the principal and the faculty to be preent at the contests. As I was training every day and saw here an opportunity to find out how I was running, I accepted the faculty's invitation and informed the principal that if he thought the students would care to see me run I would most willingly run an exhibition for them. Immediately it spread like wildfire around the town and school (which, by the way, is a preparatory school for (xford) that I was going to attempt to lower the record, and, arriving at the school grounds, I was introduced to many of the trustees of the institution, also lower the record, and, arriving at the school grounds, I was introduced to many of the trustees of the institution, also the Mayor, who, learning that I was to race again, appeared and wished me heartily the best of success. After the boys ran their events, I requested the two winners of the school sprint to pace me, and allowed each a liberal handicap of twelve yards. The young sprinters were very desirous of making a good showing against me, and wished me to give them a better chance than this. But, realizing that I would have all I could do to overtake them with this handicap. I informed them that they had plenty of start and undoubtedly would defeat me. Never will I forget the outbursts of laughter from that fashionable audience as I commenced to dig my holes at the start, and when I assumed the crouching posture it seemed ridiculous to the old folks, for they could not understand how it was possible to start from such a position.

After the exhibition race, which I managed to win in the time of nine and four-

After the exhibition race, which I managed to win in the time of nine and four-fifths seconds. I was shown around the institution, and after tea with the principal I was invited to be present at the distribution of the prizes that evening in the hall. The prizes were to be awarded by the lady Mayoress, and after the youthful victors had received their spoils, youthful victors had received their spoils, the principal arose and addressed the school in a most edifying speech, pointing out to the young lads the necessity of obtaining a good foothold in the school and in life. I listened most attentively to the able professor's instructive remarks, and as gradually everybody became attentive I was much surprised when he used for an example the careful foothold I secured when I started in my races. It was a most appropriate examfoothold I secured when I started in my races. It was a most appropriate example and was received with loud bravos from the student body. After the cheers had subsided, the principal continued and announced that the faculty took great pleasure in presenting me with a most suitable prize for favoring the school with my appearance. For the moment I was stupefied, and as I examined my gift I was pleasantly surprised to find that I had received a complete set of Shakeshad received a complete set of Shakes-

peare's works.
Having spent a most pleasant week in Having spent a most pleasant week in Wolverhampton, on the following Saturday morning I set out for Northampton, at which place I was to compete for the "Prince Hassan Cup" and defend my title as British Champion. Arriving in Northampton, or St. Crispin's town as it is called by the old inhabitants. I was much impressed by its picturesque and antiquated appearance. As I was only there for the day, I did not have much opportunity for sightsceing, but learned that the town is now chiefly a boot and shoemaking center.

On a fine afternoon likewise the British championship was run off, and everything pointed to a record-breaking day. My race here was universally conceded to me, owing to the form I had displayed in my former races, and all the spectators looked to see me lower the British record. As I was not in the highest spirits, the

As I was not in the highest spirits, the best I could accomplish for the distance was inside 10 seconds, besting my nearest competitor by two yards, and thus winning for the fourth consecutive year the blue-ribbon event of British amateur athletics.

As it is the custom to banquet the new champion and the distinguished guests, I was invited to be present at the dinner that evening. It was a very pleasant I was invited to be present at the dinner that evening. It was a very pleasant occasion. After listening to the eloquent address of such gentlemen as the chairman, the Earl of Dudley, and Montague Shewman (King's Counsel), the former in a most pleasing speech welcomed me to Old England again and presented me with the beautiful Prince Hassan Trophy and the usual gold medal from

Trophy and the usual gold medal from the Amateur Athletic Association of England. Leaving Northampton after the banquet, I proceeded on to Kettering, arriving Sunday morning. A quaint little place also was Kettering, and as I ap-

proached the hotel I was much surprised to see many of the inhabitants carrying

proached the hotel I was much surprised to see many of the inhabitants carrying trays, napkins and other utensils from which arose the fragrant odors of Yorkshire pudding and other old English delicacies. Inquiring why the people carried such things, I was told that it was the custom among them to carry their Sunday dinners to the public baker, who cooked the same for a few pence, and at noon all called for their dishes. It seemed very strange to me, and I pictured to myself how impossible and absurd it would be to attempt such a thing in our American towns.

The following day, Monday, being a holiday, all the people from the neighboring towns flocked to Kettering to see the county fair and the sports which were held in conjunction with it. Gradually it became known that a "Yankee sprinter" was to race at the sports and as every little town and borough throughout England has some runner of note whom the inhabitants claim can beat the world, great interest centered in the match between the local champion and myself. Arriving at the scene of the contest I was quite surprised to see the sort of track we were supposed to run on. It was nothing but a sheep pasture beside the fair grounds, so that the spectators could pass from one place to the other.

My opponent was a tall, raw-boned lad,

other.

My opponent was a tall, raw-boned lad, resembling more a hammer thrower than a sprinter. Urged on by his friends, who were extremely confident that their prodigy would defeat me because of the handicap I was conceding, he came to the scratch for the final heat. As chance would have it a fakir had established a testing machine close to the starting points, and in eloquent bursts of rich Yorkshire dialect was beseeching the crowd to test their strength. Many, desirous of testing their hitting abilities (shown by swinging a huge mailet and hitting a peg which connected with an indicator that sounded a large gong at the top of the beam) came forward to try. At last the starter's voice rang out, "Get ready!" and with eager pulses anxiously we crouched and awaited the report of the pistol; but, to our dismay, some energetic individual swung the mallet and hit the peg, and the terrific clash with the clang of the gong was the signal for our departure. Personally I could not state at the moment whether the pistol went off or not, at any rate I ran as fast as my legs would take me, and after a terrific battle with my herculean opponent I managed to win out at the tape. It was a most peculiar occurrence, and I laughed heartlly when I was informed of the cause, and though it aroused a little comment we both agreed that it was a perfect start, and my opponent congratulated me in a most sportsmanlike manner.

As I was booked to race the following Section of the pistol was contained to the course. My opponent was a tall, raw-boned lad,

sportsmanlike manner.

