will prevent them getting wet and falling off.

It takes a practiced eye to make several prints from the same negative and have them all of one tone. But the knack will come with experience.

If you want to bore a hole in a piece of

them all of one tone. But the knack will come with experience.

If you want to bore a hole in a piece of glass, use a steel tooth and keep it wet with camphor dissolved in turpentine. Flat glass can be easily sawed any desired shape with a watch-spring saw, with the aid of this solution.

The ray screen is of most value with isochromatic plates. This makes a combination that gives the color values of the objects photographed, and is especially valuable in getting flowers.

A good authority says that a solution of permanganate of potassium slightly acidified with sulphuric acid is one of the best of negative reducers. The brownish stain left in the negative can be removed by a solution of oxalic acid.

The very best way to dry a negative is to put it on your rack and leave it alone until perfectly dry. Efforts to hasten the work is apt to result in defects. An electric fan is least llable to do injury, as it stimulates nature in "raising the wind;" but even then it is llable to throw dust on the wet film, and this is hard to remove. the wet film, and this is hard to remove.

Opportunities for Young Men.

The old men in photography are rapidly passing away. The future of the art is in the hands of live, energetic young men. With them we are content to leave it. They are convinced of its worth and are determined to carry it to a point far, far above its past. More power to their physical and artistic ability.—Abraham Bogardus.

New Magazine Camera.

A twin lens camera is in the market with practically an inexhaustible number of plates. The plates are in a closed drawer which is attached to the camera, and when all are used the drawer can be removed and another attached. Thus the operator can change his drawer of plates in daylight, and he can have as many plates with him as he is able to carry drawers.

Arabs and Photography.

Some Arabs are in deadly fear of the photographic lens. In the village of Marguerite a number of Arabs had revolutionized against the Europeans there, but without success. They were captured and taken to Blidale, where they were ordered to be photographed. They objected, and it required the help of soldlers to make them stand up against a stone wall. When they saw the photographer approaching with his camera they thought their last hour had come and threw themselves down before the officials, begging for mercy. However, they kept still and suffered to be photographed when they learned that no bloodshed was intended.

Pyrocatechin Developer.

Costly Cameras for Royalty.

An English firm has made two special cameras for the Sultan of Morocco, costing respectively ten thousand five hundred dollars and four thousand five hundred dollars. In the former which is a quarter plate, all the metal work—even the screws, is of gold. The total weight is 150 ounces. The other camera, which is half plate, has its metal parts of silver. The lenses and leather and wood parts are costly. All the most recent inventions are embodied in the two cameras.

An Artist With a Jackknife.

Walter Burgess, Hardman, Ore., nine years old, knows how to use a pocket-knife. In this picture are shown a windmil, a pump and tower, and a battleship which he has whittled out of wood. He is said to have made a threshing machine that will thresh three or four heads of wheat and clean them as perfectly as any threshing machine every invented, and an engine with perfect action. He must be a patriotic little fellow, for see the American flags!

INDIAN BOYS

and THEIR BAND

W. FRANK MCCLURE.

The accompanying picture illustrates a

The accompanying picture illustrates a type of genuine American boys. Their ancestors were the first inhabitants of America of which we have any definite information. They were the wild Indians who have formed the subject matter for so many thrilling stories as well as true history. The boys shown in the photograph were themselves not very long ago contented to live in wigwams and to run about with dirty faces with no thought higher than sometting to eat. What they are today, the United States government has made of them.

Inese boys live in Nevada and attend the government Indian school at Carson City. They are learning trades, and studying books. They have formed a band which is noted far and wide throughout their state for its excellence. But for their reddish faces and high cheek bones they might easily be mistaken for the American boys who now predominate in this great and grand republic. When one stops to think of the noises which represent the music of the Indians of America, this harmonious band of Nevada takes on a greater degree of interest. Its members have no use for the old kettle drum of their forefathers. Their musical instruments comprise a real bass drum, a snare drum, flutes, cornets and trombones. They play by note and when they go from home always have with them their music stands. They wear braided uniforms and nobby band caps.

always have with them their music stands. They wear braided uniforms and nobby band caps.

All this progress, which the Indian boys of our frontier are making, reflects great credit upon the work of the United States government on the reservations and in the training schools. This work was started under Gen. Grant's administration and has grown in importance rapidly. The fact that this year a larger appropriation than ever before was made for the betterment of the remainder of the race of American Indians, shows the satisfaction that Indian pupils are giving. It will be remembered that President McKinley on his recent trip to California was greeted in a

Arizona by Indian boys and girls, anxious to be recognized by the official head of a government which has done so much for their good. To the delight of President McKinley they rendered pleasing music. In a number of the Indian schools the pupils are editing and printing little school papers. They work in nicely equipped little offices and are said to quickly learn type setting. The presswork, too, is neatly done. At Carson City the paper is called the Indian Advance. In it is a kindergarten department and half page descriptive of social events. The boy who thinks that these little Indians enjoy nothing but hunting and fishing in the way of recreation is mistaken. From a copy of the paper I clip the following, which appeared under the head. "A social affair": "About thirty couples of young people enjoyed a pleasant party given Tuesday evening by some of the pupils of the school. The young ladies in their airy summer dresses and the gentlemen in more sombre gray with a sprinkling of Carlisle blue, made a most attractive picture, while the bright faces and happy voices gave good assurance of the perfect enjoyment which all claimed to have had. The disappearance of a loaded ice cream freezer and a large cake was the only thing which marred the success of the evening. Upon the late return of the freezer refreshments were served, after which a fine cake was walked for and won by Mr. William Brown and Miss Annie Allen. At a late hour the guests dispersed with many good-nights and good-byes. With reference to the band music at Carson City school, it may be said that the successful band conducted by the larger boys has created a desire on the part of the smaller ones to start a band of their own, and word from the institution is to the effect that the boys of ten and twelve years of age are to organize band No. 2 soon.

WANTED-Two hundred boys who know the multiplication table, can read and write correctly, quick at figures and willing to work. Boys who do not drink, smoke, chew or

CARSON INDIAN SCHOOL BAND. Composed of Pintes, Washoes and Shoshones.

Fifth Annual Convention of the United Amateur Press Association.

JAMES M. REILLY, JR.

The fifth annual convention of the United Amateur Press Association was held in the Nicoliet Hotel, Minneapolis, on July 10 and 11, President Floyd R. Switzer, of Utica, N. Y., occupying the chair. The reports of officers were read and placed on file.

The winners in the laureateship contests were announced as follows:
Poet—W. R. Murphy; honorable mention,
J. O. Baldwin.

B. Murphy: honorable men-

Poet—W. R. Murphy; honorable mention, J. O. Baldwin.

Story—W. R. Murphy; honorable mention, A. R. Stanton.

Editorial—J. C. Bresnahan; honorable mention, W. R. Murphy.

After the transaction of routine business the convention then adjourned for the day. In the evening a reception was given in honor of the delegates, by the St. Paul Amateur Press Club.

The principal business of the second day was the election of officers, which resulted as follows: President, Guy N. Phillips, Sloux City, Ia; Vice-President, Anderson G. Ulmer, Savannah, Ga.; Secretary, Morris J. Cohen, 221 North Aldrich avenue, Minneapolis, Minn.; Treasurer. A. M. Keefer, Mongo, Ind.; Official Editor, A. Edw. Cull, Jersey City, N. J.; Historian, James H. Smith, Bay City, Mich.; Laureate Recorder, Harry A. Thatcher, Sloux City, Ia.; Eastern Manuscript Manager, John W. Boud, Philadelphia, Pa.; Western Manuscript Manager, Erwin B. Ault, Equality, Wash.; Directors, Floyd R. Switzer, Utica, N. Y., Louis J. Cohen, Minneapolis, Minn. Charles A. Wendemuth, St. Louis, Mo.; 1912 Convention City, Philadelphia, Pa.

The banquet was held Tuesday evening, July 9. The menu was excellent and the

PRESIDENT-ELECT GUY N. PHILLIPS. SIOUX CITY, IA.

toasts were as follows: "The U. A. P. A."
F. R. Switzer; "The Fighting Editor." C. D. Raymer; "Jersey City and Its Amateurs," A. E. Cull; "The Fraternity." G. C. Cowing; "Recruiting." L. J. Cohen; "Reminiscences of the Jersey City Convention," G. N. Phillips; "Our Official Organ." J. A. Clerkin; "Amateur Journalism." C. A. Wendemuth; "Peace and Goodwill Throughout Amateurdom," M. J. Cohen; "Reminiscences of the New York Convention," J. M. Rellly, Jr.
The only person elected to honorary membership in the Association was Griffith Ogden Ellis, assistant editor of THE AMERICAN ROY.

Among those present who have not al-

Fine Printing With Poor Facilities.

Fine Printing With Poor Facilities.

The most handsomely printed amateur publication that comes to our desk is The Dilettante, published by Samuel Steinberg, of Alameda, Calif. It is a fine example of what skill and determination can accomplish, even with poor facilities. The inland Printer, the leading authority on printing in this country, says of it: "It is perfectly registered, color and impression even, composition and make-up of pages correct. In fact, there is nothing about the little magazine of which any printer, be he amateur or professional, need be ashamed." An examination of The Dilettante would lead anyone to believe that Mr. Steinberg had a large and expensive printing outfit. The facts are just the reverse of this. We are informed that the entire magazine is printed one page at a time on a five by seven inch hand-press. His plant consists of this press and twenty five pounds of tenipoint Casion type, five pounds italics and a few leads and rules, with a pane of glass for an imposing stone. He has no rack,

The Amateur Journalist has commanded the favorable comment has commanded the favorable comment of amateur and professional printers alike, thus showing what a man can do by making the best of the means at his disposal. Of course the average amateur printer cannot hope to bring out so handsome a paper at the beginning, it takes practice, but by careful study and careful attention to each piece of work that he turns out, any amateur who has the instincts of a printer in him can bring out a handsome publication; and it costs but little if any more to do this than to bring out a smudgy sheet, carelessly printed, such as some that come to our desk.

Which Best—Flattery or Criticism?

Which Best—Flattery or Criticism?

Harvey M. Whipple, of Detroit, Mich., Editor of "The Heronia Amateur," writes THE AMERICAN BOY as follows:
"I am very desirous of obtaining your opinion—as the head of the best paper for boys—on a subject of considerable interest to amateur journalists,—that of permitting young writers to form a wrong idea of literary work and the chances of success, by giving them too many professional puffs, publishing too much that they write and rewarding them with prizes, etc. Granting that it does encourage them, do they not fall to realize the tough times that mark almost every career? Will they not be disappointed later when their efforts are not made so much of? Is so much publicity good for them? For my own part I believe that were a department of criticism conducted side by side with the amateur writings that are published, the young writer would not only be encouraged, but would have pointed out for him ways in which he might improve, and the light of publicity would be just as bright, but not so dangerous, for one standing in it."

There is no question but that amateur writers would get much assistance from a well considered criticism of their produc-

but not so dangerous, for one standing in it."

There is no question but that amateur writers would get much assistance from a well considered criticism of their productions, but who is to be the critic? The post of a voluntary critic is not a desirable one. There are few persons who take criticism in a kindly way. The man who poses as a fault-finder is sure to become disliked, and he gets his labor for his pains. Were we all honestly desirous of criticism, the post of a true critic would be a happy one, for to the true devotee of any art there is real pleasure in helping others along. Then, too, there are so few critics who are reasonable and really just. One who starts out criticising usually ends up by scolding and ceases to be a valuable critic. There is a great deal more pleasure in life to be derived from encouraging than from discouraging. The man who lives in an atmosphere of criticism cannot be happy, and as THE AMERICAN BOY wants to be happy it prefers to let others do the criticise the critic, and this would add to his troubles.

However, we have often wondered why the Amateur Press Associations did not employ censors or official critics, whose business it should be, in the official organs of the Associations, to criticise the current publications of the Associations. Great care should be taken, of course, in the choice of an official critic, who should himself be thoroughly capaide and should be entirely independent. Such men can be found, and for a small remuneration their services can be had.

Blackie says: "The first lesson that a young man has to learn is not to find fault, but to perceive beauties."

Roy B. Graves, a young amateur journalist of Ellisburg, N. Y., is forming a club of amateur journalists, or boys who desire to be amateur journalists. He desires to get twenty five members, the membership fee being one dollar. The money thus received is to be used in buying a printing press, which will be owned by the club. The literary matter in the paper is to be furnished by the members of the club, and all money received from subscriptions and advertising, after paying expenses of publication, will be divided among the members. Boys of lifteen or over who have fair literary ability are eligible to membership. eligible to membership,

THE AMERICAN BOY is the only official organ of the Agassiz Association and should be in the hands of every member.

All correspondence for this department should be sent to Mr. Harlan H. Ballard, Pittsfield, Mass. Long articles cannot be used.

THE AGASSIZ ASSOCIATION welcomes members of all ages, and any one who is interested in any form of natural science is invited.

Established in 1875. Incorporated in 1862.

Short notes of personal observations are particularly desired for use in the A. A. department. Send illustrations when convenient. Questions are invited.

Address H. H. BALLARD, Pittsfield, Mass.

is it Suction or "Sticktion?"

In the June number of THE AMERICAN BOY I offered a badge of membership in the "A. A." to every reader who would send an answer to the question: "How does a tree frog climb a pane of glass?" We have already published a report of answers received. Since that report, however, so many more replies have been received that we must briefly notice them. Only a word or two from each reply can be given. Badges have been duly forwarded to each of the young friends, who have sent the following answers:

1. "Air cells on the bottom of its feet."

- 1. "Air cells on the bottom of its feet."
 -H. B. Turner, Walhonding, O.
- 2. "Toes are large suckers."—Clyde Stewart, Augusta, Me.
- 3. "Round disks on toes."—Julian H. Gist, Cedar Falls, Iowa
- 4. "Disks like those on arms of cuttle-fish."—John E. Armitage, Milwaukee, Wis.
 5. "Sucker-like pads."—Harry Schmidt, Shamokin, Pa.
- 6. "Disks with power of suction."-Joseph E. Goodacre, Daleville, Pa.
- 7. "Sticky secretion on disk-like toes."
 -Frank Heard, Roxbury, Mass.
- 8. "Suction pads covered by glutinous secretion."—Clifton Corbett, Edwardsville.
- 9. "Cup-shaped cavity under toes, from which by pressure of foot air is expelled forming a vacuum. Small bottles can be made to stick to the tongue on the same principle. The tree frogs here are mottled exactly like the trees upon which they live."—Norman F. Arnts, Elizabethville,
- 10. "Disks containing a sticky substance."—Forrest II. Thompson, Gaithersburg, Md.
- 11. "Disks on toes force out the air."-E. E. Dodson, Georgetown, O.
- 12. "Disks form a vacuum."—John R. Northcutt, Marietta, Ga.

- 13. "Disks make air suction."—Paul C. Ravlin, La Porte City, Iowa.

 14. "Suction of air."—Howard G. Mc-Elheney, Black Creek, N. Y.

 15. "Suckers."—Elmer Broberg, New London, Minn.
- 16. "Atmospheric pressure."—Earle W. Walter, Monallen, Pa.
- 17. "Suction, as may be illustrated by wetting the disk from the top of a pop-bottle, and pressing it against window pane."—LeRoy D. Koehn, Chicago, ill.

 18. "Suckers on its feet."—F. D. Schemmer, Rock Valley, Iowa.
- 19. "Ends of digits furnished with cushions, which secrete a viscid fluid."—Ralph P. Haas, Nebraska, O.

- P. Haas, Nebraska, O.

 20. "Pressure of the air."—Ray Zimmerman, Boulder, Colorado.

 21. "Suction; it lifts its foot, as you would a postage stamp, from one edge."—Grover Cook, Comanche, Texas.

 22. "I have caught them like those described by Carl Vernon, and also others green and beautifully striped, green and yellow. I put them in glass jars and fed them on live flies, but to my surprise they would be black one morning and the next silvery gray, and in another day or two beautiful green again. They like very much to live on grape leaves. Air pressure holds them to the glass, same as it does a fly."—Edward Stein, Westphalia, Ind.
- "Knobs on its feet like small cups; by suction."—Howard Richardson. held irving Park, III.
- 24. "With these disks he sucks to the tree."—Bennie de Weerdt, Aplington, Iowa.
- 25. "Suction of small suckers on its toes."-Wallace Sutherland, Embro, Ont. "Disks act as suckers."-G. F. Dutt.

- 28. "The hyla lives along streams and in damp places, and tills the early spring evenings with strange music. They cling by little pads on their toes. They change their color often, sometimes being entirely brown, at other times bright green, and again a mixture of the two."—Lesley F. Blackburn, Fishertown, Pa.

There are many interesting things about these answers; the large number of dif-ferent states represented, the fact that the ferent states represented, the fact that the answers are all from boys; the division of opinion between those advocating adhesion by air pressure, and those believing in a sticky secretion; and the fact that several persons compared the feet of the hyla to the feet of the fly. Will any one suggest an experiment which may decide between the two theories advancd? Can the feet of the hyla be cleansed of all sticky substance? Can it then walk up the glass? Or, on the other hand, can the

animal live long enough in an air pressure so reduced as to be negligible, to demonstrate its ability to cling to the glass without atmospheric support? If it is held only by a gummy secretion, could not a dead tree frog be stuck to the inner surface of an exhausted receiver by its feet? The same questions are pertinent in the case of flies. Will some expert zoologist settle this for us?

The Earliest Flowers.

So far we have received replies from twenty one States and also from Ontario in answer to the question in the June number of THE AMERICAN BOY. "Which is the earliest flower?"

OHIO.—Johnny-jump-up or wild pansy; about March 25.—Arthur Engler, Fremont. Crocus and snowdrop; about 1st of March.—Gustle McMillen, Deersville. Easter flower or hyacinth; no date.—W. H. Crocks, Kenton.
Crocus; about March 25.—Herbert M. Gallagher, Springfield.
Snowdrop; February 20.—Ottis Mathias, Peebles.
Hepatica; no date.—Albert Klinefelter, Greenville.

HEPATICA.

will keep their eyes open next spring and then send in reports we will be very grate-ful to them. Some of the letters about flowers are so interesting that we print a few of them:

ful to them. Some of the letters about flowers are so interesting that we print a few of them:

"I think the earliest flower in our neighborhood is the crocus, or "Little gosling." It is called "Little gosling" because it has fuzzy petals which look and feel like the down on a gosling. It has five purple petals. It blooms in the latter part of March or the first of April. Another one of its names is "Easter flower."—Jay Ludlow, La Porte City. La.

Herbert Post, Westbury Station, Long Island, N. Y., says that if you hold the leaf of the common myrtle to the light it appears as if filled with pinholes, and he would like to know why it is so. [To ali sending the correct answer a badge of the A. A. will be sent free of charge—Ed.]

Harold Cheever, Greenfield, N. H., wants to know what makes the skunk cabbage turn black when the ground begins to thaw. [A badge of the A. A. will be sent to all sending a correct answer.—Ed.]

Willie Davis. West Point, Va., says the trailing arbutus grows on the north side of the hill. Does he mean on a certain hill in West Point or on all hills there? We have found it growing on the south, east and west sides of hills in Pittsfield, Mass.—Ed.

In Tuscarora, in the west central part of

and west sides of hills in Pittsfield, Mass.—Ed.

In Tuscarora, in the west central part of New York state, the first flower that we notice is the dandelion, which is quite familiar all over the state and other states besides. It blossoms in the month of April and tnen continues all through the summer, but not so thick as at first.

The dandelion is of a very rich color, a handsome gowen yellow. As the flower grows old it turns into a very fine fuzzlike substance, on the ends of which are the little brown seed, and as the wind blows the little fuzz over the country, so does it sow the seed as nature intended.

The dandelion plant is used quite extensively among the farmers for "greens," as it is the first thing in the spring that they can get, and it makes a very nice dish indeed when it is properly cooked.—Warren Loomis, Tuscarora, N. Y.

Our first flower, the poppy, is seen about the list of February. On the hills around here about that time you can see large patches of poppies, sometimes a whole acre. On Washington's birthday we got a lot of poppies and decorated our schoolhouse. Their colors are either yellow or white. Most of them are yellow. When about a half a mile from a large patch of them, they look very beautifui.—Fred Clayton, Lang, California.

The snowdrop is the earliest flower of our neighborhood, and will even show her

The flower which first makes its appearance in our vicinity blossoms about April 16. The plant first appears and grows about three inches, when a straight stem runs up from the center about the same height. Upon the top of this appears the blossom, which is about as large as a twenty five cent piece. It is light purple in color. This blossom stays in bloom about a week, closing up every night. A short time after the blossom fades, the stem starts to grow again. After reaching the height of seven or eight inches, the seeds begin to grow in a round cluster on top. There are about 40 seeds in each cluster. We call them

"prairie velvets," but do not know whether it is the proper name or not.—Her rick, White Lake, South Dakota.

In northwestern New Jersey, the first flower that I found was the skunk cabbage (symplocarpus foetidus), March 23. The second flower was the liverwort (hepatica triloba), April 17. Last year I lived in New York, and I found 187 different flowers. So far this year I have found 34 flowers that I aid not find last year.—J. Parsons Greenleaf, Sparta, Sussex County, New Jersey.

We wish to congratulate Mr. Greenleaf.

We wish to congratulate Mr. Greenleaf on finding and identifying so many different flowers and urge him to keep up his botany.

The Locust.

The locust was found in the grass along the side of the road. It has greenish wings and black body. It has one pair of wings. Each leg has three joints. Large eyes. It has several enemies. It makes a peculiar

sound by crossing its wings at a great rate. In the fall of the year it sheds its skin which it leaves in the exact shape of its body.—Herbert Post, Long Island, N. Y.

The Spring Beetle.

I will tell you of an ug'v looking bug I came across during one of my summer "tramps" in the woods. It was about one and three-fourths inches long. On its under side was a kind of pincher which under side was a kind of pincher which seemed to form a part of the joint of its neck. When bits of wood were placed in this, they were instantly snapped off. When provoked, it emitted a hissing sound. The black spots on its head are only darker coloring. The eyes are near the antennae.—Geo. Thomas, Trent, Muskegon County. Mich.

Buprestis.

this is.

would like to know what kind of bug is is. When looked at through the microscope it is the color of gold. It is very quick, and can fly very fast. It has black specks on it, and has a white bronze color when looked at with the naked eye.—Joseph if. Sheasley, Sodom, Ohio.

This beetle is one of the buprestis or metallic wood-borers. Its specific name is dicerca divaricata. The larva bores in peach, cherry, beech and maple.

maple.

We are very glad to extend a cordial welcome to a new chapter, Chapter 73, C. W. Bassett, M. D., Sharon, Conn., Presi-

We most heartily invite all our readers to join the Agassiz Association. Address all communications to H. H. Ballard, President A. A., Pittsfield, Mass.

A Jar of Violets.

here about that time you can see large patches of popples, sometimes a whole acre. On Washington's birthday we got a lot of popples and decorated our school-house. Their colors are either yellow or white. Most of them are yellow. When about a half a mile from a large patch of them, they look very beautiful.—Fred Clayton, Lang, California.

The snowdrop is the earliest flower of our neighborhood, and will even show her head above the snow, as if to prove her rivalry in whiteness.

The snowdrop who in habit white and plain, "Comes on, the heraid of fair Flora's train."

They are beautiful, dwarflike flowers, pushing up through the snow in the spring; a habit where arose this name.

"Lone flower, hemmed in with snow, and white as they."—Frank Grosjean, 1025 Hicks street, Shreeport, La.

The flower which first makes its appearance in our vicinity blossoms about April 16. The plant first appears and grows about three inches, when a straight stem runs up from the center about the same height. Upon the top of this appears the blossom, which is about as large as a twenty five cent plece. It is light purple in color. This blossom stays in bloom about a week, clossbores and straight as week, clossbores and stoppers. A Jar of Violets.

Following is a composition by a little boy written in the schoolorom, the subject and all being suggested by a jar of violets and all being suggested by a jar of violets of the essay is a subscriber to THE AMERICAN BOY.

On my teacher's desk is a jar of violets. The wilder in the school of the essay is a subscriber to THE AMERICAN BOY.

On my teacher's desk is a jar of violets. The violets house is the leaf, which you see in the jar. They have dances and ifful melodies on their having a fire violets house is the leaf, which you see in the jar. They have dances and surficult melodies on their horns made out of hyacinth bells, and others plaved on violities, plane and the provided the provi

SEPTEMBER IN AMERICAN HISTORY

SEPTEMBER 1, 1885: FIRST ELECTRIC RAILWAY LINE IN AMERICA OPENED. The line ran from Baltimore to Hampden, Md., a distance of only two miles. The valuation of the \$50 electric railways in America at the close of the year 1899 was estimated at \$1,700,000,000.

SEPTEMBER 2, 1864: ATLANTA CAPTURED BY GENERAL SHERMAN. It was at Atlanta that Sherman began his celebrated march through Georgia to the sea, which resulted so successfully. Savannah was taken by the Federals on the 22d of December following.

SEPTEMBER 3. 1783: DEFINITIVE TREATY OF PEACE BETWEEN GREAT BRITAIN AND THE UNITED STATES SIGNED. David Hartley was Great Britain's representative, and Dr. Franklin. John Adams and John Jay represented the United States. United States.

SEPTEMBER 4, 1774: FIRST CONTINENTAL CONGRESS MET AT PHILADELPHIA. The total number of delegates was fifty four. Peyton Randolph, of Virginia, was president of the Congress, and the secretary was Charles Thomson, of Pennsylvania. It adjourned on October 26, 1774. It was during one of the discussions of this Congress that Patrick Henry declared, "British oppression has effaced the boundaries of the several colonies; the distinction between Virginians, Pennsylvanians and New Englanders is no more. I am not a Virginian, but an American."

SEPTEMBER 4. 1886: CHIEF GERON-IMO SURRENDERED TO GENERAL MILES. The place of the surrender of this notorious Apache chief was Skeleton Can-yon, Arizona.

SEPTEMBER 7, 1892: JOHN GREEN-LEAF WHITTIER DIED. American poet and editor, was born at Haverhill, Massachusetts, December 17, 1807, of Quaker parentage. Farming and shoemaking were his principal occupations until he reached manhood, diversified occasionally by penning verses which were printed in the Haverhill Gazette. In 1823 he began his editorial career with the American Manufacturer. At the age of 24 he published his "Legends of New England." From 1823 until 1863 he was ever with voice and pen in the forefront battling for the freedom of the slaves, and in this work he was secretary of the Anti-Slavery Society, editor of the Pennsylvanian Freeman and corresponding editor of the National Era. He wrote a centennial hymn which was sung by a choir of one thousand voices at the opening of the Centennial Exposition at Philadelphia on May 10, 1876. The American public has always regarded Whittler with great affection on account of the spirit of true brotherhood, democracy and patriotism which breathed through all his writings.

SEPTEMBER 8. 1869: WILLIAM PITT FESSENDEN DIED. A graduate of Bowdoin College. Was admitted to practice law in 1827, and was elected a member of the Maine Legislature, where he served two terms. In 1841 he was elected to Congress. In 1854 he was United States Senator and retained his seat in that body, except from July. 1864, to March, 1865, when he was Secretary of the Treasury, until his death. Mr. Fessenden was one of the founders of the Republican party, and during the Civil War gave valuable assistance to the country as chairman of the Senate finance committee.

try as chairman of the mittee.

**SEPTEMBER 8, 1900: GALVESTON, TEXAS, ALMOST DESTROYED BY WEST INDIAN HURRICANE. Scarcely a building was left standing in the city. Over 5,000 lives were lost, and property valued at \$40,000,000 was swept out of existence.

**SEPTEMBER 24, 1869: "BLACK FRIDAY" IN AMERICA. So-called because of the reckiess speculation in gold which culminated in a financial panic. Gold was quoted at 162%.

**GEPTEMBER 25 AND 27, 1862: SUSPENDED AND CORPUS AND CORPU

SEPTEMBER 9, 1850: CALIFORNIA ADMITTED TO STATEHOOD. In consequence of a clause inserted in the State constitution excluding slavery or the slavelabor system into the country, the petition of California for admission to statehood experienced bitter opposition from the Southern states. Finally the "Omnibus Bill," embodying a series of compromise measures, was passed and cleared the way for the admission to statehood of California, territorial government for New Mexico and the Fugitive Slave bill.

SEPTEMBER 10, 1813: PERRY DEFEATED THE BRITISH ON LAKE ERIE. The American loss was twenty seven men kined and ninety six wounded, while the casualties of the British were about two hundred killed and six hundred made prisoners. See facsimile of Perry's dispatch announcing this great victory in the August number of THE AMERICAN BOY.

SEPTEMBER 11, 1857: MOUNTAIN MEADOW MASSACRE. The scene of this horrible butchery in which the whole of thirty families were almost completely destroyed by Indians and their Mormon allies was near Cedar City, Utah.

SEPTEMBER 12, 1888: CH CLUSION ACT APPROVED. CHINESE EX-

SEPTEMBER 13, 1814: BRITISH ATTACK ON FORT M'HENRY. Aithough exposed to a tremendous shower of shells for several hours from the British vessels, the brave garrison under Major George Armistead were not only able to defend themselves, but inflict considerable damage upon the invaders. This successful defense saved Baltimore. It was during this attack that Francis Scott Key, detained on board the British ship Minden, wrote "The Star Spangled Banner."

"The Star Spangled Banner."

SEPTEMBER 14, 1851: JAMES FENI-MORE COOPER DIED. Possibly the most famillar to American boys of American writers. Was born at Burlington, N. J., September 15, 1789. Although he studied for some time at Yale he did not graduate. His first choice of a profession was the navy, in which he spent six years, at the end of which time he married and settled down to literature. His volumes of fiction number thirty two, which includes the well-known "Leather-Stocking Tales." His other works comprise a "History of the United States Navy" (2 volumes), "Lives of American Naval Officers." "Battle of Lake Erie." "Gleanings in Europe" and "Sketches of Switzerland."

SEPTEMBER 17, 1787: NATIONA CONSTITUTION ADOPTED IN CONVENTION OF STATES. The convention assembled in Philadelphia on May 14. George Washington was chosen president and William Jackson secretary. Debates went on until September 10, when all plans and amendments were referred to a committee for revision. The members of the committee were James Madison, Alexander Hamilton, Thomas Johnson, Rufus King and Gouverneur Morris.

SEPTEMBER 15 AND 20 1863; BATTLE OF CHICKAMAUGA. The Federals during this battle lost 16.226 men, of whom 1.687 were killed, while the Confederate loss was reported at 20.500, of whom 2.673 were killed. While the Confederates claimed the victory, their triumph was not decisive. The commander of the Federal forces was General Rosecrans, while the Confederates were commanded by General Bragg.

SEPTEMBER 20, 1881: GENERAL ARTHUR TOOK THE OATH OF OFFICE AS PRESIDENT OF THE UNITED STATES ON THE DEATH OF PRESIDENT GARFIELD.

SEPTEMBER 23, 1779; PAUL, JONES' VICTORY OVER THE BRITISH. While cruising along the coast of Scotland to intercept the Baltic fleet of merchant vessels, Captain Jones fell in with British cruisers. A desperate fight ensued between his vessel, the Bonhomme Richard and the English man-of-war Serapis, commanded by Captain Pearson. The engagement lasted three hours resulting in the Englishman hauling down his colors to the American The Bonhomme Richard was so much shattered by shot and shell that she immediately on being disentangled from the Serapis sank to the bottom of the North Sea.

SEPTEMBER 25 AND 27, 1-62; SUSPENSION OF WRIT OF HABEAS CORPUS On account of the disloyalty and disaffection exhibited toward the government, President Lincoln declared that the privilege of Section 9. Article 1 of the National Constitution, should be suspended. The second clause of that section is: "The privilege of the writ of habeas corpus shall not be suspended unless, when, in case of rebellion or invasion, the public safety may require it."

PRICE. \$100 A YEAR 10 Cents a Copy.

DON'T BE A BOTCH

J. W. BURGESS.

Be an artist.

Don't be a botch.

Not of necessity an artist with brush or pencil, but an artist with whatever instrument your calling necessitates the use of, whether a shoemaker's awl, or a locomotive; a graver's tool, or a long-handled shovel.

How can a man be an artist with a shovel? Listen:

We have in mind a man who can remove more earth, and with less friction, less wear and tear on his constitution and by-laws, and less disturbance in the neighborhood, than can any other man in town.

Many men have more muscle, and carry a greater avoirdupois and make more demonstration while at work than he, but when night comes he has done his full share of work, and in fact set the pace for the whole crew.

The secret is that he is an artist with the pick and shovel.

There are some jobs of excavation where it is impossible to throw the dirt over the right shoulder, so the only thing to do is to throw it over the left. A man who can shovel only one way, can't work on that job with any ease, or comfort, or to good advantage. An experienced foreman will spot such a man at once because he looks just as much out of place as does one pin wrong end up in a row of straight ones. If the foreman is that sort of man, and many of them are, the shoveler is told that if he can't shovel as the others do, he must quit the job. That shoveler realizes the fact, as never before, that he is no artist with the shovel, and until he finishes learning the trade, he cannot hold a job alongside of men who are.

If he is made of the right material he will go to a sand-pile, and practice until he can shovel either right-handed or left-handed, or up, or down, or sidewise, and when he can do that he can hold a job with any of them, because he is an artist.

Why is it that one bricklayer can look at a gap in the tier he is laying, pick up a brick, hit a few clips with the trowel, and then slap in the mortar, and lay in the piece of brick, knowing that it will fit, though he has not tried it? Because he is an artist, and has cultivated an artistic eye, which enables him to lay brick at four dollars a day, while other handsomer, bigger and stronger men are laying stone wall at twenty shillings a day. One man draws a white-hot rod of iron from the gleaming forge, lays it across the anvil, and with a few well directed blows warps that iron into the shape he wants it, before it has turned black, while another man, six feet away, draws from his forge a like rod of iron, and after pelting away at it until it is cold, beats it again and again before it is tortured into anything like the shape he has in mind. The former blacksmith is an artist—the latter one, a botch.

We have seen men who had worked for years on a shoe bench, go under instruction to one of those artists of the waxed-end, simply to acquire the knack of turning off the work in an easier and more expeditious manner-become artists, in fact.

October skies are dult and gray, Betok'ning winter weather. But what care we? With bag and stick We search the woods together.

Hurrah, Hurrah! Here's hick'ry trees All loaded down with treasure. Off with our shoes. Hip, up we go And shake and pick at leisure.

When winter's wind and snow and storm Assail our homes and beat them, We, seated by the glowing coals, Will crack these nuts and eat them.

-FRANC M. NICHOLS.

One young carpenter will take a jack-plane. and a pile of pine boards, and will bury himself up in shavings while his fellow workman is trying to sharpen and set the knife in his plane. The artist measures, marks, and saws off a board, and then in all confidence places it in its niche and nails it fast, knowing that it will fit, while his underdone neighbor measures two or three times, and saws as many more, and then has to take another board, because he is not the trained artist that his fellow is.

We once worked on the morning tour on an oil well, as tool dresser. Our driller was an artist. The driller on the afternoon tour was not. If everything held together, he could put more rope in the hole during a twelve-hour run than any man we ever saw. But if anything gave out he was done; my partner had to repair the break, fish out the tools, and set things in order again; and because of his ability to do these things the contractor depended on him, and paid him extra for his work.

Are you a young farmer? Learn to plow your furrows straight as a chalk mark, keep the thistles out of your fence corners, and plant shade trees by the roadside. Study up-to-date agricultural literature, and make your head save your muscle. It takes an artist to do that.

It makes no difference whether it is a boy driving a cow, a mechanic driving a nail, or an engineer driving a locomotive or a steamboat. He can do his driving as an artist or as a botch.

The great occasions that come to a man at times through life are worth to him exactly what his past life, effort and training enable him to make of them.

One man coolly holds the throttle and does the very and only thing that can save the train and passengers, while another, in precisely the same pinch, puts on the brakes and jumps, leaving the train to go to smash, and the passengers to their fate. The one has schooled himself to stand severe strains without wavering, and is an artist; the other has simply worked for pay day, and is a botch.

Where did Ben Hur get that wonderful strength of arm that enabled him to guide and control the flery steeds of the desert in the chariot race, and win the victory over his rival? He acquired it by rowing in the galleys as a slave, where he had been placed through the connivance of that same rival whose laurels he afterwards won, and whose back he broke in the chariot race. He might have pined away, grown weak and discouraged, and been thrown overboard, but he chose to make his forced labor a means of development, and thus did he become an artist and was richly rewarded in que time.

No matter what your calling in life; be it low or high, be it in the exercise of one taient or ten; see to it that you make the best use of your time and talent in the development of the capital on hand. Strive to do whatever you have to do in the very best manner possible, and thus become an artist in that line.

All painters, all sculptors are not masters, because only the favored few have the requisite ten talents. But they are all artists, and deserve commendation in proportion as they have striven to develop the best that is in them.

The world wants artists, not botches. Strive

Working My Way Around the World

HARRY STRELE MORRISON

PART I.

ACROSS THE ATLANTIC ON AN ARMY TRANSPORT.

When most people start on a trip around the world they go with their pockets filled with money and the expectations of spending several thousand dollars before they complete the circle. I would possibly have been glad to start on my trip in this way if I could have done so, but not having several thousand dollars for spending purposes, I made up my mind to work my way from place to place, and to spend no money save that I was able to earn upon the way. I have made two trips to Europe and each time returned with more money than I had on leaving New York. I may not complete the circle of the globe with a pocket full of money, but I hope to carry back to New York at least as much as I had upon my departure from there on the tenth of July. A fellow can always earn money in some honest way if he is willing and persevering, and I expect to work my way through the Philippines and Japan and China as easily as I did through the countries of Europe.

In looking about for a ship upon which I could work my way East from New York I came upon the U.S. Army Transport "McClellan," which was to carry troops and supplies to the army in Manila. As soon as I heard of her itinerary I saw that it would be delightfully interesting to travel with her as far as she would take me on my trip, and I immediately enquired if there was any position I could fill on board. The officers told me that I might be gunner and earn fifty five dollars a month, but I was obliged to confess that I had never handled a cannon in my life, and though they might never have occasion to discharge the one on the transport, I wouldn't like to have the responsibility in case the occasion should arise. They then told me that the only other vacancy was in the list of seamen, and I said at once that I was willing to accept the place, however hard the work. "You'll have to live with the seamen," said Mr. Roberts, the chief officer, as he looked me over. "Oh, I won't mind that," said I, for I had made up my mind that I would have to stand a good deal of hardship in working my way from New York around the world, and I thought I might as well have the unpleasantness in the beginning as later on.

It so happened, however, that I didn't have to go as a seaman after all, for on the morning of sailing one of the masters-at-arms gave up his place, and I was successful in getting appointed to his position. The vessel left her dock promptly on time, and I sailed out past Sandy Hook and into the broad Atlantic without having the least idea of what my duties as master-at-arms were like. I knew that there were three of us on board and that our wages would be thirty five dollars a month, but that was all. But I wasn't to wait long for enlightenment. As soon as we were out at sea the chief officer sent for me and I had my duties explained. "You are the ship's policehe said, "during the time you are on watch. Each of you will be on duty eight hours a day, and for the present you will serve from twelve at night till four in the morning, and from twelve to four in the afternoon. You are responsible for the ship's property, and you must see that no misdemeanors are committed by the crew or the passengers. The soldiers must not be allowed to smoke between decks, and you must watch that the lights are burning when you are on watch at night.

I was furnished with a blue uniform and a cap on board, and I felt quite important during my first four hours on duty. That is, I felt important until I began to be seasick, and then I felt as if I didn't care if the soldiers smoked and burned up the ship. I had been careful about my food for a week before sailing and had hoped that I would escape the miseries of "mal de mer;" but as soon as I saw the waves, which began to roll about evening, I knew that my case was hopeless. The sailors said there was a "dead swell," and before the night was over I was convinced that "dead swells" are as much to be avoided at sea as on dry land. The waves, instead of breaking into foam, came along and lifted the good old ship right up into the air. Then,

Editor's Note: Harry Steele Morrison, the writer of "Working My Way Around the World," is not an inexperienced boy traveler. This is his third voyage across the Atlantic into foreign lands. His first voyage, which was a very remarkable one considering that he was an inexperienced boy without money, was described in the early numbers of THE AMERICAN BOY. In his first travels he succeeded in interviewing some of the crowned heads of Europe and won the title of "The Boy Traveler." Young Morrison has written a book describing the experiences of his first trip abroad, which has been published both in England and America. His second trip was that which he made last summer to the Paris Exposition, and readers of this paper have read letters from him describing some of his experiences. His present voyage is perhaps the most ambitious one that he has attempted, although he is now an experienced traveler. Readers of THE AMERICAN BOY will follow with interest the experiment he is making of traveling around the globe unaided by a full purse. periment ne is makin aided by a full purse.

she rose and settled, the passengers were in danger had gone to bed sick, and as I patroled the deck until four in the morning I had the place to myself. I suppose I was as well off in the open air as I would have night I could ever remember in my life.

But one can see fun in some things, even when overcome by seasickness. Every hour at night it was my

THE ROCK OF GIBRALTER

duty to report to the officer on the bridge, "All's well below, sir," and on that first night out I couldn't help seeing the irony of the remark. I felt like telling the officer that all wasn't "well below" with me, by any means.

After we had been at sea two or three days I began to learn my duties, and I soon found that there are times when a master-at-arms is a very busy man. We were overtaken one night by a most terrifying storm. The wind blew a perfect gale and the ship was soon being swept with waves from stem to stern. Most of the passengers were huddled in the saloon, and were afraid to go to bed for fear the ship might go down while they were asleep. The storm made an awful racket, with the wind and rain and the waves beating against the portholes, and I didn't wonder that people were frightened. Indeed, I was very much frightened myself, though I wouldn't have admitted as much to one of the sailors for the world. I went up and down the decks as best I could, because of the danger of being knocked down by a sudden rush i of water, and it kept me busy watching that the water ran off the deck as fast as it came on board. In spite of all watchfulness, however, the water accumulated in one of the scuppers, and the first thing anyone knew it was pouring through one of the doors and down the passageway toward the saloon. The fright among the ladies gathered there can be better imagined than described. They thought the sea was surely coming in to drown them all, and their actions would have been funny if there hadn't been so much band has been a delight to everyone on board, soldiers

with an easy, swinging motion, they allowed her to to do. The water must be got out at once, and no settle again into the trough of the sea, and every time more must be allowed to come in, else the staterooms would be covered with salt water and the furnishings of losing their suppers. By midnight most of them ruined. The crew understood that there was no real danger, and when the call "all hands on deck" came from the bridge, they were prompt in answering, and soon a brigade of bare legged sailors was scooping been in bed, but that was certainly the most miserable the water out by the bucketful. I was sent here, there and everywhere, and decided before morning that the sea policeman has his troubles as well as the "copper" on land. When I was finally allowed to go to bed I slept soundly in spite of the rolling and pitching, and I wished devoutly that there would be no more storms until we reached Gibraltar and had a chance to recuperate ourselves a little on dry land.

As master-at-arms I have had to take my meals in what is called the petty officers' mess-room, and during the first few days I thought that it was a "mess"-room, sure enough. Some of the sailors and some of the men from the engine room are ranked as petty officers, and they sometimes come to meals wearing only their trousers and undershirt, the latter all wet with perspiration. They seldom stop to wash, so their appearance was not at first conducive to a good appetite; but after recovering from my spell of seasickness I was able to eat amid any surroundings, for I became suddenly possessed of an appetite which refused to be satisfied. And the sailors are good fellows at heart, if they do eat with their knives and appear at table in negligee costume. Some of them have been exceedingly kind to me, and all of them seem to realize that a green master-at-arms has his trials and tribulations, and they conduct themselves accordingly. There are always some black sheep, however, in every flock, and some of the tough ones in the forecastle planned to have some "fun" with the green 'un. But when it came to the point of "initiation" they found that my friends in the crowd were too numerous, and since then I have lived in peace and quiet. Most of their joking is quite harmless, and the mess-room is a lively place at meal times. Old "Chips," the carpenter, is the butt of most of their fun, and as he can't speak English so as to be understood, his tormentors have it all their own way. He has his friends, however, and they allow the jokes to go just so far. It is fine to see the way one man will stick up for another, and I am coming to think that sailor friends are a good kind of friends to have.

Down forward on the lower deck are quartered the recruits who are going to join the soldiers in the Philippines. Most of them seem to be boys who have never been away from home before, but they are not homesick by any means. They are inspired with the patriotism which comes to one who serves his country's flag, and they are willing to put up with some hardships for the sake of the glory which they know is their due as American soldiers. Some of them come from colleges, and from homes where they have been used to every comfort, yet they eat their tough meat and beans and hardtack and drink their weak coffee uncomplainingly. They are going to fight for Uncle Sam, and each hopes to return home a hero.

Though their food and sleeping quarters on board are not all that might be desired, the soldier boys are enjoying the voyage as much as any of the more comfortable passengers. They pass their time in harmless games and in reading and talking, and they never seem at a loss for something to do. Some of them keep busy by doing work for the others. One fellow is busy all day long shaving his comrades at ten cents each, and another makes quite a little money by doing washing for those who get tired of wearing dirty clothes. Several of them are detailed to assist in the preparation of stores, and still others keep busy by helping the commissary with his store.

They have a band of music with them, and this

A STREET SCENE IN GIBRALTER.

and sailors and passengers. Every morning at eight o'clock the soldiers line up on deck and the band plays 'Hail Columbia" as the stars and stripes are raiseu over the ship. In the evening, when the flag is low-ered at sunset, they play the "Star Spangled Banner," and these two simple ceremonies are very impressive and vary the monotony of the days at sea.

After we had been steaming across the Atlantic for twelve days we came in sight of the great rock of Gibraltar, that fortress which was warred over for hundreds of years and which England has so fortified that it is invincible to every power on earth. I had looked forward with great anticipation to the morning when I would see this famous Gate of the Mediterranean, and I am glad that I wasn't disappointed. The great rock loomed up majestically on our port, and, scattered about its base was the picturesque town of Gibraltar, with its three or four great hotels and its dozons of ships anchored off shore. Over it all floated the flag of old England, a challenge to the nations of Europe, for Gibraltar is the only foothold on the continent which the British have been able to take and hold for any length of time. It is the key to the Mediterranean, and together with the fortress at Malta have caused that great sea to be called "the English lake" by the French, who can never become reconciled to their position of being hemmed in on their southern shore by British forts and warships.

Some of our sailors were given shore leave and for a few hours I reveled in the truly Oriental atmosphere of the little town. It is one of the busiest places imaginable, for it is the coaling station for ships going to and from the Far East. The harbor, such as it is, is filled with great steamers at anchor, and little boats hurrying back and forth between them and the shore. The streets of the town are crowded with foreigners of every nationality, and Gibraltar is doubtless one of the most cosmopolitan ports in all the world. One can buy most any sort of merchandise. and converse in almost any modern language. All | last summer in England and he was always very this variety of life and people serve to make the town a fascinating place in which to spend a few hours or a few days, and our shore leave was over all too soon, and we were obliged to return to the ship.

A GIBRALTER OMNIBUS.

I didn't return, however, until I had called upon going around the world he was very enthusiastic. "I General Sir George White, the fine English soldier who last year was made world-famous as the defender of Ladysmith, and who is now on duty as Governor of Gibraltar. I had seen him several times kind. Of course, he was surprised to see me turn up so unexpectedly. "You American boys certainly beat the world for traveling," he said, and when I explained to him the conditions under which I was

wish you every success," he said, "and I hope to see you appear again in some unexpected place."

When everyone was again on board the "McClellan" we set sail for Malta, Port Said and Cairo, and though I had enjoyed the voyage and our visit to Gibraltar, I knew that the most interesting part of my journey was yet to come, and I determined to do my duty so that I could have shore leave at every port.

(To be continued.)

& HOT COFFEE &

LUCY SEMMES ORRICE

Hot Coffee had been guarding a paper box ever since he entered the theatre, and when enthusiasm ran high, and the whistling in the peanut gallery mingled wildly with applause from below, he jerked the package from under his arm and opened it hastily.

"Here, Wiggles," to one of the dirty faced news-boys around him, "take dese flowers to Miss Haydn wit' Hot Coffee's comperments. Chase yerself," the boy looked up in astonishment.

IN THE PEANUT GALLERY.

Wiggles gasped: "My, dat's a warm bokay," and set off on his errand, while Hot Coffee met the derisive chorus of the gang with his usual independence.

"Aw, come off," he scolded: "don't yer know how ter treat er leddy, we of de gre't Ledger;" this with his fingers in his armholes and his chest swelled out. progress became slower and slower. When Hot Coffee spoke like that they knew he meant it; that the very pride of his life was to be a credit himself; but there was Miss Haydn's letter, and he livered later on. When the benefit was over the box to the Ledger; besides, any one of the crowd who could not give up; without a word he determined to office held all the money Hot Coffee needed. The

but none of the boys found out how much bravery it in school at his lessons, his half washed face flushed took to send those flowers, nor how anxiously Hot and worried. One morning when he awoke every-Coffee awaited the result of his venture,

Miss Haydn was on the stage again, and even glanced at the gallery, so Hot Coffee thought, before

Wiggles returned.
"She's gre't," said the messenger. "T'ought de bokay was b'utiful an' sen's her 't'anks an', an' I heered her ast de play reporter who was Hot Coffee; en he tole her you got de name by drinkin' so much o' de stuff. He giv' you a sen' off f'um away back; said you was head o' de gang, wo' de belt for boxin'," with a grin, "en always paid yer debts."

Hot Coffee interrupted the eager speaker to watch

his favorite on the stage.

When he came for his papers the next morning, and to relate a vivid incident which happened under this sharp eyes, the dramatic reporter gave him an important looking letter which had been sent in care dirt, for he knew at once who wrote it.
"Some girl on your string?" laughed the man as

the boy held the letter uneasily but with a great show

of indifference.

"S'pose you read it to me an' fine out?" proposed the carrier, trying to cover his embarrassment with a flare of good natured impudence.
"All right: here goes. Well!" exclaimed the man,

"it's from Miss Haydn; she's thanking you for some flowers, and says when you can write her a letter she can read, she'll give you twenty dollars! Now, I call that a first class offer.'

"You bet," agreed Hot Coffee, moving from one foot to the other. He was thinking rather blankly there was a lot of work in it, but the prize was worth the

"B'lieve I'll do it," he said slowly.
"Well! I reckon," agreed the reporter; "nobody ever offered me twenty dollars to learn; father used a switch on me if I didn't." Hot Coffee chuckled and hurried down to the gang to show his fine letter with its blue and gold monogram, and that very night he voted to selling papers.

his studies were well under way.

"Me en Miss Ketchum, de teacher. 's gettin' erlong all right," he said, "but de light's bad on my eyes," and being conscious that the last sentence sounded like shirking, he immediately changed the subject.

'What's de latest 'bout Miss Haydn? "She's making a hit in her new play and expects to wind up her engagement with a barrel full of

evasively, as he left in some haste. But from that disposed of many a ticket. He had also written Miss very evening, to Hot Coffee's bitter sorrow, his Haydn all about the little carrier's misfortune and his progress became slower and slower. The letters unwillingness to let her know. The answer brought blurred before his eyes and he grew impatient with twenty dollars for tickets and a lot of news to be de-

thing was dark and strange as if the sun were eclipsed; then Hot Coffee went to his friend, the "play reporter."

'Why, where have you been?" asked the man cheerily. The boy did not answer, but stood at the door twisting his cap in a most unusual manner. The man looked up again, "Why, what's up?" he questioned.
"Der's—der's—somepin' de matter wid my eyes,"

blurted out Hot Coffee, choking down the sob in his throat. "I can't see to make de letters no more."

"Oh, I hope it isn't as bad as that. Maybe you've gotten something in your eyes," said the reporter with quick and kindly sympathy. I'll take you round to the Eye and Ear Hospital right away and find out what's the matter."

"You have waited too long," said the doctor, lifting his shoulders and brows at the reporter in an of the Ledger. Hot Coffee changed color under his ominous way. "Now, even with a long and expensive dirt, for he knew at once who wrote it." treatment, I cannot promise success." As the distressed man and boy started down the hall the doctor drew the former back. "He will be stone blind in a week." nodding toward the boy, "but with careful treatment there might be a chance for him.

Hot Coffee did not hear it, but he felt the danger. His brave little soul gave way. Where was he to get money to keep things going for his mother and invalid sister, much less for treatment at a hospital? That night the boy watered his pillow with big tears -bitter, because they must be hidden from the family, of which he was the head, and from the gang, of which he was the leader. While lying there aching from his tears and troubles a thought came to his active brain—a benefit. "De very t'ing," he murmured. The more he thought of it the more interested he became. A boxing contest would surely take; local athletes and some specialists he knew, would help him out. He selected his hall and fell asleep, in the satisfaction that the mighty Ledger would certainly stand by its favorite newsboy.

"You had better let me write Miss Haydn about began his school life with as much energy as he de- it," said the dramatic reporter, as Hot Coffee, anxious

and eager, discussed the plans for his entertainment.
"Naw, he said doggedly, "if I can't write de letter I ain't goin' to ast for nuttin', but if de benefit turns out all right an'—an'," steadying his voice, "I gets my sight back, I'll write dat letter yet."

A kind hand tumbled his hair and a kind voice kept

up his spirits.
"Brave boy," said the man approvingly, "we'll puff you in the Ledger and get the public interested." and together they went on down to the elevator.

The night of Hot Coffee's benefit people poured into money. Have you written that letter yet?"

The night of Hot Coffee's benefit people poured into the hall. The dramatic editor, true to his word, had could report items important enough to be written fight his ailment to the end. Every evening found Ledger took charge of the family and the boy went up was worth listening to. So the gang was settled, him out with the Ledger, and every night found him to the hospital. One bright morning Hot Coffee walked into the "Boys, wouldn't you like to have me read a chapoffice of his paper with his eyes still bandaged and his ter in the Bible?"

face white. Wiggles served as a walking cane.
"Why, hello, boy! I certainly am glad to see you out," said the "play reporter," who had been watching the case all along.

"So'm I," returned Hot Coffee with all his old spirit; "'twon't be long 'fo' I get dis bandage off, den I'm goin' ter make things hum. Doc' says I can't start on dat letter yet, but I ain't forgot Miss Haydn, an' I wants you to tell her I'm mighty near

"Got his name from drinkin' so much o' de stuff."

"That's all right, I've been keeping her posted. She wrote that if you got well and wanted to be a newspaper man she'd give you every help she could.'

Hot Coffee stood quite still for a moment—"a newspaper man," he was thinking tremulously, "de greatest t'ing in de world," but he only said in a husky voice, "Youse two been mighty good to me an' I won't forget. I'll be a newspaper man," he finished briefly, and the bargain was made.

In a small way Hot Coffee has begun. The office men say he is a born manager and some day he'll own

the Ledger.

ITTLE PIETY

CHARLES E. WELLS

It was during the siege of Vicksburg that he joined our regiment. He was the smallest addition in the shape of a recruit that volunteered to help Grant capture the old town. At roll call he responded to the name of Walter Mason. When first assigned to our regiment, the Sixth Ohio, he attracted attention on account of his diminutive size and boyish face. It was a frank, honest face, and when he looked at you it was with a fearless eye.

was known by until a rebel bullet gave him the right to receive a new name. He was assigned to a bunk in a tent with a lot of reckless, hardy regulars, men who had lost all the finer sensibilities they might have once possessed, by constant contact with grim war, and who seemed to have forgotten the very existence of a Supreme Being. The evenings in camp were spent in cards, ribald jokes, stories and songs, until the order to "turn in" was sounded.

Young Mason took no part in the story telling or nging, but taking a small book from his pocket began to read by the dim light of the camp fire. After reading a short time he put the book away very carefully, went over to his bunk, and was soon kneeling over it in the attitude of prayer.

'Say, young feller, w'at y' doin' there?" called out

blunt Ned Brunt.

Brunt's question called the attention of the other soldiers to young Mason, and again Brunt yelled

'Say, there, come off; we don't want no piety here. Better go home to yer mother an' stick to yer Sun-We don't want no prayin' soldiers; we want fightin' ones.'

At this outburst the tent mates laughed and we all began to gibe the boy. He finally arose from his knees and coming over to where the crowd was sitting, asked:

The boy's manner had a wonderful effect on the rest of us at first, and no one replied. Finally Brunt said:

"Give us yer chapter."

And then, for the first time in over two years, we listened to words from the Holy Book, while around our camp fire. Some of the boys gave heed to the reading; others lounged in inattentive indifference.

When he finished, Brunt said:
"That's all right, 'Little Piety,' but don't bother us agin with yer Bible readin'."

This admonition had no effect on "Little Piety," for the next night he again brought out the little book, and said:

'Boys, shall I read another chapter?"

The jesting and gibing stopped. Two of the boys looked up from a game of cards and one of mem

"Oh, yes, go on, if it does ye any good."

After reading the nineteenth chapter of Matthew, he closed the book, and, without a word, dropped to his knees and began a prayer. A hush fell upon the crowd, even the two card players pausing in their game, until the boy finished his supplication, after which he said: "Good night, boys," and turned in.

The influence of that chapter and prayer was visible at once. No more coarse jokes were heard that night; no more ribald songs. The card players put away their greasy deck, by what seemed mutual consent, although neither said a word, and we all soon turned in.

It was noised about camp that we had a novelty over in our tent, and soon other soldiers dropped in out of curiosity, until finally it came to be a common thing to see the tent full of soldiers every night, when "Little Piety" was off guard duty.

The boys all looked upon him as poor timber for a soldier, and more than one said they hoped he would never be assigned to anything more danger-

ous than guard or camp duty.

A few weeks after "Little Piety's" arrival in camp, General Grant determined to make the second assault on the works of Vicksburg. This was made on the 22nd of May, 1863. Our regiment, under command of General McClernand, was ordered to the attack. "Little Piety" was to be given his first smell of gunpowder. An outpost of the enemy must be taken. The captain of our company called for vol-unteers. Among the first to respond was "Little Among the first to respond was "Little Piety.

"Don't go, my boy," said Ned Brunt, "you don't have to.'

"Boys, I have showed you how I can pray; now l will show you how I can fight." was the reply, as he took his place by the side of Brunt.

The order was given to charge. Up the little incline we rushed, in the face of a shower of bullets from the rebel pickets. The assault was furious; the defense stubborn, but numbers and determina-tion were successful. When we reached the position lately occupied by the enemy, one of the boys said:

"Let 'Little Piety' plant the flag."

The boy grabbed it from the color bearer, and mounting the parapet waved it toward our regiment. When just in the act of securing the flag, he suddenly dropped it, pitched forward and fell into the arms of Ned Brunt-dead. A chance shot from a rebel gun had ended the young life.

Tenderly we bore him back to camp. Our captain and members of the company stood with bowed heads as we placed the stretcher on the ground. Then he raised the handkerchief from the white, still face, and stooping down kissed the cold cheek. Great sobs were heard from men whose eyes had not known tears for many weary days, as the captain reverently covered the face once more, and "Amen" came from The first night in camp he was given the title he many lips, as he turned toward us and said:

"Boys, bless God, for giving us 'Little Piety.'"

RECIPROCITY. Photo by Robt. Cofer Barrett, Smithfield, Va.

PARENTS! LOOK TO YOUR BOYS.

William McKinley, the twenty fifth president of the United States of America, on Friday, the sixth of September, 1901, was mortally shot by an assassin while standing in the Temple of Music at the Pan-American Exposition at Buffalo, greeting the people whom he loved and whom he served with fidelity. Every American boy was struck with awe and filled with grief in view of the awful calamity.

Leon Czolgosz, the murderer of our beloved President, was once a boy—a boy born, it is said, in Detroit, the home of THE AMERICAN BOY, a city famed for its beauty, its morality, and its intelligence. When the assassin was a boy he probably had no more the purpose in his heart to become a murderer, execrated and despised by the whole civilized world, than does any one of the millions of American boys who have gazed with tearful eyes on the sad panorama that has just moved past them into history.

What is the lesson to parents and guardians to be derived from this awful tragedy? Eternal watchful care over the habits, the education, the environments of their children.

I say, my boy is safe. You say, your boy is safe. Granted that they are, what of our neighbor's boy for whom, in a certain sense, we are responsible? What of the hundreds of thousands of boys born in homes where grinding poverty exists, where there is neither time, nor strength, nor money, nor ability, nor disposition to attend to either the physical, the intellectual or the moral wants of boys? What of the hundreds of thousands of boys born in homes whereignorance and vice prevail? What of the hundreds of thousands of American boys represented by the sixteen thousand who every night sleep in the alleys, the hallways, the garrets, and the cellars of one American city? What of the nearly four thousand American boys in that same city incarcerated in one year within the walls of common prisons amid hardened criminals?

Are we as parents doing all that we can to prevent a repetition of this terrible calamity to our country when we have done what we conceive to be our duty toward our own little ones? Is there not a world-wide duty incumbent on every man and woman to save the world's children? The anarchists of the future are the boys and girls of to-day. In them the seed of discon tent and sedition is finding virgin soil.

Thank God, childhood is radiant in the dawn of a better day, and there is hope for the future, for never in the world's history were men and women giving such serious and self-sacrificing effort to the boy and girl problem as now.

HOW CHARLIE WON A NEW NAME

In the latter part of the fifties there lived on the which I write this family consisted of the father and wolf. mother and an adopted son who was called Charlie.

The boy was about fifteen years old, but his active outdoor life had made him strong and hardy beyond his years. He was a stout, well-proportioned felwith well-formed limbs, broad shoulders and an intelligent face. His straight black hair, prominent nose and cheek bones, and keen black eyes showed soon. There's no help nearer.' that one of his parents had been a pure blooded Indian.

Charlie's parentage and the history of the first year of his life were alike unknown to him and to his foster parents. He had been left, when about a year old, on the threshold of Butler's cabin, wrapped only in a piece of an old blanket. Mrs. Butler, who had

no children of her own, had taken him in and nursed him tenderly. For some weeks she had daily expected a visit from someone who would claim the child, for she did not suppose that he had been entirely deserted; but as the months passed on without a word or a sign from the boy's savage friends, she decided to keep him. The childless couple soon grew to love the bright little waif and reared him as carefully as if he had been their own son, giving him the name of the boy whose place he supplied.

Charlie, contrary to the custom of halfbreeds, took kindly to civilized life and entered eagerly into all the pursuits of his foster parents. The old couple, thinking it better so, had told him what they knew of his parents, and as a child Charlie had often wondered what they were like. He convinced himself that his father was an Indian and so, as he grew older, he threw his whole soul into every sort of outdoor work and sport, in order to be a credit to his father's blood; but with all his pride in his savage ancestry he was a white man, except for one thing. Although he was known in the neighborhood as Charlie Butler he would never acknowledge the surname. He declared that he would some day win for himself a name of his own, as his fathers had done before him.

One bright January morning in the latter part of the fifties, Charlie and Mrs. Butler set out to get some supplies from the little village on the other side of the river. The snow lay deep everywhere; it would have been too deep for travel but for the fact that a recent thaw and freeze had crusted it so hard that it formed a smooth way over every obstruction. The river was frozen two feet deep, and lay so far beneath the surface of the snow that the travelers had a clear path to the little hamlet, which was some eight miles away.

Charlie thought nothing of walking such a distance; and Mrs. Butler, although nearly seventy years old, was still strong and vigorous. So they trudged merrily on, laughing and talking, invigorated by the sparkle of the sun on the snow and the sharp sting of the strong winter breeze.

Mr. Butler had gone off the day before to join a party of wolf hunters from the village. The unusually deep snows of that winter had driven the wolves from their accustomed haunts, and they had been seen in the neighborhood for some days. For the sake of the safety of their families and stock, and for the bounty on wolf scalps as well, the men

off for a hunt of several days. When therefore Mrs. Butler and Charlie reached the little store at the village, their first questions were for news from the

hunting party.
"Well," said the storekeeper, "nobody's seen anything of 'em since they left here. Some people say they've heard the hounds and a shot or two, but I

"Oh, they won't bother us in broad daylight," replied the boy. "Father took my gun on the hunt. You know it's better than his. I was going to bring his with me, but it's so heavy, and I knew I'd have

so much to carry that I gave up the idea." "Well," said the storekeeper, doubtfully, "I don't know 's they would bother you in the day time, but, anyway, I'd keep a good lookout, if I were you, and not let 'em surprise me.'

"I'll keep my eyes open," answered Charlie, con-them.

fidently.

ing briskly over the snow on their way home. They slipped, lost her balance, and sank upon the snow were not exactly afraid of meeting any of the wolves, with a groan. but, nevertheless, they had thought it wise to lose no time on the way.

THE AMERICAN BOY

As they walked on Charlie seemed to listen sharply once or twice, and his face began to grow grave. Finally he said, "Mother, stop a minute and listen."

Mrs. Butler stood still with a sudden paling of her wrinkled face. For a moment they strained their ears and stilled their breathing in vain; then from the east bank of the Illinois River, near Starved Rock, far distance, from the direction whence they had a family by the name of Butler. At the time of come, faint but clear, came the long drawn howl of a Mrs. Butler caught her breath with a sudden gasp. Charlie held up his finger for silence. Again they heard the sound, a little nearer; and this time it was answered by one or two more distant howls.

'Well," said Charlie, drawing a long breath, "maybe they aren't after us. But, anyway, they're coming yet. Hurry, hurry! this way in a hurry and we can't get home any too

They resumed their hurried journey; but now there for the cries of the wolves, and a few words of mutual encouragement. All the time the howling brute drew nearer and all the time his following seemed to grow.

"I must rest a minute and get my breath," exthey stopped and looked

back

Behind them, something over a mile away, and to the right, was a

thick wood through which they had recently passed. From that covert, looked, came six great gray creatures, one behind the other, all with their noses on the warm trail. Even at that distance Charlie thought that he could see their hanging tongues, their

fiery eyes and gaunt sides. He knew from their color that they were timber wolves, animals twice as large and flerce as the

Then catching up a stout bit of timber, he stood in the breach prepared to fight for life

of the district had banded together and had started common wolf of the prairies. Without a word, but with one accord, the fugitives hastened on. They had gone only a few rods when a louder, more exultant cry broke from the pursuing pack. Charlie looked behind as he ran.

"They've caught sight of us," he muttered, and quickened his speed.

The wolves, now that they were running by sight, don't think it likely. They do say that the wolves 've were gaining rapidly. They came on in great leaps been working farther down this way lately. You and bounds, fighting savagely for first place, and givought to have a gun along, Charlie."

They do say that the wolves 've were gaining rapidly. They came on in great leaps and bounds, fighting savagely for first place, and givought to have a gun along, Charlie."

They do say that the wolves 've were gaining rapidly. They came on in great leaps and bounds, fighting savagely for first place, and givought to have a gun along, Charlie." ing down the bundles which he had been carrying, Charlie took his mother by one arm and tried to help her along faster. One thing aided them; when the wolves came up with the provisions which had been thrown away they paused for a few moments to snuff around the bundles.

"Can't you go just a little faster, mother?" he cried between gasps. "If we can only reach that old coal mine up there I think we can get away from

"I'll try, Charlie." the old woman answered, mak-Two hours later Charlie and his mother were walk- ing a desperate effort to increase her speed; then she

"Go on, Charlie," she begged, with tears in her eyes; "go on and save yourself. I've sprained my ankle and I can't go another step. I'm an old woman anyhow and can't live much longer.'

But the brave boy, setting his teeth hard, picked her up in his arms and staggered on with his heavy burden. The wolves were in full cry again and the old mine seemed so far off.

'Do leave me behind, Charlie, and save yourself," pleaded the woman. "It'll be all over with me in a minute; and you're too young to die." Then as the pack became silent again she suddenly changed her tone. "Hurry, Charlie, hurry!" she cried, trembling with a new hope, "they've stopped to smell over the veil I dropped when I fell. We may get there in time

And Charlie did hurry. He pushed through the scrubby trees at the foot of the bluff, clambered up the slippery, wind-ridged snow on the hillside, and was no pleasant chatter, only a straining of the ears reached the shelter of the mine while the pack was yet some yards behind.

The mine had been cut straight into the side of a steep bluff; it was not very deep, having been worked only a short time. It had been used for a while by a stock breeder who, after losing two or three valclaimed the woman, and uable animals in the dangerous old hole, had had it boarded up. The cattle raiser had long ago left the country; the boarding, however, yet remained before the mouth of the hole, though it was now rickety.

Through a break in this rude wooden wall Charlie thrust his mother, and then, catching up a stout bit of timber, he stood in the breach, prepared to fight for life.

The wolves stopped short at the mouth of the mine,

fearing some sort of a trap; then, seeing from the boy's position that he was still at their mercy, they even as they sprang into the opening. The big gray leader, leap-looked came six ing to the front to claim the lion's share of the feast, received a blow upon the end of his nose that sent him rolling head over heels on the ground. His followers seeing him down, fell upon him feroclously, tore him limb from limb, and quarreled flercely over the spoils.

Then, with their appetites whetted, they turned upon Charlie. They all came together this time, and he was unable to use his rude weapon to advantage. He fought valiantly, holding his left arm so as to shield his face and throat. He felt their hot breath on his cheek, and their hungry teeth in his flesh. One snarling brute caught him by the left arm and another jumped for his throat; he kicked off the one and beat back the other. They came on again. One set his teeth into the boy's left arm, rendering the arm useless. Charlie struck at the gray head and broke his stick against the side of the mine, but he still made good use of the bit that remained in his hand; yet in spite of his blows they pulled him down to a half sitting position. Then help came. There was a shout of encouragement from outside the mine, a shot or two, a rush of dogs and men, and Charlie fell exhausted.

The mounted hunters had been hard after these very wolves, and had arrived in the nick of time.

Mrs. Butler speedily recovered from the effects of the adventure, and was soon able to look after Charlie; for the boy needed a good deal of nursing. He had been badly torn by the wolves, his left arm having been terribly wounded.

You had a close shave, Charlie Butler," said the old doctor who had come over from the village. But the lad answered, "Call me Charlie Wolf."

A GENTLEMAN.

I knew him for a gentleman By signs that never fail; His coat was rough and rather worn, His cheeks were thin and pale-A lad who had his way to make, With little time to play, I knew him for a gentleman By certain signs to-day.

He met his mother on the street; Off came his little cap. My door was shut; he waited there Until I heard his rap. He took the bundle from my hand, And when I dropped my pen He sprang to pick it up for me, This gentleman of ten.

He does not push or crowd along; His voice is gently pitched; He does not fling his books about As if he were bewitched He stands aside to let you pass; He always shuts the door: He runs on errands willingly. To forge and mill and store.

He thinks of you before himself: He serves you if he can, For in whatever company, The manners make the man. At ten and forty 'tis the same; The manner tells the tale, And I discern the gentleman By signs that never fair.—Exchange.

The Transfiguration of "Love"

INGRAM A. PYLE <u>X</u>\$\$\$\$\$4\$

During the spring and summer of 1893 copper did not hold so prominent a place on the stock market as it does at the present day. Stocks, bonds and, in fact, all financial securities were in a strained condition. Hence the "Carbonado" mine, like all the other mines in Northern Michigan, with the possible exception of the Calumet and Hecla, was obliged to either close down entirely or employ just enough hands to prevent the property from going to ruin.

The "Carbonado," then known as "the baby" on

the stock exchange, limited her working force to six men-men who, though skilled in both mining and forestry, were uncouth in actions and manners. Nature had been generous to them in the matter of physical strength, but extremely covetous when it came to a question of the higher gifts attributed to mankind.

In the parlance of the district these men lived during that memorable year from "hand to mouth," and by the occasional sacrifice of their appetites. Accordingly, when a knock was heard at the door of their little rude cabin one morning in early April and a barefooted, ragged specimen of boyhood stood upon the threshold, begging admittance and crying for a morsel of food, they shook their heads in idle nonchal-

ance and were fain to disregard his anxious entreaties. "Away with you, lad; we're starving ourselves," cried big Hawkins, in whose being, toil and hunger had caused the animal nature to become predominant.

A downcast expression, almost ludicrous in its intensity, came over the boy's face.

He passed one glance at the inmates assembled around the table within, then he turned upon his heel and descended the rickety steps.

The sight was too much for Jim Reynolds who. according to his comrades, had the strength of an ox, but the heart of a woman.

"Here, lad! come and share your lot with me. It's humble and it's sparse, but you're welcome to your

The boy accepted the rough invitation with a smile

of expectancy. The six men and the boy finished their meal in painful silence. When they had finished, Hawkins, with desire for retaliation governing the expression on his countenance, asked, teasingly:

"What's yer name, love?"

"Reilly-Will Reilly," replied the boy, half in affright, caused by the man's first unwelcome words.

"Reilly, eh! Where do yo' live?"
"Any place," replied the boy.

Hawkins grunted.

"One of God's foundlings," interrupted Reynolds. "There are lots of them in the world, but we're shut up here in the wilderness an' don't come in contact

"Where's yer mother, love?" asked Hawkins, still

in a taunting tone of voice.

"My name ain't Love; it's Reilly." replied the boy.
"Yo' little fool!" Hawkins arose from his chair and stood before the boy. "As long as yo' stay under this roof, yer name's goin' to be 'Love.' Yer too Yer too small and childish to bear th' name o' Reilly, but to 'blige yo', we'll call yo' Willie Love."

And this marked the boy's advent into mining life. Among his associates he was called, half tauntingly, half earnestly, by the name of "Love." Then in time he received the name so often and so naturally that his little heart rebelled; but in vain—until an incident occurred which caused every man in the copper district to grant his most feeble request.

"Love's" face became a familiar sight at the little mining cabin. His countenance was not exactly pleasant to look upon-the expanded and somewhat elevated brow-the round, full eye, that had rather a benign than stern expression, and would have betokened robust health had not the lower portion of his face served to contradict the expression. His mouth was thin and compressed; his chin, lean and short; and his nose—his nose looked as if nature had intended at first to mould it according to the most approved of Grecian features but, suddenly changing her plan, left it snubbed at the end, a rude piece of unfinished workmanship. These features have alremained stamped indelibly in Jim Reynold's mind, as evidenced by his own words:

"He was one of the homeliest specimens of human nature I ever saw; his little stubbed-up nose haunts me to this day; but he had a soul as true as an

angel's and as brave as an Apache's.'

"Love" was so earnest in his desire to be of use that in a surprisingly short space of time he was familiar with every nook and corner of the "Carbonado." And when the time came to sink a new shaft, he surprised the owners of the mine by requesting that he be made a salaried employe, at half wages, a request which was, after much deliberation, finally granted. The name of "Love" caused many a smile as it was inscribed on the semi-monthly pay roll.

The time came shortly after, however, when realized that he was working among men with whom human endurance has no visible limit. He became feeble and unable to handle his shovel and pick. As

he saw the shaft gradually being sunk into the ground, it pained him to think that he was not in a way responsible for the great undertaking. But his physical condition was already too much enfeebled to risk any more unnecessary exposure; he became a fixture at the little hut in the capacity of cook, a profession which he had shown much dexterity in learning.

When night came he listened with open eyes and ears to stories of the day's work in the shaft. He made Reynolds draw rude diagrams, showing how the great derrick had been constructed, how a great steel basket had been improvised and operated as an elevator for conveying its human cargo from the mouth of the shaft to the bottom of the pit, a hundred feet below. When Reynolds was exhausted he would ask Hawkins to explain to him just how the barriers of rock had been removed. Hawkins in turn would tell him of the mighty things which could be accomplished by the aid of nitro-glycerine, and he smiled grimly as he told of what he had done with the terrible explosive.

"Never touch it, 'Love,' " he would say.

He stood at the doorway and listened.

And the boy would look up into his rough face and, with a pleading expression in his eyes, ask:

"Won't you stop callin' me 'Love,' Hawkins; can't you call me 'Bill,' like other boys?'

Hawkins' derisive laugh would echo throughout

the little cabin.

"Not a bit o' it; yer too much of a girl t' be called

So spring crept into summer, and summer slipped into fall. The new shaft at the "Carbonado" gradually became ready for the great mechanical appliances which were to be installed as soon as the finanmarket again showed a demand for copper

By the middle of October the rich copper vein had been reached. The necessary ledges had been constructed in the shaft and the blasting completed. "Love" was therefore surprised when the men did not return to the cabin at five o'clock one evening, as was their custom.

He stood in the doorway and listened, but all was still. Then suddenly, as from the very bowels of the earth, he heard his name indistinctly cried:

"Love!" 'Love!" While he' was making up his mind whether or not it was his own imagination, the cry ceased.

He entered the cabin for his hat. Then he returned and listened.

He heard a cry, but this time it called: "Help! Help!"

He made his way to the opening of the great shaft All was dark within.

"'Love!'" came the cry from below.

The boy recognized the voice.
"It is me, Reynolds—'Love!'" he cried.
"Be careful, boy, don't yo' knock anything down Hawkins' voice became too indistinct to be heard.

'What's the matter?" asked the boy, unconscious of the danger which threatened.

For what seemed a long time he received no reply. Then Reynolds' clear voice again reached him from below:

"We're penned up here-the six of us-on ledge number two. The elevator has gone on down to the bottom of the shaft and—and—"here his voice shook and became more indistinct-"she's loaded with two cans of nitro-glycerine. If anything falls below to disturb it, the shaft will be destroyed and we'll all be buried. Keep away from the edge!"

An expression of affright came over the boy's face. He had studied so thoroughly the diagrams which Reynolds had drawn for him that he understood the situation at once.

He got down on his hands and knees and removed every piece of copper ore that rested anywhere near the edge of the shaft.

"Can't you reach the rope and raise the basket?" he called.

'No; the safety lock is on!" came the answer.

The great iron basket had been so arranged that when it had deposited its human freight at the bottom the safety lock would take effect, thus holding the improvised elevator in place until the workmen were ready to make the ascent. But no provision for safety locks had been made at the intermediate ledges; hence, after its occupants had alighted at ledge number two there was nothing to prevent it from being carried on down to the bottom by the force of its own weight. The least jar caused by the pulling of the cable, or the smallest piece of stone, clay or ore falling and alighting on the cans, would cause the nitro-glycerine to explode with such force as to make the walls of the shaft collapse in an instant. The imprisoned men realized this fully.
"Help us! Help us, 'Love!'" cried Hawkins.
"What can I do?" asked the boy from above.
All were silent. No one knew.

Then Reynolds' cool reasoning came to their aid.

"Will you risk your life for ours, 'Love?

He asked the question pointedly; there was no sign of pleading in his tones.

The boy leaned over the edge and looked down into the deep, dark depths below him. It was a question of one life against six; but he was equal to the task.

Yes," he replied.

"There is but one thing you can do, then," continued Reynolds. "If we try to climb up the cable it will jar the cans. You alone can save us. What do you say?

Again the lad peered down into the deep, dark abyss-like aperture.

"I'll do it!"

"Then slide slowly and carefully down the cable." Before another word could be spoken by either, the boy clasped the iron cable in his hands, twisted his legs around it, as he had often done before in climbing the trees in the forest, and started on the perilous descent.

His light weight had no visible effect on the great cable. Slowly-oh, how slowly it seemed to those imprisoned below, he descended. As he passed ledge number two Reynolds alone had self-possession enough to speak.

Be careful when you reach the bottom, 'Love.' Unfasten the lock; get into the basket; hold the cans in your arms; call to me, and we will pull up-

Before he could say more the boy had passed that point where the darkness met the light, and he made no reply.

To the trembling men on the ledge, the seconds seemed like minutes, and the minutes seemed like hours.

Reynolds turned to Hawkins and, though the darkness hid each from the other's view, said:

"Do you remember, Hawk, about a half year ago a hungry lad came to our door and asked for food? That's him—below.

Hawkins said nothing.

The long wait and silence were terrible. Then suddenly and clearly, like a voice from the center of the earth, one word fell upon their listening ears: "Ready!"

The strain

That word proved to them that the boy had ful-lled his mission. With anxious hands the men filled his mission. grasped the iron cable and pulled the basket to the top. "Love" alighted; he carried a can under each arm; and his hands were burnt, lacerated and bleed-Then he lowered the treacherous "elevator" until it came to ledge number two; and, two at a time, he brought them up to the light of day.

When all were safe, Reynolds tenderly wrapped, in his bandana handkerchief, "Love's" aching hands, as the boy lay on the ground, exhausted from the terrible strain.

Hawkins, shamefacedly, came and stood over the boy. Then, getting down on his knees, and raising the almost prostrated form on his arm he looked into

his eyes and said:
"You ain't got a drop of girlish blood in yer veins. Yer a hero. God bless you, Billy Reilly!'

PEET-KA-LOP

FREDERICK E. SCOTPORD **\$**

If the wild things which make their homes in the great forests of the north could talk man-fashion, they would tell us that man and fire are two things of which they are afraid.

Early in the spring when the four-legged folk that live on the great plains are growing fat on the tender new grass, those that make their homes in the woods are filled with a dread of fire. Every vagrant breeze which passes is eagerly questioned by every cold, moist nose in the forest for news of man and This is because forest fires have an ugly habit of coming in the spring. Man may come at all times. If the news be of man, the animals merely move aside a little and hide-but if the sharp smell of a great fire is in the air, every living thing moves before it until deep and wide water has been put between them and danger.

He who has journeyed through the great wildernesses of northern Minnesota and Wisconsin, has been surprised at the vast stretches of country which have been swept by flames. As far as one can see, in every direction, for miles and miles, burned stubs of great pine and hemlock trees point upward like mighty fingers, while the ground is literally a tangle of fallen trunks and branches charred by the fire which has swept through and over them.

I used to know an Indian boy who lived on the Flambeau river in northern Wisconsin. In his language his name was Peet-Ka-Lop. This in plain English means "The Son of a Wolf." The few traders who ventured into that part of the country knew him only as "Pete the Wolf."

When I first became acquainted with him he was about twenty years old; a strong, sturdy lad who could paddle a canoe all day long without resting; who could go days at a time without eating. He could and did run down the wild stag of these forests on foot, but I will tell that story another time.

He had a queer scar upon his left shoulder, five livid white marks front and back. I asked him about the scar, but he always evaded my questions, and I knew better than to try to urge an Indian to tell anything he wished to conceal.

One day while Pete and I were fishing in the Flambeau for muskellonge I noticed that he was uneasy. Every few moments he would dip his hand into the water and dash a little of it over his nose and then sniff the air anxiously, as does the beast when he scents danger.

"What's the matter, Pete?" I inquired. "What do

you smell?

'Fire," was the laconic reply.

The day was as clear as day could be and a little wind from the north and west was filled with the odor of pine, and to my city-spoiled nose, told no other tale. A few moments later, Pete remarked, Big fire somewhere. Much smoke soon.

I didn't believe him, but he was right. That evening the air was filled with a thin blue haze and the odor of burning pine was plainly perceptible. We had pitched our camp on a little island in the middle of one of the numerous lakes which dot the region, so we were not afraid for our own safety.

After we had dined royally on baked muskellonge and camp biscuit with bacon and boiled potatoes, that night. Pete stood for a time looking at the rosy glow from a great fire in the forest, miles to the west, and then suddenly remarked: "You want know about dem scars? Listen. I will tell." I threw myself at full length upon a bed of fragrant balsam boughs, and this is the story he told, standing half in the flickering firelight and half in darkness. I will not try to repeat his broken English exactly as he spoke it, for Pete was not a great linguist and his conversation was a strange jargon of English, Indian and French-Canadian.

"When I was a very small papoose my He said: name was not Peet-Ka-Lop. That came afterward. I get that, same time I get this," pointing to the scar on his shoulder. "Before that I was Peet-Ka-Gar, son of pokpin, because my mother saw pokpin in lill birch tree by our wigwam on the day I was born.

'I learned early to run and shoot with the bow and arrow, to throw the go-ba-na-tong straight to the mark, and when I was only so high from the ground," paddle a man's canoe anywhere and so quietly that I could almost touch the feeding deer as he stood in the water at night.

"When twelve winters had gone I was a man and had my share in providing for the family.

"One day in the time of green things, I took my father's gun while he was away spearing fish, and with my canoe went a long way up this river to see if I could find a deer. When I got to the place where

a great red-headed woodpecker, and a raven which fallen trees almost within reach of my hand. A great

caw-kung-meow,' as ravens do when man is near. On and on I walked until the shadows began to grow long before I came across a new track of a deer. The trail I found at last was fresh and I followed it at a trot, going as quietly as I could. When it was almost dark I saw the deer—he was a big fellow—but not near enough to shoot him, so I cut off some branches from a little balsam tree and made a bed for myself where the trees were thick in a little hollow, and went to sleep."

'In the night I was awakened by the noise of animals moving about near-by. I raised my head and listened. I thought from the footsteps that deer were moving about, but it was too dark to see, so I lay still and listened.

Then I noticed the smell of fire in the air, but I didn't think of danger. The noise died away in the distance and I was about to drop asleep again when heard more footsteps. This time it was not a deer. knew from the shuffling noise that it was Tekona. the bear, who passed. He was in a hurry and coming as he did from up the wind, didn't smell me.

"In a few moments the whole woods seemed full of animals. As I lay listening I heard a humming,

"Twisting my hands in the coarse hair, * * * I staggered on."

roaring noise, and looking upward, saw a light on the top of a high tree. Then I was scared. I knew that the woods were afire and it was that which caused the wild things to move past me in the night without fear. As I leaped from my bed of boughs a great blazing branch came sailing along in the wind and alighted in the trees near me. In a moment there was a puff of flame, a cloud of smoke, a crackling and a roaring, and the trees behind me were ablaze. Then I ran, partly crossing the wind to get out of the path of the fire if I could. For the first few minutes i mark, and when I was only so high from the ground," easily outran the fire. I was filled with a crazy joy indicating about four feet with his hand, "I could at my speed and strength. The sparks were fewer naddle a man's cappe anywhere and so quietly that now and the great wall of flame was some distance behind. On and on I went, over and under logs, through bogs, up and down hill, until I had to run more slowly because it was hard for me to breathe. Then I noticed that the sparks were creeping nearer again. Would I never find water! I threw the gun away and went straight down the wind now. I could not waste steps.

"All about me through the woods I could hear wild the big burnin' now is I saw where many deer had things crashing through the brush. Almost beside come to the water to drink, so I pulled my canoe out me ran a doe, wild with fear, leaving two helpless of the water and hid it under some bushes and, with 'little fawns to perish in the flames. Another and anthe gun across my arm, walked quietly into the forest, other deer, then three or four together joined us as "Not a living thing did I see in the woods except we hurried. A pair of wildcats raced along over the

sat at the top of a tall dead pine, saying, 'Caw-caw- | panther bounded past me and actually cleared a deer at full jump, without a snarl. The fear of man and of one another was swallowed in the fear of fire. I followed the animals because I knew that they would pick out the easiest way to go.

'The whole sky was red behind me. The air was hot and dry. It was hard for me to run. My feet were bleeding and the animals passed me easily. Red lights danced before my eyes-but it was not the fire. I was getting very tired.

"Three great gray timber wolves rushed past me, followed closely by a big black bear. His beady little black eyes were sticking out of his head in terror. Deer were everywhere. All were flying from the common enemy. There could be no war between deer and wolves that night.'

"I must rest. It was growing light now, but not daylight. The fire was eating its way nearer and nearer. The whole woods were filled with a roar as of a big wind, and the flames swept upward until they licked the clouds. It was very hot. I threw myself down among the pine needles and sobbed for breath. In a little while I could breathe again and I ran on.

"I passed a great gaunt timber wolf pinned to the earth by a fallen branch. He was crying like a little child and I went back and lifted the branch. We hurried on together. One of his legs was broken and his back was hurt so that he could not run very fast.

"Then the fire came nearer and nearer. I was almost tired out. It didn't seem as if I could take another step. Great sparks and burning branches fell all around us. The heat was awful.

"A little way ahead by the bright light from the burning trees I saw water. Could I reach it? I was afraid not. The smoke was awful. Twisting my hands in the coarse hair at the back of the wolf's neck, I staggered on and on. Right ahead of me a blazing branch caught in a clump of balsams, which in a moment burst into flames. I thought I was caught.

"Half crawling, han dragged by the wolf, my eyes burning and useless from the smoke and heat, I moved toward the water. Never mind the fire now. As I staggered past the blazing balsams a burning branch fell across my shoulder. My hunting jacket caught fire. You can see the scar now if you will look. The water was almost within reach as I fell down.

"It was morning when I had my senses. The air was dead with smoke and heat. I was in shallow water at the edge of a little lake-Wolf Lake-you know it? My shoulder was dreadfully sore and lame. The water was not more than three or four inches deep here and it was very warm. I was lying with my head on what I thought was a log. I lay still. and slowly my senses came back to me. Then the log moved. I turned my head. It was a wolf. I was too weak to be frightened. I had all I could do to sit up and stare at him. Then I remembered. It was the wolf I had helped in the night.

"I put my hand to my shoulder. It came away covered with blood. These white scars are the place. When I fell, the wolf had seized me by the shoulder and dragged me into the water. That is why I am called 'Pete the Wolf.'

"What became of the wolf? It was three days before I found my way home again and the wolf stayed with me. I doctored his leg until it was well and he became so tame he would go with me everywhere. But I could never get him inside the village where my father lived. He stayed in the woods every night and when the daylight came I would go to him and hunt with him. After a while a hunter killed him. He was a good wolf."

"THE BLANKET TOSE."

The Switch at Mud Run

A STORY IN FOUR PARTS

KARL EDWIN HARRIMAN

PART I.

Ominous whisperings had been heard in the streets all day. in front of the post office a little throng of men and boys had gathered early in the afternoon and now their voices rumbled like the roll of slight thunder that betokens the approach of a storm. One of the men was speaking. He was taller and broader than the others and his bristling brown beard gave him a certain look of animal ferocity. He brought his great, grimed fist down on the sill of the window with such force it made the panes rattle.

"No, sir!" he exclaimed, thickly, "we ain't goin' to stand it; is we, men?"

The rumble increased and a confused wagging of heads swaved his listeners.

"What right they got to throw us out o' employment?" the big fellow continued; "what right they got? Ain't all of us got wives and children t' home? What right they got; that's what I like to know; what right they got?

At the speaker's mention of wives and children a few heads in the crowd nodded. For the moment,

He * * * took up a position in the middle of the sidewalk.

all of them had forgotten that Big Petersen, as the orator was known among them, had neither wife nor child; nor yet a home, for the matter of that, and that, moreover, he was intoxicated then, and had little real idea of what he was saying.

He appeared to relish the phrases he had given voice. He repeated them over and over. "What right, I say," he grumbled on, "they got to take 'way. our jobs, and leave our wives and children t' starve?"

got no right!" a red faced man on the edge of the crowd shouted back. Three or four little boys snickered

Then someone whispered, raspingly, "Say, here comes old man Thompson, now.'

A hush fell upon the assemblage of malcontents.

Big Petersen's eyes blazed.

Where is he, where is he?" he cried; "lemme git at him, lemme git at him!" Those in front of him fell back before the advance of his giant body. He pushed weaker men to right and left and took up a position in the middle of the sidewalk, his feet wide apart, his massive shoulders hunched.

Ten paces away and coming toward him were two men, one short and slight, the other of medium height and broad shouldered. The first was John Thompson, president of the Jamestown Coal Mining Company. The man with him was the secretary of the company,

Alfred Lewis.

did not deter the two men, nor cause them to swerve Huron, at the corner, and disappeared. six inches to right or left. The crowd hung back. and his companion came upon him he flung out both his great arms and completely blocked the way.

'Look here!" he exclaimed. Mr. Thompson and his secretary exchanged glances. They comprehended the situation. The former stared at Petersen sullenly.

"What are you stopping us for; what do you want?" he asked.

Petersen leered. He was most obviously awed by the little man who dared stand there and ask so calmly what it was he wanted.

"I wanta know what right you got takin' 'way our an' babies starve; that's what I want." The big fellow let his arms fall to his sides.

"Just a minute, Lewis," the president said. Then, turning half way around and facing the men and boys who hugged the door of the post office, he watch the express come thundering into the station. added:

"You might as well learn a few things now as later, you men. This Petersen was discharged from our employ a few days ago on account of drunkenness and for attempting to incite our men to riot. Of course he couldn't do anything of the kind; they only laughed at him. We warned him three times before we let him go, and as for wives and babies, every one of you knows, as well as I do, that he hasn't either. For almost a week now he's been down town here; drunk, 'most of the time, and encouraging a lot of you to join with him in doing certain damage to our property. Oh, you needn't look so surprised. I know what he's been doing"-

Petersen, completely cowed, made to protest. The speaker continued:

"I know every one of you. For the greater part you're a worthless crowd of loafers. Not five of you have ever been in our employ. I know you, Lawson"-one of the men dropped his eyes-"and you, Farsen, and you, Green, and you, Hunter"-these last named, shrugged their shoulders and turned away—"and what's more all of you know why you were discharged. It was for drunkenness and not what I'll do; I'll make you the same proposition you'll attend to your work properly, I'll have you reinstated at the five per cent, increase of wages that the company has, only this afternoon, decided to give the men. Now Mr. Lewis is a witness to this proposition and he knows I never break my word, and I guess a good many of you know it, too, for that matter. You hear what I offer these men, Mr. Lewis?" President Thompson added, turning to his companion.

"Yes, sir," the secretary replied; "and, men, I advise you to take it."

"Now how many of you want to come back on those conditions? How many, I say?"

A reply was awaited. Big Petersen turned and talked in an undertone to several of the men. Apparently they regarded him in the light of a leader. Some of them seemed wavering; others frowned and nodded at the whispers of those beside them.

"How many, I say," the president repeated. "I'll give you just thirty seconds to make up your minds. He drew his watch from his waistcoat pocket and held it in the palm of his hand.

"Time's up," he announced shortly. He had re-

ceived no reply.

"Well," he said, taking Lewis' arm, "that's settled; and, moreover, that's the last time that proposition will ever be made to you. You've cooked your own bacon. And, by the way," he added, as an after-thought, "you might as well understand, first as last, that the company won't stand any nonsense from any of you. If you think you can destroy our property in the way of revenge you have made a court to suspend sentence, as I did last year in your case, Lawson. If you treat me square you'll find I'll treat you square. As for you, Petersen, you're big, but you aren't as big as the law. If anything happens you'll be held to blame for it. I know what you've been saying down here for the past few days, and up at the mines before that. I've got my eye on you and I intend to keep it there. Now I guess there's no misunderstanding of our position."