As I was booked to race the following As I was booked to race the following Saturday at Birmingham I set out the next day for the Midlands, staying the rest of the week as a guest of the B. A. C. The track at Birmingham was the fastest track (grass) in the kingdom, and as I was in fine fettle I won my fifth consecutive victory in my fastest performance—a yard faster than 9 4-5 seconds, almost duplicating my 9 3-5 record. As I had no difficulty in winning the scratch event, the people seemed very desirous event, the people seemed very desirous that I compete in the open 120 yards sprint. I compiled with their requests. and though my competitors were strung

all the way up to fifteen yards I managed to gradually overhaul them and win out in 114-5 seconds, thus equalling the world's record for that distance.

That evening I attended the banquet given by the B. A. C., and everyone present congratulated me on my victories, and after the usual songs and speeches I was presented with a magnificent chest of silver cutlery. The next day being Sunday the sports committee planned a motor-car trip to Stratford-on-Avon, the

was presented with a magnificent chest of silver cutlery. The next day being Sunday the sports committee planned a motor-car trip to Stratford-on-Avon, the home of the immortal Shakespeare. It was my first tour as a motorist, and arriving in Stratford I was much amused by the many young street urchins who drolled off in their accustomed monotone, incidents in the life of the famous dramatist. After visiting the birthplace of Shakespeare and other places made famous by him, I had the pleasure of seeing the celebrated novelist, Marie Corelli, who resides at Stratford.

Returning from Stratford I left Birmingham that night for Stonebridge, a town not far from Birmingham. The meeting here, though a large one, proved to be one of my severest races, owing to the fact that it was a chilly day and I was far from having the form I had shown in Birmingham. However, I managed to win in 10 seconds. As I was not to race again before the end of the week, the few days left me I decided to devote to a rest, and it was most gratifying, as I could not help looking back on what I had already accomplished and wondering how long my successes would continue. By this time the form I had displayed in my races and the many times I had come in a winner had attracted some attention, and I felt almost like a matinee idol when I read the various press notices I received, and when enthusiasts would request my autograph or some other athletic souvenir. It is true that at the many places I ran there were the usual local favorites, and they always received the usual share of approbation; but then, too, when I happened to outshine the local light, all evidenced that usual trait of thorough sportsmanship and gave me a royal welcome.

(To be continued.)

(To be continued.)

#### The West Beats The East

On "Franklin Field," Philadelphia, April 23rd, western college athletes opened the eyes of their eastern brethren. Nearly twelve thousand people filled the stands to witness the sensational events, chief of which was the performance of Ralph Rose, which was the performance of Ralph Rose, the nineteen-year-old University of Michigan boy who won in putting the 16-pound shot, equaling the world's record of 48 feet 2 inches, and later in the same day, on a trial to break the world's record, succeeded in doing so with a score of 48 feet 3½ inches, though the record, not being made

inches, though the record, not being made in a contest, does not stand.

In the 100-yard dash Michigan, Chicago, Harvard and Yale entered. The Michigan man, Hahn, won by one yard, with Schick, of Harvard, second. Michigan also won the four-mile relay race against Yale, Princeton, Columbia and Harvard. The 120-yard hurdle race was won by F. W. Schute, of the University of Michigan.

The running broad jump was won by Pennsylvania, the throwing of the 16-pound hammer by Princeton, the throwing of the discus by Iowa University, the running high jump by New York University, the pole vault by Yale. Syracuse, New York and Bucknell cach won in one mile college relay races. Bethlehem Preparatory School and Bucknell each won in one mile college relay races. Bethlehem Preparatory School won the one mile relay preparatory school championship of America; the Philadelphia Central High School the one mile relay high school championship of America; Yale, the one mile relay college championship of America; Panagukania, the two mile relay

the one mile relay college championship of America; Pennsylvania, the two mile relay college championship of America; and Michigan, the four mile championship.

During the day Michigan won the 100-yard dash, the putting the 16-pound shot, the four mile college championship of America relay race and the 120-yard hurdle race. Dvorak, the crack pole vaulter of Michigan, whose picture and signed contribution appeared in THE AMERICAN BOY for April, failed to do better than 11 feet 3 inches in the pole vaulting contest, the winner making 11 feet 6 inches.

The westerners scored in all the events (six) in which they entered, winning four and getting places in the other two.

Y., reports a game of hockey in which it defeated the Unions, the score being 5 to 0. It is organizing a crack baseball team.—JOHN BROWN COMPANY, No. 59, Williamsburg, Mich., has 12 members with the following officers: Warren Carpenter, Capt.; Harrison Vinton, Lieut. and Treas.; Homer Hawley, Sec'y; Ralph Scofield, Lib'n. Holds its meetings each week. Dues 10 cents a month. The members are busy drilling, having wooden guns. Mrs. L. B. Carpenter is Company Counsel.

#### American Boy June Field Day

American Boy June Field Day

As the athletic members of the O. A. B.
as well as a multitude of our subscribers
will be training to take part in the Public
School championship events at the St.
Louis Exposition, July 4, 5 and 6, our June
field day contests will consist of three
sprinting events forming part of the championships. These will be: For boys under
fifteen years (1) 50 yards run; (2) 100 yards
run; (3) 220 yards run. For boys above
fifteen years of age: (1) 100 yards run; (2)
220 yards run; (3) 440 yards run.
Each company's contest will take place
on a day selected by it as near Saturday.
June 18th, as possible, and at a convenient
place previously agreed upon.

The starter and judge of the events shall
be adult persons, men or women.

The judge shall keep the records, including the time of each event, and also decide
all questions arising during the contests,
seeing that they are conducted in a fair
and impartial manner.

At the close of the contests the judge
shall forward to me, over his signature, the
name, age and address, and the time taken
in each event of the boy under fifteen years
of age, and the same particulars of the boy

name, age and address, and the time taken in each event of the boy under fifteen years of age, and the same particulars of the boy over fifteen years of age who outruns all other competitors in the different contests. When the records of all the companies have been received at headquarters we will compare the records of each company and confer upon the boy under fifteen years of age who has made the best record in each of the contests of any boy under that age in the order, the title of "American Boy Junior Champion, 1904." To the boy over fifteen the title of "American Boy Senior Champion, 1904." The names and records of the winners of the various championships will appear in The American Boy.