Taking the arm of his secretary again the little, but determined, president of the Jamestown Coal Mining Company went his way down Ann street. When his back was turned Petersen made a grimace at it, whereat the others laughed.

During the latter part of President Thompson's to listen. At the conclusion of the harangue he set offer upon the moment.

The sight of Big Petersen standing in their path off up Main street whistling, then turned down

Tom Hathway lived with his mother and little Many of the men held their breaths. Big Petersen's brother, Frank, a lad of eleven, in a tiny cottage on eyes flashed the green fire of hate. As the president Thayer street. Early in the spring "Bill" Hathway, as the lad's father was called by the other men employed on that division of the Jamestown, Westphalia and Eastern Railway, died, after a lingering illness. He left to his wife and two sons only the cottage and the little patch of land behind, which, for as long a time as Tom could remember, had served as a garden, and had provided the household with vegetables. Tom was just past sixteen when his father died. Bill Hathway had suffered a stroke of partial paralysis the autumn before that incapacitated him from ever again taking out his old engine "No. 32,"—the engine that had been his jobs," he grumbled doggedly, "and lettin" our wives pride since its assignment to him as "the man up ahead" of the Mountain Express, running from Ogden, through Westphalia to Jamestown. Each morning of the winter before his death he dragged his way to the yards of the road and lingered there to When the conductor would rush to the locomotive with orders for Huber, Hathway's successor, Hathway would experience a keen pang. He hated Huber, instinctively—he, the boss of old "32!"

"These belong to me," he called to the conductor one day, as the latter made his way to the locomotive with the orders for the engineer, "they're mine by rights.'

The conductor only smiled at him, and shouted his hope that the invalid would "get around in shape before long.'

Each night Hathway prayed silently that recovery might be his, and that he might have returned to him his big iron and brass pet with her clanging bell and deep solemn whistle. But that prayer was not answered. One night in the spring he went to sleep never again to wake. And the other railroad men said, when informed of his death, they guessed Bill Hathway died of a broken heart.

Tom was well along in the High School at the time, but wanted to leave at once and hunt for work, but his mother would listen to no such plan.

"I want you to keep right on in school, Tom," she said. "A boy isn't good for much if he hasn't been attending to your work properly. But I'll tell you to school, I can manage the house all right. I'll take a few boarders; it won't be hard, and there's that none of you saw fit to accept when it was first Frankie to help me. No, Tom, I want you to keep held out to you. If you'll give me your word that right on in school. You can help me in the afteryou'il quit drinking, and assure me that henceforth noons, and a great deal during vacation time. You remember, Tom, your father always used to say he wanted you to stick to your school so you'd amount to something."

"Father amounted to something, the boy argued. "And he didn't go to mother?" school."

Yes, I know, my boy," Mrs. Hathway answered, sadly, "but he never had your chances. And he always wanted you to amount to more, even than he did; and if you stick to your school you will. Why, Tom, you'll graduate next year! Think what a pity it would be to give it up now, when you're so far along! I'll see about the boarders right away."

Tom said nothing more about looking for work and his mother felt correspondingly relieved. She found no trouble in securing all the boarders she desired. Two days after the funeral a half-dozen railroad men called at the cottage and asked if there was anything they could do to help her.

"Nothing," she replied, unless you'd like to come here and board. I'm going to try to manage things that way, at least until Tom is through school."

The men asked her when they might come, and she told them she'd be ready by the next Saturday. And she was, and they came.

Before one week of the long summer vacation had slipped by Mrs. Hathway noticed that Tom was acting strangely. She said nothing. He helped her in a thousand ways around the house, but with a most apparent lack of interest. He had not spoken re-cently of looking for work, and she felt some pleasure in that, for she hoped well of Tom; better, indeed, than she did of little lame Frankie, who since mistake. The slightest attempt of that nature on his attack of scarlet fever had never been strong. your parts will end disastrously for you. You'll all and who was physically unable to be of much assistance to his mother in her household work.

> When Mrs. Hathway asked Tom where he was going when he took his hat from the peg behind the kitchen door shortly after dinner on the day President Thompson talked to Petersen and his followers in front of the post office, he replied, "Oh, nowhere

> in particular; just down town."
>
> His mother watched him from a front window until he passed out of sight, then, going to the back porch, called Frank, who was pulling weeds in the garden.

Tom left the house that afternoon with his mind made up. He had not told his mother of his decision, for, in a measure, he feared failure, whereas, if he should meet with success he would inform her in hopes of pleasing her with the surprise. He felt speech Tom Hathway turned the corner of the post that such a surprise would not hurt her away down office and ran full tilt into the crowd. He stopped deep in her heart, whatever opposition she might

When he turned into Huron street after listening to President Thompson's speech, he ran more than half the remaining distance home.

He burst in upon his mother, out of breath. She was at the table in the kitchen, paring apples for sauce. At sight of him, coming thus so suddenly upon her, with his face so red, she almost let the said, a little sadly, "I suppose you'll have to pack up pan slip from her lap.

"Why, Tom!" she exclaimed, with a frightened tone in her voice, "what's the matter?"

He flung his cap across the kitchen and throwing

his arms around his mother, kissed her. "Nothing much," he replied. "Only I've got something to tell you."

'Something to tell me; what in the world is it?"

"Now promise you won't be sorry, or scold when I tell you," he said, snuggling his head on her shoulder. "You won't, will you? Promise."

"Now tell me, Tom; what is it? What makes you act so?" Mrs. Hathway drow ben ber Mrs. Hathway drew her boy around in front of her and set the pan on the table.

He knelt before her. 'I've done it,'' he said.

"Done it!-done what?"

With her two hands Mrs. Hathway held her boy's face directly before her that she might look straight noon. He said if they tried to do any damage to the into his eyes. He did not quail before her gaze. "I've seen Mr. Furniss."

Her hands slipped down to his shoulders,

'Seen Mr. Furniss. What did you see Mr. Furniss for?"

"He's the division superintendent, you know," the boy explained, "and I've been thinking for the last week he might have something, and to-day I went down to see, and he did have something. If he didn't have anything I wasn't going to tell you. But I must now for he's given it to me.

Mrs. Hathway was visibly excited.
"What do you mean, Tom," she asked. "Given you

'A job.''

"Oh, Tom!"

The look his mother gave him made the boy's heart sink like lead within his breast. But it was only for an instant. His enthusiasm came to his rescue and he took courage.

'Now don't you scold, mother," he went on hurriedly. "I went right up to his office-my, he's got a fine office-and told him who I was, and that Bill Hathway was my father, and I didn't know but that he might have some job open that I could have."

"And what did ne say?" Mrs. Hathway could not conceal the little smile that shone through the mist in

"Oh, he asked me a lot of questions; how old I was; if I had been going to school; how far along I was; and then he asked after you."

"And what did you say about me?" Mrs. Hathway was smiling outright now. She had absorbed some of Toni's enthusiasm.

along, and then said again I just wanted a job to wire with the rails some few rods down the track help out. What I do around the house doesn't amount where the road forks; the main line twisting onward to anything, you know, mother; Frankie could do through the mountains, the branch sheering off to the what I do without hurting him. And ever since

school let out I've been just aching to get a job."
"And what else did he say, Tom?" Mrs. Hathway

put in encouragingly.

"Oh he said if I was as reliable as father used to be, I'd be all right. I told him I'd try to be; and then he went out into another office and talked with a man at a desk, and in a little while he came back and gave me the job."

"Yes, Tom, but what is the job?" Mrs. Hathway

asked, adopting his term for a position. He laughed. "Oh, I forgot to tell you, didn't I?

It's a switch job."

"Where?" "At Mud Run."

Mrs. Hathway sank back in her chair. "Away up there in the mountains, Tom; why how will you live?' He observed her dismay, and his heart fell again, but again he summoned courage.

"Why the man who's there now gets along all right He has a little stove and gets his meals, and Mr. Furniss said it would be just like camping out. It's only three miles, you know, and if I take some of my books it won't be lonesome. And just think, he'll his successor, and otherwise assist him in learning give me eight dollars a week. Why, mother that's the ins and outs of a switchman's duties. Green at almost as much as you get from three boarders. And once showed Tom the loft where he slept on a cot in a form of definite resolve. It was on Tuesday night. there in the mother, do you? I want to take the job; you don't care, do you?"

Her boy's wistfulness as he asked her permission to accept the position offered him softened his mother's heart. She leaned forward and kissed him, and patted him on the cheek.

"No, Tom, I don't care, if you want to go. I can manage, I guess; Frankie's a good deal stronger than he used to be, and he can help me. When do you begin work?"

'Mr. Furniss said I might as well go up to-morrow. Green-he's the fellow there now-will show me what the work is, and I can go on regular next Monday. There aren't any Sunday trains and I can come down each Saturday night. Mr. Furniss said there wasn't much to do, just attending to the switch and seeing that the signals are displayed."

He stopped speaking suddenly and thrusting his fact, every duty and obligation necessary for the man-hand deep into his pocket, withdrew a folded bit of blue paper. "See, mother," he said, holding the paper fell under his charge. blue paper. "See, mother," he said, holding the paper before her, "here's my pass to go up to-morrow morning on the express. It always stops at Mud Run.

She examined the pass. As she handed it back she a few of your things. You might take some up tomorrow, it won't make so many at one time.

"I guess I'll take my flobert rifle, wouldn't you. mother? Maybe I could shoot sometimes.'

'Yes, I'd take it, I guess, if I were you.' And she smiled after him as he ran out into the garden to tell his brother of the "job."

Presently the two boys came into the kitchen together, the smaller limping painfully at the side of

Frank hobbled to his mother, his eyes dancing. Oh. mother," he cried, "Tom says I can go up and see him for over night, some day, if you'll let me. You will, won't you, mother?"

She smiled down into the little face turned so pleadingly up to her's. "Why, yes," she answered. some time; if Tom wants you."
"Oh. mother," the older boy interposed, "I forgot to

tell you, I heard Mr. Thompson talking to a crowd of Petersen's gang in front of the post office this aftermine company's property he'd have them all in prison. Big Petersen was in the crowd looking just as ugly as ever."

'So he's out of jail again, is he?" said Mrs. Hath-"I don't believe he'll make any trouble."

No, I guess not.'

"Tom," Frank broke in, "you want me to go up and see you, don't you?"

"Why, of course I do."

"There, mother, he says he does. Tom, when can I come?

"Oh, some day, before long. And we'll have a great time, won't we?" "You bet," the little fellow agreed, radiant with

anticipation.

And across the stove Mrs. Hathway smiled upon the most apparent happiness of her boys.

PART II.

Mud Run nestles upon the breast of Mount Hecker, three miles above Jamestown. The road leading thereto winds and curves in and out among the mountains. For a brief space the traveler lingers at the brink of a deep, black chasm, at the bottom of which roars and shrieks a confused tumble of rocking water, again the mouth of a tunnel gapes wide, and one enters, to be swallowed by the darkness. At the other end the ragged cliffs rise sheer on either side to a height of hundreds of feet-the narrow passage for the railway having been cut through solid masses of rock.

Mud Run itself is marked among other spots thereabout by the little cabin wherein the switch is ma-'I told him how you were taking boarders to get inipulated by a lever, connected by an underground right for a distance of fifty yards, where it ends at

> seethes and flouts its dark spray against the overhanging ledges of granite above. The bottom of the river here is mud, and it is this that gives the turbulent water its color of brown, and the name to this particular sweep of the stream.

> it was customary to run coal cars until such a time as they should be hitched to a train and carried across the country. As a usual thing there were from two to ten cars standing on this siding at one time.

> Tom noted half this latter number on the bright July morning as he jumped from the back platform of the last coach of the Mountain Express, and crossing to the switch shanty, knocked at the half-open door.

A cheery voice bade him enter. Tom found Green to be a boy himself, only some three years older than he. The note from Mr. Furniss was presented and Tom was at once made welcome. Green was instructed in the letter to explain the duties of the position to unpack the younger boy had brought with him. Together they laid the books and soap and canned meats out on a joist and Green offered the remark that during the summer it was just like camping out, only a little lonesome once in a while. Tom told him he expected his little brother up once in a while and that he intended to go home each Sunday, and Green agreed that that would surely balance any monotony that the ever similar days of work might induce. Green was most careful in the instruction he gave his successor, and so apt was Tom in drinking in the information offered, that by the time the evening mail train pulled in at the Run that night and he boarded it, he knew as well as the older boy himself all the working of the levers in the shanty, the connections of the wires, the proper signals to display on different occasions or under different circumstances, and, in listened attentively.

Later that night Tom enthusiastically explained the working of the switch, and his duties as switchman, to his mother and the wide-eyed Frank, who listened to the recital throughout without an interruption. And it happened that both his mother and his brother absorbed his enthusiasm in considerable measure, and as the days passed before Monday arrived, both of them became less and less grieved that Tom should go away up in the mountains "on his job."

Monday dragged on tired legs, it seemed to the boy, so anxious was he to receive and feel upon his shoulders the full responsibility of his new position. Sunday night he packed in a box all the other articles he and his mother deemed necessary to his comfort, including more books, more parcels of coffee and chocolate, and his flobert rifle. And the next morning he trundled the box to the station in a wheelbarrow. Frank hobbled along at his side, having expressed his desire to accompany his brother to the train and "see him off safely.

They met three or four boy friends on the way, and to their questions Tom shouted back the destination of the box and of himself, much to their surprise and envy. In all this the little lame brother showed a pride and interest even greater than Tom showed himself.

On the back purch of the cottage Mrs. Hathway smiled as she remembered what Tom had said before seizing hold of the handles of the barrow.

Who knows, mother, mebbe I'll be too good a man for the switch and they'll give me a better job.

To hear her boy thus call himself a "man" saddened his mother, who, despite his help to her, had hardly ceased to regard him other than as the little red-haired, freckle-faced tot that she was wont to trundle on her knee. Yet at the same time no one realized more fully than she that this same redhaired boy with great freckles on the bridge of his nose, was somewhat more than a boy, new, and a good deal of a man, after all.

He promised her he would come back on the last freight train Saturday night, in the caboose, permission to do which he had received from Mr. Furniss, who took great interest in this young employee of the Ogden, Westphalia and Eastern. Furthermore, Mrs. Hathway assured Frank, after considerable pleading on his part, that he might go up to the Run on Friday morning and spend the night and the next day with Tom. This promise delighted the little chap beyond words, and in return he assured his mother that there would not be a single weed in the garden by Friday noon. And he at once set to work painting pictures in his mind of what he would do up there in the mountains.

"You'll tell me all about the job, Tom, won't you?" he asked. Tom promised grandly. And the last words he heard as the express pulled out of the station on that Monday morning were these, piped in a shrill voice that sounded far above the screech of whistles, the clang of bells and the rattle of couplings: "Remember-Friday-sure." From the rear door of the last coach Tom nodded back at the little figure on the end of the station platform. Frank watched the train until it rounded the first curve in the edge of the precipice overlooking Mud Run proper. its ascent of the mountains and disappeared. Then The "run" is the channel, away down between the he went back and seizing the handles of the light walls of rock, where the Westphalia River tosses and barrow the box had been wheeled in, set off up the street for home, whistling shrilly.

The ominous whisperings that had been heard on the streets of Jamestown the week before had subsided but the feeling that had prompted them was still rampant. Big Petersen and his followers, whom On the fork of the road, which is merely a siding, President Thompson had harangued in front of the post office, were uglier than ever, but their ugliness took now the form of sullen silence, rather than outspoken threats. The fact that the Ogden, Westphalia and Eastern Railway was owned by the Jamestown Mining Company, though managed by a separate board of directors, gave them food for thought. A deep sense of revengeful right smouldered in the hearts of the four men already mentioned whom the Norwegian giant swayed. Despite the warning given by President Thompson, that any attempt at destruc-tion of the company's property would end disastrously for them, they revolved in solemn conference, plans whereby the revenge they sought might be theirs.

At last their cogitations and scheming took the n a shed behind the building wherein the offices of the Mining Company were located they came to a decision. It was to the effect that they would combine to destroy the west-bound train from Ogden, called the "East Express," on the following Saturday

night. It was Big Petersen who advanced the plan.
"It'll be easy," he said. "They ain't got nobody

along the line that'll hinder us."

When means best adapted to the accomplishment of the flendish plot came to be discussed. Lawson expressed himself as averse to the outright killing of anyone, a strange feeling for one to have who was ready to do his part in the killing of possibly five score unsuspecting travelers.

"I don't want to do it," he explained, " 'cause it ain't a good way. I got a better one."
"What is it?" Petersen asked. The three other men

just put th' feller in charge there t' sleep. Then if anythin' happens he'll git all the blame. We won't have nothin' to do with it. See? He'll be the one t' suffer.'

Lawson's plan was enthusiastically adopted. Petersen complimented its inventor heartily.

And now we got t' decide where's the best place," Hunter remarked.

Thus in cold blood and without the slightest trace of passion did these five men plot among themselves a scheme of destruction, which if carried out would surely result in the deaths of dozens of innocent men. women and children, and all to gratify a mean revenge for wrongs which they had brought upon themselves.

'They's only one place that suits," Big Petersen said, after a few moments' thought.

Where?" the others asked.

"Mud Run!"

"Good!"

"Splendid!"

"Just the place!"

"Funny we hadn't thought of it afore."

Petersen was sitting on a barrel. His great body straightened with pride when he heard his suggestion so unanimously favored.

They won't be nobody there but the switchman,'

he explained, "an' likely he's only a kid."
"I know he is," Hunter put in. "He's only a kid. His name's Hathway. He's a new one, too. Just began work yesterday, so I hear."

'All the better," said Petersen.

The other men nodded. "Sure, that's all the bet-

ter," they agreed with one accord.

Petersen went on. "We'll go up Saturday night. They won't be any moon. I'll fix it up somehow so's t' git into th' switch house. I guess they won't be any trouble. Th' rest'll be easy. There's th' siding you know about it, Lawson."

"Yes, I know 'bout it," Lawson answered, "and the

East Express don't stop at th' Run."

"You bet it don't; but mebbe it'll stop in th' river, on th' rocks," Petersen grinned, and his gleaming teeth showed behind his bristling, brown beard, savagely. The others grinned with him.

"Well, I guess that's all, ain't it?" Farsen suggested.
"Yes, I guess that's all," Petersen answered, rising.
The others followed suit. "And we'll all meet at th first curve, up past Riley's, Saturday night, bout

"Better make it half past," suggested Hunter. After a little thought Petersen concluded "half !

past" would be berter.

"And we'll stick to each other, won't we, boys?"

he added. "You bet we will."

"Sure, Pete."

"Well, rather."

Petersen appeared pleased at this assurance of fidelity. "And I guess we'll show old man Thompson and all the others o' his gang that he can't fire us, and us sit right still without doin' anythin'. Won't we, boys?"

The boys agreed they would. Deliberations ended as they always had by someone saying, "Now, let's all go over t' Moreley's an' have a drink."

But, say," offered Hunter, as the quintette emerged from the shed, "how 'bout gittin' rid o' th' kid?"

Everyone seemed to have forgotten that very necessary detail.

Petersen looked at each of his crowd in turn, wisely. Then he chuckled. "You jus' leave that t' me," he said. Thus did these five men not only plan the muider of possibly hundreds, but the downfall, through no fault of his own, of the boy who at that very moment was running back up the track at Mud Run to his cabin, whirling a colored lantern around his head, after having arranged the lights at the switch so that they would read to the engineer of the East

Express "All clear." The nervousness that Tom felt throughout Monday, when the responsibilities of his position were first transferred from Green's shoulders to his own, was as sure of himself in the accomplishment of his duty as though he were an old man and had attended switches all his life. There were no trains in the middle of the day save now and then a way freight, and they carried no fear with them, for they always stopped at the Run. Each day after dinner, and after he had washed his dishes in the spring across the om would take his flobert rifle and climb the rocks to some high crag where he would sit, silent, looking down upon his little mountain home far below, and await the approach of a squirrel or a crow. By Thursday noon he had four squirrel skins tacked against the west side of the switch house where the hot afternoon sun would strike them and dry them out. Before going into the mountains Tom had feared that the long evenings might be lonesome, but as they passed he learned to find in them the pleasantest hours of the day. Often until nearly nine o'clock he would sit tipped back against the switch house door reading. Occasionally he found it cool at night but his overcoat and the blankets his mother had made him bring were ready at hand, should the wind

miner, trudging from Jamestown to some mountain low. He was so tired out when night came that he sweetheart's cabin farther up the road, would beg a could hardly keep his eyes open until the time for drink, or a match to light his pipe. Neither during the express. But he did, and himself waved the lanthe day nor during the night did the boy experience any feeling of lonesomeness. He realized that he might after he had been there longer, but thus far by. All night long he dreamed of engines, whistles, the novelty, the inherent interest of his position, bells and switches, but on Saturday morning was as held him enchanted to the beautiful spot. While reading "Kenilworth" of an evening, he would dream reading " that the Mud Run switch house was a splendid castle, in which a "ladye faire" was imprisoned, and imagine himself a knight come to rescue her. Alone, in this wild place, the boy's imagination had free wing, and many were its flights. Before he was aware of it himself, almost, he had begun to experience a delight in nature, and in the myriad manifestations of her beauty and power and strength that surrounded him. He came to love the flowers that peeped at him from the little patches of earth between the rocks, and after one or two attempts was able to recognize different birds by their calls. He attempted to imitate them and thus kept himself amused the whole day long. But with all his keen enjoyment of his new mountain home he was glad when the train that was to bring Frank pulled up at the Run toward noon on Friday and the little lame brother clambered down the steps, turning when he had landed on the

ground to receive from the hands of the conductor the jug of cider that Mrs. Hathway had sent by him to

Frank's delight at the thought of sleeping in the little switch house and roaming of his own free will about the wild place was boisterous. He asked about wore away with the hours, and by Tuesday night he everything from the manipulation of the switch lever to the means of communication with the switch down the track, and begged to be told the meanings of the many colored lanterns that stood in a row on the floor at the back of the house. Tom explained to him all that he wished to know, and even drew for him on a sheet of paper a diagram of the semaphore that signalled the approach of a train. The workings of this machine interested the little lame boy

more than anything else.
"And if you'll listen," said Tom, "you'll hear it signal the east-bound through freight. It passes at

Frank watched the hands of the little alarm clock on the shelf by the window and the hands dragged dismally slow, it seemed to him. But at last his patience was rewarded. The signal was sounded and three minutes later the heavy train boomed by, leaving only an impression of flight and a cloud of dust as marks of its passage.

Tom promised Frank that he might wave the white

lantern before the down-bound express that night and also help him to put up the signals on the crosspole change and sweep through the gorge untempered by a little way down the track. In the afternoon Frank the warmth of the day. Now and again a railroad played around the three coal cars on the siding and man, patrolling the track, would stop for a half hour's amused himself by dropping chunks of the coal over

"When you decide where the job's goin' to be did, |conversation with the young switchman, or a weary | the edge of the precipice to the seething torrent betern according to his big brother's directions, as the streaming headlight came down the track and flew ready for another day's pleasure as he had been the morning before.

After breakfast, for an hour, he climbed the rocks with Tom, and was given a shot at a squirrel, with the flobert rifle. The builet carried so wide that the squirrel didn't appear to notice its song as it cut the air. A twinkle of his tail was the only movement he made when the rifle cracked.

When the east-bound way freight stopped at noon Frank intently examined the engine and silently wished he were the man in the greasy blue overalls that walked around the great iron monster, with a long-necked oil can, which he poked into crevices that the inexperienced eye of the boy had not even seen. In the afternoon he amused himself on the coal cars again and at supper time was more tired than hungry. He could not stand running about like other boys and it did not take much to tire out the slim lame legs. After the dishes were washed in the spring across the track, he slid down behind the switch house to a plot where in the afternoon he had seen a great many yellow-faced daisies. When he returned his arms were filled with the flowers. He stood them up in one of Tom's pails and set the pail on the table. Tom meanwhile had taken his book and gone out in front of the house to read as long as the light lasted. Frank sat in the doorway and Tom read aloud to him. It was in "Kenilworth," away along toward the end. Tom read and read, and at last laid down the book. He looked at Frank and saw that he was fast asleep with his head resting against the jamb of the door.

Tom awakened him and suggested that he go up in the loft and lie down until time for the freight. when they would be off for home. The sleepy boy was not unwilling. He lay down in all his clothes, 'just for a nap" as he said to Tom, who clambered up the ladder after him and spread the blanket over him, for a cold wind was sweeping down the gorge. that might do serious damage to any boy after such a hot day as it had been, let alone a boy not very

strong in the first place.

The twilight had deepened. Tom lighted one of his lanterns and set it on the table before him. He read further in his book, every now and then glancing over his shoulder at the face of the little clock on the shelf by the window, the alarm of which he had kept set to strike five minutes before the time for the East Express to go whizzing by.

The last time he glanced at the clock the hands pointed to twenty minutes past nine. He had heard no sound from the loft where Frank lay for three quarters of an hour. In thirty minutes the express would pass Mud Run. And in another half hour the freight that was to take him and Frank home would pull up before the little switch house and stop.

Tom closed his book and replaced it on the shelf with the others. He lighted a second lantern, and held it on a level with his eyes to examine the flame. Satisfied that it was burning aright, he strode boldly out into the night and set off down the track. As he emerged from the house he did not see four men jump back behind the great, sheltering rock that towered to a height of fifty feet on the other side of the track back from the switch. He arranged his signal lights, displaying the white one which told the engineer of the express that all was right. Then turning he trudged back up the track swinging his own lantern around his head and whistling pipingly.

Ten yards from the switch house door he stopped, suddenly, and a cold fear came over him. The lantern shook in the hand that had fallen to his side; for there in the frame that the doorway made, and bathed in the glow of the lantern he had left on the table, stood Big Petersen.

(To be continued.)

THE HAPPY BOW.

THE THOMAS JEFFERSON MONUMENT

Will be One of the Interesting Historical Exhibits at the World's Fair, St. Louis, 1908.

The original monument, designed by Thomas Jefferson, and erected over his grave at Monticello, now stands upon the campus of the University of Missouri at Columbia. It is a simple obelisk of granite, eight feet in height and without the slightest attempt at adornment. The monument will form the center of the Missouri University exhibit at St. Louis in 1903. Two miles from the spot where Thomas Jefferson was born, near the junction of the Rivanna and James rivers, in Albemarle county, Virginia, on the lands which he inherited from his father, rises Monticello or the Little Mount, five hundred and five feet high, the home for more than sixty years, and the final resting place of the patriot and statesman. During the long summer days of the year 1763, on a rustic bench near its summit, beneath the branches of a majestic oak, could be seen two young men, in the early bloom of manhood, students of the law and devoted friends. The one was Thomas Jefferson and the other Dabney Carr. Senator Vest thus described the scene: "Lifting their eyes from the pages of Coke on Littleton, they rested upon a landscape of enchanting beauty; on the right the lowlands of Vir-ginia, stretched away in an unbroken plain to the ocean, with the Rivanna and James like threads of silver, whilst on their left the Blue Ridge, robed in azure hue, looked down upon the billowy hills that nestled at their feet. It was here that the two friends made solemn compact, mutually pledging their sacred honor, that beneath this oak should be their burial place, and here their ashes rest." Dabney Carr died first. He married Martha, sister of Thomas Jefferson, and eight years later, at the very com-mencement of what promised to be a most brilliant career, died leaving to the care of his distinguished brother-in-law, a widow and six children. Fifty three years later, after forty four years in public service, Thomas Jefferson died and was buried beside his boyhood friend under the great oak. Among his papers after death was found a rough sketch in ink of an obelisk, together with this inscription for a marble tablet:

HERE WAS BURIED

THOMAS JEFFERSON,

AUTHOR OF THE

DECLARATION OF AMERICAN INDEPENDENCE,

THE STATUTE OF VIRGINIA FOR Religious Freedom,

AND

FATHER OF THE UNIVERSITY OF VIRGINIA.

The marble tablet which formerly was attached to and formed part of the granite obelisk, was badly broken when the university buildings were destroyed by fire on January 9th, 1892. It now, for safe keeping, rests under glass in the fireproof vault of the proctor of the university.

The epitaph is a significant one, Thomas Jefferson had been a member of the Virginia House of Burgesses and of the Continental Congress, Governor of Virginia, Minister to France, negotiator of the Louisiana Purchase, Secretary of State, Vice President and President of the United States, but none of these honors did he wish inscribed upon his tomb-The stern old Democrat preferred instead as passports to immortality, remembrance of his advocacy of the rights of man, religious liberty and

universal education.

Thomas Jefferson died a bankrupt. Beautiful Monticello passed into the hands of strangers, and the simple gravestone was neglected and mutilated. On The statesman's wisdom won this vast domain April 18th, 1882-in the birth month of Jefferson-Congress appropriated \$10,000 "for the erection of a suitable monument and to make other suitable improvements over the grave of Thomas Jefferson at | Monticello, Virginia." When this new monument was erected, the original shaft was presented by the Misses Randolph, the residuary legatees of Thomas Jefferson, through Dr. S. S. Laws. president, and Dr. His pen declared his country free, A. F. Fleet, professor of Greek in the University of Missouri, to that institution. It was shipped from Monticello by Dr. Fleet on the 4th of July, 1883, and unveiled on the 4th of June, 1885, upon the Missouri University campus with ceremonies in which Senator Vest, Thomas F. Bayard, then Secretary of State. Senator Stephen B. Elkins and other eminent Americans participated.

Aside from this tablet the only inscription upon the obelisk is the sunken figures showing the date of the birth and of the death of Jefferson. The shaft proper is five and one half feet high and rests upon a base three feet square. It had been chipped somewhat by relic hunters before its removal from Virginia. The tablet is two feet by eighteen inches in size and of highly polished marble. The monument stands in a beautiful grass plot on the east side of the quadrangle of the university campus. Not far from it is

the original monument from the tomb of David Barton, the first United States Senator from Missouri. replaced at Boonville by a handsomer shaft erected at state expense.

Dr. E. A. Allen, head of the department of English in the University of Missouri, himself a Virginian. wrote these verses at the time of the removal of the monument of Jefferson from Virginia to Missouri:

The granite of his native hill, Mother of monumental men. Virginia gave, whose page her Plutarch fills, With undiminished deeds of sword and pen.

More fitting far than molten bronze, Or polished marble carved by art. This monument of him who broke the bonds That bowed in fetters every human heart.

The column rises in all lands, When sinks the soldier to his rest; This cenotaph of rustic plainness stands To him who gave an empire to the West.

Not with the blood of thousands slain. With children's cry and mother's tears: With gain of honest toil through peaceful years.

The highest honor of his state, And of his country came unsought; When this new monument It was not this, O men, that made him great, Of this is nothing on the tablet wrought.

> Equal and free his fellow man. Freedom in church and state, the right to be, If nature wills, the first American.

Tis well the shaft himself devised Rests here in learning's classic shade; To be her patron was by him more prized Than all the honors that the nation paid.

O. may his spirit linger near, As by old Monticello's slope! Inspire Missouri's sons who gather here With all the scholar's love and patriot's hope!

And He who holds the nation's fate Within the hollow of His hand Preserve the Union ever strong and great, And guide the statesmen of our native land.

A LITTLE ARMY BOY.

MARGARET BUSBER SHIPP.

'Little Army baby, Father's many miles away, Mother's heart is aching for the sight of him to-day. Nestle closer, listen to the fullaby of rain-Go to sleep, our little lad, and dream he's home again!

'Now the baby eyes are shut, and tears to mine bring

ease.

Thinking of the endless rainfall in the isles beyond the seas.

Tropic heat and fever mist, and deadly, lurking foe,-As his father's brave and noble, may our Army boy be so!"

"Marching through the rain and night, the soldier lifts his prayer:

Through the weary separation, I commit her to Thy care.

Cheerful, patient, steadfast-each day a victory won. For the sake of bravest mother, bless our little Army son!'"

A BOY'S POCKETS.

NORVIN G. PERET.

Things in the world that you want to find Pockets of boys have of one a kind; Marbles and blocks and unnumbered strings. Tops and old cards and odd other things; Knives and flint rocks and gun shells and sticks-All of his pockets brimfull, he's fixed.

Frogs and green lizards and bugs and snakes, Everything loose the small boy uprakes: Crowded pants' pockets resembling a sack.
Odds and the ends that he takes he'll "pack;" Lines and their sinkers and corks and hooks, Fishing in rivers and sloughs and brooks.

Button and staples and nails and screws-Sack of "tobac" that he smokes and chews-Pistols and powder, and fiery rockets-All can be found in a boy's bulging pockets.

THE AMERICAN BOY.

A. R. PERHAM

The American boy true and trusty should be, How honest and helpful and happy is he! Energetic and earnest and eager to learn.

Animated, attentive, and active, in turn, Merry hearted and musical, oft by the way, Entertaining, enlivening, every day; Resisting the wrong and regarding the right, Industrious, impulsive, intelligent, bright; Choosing companions with caution and care, Always aspiring, ambitious and fair, Neglecting no duties and no needful rule;

Befitting behavior at home, church and school; Obliging, obedient, o'erflowing with joy, Yes, this is the model American Boy.

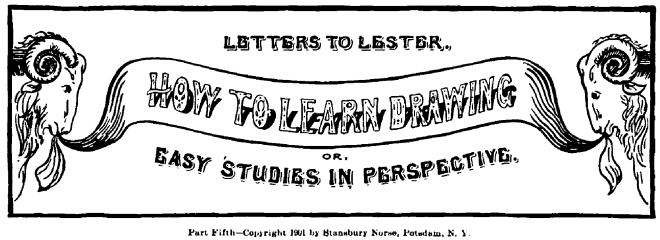

WASHINGTON'S REVERENCE FOR THE NAME OF GOD.

The following is a general order issued by General Washington, Commander of the Colonial Armies, August 3, 1776:

The General is sorry to be informed that the foolish and wicked practice of profane cursing and swearing, a vice hitherto little known in an American army, is growing into fashion. He hopes the officers will, by example as well as influence, endeavor to check it, and that both they and the men will reflect that we can have little hope of the blessing of heaven on our arms, if we insult it by our implety and folly. Added to this, it is a vice so mean and low, without any temptation, that every man of sense and character detests and despises it.

THE OLD FAMILY HORSE. Photo by Marvin Rowland, Troupe, Tex

Part Fifth-Copyright 1901 by Stansbury Norse, Potsdam, N. Y.

My Dear Lester:

principles of perspective—principles which underlie every good drawing-must be completed with this letter. I do not wish you to think, however, that I have told you all there is to know on the subject. On the contrary I have only mentioned a few of the most important points—points without a knowledge of which any drawing would be a failure. In this letter I will give you a few ideas regarding the completion of a drawing which we will suppose to be correctly outlined.

To begin, then, we want to know something about shadows, and shading. A great deal may be said about the perspective of shadows, but that need not bother you at all if you have learned these lessons about the perspective of the objects, for everything else can be determined by relations.

Now, that word "relations" or "relating" often bothers some people a good deal, but it ought not to, for when everything is said and done drawing is nothing more than a matter of relating one thing to another properly.

You will remember the example of the men walking off to a great distance, how we related those far away to those near by as to comparative size. This we can as easily do with shadows, having drawn our outline of the objects properly. We can also deter-mine what parts of the objects need shading and which parts we will not shade at all, by looking at them attentively.

Artists have a term they use which it is well to understand at once. They speak of the different "values" of the object or objects they are drawing. I can explain this better by reference to a pile of money made up of bills and specie. Here we have one pile consisting of parts which have different The dollar bills have one value, the two dollar bills twice as much, and so on, while the dimes and quarters, though they may be hardly noticed, are all there, each having its true value. So it is with shadow values.

If you will put together a lot of books and an inkstand, or any such objects, you will find that your first consideration must be your outline. Every true artist recognizes this fact—that an incorrect outline will spoil everything. Having sketched the outline correctly the next thing to consider will be the values, and the "cast shadows." The latter term explains itself for cast shadows can only be those made by one object throwing a shadow upon another, or upon a surface.

Our completed drawing, then, must be made up of The lessons I have been giving you in the general three things—correct outline, correct values and correct cast shadows. (Of course, I only use the word 'correct" to impress it upon your mind that incorrect work will not pass.) "Outline, values and shadows" reduces the proposition to a very few words, but they mean everything.

Like my last article, I will illustrate this one freely, so you can see just what I mean by values and cast; the object the more the shadow spreads. You can shadows, and also obtain knowledge of how to look at

and represent them.

In this picture, No. 1, we have a beautiful illustration of both perspective and values. If you should work out the problems presented by the various objects you would find the vanishing point for each line to be correct, though Mr. Edgar M. Ward, who drew the picture, probably gave them no thought at all, merely placing one thing in correct relation to another. Such accuracy is, however, gained only by perfect knowledge of the rules and practice under them, until one works automatically. But let us look at the values and shadows here shown. The light comes in at the opening and falls full upon the bench and tools, and easts the shadow of the former upon the legs of the man and the floor. It throws up the face and figure splendidly because of this, and because of the dark values the back of the head and body have against the light on the wall.

I have selected this illustration also because of its 'high lights." Notice how white and bright they are in places. These are of the greatest importance, these bright places, for they contrast strongly with the dark values and shadows and show everything properly. In other words, we have here the "perspective of color.'

To go back to our pile of money. Suppose we call the ten dollar bills "high." the five dollar bills "medium, or half, values." and the pennies "low values." Now look at the picture and call all the white places 'high," all the places halfway between white and black "medium values" and the black places ' values," and you will understand, I am sure, what we mean by "values" in a picture. Just as we have, in our pile of money, a great number of values between the ten dollar bills and the pennies, so we have in this picture a variety of values, and all of them, when correctly outlined, make the picture what it is.

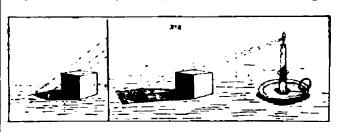

Notice, again, the difference in the values of the shirt sleeve and the rest of the man's clothing. This is right, because the shirt is white and its darkest shadow would not be so dark as those of the darker cloth of the vest and trousers.

Another point: Notice the fact that there is some light on the man's back. This light does not come directly from the window but is reflected from the walls about him. If the walls were covered with very dark stuff they would not reflect so much light, and the values referred to would be darker in tone. Thus we learn that shadows are often modified, or softened, by reflected light, and that we must always look to see whether or not this is the case, and just how much of a change is made

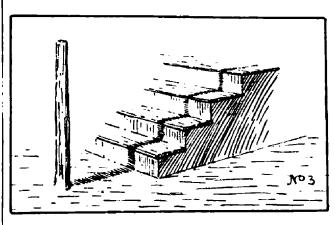

Sometimes, when making a drawing in a room lighted by a number of windows, we find we have another phase of the matter. The light coming from one side "kills" the shadows cast by that coming from the opposite side. Or there are practically no shadows at all, and the values are all about equal. The artist gets the same effect when he is sketching out of doors on a "gray day"—that is, a day when the clouds cover the sky. This kind of light is called "diffused light." called "diffused light."

We discover, then, that we have three kinds of light to deal with, "direct light," "reflected light," and "diffused light." These different kinds of light may all be combined to embarrass us, or there may be only one of them to influence our work, according to circumstances. But we must be able to recognize each such influence when we meet it, and we must make our drawing accordingly. Ward's drawing the light on the wall behind the man is direct light from the window, that on the edges of the benches, tub, etc., is reflected back from the wall. There is, also, a great deal of diffused light in the room.

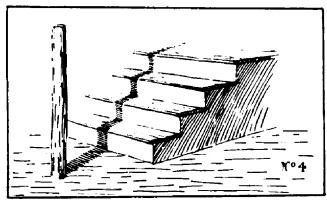

In Drawing No. 2 we have an example of the difference between sunlight shadows and those cast by artificial light. Here the light of the sun is supposed to be parallel to our picture plane, and we find the edges

of the shadow are also parallel to it. But when we place a candle so the center of the candlestick is at X (a line from X passing under the center of the cube and parallel to the picture plan), we do not find the edges of the shadow to be parallel to the p. p. or even to each other. On the contrary, the shadow spreads out like a fan. The cause of this ought to be easily seen. The sun is so far from the cube we can perceive no appreciable difference in the two sides of the shadow, but the candle is so close that lines drawn from X to the corners of the cube diverge greatly. Another thing to be noticed in connection with artificial light is this—the closer the light is to easily test this by moving your hand back and forth between the light and the wall. When close to the light your hand will darken all one side of the room, but when close to the wall the shadow will be the same size as the hand. The same rules that I have given you apply to round objects, as you will see by referring to No. 8. The broken lines in these drawings indicate the rays of light which touch the edges or corners of the objects.

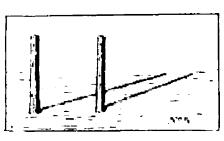

Drawings 3 and 4 show us how sunlight shadows. vhich fall upon a surface, are affected by the position of the surface. Where the surface is vertical the shadow is vertical, and on a horizontal plane the shadow is also horizontal. Notice, also, as in No. 3, that where the direction line of the shadow is parallel to one of the direction lines of the object the same vanishing point must be used for edges of the shadow.

but if the sun has moved a little, as in No. 4, so as to throw the shadow further from the picture plane (or closer to it), then a new vanishing point must be found

for the shadow edges.
"But," you say, "I thought the edges of sunlight shadows are parallel, as you said just now?"

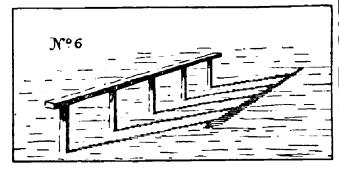

So they are, but they will not appear so if you see them in perspective—that is, if you "look along" the shadows. In that case, as in all others, "lines which

go from us." or lines which have a direction away from the picture plane, if parallel, appear to converge. Sunlight gives us parallel shadow edges and if this direction is from the picture plane then the shadows

will appear smaller at a distance than near by. The same thing is true of shadows of similar objects which are parallel to each other. This is illustrated by No. 5. Here we have the shadows of two posts. The

edges of the shadows are parallel, the posts being ver- short one. And on the same principle, I know the the next point should be, and the fourth point next. tical, and so these edges and the shadows themselves large beam to be something like ten feet long—the connecting them as before. Think whether one point all vanish toward one point. But, as in the case of the men walking along parallel paths, if we went to the shadows and measured them on the ground, we would find them the same width from beginning to end, and we would find the space between them equal, from the posts to the end of the shadows.

Drawing No. 6 is introduced to show you how you can have more than one series of shadows, and how you must look to it that the shadows in your drawing are true to your rules of perspective, or true to what you see, which is the same thing. Remember that I spoke of "relations" just now, and I want you to refer to these drawings as examples of relations—one thing properly related to another-and then to look at objects in nature in the same way. In this diagram we see that the shadow of the rail on top of the posts converges with the rail itself. That is because the two are parallel in fact though converging in appearance. If I were drawing this from nature I would not draw a horizon line and fix a vanishing point. I would simply place the two ends of the shadow in proper relation to the two ends of the rail and then shade it. Then I would get the shadows of the posts in the same way and shade the paper to represent them. I would look, then, for the dark parts of the rais and posts and shade them also. And this would be the way I would draw any object or group of objects.

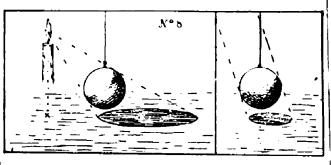

No. 7 reveals to us how shadows will show a certain condition of affairs which we might not otherwise suspect. Let us see what we can prove by this drawing. In the first place, it is near noon. Why? Because if it were earlier or later in the day the shadows would slaut more. The sun is not exactly over the edge of the house. How do I know? Because, if it were, the edges of the clapboards would cast wide shadows, also the lintel of the door and window. The house faces the south, otherwise the whole of this side of it would be in shadow. It does not face east because the left hand door and window posts would then cast wide shadows to the

right, when the sun is so high in the heavens. It does not face the west because then the shadows would slant from right to left, as we are looking at it.

But the main thing to be considered, as shown by this drawing, is the length of the two projecting sticks. I know that the round one projects only an inch or two from the house because the shadow it casts (the time of day being taken into consideration), is a very

shadow on the ground showing, by its relations to other things, that this is the case.

No. 8 is to show us how we can tell whether one object touches another or not. By properly relating the shadow we show the distance between the ball and the table below it. We see here, too, the difference between sunlight and artificial light shadows, while the elliptical form of each is still preserved—as would be the case in any round object.

In conclusion my dear Lester, I want to call your attention to this fact: It is impossible to lay down rules to cover all questions that arise when drawing. in fact, when one has mastered the general principles of perspective which I have given you he had better try to cultivate his judgment as to relations than to bother his head with many more perspective rules. One of the best of rules that I can give you is to tell CAN BOY, that a letter requesting any help upon the you to consider points. Consider each end of the subject, will meet with a ready response, I remain, first line you draw as a point. Fix the points carefully and then draw the line. Then consider where

is higher or lower or to the right or left of another, and the proper distance between them, before drawing the lines. When complete, see if your drawing is correct by the rules of perspective. If this is true, and the relations are right, then the drawing needs only correct shading to be a good one.

Just as we meet people who refuse to be bound by conventional rules, so we meet things, especially when sketching from nature, which we must handle as carefully as we would these cranky people. They refuse to be governed by any but general laws. If you stand where you see the twistings of a winding stream you cannot sketch it by any rules but those governing relations. You must fix the points at the ends of the curves, here and there, and sketch the shore line between them. A tumbled-down old mill (No. 9), with sticks and timbers projecting in all directions, boards hanging by a single nail, roof falling in and flume all but demolished by the ravages of time, will present a good example of the arbitrary, unruly, but delightfully eccentric subjects which continually tempt the pencil of the artist who loves the beautiful rather than the precise. The rules of perspective are of little help here, and to the educated mind they hardly occur. A quick eye, a steady and sure hand, and a few pencil measurements to establish relations, are all that is ecessary to produce an artistic and pleasing result.

With these remarks, I will close this series of letters, hoping that you have found them profitable. Assuring you, or any of the readers of our dear AMERI-

Yours to command, STANSBURY NORSE.

NO HEART IN IT.

J. L. HARBOUR.

I was instrumental not long ago in securing a situation for a boy of about nineteen years of age. It was an excellent opening for him because there was a chance for him to "work up" to a permanent and you there are not many est profitable place, and it was urgently necessary that any better work than that." he should have a place of that kind and thus contribute to the support of a widowed mother and a

number of little brothers and sisters.

To my surprise and disappointment the boy lost his position at the end of the first month. When I called on his employer to ask why the boy

had been discharged the reply was:

'Well, there wasn't a particle of heart in the boy's work, and a boy whose heart is not in his work will never give satisfaction to his employers."

"That is true," I said, and I am sure that I was right. The boy whose work is purely perfunctory and who looks at the clock fifty times a day to see if it is not nearly time for him to "knock off work" will never be much of a success in life.

The heart and the hand and the heart and the brain must work together in order to achieve the highest degree of success. I remember that I was shown over a very large printing establishment in isn't working just for wages."

came forward with some samples of work that was just coming from one of the large presses. The boy held the work up before me and said with a glow of pride in his face:

Perhaps you would like to see this, sir. It is some of the finest work we have ever done. I tell you there are not many establishments that turn out

The part that boy had had in the piece of work he was showing me with such pardonable pride was small, but he was proud of even that small part, and the completed work was a source of great satisfaction to him. His heart was in his work. He had the interests of his employers at heart. His eyes fairly shone as he held the beautifully printed sheet of paper out at arm's length and looked at it.

'That young fellow takes pride in his work," I said to one of the proprietors of the establishment who had been showing me around.

"Yes, he does," was the reply. "He is making very rapid advancement and has had his salary raised twice in six months. He stayed here one night last week two hours after all the others had gone getting rid of a defect in some work he had been doing. The janitor happened to speak of it or we would never have known anything about it. He

an eastern city a few months ago. While I was in No. he was not. His heart was in his work. He

and he honored himself and his work when he brought to that work the utmost skill of which he was capable. This is the kind of work that counts for most in all that it accomplishes and in the degree of satisfaction that it brings to the worker. Work without heart is lost endeavor. Put your whole heart in your work and your hand will have twice its cunning

Will not every subscriber to THE AMERICAN BOY show his appreciation of it by getting for it this month one new subscriber? A very torrent of kind words pours into our ears from thousands of subscribers. Thank you! Thank you! Thank you! But now will you not each put in a little work and each send a new subscription and thus double the number of boys made happy, and increase our ability to make the paper even better than it now is?

OLIVER WENDELL HOLMES.

SAMUEL F. B. MORSE.

EDWARD VII.

LORD CORNWALLIS.

OCTOBER IN AMERICAN HISTORY

>>

THE STATUE OF LIBERTY.

OCTOBER 2, 1780: EXECUTION OF MAJOR JOHN ANDRE. Held the rank of adjutant-general in the British army. Returning to New York in disgulse from a meeting with the traitor Arnold, with whom he had been in correspondence, he was captured by American soldiers tried as a spy and condemned almost on his own confession, for the crime of plotting and abetting a scheme for the enslavement of the American people. Notwithstanding the denunciations which have been heaped upon the court that tried and condemned him, his execution was in strict accordance with the laws of war. Andre's hody was exhumed in 1821 and taken to England and a monument erected to his memory in Westminster Abbey. His trial took place at Tappan, Rockland County, New York, where General Washington had his headquarters.

OCTOBER 15, 1874: LINCOLN MONU-MENT AT SPRINGFIELD, ILLINOIS, OCTOBER 16, 1859: INSURRECTION AT HARPEICS FERRY.

OCTOBER 16, 1859: INSURRECTION AT HARPEICS FERRY.

OCTOBER 17, 1874: SURRENDER OF GENERAL BURGOYNE AT SARATOGA. The number of the British troops which surrendered including prisoners and sick or wounded was 7,599. In addition the Americans received 42 places of brass canon, 4,600 muskets and a large quantity of other munitions of war. The leader of the American forces was General Horatio, and the price of the Status of the Called the West Indies.

OCTOBER 15, 1874: LINCOLN MONU-MENT AT SPRINGFIELD, ILLINOIS, DEDICATED.

OCTOBER 16, 1859: INSURRECTION AT HARPEICS FERRY.

OCTOBER 16, 1859: INSURRECTION AT HARPEICS FERRY.

OCTOBER 16, 1859: INSURRECTION AT HARPEICS FERRY.

OCTOBER 18, 1842: FIRST SUBMARINE CABLE LAID BY PROFESSOR MORSE.

General Washington had his headquarters.

OCTOBER 7, 1894: OLIVER WENDELL HOLMES DIED. One of America's famous poets, was born at Cambridge, Massachusetts, on August 19, 1849. After graduating at Harvard, he studied law, but finding it too irksome, he applied himself to medicine. To gain a more complete knowledge of his profession he went to Europe and attended the medical schools and hospitals in the large cities. He was professor of anatomy and physiology in Dartmouth College from 1838 until 1847 when the same chair was given him by his Alma Mater, occupying it until 1883. His literative with their delicate and refined humor, amply fulfilled the bright hopes to which his youth gave birth.

OCTOBER 8, 1656: MILES STANDISH

which his youth gave birth.

OCTOBER 8, 1656: MILES STANDISH DIED. One of the "Pilgrim Fathers" who signed the constitution drawn up on board the Mayflower on her arrival at Cape Cod in the winter of 1620. He was an English soldier, and when the settlement at New Plymouth was made was chosen captain. His services were of the utmost importance to the pioneers, as he inspired the Indians with a wholesome fear of the English. He is described as being of small stature, but full of energy, activity and courage. His wife, Rose Standish, died in the spring of 1621, falling a victim to the famine and fever which so decimated the ranks of the emigrants during that first winter in America. Standish afterward settled at Duxbury, Massachusetts, where he held various official positions. On Captain's Hill, Duxbury, a monument has been erected to his memory.

from 1833 to 1837, and in the latter year was appointed United States Senator. In which august body he sat until 1842. During our war with Mexico Pierce was colonel of infantry, rising to the rank of brigadier-general under General Scott. His nomination for President by the Democratic convention in June, 1852, was followed by his election to that high office in November. As a defender of slavery he denounced as an act of rebellion the formation of free-state government in Kansas, His sympathies during the Civil War were wholly with the Confederates.

OCTOBER 8-11, 1871: GREAT FIRE AT CHICAGO. The result of the three days' conflagration was the destruction of prop-erty valued at \$192,000,000 including 20,000 buildings, rendering 98,500 people homeless.

OCTORER 12, 1192: CHRISTOPHER CO-LUMBUS DISCOVERED THE BAHAMA ISLANDS. The indications of land which became visible put a stop to the mutin-ous conduct of the sailors, and all were cagerly on the lookout. The land which Columbus had discovered was thought by him to be part of farther India, and in that belief he called the natives whom he found there, "Indians." It was, however, found to be an island, one of the Bahama group, and he named it San Salvador. Sall-ing southward he afterward discovered the islands of Cuba, Hayti and others, which he called the West Indies.

FRANKLIN PIERCE.

erected to his memory.

OCTOBER 8, 1869: EX-PRESIDENT FRANKLIN PIERCE DIED. Born at Hillsborough. New Hampshire, November 23, 1804. On his graduation at Bowdoln College he studied law and was admitted to practice in 1827. He served as Congressman

erty was to be respected. The total num-ber of prisoners was 12,000. Included in the spoils taken were 8,000 muskets. 75 brass and 160 iron cannon, together with a large and 190 from cannon, together with a large quantity of munitions of war and military stores. The effect of the surrender was practically to end the long struggle, as in May of the following year Sir Guy Carleton arrived in New York, bearing to Congress propositions for reconciliation.

OCTOBER 20, 1860: PRINCE OF WALES ENDED HIS VISIT TO THE UNITED STATES. During his stay in America the Prince visited Detroit, Washington, Philadelphia, New York, Boston, and embarked at Portland.

at Portland.

OCTOBER 22, 1900: JOHN SHERMAN DIED. Born at Lancaster, Ohio, May 10, 1823. Studied law and began to practice in 1844. Ten years later he was elected to Congress and served there until he became I nited States Senator in 1861. With Thaddeus Stevens Mr. Sherman framed the bill for reorganizing the "seceded states," and he was also the author of the act providing for the resumption of specie payments. In 1877 President Hayes appointed him Secretary of the Treasury. He was again elected United States Senator in 1885. In I resident McKinley's first administration Mr. Sherman was Secretary of State, but on account of advancing years and ill health he resigned that position and retired into private life. In his death there passed away one of the brightest minds and ablest statesmen of his generation.

and ablest statesmen of his generation.

OCTOBER 25, 1812: CAPTURE OF BRITISH FRIGATE MACEDONIAN BY U. S. SHIP UNITED STATES. Captain Decatur commanded the United States of 44 guns, while the Macedonian of 38 guns was in command of Captain J. S. Carden. The action occurred near the Island of Madeira. The British sustained a loss of 36 officers and men killed and 68 wounded, while the United States was only crippled to the extent of five killed and six wounded. Decatur's victory was received in America with enthusiasm. America with enthusiasm.

OCTOBER 16, 1859: INSURRECTION AT HARPER'S FERRY.

OCTOBER 17, 1777: SURRENDER OF GENERAL BY ROOVNE AT SARATOGA. The number of the British troops which surrendered including prisoners and sick or wounded was 7,539. In addition the Americans received 42 pieces of brass cannon, 4,690 muskets and a large quantity of other munitions of war. The leader of the American forces was General Horatio Gates. The effect of this surrender was of great importance and created a profound sensation in England.

OCTOBER 18, 1842: FIRST SUBMARINE CABLE LAID BY PROPESSOR MORSE IN NEW YORK HARBOR.

OCTOBER 18, 1842: FIRST SUBMARINE CABLE LAID BY PROPESSOR MORSE IN NEW YORK HARBOR.

American with enthusiasm.

OCTOBER 28, 1886: LIBERTY STATUE UNVEILED IN NEW YORK Barband and graduated at West of Pennsylvania, December 3, 1826. Completed his education at the University point in 1846. He took part in the war with Mexico and was afterward instructor at West Point. After being engaged in making explorations and surveys in the Europe to study army organization and observe the Crimean war. He left the army in 1857 and engaged in civil pursuits. At the opening of the Civil war he went to the field as brigadier-general of Ohio volunteers. Afterward he obtained commission on the day of the election. He, subsequent to a tour in Europe, took up his residence in New Jersey.

OCTOBER 30, 1892: WORLD'S COLUM-YORK II 1877 he was elected Governor of New Jersey.

OCTOBER 30, 1893; WORLD'S COLUMBIAN EXPOSITION CLOSED. The total number of admissions during the six months it remained open was 27.529,400.

Uncle Sam's Sailing Pond

THEODORA CUNNINGHAM

On the fourth of March, 1839, a "little stranger" came to the city of Charlestown, Massachusetts. He citizen of that place, and was given his father's name. His coming is of interest to all Americans beganization of our navy. The story of his life shows we see the care with which they are made. only, can accomplish, if his ambition be honorable, and if he has steady application, unswerving will and determination to conquer the difficulties in his way.

When quite a lad, Philip Hichborn the younger was indentured to the government as a shipwright's apprentice. It is because he had a trade and learned it thoroughly, following his knowledge by a course of technical training in ship designing and calculations, that he was able to do the work he accomplished in later years. When young Hichborn was twenty two years old, he had a memorable voyage. He wanted to go to California to accept a position in the Mare Island Navy Yard. In order to do so, he obtained a position as ship's carpenter on a clipper, "Dashing Waves," bound for San Francisco. It was five months after leaving Boston when he reached his destination, a length of time that seems incredible in these days of swift navigation. Meanwhile,

FXPERIMENTAL MODEL BASIN.

the young ship's carpenter had shown his adaptability by taking the place of the third mate who fell ill, and he filled it so well that double wages were offered him on reaching San Francisco if he would remain with the vessel as third mate. This was not his idea, however, in striving to reach San Francisco, and he soon worked himself by a succession of promotions in the Navy Yard, to be master shipwright when only twenty three years old, with more than a thousand men under his control. In 1869 he was appointed assistant constructor, and from that time until his appointment as naval constructor in 1893, and indeed to the present time, his success has been marked. A number of the vessels of our new navy are made after his ideas, among them being the Oregon, constructed after plans made by Chief Constructor Wilson with Assistant Constructor Hichborn as his aid. There are various devices now in use in the navy that are his inventions, and it is owing to his efforts, largely, that an interesting and valuable class of experiments can now be carried on at the Washington Navy Yard.

Uncle Sam has many delightful playthings in Washington. Some of these particularly appealing to the small boy are a collection of war vessels in miniature, usually on exhibition in the corridors of the Navy Department building. These were made under the supervision and direction of Chief Constructor Hichborn, and are perfect models of the originals which they represent. With such complete little vessels at hand, a place where they might be sailed was the next requirement, and such a pond has lately been built under the auspices of the Bureau of Construction and Repair, of which Rear Admiral Philip Hichborn (as he now is) is chief. Unfory, however, the sailing pond, which at the other end of the town from the Navy Department, is not used for sailing these miniature war vessels as would seem most proper, but it is used for sailing other models, quite unlike these, in conducting a series of interesting and valuable experiments.

Close to the water's edge, in the Washington Navy Yard, stands a building bearing over the doorway the inscription:

EXPERIMENTAL MODEL BASIN, ERECTED 1888, BUREAU OF CONSTRUCTION AND REPAIR, NAVY DEPARTMENT.

The building is long and low, built of brick without windows, while the roof is of iron with skylights extending along its entire length of five hundred

feet. In the interior, the ceiling is paneled in light wood and all exposed iron work is painted white. The light tone of the ceiling, the white walls, and white cemented basin brim and platforms, intensify the light coming in from the roof and falling on the sheet of clear water below.

This is the pond where a set of very strange looking models are towed up and down-now fast, now slowly. The models at the Navy Department are fitted out with masts, smokestacks, ropes, sails, turwas the second son of Philip Hichborn, a well-known | rets, and even guns in miniature, and seem very real indeed, while the clumsy blocks of wood, shown us here as models, do not interest us particularly until

In reality, a model marked T. B. D. 7 is as perfect now much a boy with a common school education a model of torpedo boat Number Seven as the most exact measuring instruments can make it. Drawings are made from the plans of the original boat by the aid of an instrument called the eidograph, and from these drawings a wooden "former" model is made by nailing battens upon upright sections firmly clamped in position. This "former" model is then planed smooth. Meanwhile, a rough block of approximately the right shape has been made in sections and glued together under immense pressure. This block is placed upon the upper table of a model-cutting machine, and the "former" model is secured on the lower table. The cutting machine works in this way: Rollers move along the surface of the "former model, as gouges or saws work along the surface of the model proper, thus removing the excess of material on the latter and making it exactly the shape of the former. The model is carefully finished by hand and varnished, after which exact measurements are taken of every part, not only to determine whether the model represents the lines desired, but to preserve an exact record of its shape.

The first thing that a boy does with his toy boat is to see whether it will sail or sink; but this momentous question is not thought of in connection with a model used on Uncle Sam's pond. Indeed the model is given no chance to either sink or swim, but is suspended from the lower side of a sort of traveling bridge that moves over the water in the experimental basin, in such a way that the model is submerged to a greater or less degree entirely at the will of the operator who sits before recording instruments on the bridge. The purpose of all this is to measure the amount of resistance the model meets with, as it moves through the water at a given speed, and this amount of resistance is recorded automatically by the instruments on the bridge.

A moment's thought will show any one how desirable it is, in building a vessel, to know the amount of resistance there will be in a hull built after certain lines, driven through the water at certain rates of of speed, as compared with another vessel of different, shape and speed.

The experimental basin has already proved its usefulness, notably in experiments with a model of the Holland submarine torpedo boat recently purchased by the government. And, although the idea of building such a basin did not originate in this country, its existence here with its complete equipment and usefulness is a lasting monument to the efforts and good work of Rear Admiral Philip Hichborn, U.S. N.

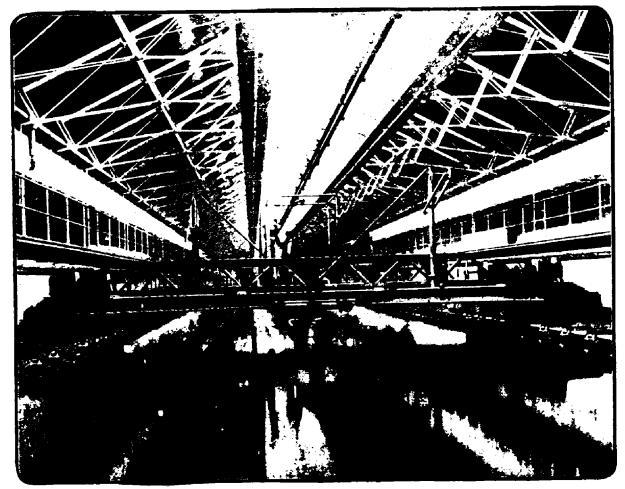

REAR ADMIRAL PHILIP HICHBORN. CHIEF OF BUREAU OF CONSTRUCTION, U. S. NAVY.

The miniature war vessels referred to in the foregoing article are now a part of the exhibit of the Navy Department in the Government Building at the Pan-American Exposition, and thousands of American boys ave looked upon them during the last few months with intense interest.

A few words of interest in this connection may be added by the editor. There are several places provided by Uncle Sam for boys in his navy. A boy may be a cadet at Annapolis, a student of ship architecture at some one of the various navy yards, an apprentice in mechanical occupations in Government yards, a young sailor on a naval training vessel or a helper in a few other places. The Ship Subsidy Bill before Congress offers attractive work for boys in connection with the navy. We understand that the bill stipulates that each ship receiving help from the Government shall, when so required by the Secretary of the Treasury or Secretary of the Navy, carry on each foreign voyage as a member of the crew one American boy for each thousand tons of the vessel's capacity. These boys will be taught seamanship, engineering, etc., according to the kind of ship on which the boy is employed.

At the Washington Navy Yard there is a branch of the Naval Construction Department devoted principally to making tracings of ship plans and blue prints of these. Here the ship architect of the future is assigned and begins work, tracing drawings and making duplicates. The work of ship plan-making begins after the bill providing for the construction of a ship passes Congress and is approved by the President. Prior to this, however, preliminary plans of the vessel desired are prepared by the Navy Department, submitted to Congress and passed upon by the proper committee in both House and Senate.—The Editor. A few words of interest in this connection may be added by the editor. There are several places provided

TOWING CARRIAGE WITH MODEL ATTACHED.

B. H. Townsend, Edon, O.-I will exchange foreign stamps for Confederate

Oscar W. Hayes, Milford, Ill.—Pet red fox, for best offer of Indian relics, stamps or old coins.

L. D. Ackerman, Bristol, N. H.—Relics of the Moundbuilders wanted in exchange for arrows, stamps and coins.

Charles Dickerman, Mallet Creek, O.-I will exchange Belgian hares for Indian relics or a good 32-callbre rifle.

chaster Werts, Weiser, Ida.—I will exchange stamps, camera or books for printing material or type. Write first.

Raymond Kierstead, 59 N. Sixth St., Newark, N. J.—I will exchange a new camera outlit for a kodak, or books.

Clark W. Kelly, Sago, O.-1 will exchange a five dollar Wiltsle camera for a printing press or other article of equal

Ralph L. Steele, Gibsonville, N. C.-I will exchange a September, 1900, copy of THE AMERICAN BOY for a January, 1901, copy.

Robert L. Adams, Box A, Gastonia, N. C.-For exchange, pair of coons in fine condition for male mastiff or Newfound-

Milo Warner, Lime City, O.—I will exchange a magic lantern for a printing press not smaller than 4x5, or an air rifle. Write first.

J. Verlinden, Wasmes, Belgium.—I will exchange ten thousand Belgian, French, Deutsch, Italian stamps for camera or Bull's Eye kodak.

D. Adams, 32 Michigan Ave., Chicago, Ill.—I win exchange a six dollar Cyclone camera (new) for a good second-hand printing press.

Frank H. Tryon, Box 86, Empire, Kan.—I will exchange a foot ball in good condition, measuring 18½ inches, for a bicycle cyclometer in good running order.

Frank L. Valiant, Spring Lake, N. J.-I will exchange one thousand varieties of postage stamps, some of them very fine, for a good sized printing press and outlit. Stanley D. White, 33 Chapin St., Chicopee, Mass.—I will exchange "Rupert's Ambition," by Alger, for "Bob Burton," by Alger; in good condition. Write first.

Maitland Milliken, McPherson, Kan.-Pan-American and good United States postage stamps catalogued at over two cents wanted in exchange for my dupli-

Joseph T. Kraus, 12 Miller St., Auburn. N. Y.—I will give two foreign stamps for every one or two cent Pan-American, and four foreign stamps for every Pan-American above two cents.

Ralph Stewart, 1510 Green St., Harrisburg, Pa.—I will exchange a collection of cight hundred different stamps, no two alike, and a bugic, for a 4x5 or 5x7 chase and press.

Frank A. Matteson, 26 Winslow St., Watertown, N. Y.—Steam engine, weight fifty pounds, minus steam chest, for best offer in type. A good offer for one who understands engines. Write.

Archie Gottfried, Grove City, Fla.—I have a choice collection of Florida seashells, a sea horse and a saw of a sawfish, which I would like to exchange for some book on American history or Knox's books on travels.

James L. McKerron, Stanwood, la.—I will exchange a small printing press, size of form 1½,x2½, with a font of type in good condition, one box of gold bronze, one box of silver bronze and one box of ink, for an air rifle in good condition.

J. J. McKallip, New Kensington, Pa.— I will exchange a Baltimorean No. 4 print-ing press and outlit (used once) for either Young's "Lessons in astronomy" or Proc-tor's "Other Worlds Than Ours;" in good condition.

Roscoe O. Bonisteel, Box 153, Hagerstown, Md.—I will exchange a bottle of petroleum in its crude state which came from Canada, and some pleces of different colored filmt, which were found along the Potomac River, for Indian pictures or an leader exceeding the petroleum Indian arrowhead.

Robert M. Klenk, Lisbon, Mich.—I will exchange two Chinese coins captured during war, twenty five mixed foreign stamps, one good typewriter, amateur papers, one shell from Atlantic Ocean, and two bullets from the battlefield of Gettysburg, for In-dian relies, coins, or best offer. Write

Chartes F. Moore, Box 7, Orlando, Fla.—I will give one thousand foreign stamps for a good camera. Also for every twenty five Pan-American eight and ten cent stamps sent me I will give one arrowhead. Write first.

head. Write first.

Jack Searing, 1137 Broad St., Newark, N. J.—I will exchange a small 2x2 camera for foreign stamps. Also will give forty different foreign stamps for one hundred one cent used Pan-American, twenty five different foreign stamps for one hundred two cent used Pan-American, and fifty different foreign stamps for one hundred four cent used Pan-American.

SEND NO MORE MATTER FOR "BOYS' EXCHANGE" COLUMN.

A Favorite Writer for Boys.

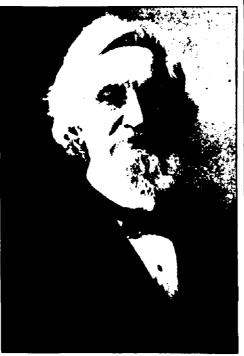

. H. H. H.

Some of "us boys" who are beginning to have silver threads in our hair and who have "strapping" boys of our own used to read with unflagging interest those deligitful stories by J. T. Trowbridge that many of the boys of to-day are fond of reading. We used to pour over "Cudjo's Cave," "Neighbor Jackwood," and all the other charming stories written by Trowbridge that the boys of to-day read with eager interest. And how many of us when we were boys used to recite "The Vagabonds" on the afternoons when our teachers had us "speak pieces" at school. I daresay that many of the boys of to-day are fond of reciting the famous old poem beginning with: ginning with:

"We are two travelers, Roger and I.
Roger's my dog. Come here, you scamp!
Jump for the gentleman, mind your eye!
Over the table—look out for the lamp!
The rogue is growing a little old;
Five years we've tramped through wind and weather.

and weather.

And slept outdoors when nights were cold, And ate and drank—and starved—to-gether."

J. T. TROWBRIDGE.

I shall not soon forget one beautiful afternoon not so very long ago when I sat in Mr. Trowbridge's home in Arlington and he told me when and where he wrote "The Vagabonds," and talked in the most interesting way of his work as a writer. Arlington is a suburb of Boston and every mile of the way between the city and the home of Trowbridge is historic ground. One leaves Boston by the new subway under the famous old Boston Common. Emerging from the subway at one of the entrances to the beautiful Public Garden one goes on out past the splendid Trinity (anreh which resounded for so many years to the eloquence of Philip Brooks. Near it is the Art Museum of which Boston is so justly proud and that all boys ought to visit when they go to Boston. One goes right by the great Boston Public Library, which is among the largest and finest libraries in the world. In a few minutes the car runs across the Charles River, and if one cares to do so, one can, when returning, cross the river by the bridge on which Longfellow stood when the words of "I stood on the bridge at midnight," I shall not soon forget one beautiful af-

"I stood on the bridge at midnight," were suggested to him. On one goes past the beautiful grounds of Harvard College to Harvard Square, where one changes cars for Arlington. It takes but a few minutes to go from Harvard Square to the old home of Longfellow, and a few minutes more brings one to "Elmwood," for so many years the home of James Russell Lowell. Then one can go back to Harvard Square and resume one's journey to Arlington, going by the famous old Washington Elm and on past many houses having a history of more than ordinary interest. One must leave the car at Pleasant street, which has been well named since it is a wide and beautiful winding street shaded in some places by fine old elms, such as one does not often see out of New England. A walk of half a mile brings one to a large and handsome house standing well back in a wide dooryard filled with shrubbery. Back of the house is a beautiful lake and "I stood on the bridge at midnight,"

the surroundings are as rural as those of

the surroundings are as rural as those of a country town.

The maid who comes to the door ushers one into a large and sunny parior from the rear window of which one could almost toss a stone into the lake. In one corner of the parior is a wide case reaching from floor to ceiling and completely filled with beautiful birds. Mr. Trowbridge will tell you with tear-dimmed eyes that all of these birds were mounted by his son who was as fond of natural history as was a fond of natural history as was a form of the parior of the parior of the parior of the parior of parior of parior of reaching manhood's years. Mr. Trowbridge is a patriarchial-looking old gentleman of seventy four with hair and beard of snowy white and most courtly manners. None but a real lover of boys could write such books for boys as Trowbridge has written. One must retain one's youthful feeling, one's real delight in life, one's sympathy with boyhood, in order to write such stories for boys, written by Trowbridge when the real days of his boyhood were far behind him. I am sure that John Townsend Trowbridge has a large place in his heart for all boyhood, and it is a great pleasure to him to have had such a large audience of boys among his readers. His books demonstrate the fact that one can steer clear of all senting and yet write stories that boys will read with cager interest.

Mr. Trowbridge was born in the town of Ogden. New York, on the 18th of September in the year 1827, so that he now feels that he is living on "borrowed time." He was the son of a poor farmer and received his education in an ordinary country school and by self-instruction. When he was but nineteen years old he went to New York City to live, and a year later he went to Boston, where he supported himself in part by his pen. So successful was he that he was soon able to devote all his time to writing. He had the qualities that win, for he was very industrious and he win a "this one thing I do" spirit and he did not give any of his time or his thought to anything else. He studied

Book Reviews.

LOYAL HEARTS AND TRUE: Ruth Ogden. Illustrated by H. A. Ogden. The author has taken a few chapters from American history and tried to write a story of interest to young people. The children with whom the story deals live in a navy yard, where Uncle Sam makes ships. Here the children live in close touch with soldiers and sallors and, of course, are a patriotic little company. Details of life aboard a receiving ship are well described. 352 pps. \$1.25. Frederick A. Stokes Co.

Co.

A BOY'S BOOK OF RHYME: Clinton Scollard. To the boy who loves rhyme and has not quite outgrown fairy tales and Mother Goose, this little volume by Clinton Scollard will be very interesting, for it has an endless variety of subjects which appeal to such readers.

Every little poem touches on something dear to a boy's heart, from bird notes to fishing, and recalls to the older reader many a dream of delight in that far-away time when he was voung and played that he was a sailor-man, or an Esquimaux. Copeland & Day, Boston. Copeland & Day, Boston.

Books of Travel and Poetry for Boys.

Books of travel are so numerous and most of them are so good that I will not suggest any of them to you, but will merely urge you to read such books as can be most helpful to you By all means read biography. It is often more entertaining than fiction, and it is a portrayal of real life. Nothing can be better for a boy than such books as Hughes' "Alfred the Great," Brooks' "Life of Lincoln," Gilman's "Life of James Monroe," Morse's "Life of Franklin," "Hero Tales from American History" and others about real men and women who have "amounted to something" and made the world wiser and better. Boys are not much given to reading poetry, although some of them do like such heroic poems as those of Macaulay and Montgomery. It is a good thing for a boy to be familiar with the poems of Longfellow, Whittier, Holmes, Browning, Tennyson and Lowell. A certain amount of poetry should enter into every boy's reading.

Some one has said, "When a book raises your spirit, and inspires you with noble and courageous feelings, seek for no other rule to judge the work by: it is Back of the house is a beautiful lake and good, and made by a good workman."

Tommy was presented lately by his older sister with a neat penwiper, for use at a school which he had just begun attending. He admired it, but remarked: "I shan't have much use for it. Jennie."
"Why not, Tommy? You use a pen every day at school?"
"Yes, I know that."
"Why don't you use a penwiper then?"

"Yes, I know that."
"Why don't you use a penwiper, then?"
she replied.
"Because I always wipe my pen down the
side of the next boy's hair."

Blind-man's-buff was played in France a thousand years ago.

PHE BEST PAPER FOR YOUNG MEN

The Law Student's Helper, published by The Sprague Publishing Company, the controlling owners of the Spragne Correspondence School of Law, is beyond question The Best Young Men's Paper in America

Sprague Correspondence School of Law, is beyond question The Best Young Mee's Paper in America.

As its name implies, it treats largely of the law, but in ruch a way as to make it of the greatest value and greatest interest to men and women who are not studying law as well as to those who are. It averages forty pages to the month. It's editor is WILLIAM C. SPRAGUE, Pres. of Sprague Correspondence School of Law; asst. editor is GRIFFITH OGDEN ELLIS, Vice-Prin. of that school. It treats of all current events in the law and political world from the standpoint of the lawyer. It departments, 'Questions Answered and Bifficulties Metfer Students of Law," and "The Self Examiner," which gives questions from bar examinations, with their answers, have proved very valuable, while the miscellaneous matter is always unique and highly Interesting. The rule of this paper is, once a subscriber always a subscriber. Its subscription list has grown to be the largest that can be claimed by any legal or semi-legal journal. We speak of this to show how it stands among those who know what good journalism is. It appeals to the young men who are in the busy malks of life, in that it treats of current events in a simple concise manner, and one does not have to read through pages of trash to get at the substance of what he wantsto know. It is to-day necessary to intelligent citizenship that one give attention to passing events and be able to view them from an intelligent standpoint. This paper supplies what no other paper gives, an opportunity for a brief, condensed, philosophic review of the world of law.

THE VEST POCKET PARLIAMENTARY POINTER

This little Hook answers at a glance the intricate questions of Parliamentary Law, without diagrams or reference marks to confuse or mislead. It is so small it can be concealed in one hand, and referred to during a meeting without attracting attention. It contains about 22 pages, and measures 25 x4 inches. It uses a system of abbreviations, condensing parliamentary rules into the smallest space.

Ray and Roy Burgess.

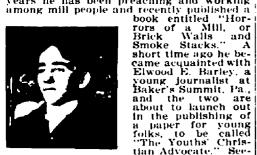

Our readers will be interested in two brothers who look very much alike. By reason of their similarity their pictures have appeared in many of the leading daily papers of the country. Hay Burgess, in sending us his photograph, says: "We have numerous requests for our photograph, but I would rather furnish it to THE AMERICAN BOY than to any other publication I know of. My brother and I are free from

the use of tobacco and intoxicating liquors, the use of tobacco and intoxicating liquors, We both have positions, my brother being a Keene (N. II.) local salesman for a plano company and I in the newspaper business, for some time having edited the Auburn Echo of Auburn, and the Advertiser of Hancock, N. Y. On account of ill-health I had to retire from journalism and am studying my brother's trade as a plano tuner. My brother and I are taken for one another every day, and many ludicrous situations arise because of our looking so much alike." much allke.

Another Boy Preacher.

Frank Herbert Alter, Amsterdam, N. Y., known in some parts of the country as the "boy evangelist," is preparing to at-tend a theological seminary. For several years he has been preaching and working

Smoke Stacks." A short time ago he became acquainted with Elwood E. Barley, a young journalist at Baker's Summit. Pa., and the two are about to launch out in the publishing of a paper for young folks, to be called "The Youths" Christian Advocate." Seeing an item in THE AMERICAN BOY about Talmage Witt, another boy preacher, young Barley at once wrote Master Witt, telling him about the project, and secured him as a helper in the enterprise. The first number of the paper, which is to be issued in September, will, it is said, contain a sermon by Talmage Witt, a story by Elwood Barley, and a number of short articles of a religious character. Alter is sixteen years old and Barley seventeen. Each of these boys is enthuslastically enterprising, and they deserve success with their venture.

Another Heroic Deed.

When the water was high over its banks birds.

TOME INDUSTRIES FOR BOYS

The following is the first of a series of articles describing Home Industries for Boys. The series will treat of Poultry and Pigeon Raising, Small Fruit Gardening, Bee and Flower Culture, Selling Papers and Small Merchandising, etc.

total of ten dollars. His own labor he did not count, for that was given only after school hours when he might have been playing.

This breeding house was then stocked with the best breeds of pigeons. He bought five pairs of homers at two dollars per pair; five pairs of fancy tumblers and pouter pigeons, and five pairs of fantails. The breeding stock, and sundries, such as a quantity of food, cost him in all twenty five dollars. He had invested altogether thirty five dollars in his venture. It was necessary to buy all the food for the birds, and this cost him in the first year nearly fifteen dollars.

The first year's expenses figured up an outlay of lifty dollars, including about everything. The boy kept a systematic account of every item of expense and every sale. Some of his fancy pigeons were sold for good prices. One homer alone brought him in five dollars. This was due to the fact that the bird was carefully trained and had won the heart of an elderly lady for whom the bird carried a message. Some of the other young pigeons were just ordinary birds, and they sold as low as lifty cents apiece for breeding purposes. Nevertheless, the year's product of young pigeons sold for seventy five dollars, which returned to the young breeder all of his investment, and twenty five dollars profit. This profit he proceeded to invest in more pigeons, purchasing with it some fancy breeds. One pair cost him lifteen dollars, but this expensive couple really proved a good investment. The eggs alone netted the owner fifteen dollars the first year, as there was a demand for such eggs for breeding purposes. Indeed one of the lessons taught by this experience was that there was more money to be inside in raising fancy pigeons than ordinary stock, and after the first year the boy proceeded to stock up his small loft only with fancy birds.

His Opinion of the Preacher. A Baptist church on the east side includes among its membership a devout family consisting of father, mother and a precocious cherub of six. The pastor has

the usual weakness for chicken and so has the cherub. In the early part of the week the pastor was invited to dine. The pride of the family had been properly coached for the event and more attention than

pastor came to dine and he showed his appreciation by requesting two helpings. Only one piece remained and the cherub in the family had not been satisfied. It was the father who said:

"Mr.—, let me give you another piece of chicken?"

The pastor, with a show of reluctance, passed his plate and the pride of the family addressed his mother: "Mamma, don't you think the preacher is a p-1-g?"

He Fell In.

"Johnnie, your hair is wet. You've been swimming again." "I fell in ma!" "Nonsense. Your clothes are perfectly

the fundamental principles of producing, manufacturing, and selfin articles of commercial value. With a good back yard kitchen garden, or enterprising lad has opportunities for making pocket money that are not always appreciated. One boy of the writer's acquaintance made enough to pay for his schooling, in rearing and breeding fancy pigeons on his father's house-top. There was little enough room in the back yard for the pigeons, and that was needed for other purposes, but the boy, not to be discouraged, sought permission to convert the flat roof of the house into a breeding home for pigeons. He raised a wire netting over the top of the roof, and arter it was all enclosed he proceeded to build nesting and breeding houses. The wire netting cost him three dollars, planks and boards for the houses five dollars, nails and sundries two dollars, making a total of ten dollars. His own labor he did not count, for that was given only after school hours when he might have been playing.

This breeding house was then stocked with the best breeds of pigeons. He shought tive pairs of fancy tumblers and pouter pigeons, and five pairs of fancy tumblers and a quantity of food, cost him in the itwenty five dollars, in his venture. It was necessary to buy all the food for the birds, and this cost him in the first year sexpenses figured up an another pigeons. He had invested altogether thirty five dollars. The irret year's expenses figured up an another producing

Fancy poultry should be raised both for the show bench and exhibitions as well as for market. When the amateur gets a prize at a poultry exhibition for his stock he makes for himself not only a reputation, but good prospects for earning money. The eggs of the prize hen will immediately command higher prices in the markets. It is not so difficult a matter either for a young amateur to obtain a prize for his fancy chickens. If one starts out with good stock, and breeds carefully and conscientiously, he stands as good a chance of producing prize chickens as another who has been at the business for years. Beginners do not as a rule pay sufficient attention to the small details of feeding cleaning, and caring for the birds, and the experience they gradually gain in this direction will always be of value.

There is probably no better way of training a boy for future business life than to let him experiment with some such little home industry as breeding poultry or pigeons or both for market. Boys should be given the sole charge of everything connected with the work, and they should be made to keep accurate accounts of all sales and expenditures. From such a test it is quite easy to get an Insight into the boy's character and business ability before he has reached the age to leave home. Fancy poultry should be raised both for

has reached the age to leave home.

JOHN P. LOVELL ARMS CO'S., Boston, Mass.

Tells Big Stories.

Here is a picture of little Richard Murphy, a twelve year old boy who recently arrived in New York city from his home in Jefferson City, Mo., to astonish people in the great metropolis. He stopped at the Waldorf-Astoria, and there he was found by Rev. Father Thomas J. Ducey, who writes the New York World an interesting letter about him. "The boy told me," says Father Ducey, "that he was the editor and proprietor of a juvenile paper in Jefferson City; that he was starting for a tour of the world without tutor or guide."

RICHARD MURPHY.

Father Ducey at once suspected that everything was not all right, and telegraphed to the boy's parents and found that he had run away from home and that they were not aware of his whereabouts. The boy's dress was decidedly western, and not at all in keeping with the seeming polish and precocity of his mind. When Father Ducey approached him the boy said, "I am glad to meet you, Father; I have read much about you in the west." The priest asked him the story of his newspaper. He answered, "Yees, Father, the paper which I edit is called "The Spectator." It was started as a little school paper by my teacher and was written with a pen. It attracted a great deal of attention, and I immediately made arrangements to print the paper. I have four presses, one of them being a large floe press. My paper is democratic, but not silver democratic, though it supported Mr. Bryan. My father is a capitalist. He is the head of all the street railways in our part of the country. I do not agree with my father, but my father would not interfere with my views."

Father Ducey brought about an introduction to the boy to Mr. James R. Keene, and together they talked polities, the boy saying that he thought Mr. Bryan a sincere man, and that he opposed trusts, monopolies, imperialism, expansion, and militarism. Mr. Keene asked him, why he thought trusts and monopolies wrong, and this twelve year old boy said: "I am opposed to them for this reason: Concentration of capital for the greater wealth of the few is an injury and injustice to the smaller producers and plants. The trusts and monopolies seek, by the concentration of wealth, to get the smaller plants they then dictate their measures and say to their victims, 'You must do as we wish you to do; you must do busines as we dictate.' This is all wrong. Mr. Keene; it is a violation of the liberty and just rights given by God to man." Then turning to the great wall street broker, the boy finished his conversation in this way:

"Mr. Keene in the East is they don't understand the farming classes

the union."
"Why," asked that gentleman.
"Well. Mr. Krene, first, because of the character of the men they produce; secondly, because of the richness of the soil and its products. Don't you think, Mr. Keene, that the farmer in Nebruska and Manager tilling the soil wearing homes and Kansas tilling the soil, wearing homespun, and living an upright and honorable life before God and man, with true character.

perore too and main, with true character, is a better person than the wealthy financier here in the East making money putting up railroad schemes, living sumptuously every day, dressed in fine clothes, and with no real character or honor before God and man?"

Eather Ducey further says in his letter.

Father Ducey further says in his letter that on the 4th of June he took this boy in hand and observed him closely all day. He found the boy not to be a liar, but a dreamer. He then took the boy to a retreat and watched over him, calling every day—sometimes twice a day—and then sent him home. He had he boy carefully examined and found him to be a remarkable youth, but with an intellect that needed a year or two of rest. To this end he is to be placed in the care of persons who will see to it that he has out of door occupation. The boy has promised not to read

parents.

Experts who have examined the boy declare that he has been precocious all his intelligent life. His head is somewhat above the average size, but is normal in contour. He can hardly be called a genius; he is simply gifted with a memory and a grasp of things unusual at his age. He has read over-much; his talents have surprised every one, and those about him have un-

a newspaper for at least two years, to avoid all mental excitement and strain, to make it a rule to rather detract from a story than add one word of exaggeration, to tell the simple truth and avoid clothing it in wild imagination, and never to start from home without the knowledge of his parents.

Experts who have examined the boy declare that he has been precocious all his intelligent life. His head is somewhat above the average size, but is normal in contour. He can hardly be called a genius; he is simply gifted with a memory and a grasp of things unusual at his age. He has read over-much; his talents have surprised every one, and those about him have una great man.

BOYS IN THE OFFICE, STORE, FACTORY, AND ON THE FARM

A Lesson for Time-Wasters.

"What is the price of that book" at length asked a man who had been dawdling for an hour in the front store of Benjamin Frankiln's newspaper establishment. "One dollar," replied the clerk. "One dollar!" echoed the lounger; "can't you take less than that?" "One dollar is the price," was

than that?" "One dollar is the price," was the answer.

The would-be purchaser looked over the books on sale a while longer, and then inquired: "Is Mr. Franklin in?" "Yes," said the clerk, "he is very busy in the pressroom." "Well, I want to see him," persisted the man. The proprietor was called, and the stranger asked: "What Is the lowest. Mr. Franklin, that you can take for that book?" "One dollar and a quarter," was the prompt rejoinder. "One dollar and a quarter! Why, your clerk asked me only a dollar just now." "True," said Franklin, "and I could have better afforded to take a dollar than to leave my work."

work."
"The man seemed surprised; but, wish-"The man seemed surprised; but, wishing to end a parley of his own seeking, he demanded: "Well, come, now, tell me your lowest price for this book." "One dollar and a half." replied Franklin. "A dollar and a half! Why, you offered it yourself for a dollar and a quarter." "Yes," said Franklin, coolly, "and I could better have taken that price then than a dollar and a half now."

The man stiently laid the money on the counter, took his book, and left the store having received a salutary lesson from a master in the art of transmuting time, at will, into either wealth or wisdom.

The American Boy in One Boy's Life.

Indianapolis, Ind., June 11, 1901.

The Sprague Publishing Co., Majestic Building, Detroit, Mich

The Sprague Publishing Co.,
Majestic Building, Detroit, Mich.
Gentlemen:—Enclosed find one dollar for which please send me THE AMERICAN BOY for another year. I have found your paper to be one of the finest and best papers for boys that I ever read. I was learning to be a regular hoodlum and was good for nothing. I read your advertisement in another paper, and thought I would see what kind of a paper it was. I sent to you for a three months' trial subscription, and found it helped to bring me on the right road again. I always neglected my father's business, was very careless and spent my money foolishly. I read THE AMERICAN BOY for one year, and that helped me to huild up my father's business and also myself. I saved my money and bought good books and other things that were of good use to me, instead of squandering it away. I have not much time to write because I am very busy. I may get a chance some day and write you what I was and what I turned out to be. Your paper has helped me to be a gentleman, and has saved me from being a hoodlum or bum. I am twenty years old now; and if I live to be fifty years old I think I shall be a subscriber to THE AMERICAN BOY. THE B

The Service We Are Doing.

Springfield, Ill., May 2, 1901. Editor THE AMERICAN BOY,

Dear Sir:—I cannot tell you what a service I feel that you are doing our nation in the task you have undertaken. After reading almost every word in the last issue, which I have just laid down, I have asked myself. "How could that be im-proved?" You seem to strike every note in a boy's being, and in a way to bring out the best that is in him.

Study Law at Home

and complete the course is to achieve a real distinction—for to know the law is to be qualified for a dignified and paying profession. Education in this important field is within the reach of any one. It is not confined to the few who can attend institutions requiring actual presence, at large

expenditure of time and money. We offer to the poor man, the busy man, the ambitious man debarred of school privileges, a course of home study comprehensive and practical, that actually fits for the practice of the law. It is no makeshift. It is the result of eleven years' labor in perfecting a plan suited to modern conditions. Thousands of testimonials bear out our assertion that this school educates in the law. It takes spare time only. It gives the student, whatever his employment, a chance to get a legal education at small expense and without interference with his daily duties. We are the original correspondence school. We offer three courses: Preparatory, Business Law, regular College Course fitting for practice. Drop us a postal for full particulars. Sent free. Special reason for beginning now.

BOYS IN GAMES AND SPORT

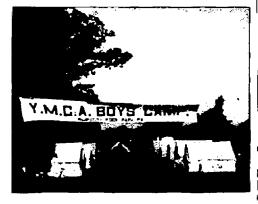

A Boys' Yacht Club.

Frank B. Bleakley, Wayzata, Minn., writes: "We have a nice yacht club here composed of boys and intend to name it. The American Boy Ice Yacht Club." We have a room in a large brick building wherein we hold our meetings, a library of between seventy five and one hundred volumes and over six hundred papers. We are now repairing our boats, ready for the coming winter, and making some new ones."

Our correspondent sends us a photograph of the "Star," the winner in the Wayzata Yacht Club's championship races last winter, but the tone of the photograph is such that it will not reproduce well for our

Having Good Times.

R. H. Andersen, Lansdowne, Pa., tells us about a fishing trip he made with his father and brother to Beezeley's Point, about three miles west of Ocean City. They caught sixty five fish, lifty of them weak fish and lifteen Cape May goodles and pargles mixed. Then they made a trip to Atlantic City and saw many interesting things. They took a walk along the famous board walk and saw, among many interesting things, a building in the window of which was a miniature blacksmith shop, where there were little men, four inches high run by clockwork, one of which was shoeing a horse, another working the bellows, while a miniature boy was tickling a donkey. After dinner they went to the pier and saw the flip-flap railway. You get in a car which is like a sleigh with four seats. This runs up an incline track, then around a half circle, and then down a very steep incline, after which it turns a complete somersault.

WESTERN PENNSYLVANIA Y. M. C. A. BOYS' CAMP, SLIPPERY ROCK, PA

The Amateur Magician.

The Amateur Magician.

Here is a beautiful experiment, and one that never fails to excite wonder. Of course, if you wish to amuse your friends with your amateur magic you must prepare all your apparatus secretly; otherwise nothing you do will surprise them. In the little feat that is now to be described, for example, you have to attend to a few details before you make a public performance. You will need a straight glass lamp chimney (not one that swells yout at one end), a bristle brush, such as is used for cleaning lamp chimneys; a silk handkerchief; a piece of tinfoll; a sheet or two of cigarette paper, and about a foot of fine brass or iron wire. With these simple appliances you can make an electric machine with which you can do things that will astonish you.

First, cut a narrow and of the foll and paste it around the middle of the chimney, using as little paste as will make it stick. Then cut a strip of the foll just long enough to extend from one end of the chimney, outside, to within half an inch of the middle band, and paste it on, lengtowise, of course. Having made sure that the silk handkerchief is perfectly dry, put it over the bristles of your brush, and then insert the brush, thus covered, in the chimney.

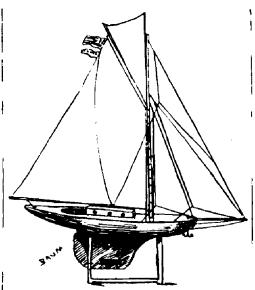

Now hold the chimney so that your hand

brush out of the chimney a brilliant electric spark will leap from one piece of foil to the other.