Read what appears on pages 245 and 258 regarding American Boy Day at the St. Louis Exposition.

## American Boy Day

At the St. Louis Exposition >

uly 5, 1904

See our Editor's letter entitled "Just Between Ourselves," in this issue. Every company of the O. A. B. should be represented of the St. of the St.

## Just Between Gurselves

As I sit down for my talk with you this month I find before me a great pile of letters which indicate your interest in this page of THE AMERICAN BOY. The letters are of many kinds, and I presume they represent as many kinds of boys—big letters, big boys; little letters, little boys; good letters, good boys; bad letters, bad boys; long letters, long boys; short letters, short boys. It takes all kinds of letters to make up the correspondence of the Editor of a boys' paper as it takes all kinds of boys to make up a world.

I do not suppose that I can begin to answer in these columns all these letters, and I shall not try to do so; some of them, however, are of general interest and such as are I will endeavor to answer for the benefit of all.

#### BADGES, ETC., FOR JULY 5TH.

Boys are writing for American Boy badges for American Boy Day at the Exposition. Once for all let me say, these badges will not be given out until the latter part of June, and only to those boys who are practically sure of going to St. Louis for July 5th. One boy writes: "I guess I will be at St. Louis July 5th so please send me a badge." By the latter part of June this boy as well as others who are now "guessing" should be practically sure of whether they will be with us on that day. If they will write us then we will send the badges.

A boy suggests that on American Boy Day at the exposition an orchestra be engaged to play, as a part of its program, The American Boy March. I am waiting patiently for some boy orchestra in the country to offer its services in St. Louis, free of charge, for the 5th of July. There could not be any better advertisement for an orchestra than that it had appeared on that date in the great American Boy program. If there is an orchestra in your town suggest this to its leader.

I am receiving many letters from boys who say they play some particular instrument, as a violin, a cornet, etc., who wish to play in an orchestra at the exposition. There will be no time on American Boy Day for the making up of an orchestra or for rehearsals, as the program covers but one day, so that it will be impossible to meet the wishes of these boys. Where a boy is particularly capable as a soloist, we want to know it, as we can doubtless make room for him on the program, but he must be able to do good work.

#### M USCLE.

One of our boys recently asked me what was a good form of exercise to develop the lower arm. Another boy answers, "Milking." Well, now, who ever imagined he was practicing gymnastics or engaging in athletic exercises when milking a cow. I expert now that all our boys will turn out in the morning before daylight and hunt up the old cow with added interest since they understand it is good gymnasium work.

One suggests that it is a good thing for a town or city boy to go out into the country and hire himself out to a farmer for the summer, saying. "A boy's pride is in his muscle and there is no better place to develop muscle than on the farm." The boy is right. The country is the place for the boy in the summer time. It's the place to eat and sleep and work and play, to breathe good air, to fish and hunt, to get muscle and health and a foundation for the winter's work in town. Farm work is hard and no boy knows it more surely than does the city boy who takes his soft muscles out into the country and tries planting corn all day with a hand corn planter. I tried it once myself for one day and was sick for a week afterwards. The trouble with me was that I tried to keep up with the country boy who was planting alongside of me. I thought that having lived in the city all my life I knew as much as he did and could do whatever he could do. No boy is properly educated until he has had experience with the country. No father can do his son a greater service than that of sending him out to plant corn, hoe potatoes, pitch hay, feed the stock and milk the cows on the farm for a while.

#### TO ORGANIZE.

An Illinois boy wants to know how to go about getting the boys of his town to organize a company of The Order of The American Boy. In the first place the boy should not imagine it to be necessary to get a large number of boys together in order to form a company. Some of our most successful companies consist of not more than five boys. It would seem that a boy with any influence at all among his fellows could induce four to join with him in a company of the Order.

Every boy likes athletics and the Order is just now devoting a good deal of attention to that subject Where boys do not understand what THE AMERICAN Boy is we will agree to send free of charge to boys whose names are given us free sample copies. A reading of THE AMERICAN BOY and particularly the pages devoted to the Order ought to inspire hoys with a desire to become a part of the great army consisting now of over 15,000 boys enrolled under the banner of the Order of THE AMERICAN BOY. When you tell the boys, too, that they are not bound to any special form of organization and that they can make of it an athletic club, a stamp collecting club, a correspondence club or any kind of a club, so long as it is for a good purpose, there ought to be little difficulty in obtaining their consent. Speak to them of the great time we are to have at St. Louis on July 5th and that will interest them. Boys are natural joiners. All that is needed is some boy with enough influence among boys and enough push to carry through a project once undertaken to achieve success in this line.

#### SOME GOOD LETTERS.

It does me a great deal of good to receive from boys such letters as the one from which I am about to quote, written by a boy who lives in a little town in eastern North Carolina. His father is one of the principals of the High School in the town where he lives. The boy writes: "I do not wish to exaggerate in the least, but I wish to speak as I feel. I believe that your paper has done more to strengthen my ambition and to elevate my ideals than any other publication I have ever seen. I think it is a great help to any boy who has any ambition in the world. My gratitude to you is simply unbounded. After reading your paper I can resume my studies with more determined zeal. I am able to discharge such duties then as fall to my lot more thoroughly." he goes on to tell how much he longs to go to the St. Louis Exposition and be there on American Boy Day, July 5th. He lives a long way from St. Louis and fears that he cannot go. When I read such letters 1 wish that it were within my power to put into the hands of such a boy the money he requires for the trip to St. Louis. Every word of the letter breathes an earnest boy spirit. It is this kind of a boy that I believe in. I shall not be at all surprised if I am able to shake hands on American Boy Day with this boy, for this kind of a boy brings things to pass.