For the second part of your experiment you fix the wire around the band of foil in the middle of the chimney, letting one end of it hang down, and to this end you attach half a dozen strips of the cigarette paper, made, say, by cutting each sheet into four strips. Now put the covered brush in the other end of the chimney, not the end with the strip of foil on it, and when you rub the brush briskly the pieces of paper will stand out from each other as if they were alive.

This experiment illustrates three principles of physics: First, that glass becomes electrified by friction; second, that metallic substances, like foil and wiretransmit the electricity from a charged body (the glass) to an uncharged body (the paper); and third, that bodies charged with the same kind of electricity repeleach other, for the strips of paper fly apart when they are charged.

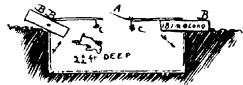

Johnny-Mrs. Talkemdown paid you a big compliment to-day. Mother-Did she, really? Little Johnny-Yes. She said she didn't see how you came to have such a nice little

We present a picture of "The Alma," built by Dwight J. Baum, Littlefield. N. Y., age fourteen. The boat is built of yellow pine, the keel of sheet iron. It has live sails—mainsail, jib, flying jib, staysail and topsail. It has a cabin with a cockpit, having seats around the latter. It is enameled white.

To Make a Rabbit Trap.

Clarence A. Snyder, Ashville, O., suggests a way of making a rabbit trap. He says: "Make a hole in the ground and put in it a box about the size indicated in the sketch. At the top of the box have a little door (A) for the admission of air and sunlight and through which to bait the trap. Let "B" be a little box eighteen inches long open at both ends. It should be about

six inches wide and deep. Let it extend through the opening into the larger box and be placed as on a pivot so that it will tilt as in B B. The end of the little box on the outside of the larger one should be slightly heavier than the end in the box so that it will fall back into position when the rabbit has passed over it. "C" is the bait. The trap may be made a double ender, having an entrance at each end of the larger box."

Suggestions for a Tumbling Mat.

A reader of THE AMERICAN BOY sends us the following: All boys know that tumbling on hard ground is not pleasant, so I have thought of a plan by which a tumbling mat can be easily made, having made one myself that is very satisfactory. First, dig a hole about a foot deep of the size

swells you wish to make the tumbling grounds which as Fill the hole about three-fourths full of dried grass or straw packed well. (See A in sketch.) Lay an old piece of carpet or sheets of heavy paper over this at B. Then with with sprinkle an inch or two of shavings, and over all spread about three inches of soft and elastic ground.

The Boy Webster.

using as little parke as will make it stick. Then cut a strip of the foil just ong enough to extend from one end of the chimney, outside, to within half an inch of the middle band, and paste it on, length-wise, of course. Having made sure that the slik handwerchief is perfectly dry, put it over the bristles of your brush, and then insert the brush, thus covered, in the chimney.

Now hold the chimney so that your hand may not touch the foil anywhere, and rub the brush briskly back and forth. Do this in the dark, and every time you bring the brush out of the chimney a brilliant electric spark will leap from one piece of foil to the other.

For the second part of your experiment you fix the wire around the band of foil in the middle of the chimney, letting one end of it hang down, and to this end you attach half a dozen strips of the cigarette paper, made, say, by cutting each sheet into four strips. Now put the covered brush in the other end of the chimney, not the end with the strip of foil on it, and when you rub the brush briskly the pieces of paper will stand out from each other as if they were alive.

The Boy Webster.

Daniel Webster as a lad is thus described by John Bach McMaster, the historian. In the first of his illustrated papers on the statesman, published in the Century: "As the boy grew in years and stature his life was powerfully affected by the fact that he say powerfully affected by the fact that he says powerfully affected b

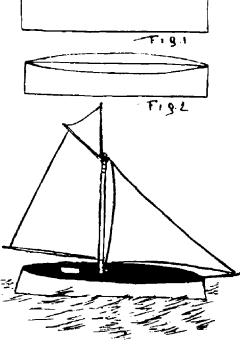

boy as me.

Running as Exercise.

William Blackle, author of "How to Get Strong and How to Stay So," a work that has been accepted as a leading authority on physical culture for the past twenty years, recommends running as the best exercise. He says that if every boy in America ran at least one mile a day without stopping—at any pace he liked—but every secular day and in all weathers, he would have superb legs, rubbery threless legs, easily equal to every call he would ever give them. But it would bring him something even more valuable than legs. The consumptive dies of fibrous consumption. The lung fiber itself is consumed. The consumptive also never breathes enough air. But he who runs a mile a day takes every one of his million of air cells, and every particle of the delicate fiber between, and gives them rational, vigorous use. He thereby toughens that same lung fiber and those same air cells so that when exposed to chill, pneumonia or other disturbances, which often kill a delicate man, he, while not wholly free from danger, is far less susceptible to disease of throat or lungs, as this part of his machinery is made of healthier and stronger material. But this work would reach further. Anaemia would be unknown to such a man. Instead of a feeble heart, pumping blood of a skimmed milk sort, he would now have a superb pumping muscle of a heart, hurling rich, nourishing blood out through every artery and back through every vein. Each vital organ through which that same blood coursed could not help doing better work than it would have done if that heart had never been trained thus to pump strongly, rhythmically, surely. With every vital organ thus invigorated, is it hard to see that you are getting a shaky, undeveloped one? The brain is fed with that same blood. Which brain will do better work—the ill-fed brain or the well-fed one?

How to Make a Tin Boat.

"The easiest and cheapest way to make a boat," says James Hiller, of Ocean Grove, N. J., "Is to make it out of tin. Take a tin can and melt the top and bottom off. Melt the solder at the joint and flatten out the tin, when it will look like Fig. 1. Now hold it lengthwise, double it the long way, turn over each end half of an inch, hammering down the ends good and tight. Spread it in the center, making

the front end a little more pointed than the back end. The hull will then be like Fig. 2. Cut a piece of wood a quarter of an inch thick of the shape and size of the boat at the place where the deck should be, first having cut a hole through the middle of the wood. Use this piece of wood for a deck, tacking the tin around it. Set your mast through the hole cut in the wood. You can make a trapdoor in the deck through which you can put your ballast."

CAPTAIN'S BADGE. (Twice Actual Size.)

Boys desiring to Organize Companies may obtain a Pamphlet from us containing the

Directions published in the January and February Nos. of this Paper. It is sent free.

A Word from Uncle Tangler.

destination not later than the 15th of the month.

Don't hesitate to consult atlas, Bible, dictionary and encyclopaedia or to ask needed questions of parents, teacher or pastor when you have exhausted your own resources of knowledge. "Tangle" night will no doubt prove one of the most enjoyable of the month. Which Company will be the first to try for one of Uncle Tangler's prizes?

Under the Auspices of "THE AMERICAN BOY."

Object:—The Cultivation of Manliness in Muscle, Mind and Morals.

The object more definitely stated: To promote mutual and helpful friendships among boys; to give wider circulation to high class boy literature; to cultivate in boys physical, mental and moral courage, and develop them along social, intellectual and moral lines; to cultivate purity of language and actions; to discourage idleness, and encourage honest sport and honest work; to cherish and emulate the examples of great and good men; to inculcate lessons of patriotism and love of country; to prepare boys for good citizenship; to cultivate reverence for the founders of our country, and to stimulate boys to all worthy endeavor.

also a member of that Company. The for-mer is the larger of the two boys in the

All names of new members should be sent in by Captains of Companies.

Degrees Conferred.

Degrees are conferred on the following boys: J. Conrad Stegner, Trent, Wash, one degree for good work on behalf of THE AMERICAN BOY and the Order; Rudolph L. Marshall, Trenton, N. J., one degree for skill in athletics; Oscar Everett Trenton, N. J., one degree for skill in athletics; Harvey O. Chapman, Chesaning, Mich., one degree for good work in behalf of THE AMERICAN BOY and the Order; Will P. Wilson, Chandlerville, Ill., one degree for good work in behalf of THE AMERICAN BOY and the Order; Jean Scott, Chandlerville, Ill., one degree for good scholarship. "Uncle Tangler suggests that the O. A. B. Companies devote part of the first meeting after the arrival of THE AMERICAN BOY each month to attempting solutions of the clever Tangles that appear in his department, and in the making of new puzzles to be sent him for publication, in the endeavor to secure some of the prizes he offers. A good way will be to first discuss the puzzles as a Company and thus get the benefit of the combined thought of all the members, and then assign one or more puzzles to each individual, to be reported on at the meeting a week later, when the Secretary should promptly send in all the answers secured to reach their destination not later than the 15th of the month.

Championship Medals and Libraries Pleased the Boys.

Hebron, Neb., Aug. 20, 1901.

William C. Sprague.

Dear Sir:—We have received the medals and are greatly pleased with them and think they are very pretty.

Yours for M. M. M.,

Victoria Company, No. 1, Division of Michigan, Watervilet, Mich., held its elec-tion of officers recently. Arthur Frazee was elected Captain.

Cuban Athletic Club, No. 7. Division of New York, Cuba, N. Y., held its election of officers recently, which resulted as follows: Carlos Lacy was re-elected Captain, William Leach, Vice-Captain, Lawrence Sisson, Secretary, Harry Hamilton, Treasurer, Judd Thomas, Librarian.

THE ORDER OF THE AMERICAN BOY

A NATIONAL NON-SECRET SOCIETY FOR AMERICAN BOYS.

General Lawton Company, No. 3, Division of Indiana, Tipton, Ind., held its election of officers the evening of August 21, with the following result: Harry S. Adams was elected Captain, Clarence Adams, Vice-Captain, Carl Burkhart, Secretary, Fred Ayers, Treasurer, Harry Adams Librarian, and Glen Huron, Janitor.

sidney J. Dunn, Captain of the Buffaloes Company, No. 8, Buffalo, N. Y., reports that the Company has not done much during the past summer owing to the Exposition. He reports having called upon Clifford E. Hayes, of the Hagerstown Boys Company, No. 1, Hagerstown, Md. He says he has been at the Pan-American a number of times, and that he recently made a trip to Cleveland, where he was sorely tempted to take the steamer for Detroit and see THE AMERICAN BOY.

On account of the death of President Mc-Kinley, the George H. Marshall Company, No. 1, Division of New Jersey, Trenton, N. J., postponed its Thursday evening meeting. The boys have draped their club rooms in the national colors and black, in honor of our late President, John Blaker, the Secretary of this Company, has resigned, and Charles Wheelans has been appointed to fill the vacancy. The Captain writes us that they expect a large crowd to witness their potato race on Saturday, September 21. On account of the death of President Mc-

Toronto Company, No. 1. Toronto, Ont., held an interesting meeting the evening of August 15. The programme consisted of a description of their camp, stump speeches and talks on their library. This Company has fifteen books in its library. The following is a copy of the printed slip used in sending out books:

This book is the property of the Toronto Company No. 1 Division of Ontario, Order of American Boy. Any person injuring or defacing this book will have to reproduce By order.

On Thursday evening, August 22, the fol-On Thursday evening, August 22, the following programme was presented: Life of Daniel Defoe, by Arthur Vey; Life of Victor Hugo, by Secretary Willie Watson; Life of A. G. Henty, by Ed. Levee; Debate, subject, "Resolved, that the horse is of more use to man than the automobile. The Company has recently had its characteristic forms." ter framed in a handsome walnut frame.

The Company has recently had its charter framed in a handsome walnut frame.

John Brown Company, No. 4, Division of California, Saratoga, Cal., held its first regular meeting at the home of the Captain on the evening of August 8. The proposed Constitution and By-laws, with a few minor changes, were adopted by a unanimous vote, the only changes being in regard to meetings, elections and dues. The regular meetings will be held every third Saturday evening at the homes of the different members. The regular elections will be held at the first meetings held in January and July. The following officers were elected: Captain, John W. Cox: Secretary, Harry E. Smith; Treasurer, David N. Nerell; Libracian, Robert W. Cross.

This Company has a circulating library. Each member of the Company has a bumber of books, and each boy makes a list of the books which he is willing to lend to his fellow members. These lists are handed to the Librarian, who makes a complete list of all the books, with the names of the owners. A copy of this list and a fibrary card are given to each member. When a member wishes to read a certain book he goes to the owner, obtains the book, and has the number checked on his card. When he has read the book he returns it to the owner's home. The cards are collected and inspected at certain intervals by the 13-brarian. In this way the Company expects soon to have a library of over one hundred books.

Jean Scott, Chandlerville, Ill., a member of the Shick-hack Company, No. 1, O. A. B., writes us that during the Central examinations held last spring he made the highest grade of any boy in the county and won a scholarship to Illinois College.

ARCHIE D. ANDREWS.

Total Amount, #6,659

The prizes will be awarded in regular order to those making what we consider the best suggestions for the name of our magazine, complying with the easy conditions we will explain. The first prize will be given for the best name of the second prize to the person sending the second best name, and so on, for the one hundred and seventy-five best names. If two or more people send the same name and we consider it one of the best, the value of the prize will be divided equally between those suggesting this name. Do not delay, but think it over and send a name at once, you may win a prize, and the prizes are certainly worth trying for. The names of prize winners will be published in the first issue.

in the first issue.

The magazine will be published on our breeding farms and will be devoted to animals of all kinds, edited by expert animal breeders and trainers, telling how to rear animals successfully and care for them, either for pleasure or profit; how to make money raising, training and exhibiting, cage making, aquarium making and interesting information shout Birds, Fish, Reptiles and Pet Animals of all kinds, handsomely litustrated and printed on fine hook paper. The description of the scope and purpose of the magazine will enable you to suggest a name. Do not lay this advertisement saids to be lost until you have sent a name. This is certainly an easy way to win a prize that will be a source of pleasure for years.

PETS OF ALL KINDS FREE We give valuable animals of all kinds free, for a little of your time.

PETS OF ALL KINDS FREE We give valuable animals of all kinds free, for a little of your time.

Canary Birds, Mocking Birds, Bullfinches, Dogs of all kinds, Aquariums complete with Fish, Plants, etc., Squirrels, Ferrets and even Handsome Ponies for your promptness and trifling efforts.

START A GOOD BUSINESS We will start you with animals for breeding purposes or for pets, without stamp for full particulars when you send your name for the magazine.

We sell animals of all kinds, these quality at lowest prices for choice stock. We buy, sell and exchange.

THE ANIMAL EXCHANGE, I HECKEL STREET, NEWARK, N. J.

| Tangler's prizes? |
|--|
| Aubrey C. Griffin, Captain of the Oliver Hazard Perry Company, No. 1, Brooklyn, Miss., writes us a pleasant letter regarding a trip he took to Memphis, Tenn., last May. He carned fourteen dollars by cooking eleven days for sixteen men. He borrowed seven dollars and a half from his mother, and with the money thus accumulated he went to Memphis for a visit with some friends. His friends lived twelve miles from Memphis and had expected to meet him at the depot in the city, but failed to do so. "That was the first time," he says, "I was ever in a place so large, but I wasn't afraid. I kept on the lookout for pickpockets. For three days I was in Memphis without seeing a person that I knew. On the evening of the third day I left Memphis and went to Horn Lake, thirteen miles away, stayed there until the next morning, and then walked six miles to where my friends lived. After staying there nearly three weeks, during which time we hunted for plums and frogs and did many other interesting things. I went back to Memphis and then home. I told my home folks that I never wanted to get into as large a crowd of people as I was in while in Memphis. The next morning after reaching home I got work at one dollar and twenty live cents a day tallying logs and keeping time. Soon I had made enough to pay back the seven dollars and |
| sixty cents left, which I will use for schooling this winter. |
| |

| We present herewith a picture of Ralph |

We present herewith a picture of Ralph Kightlinger, aged sixteen, average grade in the Mcadville (Pa.) High School, eleventh year. 96 per cent; and William Fixel, age thirteen, ninth year. Meadville High School, average grade 96 per cent. Young Kightlinger is Captain of the Benjamin Franklin Company No. 2, Order of the American Boy at Meadville, Pa., and young Fixel is

A Catamaran House-boat

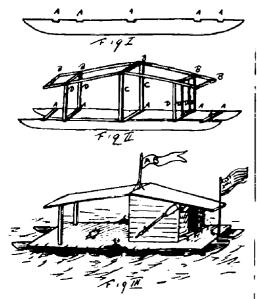

DESIGNED FOR THE READERS OF THE AMERICAN BOY

LEWIS ALLEN

Boys love the water, and if such a thing is possible, they will spend many of their happlest hours upon its shores or riding upon its surface.

What boy has not built himself a raft? Here is something that should afford much pleasure to the average youth whether or not he is able to possess a boat. It is called the catamaran houseboat and is intended to serve for a manifold purpose, it being adaptable alike as a craft almost as rapid as a rowboat, a raft, a floating camp, a summer fishing house and many other things that will at once present themselves to the brightminded readers of "THE AMERICAN BOY."

Among its many advantages are the facts that it is perfectly safe from overturning, that it will not crush in when struck ever so violently by anything found upon the

water, that it may be propelled much more easily than a ratt; indeed, with almost as little effort as a beat, and that it is an ideal attraction for boys, whether used stationary, propelled about lakes, ponds and rivers, used as an aquatic playhouse, a summer camp, a rainy day fishing house or any other pleasant use to which it may be put. Another of its advantages is that its cost need not be great, although it may be made very expensive. Having possessed the proud privilege once of being a boy himself, the writer is aware that the average boy is never overstocked with money, hence the question of cost is a momentous one.

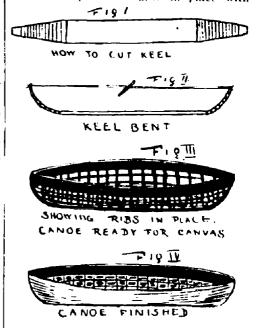

To build one of these house-hoats it is first necessary to secure two logs. Logs being round should be used in preference to square beams, although the latter will answer. They should be fifteen or more

they will watersoak. First round and point each end, as in Fig. 1, then with a point each end, as in Fig. 2, then with a point each end, as in Fig. 3, then with a point each end, as in Fig. 3, the middle end of your little for the crosspices as indicated at A in When this is done make your crosspices which will be five in number, four feet in keins. The prosspices and frame in the point in the

feet in length and quite sound, otherwise they will watersoak. First round and point each end, as in Fig. 1, then with a saw, hammer and chisel, which are about all the tools needed, cut out resting places for the crosspleces as indicated at A in Fig. 1.

When this is done make your crosspleces, which will be five in number, four feet in length. The crosspieces and frame pleces should be two by two or two by four inch deep and one inch wide, about one inch from the end. Do this only at one end now. Now take your strips and screw them with brass screws to the keel, about one inch from the top. Now strap these pieces loosely to the other end of the keel so they may slide easily. Cut two pieces of wood twenty inches long and pull the side pieces appart and our those misees so as to press twenty inches long and pull the side pleces apart and put these pieces so as to press the side boards out far enough to make the distance half way between these two boards thirty inches, or more will be better. Now mark at the other end (where the side boards have not been screwed), the place where the keel reaches, and saw grooves the same as in the other end and screw these ends in place. Next fasten those twenty inch boards in place with

screws. The pieces which keep the sides apart can be the ends which were cut from the sixteen foot boards. Other pieces must be used until these are cut off. The boat is now ready for the ribs, which can be made of barrel hoops which should be cut in half. These should be screwed to the keel, and fastened to the side boards with brads. Be sure and get each of them even. These will make excellent ribs and are quite strong. Now take your strip (sixteen feet by one-half by one-fourth), and tack them to the barrel hoops. This will make a good framework to which the canvas may be tacked. Use copper tacks, other tacks will rust and make holes through the canvas. Begin to put the canvas on at the center and tack it on toward the ends. Then tack to the siles and stretch the canvas as tight as possible and put in pienty of tacks, at least three-quarters of an inch apart on the keel, and about two inches apart in the rest of the places. Paint woodwork and canvas so they will stick. The canoe is now ready for painting, and I am sure any boy will know how to do this. Put on at least two coats of paint. This canoe is capable of holding two boys and a small camping outfit. It will hold at least four hundred and fifty pounds, and does not weigh more than sixty pounds.

A Twentieth Century Lad. ARMOND EDGAR.

Boys will be boys, is an old saying and a very true one at that. It seems to infer that the boy or boys referred to are wild and mischievous, but not always so. In this case you are to understand that I mean a real manly little fellow, intelligent

and up to date.
Clifford Kaime, a boy of twelve years of and up to date.

C'lifford Kalme, a boy of twelve years of age, has succeeded in performing a feat which many a man would be proud of. Clifford lives in Denver, Colo. Last summer while stopping at a ranch twenty five miles from the city, he became very much attached to a Newfoundland dog, which the ranchman had. She was a kind and intelligent beast and made friends with everybody. For this reason she could not be used for a watchdog, so Clifford begged to be allowed to train her to harness. This is not an easy task and requires patience and perseverance. Old Farmer Pete, as the ranchman was called, was a good-natured fellow, and Clifford did not have to coax very hard to get his consent to do any thing, as he had taken a liking to the boy. This youthful animal trainer had his hands full before long.

I forgot to mention that the dog's name to the liber of the

CLIFFORD KAIME.

the ranchman had. She was a kind and intelligent best start made freines with a content to the start of the s

Clinord's father and mother were so much pleased with their son when he showed toem how he had trained his dog, and with the stable and wagon shed he had built, that they bought him a nice new express wagon, large enough to hold two boys and carry a light load. He had a very neat outfit now and looked very swell, as you can see for yourself by the accompanying photograph, which was taken one bright morning when Clifford was just getting ready for a drive to City Park.

Clifford has quite a reputation in the neighborhood as the young animal fancier. A few days ago he was made a present by one of the neighbors of some pretty white tats. He also has a stock of fine Belgian hares and a wise-looking magple, which sits perched up in one of Clifford's homemade cages and cuatters all day long. It has a cute trick of whistling at everyone who passes by the house. The cage is in such a position that he can see the people passing on either side of the street, but cannot be seen by anyone, and most people who do not know of the bird think some one is whistling for them, and they naturally turn in the direction of the sound. Of course, Mr. Smart-Bird crouches in the corner and tries the trick again. Sometimes he takes a notion to call the dog. Poor Belle can only answer by a wag of her tail. She has a curious look on her face as much as to say "Who taught you to talk? How do you know my name?" The bird really talks as plain as a human being.

up, he saw a large bird flying over his head. It alighted in a large tree just back of the chicken yard at his home, and running to the fence he called to his mother to bring his rifle.

Lying flat on his back under the tree with the rifle resting on his knee, he took aim and fired directly through the bird, the ball passing through the breast and out at the back, scarcely leaving a mark that showed. The eagle fell and died im-

An English Boy Writes to American Boys.

Frank Tanner, a Union City (Pa.) boy, who reads THE AMERICAN BOY, has a cousin who resides in England. Frank wrote his English cousin, asking him to write a few words for THE AMERICAN BOY, and here is what the English boy

Boys will be boys the world over, with their pranks, and their sports, and their studies; but the boys of old England are probably more like the boys of young America than of any other country in the civilized world, with the possible exception of Ireland and Scotland, whose lively young fellows are pretty much like the boys of England. You will all be sorry for the English kals when you learn that they do not have a Fourth of July celebration and do not understand the importance of Independence Day, all because their great-grand-fathers forgot to tell them how your greatdence Day, all because their great-grand-fathers forgot to tell them how your great-grandfathers, under General George Wash-ington, took America away from old Eng-land. But the English boys have the Fifth of November, their Guy Fawkes' Day, when they shoot off gunpowder and firecrackers they shoot off gunpowder and firecrackers and rockets. No doubt your teacher of history can tell you all about Guy Fawkes and the failure of the Gunpowder Plot, which English boys now celebrate. This autumn the English boys have had many added celebrations over their general elections, when the voters of Great Britain and Ireland chose members of Parliament, like your members of Congress, you know. This brings up another timely topic for your investigation—how is your Congress like the English Parliament, and why does England have a general election this fall like the United States? English boys have just about stopped celebrating the victories of the English armies over the armies of South Africa. Perhaps some of your boys might about stopped celebrating the victories of the English armies over the armies of South Africa. Perhaps some of your boys might disagree with the young Britons in thinking that Mr. Kruger and Mr. Cronje were the worst men on earth, but many of the English boys thought so and they killed all sorts of playmen representing Transvaal soldiers; and more than one proud little Englishman has wished that he could grow up big and fast in order to go and help his father and older brothers kill Boers, just as you may have done when the Americans were fighting the Spaniards. But, best of all, the English boys have forgotten all about the time when their great-grandfathers fought unsuccessfully against the United States, and they think now that the Americans are England's best friends, who would come over and help them to fight the Boers or the French or the Russians, if necessary, and they hope that some day their "Yankee cousins," as they call you all, may come across the ocean and play with them at storming the old casties and building the big ships of which England is so justly proud. so justly proud.

Loyal to His Queen.

A. J. CAMPBELL.

Paddy Doogan was a chubby little Irish boy. Ireland was his country, and Dublin, his native city; and proud was he of that fact. Ireland had no son that sung her praises with more ardor, and wore "the green" with more complacency. With the light-hearted manner of his race, he strolled day after day through the streets of Dublin, ready for a job, a fight, or a patriotic song.

As for a home—he knew none: all Dublin

As for a home-he knew none; all Dublin As for a home—he knew none; all Dublin was his home. A crust or a spotted apple at times made a meal; a box or a keg a bed. Often hungry and seldom satisfied, he was always cheerful. Nothing could still his merry whistle, that rippled out in sports from an over full fountain of good feeling or poured forth fresh and sweet like the morning song of the skylark. His eyes were blue—a beautiful, liquid blue, like detached pieces of his native sky. His brown curly hair was a frouzy tangle that overlapped hisears, and hung low over his forehead.

Happy and careless, he was one evening

was a trouzy tangle that overlapped his ears, and hung low over his forehead.

Happy and careless, he was one evening sauntering down a side street, with hands in pockets, whistling "The Minstrel Boy." Suddenly he espled a newspaper lying by the sidewalk. Stooping, he slowly spelled out the headlines: "Our Queen has passed away. Victoria, the Great and the Good, is no more. She has visited Ireland for the last time." Little by little the 'truth dawned on Paddy. Victoria dead! The Queen dead! The Queen whom, only the summer before, he had cheered in Dublin streets till his voice failed him. There was no whistling now; and his face wore a touchingly pathetic look. He felt that Paddy Doogan had one friend less in this world.

The call of a flower girl drew his attention.

The call of a flower girl drew his atten-

The call of a flower girl drew his attention. Hastening to her, he purchased with his last penny a little bunch of violets, then, baring his head, he reverently laid his simple floral offering upon the newspaper, just over the fatal headlines. As he turned away, he drew the back of his grimy little hand across his eyes.

That night the glorious moon hung high in the heavens. Her silver beams pierced the chinks of an old woodshed in which, curled up fast asleep, lay Paddy Doogan He slept the sleep of the just. He had done his duty to the memory of his Queen; and the wind, creeping softly through the crevices, played lovingly with his curly hair.

During the first seven years of his mercantile career, Amos Lawrence did not permit a bill to remain unsettled over Sunday.-Pushing to the Front.

WAITING FOR THE BALL.

This little for terrier plays ball. He is waiting now o catch a ball his mistress is about to throw him: Photo by C. M. Fessenden, Stamford, Conn.

Young Defenders.

in some of the New York schools they have a Young Defenders' League to help the Society for the Prevention of Cruelty cruelty to horses, dogs, donkeys, cats, etc., to headquarters for investigation and punishment. In one of the schools the League was started by a boy who had been a torment to the teacher of every school he had passed through. He was the last one they expected to lead a reform movement. The way it came about was this: He was passing Madison Square one afternoon when he saw a company of boys coming out of the S. P. C. A. building. On meeting they explained the League to him and asked him to join. He was told to get into line; he signed the card, and had his badge pinned on; and the next day he began his work. He not only reported cases to the society, but induced twenty five of the boys of his school to become members of the League. He seems to realize that a leader must be one the boys can look up to, for there is a marked change for the better in his deportment.

"Tommy, you seem to know a good deal about weeds and flowers?"
"Yes. I'd know 'em all if they wuzn't so many" many.

queer stories about rats, says a reporter of the New Orleans Times-Democrat. "I have the ship cleaned out by professional rat-catchers whenever we touch at Liverpool," he said, "and between times we try to keep them down by trapping, but it's hard work. We don't dare to use poison. If we did the hold would be full of dead rats and the stench would breed a fever. Our traps are of the wire cage pattern and considerable craft has to be used in setting them, for a ship rat is a very cunning beast, and he will steer clear of decoys that his landlubber brothers walk into with their eyes wide open. If we simply baited the traps in the ordinary way and left them about in the hold, we wouldn't catch a dozen in a year. Our plan is this: On the first night we open the trap doors and tie them in that position with bits of string. so they can't possibly spring shut. Then we put scraps of old cheese inside and leave them until the following evening. That's to reassure the rats that the strange wire contrivances are perfectly harmless and that they may enter in with a certainty of getting out again. Next night we renew the bait and take off the strings, and, as a general thing. we catch all that the cages will hold. I Animals. They report cases of have seen them so full that it seemed impossible to get another rat inside, which is pretty good evidence, as I take it, that they can't communicate with each other and give the alarm. There is nothing new about the trick I describe—it is practiced on all big ships when the rats get too bad."

"Pussy."

The origin of the name "pussy" is explained by Our Boys and Girls as follows: Many years ago the people of Egypt worshipped the cat. They thought that she was like the moon, because she was more active at night, and because her eyes changed, just as the moon changes, which is sometimes full, and sometimes only a little bright crescent, or half moon.

So these people made an idol with the cat's head, and named it Pasht, the same name which they gave to the moon; for the word means the "face of the moon."

That word has been changed to "Pas," 'Pus," and has come at last to be "Puss," the name which almost every one gives to the cat.

Rat-Catching on Board Ship.

Chatting with some friends recently the Captain of a big freight steamer now taking on cargo at this port, told some

Saved His Dog.

A boy about ten years old went to the central police station in Kansas City, Kas., one day last week, leading a fine shepherd dog by a short piece of rope tied to his collar, relates the Kansas City Star. The boy's face was red and swollen and he was crying.

"Well, well, well, what's the matter here?" asked a big policeman, stooping down and looking into the boy's face.

It seemed like a long time before he could stop crying.

"Please, sir." he sobbed, "my mother is too poor to pay for a license for Shep. and I brought him here to have you kill him."

Then he broke out with another wail that was heard all through the city building. Shep stood there mute and motionless, looking up into the face of his young master. A policeman took out his handkerchief to blow his nose and the desk sergeant went out into the hall, absent-mindedly whistling a tune which no one ever heard before, while the captain remembered that he must telephone somebody. Then Chief Mc-Farland led the boy to the door, and, patting him on the head, said kindly:

"There, little fellow, don't cry any more: run home with your dog. I wouldn't kill a dog like Shep for a thousand dollars."

'Oh, thank you, sir." They were tears of joy now. He bounded out into the street and ran off towards his home with Shep prancing along and jumping up and trying to kiss the boy's face. It was hard to tell which was the happier, the boy or the dog.

The Tartars and Their Horses.

The Tartars have a way of living with their animals which is truly astonishing; they talk to them, and when they wish to encourage them they whistle to them as if they were birds. If they do not travel well, they address to them tender reproaches; and when special effort is needed on their part, they say to them: "Come, my doves, you know you must go up there; courage, my pets; come, go And when the difficulty is accomplished, they get down from their box and praise and caress them, allowing them to rest and breathe; patting them between the eyes, rubbing their noses, stroking the hair on their foreheads between their ears; indeed caressing them in every way, and treating them like muchloved pets.—Un Touriste au Caucase.

An Interesting Talk About Stamps.

KATHERINE LOUISE SMITH

Thousands of people, young and old, find pleasure and profit in stamp collecting. About forty years ago, a Belgian school-master tried to make geography more interesting by having his pupils adorn their atlases with stamps belonging to different countries, and thus began the craze that has spread all over the world. The varieties of stamps are without number and a philatelist wishing to obtain rare stamps and knowledge of the pursuit finds that there are over seventy stamp magazines published in France, England and Germany. Two things fix the price of all but the rarest stamps—auction sales and the desire of the catalogue dealers to obtain as high a price as possible for what they Thousands of people, young and old, find high a price as possible for what they

as high a price as possible for what they have.

There are a number of individuals who make their livelihood by giving time and attention to the selling of stamps. A St. Louis firm gave employment to one hundred and thirty persons and published for a short time a weekly stamp paper. A firm in New York publishes a catalogue of all the known stamps in the world. A London business house issues catalogues of British and Canadian stamps. It is estimated that there are 500,000 stamp collectors in the United States and one of the fifty and over stamp dealers in London estimates his stock at £60,000. Frequently millions of cheap stamps are bought to paper the walls of public and private buildings.

ings.

A philatelist club in America with head-quarters in New York is called "The Col-lectors' Club." and boasts of having mem-bers from all parts of the country. In 1897 a stamp exhibition was held in Lon-don. Stamps were exhibited from Great Britain, Europe, Asia, Africa and America to the value of \$2,000,000.

Though there is a penalty against any one selling or using fictitious stamps, the collector is often deceived.

collector is often deceived.

American stamps have been known to sell for \$1,000 to \$2,500, and one Alabama stamp sold for six hundred dollars. One of the most remarkable English stamps is the straw-colored Queen's head, issued in 1862. It is worth thirty pounds. An English penny black, the first stamp ever issued, now brings seventy five dollars, and some Canadian stamps have sold for three hundred and fifty dollars.

There are about a dozen stamps whose

dred and fifty dollars.

There are about a dozen stamps whose rarity has achieved for them a fame which certainly will have to be denied on any other score. Two Mauritius stamps, issued in 1847, sold for six hundred and eighty pounds recently. It is probable that not more than eight sets of these stamps are in existence. They are, however, not by any means the rarest stamps in the world, for there are some of which only one copy exists. A rare stamp for instance is the 1851 issue of British Guiana, of which only six are known, and three of these are in a Paris collection and one in the British museum. museum.

A unique advantage of the craze was taken when the Republic of Liberia, not having cash to pay the expenses of a del-egate to the Chicago exposition, gave him supply of stamps to sell to the best advantage.

Among the many kinds of odd stamps that have been in use are Memorial Stamps. The first Issue of this description was made in 1887 on the occasion of the liftieth anni-The first Issue of this description was made in 1887 on the occasion of the fiftieth anniversary of the ascension of Queen Victoria to the throne. Columbian issues were made in the United States in 1893 and similar issues in Nicaragua, Honduras and Porto Rico. One odd stamp was used for one day only. It was issued in October, 1892, by the Argentine Republic to commemorate the discovery of America. Our Centennial Stamp was made in 1876. Sorrow, as well as joy, has received a fitting tribute in the shape of these souvenirs. Memorial stamps were made for Lincoln and Garfield, and one of the first proofs of the latter was sent to Queen Victoria. It was mounted on a card, placed in a silver and gold frame and protected by a glass in an ebony frame. It is interesting to an American to know that the United States has the distinction of having the greatest number of stamps in use at one time. The stamp history of the United States is of value from an educational point of view. Stamps reached America in 1843, being introduced by Brazil. Some of the early postmasters had stamps printed and sold at their respective offices. This took place in Baltimore, Brattleboro (Vermont), New Haven, New York, Providence and St. Louis. These now sell for large sums.

taken for properly preserving them are strange and unique. A few years ago it was the fashion to ornament white china piates with stamps. Some were arranged with such care that they were works of

A collector recently put on exhibition a number of philatelic bracelets, lockets, etc. He took the stamped envelopes, cut out He took the stamped envelopes, cut out the faces and used them as cameos. The most beautiful was that of Queen Victoria, taken from English envelopes. Quite as curious an idea was that of the New York dealer who exhibited in his window a complete suit of clothes entirely covered with postage stamps. This suit was worn at a competitive ball and took the first prize. The coat was composed of red stamps, the vest of green and the trousers of blue. of blue.

stamps, the vest of green and the dousers of blue.

One of the largest steamships in the world has decorated the main saloon with the main saloon with the main saloon with the main saloon with the main saloon stamps. This artistic idea in another form has been carried out by a lady in New England, who has \$26,000 stamps, completely covering every portion of a bedroom set consisting of bedstead, bureau, commode and chairs. The stamps are secured to the set with glue and then varnished so that the furniture can be washed. The beginning of the conection dates back many years. Included in the tiny specimens of stamps are stamps from every country that the international system of postage covers. Some are old and known only to the stamp collector. Cornell offered two hundred dollars for this collection, but it was refused.

tem of postage covers. Some are old and known only to the stamp collector. Cornell offered two hundred dollars for this collection, but it was refused.

All these are interesting in their way, but they are nothing as compared with the valuable collections in the world at large. Berlin, Amsterdam, Vienna, Dresden and the British Museum each boast of expensive collections, and as an illustration of the value a philatelist puts upon the genuine as distinguished from the amateur assortment, albums have been classified as (1) Beginners' Collection; (2) Average Collection; (3) Serious Collection, valued at \$10,000; (4) Important Collection, valued at \$10,000; (6) Great Collection, valued at \$50,000; (6) Great Collection, valued at \$50,000; (6) Great Collection, valued at \$100,000 or more.

The Galliera collection in Paris is valued at 1,440,000 francs. The Duke of York has a collection worth £30,000, and the Rothchild's collection is estimated at £100,000 while the late Czar of Russia, who took a personal interest in his stamps, particularly those of Asiatic issue, had a collection worth £30,000.

The Ferrari collection, estimated variously from \$50,000 to \$1,000,000 is in a way unique. This gentleman has the credit of purchasing at any price examples of which he has no specimens, and has had for years two specialists devoted to the custodianship of the stamps at salaries of \$2,000 a year each.

The day for forming a complete collection of stamps is passing away. Nearly every collector is now a specialist, but the majority keep a more or less wary eye open to completing their collection so far as it remains possible.

The Boy Coin Collector.

The Numismatic Sphinx.

D. R. Jacobs, Brevard, N. C.—There is no premium on the coins you mention. Any dealer in coins can supply you with the Columbian half dollars of 1892 and 1893.

Walter K. Rose, Pierre, S. Dak.—Your rubbing is from a two real piece of Charles IV. of Spain and is of no particular value. The ordinary English modern silver brings no premium with collectors.

Elbert McCochran, Jr., Bloomfield, Ia.—An 1828 sixpence Victoria 1825, the dealers seil for twenty five cents; 1825 half cent is worth five cents; all the good dollars now command a premium and bring from one dollar and fifty cents to one dollar and seventy five cents each. Your shinplasters, If fine, are worth more than face.

Charles W. Tamplin, Nebraska City, Nab.

Charles W. Templin, Nebraska City. Neb.—(1) Mexico eight reals or dollar. 1838; (2) Spain, Charles IV. (1789-1898), 1891. This series was issued in denominations of 44, 1, 2, 4 and 8 reals. Both Mexican and Spanish silver are very common in sections of this country. Collectors are usually supplied and the banks only allow builion walks for them. value for them.

Guy Parmenter. Yutan. Neb.—(1) German 10 pfennig; (2) Columbian half dollar. 1893, sixty cents if in good condition; (3) coronet head half dollar (you do not give date). They were issued every year from 1807 to 1838, both years inclusive, with the single exception of 1816. (4) Fractional currency, unless fine, no premium. (5) Five cent silver pieces of Canada, 1890 and 1891, are very common.

Frank Armin, Sibley, Iowa.—Your rubbing is taken from a Swedish coin of Frederick is taken from a swedish coin of Frederick 1., 1720-51. Obverse: Two F's in monogram crowned, crowns at sides and beneath. Re-verse: Crossed arrows, crown above; value 1, OR S (lifer) M (ynt), date beneath 1742. The coin sells for twenty five cents.

Ernest Rossignol, Brooklyn, N. Y.-Your Ernest Rossignol, Brooklyn. N. Y.—Your drawing is taken from a Wellington token or medal, and was struck to commemorate the restoration of the Spanish provinces back to that people by Wellington. Your history will tell you of the Peninsular wars, 188-12, during which time the French were expelled from Spain by the English forces under the Duke of Wellington, and your medal will be more interesting to you after reading it.

Wm. G. Nyce, Ferniteld, Pa.—An 1825 half cent is worth fifteen cents. We know of no Canada three cent piece of 1838, or cent of 1857 with "Millions for defense." You no doubt mean 1837. An 1839 dime is worth twenty five cents, 1853, face value only. Your foreign coin is a Russian one-half kopeck of Nicholas 1, 1825-55. This belongs to his third coinage; the full set contains a one quarter, one half, one, two and three keyecks; all easily obtained.

Kelecks; all easily obtained.

Frank E. Bronson, Jr., Painted Post, N. Y.—Your two rubbings are taken from coins of Tunis. The first is a 3 plaster silver coin, issued 1295 A. H., and the second a 2 caroub copper coin issued in 1289 A. H. Intrinsically the coins are worthy thirty and two cents each, respectively. The dealers charge sevent? five and forty cents for them. It must be noted that the date is from the Hegira, or Flight of Mahommed, and not Anno Domini. For instance, 1289 A. H. equals 1881-82 A. D.

Charles W. Barrson Nashua V. H.—

A. H. equals 181-82 A. D.

Charles W. Pearson, Nashua, N. H.—
Your Canadian, Nova Scotia, and U. S.
coins are all of common varieties and hardly bring a premium. The English penny
of George III., dated 1797, is one of the
largest copper coins. It weighs two ounces,
and if in good condition is worth seventy
five cents. French Colonial coins of Charles
X. (1821-30), in good condition, sell for ten
cents each. The 1804 half cent sells for
from fifteen to twenty five cents; 1828 half
cents are in two varieties, twelve and thirteen stars. The former sells for twenty
five cents and the latter half a dollar. The
war token "Dix Cent." so called. "If anyhody attempts to tear it down shoot him on
the spot." is common. A rare variety has the spot." is common. A rare variety has the word "spot" spelled "spoot."

ALL READY! LOOK PLEASANT! Photo by Earle A. Bannister, Thompsonville, Mich.

THE AMERICAN BOY offers twelve prizes of Two Dollars each for the best Amateur Photograph received during the twelve months in the year, one prize for each month, also a second prize each month, of one dollar, for the next best photograph, the competition to be based upon the originality of the subject and the perfection of the photograph. The contest is open to subscribers only. Photographs will be returned if stamps are sent for the purpose. All photographs entered in the contest and not prize winners will be subject to our use unless otherwise directed by the sender, and fifty cents will be paid for each photographs in any event to be our own, without further payment than the payment of the prizes. Write on the back of the photograph is title, with a description of the picture, and the full name and address of the contestant.

รี้สันสับสาขาดเลยเดียสันสาบดินสาบดินสาของสาขาดเลยเสยเสยเสยเสยเสยเสยเสยเสยเสีย

PHOTOGRAPHIC DEN OF HAROLD D. EARL,

Box 472, Brandon, Manitoba,

Photographic Notes.

Iodide of potassium is said to be a much more powerful restrainer than bromide.

The Monroe Dry Plate Co., Jamestown N. Y. offers a small package of their special plates, 4x5 or 5x7, with developer for twenty cents.

Every amateur photographer should learn by the "feel" of the plates to load his plate holders in the dark. Then there will be no fear of fogging.

A cover to slip over your developing tray

If you have no drying rack, drive a count of nails in a wall, and put your plate on them. Of course, do not drive the nails all the way in, but leave the heads a sufficient distance from the wall to make a safe slant for the plate.

When the ruby light is covered with what when the ruby light is covered with what is known as post office paper, it should be changed at least twice a year, as the paper fades, and at last becomes quite unsafe, fogging the plates by allowing light to

Very few public men object to having their pictures taken, even by the amateur photographer, though they may joke about it, and pretend to be annoyed. There is that in men as well as women that delights in being taken nooce of, and "any old picture" is acceptable, if only it advertises them. So the amateur is advised to take his camera to all public assemblages, and fire away at anyone who is in the public mind at the time. In this way it is not impossible that he may obtain the first picture of a future President of the United States; a better chance that he is getting a governor; and a first rate chance that in his collection will be a mayor and several aldermen. Very few public men object to having

To Prevent Prints Curling.

Sometimes it is not desired to mount prints that have been made on developing paper. When they have a tendency to curl they may be made to lay flat by immersing them, after the final washing for a few moments in a solution made up as follows: Glycerine, 3 ounces; alcohol, 4 ounces; water, 1 ounce.

To Soften a Portrait.

The lens in the ordinary view camera does not take a really fine portrait. It is not made for that purpose. It has too much depth of focus, making both the foreground and background sharp—something not required in a portrait. A writer in Camera Craft says that this defect can be remedied in part by producing what is called "diffusion of focus." To do this unscrew the back and front combinations as far as possible without their dropping off. This takes away the sharpness, and is said to give a pleasing softness of outline. Then use the lens wide open, that is, without stopping down. Make the exposure as short as possible.

Answers to Correspondents.

Charles Scott.—The Scovill & Adams Co., 62 East Eleventh street, New York, advertise pyrocatechin for sale.

P., Antioch, Cal.-A combined toning and fixing bath is not recognized as being permanent. It will do for a temporary

Hiram Collins.—A transparency is a positive, and a positive is the opposite of a negative. All lantern slides are positives. They can be made by contact, or by reductions from larger negatives.

Harry C. Hollingsworth.—You are using the ferrotype plate the right way. When the print sticks to the plate, rub it with a solution of paraffine dissolved in refined benzine, and polish with a soft rag.

Willie Watson.—It is not safe for a boy to attempt to make his own flashlights. The stuff is sufficiently dangerous as it is, ready for use, at the photographic supply houses, without buying the raw material and manipulating it. and manipulating it.

and manipulating it.

George E. Howell.—Unless there is a class for copied photographs in an amateur contest, copied pictures would not probably be admitted, unless it was plainly stated that it was a copy. Photographs not copyrighted can always be copied. There are a number of preparations on the market for coating paper, cloth, wood, etc., but for a small number it will be cheaper to buy the prepared article than to attempt to mix from chemicals.

Cooling the Developer.

A writer in Camera and Dark Room obbut wants it used in a different way. When the ice is put direct in the developer to the ice is put direct in the developer, he says, it means the gradual changing of the says, it means the gradual changing of the composition of the solution; that is, you are constantly diluting it. Such dilution may be advantageous in some cases—in fact, absolutely necessary, but in others it is the reverse. Then again, the liquefaction of the ice will make your developer weakest at a time when it should be strongest, i. e., when building up density after having atyon the details a change to work out. e., when nulling up density after naving given the details a chance to work out. By putting the ice in medium-sized lumps, in a larger tray than the one in which you are developing and resting the latter crosswise on the former, the ice, coming in contact with the bottom of the developing area. will be found a handy affair, allowing you coming in contact with the leave the dark room for a moment without fear of fogging the plate.

When drying negatives with alcohol, it changing its composition. The fact that when drying negatives with alcohol, it is well to first swab them off with a tuft of cotton, so as to be sure to remove all foreign substances from the face of the film.

The flat tuation of the face of the film.

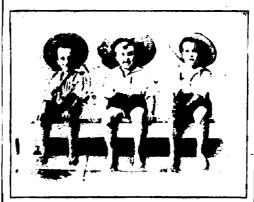

The flat tuation of the sure to remove all the smaller tray is resting on the top of the larger one will not scriously impede the gentle rocking of the former. Have the lumps of ice of such a size as to come in contact with the bottom of the upper for as long a period as possible, but The size of the "stop" plays an important in contact with the bottom of the upper part in the proper length of the exposure. A study of the good and bad effect of stopping down will do much to produce good flow unevenly over the plate.

A Bit of Human Nature.

Practical photographers are sitters seldom like their own pictures, "All yours are good, but mine are not right, is the common criticism. Perhaps the objector expected too much. Fanny says, "Kate! yours is fine, but look at my nose." Kate says, "Yours is exact, but I'm going

Pictures Worth Mentioning.

Among the many excellent pictures sent to the photographic department of THE AMERICAN BOY the past month are an unusually large number printed too dark for reproduction in half-tone. One is by Raymond Clark, West Winterport, Me., and shows a scene on March River. Another is by Howard S. Wheeler, Rockland, Mass., and is a view of a spring freshet. Geo. R. Bailey's picture of cows in the water, entitled "Homeward Bound," has a beautiful background and gives evidence of the excellence of the single lens used—a fine example of good photography; yet it is printed too dark. There is the same difficulty with the pictures by Jasper Miller, of Three Rivers, Mich., giving Michigan

THREE IN A ROW.

Photo by Howard S. Wheeler, Rockland, Mass

Photo by Howard S. Wheeler, Rockland, Mass. scenes. Albert J. Young. White Plains, N. Y., overprinted, though otherwise the pictures sent are good. Two of the three photos sent by Nelson B. Moulton, Dorchester, Mass., are cunning baby pictures, but cannot be reproduced.

Other pictures worthy of mention are: "In Summer Time," by Walter George Reineman, Allegheney, Pa.; "Billy," a goat, by T. Harold Knight, Racine, Wis.; "Playmates," a 'coon and a rabibit, by Latther Bradbury, Denver, Col; an explosion of thirty tons of nitro-gelatin in San Francisco Bay, by W. S. Haskell, N. Berkeley, Cal.; "Traveling Bill," by Charles W. Lautz, Pennsboro, W. Va.; and "Our Baby," by Frank Venning, Chicago, Ill. "An American Girl," by H. R. Carstens, Detroit, Mich., is good, but would be better if printed on aristo platino or platinum paper, "A Holiday in the Country," by Geo. W. Copeland, Pottstown, Pa., shows a group of children picking fruit from a tree.

Tom Cole has done very well for a "first offense," Howard D. Earl's first flashlight is creditable. C. M. Fessenden's four prints are worth mentioning, but lack detail in the high lights. Perhaps they were developed with a too strong solution. It is a pity that Howard S. Wheeler's "Three Jacks" cannot be effectively reproduced, for it is a nice piece of artistic photography.

IN THE BACK YARD, WITH THE THERMOMETER 101 IN THE SHADE.

Earl Hopkins, 1718 West Fourth St., Sionx City, Ia. takes a friend's photograph while the latter is taking a back yard bath with hose and tub.

Heat is an Accelerator.

It is hard to make the amateur believe that a few degrees difference in the temperature of his chemicals will make much, if any, difference in his pictures. There is nothing like experience to prove the contrary, so a writer in a photographic magazine advises the amateur to take, say, three shots at the same object and then develop the negatives with developer at different degrees of temperature.

Develop one in a solution at fifty degrees, the second at eighty degrees and the third with the temperature about normal, say between sixty five and sevency five degrees. The plate developed in the fifty degree solution will be dull, lacking not only in brilliancy, but in detail; the one which has passed through the eighty degree solution will be foggy, flat and abnormally dense, to say nothing of the physical damage which the high temperature has done to the film, known as frilling. Other conditions being normal, the remaining plate will be well basanced, showing detail and density in harmonious proportion.

If you now make prints from each of the three plates, printed on the same kind of paper and under as nearly the same conditions as possible, and study both the negatives and positives very carefully, you will no longer doubt that ofttimes the difference in the temperature of the developing solutions is the difference between success and failure.

An esteemed correspondent writes that amateur photographers should be warned of the poisonous qualities of cyanide of potassium. It is used as a reducer. He advises the use of red prussiate of potash and "hypo" instead, as preferable. Most of the chemicals used in photography have poisonous qualities, and those using them cannot be too careful. Label everything very plainly, and use different shapes and sizes of hottles. Then if the eye doesn't eatch sight of the label, the hand will know what is in the bottle.

The Amateur Journalist 🖫 ...and Printer...

Editorials for Amateur Papers.

lish High and Manual Training School. In addition to his work in school he devotes his time and effort to printing and publishing. His publication is "Chicago's Welcome Visitor," the third issue of which recently came from the press. Young Geiger is of German ancestry, and was born in Chicago nineteen years ago. He exhibits a strong natural tendency toward journalistic work. Since he was eleven years old he has been interested in printing. When but twelve he was "copy boy" on one of the large newspapers of Chicago, and every summer since then he has found some sort of newspaper work to do. Last summer he had charge of all the boys in the editorial department of the Chicago-American, and was occasionally sent after news himself. In his spare moments he has gathered news clippings from the Chicago daily papers; and in 1893, when one of the local papers devoted two columns daily for some time to the publication of news stories and items gathered by the school children of the city, young Geiger invariably supplied one or two of these items, and in one week had the distinction

of capturing both the first and second prizes offered for this work. He keeps and studies almost everything he sees on the subject of journalism or newspapers. His alm ultimately is to bring out a magazine. "Chicago's Welcome Visitor" is said to have quite a large circulation, although it

The winners of the laureate awards for the past year were as follows:
Sketch Laureateship—Samuel J. Steinberg; honorable mention, Foster Gilroy.
Poet Laureateship—Nelson G. Morton; honorable mention, A. V. Peterson.
Essay Laureateship—Louis M. Stafring; honorable mention, W. R. Murphy.
The Historian and Editorial Laureateships were both won by Samuel J. Steinberg.

berg.

"The N. A. P. A.," John T. Nixon.

"Youngblood," John M. Acee

The Youth's Companion

HE stories to be published in The Companion during 1902 will number more than two hundred, and be of the greatest variety in scene and in character. A few of the noteworthy groups of stories will be:

Reveille and Taps.

Three stirring stories of soldier life by men who have been in the thick of battle. Another series

Tales of a Circus Hand.

Four stories of remarkable experiences in the lives of men who travel with the great circuses. These stories will delight old and young. A series of thrilling interest will be

Told by a Deep-Sea Diver.

Four stories of perilous adventures of a diver among wrecks at the bottom of the ocean. Then there will be:

Stories of an Indian Agent.

Four tales of the difficulties and dangers among the Indians on some Western reservations. But it is impossible to enumerate here all the attractions which the editors have provided for the new volume. To any one requesting it, however, we will send free, full illustrated announcement for 1902 with sample copies of the paper.

Free Jan. l, 1902.

HE New Subscriber who sends \$1.75, a year's subscription price, now, with this slip or the name of this paper, will receive not only the 52 issues of The Companion's Volume for 1902, but all this year's November and December issues from the time of subscription, including the Double Holiday Numbers and the New Companion Calendar, charming in design and exquisite in color. It is sold to non-subscribers for 50 cents.

THE MENT OF THE PARTY OF THE PROPERTY OF THE P THE AGASSIZ ASSOCIATION

THE AMERICAN BOY is the only official organ of the Agassiz Association and should be in the hands of every member.
All correspondence for this department should be sent to Mr. Harlan H. Ballard, Pittsfield, Mass. Long articles cannot be used.
THE AGASSIZ ASSOCIATION selcomes members of all ages, and any one who is interested in any form of natural science is invited.
Established in 185. Incorporated in 1852.
Bhort notes of personal observations are particularly desired for use in the A. A. department. Send illustrations when convenient. Questions are invited.
Address H. H. BALLARD, Pittsfield, Mass.

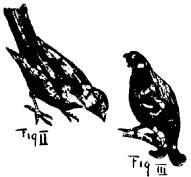

The American Boy in India.

Dacca, Bengal, India, July 18, 1901.
Dear Mr. Ballard:—I like reading about the Agassiz Association in "THE AMERICAN BOY," which we think to be a grand paper. My mother tells me that your society is named after the great French naturalist and is devoted to natural history, and she thinks highly of it. I want to know the name of a flower which sprang up plentifully in our compound when the monsoon commenced. The leaf is like this cut (Fig. 1). The spadix is a deep crimson enclosed in a large

is a deep crimson enclosed in a large sheathing fract leaf which is also a deep red. The under surface of the spathe is a light green. Is it an arum? I have read of Carl Vernon's lizard that climbs up the glass walls of a ferncase. Our lizards climb up the walls of our houses, and climp to the ceilings, although they hang with the head and back downward like files. They can do this because the tips of their toes are formed with round disks. with round disks.

We have a black bird in our compound. It is the size of a crow. It lays its egg in a crow's nest, and the crow hatches it and rears the young. (Fig. 2.)

I should like to know the name of this bird, also of this other one (Fig. 3), which I have heard called a quall. But it is not like the quall in the jungle opposite our house, which are killed and enten. The indian magple is a black and brown bird with a little white on its wings.

With best wishes, your little friend,

JOHN SMEAL BELCHAMBERS.

JOHN SMEAL BELCHAMBERS.

By virtue of this interesting letter, and the drawings which accompany it, Master Belchambers is doubly entitled to membership in the A. A., and is most cordially welcome. The oftener he writes the better we shall like it. I will present the envelope which brought his letter, with the two odd Indian postage stamps to the first person who shall send me correct answers to the questions about the flower and the birds. A few of the words in this letter from far off India may puzzle our American boys. A "compound" is the walled or fenced inclosure of residence in India; it is the same as our "yard." or "garden"—or both compounded!

The "monsoon" is wind that blows steadily along the Aslatic Coast; in winter from the northeast, the dry monsoon; in summer more violently from the southwest, the wet monsoon. When our friend speaks simply of "the monsoon," he refers to the latter. A jungle (In India) is a dense thicket of bamboo and palm.

Those of our readers who are familiar with "Jack-in-the-Pulpit," will easily understand the terms "spadix," and "spathe," when we tell them that "Jack" is a "spadk," and the "pulpit" is a "spathe." Speaking of Professor Agassiz, there was a time when he was a French naturalist,

"spadix," and the "pulpit" is a "spathe." Speaking of Professor Agassiz, there was a time when he was a French naturalist, but he got over that, and became a great American naturalist. If they ever get up as good a boys paper as this in France and call it "The French Boy," we will fight this question out! this question out!

Wanted.

I wish to exchange specimens with a few reliable collectors of butterflies in the eastern and southeastern part of the U. S.—Gary Roddy, Greeley, Colorado.

The Caterpillar Spins.

they should suspend themselves on threads nearly two feet long. Is it customary for caterpillars to do this? The Agassiz Association is one of the most interesting and instructive departments of THE AMERICAN BOY, and I like it very much. I am glad you have adopted THE AMERICAN BOY as your official organ.—Harold B. Pratt, Brooklyn, N. Y.

The Okapi, a Congo Animal.

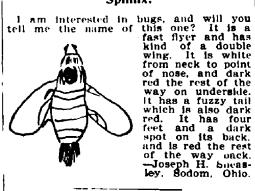

The okapi, an animal having a giraffelike shape, and zebralike stripes on its front legs and hind quarters, has been much discussed by zoologists ever since its discovery by Sir Harry Johnston, special British Commissioner for Uganda, when exploring recently in the Congo State. Professor Ray Lankester thinks the okapi has so unique features that it must be regarded as a new genus. Sir Henry M. Stanley heard of the okapi in the Congo forests. Sir Harry Johnston first sent home two pieces of its skin, which seemed to indicate the discovery of only a new species of striped horse, but the complete skin, together with two sku'ls, that were subsequently sent to London from Mombasa, showed that the discovery was of much greater importance than was at first supposed.

greater importance than was at first supposed.

The animal is a cloven hoofed ruminant, measuring about six feet from the top of its head to the ground. The hide and hair on the body and neck are like those of a deer, while the remainder is striped. The ears are large and ruddy, and fringed with blue black hairs, and the face has stripes of an extremely vivid red.

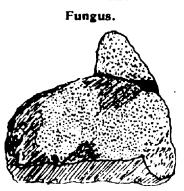

It will doubtless be found, zoologists say, that the peculiar coloration of the okapi is greatly to its advantage. Just as the tiger's yellow stripes match the tall grass in which it waits for prey, and the spots of the giraffe seem like the flecks of shadow on the trees, so the grassy looking stripes on the legs of the okapi hide it, the rest of it being concealed by follage, from the animals which seek to devour it. Perhaps the okapi was formerly striped all over, and as it grew more timid it hid more from its foes and needed its stripes less and less. its foes and needed its stripes less and less

Hemaris Thysbe-Clear-Winged Sphinx.

Frog in December.

While skating one day last December I noticed a frog hopping along on the ice. Can any one explain how a frog could be out and still be alive at such a time; I do not understand it.—Leon V. Smith, Box 30, Evan, Minn.

The accompanying illustration is from a The Caterpillar Spins.

The accompanying illustration is from a sketch of a sponge-like thing which I found attached to the end of an old sidewalk. It is full of tiny holes and dark brown in color. I would like to know what it is and how it happened to grow on the near a large oak. On looking more closely I found that they were hanging on the large and of silven threads attached to the limbs. I should not think it could have been on the plank when the sidewalk was part of silven threads attached to the end of an old sidewalk. It is full of tiny holes and dark brown in color. I would like to know what it is and how it happened to grow on the sidewalk. I should not think it could have been on the plank when the sidewalk was winter quarters were thus broken up, took

Pigeons and Doves.

Doves and pigeons fly about the cities picking up their food in the streets. They are funny birds and seldom light on trees and wires as other birds do, but on roofs of buildings and on the ground. They are very pretty and are easily tamed. The turtle-dove is very pretty. Most of them have a black ring around their necks, this being the only marking—Arthur Burdick. being the only marking—Arthur Burdick, 199 Union street, Pittsfield, Mass.

Rattiesnake.

Two weeks ago a friend and I were in the Rincon Hills hunting, he with a gun, i with a camera, when we came upon a cave in a little bluff. He got down to look into it, but just then I called his attention to a rattlesnake only two feet from his hand. He is used to handling all kinds of snakes so was not afraid of it. It was a Red Mountain rattlesnake, fifty two inches long and nine inches around. All but eight of the rattles were broken off. these being about half an inch wide at the smallest end, so he must have been eighteen or twenty years old.

Its back is a reddish brown. Its back is a reddish brown, except about six inches at the tail, which is black and light brown. Its underside is a whitish yellow. Its tangs are in the top of the head, lying back and up like this, and are covered with a skin when not in use. They are very like a cat's claw only finer and longer, and are white with a groove at the end where the poison is when it strikes. We kept it two weeks, and then killed and skinned it and put some of the meat out to stew.

meat out to stew.

The skin stretched six feet long and nine inches wide. The soup is the finest I ever tasted. The meat is very delicate and white.—James G. Stafford, Placentia. Cal.

Garter Snake.

This is a picture of a garter snake, seven inches long, with two perfectly formed heads united at the base of the neck. It

lived about twelve days after being cap-tured, when it was preserved in alcohol and sent to one of the museums in Washington. Roy Cook.

Other Garter Snakes.

I have two garter

I have two garter snakes in a cage for pets and like to study them. I feed them small frogs. I put a frog in the cage and instantly one of the snakes was gliding towards it. The frog gave a frightened hope but the snake caught him and swallowed him and swallowed him and swallowed him about three days. One morning I saw that one of my snakes eyes were all white, as if it was going blind, but the next morning the snake was as bright as a dollar and I found a skin or slough in the cage, for it had shed its old skin. The skin measured twenty five inches in length.—Charles Fisher. Ottumwa, lowa. Fisher, Ottumwa, Iowa,

The Night Hawk.

Most taxidermists say the night hawks (commonly called Bull-bats), do not roost or light in trees, but on the ground or fence

posts or stakes.

One day while going through a tract of rather dense woods I noticed something on a limb that resembled a common bat, but upon closer examination proved to be a night hawk, and one of the largest specimens I had ever seen. This proves to my mind that they are mistaken.—Grant Wil-

covered in a small cavity. Though he was frightened by the fall, he appeared unwilling to leave. On splitting up the lengths the skeleton of a third squirrel was found in the cavity, which the second seemed unwilling to leave.—Wilbur W. White, 500 Broadway, Waukesha. Wis.

A Second Example.

One of our dogs died last year and our other dog covered her body up with leaves and stayed there and howled for a long time.—Beverly L. Wren, Chilhowie, Va.

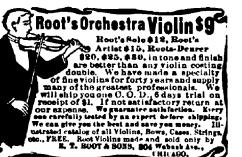

Ground Squirrel.

The ground squirrels in California are interesting animals to watch. Our potatoes were disappearing and I tried to find out where they went to. Soon I found out the ground squirrels had taken them. What do you think they did with them? They bit them up in small pieces and dried them in the sun. Don't you think they knew it was a good way to preserve them for storage?—Herman Klen, Shrewsbury, Mo.

Gasteracautha Caucriformis.

In answer to the letter of Mrs. Belle White, Wyman, Page county, lowa, published in the May number of THE AMERICAN BOY, I would say that the insect she describes belongs to the spider family (Arachnida), and is a specimen of the sub-division known as Gasteracautha Caucriformis.—Henry P. Musch, 35 Houston street, New Haven, Conn.

LYON & HEALY'S BRASS BAND

INSTRUMENTS. Indorsed by the great Jules Levy as the best in the world. Hig Catalegue, 400 illustrations, FREE. Positively the lowest prices on Band Instruments. Uniforms and Supplies of all kinds. Also contains Music and Instructions for New Hands.

THE WONDERFUL OPTICON.

An adjustable attachment which fits any lamp chimney and converts it into a powerou Magic Lantern. It is well made on correct optical principles, has 5 double convex lenses and will enlarge the Brilliant Lantern Slide from 4 to 6 feet in diameter.

Any slide up to 2 inches wide can bused. Price complete with a set of 55 brilliant lantern views postpaid \$2.00. This (piticon or other premiums can be easily earned by selling a few of our loc articles. Write for premium list and full particulars. KEEVES MFG. Co. (E) Grand Rapida, Mich.

To introduce our povelties we will send A Rolled Gold Bangle Ring, warranted Syears. Pan-Am. Expo., or any Initial engraved FREE. Send size and 10c for mailing, etc. Vokes Jewelry Oc., 28 Western Ave. Cevington, Ky.

FARM HOMES FOR SALE, Near occan and city markets. Healthy, delightful old-

A Messenger of the Cumberland Tel. and Tel'g Company.

Mattie Wolfenden Marks, Nashville, Tenn., sends us a portrait of Luther Ramsey, a messenger boy of Brookhaven, Miss. This photograph had been sent also to Mr. Le-land Hume, Assistant General Manager of

LUTHER RAMSEY, AGE 12, BROOKHAVEN, MISS

the Cumberland Telephone and Telegraph Company, at Nashville, Tenn., by the local manager of the company at Brookhaven. Mr. Hume's reply to the local manager's letter reads as follows:

Nashville, Tenn., Aug. 10, 1941.

Nashville. Tenn., Aug. 19, 1941.

Mr. L. C. Gosney, Manager.

Brookhaven, Miss.

Dear Sir:—We are in receipt of photograph of messenger boy in his uniform and on his telephone bicycle.

Say to him that the highest positions in the company's service are just as open to him as they are to anybody; that merit is the thing that goes with the Cumberland directors; that no man holding an official position in the company's service at this time has gained it except by hard work, and we have absolutely no favorites, picking our timber for advancement out of the best material that we can find. The President of the Company came to Nashville without money and without influence after the war, and during the bloody struggle he lived with his widowed mother on a plantation near Shepherdtown, on the Yazoo river, and rode around the country on a mule with a sack for a saddle and peddled for a living. He was so intensely southern that he would not sell his goods for anyfor a living. He was so intensely southern that he would not sell his goods for any-thing but Confederate money; at the end of thing but Confederate money; at the end of the struggle he had accumulated quite a little sum, which, of course, was worth nothing. But hard work and a brave determination to succeed, like the penniless man's appetite, was still left.

Tell this messenger boy also that a large number of the managers of the exchanges of the company were ten years ago messenger boys in small offices.

We like his face and hope we will see and hear more of him as time goes on.

Yours truly,

LELAND HUME,

Assistant General Manager.

Don't Give Him Up.

Don't give up a boy or turn against him because he is bad. If your parentage and surrounding had been the same as his perhaps you would have been bad, too. He may not be altogether bad. Give him another trial at least. Put yourself to the trouble to do a favor for him and do it with

Edward V. Pettis. Farmington, Cal., earned the dollar with which he renewed his subscription to THE AMERICAN BOY by taking a telegram to a house six miles distant from the telegraph office.

Catching Life's Elevator.

ANNIE PARTLAN.

Annie Partian.

On the main floor of one of New York's large department stores, a man was running back and forth, looking very much annoyed. After watching him a moment, I saw the cause of his distress was his failure to catch an up-going elevator. Standing at the entrance to one, he saw another at the extreme end of the store, descending. Starting after it, he reached it just as it had started on the upward trip. Meanwhile, the first had come and gone. Continuing this running back and forth, he finally succeeded in boarding onc, having wasted time and energy unnecessarily, and believing himself very much abused. How typical is this of the lives of many of us—the secret of many failures. If everything does not come our way at once in our chosen pursuit, we rush off to some other field, only to find it filled, or that we are not fitted for it; while if we are only patient at the outset. Time's own elevator-man will open his gate and bear us up, stopping only to call out Fame. Fortune, Power, or whatever department in Life's great store we wish to enter.

Beecher's Advice to His Son.

From a letter once written to his son

From a letter once written to his son by the famous preacher, we take the following wise kints, which are good for all young men—and young women, too:—
"You must not get into debt. Avoid debt as you would the devil. Make it a fundamental rule: Cash or nothing.
"Make but few promises. Religiously observe the smallest promise. A man who means to keep his promises can't afford to make many.

make many.

"Be scrupulously careful in all statements. Aim at accuracy and perfect frankness, no guess work—either nothing

ments. Aim at accuracy and perfect frankness, no guess work—either nothing or exact truth.

"When working for others, sink yourself out of sight; seek their interest. Make yourself necessary to those who employ you by industry, fidelity, and scrupulous integrity. Selfishness is fatal.

"Hold yourself responsible for a higher standard than anybody else expects of you. Demand more of yourself than anybody expects of you. Keep your own standard high. Never excuse yourself to yourself. Never pity yourself. Be a hard master to yourself, but lenient to everybody else.

"Concentrate your force on your own business; do not turn off. Be constant, steadfast, persevering.

"The art of making one's fortune is to pend nothing; in this country, any intelligent and industrious young man may become rich if he stops all leaks and is not in a hurry. Do not make haste; be patient.

"Do not speculate or gamble. Steady.

patient.

"Do not speculate or gamble. Steady, patient industry is both the surest and the safest way. Greediness and haste are two devils that destroy thousands every year."

Fifty Years Ago.

William C. Moores. Genoa Junction, Wis., writes that he prizes THE AMERICAN BOY very highly, and cannot help thinking how much such a paper would have been prized in his ploneer home fifty five years ago. He says that in the early days he and his brothers and sisters took a small monthly magazine called "Woodworth's Youth's Cabinet." which was quite entertaining and which they preserved for years by stitching each succeeding number to the former. "It proved," he says, "quite a factor in our early education."

A Kind Letter from Illinois.

William G. Parker, Kell, Ill., writes THE AMERICAN BOY under date of June 7, as follows: I consider THE AMERICAN BOY the best boys' paper in circulation. From what I have seen of it I find nothing in the least wrong with it. It is inspiring in truth and energy to boys. It has many practical hints that enable a boy in money making, etc. Mr. Sprague should have the thanks of thousands of boys.

An Enthusiastic Letter from Kentucky.

"Greenup, Ky., May 26, 1901.
"The Sprague Publishing Co.,
"Detroit, Mich.
"Gentlemen:—I have taken your paper since its first issue and am very much pleased with it, as I see you are finding out what boys like to read, do, etc. You say my time is up, and if I do not want to take THE AMERICAN BOY for me to let you know and you will cancel my other trial at least. Put yourself to the trouble to do a favor for him and do it with an earnest, loving spirit. In many cases this will win him and when once you have won him he is true until death. If your first effort to win him does not succeed, try again and again. You will get nearer to him each time and as his associates come over to you he will be drawn nearer and nearer.—Southwestern School Journal.

Wayne R. Elliott, Gettysburg, S. D., writes: I have bought one hundred head of good young sheep, and have gone into that business will an uncle of mine. Although one hundred head is but a small start, I hope in time to realize quite a sum out of them. I am but fifteen years old, so I stand a chance of being worth something by the time I go out to make my own living.

The trial at least. Put your with with the "Gentlemen:—I have taken your paper since its first issue and am very much to take THE AMERICAN BOY for me to let you what boys like to read, do, etc. You say my time is up, and if I do not want to take THE AMERICAN BOY for me to let you know and you will cancel my name. Cancel my name! Well, I guess not. If it is in my power not to let you why you won't. Have my name canceled in that great book in which so many of the United States boys' names are written? No; I would sooner pay that one dollar and let you write my name with the 'red. white and blue.' or the 'kind, manly and true' boys. So I will enclose one dollar and be a subscriber of THE AMERICAN BOY once more. I am very much designed with the stories in THE AMERICAN BOY once more. I am very much designed with the stories in THE AMERICAN BOY, but none so much as the 'Three Boys in the Mountains.' Your truly, Otto Nicholas Bergmaier."

In some Italian towns, instead of giving books as prizes in public schools, they give savings bank books, with a small sum entered to the credit of the prize winner.

A banker the other day said: "Every day for more than a year a certain boy has come into my office punctually at three o'clock and delivered to me a paper. I have never given him more than one penny for the paper yet he has never varied a minute from the appointed time. I feel that a boy who does his work so faithfully and well is deserving of some recognition. He has something in him, and I am going to give him a position in my banking house."

A boy was caught in the act of stealing raisins in a store, and the grocer locked him up in a dark closet. He begged piteously to be let out, and after using all the arguments he could think of, finally proposed: "Sir, if you'll let me out, and send for my daddy, he'll pay you for the raisins and lick me besides." This appeal was too much for the grocer, and he let him go.

We are all the time talking about young men who fail because they lack ambitton. There are many who fail because of a too hasty ambition. They fail to do the work at hand well, because they are in so much of a hurry to get something better

Out off every dollar earned save twenty five cents. Save seventy five cents if you can, but never less than twenty five.

INFORMATION FOR BOYS

A LARGE APARTMENT HOUSE.

The apartment building and hotel now under construction on the ground bounded by Seventy third and Seventy fourth streets and Broadway boulevard, in New streets and Broadway boulevard, in New York, will be the largest of its kind in the world It is being erected by W. E. D. Stokes, who, in reply to a question as to the future of the building, declares he "Can't tell yet whether the building is going to be a monument to my skill or my asininity."

The building is seventeen stories high

going to be a monument to my skill or my asiminity."

The building is seventeen stories high, one block long, and will cost \$5,000,000. Sixteen hundred men have been two years in laying the foundations and erecting the iron work and walls, and it will be two years more before the structure is finished. It is built of granite, limestone, white brick and terra cotta. Of the cost, \$3,000,000 is for the building and ground, and \$2,000,000 for interior decoration and furnishings.

The building will contain 2,300 rooms. It will be equipped with a telephone exchange larger than that of a city of 30,000 people. It will have a "central" of its own, from which will radiate the wires for 2,000 telephones, all under one roof.

The basement is twenty six feet below the surface of Broadway. Along the Seventy fourth street side of the subbasement will be a wine cellar in which a dozen like the great Heidelberg tun could be stored without trouble.

There will be eighteen fast electric elevators. Fourteen of these, each capable of carrying from twenty to thirty persons at a trip, will be exclusively for passenger service, while there will be the largest dining.

clevators.

On the top floor will be the largest dining room in the world, and in the basement will be a swimming pool capable of accommodating 500 persons at one time.

—Timely Topics.

DESTRUCTION OF THE MOSQUITO.

Mosquitoes disilke drafts; they do not attack persons using a fan. If electric fans are put in a room the insects will abandon it. An experimenter who has tried the effect of certain oils finds that the essence of Cajeput is quite effective, although it fails in some parts of the country, strange to say. Pyrethrin succeeds everywhere, either as a tincture or a powder. The tincture burned in a lamp with a platinum wick effectually drives away the pests. The larvae may be killed by petroleum oil spread over the breeding places.

◆◆◆◆ | HOW TO RUN A FURNACE.

The following directions, addressed to those who take care of their own hot-air furnaces, are given at the end of an article on the subject by T. N. Thompson in Science and Industry.

"Keep the furnace clean outside and inside. It is part of the house. Do not let the sales accumulate in the sa

side. It is part of the house. Do not let the ashes accumulate in the ash-pit, or the grates will soon burn out.

"Fire lightly and often if you can, and you will not use so much coal. If you must like thick, pile it up first on one side, then on the other. This will give you fire on top all the time; otherwise the fire will be alternately dead and alive on top and the heating results will be intermittent.

"Keep the fire-door shut. If you want to deaden the fire, do so by closing the bottom door only. If this will not shut tight enough, you had better get the furnaceman to make it fit close.

"Never open the check-draft at the back

"Never open the check-draft at the back of the heater, otherwise this will allow fur-nace gases to flow through the joints of the furnace and poison the fresh air that comes up the registers; rather open the by-pass damper that is fitted to all modern furnaces to prevent ash-dust from getting into the

to prevent ash-dust from getting into the cellar when the grates are shaken. This should check the draft.

"Do not use a damper in the cold-air box, but regulate your heat at the registers. This is the best safeguard against furnace gases getting into the house.

"Keep the water-tank filled with water, to relate the other for interest the better to

moisten the air, for in winter the hot air is

too dry.
"Keep the ground around the mouth of

the fresh-air box clean.
"Do not sweep dirt from the floors into the registers."

HOW FLIES WALK ON THE CEILING.

We once were taught that the explanation of how files walk on the ceiling was that each little fly is a miniature air pump, the bottom of the foot adhering to the glass by suction. This theory has been exploded, as flies have been known to walk on the inner side of a glass receiver after all the air has been exhausted. Now scientists say that the flies hang on by the help of capillary adhesion—the molecular attraction between solid and liquid bodies. It has been found that the foot of the fly never touches the ceiling, and that the foot is covered with hairs. These hairs are very minute, each fly having from ten to twelve thousand of them.

THE THREE-TOED HORSE.

Expeditions sent out by the American Museum of Natural History of New York have recently discovered in Texas a deposit of skulls of three-toed horses belonging to a species known as the Protohippus, the immediate ancestor of the true horse.

A NEW CALENDAR FOR BOYS.

A NEW CALENDAR FOR BOYS.

A French scientist proposes a calendar that is to be uniform year after year, i. e., the same day of the week must always correspond to the same day of the month. The year must commence at the vernal equinox (March 21). There must be thirteen months of twenty eight days, or else twelve months, seven of which shall be thirty days and five thirty one. This leaves one day to be accounted for. The first day of the year is to be a holiday and have no number and belong to no month. In leap years there are to be two zero days. The months are to be named in their order: Truth, Science, Wisdom, Justice, Honor, Goodness, Love, Beauty, Humanity, Happiness, Progress, Immortality. The reform, if it is a reform, will probably not generally commend itself.

COPPER PRODUCTION OF THE WORLD.

COPPER PRODUCTION OF THE WORLD.

During last century the United States produced two million, seven hundred and twenty five thousand, six hundred tons, which was about a third of all the copper produced. The next largest amount was taken from Chill, Bolivia and Peru, and the next from Spain and Portugal. During a single year three mines produced about twenty eight per cent of the total output of the earth, viz.: Anaconda, 17.830 tons; Calumet & Hecla, 41.101 tons; Rio Tinto, 33.705 tons. If the product of five other mines are added, the output amounts to 50 per cent—half of the world's production. These five are the Boston & Montana, the United Verde, the Mansfield, the Copper Queen and the Tharsis.

SPELLING OF SHAKESPEARE'S NAME

There are at least three spellings of Shakespeare's name: "Shakespeare's name: "Shakespeare," "Shakespeare," In each of the two spellings last given are ten letters—four vowels and six consonants. Combine these two figures and we have forty six. Turn to the forty sixth psalm in the Revised Version, count forty six words from the beginning of the psalm. and you reach the word "shake." Count forty six words back from the end of the psalm and you reach the word "shake." Count forty six words back from the end of the psalm and you reach the word "spear."

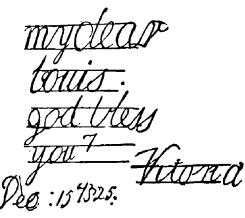

Talking about Shakespeare's name, it may be interesting to our readers to know that there are but seven known specimens of his signature. One of the seven is in the British Museum, and cost over fifteen thousand dollars.

GREAT TRAVELERS.

Two well known Atlantic liners have each traveled considerably over two million miles, a distance equal to eight and three fourths times that between the earth and the moon. The two together have carried considerably over three hundred and sixty thousand passengers across the Atlantic.

QUEEN VICTORIA'S FIRST LETTER.

The letter here shown is the property of Mr. Berry, keeper of the oldest shop in London. Mrs. Louis, to whom the letter is addressed, was the lady who accompanied

the wife of George III. to England. The Oveen, as an infant, took so great a fancy to Mrs. Louis that when she reached the age of three she declared her intention of writing her a letter.

THE EARTH NOT PERFECTLY ROUND.

Suppose there were two tunnels, one from the North Pole directly through the center of the earth to the South Pole, and the other connecting two directly opposite points upon the equator. Let us suppose an express train running a mile a minute should start at one end of each of these tunnels bound for the other end. The trip from the North to the South Pole would take 26.8 minutes less time than the trip through the earth by the other route. In other words, the earth is flattened at the poles to the extent of 26.8 miles.

IN BRIEF.

Civil engineers employed by the United States government have just completed the measurement of the globe, a task that they have been engaged in for thirty years, at an expense of over half a million dollars.

The Japanese language is said to contain 60,000 words. It is quite impossible for one man to learn the entire language, and a well educated Japanese is familiar with only about 10,000 words.

The tallest man in the world is Lewis Wilkins, a young farmer, who lives near St. Paul, Minn. His height is eight feet eleven and a half inches.

BOYS' BUILDING

At the St. Louis (1903) Exposition

The American Boy will make an effort with the Co-operation of its readers and the friends of boys everywhere to institute a novel feature at the Next World's Exposition.

HON. W. B. STEVENS, Secretary Louislana Purchase Exposition.

WORK BEING DONE.

In our last number we said that we had filed a formal request with the Secretary of the Louisiana Purchase Exposition Company that they make a Boys' Building a leature of the great Exposition to be held at St. Louis in 1903, and we asked the cooperation of all our readers to the end that the Exposition Company be induced to consider the request favorably. We have had hundreds of letters commendatory of the enterprise—many of them from prominent workers for boys, and of course a large number from boys themselves. The suggestion has met with the approval of hundreds of newspapers throughout the country, and we have had the privilege of sending many clippings from newspapers heartily favoring the matter, to Secretary Stevens. We sent marked copies of our stevens. We sent market copies of our last number to all of the officials of the Exposition, and from some of them we have received encouraging words and from none of them discouraging. The matter, however, is still undecided.

WHAT PEOPLE SAY.

Wallace R. Struble, General Director of The Young Citizens' League, says: "I am glad you are taking this matter up. We discussed it at our Buffalo convention and all the boys were enthusiastic regarding the proposition. I have written the St. Louis

proposition. I have written the St. Louis people and will continue to write, until the matter receives definite action."

Perry A. Green, Manchester, Va., says: "I approve of it. Virginia boys will make a good exhibit. It will be a good thing, as it will bring thousands of people to the realization of what boys can do."

The amateur journalists are particularly interested. Their opinion is voiced by Alfred Kohlberg, of San Francisco, who says: "A grand display of amateur journalism could be made, and all amateur journalists would be glad to publish a special Exposition edition."

The Superintendent of Schools at Rossville, Ill., says: "It is a happy thought, and I sincerely hope that the plan will be carried out. There should be a complete library of boy literature on exhibit."

L. B. Clark Perry. Ohio, suggests an arbibition of hour collections."

L. B. Clark, Perry, Ohio, suggests an exhibition of hoys' collections of stamps, curios

I. B. Clark, Perry, Onio, suggests an exhibition of many and medals.

Isaac S. Taylor, one of the prominent architects employed by the Exposition Company, says: "I think well of your enterprise and would be glad to see you carry it to a successful issue."

A. H. Foote, Secretary of one of the largest St. Louis business houses, says: "I am sure that such a building would result in great benefit. If there is anything I can do to further it let me know."

A. W. Moise, a prominent St. Louis lawyer, says: "Your idea is an excellent one and the property is through."

A. W. Moise, a prominent St. Louis lawyer, says: "Your idea is an excellent one and I hope you will carry it through."

George R. Barclay, of the Simons Hardware Company, St. Louis, writes: "I think your idea a good one, and believe it will be a feature both novel and instructive."

Secretary Stevens, of the Exposition Company, says that he will bring the matter before the attention of the Executive Committee, and that he considers the suggestion an inter-

esting one.

We could fill our paper with letters of a like tenor from boys and their friends. The letters from which we have quoted will be enough to show that there is general approval of the idea.

WHAT WE WANT.

Now, will every boy, and every friend of a boy, write us a letter approving or condemning the suggestion, and suggesting what the building should be and what it should contain?

THE IMMENSE ARMY OF AMERICAN BOYS.

There are five hundred and fifty four thousand four hundred and forty eight American boys between the ages of five and twenty in the state of Missouri alone. Then, too, just across the river, in the state of Illinois, there are seven hundred and forty nine thousand and seventy five American boys between the same ages; and in Arkansas, the state to the south of Missouri, there are two hundred and sixty five thousand five hundred and forty one. The statistics for the bordering states of Kansas and lowa are not before us, but three quarters of a million may be added for these. Should there not be an American boys' building at the Louisiana Purchase Exposition in 1903?

UNDISPUTED LOUISIANA PURCHASE TERRITORY.

Halloween or the eve of All Saints Day, has been observed since before the beginning of the Christian era. In the very early years it was believed that fairies, ghosts, and supernatural beings ruled over all earthly mortals. It was considered exceedingly dangerous for people to be out on this evening as they were liable to be set upon by demons and spirits.

Thus it became customary for large companies of friends to spend the fateful night together both for companionship and protection against possible attacks of ghosts and evil spirits. These parties gathered at the fireside and spent the evening drinking cider, cracking nuts, and eating apples. In whispers the guests told weird ghost stories and so frightened themselves that in their imaginations they saw witches and demons darting out from the fire place. But as civilization advanced and people became less superstitious, the fear of these evil spirits passed away; yet the custom of holding Halloween feasts remained and is still a part of the present Halloween celebration.

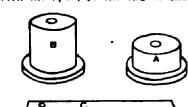

Halloween parties are enjoyed by old and young, although the boys generally prefer spending the evening upon the street, scaring passing nedestrians, unhinging gates, ringing door bells, and playing pranks that would very likely land them in the lockup at any other time.

A NEW STYLE OF TICKTACK.

The well-known ticktacks of long ago have been improved upon. For the making of this procure two large wooden spools, three spikes, some heavy twine, and a long pole (perhaps you can borrow a clothespole for the occasion).

With a sharp knife cut notches in the flanges or edges of one spool. These notches need not be cut deep or at any regular distance apart, but should be fairly close to one another. When this has been done, fasten the spool to one end of the

another. When this has been done, fasten the spool to one end of the

F16.2

FIG I

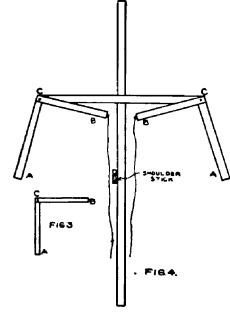

pole by nailing a spike through the hole in the spool into the pole. With a saw cut the other spool into two pieces as A and B in figure 1. A being one-half of B, or one-third of the entire spool.

Find a narrow strip of wood, and after cutting it about six inches long, nail one end of it into A as shown in figure 2. With a small bit, bore a hole through this strip of wood directly over the one already in the spool. Nail B onto the other and and opposite side of C. When figure 2 has been completed, nail it to the pole about six inches from the end. The spike should rus through the hole made in A and C. Now take the heavy twine and pass it around the notched spool, and then down to and around A, and after pulling the twine taut, tie It. Now it will be seen that a simple apparatus has been made, consisting of a crank at one end of the pole, which, upon being turned, revolves the notched spool, some resin had better be rubbed upon both twine and spools. One person can easily work this sort of a ticktack and can rattle it upon a window as long as he pleases, not being stopped by a lack of string as with the hand ticktack.

HOW TO MALE A ANGE C. the hand ticktack.

HOW TO MAKE A JACK-O'-LANTERN GOBLIN.

A great deal of fun may be had with the Jack-o'Lantern Goblin, which may be made up in a few minutes out of odds and ends that can be found in almost any house. Secure a pole about four feet long, and one eighteen inches long. Nail the center of the shorter pole at right angles to the larger pole, fastening it about eighteen inches from one end of the larger pole. Now take two sticks as A and B in figure 3, A being about twenty four inches long. Fasten the ends of the two sticks together at right angles and then nail them at C to one end of the crossplece on the pole by means of a wire nail. This right-angular of the shoulders. The nightshirt should be pleced out with white cloth until it nearly preaches the ground. When the goblin is one end of the crossplece on the pole by means of a wire nail. This right-angular reaches the ground. When the goblin is one end of the crossplece upon your shoulders, grasping in should be able to move freely about the

wire nail. When this has been done, make another arm and fasten it similarly to the other end of the crossplece (see figure 4). Fasten a screw-eye into B on each arm and attach a piece of string to them. At D a short stick should be nailed to the pole. This is to rest upon the shoulder of the boy who carries the pole and should be fastened about eighteen inches from the lower end.

The head of the goblin is a tack-o'-lanters.

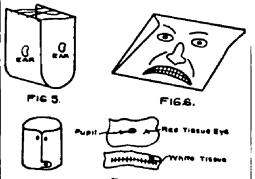

inwer end.

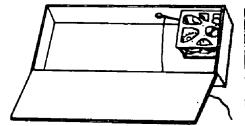

The head of the goblin is a jack-o'-lantern made in the following manner. Take a piece of cardboard about eighteen by twenty four inches and bend it to the shape shown in figure 5, holding it in shape by tacking it at the top with thread. In each side of the cardboard cut a hole the shape of an ear, and paste red tissue paper over the openings. For the face take a piece of plain white paper a little larger than the face is going to be, and, after marking upon it eyes, nose and mouth, cut the openings for the same. eyes, nose a for the same.

for the same.

Cut two pieces of red tissue paper about two linches square and mark a black pupil in the center of each. A piece of tissue for the nose and a piece of white tissue with teeth marked out upon it in ink for the mouth, when pasted over the openings will complete the face. (See figures 6 and 7.) After finishing the face paste it on to the head.

Inside of the head, fasten a candle far

the pole with one hand and the strings which manipulate the arms in the other

the pole with one hand and the strings which manipulate the arms in the other hand.

As this weird looking sight passes down the street with glaring red eyes, and arms fanning the air, the pedestrians will have to stop to reassure themselves that beings of early days are not before their eyes.

The writer has seen boys startle people by means of old clockworks. Secure an old clock and remove its works. Fasten these to the bottom of a cigar box so that the striker is just near enough to the side of the box to enable it to strike the wood. Make a hole in the box directly opposite the striker and run a piece of heavy twine through it, attaching the same to the striker. Wind up the alarm and set the box in a dark part of the sidewalk, holding the string taut meanwhile, to keep the alarm from going off.

To keep yourself out of view, you can take the string leading from the striker into your house, and there wait for somebody to pass by. When the string is slackened the alarm goes off making a rattling noise, and, as the cigar box is hollow, the noise produced sounds quite loud. Figure 9 shows the clockworks arranged in the box.

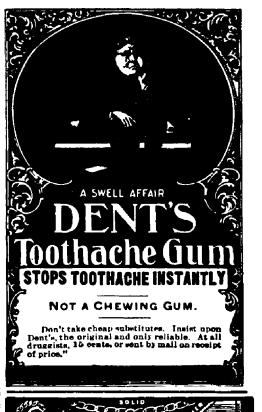

The following trick will be found a source of amusement for at least a part of the evening. Procure half a dozen rubber bands and tie them together. Attach one end of these to the front baluster rail and to the other end fasten some string. After doing this, cross over the sidewalk with the string, pulling it until the rubber bands stretch considerably. Where the string crosses the walk, hang a sign marked "DANGER."

As soon as anybody approaches the string and reads the warning, he will make a grab for it. The moment you see him make this movement you must let go of the string. This will fly back to the steps on the contraction of the rubber bands, and the angry passer will grab space, instead of the string which he saw in front of him a second before. For a moment he will be puzzled at its disappearance and then, seeing the joke, will pass on once more goodnatured.

A Progressive Age.

Next year we may expect to read some-thing like the following in the daily paper: About ten o'clock this morning a horseless milk wagon, loaded with cowless

ELEGANT WATCH-FREE
This is a Solid Gold Plated Watch with genuine American movement, fully warranted to keep good time and with preper care it should wear and give satisfaction for 30 years. It has the appearance of a 840 floid Gold one. The watch is eccompanied with a 30 Year Generates and if it is not as represented we will buy it back at \$10.80. Just the wetch for a railroad man or those whe want a close timer. We give it free as a promium to ladies, boys and girls or anyone for ceiling 30 pieces of our handsome jeweiry for locits each. Simply send your name and address and we will send you this alegant field Gold Plated Watch poortpaid. We trust you and will take back all you cannot sell, we proposes to give away 50,000 of these watches to advertise our business. This is an honest offer; no catch word about it; we mean just what we say, and if you get to work quickly we will also send you a fine Gold Flated Chain. Write to-day! Address Inter Street Chain.

A Texas Boy With X-Ray Eyes.

LELA F. WOODWARD

Out in the semi-arid regions of West Texas veritable miracles are being performed by a Texas youth of not quite thirteen, Guy Fenley, of Uvalde, Texas, who is daily manifesting a wonderful gift—that of seeing through the earth at night, the power being especially strong during the dark of the moon.

power being especially strong during the dark of the moon.

"About a year ago," so Joel C. Fenley, a man of high standing and unquestionable veracity, states, "I and my son, Guy, were walking through a pasture near our home. It was a very dark night, and you can well imagine my surprise when Guy suddenly exclaimed: "Look, father, look at that stream of water." I looked around everywhere, thinking that the dim moonlight might be drawing pictures of a stream, for I knew that no stream existed for miles and miles in that dry country, but could not see anything resembling one. Guy laughed at my evident perturbation as he, pointed downward and gleefully cried: "There, about three hundred feet under ground. Don't you see it?"

Mr. Fenley, of course, could see nothing and was much worried at what he might have thought a practical joke, had not his son's face assumed a serious look might have thought a practical joke, had not his son's face assumed a serious look and his eyes a peculiar expression. He said nothing more and seemingly ignored the subject until he reached his residence when he told his wife of the circumstance. "We will see," she replied, and accordingly she secreted a bucket of water under a table upon which she had arranged draperles to screen it. "Now we will see if he can see through the table," she said. As Guy entered the room—the light was burning brightly and he knew nothing of his mother's strategy. His parents asked him if he saw anything unusual under the table. He replied in the negative, but when the light was blown out, he looked through the table and saw the bucket of water. This proof of his peculiar power convinced his parents that their son was gifted with an X-Ray pair of eyes, but to make further test Mr. Fenley took Guy to his own ranch and had him locate by night a stream of water that the boy declared was about two hundred feet below the surface; and he also described minutely the different strata of earth and rock between the surface of the earth and the stream. Mr. Fenley had so much confidence in his son's ability to see through the earth that he at once sank a well at the place where water had been located, and after boring about one hundred and eighty seven feet, a fine stream of water was found; and the well is to-day one of the finest in that part of Texas.

News of the boy's wonderful power spread.

of Texas.

News of the boy's wonderful power spread rapidly, but, like all uncommon things, was slow in being credited. Realizing the great value of such a gift to the drouth-stricken regions of Texas, and particularly to their own poorly-watered ranches, the ranchmen of that section decided to give his peculiar power a practical test. Mr. Thomas Devine, a ranch owner in the northern part

GUY FENLEY.

hundred and seventy five feet. Mr. Devine marked the spot indicated by the boy and followed up the underground stream for more than a mile. Wells were dug in a number of places and at every place a fine flow of water was found at about the depth indicated.

Mr. F. K. Moore, a gentleman who owns a ranch in Edwards County Towns was

Mr. F. K. Moore, a gentleman who owns a ranch in Edwards County, Texas, was the next to test his X-Ray sight. One dark

THE AMERICAN BOY

but after his wonderful power is manifested he is completely exhausted, and is restored to his normal self only by a deep and long sleep.

The appearance of Guy Fenley is prepossessing. He is rather modest, and there is nothing to distinguish the handsome, intelligent youth from any other ordinary boy, save a peculiar expression of the eyes. Physicians have examined his eyes, but so far have discovered nothing wonderful in their construction, consequently many persons who have seen and conscientiously believe in his extra sense—X-Ray sign, or whatever one may term it—believe it to be some peculiar power exercised by the mind. Because of the lact that he can tell with certainty the different strata between the earth and the water, it is believed that he could locate minerals as well as underground streams. Many citizens of Uvalde have made simple tests of the boy's X-Ray sight, and all believe implicitly in his power. Hqn. J. N. Gartner, of Uvalde, a member of the State Legislature, says that there is something inexplicable about this boy's power which he has tested by placing buckets and other vessels off water unbeknown to the boy under buildings. In every case he located the water accurately. Although he is a mere child, and has in every case so far located underground streams gratuitously, refusing large sums offered him to exercise his power, yet his services are already greatly in demand not only by stockmen who own ranches in the dry districts of the State, but by those who are interested in the cultivation of rice, and by oil prospectors, and when his gift will doubtless become a great factive in mining. Already several sterile tracts in Texas have been converted into blooming and deserts by the supplies of water that he has located, which are being used for the purpose of irrigation.

It is believed that a fortune awaits the bright, handsome boy who possesses this remarkable gift.

"The American Boy Shut-in Society"

Every boy who is sick or crippled and compelled to remain indoors from morning till night, day after day-one who is likely to be confined to his home for months or years to come-may have a free subscription for one year to THE AMERICAN BOY. Such a boy is entitled, also, without any cost to himself, to be a member of THE AMERICAN BOY SHUT-IN SO-CIETY.

Words of Appreciation.

Mr. Frank Buckshaw, of Woodlawn, Ala., sent us the name of a Birmingham (Ala.) shut-in boy, suggesting that this boy was entitled to be made one of our society and receive THE AMERICAN BOY free of charge. We wrote the boy advising him that we had put him on the list, and now we get a letter from the boy's father, which reads as follows: "Your letter of July 20, addressed to my invalid son, got mislaid in some way, and as he cannot write himself, I beg to say for him that he very much appreciates your kindness in sending THE AMERICAN BOY for one year free of charge, as I do myself. He enjoys your paper, and as reading is his only pleasure it is a blessing to him during his long weary day watch. Lenclose you a carbon copy

It is a blessing to him during his long weary day watch. I enclose you a carbon copy of the letter I have written to Mr. Buckshaw. My wife and I thank you very much and pray God's greatest blessing upon each member of your firm."

In the carbon copy of the letter to Mr. Buckshaw the father writes: "You have by an act of this kind not only made a poor unfortunate boy happy, because reading is his only pleasure, but you have added one more jewel to a crown which is always laid away for those who do noble acts such as you have done."

Charles W. Holst, Portsmouth, N. H., writes: "I am a shut-in, so I thought I would tell you how I spend my time and thus perhaps do a little good to others, who, like myself, cannot move about and mingle with people. I have been a great complainer, but THE AMERICAN BOY has cured me of the very bad habit. Since I

have seen that there are other boys who are as bad off as I am I quit whining. I find a great deal of pleasure in collecting postage stamps. I also know how to make envelopes out of heavy manilla paper for use in sending stamps and money, and I occupy some of my time in doing this. In the winter I paint in water colors and print tyisiting cards on a small printing press. I will be glad to correspond with other shutins. I would like to know whether anyone can give me a recipe for a good paste to put on the flaps of envelopes to make them stick."

Thomas F. Lockart, Wellington, Mo., writes, "THE AMERICAN BOY is the best boys' paper I ever read. It is truly a noble deed in you to put the shut-in boys down for a year's subscription free. I heartily thank you in behalf of myself and all other unfortunates. I don't think any of the shut-ins are in as bad condition as I am. I think I am the most helpless one on your list, but I am not complaining. I have found long ago that worrying and fault-inding doesn't help a bad situation, but makes it worse. Things are never as bad as they could be."

Ereddie Long St. John Kas writes. "I

Freddie Long, St. John, Kas., writes, rreduce Long. St. John, Kas., writes, "I have not walked for five years. I have many good friends who roll me about in my wheel chair and give me lots of books, so you see I am real well off."

Suggestions.

In our September number we asked for suggestions regarding THE AMERICAN BOY. SHUT-IN SOCIETY, as to a good motto for the Society, a better name, suggestions as to what members can do for one another design for emblem or pin. gestions as to what members can do for one another, design for emblem or pin, colors, etc.

The following suggestions have been received from Fred Woodhouse, a shut-in at Millerton, Pa.:

For a motto—Bring sunshine to one another.

Already given.
What members can do for one another— What members can do for one another— Write letters, send reading matter to one another or little tokens of love, picture books, and such things as will help to pass the lonesome hours; and where they need help to help them by sending them such things as writing material, station-ery, postage if necessary, etc.

Design for emblem or pin—An eagle or a star with the letters A. B. S. I. S. (AMERICAN BOY SHUT-IN SOCIETY). Colors—Red, white and blue.

Colors-Red, white and blue.

THE AMERICAN BOY

tangles

New puzzles to be printed and answers to the Tangles should be addressed to UNCLE TANGLER, care AMERICAN BOY. Detroit, Mich.

Kent B. Stiles, Stonington, Conn., wins the prize for the most carefully written complete list of answers to the September Tangles. Other bright Tanglers, whose commendable lists made a decision very difficult, are William E. Stager, R. Gordon Gilholm, Elbert M. Moffatt, Edw. B. Reimel, Arthur G. Wells, Philip Willmarth, Wallace B. Baylies and Roland R. Hockett.

The following sent in correct answers to

marth, Wallace B. Baylies and Roland R. Hockett.

The following sent in correct answers to some of the Tangles, or contributed new puzzles: W. G. Stover, Chas. Kelly, Frederic Grant Stanley, Amma Corbett. Allen S. Hubbard, Howard Martin, Homer N. Sweet, Floyd Cary, Howard Kirk Chaffee, Ray McClain, Frank S. Hopkins, Charles Battell Loomis, Jr., Levant Hackley, Lamar Armstrong, John Hug, F. W. Lathrop, Ralph Salisbury, W. S. Cory, William Anderson, E. Rinard, George T. Colman, Frank M. Field, Chas. E. Johnson, Edward J. Dinsmore, Russell G. Davidson, Will F. Vaughan, Charles W. Burpce, Hubert H. Wagner, Don M. Cottrell, and others who forgot to sign their names.

This month we offer as prizes two books that boys will enjoy reading and be glad to have in their libraries; one for the best and most carefully written complete set of answers to this month's Tangles; the other for the best new and original puzzles suitable for publication in this department. Both awards will be made Oct. 15. Simple anagrams, drop-letter puzzles, cross-word and numerical enigmas stand very little show of winning prizes or of being printed, which is also true of puzzles having for their answers the "American Boy" or "Uncle Tangler."

Answers to September Tangles.

13. Adam. 930; Noah, 600; Joseph, 110; Abraham, 100; Moses, 120; Ishmael, 137; Christ, 3; total, 2,000, 14. -Uncle Tangler.

When Boys and Girls Grow Most.

Boys do more growing in their seventeenth year than in any other year; girls in their fourteenth. Boys reach their full height usually at eighteen or nineteen; girls at lifteen. From the eleventh to the sixteenth year the average girl is bigger and stronger than the average boy. The winter cold seems to retard the growth of children just as it does plants. From November to April children grow very little.

We have received from A. C. Wendell, San Marcial, New Mexico, a bunch of wild Tornea beans, which are said to grow and remain all winter on high bushes at the foothills of the Rockies. The American name is the "Screw bean," from their peculiar shape.

Ireland had nearly twice as large a population in 1845 as she has to-day.

A Novel Contest.

A Novel Contest.

The J. Stevens Arms and Tool Company, Chiccopee Falls, Mass., are advertising a contest that will interest all boys who use their rifles. A boy may think he is a "good shot," but he cannot know how good he is until he compares his marksmanship with that of other boys. Hundreds of boys will be shooting at targets between now and the first of October, when the contest closes, as the prizes, which range in amount from fifty dollars down to five dollars, will be awarded in October to sixty young persons who send to the Company the sixty best targets made with the Stevens rifle. The Company sends to boys, on receipt of ten cents in stamps, the conditions governing the contest and twelve targets. Here is a good opportunity for you to try your skill. twelve targets. Here is a gootunity for you to try your skill.

Boys should be careful in writing us to sign name and address in full. We are at present holding four important communications for want of proper addresses.

We want a man or woman in evéry town in America to represent us. Liberal terms. The Sprague Publishing Co., Detroit. Mich.

HUNDRED DOLLAR SQUARE PUZZLE.

There is no catch of any kind in our offer, the only condition is that the puzzle must be solved in 24 hours after you receive it.

It consists of 41 irregular blocks, that are to be put together to form a perfect square.

We show here 6 of the blocks reduced in size They form a perfect square. TRY IT.

THE \$100 SQLARE PUZZLE is the greatest invention of the century, it is fascinating, amusing and instructive.

It is easy to solve if you are ingenious or lucky. It has been solved in less than one hour. The solution is in the hands of the cashier of a National Bank of Chicago.

Place all the pieces in a perfect square and your solution is correct.

Semi for one today and try to earn one hundred dollars in 24 hours.

&THANKSGIVING NUMBER&

THE BEAR KIDNAPPERS OF CROW PEAK

IBABEL HORNIBROOK

"It would be better for a man to find himself among musical coyotes than the center of such a young rabble," laughed "Uncle Buff," otherwise Mr. Jem Buffington, our father's western friend, parrying the clamorous attack of some dozen of us, boys and girls, who were pressing him for "a story."

This was Mr. Buffington's second visit to our New England home, and we thrilled still with recollections of his adventures in "side-hills" and lonely gulches; or of hairbreadth escapes from roachbacks and silver-tips in the corridors of wild canyons or on bowlder-strewn mountain slopes.

To-day, however, our "Bearman"—as Curley, my small brother, called him—did not seem to be in a reminiscent mood, until a cry from that same ten year old stirred an eddy in his memory.

Dagon, Uncle Buff's big mastiff, had snatched a sandwich which Curley carelessly deposited on the ground, and was swallowing it in two

"Too bad! Too bad!" laughed our western friend. "But pshaw, Curley, you ain't going to look blue over a little corner left unfilled? How'd you feel if you were sleeping away up among the hills, miles—as you thought—from any other human being, and saw a big roachback come along in the night an' eat up all your grub, while you lay shaking from collar bone to heel?"

Curley's "blue" look changed in a flash to one of scarlet interest. We older boys and girls exchanged satisfied nudges; we knew the vein of experience had been struck, and that if it were judiciously tapped, the story would flow out.

"Where were you then, Uncle Buff, and what were you doing?" I asked, looking up at the bronzed miner whom we had adopted as a relation.

"I was rolling rocks down Crow Peak," he answered, with another big neigh of laughter—and then grew suddenly serious. "I guess that's a part of my life about which I haven't told you." he went on. "'Twas in '83 that I grew tired of working, and left the mine where I was foreman under my brother. struck out for the Black Hills, determined to do some prospecting on my own account in the loneliest regions; with the result that nine months later I turned up at a lonely mining camp, 'dead broke,' wanting to earn money to take me back to Montana.

Well, the manager at that mine said that there was only one job he could give me, and that had 'lots of chances' about it. He wanted a daring man to go five miles up the canyon to Crow Peak, and on that bowlder-strewn old mountain to select rocks for the 'rasta,' a primitive kind of crushing mill, where the ore was ground to powder by heavy stones dragged round and round by horses. I accepted the job and the 'chances,' though he told me at starting that Crow Peak was a regular 'bear hill.' Evening found me upon the shoulder of the mountain, where I soon found the sort of rock for which I was searching, weighing some two hundred pounds, and smooth as a flatiron on the underside.

"I started it with my crowbar. And down it went clear a hundred feet at one lick. The noise seemed to sweep me off my feet, and as I clung to a crag, shuddering, I saw something far below that sent my heart staggering round in my body.

'Out from a thicket scurried a lively mouse-brown thing, followed by two scrambling yellow dots, all three hurrying out of the way of the danger which I had set rolling.

'Great Scott! it's old Baldy herself-a roachback and her precious twins,' I said, speaking half aloud, I guess, to the dwarf bushes that shook as if they the whiteness of the moonlight—like a pillar of mist. were frightened, too. 'If she don't sleep well tonight—or these cubs are restless—likely enough I'll snorting an' growling—mad as could be—and dusted hear from her!'

"Well, that thought did not make the canyon grass seem any softer when I descended to my campingground near the stream, where I was to pile my rocks for a team to fetch them, and where I hung up my grub-which the mine manager had given me-eight pounds of beef, a wedge of bacon and big bag of flour. Luckily, I knew enough to put thirty yards of dusky gulch between me, as I lay down wrapped in my blanket, and my suspended larder, swaying between two pine trees.

"With a prayer that Mother Roachback's twins might keep her at home that night. I fell asleep, and woke some hours later to find my campfire out, an' shivers rippling over me, as if the moonlight, ing my beef an' bacon for a grand feast with the her hot breath. Then I tell you the old hill spun-

scalp with icy fingers.

"Before I knew what frightened me, a shaggy, shadowy thing crashed on to my camping-ground and stood upright, a full five feet, sniffing an' clawing at my beef an' bacon, growling-quite low-a sort of grace over the food that I suppose was joyful in bear idiom. But, goodness, it turned me so cold I felt as if my backbone was freezing to the hard ground of the canyon.

'It's that roachback,' I said to myself, my heart going as slow as a 'dead march.' 'Jem Buffington. your hour's come now, sure!'

"For, though I stole a hand towards my rifle, I knew that if I stirred the bear would come on before I could spoil her digestion for my meat.

"So I just lay there an' shook! The trees were moaning and creaking in an awful mournful way; it seemed as if with each lonesome sob they scattered a whole swarm of fresh fears down on me, and made the canyon seem a terrible dreary place for a death struggle.

"I was praying behind my teeth that she'd take herself off with the meat and let me escape with what I wanted most to keep me from hunger-my the theft at last, and hauled the fat, whining little We were picnicking by a blue-eyed lake, and flour. But I soon saw that her curiosity was too fellow off to our camp, where my new friend, Mack.

"I clung to a crag, shuddering."

ing for her somewhere. She went for that flour bag, slapping it first with one paw, then with anotherfor all the world like an athlete with a punching bag.

Then suddenly she burst it from top to bottom with one ripping blow. Out bulged a white cloud into like a floury baker from her nose to her tail.

"Goodness! how I felt then I never could tell you. Seemed as if every feeling I had ever known was working in me together—tossing like straws in a wild gale of laughter—with a pool of anger underneath; yet I daren't let out a sound-I was holding the breath in my nostrils-for fear she'd get on

to me.
"I clutched the canyon grass. I dug my fingers into the ground as if I were nailing myself there, while my flour whitened the gulch and whirled away in little pale clots on the stream—and the bear raved and capered, trying to shake the dust out of her eyes. Then suddenly she jumped off into the darkness, leaving a floury trail behind her, carry-

be a famished man next day.

"Well, when morning came and I felt the pangs of hunger, I vowed vengeance on that roachback. But I tightened my belt and determined to secure another rock for the crushing mill before returning to camp.

"And it was when climbing the peak for this purpose that I spied a campfire on the east slope of the mountain. I made for it pretty quickly, found an old miner and his son out prospecting, who shared their grub with me, laughed at the way I had been robbed, and the son secretly proposed a scheme for revenge on the bear.

"It was so wild and dangerous that he would not mention it before his father, being nothing less than a plan for kidnapping one of Mother Roachback's tawny twins, by lying in wait near her lair, until she helped us to an opportunity by trotting off on a long forage—when we were to carry off one of the cubs in a gunny sack.

"Well, it took us two days of weary watching, and lots of bites and scratches at the capture—bear babies can fight I tell you! But we accomplished

proceeded to show me how we could have lots

of fun with him.
"We built a small corral of twigs and imprisoned him there, then stuck lighted candles into the ground at the four corners—as if he were a sort of little idol. You should have seen the yellow cub do battle with those lights! He'd charge one of the guttering flames full tilt, as if 'twas his worst enemy, knock it over, let out the queerest little thunder of a growl, an' trample it joyously, just as though he felt himself all sorts of a bear. Then he'd lick his singed paw and go for another.

"Well, Mack and I laughed, while the shadows edged over the camping-ground, until we felt sore in all our corners. Mack's father was off prospecting in some lonely gulch so we could play as much as we liked. We were just lighting fresh candles, to arrange another sham battle for the cub, when into the middle of our fun struck a growl like doom-that froze the laughter in our pipes.

"'She's on to us, Mack—the she-bear!' I cried; and we jumped for our rifles.

"I tell you our kidnapping partnership was dissolved pretty quickly. Mother Roachback was on to that darkening camping-ground, like a bolt from the dusk, her eyes burning like flecks of flame—growling savagely enough to make a fellow fly, 'even if he had a small arsenal to back him up.'

'With the force of a battering-ram she launched herself at the corral of twigs where we had caged her baby, trampling the lights of our novel 'bear show' in a mother-rage that was fairly splendid—so I thought afterwards.

"It kind o' made a man feel at the time as if he was shrinking into a gray transparency, losing color and weight with each gnash of her teeth.

"I fired—so did Mack. But I guess—rough as we were-neither of us wanted to kill the cub, which was snugging up to its mother, whining complaints of all we had done to itso like a human baby that I felt paralyzed.

'But the next minute I was running as if wings had sprouted on my feet-away up the mountain—blindly—anywhere. All our startled shots had missed, and the old roachback was coming for me straight—determined to call me to account for the kidnapping. There was no tree near that offered safety, so I tore up-hill, for I had learned enough about 'bear' to know that while she could climb or run down more quickly than I could. I might keep aheadonce I got away up on the steeps—by running across the stony slope of the peak, where trav-

great for that, though the cubs were probably whin- | eling did not suit her at all, as her claws could not take hold easily.

"Well, I might have dodged her in that way if my strength had held out; but I felt it going-leaking out o' me like dead steam—and not even a tall sapling in sight. There was nothing but dwarf timber on the side of the mountain where I was camping with my new friends. I doubled and rounded, but the roachback was gaining, and far away below I could hear the faint, querulous cry her on.

"She was slipping at every step, rounding a rugged spur, yet I could hear her grumpy gasps getting nearer, and the fierce, mumbling noise she made, like a hog over parings—goodness! it fairly withered the breath in me.

"Well, I 'll never forget the minute when it seemed a choice of turning to fight—or of feeling her claws in my back. But at the last, when she almost touched me, I jumped aside and stumbled down-hill, at a spot where the mountain was mostly loose stones an' crumbly stuff.

"I gained a few feet and a flash of hope that way, for she couldn't turn as quickly as I could. Pretty soon, though. I heard her close behind again. I felt last time, an' fell, helpless, across a bowlder—while she went by so close her fur touched me.

"She couldn't stop short. She planted her claws in a ledge of earth, trying to turn, but it crumbled out over the New England lake, we—scarcely breathunder her weight. Down she crashed, pitching an' ing-could almost see mirrored the darkening hill, sliding-growling like played-out thunder-with such a racket of stones and falling stuff, that it seemed to poor me as if I was dying there in the dark-all

—or imagined I heard—the querulous whine of the yellow cub, like a death-dirge."

"Uncle Buff" broke off. In his eyes, as they looked the sliding bear, the kidnapped cub.

"She didn't come for me again, or 'twould have ended my time-story," he went on after a long pause.

as if there was nothing solid on it but that bear! specked with flame before my bloodshot eyes—amid "Whether I heard the young one or not then, I guess And the dusk grew all red-shot. I jumped for the the wreck of a world. And still, far away, I heard she did. Mack found me later, more dead than alive. You see, he thought the roachback was charging him, and made for a tall bowlder across the gulch. In the dusk he didn't see what a bad chase I was having.

"'I'm all here, Mack-she didn't take any shreds off me, I said, when I could speak. 'But if I live to be a hundred and one, you'll never find me kidnapping a bear cub again—not if a roachback should steal from me twenty times over!"

A DOUBLE RESCUE

JAMES BUCKHAM

The Craftsville Weekly Star, in one of its most interesting items, outlined the "prospects" of the graduating class of the High School. Some were going to college; some to the normal school; some were to begin teaching at once; some intended to read law. But only two members of the class, according to the Star, were "going into business" immediately. These were Leslie Fairbanks and George Gould.

These two boys had secured positions with Mr. North, the leading general storekeeper in Craftsville. They were to begin at the bottom of the ladder—as most boys are expected to do-and work up. Promotion depended entirely upon their own diligence, honesty, and push. It was somewhat unfortunate, perhaps, that these young fellows, between whom there had been more or less rivalry at school, should be hitched to the same task, in a harness so flexible that one must almost inevitably pull ahead of the other, in the long run. But Mr. North happened to need two helpers, just at that time, and, as both applied, the proprietor was glad to give them both a chance. So they started even, with the understanding, implied, if not expressed, that by and by one of them would be promoted to the dignity and increased salary of "clerk."

Even the best of friends, under such circumstances. would find it hard not to be envious of one another's advancement; and, although there had never been any bad feeling between Leslie and George, it was of you." natural that each should take advantage of every fair George Gould walking hastily away from

opportunity to get ahead of the other. While the boys were about evenly matched in ability. Leslie's habits were better than George's. He cared less about being out at night, in questionable places, and with questionable companions. He neither smoked nor drank, while George did both, as he claimed, "in harmless moderation." Leslie spent his evenings quietly at home, reading or resting, and got to bed early, so that he was in prime condition when the hour came for opening the store in the morning George, on the contrary, from keeping late hours, was often half awake and stupid; and, as physical condition always tells in work of any kind, the more wideawake and clear-headed boy began soon to get the start of his companion. Leslie made none of the stupid blunders that George did, and performed his work more promptly and neatly. George might have retrieved the lost ground if he had taken warning in time, for Leslie frankly advised him to quit running the streets at night if he wanted to be bright and fresh for work in the morning. But this well-meant advice only aggravated George and made him willful and perverse. And when, finally, Leslie was appointed clerk, and could "boss him about," as he put

and he announced to the boys his de-termination to "get even with that snob before year was up."

About this time, Leslie invested part of his earnings in a beautiful new bicycle, which, when not in use, he kept of his fine wheel entirely slit to pieces. over the dastardly the

lie?" he asked, sympathetically, seeing the young fellow's distress. "The new boy?"

"No, sir; I think not," replied Leslie.

"Possibly, Patrick?" Leslie smiled, faintly. The idea of the honest old

Irishman who took care of the horses and fires, and acted as heavy "freighter," doing such a mean, spiteful trick was absurd.

Well, Leslie," said Mr. North, decidedly, "I think we both know pretty well who is responsible for this outrage, and I promise you he shall be discharged, Saturday night."

"I wish you wouldn't, sir," said Leslie, quietly. "Please don't, on my account, discharge George! His mother is very poor, and dependent entirely upon him. George is really a good boy at heart. The trouble all comes, I think, from his bad associates. Then he is, naturally, sore over my promotion. I don't blame him so very much. I should feel a good deal cut up myself, if he had got ahead of me. What

I wish Mr. North is that you would have a good, kind, frank talk with him, advising him to quit the company of those bad fellows he goes with, and spend his evenings at home. If you discharge him, he will probably go to the bad right away, and his poor mother will die of a broken heart, if she doesn't die of starvation. Please, so long as I don't make any complaint against him, give him another chance, on the condition that he follows your advice about the company.'

Mr. North arose and took Leslie's hand. I will, my boy," he said, warmly. "You have the right disposition, and I am proud

the thin partition that separated it from the shelves and counter, on one side of the store. It did not occur to him, at the time, that George might have been listening; but what he had noticed came back to him, afterwards, with considerable significance.

That afternoon, Patrick brought up from the depot, on the big dray, a tremendous hogshead of molasses. Mr. North always bought his yearly supply of molasses in one lot, as he could get it several cents cheaper a gallon by buying in what is called "unbroken bulk wholesale." The big hogshead weighed nearly a ton, and it took the entire force of the estab-

lishment half an hour, with a tackle, to get it safely landed on the back platform of the store. Leslie Fairbanks then went down cellar, to raise the rude, slowmoving freight elevator, operated by crank and windlass, to the level of the store-room floor, while the others rolled the hogshead into the store-room.

"Next year I am going to have some new beams under this floor," said Mr. North, as the big hogshead it, the evil side of his nature mastered him entirely, groaned over the threshold. "The old beams are not very sound, and every time anything heavy has to be brought to the elevator, I am afraid-

His words were interrupted by a sudden crash. One end of the store-room floor gave way beneath the tremendous weight of the hogshead, and its huge bulk, with the struggling men and boys, sank suddenly into the cellar.

For a moment Mr. North and his assistants were overcome by the shock of the fall, and lay half stunned in the debris. Fortunately, however, the immense hogshead had rolled upon none of them, and, as soon as they had recovered somewhat from their room at the back of severe shaking up, they struggled to their feet and "Where is Leslie?" cried Mr. North, sharply. the store. One "Where is Leslie?" cried Mr. North, sharply. the store. One "He must have been under the floor when it fell. came to open up, It was George Gould who sprang away into the darkness and was back in an instant with a lighted

But not for one instant did he hesitate. There, suf-Who did it, Les- fering, and perhaps dying, lay the true friend, who, fortnight.

in spite of hatred and injury, had spoken that loving, loyal word for him in his employer's presence. Now, with his better nature as far in the ascendancy as his evil nature had been, a few hours before, the young rescuer, in gratitude and devotion of heart, gladly risked life and limb in behalf of him whom he had wronged.

Carefully, yet rapidly, he wormed his way toward the motionless body, until his outstretched hand touched it. Then followed a moment of terrible suspense and dread, as he dropped saw and hatchet and pulled, cautiously but firmly, at the outstretched figure. At first, Leslie Fairbanks seemed wedged so tightly under the beam, that pinned one arm and shoulder to the floor, that it would be impossible to move him without cutting away the beam. But, by steady pulling, and shifting the body from side to

side, George finally worked his unconscious friend loose from the crushing weight that held him down.

It would have been in order for George Gould to have fainted, when he had rescued his friend, at such awful peril and nervous strain to himself. But, instead of that, he brought water and bandages, while Mr. North was removing the clothing from Leslie's breast; and then, as soon as the unconscious boy began to show signs of life, he was up and off, with the speed of a deer, after a doctor.

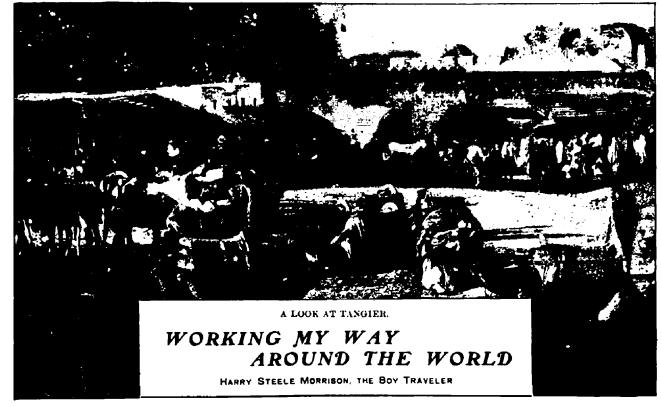

"He is not seriously injured," said the physician, whom, luckily, George met on the street and brought immediately to the scene. "But a few minutes more of that heavy pressure over the heart might have killed him. He owes his life, undoubtedly, to the promptness and bravery of this young man."

For the first time, the tears started to George Gould's eyes, and he turned his face away, while the doctor's kindly hand rested on his shoulder, "Don't. doctor!" he said, huskily. "I owe him a thousand times more than I did, or can do, for him."

And when Leslie was able to return to his duties at the store, two weeks later, he found his beloved bicycle standing in the tool room, perfectly repaired, and shining as brightly as if somebody had been over it with the dust cloth every morning for a

One morning * * he found both tires * entirely slit to pieces.

PART II.

SOME INTERESTING DAYS IN THE MEDITER-RANEAN SEA.

Having reached Port Said on my journey around the world with more money in my pocket than when I left New York, I feel well satisfied with the success I have had thus far in being able to work my way. I have been master-at-arms on board ship for a month and the other day received my wages. They amounted to only a few dollars in money after I had paid the cost of my uniform, but when I thought of all I had seen and done since starting on the trip, I knew that I couldn't judge my gains by my pocketbook. It was worth my month's work to see the Rock of Gibraltar alone, and since visiting that place we have touched at other ports even more interesting.

The first of these ports was Tangler, in Morocco, on the northern coast of Africa. I had often heard of the place, and knew that the people there were ward that I wouldn't have missed the visit for a about going back again. Our very first experiences the bay off the city it was surrounded by dozens of money they can squeeze out of the people. small rowboats, filled with shouting, gesticulating Moors, who were all anxious to secure the privilege by one, until finally we were really in their hands, or so it seemed, for there were at least two hundred of a dozen of them to take us to the landing-stage. When we reached the pier we were informed that every person entering Tangler was obliged to pay a sum equal to ten cents of American money before landing. We thought this a strange rule, but ten cents was not an amount to be quarrelled over, and we paid it and went our way. We found ourselves in a place with streets so steep and narrow that the only means of getting about seemed to be the dirty little donkeys which were standing everywhere along the pavements, while their owners shouted at our heels trying to persuade us to ride. I made up my mind that a donkey ride in Tangier would be an experience worth having, and I mounted one of the smallest of the lot. He looked as if he could hardly carry one person, but his owner explained that he could carry three with great ease. I decided that I would occupy his padded back alone, and started off through the crowded, ill-smelling streets of the Moorish metropolis. I didn't have any idea where I was going, but I felt sure I could find my way back again to the landing-place, and I wanted to see as much of the city as possible before sailing-time came round. My donkey proved to be an interesting guide. He took me through some of the strangest places one could imagine. Every new street I entered seemed to be more narrow and dirty and crowded than the last, and altogether the city seemed a part of another world from clean, well-kept Gibraltar, which we had left such a short time before. The people I saw presented a most picturesque appearance. Some of them seemed to wear as few clothes as possible, and others, strange to say, were evidently convinced that a great variety of garments was fashionable. The poorer classes predominated, and the rich Jews, with flowing

which I came in contact, and there were also a great many black Zulus and Soudanese from the great desert. Some people wore nothing at all for a headcovering, but most everyone had a bright red fez, a kind of hat which is surely a poor protection from the burning African sun.

I suppose there may be places in the world where people are living in a more wretched state of dirt and poverty than in Tangier, but I would certainly want a long while in which to find them. The population of the city is said to be about twenty thousand, and surely not more than five hundred or a thousand of this number are engaged in any active occupation. In passing through the streets I could see but little industry of any kind. In one shop some men were engaged in making sandals by hand. and in the bazaars the merchants were of course selling their goods, but these few, together with the men who rowed our boats and owned the donkeys seemed to be the only ones who cared to work, or who could barely civilized, but I had no idea that I would have find work to do. The others lay about on doorsteps such an exciting time as fell to my lot before we left. or ran shouting at my heels, and I couldn't help wonfind work to do. The others lay about on doorsteps It was a day long to be remembered; I thought after- dering how the Sultan of Morocco ever manages to collect any taxes from such a lazy people. They say great deal, though I couldn't honestly say that I cared that he gives the governorship of Tangier to the man who bids the most for it, and I suppose the men were unusual. As soon as our steamer anchored in who are in the bidding know just about how much

In my ride about the city I observed enough to know that none of the Tangierians are in danger of of rowing us ashore. They boarded the steamer, one becoming fat from over-eating. The chief article of diet seemed to be hard corn roasted until it was browned a little, and old men and women were chewthem swarming on the decks. The poor captain and ing this with the greatest ease, in spite of their lack the other officers were frantic with rage at such a of teeth. Occasionally I came to a little hole in the state of affairs, and it was only with difficulty that | wall which seemed to be a sort of restaurant, where they were driven off, after we had arranged with half they sold sausage which had been wrapped upon a wire and then cooked over an open fire. When the customer had eaten the sausage, he returned the wire. which was then wrapped with meat and made ready for the next purchaser. The fruit I saw on sale in the streets was of poor quality and invariably in a state of bad preservation, though one would naturally expect to find good fruit in Northern Africa.

I visited some places in my ride which I would just as soon have missed. One of these was the prison in which men are kept who have been sentenced for life. There was a hole with a sliding piece of wood in front of it, and when this was pushed back I looked in and saw the prisoners in all their wretched filth and misery. They looked as if they were almost ready to die, and after I had a smell of the place they were in I wondered whether any of them were strong enough to serve a very long life-sentence. It doesn't seem possible for human beings to live in such a foul place. The prison, however, was but little worse in this respect than some other parts the city. There were smells everywhere being a total lack of sewerage. One would suppose that people living at the very door of the civilized countries of Europe would adopt some improvements in their way of living. The people must all be thoroughly accustomed to the state of things, else they would all have been dead long ago of the bubonic plague or cholera or some other horrible disease.

Some of the ladies in our party were permitted to visit the governor's harem, and in looking for one of them I entered that building without suspecting what sort of a place it was. I had penetrated as far as an inner room before being stopped, and I was then hustled out with just a fleeting glimpse of a row of beautifully dressed women squatting on the robes and turbans, seemed to look upon their less for-tunate fellow-citizens as dogs. There were Moors of admiring their silks and jewelry. I suppose I should all degrees of wealth and education in the crowd with be thankful to have had even such a short visit to a

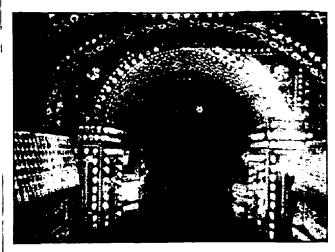

real harem, for men are never permitted to enter such places. There was a good deal of laughter over my mistake, and as no harm resulted to anyone except to the feelings of the ladies squatting on the floor, I suppose the incident is a laughing matter. But at first I couldn't imagine what I had got into, or why I was hurried out with so little ceremony.

I saw a great many queer people and queer objects in Tangier which I would like to describe if I were able, but words would be powerless to give one an accurate idea of a place so strange and so filled with curiosities. I rode about on my donkey until I could hardly imagine what any place was like which didn't contain Moors and Zulus and beautiful, white buildings set in dirty streets. The city made an impression on me which I can never forget, and as I am writing now on shipboard I can see the strange, black people, as they ran at the heels of my poor little donkey, crying out for pennies. I was glad when I reached the landing-place, about five o'clock, but my most exciting experience was yet to come. I found that I had only an English sixpence in change with which to pay the man who claimed that he owned my donkey. I knew that this was quite enough to give him, but if I had had more I would have been glad to have added to the sum. My first difficulty was in finding the man who owned the donkey. There were several who said it was theirs. and as I couldn't imagine how any donkey could have so many owners, my only course was to give the sixpence to the man who had first come up. This aroused the ire of the other claimants, and in a minute I was surrounded by them all, shouting. screeching, and catching hold of my clothes. To add to my troubles, the man with the sixpence thought he hadn't received enough money, and he grabbed out of my hand a queer old coffee-pot which I was carrying for one of the ladies in our party. I had a scuffle with him to regain the pot, and as soon as I had hold of it I started on a dead run for a rowboat. At that moment I was more anxious to be aboard our ship than anywhere else in the world. Once safe on deck, I looked back and saw the screeching Moor still standing there waving his arms, and I breathed a sigh of relief at being out of his reach. Most of the other members of our party had somewhat similar experiences with their donkeymen, but as most of them had plenty of change, they were able to quiet them with money. We figured that the entire population must have benefited in one way or another from our stay, and certainly all were determined to have a share in the profits if they could possibly manage it. I certainly wouldn't advise anyone to visit Tangier without a strong guard of some kind to protect him from the robbers those people cer-

We returned to Gibraltar again from Tangier and proceeded to the famous Island of Malta. I didn't know much about that place before I went there, but on a quiet Sunday evening I sat on our forward deck and read through the twenty seventh and twenty eighth chapters of Acts in my Bible, and was delighted to know that some wonderfully interesting Bible events had taken place in the Island we were approaching. I was delighted with the prospect of sceing something of the place where Paul ministered for three months.

The Island has several fine harbors, and our ship anchored in one of the best of them, that at Valetta, early on Monday morning. I was successful in securing the Captain's permission to go ashore, and at the Custom-house landing I was besieged by guides who wanted to show me the famous Chapel of Bones, the Cathedral, and other sights in Valetta. I told them that I would like to see all these places later on, but that now I wanted to see something of the scenes visited by St. Paul. I was sure I could make this pilgrimage alone, for I had read in a little guide book that he landed at the Civita Vecchia, or old city, and that this place was about seven miles from the place where our ship lay at anchor.

Public carriages are very cheap in Malta, and as I could hire one at about thirty cents an hour, I determined to make the trip out in as much comfort as possible, and I certainly had thirty cents' worth of pleasure and profit out of the little journey. After being cooped up in the ship for so long, without

the Roman occupation, and there when the Spaniards were in possession. The country did not seem at to plant grain he would certainly have been obliged to cart away a great quantity of stone and marble ruins. A few fig and olive trees hills, but the landscape was bare buildings and the ruins. I couldn't help thinking how much like the

pictures of the Holy Land the whole scene was, and it was appropriately similar, because St. Paul was twice saved from death in that neighborhood.

When I reached the Civita Vecchia I went at once to the Cathedral. In the twenty eighth chapter of Acts I had read how Publius took Paul into his house and cared for him three days, and this Catheurai is reputed to stand on the site of Publius' home. I sat down in the cool darkness about the alter and thought of the events which took place on the same spot nearly nineteen centuries ago, and I felt grateful that I was permitted to visit a scene so historic. This Cathedral was by no means the place I was most anxious to visit, however, for I had heard that there was a cave which Paul had dug out with his own hands, in which he lived during the three months to go near the place again, and hereafter when I hear | toric places I will see before reaching Aden and the he remained on the island. I found it beneath a fine of bone chapels I think I shall be content to go Indian Ocean. old church, and it was necessary to descend a great

many privileges, it was glorious to drive along the many steps from the street level before I stood be- One thing I had expected to see in Malta I didn't hard Maltese roads in a quaint little yellow carriage, fore the iron gate which guards the sacred enclosure, see at all, and that was a real Maltese cat. We A carctaker finally came to open the gate, and I saw have them in abundance in America, but, strange to before me a cave about twenty feet in width and the say, I didn't see one of them in all my journeyings same distance in length. Its ceiling was barely high about the island, where they are supposed to have enough for a man to stand under, and it was evident originated. One man volunteered the information from its appearance that it had been hewn out with that there was one gray-blue cat in the place, but sion, and since then have been engaged in an effort some small, sharp instrument. I was allowed to it had been imported from Sicily and was not propenter, and it did seem hallowed ground as I thought erly at home. None of the dogs have been seasick so around the world is not so high a resolve as is the Christianising of an island of people, but I must cerall fertile, but if any farmer wanted tainly expect to endure some hardships if I intend to carry it out on the plan with which I started.

I remained some time in the cave and finally left it with regret. It isn't likely that I will again see a place so peculiarly interesting on this long trip of were growing in patches over the mine, and I will remember Malta on account of St. Paul's cave if for no other reason. But there were otherwise, save for the snow-white other curious things to be seen, and one of them was the Chapel of Bones. This was a grewsome place, and after I found myself within its walls I wished that I had brought some person with me instead of visiting it alone. The chapel is entirely constructed of the bones of the old crusaders. The altar and sidealtars are formed of grinning skulls, and all along the walls are heaped thousands of thigh-bones. On either side of the main altar stand complete skeletons, and there are skulls everywhere on the walls and ceit-Some of them have holes in the forehead which are said to have been made by bullets, but I wouldn't like to vouch for the truth of all the stories that are related about the men whose bones have built this curious place of worship. One thing only is certain: The bones are there, and there can be no question but what they were once parts of human beings. This fact alone is enough to keep me from wanting mind the heat, considering all the interesting and hisaway without seeing them at close range, and alone.

their own mess-table, and keep them in boxes under far on the voyage, and their owners are hopeful that they will live to reach Manila and so become real American dogs in time. One of the sailors on the ship bought a canary bird in Malta, and another carried off a cat, so that now we have quite a menagerie in the forward quarters of the vessel. The complete list of our pet passengers embraces four dogs, four cats and the bird; and one sailor says he is certainly going to secure a monkey when we reach Ceylon.

We were unfortunate enough to carry from Malta two British soldiers, who deserted from the garrison there in the hope of reaching Manila and joining the American forces. The captain of our ship said that the only thing he could do would be to turn them over to the English consul at Port Said, and everyous knew that their punishment would be a long term of imprisonment in the military penitentiary. No one knew this any better than the unfortunate Tommies themselves, so when we were nearly the head of the Suez Canal they jumped overboard and swam for shore, much to the relief of everyone on board, because we all hoped they would escape.

We sailors are preparing to sleep on deck next week, for everyone says that the Red Sea is really a red-hot sea at this time of year. I'm sure I will not

(To be Continued.)

Fun and Profit in TrappingA TRUE STORY....

J. A. NEWTON

(Copyrighted, 1901, by the Author.)

OUR START.

The last of the month of October, 1900, found my brother Tom and myself speeding for Northern Michigan as fast as the train could carry us. We had been preparing at spare times all summer, so that when the season for hunting and trapping should arrive we might be prepared to start without delay.

Our ages were twenty three and twenty one, Tom being the older. We had trapped, hunted and fished ever since we were small boys, but had never been north of the Grand and Flat Rivers in Kent County; consequently we had never killed any larger game, or caught any fur-bearing animals, larger than a coon; but a friend who had made many trips into the Upper Peninsula, for the purpose of hunting deer and other large game, had told us how abundant fur-bearing animals were in the several localities he had visited. and had stimulated us into going on an expedition in the fall, to have a try at larger game.

Our destination was Montmorency County, among the lakes and streams in the vicinity of, and forming the Thunder Bay River.

OUR EQUIPMENT.

In order to give my readers some idea of the amount of preparation and material necessary for a trip like this I will give them a list of our baggage: We carried two tents, ten by twelve feet each, with six foot walls-one to eat and sleep in, and the other to keep our furs in while drying, and to be used as a general storeroom; we had one hundred and fifty traps, including two bear traps we had bought cheap a second-hand store, but which were as good as new, also two screw clamps for setting the bear traps. Tom had a double-barrelled gun (of Pieper make), a combined rifle and shotgun, while I had a double-barrelled shotgun. Our miscellaneous tools and utensils consisted of the following: An axe, two hatchets, two revolvers, two jackknives, two hunting knives, two watches, a compass, woolen blankets, two pairs of thigh rubber boots, felts and arctics, a supply of boards for stretching mink pelts, a sheet-iron stove and several lengths of pipe, one kettle, spider, teakettle, coffeepot, basins, knives and forks. In the way of provisions we had a stock of flour, bacon. canned fruits and meats in tins, baking powder, oat-meal, crackers, rice, salt and pepper. We also carried with us a small supply of medicines and a quantity of strychnine to use in poisoning wolves, if it became necessary.

We bought tickets direct to Alpena, and had our goods follow by freight. No incident worthy of men- found so many places to put our traps, and by noon

goods arrived we engaged a teamster to take us and mink, but a few for muskrats. These latter animals our stuff out to the scene of operations; it made a are never very plentiful away from the settlements. big load for the team.

Our route lay along the State road, as that was set traps in their paths. the only way to get through the country with a team. We intended to camp on the banks of a large lake let our traps set for two nights before looking at which is situated a few miles northwest of Hillman, the county seat. As we had quite a heavy load, and look for prospects on another fork of the creek, and the road was bad, we did not reach the lake until nearly dark, but being used to pitching tents in a hurry we soon had both tents up and a bright fire of pine knots crackling and sputtering.

Being very tired after our journey and hard work we both agreed that we could get along without a very elaborate supper, so we made some coffee and cooked potatoes, but for the rest we lunched off the and over logs and fallen trees. Occasionally we canned food we had brought, but which, needless to

say, was eaten with a keen relish.

soon had a roaring blaze leaping up, which lit up the refrained from killing more, although we might woods and lake for some distance, and after sitting easily have downed twice or three times as many. around the fire and speculating on the prospects for game on the morrow, we went to bed, and slept like

SETTING THE TRAPS.

The next morning we were out bright and early, and after a hasty breakfast, we settled with our teamster, and arranged for him to come and haul us back to town when we should be ready to leave. He left, wishing us all kinds of good luck, and we prepared to start out on our first day's trip.

We agreed that we should both go together until the traps were all set out, and after that each should gan walking on all fours. tend one half of them. We first started up the out- "It's a bear, Tom," said I, "and an awful big one." tend one half of them. We first started up the out-let of the lake, called Cedar Creek, and soon saw on

rarely use bait. We had long ago found it best not grand and majestic that we never once thought of our to hang up any bait, and to make as little show as guns until he was out of sight. possible, so we set mostly what are known as "blind sets," i. e., we set our traps under the banks wherc the mink travel, and under logs where their tracks lead, or any hole which they are sure to go into, provided there was a little water in any of the above mentioned places in which to set the traps, for the trap must be about an inch under water, in order not to arouse the suspicions of the mink. They are never stupid enough to walk into a naked trap. We often found it necessary to dig out a little when the water was too shallow, or fill up under the trap when the water was too deep. Then we always made it a point to stake the chain which held our trap, out in the deep water. so that the game would drown; otherwise, it would be liable to gnaw or twist its leg off and escape.

We made slow progress up the stream, because we

tion happened during the trip, and as soon as our we had them all out. Most of them were set for We also ran across the tracks of several coon and

> From experience we had found that it is best to them, so we decided that the next day we would let these traps go unattended until the second day.

> We now began to retrace our steps toward camp, as we were six or seven miles away, and we wished to make camp before nightfall. The pangs of hunger were beginning to make themselves felt, as we had only taken a cold lunch with us.

It was very slow traveling through the thickets. started up a rabbit and now and then a flock of partridges would rise before us and go whirring away. We piled a large quantity of wood on the fire, and We shot enough of them for a good meal, and then

WE SEE A BEAR.

We were making our way through the bushes speculating on the probable number of mink and other animals we should find in our traps when we visited them, when I heard Tom exclaim, "Look, Jack! there comes a man.'

"Where," said I.
"Right there," said he, pointing off to the left through the trees, "I wonder what he is doing here?" Just then the supposed man dropped down and be-

The bear was a very large, brown looking animal. all sides of us that which gladdens the heart of a and he was moving at a slouchy, shambling gait. but a sort of locomotion that covered ground very Wherever there was any muddy or sandy deposit fast. He was not more than ten rods away traveling there were regular beaten roads, made by mink in parallel to us, and appearing to take no notice of traveling up and down stream. Now some trappers anything. He gave his huge head a swing from side always use bait in trapping mink, but Tom and I to side at every lope, and altogether he looked so

Why didn't you shoot?" said Tom.

"Why didn't you shoot, yourself?" I replied. "You have the rifle, the only weapon that would be any good at the distance he was from us."

"I guess I must have been waiting for someone to tell me that I had a gun," said Tom. "I must have had a touch of buck fever they tell about. I'll bet I don't let such a chance escape again, if I have to run for it. Judging from his size, though, maybe it is just as well that we let him go unmolested."

We both agreed that the bear must have weighed

at least four hundred pounds.

We reached camp without further happenings of interest, and after having had our supper we lay awake for a time planning for the morrow; finelly I said, "Tom, why can't we set one of the big traps for that bear and maybe catch him?

"I don't believe we could hold him if we should

get him into a trap," replied Tom. "Our traps are; intended for the common black bear, and that was knocked his gun barrel down so that he missed the a large brown bear, sometimes called the 'racer.' have heard that hunters occasionally follow one of them for two days in succession without coming up with the game. I presume the one we saw to-day was a 'traveler.' Probably by this time to-morrow he will be forty miles away, but if we find any signs that he is still around, or any others, we will put cut the traps and have them doing duty.'

Saying which, Tom rolled over, and was soon snoring lustily, which put a stop to any further planning for that night.

VISITING THE TRAPS.

We both seemed to awake at the first sign of daybreak, and sprang up in haste. We found that the night's sleep had not only greatly refreshed us, but had filled us with a desire to set off for our traps set the day before, notwithstanding the fact that only yesterday we had agreed not to look at them for a couple of days, but we finally decided that as the game was not used to being trapped around here, we need not wait so long, so we thought we would go and look at them and take with us another lot of traps to set on another branch of the creek when coming back; so we started out, taking with us about forty more traps.

We soon reached the place where our first trap had been set, but found that it had not been disturbed, and we found the next three traps in the same condition; we then found one that had been sprung by a mink without getting caught, and the next contained a muskrat. Our hopes began to fall a little at these rather slim prospects, but on rounding a bend where we had set a trap under the bank, there was a large mink in the trap drowned and the chain all wound up around the stake and his back barely out of the water.

'Ha, ha! my boy," shouted Tom, "that's the time

we caught you.'

We set the trap again-put the mink in our sack and continued our journey. We found the majority of our traps just as we had set them, undisturbed, but finally we came across two which we had set close together, and we saw that each contained a mink-one large and one small one. The latter was drowned, but the large one had become entangled in some roots so that he could not drown. He had eaten his toes off on the under side of the jaws of the trap, which left but a small hold on his foot.

"Lucky we came this morning, Jack," said Tom, "or we should have been minus that fellow."

Just then we heard a plaintive whimpering and crying down the stream a few rods, and then another

similar cry a little farther along.
"Listen to that, Tom," said I; "we have got some different kind of game down there."

Sure enough, on coming to the spot where the cries came from, we found that two of the coon we had seen tracks of the day before, had come along under the banks, and had both got caught within ten feet of each other. We soon dispatched them with our revolvers, and now having considerable weight to carry we decided to stop and remove their pelts before going farther. This task was soon accomplished and we continued the round of our traps, but found only two more mink and two muskrats. These latter animals we were not very anxious to catch, for whenever they are found away from the settlements they are small and have thin, papery hides, and are not worth much; but the mink and coon are dark colored, and of the very best quality

"Well, Tom," said I, "five mink, two coon and three

rats isn't so bad, is it?"

"No," he replied, "they will probably bring us twelve dollars, at least. The large mink are worth about two dollars apiece, and the smaller ones a dollar and a half; the coon one dollar each, and the rats thirty cents, and we didn't have but one-third

of our traps out, either."

After getting our game skinned, and the hides sethe "Cedar." as we called it, farther down, to see what became of it, providing it would not lead us When we traveled three or four miles, as too far. near as we could judge, we came to another fork, or branch, which joined the Cedar, forming what we afterwards learned was a branch of the Thunder Bay

We judged that it would be leading us toward our camp in its course, although considerably to the

Mink signs were as plentiful as on the other fork, and we were not more than two hours setting the best him some way, or our names will be Dennis in new line of traps.

WE SEE OUR FIRST DEER.

It was on this stream that we started our first deer. We had seen many paths made by them but had seen no deer until, as we were descending a knoll, a herd of five sprang up; they had been lying down. As they started to run Tom brought the old Piper to his shoulder.

"Don't you know that the season isn't open deer. yet? This is only the third of November, and you can't shoot them until the tenth."

"I know it," said Tom, "but I forgot for the moment. I was as much too fast this time as I was backward in paying my respects to the bear.

"I think we respected him most by letting him his traps." alone," I replied. "He might have chewed us both covered it. up, just as well as not, without delaying him much either.'

it about time to be getting back. We decided that the best way of finding our way back would be to travel direct south, as nearly as possible, until we came to the Cedar Creek and then follow it up until we reached the lake. So we looked at our compass and started south, and traveled perhaps about twenty recently, and all were baited with partridge or muskminutes, when we began to notice familiar objects and landmarks, and soon discovered that we were right back from where we had started, having traveled in a circle.

of starting.

"Well, if that don't beat all," said Tom.
"I should think so," said I. "Can't we do better than that?"

"I'll tell you how to travel a little straighter," replied Tom. "You give me your gun, and I will carry them both, and keep far enough away from you so that gets the longest goes to our traps on the creeks. that they won't affect the compass, and you take the

compass and keep watch of it." We adopted this plan, and after about an hour's journey reached the banks of the Cedar, whereupon we were all right. But we struck it farther down than we intended to, and darkness fell upon us some time before reaching camp. Having had considerable experience in cooking wild game, we had placed our partridges in a kettle over the fire before starting in the morning, and we had built up so good a a bullet, as you did when we saw our supposed 'man fire that we found our birds thoroughly done, and with the brown coat,' "I said jestingly. ready for eating, and as we had eaten practically

nothing since morning, there was very little of the birds left when we got through.

Supper over, we now had our fur to stretch, and as we had brought a good supply of mink boards with us, of all sizes, we made short work of it; for the coon we made a frame of small cedar sticks so as to I was accosted by a bright little fellow: "Carry your stretch each skin to the fullest extent possible; the muskrat hides we stretched on bent bows to dry.

Our work finished, we replenished the fire once more, and then lost no time in seeking our muchneeded rest.

WE SIGHT AN INDIAN.

Morning dawned, bright and clear, with a crisp November air, which put new life into us. After panions and punctuating his remarks by sundry breakfast we decided to divide the remaining small traps between us, and see what the prospects were for trapping around the shore of the lake. We found curely packed away in our sacks, we began following the signs about as numerous as on the two previous days, and by the time half of the circuit of the lake was accomplished we had set out the remainder of our traps.

Tom then suggested that we should keep on around the lake and see what the other side looked like. I gives consent. agreed, and we had not proceeded far when, as I was looking down the shore of the lake, about a quarter Being satisfied with the extent of our explorations of a mile ahead of us, I saw a canoe shoot out from

> "See there, Tom," said I, "it looks as if we were going to have some one to compete with us in the trapping business.'

> "An Indian sure," replied Tom, "or possibly a halfbreed, but say, Jack; if he should happen to be a chap that will lift game and traps, we will have to this locality, and we might as well move elsewhere.'

> "Perhaps he is as honest as we are," I suggested. "We'll have to keep watch and see. I presume he is out on the lake looking for signs of otter," said Tom. "I have heard that they climb up onto logs that are partly out of water, to eat fish they have caught, and that the otter can be caught by setting the trap on the log a little under water. Old trappers say that the best way to catch them is from a

"Hold on, Tom," said I, and at the same time I | boat. We would not dare to trap them, however, it we had a boat, for a couple or three years ago a law was passed forbidding any one to trap them for five years, and the time is not up yet, but an Indian doesn't respect the laws of the white man, relating to game; I have been told that they kill deer whenever they see fit."

Look here, Tom," I interrupted, "here is one of I, being in advance of Tom, had just discovered it.

It was a very clever deadfall set in front of a either."

pen, in which a partridge was placed for bait. "This
The day was now pretty well spent, and not knowmust be one of his mink traps," suggested Tom. It
ing just how far we might be from camp we thought was so constructed that if a mink went under the drop (a heavy pole) he would put his feet on a little twig, in order to see the bait, when down would come the drop and crush him on a bed pole.

As we passed along we found several more wooden traps belonging to the stranger; all had been set rat meat.

"I guess he has just begun busines; by the looks of things," I remarked to Tom.
"It looks that way," he replied. "One of us needs

Laughing at our own stupidity we started in again, to visit the traps we have set to-day, very early in the but in a few moments came right back to the point morning, I am thinking."

As we neared our camp, Tom suggested that one of us look after our traps on the creeks next day, and the other visit those on the lake, the one who re-turned first to have supper ready. "Suppose we draw turned first to have supper ready. "Suppose we draw cuts to decide which route each of us takes," said he. "All right," I replied, "prepare your cuts. The one

Tom then prepared the cuts and presented them to me; I drew the longest, so of course it fell to my lot to go to the creeks.

"You will have to deal with the Indian if he crosses your path," I said.

'He had better let our traps alone," Tom replied, for if I catch him meddling I'll see how close I can send a ball to him without hitting him."

'Don't forget that you have the means of sending

"That joke is getting pretty old now," Tom replied, somewhat nettled. "Never mind, Tom," said said "Probably we would both do better if we had such a chance at 'old brownie' again."

It was in this idle and bantering manner that our conversation drifted, as we walked toward camp After having our supper we sat for a time watching the changing forms in the coals of our campfire, and listening to the many sounds peculiar to the forest. such as the dismal creaking caused by two trees rubbing together, and swaying in the wind, the hooting of the horned owl, the short, sharp bark of the dox, or the long-drawn out howl of the timber wolf. We were accustomed to all these sounds, excepting the howling of wolves, but with a bright fire burning, these animals are not particularly dangerous, at that season of the year. Amid these sounds we fell asleep.

(To be continued.)

ANOTHER SUCCESSFUL BOY.

L. M. DITHRIDGE.

Not long ago I was on the point of leaving town for a day or two. As I went down Griswold street satchel to the depot?"
"No," I replied, as I entered the Ypsilanti wait-

ing room, "I'm going to stop right here."
"Carry your satchel out to the car?" kept up the

small boy as he followed me in.

I settled myself to wait for the car, and thought my youthful man of business had given me up. He stood outside on the pavement talking with his comnods in my direction. Presently the Ypsilanti and Ann Arbor car was announced. Before I had time to lay hands on my baggage, my small boy had marched straight in, seized my suit-case and marched out again. He boarded the car before it reached the depot, not even waiting for it to stop. In fact, he had not waited for anything, not even for my consent. Probably he was of the opinion that "silence

After I had seated myself he spread out a paper on my lap. "Have a Tribune, something to read all the way over." He evidently considered that he had scored a point by having a big paper to sell. Of course I bought it. He was so quick and so business like that I could not but admire him. That boy will never wait for something "to turn up."

Our Christmas Number

Our December (Christmas) Number will contain a splendid story by Hezekiah Butterworth, and a hundred other features of interest to boys and their friends.

NED'S STRATAGEM

The Story of an American Boy and a Filipino Ambush

H. IRVING HANCOCK

Ned ran to the window as a sudden, rousing volley of rifle-fire sounded south of Manila.

It was answered by another volley of heavier roar. Though the firing came from a point between four and five miles south of the Calle Nozelada, the air was so still that the racket seemed less than a mile off. Ragged, rattling volleys of thin-noted Mauser fire were replied to, at intervals, by Springfield vol- brain.

leys that sounded as the roar of one great gun.
"They're fighting!" quivered Ned, his eyes flashing and color mounting high. "How, I'd like to be there!"

"You ought to be thankful that you're not," replied Captain Burnham, slowly and practically. "Has it struck you, my boy, that every time those guns rip out somebody is very likely dying?" "But I've never seen a fight, dad."

"I pray that it will be a long time before you do." Ned was not surprised. He was used to hearing his father talk in that vein. There was no braver officer than Captain Burnham of the Third Infantry; but he had been a long time in the service, and, like most old soldiers, was an ardent lover of peace.

'How glorious it is," breathed Ned, still listening to the distant racket.

"It isn't much of a fight," returned his father, coolly, as he rose and came to the window. "Hardly more than an outpost row. As the sounds tell the story, I should say that there were about a half a company of our men and a hundred or so of the in- stairs. Wait until the officer has started. surrectos. Probably the enemy were prowling forward, and ran unexpectedly into a detachment of our fellows. They are Washington volunteers, most the jogging of a pony's hoofs sounded outside. likely. There! Did you hear that? By the split in Springing to the window. Ned watched until he saw the sound I should judge that our men are on either side of a ravine, with the Filipinos below and getting enfiladed."

Within the next two or three minutes the sound of firing entirely died out. Captain Burnham glanced at his watch, then down at the quilez, pony and Filipino driver waiting at the curb outside.

"I've only a half an hour to get my train," announced the captain. "Good-bye, Ned. Be a good boy until I am able to come down here again."

'Dad," pleaded the boy, his eyes shining wistfully as he looked up into the handsome face of the manly soldier, "do me a great favor. Take me with you."
"Up to Baliuag?" asked the captain in surprise.

"Yes. You know I was born in the regiment, yet I've never seen it in the field."

regiment in the field," retorted Captain Burnham, riding around the corner.

that Baliuag is liable to be attacked, any day, by Pio Pilar's rebels?'

'And I shan't be there to see the old regiment

fight!" cried Ned, in genuine disappointment.
"No; I feel pretty confident that you won't," joined his father, as he stepped to a table, picked up a belt from which his revolver hung and put it on.

'If you always try to keep me out of the field in this fashion, you'll end by making me a rebel," playfully predicted the boy.
"And what form will your rebellion take?" asked

his father, smiling. "I don't see," replied Ned, slowly, "but that I shall have to try to get into the field without your per-mission."

"Good!" laughed the captain. "Try it. You're welcome to succeed, if you can on those lines."

"Do you really mean it, dad?"
"Certainly," with another laugh. "Do you expect to reach Baliuag by train, or by walking?"
"Either way, to get there."

"Well, if you walk, you will have to pass a few hundred sentries on the way. The first one you meet will send you to the right-about back to Manila, unless you have a pass. Go by train, without a pass, and the guard will throw you off. Now, do you think General Otis is going to give a pass to such a young ster as you are? Come up to the front, by all means, my boy, if you can get the pass!"

With still another laugh, evoked by a sight of Ned's crestfallen look, Captain Burnham thrust his arm through his son's, walked him downstairs to the curb, gave him a good hug, and then dove into the quilez. The sleepy driver whipped up the pony. Ned had only time to wave his hand when the odd little

vehicle was out of sight around the corner. Going slowly upstairs to the front room, Ned sat

down to think. "If I could only get the pass!" he murmured, halfclosing his eyes, though he was very far from being

Now it is a dangerous thing to give an American

work to find a way of joining the regiment at a pass—and I've got it!" Baliuag.

THE AMERICAN BOY

"Oh, Major Ellis, is that indeed you? So delighted!"

Two or three other women's voices reached his ears from the street. Ned sauntered to the window and looked out. A dust-covered officer in khaki uniform, holding his pony by the bridle, stood at the curb before the next house, chatting with a little group of women.

'Major Ellis, of the Thirteenth? Why, I know who he is," thought Ned. "Dad saved his life once on the frontier. They were great chums then. I won-

drew back, a new-born plan running through his

"He has never seen me—doesn't know my age!" There was nothing drowsy about Ned's movements now! He raced into the next room, drew chair to a table, snatched up a pen, and began to write as if the safety of the Eighth Army Corps depended upon his speed. This done, he ran into the rear of the quarters, where he found Mrs. Burton's man-servant asleep in a chair.

"Juan! Juan!" breathed Ned, shaking the hombre by the shoulder. "Go to the front window and get a good look at the officer with a horse in front of the class coach, the soldiers for the second-class, and next house."

Juan sleepily obeyed.

"I see," said the native, turning from the window.

At that moment Major Ellis' voice came up from below: "Ladies, I would be delighted to stop here longer,

but I am due at the palace in five minutes. Really must go." whispered Ned, excitedly, "go down-"Juan," Then run

after him with this note. Don't miss him!"

As the hombre's bare feet pattered down the stairs the jogging of a pony's hoofs sounded outside. Springing to the window, Ned watched until he saw Juan overtake the major and hand him the note.

"Cassidy, of M Company, sent his bugle down to have it fixed," went on the soldier, holding up the instrument. "Will you take it to him?"

Springing to the window, Ned watched until he saw Juan overtake the major and hand him the note. after him with this note. Don't miss him!"

Juan overtake the major and hand him the note. "Well, well!" mused Major Ellis, opening and perusing the missive as he rode. "So Jack Burnham

has a grown-up son! This was what he read:

Dear Major Ellis:

"As I am not acquainted with General Otis, and as it is imperative that I should go to Baliuag to-morrow to see my father, Captain Burnham, will you kindly undertake to get me a pass, and send it to my quarters, number 7, Calle Nozelada?

"Your old comrade's son, "EDWARD BURNHAM."

"Officer leave

nila.

Through the rest of the day Ned's mind was in a ferment. Late in the afternoon, he happened to look "Nor has a boy of fourteen any right to be with a out of the window just in time to see Major Ellis

with a prompt decisiveness that boded little hope.
"I won't get in the way," urged Ned.
"You couldn't help it. Why, don't you understand out—you don't know when I'll be back." "Juan," cried Ned, breaking again into the back room of the quarters, "if anyone calls, say that I'm

hiding in the stable. Not for

With trembling fingers the boy opened the myelope.

at the envelope, Ned read these words pencilled on the outside:

"Heartily sorry to have missed seeing Jack Burnham's son. When you return from Balluag, look me up at mess some night. We'll have a jolly time. "ELLIS.

seems insurmountable. Ned set his wits hard at | him so. Dad said I could go to Baliuag if I could get

Mrs. Burton was good-natured and simple to the point of blindness, or she would have noted Ned's excitement, half-suppressed though it was, that evening. Not half of that hot June night did the boy sleep. Right after breakfast Mrs. Burton went on a visit to a silk shop. Ned jumped into a quilez that Juan called, gave the hombre a note for Mrs. Burton, and rode away over the bridge of Spain, through New Manila, around to the Pasig River again, past the Captain of the Port's office, and straight up to the Depot Quartermaster's building, on the track opposite which stood the train. It was a long affair. made up of fifteen or twenty freight and hospital Seeing one of the women about to look up. Ned cars, three third-class two second-class and one firstclass passenger coach. To the door of the latter

marched Ned.
"Pass?" demanded one of the soldiers belonging to the train guard.

For answer, Ned showed his precious document. "All right; climb in!" And Ned obeyed with alac-

rity. It was an hour yet before the train would start. Down the line Tagalo laborers and jabbering Chinese coolies were loading the freight cars. After a while Ned got out and stood on the side-step of the coach to watch the animated scene.

By and by the officers who were to fill the firstthe natives and Chinese for the third-class, began to arrive. There were about a dozen of the officers. with three of whom Ned was acquainted. They looked surprised to find him here, but naturally concluded that Captain Burnham knew his own business best.

"Going to Baliuag, Mr. Ned?" asked a soldier, approaching the coach while Ned still stood on the side-

Ned looked down, nodding affirmatively, recognizing his questioner as one of the men of the regiment.

he threw over his right shoulder.

After one of the longest kind of hours, the train began to move away from the busy water front. From the start there was historic ground to see, for the revolution had begun in the outskirts of Manila. Past Caloocan, the first station beyond Manila, there was a long succession of trenches that had been taken, one by one, at the cost of many lives and much suffering by Uncle Sam's splendid fellows. No sooner did the officers in the car discover what an interested listener they had in the boy, than they began to tell him the story of every field and trench that was passed. It was such a lot better than learning history out of books. It needed only the noise and spice of battle to make these scenes perfect for the boy.

Ned began to understand, too, what is meant by a line of military "communication" across captured country, and how many soldiers are needed to protect this "communication," for at every station the Down the stairs flew Ned, crossing the yard and train stopped to unload supplies for the strapping big soldiers stationed there.

Malolos, the former seat of Aguinaldo's "government," was reached before the morning was out. All of the officers were bound farther up the line, but it was here that Ned "detrained." He alighted before a small, two-story station building, over the door of which hung the flag of the signal corps. A hundred yards south of this building was a big, oblong, zincroofed freight shed. In and out of this moved a swarm of shouting, puffing Chinese coolies, carrying burdens pendant from either end of stout bamboo poles thrown across the shoulders. Here and there was a sprinkling of Tagalo amigos, or "friendlies," carrying burdens on their backs. It required fully three hundred of these odd Oriental laborers to unload the train and carry the quartermaster and commissary stores into the shed, for Malolos was then a sub-base of supplies.

"Hello, Mr. Ned!" called Sergeant Hart, of the Third, approaching the boy, whom he found staring at the scene in some bewilderment.

"Oh, good morning, sergeant. I was wondering how to get from here to Baliuag."

"You'll go with the wagon-train and escort, un-It less you want to make meat for the goo-goos," replied Hart, a grizzled old great Dane, and the sergeant of H Company.

"That's just what I wanted to do-to go with the

escort, I mean." "Then get over there and sit down." directed the sergeant, pointing to the shady side of the shed. "I'll make sure to call you when I get that bulltrain loaded.'

Ned went to the spot indicated, seating himself on the ground, with his back against the side of the building. He had been anxious for a good look at Malolos, but the only glimpse of it obtainable from the station was of a dusty street lined with nipa huts. All else was hidden behind the lines of tall bamboos. In a half an hour the train pulled out northward, but the din of the noisy laborers reboy permission to do some inadvisable thing if only he can find a way to get over some difficulty that triffe ashamed the next moment. "But I didn't tell Hart reappeared, leading a pony saddled and bridled. mained. It was another half hour before Sergeant

animal is going up to an officer at Baliuag. can ride it, if you care to."

If he cared to! Ned was in the army saddle almost before the "top" had finished. Sergeant Hart shortened the stirrups.

Follow me, Mr. Ned."

Ned rode down the track, between the rails, in the wake of the sergeant. To the east of the track hundred yards, though not so much as the head of an stood a long line of waiting transports. There were some thirty ponderous two-wheeled carts, each drawn lible anywhere, though the air was alive with the by a water buffalo. Through each animal's nose was hum of the steel-jacketed little bullets. Two of the an iron ring; through the ring ran a rope, the other men near the head of the column fell wounded. A end of which was in the hand of a Chinese coolie who stood on the left of his own particular animal. Ahead of this Oriental outfit were five escort wagons, each drawn by four American mules driven by an American soldier.

"Hike!" ordered the sergeant, as he and Ned came up.
With a clamor of "hi! hi!" from the coolies, the
wagon-train started. Sergeant Hart strode along at the head of the outfit, Ned riding by his side. It journey.

Half a mile from the station, Ned caught sight of

khaki-clad soldiers squatting on either side of the road. As they, in turn, caught sight of the train, they rose to their feet. Many of the men gave the boy an informal salute as he rode past them. The whole of H Company was out for escort duty. At the head of the line stood Lieutenant Houle, the company's commander; two or three inches more than six feet in height. of slender athletic figure and fine, smooth face, he looked what he wasone of the best products of West Point.

'What are you doing here, Ned?" was the lieutenant's query, as soon as he had returned the sergeant's salute.

'I'm going to Balluag, Mr. Houle." "Does Captain Burnham expect you?"

"He said I might come, if I got a pass. Here it is.'

Lieutenant Houle glanced at the paper, and from that to the boy. He may have had his doubts, but he was too good a soldier to ignore the written orders of the military governor of

the Philippines.

"Very good," said the lieuter
briefly. "Keep with me, please."

"Won't you ride the pony?" said, the lieutenant

gested Ned, making a move to alight. 'No; keep your seat. It's a long march, and I'm used to it.'

Some thirty of the men fell in automatically at the head of the wagontrain, others distributing themselves along the flanks of the column, while a

squad brought up the rear. "What will dad say?" Ned wondered, not unfrequently. "But he's a man of his word, and he'll have to stick to what he said.'

No more delightful road could be imagined than that over which they were passing. On either side rose forests of tall feathery bamboo, with here and there a mahogany or other virgin tree of greater girth. Mr. Houle stirringly described the battle that the Western volunteers had fought along this very road less than a month before. While the story was yet being told, the col-umn reached Quingua, which the Nebraska troops had taken at the cost of their colonel's life, and that of many other brave comrades. Here the column halted for a few minutes.

asked Ned, when the long straggling line was in mo- He was almost certain that something was crawling of the bushes a little way ahead, darted to a tree, and tion once more, winding out of Quingua.

Because beyond here is almost wholly the enemy's country," replied Mr. Houle. "Except the Third, at Ballung, there are no troops so far out on the eastern flank of the Eighth Army Corps. This country is swarming with rebels, though they keep out of the sees what he is told to aim at." "The range of the representation of the represent

"It might happen to-day." suggested Ned eagerly. "Yes, it might, but I hope it won't. When they do attack, it is likely to be in force, and we're sure to

have a hard time of it."

It was plain that Houle was taking all possible chances against surprise. Six men and a corporal were sent ahead as a "point." to make sure that the road was clear. Other soldiers moved out into the field on either side to serve as flankers. Though the lieutenant seemed even indifferent, he was really keeping a sharp lookout.

'See that rise of ground over there, Ned?" asked Mr. Houle, pointing to the left when they were less "That crescentthan an hour beyond Quingua. shaped line of yellowish-brown yonder shows where the Filipinos were driven out a few weeks ago. We

You only a question of time when the Filipinos sneak back, and-

Crack! It was a solitary shot from an invisible rifle, but the sound came from the direction in which the lieutenant had been pointing. A hissing Mauser bullet made the air hot over their heads. It was the instant signal for a crashing volley at hardly four enemy could be seen. Not a puff of smoke was visfew of the recruits began to shoot back indiscriminately, just as Lieutenant Houle coolly gave his first rode at a mad gallop down past the wagon-train to the order to the bugler who hastened to his side.

At the first note of the bugle, most of the soldiers lay down, hastily slipping cartridges into the breeches of their rifles. To the right of the road was a sound of bodies crashing through brush, where the Chinese coolies, deserting their water buffaloes, stampeded wildly for cover. Not for an instant did the Mauser was a hard macadam road, splendidly shaded by tall bullets cease throwing up little jets of dirt, or cracktrees, over which they traveled at this stage of the ling through the hollow bamboo trunks, or fanning the air over the heads of the crouching men.

Was this war? White-faced Ned, sitting numbly in

Ned sternly drove his two prisoners over the road with a Mauser muzzle at their backs.

around in his stomach just under the belt.

Then, coming back to the head of the line, the lieutenant saw the boy seated on his pony, as erect and

stiff as if he had been turned to marble. Get out of saddle. Lie down flat. Do you want to make a target of yourself?" sounded the officer's deep bass voice.

But Ned shook his head. That first startled feeling of terror had passed away. He would have been ashamed to dismount; it looked too much like a confession of cowardice.

But Houle, who supposed his order would be promptly carried out, had turned to the enemy, keeping his field glass in constant play, and was unaware of Ned's disobedience.

Before the first sixty seconds were over the affair had developed into an encounter of the most savage fellow broke into a dogtrot.

"Mr. Ned, the bull-train is ready to move. This haven't the men to spare to hold those trenches. Its sort. It was plain that the attackers outnumbered the Americans by several to one. Neophyte though he was in war, Ned felt certain, from the heaviness of the enemy's volleys and the windy whishing of 'sheets" of Mauser bullets, that the wagon-train and escort were in grave danger.

"We can't be defeated! We won't be!" groaned the boy. As he stared toward the distant yellowish-brown line, he saw swarms of Tagalos leap suddenly over the redoubt, run thirty or forty yards nearer, fall flat on their faces and fire more heavily than before. were trying to attack the wagon-train by rushes.

Just then, all in a twinkling, a wild idea came into the boy's head. Jerking his pony's head around he rear, through the atmosphere of hot steel and lead. One projectile, boring through a case on one of the wagons, carried off Ned's straw hat. Soon the boy was out of the zone of the fire, but he did not halt until some three hundred yards past the last bull-cart. Now he pulled his pony up with a jerk that all but unhorsed him. In a flash Ned's trembling left hand brought the bugle to his lips. He had learned to sound all the calls, but more than that was needed now.

"Now, then! All the wind you can raise!" he muttered. Filling his lungs he made the instrument

fairly scream as the "left oblique" pealed out on the air. This was quickly followed by the bugled order to "deploy." A moment after the "double-quick" rang out.

Ned's horse bounded down the road farther yet. Something moved between two of the trees. A brown face, brown arms and legs darted into the road. Ned saw straight ahead of him a Filipino bolo man, in uniform of striped blue and white. Crouching for the spring, the little Tagalo, holding his short, heavy knife in readiness, waited for the boy to reach him.

"It's all up with me," quivered Ned, "unless-

Setting his teeth tight, he dug his heels into the pony's sides, guiding the animal to the side of the road as if he would try to rush past this human obstacle. Smiling confidently, the Tagalo stood his ground.

Not until he was fairly upon his enemy did Ned swerve his mount. Then he did it with amazing speed, bringing the animal up on its hind feet, its front feet pawing the air. As Ned let go the bridle, the swinging hoofs fell, striking the Tagalo full in the breast.

It was over, almost as soon as planned, and the little brown enemy lay in the middle of the road, stunned.

'Poor fellow! I'm sorry for you, breathed the boy, as, dismounting and bending to pick up the bolo, he took a close look at his vanquished foe. The face, arms and legs of the little brown man were emaclated; there was the general appearance of hunger about him.

But the sharp rattle of rifle-fire behind him recalled young Burnham to his work. With the bolo in one hand he quickly mounted, again urging the animal on. Two hundred yards farther away he halted, blowing the bugle louder than ever before, maneuvering a battalion of imaginary soldiers through the trees to the left.

"That's all I can do here—if I've done anything," panted the boy as he let the horn fall to his side. "Now, back to the real scene!"

Volleys were still crackling out ahead as he raced up the road. There

Why do you need a whole company for escort?" the saddle, was sick and uneasy with the horror of it. | was another enemy close at hand, too; he leaped out stood there with Mauser ready. Not trusting to a Meanwhile, Lieutenant Houle was darting up and shot at long range, the Filipino waited for a sure sight. It is only a question of time when Aguinaldo's is four hundred yards." "Sight your pieces closely, ing for the brown man's head, and let his hand fly. men will swoop down on this wagon-train." "Make every shot tell!" Down dodged the Filipino, but Ned, who had expected the move, had not made the throw. Now, however, he sped the the bolo through the air just before reining up. The flat side of the heavy blade struck the brown man's head, causing him to drop as the hewn tree falls.

Quick as a flash, Ned was out of the saddle long enough to pick up the rifle. Secure in his seat, he clicked back the bolt, then waited impatiently. was some moments before the native opened his

"Up on your feet!" ordered Ned, in Spanish. "Get ahead of me-move fast!'

Finding himself looking into the muzzle of his own

rifle, the Filipino sullenly obeyed.
"Mas pronto!" (More quickly) shouted Ned, and the

man, crawling in a dazed fashion to the side of the road. There was a halt of a moment, after which Ned sternly drove his two prisoners over the road with a Mauser muzzle at their backs.

While all this was going on at the rear, scores and scores of Filipinos had been seen to rise, rush backward and disappear over the redoubt at the first sound of the bugle. Lieutenant Houle glanced at his "top" sergeant with a meaning smile. Though neither could imagine who the reinforcements were, the fact that help was coming was as patent to them as it had been to the startled Filipinos. By the time that the second series of bugle calls reached them, the soldiers of H Company knew that the fight was in its last minutes. A couple of hundred Filipinos, however, still stood their ground in a wavering fashion, giving the wagon-train's escort plenty to do.

"Where's Ned Burnham?" finally demanded Lieu-

tenant Houle, missing boy and pony.

"Saw him galloping to the rear," vouchsafed Sergeant Hart.

"White feather?"

"Looked that way, sir."

The lieutenant said no more, though the grim compression of his lips was eloquent. Ned was only a boy of fourteen, to be sure, yet somehow it seemed as if the honor of the whole regiment were compromised by his precipitate flight. At the height of Houle's chagrin up rode Ned, armed with bolo and rifle, driving the captured Filipino pair before him.
"What does this mean?" bellowed Houle, in his

deep bass voice, making a rush at the boy.

'Got 'em down the road, sir,' nodded Ned. "Will

A little farther on they came upon the late bolo you please take 'em off my hands? I want to fight." tenant Houle, in the interests of discipline, had to nan, crawling in a dazed fashion to the side of the "Fight you shall, then," agreed Houle, calling a order the demonstration stopped right then and there.

soldier to guard the prisoners. We have them nearly whipped, and I'd order a charge, but I'm afraid of throwing a cross-fire into our reinforcements." "Reinforcements?" repeated Ned. Then, breaking

into a gleeful laugh, he tapped his bugle as he added, ungrammatically:

'That's me!

Houle certainly gasped, for once in his life. Then, as the nature of the ruse dawned upon him, he threw his arms around the boy, giving him a hearty hug.

'The trick fooled the enemy, too," exclaimed Houle, Well, we'll charge, then. Tie your pony to a wagon wheel and come on!"

As the soldiers started with a yell, Ned ran with them, firing the four cartridges remaining in his rifle at close quarters. The trenches were found empty, save for dead and wounded brown men. Presumably the unharmed insurrectos were still running. At all tically describing how Ned's stratagem had saved H events, they gave H Company and the wagon-train no further trouble that day.

Five of H Company's men were wounded. There Ned glowed like fire. were about six times that number of wounded Tagalos, besides a score of dead. As Ned saw these, he began to feel more than ever how horrible war is. By the time that the wounded, white and brown alike, had been made as comfortable as possible on the wagons, most of the soldiers began to wonder at the non-appearance of the reinforcements. Then down the line traveled the story of Ned's stratagem. What a rousing cheer there was! Hats went up in the air, and so many bronzed soldiers ran from their places

"What do you think of war now, my boy?" asked the lieutenant, striding along at Ned's side, when the column had once more got under way.

I know, now, why old soldiers don't like it."

"You don't find it glorious, then?"
"I guess it is, and it isn't," declared Ned, slowly. "But"—and here the old sparkle came back into his eyes, "when there's need for such work it's a glorious thing to be a man, and neither afraid nor unable to do the thing that is needed. I did help you some. didn't I?"

'Did you?" echoed the lieutenant. "Your trick certainly saved me a long list of kitled and wounded.

Late that afternoon H Company and the wagontrain wended their way into the odd little inland Filipino city of Baliuag. In less than five minutes after his arrival Lieutenant Houle was enthusias-Company from disaster. Colonel Page officially thanked the young American, doing it so warmly that

"Now, listen to me, young man," uttered Captain Burnham, who had come up a little before Houle had finished. "If you ever again take such an advantage of me as you did this time, I'll-

'What, Dad?" queried Ned, innocently, as his father paused.

'Do my best to have you sent to West Point," replied Captain Burnham, furtively brushing his eyes with one hand.

At which threat, the group of officers gathered in in the line to shake hands with the boy that Lieu- the mango grove sent up a rousing, approving cheer.

The Switch at Mud Run

A STORY IN FOUR PARTS

KARL EDWIN HARRIMAN

(Synopsis of parts ore and two: Big Petersen and his four followers, discharged miners, have plotted to destroy the East Express at Mud Run on Saturday night. The switchman there is Tom Hathway, a boy, appointed to the place by Supt. Furniss. On Friday his little lame brother comes up into the mountains to spend the day with him. It is Saturday night. The little fellow is asleep in the loft of the switch house. Tom runs down the track to arrange the signal lights and as he approaches the switch house he sees Big Petersen standing in the doorway.)

PART III.

Big Petersen was the first to speak.

"Was just goin' by," he said, "and found I didn't have a match. Thought I'd drop in and get one from you." He pulled a blackened pipe from his coat pocket and made to fill it from the pouch he held in his hand.

At the Norwegian's words Tom's fear left him. Often had miners thus stopped at the switch house for a match, or a drink, or for ten minutes' conversa-

tion with the young switchman.

"All right, I'll get you one," Tom said, feeling in his pockets. "Oh, I guess I haven't got one; but there are some in the house" there are some in the house.

Big Petersen stepped to one side of the doorway as Tom entered, then he turned and followed him inside. With one glance he took in the whole arrangement of the switch house and the location of the switch-lever. The boy offered him a little handful of matches from the box on the clock shelf, and striking one on the top of the table Petersen lighted

"Phew!" he whistled, "but I'm tired!" and he sank upon one of the chairs by the table. Tom sat opposite him.

"Better rest a while," the latter said; and then-"Where you bound for?"

'On my way to Farsen's fer over Sunday," Petersen replied. "Didn't know I wuz so tired till now. Settin' a minute makes folks tireder'n' sometimes." walkin

He playfully blew out a great cloud of smoke and passed his pipe through it. He indifferently glanced over his shoulder at the little alarm clock. The hands registered nine fifty. In just twenty minutes the East Express would rush thundering past the little house on its way to Jamestown.

'Well''-Petersen shifted in his chair-"I guess I'd better be goin'."

"What's your hurry?" Tom asked.

His big caller stood upright

"Oh, I'd better be goin'." he replied, "if I expect to git to Farsen's to-night. By the way," he added, his eyes resting upon the jug that Frank had brought to his brother the day before, "kin I have a drink, if it ain't too much trouble?"

"Why, of course," the unsuspecting boy replied, pleased that the Norwegian had begun to show signs of leaving. As he started for the waterpail in the corner he happened to remember the cider.

"Say," he exclaimed over his shoulder, "how'd you

like some cider?'

Big Petersen grinned. At the time Tom took it to be a grin of pleasure, but when he came to think of it afterwards he interpreted its meaning differently. "Got any?" Petersen asked. "Yep: got a whole jugful."

and set it on the table.

Petersen suggested.

"All right, if you say so," agreed the boy. He set his own tin cup on the table beside the glass. As he moved away to get the jug. Petersen drew from scious boy raised his head with an effort and looked the pocket of his flannel shirt a tiny vial, the contents of which he poured into the cup, where, being colorless, it was not apparent upon the shiny tin. When Tom turned, the Norwegian was standing as he had been.

"Here, let me pour it," he said.

As he moved away to get the jug. Petersen drew from the pocket of his flannel shirt a tiny vial.

He reached across the table and seized the heavy jug. He filled the tin cup first, then the glass. He the cup and inferred that some lifted the latter and sipped the cider. He smacked switch house with Tom while he had been asleep. his lips. "Say, but that's good!" he exclaimed; 'why don't you drink your own?"

"I was just waiting to see how you liked it," Tom replied, whereupon he raised his own tin cup and drank off the contents.

Setting the glass back on the table Petersen stepped to the door of the switch house. The heavens were dotted with stars, but the moon had not as yet risen.

"Say, but it's a fine night," the big Norwegian flung back over his shoulder at Tom who had re-placed the jug in the corner and was now sitting at the table. Then he began to whistle, a broken air in which the same notes were repeated seven or eight times.

After a few moments he turned from the doorway. Tom brought a glass from his little box cupboard, Tom's arms lay stretched across the table and his head was resting on them. Big Petersen glanced at "Better have a little yourself, hadn't you?" Big the clock; in three minutes the Express would go crashing by. The work that remained for him to do must be done quickly. He strode over to the table and shook Tom roughly by the shoulder. The unconup into the face above him with dazed eyes.

Oh. I'm so sleepy," he muttered; "lemme 'lone." His head fell back upon his outstretched arms.

Big Petersen waited until the hands of the clock had covered two minutes. Then he shook Tom again. This time there was no responsive movement. The breath of the sleeper fell regularly. Petersen grinned. With a quickness of motion astonishing for one of his size, and awkwardness, the northern giant jerked back the switch-lever. He knew the rails had thereby been separated down the track, and that now the East Express would shoot out upon the siding and crash into the few coal cars standing there. Then, with a pair of nippers he had provided himself with. Petersen cut the wire at the bottom of the lever thus breaking all connection between it and the switch proper. He wished to run no risk of Tom's awaking and examining the lever from force of habit. This done, he noiselessly stepped across the room and passed out into the night, closing the door softly behind him. He ran headlong down the track and across to the high rock on the left where he disappeared. There he joined his companions, who, by the whistle he had sounded some minutes before from the shanty, knew that his plan was being carried out to his satisfaction.

It was just as Petersen dashed around behind the lock down the track that the little alarm clock on the shelf over the table where sat the sleeping boy. whirred its alarm. As it finished, the semaphore signal, too, sounded. At the first clatter of the clock gong Frank moved restlessly on the cot in the loft above. He sat upright and rubbed his eyes. Through the cracks in the floor the light of the lantern below streamed up. The boy was no more than half-awake when the semaphore signated. But its sound brought his dozing senses back to him. He listened but heard no movements beneath him. He limped across the loft and began the descent of the ladder. Halfway down he twisted his neck and looked over his shoulder. There at the table, his head upon his outstretched arms, he saw his brother. He did not know that Tom had arranged the signals for the coming train and concluded that he had fallen asleep before so doing. He hobbled over to him, and shook him, with both hands, calling at the same time. 'Oh, Tom. Tom! Wake up! Tom! Tom!

A convulsive movement of the sleeping boy's shoulders was the only reply. Frank noticed the glass and

The thought frightened him.
"Oh, Tom! Tom! Tom!" he cried, half frantic. The train is coming! Tom! Tom! Wake up! Oh.

Tom! Wake up!" He shook his brother with all his weak might. He

rushed out at the door and looked up the track. Across the valley he saw a ghostly stream of light. not pointing at him, but away, to the right. He knew by the shimmer the Express was only a little way beyond the curve above the Run, and that the glow was the illumination of her headlight.

Darting back into the house he seized hold of his brother again. He shook him, kicked him, beat his breast, holding him back in the chair the while. Tom; opened his eyes. Frank screamed.

"Tom! Tom! The express is coming! Fix the ritch! Fix the switch! Oh, Tom! Wake up!" switch! Fix the switch!

He heard the hum of the wires outside. He remembered Tom had told him the wires always hummed that way when a train was coming at full speed.

Half numb and without speaking; moving, indeed, like a person in a dream, Tom staggered to his feet and reached for the lever. He found it inclined toward the front of the shanty when it should have leant the other way. Vaguely the boy's half dead mind understood there was something wrong. With a tremendous effort he tried to concentrate his thoughts. He shuddered. His senses came back to him. He jerked the lever into position. It wagged easily on the pivot at its base. Seizing one of the lanterns he stooped and discovered the wire had. After some seconds a smothered cry was heard been cut. He rushed to the door. The glow up the from those at the back of the circle, "Here comes track was deeper, wider. In two minutes the express would be due at Mud Run.

The boy hurriedly picked up one of the red lanterns, and, in an instant, had lighted it. He thrust the wire grip into Frank's hand. Then seizing the other lantern himself he cried: "Come down track! We'll have to run for it! The switch!"

He was out of the door like a shot. Frank hopped along after him as fast as the lame leg would let Just as they stepped in between the rails the train came around the curve and the great yellow headlight of the East Express flooded the gorge with its glow. With all the speed at their command the two boys ran on toward the switch. Tom screamed back to Frank: "Wave your red lantern!"

And standing on the middle of the track the little fellow swung the crimson ball of fire around his head Meanwhile Tom had reached the switch. Frank had caught up with him.

'Keep on waving it." Tom ordered, and Frank obeyed.

The train was upon them. Just as Tom stooped to fit his key into the lock of the switch which would permit of throwing it properly, there at the junction of the rails, the sharp crack of a rifle rang out above the roar of the approaching train, and that same instant Tom felt himself suddenly growing numb all He seemed to stiffen in every limb. He mut-"Petersen! Big Petersen did it. Tell"—then fell backward, away from the switch, with a bullet

The activity of Frank's arm had served the purpose. The engineer in the cab of the swiftly approaching locomotive had noted that talismanic signal of danger. Instantly he threw the reverse throttle wide The great iron monster snorted, screamed, crunched, and rattled, as though angered that its progress should be impeded; then rolled on a little way down the siding, and stopped, panting.

The engineer, followed by the fireman leapt from the cab and rushed to where a blot of black lay beside the track, half illuminated by the light of two lanterns, one of them red. There he found a little crippled boy kneeling beside another boy, his brother, and attempting to staunch the flow of blood from the latter's breast with a pocket handkerchief.

What's the matter here?" the engineer cried. In a voice strangely broken, Frank told all he knew of the affair, which was not much. He repeated to the engineer the last words Tom had muttered before sinking back upon the ground.

The sudden stoppage of the train had aroused all and so faithfully before him. those passengers who were not asleep in the rear They came trooping out of the cars and down the track. Before the engineer and his firemen were aware of it they were surrounded by a curious crowd of men and women. Then the throng fell back before the approach of two men.

What's this? What's the matter here?" one of them asked, who was the first to enter the circle. "It's the switchman, Mr. Furniss," the engineer

replied; "he's been shot. It looks as though there'd been some bad work here.

'Where are we?" Mr. Furniss asked, peering into the darkness around him as though to detect some

'Mud Run, sir."

and the division superintendent at once fell upon his knees beside Tom's prostrate body.

Who are you?" he said to Frank.

"I'm his brother," the little chap replied. "They gave him something, I guess. They cut the wire in in one of the hotel 'busses. Is there anything you'll the switch house and Tom went to sleep."

shot him?" he asked.

"I don't know for sure," Frank answered. "I was lives on Thayre street?"
leep in the loft. We were going home on the "Yes," Mr. Furniss answered, "on Thayre street." asleep in the loft. We were going home on the last freight train to-night for over Sunday, but just before Tom fell down he said Big Petersen did it."

At that the little man who had forged through the long side seat of the Dawson House 'bus. Frank crowd with Mr. Furniss, exclaimed: "I might have clambered into the great, lumbering vehicle, and the known it," and then he asked, "Did you notice where rear door was pulled shut by the driver. the shot came from?"
"No, sir," Frank

seemed to come from over by that rock," and he know where it is don't you?"
pointed across the track.
"Yes, sir," the man on the front seat replied.