Now I am going to let Eugene Libby of Denver, a high school boy, do a little talking for me. "I am, says he, "in the high school and so know a good deal about a boy's life, and I want to say that I agree almost entirely with you in regard to what you say on the page 'Just Between Ourselves.' A good, wideawake boy plays all sorts of things in their season. Some boys go right into sports and enjoy themselves and get muscle and brains from them. Baseball is about the best exercise a boy can get. It trains the eye and gives muscle. Moreover, a boy must know just what to do to 'get a man out' and that strengthens the mind. Such boys make the best men. Boys who do not take to such sports do not make good men. (The editor thinks this is putting it a little too broad.) They seem to forget that they were ever boys themselves. One such man lives near me and because he did not want the boys to play in a lot near his house took some of our gloves and then pulled a gun on us. Detective stories and such like teach a boy to smoke, swear and drink. These are the worst things a boy can do, as they break him down in muscle, mind and morals. What you refer to as 'namby-pamby Willie stories' are almost as bad as detective stories in a way. I like good, healthy boys who depend on themselves and know how to do hard THE AMERICAN BOY helps build up such men. The editor deserves a great deal of praise on editing such a paper and proves by what it contains that he was once a boy himself." Our western boy friend has preached us quite a sermon,-more than I would dare to preach for fear you would think that I was growing too wise and solemn. Perhaps you may be willing to take a little advice, however, from one of your own age. It is very good advice, too.

A very nicely written letter comes from a Minnesota boy of fourteen who speaks both English and German, is in the sophomore class in high school, is the son of an editor of two papers, and seems to know what he is talking about. He says that in reading "Just Between Ourselves" he feels as if his father were talking to him; that his mother, too, likes The American Boy, "because," as she says, "it voices her own thoughts and ideas." He says some days when he is ugly she says, "Where's that American Boy?" Well, that is very much better than to have her looking up a good hickory stick. I never had any idea when I started in editing The American Boy that I was going to serve the place of a hickory switch or a scarecrow in American homes, but it seems that I am. I am sure that I am not sorry for

it if what I say serves to banish the rod from any home, for I do not believe in the rod. There are good people, however, who have believed in it and one of them was my own mother. Sometimes now I think she did not lay it on hard enough and yet after all I believe there are other ways of bringing a boy up that are far better. Now, when your father invites you into the woodshed do not tell him what I have said, for he has just as good a right to an opinion on this subject as I have and probably will lick you all the harder for suggesting that somebody else does not agree with him. I am sure when I was a boy if my mother had had THE AMERICAN Boy in the house for me to read our cherry trees would have been much more thrifty and less scraggly looking than they are now, but I did not have any such paper.

#### FUNNY STORIES.

A Pennsylvania boy wants to see more funny stories in The American Boy. This leads me to say that the crop of writers of humor is entirely exhausted. There is a yawning need in the field of boy literature for some one who can write the sort of stories that a boy can laugh over. We get stories that are silly enough, but very few that are really funny enough to warrant printing. Some of these days I am going to run up against a writer who can write funny stuff for boys,—such stuff as will make a boy laugh even against his will and keep him laughing, and when I do run up against such a writer I am going to hold him tight and not let him get away. There are all kinds of people on The American Boy editorial staff excepting the funny man. We have been looking for him for five years and have not found him yet. I want him more than you boys do.

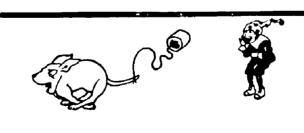

#### WHICH IS THE BEST?

A Maryland boy wants to know what is the best occupation, that of bookkeeping, telegraphy or stenography. He says he is in good health, sixteen years of age, and working in a can-making shop where he has steady employment for six months of each year. If I were in that boy's place I would learn all three. I would learn how to keep books, how to send and receive telegrams, how to write in shorthand and operate a typewriter. He doubtless has spare minutes every day, perhaps spare hours. By the use of this time only he can within a year learn bookkeeping, telegraphy and stenography. I do not know which is the best from a financial point of view. A good bookkeeper makes more money than a poor stenographer and a good stenographer makes more money than a poor bookkeeper, and the same can be said in comparing any two of the three. Perhaps the most money is made by the expert stenographer. Bookkeeping is rather a narrowing occupation; telegraphy is not much better, while stenography gives wide scope for genius and industry. If the question were, which would you choose of the three, if confined to these three for a life work. I should choose stenography, but, as I have stated, if in this boy's place, I would learn them all as any one of them can be learned at home in spare time, though they are best learned in school under a competent instructor.

#### COST OF A WEEK AT ST. LOUIS.

Many of you have asked what would be the total cost of a week at the Exposition. It is difficult to answer a question of this kind without knowing the extent of your purse, what your tastes are and what you want to see and what you are willing to sacrifice. The cost of railroad fare to and from St. Louis can be determined exactly by a reference to your railroao ticket agent. The railroads give a one and a fifth fare for the round trip from all places within a radius of three hundred miles from St. Louis. Find out what is the regular fare one way from your town to St. Louis, add one-fifth to that and you will have the round-trip rate. If, for instance, the regular fare to St. Louis from your town is \$7.50, the round-trip special rate for the Exposition would be a total of \$9.00. For towns farther distant than three hundred miles there are even lower rates made. Admission to the fair costs 50 cents, car fare to or from any point in the city 5 cents; as regards meals and lodging there are all kinds of accommodations. A good, clean room can be had for \$1.00 a day and there are restaurants everywhere with all sorts of prices. Your necessary expenses, including admission to the ground, but not including admission to the shows on the Pike, should not be over \$2.25 a day. You may live at the very best hotel in the city, go to and from the grounds in an automobile, use \$1.00 on the Pike. \$1.25 for extras, \$1.00 for dinner, 60 cents for breakfast, 75 cents for luncheon and still make six days not cost over \$55. A medium expense would be 85 cents for incidentals. including souvenirs, 50 cents on the Pike, 40 cents for breakfast, 50 cents each for dinner and supper, \$1.50 a day for a room, 50 cents for admission to the grounds, or a total of \$4.75 a day; six days would cost \$28.50. If you live, say 300 miles from St. Louis. add \$9.00 to that and you have a total expense of \$37.50. You can live for six days like a Croesus and come within \$75.00, but if you do that you will be extravagant. With the reduction in railway rates and the cheap prices at which the sights of the Exposition are open to the visitor a traveler will spend less money in the same length of time going to St. Louis to the fair than in making a trip to see the sights of any of our American cities in ordinary times. Yours Sincerely.

He Sprague

Lickity-brindle—
And lickity-switch!

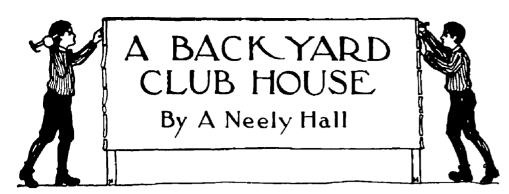

Over the hedgerow
And into the ditch;

Fleeter and faster—
A bark in full sail—

Scampered the cur
With a can to his tail!

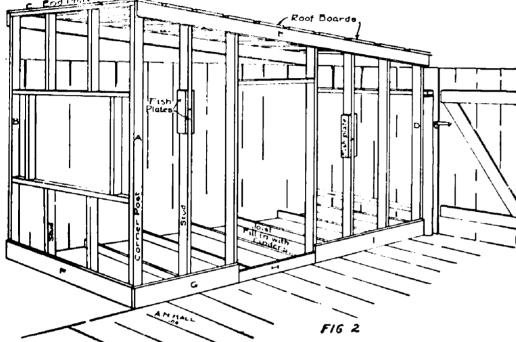

Lickity-larrup—
And lickity-switch!
Twenty red places
To tingle and itch—
Somebody surely
Is raising the fur
On the back of the boy
That tormented the cur!

ing number of members.

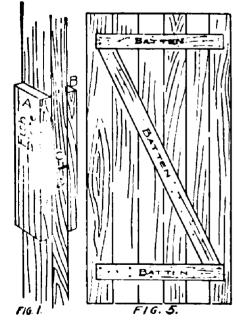

OR many years there stood in a city work figure out just what material will back yard a house in which the be required. If you haven't enough lumboys of the neighborhood gathered her it is a great deal easier to alter the after school and during vacation plans at first than when the work is half to hold their club meetings. Many a completed. It is best to first place in pleasant hour was spent within the walls one pile all the material you can find; of this shanty which had to be enlarged then after drawing the plans, sort out year after year to hold the ever increas- the boards according to their lengths. Use the short boards whenever possible The greatest difficulty was found in so that the long pieces may be kept for obtaining large enough material with places requiring long boards. Several which to build. The woodshed was the two-by-fours should be secured for the lumber yard and as this contained only framework. If you do not happen to a few old boards, several packing cases, have these, you can easily get what you and kindling wood, a great deal of splic- want at some alteration job or where ing was required and many pounds of some frame structure is being torn down. nails were used in fastening them in Short two-by-fours may be spliced or more correctly speaking "fished." This is very often resorted to in building

After remodeling the clubhouse one placed a "For Rent" sign upon the door, following mysterious letter:

Mister Agent:

I sea u hev a house Fur rent what u want furit im a wider with 12 children six pigs 5 chickens a mule three dogs 7 cats and ten ducks I hop the house is blg enuff it don't matter bout the children but I wont crowd the pigs. I soppose will paint outside an in and put awnins at the frunt winders !'d like terry cotty shades and a stun sidewalk iF u'll put a plassee on and reduce the rent till after wurlds Fair I'll take it what you want furit please let me know soon if u dont find me hum im like to be at mis whatnots if a fort no the way to ber house

just ask mis jones next door but one to me she'll tell u Good by

Mary Jane Johnstone

The letter was answered immediately and sent to the general delivery but was soon returned from the Dead Letter Office and no trace of the large family could be found.

Knowing that many boys who would like to build themselves a clubhouse have not the money with which to buy new lumber, this article will describe the manner in which a rough and ready house may be built. It will not be attempted to show the correct methods of putting up a framework such as would be built if the right sized lumber were obtainable, but the simplest way in which boys can make use of the material at hand.

Draw the plan of the building upon a piece of paper, and before commencing

when studding of a sufficient length cannot be procured. Figure 1 shows the year, the members in way of a joke method of fishing studs. Two fish plates A and B are nailed to the sides of the and were greatly surprised to receive the study, covering the joints, while the face CD remains on a level to receive the siding.

> By building the clubhouse in the corner of the yard, against the fence, house, or barn, it is necessary to build but two walls. Less material is required in doing this and a much firmer structure is obtained.

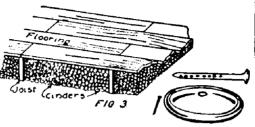

> Stake out the length and width of the house upon the ground, and sink a stone or two or three bricks at the corner to support the corner post.

> Then cut two two-by-fours the length of the greatest inside height of the house. Set one upon the corner stone. bracing it temporarily with boards run from it to the fence, and spike the other to the fence on a line with the corner post. (See A and B in figure 2.)

Cut the end plate C the correct length and spike it to A and B, after which cut a two-by-four the length of the shortest inside height and spike it at D to the fence rails. Nall the boards E. F. G. H. I, to the places shown in figure 2.

The studs should be placed from two to three feet apart, according to the length you mean? How much what?" asked the of boards used for siding, and additional astonished parent at this evident irrevstudding should be set in where necessary. Fasten the ends of the studs to the boards E. F. G. H. I. Studding should be placed around all window and door openings as shown in the illustration. After completing the framework, board up the sides, fitting the boards around openings and corners as neatly as possible.

The roof is a very important factor in a building of any kind, and care should be taken to make it of waterproof material, for a leaky roof will not only ruin the interior but make it damp. Tar paper will be found a good roofing material, inexpensive, and easily put on. First cover the roof with boards placed about one inch apart. Then cut the tar paper into lengths equal to the width of the roof. Commencing at the lower edge of the roof tack one strip in place. Lap a second strip two inches over the first. a third two inches over the second, and so on until the entire roof is covered. Figure 3 shows a nail and tin cap made especially for this kind of work. The cap is punched to fit over the nail and prevents water from running into the hole made by the latter. It will be un-

necessary to coat the paper with tar as there is sufficient in its preparation to keep it waterproof a long time-probably longer than the house itself will stand.