A dozen men led by the conductor, and the fireman They returned almost immediately.

"Got away." the fireman said, "but they left a lot! of burnt matches around there.'

Mr. Furniss who had been examining Tom while nose around him muttered speculations regarding he narrowly averted tragedy, now rose and said: "Is there a doctor here in the crowd?"

Someone answered: "Dr. Lewis of Jamestown is in the last coach.'

"Will somebody go for him, please. I don't know how badly this boy is hurt." A dozen men and A dozen men and women set off with one accord for the physician.

Mr. Furniss knelt beside the body again.
"Do you think he'll die?" Frank pleaded. "You

don't think he'll die, do you?"

Mr. Furniss didn't answer for a moment, then said: "I don't know, my boy. But he won't if doctors and doctoring are of any avail."

the doctor," and the men and women made way for him. 'This boy's been drugged and shot, Doctor,' Furniss explained, as the physician knelt beside the

body, "what do you make out?" "Someone hold a lantern here, will you?" the

"Come down the Doctor asked. A fat man complied.

The physician tore away Tom's shirt and examined the wound. The crowd held its breath awaiting the verdict of the medical man. It's deliverance was delayed. Meanwhile the engineer, in response to inquiries, told the passengers what their fate would have been if the train had gone crashing down the siding as the Petersen gang had planned, and how terrible the destruction would have been if the boy lying there on the ground, upon whom-unknown to him-they had depended, had not, at the last moment, "The whole train would have shot thwarted them. off the track and crashed into the Run." he concluded, "and every man, woman and child on board would have been killed."

Thereupon someone suggested that a purse be made

up for the two boys.
"Better wait," another advised. "Maybe the one of 'em's dead now.'

The doctor turned upon the latter speaker.

'No," he said, "he isn't dead yet, but he may be by morning. If the bullet has gone in straight, he'll die, but if it hasn't, there's one chance in a hundred that he will live. Anyway a couple of you might help me to get him into a berth."

Mr. Furniss was one of those who assisted the physician in carrying Tom the length of the train. Frank limped at the head of the little procession and clambered up on the platform. Two brakemen were detailed to guard the broken switch the balance of the night by Mr. Furniss. Tom was gently laid in a berth and the doctor applied such restoratives as he had at hand all the way to Jamestown.

When he saw that his protege was being carefully cared for, Mr. Furniss went ahead into the smoking car, where he had left President Thompson of the mining company. The two men were on their way home from Ogden.

"You seem to know the boy," President Thompson

"Yes," replied Mr. Furniss. And thereupon he told his companion of Tom's search for work to assist in the support of his mother and the little crippled brother, and how he had come to him and in his open-hearted way begged to be allowed to do something for the road his father had served so long

"He's got the making of a good man in him," Mr.

Furniss concluded, "if this thing doesn't end it all."
"Better go back and see how he is," suggested President Thompson, "and when we get to Jamestown I'd go right up to his home with the doctor ıf I were you."

Mr. Furniss went back into the sleeping car. After some minutes he returned.

'How is he?" President Thompson asked.

"He hasn't regained consciousness yet," was the reply.

PART IV.

When the long passenger train rolled alongside the station platform at Jamestown, and stopped, ofter the short run from the mountain pass, where the accident had been averted, Mr. Furniss again went back to the sleeper where Tom lay.
"I'll go right up with you, Doctor," he said to Dr.

Lewis. I guess we can make the boy comfortable want?"

"Oh. yes," Dr. Lewis replied, "we'll have to stop be on the way; let me see-didn't you say the boy

The two men carried the still unconscious form of Tom across the station platform and laid it on the

rear door was pulled shut by the driver.
"Don't drive fast," ordered Dr. Lewis, "and pull
Frank answered, "not for sure, but up for a minute at my office on Main street. You

After the Doctor had alighted at his office Frank leaped across the track and rushed upon the rock, spoke to Mr. Furniss for the first time since leaving Mud Run.

All he said was: 'Do you think he'll die?"

To which Mr. Furniss replied: "We'll hope not, anyway, and the Doctor says he'll do his best to pull him through. He won't know for certain whether he can, though, until he's made a more thorough examination.

At that Frank lapsed into silence. After a few moments the doctor returned carrying a little black square case with silver hinges and clasps.

Immediately upon the arrival of the express at Jamestown, news of the attempted destruction of the train flew this way and that through the not yet deserted streets. In the shops still open the clerks discussed the narrowly averted disaster with their customers, and within ten minutes the heroism of the boy switchman and his little brother was known all over the town.

On the way to the cottage Dr. Lewis asked Mr. Furniss what plans he had for capturing Petersen's gang, and was informed that President Thompson of the mining company offered to take that matter in charge, that Mr. Furniss himself might accompany Tom. Not many minutes after their arrival in Jamestown a posse of deputy-sheriffs left on a special train for the scene of the accident, from which point they would scour the surrounding territory. "There'll be no trouble in finding them," Mr. Furniss concluded.
In some way the news of Tom's misfortune reached

Mrs. Hathway before his own coming. When the bus was driven up to the house she was on the front porch awaiting it.

She rushed out upon the sidewalk, and, seizing Frank, who was the first to alight from the big covered wagon, she cried-her face as white as the moonlight that shone upon it-"Frank! Frank! Is he dead? Oh, Frank! Frank! Is he dead?"

The little fellow bravely tried to comfort his mother. "No, mommie," he said, with an attempt at a smile, "he isn't dead, and the doctor says he'll get well."

It was at this moment that the two men bearing the still body of the boy between them, clambered out of the 'bus. At sight of them and their burden. Mrs. Hathway felt her knees giving away beneath Without speaking, she darted ahead of the little procession into the house and pointed to the door of the sleeping room off the parlor.

Tom was laid there upon the bed. While Mrs. Hathway assisted the doctor in undressing him she was told the story of the shooting in answer to her num-berless whispered questions. Dr. Lewis tried to comfort her with the assurance that her son was quite as likely to live as to die.

"And now," he said, when Tom had been covered with fresh, cool sheets. "if you'll leave me alone with him for a little while I'll see just how bad a case it is.'

Mrs. Hathway reluctantly withdrew into the parlor. Mr. Furniss came to her and assured her that the company would take all care of Tom and the best medical service obtainable would be given him. "But," he added, "I think Dr. Lewis can do as much for him as anyone."

The sorrowful mother did 1.5t reply. She rocked silently to and fro in her chair. Every now and then her tears would flow afresh and she would seize Frank and draw him close to her, and sob over him. He patted her face and repeated what the doctor had said concerning Tom's chances of life.

By and by it came to be that no one spoke further. The little group sat there, still, awaiting the physician's verdict. It was just after midnight when the door of the tiny sleeping room was opened, at last, from the other side, and Dr. Lewis came into the parlor. Between the thumb and forefinger of his right hand he held a small round, flat object about as large as a good sized bean. He was smiling. Mrs. Hathway looked up at him, dumb. She seemed to fear the words he had to speak. Frank clung to her.

Mr. Furniss was the first to break the silence. Well, doctor," he said with a tremble in his voice.

"He'll recover," was the simple reply.

Mr. Furniss rose and grasped the physician by the Mrs. Hathway started forward, her face hand. radiant, then she fell back in her chair and lapsed into a violent fit of weeping. She had given way when the tension of the hour was relieved, but now her tears were tears of joy, each one of them a tiny 'thank" unto Him who had saved her boy. And now, even. Frank cried with his mother. crossed to the weeping woman and told her all danger was past, and that complete recovery for Tom was only a matter of a little time.

"At first," he said, "I thought the bullet had followed a straight course. If it had the lung would "Ah, yes"—Mr. Furniss muttered, understandingly. "Oh. yes," Dr. Lewis replied, "we'll have to stop lowed a straight course. If it had the lung would "Who did it, do you know? Did he say before they at the office for my instrument case, but that will have been penetrated and hemorrhage would have set in. But it didn't, thank fortune; it sheered upwards and lodged just beneath the collar bone. It didn't touch the lung. I got at it easily. And here," he added, holding out his hand, "is the pellet that caused all the trouble."

Mrs. Hathway and Frank looked. At sight of the cruel morsel of lead the former averted her eyes and shuddered.

"Take it away," she said, "I don't want to see it." Frank examined the bullet closely, and asked the doctor, in whispers, if he might have it. He stowed it away in one of his pockets and every now and then felt to learn if it was still safe.

"And now can I go to him?" Mrs. Hathway asked. "Yes, if you wish," the doctor replied, "but if he

Oh, yes," the physician replied.

"What did he say?"

"He asked if his brother was hurt and said he sup- cheer for him. posed he'd lost his job."

Mr. Furniss smiled weakly, and felt a little mist coming over his eyes. His voice trembled slightly as

he spoke.
"Well," he said, "I suppose there is nothing else." He went with the doctor to the door of the sleeping room. "I'll call in the morning Mrs. Hathway," whispered, "and remember, if there is anything the boy wants just let me know and he shall have it.

"I'll run over in the morning, of course," added the doctor as he gathered up his instruments and replaced them in the little black case and snapped the silver lock; "I don't think he'll awake, Mrs.

The two men left the house together. His mother made a bed for Frank on the sofa. It was done at his request. He said he wanted to be "handy" anything should be needed during the night. Until morning Mrs. Hathway sat wide awake beside her wounded boy, just as mothers have sat at the side of sick boys since the world began and as they will continue to do. forever.

It was broad daylight when Tom awoke. He opened his eyes with a start. He looked up into the face of his mother who had detected the first little

sign of wakefulness.

For a moment his eyes looked into her's, half dazed. Then a smile swept across his face and he

said: "Oh, I remember, I got shot."

Mrs. Hathway smiled. "Yes, Tom," she replied,
"but the doctor says you'll be all right. You must
be quiet and not talk much. He says you'll be out in a few days."

Mrs. Hathway noted a little sorrowful look come

into her son's eyes.

'Oh, well, what's the use," he said, more to himself than to her; "I'll lose my job—I didn't have any business letting big Petersen into the switch house. He must have given me something. Oh, now I remember, he asked for some cider. When my back was turned he put something into my cup. That's

what he did, mother, that's what he did."
"Yes, yes," Mrs. Hathway answered, "but you mustn't talk too much now, Tom. The doctor says

it won't be good for you."

"Oh, I'm all right," was the reply. "See, I can sit'
up." He made the effort. A tearing pain shot
through his body and he fell back. "No, I guess I

can't, either," he added, smiling.
"Mother," he went on, "I wonder what Mr. Furniss thinks. I'll bet he's mad. I can't ever get another job from him. It's awful for a feller to have anything happen to him when he's attendin' a switch." Mrs. Hathway laughed behind the mist that had

gathered in her eyes. 'Tom." she said. "Mr. Furniss isn't angry at all.

He brought you home with Dr. Lewis. They were both on the train that you and Frank saved.' "Where is Frank?" the boy broke in.

"He went to sleep on the sofa in the parlor. He wanted to sleep there so as to be handy. He hasn't stirred all night."

Mother and son both smiled.

"What were you saying about Mr. Furniss?" Tom went on.

"I was saying he brought you home with Dr. Lewis and stayed here until the doctor went away. He said he'd come over this morning again to see how you are."
"I don't want to see him, mother." the boy said.

"He'll tell me I've lost my job. And it wasn't all my fault, was it, mother? I thought I'd be preventing trouble if I was nice to Petersen, and then he went and tried to wreck the train. I know it was him."

He fell to crying softly.
"There, there, Tom," his mother comforted him;
"don't cry. Mr. Furniss isn't angry, and I hope, myself, you won't go back up there in the mountains. ' she added, stooping and kissing him on the forehead where his red hair lay in a tangled mass, "It's awful, awful lonesome down here without you I can't get along without you at home, Tom. You have no idea what a different week this week has been with you away."

up and clasping his mother's face in his hands,

kissed her. "But I hate to lose my job," he added, "and it might prevent me from ever getting another."

No it won't Tom, don't you worry," his mother

said, brushing back his hair.

After a little she left the bedside to get breakfast. She had six boarders and their breakfasts had to be ready by seven o'clock. She did not awaken Frank, thinking it would be best to let him sleep as he had been up so late the night before. But when she entered the room where Tom lay, a half hour later, there was Frank sitting on the edge of the

At the doorway she heard Tom saying: "But you You'll find medicine on the stand, Mrs. Hath- did just as much to save the train as I did, Frank. And then Frank's reply. "Naw, I didn't neether."

> By and by, before her boarders arrived, Mrs. "Yes," Mrs. Hathway said, "they'll be se Hathway brought a nice little breakfast to Tom. Be- prison. I'm glad none of them have families." fore he had finished the railroad men came. They all had to see him and each had some word of good

He told Jennings, a big brakeman, that all he feared was he'd lose his job. To which Jennings replied, "Pshaw, you won't do anything of the sort. More likely they'll make you president of the road and I'll have to look to you for my salary. Now that would be funny, wouldn't it?"

Tom laughingly agreed that it would be-very,

very funny.

About half past eight the doctor called. He was surprised himself that Tom should appear so well. Under other circumstances it might have been a bad sign, but he told Mrs. Hathway that it was only the boy's constitution, and repeated his former opinion, that a little thing like a bullet couldn't affect that very seriously.

He'll be up and around in a week," he added. He left a change of medicine, and many comforting words for Mrs. Hathway, and just as he stepped out upon the front porch Mr. Furniss swung the gate and came up the walk.

"How's the boy?" he asked.

"Oh, he's all right," replied Dr. Lewis; "he's as bright as a dollar. Be up in a few days. No, there'll "GORDON JOHNSON, be no complications."

"Well, they got the Petersen gang." Mr. Furniss said; "the sheriff's posse found them in the mountains."

is asleep, don't disturb him, please. Sleep will do bed, and the two boys were going over together the him about Frank waving the red lantern and he seemed pleased at that.'

"Did he tell you they've found Big Petersen and his crowd?" his mother asked.

"Yes, and said Lawson had confessed it was Big Frank was despatched to the corner grocery and Petersen that planned the wreck. I knew it was all the time.

Mrs. Hathway said, "they'll be sent to

Tom reverted to the subject of his "job." His mother tried to comfort him. That night in his sleep he cried and moaned about losing it. But toward morning there came a change and he slept soundly.

The boarders were all at breakfast and the doctor had not yet arrived when the postman rang the front doorbell. Mrs. Hathway went to the door and returned with two big envelopes.

One of them was addressed to "Master Frank Hathway" and the other to "Thomas Hathway, Esq." "Frank," Mrs. Hathway called, "here's a letter

for you.'

The boy tore open the envelope and drew out a folded sheet of paper with the letterhead of the Ogden, Westphalia and Eastern Railway across the top. The letter was as follows:

"The directors of the Ogden, Westphalia and Eastern Railway extend their thanks to Master Frank Hathway for the services rendered by him in preventing the destruction of the East Express at Mud Run on the night of July 9th. Furthermore they wish to state that there is being struck off a medal which will be presented to Master Frank

> "President O., W. & E. Ry. "JOHN THOMPSON, "President Jamestown Mining Co."

"A good man cannot be gotten along without for a very great length of time."

"Is there a case against them?" the doctor asked. "I should think so," was the reply; "one of the crowd—I think he gave his name as Lawson—has confessed. He'll get off lightly but the others will go to State's prison and for a good long time, too."
"That's where such as they belong," the doctor

Mrs. Hathway led Mr. Furniss directly to Tom's bedside.

replied.

"Here's Mr. Furniss, Tom," she said at the door-The man entered the room, smiling.

"Well, well, my boy, you're not so very bad off, after all, are you?"

"No, sir! not so very," Tom replied. For a little while they talked of the affair at Mud Run and Tom told Mr. Furniss of the part Frank

played in saving the train from destruction.
"If it hadn't been for him," he concluded, "I guess

there'd been a wreck.''

In the dining room, after a few words with the lit-And he felt a tear fall upon his cheek. He reached the lame fellow, Mr. Furniss took Mrs. Hathway to one side and asked her what Tom had to say to her about the affair.

"He's afraid he'll lose his job, as he calls it, Mr. Furniss," she replied; "that's about all."

Mr. Furniss smiled.

"Didn't he?" she asked.

"Oh, I guess we can fix that," he said. At the doorway he spoke low a few words to her and when she went back into the boy's room she was smiling behind very apparent tears.

"He didn't say a word about the job, mother," Tom exclaimed.

"Dear Sir," it said, "I regret to have to inform you that your services as switchman at Mud Run for the Ogden, Westphalia and Eastern Railway are no longer required. I enclose check for your salary to date. I am furthermore instructed by the

Tom read the letter addressed to himself:

Thus far Tom had read the letter aloud to his mother and Frank, but suddenly his voice broke and the sheet fell from his hand.

'I knew it." he sobbed, "I knew I'd lose my job." Mrs. Hathway snatched up the letter and went on from where he had left off.

"I am furthermore instructed by the board of directors of the O., W. and E. Ry., to inform you that there is a position in the offices of the company awaiting you as soon as you shall be strong enough to take it, which, it is hoped, may be soon, as a good man cannot be gotten along without for a very great Your friend length of time. "H. F. FURNISS."

Tom had ceased sobbing. As the letter proceeded his eyes opened wider and wider and when his mother had finished, and in the excess of her joy bent over him to kiss him, he hugged her tighter than he had hugged her since he was a baby.

"And here's the check for your salary," she added. handing him the long slip of greenish paper. He

looked at it. It was a check on the First National Bank of Jamestown and it read:

"Pay to the order of Thomas Hathway the sum of one hundred dollars. H. F. Furniss, Division Super-"Nope, not a word; but I know I'll lose it. I told intendent."

TRUE AMERICANS

IDA A ROFF

the reservation must be opened to a look or a word was exchanged. settlement.

Big Buffalo signed the treaty interminable time.

the Kiowas, Comanches Apaches was signed by all but a read her thoughts and asked for their fathers. few of the men of the tribes. It that for thirty years they should and when on the war-path in the years gone by. receive annuities of clothing, bedding, etc., also monthly rations of beef, flour, soap, sugar, coffee and that schools should be provided for the children, and farmers to teach the Indians to open up farms and use farming implements. In re-

turn the Indians promised not to go on the warpath.

About ten years ago another treaty was made with these Indians in which it was agreed that as the Medicine Lodge treaty was soon to expire they should then no longer hold their reservation as a tribe but that each man, woman and child should receive one hundred and sixty acres in severalty and that the government should pay them two million dollars for the surplus land which was to be opened to settlement. Four hundred and fifty five out of five hundred and sixty two Indians signed.

When the United States Senate passed the bill last June it further gave the Indians an additional four hundred and eighty thousand acres for pasture.

It was all undoubtedly fair, but it is so easy putting off preparation for the future not realizing that old time is sure to pass.

Big Buffalo, when it was too late, thought he would like to change his mind, and that things were well enough. He began to think he would rather not have the white man as his neighbor and that the whole reservation was good enough just as it was. Indians do not as a rule think much of the

future, present happiness being all sufficient.

Big Buffalo called a few of his friends together and they talked it all over. They decided they did not want to have the reservation opened; so they took up a contribution to send a delegation to Washington to "make a good talk" and thus remedy the matter.

After another council five men were chosen. A week was spent in preparation; each man wore a new suit of clothes throughout, and a white shirt, collar and cuffs. They certainly made a very fine appearance when they were ready to start. Their long, black, glossy hair was well brushed and combed and twisted with bright worsted, one strand falling

A TEPEE,

in front over each shoulder while the small finely braided scalp-lock fell down the back. Some of them carried gold watches. Big Buffalo said that he only looked at the big hand, "the little hand is no good; it goes too slow.

They took with them an educated Indian to in-One by one the years have gone terpret for them. They shook hands with their wives and children, then jumped in a wagon and by, thirty in all, and now it has were off. They did not even glance backward, for come to pass, and all too soon, that Indians never look back. The children cried, but not

Red Bird, the wife of Big Buffalo, stood watching as long as she could see the wagon. As she turned when about eighteen years old and to go in her tepee she brushed away a few tears: then when he did it thirty years more of she began to work, for she had to feed the ponies, reservation life seemed to him an take them to the river to drink, carry water for the | family use, chop the wood and cook. Every evening The Medicine Lodge Treaty with she stood at the door of the tepee and looked off in and the distance long and silently till the children almost

Meanwhile the men had boarded the train and were gave the Indians their reservation interested in the country of which they knew every on which they lived and promised foot, for they had traveled it thoroughly in hunting

As they went on and on, finally over new land, their interest did not abate. Although it was the first trip for most of them, they showed no signs of being strangers to what they saw and acted as though

BIG BUFFALO AND RED BIRD

traveling were an ordinary occurrence. After fifty hours' ride Washington was reached and immediately they wanted to see the "Great Father."

Indians are always received at Washington with great deference and their long talks listened to with much patience. Everything is explained carefully and interpreted.

The embassy accomplished nothing so far as the treaty was concerned yet it was with a better feeling toward "the whites" that they yielded to the inevitable. A few days were spent in sight-seeing and "the great iron mare." as they called the steam engine, was ready to take them home.

As the wagon bringing them to the camp from the station drove up the Indians gathered round to receive them. There was a hearty handshaking and then a general talk over what they had done. Big history. It is said, "He dared to lead where any Buffalo told them that now there was no help for it dared to follow." He died at the age of seventy two and that the reservation must be opened and the years. best thing for them all to do was to be good citiens and farm their land.

After a time the group dispersed and the matter was again discussed as the families sat down to their evening meal. Big Buffalo felt very comfortable and that while he was away he had had the very best things to eat that white people could buy, yet noth-Indian way.

The children were much interested in hearing the wonderful things the father had to tell. He said finally that of all the things he had seen, the one thing that impressed him most was seeing, among

KIOWA BOY AND GIRL

the many other animals at the menagerie, a great buffalo. He said when he saw that buffalo he just stopped and stayed there by it after the others had gone and talked to the buffalo and told him, "The buffalo and the Indians are the only true Americans left. One time you had this whole country and could go just where you pleased and now there are only a few of you left, and here you are in this little place with a fence all around you and that is just what they want to do with us. The Indians, too, once had this whole country and could go where they pleased and now there are only a few of us left and pretty soon they will put us on a little piece of land and put a fence around it. We are just alike and we are the only true Americans."

Big Buffalo brushed a tear away; all were silent, and one by one they rolled over in their blankets to sleep and perhaps to dream of the good old days.

THE "OLD PUT HOUSE"

WALTER CUMMINGS BUTTERWORTH

As hale and aged pilgrims Still linger by the way. So, too, these ancient landmarks, Despite rude time's decay. In stateliness are standing So long beyond their day.

About eighteen miles from Boston, in a secluded section upon the hills of the ancient town of Danvers, stands the "Old Put House," the birthplace and early home of General Israel Putnam of Revolutionary fame.

It is a fine old building, with low ceilings, a huge chimney and gambrel-roof, a combination of seventeenth and eighteenth century architecture. The old L running back from the main structure was the original house, built about the year 1650 by Thomas Putnam, grandfather of the general. It was in an upper chamber of this quaint old building that the Revolutionary hero, Washington's "uncut diamond." was born on the seventeenth of January, 1718. The front part was built on some fifty years later by General Putnam's eldest brother David. The quaint interior of the house has undergone very little change, so that with its antique furniture, treasured portraits and a collection of cooking utensils of two centuries ago, it presents a splendid specimen of an old-time New England homestead. In the wide field back of the house is still standing the aged willow of "Old Put's" boyhood days.

In 1739, at the age of twenty one, General Putnam married Hannah Pope, and soon after removed to Pomfret, Connecticut. The story of his patriotism and dauntless courage is a part of our country's

The remarkable statement has been made that no less than seventy five Putnams, all descendants of John Putnam, the pioneer of that distinguished family in America, marched to the Concord fight.

Near the "Old Put House" are several other old happy as he threw off his coat and took the warm Putnam homesteads, and not far away is "Oak blanket that Red Bird handed him. He wrapped it Knoll." the home of the Poet Whittier. Here, too, about him and sat down by the camp-fire and said is the old Nurse farm, the home of Rebecca Nurse, and other scenes of the "Witchcraft fury."

This old mansion is now occupied by Miss Susan ing tasted as good as beef and bread cooked in the Putnam, who is eighty seven years of age, and is granddaughter of Colonel David Putnam, General Israel's brother.

This was the home of Putnam.
And long shall that noble name
For centuries still untold
Be borne on the wings of fame.

ica ought to take it.

Spending and Saving.

Whether in college or in business, whether the young man is making three dollars a week or three dollars an hour, he should make it the fundamental business of his life to see that a large part of his salary is saved. To spend ten thousand dollars a year no doubt is a delightful sensation to a young man, but if he is only J. H. Hanson, Yadkinville, N. C., fifty four years of age, suggests that we publish THE AMERICAN BOY weekly. He says that he would pay five dollars for it if it came that often. He thinks every father, mother, son and daughter in America ought to take it.

ELMER CHESTER HAZELING AND HIS BUSINESS OUTFIT.

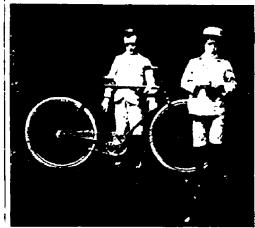

A Nine Year Old Financier.

Elmer Chester Hazelrig, a nine year old Decatur (III.) boy, is a money-maker, having carned in his short life over five hundred dollars, much of which he has invested in a business that he is carrying on unaided by his purents. The boy started in to make money at six years of age, when a neighbor let him have the milk from a cow, which he sold to other neighbors, netting, in the course of a year, about one hundred dollars. Then he began gardening and peddling vegetables, and this last spring he rented seven vacant lots, hired a man to plow it and then made a garden, doing much of the work himself but hiring other boys in the neighborhood to help him hoe. He traded for a horse, and with a horse and wagon he peddles the produce. He also raises pigs and chickens. The first horse he owned was rather a poor animal, but by trading he managed to get a better one, and for his present horse he has refused one hundred and fifty dollars. His entire stock in trade now consists of a horse and wagon, a pig, a cow, money in the bank, and a large garden. This year the boy planted three kinds of sweet potatoes, Irish petatoes, cabbages, tomatoes, corn, beans and other vegetables. In addition to this work he attends school during the school season.

Is there any other American boy of his age who can show a better record?

Chancey and Meredith Smith.

These two sturdy boys are Chancey and l Meredith Smith, of London, Ont. They earned the money for their bleycle cent by cent selling papers. They are enabled now by the aid of their bleycle to materially increase their income, and they have

Boys in Games and Sport

The American Boys' Club House.

Here is a picture of a club house built in the treetops by American boys. A platform fifteen feet long and eight feet wide was built between hickory trees among their top branches, and on this a house was creeted that will comfortably hold five boys. A novel elevator has been

constructed, consisting of a double pulley block and tackle, by which the boys pull themselves up to their club house among deaves.

The picture was sent us by Hugh Knerr, Atchison, Kas., one of the club.

The Dancing Pea.

Push a pin half way through a green pea, making the two ends as nearly as possible the same weight—i, e., let the point come a little more than half way through. Then break off the stem of a common clay pipe, and the toy will be completed. To make the pea dance put it on top of the pipe stem, the point of the pin sticking down the bore. Throw your head back with the pipe in your mouth so that the stem may be held vertically and blow gently. This will make the pea rises. Keep blowing harder until the pea rises entirely from the pipe and is supported in the air. It will now begin to spin round and round and turn over and over, all the while bobbing up and down as long as the current of air is kept up. The dance may be changed by pushing the pin up to its head. The pea will now rise to the top of the pipe and dance slowly and with great dignity around the edge, or, if the blast is a little stronger, it will spin rapidly unless the blower stops to laugh, when it is apt to fall into the open mouth below.

A schoolboy with a freekled face, being asked to name something that girls can do better than boys, replied, "Two girls can stay mad at each other longer than two boys can." Girls, is that true? If so, why?

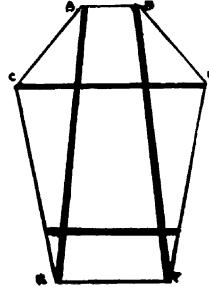

How to Make a Good Kite.

How to Make a Good Kite.

Kite flying is one of the best outdoor amusements that a boy could have; indeed, we know a good many men that enjoy it as much as they did when they were young. The writer of this paragraph is one of them. There is a fascination about it that is not easily described. City boys have little chance to indulge in the sport, except when they go to the country or the seashore during vacation, but those who live in the suburbs, or in places where they may conveniently reach the open fields, ought all to have their kites.

Fancy designs of all kinds are sold in the shops, but if a boy wishes to have all the fun that there is in the sport, he ought to make his own kite. Besides, it will give him better service.

The accompanying cut shows how a good flyer can be made. Out of some straightgrained, light wood—cedar preferred—make four sticks, about one-eighth of an inch in thickness. Let two of them be twenty two inches in length, one seventeen and one-half inches, and the other thirteen and three-fourths inches. Place them as shown in the picture, and tack them firmly where they cross. Cut little notches at the ends of the sticks, and put a string around the whole frame, making it taut and tying it so that it will not slip.

Now cut out a piece of very thin manila paper—tissue paper would do, but thin manila is more serviceable—one inch larger, all around, than the frame, and paste the edge over the string. Make a small hole in the end of the sticks at A. B. C. D. E and F, and put in a string loosely from A to F, from B to E, and from C to D. Make a string loop from E to F, to which the tail of the kite is to be attached. The string must come through the paper side of the kite, not the stick side.

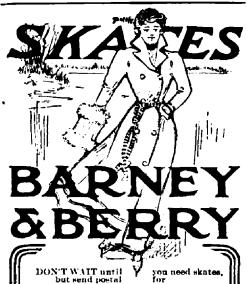

The cord by which you are to fly the kite should be attached where the strings cross each other; do this with a loose knot inclosing all the strings. For the tail use a strip of muslin about one inch in width and fifteen feet in length and attach ten bobs made of paper rolled up. If the kite should dive, add more tail until it sails steadily.

Use fine but strong cord for the flying, and don't attempt it in a high wind. Kites always fly better in a moderate wind.

Japanesed English.

In one of the more pretentious cities of Japan, which is visited by English speaking and acting tourists, there is a store dealing in cameras and chemicals. Over the door there is a large sign which reads: "All Kinds of Machinery and Medicines for the Photografy." It may not be very good English, but it is a welcome sign to the photographer out of supplies.

''DAISY" Air Rifles on the sock of the range of the Air Rifles on the Simply a matter of choice between the two, as either ettle represents the table of the social state of th the two, as either strie represents the best that skilled labor and accurate machinery can produce. They shoot as straight as any gun made and are entirely free from danger, smoke and noise, with a little practice any boy can become a crack shot. The possession of a good gin helps to make a boy manly, and affords him amusement of an innocent and practical kind. Shadowgraphy

A most amusing entertainment is that yielded by the practice of the art of

shadowgraphy.

And it is astonishing how half an hour of the long evenings may be made to fly quickly and comfortably with the aid of a pair of hands, a powerful lamp and a sheet.

The pictures selected form the simpler The pictures selected form the simpler features of shadowgraphy, but those who take the trouble to become familiar with the various modes of reproducing on the sheet silhouettes of the heads, etc., of the living creatures with which even the youngest child is familiar may easily elaborate the performance at will, so as to illustrate in a most amusing fashion episodes such as professionals introduce at many of our extertainments.

episodes such as professionals introduce at many of our entertainments. Who has not succeeded in producing the form of a rabbit? This is the simplest, perhaps, of hand-and-finger manipulation. The accompanying photograph shows the best way of bringing a very lively specimen of Bunny—with eye complete—before the notice of an appreciative—of course—audience.

Another rather simple picture is that

plete—before the notice of an appreciative—of course—audience.

Another rather simple picture is that of the goat, with very striking horns and a delightful beard. The right hand is placed above the left, the first and second fingers forming the horns, the thumb the ear. The left hand forms the lower part of the head with the fingers doubled up, the little one being extended to represent the beard. This figure is capable of the most laughable grimaces, and a little practice is all that is necessary to make this item a complete success.

The elephant's head is another of the simple figures. The right hand forms the top portion of the head, the left hand below makes up the needful bulk, the drooping fingers—which must not show too thickly on the sheet—the movable trunk, while the thumb makes a very tolerable tusk. A slight opening between the hands gives a good representation of an elephantine eye, with winks complete.

Next we have the artistic figure of a swan, in which the performer's head helps the hands. The head forms the body, the right arm the neck, the hand and fingers the head and bill, and the fingers of the left hand, placed against the back of the head, a very satisfactory tail. This figure, moving along a straight line to represent the surface of a lake or river, can be made most life-like in every movement. Cleverly depicted, it never fails to produce thunders of applause

The figures of a dog "going for" a rabbit are ossily explained by a grance at the

The figures of a dog "going for" a rab-bit are easily explained by a glance at the photograph.

The cat figure is formed by a combina-

tion of the right coat sleeve and hands. It is by no means difficult to perform. The hand is raised above the level of the The hand is raised above the level of the cuff and shapes the head; the first and fourth fingers bent inwards produce an excellent pair of ears, which may be twitched at pleasure. The forefinger of the left hand makes the tail, and bending gracefully at the joints, produces a movement as near as possible to that of the real thing.

movement as near as possible to that of the real thing.

The "monkey on a stick" will be found a slightly more difficult figure to form. The upper portion of the right hand with bent fingers form the head, the thumb forming the "arm" and the first and second fingers the legs, which should be placed over a stick, as shown in the photograph.

placed over a street and graph.

The bat or butterfly figure is formed by the two thumbs being brought together. It the palms of the hands facing outwards, the wing movement being well imitated by moving the fingers and chands as on a binger.

a ninge.
You can make a really effective head
of a rhinoceros by placing the ring fingers between the thumb and forefinger of
the left hand, the thumbs forming the
ears, and the fingers of the left hand the
peculiar hooked snout of that ugly animal.

By placing the hollow of the right hand with upheld thumb across the lower portion of the left thumb and wrist, the ton of a bull's head can be shaped on the screen. The fingers of the left hand, bent

inwardly, as in the photograph, form the jaws of the beast, and a cud-chewing movement is then an easy matter.

Some very comical caricatures may be formed. It will suffice to give one here. The right hand is partially clenched, the three lower tingers forming the lips, mouth and chin; the forefinger clenched over the thumb makes an excellent Ally Sloper nasal organ; the left hand, with the fingers deftly arranged, will produce an old cap, and the comical effect is complete.

There are several other combinations which will readily occur to the operator as he progresses, but I think I have given our readers sufficient specimens of the art of shadowgraphy to keep the hands and fingers busy for a considerable time.

The Game of Commercial Traveler.

say, that all the words of the answer should begin with the same letter; and the first answer should begin with the letter A. This is the way it runs:

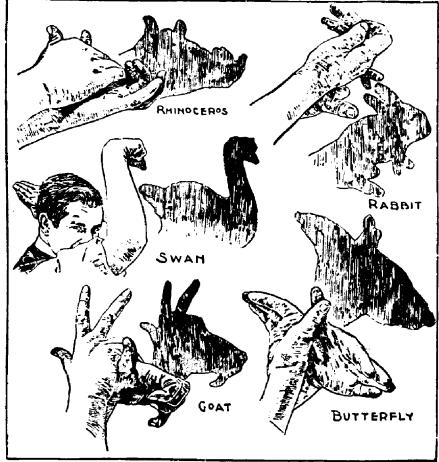

Leader—Where are you going? Answer—To Annauolis.

A. This is the way it runs:
Leader—Where are you going? Answer—
To Annapolis.
Leader—What will you do there? Answer—Attend Academy.
B goes to Boston to buy baked beans.
C to Chicago to collect Columbian coins.
D to Damascus to do Dervish dances. E to England to earn Edward's esteem. F to Florida to find fragrant flowers. G to Golconda to gather glittering gems. H to Havana to have half holiday. I to India to inspect idols. J to Jerusalem to judge jewels. K to Kentucky to keep knives.
L to Liverpool to lodge land lubbers. M to Montana to make money. N to the Netherlands to negotiate notes. O to Oklahoma to open an oyster shop. P to Philadelphia to pawn pennies. Q to Quebec to quiet quarreling. R to Russia to raise rice riots. S to Senegambia to sell saucepans. T to Turkey to taste tobacco. I' to I'tah to urge use of umbrellas. V to Vienna to visit various viscounts. W to Washington to willingly waste wages. Y to Yazoo to yell at yielding yokels. Z to Zanzibar to zoologize zebras.
This game, when played by the older boys and girls, or even by adults. is made uproariously funny by the queer and incongruous answers that are given without time to think them up. This is a game that may be played without any preparation whatever, as no materials are required, not even penell and paper. It is, therefore, well worth knowing, for it may be suggested to a party of friends on the spur of the moment, when some such amusement is desired. The players choose a leader, and then seat themselves in a circle, with the leader in the center. He, of course, stands. As the game may be better understood from an illustration, we will suppose the leader to begin it by saying:

"Young people, you are all supposed to be commercial travelers, about to start on a journey to any part of the world that you may prefer, on business. I will ask each of you, if you please, to tell me where you are going, and what you intend to do when you get there."

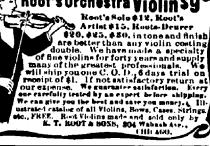

It is required that every answer to his questions should be alliterative: that is to

Brown & Co.

THE CAPTAIN OF THE SCHOOL: By Edith Robinson. Hustrated by Alice Barber Stephens. This is a bright and entertaining book, sure to please boys and girls, it tells about a family of children who were left wholly to their own devices, their parents having died. The main character is Bobbie, a bright earnest, genuine boy, and his school difficulties in editing a paper, his trials with the football team, his adventures on the canoe, and his efforts to earn money to pay his debts, are very interesting. 12-mo. Decorated. Cloth. \$1.20. Little, Brown & Co.

GALAPOFF, The Talking Pony: By

GALAPOFF, The Talking Pony: By Tudor Jenks, author of "The Boys' Book of Explorations." Pictures by Howard R. Cort. Tudor Jenks' books are favorites Cort. Tudor Jenks' books are favorites among parents who judiciously select what their children shall read. The book is a series of incidents and conversations between the little girl and the talking pony. It is amusing from first to last, and the pony's convincing philosophy is something quite remarkable. It is a model book for model young folks, as enjoyable as "Black Beauty" or "Alice in Wonderland." 12-mo., cloth, handsome cover. Illustrated. \$1.00. Beauty" or "Alice in Wonderland." 12-mo., cloth, handsome cover, illustrated, \$1.00. Henry Altemus Co.

CAPS AND CAPERS: A story of board-

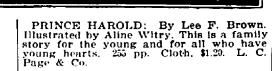

Henry Altemus Co.

CAPS AND CAPERS: A story of boarding school life, by Gabriel E. Jackson. Pictures by C. M. Relyea. The book is quite unlike the general run of boarding school stories. The girls are folly creatures but not the kind who must be watched from morning till night lest they disgrace themselves. There is a Caps and Capers club, with its secret meetings and midnight spreads, jolly sleigh rides and sleep walking act, spelling matches, a wedding—in words full of human interest. The characters are such as attract and hold the interest. 12-mo., cloth, illustrated, \$1.00. Henry Altemus Co.

A TWENTIETH CENTURY BOY: By Marguerite Linton Glentworth, with illustrations by Charles Copeland. The writer is well known both in this country and England as the brilliant poet and writer of sketches, Gladys Dudley Hamilton. Dr. Holmes said of some of her work that it was worthy of Douglas Jerrold. The hero of the book is Jack, a mischievous and winsome boy. The story is of the attempt of a young woman of wealth and position to look after her little brother at various summer boarding places while her mother enjoys a trip to Europe. Each chapter is a complete sketch in itself. The best crities declare the work of a very high order. 12-mo., cloth, illustrated, \$1.25. Lee & Shepard. & Shepard.

MORGAN'S MEN: By John Preston True. This book contains adventures of Stuart Schuyler, captain of cavalry during the Revolution. Those who have rend "Scouting for Washington," by the same author, will be glad to welcome another book of the same type dealing with

to were... book of the type dealing Revolutionary campaign in South Carolina, giving a vivid description of the Battle of Cow-pens, in which the British under Tarle-ton were defeated by the Colonists, No better material could be put in the hands of a growing has

Little, Brown & Co. have just issued a new edition of the Katy Dld Books, by Susan Coolidge.

The new fall volumes of the popular "Children's Friend Series." published by Little, Brown & Company, number fourteen. The authors include Louisa M. Alcott. Nora Perry, Susan Coolidge, Louise Chandler Moulton, and A. G. Plympton.

More Care in Selecting Sunday School Books.

A writer in the Literary Era says that it A writer in the Literary Era says that it is a common practice to choose books for Sunday school use and for juvenile departments of village libraries from publishers' catalogues with no further knowledge of the books than that suggested by the authors' names, and that there is room for soher exhortation upon the subject. "I know," says he, "a case in point where the catalogue of a publisher of high standing was used without other investigation in forming a children's department in a town Library otherwise well equipped."

About Henty and Munroe.

Leo Diamond and Albert Truitt, of Pontiac, III., think Kirk Munroe's writings are better than Henty's. In a letter to us they say: "We have read Mr. Henty's

are better than Henty's. In a letter to us they say: "We have read Mr. Henty's books about this country and think that he doesn't know what he is talking about. Mr. Henty makes his heroes too wise." They say Kirk Munroe writes carefully and in accordance with facts.

Philip M. Faris, West Hall, Ill., writes that he was very much pleased to see the article about Kirk Munroe in a recent number of THE AMERICAN BOY. He says: 'He is my favorite author. I have been living at Maml, Fla., five miles north of Cocoanut Grove, where Mr. Munroe lives, Ite is president of a library there which has 1,000 volumes, and the building cost six hundred dollars. As the population is only about 500. I think the town is doing very well, and it ought to be proud of Mr. Munroe."

very well, and it ought to be proud of Mr. Munroe."

Bennett C, Clark, Bowling Green, Mo., writes that he cannot agree with Harold Wheeler, who says in a recent number of THE AMERICAN BOY that Mr. Munroe is the best writer for boys. "I think," says he, "that G. A. Henty is the best and Mr. Munroe close second. I have read over a score of Henty's works."

Effect of Reading Upon Character.

Parents who do not exercise a careful supervision over the reading matter of their children, omit a duty of vital importance, may reasonably anticipate subsequent disappointment, morthication and sorrow in the failure of those children to meet the expectations which had been formed for them. Aaron Burr reveled in the reading of bad books in early youth, and yet with talents to have made him a second Washington, he went down to his grave with a reputation of a corruptor of his kind, a traitor, a murderer. The son of the immortal John Howard, the friend of man, with all the advantages of a superior education and high social position, left to himself to read what he listed—his mother being dead and his father in foreign lands—fell into debauchery, and died a drunken madman in the lunatic asylum at Lelecster before he was thirty five. It is recorded of the Emperor Paul, the Nero of modern times, one of the most execrable of men, if received histories are true, that he took the utmost delight in reading exciting tales of every description, in contemplating pictures of rapine, murder and blood, only to practice them all, when, a little later, he was placed upon the throne of all the Russlans.—Exchange. Parents who do not exercise a careful

A Good Suggestion.

Arthur F. Webb. Winfield, Kas., suggests that boys save newspapers containing accounts of the death of President Mckinley, saying that these will become valuable as years roll by. This boy has a bound volume of newspapers that his grandfather edited and printed in 1846. They contain almost a complete history of the Mexican War. Arthur is fourteen years old and in the second year of the high school. He has twenty six dollars and fifty certs in the bank and six dollars in addition, his money having been earned on a farm last summer.

be put in the hands of a growing boy who is by his very nature interested in history, than this stirring tale of the Revolution, bringing in the characters of General Greene, General Washington, Lord Cornwallis, Colonel Tarleton, General Morgan and Captain Schuyler Cloth bound, 342 pp. Well illustrated. Price, \$1.20. Little, Brown & Co.

'HE BEST PAPER FOR YOUNG MEN

The Law Student's Helper, published by The Sprague Publishing Company, the controlling swares of the Sprague Correspondence School of Law, is beyond question The Best Young Men's Paper in America

Sprague Correspondence School of Law, is beyond question The Heat Young Men's Paper in America.

As its name implies, it treats largely of the law, but in such a way as to make it of the greatest value and greatest interest to me and women who are not studying law as well as to those who are. It averages forty pages to the month. It's editor is WILLIAM C. SPRAGUE, Pres. of Strague Correspondence School of Law; asst. editor is GRIFFITH OGDEN ELLIS, Vice-Prin. of that school. It treats of all current events in the law and political world from the standpoint of the lawyer. Its departments, "Questions from bar examinations, with their answers, have proved very valuable, while the miscellaneous matter is always unique and highly interesting. The rule of this paper is, once a subscriber always a subscriber. Its subscription list has grown to be the largest that can be claimed by any legal or semi-legal journal. We speak of this to show how it stands among those who know what good journalism is. It appeals to the young men who are in the busy walks of life, in that it treats of current events in a simple concise manner, and one does not have to read through pages of trash to get at the substance of what he wantatoknow. It is to-day necessary to intelligent citizenship that one give attention to passing events and be able to view them from an intelligent standpoint. This paper supplies what no other paper gives, an opportunity for a brief, condensed, philosophic review of the world of law.

'HE VEST POCKET PARLIAMENTARY POINTER

This little Book answers at a glance the intricate questions of Parliamentary Law, without diagrams or reference marks to confuse or mislead. It is so small it can be concealed in one hand, and referred to during a meeting without attracting attention. It contains about 22 pages, and measures 24 14 inches. It uses a system of abbreviations, condensing parliamentary rules into the smallest space.

The Sprague Publishing Co., Detroit, Mich.

Boys in the Home, Church and School

A Good Reputation Saved this Boy.

A Good Reputation Saved this Boy.

John Watt, a Canadian boy, was arrested in Detroit the other day. He was convicted of using money that belonged to another, having in his necessity yielded to temptation. In suspending sentence Judge Murphy said to this boy:

"The highest treasure in this world is a good name, and I am going to show you the value of it. I have written to various people in Toronto, and I find that your character has been above reproach up to this time. I think you see the error of wrong-doing, and I trust the lesson will be sufficient. In allowing you to go on suspended sentence, I know you will go back to Canada out of my jurisdiction. I am trusting to your honor. I do not know whether an American boy in like circumstances would receive the same consideration if in Canada, but I trust so."

Tears were kept back with difficulty by the young Canadian, and he promised the judge that he would write to him every month and let him know what he was doing.

"Many days well lived may sometime count for one day misspent."

the meaning of the word "fear." They are excedent boxers. A room on the second floor of the Governor's mansion at Albany was set aside for their use, stripped of carpets and furniture, and a wrestling mat was put on the floor. Here the boys received instruction in boxing three times a week, stripped of clothing and attired in bathing suits. Every day they had to punch the bag just so long, then take a bath, and finish up with a good rubbing. Probably President Roosevelt will have a similar gymnasium in the White House. The President's idea of the education of young men is to teach them to work, and first and foremost to be American. He says: "Then I have taught them to go in with any person heedless of anything but that person's qualifications, and to work just as quick beside Pat Doogan as the son of a millionaire, so long as the work is good and the man is in earnest."

The White House has not been the home of many boys. President Lincoln had three sons; namely, Robert, Willie and Thomas. Robert was a young man and entered the army. Willie died early in the administration, and Thomas, or "Tad." was the "child of the White House," the object of everybody's love, being a thorough-going American boy, independent and mischlevous, but at the same time thoughtful. The President made him his companion. "Tad" was a great favorite with the soldiers and often marched with them, at with them and slept with them. On the night that President Lincoln was shot it was "Tad" who first acquainted the servants in the White House with the tragedy, addressing his friend, Thomas Pendel, the usher at the White House with the tragedy, addressing his friend, Thomas Pendel, the usher at the White House with the roy: "Oh. Tom Pen. Tom Pen! They have killed my papa."

During President Johnson's administration his grandson, Andrew Johnson Pat-

papa."
During President Johnson's administra-

During President Johnson's administration his grandson, Andrew Johnson Patterson, was a member of the White House family, as was also a son of Mrs. Stover, daughter of the President.

President Grant had three boys. Freshad grown up and was about to graduate at West Point. Ulysses and Jesse were boys in the White House and they took full possession of it, organizing circuses, secret societies and military companies. Fred Grant married and his first child was born in the White House.

Webb Hayes, Rutherford Hayes and Scott Hayes were boys in the historic man-

born in the White House.

Webb Hayes, Rutherford Hayes and Scott Hayes were boys in the historic mansion. Burchard Hayes, the oldest son, was in college and only visited at the White House. Mrs. Hayes introduced the custom of giving children's parties where old-fashioned games were the rule. The children played blind-man's-buff and pussy-wants-a-corner in the big East room.

There were two boys in the Garfield family. Harry and James, but they hardly got acquainted with their new home when their father was assassinated. President Arthur's son, Allen, was in college during his father's administration. President Cleveland's family was a family of girls. President Harrison had, as a close companion in the White House, "Baby Mckee," a little grandson, now known as Benjamin Harrison McKee. President McKinley's household contained no children, the first administration in forty years not to boast of children in the White House. The President and his wife were both very fond of children and gathered about them the children of friends. Mrs. McKinley's own children, two little girls, died thirty years ago. thirty years ago.

OME INDUSTRIES FOR BOYS

We Sound the Call.

Mrs. Ellen Pond Smith, of San Francisco, Cal. writes: "We all find material for inspiration in THE AMERICAN BOY. By "we" I mean father, daughter of twelve, son of ten, and myself, the mother. It is a great thing to mold the minds and even the hearts of boys and girls toward honorable achievements as you are doing. You are in a position to sound the call to hon-

orable, self-assertive manhood and womanhood. Let it ring out loud and clear. We mothers have to do our work sliently, planting the seeds with patience, and we welcome every good and stimulating influence with thankful appreciation.

Punctuality is said to be the politeness of kings.-Pushing to the Front.

CAN I BECOME AN ELECTRICIAN?

Yes, you can. We teach ELECTRICAL ENGINEERING at your home by mail at a cost within the reach of anyone. No matter where you live, if you can read and write, we guarantee to teach you thoroughly. Our institute is endorsed by Thomas A. Edlaen, and other prominent men of the country. We teach also Mechanical Engineering, Meass Engineering, Mochanical Brawing, Telephony, Telegraphy, Electric Lighting, Electric Railways, Electric Lighting, Electric Railways, Electric Motorman's Course, Short Electrical Course, Dynamo Tender's Course, Elementary Mathematics, etc., by mail. Write for our free illustrated book entitled, "Can I Become an Electrical Engineer!"

spot, for he is convinced that he was not cut out for success. That boy will be cursed with mediocrity, or will be a failure. There is no place in this century for the lazy man. He will be pushed to the wall.—

William Herron, Cleveland, O., pays us very high compliments. He says: "THE AMERICAN BOY is worth three times its price. It is improving with each issue both in stories and illustrations. There are no publishers in the world who are doing so much for boys as you are. Your paper cannot be equalled."

Boys Who Were Successful.

Mr. Charles M. Schwab, the president of the billion dollar steel trust, who began life as a poor boy, told in his talk to the St. George's Trade School in New York. the following stories of industrious boys who afterward became successful and prominent in the business world.

"There were ten boys employed by a concern once and one night the manager said to his subordinate: "Tell the boys they are to stay a little longer to-night—tell them they are to stay until 6 o'clock. Don't tell them why. Just tell them that and watch them. So this was done, and when 6 o'clock came around there was just one boy who was interested in his work, and was not watching the clock to see what time it was. That boy was the one the manager wanted, and he was taken into the office, and as he continued to manifest the same interest in his work he was promoted until at last he got a very responsible place. sible place.

"Then there was another boy. He began carrying water, and he did it so much better than any other boy, seeing to it always that the men had good water, cool water and plenty of it, that he attracted attention to himself. He was taken into the office, where he became in time super-

attention to himself. He was taken into the office, where he became in time super-intendent and then general manager and he is now the man that is at the head of the Carnegle Company with thousands of men under him. As a boy he did more than the ordinary run of boys did and so attracted attention, and that was the secret of his first step upward.

"I was in a bank down town the other day when a newsboy came in and sold the banker a paper. After he had gone out the banker said to me: 'For two years now that boy has been coming in here at the time I told him to come—two o'clock. He does not come before two or after two, but at two precisely. He has sold me a paper every week day in that way when I have been here without a break.

"He sells for just one cent—its price, He neither asks more nor seems to expect more. It is a cold commercial transaction. Now a boy that will attend to business in that way has got stuff in him. He doesn't know it yet, but I am going to put him in my bank and you will see that he will be heard from."

Young Clock Makers.

Atlanta. Ga., boasts of some ingenious and ambitious boys, since two lads of that place, the older but fourteen and the younger eleven, have designed and constructed a clock that is a wonder of painstaking work.

It contains over 300 pieces of wood, all of them cut from boards with a small footpower scroll saw, and afterward sandpapered and put together with screws and mucilage.

The clock represents a cathedral from

muchage.
The clock represents a cathedral, from the dome of which a bell peals forth the hours of the day. Inside the building the columns and statuary of a cathedral are reproduced in word.

produced in wood.

The clock is fifty one inches high and twenty one inches wide at the base, and the contrast in colors is decidedly pretty, the wood used being maple, white holly and

walnut.

The figures on the dial were cut from walnut with a pocketknife, and look attractive on the white holly.

Notwithstanding the simplicity of the tools used, the boys have succeeded in producing a timeplece of which they may be justly proud. It represents their leisure time after school hours, for other work was not neglected during its construction.

William McKinley as a Boy.

William McKinley as a Boy.

The mother of the martyred President. William McKinley, once said of him: "He was naturally a good boy. He was very bright, and began to take notice of things very young. He was a healthy boy. We lived in a country village and he had plenty of outdoor air and exercise. He was also obedient and affectionate and very fond of his home. He went to Sunday school and to the village school house. He attended Sunday school till he went away to the war. He was fond of marbles and very fond of his bow and arrow, and was a very good shot. The thing he loved most of all was a kite; he was continually making kites. I don't believe he ever had a pet. He didn't care for fishing, but was very fond of swimming. After a while he entered the Poland Union Seminary, where he became a member of the literary association, took part in debates and literary contests. As a mere boy he used to go to the tannery kept by one Joseph Smith, and engage in warm controversies with him over the slavery question."

Being asked what she regarded as essential in the bringing up of a boy, Mrs. Mc-

smith, and engage in warm controversies with him over the slavery question."

Being asked what she regarded as essential in the bringing up of a boy, Mrs. Mc-Kinley said: "I can scarcely say, there are so many things to teach boys. They should be taught to be honest and to win the respect and confidence of their fellows. They should be brought up to love their home. The love of home is a great safeguard to the lads of this country. If they are going to be great men they must be good to their parents. If a boy wants to be President, he should be honest and truthful, love his home, his family, and his country. He will never be President if he is afraid of hard work; and I think religion is a great thing for a boy. I didn't raise my son to be President. I tried to bring him up to be a good man, but the first thing I knew my son turned around and began to raise me to be the mother of a President."

BOYS IN THE OFFICE, STORE, FACTORY, AND ON THE FARM

Chances for Employment on Railroads.

Chances for Employment on Railroads.

Steady young men with brains enough to master the details of railroading are in demand every day in the week in that business. It is said that most of the applicants for positions on railroads have tried a half dozen other callings before attempting to break into railroading. Engineers and firemen are recruited from below, but the higher class engineers and high salaried clerks must come from the educated young men. Western railroads constantly absorb the supply of high class mechanics turned out by the practical departments of the big universities of the West, but the supply isn't equal to the demand. Nine out of every ten young men who attend college take the classical course and pass by electrical engineering, civil engineering, and other practical subjects. The professional life seems to have more attraction than that which requires the wearing for part of the time of overalls. The railroad man says that there is room in the railroad business for honest, bright and active young men. In departments that pay larger salaries than two-thirds of the doctors, lawyers and educators can hope to get. Railroads are constantly bidding against one another for the services of men who have distinguished themselves in some one branch of railroading.

Not Cut Out for a Merchant.

When Marshall Field was in his teens his father decided he would make a merchant of the boy, and took him to Pittsfield, where he was placed in the store of a family friend. The father returned to Conway, and several months passed before he again visited Pittsfield to learn what progress his son was making. The keeper of the store received the father of his apprentice very cordially, but hesitated for a moment when he was asked, "How's the boy coming on?" "Hate to say it," was the reply, "but I

a moment when he was accepted by coming on?"
"Hate to say it," was the reply, "but I guess you might as well take him back with you. The fact is, I don't think he's cut out for a merchant!"
This anecdote is one of the chief traditions of Pittsfield, and is related with great relish by the men whose recollections cover the period of Mr. Field's boyhood appropries by the men whose recollections.

The Kind of a Boy the World Wants.

Boys are always in demand because they are the material out of which men are made, and as first-class material is always

are the material out of which men are made, and as first-class material is always at a premium in every line of trade, so the boys who give promise of making first-class men are most eagerly sought after.

The boy the world wants to-day is the one who can be trusted to handle money without any of it sticking to his fingers or finding its way into his pockets. He will take as much interest in the affairs of his employer as if they were his own, and will stay fifteen minutes, without being asked, to finish a piece of work after the whistle blows and the rest of the men have quit work. He will be able to write a business letter and spell the words correctly, and to add up a column of figures promptly and accurately. He will lift his cap as readily to his sister when he meets her on the street as he would were she the sister of some other boy; and he will not be ashamed to walk to church with his mother, show her into her own pew and sit beside her during the service. He will be careful in making a promise, and just as careful about keeping it. He will have sufficient moral backbone to say No to those who would lead him astray, and he will have enough courage to own that he is striving to make a man of himself.

This is the kind of boy so many are on the lookout for.—Selected.

One thing that keeps young men down their fear of work. They aim to find

One thing that keeps young men down is their fear of work. They aim to find genteel occupations, so they can dress well, and not soil their clothes, and handle things with the tips of their fingers. They do not like to get their shoulders under the wheel, and they prefer to give orders to others, or figure as masters, and let someone else do the drudgery. There is no doubt that indolence and laziness are the chief obstacles to success.

When we see a boy, who has just secured a position, take hold of everything with both hands, and "jump right into his work." as if he meant to succeed. We have confidence that he will prosper. But, if he stands around, and asks questions, when told to do anything; if he tells you that this, or that, belongs to some other boy to do, for it is not his work; if he does not try to carry out his orders in the correct way; if he wants a thousand explanations, when asked to run an errand, and makes his employer think that he could have done the whole thing himself—one feels like discharging such a boy on the

George H. Marshall Company, No. 1, Division of New Jersey, Trenton, N. J., held its first meeting and election of officers August 13. Rudolph L. Marshall was elected Captain Oscar Everett, Treasurer, and John Blaker, Secretary. This Company has a fine cub room. It is papered in green with white flowers, and has a Brussels carpet on the floor and nine chairs, with special chairs for the Captain, Secretary and Treasurer. There are also two tables, one for the officers and one for the members. They have a silk American flag, under which is their charter, and expect soon to have some pictures with which to decorate the walls. The Company yell is as follows:

"Quick with the alarm.

"Quick with the alarm.

"Look at the arm,
"We're the A. B.'s from the farm;
"Hay, Straw, Flour, Feed,
"We're the A. B.'s who can't be beat.

"Sis-boom, give us room.

"Sis—boom, give us room."

Theodore Roosevelt Company, No. i, Division of Michigan, Chesaning, Mich., held its semi-annual election of officers Sept. 3, with the following result: Harvey O. Chapman was re-elected Captain, Lynne Parshall Vice-Captain, Albert H. Dredge Secretary, Frank J. Stevens Treasurer, Augustus B. Stewart Sergeant-at-Arms, Floyd Mills Assistant Sergeant-at-Arms, and Oliver B. Whipple Librarian. The Installation of officers took place at the following meeting. This Company went on a camping expedition in August and spent one week on the banks of a river. There were ten boys in the party and they had two tents, a good table, plenty of fishing tackle, etc. The Captain writes us that on one day while there the Baptist Sunday School held a picnic and field day near their camp, and that out of twenty one prizes for racing, jumping, etc., they captured twelve, and, he adds, "The they captured twelve, and, he adds. "The reason we didn't capture more was because some were ladies' and girls' races. What's the matter with that for American

J. Murray Clark Company, No. 5, Canonsburg, Pa., held its election of officers the evening of September 27. John Black was elected Captain, Lloyd Galbraith Vice-Captain, Thomas Jones Secretary, George, Estep Treasurer, Clyde Jacobs Sergeantat-Arms, and William Estep Librarian. This Company has nineteen members, and has, at this writing, fifteen dollars in its treasury. The dues are twenty five centsper month. The boys have a handsome new ten dollar flag, which was used for the first time on the occasion of the memorial services held at the church in honor of President McKinley, it being hung above a picture of the President. This Company has a fine club room, for which they pay fifty dollars a year rental. Mr. J. Murray Clark, for whom the Company is named, paid the first month's rent for the boys. They have a literary program at each meeting, and the Secretary writes that they intend to have a curlo case and a gymnasium and library in their room, so as to develop both body and mind. The Company colors are red and black, and the boys have black caps with the letters O. A. B. In red across the front. The Secretary has promised to send us a picture of the Company soon.

Any Company of THE ORDER OF THE AMERICAN BOY can get the free use for two months of one of ' the libraries of five sterling books for boys by sending fifty cents to

Minor F. Wasson, Captain of the Stotsenberg Company, No. 1, Hebron. Neb., writes us under date of August 10: "We received the library this morning and think the books are very nice."

New Companies Organized.

Colonel Cody Company, No. 10, Division of Illinois, Monmouth, Ill., Captain J. Stewart Jamleson.
Columbia Company, No. 8, Division of Ohio, Minerva. O., Captain Roy Holmes Haines.
Simon Kenton Company. No. 9, Division of Ohio, Crbana, O., Captain Roy Cramer. John Henry Ketcham Company. No. 12, Division of New York, Amenia, N. Y., Captain Howard A. Smith.
Fred Funston Company, No. 2, Division of Kansas, Baldwin, Kas., Captain Earl G. Brown.

Baseball Throwing-Senior and Junior Championships.

The August American Boy Fleid Day contests resulted in the Baseball Throwing Senior Championship going to Bert Laird, Atlantic, Ia., his record being 295 feet, and the Junior Championship to Minor Wasson, Hebron, Neb., with a record of 189 feet, 9 inches.

Potato Racing-Senior and Junior Championships.

The September American Boy Field Day contests resulted in the Potato Race Senior Championship going to Rudolph L. Marshall, Trenton, N. J., 23 1-5 seconds, and the Junior Championship to Harry L. Potts, Littleton, Colo., 29 2-3 seconds.

The November Field Day Contest.

J. Murray Clark, for whom the Company is named, paid the first month's rent for the boys. They have a literary program at each meeting, and the Secretary writes that they intend to have a curio case and a gymnasium and library in their room, so as to develop both body and mind. The Company colors are red and black, and the boys have black caps with the letters O. A. B. in red across the front. The Secretary has promised to send us a picture of the Company soon.

Degrees Conferred.

Degrees are conferred on the following boys: Ralph Falkinburg, York, Neb., one degree for good work in behalf of THE AMERICAN BOY and the Order; F. E. Cantield. Tent Wugh one degree for good the longest for good the contestants will have three trials. The record should be sent as soon as possible after the contest, care being taken that the ages of the contestants be given.

Boys desiring to Organize Companies may obtain a Pamphlet from us containing the Directions published in the January and February Nos. of this Paper. It is sent free.

Company News.

Wolverine Company, No. 8, Division of Michigan, Addison, Mich., holds its meetings every Tuesday evening. The boys are fitting up a lodge room.

Ensign John R. Monaghan Company, No. 2, Division of Washington, Trent, Wash., expects to have a gymnasium soon. They have already secured a room for this pur-

Toronto Company, No. 1, held an interesting meeting on the evening of September 19. This Company has recently added ten new books to its library and now has

Centennial Company, No. 1, Division of Colorado, Denver, Colo., held its second installation banquet September 10. Henry Greenwald is the newly elected Captain of this Company.

George H. Marshall Company, No. 1, Trenton, N. J., has a baseball team and a basket ball team. The club has fine quarters and has a good collection of games for winter evenings.

Oglethorpe Company, No. 1. Division of Georgia, Culloden, Ga., has recently fitted up a gymnasium. The boys have a football and some dumbbells, and tney play football nearly every evening after school.

Columbia Company, No. 8, Division of Ohio, Minerva, O., will hold its meetings every two weeks. Their club room wit soon be ready for them. They will devote must of their time to athletics and ex-

Eden Junior Volunteer Company, No. 10, Eden, N. Y., has a large room in which it holds its meetings. The room is heated with an oil stove in winter. During vacation this Company met but once a month, but beginning with October meetings will be held every Friday evening. The boys have a library of about thirty books. Monthly dues lifteen cents. This Company has at this writing nine members, and the Captain writes us that there are prospects for more in the near future.

Answers to Correspondents.

L. V., Eminence.—Your stamp is the three cent of 1869 and is worth one cent. T. P., Kansas City.—The two cent "light pink" is worth about two cents.

F., Minneapolis.-Your Japanese and Newfoundland stamps are worth about five

J., Connersville,-The stamps you describe can be bought from a stamp dealer for from sixty to seventy five cents.

J. R., Chicago.-The five dollar charter party is catalogued at twenty five cents, and the ten dollar charter party at one dollar.

W. W., Toronto.—Your description of the stamp is rather indefinite; what is the color and denomination? Is there any other inscription besides "Postage and In-land Revenue?"

R. M. A.. Bayonne.—The twenty cent Belgium you describe is No. 47 in the six-tleth edition, the twenty cent "reseda" of the 1893 issue your stamp probably has the coupon torn off.

P. H. Redwood Falls.-We have not heard of any 1898 revenues Issued imperforate. They are occasionally found part rouletted, and in this condition in unsevered pairs are worth from two to ten times face value, according to denomination.

Subscriber, St. Louis.—The 185 set of Newspaper and periodical stamps were sold by the government at five dollars per set and can be bought for that price from stamp dealers; the two Spanish mourning stamps are worth about one cent each.

R. T., Philadelphia.-There are so many R. T., Philadelphia.—There are so many different kinds of two cent revenue stamps that it is difficult to tell what those you describe are worth; the most common, the two cent bank check and U. S. internal revenue orange have practically no value.

H. S. R., Delevan.—Your description is too indefinite to give the value of your stamp; the first two cent internal revenue stamps were issued in 1862 and within two years nineteen different varieties appeared including imperforates and part perforated

Reader, LaGrange.—The three cent war department is worth two cents. There are nineteen different blue U. S. stamps with the head of Franklin, ranging in value from nothing to fifteen dollars; hence we cannot tell the value of yours unless we see it; the other stamps you describe are of no value.

R. T., Cardington.—The one dollar foreign exchange is worth two cents; we cannot give the value of the other revenues, as you do not state what inscription is on them there are eight different perforated twenty five cent stamps and ten different fifty cent stamps ranging in value from a cent to fifty cents each to fifty cents each.

C. E. H. Hagerstown.—Some people collect stamps with plate numbers, that is, the three stamps with the name of the maker and the number of the sheet; strips of some of the older issues or early numbers of the present issue bring a premium over the ordinary value of the stamp, but the num-ber you give, 927, is of no value.

Two Cent U. S. 1894; Triangle I, II and III.

One of the questions frequently asked by the young collector is: "What is the differ-ence between the three types of the cur-rent two cent U. S. stamp originally issued in 1894?

in 1894?
For the benefit of those who have inquired and many others who have not, we give an enlarged Illustration of the three different triangles in the upper corners.

It will be noted that in Triangle I, the horizontal lines forming the groundwork, of the stamp are of the same width within the triangle as without. In Triangle II the lines are narrower inside the triangles, and in Triangle III the lines do not cross the triangles. All the stamps issued since 18% have been of the last type. With a little patience and the aid of a magnifying three the different transparent authority. glass the different types can easily be told.

Lawrence (Mass.) Boy Collectors.

FREE Paraguay Ic 1900, to all who apply for shoots at 505 com. W.T.McKay, 673 Broud St. Newark, N.J.

About February 1 last, John Ulerig Goller, an American boy at Lawrence, Mass. became interested in making collections. He set to work making cases, derawers and cages to keep his treasures in, when he was successful enough to gather them. A friend then joined him, and a club was started called the "Everything Collectors," of Lawrence. They now and a club was started called the "Everything Collectors," of Lawrence. They now and the finest collection owned by any two boys in New England. Their collections half a dollar. The Feuchs-wanger cent of 1788 is worth half a dollar. The Feuchs-wanger cent of worth mow number about 1,050 articles, in addition. The Hooth of the mint initial of Heaton & Sons, Birming-tham, England, where the coins are issued.

Albert Robinson, Buckland, Mass.—Your two coins with jackass and hog running, are Jackson cents or Hard Times tokens of 1834 (see this column July issue); 1826 (collectors, Collection, own have boys in New England. Their collections now number about 1,050 articles, in addition. The Hooth of the mint initial of Heaton & Sons, Birming-tham, England, where the coins are issued.

Albert Robinson, Buckland, Mass.—Your two coins with jackass and hog running, are Jackson cents or Hard Times tokens of 1834 (see this column July issue); 1826 (see this column July issue); 1827 (see this column July issue); 1826 (see this column J

The Numismatic Sphinx.

Earl Hillis, Riverside. Cal.—There is no premium on the 1861 half dollar.

Harold Chittenden, Guilford, Conn.—Your 1798 cent is worth a half dollar.
Frank W. Kellogg, Battle Creek.—Your quarter of 1876 is worth only face value.

R. W. Galbraith, Colorado, Tex.—An 1851 haif dime, if fine, is worth twenty cents. Charles Matin, Table Rock, Neb.—Your 1822 half dollar sells for seventy five cents.

W. Chauncey Carter, Jacksonville, III.— Any torn or poor paper currency of 1862 is worth only face value. James Huff, Tonawanda. N. Y.—Your coins are all common. Good cents of 1831 and 1837 sell for from ten to fifteen cents each each.

G. E. Dunham, Salisbury, N. C.—The half dollars of 1857 and 1858 O (New Orleans mint), unless uncirculated, bring no premium.

Preston Ruggles, Eden, N. Y.—Your rubbings are from a Canadian penny token and Netherlands twenty five centimes. Both common.

Henry Trigan, Cleveland, O.—There is no premium on the half dime of 1857 or dime of 1853 unless they should be in at least, uncirculated condition.

Jos. F. Driscoll, Ballston, Spa., N. Y.— Your rubbings are taken from a common half penny of Nova Scotia, 1832, and a one Kreutzer piece of Austria, 1860. The dealers charge five cents each for them.

John McKean, Jr., Troy, N. Y.—The 1894 dime, San Francisco mint, is one of the rarest of American coins, only twenty four having been issued. There is no premium on the 1892 dime of this mint.

Herbert Brownell, Portsmouth, O.—Yo coins are from England, Denmark, No Scotla and Prince Edward Island. In go condition they are worth ten cents eac A half cent of 1805 is worth forty cents. In good

Lesile Cornelius, Cave City, Ky.—The 1819 and 1828 cents are worth lifteen cents each, and an 1807 half dollar, Liberty head, flowing hair, eighty five cents. Coronet head of same date, one dollar.

Glen A. Clifton, Albion, N. Y.—A common cash coin of China, of the Shun Chih dynasty, 1644-61. China has issued these round cash coins, with hole in center, for upwards of two thousand years and without a break or interval. out a break or interval.

Jay E. Eddy, Clinton, Mich.—(1) Mexico, peso, 1872. (2) France, five francs of Napoleon I., 1812. (3) Spain, Ferdinand VII. (1808-1833). 1822 peso or eight real. (4) Mexico, Maximilian (1864-1867), 1867, peso. (5) France, Louis XVIII. (1814-1824), 1824, five franc. These silver coins are all of dellar size and sell at the dealers for \$1.75 each. An 1812 half dollar sells for eighty five cents.

Mrs. W. H. Aydlitte, Davenport, Iowa.—
Of the U. S. cents the following are given in the order of rarity, 1799, 1844, 1793, 1856 nickel, 1849, 1795, etc., the first being the rarest. In the same order the half cents would be as follows, 1802, 1793, 1795, 1797, 1794, 1811, etc. Proof half cents were issued only for the years 1831, 1836, 1840, to and including 1849 and 1852. These bring much higher prices. higher prices.

Andrew D. White, 2d.—The dollar gold pieces of 1851 and 1873 are worth \$1.75 each. Unless the quarter eagles of 1834, 1849 and 1861 are fine they are only worth face. Three dollar pieces of 1854 sell at four dollars. The half dollars of 1813 and 1837 sell at the dealers for seventy five cents each. An 1846 silver dollar, if fine, two dollars. Dimes of 1829, 1834 and 1837 bring twenty five cents each.

Floyd R. Jackson, Bloomfield, Ind.—Your rubbing is taken from a Prussian two thaler piece of Frederick William III. (1797-1840), 1840. The coin is indeed a beautiful one in design and execution. The fourteen arms on the shield on the reverse indicates the different matrimonial alliances of the royal family. "Gott mit uns" (Got mit uns") the royal family. "Gott mit uns" (God with us), is often found around the edge of Prussian silver. The coin sells for \$2.50.

G. L. Bingham, Erie, Pa.-It is a well G. L. Bingham, Erle, Pa.—It is a well recognized fact that the earliest stamped money came from Lydia in Asia Minor, and that the beginning of the seventh century B. C., is the date of its first appearance. The metal was electrum, a natural alloy of gold and silver at the ratio of three parts of gold to one of silver. A little later the first silver coins were struck in the Island of Aegina. These bore the tortoise shell on the obverse. of Aegina. The on the obverse.

on the obverse.

Horace H. L., Salt Lake City.—Your 1893 quarter is not the Isabella quarter, but the common standard piece. The gold quarter eagle of 1853 brings only face value. The 1852 three cent sliver is worth fifteen cents. Half dimes of 1835, 1850, 1863, 1854 and 1861 bring from twenty to twenty five cents each. This is for the pieces if in fine condition. The H on the Canadian coins is the mint initial of Heaton & Sons, Birmingham, England, where the coins are issued.

T. C. BACON, 66 DUANE STREET, NEW YORK.

Geo. Raymond, North Cambridge, Mass.—The cents of 1844, 1847, 1848 and 1855, are worth five cents each. Your thaler of George V. of Hanover, 1866, is worth one dollar. Your "Marine Barracks 10, Boston," is a trade token of little value. The copper coin of 1867 is a two and one-half centimos of Queen Isabella of Spain. Your small silver coin is a Portugal one hundred reis of Louis 1. (1861-1889), 1866. All these pieces are nice pieces for a cabinet, but have no particular premium value. Your drawing of 20—1894—is too indefinite for location. A pencil rubbing would be better. The Newfoundland silver and New Brunswick copper coins are very common.

V. H. Scott, Manitowoc, Wis.—The three

V. H. Scott. Manitowoc, Wis.—The three cent nickel pieces of 1867, 1869 and 1879 hardly command a premium. Only the 1873 two cent piece, which was issued only in proof, brings a premium. Your rubbing is from a copper coin of John Hyrcanus, 135-106 B. C. The Hebrew inscription translated reads: "John, High Priest, and the Confederation of the Jews." The reverse shows the poppyhead between two cornucopiae. The coin is, therefore, a Jewish one, and we suspect from your fine rubbing, that it is a facsimile that has been lately made to illustrate a work on "The Coins of the Bible." We would that we could say once for all, so that all for once, might know, that the eagle cents of 1857 and 1858 have no premium V. H. Scott, Manitowoo, Wis.--The three

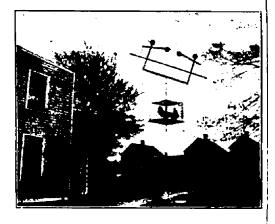

Boys and Animals

Carrier Pigeons.

Edward H. Clayton, 80 West Eighth Street, Bayonne, N. J., writes us regarding carrier pigeons. He says that the carrier pigeon is an intelligent bird and will fly a long distance with proper care and training. "I have had," says he, "carrier pigeons for a long time and understand them well. I train my birds by taking the young ones a few blocks away from home and letting them go. They will circle about a few times and then strike out for their home. The next time I take them still farther away and by the time the bird is a

for I strike out for their home. The next time I take them still farther away, and by the time the bird is a year or so old he will be able to go most any distance. The greatest distance I have practiced on is forty miles. I have never found out why the carrier pigeon will fly home. I send you a picture showing the liberating cage used by the Bayonne Kite Corps of which Dr. William H. Miller is manager. The cage is drawn to high alti-

tudes by large kites, and when it is a thousand feet or more above the ground the floor of the cage is let down by a string from the kite line. When the floor of the cage has dropped the bird easily flies for home. A few weeks ago the Bayonne Kite Corns liberated at Seagirt. N. J., fifteen carrier pigeons belonging to the Brooklyn Navy Yard, the distance between Seagirt and the Navy Yard being fifty five miles. Two of the birds flew home in one hour and ten minutes. The others arrived soon after. Two were never heard from."

The Smallest Pony.

A colt seven months old, which weighs 24 pounds and is only 22 inches tall, is the freak which has been on exhibition at Louisville, Ky., for several days past. The colt is owned by G. H. Hackstead, a blacksmith near Ludlow, Ky.

The colt was foaled on a farm near Fountain Ferry park. Its owner considered it worthless and sent it to Mr. Hackstead. At birth it only weighed about 12 pounds, although it was perfectly formed. Since that time it has grown very slowly, and for the past two months there has been almost no change in its height and weight.

If it stops growing now there is no doubt that it is the smallest horse in the world.

The colt is perfectly healthy and is well formed and strong. Its dam was a mustang pony of average size and its sire was a good sized horse. The cross should have produced a medium sized horse. The colt is good tempered, although very frisky. It has been taught to follow its master like a dog, and is very affectionate. The freak has attracted much attention since it has been on exhibition.

WILLIE'S DREAM THANKSGIVING NIGHT

THE TRAINING OF A PUG

BESSIE SALTMARSH THIELE

No breed of dog is so completely misunderstood and so frequently, in consequence, mismanaged, as the pug. Many who have owned them call them stupid, while others discover by a happy knowledge of their dispositions that these dogs are "bright." The buil dog, buil terrier and pug are the most obstinate of all dogs. An ugly word, a blow or impatient gesture is sufficient to set them into a fit of buil-headed sulks. Having owned fifteen pet dogs, whose tricks I taught to them, it is with some shadow of authority, based upon experience, that I assert that a pug may be taught "tricks" as readily as other dogs. The first thing to remember when attempting to train them is their stubborn natures. No amount of heating or of coaxing will avail if they once become "sot."

To a sum the same time impress upon it that it really wants to do the trick, but it can be done. The main features in this understand of the same time impress upon it that it really wants to do the trick, but it can the same time impress upon it that it really wants to do the trick, but it can be done. The main features in this undertaking are: Perception, perseverance and patience. Perception of your dog's nature; perhaps all dogs' natures are alike to you:

perhaps all dogs' natures are alike to you that being the case, for want of perception you cannot handle an animal—in fact would ruin the creature completely. Wherein then is the failure when your dog won't respond? It's clearly in yourself; the failure existed before you ever spoke the first word of command. But if you possess this first great requisite, what of the second? Perseverance? Even tho' you appreciate the fact that your bet is stubborn or sensitive or whatever its chief characteristic may be, if you have not perseverance the fate is still the same-failure. Dogs possess great intelligence, but do not children have to repeat again and again some lesson they are mastering? Then how much more necessary is it that we use great perseverance with our dog. Patience, tho' the last of the three "P's" is not the least. Perception

THE WONDERFUL DOUBLE THROAT

The only genuine Bird Call and Prairie Whistle, with which you can imitate any bird or animal. Astonish your friends by making them believe you are a ventrlequist. The instrument is concealed in the roof of the mouth and detection is impossible. If ladies are near initate a mouse and see them grab their skirts and climb a chair. Boys liy on like fam. send 10c. for this instrument with full instructions. Cat. of tricks, novelties and books mailed free, H.W. Hardesty & Co., 1130 Centre Ave., Newport, Ky.

INNESGIVING NIGHT.

HANKSGIVING NIGHT.

HANKSG nate years, we have been compelled to avoid, so we resorted to spelling, but that does not avail now; the subject is, there-fore, forbidden, for sugar and candy are equally had for a pug almost nine years

of age.
Once I was very ill—so feeble I could not turn unaided in bed; the dog was, of course, always in and out of the room, but she had been told she must not so on the bed. This was not at all to her liking, for when any one lies down that is a signal for her to follow suit. It was perhaps a problem that she figured out in this way: That I was at the bottom of this new rule, and she would wait her chance to "get even." It chanced that soon after this new law went into effect both the nurse and my mother were ou; of the room. Like a flash she was on the bed, and (Concluded on page 23).

Ø Ø FOR BOYS TO THINK ABOUT Ø Ø

THE SECRETS OF THE SEA.

THE SECRETS OF THE MEA.

The Russian Government and our own are making a joint effort to determine the direction and the velocity of ocean currents. All American and Russian warships and merchant vessels carry with them a supply of empty beer bottles. As they traverse the seas thousands of these bottles are cast upon the waters, each bottle carrying a record telling when and where it began to drift. Whenever a bottle is sighted by a Yankee or Russian ship it is picked up and a record made of when and where it is found. Then it is corked up and again sent adrift to be picked up again and again until perhaps it has indicated the force and direction of the currents of many thousands of miles of sea. The records show that many of these bottles have drifted from five thousand to eight thousand miles, at a speed varying from two to thirty five miles a day. Each bottle when sent adrift contains directions printed in seven different languages, so that the skipper of the ship finding it, whatever be his nationality, may know what to do with it.

THE COST OF ONE SUNDAY'S OUTING IN NEW YORK.

The New York Heraid has compiled figures showing that the people of New York City expend on the average Sunday excursion in summer time \$2%,700. He figures out that 593,100 persons in that city take steamers, or street cars, or steam railways to parks or out-of-town resorts on a single Sunday.

AMERICAN LOCOMOTIVES.

The first American locomotive was constructed by Peter Cooper for the Baltimore and Ohio Railway in 1829. American engines can be made in shorter time than can those of any other country. The parts are interchangeable. Their price is the lowest, although the wages of the workmen are the highest. The early locomotives welghed about fourteen tons. Freight engines now weigh about one hundred tons, and passenger engines about seventy to eighty tons. The speed has increased also. The Atlantic City express runs the fifty live miles from Camden to the Sea in about forty five minutes. The weight of rails has increased nearly double, and so has the weight of the cars.

WILL NIAGARA BE ESED UP.

WILL NIAGARA BE USED UP.

When the great British scientist, Lord Kelvin, visited Niagara Falls a few years ago he said: "I look forward to the time when the whole water from Lake Erie will find its way to the lower level of Lake Ontario through machinery. Gradually the water at Niagara Falls, which forms the most magnificent natural spectacle in the world, is being diverted by canals and races to supply the forces to turn hundreds of thousands of wheels."

If the rate of industrial development of the last five years at Niagara is kept up it will not be long before Lord Kelvin's prediction will prove true. Mr. Edison points out, however, that a limit is being approached in the area that can be supplied profitably by power from Niagara.

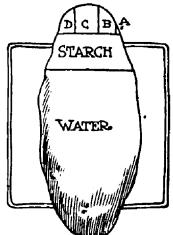

sess large eyes and that are colored with all the hues of the rainbow. The question has arisen, whence is the light derived? A great number of deep sea animals are phosphorescent, giving out light at will from various organs.

HAIL STORMS.

A fall of hail to the average depth of one inch over a region four miles wide and eighteen miles long is a fall of ice weighing nearly a million tons. The average height from which it fell may be taken as five thousand feet. All that mass must have been raised to that level; that is, a million tons must have been raised five thousand feet, which corresponds to the work of an engine of a million horse-power working for five hours.

THE FOOD VALUE OF THE POTATO.

The accompanying diagram illustrates the composition of the ordinary potato. Everybody knows that potatoes are classed as starch food. It is chiefly on account of its starch properties that the potato is eaten. It may appear that the potato is not an

economical food, owing to the large proportion of water which it contains. In rice there is four times as much nourishment as in an equal weight of potatoes. There being so much starch in the potato it is valuable as a source of muscular energy.

TELEGRAPH STATISTICS.

GROWTH OF EXPORTS.

REES FOR USE IN WAR.

It has been suggested that honey bees be tried as military messengers in place of homing pigeons. A bee could carry a good deal of information if it were transferred by micro-photography to a minute piece of paper fastened to the insect's back Carrier pigeons are often intercepted and killed by the enemy, but it would be difficult to do this is the case of bees. The homing instinct of a bee is as strong as that of a pigeon.

WATCH AND CHAIN For One Day's Work

DAVID C. COOK PVB. CO. 36 WASHINGTON ST., CHICAGO.

The United States have two-thirds as many miles of wire as all the principal countries of Europe put together, and send about 24 per cent of all the messages.

During the years from 1875 to 1900, the total exports of the United States increased about ninety two per cent, while those of France increased only five per cent, of Germany seventy three per cent, of Great Britain thirty four per cent.

four watches of its size on an area equal to that covered by a twenty five cent plece. It contains a hundred separate parts, and weighs a thirtieth of an ounce avoir dupols. The large hand is an eleventh of an inch. The watch is valued at twelve hundred and fifty dollars.

STCCESSORS TO THE PRESIDENT.

Prior to 1886, if the President of the l'inited States died in office the Vice-President succeeded him and in case of the latter's death the Speaker of the House of Representatives. In 1886, however, Congress provided for the following succession: Vice-President, Secretary of the Treasury, Secretary of State, Secretary of the Treasury, Secretary of the Interior. Only native born Americans are eligible to the offices of President and Vice-President.

THE DEEP SEA.

The temperature of the deep sea is nearly uniform, and not above thirty nine degrees Fahrenheit. In many places it is below thirty two degrees, but does not freeze on account of the pressure, which at the average depth of the ocean (about eleven thousand, eight hundred feet), is about eight hundred feet is about eight hundred feet is about eight hundred feet, so that sea animals will live for more than a thousand feet under the surface, having no eyes an index the greatest depths, so that there is no life there. Sunlight penetrates sea water the greatest depths, so that there is no life there. Sunlight penetrates sea water to about seven hundred feet, so that sea animals will live for more than a thousand feet under the surface, having no eyes an index of the pressure with the greatest depths, so that there is no life there. Sunlight penetrates sea water to about seven hundred feet, so that sea animals will live for more than a thousand feet under the surface, having no eyes an index of the pressure with the greatest depths, so that there is no life there. TRICKS " AN INTERESTING FOR THE BOYS 5C [|]"TRICKS," 491 6th Ave. New York.

A California Harvester.

Through the courtesy of Neil Moore, a fourteen year old AMERICAN BOY subscriber, who lives on Mrs. Stanford's great vineyard, which is, perhaps, the largest vineyard in the world, we have received some very pretty photographs taken by him. One of them is a California harvester, which reaps and threshes the grain. There are twenty six mules harnessed to it, though there does not appear to be so many in the picture.

FACTS ABOUT SPIDERS.

In a large gland in the body of the spider is secreted a fluid which is the substance of the threads which form the spider's web. If a common spider be examined there will be seen at its posterior end a number of little protuberances. Each of these is provided with a great many tiny tubes which communicate with the gland. Each of these tubes emits at the will of the spider an exceedingly fine thread from the liquids secreted by the gland. The thread from each protuberance unites while yet sticky with the threads from the others. From each is drawn at least a thousand tiny threads; and as the spider has six protuberances there are six thousand separate threads that, all uniting at about one-tenth of an inch from the body of the spider, form a line of six thousand strands, and that is the thread we see the spider use for his web. It takes about twenty thousand such threads laid side by side to make a ribbon one inch broad; and as each thread contains six thousand strands, it requires one hundred and fifty millions of these strands to make an inch in width. It takes four million threads from the minutest sorts of spiders to make a thread the thickness of one of the hairs of the human head.

Spiders' thread, thickness for thickness. human head.

human head.
Spiders' thread, thickness for thickness, is actually stronger than cast iron, almost as strong as copper. Weight for weight, it is even stronger than steel. Spiders' threads are used to support small weights in several delicate scientific instruments. The French Government has stations in Madagascar where spider silk is woven into the most beautiful and the strongest fabric for its weight anywhere manufactured.

HOW A HEN KEEPS HOLD.

How is it that a fowl does not fall off its perch when it goes to sleep? We are taught that muscles relax when the body falls asleep. The Creator has supplied birds with a sinew so connected with the toes and the upper part of the legs that when the body settles down in its posture of rest the toes are contracted and cannot open out again until the body becomes erect.

Electricity from waterfalls has only a restricted distance over which it can be delivered successfully. Necessarily a limit must be reached in time for the local issue of power. This natural limitation may operate to save the great Falls, so there need be little fear that Niagara will run dry.

THE SMALLEST WATCH IN THE WORLD.

A watch has been made at Geneva. Switzerland, so small that you could get four watches of its size on an area equal to that covered by a twenty five cent plece. It contains a hundred separate parts, and weighs a thirtieth of an ounce avoirdupois. The large hand is an eleventh of an inch in length and the small hand one-twentieth of an inch. The watch is valued at twelve hundred and fifty dollars.

By the aid of modern machinery one man can cut ten thousand watch wheels in a day.

The Training of a Pug.

(Continued from page 21.)

with a wild jump she landed all four feet on my poor body, causing me to cry out for help. As quickly as she came she went, and before the terrified nurse reached went, and before the terrified nurse reached me this miserable hypocrite was scated in staid dignity in a distant part of the apartment, looking for all the world like an angel of light who could do no harm. Nor was this the only time she did this trick. It became necessary to watch her for she realized my weak and helpless condition, and it was great fun to jump up and playfully attack me. A year ago my mother was ill and steam baths were necessary, so a vapor bath was bought. One day my mother told the maid she was going to take a bath and to leave open the door down stairs, so when she would call to her, ice water would be brought up. For some reason the door was not left open, and my mother called and called. At last Miss Toodles went down the stairs and set up an unearthly barking which brought the maid and the water. After

President Roosevelt's Career

BOYHOOD-Weakling, wore glasses, ambitious to become strong. Rather retiring. Doctor advised plenty of outdoor exercise. Fond of reading stories of great Americans' lives.

YOUTH-Ridiculed on Montana ranch for wearing "spees." Not especially brilliant as student. Possessed of great amount of perseverance. Not facile thinker and poor speech-maker.

MANHOOD-Acquired robust constitution. Fond of constant exertion and outdoor life. Full of intense energy, tenacity and patriotism.

AUTHOR-Stirred by slanders of standard British author on American Navy. wrote stinging denunciation of author in his first work, a history of the navy, at twenty four. Also wrote "American Ideals and Other Essays," "The Winning of the West," "The Strenuous Life," "Essays on Practical Politics," "The Wilderness Hunter" and "Hunting Trips of a Ranchman."

RANCHMAN-Plainsman on Western ranch several years, acquiring fondness for big game and rugged hardship. Developed gigantic strength.

REFORMER-As Police Commissioner, reformed and reorganize! Police Department, putting new blood into it. Patrolled officers' heats in disgulse and sought out violations of Excise law in midnight carriage tours.

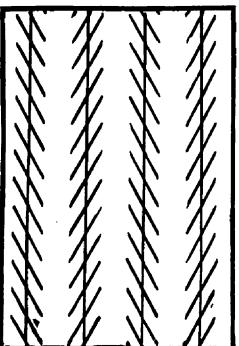

SOLDIER-Organized regiment of "Rough Riders" at outbreak of Spanish war, becoming Lieutenant Colonel under Colonel Leonard Wood. Mrs. McKinley's physician. Led regiment in famous charge up San

STATESMAN-Resigned Police Commissionership to become Assistant Secretary of Navy in 1897. Was elected Governor of New York after the war and Vice-President in 1900 after vigorously opposing nomination.

ORATOR-Entered vigorously into Presidential campaign, making extensive trips throughout the country, delivering several speeches daily.

HUSBAND AND FATHER-Prefers society of home and family to anything else. Has six children, four boys and two girls. Married twice, first wife being Miss Alice Lee, of Boston, who died few years later.

PERSONALITY-Forty three years old, five feet eight inches tall; weight 185 pounds. Has not been sick in ten years. Has no life insurance policy. Has voracious appetite and eats simple food. Rides horseback, uses dumbbells, punches bag, wrestles, walks miles for exercise. Sleeps eight hours every night.-New York World.

You cannot always be sure a thing is so because it looks as if it were. First impecause it looks as if it were. First impressions are not always correct. You would think that the long lines in this picture were not exactly parallel; and yet they are. The deception is brought about by the short crisscross lines.

that the dog seemed to think that was her part of the performance, for when my mother would call the maid the dog would run, barking with all her might. The doctor's visits were also announced in this way. If my mother did not appear as soon as the lady thought she should, she would come to the toot of the stairs and call. The mail is always carried upstairs by Miss Toodles. This is a trick taught her by the maid, who thought it would be useful as well as cute. There is a species of recklessness in the disposition of this otherwise model lady. She will drink beer every night at nine o'clock; she demands that the head of the house go into the cellar and produce a bottle of this beverage, into which crackers are crumbed and fed to her as she sits in state upon the table. She is the ideal of hospitality and forgets no one. It was two years since she had seen a certain friend of the family; this friend used to give her "Sen-Sen," of which she is very fond. When she met him after this period had elapsed she showed her appreciation for his favors by pawing his vest pocket, as of yore, by way of invitation to resume his treat of she showed her appreciation for his favors by pawing his vest pocket, as of yore, by way of invitation to resume his treat of the "Sen-Sen," as of old. That she did not smell it in his pocket is certain from the fact none was there. It was a simple case of recollection. Other incidents could be related had I space to do so. It can never be said, and believed, to those who have owned and understood the pug that it is a stupid animal. The stupidity, if existing, is primarily with the owner, who does not understand the nature of the creature, and can therefore obtain no results. This applies to children as well as animals. We do not all develop alike, either physically or mentally. Human nature and dog nature are "near kin;" one principle may be applied to both with success, perception, perseverance and patience, not forgetting that one grand principle—love.

FREE 10 BOYS

We are going to give away 5,000 Reys' Printers. They printCards, Envelopes, Linen, etc. The outfit consists of three alphabets of rubber type, a type holder, a tube of ink, an ink pad and a type holder, a tube of ink, an ink pad and a pair of tweezers, a wooden type case and a full ret of directions. * WHAT BOYS ARE DOING

A Boy Artist. BESSIE BABCOCK.