The floor should not be laid directly upon the ground, but supported upon four inch joists as shown in figure 4. with cinders rammed in between them. This will help keep the floor free from dampness. Four inch boards stood on end will do very well for the joists. You can probably make a bargain with a carpenter for a window sash. They very often have a number which they have taken from old buildings, and which they will gladly sell. Make your door as shown in figure 5, fastening the boards together on the inside with battens.

With the carpenter work of the house completed, the next step is to caulk up the cracks, of which there will doubtless be a great number unless matched boards have been used. This may be done by rolling newspapers into wads and wedging them into the cracks with a pointed stick. Several thicknesses of wrapping paper tacked over the inside walls will help prevent the wind from entering, and also make a good foundation for wall paper if that is, to be placed upon the walls. The earth should be banked up around the exterior walls to prevent surface water from draining into the house. Vines trained over the outside will help hide the roughness of the boards.

#### To Salute the Flag

Many boys would like to know what is the proper form to use in saluting the American flag. The military salute is as follows:

Standing at attention, raise and carry the right hand smartly to a point over the right eye, thumb and fingers extended and joined, hand at an angle of 45 degrees. Drop the hand smartly to the side.

A good form of salute for a boy not in uniform or engaged in military exercise is that of raising the hat with the right hand and drawing the left arm to the left side.

#### Bobby Liked It

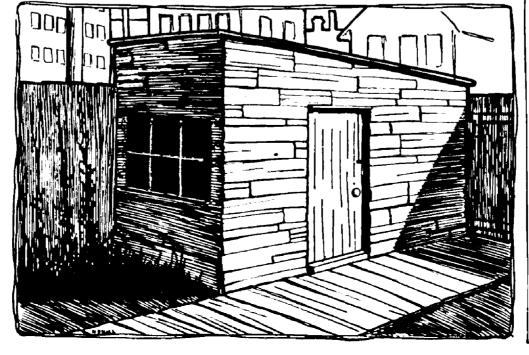

"Well, Bobby, how do you like church?" asked his father as they walked homeward from the sanctuary, to which Bobby had just paid his first visit.

"It's fine!" ejaculated the young man. "How much did you get, father?"

"How much did I get? Why, what do erence.

"Why, don't you remember when the funny old man passed the money around? I only got 10 cents."—Lippincott's.

## The Boy Photographer

EDITED BY DR. HUGO ERICHSEN

FIRST PRIZE PHOTO BY NICE DRUEHL, SREEWOOD, WIS.

#### Pinhole Photography

We herewith present an artistic group of trees that was "taken" by means of what is known as "Pinhole Photography." The image was transmitted to the plate through a hole made by a pin point in a piece of opaque mate ial ctinfoil, for instance) that is inserted in place of the camera lens. The hole should be carefully made, in order to obtain the best results. A very simple method of avoiding the formation of a burn is to burn the hole in a piece of black paper with a red-hot needle. Instead of a camera, a rectangular light-tight box may be employed, with some arrangement for holding a plate at the end opposite the pinhole. Defini-

DANDSCAPE MADE TRIGUER A PINHOLE

tion depends upon the size of the pinhole. With such an apparatus, it is, of course, impossible to "take" snapshots or portraits, but really artistic marine and lands ape photographs may be produced.—The Editor.

#### Queries and Answers

Harold Locb: A double shutter is superior to a single one, because it enables us to make more rapid exposures and because the exposures for all parts of the image commence and finish together and are of precisely the same duration. Either of the came as you mention would do for everyday work - Eugene M. Steward: 1. Probably improper development; the developer should be flowed evenly over the film at the beginning. Immersion of film in water before placing it in the developer may remedy the trouble. If it does not, you had better write to the Eastman Kodak Co., Rochester, N. Y., about it, enclosing stamp for reply. 2. Change in color of prints may be due to paste employed in mounting or insufficient washing after fixing. 3 Stanley or Standard. No, seed plate is not too quick for snapshots. 4. Yes,-Dana M Ross: 1. See answer to first inquiry of E. M. Steward, 2. Stamp photographs can only be enlarged by copying the positive and making an enlargement from the negative thus obtained. 4. It is a panoramic camera of good reputation, 5, A negative dryer, such alcohol, should only be used in case of necessity, as it is liable to ruin plate or film .-Harry R. Underwood: Yes, your camera seems to be all right. You can use common plate glass as a substitute for ferrotype plates by coating it with French chalk before applying the print,-Geo, F. Alton: Photographs submitted in our monthly prize contests should be entirely the work of contestants; we bar prints emanating from professionals.-D. F. Illig: 1. I do not believe freezing would destroy the usefulness of a developer, although I cannot deer was at some distance from the enclosure.

answer this question definitely, as I have had no experience of the kind. 2. The reply to your second query depends upon the nature of the developer. 3. If you will kindly give me the name of the manufacturer of the toning solution powder referred to, I will provide you with the desired information.-Oscar C. Olson: Of course, you can learn to make photographs with the Brownie Kodak and developing machine, but we would advise you to buy one of the 4x5 cameras of the Eastman Kodak Co.; in the long run it will give better satisfaction. The advantage of the developing machine is that It does away with a dark-room.-L. Glenn Ingham: The Eastman Kodak Co. manufactures Brownie Kodak at the price you name .-Arthur S. Trafford: Description asked for refers to development, printing, etc.-J. Stanley Tuttle: medium-sized opening will probably give the best results. The objection to flashlight is that it concentrates the light at one point; it may be diffused, however, by interposing a screen between it and the object to be photographed. white cotton sheet will do.-Harry Hunter We cannot waste space by describing processes for development and toning. Directions for both accompany plates and photographic paper. A dark-room is an apartment from which all light but that of the ruby-lamp has been excluded.-Eugene Fisher: 1. It would be impossible to comment on all the prints we receive. 2. Yes. -K. Forman, Kansas City, Mo.: Your photos are probably out of focus and your negatives undeveloped. Use your largest stop for snapshots. Aristo and Aristo-Platino will answer your purpose.-Clinton Y. Wilgus: Full directions would take up too much space, hence we must refer you to "Lantern Shies And How To Make Them." by A. R. Dresser, New York. Anthony & Scovill Co., 25 cts. in paper, for information. We can get it for you.