Unknown beyond his village home and school there lives in a sleepy little town well hidden from the busy world behind rows of maples and banks of elm and honey locust in Ohio, a boy who may some time trace his name high on the scroll

of fame.
From the children who attend this village school I had heard of the wonderful pictures this young artist made. Pictures of fat soldiers and sailors and tramps, of fat

CLAUDE CLOSE.

men and lean men, of black men and white men, in fact of all sorts and conditions of men; but having seen none of these famed pictures, I smiled at the enthusiasm of the children until visiting the school one day I discovered for myself that the school could boast an artist.

Among a number of creditable sketches fastened against the wall, the portrait of George Washington, done in lead pencil, attracted my attention, especially when I learned that it had been done by a boy barely eleven years old.

After sceing this excellent portrait of the President that all boys like to read of, my interest was aroused, and when the little boy, whose name is Claude Close, came to my home a few weeks later, giving him pencil and paper, I asked him to draw something for me.

Looking over his shoulder, as with a soft pencil he stroked the paper. I was amazed to see appearing as if by magic an old

man with a thin face, big nose and ragged

man with a thin face, big nose and ragged beard.

When completed, which was but the work of a moment, he looked like a man who would steal a sheep on Saturday and pray beautifully in church on Sunday.

A second sheet of paper was placed before the artist and immediately a second man appeared, this time a scholarly gentleman of middle age wearing large eyeglasses and turn-down collar.

I then gave the artist a pen and ink. He had never tried to use a pen before and at first was confused, but in a very few minutes he was making long strokes and short strokes, thin strokes and broad strokes, well pleased with the effect.

In a short time he began to build upon the paper before him a stone wall, and as stone after stone was rapidly set in place by his pen, a fortress developed with a cannon pouring its deadly discharge through a loophole.

A locomotive running at full speed,

ship at sea and a variety of men quickly followed the making of the fortress.

Thinking that a number of boys might be interested in the work of this young artist, I asked him to draw a few sketches to be used in "THE AMERICAN BOY."

A Boy's Exciting Trip Skyward.

How would you like to sail skyward for fifteen hundred feet or more hanging with your feet entangled in a rope and your head down? Such was the experience of nead down: Such was the experience of Carlton E. Myers, a twelve year old West Liberty (lowa) boy on July 6 last. Carl was helping hold a big balloon down, when suddenly it sprang into the air. His feet

CARLTON E. MYERS.

were caught in the ropes, and to the amazewere caught in the ropes, and to the amaze-ment of every one he was carried upward in the wake of the big air ship. The boy bravely clung to the line and finally caught one of the dangling parachute ropes. Twist-ing aimself about this, he gradually worked his way up to the balloon. When his strange conveyance had reached the height

Snap Shot taken of the balloon as it was carrying the boy up.

of about fifteen hundred feet a current of of about fifteen hundred feet a current of air struck it and it drifted away. There was a novel and exciting chase for the balloon on the part of the crowd, some in wagons, some on horseback, others on foot. After a chase of three miles the balloon was seen slowly to descend. It finally came to earth in a field of grain, where it gently dropped the young aeronaut. A triumphal procession was formed and the boy was carried back home, and there a purse of one hundred dollars was raised to show to the boy how much his pluck was appreciated.

PAUL MILLER.

To make these pictures 1 let him have a Gillott pen, a bottle of Higgins India ink and some ivory white bristol board such as artists generally use. These materials he took home with him one afternoon; the next morning he handed me the sketches appearing with this number of "THE AMERICAN BOY."

This boy artist has never had any instruction whatever, there being no art teacher in his village.

It is ability was born with him and has been showing itself almost from the time he learned to hold a pencil.

In appearance and manners he is quite a little gentleman, and if he has the perseverance to develop and carefully train his unusual talent, his success is assured, for the world was never in greater need of sympathetic, careful artists than it is to-day.

Best Boy Farmer.

At Carroll Park, Baltimore, Md., there is a school where various branches of industry are taught. Among the boys who are learning farming. Paul Miller, son of Lewis Miller, Baltimore, has won the position of best boy farmer. Some time ago he visited the office of the Baltimore American with the lady who has charge of the Carroll Park playgrounds, and exhibited samples of his work which won great praise. The young man has been on the school farm three years and has made ican with the lady who has charge of the Carroll Park play-grounds, and exhibited samples of his work which won great praise. The young man has been on the school farm three years and has made school farm three years and has made great advancement.

Boys Form an Anti-Anarchy Society

The pupils of Grammar School No. 147, New York City, ranging in age from twelve to fourteen, have organized an Anti-Anarchist Society, known as the Juvenilo Anti-Anarchist Society of Greater New York. William Griffin, a fourteen year old boy, is president. Griffin called a meeting of all the boys in the school to be held in a neighboring park, and there was a large gathering. A constitution and by-laws had been drawn up, and these were read to the meeting. No boy who was not at heart a true American was eligible to membership. Anarchy was denounced as a grave menace to the nation, and those joining the society pledged themselves to do all in their power to disseminate the principles of liberty and good and honest government; also to refrain from any association with boys and men known to be friendly to any anarchistic movement.

Frequent meetings are held in the park and these are well attended. Before proceeding to the program, the boys parade with banners through the neighboring streets; then juvenile orators address the boys. The society is rapidly growing and now numbers nearly a hundred. The pupils of Grammar School No. 147.

now numbers nearly a hundred.

A Model Young Farmer.

We want to tell our readers about Way-land Whitney Sweeney, a thirteen year old model farmer who lives at Concord. Depot. Va., with his widowed mother, three sisters and three brothers. Sickness and misfortune have thrown the family into a debt several

WAYLAND WHITNEY SWEENEY

times greater than the value of the small, poor little farm on which they live. When the father died last spring there was no one to keep the wolf from the door save Wayland, but he went to work with a will, and notwithstanding the poor soil and his inexperience, is a farmer. The farmers in the neighborhood think him a model farmer, and praise of him is in every mouth. The boy denies himself all boyhood pleasures and toils hard and single handed from early morning till late at nood pleasures and tolls hard and single-handed from early morning till late at night every day. On Sundays he takes his brothers and sisters to Sunday school three miles away from home. What little spare time he has—and this must be very little—he spends in reading, and THE AMER-ICAN BOY is one of his standbys.

The Old-Fashioned Debating Society.

The old-fashioned debating society in a large degree was responsible for the great orators of the early part of the last century. What has become of the old-fashioned debating society? It is said that all the greatest parliamentary orators of England, with the exception of Lord Erskine and John Bright, frequented a good debating society in youth. Brougham trained himself for extemporaneous speaking in the Speculative Society, the great theater of debate for the University of Edinburgh. Canning practiced much at extemporaneous speaking in the societies of Eton. At that college there was a mock House of Commons, in which many noted orators trained themselves. The decadence of the debating society bodes ill for future oratory. The old-fashioned debating society in a

When the Boy Cuts a Finger.

To stop the bleeding of a cut finger bind a piece of rag around the cut very tightly to stop the circulation for a few minutes, and hold the finger in an upright position. This is promptly effective.

After a short time remove the rag, sponge the cut quickly over with cold water, and apply a piece of surgical adhesive plaster.

The application of collodion will also stop bleeding. It forms an artificial skin which is more elastic than plaster and sufficiently insoluble in cold water.

Another way to stop bleeding is to place a piece of lint moistened with creosote on the wound, previously wiped clean, or to pour a drop or two of the liquid upon it.

WATCHES BELOW COST

WAIGHES BELUW USS

We have 2000 watches which we wish to dispose of in the next 60 days and will sell them for \$3.75 each, a price far below actual cost. This is a 14k Gold ulated hunting case watch, with a genuine richly jeweled American model movement, guaranteed for 20 years, worth double the price.

SPECIAL OFFER; send your name and address and we will send this watch C.O.D. with privilege to example and the watch is yours. A 20 year surrantee and a Landsome chain and charm with each watch. Hention size its. Order now before they are all gone.

INSPECTION.

ON THE MARCH.

HARDTACK AND WATER.

The Ventura (Cal.) County Cadets in Camp.

Forrest M. Casey sends us from Toledo pictures taken by himself of the Ventura County Cadeta, who took a twenty mile march over the mountains and enjoyed a ten days' camp last summer. The camp was called Camp Bard, in honor of Senator Bard, of California, who gave to the cadets a fifty dollar silk flag. He says the trip cost each boy about seven dollars, and that it did the boys a lot of good, every one having a grand time. One of the pictures shows one of the cadets at a luncheon of hardtack and water; another shows one of the boys on the march, and another gives a picture of

Company E, the banner company.

The young man who send us the picture was one of the cadets who enjoyed the camp among the Sierras.

Blatchford Kavanagh Goes to Europe to Study.

Nearly everyone has heard of Blatchford Kavanagh, the famous boy choir singer of Chicago. After singing several years his voice failed him. Now, it is said, he has re-

Chicago. After singing several years his voice failed him. Now, it is said, he has recovered the use of it and will go to Paris, where he will begin his studies with the celebrated Sbriglia. No boy singer of the city won such fame or so deeply touched the hearts of the people as young Kavanagh. The song with which he achieved his greatest fame was "Angels Ever Bright and Fair." Thousands have been moved to tears by his matchless rendering of this song. His change of voice brought actual grief to thousands, and people even stole his music and articles of wearing apparel as souvenirs. After an eight years' rest his voice dropped one octave in pitch, and it is now a sympathetic baritone of unusual sweetness and mellow quality. His strength of voice is doubled. He will fit himself abroad for the grand opera stage.

Kavanagh's earnings as a boy began at two dollars and fifty cents, which he received for his first concert engagement. When he quit he was earning a thousand dollars a night. During his retirement the boy spent his time in educating himself at the Manual Training School and at Ar mour institute, and in acquiring experience in business methods at Lyon & Healy's.

A World Trotter.

Charles Cecil Fitzmaurice, a seventeen year old Chicago schoolboy, was one of the three lads sent out by a Chicago newspaper in an attempt to break the record for a trip around the world. The young

CHARLES CECIL FITZMAURICE.

man made the trip of 20,545 miles in exactly sixty days, thirteen hours, twenty nine minutes, forty two and four-fifths seconds, and was the first of the three boys to reach home. His record is the best that has ever been made.

Admiral Dewey says that before letting a boy go into the navy he would be sure that it was not a temporary craze for adventure on the part of the boy. Many boys who ship aboard a vessel when they are fifteen or sixteen are very sorry for it a few years later.

A Young School Principal.

Clyde C. Tull, of Monon, Ind., twenty years of age, has been elected to the principalship of the Monon (Ind.) High School. He is a graduate of the Monon and Monticello High Schools and has been a student of the State Normal at Terre Haute, Ind.

OLYDE C. TULL.

The Monon High School is absolutely a four years' course, and the principal will be instructor in Latin and mathematics. The young man is probably one of the youngest principals in the country.

Good Debaters.

The debating club of the eighth grade, Eighth Ward Public School. Louisville, Kv., held its final debate for the school year of 1900-1 in the chapel of the school June 17, in the presence of members of the school board and invited friends. The question for debate was, "What is the greatest invention of the nineteenth century?" Three judges awarded the prizes, which were, first, a gold medal; second, a

FERRELL R. BURTON.

WILLIAM L. CLORE-

silver medal, and third, a book. There were eight speakers. Ferrell R. Burton, age fifteen, subject, "The Steamboat," received the gold meda!; William L. Ciore, age fifteen, subject, "The Locomotive," received the silver medal, and Sam Stone, age fifteen, subject. "The Improvements on the Application of Steam," won the book.

What a Boy's Reply to a Socialist's Speech Did.

One Sunday evening in September Eddle Sloan, a Chicago boy, who lived for the most of the time on the streets of the great city attending political meetings, was in a crowd of five hundred who had gathered around an anarchist and a socialist who were arguing. Major Thomas P. Simmons of the Union Veterans' Union

happened around and, being disgusted by the arguments of the men, began to reply. Finally, when about to give up the attack, the major stepped back and his place was taken by young Sioan, who took the socialist's words out of his mouth and turned them back on him and routed him. The socialist declared that a working man couldn't get a living in this country though he carned millions for the rich. In reply Eddie pulled out of a pocket a handful of coin, which he said he had earned, and declared that he was able to and did support himself, and cited his own father as a workingman who took good better in San Francisco.

The bell makers at once sent their best salesman to California, with instructions to secure the contract at any price, and a few days ago he walked into the San Francisco house, and courteously asked for Mr. John Martin. No one knew him then bookkeeper said: "That must be our Johnny." It was. He was called in and confessed. The agent was very wroth and demanded the instant discharge of the lad, but the firm said "No." They said and did support himself, and cited his own father as a workingman who took good care of his family and his earnings. Then he attacked the socialist as a discontented agitator and explained some things about the government to him, and the crowd cheered and the socialist sneaked away. The major then came to the front and said to the boy, "Give me your name, and here is mine." He found that the boy wanted an education, and the major declared that he would help him get it.

This is the kind of a boy that this country needs; that is, a real American boy—the boy with brains and sense.

A Young Telegrapher.

One of the youngest Western Union Telegraph office managers in the country is Roy Rose, of Mt. Marion, N. Y., aged thirteen years and eight months. When the superintendent of telegraph offices for the West Shore Railroad was experiencing some difficulty in getting a man for the West Forty-second Street telegraph office in New York city, he wired an old friend at Mt. Marion, saying, "If you find any one who can do it tell him to come down and go to work at the West Forty Second Street station."

The next morning when the superintendent's assistant called up the station, some one answered whose touch and precision in telegraphing startled him. After several days the assistant went up to the station to see what the new man looked like, and found him to be rather a stout boy of fourteen, rosy cheeked, with brown eyes looking out sharply from behind eye-glasses.

glasses.
"Hello, sonny, where's the new manager?" asked the assistant.
"I'm the new manager," the boy replied. The official thought that the boy was fooling him, and could hardly believe his eyes that the position was being acceptably filled by a boy, when three operators had been discharged, one after another, for inability to do the work.

A New Kind of Bell Boy.

Stamps, postmarks, coins and autographs are common enough in the way of "crazes." but a boy with a passion for bells is something of a novelty.

Johnny Martin is the office boy of a San Francisco firm, says the New York Sun, and has a great liking for bells, and he never tires listening to them. It is a positive mania with him. Some weeks ago he sent a typewritten letter on the letter head of the firm to a well known bell manufactory in New York State, asking the price of bells, particularly large church bells, weighing from twenty thousand to thirty thousand pounds. In reply he received a circular and price list, and a polite letter earnestly soliciting his patronage. He acknowledged its receipt,

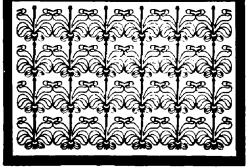

The bell makers at once sent their best salesman to California, with instructions to secure the contract at any price, and a few days ago he walked into the San Francisco house, and courteously asked for Mr. John Martin. No one knew him until the agent showed the letters, and then the bookkeeper sand: "That must bour Johnny." It was. He was called in and confessed. The agent was very wroth and demanded the instant discharge of the lad, but the firm said "No." They said a boy who could write such good business letters was the kind of a boy they wanted, and they promoted him. He says that when he gets rich he is going to build a church, and hang in it the biggest bell that this Eastern firm can cast.

First Prize Photo, by Edward Loyd Thomas, Atlanta, Ga.

It Quickens Perception.

A writer in the Photo-Era tells an inter-A writer in the Photo-Era tells an intersecting story of how valuable a camera is in teaching English. In a school which is on the border line between city and country, most of the pupils in the ninth grade have been provided with cameras. One of the popular things is to go on a walk at noon of a mile or so. The schoolhouse is on the bank of a river and one series of the public writers. It is not necessary to cover the entire spot was a fairly good dark lander. It is not necessary to cover the entire spot was a fairly good dark lander. It is not necessary to cover the entire spot was a fairly good dark lander. It is not necessary to cover the entire spot was a fairly good dark lander. It is not necessary to cover the entire spot was a fairly good dark lander. It is not necessary to cover the entire spot was a fairly good dark lander. It is not necessary to cover the entire spot was a fairly good dark lander.

noon of a mile or so. The schoolhouse is on the bank of a river and one series of pictures shows the variety of sailing craft. Then some of the pupils will describe the different types of vessels, where they came from and where going. Getting interested in seafaring, when a fishing schooner tied up at the dock the children caught various views of the cargo and crew, and they even read Kipling's "Captain Courageous."

The streets, too. afford endless pictures and instruction. A pupil who visited New York city showed a picture of a horse carsomething many of the others had never seen. A wharf was being built some distance away, and a troiley ride of a Saturday afternoon gave the children not only a fine outing, but lots of information was gathered concerning the way such work was done and the material necessary. Near the school is a brook which comes tumbling down a steep hillside, and this furnished subjects both picturesque and geographical.

The developing is done in the basement

The Boy Photographer of the windows. Here comes in a lesson in the use of chemicals. After being developed by Judson Genell of the pupils. The results are a great improvement in English work." says the writer. "due to increased quickness of perception."

A convenient intensifier is called "agfa," made in Germany. American stock houses keep it. It is diluted with ten parts of the windows. Here comes in a lesson in the use of chemicals. After being developed and fixed, the negatives are left in running water all night, and dried the next day, the printing being done at the convenience of the pupils.

The results are a great improvement in English work." says the writer. "due to increased interest, and a greatly increased quickness of perception."

A convenient intensifier is called "agfa," made in Germany. American stock houses keep it. It is diluted with ten parts of water, the negative immersed for about ten minutes and then washed.

Dr. E. F. Grun, of Brighton, has invented a lens working so rapidly that the stage of a theater can be taken at night in a few seconds. A good outdoor picture was a few seconds. A good outdoor picture was taken in a quarter of a second.

Amateur photographer with a taste for experimenting are advised to load a plateholder with Rutograph paper, and expose: then develop the paper with the develop.

Developing and Fixing.

The formula that comes with Pyrocate-chin will both fix and develop a plate at the same time. While at the Pan-American exposition, the writer took a number of pictures, and on returning developed some of them in the following formula:

Caustic soda, purified in sticks... 105 grains
Pyrocatechin ... 105 grains
The above is the stock developing solution. To mix for developing and fixing a plate the following was used:
Developer ... 3 drams
Hypo, in proportion of 1 oz. hypo
to 5 oz. of water ... 3 drams
Water ... 7½ drams

The exposed plate was put in a tray and The exposed plate was put in a tray and the above flowed over it. In a few seconds the image appeared, gradually increasing in strength. Finally it began to be fixed, and when the operation was concluded the result was a perfectly developed and fixed plate, ready to be washed.

There is no necessity, however, for the amateur to go to the trouble of mixing his own developer. The company making the pyrocatechin also supplies ready for use a developer under the name of "Elconal F."

When the negative is over-exposed, a few drops of a ten per cent solution of bromide of potassium must be used, with the addition of more water.

Indoor Exposures.

A new way to determine the proper time of exposure indoors is suggested by a writer in Camera Obscura. For this purpose he uses a strip of any printing-out paper. Half of this is covered, and the other half exposed a convenient time outdoors. It is then brought into the room, and the other half uncovered, and exposed until it reaches the same color as the first half, which of course has been covered meanwhile. The ratio between the two exposures gives the number of times the interior exposure must be that of the proper exposure outdoors, which may be judged by experience.

Combined Toner and Fixing Bath.

The following recipe from a foreign photographic journal for a combined toning and fixing bath is said to give good results: Water 1000 cc
Lead acetate 18 g
Potassium chloride 20 g
Pulverized chalk 15 g
Sodium hyposulphite 275 g1000 ccm

After the solids have dissolved add 0.3 g or 5 grains of gold chloride. Filtering is unnecessary. This quantity of gold will tone about fifty cabinets, and then an equal amount of gold chloride may be added, and fifty more prints toned, after which the bath should be thrown away.

Backing for Plates.

A popular formula for backing plates consists of: Mucilage1 oz Caramel 1 oz
Burnt sienna ground in water 2 ozs

Mix well. Add two ounces of alcohol. Apply with a brush, and let it dry before placing plate in holder. All this must be done in the dark room. After making the exposure and before developing, wish off with a damp cloth or sponge.

Photographic Hints.

Uneven development is often caused by not sufficiently rocking the tray.

It is said that a drop or so of hypo solution to the developer will act as an accelerator. tion to erator.

Amateur photographers with a taste for experimenting are advised to load a plate-holder with Rutograph paper, and expose; then develop the paper with the developer recommended by the makers. The expose must be longer than for a plate. This will be found out by experimenting. Try ten or fifteen minutes.

Second Prize Photo, by Willard Bennett, Chatham, Ont.

Loading the Plateholder.

The editor of the "Photographiches Wochenblatt," a German publication, announces that all that is necessary in filling plateholders at night time is to put a burning candle on the floor and use the light reflected from the ceiling to work by. It takes more than forty four seconds to make an impression on the most sensitive plate, he says—more time than is required to load the holder. He finds even that a plate thus treated will render the fine detail in the shadows better than one which has been kept in absolute darkness.

Excellent Pictures.

Excellent Pictures.

"The Red Bridge." by Isaac Eshelman, Reading, Pa., is a nice bit of photography, but slightly overtoned; otherwise the foreground would not be red and the bridge green. "Out for a Picnic in the Fields," by Louis Beauvis, Chicago, is clear and nicely toned, but would be improved by cutting off two-thirds of the foreground. "Autumn Sports," by Louis J. De Pass, Watertown, Mass., shows a big kite, and it looks as if in a brisk wind it will take both the boys to hold it down. "Hunting in the Woods," by Ward L. Kyser, Canton. Ill., is a fine plece of outdoor photography. It would be well to cut off the fogged place in the foreground. The five pictures of Catskill mountain scenes, by C. M. Fessenden, of Stamford, Ct., are good. So also are the two views by Francis Compton, Elkhart, Ind. Irving W. Stoddard's picture of a river scene has merit. E. B. Crosby, of Lockport, N. Y., sends a good photograph of the scene around the house in Buffalo, where President McKinley died. It was taken a few hours after the president died, and should have found a place in the columns of some local paper in Lockport at that time. Howard S. Wheeler's picture of Scituate Beach shows beautiful cloud effects.

Gun vs. Camera.

There are now hunters of game with guns, and hunters with cameras, and it is said that the latter are becoming the more popular with those who love real sport. They find in the camera "all the elements that make hunting fascinating, without its cruelty. It is particularly recommended to young people, who, in photographing birds and the smaller wild animals, have all the excitement and amusement that they could wish for, with a healthful and wholly beneficial study of nature. The photographing of cases of cruelty to animals, or of the results of cruelty, is becoming quite common. A snapshot of a case of this kind may often be conveniently taken, and the picture is the best evidence that can be produced in court when the offender is to be prosecuted."

Gold and Silver Inks.

Nothing looks better to set off a photograph intended for a greeting, says the British Journal of Photography, than to write on the mount its title, or some appropriate remark, in gold or silver ink. This ink can be easily made. There is bronze powder, both gold and silver, sold for this purpose. They cost from ten to fifteen cents a package, and can be found in any art store. A little gum water is made, in which the powder is incorporated, and the writing done with an ordinary pen or a quill, whichever is preferred for the purpose. Of course, the powders made of the real precious metals are expensive, but can be obtained if required. Another method—though, perhaps, hardly so satisfactory—is to write with the gum solution, and then dust the powder over afterwards whilst the writing is wet. The result in either case is a fine, dull surface, which can be burnished with an agate tool to a beautiful shine, and looks very effective.

A Cheap Dark Room.

A Cheap Dark Room.

Many would-be photographers are deterred from taking up this scientific pastime by difficulties in the way of a dark room. The following is a cheap and efficient way of making a portable developing arrangement: Procure a large wooden box, remove the lid and cut a hole say 8x10 in the bottom, in which it would be well to insert a piece of ground glass to equalize the light. Fasten over this two sheets of postoffice paper, ruby fabric, or a ruby and yellow glass. Place the box on its side on a table, and attach to the open edges sufficient opaque material to reach the floor. You can then take a chair, and, sitting down with the cloth over your head, close up your window and look for white light entering anywhere. When you have darkness inside you can change plates or develop with safety, by turning the window of the box toward a north window by day, or placing a lamp in front at night.—The Camera and Dark Room.

When a Plate is Fixed.

The usual way of feeling sure that a plate has been permanently "fixed" is to leave it in the hypo bath four or five minutes after all the emulsion on it has disappeared. In order to discover when a plate is really fixed the Technical Committee of the Photographic Society of Philadelphia carried out a series of experiments with the following results:

A 1:4 hypo bath was used. It took an average time of seven minutes in this solution to clear a developed plate, the fixing bath being at 65 degrees Fahrenheit.

Two plates, after washing for ten minutes in a strong current of water, were tested, and a silver reaction was at once given.

given.

Two other plates after washing for two hours, proved to be entirely free from

The conclusion arrived at is that it is not necessary to leave the negative in the hypo bath after it has cleared, but thorough washing is absolutely necessary, and cannot be omitted if both silver and hypo are to be fully removed from the film.

Sympathetic Pictures.

Sympathetic pictures are pictures which are invisible on a piece of white paper, but become visible as soon as they are immersed in water and invisible again as the paper gets dry. The process by which they can be made is the following:

Procure a good quality of paper (photographic plain paper) and remove all gelatine or starch which it may hold in its fibres by muriatic acid. Wash and dry.

Now prepare a solution of gelatine four

Now prepare a solution of gelatine four parts, water one hundred parts and let the paper absorb as much of it as it can hold. Hang up and when dry sensitize it by floating it for three to four minutes on a solution of four parts of bichromate of potassium and one hundred parts of water. potassium and one hundred parts of water. It is ready for printing now. The printing is done in the usual way until a brown picture is distinctly visible. The print is washed now, until all traces of bichromate are removed, and finally treated with hot water to remove all traces of gelatine. A faint impression may be visible yet, but this is easily obliterated by a solution of sulphite of soda to which a few drops of sulphuric acid are added (or sulphurous acid will take it out). When dry now, there is no trace of a picture visible, but it will appear as soon as the paper is wetted.—St. Louis and Canadian Photographer.

Answers to Correspondents.

Arthur Klingner -The camera and plates you inquire about are all right.

Carl Erb—Always use a tripod when taking pictures in the woods. The light is very deceiving, and it is next to impossible to get a satisfactory snap shot.

Glenn Merry—To produce olive tones in your aristo platino paper, do not tone out in the gold all the red Just clear the whites. The warm tint shown in the gold will turn to olive in the platinum. As one photographer puts it: "Clear your high lights only in the gold bath."

Charlie White—In exposing for an interior where no windows appear in the field of vision, you can let the plate "eat up" the shadows for from fifteen minutes to half an hour—the latter if it is very dark in the shadows. Then develop with old developer, or with plenty of bromide in it.

Harry Yates.—Velox paper turns yellow if the development is carried too far, or if it is not immediately completely immersed in the fixing bath and moved around. The American Avistotype Co., Jamestown, N. Y., make platinum paper. A good time to take outdoor pictures is when the sun makes long shadows; but there is no fixed rule. All the plates 2½x4 are good enough without bothering about any particular make.

PHOTOGRAPHS WANTED II Original, unamateur work; artistic, historical, catchy, comic or
current events. Highest cash prices for suitable

An American Boy in India.

An American Boy in India.

There are readers of THE AMERICAN
BOY wherever the English language is selling year old boy who lives at Decay.

"I like THE AMERICAN BOY very much, We have no boys' japer out here is not nearly so nice as yours. I am interested in secting what Americans do we are very helpless here, because Hindoes and Mohammedians despise those who do four country to make the servants of which we have so many so everything fived all her life among the English Boyched Here are very different ways of life out here are very different fived all her life among the English Boyched Here are very different ways of life out here are very different ways of

Mary Had a Billy Goat.

By HAZEL HENDERSON, & BOY.

Mary had a Billy Goat,
Its tail was some what Bent.
and every where that mary goes,
the Goat is shure to went.
It followed her to school one day.
it made her hot as fire,
for she had got there on her wheel,
and Billy ate the tire.
the wheel was some what Broke and bent.
But it was Mary's best.
When she leaned up against the fence Billy ate the rest.

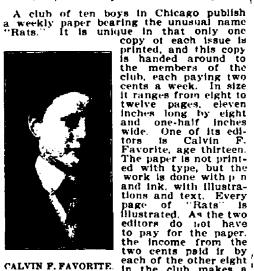

Charles A. Phelps, known at Fort Wayne, Ind., as King of the Newsboys, writes THE AMERICAN BOY that he believes that paper has given a great impulse to many American boys to do right, and that he highly commends it. He says the members of the Fort Wayne Boys' Union have received a great advancement from having read to them articles that appear in THE AMERICAN BOY.

Young Phelps is President of the Union.

Paul A. Mastenbrook. Grand Haven. Mich., aged thirteen, sends a pen and ink locomotive, under which he has written "The American Boy is progressing with the speed of a locomotive." It is a good piece of work.

THE YOUTH'S COMPANION, 201 Columbus Ave., Boston, Mass.

the circulation appears to exceed that of the Tribune. Chronicle and Inter Ocean combined. They assert that their circula-tion is now 2,180,000,000,000,000,000,000. Any one outside the club who desires to see "Rats" has to pay ten cents a week for it.

The Knickerbocker Amateur Press Club meets alternately in Brooklyn and New York. The Club already has thirty members, but will gladly welcome new members, to whom it will certainly prove of interest and benefit. B. Franklin Moss, 40 West 114th street, New York, is the Secretary. Secretary.

J. Lewis Oliver, a Lynn (Mass.) boy of seventeen, tells how he is succeeding as an amateur printer. "About four years ago." he says. "my father bought me a small press, 2½x3½, on which I printed small cards and envelopes. After using this press a year I bought a 5x8 press, and this I kept busy for two years. With it I did theater printing. Then I bought a 7x11 foot power press and a 3x5 ticket press, and now I have at times as many as four men working for me. I started business with one dollar and the press and two fonts of type, and now I run three presses and have two or three hundred fonts of type. Don't you think that is pretty good for a boy under seventeen?"

Harry L. Nado, Danielson. Conn., though only ten years old, is quite a successful job printer. He has a press that prints a page seven by ten inches. His work, judging from the sample sent us, is very good indeed, though we would criticles it on the ground that he uses too many different kinds of type in one advertisement; then, too, the fancy type used cannot be easily read.

The paper is not printed with type, but the work is done with p and ink. With illustrations and text. Every page of 'Rats' is illustrated. As the two editors do not have to pay for the paper. The income from the two cents psid ir by each of the other eight in the club makes a net revenue of sixteen ever who has a boy ought to subscribe for him. In your last number you printed an article entitled 'The Gentleman.' Do not fear to reprint over again the same lesson. Our boys should learn how to respect age, poverty and misfortune. I recently read an article in the Chicago woman writing to THE AMERICAN BOY says: "I will miss no opportunities to recommend your magazine. It is worthy of all encouragement. It fills the wants of every boy. There is no nobler task than to educate boys—the boys who will be the men of the future—to make them love all that is pure and boautiful, to teach them to be industrious, to value time and appreciate the chances of thing for that purpose, and I think every mother who has a boy ought to subscribe for him. In your last number you printed an article entitled 'The Gentleman.' Do not fear to reprint over again the same lesson. Our boys should learn how to respect age, poverty and misfortune. I recently read.

THE AMERICAN BOY is the only official organ of the Agassiz Association and should be in the hands of every member.

All correspondence for this department should be sent to Mr. Harlan H. Ballard, Pittsfield, Mass. Long articles cannot be used.

THE AGASSIZ ASSOCIATION welcomes members of all ages, and any one who is interested in any form of natural science is invited.

Established in 1975. Incorporated in 1992.

Short notes of personal observations are particularly desired for use in the A. A. department. Send Illustrations when convenient. Questions are invited.

Address H. H. BALLARD, Pittsfield, Mass.

Curious Trees.

We have had a great many interesting letters about and pictures of freak trees and this month will publish some of them.

A Drawing of a Freak of Nature.

It is in the form of two trees, about seven feet apart, connected by a limb about twelve feet above the ground. It is situated across the Wabash river, about two and a half miles from here, on the Illi-nois side of the river.— Henry W. Halls, 815 Seminary street, Vin-cennes, Ind.

Peculiar Plum Tree.

I send you an exact drawing of a peculiar plum tree. It is about five years old, and twelve feet high.

old, and twelve feet high. When it came from the nurseries and was planted it was a fine specimen, not unlike any other. After planting it, no attention was paid to it for a year or so. It had grown together in two places. I suppose that the rubbing and pressing together of the tender, young limbs had caused this peculiar growth. On the large knot formed at the upper connection half a dozen strong

connection half a dozen strong limbs have grown. Although there are some appearances of decay at this point, the tree is in splendid condition and bears a tremendous crop of plums regularly.—Eugene H. Blake, Greenwood, S. C.

Douglas Pine.

Raspberry Bush Growing in Tree.

I found a very queer thing the other day, it was a good-sized raspberry bush growing in the heart of an elm tree. The bush was situated about twelve feet from the ground. The queer creatures found in a cistern are very likely the young of mos-outloos.

noticed several times that cats and dogs turn round before lying down. I have heard that their ancestors did the same thing so as to crush down the rank grass in which they lived, thus forming a sort of nest. Please give me your opinions.—G. F. Dutt, 338 W. Perry St., Tiffin, Ohlo. quitoes. I have

In this rude drawing I have tried to show two branches that have grown together. That part of the two branches that connects them is very gnaried. I am very much interested in natural history.—Frederick D. Seward. 4 Childs Block. Binghamton, N. Y.

Report of Livermore Lookabout Club.

Since organizing Chapter 243, we have harned of many interesting things and found in our rambles two trees worthy of mention. One was a pine tree, Fig. 1.

Some horse had jumped or been forced through by others, and there hung in the tree as in a vise. The more the animal struggled the tighter it was wedged in. Its bones are all that tell the tale, but what a pitiful tale they tell.

I saw a pretty sight last fall. I was standing in the doorway of a neighbor's house that was surrounded by large cottonwood trees. A whirlwind carried the leaves over the house in a beautiful shower. Looking up as far as the eye could reach leaves over the house in a beautiful shower. Looking up as far as the eye could reach they filled the air like snowflakes. Whirling and slowly sailing, down they came, a beautiful golden shower.—Mrs. Belle Olson, Livermore, Colo. Livermore, Colo.

About Two Birds.

There is a small bird making a nest in a vine on my porch. I put out some threads and he wove them into his nest. There are no eggs yet.

no eggs yet.

Last summer I had about a thousand bulbs of gladiolas, and there was a humming bird that came around every evening and sucked honey out of the blossoms. I caught it and put it under a glass with holes in it, and also put some flowers in I looked at it awhile, and then let it go. It did not seem afraid, but went right back to the flowers.—G. M. Stack. Box 135, Still River, Conn.

Fir Tree.

I enclose a sketch of a fir tree which was in some way deformed. Just below the burl it was seven inches in circumference, the burl twenty one inches, and just above the burl it was five inches. To all appearances the tree had been dead for a great many years. It grew in a thick forest and in sandy soll. What was the matit?—Chester N. Reynolds, Saint Vash.

with

While I was out in the country last Sun-

1000

While I was out in the country last Sunday I saw something that I thought was very curious. There was a large maple tree, and the first branches were about eight feet from the ground. About six feet up was the end of an old neck yoke sticking out a half of a foot from the side of the tree. In between the first two branches was an old-fashioned skate overgrown with wood. They had been put up in the branches and left there until overgrown. Here is a small drawing of it that will give you an idea.—Charles Showers, 423 South Dubuque St., Iowa City, Iowa.

Peculiar Dogwood Tree.

I present herewith a sketch of a tree which is very curious: it has a prong which grows out about two feet from the ground and extends about one foot up and goes back in. About two feet higher grows another, which grows back in. and then is smooth. It is a dogwood tree, and a squirrel was be-tween the limb and the tree. dead.—S. W. Overstreet. Ephesus, Bedford Co., Va.

The Ant-Lion.

leon.—T. Sch ams County.

While near a

cherry tree this spring I noticed a very peculiar leaf, and as I was interested in plants and leaves I carefully broke it off.

Near the center of the leaf, growing on the mid-vein, were sevent-en small fibers, each having a tiny bulb on the end These fibers were so small that they were scarcely visible they were scarcely visible and resembled small hairs.
The bulbs were about the size of a small radish seed.
—Dale J. Noland. Frankton. Ind.
The bulbs are eggs of some small insect, probably. (Ed.)

Ducks and Frogs.

One day in the summer of 1899 I was down at the pond watching the ducks swim. I happened to look at a little duck off at one end of the pond. It was standing on its head in the water. It did not rise upfor some time. After awhile I saw something making waves close beside it. I ran around there and saw that a frog had it by the head, trying to swallow it. I caught the frog and pulled the duck's head out of the frog's mouth and turned it loose. It seemed none the worse after its experience.—Guy W. Fitzgerrell, Fltzgerrell, Ill.

One day last summer, as I was walking through the pasture. I noticed a bird hanging by its head to a branch of a cottonwood. On in vestig a tion, I found the bird had a horse-hair wound around its neck and then around the branch. Whether it had been out thereby anything else or had been but there
by anything else or
it had committed
suicide I am unable
to tell. The bird was
a gold finch.—Gary Roddy, Grelley, Colo

I have been an interested reader of the Agassiz Association columns in THE AMERICAN BOY and have been studying Botany and Zoology in the High School. I wish to become a member of the Association. While on a tramp two years ago this summer a friend of mine and I were following a partially dried-up creek bed. We had just come around a sharp bend in the creek when I noticed, about fifteen feet in front of us, a snapping turtle and a large snake, about two feet apart, gazing intently at each other. The turtle was about six inches long and the snake was about four feet. My friend had been very anxious have been an interested reader of the assiz Association columns in THE

to secure snakes and he ran forward and stunned it with a club while I got the turtle and put it in a flour bag. If we had turtle and put it in a flour bag. If we had waited we might have seen something interesting. We found that the snake was a harmless one, but I do not remember the kind. It was yellow on the underside and mottled dark-red and black on the back. I think its greatest diameter was between one and a half and two inches.—G. Edwin Knapp. 301 East Mulberry St., Bloomington, Ill.

Observations from Nature.

Last year I kept a note book in which I recorded anything that I observed in nature that interested me. (And. by the way, I would advise all students of nature to keep one to record their observations)

thre to keep one to record their observa-tions.)

The following is taken from my "Ob-servations from Nature."

I used to think that grasshoppers and the like always perished as soon as cold weather came on in autumn, and that the new generations were hatched by the

weather came on in autumn, and that the new generations were hatched by the warmth of the sun, out of eggs laid the previous year.

This idea was somewhat shattered today, when as I was plowing a piece of sodland that had been used as a hay field the past few years, and on which a number of pocket-gophers had been working the previous year. Every once in a while I would plow through one of these holes, and in mostly all I would find a number of bleached and faded out grasshoppers, and crickets of all sizes. They all seemed dull and stupid, and hopped awkwardly around upon being exposed to the light.

From this it strikes me that they must hibernate like the woodchuck and his kind; but it may have been that as last winter was mid the ground did

that as last winter was mid the ground did not freeze to so great a depth. However, if this depth. However, if this was the case what did they live on?—C. L. Mc-Nally.

A Large Rock in Stokes County, N. C.

Last summer I found a caterpillar (Fig. 1), which I took home and put in a glass case, and also some leaves and twigs with it. In September it spun a cocoon

temper it spun a cocoon (Fig 2).

I kept it in a warm room all winter, and next May a butterfly about six and one-half inches long, came out of the cocoon (Fig. 3). The roccoon was about three

HEAD

the cocoon (Fig. 3). The cocoon was about three inches long. As you will see in the sketch, the cocoon was fastened to a twig and it was deadgrass color. The caterpillar was covered like a prickly pear. Can you tell me the name of this species of butterfly? They are very rare around here. I would like to learn to draw pictures of insects, birds and animals and everything a person will come across when studying nature.—J. S., Iron Belt, Wis., Box 2.

DEAFNESS OR HARD HEARING ARE NOW CURABLE

ALL CASES OF

by our new invention. Only those born deaf are incurable.

HEAD NOISES CEASE IMMEDIATELY

F. A. WERMAN, OF BALTIMORE, SAYS:

BALTIMORE, Md., March 30, 1901.

- Being entirely cured of deafness, thanks to your treatment, I will now give you my case, to be used at your discretion. Gentlemen: a full history of my case, to be used at your discretion.

About five years ago my right ear began to sing, and this kept on getting worse, until I lost my hearing in this ear entirely.

I underwent a treatment for catarrh, for three months, without any success, consulted a num-

I underwent a treatment for catarrh, for three months, without any success, consulted a number of physicians, among others, the most eminent ear specialist of this city, who told me that only an operation could help me, and even that only temporarily, that the head noises would then cease, but the hearing in the affected ear would be lost forever.

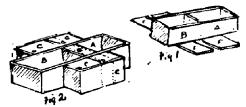

I then saw your advertisement accidentally in a New York paper, and ordered your treatment. After I had used it only a few days according to your directions, the noises ceased, and to-day, after five weeks, my hearing in the diseased ear has been entirely restored. I thank you heartily and beg to remain

Very truly yours.

P. A. WERMAN, 730 S. Broadway, Baltimore, Md.

Our treatment does not interfere with your usual occupation. Examination and advice free. YOU CAN CURE YOURSELF AT HOME at a nominal cost. INTERNATIONAL AURAL CLINIC, 596 LA SALLE AVE., CHICAGO, ILL.

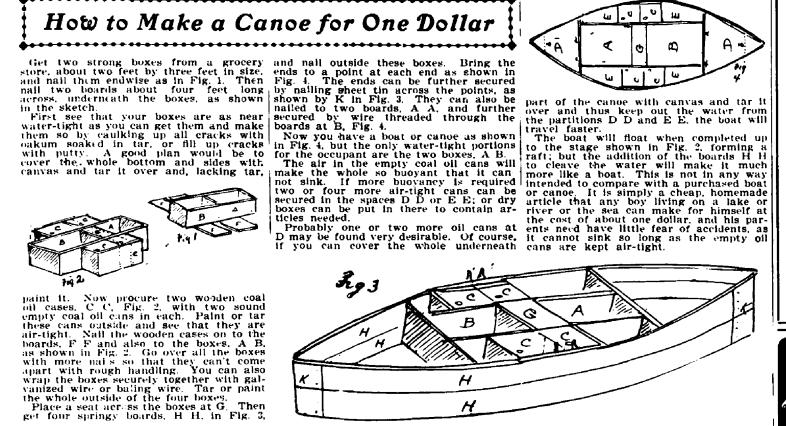

How to Make a Canoe for One Dollar

paint it. Now procure two wooden coal oil cases. C C, Fig. 2, with two sound empty coal oil cans in each. Paint or tar these cans outside and see that they are air-tight. Nail the wooden cases on to the boards. F F and also to the boxes. A B, as shown in Fig. 2. Go over all the boxes with more nails so that they can't come apart with rough handling. You can also wrap the boxes securely together with galvanized wire or baling wire. Tar or paint the whole outside of the four boxes.

Place a seat across the boxes at G. Then get four springy boards. H H, in Fig. 3,

Bennett Clark, Bowling Green, Mo. thinks we ought to start a subscription for the boys' building and offers to give a dolard toward it. Clarence H. Wortman, New Concord, O: Leroy H. Ault, Costonia, O., and William Crary, Marshalltown, Ia., also suggest that the boys set to work and raise money for the building among themselves.

Vincent E. Dailey of Athens N. Y...

also suggest that the boys set to nor any raise money for the building among themselves.

Vincent E. Dailey, of Athens, N. Y., suggests that the boy's building at the St. Louis Exposition should contain a department for a library of boys' books, the books to be furnished by publishers; that there be a department showing work done by boys; that the attendants in the building should be boys.

This boy says he went to the Panamerican Exposition, having earned his way with his printing press.

Harry Hadley, Chambersburg, Ill., suggests that we name a date when every subscriber to THE AMERICAN BOY shall write a letter to the Board of Managers giving reasons why he thinks such a luilding should be erected. He thinks the boys of America could easily stagger the management. Harry has an uncle in St. Louis who is a physician, and he is going to write to him and ask him to use his personal influence.

personal influence.

Harry promises to tell the boys something about feeding pigs.

A Sample Letter of Approval.

Nashville, Tenn., Aug. 12. 1901.

Editor "THE AMERICAN BOY,"
Detroit. Mich.:
Dear Sir:—I note what you say in your announcement concerning the proposed Boys' Building at the St. Louis Exposition.
I want to heartily endorse this effort, as I believe it can be made the most interesting and instructive building of the entire Exposition, as at this time the needs and conditions of boys are being studied more than ever before, and many of the greatest men of our day are endeavoring to solve some of the great problems of boy life. If I can serve in the slightest way in this movement, please command me.

At the recent jubilee of the Young Men's Christian Association at Boston, of all the exhibits, the one made by the Boys' Departments attracted by far the most attention. I believe the Boys' Departments over the entire world would be glad to place an exhibit of work being done, and give the movement their support. An exhibit such as we had at Boston would make the building a success, but of course a much better exhibit would be arranged for the Exposition, as we are making rapid progress in our methods, and there would be hundreds of other features of an educational nature. I hope the plan is pushed through.

Very truly,

A. ALLEN JAMESON.

Commendation from a Worker for Boys.

PROFITABLE EMPLOYMENT.

With the approach of the holiday season, when the subject of presents is in everybody's mind, what more pleasant and profitable employment could you have than acting as representative for THE AMERICAN BOY in your locality? You will find mothers, and friends of boys generally, interested at this season of the year in a publication that appeals, as does THE what more pleasant and profit-AMERICAN BOY, to the young fellow for whom we have usually some trouble in selecting suitable presents. THE AMERI-CAN BOY makes a good Christmas present—a present that has value all through the year.

In another column we show our Christmas card. This card we furnish free of charge to any one who wishes to use THE AMERICAN BOY as a Christmas present. It is printed in two colors and is attractive. If you want to solicit for THE AMERICAN BOY during the next sixty days, drop us a postal card to that effect and we will send you sample copies and give you liberal terms.

How Do You Treat Your Sister?

It is the easiest thing in the world for a boy to be polite to some other fellow's sister. Then why is it that some of them find it so hard to remember to be equally courteous to their own sister? Many a boy is rude to this sister without readily realizing it; in other words, he forgets to be polite. Then, again, he is afraid of being dubbed as "sissey" if he should be caught paying some attention to his sister. It is a bad habit for any one to get into—that of saving ones polite ways for outsiders.

If she asks you a question, don't answer her in a rude or careless manner, as if you thought she did not know what she was talking about, and wasn't worth listening to.

Don't tease her, or make fun of her in a way to hurt her feelings. You wouldn't do that to some other girl.

You can just bank all you have on the boy who is kind and thoughtful to his own sister, for you may be sure he will develop into the right sort of a man, and is bound to win the respect and admiration of every one. our Christmas card. This card I most cordially commend the idea of a Boys' Building at the Louislana Purchase Exposition, with all that the idea implies in the way of exhibits of the brain and brawn of American boyhood. The suggestion opens up a world of possibilities of absorbing interest to the boys and their legion of friends. By all means, the promoters of the Exposition should indorse this plan. The designing of the buildings, and so far as possible the construction of the same, together with the collection and arrangement of the exhibits, should be done by boys; the general direction of that feature of the Exposition should be in the hands of competent boys, with possibly an adult directory; rallroad excursions on a large scale should be promoted; patriotic processions and geographical and historical

"The American Boy Shut-in Society"

Every boy who is sick or crippled and compelled to remain indoors from morning till night, day after day—one who is likely to be confined to his home for months or years to come—may have a free subscription for one year to THE AMERICAN BOY. Such a boy is entitled, also, without any cost to himself, to be a member of THE AMERICAN BOY SHUT-IN SO-CIETY.

New puzzles to be printed and answers to the Tangles should be addressed to UNCLE TANGLER, care AMERICAN BOY, Detroit, Mich.

Raymond MacNeal, 577 N. Laurel St., Hazleton, Pa., wins the prize for best new and original puzzles received by October 15. One of his contributions appears in this terms.

Others who sent in answers to the Tan-

Others who sent in answers to the Tangles or contributed new puzzles, are: Harry E. Schreppel, Arthur H. Myer, Fayette Jones, I. Donald Huston, Warren P. Lovett, Stanley C. Hill, E. Kahner, George H. Bell, Henry W. Hall, Will H. Sampson.

The October Tangles were unusually lengthy and hard to unravel, while the time between their publication and the date of the award of the prize for best list of complete answers was too short to enable many to compete with any hope of success. To obviate this in future and give the Pacific Coast and other far-away Tanglers time enough to have a fair show. Uncle Tangler proposes to receive answers until the twenty lifth day of each month instead of the lifteenth as heretofore, and postpone the announcement of the prize winner until a month later. The award for the best new puzzles will be made and announced as usual in the issue first following their receipt.

susual in the issue first following their receipt.

Alphabetical Geography, Tangle 24, in the September issue, has challenged our persistent Tanglers to seemingly tireless research. Answers are still coming in, the highest number of geographical names beginning and ending in A so far reported being 53, by I. Donald Huston, of Mobile Fayette Jones, of Mt. Pisgah, Ia., finds 561; Arthur H. Myer, San Francisco, over 500, while Warren P. Lovett, Sandersville, Ga., finds in the United States alone over 200 cittes and towns that fulfill the conditions. As information regarding the 1900 census is not everywhere commonly accessible as yet. Tanglers residing in the smaller towns and seeking to solve the Census Tangles. Number 42, in this issue, may have to ask the postmaster or the editor of their local paper for the required figures. Populations of all cities exceeding 25,000 will be found in a booklet. "Great Achievements of the Nineteenth Century," that can be obtained free by writing Jones & Hyde, 289 Dearborn St. Chicago, and enclosing a stamp.

The prizes this month will again consist of two interesting books for boys, one of which will be given for best new puzzles for publication, and the other for best complete list of answers to this month's Tangles. The award for new puzzles will be made November 15 and announced in the December number, while that for correct answers will be he'd onen till November 25 and announced in the January number.

Answers to October Tangles.

Prize Puzzle.

37. DOUBLE ACROSTIC.

Each word consists of six letters. The initials spell the name of a celebrated English tragedian who died January 22, 1863, and the finals the name of a celebrated English statesman who died January 23, 1806.

A water fowl you'll please to find. A water fowl you'll please to find.
An ancient prophet bring to mind.
Relating to the stars, you'll see.
A wretched fellow this will be.
An azure stone now greets the sight.
A point of time now bring to light.
A method or a scheme's here seen.
To steal a child, this word doth mean.
A scripture name doth now appear.
A skillful person look for here.
And now we float on water clear.
—R. M. N.

38. CHARADE.

My first we all should give to God For blessings on us poured;
My second is more blessed than To lay by a great hoard;
My whole's a day that's set apart,
When joy and praise should rule each heart.

—Queen Zero.

-The Empress.

Our 45 Day Offer

46. THANKSGIVING BLANKS.

Fill the blanks with words pronounced alike, but spelled differently:

1. When we were — the turkey our eyes — with delight. 2. We had to — the turkey — the dressing would not come out. 3. I would like to — how a Thanksgiving dinner is served at — 1. I will try to — this turkey to the man in the — 5. We went a long — to — the turkey. —Herbert Whitney. 43. CENSUS TANGLES.

All the figures will be found in the U. S. official census of 1900:

1. The population of Greater New York is 3,437,202, which is exactly equal to the combined population of the following cities: Chicago, Philadelphia, Newark, N. J.; St. Joseph, Mo.; Lincoln, Neb.; Taunton, Mass., and Easton, Pa., plus the number by which Newport, Ky., exceeds Woonsocket, R. I. Prove it.

2. The largest city in the largest state in the U. S. is exactly as much smaller than the largest city in the smallest state as the sum total of the populations of Schenectady, N. Y., Rockford, Ill., Butte, Mont., and Montgomery, Ala., less the number by which Kansas City, Kansas, exceeds Portland, Me. Prove it.

3. According to the official census, Salt Lake City, I'tah, exceeds San Antonio, Tex.; Covington, Ky., exceeds Akron, O.; Augusta, Ga., exceeds Pawtucket, R. I., and Atlantic City, N. J., exceeds Hay City, Mich., by exactly the same number of people in each case. What is this uniform difference in population between the cities named?

44. TANGLED MAP.

47. DOUBLE DIAMOND.

Read across: 1. The sixteenth letter of the alphabet. 2. Very welcome when the sandman comes. 3. The capital city of a Western nation. 4. A boon to bald heads. 5. A consonant in Episcopalian.

Read down: 1. The seventh letter from the end of the alphabet. 2. A weapon. 3. The capital city of an Aslatic nation. 4.

The capital city of an Asiatic nation.
To delve. 5. An exclamation.
—Marshall.

48. ARABIAN NIGHTS ACROSTIC.

48. ARABIAN NIGHTS ACROSTIC.

The initials give the name of a celebrated Arabian Nights' character:

1. The grand vizier's daughter, who told the Arabian Nights' tales to her husband, the Sultan.

2. The last name of "Scheich," who so royally entertained Noureddin and the fair Persian.

3. The father of Bedreddin Hassan.

4. The physician who cured the Greek king and whose head spoke after it was cut off.

5. The Princess of China, daughter of King Giaour, who married Prince Camaralzaman.

6. The son of the Chinese tailor, Mustapha, who wedded the Sultan's daughter and did many wonderful things with the aid of the genie of the lamp.

7. The sister of the relater of the Arabian Nights tales.

—Uncle Tangler.

Playgrounds for City Boys and firls.

Good men and women in the cities are giving their attention to finding play-grounds for children in the crowded tene-ment districts. Mrs. Courtwright, of Chi-cago, has opened a day and evening play-ground for the children of the First Ward It is located in Plymouth Court, just south of Harrison street, and the night it was opened about five hundred children enjoyed its seclusion.

its seclusion.

The purpose of the playground is to keep the children from the street. The lot is bare of grass and is fenced in, and Mrs. Courtwright has filled it with swings, ladders, punching bags, rings, etc. Mothers came with their bables and gave them such a treat as they had never had before.

There is talk of making a place on the Lake-Front Park for a free playground for the First Ward children. Golden Gate Park, San Francisco, has such a playground, with grass, a fountain, ponies to ride, go-carts, marble and ball grounds, and the like. It is for the children of the poor.

The Boy Who Won the Baseball Outfit.

In our June number we offered to the boy who came nearest to telling where in the United States during the month of June the thermometer would register the highest temperature, twenty eight dollars and eighty five cents worth of Spaiding's League baseball goods. According to the terms of the offer, if there were several who chose the same spot, the winner was to be determined by lot. The Government report showed that two towns in the far west, namely. Salton two towns in the far west, namely. Salton and Volcano Springs, Cal., took the palm for hottest weather. There were several boys who selected these towns, and the

JAMES ADAMS.

winner was chosen by lot, the names being written on slips of paper, thrown into a hat, and the drawing was made by Mr. Ormond F. Hunt, Prosecuting Attorney of the County of which Detroit is the County Seat. His certificate follows:

State of Michigan, \ SE.:

County of Wayne, (88.)

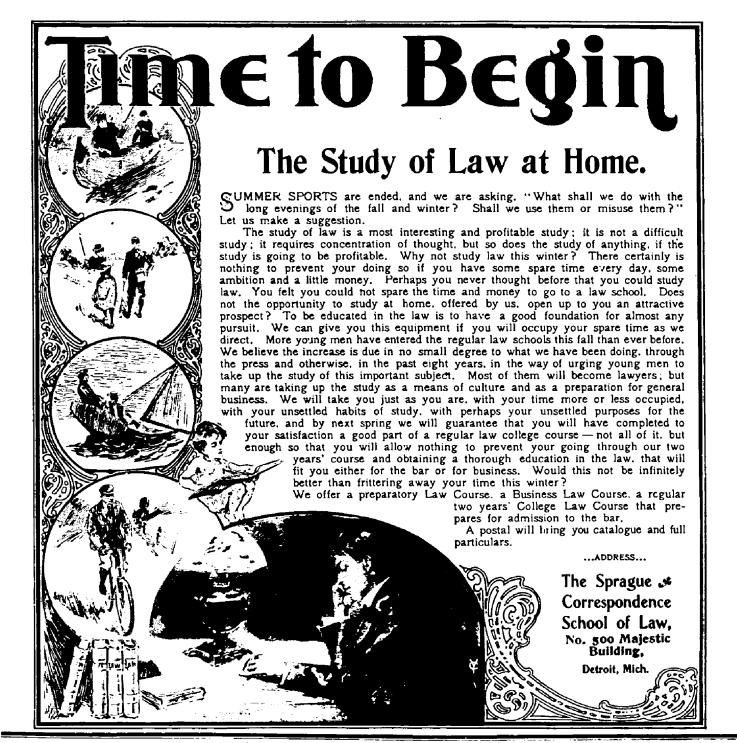

This is to certify that on August 19, 1901, I deposited in a hat slips of paper bearing the names of James Adams, Rex C. Leeper, Richard Bonorden, Willie McBride, Louis Straka, Ross Seasly, Edison Belt and Harold W. Wiley, and that these slips were of the same size, shape and color. Further, that I then, without looking in the hat, placed my hand therein and drew forth one of the slips, and that this slip bore the name of James Adams.

ORMOND F. HUNT. ORMOND F. HUNT.

Prosecuting Attorney, Wayne Co. Mich. Detroit, Mich., Aug. 19, 1901.

The following letter has been received from the winner:

Columbia City, Ind., Sept. 13, 1901.
Sprague Publishing Co.,
Gentlemen:—I received your letter on the tenth, and am pleased to say that the baseball outfit was received a few days ago. It is all just as represented, and I am very

proud of it. My friends are all willing to help me use it. I was fourteen years old the second of July. I thank you very much for the outfit and wish THE AMERICAN BOY many years of success.

Very respectfully,

JAMES ADAMS.

In Writing Advertisers.

In writing firms and individuals whose advertisements appear in THE AMERICAN should be in early to insure good position.

BOY please mention THE AMERICAN BOY; call attention to the fact that you saw the advertisement in these columns. This helps the advertiser and helps us. At any rate see that in addressing the advertiser you use his exact address as it appears in the advertisement without omitting post office box, street address, or other seemingly unimportant parts of the address.

Advertisements for our Christmas number

Binders for "The American Boy."

You want to preserve your copies of THE AMERICAN BOY. You want to keep all the numbers together in nice, clean condition. Then you need one of our AMERICAN BOY BINDERS, made especially for THE AMERICAN BOY, and so constructed that each number, as it is received, can be slipped in and fastened, and when the twelve numbers of a volume are completed you have a book with good binding, embossed with the title, THE AMERICAN BOY. The price is \$1.00 delivered.

The American Boy as a Christmas Present

Don't you want to give a subscription to The American Boy to some one or more boy friends, this Christmas? If so, drop us a postal card telling us how many subscriptions you will have to send in, and we will send you FREE OF CHARGE a sufficient number of these Christmas Cards, in colors, for you to mail to your friends.

CHRISTMAS CARD

The American Boy for One Year

To___

HAT you may have a happy Christmas, and that it may last all through the coming year, I have sent a subscription for you to the Sprague Publishing Company, Detroit, Mich., for THE AMERICAN BOY for one year. I hope you will get great pleasure and good from its monthly visits. The first number should reach you on or before Christmas morning. I wish you all the joys of the glad holiday season.

here are thousands of boys who do not make the most of their with little idea of the blessings bestowed upon them by nature. Outdoor life means a strong constitution, without which a boy's future looks grave. There is no better way to enjoy an outing than by taking along a reliable Rifle. Our 37 years' reputation as makers of Standard Arms is a guarantee that is thoroughly reliable. The boys in the picture above are using our "Favorite" the most popular rifle ever introduced. It sells with open sights for \$6.00, and with target sights for \$8.50. We have several cheaper models as our

Our Editor Among the Boys

D

RING the sixty days just past I have been visiting the boys and incidentally visiting their parents, their sisters, and their adult friends generally. It has been a pleasant experience. True, it has been hard work—this delivering of a lecture night

after night, running for trains, eating strange cooking, and sleeping in strange beds, but the compensation—a large part of which is the opportunity of talking face to face with thousands of American boys and friends of boys—is sufficient, I assure you. My lecture, was, of course, on the American Boy. What subject more worthy of my time and my labor!

I spent some very pleasant evenings in Ohio; at Cambridge, under the management of the Denison Club; at Tiffin, under that of the High School; at Mansfield, under that of the Young Men's Christian Association. Then a little later I took a run over to Illinois and talked for the Young Men's League of the Second Presbyterian Church, and to Joliet, where my lecture was under the auspices of the Senior Class in the High School, and then to Lansing, Mich., where a dozen bright boys of the Plymouth Congregational Church greeted me with a big church full of people. I have had other evenings with the boys, but it is enough to mention these.

Everywhere I have gone I have met the boys-hearty, healthy, aspiring, enthusiastic American boys. They greet me as their friend, and this distinction is dearer to me than any office, or honor, or gift men could bestow. Why, at some places I had to look at myself in the mirror to see if indeed I were not some great hero, instead of the plain, private citizen, I had always thought myself to be. And why shouldn't I feel proud when mothers and fathers come to me, bringing their boys and saying, "Mr. Sprague, my boy wants to shake hands with you. He reads THE AMERICAN BOY and he will not be satisfied until he has shaken hands with the editor;" or, as one mother said,

"Mr. Sprague, I want you to meet my two boys; they are of the kind of boys you admire." Then the mother beamed upon the two manly fellows who advanced and greeted me, and I said to myself, "There is character there," and in the mother's deep, intelligent interest in her boys I saw the secret of it all.

I wish you could have gone to Lansing a few days ago and stood on the platform with me, facing nearly a thousand people, mostly boys. The boys of the Industrial School, over six hundred in number, in their

their sisters, and their a pleasant experience. ering of a lecture night boy faces. Wasn't that a sight to inspire a lecturer, particularly one who loves boys? That was indeed a notable evening. The success of it was largely due to a lady, Mrs. S. S. Beggs, who is consecrating a large part of her heart and her life to a Sunday school class numbering some fifteen boys. But she could have done nothing without the hearty support of these boys. She called upon me at the hotel before the hour for the lecture, accompanied by her own boy—a good specimen of the American boyand told me how anxious she was to do something for her class. She had learned

MANLEY LAWTON

Son of the Late Major-General H. W. Lawton

See Page 50

Beggs, who is consecrating a large part of her heart and her life to a Sunday school class numbering some fifteen boys. But she could have done nothing without the hearty support of these boys. She called upon me at the hotel before the hour for the lecture, accompanied by her own boy and told me how anxious she was to do something for her class. She had learned the secret of success with boys giving them something to do, and her voice and manner betrayed her earnest desire to be to them a real leader and teacher. Oh, for hundreds of such women in every community—women who see that their place in life is the mothering of the nation that is to be. How grand and inspiring would be the sight could we see the club women of America who are spending their time and strength in trifling, meaningless, absurd discussions of everything under the sun but the practical things of life, turning as a mighty army to the betterment of the conditions of child life—especially boy life in our American towns and cities, where scarcely a door is open to these boys at night, as they wander the streets, save the doors that lead to ruin! One such club that will establish a free gymnasium and swimming pool, or free reading room, or boys' lyceum, for the boys of the community, will do more to cheer its own and other hearts and make the race stronger, wiser, and better, than a thousand clubs discussing the question, Is the Is Issable.

When the time for the Lansing lecture drew nigh I went to the church, was met by this teacher, who introduced me to the president of the class—a straight manly young fellow of, I should say, seventeen.

He gave me a rose for my button hole, just like the one he himself wore, conducted me to the platform, and with perfect composure, introduced me to the large audience, but not until the Boys' Industrial School Choir of thirty boy voices had sung a song, as only the trained voices of boys can sing.

When my lecture was over, Mrs. Beggs brought her entire class to see me and introduced them to me one by one; I detected in her face and voice a spirit of real, genuine pride and satisfaction, as she said, (Continued on page 87.)

Little Pete's Christmas-Bertha Ester-brooke Goodier

long baking-board and looking, with bright eyes, up less as they seem. at the stalwart "lumber-jack" who bent before the When at last t fire, "did you know Christmas was coming?"
"Christmas?" asked Dan, still struggling with the

troublesome thongs that bound the great snowshoes to his moccasined feet, "w'at's Christmas?"

"Why, Dan, don't you know?" the blue eyes opened very wide; "why, Christmas—that's the night when we hang up our stockings, and in the morning they're filled with candy and oranges and maybe a knife er a pair of skates, er—er something."
"Who fills 'em?" demanded Dan.

"Why, your father and mother fills them after you're gone to bed. Little kids thinks its Santy Claus, but o' course, we know better than that."

"W'at for?" was the next question. "'Cause that's the night when the Saviour was ciled note.

born in Bethlehem, Dan, far, far away. And just think, there wasn't no place for his mother and father-that's Mary and Joseph—to stay, so they had to lay him in a manger."

"Not 'long with the horses?"

The boy nodded. "Poor little kid," said the kindly woodsman; "why, didn't they have no place to stay, Pete? Wasn't they no hotels?"

"There was a hotel—an inn, they called it, but there wasn't a single room for them."

"Well, that was hard luck, wasn't it?" The story had made an impression upon this careless mind, for Dan sat silent for a moment, then said: "Tell me more about him, Pete, and why you hangs up your stockins on his birthday."

And together they sat upon the rude bench before the wide fireplace, this little "Cookee" of the lumber camp, and the rough, young "lumber-jack;" the fair head close to the dark, uncombed one. Then the childish voice began the old, old story of shepherds that watched their flocks by night; of the glorious star that rose before them, almost blinding them with its brightness; of angels, singing the glad tidings of "Peace on earth, good will to and of the wise men men:" who followed the Star of Bethlehem till it led to the lowly manger, where lay the babe that had come to save the world from sin.

During the telling, others of the lumbermen had come in until, when he had finished, there was quite a little circle around the fire—a circle that stood quietly and listened, for there was something in the simple story that hushed their rude jokes and boisterous laughter. The firelight played upon their faces as they stood listening-these men who had come from all parts of the country to hurl their great strength against the unyielding pines; to swing their bright axes against the woody sides; and stand for hours, knee-deep

the river's icy now, to the with the crushing, jamin prowding logs. "Lumber-jacks," careless,
have as warm hearty, rough, it may be, but with hearts as warm beneath their ragged mackinaws as beat neath the

finest of cloth.

were the pale eyes and blonde hair of the Swedes; est as well as in the great city. I send you this the stolid, high-cheeked faces of the Fins; the dark swarthiness of the French-Canadian; the sturdiness of the Scot, and the ever-present son of Ireland.

Is Christmas wherever God is, and he is in the forest as well as in the great city. I send you this money, which I have saved for you. Perhaps my little boy may make their Christmas merry * * *."

It was only a two dollar bill poster folded. Casey by name.

They were all fond, in their way, of this little fairhaired boy who had come among them to be "Cookee," and they all knew that back there in that world where Little Pete had lived, was a sweet-faced mother who prayed for her boy, and sent him every week long, loving letters or sometimes a wonderful cake, or a pair of blue and white stockings-all that a widow's slender means could give. They had seen the tiny bible which she had tucked away, with many tears, in her little boy's belongings, and they felt a certain reverence for "Little Pete's mother" that was almost worship. Perhaps "lumber-jacks" have moth- help to make their Christmas merry." Over and rude bunk and longed for the morning. There was

"Dan," said Little Pete, leaning his arms upon the ers, too, and perhaps they're not as rude and care-lover the words rang in his ear as he thought of Dan,

When at last the boyish voice was still, there was a silence, broken only by the crackling of the flames. Each man stood staring straight ahead of him; each seeing some bygone Christmas day when well-loved faces had gathered around and well-known voices shouted the glad greeting, "Merry Christmas! Merry Christmas!"

Then Little Pete must slip away to set out the tin dishes and help put the supper on. Soon only the clattering of cups and spoons was to be heard, for the printed rules, "No talking," must be obeyed in the "cook-shanty" during meal-time.

That night, when each tired head had sought its table and in the flickering firelight, scrawled a pen-

who had not even known what Christmas was; of "Scotty," who still longed for the hills of "Bonnie Scotiand" and the white, white heather; of "Yon-son," poor old "Yonson," whose Christmas would be only a prolonged lapse into drunkenness, and who would spend all his hard-earned dollars up at "Hogan's"; of "Frenchy Mike," who could remember Christmas days in "Monrahal"; of "Joe Salt," the slender young trapper, a devout convert of "Father de le Ronde," and a very good Indian. They were all his friends and he wanted to give them pleasure -but how?

The troubling question rose before him, as he looked from the little window set deep in the logs, rough pillow, Little Pete sat by the narrow pine out upon the white world that lay around; up onto the snow-capped mountains, to whose rocky sides clung the pines, their frosty branches glistening in

the wintry light till they sparkled like "Christmas trees." Why, they were Christmas trees, here at his very door, and he had scarcely thought of them. What better luck could he wish?

"But Joe," argued Little Pete, stopping the while to stamp his feet together and rub his tingling fingers-for it was bitter cold up here on the mountain, "that one's a lot too big. It wouldn't go in the shanty at all. We'll have to go on till we find a better one."

Joe Salt grunted, an Indian's way of saying "All right," and shouldering his shining ax once more took up the search, for, though it was the greatest of secrets, Little Pete had told all his plan to Joe and counted upon his aid, for Joe knew all about Christmas. He had been guide to many a hunting and camping party and had once been across the "Great Lake" in Michi-

pocaton Harbor and to Saulte

Ste. Marie. They had decided that there must be a Christmas tree—just the right sort of a Christmas tree, too-and they had come far from camp, lest some of the "cutters" spy them out and • guess their precious errand. They had inspected many a slender pine during their tramp, but always there was Little Pete's "too big" or "too small," and Joe's "Kaween na scheen" (no good) or "Kcheemang, Pagwah" (big tree no like).

Then at last Little Pete, who had been running ahead, came to a standstill. "Oh, Joe," he cried, "look at that. Isn't that a daisy?"

And a "daisy" it was, indeed. Tall, but not too tall; slender, well-proportioned, with green fringed branches and rugged trunk. They could al-most see the much-talked-of candles and strings of popcorn and "presents" hanging upon it.

A few deft strokes from Joe Salt's trusty ax and the sturdy pine was laid low. Then they piled it onto the waiting sled

* * And just think, mamma," he wrote, and started for the Indian's cabin, for here the didn't seem to know about Christmas. Isn't "Christmas tree" must stay hidden from all until to-morrow afternoon, when they could smuggle it over to camp while the men were in the woods.

ing into Nepigon, and the whispered conversations he had had with the Indian agent's kindly wife.

"Glory, don't they look like a lot, though," said their owner, as he viewed them with pride. "And won't the fellows open their eyes when they see them?"

"You bet," answered Joe, for he took almost as much delight in the gifts as did Little Pete. Indeed he had contributed a much-treasured dollar and had hunted up some scraps of red ribbon and blue beadwork, which Little Pete declared would look just 'beautiful" on the tree.

That night Little Pete tossed to and fro on his

"they didn't seem to know about Christmas. Isn't

it Christmas way up here in the lumber-woods? During the week came the reply: "Yes, dear, it

It was only a two dollar bill, neatly folded, but to Little Pete it was riches. It would buy that shining pair of skates on which he had feasted his eyes at every trip into the little Indian village of Nepigon; it would buy a bright red sled on which he longed to ride behind "Shoska," Dan's snow-white "husky" dog; it would buy * * * and then his mother's words came to him: "My little boy may help to make their Christmas merry," and with a sigh, he put the bill into the pocket of his great apron and turned once again to the tall pile of dishes that must be washed and dried for supper.

"May help to make their Christmas merry. May

so much to be done, so much to plan, he could time, 'cause I want you to help light up. 'Member, know how much," said Frenchy Mike earnestly, scarcely wait. Then all the day he went about his now," the excited boy shouted after the retreating His gift had been a tiny pair of Indian moccasins, work with such bright eyes and such an air of suppressed excitement that Dan, who had always a ready eye for anything that concerned the "kid," said more than once: "What's the matter with our 'cookee' this morning. Seems like he can't hustle us off soon enough? Hope he ain't sick er nuthin'," and much to the little boy's dismay loitered about the cook shanty long after the rest had trudged off to the scene of their labors.

When at last the stalwart shoulders were seen disappearing behind the snow-covered rocks, Little Pete, all restraint now thrown to the winds, fairly flew down the trail till he came to the half-breed's cabin.

"Hurry up now, Joe, get the 'husky' harnessed, 'cause Dan might come back any minute," and together they strapped the faithful dog into the reins and started the heavily laden toboggan on the way.

Once inside the shanty, they set busily to work. Old "Shorty," the cook, whom they had found necessary to let into the secret and who had been on the edge of blurting it out a dozen times a day, had filled a great sugar pail with sand and into this they placed the tree, packing it tightly about with the long greyish-green moss that covers the rocks in stood stamping their feet in the cold and waiting that region.

Then, what a busy afternoon they had, for the corn must be popped and strung into yards and yards of feathery whiteness. Joe had gathered the bright red berries that lay hidden just beneath the snow, and long strings of these, together with the popcorn they looped from branch to branch.

"Oh, doesn't that look grand!" Little Pete was hopping round and round the tree and clapping his hands in delight. "And now, the candles. Oh, how will we ever get them on?" And in truth it was no easy matter, for they had been able to get only the heavy tallow dips, and they wobbled this way and an illigant tree." that in a most stubborn manner and refused to stand straight, as a well-balanced candle should. But go on they must, and at last Old Shorty hit upon a plan. It was but a little matter of a split clothespin and a tenpenny nail that made each candle stand straight and true, each seeming proud of its little necktie of red ribbon.
"Whoop-ee!" Little

Little Pete went dancing again when this task was completed. "And now for the presents. Oh, Shorty, give me that chair for I must tie Dan's necktie way up high. Lift me Joe, I want to put it on myself—the very first one;" and while the little boy stood braced on the Indian's broad shoulders, very carefully, lest he disturb the glorious festoons of red and white, he fastened the little parcel to the topmost branch of all, then slid quickly to the floor again.

One by one they all found a place, and a long, mysterious bundle, which Pete had kept hidden beneath his pillow, and which bore the scrawling inscription, "To Joe Salt, from his friend, Peter Warwick, a Merry Christmas." was concealed among the branches. I am sure that the half-breed guessed for whom this present was intended for he very carefully avoided that side of the tree.

When at last all was complete, they stood back and gazed in open-eyed wonder at their handiwork.

"Glory, when she gets lit up, won't she be a daisy, though?" was all Little Pete could sav. and very was all Little Pete could say, and very heartily his friends agreed. "And now, Shorty, we'll just get the supper early, and, Joe, you'd better go, 'cause if they see you here they'll guess there's something up. We'll shove the tree into the storeroom and lock it up, so they'll never know till the very minute. And, Joe, don't forget to be here on

figure, then went about his evening's task.

How Little Pete ever got through that supper hour he could never tell. It seemed to him that the men had never dawdled so long over their frugal meal; that the calls for "more pancakes" and "nuther slice o' bread," had never been so frequent. But as all things come to an end some time, all the chairs were pushed back at last and the pipes came out, preparatory to the evening's smoke.

Little Pete had whispered it to Dan, and Dan had whispered it to his next neighbor, who in turn had passed it on, till all knew that Little Pete had some-

thing he wanted to say to them.
"Let 'er go, youngster," they all chorused goodnaturedly. "Stand up and have your little say," and accordingly Pete stood up.

"You see, me and Joe have planned a sort of a surprise for you this evening." he began. "It's in honor of the day and the little baby, that I told you about, you 'member. And if you'll all follow Dan outside, we'll be ready for you in just a minute."

Obediently they rose from their places by the fire and with many expressions of wonder trooped out into the snow, over to the "boss' shack," where they eagerly.

At last came the welcome summons: "Come on, now, fellows," and they all trudged back to the cook shanty, now ablaze with a wonderful light.

At the door they paused, as though hardly daring to cross the threshold.

"Come in, boys, come in. Don't you see, it's a Christmas tree, 'cause this is Christmas Eve," and then how Little Pete laughed at the shouts, in many tongues, that burst from the astonished men.

"The Saints presarve us," Casey's voice was heard

"Yiminy!" cried Yonson, "b' ain't it grand!"

"Just scrumptious," agreed Dan, his great eyes sparkling, while "Frenchy Mike" declared:

Eet iss lak the tree on Monrahal. Cel'st magnificent!"

Surely never was there so delighted a company At first it seemed that they could only walk round and round the wonder, and never admire enough. Little Pete was here, there and everywhere about the narrow room, too happy for words.

And when it came to the present-giving. Ah, that was best of all. Little Pete was, of course, master of ceremonies, and from his lofty seat on the faithful Joe's shoulder, handed down the parcels with a word for each. And what shouts of delight went up as the pink strings were untied and the presents brought to

"Say, look at this, will you? Oh, I'll be too proud to speak to you fellows," cried Dan, waving a flam-

ing red necktie before them.
"Put it on, Dan. You'll be a dude! Put it on,"

they urged and Dan needed no second invitation.
Then "Joe" and "Casey" and "Shorty" must light the long Indian pipes that had fallen to their lot, and soon were puffing away furiously.

"Seems to me tobacco never tasted so good," said

Casey, and the others agreed.

"That's for Maggie, ma dawg, so's she won't get losted," Old Yonson proudly held out a shining collar on which Little Pete had spent a very busy hour, for he had carved on the bright name plate, the words "Maggie Yonson," knowing that it was the fear of the old Swede's life that his only friend might

"Leetle Peet, that's mak' me so glad—you don'

beaded with bright blue beads and threaded with soft thongs of leather.

"They're for that little baby, that you left in Montreal, you know," explained the giver, and grateful 'Frenchy" did not say that the "baby" had long since outgrown "moccasins" and was now clamoring for 'copper-toed boots."

Then, when all the presents had been handed round and examined to their heart's content, Dan in answer to the many questioning glances that had been turned toward him, arose from his place by the fire, and said:

"Well now, Little Pete, you've had your say and I guess I'll have to have mine. Fust, I want to tell you, on behalf of myself and all of us fellows, that

kid and we all 'preciates your Christmas, you can bet. and thrusting a brown paper parcel in the astonished boy's hands. Dan sat down, with something very much like a tear in his big brown eyes.

It did not need the flashing of steel to tell Little Pete that the much-coveted skates were his, after all, and that night when the light of the wonderful Christmas tree had been put out and darkness once more fell over the little shanty, it was a very happy boy that fell asleep with his Christmas present under his pillow and a song of gladness in his heart.

"I did what you told me, mamma," he whispered, as though the sweet-faced mother were bending over him. "I tried the very best I knew how to make their Christmas merry, and I guess I did it, too."

An Unexpected Santa Claus; or, The Old Stove That Spoke

HEZEKIAH BUTTERWORTH

'Fore the Lor',
'Fore the Lor',
'Glori, Glori!
'Fore the Lor', 'fore the Lor''';

so sang Bonny, the janitor. His voice rang out through the empty church as he beat up the dusty pulpit cushions, filling the bright air of sunshine that was sifted through the Russian stained glass windows of ruby and golden saints and angels, with dust.

broom lay in the aisle. He opened a new door and lifted another crimson cushion which he began to beat with the air of a band master, singing:

"'Fore the Lor',
'Fore the Lor',
You may go from door to door,
But you must hab de heben!! grace
Or the Devil will get you sure!"

The last word of which he pronounced "shore."

The curator appeared.

"Preparin' for Xmas, and they'll be here soon with a cartioad of evergreen, and then everything will all be in clutter again." This was said for the ear of the curator.

"Bonny?" "Sar!"

parlor. Come after me. I want to show you how to arrange the room."

"Yes, sar.'

"Bonny, here, we are having a new furnace put into the room. We will have to use the old one that night. Now, the opening of the new furnace pipe, as big as a barrel, is uncovered. Put the old church stove over the opening so that no accident may happen, and we will dress up the old stove in evergreens just like a Santa Claus. No one need ever know what it is."

"Yes, sar." "And take the false bottom out of the old stove and remove it to the cellar. We'll never kindle a fire there again. You may sell that for old junk with the pipes and all; you might have the stove, too, if it were not needed just for that one occasion. You understand?"

"Yis, yis, understand? Yis, what's my head for?" There was a great giggling outside of the church. A cry of "whoa!" rose into the frosty air. Doors banged and a merry company of girls entered the church and skipped through the audience room, irreverently, into the church parlors which connected with the princess pine.

"The Christmas tree is going to be in the social | with the room by folding doors, which were now slid

Bonny, the colored janitor, had moved the bottomless stove over the opening of the new register, and Barry, the custodian, called out:

"Trim up the stove; make a Santa Claus of it, it looks unshapely and out of place as it is; but we'll have to have it there this year, it will be there for the last time. What a story it might tell—if it only had a mouth."

"It has a mouth," said Bonny, "mouth enough, but stoves do not talk. No one eber knew a stove to talk. No, no," and he sang on—

> "'Fore the Lor', 'fore the Lor', Glori, giori, 'Fore the Lor', 'fore the Lor', There's glory in my soul.

The merry work of trimming the church parlors began, and when it ended the old stove was changed into the form of an Evergreen Gatherer, with a pile of savin and creeping-jenny on his back.

"Now let me put some princess pine on his head, and he will look real scrumptious," said the squire's daughter Jane, and she crowned the evergreen man

The green festoons about the sunset-glimmering windows gave the rooms a very cheerful look at last. The reed organ was placed near the evergreen man as the stove was called. The old register filled the room with a summery air.

"We will have orchids and canary birds here this year," said Alice, whose father had a greenhouse, "and the bells shall ring in the chorus of our Christmas carol. We will mingle the pines and palms together-don't the old stove look handsome; if we were to open its mouth it would speak."

"It would take the wits out of me to have a stove speak," said Bonny. "Dumb animals spoke in the Scripture times, and said, 'Stop that wholloping,' and like asservations. But de walls ought to cry against any one who would wrong any one or anything in this bountiful year.'

"We'll put an electric star in the evergreens this year, and Mabella shall sing the old song, 'The Star of Bethlehem,' so as to recall to the goodwives the Christmas day of long ago."

It was dark when Bonny, the janitor, closed the doors. The stars came out, the snow glistened on the walls, and at nine o'clock the custodian reminded the town of the near approach of Christmas, by playing on the chimes, "On Christmas Day in the Morning.

Joseph Bonny, janitor, looked oddly at the stove which had been changed into the evergreen man, as he was about to turn out the lights in the spacious church parlors. The old stove with its evergreen mantle stood at the end of the speaker's platform, and when its door was open, now that the grate was gone, formed with the new furnace chimney a continuous cylinder to the coal chamber in the furnace in the cellar room. Joseph opened the stove door, brushing aside the evergreens, and shouted down into

the furnace.
"I does like to hear my voice double up so and come sounding back as though I was a man o' quality, such as the old burgermasters used to be.'

He shouted down the cylinder.

"Joe!"

His voice came back with compound interest, like an echo from the under world.

"Joe!"

He stopped and looked intent. Then he leaped up twice, and struck his hands on his knees.

He stopped and looked intent.

"Joe"-he was speaking to himself-"I'll tell you what I'll do. I'll get into the furnace in the cellar on night to the star-lit pit. Now, listen all. de festible night, and just stay there, and hear my own pickaninnies speak their pieces. I will now-I'll hear! He looked into the pit." be all coal dust after I've fixed the fires that day, and they would not let me listen in the parlors, even at the door."

Joseph Bonny, janitor, had two children, a boy and a girl, in the mission school, who were to "speak pieces" at the holiday festival this year, and it would be the proudest honor of his life if he might hear them. He told them to "acquit themselves like men," and when he had heard them speak their pieces at the home rehearsals he remarked to him-

"Joseph Bonny, you are the father of more brains than any other man in New York." He somehow seemed to think that his two pickaninnies were the authors of the pieces that they spoke, one of which pieces was composed by Derzhavin and the other by Milton.

"That is the biggest speakin' tube that I ever saw yet," said he; "beats any other speakin' tube that I ever saw before all hollow—those speakin' strings are as a thread to it."

"Joe Bonny," he called into the stove door.
"Joe Bonny!" answered the hollow chamber beneath the great cylinder.

He leaped up twice again, clapping his hands on his knees.

"Now, that's what I call a mystery."

He shut the stove door and shook out the evergreens over it. Then he went into the cellar of the two furnaces and crawled into the door of the new one which was being prepared for use at some future time, and which was covered in the parlors by the, old stove representing the evergreen man.

He called up:

"Joseph!

The parlors seemed alive with the word.

"It all works wonderfully well," said he, "and here I will hear the pickaninnies, proud as King Solomon on his throne of ebony and peacock feather. Hi, hi, how grand it will be when I hear my own little pickaninny Joe say:

'No war nor battle sound Was heard the earth around. No hostlle chief to furious combat ran!' "

He came up from the cellar, and went out into the night, beneath the bright cold stars which seemed to be shining for him with a sort of prophetic light, because he was the father of piece-speaking pickaninnies.

"Those pieces that my little pickaninnies are to speak are just about the most wonderfulest I ever hyerd: one of dem is wonderful and de other is wonderfuller; 'Osiris' and Arcturus,' dems de words fer me; carry you away on the wings ob de winds. If I only had the coppers I would give dose two pickaninnies an education." He added: "I does my work well, year after year, but they never remember poor ole Joe on occasions like dese hyer, only with scraps and odds and ends and things—now I wants my two pickaninnies to amount to more than dat."

The day of the festival came, "de festible ob de Zion

Church," as Joe chose to call it, naming the cathedrallike edifice after the mission church it supported. It was a keen, blue winter day; the church parlors were thronged, and as the occasion was to be made notable for its liberality, a special speaker, a lecturer of continental reputation, was engaged to address the chil-

dren. His name was Pringle, or we will call him so. Mr. Pringle, it was said, knew "how to talk to children." This is a rare art. His style was quite dramatic, and he made his remarks live and breathe, and move forward in a very lively way by asking questions.

The music was a charm. The selections for recitations were made with taste and were admirably spoken, especially the Miltonic ode assigned to little pickaninny Joe. He made the names of the planets and oriental kings rise like eagles over the wondering crowd in silks, furs and feathers. After the speaking Mr. Pringle was to make his address, then presents were to be made, followed by ice cream, cake and coffee, and a lively sociable, at which it might be said that "Ceremony dropped her pride."

Mr. Pringle entered into the liberal spirit of the occasion. He chose for his address the story of Joseph and Reuben which he intended to make teach the lesson of lost opportunity, and to influence all not to neglect any one in present-making that year.

There was complete silence when he arose and stepped to the end of the platform near the stove which represented the evergreen man

He related the tale of the early life of Joseph in

a very picturesque and oriental way.

He described the casting of Joseph into the pit; then touchingly told how Reuben, of the tender heart, went away into the mountains, in order to come back again and rescue his brother Joseph from the pit, but as the Scriptures say, "he went to the pit, and Joseph was not in it." which illustrated lost opportunity. He should not have allowed Joseph to have been cast into the pit; when he sought to save him, it was too late.

His description of the good Reuben coming out of his hiding place to rescue Joseph was very graphic. He approached the point of the story when silence was to make a profound impression.

"So," said he, "Reuben came in the shadow of the

Reuben bent over the edge of the pit. Hear!

Here imaginative Mr. Pringle opened wide the old stove door, which was ajar before, so as to serve the ears of an unexpected Joseph below.

"Reuben heard no sound in the pit.

"He called:

"'Joseph!

"Listen, children, all listen. There comes no sound. He remembered Joseph too late." Mr. Pringle called: Joseph, are you there?"

Mr. Pringle put his hand to his ear, shaking his

"Joseph, are you there?"
"Hi, hi; I is here. It is not too late to remember Joseph.'

This was an unlooked for situation. The answer sounded tinny and hollow as if the shade of the veritable Joseph were in some deep pit below a tin mine.

"I am being guyed," said Mr. Pringle.

"I am being guyed," said Mr. Pringle. "There must be some ventriloquist here.

He called again:

'Joseph, I am your brother Reuben."

"Hi, hi. What did you come here for where I am living a respectable life. Did you hear my little pickaninnies speak their pieces? You steal chickens. I thought it was de rector a-callin' me up to make me a present."

The rector recognized the voice, as did the two precocious pickaninnies.

The rector went to the evergreen man, and shouted at the old stove door:

"You may come up, Joseph. Your two children have done you honor, and you have done your work here well for years, and janitors and rectors are all on the same level to-day. Come up, Joseph!"

He turned to the audience and said: "We shall not need any Santa Claus this year," and added, "Let us take up a collection for Joseph!"

The Christmas Bear

MARY H. McCoy

the mountains of western Virginia. The eight inches of snow which wrapped the earth, and clung to the pine and fir trees lay dead and cold in the grey light of early morning. David and Henry, now sixteen and fourteen respectively, were up with the first dull light, stubbing their cold toes, and blowing their stiff fingers, as they completed their preparations for a tramp across the mountain.

did that the day held great sport for them. The older Arnold boys had built and baited a bear trap some distance across the mountains, for the purpose of trapping a marauder that the mild winter had beguiled from his warm den.

'Now's the time," said these experienced foresters, "to catch him, before he goes in for the winter." for the signs pointed out that the offender they were after was a monster.

had been visited by Mr. Arnold, or one of the older brothers, who, finding it empty, were about concluding that bruin had given them the slip and

gone into winter quarters.

David and Henry had teased to be allowed to inspect the trap, and Mr. Arnold had granted their request, much to their joy. These boys, though mountaineers, had never been allowed to hunt much alone, and the anticipation of finding such big game made them quite jubilant.

Armed with a flintlock rifie, an ax, and a basket of lunch, they started off before the sun had climbed over the mountain that shut in the little valley. They felt their importance, and talked in very confident language of what they would do, should they find the bear.

"You know what I'm gwine to do, Marse Davie, when I see dat dar bar? I'm gwine march right up to 'im, and split he's hade to 'im, and split he's hade wide open wid dis heah ax! 'Dar, Mr. Bar!' I'll say, 'dat's whut yo' gits fur yo' pains, fur goin' inter dis heah bar trap!'"

"No. Henry," said David a trifle "toploftically," "I

had better shoot him, right between the eyes; for he might possibly reach out his paw and pull you into the trap."

"Sakes alive! Marse in de top ob de hade!'

And so they talked as they trudged through the snow, up over the crest of the mountain, and down on the other side. It was a tramp of some four miles. but excitement and anticipation banished weariness from their thoughts. The trap was set upon a ledge -a small plateau that bordered a steep descent. As the boys neared the point from which they knew they might obtain a view of the trap, their hearts took on a quicker beat, and excitement was plainly visible in their faces, though each tried to appear composed. With a mutual impulse they stood still-there, perhaps one hundred yards distant was the trap-but that was not what made each boy's heart jump into his throat.

Something was the matter with the trap! It was pitching, and creaking, and groaning: ine bar's playin' possum—I think he jes' waitin' fur and fifty boys and girls of the High School, mighty scamper to put distance between them and manner to put distance between the put that heaving bear trap. David was the first to re-cover himself. "Henry!" he shouted, but Henry only looked over his shoulder a moment, the whites of his eyes gleaming in the distance.

His foot struck a stump, and down he went sprawling into the snow. David made a dash for him, grabbed him by the collar, and raised him to a sitting posture. "Gracious, Marse Davie!" he gasped. "whar's dat bar? I thought he done got me dat

Christmas Day, 18-, dawned crisp and clear, in then the pitching began again, accompanied by creaking, and thunderous growls. David had to hold Henry by main force. They spoke in whispers, and Henry said his prayers between agonized entreaties to Marse Davie to let him go. At last David succeeded in quieting him somewhat, and laid his plan before him.

He pointed out a large fallen tree some fifty feet from the bear pen. Also two slim young birch trees But little they cared for the cold, feeling as they fifty feet nearer them. "Now," said David, "we'll id that the day held great sport for them. The crawl to that log with the ax and gun; I'll wait until I get a good chance at his head before I shoot. Then we'll run and skoot up those birch trees and wait to see what happens. They are too slender for the bear to climb."

Accordingly they crept, David in front and Henry "to catch him, before he goes in for the winter." close in his wake, until the log was reached. A And so the trap was set and secured with extra care. closer view of bruin was not calculated to quiet their quick beating hearts. He was indeed a monster; so tall that when he stood on his hind legs the trap was The bait used was a chicken and a tempting lifted entirely off the ground. David loaded his gun, chunk of honey. During the two days following it watched his opportunity and fired. The report of the

Then dropping gun, ax and basket, took to their heels.

Davie, I ain't 'fraid o' no bar—'specially ef dey's in | Sooner than it can be told the boys had dropped he did, dis niggah wouldn't a bin heah fur to tell de er trap! You jes watch me give Mr. Bar a split open gun and ax, and were safe among the branches of the tale! Ain't dat so, Marse Davie?" er trap! You jes watch me give Mr. Bar a split open gun and ax, and were safe among the branches of the birch trees. The growls continued for what seemed an age to the terrified boys. Then all was still. The boys waited. "Come on Henry, let's take another shot.'

"Don't you think, Marse Davie, I bettah stay up here and watch dat bar fur you?" "All right, if you want to act the coward, you may." That was too much for Henry; he slid down the tree, and crept after David to their former position behind the log. There was no movement in the bear trap. The big black beast lay prone just where he had been when David had first taken aim. Reloading and putting his gun in position he fired again. Then to their heels and up the trees as before. But no sound came from the bear trap.

was David made bold to speak aloud. "I guess he's boys dead, Henry; come on!" "Marse Davie, I think dat mammy cry! I feel his teefs goin right fru my bones dis minute—I do, Marse Davie!" "Now, Henry, don't act the baby! But to please you, I'll shoot once more—come on." Again the performance. and again the boys were up the trees. Still no sound or movement in the bear trap. David was triumphant, and let out a whoop of victory. But Henry begged him to "Hish up. I's heered ob bars playin' possum fur er whole day, den eatin' everybody dey could fine fur dere supper." At last, however, per-David sat down upon a log and, somewhat alive to suaded and shamed by David, he climbed down and

the ludicrous situation, laughed aloud. "Hish up helped him pare and sharpen a hickory sapling into dat, Marse Davie, you think I gwine stay here ef a spike. With cautious steps they approached the you tell dat bar whar we is? I go right stret home trap, and pushing the sapting into the hole in the dis minute ef you don't quit yo' projikin (joking)— bear's head, made by David's good marksmanship, dat dar bar's mad, he is!" "You bet he is, but let's they drove it into the brain of the monster. Still go have another look at him." After much persua- Henry was skeptical and kept at a respectful dission Henry yielded, and the boys stood again in view tance, grinning broadly, however, and rapidly reof the bear trap. It was quiet for a moment, and gaining his spirits. David was jubilant. He had never seen so large a bear, and was naturally proud to have been the one to kill it.