#### The Roll of Honor

The following are entitled to Honorable Mention this month: D. Kratz, D. M. Ross, Henry Farwell, Robert Fate, Jr., Ralph Miller, Paul Wilson, Henry Stelwagon, W. H. Scott, F. B. Mulford, E. E. Trumbull, H. M. Biggin, Maurice Coulter, Ke.th Johnston, Worcester Perkins, Robert M.F. Holroyd, J. M. Fiksdal, Fitz John Porter, Wayne M. Shipman and Ewing Brady.

#### **Current Comments**

H. R. Underwood: Your print evidently remained in the toning-bath too long -J. S. Tuttle: Slightly underexposed; detail lost in white dresses.-R. Fittz: Underexposed: lack of detail.-C. H. Wardner: Too much contrast.-C. G. Voigt, Jr.: "Garden Scene" would have been more successful, if you had confined yourself to hydrangeas instead of including so much.-David G. Steel: Your photo shows more of the barn-door and ground than it does of the pups, although the latter are the most interesting objects and should have taken up the whole plate.-Geo. Barber: Your print lacks detail and your negative evidently density.-G. P. Hoffman: Your "Friends" is promising, but you should not have cut off the poor boy's feet.-Osborne Nichols: Your Central Park deer

STONY BROOK, PRINCETON, N. 4 Second Prize, by Geo. H. Seagraves, Princeton.

looks like a zebra, owing to the shadow of the hars on the animal's body. It would have been better, if you had taken the photo when the

WRITE FOR A Free Scholarship

Y Board of Directors have voted to issue Free Y Board of Directors have voted to issue Five Scholarships, and I have been authorized to confer these upon worthy persons who can ill afford to pay the regular fee. Under this exceptionally gener-

> ous offer, it is my purpose to enroll students who, in consideration of the rapid progress made and the benefits derived from our superior method of instruction, will gladly recommend our Institute to others. I am positive that the recommendations of the holders of Free Scholarships will prove more effective in popularizing our Institute than would large amounts of advertising.

I have had at my disposal only a limited number of Fice Scholarships. You should write or send me the coupon application at once if you wish to take advantage of the liberality of my Directors. I sincerely trust that every ambitious person will write me before it is too late.

The following courses for home study

#### Illustrating, Advertising. Journalism, Proofreading, Electrical Engineering, Bookkeeping, Stenography

Ours is the modern method of mail in struction. It has been decided to save the enormous wages of canvassers, col-

lectors, etc., necessary under a vast Agency system, and employ the money thus saved in offering a few Scholarships to well-recommended young people. Cut off, fill in, and mail to me immediately the attached corner coupon. It will secure for you at small cost a regular course of instruction. The only expense is the small sum

for text books and postage—these can be paid for as needed. After the Free Scholarships in my possession are donated, the regular fees will be charged. This will, probably, be your only opportunity for COUPON securing a regular complete course of instruction absolute-ON OTHER SIDE AND ly free. In fairness to all, I shall consider every ap-MAIL TO-DAY plication in the order received. The time is short.

> Send the coupon to-day-NOW. ALT. F. CLAEK, President Write Correspondence Institute name of America and address Scranton carefully and plainly.

OUT

Coupon to Alt. F. Clark, President, Box 642 Scranton, Pa.: 1 hereby make application for a Free Scholar-

ship, and if it is awarded to me I promise to study dilicently.

DECORATION DAY Photo by E. E. Trumbull, Plattsburg, N. Y.

Whyte: Your photo of "The Falls" would have entitled you to honorable mention if there had been more detail in the cascade - Vivian Alexander: Your subjects are too la se for so small a camera.-B. L. Crenshaw: Your print lacks 'sharpness," although we cannot tell to what this should be attributed. You may not have focussed properly or the negative may not be dense enough.—C. C. Kreming: You should have confined yourself to one cow instead of trying to photo: uph the whole herd; the result would have been far more satisfactory.

#### Approval

Approvat

New Brunswick, N. J., March 16, 1904.

Dear Mr. Sprague.—

I am interested in your remarks to boys in the last issue of THE AMERICAN ROY. I appreciate the spirit and tone of THE AMERICAN ROY. I consider it the best boys pappublished, that I have come across, You "life of Napoleon" was fine. I had read good history of Napoleon previously so coul realize the excellence of your sketch.

Respectfully yours,

FRANK R. BUCKALEW, General Secretary V. M. C. A.

THE AMERICAN BOY offers twelve prizes of Two Iboliars each for the best Ameteur Photograph received during the twelve months in the year, one prize for each month, also a second prize each month, of one dollar, for the next best photograph, the conjection to be based upon the originality of the subject and the perfection of the photograph. The context is open to subscribers only. Photographs will be returned if stamps are sent for the purpose. All photographs entered in the context and not prize winners will be subject to our use unless otherwise directed by the sender, and fifty cents will be paid for each photograph that may be used, the prize photographs in any event to be our own, without further payment than the payment of the prizes. Write on the back of the photograph its title, with a description of the picture, and the full name and address of the contextant, who in every case must be the artist who took the picture.