After discussing every phase of this lucky find, the boys discovered they were hungry; sat down upon a fallen tree, at2 the lunch with a relish, then started for home. The short winter day had closed before they left the mountain forests, and their hearts gave a glad bound when the lights of home twinkled in

Henry, the loquacious, was not slow to answer the questioning glances which greeted them. "Marse Nathan, ef me and Marse Davie ain't kill de biggis' bar dis day you ebber see! An' he mos' et us up, too! Little mo'n he'd a had me sho! Ain't dat so, Marse Davie?'

David held his head with somewhat more pride than was his wont, as he replied: "There's a big bear dead out there in the trap, father, but, of course, we could not bring him in.'

Mr. Arnold's curiosity was aroused to such an extent that he determined to see this beast which Henry so graphically described, and as the dusk soon passed into a brilliant moonlight night, he, with two of his sons, mounted horses and rode off

toward the bear trap. In three or four hours they returned, dragging by strong ropes upon the snow the disemboweled body of bruin. The entire family went out to inspect the trophy and wonder at its huge proportions. There were no scales on the place large enough to weigh it intact, and so great was the enthusiasm that all hands set to work to skin the animal, and sait down the meat. When the work was completed, there were four hundred pounds of bear meat put away for future use, and disbursement among the neighbors.

David and Henry were the heroes of the hour in the community, having killed the largest black bear on record in those parts. David bore his honors with dignity; but Henry, when the subject was mentioned, was wont to turn five or six handsprings in succession, ending by standing half double with his hands upon his knees, and giving vent to his feelings after this fashion:

"Yi! hoo! Hyah! Hyah! Hyah! Dat's de time dis niggah nearly got et up for sho! Ef Marse Davie hadn't a shot 'im when

Our Editor Among the Boys

(Continued from front page.)

"Mr. Sprague, this is another of my boys; and this is ----, our treasurer," and so on. There's hope for these boys and a reward in store for their teacher.

Then the principal of the High School asked me to come to the school at its opening the following day. I accepted the invitation, and at nine o'clock I stood talking to four hundred them with the earnest meaning of life and the need to "get busy." The hearty applause that followed me out of the door as I sped for my train kept my heart warm all the way to Detroit and I said, and I say now, as, days after, I write these words, it pays to work for boys.

WILLIAM C. SPRAGUE.

Aunt Margaret's Christmas Box MORRIS WADE

I lived out on the western plains when I was a boy. My father had gone west and had taken up a tract of government land; and I was about twelve years of age when I went with my parents, my older brother, Ned, and my three little sisters from Pennsylvania to the western border of Kansas where my father's new possession was. We went nearly all of after we got beyond the Missouri river the country grew desolate and unattractive. It became more and more barren each day, and I remember that brother told us that we were on his tract of land.

.There was hardly a tree in sight and the nearest house, which was nothing more than a little sod hut, was four miles distant from the little sod house that was to be our home. The only thing that reconciled us to the change from our pretty Pennsylvania home to this dreary place was the fact that my mother's health had improved steadily from the hour we first there had not been a cloud in the sky.

crossed the Mississippi river. She had never been very strong, and as there had been several consumptives in her family her doctor had advised her to go west. A troublesome cough that had caused father a great deal of apprehension and had distressed mother for some years left her long before we reached our destination, and the joy of such health and strength as she had never before known made her ready to endure the discomfort and the dreariness of the home to which father had brought us.

"The country is filling up rapidly and we will soon have all the neighbors we want and there will be towns all around us," said father, a prediction that was verified in coming years, for there is now a large and flourishing town on the site of our homestead.

The nearest post office was twelve miles distant and the railroad was hundreds of miles away. There was no town of more than seventy five or a hundred inhabitants nearer than forty miles, and during the first winter of our stay in our new home we did not see a single white person from the first of December until early in March. There were two or three tribes of harmless and woefully lazy Indians in the country, and sometimes a little company

of them would come riding along, and they would and we must be prepared for a sudden change. Have usually stop at our house to ask for "backy" or "fire- you put the buffalo robe into the pung, Ned?" with neither of which were we able to supply water, them, for father did not use either the one or the

The winter passed slowly with the novelty of two or three frightful blizzards, but none of us were ill for a day during the entire winter, and we were such a united and happy family that we were less dull and lonely than many families would have been.

It was during the second winter of our stay in the little sod house that my brother Ned and I had the experience of which I am going to tell you. One day father came home from a horseback ride to the post office bringing mother a letter from an aunt of hers living back in our old home. This was a part of the contents of the letter:

"I happened to-day to come across your letter of last January telling me about your Christmas of last basket under the seat of the pung. Altogether, our year, and how you find it impossible to purchase a single toy for the children or anything to make the day seem like Christmas, and I have determined to do something that will make your Christmas and that of the children a great deal happier and pleasanter this year than it was last year. I shall therefore send you within a few days a Christmas box, and you must be on the lookout for it. I am told that the box ought to reach you by Christmas time. I my knife on the way out here, and I haven't had one hope that it will, and that you will be pleased with since, and life isn't worth living to a boy without all that you find in it. You may be sure that there a pocket-knife."
will be something in it for each one of you."

"I hope she

did anything by halves. That box and its probable contents formed the chief topic of our conversation from the day of the arrival of the letter until the box itself appeared.

There was a stage station sixteen miles from our house at a little place called Sagebrush, and we would have to go to this station to get the box. If no unusual delay occurred the box would reach Sagebrush three or four days before Christmas. Father said that he would drive over to Sagebrush for the box the day before Christmas, but three days before that time he fell in some way when dismounting from one of our horses, and sprained his ankle so badly that he did not walk again for more than a month. This made it necessary for Ned and me to go over to Sagebrush for the box. We had never been there alone, and we felt quite important over the way in a covered wagon, or prairie schooner, and the long drive we were to take by ourselves on this occasion.

We started at about seven o'clock in the morning in a homemade pung drawn by a big white horse. It Ned said that he thought that we had reached the had snowed some the week before and the snow had "jumping off place of creation," when father finally not yet melted, and father said just before we not yet melted, and father said just before we started:

"If it is as warm to-day as it was yesterday I am afraid you will find it rather hard sledding in some places. It is surprising how warm it is for this time of the year."

It had been remarkably warm for two or three the first peep days. The air had a Spring-like balminess, and of the family.

the kindest of hearts, and we knew that she never report father has. As for mother's copies of 'Pilgrim's Progress' and 'Baxter's Saints' Rest,' I just about know them by heart. My, isn't the sun bright and hot? It fairly makes my eyes ache.'

"It's making siush of the snow," I said. "We'll find it hard work getting back home with a pung if it keeps this warm all day. I guess it would have been better if we had brought the light wagon."

Our ride to the little town was uneventful. There was nothing whatever to give it variety. The road was an almost straight and level one, and we did not pass more than a dozen houses on the way. We met but one traveler on the road, and the chief excitement of the day came when we saw a herd of buffalo dash by us on a mad gallop over the plains.

When we reached Sagebrush we found to our great delight that the box had been brought to the town by some freighters, journeying across the plains with a long line of big covered wagons. We rejoiced over the size of the box. It was really a large dry goods box, so large that it just about filled the back part of the pung.

"I tell you Aunt Margaret isn't one to do things by halves," said Ned, when we had finally got the box into the pung. "I'll bet you there's no end of box into the pung. "I'll bet you there's no end of nice things in that box. Wish we could take a peep into it right now."

"That would be taking the bloom from the peach," I said. "We will enjoy it a good deal more having the first peep at the things in the box with the rest

We had a number of purchases to make for father "I guess we will find that it is a weather-breeder, and mother, and when we had made them and had

spent our own money we took old Whitey, the horse, to the edge of the town and unhitched him and gave him his dinner in the little wooden box we had brought for that purpose. Then we ate our dinner sitting on Aunt Margaret's box. It was about two o'clock when we hitched old Whitey to the pung and started homeward. We had started homeward. gone perhaps ten miles when old Whitey went a little lame and at the same time we noticed a change of temperature. The sun suddenly disappeared and it grew ten degrees colder in about as many minutes. I was driving and Ned reached back and got the buffalo robe, saying as he did so:

"I guess we will be glad that we brought this robe seems!" dark it How

It was about four in the afternoon. We tried to hurry old Whitey up, but his lameness increased, and he was soon limping along at the rate of about two miles an hour. Ned glanced over his shoulder at the dark clouds gathering in the east and said:

"There's a blizzard coming, as sure as you're born, Bert. Can't we make old Whitey go faster? G'lang! Git out o' this!"

But Whitey was physically incapable of a higher rate of speed. He looked back reproachfully when Ned stood up and whacked him with the reins. The wind began to rise and its edge grew keener and keener. Soon we felt chilly even with the buffalo robe over us. We went about two miles farther and then, to our dismay, old Whitey stood stock still holding his lame foot up from the ground. He simply could not go another step. It was intensely dark now and Ned told the truth when he said:

"Bert, we simply couldn't go any farther in this pitchy darkness even if Whitey were not lame. We would lose our way and no telling where we would

"Oh, Bert!" "There's nothing else to do. It's going to be a put into the stockings of our little sisters. Mother ripper of a night but we'll have to snuggle up tohad put us up a bountiful lunch and we had it in a gether here in the pung and do our best to keep

each other warm until daylight. "Couldn't we leave old Whitey and the pung here and walk on home?"

"We might, perhaps, if we could see our way, but that is something we could not do in this fearful darkness. Anyhow, if the wind keeps on rising we would be fairly blown from our feet. The best thing to do is to stay here in the pung. If Whitey lies down we might snuggle up to him and the warmth of his body would help to keep us warm. It's too bad that we didn't bring some blankets beside the buffalo robe."

We got out of the pung and unhitched the horse with fingers numb with cold. The temperature had gone down many degrees and we felt our blood conthe little sod house out there on the western plain. even our unabridged dictionary through, and have gone down many degrees and we felt our blood con-Our Aunt Margaret was quite a wealthy woman with begun on the four volumes of that old patent office gealing under it. We led the horse to the side of the

"Come, come, rouse up, boys! Froze most to death?"

"Oh, we won't need it such a day as this," replied Ned.

"You take it just the same. There's no telling what the weather may be before you get home, and it is well to go prepared for anything."

Ned and I were in high spirits as we rode away over the wide, smooth plain. Each of us had fifty cents father had given us to spend in any way we liked when we reached Sagebrush. We would have very little choice in our selection, but we knew that there was a store in the little town in which we could buy candy, sweet crackers and prunes, three bring up. We must stay right here all night." delicacies for which our boyish hearts longed. Then we hoped to find some little things that would do to; trip took on the air of a very festive occasion indeed. It was a great event in the dull monotony of our lives, and we were very happy as we rode along singing snatches of rollicking songs or giving voice to our conjectures regarding the probable contents of the Christmas box Aunt Margaret had sent us.

"I hope some good angel told her to put in a nice four-bladed knife for me," I said. "You know I lost

"I hope she has put in some interesting books," This letter created quite a flutter of excitement in said Ned, who was an inveterate reader. "I've read

we got back into the pung and snuggled down under the buffalo robe while the wind roared around us and fine, sleety snow began to fall. Presently Ned said:

"See here. Bert: we'll freeze stiff and stark if we lie here all cramped up, with the icy wind sweeping over us this way and nothing but this one robe to keep us warm. Do you suppose that there is anything in the box that would help us out?"
"Perhaps there is," I replied.

"Anyhow, there is the box itself. I have been thinking that we might take the things from the box and put them in the pung and then crawl into the box ourselves. It is big enough for us to get into it. We could set the pung up on one side and put the box against it, and get into the box and be a great deal better protected than we are now. Let's try it.

Among our purchases for father that day had been a new hatchet. It lay in the pung at our feet, and Ned felt around until he had found it. Father had made us carry a small lantern with us, saying to

"They'd better take the lantern. They ought to get back home a little before dark, but if they should be delayed the lantern might come in handy."

We managed to get the lantern lighted under the robe, Ned saying as we did so:

"We'll keep it burning, Bert. It will make a little bit of warmth for us. It will help keep our hands warm.

I held the lantern while Ned hammered and pried away at the boards on the top of the box. It had been nailed up "to stay," as Ned said, but we managed to get it open at last and, to our joy, the first thing Ned lifted from under a layer of paper on the top of the box was a pair of thick, warm blankets. Farther down in the box we found heavy warm overcoats evidently for Ned and me, and also an overcoat for father. There were thick mittens for all of us and some cloaks for our little sisters.

"What's this?" said Ned as he lifted a large white

in a soft white cloth—a large fruit cake.

"I guess it would serve to keep us awake if we ate any of it," said Ned. We did not open any of the many small boxes and packages we found, but piled them up in the pung. We found packages that we knew were dolls and toys for our little sisters and our younger brother. We found also a big bag of candy and Ned said:

"We'll eat some of this. I read once that candy was heating, and we need all of the heat we can get just at present.

The interest and excitement of opening the box made us unmindful of the cold, and we hardly knew that our teeth were chattering. Emptying the box of its contents we dumped it out of the pung on its side. Then we set the pung up on its side and tilted it over until the upper edge rested on the top of the box. Then we crawled into the box, taking the buffalo robe, the blankets and the three overcoats as well as the cloaks with us. Wrapping ourselves up in all of the things we snuggled up close together in the box with the little lantern between us. snow fell fast and drifted against the pung, forming still more of a protection against the bitter wind. We were a good deal cramped in the box, and it worried us a good deal to think that the contents of the box must be snowed under, but we were far snugger and warmer than it would have been possible for us to have been in the pung.

We kept awake for a long time munching candy and some of the sweet crackers we had bought at the store. We knew that our parents would be intensely anxious about us, and we wished that they could know just how snug we were.

"But I guess it will be all day with poor old Whitey," said Ned. "He must be freezing to death -poor fellow! I would give him some of our coverings, but we must keep them ourselves or freeze, and I guess we are worth more to father than Whitey.'

All night the wind roared and the snow fell. We slept fitfully after midnight, and I was dimly conscious of signs of daylight when I dropped off into box from the middle of the wooden box. Removing profound slumber. Ned had already succumbed to that it will be none the less readable on that account.

pung and he dropped down almost exhausted. Then several layers of tissue paper we found wrapped up weariness and sleepiness, and I could hear him breathing heavily by my side when I wandered away into dreamland. Neither of us knew anything more until we heard some one saying:

"Come, come, rouse up, boys! Froze most to death?"

There was father on old Sorrel, our other horse! In spite of his sprained ankle he had managed to mount old Sorrel at the first sign of day, and had ridden out to find us. He had his sprained ankle swathed in bandages, and he said as we opened our

"Not frozen, are you, boys? God be praised for that!

"Aunt Margaret ought to have some of the praise," said Ned. "We surely would have frozen if it had not been for her Christmas box.'

The contents of the box were lying all around us. some of the things being under the snow. We lifted the box back into the pung and restored its contents. all but the blankets and overcoats, which we needed for warmth, for it was still bitter cold.

It was, as Ned feared it would be, "all day" poor old Whitey. We had been very fond of him. and there were tears in our eyes when we saw him stretched out, frozen to death and almost buried under the drifted snow.

We helped father to dismount and Ned and I managed to get the harness from Whitey and transferred to Sorrel. Then we started for home. Mother saw us long before we reached the little sod house, and came running to meet us with tearful eyes, so fearful was she that father had found us frozen to death. One of my toes was frozen and Ned's heels were both badly frozen.

"But that is nothing compared to what would have happened to us had it not been for Aunt Margaret's box," said Ned. Ned, who was very clever with his pen, wrote our Aunt Margaret a long and detailed account of our adventure, and weeks later she sent us a paper published in our native town with Ned's letter printed in it. And this is, therefore, the second time the story has appeared in print, but I trust

THROUGH THE SUEZ CANAL-EGYPT-THE RED

ocean, I am beginning to feel quite at home in the little cubby-hole of a room which I share with the other master-at-arms. And the days pass more quickly as we near Manila and the end of this part of my journey. When I am not "on watch" and reporting every hour to the officer on the bridge, "All's well below, sir," there are many other things to keep me busy. There is our little room to keep in order, and every three or four days there is a pile of dirty clothes to be washed-for it is a bad plan to let them lie dirty where the iron rust can get at them. Someone is washing all the while on the lower deck, and we all follow the same scheme, since there are no washboards in the ship. We have benches on which we lay the clothes, and then we go over them time and again with scrubbing brushes and salt water soap. In the end they are sure to be clean, and then we hang them on the foc stle bulkhead to dry in the sun. The troops on board are wearing khaki uniforms and these require to be washed very often, so that the forecastle deck usually reminds one of the

But though our washing and our duties keep us busy and make the time pass rapidly, we are always through such a desert as that lying between Suez Egyptian cooking. A man came along selling some glad to sight land, and I was particularly glad when we anchored one Saturday morning in the harbor of Port Said. For Port Said is in Egypt and I had been promised a trip to Cairo as soon as our ship passed through the Suez Canal to Ismailia and anchored there. I had looked forward to seeing Cairo ever since we left New York and naturally was pleased to be so near. We were obliged to remain at anchor nearly all day before we could begin our progress through the great canal, but this was no hardship. The harbor was a scene of great activity and I was kept busy watching the life and movement which was going on about me. Rowboats, manned by dark-skinned Egyptians, were flitting here and there, and about the middle of the afternoon a large boat came alongside with a party of musicians from Naples in Italy. They played and sang for the pas-

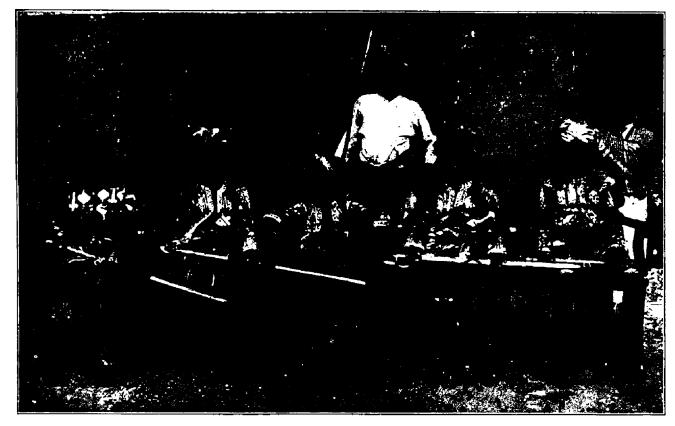

sengers, and then prow of the ship, moved up to the where the soldiers gathered to listen. and sailors were I have seldom heard more charming music, and when they rowed away they carried with them all the small change from the passengers and crew.

Toward evening the men came on board to fit the vessel for passage through the canal. Great arc lights were hung in front and from both sides of the ship, so that when we moved the water and land about us were all illuminated. These lights rendered us visible many miles away to other vessels which were coming north, and, though it was eight o'clock when we started through, the banks of the canal and the water ahead of us were as clear as by daylight. Going for the first time through the Suez Canal is an experience which all travelers are likely back yard of a city flat building on a Monday morning. to remember, when they consider what a tremendous undertaking it was to construct such a waterway more canal has cost and Port Said. Up to date the than one hundred million dollars, and it is a constant expense to keep it dredged and free from accumulations. Since its length is but eighty seven miles it has so far cost more than a million dollars a mile. There are many vessels passing through daily, however, and these pay enough in tollage fees to make the shares of the canal company very valuable. Each ship pays according to its tonnage and the number of passengers carried, and it cost us nearly four thousand five hundred dollars, which is no small sum to pay for the privilege of traveling eighty seven miles. But, of course, we saved both I decided that there was no better way to see those time and expense by not sailing around the Cape of streets than from the front or rear platform of an Good Hope, and there can be no question of the value of the canal to the commerce of the world.

We reached Ismailia, which is half way through,

proceeded to the capital, I expected to be pleased and surprised—and I was not disappointed. For many miles the train passed through a barren, sandy desert, and the hot winds which came in at the car windows were almost suffocating; but after an hour we entered the valley of the Nile, which is one of the most fertile regions in all the world. Here everything I saw was a delight to the eye. Fields of cotton were visible in every direction and the graceful date-palms and other tropical plants, lent an oriental air to the landscape. But what I most enjoyed were the station-stops, where I had a chance to observe the Arabs and Egyptians. The former were dressed in elaborate costumes of woolen goods and wore heavy turbans on their heads—but the native Egyptians and the Soudanese seemed to wear as little clothing as possible, and considering the summer heat, no one can wonder that they do so. At every station boys and girls came to the car windows offering us jars of muddy water to drink, and at a place called Zagazig. I had my first-and last-experience with native and of fish cakes and dirty bread, and after I had eaten some of each I felt almost as bad as when I was seasick in crossing the Atlantic. I at once determined that I would live on sandwiches in Cairo, if I could find no European restaurant.

We arrived in the famous city about the middle of the afternoon, and my first surprise was to find a string of electric cars waiting in front of the railway station. I had no idea that I would find trolley cars in Egypt, but I was very glad to see them, and I immediately boarded one to have a ride through the streets of Cairo. Before returning to the ship I decided that there was no better way to see those electric car, and during the remainder of that first afternoon I saw a large part of the old and modern sections of the city.

ARAB BOYS AT ADEN.

I can never forget my first impression of the life way is well patronized by the natives, and when one in Cairo's streets. The scene in one of the busy thoroughfares baffles description and is like nothing else in all the world. I saw Egyptians, Arabs, Nubians, Soudanese and representatives of all the countries of Europe jostling each other, shoulder to shoulder, and I saw every sort of costume, from the latest London style to the breech clout and twine of the desert negro. Cairo is the most cosmopolitan city I have ever been in, and is therefore one of the most fascinating. In some ways it reminds one of Paris, for there are shaded streets and squares which rival those of the French capital, or of such American cities as Detroit and Cleveland. Then there are French cafes, too, where people take refreshments at little tables scattered about the sidewalk, and there is a fine French opera house and many handsome residences modeled after those on the boulevards of Paris. But I was much more interested in visiting the native quarter than in seeing the modern buildings. Everyone has heard of Egyptian bazars, and I was glad to find them just as interesting in reality as they are said to be, in books. I passed through several covered streets where nearly everything on earth seemed to be on sale, and it was a great temptation to buy some of those oriental knickknacks which I knew would be of no use at all to me at home, and which are sadly out of place in an American house.

When night came, and the moon and stars were out, I boarded a trolley car and rode out to see the pyramids and the sphinx by moonlight. These wonders of the world are eight miles distant from Cairo, but I could see them as soon as I had crossed the River Nile, and the nearer I approached, the more majestic and wonderful they seemed. I have heard many people say that they found the pyramids disappointing at first sight, but that was certainly not my experience by any means. Perhaps the moonlight made them more impressive, but as I looked upon them I thought of Napoleon's words to his soldiers when he stood in my place, "Remember, men, the wisdom of the ages is looking down upon you.' And so it seemed to me. The next morning I visited the wonders again, and when I had passed through the intricate operation of mounting a camel's back. I rode all around them and examined them more carefully than was possible by moonlight. I can never forget how I was impressed with the scene. On a high table-land stood the three pyramids and the sphinx-below, across the plain, flowed the River Nile, and beyond it rose the glittering spires and minarets of Cairo. The whole country about was filled with historic interest, and I thought I would Arabia. like to remain in the neighborhood for months.

But there were many things I wanted to do in Cairo, and I returned as soon as I had climbed the Great Pyramid and learned by experience of what enormous stones it is constructed. On the return journey I determined to ride a donkey. In the city I had seen fat Arabs astraddle the little beasts, with a boy running behind to use a stick if the unwilling steed needed urging, and I thought I would like to than not their wool becomes a pale pink instead of try all the popular means of locomotion. I found that riding a donkey is a slow way of getting about, even when one has a boy running behind to use a stick. It took me about two hours to return to Cairo, and I was so tired upon my arrival that I longed to be

considers that they have always been used to donkeys and camels, it is no wonder it is appreciated.

Of course I visited a mosque in Cairo and it did seem funny to take off my shoes at the door and go in in my stocking feet. And once inside, there wasn't much to see; only several Mohammedans bowing and scraping toward Mecca, and a lot of beautiful rugs and tapestries. When one has visited one Mohammedan mosque he has seen them all, and one knows about as much before as after.

When I finally left Cairo to return to the ship, my mind was made up that it is one of the most fascinating cities to be found anywhere, and I was determined to return some time in the future and make a longer stay. It wasn't possible to see everything in so short a visit, but I brought away a vivid impression of the picturesque streets, the beauty of the streets and buildings, and the majesty of the pyramids. I can only imagine what a charming place it must be in winter, when the palatial hotels are filled with visitors and the climate is at its best.

It was rather hard to return to the monotony of life on shipboard after my glimpse of Egypt, and it was particularly unpleasant because the following days were spent in the Red Sea, which is famous as being the hottest body of water in the world. I had heard a great deal about the heat, but I would never have believed that such a large body of water could lack wind and coolness so entirely. It seemed to me that we had not a breath of cool air from the time we left Suez until we reached Aden, and all day long the hot sun beat down pitilessly. I sat in the shade and moved about as little as possible, and still the perspiration poured off me. Every man of the crew and the firemen were drinking about twice as much water as in ordinary times, and just when the heat was greatest the ice became so scarce we could have none at all. The passengers had previously been using it in wasteful profusion, so that we all thought the scarcity was due to carelessness. One of the firemen was overcome by the heat, and was brought on deck in a dead faint. They were all big, strong fellows, or more of them must have succumbed. The soldiers suffered, too, though they had no work to do. and one of them remarked that he wished someone would give him a drink of cool water and throw him overboard. At night the decks were covered with soldiers and sailors who were trying to get a few hours' rest. But it wasn't possible to sleep much during those five days in the Red-hot Sea, and we all breathed a grateful sigh of relief when we finally reached Aden and were greeted with a cool breeze from the Gulf of

There wasn't much of interest to see in Aden, and the only unusual "sight" was the inhabitants themselves, who are mostly negroes who have come from Somaliland. These peculiar black people are in a way like the Parisians, for they share the Frenchman's passion for red hair. They have no patent preparations for changing their color, so they cover their heads with a solution of lime, and more often red. They are as black as they can be, and their hair makes a funny combination. Being myself endowed by nature with red hair, my appearance in the streets of Aden caused a great sensation among the Somalis. They called each other to come and look, aboard the swift trolley once again. The electric rail- and if my scalp had been detachable I think I could Japan ahead of me.

have disposed of it at a good price. But one can never tell, and perhaps the Somatis prefer artificial red hair to the real thing, though I will return home from my trip around the world happy in the consciousness that there is one place on earth where red hair is considered of some value.

Although the English have fortified Aden and hold it as a coaling station, it is nominally under the rule of a native Arab chief, who lives in a handsome house on a promontory overlooking the sea. I had the privilege of seeing some of the boys belonging to this family, and, as will be discerned from the accompanying photograph, they are handsome little fellows, and dressed in the height of Arab fashion.

From Aden we steamed for eight days through the Indian Ocean to Colombo, in Ceylon, which must be put down as one of the most interesting places I have yet visited. It is quite a large city and has a harbor which is always crowded with ships from every part of the world. On the afternoon of our arrival there was a large German troopship anchored, with soldiers on their way home from the war in China, and when our band played the German national hymn you could have heard the cheers two or three miles away. There was also a British battleship in port, and when we steamed past it the band played "God Save the King," much to the delight of the jackies on board. When we were finally at anchor, we were surrounded with rafts and every sort of strange boat imaginable—all filled with Singhalese who wanted to dive for money, or sell us something, or sing us a native song. It was not the first time I had seen people from Ceylon, but I was nevertheless much interested in watching them. They wear their hair done up behind, both men and women, and some of the sailors declared they couldn't tell the sexes apart, they dress so much alike. But it is very easily done, when one is better acquainted.

When I was off watch and went ashore in Colombo, I found a great many things which I have read about all my life, but never saw before. I was delighted to see Japanese jinrickshas standing in a row at the jetty, and one of the first things I did was to enjoy a ride in one of these queer "pull-man cars." The streets in Colombo are smooth and well paved, and it was very pleasant to be pulled about so swiftly by the "ricksha" men. They are strong, muscular fellows, and can run miles at a stretch without resting. One can ride a whole hour in a jinricksha for fifteen cents in American money, and in two or three hours one can get a good idea of the streets of Colombo. Another conveyance I had never seen before was the straw-covered cart pulled by Indian oxen. These carts are used all over Ceylon for the conveyance of tea, coffee and other freight, and the patient oxen good workers, if they are slow. Some of the Singhalese drive the oxen hitched to carriages, and if one is in no hurry they answer the purpose as well as horses. The streets of Colombo present an animated scene, filled as they are with vehicles of almost every description, and the whole city has an air of prosperity which is refreshing to an American visitor.

I visited a Buddhist Temple one afternoon, and found it an awesome place. The keeper closed the door after me when I entered, and when I found myself surrounded with towering wooden images of all sorts of Buddhas, I had a creepy feeling down my back. The Great Buddha was an image fully twenty five feet long, lying behind a veil of lace, and the figure had a gruesome look upon its face which made me anxious to take my departure. I saw the rusty tin boxes into which the ignorant Singhalese place their offerings to their god, and it was plain that the whole religion is nothing but a superstitious fear of the evils which are threatened by the Buddhist priests. But even this fear is losing its hold, and the temples are now frequented chiefly by children who go out of curiosity.

There are over five thousand Boer prisoners in Ceylon, and I went out to one of the camps to see what the men were like. I found them very interesting talkers, who had nothing to complain of in the way they are treated by the British. Of course they would all like to be home again with their families, but, as one old man said, they would rather remain prisoners for years than see De Wet surrender. They are firm in their belief in the righteousness of their cause, and that the result of the war will be favorable to their interests.

SINGHALESE MUSICIANS.

I found the Singhalese people so attractive and the city of Colombo so pleasant that I would have been glad to remain in Ceylon weeks instead of days, but I will never get around the world if I remain too long in one place, and there are Manila and China and

Fun and Profit in Trapping-ATRUE-J. A. Newton

(Begun in November Numbers) A DAY'S SPORT.

Tom was so anxious to get to the traps that he only waited to eat a cold bite before starting, as he feared that our mysterious competitor might rob our traps.

I took more time about breakfast, but started soon, could increase the distance between us. after he did, with considerable eagerness, for we had not attended to the traps on the Cedar for three branch since setting them, and they had been lying in wait for unwary animals for two nights. Having to visit both lines of traps alone in one day, skin the game, reset the traps and perhaps change some of them to new places, especially on the Cedar, I knew that I had a snug day's work before me, and, expecting to return late, I put a good lunch in my pocket. I had had enough experience at this kind of work to know that if it is only a few crackers that are carried they sometimes brace up a hungry sportsman to a remarkable extent, seeming almost to put new life into him.

I made the trip without special incident worth relating, except that about three o'clock in the afterno more about it.

After making the round of the traps I could place storm when you were on the creeks to-day?" seven more mink to our credit: three large ones, three medium and one small mink; also I had another very nice furred coon, and a red fox which had been I had the foot of a mink, and in a trap close by the

On both of the creeks I discovered fresh tracks and blacker every minute; chain lightning began to going up the stream, and as there were no returning streak through it, accompanied by ear-splitting peals was, Tom." "So am I," he replied, "but I would be tracks I came to the conclusion that there were still of thunder, which you, of course, heard. more left.

camp, the sun not being more than an hour high. I I made up my mind that the best thing for me to crossed the country in the same place where Tom and I had lost our bearings two days before. Tom had kept the compass with him, so I traveled by getting two trees in line and going straight for the farthest one, then looking ahead some distance at another tree in line, and in this manner managed to strike the Cedar where I was familiar with the ground.

It was now nearly dark, and I still had some two or three miles to go, when I saw a flock of partridges treeing for the night. It was not very sportsmanlike to stand there and shoot them from their perch, but we were out of meat and there was no time for scruples of that sort. There were over a dozen of them, but I only dropped four of the birds

When I came within sight of it the great volume that Tom had arrived before me. "Well, what luck," peltries.

"That much," I replied, as I dumped the furs out

into a pile, for his inspection.

"That's doing pretty well." said Tom, "but I didn't accomplish very much, although I consider that there all the water out of the lake and leave it dry is a good excuse for it. Sit down and rest yourself, and I'll tell you what has happened to-day."

TOM'S STORY.

"You know you thought I was unnecessarily alarmed fears were.

do much of anything-you know it is dark around the know but what the end of the world was coming. lake for some time after it has been daylight here and I shrunk down under the roots, in about as in this open place. I hadn't looked at but three small space as was possible, although I was about traps, none of which held any game, when, on coming to the place where the fourth trap should be, it was gone. At first I thought that we might possibly have neglected to stake it down and some animal had no longer. Inside of ten minutes after the storm so I kept a sharp watch ahead and on all sides. All got in and carried it away, but when I found that the had passed, the sun came out bright again, and I at once I heard a distant rifle shot in the direction next two were gone also, and saw the stakes thrown looked for the Indian, but neither he nor his canoe Tom had taken, and almost instantly after another to boil. Just then I hanpened to look through an opening in the bushes, and caused the lake to swallow him and his boat. saw our Indian (I now believe he was a half-breed, for I have been told that full-blooded Indians don't derer in keeping the Indian out on the lake until he of the traps, I heard a crashing in the underbrush. often steal) bending over and taking a mink out of one of our traps, and then I knew for a certainty ing our traps. where our traps had gone to.

"I had a good notion to give him a bullet at I made up my mind to give him a scare. I aimed a few feet to the right of him, and pulled the trigger. The ball went very close to him and splashed in the lake. The report of the gun and the splashing of the bullet came so unexpectedly that he jumped about four feet in the air, and made a frantic dive for his canoe, without stopping to take the mink along.

not knowing but that he might have a gun and re-

mile or so.

prowling around one of our baits, but was not smart traps any more, or anyone's else, for that matter, the wreckage of timber where the waves left it? I enough to keep out of the trap. He acted very crest- As I said before, he was keeping out in the middle fallen, and hunched down as if trying to bury himself, of the lake, and at first he didn't seem to notice that out of sight in the ground. Also in one of the traps the sky began to have a brassy look in the west, which fast covered the sun. Then, to the southwest, I saw a big black cloud coming, which grew bigger and blacker every minute; chain lightning began to

"Pretty soon a terrific wind commenced, making After skinning my catch of animals I started for the whole forest bend before it, like so many reeds. do would be to get under shelter about as quick as I could, and seeing near me an old, upturned oak tree I managed to crawl in under the roots, where I was perfectly safe, and could also look out on the lake at what was happening there.

"I took another glance off to the southwest, at the oncoming storm, when I was terrified to see, approaching at cannon-ball speed, what looked like an immense column of black smoke; it was traveling faster than any storm you ever saw. In my state of mind it seemed to me to reach over a mile high, and traveling on a lean, or slant.

"But what of our Indian? At first he had not acted disturbed, but now he was paddling for dear without the rest flying, and then hurried on toward life toward shore, keeping straight before the wind, and across the troughs of the waves. The lake was plenty rough enough for a man to weather it in a of sparks shooting from the stovepipe gave evidence canoe, before the head of the storm (what is called "twister") came in sight. All at once it struck the said Tom, as I came in and threw down the sack of forest with a sullen roar, and I saw great trees broken | off like straws; some being literally torn up by the off like straws; some being literally torn up by the be covered with between four and five inches of roots and cast into the lake. It carved a wide lane snow. We both shouted with joy on seeing the through the forest, slick and clean, and then struck the lake; it looked as though it was going to scoop

"Just then, the Indian, no doubt realizing that his time had come, let out a despairing yell, which I heard above the roar of the storm. A great mountain of water came on at race-horse speed, when he was yet about a quarter of a mile from shore, and and worried for fear that the Indian would disturb about the same time. I should judge, the "twister" our traps? Well, I'll show you how well founded my reached him. I did not see it strike him, for what with the roaring of the storm, the cannonading of "I got to the first traps as soon as I could see to falling trees, and the almost total darkness, I didn't half under water. The storm passed on to the left of me, still thundering and crashing, but the sounds kept growing fainter and fainter until I could hear it vere anywhere to be seen. Evidently the storm had

was drowned, but he brought it on himself by steal-

"I made up my mind that I still had time to look at the traps, so started out, but had only gone a first, and then on thinking it over decided that I little way when on coming to the path the storm didn't want to murder a man for a trap or two, so had taken through the woods. I found the Indian's canoe where it had been left by the great waves that swept onto the shore. The canoe was safe from ever floating away, and, although I kept constantly thinking of the tragic end of the one I had been so flercely pursuing I kept on to the traps, and got took a quick aim at the breast of the animal, and fired. three mink, counting the one the Indian threw down when I fired to scare him.

"I don't know whether he had a gun or not-at "I forgot to tell you," continued Tom, "that I any rate, he didn't bring one into view. I dropped found several of our traps which had been reset by We were up before daybreak next morning, and behind an upturned cedar root, as soon as I fired, the Indian, which shows plainly that there had been something in them and the robber had thought to turn the compliment; however, he did not stop for cover up his theft by resetting the traps. Why he anything, but paddled out into the lake as fast as he didn't take these traps as he did the others I cannot see. By the way, I have figured it out how he was I could have kept sending lead after him, and able to find our traps in the darkness. He must have had a spear with him for fishing, for I found a burnt-out pine torch, and saw two dead pickerel traps, but to hustle around the lake where he landed that had been speared and torn off from his spear his cance and demand our traps; if he proved unruly and escaped. So with a light, you see it was dead easy to find our traps, especially as the mink had not been caught long enough to be tired out, or 'So I hurried on as fast as I could, although it was drown, and he could hear them splashing and rat-

But how do you know that the ill-fated trapper

was not a white man, Tom?" I asked.
"I'll tell you," he replied. "When I interrupted him in borrowing that last mink, I was close enough so which wouldn't have been the case with a white man; besides, he had a dusky, smoky look, and his canoe

"Hadn't we better be getting out of here, now that the north of me, and for a few minutes it was almost stayed.

This thing has happened?" said I "Won't some of his happened?" said I "Won't some of his his friends be likely to come looking him up, and

> "As long as we didn't cause his death by direct I told him that I did but that it missed me by a means, and in no way that the law could be applied to us, I see nothing to run for," Tom replied. "Well," resumed Tom, "our Indian won't bother our sides, can't we show any one his boat lying among think he was some Indian or half-breed who was in the habit of trapping alone, and probably his friends. if he has any, will never know what became of him. However, if he had a squaw and pappoose, they will look for him a long time.'

> > grandmother were living now, and she knew of this happening, she would tell us that this is a pokerish place to stay in with death so near, and that we will probably be haunted o' nights, but I am not as

superstitious as that."

So we decided to remain and continue our trapping and not touch the Indian's canoe or any other of his belongings we might find, and await further events.

WE KILL TWO DEER.

The next Sunday, following the tornado, it had turned much colder the sky clouded up and it soon began snowing quite heavily—it was then November ninth. We did not care to be out in the storm, and as we had no traps suffering for our attention, concluded to lie still and observe the day by doing no work except our cooking.

We did not refrain, however, from planning for the morrow, especially as it was the opening day when deer may be lawfully killed. We had provided ourselves with licenses before starting out into the woods, so we were prepared in that respect,

Monday morning dawned, showing the ground to snow, as it was just right for tracking deer.

"What move had we better make to-day, Tom?" 1 asked.

"I have been thinking," he replied, "that as we had ought to make the round of the traps again. how would it do for us to tend them and keep watch at the same time for deer? I think if you should go down the Cedar, and I strike across the north fork we could look after all the traps on the creeks today, and perhaps get a crack or two at deer, at the same time, and we will meet at the junction of the two creeks.

'That plan suits me all right,"I agreed. So we set forth with a feeling of good sport in store for us; I took a dozen shells loaded with buckshot, and Tom had a good supply of ammunition for his gun.

Before going hardly half a mile I saw tracks of deer, where they had been feeding during the night, came from his shot could not have been more than five minutes after "Well, thought I, perhaps I am as bad as a mur-, these shots when, as I was taking a mink out of one the sound coming from the north. I at once got ready and looked over the bank in the direction of the noise just in time to see a large fat doe stop behind a bush, with her breast toward me, thus presenting an excellent mark.

It seemed a pity to shoot at such a pretty creature, but I knew this was my first deer, if I could get it, and heside I wanted to beat Tom, if possible, so hardening my heart (although my hand was shaking somewhat). I brought up the gun to my shoulder,

I was not well braced when I fired, and the recoil threw me back down the bank. I heard deer crashing off through the brush, and concluded, with no little disappointment, that I had missed altogether, or at least failed to knock down my first deer. I hurried to the spot where the deer had stood, to see if there was any hair or blood, or signs that the shot had not missed altogether, and there my deer lay just straightening out, which made me very proud just then, as all hunters are over their first deer.

I knew then that the crashing I had heard in the brush, after firing, must have been made by companions of the animal I had just slain, but which

had kept out of sight.

From having heard several old deer hunters relate their experiences, I had learned that it was necessary to bleed large game by cutting the throat, but not knowing how to use the knife to open the large artery in the neck, I made bungling work of it, and cut the head half off in my first attempt at butchering, before the blood would run freely. As soon as the blood started, the deer began its death struggle, and I only got out of the way in time to keep from getting a tremendous kick from the hind feet. When its struggles had ceased I thought best to take out the entrails and hang up the carcass out of reach of wolves and foxes, returning when I had time to spare and drag my game home.

I had heard hunters tell of bending down a good, strong sapling and fastening a deer to the top by its hind feet; then when they released the sapling it would spring upright, carrying the animal with it. So I tried it, and it may have been partly because I was light in weight so that I could not bend down a very stiff tree, but, at any rate, I was nearly an hour in getting my deer clear of the ground in that manner.

Having finished this job I continued round of my traps, seeing the tracks of many deer and foxes, also mink, occasionally, where one had left the water and tracked around in the snow. Finally I came upon the track of a large bear and little cub: the latter must have belonged to a late litter, for by its track I judged it would not weigh over fifty pounds.

I also saw tracks which looked very much like those made by large dogs, but which I had no doubt were made by wolves.

When I reached the junction of the two streams I had four mink, and had seen nothing more to shoot, though plenty of tracks. Tom was nowhere in sight. So I continued on up the north branch, expecting to meet him any time, and as I came to the traps I took out the game and reset them. I kept on until I knew there were only six more traps on the creek before I saw any signs of Tom. I then found his tracks, which led northeast straight into the forest. Deer tracks were plentiful on this stream, so I concluded that Tom had seen, and probably wounded, a deer, and had gone in pursuit. My surmise proved correct, for as I was nearing camp with a growing fear that Tom might have got lost in the forest, I saw him coming, dragging a deer—a young buck. Tom appeared considerably jaded.

"Well, you got him, I see?" was my salute.
"Yes, and I earned him, too," said Tom. heard me shoot early in the day, didn't you?'

"I head some one in your direction shoot," I replied. "Well, I saw a drove of four deer—three goodsized and one fawn. They hadn't seen me and were not more than ten rods off. I fired at a large doe

with the rifle barrel, and must have had the buck fever again, for I missed slick and clean; but as they started to run I cut loose with the shot barrel, and this buck dropped its tail—a sure sign of being hard hit. The others turned and ran towards you, but the wounded one kept straight on for a mile at good speed and then began to stacken, and finally I came to where it had lain down until it heard me coming, and then had jumped to its feet and made off again. Quite a spot of blood was on the snow where the buck had laid, and blood in his tracks every few jumps. He now got cunning and began doubling on his tracks to fool me, and yet keeping a course toward the lake of the woods, or Thunder lake, or drowned Indian lake (whichever you have a mind to call it). I'll bet I followed that deer, in all his winding and doubling and twisting, more than twenty five miles. Finally, he made a break, as it he was going around the lake, so I took a circle out around his trail and legged it like a good fellow, and managed to come in ahead of him. As I climbed onto a large log I caught a glimpse of him working through the young cedars and coming toward me. He was looking back on his trail all the time and not suspecting any danger ahead. As he walked into an open space I gave him a ball between the eyes and then it was all off with him. It was a mighty heavy lug to drag him clear into camp, so I've kind of got that tired feeling, and now you know why I didn't tend my share of the traps and meet you as agreed."

I related my experience, after which, having broiled each of us a generous venison steak, we rolled into our blankets and were asleep in no time.

(To be continued.)

Real Conqueror-Ben Hains

term of the public school in a certain viliage of the middle west. It was not a large place, and all the scholars below the fifth grade were taught by a look of despan and scholars at lo Miss White, while "Professor" Milburn had charge of the higher grades.

It was almost time for morning re-cess, when the door of Mr. Milburn's room opened noiselessly and a small figure stepped timidly inside. The teacher looked up as the boy approached and turned a pair of great dark eyes, half-frightened, half-pleading, to meet his own. His clothes were shabby in the extreme, his shoes a mere pretense. while he held in his hand a thin cotton cap, which, in bold letters, advertised somebody's soap.

'I want to come to school," he said. Mr. Milburn looked at the clock, tapped the bell for recess, and when the room was cleared asked:

- "What is your name?"
- "Homer Wells."
- "How old are you?" "Twelve last June."
- The boy proved to be quite well prepared to enter the fifth grade, and the teacher asked:
 - Have you any books, Homer?'
- "No, sir," the boy answered, "but I've got some money to buy them. I saved it up last summer," and he poured out upon the desk a lot of nickels and coppers. Mr. Milburn counted it. The small pile fell quite short of the amount necessary. He turned to the boy, and

It was the second Monday of the fall saw a look of despair arise in the dark

Now it happened that fastidious, welldressed Victor Bixby occupied the other half of this same desk, and when he re-turned from recess he was by no means pleased with his new seatmate. He drew as far away from him as possible, with a sneer that the boy did not fail to see and feel.

Victor was very indignant that "that little beggar" should be seated next to ignoble spirits, he made life a burden for the shy, sensitive boy, until Will Elkins threatened to "thrash him good" if he which he worked more on the sly. Will was the largest boy in the school, and almost universally loved for his thoughtful kindness and good nature, and he soon became very much interested in the sad-eyed, shrinking little fellow. One day he even followed him, at a distance, to see where he lived, through the town, to a deserted log cabin on the edge of the flats that extended to the creek beyond.

A large, heavy-set man, with black whiskers and a countenance red and besotted from drink, rose unsteadily from

the doorstep, and, shaking his fist at the approaching boy, poured out a stream of vile words, while Homer tried to pacify him. Will turned away in disgust from the painful scene upon which he had intruded.

The next morning Will entered the school room some minutes before opening time and found Victor Bixby, with boys, standing about rection. the teacher's desk.

"Mr. Milburn," Victor was saying, "I don't want that little pauper sitting next to me. I won't sit with him, that's all!"

"You know very well that every other seat is full," said the teacher, somewhat sternly. "I do not see but Poured out a stream of vile words. stepped up.

"Very well, move your books at once," said the teacher. But Victor's face was growing red. He was the kind of boy to make enemies, and the worst one he had was Will's present seatmate, Tip Owen. Tip was too big to be bulldozed, and de-

spised him with all his heart.
"No, sir!" said Victor positively, "I don't want to go there. I won't sit with

Tip_Owen.'

"I have an idea that you will go there," said Mr. Milburn in an unmistakable tone, rising to his feet. "You him, and, with the help of several other will please not be over one minute in making the change.

When Homer came in a little later and discovered his new neighbor, a happy didn't attend to his own business, after light shone in his eyes. It was on this same morning that Mr. Milburn happened to speak of the "Great Prize," as he did often, to keep it well in mind.

"What is the 'Great Prize?" Homer

asked of Will at noon.
"Why," said Will, "it's a big gold medal to the scholar in our room whose grades for the year are the highest." "Can anybody, in any class, get it?"

the small boy asked eagerly.

"Yes," Will replied, "if he has the highest grade." Homer said no more, but Will noticed that afternoon that he was studying like a good fellow, with wrinkled brow and stopped ears. Was he really going to try for the gold medal? Will smile.. But in the small head a great thought surged. "If I only could!" he said. "Maybe they wouldn't call me a beggar when they saw me wearing the gold medal."

The weeks passed, and cold weather came on. Homer's thin face seemed thinner and paler than ever, and there was a hungry look upon it that could not be mistaken. Will was uneasy, and finally asked one day:

"Does your father find work now?"
"Some—we get along," replied Homer, half a dozen other in a tone that closed inquiry in that ai-

"What kind of

ventured. "Oh, anything now, but he used to be a wood-carver and cabinet-maker. Oh, you just ought to see what kind of work he can do!" he added with kindling eyes.

"Where did you live before you came here?"

"In Peoria."

"Did he work at his trade there?"

"No," Homer answered with paling ice. "That was before. He worked in a distillery there. Oh, I wish I had never seen Peoria!"

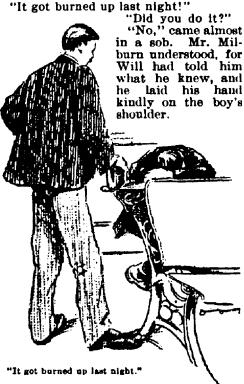

that you will "Why? asked Will thoughtiessly. have to." Will Homer turned to his friend a face so full of pain that Will hastened to say the class should be called.

"Mr. Milburn, I'll sit with him, and tenderly, "Never mind." But he under-Victor can have my seat," he said. | stood it all now.

After this, few days passed that Homer failed to find in his desk an apple, a piece of pie, or a sandwich, while Will regaled upon its duplicate at recess. He thought once or twice, from the looks of Homer's coat pocket, that he must have put the sandwich away there instead of eating it.

Homer continued to study hard, and did well in his classes, but one morning he made a flat failure in the geography recitation. When he returned to his seat he buried his face in his arms on the top of the desk.

"You did not study your geography lesson to-day," said the voice of the teacher at his side. "How was that, Homer-you were doing so well?" choked voice answered:

"Never mind," he said. "I have an old one that you can use." After this Homer never took his books home, but studied before school, at recess, and, sometimes, even after school, when Mr. Milburn had occasion to remain.

One cold December morning he came in just as the scholars were seated, all out of breath from running, and with a face pale as death, while his poor old coat was torn almost to shreds. He opened his geography and began a desperate effort to learn the lesson before

alone. The boy looked at him, but said

"Well, you can't wear that any longer," Will said. "I've got an old coat that I caught the teacher's quick ear. outgrew long ago, but it's real good yet, and I'll be glad to give it to you.'

"I'll work for it, if there's anything his head. that I can do," said Homer. Will saw that he was determined, and reluctantly agreed that he might split wood for it, and he promised to be on hand early an anguish of entreaty. The teacher in the morning.

But he did not come; and school began without him. About a half-hour later the door opened, and Homer stepped inside with apparent difficulty. He crossed the floor limping badly, and evidently in great pain. Mr. Milburn left his recitation to assist him to his seat.

"Why, my boy, you are badly hurt!" said kindly. "What is the matter?" he said kindly. Homer put his hand upon his hip.

'I didn't think it would take so long to get here," he said, "but it hurt so I had to stop a good many times.'

"How did it happen?" The boy turned answered. to his teacher such a pitifully appealing face that he said no more. He might have known, he thought, and have been less cruel.

Homer had a good dinner that day at the schoolhouse, and after school Will more delightful.

slumber, while a feeble fire flickered in the old fireplace. A large box, a small furnishings.

Homer dropped to the ground before

till your leg gets better.'

Thank you, but I can't." Then he a tone that brought tears to Will's eyes. to be to me before—before mama died—

creek, a couple of hundred yards distant, where the driftwood lodged freely at the bend. He brought several loads and cut it up, and then, upon Homer's assurance that they had plenty to eat, left him.

all his might. Will was growing to love of a happy home and better things in the burly man by the door drew his coat brought me things that his schoolmates

asked Will at recess, when they were Will, he never referred to them again, and to anxious inquiries as to the present he would always answer: "O, we're getting along, thank you."

The winter was nearly over when, one afternoon, Mr. Milburn and Will stood a madman. talking at the school-yard gate before The ente separating for their homes. A drunken man stagged along the walk.

"That's Homer Wells' father," said Will, when he had passed. "I'm afraid there will be trouble to-night."

The following morning school opened once more with number twenty eight vacant. There had been trouble, truly. But it was only a few minutes until Homer came in. Will stared, He had seen his face pale and frightened before, but this time it seemed bloodless.

He staggered a little as he crossed the floor, holding his hand to the side of his face, and half fell into his seat. His man, but he has persevered under them hand dropped, and Will started in hor- all with the courage of ten men." In ror. A deep cut extended across his the great applause that followed the cheek to the white temple, fully three inches long, so fresh that the blood still oozed slowly from several places. Homer put his hand in his pocket and drew out a small bloody rag, the best he had. Will pressed his handkerchief to the most noble, generous, or worthy into his hand with an exclamation that

Why, Homer!" he said, stepping up. 'How did that happen?" Homer hung

"Who did that?" Mr. Milburn continued, almost sternly.

"Please don't ask me," said the boy, in went to his desk, and returned.
"Will," he said, "take Homer to the

wash room and close up the cut with this sticking plaster. It will make a terrible scar if it is left open like that." Milburn himself followed soon, and, as he assisted Will, he said:
"How white you are, Homer!"

and that made me late.

"Homer," said the teacher, "suppose you make me a visit for a few days?" "I can't, thank you, though,"

"But this might happen again?"

"I'll watch out."

The weeks went on and school drew toward its close. Although there were hero!' many difficulties in the way of Homer's The winning the Grand Prize, yet he un- not on the program. A big man came helped him home. It was very cold, the doubtedly excelled everyone else in the striding down the aisle, with tears runwind was piercing, and it was a long school in one thing, and that was in the ning down both cheeks, sprang on the way, but as he felt the small arm close reciting of the selections that the teacher platform, and, with a "Let me speak, about him and he bore up as well as he gave the scholars for their Friday af-please!" faced the audience, drawing the could the slight weight from the in-ternoon "Literary." He threw his whole boy with him, and putting his arm jured member, never was a work of love soul into the effort with surprising ef- around him. fect, and Mr. Milburn decided to have Will shuddered as he entered the him recite at the Exhibition, on the rabin. On the hard clay floor straw was evening of the last day of school. He piled deeply in two corners, and in one had made the selection with great care, lay a repulsive creature in a drunken and was drilling Homer in it thoroughly.

At last the day came. There was a great deal of talking at recess that mornone, and two nail kegs completed the ing, but that was nothing unusual on the last day of school, and at noon all were dismissed, thus leaving the who.e the fire, and Will began piling upon it a afternoon for drilling the participants little wood that he found in the corner. in the Exhibition. This was the event "Oh, not so much!" exclaimed the of the year in the village, and that night by. "That's all there is, and I can't its largest church was packed from end go to the creek for any more to-night." to end, the scholars occupying the front "You can't stay here!" cried Will, in seats. And away back by the door sat a shaky voice. "Come home with me Homer Wells, Sr., more nearly sober than he had been for a week, though he never would have been there but looked over at the snoring heap in the for the dollar that Mr. Milburn had corner. "He's my father," he said, in shown him.

Songs, dialogues and recitations called "Oh! you don't know how good he used for loving applause from parents and friends. Then Homer stood up to speak. and he worked in the distillery. He As he timidly faced the great audience might freeze to death if I left him when he felt the words hopelessly slipping said Will nuskily, and he started for the After that he saw no according to the creek, a couple of hands away, but suddenly his eyes glowed as came back in a flood, and he began to speak—to his father!

Mr. Milburn, indeed, had made the peculiarly fitting selection in the hope that the man might hear it, but even he was surprised, for never had Homer Homer appeared at school the next spoken so before. He was making a morning as usual, still limping sadly, supreme effort—was it hopeless—to but he settled himself to study with reach the heart he loved. The audience was spellbound, and no wonder, for it the little fellow as he had never loved was his life's blood that he poured out a boy before. There was a gentle re- before it—but not for it. Many an eye has fed me, and kept me from freezing finement in his every manner that spoke was moist, but he noticed it not, until when I lay dead drunk. He has even

"How did your coat get torn so?" the past, but, while he fairly worshipped sleeve across his eyes. The boy fairly had given him, and I ate them while I trembled, finished the few remaining saw the hunger in his eyes as he lines, and ran behind the curtain.

> There was perfect silence for a moment, then the applause was deafening, and Homer Wells, Sr., applauded like

The entertainment drew to a close. Mr. Milburn stepped forward.

"We have but one prize for scholarship in our department," he said, gold medal for the highest grade for the year. And this medal belongs to Homer Wells, with a grade of ninety five and seven-tenths." Homer ascended the Homer ascended the steps with a distinct limp, for he had not fully recovered even yet from the effect of his hurt, and Mr. Milburn fastened the medal to his coat, saying:

"I am glad that Homer has won this medal, for he has worked under difficulties that might well have discouraged a man by the door grew so excited that he rose to his feet. When it had subsided the principal spoke again.

"We have one more medal to bestow in our department, he said. "A medal pupil, in everything outside of mere scholarship. This will now be voted upon by the pupils."

The ballots were quickly passed, and collected again—all but Victor Bixby's; he tore his up and threw the pieces under the seat—and the tellers were at work.

"There have been but two persons voted for," announced Mr. Milburn, after a short delay. "One has one vote, and the other forty six are all for-Homer Wells!"

A storm of applause cut him off before he could utter another word, and it was redoubled as the boy again limped up the steps, and his teacher fastened the "Yes, the boy answered, "It bled a other gold medal, larger than the first, lot, and I couldn't stop it for a while, upon the opposite side of his coat. Then the commanded silence.

"Let me read you," said he, "a few of the reasons which his companions have he given for their choice, written upon their ballots, as is our custom. Listen! 'Perseverance under difficulties; 'No advantages;' 'No help at home;' 'So brave;' 'Never complains;' 'Because he is a

Then happened something that was please!" faced the audience, drawing the

"Ladies and gentlemen," he began, ten gold medals with diamonds all around them would not begin to show this boy's true worth. I am ashamed to have him call me his father. I've been a beast and a brute, and he has loved me through it all. I have let him go cold and hungry, and in rags, and he

watched me. And then I have raised this hand to strike him—him!

"Did you see him limp? I did that! Months ago he said to me one night, so lonely like, 'Papa, won't you kiss me tonight, like you used to-just once?' And I answered, 'I'll kick you!' And I did—an awful one, brute that I was in the drink! And he never cried, only looked at me-such a look!

"And do you see that scar?" he cried, drawing his finger tenderly over the boy's thin cheek. "I did that, too! I had made up my mind to end my worthless life one morning, and had sharpened up my knife and as just putting it to my throat, when he came in the door, and with a cry tried to wrench it from my hand. And I struck him with it, hard-it would have killed him if he hadn't thrown up his arm; and then I cursed him-cursed that boy!-and drove him from the door-but he loved me still!"

The silence of death had fallen on the house, when the man dropped upon his knees before the boy, and cried out in a voice that swayed every heart:

"Can you forgive me, my boy, this brute of a father? If you only will I'll be a real father to you from this night on—though I never can be such a one as you deserve!" And the boy, with one shrill, vibrating cry of joy, threw his arms around his father's neck and sobbed: "Oh, papa!—my papa again!"

Then the Exhibition broke up of itself, without waiting for the closing exercises. Every man in the audience rushed to the platform to shake the hands of the father and the son. And Mr. Bennett, the owner of the furniture factory, who had turned away the drunken man half a dozen times, followed a warm bandshake with:

"Come to my place to work to-mor-row, Wells, and I'll help you fight the drink."

Advice to Boys Entering Business.

James A. Shaw says: Boys do not appreciate the importance and seriousness of the first steps in business life. They fail to realize that the future depends not upon luck or chance but upon having a solid foundation. Too many start out blindly, without any idea as to what they want or are aiming for, thinking only of their salary. If a boy could commence business life with even a small part of the judgment and common sense he enjoys later on how differently he would not. Boys too often fail to realize the dignity of their new life and cling to their boyishness and their boy pranks which seriously interfere with their work. He need not assume the airs of an old man, but he should forget the time-wasting and useless nonsense during business hours.

need not assume the airs of an old man, but he shou'd forget the time-wasting and useless nonsense during business hours.

Boys often think that because their work is apparently trivial that it is unimportant, and so do their work in a slipshod way. There is no part of the work about a business establishment that should not be done accurately and promptly. Employers notice how the employe does the little things, though the employe sometimes thinks that his shirking is not noticed. Every boy shou'd aim to do all his work at least a little better than any one else can. He should give it thought, figure out how he can save time and money and improve the character of the work. Suggestions are always in order. He should be in his place on or before the time expected, and if sickness makes him late he should immediately explain it to his employer. If the boy runs out of duties he should look for more. Men want bright, ambitlous boys around them prepared by experience in humble positions to fill higher.

Debt and Its Danger.

Pay as you go, boys. No matter how until earnestly you long for the possession of a gun, a boat, a blcycle or what not, nor how certain you may be that at the end of the week or the month you will have the money to pay for it, do not run in laws.

debt.

Lyman Abbott, the man who occupied Henry Ward Beecher's place in Plymouth Pulpit, has this to say on the spending of money before it is earned: "Hope inspires the man who is earning for future expenditure; debt drives the man who is earning for past expenditure; and it makes an immeasurable difference in life whether one is inspired by hope or driven by debt."

A man—or a hov—in data to the process of the man—or a hov—in data.

whether one is inspired by hope or driven by debt."

A man—or a boy—in debt is like a swimmer with a stone around his neck. However expert he may be, his onward progress has a continual drag put upon it, that not only hinders him from reaching the goal, but discourages him in his efforts to even keep his head above water.

A Gifted Boy.

Now and then one meets a boy possessing rare gifts in certain directions. In the little town of Mt. Sterling there is a boy that has enjoyed about one-half his teens, who, from the pictures of chess playing in the encyclopaedia, was led to study the game for his own amusement. To him the old Hindoostanese game became very interesting, and without delay he not only carved out of Georgia pline a beautiful set of chessmen, but mastered the functions of each piece on the board, and has become quite expert in the game. This gifted boy. Daniel Kumler, has a way of thinking that is strictly his own. In the same manner he became interested in electrical appliances, and although but a school boy, has made some new and exceedingly useful observations in the application of electricity, one of them being a discovery by which the cost of using telephone wires may be reduced one-half. And the fine part of it is that although very young he has the wit not to let any one know about the application of his discovery until he can protect the use of it from those who would make capital out of it. Daniel and three other boys in the town have a telegraph system, and the lads can have telegraph parties every evening if they so choose. Daniel has recently introduced a new feature of an economical nature, by a cut-off, which saves the chemicals from eating themselves away when

the lines are not in use. When boys have a mind to put their evenings and spare time to a profitable employment, they can learn many things that may not be found in books, and learned that way will never be forgotten.

D. D. BIGGER.

. Occupation for School Boys.

That is a capital idea of Sam Walter Foss, of the Somerville, Mass., public library, to have boys deliver library books at houses for the fee of two cents per book—the fee, of course, going to the boy. Such work would be sufficiently light and easy for a boy of tender years to do capably, and in the course of a Saturday afternoon any bright lad might amass a respectable sum. Any one who shows an idle lad how to earn money without interference with his school work, or undermining his health, is doing a good thing. What boys can do to earn money varies with the passing years. The old-time boy whittled shingles by the family fire and earned enough to pay for his schooling. Nowadays country boys can weed the onlons, "bring up" somebody's cows, and chop kindlings. In the city the boy's chances are more restricted, especially for a boy with social standing above the paper-selling and boot-blacking class. Mr. Foss's idea might be introduced elsewhere with advantage to both boy and book-reader.

Good Advice to Young Men.

The following epigrammatic periods are from President Porter. Yale College: "Young men, you are the architects of your own fortunes; rely on your own strength of body and soul. Take for your star self-reliance. Inscribe on your banner, 'Luck is a fool. Pluck is a hero.' Don't take too much advice; keep at the helm and steer your own ship, and remember that the art of commanding is to take a fair share of the work. Think well of yourself. Strike out. Assume your own position. Put potatoes in a cart, go over a rough road and the small ones go to the bottom. Rise above the envious and jealous. Fire above the mark you intend to hit. Energy, invincible determination, with a right motive, are the levers that move the world. Don't swear. Don't deceive. Don't read novels. Don't marry until you can support a wife. Be civil. Read the papers. Advertise your business, Make money and do good with it. Love your God and fellow men. Love truth and virtue. Love your country and obey its laws."

"How is your brother, Tommy?"
"Sick in bed, miss; he's hurt himself."
"How did he do that?"
"We were playing at who can lean the farthest out of the window, and he won."
—Tit-Bits.

This is a picture of a boat whose name is Finny, made by G. H. Buckley, a twelve year old boy, at Spring Lake, Mich. The boat will carry five boys and has traveled seven miles an hour.

Curious Feats With an Egg.

Dissolve an ounce of alum in a half pint of vinegar. Then take a camel's hair brush and paint with the solution whatever you desire on the shell of an egg. Let it dry, and then boil the egg for 15 minutes. The writing will then have disappeared from the outside, but when the egg is cracked the writing will be found on the inside.

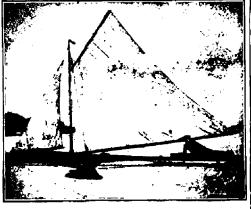

Inside.
Stand an egg on end on the table, placing a tiny pinch of salt at the spot where you wish to stand the egg. This will not be noticed on a white tablecloth. You will then be able to stand an egg on end as long as you place it on the salt, as the small particles grip the egg and prevent it from falling. This is a splendid impromptu trick for the dinner table.

A BIG KITE. Photo by Louis J. De Pass, 48 Fayette Street, Watertown, Mass. Kite made by De Pass and a friend.

The Crescent.

This is one of the "skippers" of Lake Minnetonka, near Minneapolis, Minn. She is owned by William W. Moore, of Way-

succeeding so well that the last the two was put into the water the twenty fourth of July. They say they have been paid for all their time and trouble in that they are the best looking boats they have seen.

His Trousers Material.

He was a proud little fellow, as he strutted around in a new pair of trousers that his mother had made for him, and very important he looked as he squared himself in front of his best friend, the corner groceryman, and said: "I bet you can't guess what my trousers are made of?"

"Of broadcloth?" asked the groceryman.
"Nope," replied the little fellow.
"Of corduroy, then?" ventured the

groceryman. "Nope."

"Of Jeans?"

"Nope."
"Well, what are they made of, then?"
"Of papa's old ones," triumphantly replied the happy little fellow.—Memphis Scimiter.

The Famous Magic Square.

One of the most perplexing problems that young people have to wrestle with —and they are all bound to face it sooner or later—is the one that is sometimes called the Magic Square. It is the object of this short article to give a simple explanation of the mystery.

The proposition is as follows: A square measuring eight inches on each of its four sides contains, of course, sixty four square inches. Now, this square may be cut into four pieces, and these pieces may be put together so as to form a rectangular figure measuring five inches on two of its sides, and thirteen inches on the other two. This figure would contain, therefore, sixty five square inches, and yet it is formed of the four pieces into which the original square of sixty four square inches was divided. The puzzle is to account for the extra inch.

of sixty four square inches was divided. The puzzle is to account for the extra inch.

Let us make a practical test. First, we lay off with a ruler, as accurately as possible, on a piece of cardboard, a square measuring eight inches on each of its sides. We then cut the board into two pieces, one five by eight inches, and the other three by eight. By a diagonal cut, we divide the larger piece into two pieces, each five by five by three, and the smaller piece intwo triangular pieces by a diagonal cut from one corner to the other. The base of each triangular piece will measure eight inches, and the altitude three inches.

Now fit the four pieces together to form a figure five by thirteen inches, and we certainly have within those lines an area of sixty five square inches. But we find that the four pieces will not wholly cover that area, for in the centre of the figure there is a space in the form of a narallelogram uncovered, and it is in this space that the extra inch is found.

The whole thing may be shown by trigonometry, but that is too technical for our present purposes. The "catch" is in making a small diagram, or in dissecting a square much smaller than eight inches, for then the uncovered space is scarcely perceptible.

Ice Sailing on Skates

(PEARSON'S FOR SEPTEMBER.)

The next best thing to ice yachting is ice sailing on skates. This exhilerating sport may be practiced, of course, where boating on the ice is out of the question; a fair-sized pond will give the skater plenty of opportunity to sail before the wind with the wind's own speed, to tack and maneuvre in the most approved fashion. The Swedish sail is the best and simplest. It is made of white duck, between seven and ten feet in height, about ten feet wide at the base, tapering to a narrow top. Light hamboo, or some other light, strong wood, is used for the spars. Of these there are usually three; two long ones, to which the sides of the sails are attached, and a strong main-stay, crossing about the mid-

the sides of the sails are attached, and a strong main-stay, crossing about the middle from side to side.

The expert skater, with a sail to his back, can have all the excitement and sensations of the ice yachtsman in a modified form; indeed, he can make complicated evolutions. pace and can make complicated evolutions space and can make complicated evolutions in less time, than the best of the yachtsmen. It takes a little time to become used to the sail; one feels like a bird, and as one glides swiftly along, seeming to have lost all hold of the ice, one might be drifting through the air.

Driving straight before the wind, an expect can sail thirty miles an hour. Nothing

Hop-Picking.

In those sections of the country where hops are raised, the time of hop harvest, usually from about the last week of August to the middle or last of September, is the time of the boys' money harvest as well. Men, women and children spend healthy days of hard work in the open air, with a good deal of fun and sociability to lighten the labor. Those boys who have been hop-picking ever since they were just big enough to toddle and play around their mothers boxes and so, on, year by year, first helping them, then promoted to boxes of their own, stand a better chance off making money than a "green hand;" as the hop-pickers say, and careful to pick his hops "clean" can have a good sum to his credit for his fall work. Hop-pickers are paid by the "box" and "box-tenders" by the day—a dollar and twenty five cents a day. The price for the pickers waries from fifty to sixty five cents per box, and a few boys can pick three boxes a day, but the average is from one to two hoxes, A "box" is really, to be Irish, half a box. Two large boxes are onnected by a tray on which the hops are piled, and each large box is divided, lengthwise, in the middle, and each of

OTSEGO COUNTY (N. Y.) HOP-PICKERS.

Youthful Sons of Ex-Gov. Hogg Are Learning the Oil Business.

The youthful sons of ex-Gov. Hogg are working as day laborers here, writes a correspondent at Beaumont, Texas. Hogg, it will be remembered, has made a million it will be remembered, has made a million in the oil fields in four months and now proposes to organize a twenty five million dollar corporation in London. Mike, the 15-year-old boy, works as a day laborer on Spindletop Hill, where the great crude petroleum gushers are located. The ex-Governor wants his two younger sons to learn the oil business from the ground up, so that they may be qualified as practical men to handle the oil interests at Beaumont which in all probability they will inherit from him. Tom Hogg, the ex-Governor's youngest son a lad now 13 years mont which in all probability they will inherit from him. Tom Hogg, the ex-Governor's youngest son, a lad now 13 years old, spent a month doing rough work on the property of the Hogg-Swayne syndicate on Spindletop Hill. It was early in the summer when the youngster swented at a derrick on Spindletop, and the heat and exertion proved almost too much for him. Later Mike came to Beaumont and applied to Capt. F. M. Brown, manager for the Texas Oil and Pipe Line Company, for a job in the field, where the company is boring several wells. Capt. Brown sized up the youth and, deciding he was as good as a man, put him to work on a boring rig on Spindletop Hill, where he has since earned three doilars a day. Both boys have declared their intention of returning to Beaumont at the close of school next summer to resume their work.

Laborers on Spindletop are well paid. A Laborers on Spindletop are well paid. A good man can easily earn three dollars a say and his board. Mike messes with the other workmen, and it is said that his appetite, like his muscle, is equal to that of any man on the hill. At the end of another season on Spindletop. Mike will be qualified to apply for a position as driller, and such a place is not to be laughed at even by rich men's sons, for it pays \$200 a month and board. A competent driller is always in demand at the salary named, and some are paid considerably in excess of this figure.

of this figure.
Ex-Gov. Hogg intends that his sons shall be self-supporting from the time they leave school, because he believes that they should learn to depend upon their own efforts to gain them a place in the world. His eldest son, Will, is rated as a very capable young lawyer.

A family of vegetarians has raised a cat on exclusively vegetable diet, with the re-sult that "Tabby" will not touch animal food and pays no attention to rats or mice

The greatest pheasantry in the world is that owned by Homer Davenport, the noted cartoonist, at East Orange, N. J. It occupies the entire rear of a city lot, and is covered with wire netting. Boys can, with just a little time and paims, collect in a few years material that will be equal to a number of bound volumes. Have commerced to the paims, collect in a few years material that will be equal to a number of bound volumes. Have you may have the paint of the paint o

The advantage of filing clippings is apparent. Suppose, for instance, that when the Spanish-American war broke out, a boy had begun to clip everything of importance he read about it. He would now have valuable facts and figures easily equal to a volume of history; and if called upon to write an essay on the subject, he would know right where to go for information.

Several years ago I went over a lot of old papers I had been keeping, and clipped every important and valuable religious and secular fact in them, and the result is that I have a veritable encyclopaedia of

Reviews of Boys' Books

JACK MORGAN, A BOY OF 1812: By W. O. Stoddard. Illustrated by Will Crawford. There is something fascinating about stories of the War of 1812, and just now there seems to be a wave of interest over such stories. The author of Jack Morgan has made a study of the operations of the land and water forces in our second war with England. In their maneuvers on the Ohio border and on Lake Eric culminating in Perry's glorious victory. Jack Morgan, the hero of the story, is a fine specimen of the frontier lad. He leads just the sort of life that stirs the blood of young Americans. In the story there come before the reader indians, scouts, frontiersmen, British soldiers, brave earnest men and women. What boy will not want to read about General Harrison's defense of Fort Meigs, Major Croghan's repulse of the British at Fort Stevenson, P. H. Perry's wonderful victory, and Harrison's triumph over Proctor and Tecumseh? This splendid boys story is thrown against a notable historical background. 33 pp. 12 mo. Cloth, \$1.25. Lothrop Publishing Co.

LITTLE MEN: A new edition of Louisa M. Alcott's famous stories, with fifteen full page pictures by Reginald B. Birch, illustrator of Little Lord Fauntleroy. Perhaps no book on the market will have a MAERICAN BOY'S LIFE OF WILLIAM

Lothrop Publishing Co.

Little MEN: A new edition of Louisa M. Alcott's famous stories, with fifteen full page pictures by Reginald B. Birch, illustrator of Little Lord Fauntieroy. Perhaps no book on the market will have a better holiday sale. The popularity of the author is sufficient to win for it popular favor, and the illustrations are delightful. It is gotten up in the best style, large clear type, filling three hundred and seventy nine pages. This book will appeal to adults who are looking for a pleasing book for children that is natural and fits the child nature. It is a book that adults will read with interest, and one of those books with which you can sit down with the children and spend an hour that is not tedious. \$1.50. Little, Brown & Co.

THE MASTER KEY—An Electrical Fairy Tale: By L. Frank Baum. The illuminated cover of this book is attractive enough to cause the boy to open the book with eagerness. The tale is founded upon the mysteries of electricity. Illustrations are by F. Y. Cory. The author says that while the fairy tale is founded upon the wonders of electricity and the things written about may seem quite improbable, yet they are not impossible, and that when the young readers of this tale shall have become men and women the story will not seem to their children like a fairy tale at all. To any boy who delights in the stories of electricity and at the same time has a taste for fairy tales, this book will prove a very acceptable Christmas present. It is beautifully gotten up, printed on heavy glazed paper, and illustrated in colors. The Bowen-Merrill Co.

good paper. 12mo. Cloth, picture cover. \$1.50. L. C. Page & Co., Boston.

THE HERO OF THE HILLS. By G. Waldo Browne. This is Volume III. of The Woodranger Tales by the same author. The foundation of historical facts upon which the author builds his tale materially stimulates the interest of the reader. From the opening to the closing chapter of the book there is enough stir and excitement to amply satisfy any boy. The homely philosophy and quaint mannerisms of the old Woodranger, the strong, sturdy, fearless self-reliant characters of John Stark and his friends, their unceasing struggles with the willy redskins, and their times of fun and frolic, as well as the descriptions of animal life and forest and lake scenery, go to make up a book which will be read with eagerness by all boys who love—and what American boy does not—stories of adventure and heroic deeds. As a Christmas present it is just what will please a boy. Henry W. Herrick is the illustrator. Three hundred and twelve pages, 12mo. Cloth. Illustrated cover. \$1.00. L. C. Page & Co., Boston.

THE LITTLE COLONEL'S HOLIDAYS.

THE LITTLE COLONEL'S HOLIDAYS. By Annie Fellows Johnston. Handsomely illustrated by L. J. Bridgman. This is another and welcome addition to Mrs. Johnston's delightful stories for younger boys and girls, and it fully sustains her already established reputation. The Little Colonel, Betty, Molly, Eugenia and the Appleton boys, and their games and fun are all so delightfully and fascinatingly real that we come to the end of the book with regret. Fathers and methers who are on the lookout for good, pure, wholesome literature for their children's enjoyment will find this volume all they can desire. Two hundred and thirty pages, 12mo. Cloth, with handsomely designed cover. \$1.50. L. C. Page & Co., Boston. THE LITTLE COLONEL'S HOLIDAYS.

appeal to all boy readers. His career as a soldier during the Civil War shows the gallant, fearless boy; and as we read of his work during the 'battles, sleges, fortunes,' of those trying times, we are not greatly surprised that he should afterwards be found worthy of the highest gift in the power of the people. Such a book will surely do much to instil boys with rightful ambition, honesty and love of their country. The anecdotes interspersed throughout the book show the sincerity unwearied efforts and unswerving honesty of a life cut all too short. There are sixteen full-page cuts and portraits in the book, which should certainly find a place in every library. Three hundred pages. Price \$1.25. Lee & Shepard, Boston.

the little fellow with half an eye can read
it. Price \$1.75. The Macmillan Company.

Reading With Profit.

Books should be read with a purpose, and ought to be carefully pondered. He says: Lord Macaulay's experience to that end "When a boy, I began to read very earnestly, but at the foot of every page that I read, I stopped and obliged myself to give an account of what I had read on that page. At first I had to read it three or four times before I got my mind firmly fixed; but I compelled myself to comply with the plan until now, after I have read a page through once I can almost recite it from beginning to end. It is a habit that may be formed early in life, and is valuable as a means of making our reading serve the best purpose."

Chorthand Instruction By Mail

Are You a Strangerapher? If not, do you desire to become one by putting in your spare time in study and practice at your own home without loss of time from your present employment? I am a practical stenographer and can give you practical instruction in a practical manner. If you are now a stenogapher, are you satisfied with your ability and earning capacity? If not, write me, as I can probably give you just the practical assistance you need. L. CAYWOOD, ATENOGRAPHIC EXPERT, Bex \$273, Alten, Illinois.

BOYS IN THE HOME, **CHURCH AND SCHOOL**

Angelo M. Fasno, a New York boy, who stood highest in a recent examination of candidates for Annapolis, though pitted against him were the sons of wealthy parents who had provided private tutors

ANGELO M. FASANO.

for their boys. Angelo is seventeen years old and one of six children of poor parents. He had been working for some time in a plumbing establishment, earning a small salary which went to help swell the family purse.

Indian Boys' Home Training.

The following account of the Omaha Indian boy's home training is given by Mr. Francis la Flesche, an Omaha Indian:

"No child is permitted to interrupt an older person, or to pass between two persons who are speaking; still less to come between them and the fire. They are strictly enjoined never to stare at strangers, nor to address anyone by his personal

ers, nor to address anyone by his personal name without giving a title.
"From his earliest years the Omaha child has been trained in the correct use of his native tongue; no mistake was allowed to pass uncorrected.
"No Indian parent ever whips his child. When it commits a fault, the entire family assemble in solemn conclave, and it is summoned and reproved with such gravity that it never forgets the lesson."

A First Grader.

Clarence A. Reece, Ben Avon, Pa., last year in the nine months of school took first place eight times, second place once. In twenty months he won first place seventeen times and second place three times.

Boys as Inventors.

Humphrey Potter, when a mere lad, invented the "hand-gear," an important invention connected with the steam engine.

Thomas Edison, when a boy, invented many important electrical devices.

Brunel, of Thames Tunnel fame, invented at the age of twelve a nightcap-making machine, which is to-day used in Normandy.

mandy.

Bewick, when a boy, invented a "graver" that enabled him to cut outlines in wood.

A boy of ten in Ohio a little while ago
fitted to his blockle an electric light apparatus of his own invention, the power paratus of his own invention, the power for which is obtained by the revolving of the wheels when riding.

An Inspiring Influence.

Mrs. A. H. Mitchell, Worcester, Mass., says THE AMERICAN BOY is an inspiring influence in her home. "Three of us," says she, "ran to the door the last time the bell

What is believed to be one of the richest copper deposits in the world was recently discovered through a boy's selling pretty rocks to an assay office at San Diego, Cal. Several weeks ago a small boy came into the office of Col. Robbins, an assayer of San Diego, with some "pretty" rocks which he wanted to sell.

The assayer gave him a few nickels and took the rock. Examination showed the ore to be almost pure copper streaked with silver. The boy had disappeared, but the assayer kept a standing advertisement in three papers for several weeks and finally located the boy and also his father. It was found that the ore came from about 25 miles below the Mexican line, and the boy's father. Antonio Feliz, Col. Robbins and J. Wade McDonald have located the land under the Mexican law. Development work has begun.

New York Newsboys' Lodging House.

On Chambers Street, New York City, is located the Brace Memorial, or the Newsboys Lodging House, erected as a home for newsboys by Charles Loring Brace. A visitor to this place says that when she entered early one morning she found two or three boys sweeping the dining room floor, several more making beds, and still others with mops and pails washing the hall floors. A little later boys were found in the kitchen doing kitchen work, and other boys were setting table. On the top floor is a gymnasium, and here the little fellows spend most of their spare time.

time.
The boys housed here have no other homes. They are taken care of for a small sum—fifteen cents a day.

An Essay on Habit.

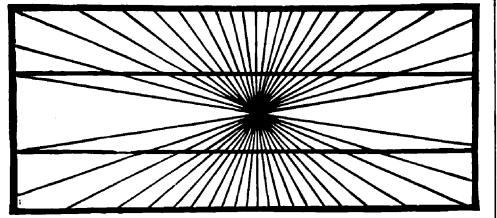

A story is told of an English school-master who offered a prize to the boy who should write the best composition in five minutes on "How to Overcome Habit." At the expiration of five minutes the compositions were read. The prize went to a lad of nine years. Following is his essay:

to a lad of nine years. Following is his essay:
"Well, sir, habit is hard to overcome. If you take off the first letter, it does not change 'abit.' If you take off another you still have a 'bit' left. If you take off still another, the whole of 'it' remains. If you take off another, it is not wholly used up; all of which goes to show that if you want to get rid of a habit you must throw it off altogether."

A Busy Boy.

A Busy Boy.

Russel O. Webster, of Newton, Wis., is a busy boy. Some of our city boys will be interested in reading how he is occupied. He is thirteen years old and lives on a farm in the Bad Axe Valley of Wisconsin. a mile and a half from his school house. He and his brother and sister ride to and from school every day. He gets up in the morning at half past five and feeds twenty head of cattle, milks four cows and eats his breakfast, before he starts for school at a quarter to eight. At five o'clock in the evening he is home from school, has his chores to do before supper, and then spends the evening, as he says, reading THE AMERICAN BOY. He is in the A class at school, and in examinations averages 83. He is looking forward to maple syrup time, which is the early spring. Making maple syrup is hard work, but there is much in it to enjoy.

You would think to look at this diagram that the two heavy black lines were not parallel. As a matter of fact they are exactly parallel. Hold them up edgewise and you will see that they are. The divergent lines which stick out from the centre are responsible for the trick.

she. Tan to the door the last time the behring to see who would get THE AMERICAN BOY first. If you could see the expressions on their faces you would know that it fills a long felt want. I wish you had as good a paper for girls."

Boy Finds Rich Mine.

A SURE CROP OF PEACHES THE EVERBEARING PEACH

This is the most remarkable of Peaches, combining many very valuable qualities, including:

FIRST:—Its Long Continued Bearing Period. The first ripening begins about July 1, and successive crops are produced until some time in September. Fruit in all stages of development—ripe, half-grown, and just set, as well as the blossoms—may be seen upon the tree at the same time.

RECOND:—As the Tree Blossoms at Different Periods, a complete failure of fruit from late frosts in spring has never been known.

THRD:—The Fruit is Creamy White, mottled and stripped with light purple and with Pink veins, oblong in shape and tapering to the same; flesh white, with red voins near the skin; very goed to best. Freetone of the ladian Type. The first ripening averages 3% inches long by 3 inches broad. The size of the second and following crops diminishes gradually, until that of the last ripening is shout 2 inches in diameter. A supply of fruit may, therefore be secured from the same tree for nearly three months in succession.

This is the most remarkable, as well as valuable peach

This is the most remarkable, as well as valuable peach ever offered in America for family use.

ever offered in America for family use.

By See what the Necretary of the American Pomological Nociety, also Assistant United Ntates Pomologist says about Everbearing Peach:

MESSER, PULLEN BROSE, Milford, Del. July 27, 1899.

GENTLEMEN: Referring to yours of the 28th inst., in re "Everbearing" Peach. I would say that the specimens which lexamined at meeting of Ga. Hort, Soc. at Americus, Ga., in August last, impressed me very favorably. It is a good sized Peach of the Indian type, a little dull in color but of excellent texture, flavor and quality. The long blooming reason which it is reported to have is a strong point in its favor where late frosts in spring are troublesome. Very truly.

WM. A. TAYLOR, Sec.

Have tested the Everbearing Peach to my perfect satisfaction.

Steps in Outlining an Argument.

The first great step in outlining or planning an argument is to divide the subject into two, three, or four main questions or aspects. Thus, if the subject is—Should women be granted the right to vote? You might consider the arguments under these heads:

1. The justice of granting the suffrage to women

to women.

to women.

2. The wisdom of it.
Or if the subject is—
The sale of intoxicating liquors should be prohibited—and you are on the negative or denying side, you might take for main divisions:

1. Is prohibition desirable?
2. Is it wise?
3. Is it possible (or practicable)?
Division of Argument.—In a similar way to that just described, suggest main heads for the discussion of the following questions: tions

The spelling of English words should Hawthorne was a greater writer than

Irving Examinations should be abolished.
 Young persons should not read news-

papers

5. French and German should not be taught in American schools.
6. Washington was not so great a man as Lincoln.

Writers are more useful than inven-7. Writers are more useful total avectors.
8. Winter is to be preferred to summer.
9. The Spanish-American war should have been prevented.
10. Novel reading is a waste of time.
11. The observance of the Sabbath should be compulsary.

be compulsory.

12. A man should always vote with his party.—From "Writing in English," by Maxwell and Smith.

A Little Patriot.

There is a five-year-old boy in Massachusetts avenue who is of the blood of patriots. says the Washington Star. His grandfather was in both the Mexican and Civil wars, and his father was also a Unionesoldier, consequently the little fellow has heard much "flag" talk in his short life and has exalted ideas of its protective qualities. He was the baby of the family till very recently, and occupied a crib bed in his mother's room. When the new baby came Harold was put to sleep in a room adjoining his mother's, and as he had never slept alone before, his small soul was filled with namcless fears which he was too proud to tell in full.

"It's mighty lonesome in here, mamma," he called the first night after he had

roug to tell in full.

"It's mighty lonesome in here mamma," he called the first night after he had been tucked in his little white bed.

"Just remember the angels are near you and caring for you," replied mamma from the outer room.

"But, mamma," he objected, "I ain't acquainted with any angels, and I'd be scared of them if they came rustling round, same as I would of any other stranger."

"Now, Harold, you must go to sleep quietly; nothing will hurt you."

"Can't I have the gas lighted in here?"

"No, mamma doesn't think it necessary and it is not healthy."

There was silence for some time, and then the small voice piped up again, "Oh, mamma!"

"Yes, dear."

"May I have granded!" flag?"

When Daniel entered Phillips Academy at the foot of the lowest class, the higher class boys were inclined to make fun of the diffident lad clad in homespun; but Daniel, taking little notice of this treatment, applied himself to study, and soon rose to the head of the class. One day the teacher said aloud in school: "Daniel Webster take your books, and stand upsir." Daniel obeyed, and the kind old man continued: "Leave the room and go into a higher class. Boys, say goodbye to him, for you will never overtake him." They never did overtake him. He went through college, became a distinguished lawyer and orator, a United States Senator, and the great expounder of the

Subjects for Debate.

That the whipping post should be revived

for certain crimes.

That lynch law is sometimes justifiable.

That hunting and trapping for amuse-

ment are wrong. That pardoning prisoners is bad in policy and in morals.

That the government should encourage

rewarding eminent talent.

That the government should encourage literary men and women by some plan of rewarding eminent talent.

That the country press is more influential and beneficial, on the whole, than the

and beneficial, on the whole, than clty dailies.

That a journalist is more influential than a preacher of the same relative ability.

That a good novel does more good than a good sermon.

That a bad book does more harm than a bad man

bad man.

Public Speaking.

The following suggestions, which William Ewart Gladstone made in answer to a request for "any hints that might be useful to a public speaker," are well worthy considering by all "platform" aspirants. It was attention to these rules which in no small degree accounted for Gladstone's own power in "swaying audiences."

1. Study plainness of language, always preferring the simpler word.

2. Shortness of sentences.

3. Distinctness of articulation.

4. Test and question your own arguments beforehand, not waiting for critic or opponent.

or opponent.

5. Seek a thorough digestion of and familiarity with your subject, and rely mainly on these to prompt the proper words.

6. Remember that if you are to sway an audience you must, besides thinking out your matter, watch it all along.

Keep the Boys at Work.

Put your boy to work if he is not in school. If there is nothing else for him to do, put him to whitewashing the back fence. Keep the lawn mowed, and even cut the winter supply of wood. Anything is better for him than loafing about town at the head end of a cigarette stump, learning all the evil and contracting all the vices that the devil keeps afloat to catch idlers. No honest labor will hurt your boy, but the evil habits he may contract on the streets may kill his soul and poison his moral nature so as to make him a detriment to the community in which he lives and how down his gray-haired parents with sorrow. If the fathers and mothers of today would learn the importance of training their sons to be industrious and keep them off the streets, the coming generation would be inestimably better off.—Exchange

Captain Manley Lawton, a Bugler at Thirteen.

(See front page.)

scared of them if they came rustling round, same as I would of any other stranger. "Now. Harold, you must go to sleep quietly; nothing will hurt you."

"Can't I have the gas lighted in here?" "Now, mamma doesn't think it necessary and it is not healthy."

There was silence for some time, and then the small voice piped up again, "Oh, mamma looked in the small voice piped up again, "Oh, mamma"."

"Yes, dear."

"May I have grandpa's flag?"

"Why, what for? I want you to go right to sleep."

"Please, mamma!" and a small night gowned figure appeared at the door. "Just let me stick the flag up at the head of my bed, and then I'll go right to sleep. Indeed, I will! You know the other night grandpa said at the meeting that 'under the protecting folds of the flag the weakest would be safe,' and I feel mighty weak, est would be safe,' and I feel mighty weak, est would be safe,' and I feel mighty weak, fast asleep, with a fat little fist under his red cheek, holding fast the end of the 'protecting' flag.

A Story of Daniel Webster, the Boy-Gustav Isenberg, Philadelphia, Pa, sends us the following anecdote of Daniel Webster's school days:

When Daniel entered Phillips Academy at the foot of the lowest class, the higher class boys were inclined to make fun of the difflident lad clad in homespun, but Daniel, taking little notice of this reat.

ing of the Companies; for the second best two dollars, and for the third best one dol-

Degrees Conferred.

WARD C. CASTLE. Captain of the Shelby M. Cullom Company, of Illinois.

A National Non-Secret Society for AMERICAN BOYS.

Under the Auspices of "THE AMERICAN BOY."

Object:—The Cultivation of Mantiness in Muscle, Mind and Morals.

The object more definitely stated: To promote mutual and helpful friendships among boys; to give wider circulation to high class boy literature; to cultivate in boys physical, mental and moral courage, and develop them along social, intellectual and moral lines; to cultivate purity of language and actions; to discourage idleness, and encourage honest sport and honest work; to cherish and emulate the examples of great and good men; to inculcate lessons of patriotism and love of country; to prepare boys for good citizenship; to cultivate reverence for the founders of our country, and to stimulate boys to all worthy endeavor.

Company News.

Cuban Athletic Company, No. 7, Division of New York, Cuba, N. Y., holds its meetings every two weeks at the homes of the members. As the name indicates, this Company is chiefly interested in athletics.

Conger Company, No. 2. Division of Illinois, Galesburg, Ill., held its election of officers recently with the following result: Burt T. Anderson was re-elected Captain. Frank Gerould Secretary. Howard Anderson Treasurer, and Ralph Hart Librarian.

Toronto Company, No. 1. Toronto, Ont., met for the first time in its new club room Wednesday evening, Nov. 20. Beginning with January, the Company dues will be 15 cents per month, and an admission fee of five cents will be charged all visitors. The Captain promises to send us some photographs of the club room when completed.

George H. Marshall Company, No. 1. Trenton, N. J., has a fine club room on which they have recently expended twenty five dollars for furniture, etc. This Company has had, altogether, about thirty five dollars in its treasury since its organization. The boys are very much interested in athletics, and the captain promises us a picture of their basket ball team soon.

David Wilmot Company, No. 7, Division of Pennsylvania, Macedonia, Pa., held its election of officers recently with the following result: Paul Daily was elected Captain, Wortha Heath Vice-Captain, Frank Coolbaugh Secretary, and Arthur Lewis Treasurer. The ten cents a month dues have been discontinued, and each month's bills are now paid by an assessment. two dollars, and for the third best one dollar. The first prize goes to J. R. Judy, Secretary of Daniel Boone Company, No. 1. Bunceton, Mo.; second prize to George C. Estep, a member of J. Murray Clark Company, No. 5. Canonsburg, Pa., and the third to Lewis Pettlt, a member of Wolverine Company, No. 8, Addison, Mich. The programs will be communicated to the companies by letter.

ment.

Toronto Company, No. 1, Toronto, Ont., held a very interesting meeting the evening of Oct. 23. Captain Lou H. Warnica gave the Life of Wellington, and Secretary Willie Watson gave a chemical experiment. This Company has recently adopted a new rule in regard to time of meeting. They now meet at 7:45 p. m. and have their literary and business meeting from that time until 8:30, after which time they play games, closing their meetings at 9:15 in order to give the boys time to study and prepare for their next day's lessons.

Deniel Roone Company, No. 2, Wayne

prepare for their next day's lessons.

Daniel Boone Company, No. 3, Wayne, Neb., is growing very rapidly, having recently added four new members to its list. This Company has about sixty books in its library, and is trying to get all of Henty's, Alger's and Harkaway's books. The boys are now studying the Life of Mc-Kinley. This Company is principally interested in athletics. One of the rules of the Company is that any member found to be using tobacco in any form shall be expelled from the club, and no person addicted to this habit will be admitted to membership. membership.

membership.

Lone Star Company, No. 1. Division of Texas, Ennis, Tex., holds its meetings every Friday night. Dues five cents a week. This Company has a nice room at the home of the Librarian, Curtis Knighten. They have eighty nine books in their library and expect to add more soon. The Captain writes us that they gave an entertainment recently and expect to add several new members to the Company as a result thereof. He says the boys saw what they were doing and thinks that with a little effort on their part the membership will be increased very materially. They will hold another entertainment at Christmas time. This Company has established an initiatory of three degrees, and the Captain says it is a good one. the Captain says it is a good one.

the Captain says it is a good one.

"Get There Eli" Company, No. 7, Division of Nebraska, York, Neb., held its first meeting the evening of October 29. The proposed Constitution and By-Laws were adopted. Dues twenty five cents each for the first four months, after which time they are to be lowered. The following officers were elected: Vice-Captain, Clyde Bailey: Librarian, Wray Edwards: Secretary, Willie Mead; Treasurer, Leverne Goble. They have had their charter framed, but have not as yet secured a room in which to meet. The Captain writes that they intend to have a gymnasium. This Company is principally interested in athletics. The boys have a foot ball team which the captain says is a good one. Number of members carolled at this writing sixteen. writing sixteen.

THE BLACK CAT AND SUCCESS, \$1.25

It is fortunate for our patrons that we are enabled to include in our most attractive offers the Great Story Magazine, THE BLACK CAT. THE BLACK CAT, during 1902 alone, will contain \$10,25.00 worth of prize stories. Its regular price is 50 cents, which price cannot be cut, but by special arrangements with the publishers, based upon very heavy guarantees, we are enabled to make these wonderfully low combination offers. We strongly recommend The Black Cat, and no one who enjoys a good story can afford to be without it. Do not miss the prize stories for 1912.

we strongly recommend The Hlack Cat, and no one who enjoys a good story can afford to be without it. Do not miss the prize stories for 192.

THE HOSTON PORT SAYS: "The man or woman who doesn't read The Black Cat misses the greatest stories in the world."

THE SAN FRANCISCO CHEONICLE SAYS: "The Black Cat is without doubt the story-telling hit of the century."

Answers to Correspondents.

Brainerd S. Gibson—The catalogue value of your stamps postally used is \$3.65. They sell at about fifty per cent discount from

A. B. N., Waco—The Paris Exposition stamps" are not stamps at all, but merely abels, and have absolutely no value from a philatelic standpoint.

Paul H., Redwood Falls—Nearly all of the 1898 revenues have been found "part perforate," and a few values have been found imperforate. In unsevered pairs or blocks they should bring quite a pre-mium over face.

W. J. E., Danbury.—All of the stamps you mention are very common with the exception of the two cent blue playing cards, which is catalogued at twenty five cents, and the 14c Fletcher & Marchand, which are worth about five cents aplece.

Edwin L., Brooklyn—The 8 pence yellow New South Wales is worth about thirty cents. This stamp is watermarked a crown and "N. S. W." and must not be confused with the 8 pence orange of the same de-sign, which is found unwatermarked or watermarked "8." and is much more rare.

G. L. C., So. Boston—The Standard Postage Stamp Catalogue (which can be obtained of almost any stamp dealer for fifty eight cents) gives the list prices of mearly every postage stamp ever issued. Many stamps are sold at large discounts from catalogue prices.

W. C. G., Yankton—One sheet of the two cent Pan-American inverted centre was placed on sale in the Brooklyn, N. Y., post-office May 2, 1901. So far as known no more have turned up and but few copies are in the hands of collectors. They bid fair to be very valuable.

Harold G. P., New York—There are fif-teen or twenty papers and magazines de-voted to postage stamps published in this country, several of which are weeklies. Every stamp collector should take one or more stamp papers, the subscription price ranging from twenty five to fifty cents per annum. The addresses of a number of the best stamp papers will be furnished upon receipt of a stamped envelope for reply.

Big Prices.

At a sale of postage stamps in London recently, a fine copy of Roumania, Moldavia, 1854, 81 paras blue on blue, fetched £143; another, 108 paras blue on pink £18 10s; another specimen, 27 paras black on rose, £36; another, 54 paras blue on green, enormous margins, £15 10s.

At another sale among the specimens disposed of were a fine copy of the rare Canada, 1851, 12d black, with large margins, £57; United States, Brattleboro, 1846, 5c, black on buff, £40; another specimen, 1869, carmine and blue, error with inverted flags, £54; another, 24c, green and purple, error with inverted center, £24; Nova Scotia, 1851-57, 1s; purple unused, £24 10s; and Transvaal, 1877, V. R., 6d blue, £16. The three days sale realized about £3,000.

The British authorities announce that the color of the stamp on half-penny post-cards, half-penny embossed envelopes, and half-penny newspaper wrappers will in future be green. A decision has also been arrived at to change the color of the one penny stamp on newspaper wrappers to carmine. Philatelists will be interested to learn that the supply of the latter in the old color to postmasters and others is exhausted, so that the carmine-tinted stamps will appear almost immediately.

New British Stamps.

The new ½d and 1d English stamps with the head of Edward VII. have been printed and will probably be in circulation by the time this paper reaches our readers.

The stamps are printed on white paper in the postal union colors—the ½d in green and the 1d in deep carmine, the design being an oval with the head turned to the left, and on one side a branch of laurel, and on the other a branch of oak leaves. Above the oval are the words, "Postage and Revenue," and above the inscription a Tudor crown. The value of the stamp is at the bottom.

Our readers must not imagine that the old stamps with the queen's head will become rare as soon as the new ones come into use. While they will gradually appreciate in value, it will be a long time before they will become valuable except in special instances.

Danish West Indies.

Just at this time when the sale of the Danish West Indies to the United States is being considered by the Danish government, much interest is being aroused in the stamps of these little islands likely soon to be the property of the United States.

Not counting shades, there are only fig-

Edw. G. Michaels, Richmond, Va.—See answer to Irving Truitt.

Harry Humphrey, Antigo, Wis.-No premium on an 1853 half dime.

Peter A. Iverson, Fergus Falls, Minn.— The five cent nickel of 1867 has no premium. James F. Quigley, Brooklyn, N. Y.— The 1883 V nickel hardly commands a premium.

Lauren W. Porter, Jamestown, N. Dak.— The 1851 three cent plece is worth fifteen cents.

Box 12, Clayton, Ia.—A dime of 1849 is worth a quarter. Your other pleces, face value only.

Fred Cameron, Pawtucket, R. I.—A 1798 cent, in good condition, readily sells for half a dollar.

J. U. Galler, Lawrence, Mass., and Cornelius M. Smith, Baltimore, Md.—See answer to James Marsh.

J. Percy Kimball. Parksville, N. Y., asks "what the G on the face of a gold quarter stands for?" None should be there.

Verne Besbuick, Gallepolis, O.—The 1835 half dime, unless fine, is common; 1834 dimes and 1816 cents, unless good, have no premium.

De Witt Bailey, Pine Bluff, Ark.—The English coin you have that is so poor that you cannot determine the date, has no value over face.

Carl W. Helwagen, Circleville, O.—Your rubbing is taken from a common brass medal, spiel marke or spiel munze (play money), and is of no value.

Melvin Hall, Logan, O.—The dealers charge \$4.00 for an 1869 dollar gold piece. The gold quarter eagle of 1863 has no premium; 1857 cent no premium.

H. M. Keeler, Spring Lake, N. J.—An 1876 trade dollar, unless at least uncircu-lated, has no premium; 1833 cent, if good, fifteen cents; 1875 twenty cent piece, no premium.

Dean King, Katispell, Mont.—The three cent nickel of 1868 has no premium. They were issued every year from 1865 to and including 1889, when their coinage was discontinued.

Richard Beers. Syracuse, Neb.—You do not give full date of your Danish shilling. I, however, presume it to be 1771, which is common and sells for ten cents; 1858 cent, no premium.

Henry G. Holmes, Bellows Falls, Vt.—Your coin is an English one of George II (1727-80). 1749. Farthings and half pence in copper were struck during his reign and are common, selling for twenty five cents each in good condition.

William G. Christy, Jerseyville, Ill.—An Italian 2 lire. This coin you refer to was struck between the years 1807-1814 by Napoleon I., as Emperor of Italy. It is worth half a dollar. Your other questions are elsewhere answered.

Roy E. Gardner, Machias, Me.-Your 1797 half cent (not cent), if good, is worth a dollar; if only fair, half as much. Your other rubbing is from a Russian coin 1843. 3 kopeck, the third series of coinage of Nicholas I. (1825-55). The piece sells for twenty cents. twenty cents.

U. S. Boyle, Jr., Pittsburg, Pa.—Good cents of the following dates are worth: 1800, fifty cents; 1803, twenty five cents; 1805, thirty five cents; 1806, fifty cents; 1808, and 1814, fifty cents each; 1818, fifteen cents; 1831, twenty five cents; 1837, 1847, 1851 and 1853, five cents each.

Warren Morris, Emporia, Kan.—Your drawing is from a VI. Marien Groschen. 1708 of George Louis (1638-1727), of Brunswick and Luneburg. The piece sells for half a dollar at the dealers. It would be well to remember that this George Louis reigned 1714-27, as George I., of England.

E. Reid, San Louis Obispo, Cal.—(1) 1803 cent, twenty five cents; (2) 1834 half cent, fifteen cents; (3) England, half farthing 1844, ten cents; (4) Hawalian ten cents 1883, twenty five cents; (5) United States three cent silver 1865, fifty cents; if in nickel, no premium. All your others are very common.

Eugene Newson, Paragould, Ark.—The 1838 half dollar, with O between bust of Liberty and date, is worth seventy five cents. This is the first year on which mintmarks appear on our coins. O signifies New Orleans mint. The ore is a money denomination used by Sweden, Norway and,

Jas. Marsh, Washington, Pa.—An 1819 half dollar is worth seventy five cents. In this connection it would be well enough to state that good specimens of the half dollars from 1806 down to the present time, with the exception of 1852, 1866 and some die or year varieties, can be purchased at the dealers for seventy five cents each the dealers for seventy five cents each.

Charles Larzelere, Wathena, Kan.—Your coin is a New Jersey cent of 1787, an early issue of that state. They were issued during the years 1786, 1787 and 1788. There are many varieties, but all have the horse head and blow on the obverse and the shield on the reverse. Yours is of the commonest type and date, and is worth a half dollar at the dealers.

Carl A. Lohmann, Akron, O. -Your draws.

soon to be the property of the United States.

States.

Not counting shades, there are only fifteen varieties of adhesive stamps, and with the exception of the 14c liac and green, none are very rare. The price of all of them is rapidly going up, most of them bringing full catalogue value if not more, and we would advise the completion of collections of this country as soon as possible.

Have You a Stamp Album?

WE HAVE A FEW INTERNATIONAL ALBUMS, 1901 EDITION WHICH WE WILL CLOSE OUT AT REDUCED PRICES.

These albums contain spaces for every adhesive postage stamp ever issued and are the most widely used by collectors in this country; they contain thousands of illustrations besides much information of value regarding each stamp issuing country.

"ANIMAL ADS" WILL DO WELL ON THIS PAGE

James Garfield Teagarden, Boulder, Colo., writes THE AMERICAN BOY as follows: I have heard of many ways in which boys may amuse themselves, but I prefer pet stock raising. I see many things of interest in THE AMERICAN BOY, and I thought perhaps I might add a little to the interest awakened by the paper by giving a few ideas for making money. I started raising Belgian hares in 1889, and since then have handled from fifty to one

hundred and fifty a season, and have made enough money from their sale to enable me to keep them in feed and to furnish me with spending money, also to take me to Denver to the stock fairs. I have taken prizes on my stock at these fairs. Belgian hares sell here at from fifteen to twenty five cents a pound in the market. Pedigreed stock sells for more, of course. I have one buck, 'Symmetry John,' that scores 94. I handle the Flemish Glant, which is the largest rabbit, weighing from fifteen to twenty-five pounds. I also raise Guinea pigs—little animals of the size of a large rat, with ears like a hog's, and no tail. Their color varies and their value is from twenty five cents to ten dollars each. I also handle pheasants, which are very beautiful animals, having about fifteen colors. In June of last year I started in the fancy pigeon business, and now I have the Parlor Tumbler. When I snap my finger to make him fly, he will tumble a back somersault. Some of them will turn over two or three times. These birds cannot fly at all. The outside Tumblers, however, fly high in the air and tumble in descending. I also have Carriers. Fantalls and Jackarpins. I feed grain and hay.

I am fourteen years old and in the highest grammar grade at school. People say I am proud of my name, and I certainly hope I shall never do anything to dishonor it. hundred and fifty a season, and have made

honor it.

The Inside Tumbler.

The question is often asked, what is the uside Tumbler, referring to a kind of Inside pigeon.
The Inside Tumbler is one of the rarest

The Inside Tumbler is one of the rarest varieties of pigeons, and gets its name from its very close tumbling qualities. A perfect performer can't fly at all, and can be exhibited indoors or out, and picked up at will. It tumbles from two feet down to six inches of the floor or ground. As fully developed performers can't fly, much care should be taken in the arrangement

The illustration is furnished us by F. C. Hege, a fancier. of Salem, N. O.

Stock Business.

James Garfield Teagarden. Boulder, Colo., writes THE AMERICAN BOY as follows:
1 have heard of many ways in which boys may amuse themselves, but I prefer pet stock raising. I see many things of interest in THE AMERICAN BOY, and I thought perhaps I might add a little to the interest awakened by the paper by giving a few ideas for making money. I started raising Belgian hares in 1899, and since then have handled from fifty to one little feats he astonishes all who witness his performances. performances.

Boys and Poultry

Boys' Experience with Poultry.

Duffie Reil, Stephenville, Tex., writes: I am fourteen years old and a breeder of poultry. I raise the Barred Plymouth Rocks exclusively. I bred the white for a while, but found the Barred the best. I also raise Pckin ducks. I have sold over twenty five settings of eggs this spring.

twenty five settings of eggs this spring.

Sidney Gallaway, Hico, Tex., writes: A teaspoonful of sulphur and a teaspoonful of alum mixed with water and fed every other day will cure any case of chicken cholera. Red pepper fed twice a week keeps chickens healthy. To make hens set, have good nests and keep from three to five eggs in the nests. Keep plenty of snuff in the chicken roosts and nests and you will never be bothered with fleas or mites. When a chicken gets droopy and sickly, give him a drop of turpentine on bread every day and he will soon get well.

every day and he will soon get well.

William T. Pickering, Mandeville, Jamaica. W. I., writes: I have at present four hens and twenty two chickens. The chickens can be sold at nine cents a pound, but as the chickens of the oldest brood only weigh a pound apiece it is not worth while to sell them yet. Their mothers have all left them and are laying again. • • • I never tried poultry raising before, and I think considering this that I have been pretty successful. Out of twenty four chickens hatched I have only lost two. One of these got drowned and the other got carried off by a mongoose. These animals are the terror of the poultry raisers. The mongoose does not take very young chickens, but waits till they are about three weeks old. Rats are very destructive to young chickens. I know of one hen that had six chickens carried off in one night by the rats.

rats.

L. H. Button, Hubbard, O., age fourteen, says that breeding Belgian hares, pigeons, chickens, etc., for profit is a fascinating way of making money, but he cautions boys that they must take care of their pets—not let their houses become filthy or damp or overrun with lice. He first hred Indian Games, as he had read much about the superior quality of their fiesh. He bought a trio but before spring the cock was stolen; then one of the hens died and he became discouraged. He then started to breed the white Plymouth Rocks, and has been at it now for two or three years and has found it very profitable. Lately he became interested in homing pigeons, and has now a few nice pairs. He says; "If any boy desires to make money and have pleasure at the same time, let him start a loft of homers. I am sure he will be benefited."

Points for Young Poultry Raisers.

The hen has been called the queen of money makers.

Don't keep a hen over her third winter, for she will not pay her way.

One pound of meat is worth several pounds of grain for making eggs.

Remove all unprofitable members of the flock so as to give the others more room.

The poultry products of the United States reach very nearly the \$300,000,000 mark annually.

Try to combine beauty and utility. It costs no more to have beautiful birds than to keep scrubs.

The him add: more to the wealth of the nation by \$90,000,000 than do all the coal mines in the country. January is not too soon for separating the birds into breeding flocks if eggs are

chesired for hatching.

Chickens must be kept clean, dry and warm, and generously fed with nutritious food and comfortably, lodged.

Chickens should have some kind of green stuff for winter. Cabbage, turnips, beets of any kind, small potatoes, are all good.

It is well frequently to spade up the poultry yard, turning the filth under and allowing the fow's to take advantage of the loose earth to scratch and exercise.

The hen and the busy incubator turn out annually 2,500,000,000 chicks which live long enough to reach the market, and the annual egg crop is fully 13,000,000,000 dozens.

There should always be a storm house with a southern exposure, for poultry, to which they can retreat in times of storms or showers, and where they can nestle and dust in the dry earth or sand.

pacity. Heat, moisture and ventilation automatically and perfectly controlled.

A non should never have a full crop during the day, but should be kept hungry enough to scratch and hustle about and find the food which has been scattered about in the litter.

Chickens should have some kind of green stuff for winter. Cabbage, turnings, beets of any kind, small potatoes, are all good.

The boy who keeps good poultry and studies how to carry on the business by the most approved methods will make money.

The average hen can give birth to an hundredfold more chickens in a season by the ald of the incubator than she can in the good old way.

It is well frequently to spade up the poultry yard, turning the filth under and allowing the fow's to take advantage of the loose earth to scratch and exercise.

About in the litter.

Rolled oats has been found injurious to little chicks. A good feed for the first week is pinhead oatmeal mixed with one-third the quantity of millet seed. Feed every two hours and never leave more than the chicks will eat up clean. After the first week give bread made of equal parts by weight of corn meal, sifted ground oats and middle oats has been found injurious to little chicks. A good feed for the first week is pinhead oatmeal mixed with one-third the quantity of millet seed. Feed every two hours and never leave more than the chicks will eat up clean. BOYS, SEND US PICTURES OF YOUR STOCK.

CHARACTER IN THE EAR.

"The criminal ear," as exploited by Italian anthropologists, has just received a severe setback from Dr. Keith, a well-known English scientist, who, after studying the cars of more than forty thousand persons, including two thousand lunatics and eight hundred criminals (besides some hundreds of animals), finds that ears are absolutely characteriess so far as furnishing any clue to personal traits is concerned.

Census Results-1900.

TRAINING A CAT TO RETRIEVE.

With patience, gentleness and entirely without force a man has successfully trained a common cat to retrieve. His education began by leading him up to all game that had been killed, which was followed by the cat seeking the game himself. Next, he was taught to stay close by his master, at first perched on his shoulder. He was then taught not to fear the sound of a gun. When the gun was fired a common ball was thrown forward by the master, and the cat soon found out fired a common ball was thrown forward by the master, and the cat soon found out the connection between the report of the gun and retrieving. A dead bird was afterward substituted for the ball, being at first thrown from the hand, and later on dropped from the branch of a distant tree, and the cat's education in retrieving was completed. He retrieves perfectly, points sometimes, and in general conducts himself like a hunting dog.—Forest and Stream.

EVOLUTION OF POSTAL RATES.

Congress passed the first law fixing postal rates on February 20th, 1792, and on the 1st of June following it went into effect. The charges for transmitting letters were fixed as follows:

Not exceeding thirty miles, six cents.

Over thirty and not exceeding sixty miles, eight cents.

Over one hundred and not exceeding one hundred and lifty miles, twelve and one-

Over one hundred and fifty and not exceeding two hundred and fifty miles, seven-

oceding two hundred and fifty and not ex-teen cents.

Over two hundred and fifty and not ex-ceding three hundred and fifty miles, twenty cents.

Over three hundred and fifty and not ex-ceding four hundred and fifty miles, twenty two cents.

Over four hundred and fifty miles, twenty

five cents.

After the Civil War the postage to Europe was twenty five cents. To-day a letter may be sent to Manila, about eleven thousand miles, for two cents.

THE ROUNDARY OF OUR VISION.

Standing on the highest mountain—say at a height of twenty six thousand, six hundred and sixty eight feet, which is slightly over five miles above sea level, on a clear day, a man can see to a distance of two hundred miles, To see objects at a distance of one hundred miles the observer must be standing at a height of six thousand, six hundred and sixty seven feet above the level of the rea. The rule is that the distance in miles at which an object on the earth's surface may be seen is equal to the square root of one and a half times the height of the observer in feet above sea level, allowance being made for the effect of atmospheric refraction. As the refraction varies, however, at different heights and also by weather conditions, precise accuracy cannot be given. A deduction of from one fourteenth to one tenth of the distance given by the rule might probably be made on account of this refraction.

OCEAN-GOING TIMBER BASTS

OCEAN-GOING TIMBER RAFTS.

The great cost of transporting timber from the forests of the North West by vessel to the west coast of America has caused experiments to be made at various times of transporting timber in bulk. The rafts are eigar-shaped, built in a central hulk and secured by chains every twelve feet. The whole raft is about four hundred feet in length, made up of eighty foot logs, and being thirty feet in diameter. It would take the full capacity of a dozen ordinary vessels to carry as much timber as there is in such a raft. Quite a number of these rafts have already arrived at San Francisco from the Columbia River in safety. in safety.

A MONTH OF SUNDAYS.

As each day of the week is observed as Sunday by some nation, a month of Sundays is just an ordinary month. The first day of the week is our Christian Sunday; Monday is the sacred day of the Greeks; Tuesday is the holy day of the Persians; Wednesday of the Assyrians; Thursday of the Egyptians; Friday of the Turks, and Saturday is the Subbath of the Lag. Saturday is the Sabbath of the Jews.

MEASURING THE DISTANCE OF LIGHTNING.

If five seconds clapse between the flash and the peal of thunder that you hear, it means that the flash is a mile away from you. Fifteen miles is the longest distance that thunder has been heard after the flash. The sound of cannon-firing has been heard at a distance of one hundred and

The great English scientist, Sir Robert Ball, says that the sun loses five miles of its diameter every one hundred years. We need not, however, fear the speedy disappearance of the great orb of day, because in forty thousand years the loss would be only two thousand miles, which would not greatly affect the sun's present diameter of \$60,000 miles.

MULTITUDE OF THE STARS.

To the human eye the number of stars visible is five thousand, while through the great Lick telescope there can be discerned 50,000,000.

WORMS ARE USEFUL

In an acre of earth there are said to be, on the average, 34,000 worms, and naturalists declare that the good done by these apparently worthless creatures is almost incalculable.

POSTAL RURAL DELIVERY.

There are over four thousand routes in operation, and nearly four million people are benefited by the rural free delivery system which was commenced in 1897.

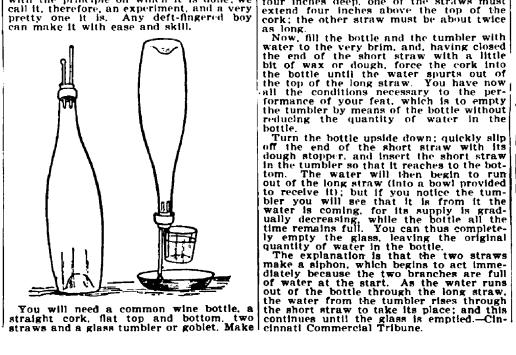

There are over four thousand routes in operation, and nearly four million prople are benefited by the rural free delivery system which was commenced in 187.

Fig. 1.

The woods, fishing in the river, or strolling over the fields, there always came to me a wish for the companionship of a canine friend. But if the dog himself brings so much pleasure, how much more will you enjoy him if he be bright, quick and well trained. The purpose of this article is to tell boys how they may have such a pet.

Dan Beard in his American Boys' Handy Book says: "It is true, that a boy can do without a canine companion, and live to enjoy life, but he is almost incomplete, he has lost a gratification, a harmless, pleasant experience, and the loss leaves an empty space in his boyhood life that nothing can ever quite fill." It has almost always been my good fortune to own a dog.

Take him out to some field where there are no dogs or cats to chase, and set him behind you in the right position, saying the word "heef" as you walk along. Of course his desire will be to run on before, but if called back each time to his place he will learn your wish. Should he keep up his antics you must take a whip and use it whenever he starts ahead. When wave your arm and trot on a little dissipation. The words will soon be understood.

The pupil has now had his kindergarten

soon be understood.

The pupil has now had his kindergarten training; he must be taught good manners. Say either "shake hands" or "give me your paw," as you take his right forefoot in your hand and lift it up as in Figure 1. He will learn to raise his paw when you tap it with your finger, and finally the command alone will be sufficient.

or strolling over the fields, there always came to me a wish for the companionship of a canine friend. But if the dog himself brings so much pleasure, how much more will you enjoy him if he be bright, quick and well trained. The purpose of this article is to tell boys how they may have such a pet.

Let us first consider the selection of a dog. If you want a useful hunting companion, take a pointer or a setter; a lighter, of course a buil; a water dog and retriever, select a spaniel; or a performer, have a poodle; if an all-around dog, which excels in almost every one of these qualities is desired, choose a buil terrier. My dog Don, whose photographs are shown, is two parts buil, and one terrier blood. Some prefer

place it in his mouth. In this way he will learn to carry, and a basket may be substituted for the other objects. When this is learned show him a stick and say: "Take it, sir." If he does not, force it between his jaws and, pretty soon, he will open his mouth for it when you give the order. Now move it a short distance—two or three inches away—and he will reach out and take it. Then you can gradually make the distance farther. Do not expect this to be so easy as it appears; it may take hours of patient labor, but with these two things learned retrieving is a very simple matter. Suppose you have shot a duck out in the water, tell your dog "go take it," and he will bring your game in like any retriever. He knows it must not be dropped, because you have taught him to carry.

The art of jumping should come next on the list. I found a hoop better than a stick to begin with. Take a large barrel hoop, with no nails protruding, and place it a foot from the ground. Hold a plece of food at one side of it and call the dog to the other. Then speak out sharply, "jump, sir." Do not allow him to go around the hoop for the morsel, but make him jump through. Soon the food may be dispensed with, for the words will be understood.

I will tell you about Don's favorite trick.

dispensed with, for the words will be understood.

I will tell you about Don's favorite trick. "saying his prayers." When the minister calls, Don usually engages in a long, silent prayer, but it ends in a noisy manner, for if there is no cake or candy forthcoming he lets out such a volley of "speaks" that our visitor thinks he is using improper language. You see in the photograph, Figure 3, the position taken for his devotions. As you repeat the order, "say your prayers," pat the back of the chair and snap your fingers. This will make the dog jump up to the correct position, and he must remain there until "Amen" is sald. This trick is easier to learn than it seems. It took Don about half an hour.

As pretty a performance as I know of is "shutting the door." Tap the door near the knob, so that the dog stands up and puts his forepaws on the panel. Meanwhile tell him to shut the door. He must not return to the floor again until you lower your hand. With this much accomplished, open the door very slightly and do the same as before, except to make him push it shut—see Figure 4. Open it wider and wider, at the same time using the hand less, and teaching him the words. Then at a distance of a few feet give the command, and finally he may be gent from another room to shut the door for you.

No canine actor's repertory is complete without the well-known trick of "sitting up." Do not attempt to teach this to a dress, Chas, F. Howard, Windfall, Ind.

dog under six months of age, as his back is not strong enough to allow taking that position. This is the way Don was taught: Sitting on a low chair, I called him to me. Then I lifted his forefeet on my knee so that he sat on his haunches, as in Figure 5. After a few times he would take that position at a motion of my hand, and, inally, when commanded, to "sit up." The support was withdrawn as soon as he was able to maintain the position alone.

If you wish he may now rise to "attention." This is simply changing from "sitting up" to standing erect on his hind feet, as in Figure 6. To teach this have him sit up, and at the same time hold out a piece of meat above his nose. Of course he will rise to take the morsel, and when that position has been maintained for a few seconds award the prize. Now extend your hand with no food in it and say "attention." Thinking there is something for him he will take the correct position. Make him keep it, by slapping his chin, until your hand is lowered.

Up in Alaska, where railroads and horses are scarce, men depend almost entirely upon dogs for transportation, so do not be disappointed if you cannot own a pony, but train your dog to pull a sled or cart. I place this last on the list of performances because a dog should not be made to pull until at least a year old. First make a harness, which should consist of a breast band, held in position by a shorter strap that goes over the back, see Figure 7. Fasten each end of this breast band to the wagon or sled and start off. You should walk behind the cart, ready for emergences, for the "horse" will either race wildly about or eise stand perfectly still. If the former, hold him back, meanwhile saying, "whoa," and if he tries the latter and refuses to move, say "go along, sir," meanwhile running a short distance ahead to start him. In this way he will learn to trot along as steady as an old car horse, or at the word, break into a gallop. With all these tricks mastered your pet will have a good education, and you may

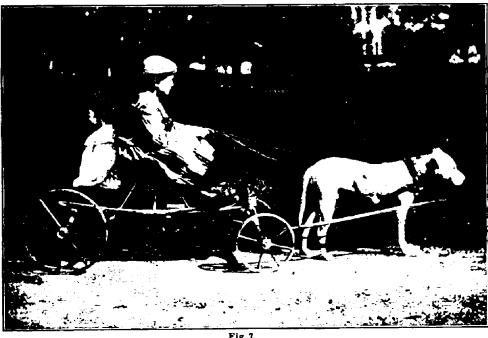

Reins attached to a muzzie are used oriving.
With all these tricks mastered your pet will have a good education, and you may well be proud of him. He may be able to mount higher, and learn to stand on a rolling ball, climb up and down a ladder, walk on his forefeet, or even distinguish between different numbers or articles, but few have the intelligence necessary for these

few have the intermediate these.

Use the whip sparingly, but when your command is understood never fall to punish disobedience. If you treat a dog kindly and yet enforce orders, he will be a companion, who obeys your word, and is perfectly willing to give up his life in your

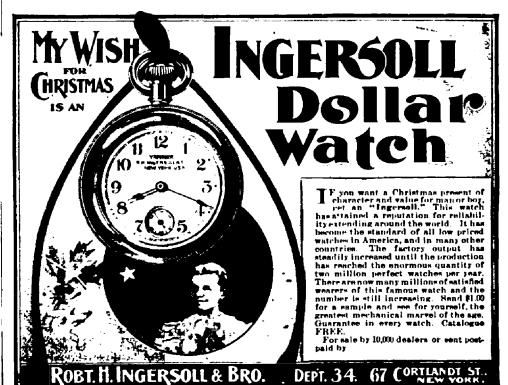

an even proportion of each. I admit that the latter are more graceful and livelier, but not, in my experience, any easier to teach, and not nearly so strong and hardy. By all means purchase a pup, two or three months old, and be careful that he is not deaf, as this species has a tendency to loss of hearing when young.

Hegin his instruction as soon as possible in a quiet room where there is nothing to distract attention. Teach him to "its given, push the pup gently down to a crouching position, and when he grasps your meaning, give the word alone. This first lesson should not be over ten or fitteen minutes in length. Rewards of a few pieces of crackers or bread may be given, but do not become discouraged, for with the first tricks mastered the rest will come easier. Have the dog "charge." It takes several attempts to instill the idea of obedience, but do not become discouraged for with the first tricks mastered the rest will come easier. Have the dog "charge." The one end of a cord, about ten feet long, to his collar, and walk a little distance away "come here, sir," and pull him steadily toward you. He will find that he must come when this command is given, and the cord will not be necessary.

Your pet by this time may casily be taught to follow at your heels or "to heel."

Christmas is emphatically the day of the children. In certain churches of Germany a sermon is preached to the children only, on Christmas day, and the little ones walk in procession, each bearing a lighted taper in the hand, and such a custom seems a fit recognition of the part that children play upon that day, they, far more than their elders, valuing its traditions, cherishing its legends, making much of its mysteries and learning its poetry by heart. As the children of the very poor went about in the old times, just before Christmas, on what were styled "dolling" excursions, singing under the windows:

"Wassail, wassail through the town, If you've got any apples throw them down;

Up with the stocking and down with the

If you've got no apples, money will do."

So, in some countries, the same class of children now run about from house to house, ringing the door-bells and asking for goodies, without the song, indeed, but with the same merry effrontery. In England the children still sing the carols that the early bishops used to sing, commemorating the angels' song:

"And all the bells on earth shall ring On Christmas day, on Christmas day And all the souls on earth shall sing." On Christmas day in the morning.

accordingly.

His national nicknames are as multifarious as his personal disguises. The name of Santa Claus is derived from the Dutch. In Switzerland he is the Sami Claus, and in Norway and Sweden Sonner Klas. The people of the Vocarlberg know him as Zemmei Klas, and believe that he travels about with a big hay-sack, into which he threatens to put naughty children.

dren.

He takes the name of Niklo in Austria.
and is usually followed by a masked servant whom they call Krampus; and in the Tyrol he goes by the name of the "Holy

In the latter country he shares the patronage of his office with St. Lucy, who distributes gifts among the girls, as he among the boys.

In Russia and many parts of Germany, as formerly in England, St. Nicholas distributes his presents on St. Nicholas Eve—December 5th—instead of on Christmas

December 5th—instead of on Christmas Eve.

In the Rhine provinces, as Sunder Klaas, he is especially popular. There he has been personated in every neighborhood for centuries. For days previous to his expected advent busy mothers and aunts have been secretly conspiring with the bakers in gilding nuts, cakes and gingerbread, and torturing pastry, prepared with flour, sugar, honey, spices and sweetmeats, into the queerest fantastic forms, from which the good saint may from time to lime replenish his stores. And the children importune the generous old fellow, the night before, to let fall from the chimney top singing, with fervor, the refrain:

"Dear Santa Claus, for the children's sakes, Bring us nuts and sugar cakes;
The children have the custom in Belgium, on the eve of the good bishop's visitation, of polishing their shoes, and, after fill-

The children have the custom in Belgium, on the eve of the good bishop's visitation, of polishing their shoes, and, after filling them with hay, oats or carrots for the saint's white horse, they place them on a like a play at the theater. The first to ap-

table, or set them in the fireplace. They then carefully close the room and lock

then carefully close the room and lock the door.

In the morning, when it is opened in the presence of the assembled household, mirabile dictu! The furniture has been turned topsy-turvy, and the little shoes, instead of holding a horse's forage, have been filled with toys and sweetmeats for the good children, and with rods for the bad ones. In some of the country villages, shoes, stockings, baskets, cups and saucers, and even bundles of hay, are placed in the chimney, or by the side of the bed, or in a corner of the room, as the favorite receptacles of Santa Claus' presents.

In France, though New Year's is generally observed rather than Christmas for the distribution of gifts, it is the Jesus Cainbin—Christ-child—who comes with a convoy of angels loaded with books, toys and confectionery with which to fill the little shoes that tiny hands have so carefully arranged in the fireplace.

A young malden, dressed in white, with hair of lambs' wool hanging down upon

A young maiden, dressed in white, with hair of lambs' wool hanging down upon her shoulders, and her face whitened with flour, and with a crown of gilt paper set round with burning tapers upon her head, personates him among the peasants of Alsace. She holds in one hand a silver bell, and a haskeful of sweetmeets in the a basketful of sweetmeats in the other.

Accompanying this shining presence of loveliness and good will goes an ugly masked figure, wearing horns and a long beard, and carrying a bundle of rods. This latter is Hans Trapp, the Alsatian Ruprecht, and the bugbear of all young folks. Upon entering the house, the unwelcome intruder demands in a hoarse voice how the children have behaved since his last annual visit, asking such question as "Has Carl learned to like the crust of his pie?" or "Does Lena turn her toes out yet?"

Trembling and crying, the little ones seek to escape as best they can from the impending storm. The Christ-child now intercedes for them, and, upon their promising to become better in the future, she leads them one by one to the brilliantly illuminated Christmas tree, loaded with presents, when, in their joy, they speedily hecome oblivious of the frightful Hans Trapp.

On Christmas day, on Christmas day.
And all the souls on earth shall sing.
On Christmas day in the morning.

It is the world's misfortune to possess only an imperfect buggraphy of its most popular saint. Accordingly knows, St. Nicholas is the atroof children, who all regard in the calendar. What else is known in the calendar what else is known his of a little legitimate history, mingled with a great deal of legendary lore. He is usually pictured as an old most thought of the strong of the story in the state of the carries on his back a basket filled with trinkets.
This is the Santa Claus of the story books. And the bright-eyed children of America unite with those of every Christian land in the custom of hanging up their stockings on Christmas eve before going to sleep, expecting them to be filled by this mysterious person.

But the patron saint seems to have a different appearance to different peoples. In some parts of Germany he makes his appears dressed as a real bishop, either riding a white horse or an ass, and carrying a large basket on his arm and a bundle of rods in his hands. In Bohemia happears dressed in a sheet instead of surplice, with a crushed pillow on his head in lieu of a mitre.

On his calling out "Wilt thou pray?" all the children fail upon their knees, where upon the benevolent visitor it is fall some fruit upon the floor and disappears and the conduct of the children and the conduct of the children in the conduct of the children in the conduct of the children in the full of the part o

The bugbear, Ruprecht, under different names and disguises, plays a conspicuous part among all the German-speaking populations.

ulations.

In Nether Austria it is the frightful Krampus, with his clanking chains and horrible devil's mask, who, notwithstanding his gilded nuts and apples, gingerbread and toys, which he carries in his basket, is the terror of the young folks.

In the Tyrol, St. Nicholas is accompanied by the terrible Klanbauf, who kidnaps naughty children and stows them away in his basket. It is Rumpany who figures as the bugbear in the train of the Christchild in the Bohemian Netherlands.

In Swabia the Christ-child is accompanied by the Pelzmaert, who carries an old bell, and an earthen pot containing the presents. In Hanover and Mecklenburg he is known as Klas. In Siberia they call him Joseph.

pear upon the scene is the Archangel Gabriel, who greets them with "May God give you a happy good evening!" He is followed by the Christ-child, who enters, wearing a gilded paper crown, carrying a basket full of nuts, apples and candies, and singing the song beginning with "Down from the high heaven I come." In the course of the song the children are informed that the object of the visit is to learn if they have been good and obedient, and if they "pray and spin diligently."

If their answers are satisfactory, he proceeds to reward them with gifts "from his golden chariot," which stands at the door. Should a child prove to be wayward, he is threatened with a beating from rods. St. Nicholas is then called in to furnish a faithful account of each one's deportment. The saint, a grave personage, with a bishop's mitre of gilt paper on his head and a long crozier in his hand, does not give a fiattering report.

The saint, a grave personage, with a bishop's mitre of gilt paper on his head and a long crozier in his hand, does not give a flattering report.

The children, he says, loiter in the streets on their way from school, tear their books, neglect their tasks and forget to say their prayers. As a penance for all this evildoing, he recommends a liberal application of the rod. But here the Christ-child interposes, almost supplicatingly:

"Ah, Nicholas, forbear! Spare the little children! Spare the young blood!"

A compromise is effected by summoning St. Peter, who promptly enters, fingling his keys. This heavenly janitor conducts things with a high hand, examining the children's copy-books, asking them questions about their lessons, and finally pronounces sentence upon the delinquents, and calls in Black Ruprecht, who is outside the door, to execute his orders.

"Ruperus, Ruperus, enter! The children will not be obedient!"

Thus summoned, the frightful apparition stumbles into the room, dressed in fur, his face blackened, and a long, red tongue protruding from his mouth. Brandishing a heavy birch rod, Ruprecht roars out:

"Down upon your knees and pray!"

The children obey him, repeating their prayers at the top of their voices.

Thereupon the live visitors stand around them in a half circle and sing a couple of songs descriptive of the heavenly joys, or freighted with wholesome advice to both children and parents.

A few farthings are then given the guests, while the Christ-child scatters nuts and fruit and confectionery upon the floor for the delectation of the little folks, whose anxiety and patience is thus at last satisfied and rewarded.

This closes the affair, and Christ-child. St. Nicholas. St. Peter, the Archangel Gabriel and Black Ruprecht take their departure, to repeat the same thing in a neighboring house.

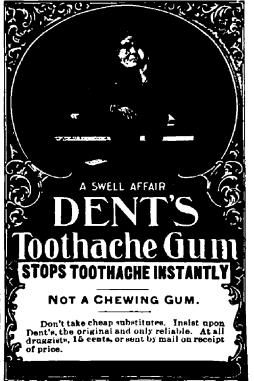

Two Rapid Boys.

We introduce readers to Karl Ralph Atkinson Iowa boys who cousins. Ralph cousins. Ralph completed the Latin course at Carrolton, Ia., May 29 last, at the age of thirteen. He completed with credit a thirteen year school course in eight years. He reads; German very fluently, is strong in mathematics, and particularly geometry. Although he has made such remarkable progress he is not a recluse nor a bookworm but enjoys all the recluse nor a bookworm but enjoys all the games of childhood. Ralph is small for his age, weighs only eighty pounds, but has the best of health and is well developed physically. He passed the regular teachers examination when he was twelve years of age and received grades of 90 per cent and above in all branches and above in all branches examination when he was twelve years of age and received grades of 90 per cent and above in all branches and above in all branches, averaging higher grades than any one out of over two hundred applicants.

Karl Atkinson finished the High School course at Ute Ia., last spring, having completed the English course of eleven years shortly after his tweith birthday. He has shown marked success in history and kindred studies, due largely to an exceedingly retentive memory. He devours all the books he can get hold of. He has read Shakespeare. Dante. Millon, and translations of the Illad and the Odyssey. He plays the piano

Familiar Talks With Boys-H. R. Wells

Questions from Boys Will be Welcomed.

Editor THE AMERICAN BOY:

Editor THE AMERICAN BOY:

Dear Sir—I see in your paper that a neighbor boy lends me, so much about boys who are succeeding so well, it makes me want to get on better than I do. I thought maybe you could give me some idea how to do it. I'm sixteen years old, and I've been working two years in a pottery. I had to stop school at fourteen to help my folks. I was glad of it then, but I'm sorry now; for this was the only place I could get, and I haven't learned anything, and there's no chance to get any higher. I know a boy who used to be in my class. He staid in school and got a place in an office this summer, and just for his vacation he earned more than I do in over half a year, and they gave him different things so he could learn a lot about the business, and he didn't have to work half as hard as I do, nor such long hours. I don't mind the hard work if I could only be learning and earning more.

earning more.

Please tell me if you know any way I can do better without giving up what I've got? I don't dare to do that.

JOHN FROST.

JOHN FROST.

I was much interested in your letter and I know there are many boys in the same situation as you are. Boys who cannot or will not go to school longer than just the time the law requires; and who then find themselves unfitted for any but poor paying places. That you put the word learning first shows you gealize that you must fit yourself to be of more value to your employer before you can expect to be better paid.

Now let us consider how you can best accomplish this. A town of the size of yours should have a night school where you can take a regular course of instruction in the branches you most need free of expense except for books. In some cities even books are provided; but if not, you can nearly always, on inquiry, find them at second hand at quite a reduction from the regular price.

You may find it difficult at first to keep your mind on your work, or even to keep awake. This is very apt to be the case when one is out of the habit of study, particularly when tired in body; but if you are as fully determined to succeed as I believe you are, you will overcome this to decided, the sooner and better you can fit yourself for your chosen career, or at least some pathway that will lead towards it.

Let me hear from you again. We will be glad to know how you are getting on.

Dear Sirs:—Please tell me how a boy that goes to school all week can earn some money it want so many things myself and I want Christmas presents for the whole family. There's just piles of things a fellow needs money for that the other boys expect of him, and I'm ashamed not to have it, yet I'm more ashamed to be always asking my father for it.

You may find it difficult at first to keep your mind on your work, or even to keep your mind on your work, or even to keep your mind on your work, or even to keep your mind on your work, or even to keep your mind on your work, or even to keep your mind on your work, or even to keep your mind on your work, or even to keep your mind on your work, or even to keep you may find it difficult at

least of one boy I know who at first was obliged to bathe his eyes in cold water every little while to keep them open, and frequently he would take a brisk walk out in the cold air to freshen him up for his study. Besides, he was a German boy and knew only a very few words of English when he began in the night school, where I knew him, and so had the language to learn along with his arithmetic, reading and writing. You should have seen how eagerly he watched and listened, how hard he tried to pronounce and to understand, how good-natured he was when others laughed at his mistakes, and how glad, too, every one was to help him on. You would have been surprised to see what remarkably rapid strides he really made. While you are getting the education that is to be the foundation for your future work, be careful about your habits that have to do with your health and manners. Keep your eyes and ears open, for almost any day you may see a better chance, or hear of an opening, or at least get ideas that will help you decide what business you would like to enter. The sooner this is decided, the sooner and better you can fit yourself for your chosen career, or at least some pathway that will lead towards it.

Let me hear from you again. We will be glad to know how you are getting on.

make themselves and others think so. You will notice that the more a boy has the more he wants, and the more discontented he grows. The boy who has few things, possibly only those he made for himself, enjoys them much more in proportion.

I do not know just what the chances may be in your town for getting employment; but in most places of any size at all there is a demand in stores, and in business places generally, especially during the Holidays, for extra help on Saturdays and evenings. I know several boys who do such work, and still seem to have no difficulty in keeping up with their lessons. The night work, however, is not good for any but those boys who are quite well, and are strong enough to bear the strain, and at the same time get their lessons in the limited time left them for study.

Many boys carry papers in the evening

well, and are strong enough to bear the strain, and at the same time get their lessons in the limited time left them for study.

Many boys carry papers in the evening after school for the local press; and others make "routes" for out-of-town papers. Many weekly and monthly papers make very liberal offers to boys who will solicit for and deliver their publications. Boys anywhere, in town or country, usually succeed well in getting subscribers for attractive papers that will make suitable Christmas presents for other boys. I do not need to make any suggestion to boys who read THE AMERICAN BOY as to any particular papers.

Let me tell you how one boy got his mother's Christmas present, and it may help you to think of other ways.

This boy's mother was very fond of flowers, as most mothers are, and could never have too many. So he went to the greenhouse and consulted the florist as to what would grow well in the hall and north parlor windows. The florist suggested a palm for the hall and a begonia, which wants no direct sunlight, for the north window. He decided upon the latter, as the price of the palm was beyond his reach, and bargained with the florist to help him repotting plants (in which he learned a thing or two) to pay for it. Then he secured a barrel-head for the top and three troom handles for the legs of the stand, which he fashioned in hourglass shape, and of just the height to bring the top up level with the window sill. He drove the delivery wagon one Saturday's for the dealer of whom he bought the dark green eramel paint that covered all defects in his carpentry, and made the stand look quite like one in the store windows. He worked several Saturdays and evenings, cash pay, for the general merchant, from whom he bought at clerks' discount a very pretty jardinlere; and when the beautiful red-leaved plant was placed in this and upon the green stand, it made a present that any boy would be proud to give or any mother to receive.

Kennember though, my boy, if you have or can get nothing else to give, a k

Manners for Boys.

Here are a few rules that our boys, both large and small, would do well to observe;

1. IN THE STREET.—Hat lifted when saying "Good-by," or "How do you do?" also, when offering a lady a seat, or acknowledging a favor.

Kucp step with any one with whom you walk. Always precede a lady upstairs, but ask if you shall precede her in going through a crowd or public place.

2. AT THE STREET DOOR.—Hat off the moment you step into a private hall or office.

Let a lady pass first always, unless she asks you to precede her.

3. IN THE PARLOR.—Stand till every lady in the room, also every older person, is seated.

Piec if a lady enters the room after you. Here are a few rules that our boys, both

lady in the room, also every older person, is seated.

Rise if a lady enters the room after you are seated, and stand till she takes a seat.

Look people straight in the face when they are speaking to you.

Let ladies pass through a door first, standing aside for them.

4. IN THE DINING ROOM.—Take your seat after ladies and elders.

Do not take your naukin up in a bunch

Do not take your napkin up in a bunch in your hand.
Eat as fast or slow as others, and finish the course when they do.
Do not ask to be excused before the others unless the reason is imperative.

75 WATCHES BELOW COST We have 300 watches which we wish to diapose of in the next wo days and will sell them for \$3.75 each, a price far believed them for \$3.75 each, a price far believed them for \$3.75 each, a price far believed them to be a genuine richly jeweled American model movement, gearanteed for 20 years, worth double the price.

SPECIAL OFFER send your name suid address and we will send this watch C.O.D. with privilege to examine. If found satisfactory pay express agent \$4.75 and charges and the watch is yours. ALL READY! LOOK PLEASANT! Photo by Earle A. Bannister, Thompsonville, Mich.

THE AMERICAN BOY offers twelve prizes of Two Dollars each for the best Amateur Photograph received during the twelve months in the year, one prize for each month, also a second prize each month, of one dollar, for the next best photograph, the competition to be based upon the originality of the subject and the perfection of the photograph. The contest is open to subscribers only. Photographs will be returned if stamps are sent for the purpose. All photographs entered in the contest and not prize winners will be subject to our use unless otherwise directed by the sender, and fifty cents will be paid for each photographs in any event to be our own, without further payment than the payment of the prizes. Write on the back of the photograph its title, with a description of the picture, and the full name and address of the contestant. THE AMERICAN BOY offers twelve

It is a mistake to think each picture must be the full size of the negative. Better results are obtained by considering each print separately, and trimming it to the size that gives the best effect.

The California Camera Club recently divided San Francisco into districts, and the members proceeded to photograph everything picturesque and historical in their territory. The result was a surprising lot of beautiful pictures.

Rev. Hannibal Goodwin, of Newark, N. J., has just obtained a patent for transparent films, said to antedate the patent held by the Rochester firm that has long had a practical monopoly of the market, and the reverend gentleman has decided to form a company and manufacture the article.

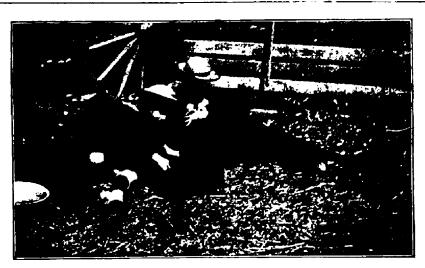

Think of exposing from a balloon a plate eight feet long and five feet wide; yet that is what a large packing concern out west has done. The plate was dusted by entering the camera, capping the lens with a ruby cap, and then, when the slide was drawn in the plate holder, the man dusted the plate much as he would paint a house.

And now there is another combined developing and fixing bath on the market. It is called "Boffay," and it is claimed that no matter what the exposure may be, the hypo fixes the plate no faster than it is developed. The best results are said to be obtained from a rather full exposure. Those interested can address the Boffay Camera and Chemical Co., Newark, N. J.

"Tank" development is being recommend-"Tank" development is being recommended strongly by some photographers. "Howeasy it is to put twelve plates into a tank of weak developer," writes Edward W. Newcomb to the Professional and Amateur Photographer, "and then go out of the dark room for an hour and let them cook almost automatically. Better results are commonly obtained than in the old fashioned method."

Japs Give Us a New Word.

The photographer's vocabulary is about to be enlarged, it is said, by a new word from Japan. This word is "Notan." It expresses the term light and dark. When the Japanese speak of the notan of a pattern, or a picture, they refer to the arrangement of its light and dark masses. As the beauty of a photograph depends in large measure on the arrangement of its light and dark masses, why not say it depends on its notan? on its notan?

CHRIS FERGUSON, VETERINARY SURGEON. Second Prize Photo, by George Ferguson, 2228 S St., Lincoln, Neb.

Photographic Notes.

There are now several schools of photography established in this country.

The older the dry plate the more resistant it is to the penetration of the developer.

get a fine assortment of snow pictures this winter.

months old, give more harmonious pictures than new ones

of cloud pictures, v negatives but clouds.

Highly polished work can be successfully photographed by using plates with good non-halation backing.

There is a growing scarcity of platinum, and last winter the German reichstag threatened to forbid its use in photography.

Out-door exposures must be much longer in December than in July; but as soon as the ground is covered with snow givequick-snaps with small stops, unless a hazy effect in dealered.

Some wise statistician has estimated that there are now about one million, five hundred thousand amateur photographers in the United States, but no one has yet had the courage to calculate just how many of these can make pictures.

Permanency of Prints.

There are now several schools of photography established in this country.

The older the dry plate the more resistint it is to the penetration of the developer. Dust out your camera, and be prepared to get a fine assortment of snow pictures this winter.

Experiments show that dry plates, four norths old, give more harmonious pictures than new ones.

There is satisfaction in getting a series of cloud pictures, with nothing on the negatives but clouds.

Experience has shown that prints toned in "combined" baths—that is, the gold and the "wombined" baths are not sure to be permanent. The fading has generally been laid to the presence of hypo which has not been removed by washing. According to recent researches, however, it is found that if the hypo is in excess and if the prints are moved while being fixed, even with a combined bath, a great degree of permanence can be attained. Another way is to put the print toned to be permanent. The fading has generally been laid to the presence of hypo which has not been removed by washing. According to recent researches, however, it is found that if the hypo is in excess and if the prints are moved while being fixed, even with a combined bath, a great degree of permanence can be attained. Another way is to put the prints toned in "combined" baths—that is, the gold and "combined" baths—that is, the gold and the "combined" baths not been removed by washing. According to recent researches, however, it is found that if the hypo is in excess and if the prints are moved while being fixed, even with a combined bath, in a fresh hypo bath after the "combined" baths and the same bath—are not sure to be permanent.

Printing on Cloth.

Any amateur can print on cloth. The simplest process is the blue print, which can be put on silk or cotton. For cotton the Photo Era advises twilled white cloth. the Photo Bra auvises which costs fifteen or twenty cents a yard, will not stretch much, and is stiff enough to hold its position in the printing frame. Make up two solu-tions, as follows, which must be kept in well stoppered bottles in a dark place:

| A-Water | ounces |
|------------------------------|--------|
| Red prusslate of potash | ounces |
| B-Water | ounces |
| Citrate of iron and ammonia? | ounces |
| I | |

Equal parts are to be mixed directly be-

"THREE BALLS AND TWO STRIKES." THE 1908 BATTERY FOR THE STANWOOD BASEBALL CLUB. First Prize Photo, by James McKerrow, Stanwood, Iowa.

fore use, and the cloth is to be floated on the solution for a minute or so, after being previously wrung out in water until the floers are thoroughly wet. Do this by arti-ficial light. Then stretch the cloth on a board with pins and let it dry, in the dark of course

Printing is performed as usual, but great care must be taken to get the cloth back to its original position after looking at it while printing; otherwise it will be spoiled. Print deep and wash well. Snappy nega-tives, well developed, make the best prints.

Answers to Correspondents.

Adolph Duffner—The number of prints that can be made from a negative are uncountable. Nothing is taken from a negative when printing. Only a shadow is caught.

Harry H. Revell-Rotograph paper-not

Harry H. Revell—Rotograph paper—not Rutograph, as was printed last month—can be obtained through any photographic supply house. Russegger & Mapes, 101 Fifth avenue, New York, are the selling agents. Write them for circulars, Sidney Carroll—Unless the picture was taken late in the afternoon, fifteen minutes would be too long to expose Rotograph paper. We are informed that regular Rotograph paper has the speed of a Carbutt B plate.

Earl Hopkins-Scrape off the film from an old plate and wet it. It will do for spotting.

With a Comment or Two.

With a Comment or Two.

A large number of well taken and excellently printed photographs reach THE AMERICAN BOY, but unfortunately many of them will not reproduce in a satisfactory manner in half tone. So the editor is obliged to just "mention." Others will reproduce, but the subjects are not available. W. A. McCune, of Taos, New Mexico, sends a number of pictures of that region. One shows the oldest church in America, others the style of architecture; but the figure photos—the most interesting—are almost too small for reproduction. Had Clarence W. Lewis, New York City, been more careful with his focusing, his picture of his pet dog dressed up and sitting in a chair would have received a prize; but then it is pretty as it is. Ralph Belden, Grand Rapids, Mich., sends "A Shady Dell." which ought to make a still better picture in the spring when the water is pouring down in the foreground. Ollie Cleveland, of Adrian, Mich., succeeded in taking a good picture of the electrical illumination at the Buffalo Exposition. Ellis C. Myerle, Brooklyn, N. Y., has obtained a good sunset picture with a Brownie cam-

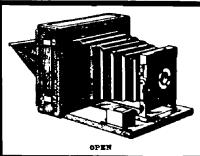

era. The foreground, however, could be improved from an artistic standpoint. All the faces in the hunting scene taken by Thorny Christopher, Lake Geneva, Wis., are perfectly recognizable. It ought to make a nice picture on portrait velox, or aristo-platino. The coach dogs, by Willard Bennett, Chatham, Ont., make an interesting group. The view "Looking from the bridge," by Herbert Post, Westbury Station, Long Island, is beautiful. Its only defect is the rock out of focus in the lower right hand corner. Try an oval. F. Kurt's picture of "Two Friends" is photographically perfect. But the back ground is not in harmony. The "Chums" of Wayne C. Harris, Griffin, Ark., is a good idea, but should have more foreground and a better background. Had the picture by Willie Watson, Toronto, of a boy impersonating a doctor, and a little girl the "patient," been better focused, it would have been a winner. Try the same composition over again. The photo of Clyde E. Kaler. Coon Corners, Pa., is a good barnyard scene, which needs its foreground to be trimmed off to make a picture. The photo of High Falls, in High Falls village, by C. Edwin Williams, of Walden, N. Y., is pleasing, and would, if printed on platinum paper, charm those who like nothing sharp. It is just enough out of focus to give a general haziness, in this respect resembling a painting. a painting.

High School Papers.

A number of excellent high school papers, that is, papers devoted in whole or in part to the interests of particular high schools, are published by readers of THE AMERICAN BOY who are interested in this department. The founders of some of these papers, at least, received their inspiration from an article on high school papers that was published in the issue of THE AMERICAN BOY for last February.

Among the more creditable ones that we have received are The Mountaineer, a paper devoted to the Cripple Creek high school and published by H. Ralph Elliott as editor; Harry Horton, assistant editor; William E. Parker, business manager, william Friedhoff, assistant manager, and George Stratton, athletic editor. It is a sixteen page paper, the pages being eight and one-half by six inches, and the first issue, which is before us, contains an article on "The High School, Its Aims and Prospects," by the principal; an account of a trip to Cape Nome, by one of the editors; a story, one or two poems, editorials, general school notes, and numerous humorous articles relating to individual students. The paper is well edited and very nicely printed.

The Phoenix is the eight-page publica-

articles relating to individual students. The paper is well edited and very nicely printed.

The Phoenix is the eight-page publication of the Canisteo, N. Y., high school. It contains a story and editorials, but the well conducted and well written page of local items constitutes the principal feature, though the editor of the funny column has done some excellent work. The editorin-chief is Cleon W. Newman.

The September number of The Pennant. which is published by the students of the Charleston. Ill., high school, Walter C. Ricklin being editor-in-chief, and Hugh C. Ricketts the husiness manager, with a full corps of departmental assistants, is a publication that the Charleston students should be proud of. The literary department contains an article on Southern Mexico. The editorial department contains some crisp, well written paragraphs, the subjects of which have been well selected, while the "Locals and Personals" give in short paragraphs the news regarding the students and instructors of the school. The athletic page is also edited in a way to interest the students and win popularity for the paper, and the alumni department is calculated to renew the interest of the old graduates in the school.

A school paper is, in our judgment, a most excellent adjunct to any high school. It can be made a benefit to the school by

A school paper is, in our judgment, a most excellent adjunct to any high school. It can be made a benefit to the school by awakening the interest of the alumni and citizens of the town generally, but its principal benefit will be to the students themselves, both in the way of the experience they will gain, and also by way of arousing and cultivating a general interest or school spirit as nothing else will.

A Young Editor in New Jersey.

John N. Bowen, of Clayton, N. J., is said to be the youngest successful editor in the southern part of New Jersey. He is nineteen years old and is the owner of the Clayton Reporter, a prosperous weekly. Its advertising columns show that

JOHN N. BOWEN.

"Tommy." is your mamma at home?" asked a lady caller, coming up the gravel walk. Tommy, who was peeping around the corner of the house, gave a guilty start and then replied meekly:

THE AMERICAN BOY is the only official organ of the Agassiz Association and should be in the hands of every member.
All correspondence for this department should be sent to Mr. Harlan H Ballard, Pittsfield, Mass. Long articles cannot be used.
THE AGASSIZ ASSOCIATION selcomes members of all ages, and any one who is interested in any form of natural science is invited.
Established in 1975. Incorporated in 1992.
Short notes of personal observations are particularly desired for use in the A. A. department. Send illustrations when convenient, Questions are invited.
Address H. H. BALLARD, Pittsfield, Mass.

To all the members and friends of the Agassiz Association we wish the merriest of Christmases and happiest of New Years in looking back over the year we are greatly pleased and encouraged. Hundreds of letters have been received, and these have come from boys and girls in nearly every state and territory, and a few have even found their way to us across the ocean. All these letters without exception have been earnest and courteous, and nearly all have been carefully written. They have given us pleasant glimpses into hundreds of happy homes, and have shown us in every part of the country the American boy at his best; whether working on the farm or ranch, busy in the factory, or active in the school.

The quick observation and intelligent in-

at his best; whether working on the farm or ranch, busy in the factory, or active in the school.

The quick observation and intelligent interest of our young correspondents can be seen by glancing through the letters which have been printed in THE AMERICAN BOY. They have reported many interesting and original discoveries in nature, all made within a few miles of their own doors, and they have sent us scores of drawings to illustrate their treasures, many of which have been reproduced in this paper. Better than all this almost every one of our correspondents has become an active member of the Agassiz Association and is now proudly wearing the Agassiz badge. This badge bears a faithful portrait of Louis Agassiz, the great scientist, for whom our society is named. We have presented it, together with a card of membership, to every boy and girl who has sent us a report of any personal observation of nature accompanied by a drawing or photograph. This offer is now renewed, and we hope that beside keeping all our old friends we shall make hundreds of new ones in 1902. All our members are loyal supporters of THE AMERICAN BOY, which is universally declared to be the best boys' paper in America, and the "uppest to date!" In one thing only we have been disappointed—the number of new chapters formed has not been as large as the number of new members would lead us to expect. We wish to have a local branch of our society established in every town. Only four members are required. It has occurred to us that the expense attending the formation of a chapter, although it is really not large, may still have seemed too serious a burden for many of our boys and girls. To test this matter, and also to encourage the formation of a large number of new chapters at the beginning of the new year, we make the following make the following

SPECIAL OFFER.

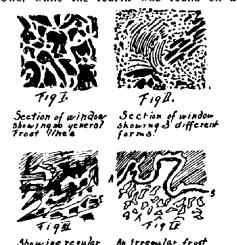

SPECIAL OFFER.

The regular fee for the admission of a chapter is one dollar; but all new chapters organized before March 1, 1902, will be admitted free; and to each chapter thus formed we will send free one copy of the Hand Book of the Association, the price of which is seventy five cents, and a fine engraved charter, signed with the autograph of the President, bearing the seal of the Association, the names of the charter officers, and an excellent portrait of Agassiz. This charter is suitable for framing and will be an ornament to any chapter room. The hand book, besides chapters on the collection and preservation of all kinds of specimens, methods of work and carefully selected lists of books, contains full directions for organizing and conducting local chapters. This book will be sent free to any boy or girl who will endeavor to organize a club, and when the organization is completed the charter will promptly follow. Now who will be the first to take advantage of this generous offer? Chapters organized now will be all ready for our spring and summer work. The names of successful organizers, and of the officers of all new chapters will be printed in THE AMERICAN BOY.

Snow Crystals.

ADDISON BALLARD.

The "snow crystal" paragraph in the Agassiz Association page of the February AMERICAN BOY recalls a visit I had the pleasure of making some twenty five years since at the delightful home of Rev. Dr. Chickering in Portland, Me. On the parlor table was a beautiful volume entitled "Snow Crystals," of which Mrs. Chickering was the author. In it were figured and described over four hundred distinct forms of crystals. Of all these the hexagon is the prevailing type. Upon my inquiring how she came to make the book, Mrs. Chickering gave me this explanation: "Coming in one day during a snowfall I, for the first time in my life, noticed the clear and uniform shape of the flakes on the sleeves of my black velvet mantle. Before they had time to melt I sketched them on paper. After this, snow storms, instead of being dreaded, were eagerly watched and welcomed. I was soon rewarded by finding the almost endless variety of forms which at different times the flakes assumed. Lying in walt for the lovely visitors. I caught and sketched them, at times using the mi-

west window, the wind hardly reaching it. The temperature was 20 degrees above zero, wind from north. I enjoy the Agassiz Association very much.—Harrie Elliott, 215 W. Warren avenue, Cripple Creek, Colo.

Bat.

One day I found a bat asleep in a plum tree. I got it and put it in a box. I had it all night but the next day in broad daylight it flew away. Its eyes were bead-like, small and black; its ears were round; it

was red brown on the back and gray under-neath. Can any of the readers of THE AMERICAN BOY tell the name of it?— Roy Russell, 138 Cherry street, Battle Creek, Mich.

Sharks' Teeth.

These drawings are rough sketches of sharks' teeth found in sandstone in the Rio Puerco Valley, about twenty two miles from Albuquerque, N. M.

A in the sketches represents the tooth proper, and B the root of the tooth. There are hundreds of them in the valley, but they are so brittle that it is difficult to get a good specimen. In the Rio Puerco valley there is also much petrified wood, some gypsum, and quite a bit of impure coal. What is the scientific name for unformed or impure coal?—"R. J.," Albuquerque, N. M.

White Clover.

One day last summer I found a bunch of clover with white heads. It was not like the common white clover, but just like the red clover in every particular. I could not find another bunch like it. Is that kind of clover growing in some other part of the country, or was this probably only a freak of nature?—Otto L. Alberts, Du Page Co., Schick, III.

Judson P. Guinon, Mayflower, Ark., says that he found an old brass revolver shell in which a mud wasp had put twelve spiders, probably to be eaten at some future time.

What Are They?

Not long ago I noticed on a deformed ear

Not long ago I noticed on a deformed ear of corn a number of bright red bugs that looked very much like spiders. The grown ones were sixelghths of an inch in length. They have six black legs and two long feelers. Can you tell me what they are?—J.

I. Chilton, Greensboro, Ala.

I. Chilton, Greensboro, Ala.

Experiments With Ants.

Once a French scientist was traveling through India hunting for explanations to the many tricks the Indians perform. He noticed that the earth that they used for the mango trick was brought from ant hills, so he commenced experimenting with ants, and found that they contained an acid, called formic acid, and that the acid had qualities of eating away the fibrous matter and stimulating the growth of the germ. If ants be bolled in water you will secure an acid nearly as strong as vinegar. If one part of "ant juice" be diluted with five hundred parts of water and this mixture used to moisten the soil about the seed of the mango, you can produce a plant in about half an hour. I have not tried the experiment as yet, but a friend of mine tried it successfully. Almost any kind of seed might do, I should judge.—L. B. Saxon, 219 West Vine street, Muncle, Ind.

Muskrats.

Roy H. Murdaugh says: "I am very much interested in taxidermy. During the last year or so I have studied and caught muskrats and I think I can answer any questions in that line." If any one wishes to write to Mr. Murdaugh, he should send letters to Croswell, Michigan.

While walking through my field a few days ago I noticed a large cutworm struggling with a number of red ants. I sat down to see what they were going to do with it. Finally they began to dig a hole around the worm. The ants worked diligently and in an hour the hole was a half an inch deep. Then they dug a round hole in one corner of their ditch and when I looked again in a little while they had taken the worm out of sight.—Lewis A. Miller, Chowen, Minn.

Wasp and Spider.

Some days ago I noticed an incident which I think will interest the Association. It is as follows: A small black mud wasp approached a spider's web and became entangled in it. The spider ran toward the wasp, but he disentangled himself before the spider reached him. He again allowed himself to become entangled, and this time made a seemingly desperate effort to release himself. The spider did not hesitate now, but ran right into the fond embrace of the mud wasp, and soon the wasp was flying away with another spider for his nest.

nest.

The deceit used by this wasp was quite amusing; and I think the incident possessed a moral also, for had the spider been less eager to catch the wasp, he himself would not have been captured. I noticed a strange peculiarity a few days ago. I saw a calla lily leaf formed exactly like the blossom of that flower. Has any other member noticed such?—Arlie B. Owen, Gibsonville, N. C.

We had two other interesting letters about a wasp catching a spider in this way. One from George B. Risedorph, 385h Front street, Grand Rapids, Mich., and the other from Francis Cullen, Savanna, Ill.

The Spider and the Fly.

It is amusing and instructive to watch the different insects working in one way or another. As I was sitting in the attic one afternoon looking over some things. I noticed a spider on the window. He crawled up the window, and as he came near the top, he turned, started for the window and began to make a web. I watched him weave. He twisted round in great shape and made his web larger and larger. As soon as his work was finished he went to the center and settled down for a-rest. I suppose he felt hungry now, as he watched every fly that came near. Soon came two fles fighting just over the web; one got the better of the other and he fell into the web. The spider soon made way with him. So after his work he had a hearty meal.—Earle C, Hamilton, P. O, Box 1887, Westbrook, Me.

A Mud Wasp's Nest.

One day last September I noticed a mud-

One day last September I noticed a mudwasp flying over the front door. It flew away and in about two minutes returned with a little ball of mud, which it placed along one side of the moulding of the door. It flew away again and was gone about the same length of time, returning with the same amount of mud, which it placed on one side of the first. Then it placed one on the other side of the first. Thus its nest was started in the shape of an inverted V and extending towards the bottom of the door. With each ball of mud it would bring, it would commence at the apex and work it down the slanting side to the base, where it was fastened to the door. Then it would commence on the other side of the nest and do likewise. Then the wasp would go on the inside and press it round and smooth. When finished it was formed of little ridges of mud extending from the top to the bottom, in a slanting direction. The nest was torn down three times, and each time it was built again, but the fourth time the wasp left.—H. E. McMaster, Jr., Jacobsburg, Belmont County, Ohio.

Bumblebee Ate Yellow Jacket.

I have seen a yellow jacket kill and eat files, but I dld not know that they themselves were eaten. The other day I saw a yellow jacket catch a fly and eat it. He had hardly eaten it before a bumblebee caught him and ate him. It seems queer that a bumblebee should eat a yellow jacket instead of being friendly with him, as they are so nearly the same.—Judson P. Guinon, Mayflower, Ark.

Wasps.

Going through a plece of woodland in quest of insects, my attention was called to a loud humming overhead. I looked up and saw several hundred wasps making a nest over my head, about fifteen feet from the ground. They were coming and going at a great rate and seemed to be making paper from mud, for I found several at a spring near by sucking up mud; some were

getting pieces off a fence rail, and all were busy. I came often to watch them, and when the nest was completed I took a picture of it. It is three feet round and forty two inches from top to bottom. I learned a great deal about wasps during that time. The wasps left one day in September and I secured the nest. I would like to correspond with other members of the society.—Clarence Wood, Marion, Wayne County, Box 188, N. Y.

Last summer as I happened to be walking along a path, I saw a great many ants. They were all going in what seemed to be a sort of causeway which they had made. I followed this along until I came to a rotten log, where they disappeared. This trall was about four inches wide and about a block long.—Halbert Armstrong, Drawer 1607, Spokane, Wash.

I found a bug in our yard. Its body was a little larger than a navy bean. The head and body were connected by a sort of lump. The head was about half as large as the lump. Its eyes stuck out from its head. It had two large feelers and four small ones. Protruding from underneath the body were six legs, of which the back two were largest and longest. The body and head were black, while the lump, legs and feelers were blood red. What is it?—D. J. Coyne, 305 W. Harrison street, Chicago, Ill.

A Battle of Ants.

A Battle of Ants.

I will relate what I noticed in my yard one afternoon. My attention was called to some forty or fifty black ants going in great haste to their home near by. They were each carrying a disabled ant. With the wounded on their backs they were going at a great rate. Looking where they came from, I found that while there, they had met a body of red ants in superior numbers. After what must have been a severe battle the black ants were driven from the field, carrying their wounded. The victorious red ants were furiously pursuing them, but were kep at bay by a small rear guard, which would engage the swiftest of the enemy and then fly till they overtook the retreating body, when they would face about and again give battle. This was repeated till they were near home when the red ants hastily retreated and, gathering up their disabled comrades, also went home.—E. F. Norman, Star, Marion County, Iowa. Star, Marion County, Iowa.

Stonington, Conn., who sends in fitteen very bright, original puzzles.

Announcement of the prize winners for correct answers to the November Tangles will appear in the January number.

Answers and new puzzles have been received from the foliowing: Renel Morean, Vernon Turnburke, Philip Willmarth, Edward J. Dinsmore, Henry W. Hall, M. Shannon Fife, Harold M. Case, Ch. Philip Hexom, Geo, Kump, William A. Ritczel, L. W. Slocum, Alonzo E. Williams, Pearl Sparks, H. C. Sims, Clarence A. Reece, Arnold Nell, Willie A. Whiting, Guy Parmenter (can't use, won't print McKinley's assassin's name, James I. Tinnle (puzzle not new), Guy Hurlbutt (no answer). Alves D. sassin's name), James I. Tinnie (puzzie not new), Guy Hurlbutt (no answer). Alves D. Dick (no answer), Kent B. Stiles, Chester H. Pierce, Willie Glanville, Ivan Peonles, Frank Fie'd, Bert Hudd'e, Leslie A. Gallo-way, Daniel Berge and others who forgot to sign their names.

NEW TANGLES.

49. CHRISTMAS DOUBLE ACROSTIC.

49. CHRISTMAS DOUBLE ACROSTIC.

Each word contains the same number of letters. The initials and finals spell two articles that abound at Christmas time:

1. The sister of Moses, who watched his cradle in the Nile. 2. An Indian tribe, from whose name was derived the name of the state whose capital is Springfield. 3. An Italian city and bay. 4. Him whose birthday we celebrate. 5. To enter names on a list. 6. The royal color. 7. The name by which the Esquimaux call them selves. 8. The westernmost city of the largest state. 9. An animal you use in your bath.

—A. Kelley.

WHAT LETTER IS IT?

I'm in peaches and pears,
In turkeys and hares,
In trousers and pocket and sleeve;
You'll find me in stores,
In apples and cores;
In the tree that you have Christmas Eve.
—Herbert Whitney.

BLANKS.

Fill the blanks with words pronounced alike, but spelled differently:

1. We welcomed our — when he said he had — all the Tangles. 2. The — building is always in the — city of the state. 3. While rehearsing for his new — the actor dined only on a — and coffee.

4. There were ugly — about that many of the — in the cheap lodging house were burglars. 5. But few gold — are — in years. 6. The soldiers in the — were under a — strain. 7. The — he could have done was to have — the premises to the best tenant. 8. There was no — in paying fifty — for such undesirable —. a sail he will — hold of his glass. 10. The — of both ships voted to continue the — 11. You wouldn't think a boy of his — could heave such tremendous — . 12. The search for precious — keeps the prospector on his — . 13. To — a fellow's sweetheart is to — his heart against you. 14. I saw the moon — from behind the mountain — . 15. When a dog is pestered with — he — to the river to drown them out. — . Typo.

CHRISTMAS REBUS.

What Christ brought.

-Parson Queer.

OHIO DIAGONAL.

Each word is composed of six letters, and is found on the map of Ohio. The diagonal letters, reading from the upper left hand corner, spell the city in which a great president lived and is buried:

1. The county in which Springfield is situated.
2. The county in which Gallipolis is situated.
3. The county in which Tiffin is located.
4. The town in which President Garfield lived.
5. Where the cash registers come from.
6. A town in Trumbull county.

—Ohio Boy.

CHANGED HEADINGS.

First, I am a tiresome talker. Change my head and I become successively: Lacerated; a small duct; the inner part of a thing; a greater quantity; in olden time; had on; blood; antecedent; an ulcer; learning; a celebrated artist. —The Oracle.

CHRISTMAS PI.

Swat het thing robeef shirtscam, _Dan ial roughth eth shoue Ton a truerace saw gristrin, Ont vene a soume. —Oliver Twist.

KNIGHT'S MOVE.

By starting at a certain letter and following the Knight's move in chess, using each letter once only, find ten games.

DIAMOND.

1. 1000. 2. A head covering. 3. Juice of apples. 4. A western capital, named after a president. 5. Troublesome. 6. A boy's name. 7. A consonant in consonant.

—Dontguessit.

58. ILLUSTRATED DOUBLE ACROSTIC.

Each picture can be answered by a word of five letters. Taken in their order as numbered, the initials spell what your teacher does; the finals, what you should strive to do at school:

MOTHER GOOSE ACROSTIC.

The initials of the omitted words tell the happiest time of all the year:

"Jack fell down and broke his —
And Jill came tumbling after."
"Old Mother — went to the cupboard
To get her poor dog a bone."
"This is the —that ate the malt

"This is the —that ate the malt That lay in the house that Jack built." — a little dog at home And he'll know me." "The — began to beat the dog. The dog began to bite the pig." "Leave them alone and they'll come home

"Leave them."
home
And bring their — behind them."
"The — was in the garden
Hanging out the clothes."
"'Long came a spider
And sat down beside her
And frightened Miss Muffitt —."
"Jack — could eat no fat,
His wife could eat no lean."
—Little Boy Blue.

RAILROAD TANGLE.

Give full and correct names of the rail-roads of the United States whose nick-names are here given:
1. New York Central. 2. Northwestern.
3. Nickel Plate. 4. Frisco Line. 5. Niagara Falls Route. 6. Scenic Line. 7. Lacka-wanna. 8. Maple Leaf. 9. The "Q." 10. Soo Line. 11. Overland Route. 12. Big 4. 13. Sunset Route. 14. Lake Shore. 15. Clo-ver Leaf. 16. Rock Island. 17. "Katy." 18.

Prize Puzzle.

GEOGRAPHICAL INTIALS.

61. GEOGRAPHICAL INTIALS.

The initial letters are the initials of an American city and the state in which it is situated. The words used describe some characteristic of the city to be named. Thus: "Many Waters;" answer, Madison, Wisconsin (on four lakes).

1. Beans Multitudinous. 2. Delightful Climate. 3. Many Mills. 4. Saitings For China. 5. Penn's People. 6. Wisely Designed Capital. 7. American Marines. 8. Saw Alamo's Terror. 9. Beautiful Maidens. 10. Liquors Kept. 11. Alarm Clocks. 12. Inland Industries. 13. Commercially Important. 14. War Prepares Nation's Youth. 15. Cincinnati Overtaken (in population). 16. Defeated Milwaukee (in population). —Kent B. Stiles.

Writing to Uncle Tangler.

All writers "for the press" must observe certain rules, and as many of you write Uncle Tangler each month with matter for publication, it is quite essential that you should know and observe the first and simplest of the rules that govern such correspondence.

simplest of the rules that govern such correspondence.
You will do well to remember the following instructions, for editors and readers of manuscript on the daily papers and weekly and monthly periodicals will not trouble to read copy not thus prepared and sent, much less accept it or print it.
First, foremost and always, write on but one side of the paper.
Do not use foolscap, legal cap or extra large-sized paper, nor scraps of paper.
Do not mucilage the sheets together end to end or any other way.
Do not write with pencil or red lnk.
Write legibly, especially your name and address.

Write your letter separately from matter

Write your letter separately from matter to be printed.

Write the answer below each new puzzle you contribute. Don't leave your Uncle to guess the answer. You keep him guessing pretty hard as it is.

Write the answers to printed puzzles on a separate sheet from your letter or matter to be printed.

Sign your letter with name and address. Sign each other sheet with your name, eitner top or bottom of page.

If you must use postal cards, don't paste anything on them. If the postal authorities forward such irregular matter at all they collect letter postage at the receiving end.

Put sufficient postage on your letter. It takes a two-cent stamp to carry a letter, and leaving it unsealed doesn't save you

anything.

Don't expect a personal letter from Uncle Tangler to tell you if your puzzle is accepted and when it will appear, or for any other purpose. Your Uncle is always Uncle Tangier to tell you in your puzzle is accepted and when it will appear, or for any other purpose. Your Uncle is always glad to hear from you with answers to the Tangies and with new and original puzzles, but cannot enter into a personal correspondence with anyone. What he has to say will be said in his department from month to month.

Don't expect a prize for solving one Tangle. Prizes are given only for solving all the Tangles, unless otherwise stated, and for best lot of new puzzles, each month, and this has been carefully stated in each issue. We publish the names of all who send in correct answers to one or more Tangles each month, but prizes are awarded only as stated.

It isn't necessary to repeat an entire Tangle when you wish to report that you have solved it. Each Tangle has a number for the express purpose of identification and when you say. "No 38 Thanks."

Tangle when you wish to report that you have solved it. Each Tangle has a number for the express purpose of identification, and when you say: "No. 38. Thanksgiving." it is perfectly understood.

Above all, don't cut out the Tangles, or any part of them, and send in with the answers affixed. You want to keep the Tangles complete to compare with the answers when they appear, and THE AMERICAN BOY should always be preserved whole and kept carefully. You will enjoy reading it 10 years from now, and so will your boys twenty years hence.

Keep this lot of "don'ts" and "do's" before you the next three times you write Uncle Tangler, till you master the simple but necessary requirements it teaches, and you will experience the satisfaction of knowing that you have learned how to write properly "for the press."

Now read it all over again, and don't forget!

—Uncle Tangler.

•HE BEST PAPER FOR YOUNG MEN

The Law Student's Helper, published by The Spra Publishing Company, the controlling owners of Sprague Correspondence School of Law, is bey question The Beat Young Men's Paper in Amer

Sprague Correspondence School of Law, is seyend question The Beat Young Men's Paper in America.

As its name implies, it treats largely of the law, but in such a way as to make it of the greatest value and greatest interest to men and women who are not studying law as well as to those who are. It averages forty pages to the month. It's editor is WILLIAM C. SPRAGUE, Pres. of Sprague Correspondence School of Law; asst. editor is GRIFFITH OGDEN ELLIS, Vice-Prin. of that echool. It treats of all current events in the law and political world from the standpoint of the lawyer. Its departments, "Questiess Answered and Billeslities Metfor Riudcuts of Law," and "The Self Examiner," which gives questions from bar examinations, with their answers, have proved very valuable, while the miscellaneous matter is always unique and highly interesting. The rule of this paper is, once a subscriber always a subscriber. Its subscription list has grown to be the largest that can be claimed by any legal or semi-legal journal. We speak of this to show how it stands among those who know what good journalism is. It appeals to the young men who are in the busy walks of life, in that it treats of current svents in a simple concise manner, and one does not have to read through pages of trash to get at the substance of what he wants to know. It is to-day necessary to intelligent elizenship that one give attention to passing events and be able to view them from an intelligent standpoint. This paper supplies what no other paper gives, an opportunity for a brief, condensed, philosophic review of the world of law.

THE AMERICAN BOY

was a mite of a boy he played about his uncle's telegraph office till it dawned on him one day that he knew all about the dots and dashes and

expert typewriter and in the yellow fever panic broke out in the South two year ago Charley, young as he was, was on hand to telegraph the news; and last spring during one memorable night he obtained a leave of absence to go to Durant, Miss. On his return that I same night his train—a freight—broke through a bridge undermined by rains and plunged into the creek below. Three men were killed and one terribly injured. Charley walked back from the train six miles to Ways Bluff, made his way into the closed and tenantless telegraph office, despatched for a relief train, stopped the oncoming "passenger" and went back to the scene of the wreck. As soon as the relief crew arrived the boy "cut in a wire," attached an instrument, and spent the day taking orders. He is a good example of what a boy can do.

OSCAR H. BOWER.

OSCAR H. BOWER. Agent. While messenger boy he assisted in general office work, and much of the time had almost entire charge of the express business, for which he was allowed a part of the commission therefrom. Here he also took up the study of telegraphy and in six months was able to go out on the line as a first-class telegrapher. So great was his desire to learn that he bought some instruments and put them up in his bedroom at home and often spent the greater portion of the night working at them. At Proctor he had full charge of freight, passengers, baggage, mail and express, besides doing the telegraph work, and is considered one of the best agents and telegraphers on the line. Since June 27 last he has been employed in the accounting department of the Fort Worth & Rio Grande at Fort Worth.

A Brave Boy.

A short time ago Christian Molloy, of 176 Fourth Street, Long Island City, N. Y., saved the life of his companion. Arthur Kelly, a thirteen-year-old boy. Kelly had

When Charley Lumley, of Canton, Miss., was a mite of a boy he played about his uncle's telegraph office till it dawned on him one day that he knew all about the dots and dashes and telegraphic s ou n ds from the mysterious board in the corner. It was not long before knowledge of him came to the ears of the railroad officials, and at fourteen we find him an efficient substitute at stations along the Illinois Central Railroad. He is now sixteen, and for over a year has held a position at sixty dollars a month as night chief at the Canton office, with an assistant. He is also an expert typewriter and distinctly a boy for emergencies. When the yellow fever panic broke out in the South two year ago Charley, young as he

Wilbur Johnson, a fifteen year old Washington city boy, is the hero of quite an adventure. The boy went to England last summer for an outing and snap-shot camera expedition, and was royally entertained by the King and Queen. He set out from St. Johns, N. B., on the ninth of June for England by schooner. Upon his arrival in London he unstrung his camera and went to work. One day he came to Marlborough House, the residence of the King. Handing the guard a piece of silver he went inside the gates. Just as he was about ready to press the bulb on a good snap-shot he was startled to see an eiderly gentleman standing directly in front of him.

"Hello, sonny, what are you going to do?" he asked.

The boy told his story, and the gentleman

"Hello, sonny, what are you going to do?" he asked.

The boy told his story, and the gentleman said, "You can't take a picture of Mariborough House." He informed him that he was the Duke of Argyll. He then asked the boy if he wanted to see the King, and the upshot of the matter was that the Duke agreed to present the boy at Mariborough House on the Wednesday morning following. Of course the boy was there at the appointed time, areased in the uniform of the Washington High School Cadets, of which he is a member.

"I see you are an officer," began the King, after a hearty salutation.

"No, sir, I am only a private," he answered.

Then the boy explained an officer."

Then the boy explained an officer."

young Bower attended the public schools at Comanche. Tex., and then took a position as messenger boy in the office of the Fort Worth & Rio Grande at Comanche Station, at a salary of eight dollars a month. In his seventeenth year he was appointed railroad agent at Proctor, and about a year later was transferred to Blanket. Tex. as agent. While messenger boy he work, and much entire charge of or which he was apolic a first-class telements where the work, and much entire charge of months was ablots a first-class telements the messenger boy he work, and much entire charge of or which he was ablots a first-class telements the messenger boy he work, and much entire charge of or which he was ablots a first-class telements the first class telements and put at home and often ion of the night roctor he had full sengers, baggage, es doing the telements been employed the phers on the line, and ran to his hotel, greatly elated over that a boy should be proud of.

A Bright Young Colored Man.

A Bright Young Colored Man.

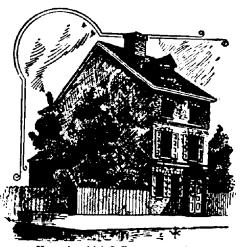

R. F. MOORE

K. F. Moore, a colored boy at Beaufort. S. C., is doing good work in school. During the last two winters he has been attending school at Claflin University, Orangeburg, S. C. He is making a good record, standing at the head of his class. During the summer time he earns money as a drug store porter and soda water clerk. He intends to become a pharmacist.

What Boys Are Asking.

Lloyd Sanford, New Brunswick, N. J., would like to know how to make bows and arrows and how to use them; also what kind of wood to use and how to tip the arrows.—Dewey Parker, Oxford, Mich., would like some information as to how to start a frogery—Lloyd B. Bennett 1024 would like some information as to how to start a froggery.—Lloyd B. Bennett, 1024 Hickory St., St. Louis, Mo., would like to know how to build a cabinet for shells and how to classify them.—Victor Bergh, 135 North Fiftieth St., Philadelphia, Pa., would like to know how to make a pair of snow shoes and what material to use.—Carroll F. Parker, Wakefield, Mass., wants to see in THE AMERICAN BOY a plan for a hen house.—James Morrow, Caldwell, Ida., says he read of a baseball pitcher who threw a "double shoot." He wants to know if any one can tell him what a "double shoot." He wants to know if any one can tell him what a "double shoot." Is, and how to throw it.—T. P. Bonner, Jr., Bryson City, N. C., wants some hints as to how to make an automobile.—Ernest B. Fry, Rochester, N. Y., wants to see plans for a twelve-foot ice boat.—A. J. Kaupel, Ossian, Ia., wants to see directions about stuffing birds.

House in which Jefferson wrote the Declaration of Independence.

TRUE STORIES OF **GREAT AMERICANS**

Is the general title of a series of twelve beautiful books, written in popular style for young and old, by well known historians. They are designed to teach history and patriotism by biography and read like fiction.

List of titles, authors, description of bindings etc., are given below.

VOLUMES

RED ENGLISH CLOTH, '-PAPER, WITH CLOTH BACKS, 1.25 FORMER PRICE, - -

This is one of many illustrations which embellish the pages of True Stories of Great Americans.

- 640 Thomas Jefferson, by Edward S. Ellis, A. M., author of "The People's Standard History of the United States," etc.
- 641 James Otis, by John Clark Ridpath, LL. D., Author of "Ridpath's History of the United States," etc.
- 642 John Hancock, by John R. Musick, Author of "The Columbian Historical Novels," etc.
- 643 Samuel Adams, by Samuel Fallows, D.D., LL.D., Ex-Supt. of Public Instruction of Wisconsin; Ex-Pres. Illinois Wesleyan Univ.

- 647 George Washington, by Eugene Parsons, Ph.D., Lecturer on American His-
- 648 John Randolph, by Richard Heath Dabney, M.A., Ph.D., Professor of History, University of Virginia.
- at 649 Daniel Webster, By Elizabeth A. Reed, A.M., Ex-Pres. Illinois Woman's Press Association.
 - 650 Henry Clay, by H. W. Caldwell, A.M., Ph.B., Professor of American History, University of Nebraska.
 - 651 Abraham Lincoln, by Robert Dickinson Sheppard, D.D., Professor of American and English History, Northwestern Univ.

A series of character sketches of twelve great statesmen whose careers are the beacon lights of American history. Every school boy knows their service to the government yet few are familiar with their private lives. Their lives read like romance, and the story of their struggles, privations and devotion to duty, can but be a new inspiration to every patriotic American.

The volumes are written in a popular style which will appeal alike to the young and old. They are designed to teach American history by biography. In connection with the life and stories of each character is a full account of the great and stirring events in which he had a part. Their lives constitute a history of the United States, and no one can read these fascinating stories without feeling a national pride in a country which raised from the humble walks of life, men who rank among the leading statesmen of the world.

Twelve magnificent volumes, convenient for handling, beautifully printed and illustrated with hundreds of rare cuts and portraits handsomely bound in best red English cloth, stamped in gold. Complete set contains nearly 1,400 pages, size 5½x7¼ inches.

The set formerly sold at \$3.50. Present price, red English cloth, \$2.50, paper, with cloth back, \$1.25.

A Christmas Present.

If you intend to give an annual subscription to THE AMERICAN BOY as a Christmas present to some friend, drop us a postal card advising us of the fact, and we will send you free of charge a Christmas card in colors which you can mail to your friend so that he will receive it on Christmas day. This Christmas card wishes him a happy Christmas and advises him that you have subscribed in his name for THE AMERICAN BOY. If you prefer to do so you can, when you send us the subscription, ask us to mail the card direct from here to the person for whom the paper is intended. The design of this card is shown on page 31 of the November number of this paper.

It will hardly be necessary for us to sug-

ls snown on page 31 of the November number of this paper.

It will hardly be necessary for us to suggest to employers of boys, Sunday school superintendents and teachers, and friends of boys generally, that THE AMERICAN BOY, in its twelve issues of 1942, will be a more enduring and more acceptable Christmas present for a boy than almost any other thing that may be named.

The Christmas number of THE AMERICAN BOY will be sent so that it will reach the person for whom the subscription is intended, on Christmas day. The subscription will be entered as beginning with the January number and running one year. This number (the Christmas number) will be sent free, making in all thirteen numbers for the price of twelve.

VEST POCKET PARLIAMENTARY POINTER

This little Book answers at a glance the intricate questions of Parliamentary Law, without diagrams or reference marks to confuse or mislead. It is so small it can be concealed in one hand, and referred to during a meeting without attracting attention. It contains about 29 x4 inches. It uses a system of abbreviations, condensing parliamentary rules into the smallest space.

STEVENS CRACK SHOT

you want to make your boy happy present him on next Christmas with a reliable Rifle or Shot Gun. If he owns such

an Arm it will be an incentive for him to get into the fields and woods, and an outdoor life means much to a boy's development, both mentally and physically. You must be careful in selecting such a present and buy only one of Standard Make. Our 37 years' reputation should be a sufficient guarantee as regard to Quality. In our " Crack Shot" we offer a high

grade boy's rifle. It will shoot 22 short, 22 long and 32 short rim fire cartridges, and is accurate and reliable. Is made upon improved lines and sells for

\$4.00

We have several other popular styles.

Nearly all dealers in sporting goods handle our Arms, but if you cannot secure them we will ship direct (express prepaid) upon receipt of price. Send stamp for our catalog, it's full of interest.