## SCHOOL FOR CHOIR BOYS Music Lessons Free

Borrowing the idea from the system in vogue in English cathedral towns, one of the Episcopal churches, St. Peter's, of Philadelphia, has established a school for the training of choir boys, the contract being that the boys are to receive an education in music and other branches of study, in return for which they sing in the church without pay so long as their voices retain their boyish sweet-The educational course does not end when the voice breaks, but continues until the period of graduation, although the boy's services are, of course, lost to the church when the vocal chords lose their grip on the soprano or contralto

The school is under the direction of Mr. Ernest Felix Potter, who is assisted by two graduates of Bryn Mawr College. The course includes reading, writing, spelling, arithmetic, algebra, geometry, United States history, ancient history, geography, civil government, physiology, zoole y. botany. English composition, for each day in this school is as follows: literature, rhetoric, Latin, German, French and drawing. The programme

cal education added. Singing is thoroughly taught in the interest of the church, for the only return the congregation receives for the money expended on the boys' education is the free singing at the services. It is considered a fair bargain on both sides, there being great competition among the boys of the Quaker City to become one of the favored eighteen, because of the splendid education the little school in the parish house affords, and the church being satisfied cal education added. Singing is affords, and the church being satisfied with the reward of a select choir of boys' voices, thoroughly trained and adequate-

## Advantages of Physical Training for Boys

New York comes a letter explaining his By George L. Meylan, M. D., Physical Director Columbia University, New York

very successful method of making the reading of good books delightful to his son. He says: "I believe it is well he should read those books he has before acquiring new ones, and so we have entered into the following arrangement: For every book he reads himself from cover to cover, and of which he tells in a little composition. I am to give him a new book of his own choosing; the right to veto the choice remaining with me, if I do not think the thing. Every boy spends choice a good one." There comes with the letter one of the little "compositions," showing how this nine-year-old doy carries out his part of the agreement. The his life. An important part idea seems an excellent one; but would it of this training is obtained not be improved if the father also should in school; this has to do write an opinion of the book, so that his with the mind. But that is son might be guided in his Judgment? It not all; a boy must first be might also be a good plan for the father to strong and healthy. make surgestions as to the new book given as a reward especially is the father writes is obtained from gymnasus that his son's taste for books is in-ties, athletics and play. herited -May St. Nicholas.

#### Paul Rockwell

Paul Rockwell, of Canal Dover, O., is shine and water. He also one of the youngest professional orches- knows that if he wants to tra players in the United States. He is raise a fine dog he must twelve years of age and is now in his get a good puppy, feed him third term of plano lessons. One evening at the opera house in Canal Dover clean place and let him out the regular planist was taken suddenly where he can run and play. The same is when he was twelve years old that he

ill. At the last moment Paul Rockwell stepped in and took his place, to the surprise and pleasure of all. Now Paul often plays the plane for the orchestra. 's able to read and play at sight all linary theatrical orchestra piano ordinary

WAS talking with a famous athlete a on or off a car; and if they were caught in

sary for a boy to have ambition and to try hard, if he expects to accomplish anythe first fifteen or twenty years of his life in preparing himself for the rest of

The training of the body Every boy knows that if he wishes to raise a nice plant he must have good seed. good soil and plenty of sunwood food, keep him in a

true of the body of every boy; if he wants would become a good athlete. He got a to grow big and strong, to be able to run twelve-pound stone and practised shot-putfast and to jump far, he must have a lot ting in his back yard every morning and of good physical training.

It is harder for a boy who lives in the city to get all the exercise he needs than for the boy who lives in the country. But there are plenty of opportunities for the city boy who is ambitious to develop and train himself. The training I mean is not the kind of training that prize fighters go through before their fights or the training that college football players have for their big games. This training is intended to get the athlete in the best condition possible for the day of the contest; after that he usually becomes lazy, eats and drinks too much, takes no exercise and gets in very poor condition. The training that a boy wants is simply to go through some good exercise every day, to get so that he can run, jump, play ball and keep his body in good health.

Some boys who go to the gymnasium want to spend all their time in doing "stunts," or in trying to get a big muscle. These are not the most important things. Let me tell you what you should work for and try to accomplish in the gymnasium First, to stand straight, carry your head and chest high, second, to develop your chest and strengthen your back; and third, to learn to handle your body on your legs and with your arms. Look at the men on the street the next time you go out and see how many of them stoop over like old men; see how awkward they are in geffing

short time ago and he told me that he a are many of them could not even hang would not care to have a boy who on a rope and go down hand over hand, would not be auxious to be stronger, much less climb a rope or vault a fence. to run faster and to jump farther than any. The trouble with most of these men is that other boy. This man knew that it is neces- they did not learn to do these things while they were boys.

No boy of ten or twelve should be satisfied until he can stand straight all the time, chin himself five times, jump as far as he can step in two strides. jump as high as the top of his pantaloons, vault as high as his breast bone, climb a rope three times as high as himself and leap frog over a street hydrant. Some boys may think that it is necessary to have a fine gymnasium, a regular athletic field and an instructor to learn these things; but they are not necessary; nearly all these things can be practised in the school yard, in the street, on some vacant lot, or, better, in some regular playground. I know of a boy who made up his mind

evening, so that later when he went to college he was the best shot-putter there, and not only won all the contests in his own ollege, but also in the intercollegiate championship.

Every hoy is not built for shot-putting, and every hoy will not go to college, but it ought to be the ambition of every one to make the most of himself by improving what opportunities he has for physical development. It is well to remember that we are not all alike, and that some boys can do much more than others. No amount of practice, will make it weight. of practice will make it possible for every boy to run one bundred yards in ten seconds, or to become a National League baseball player, or to put up a one hundred pound dumb-hell; but every boy can achieve a certain degree of success, and he ought not to be satisfied unless he accomplishes that much. Of course there is also danger of overdoing. The boy of ten should not try to do things that a boy of fifteen does; he should take exercise suited to boys of his age, and not continue after he gets very tired. Exercise is not the only thing necessary to develop the boy into a str man. Plain food, eaten slowly; very little pie, cake and candy; no tea, coffee, beer or tobacco; plenty of sleep in well-ventilated rooms-all these are necessary to the proper growth and development of every hoy

The boy who does all these things will not only have better chances of growing into a big, strong, healthy man, but he will have a good time, have lots of fun and be happy, as long as he carries out the above

#### Prize Offer

A prize of a book of selections, listed at \$1.25, will be given to the one sending the best selection suitable for a prize speaking contest, taken from a recent oration. Selections, with name and address of sender must be received not later than June 20th. Freshness, unity, virility, interest, action, style, will be important points in favor of a selection.

A copy of Cushing's Manual will be given for the best outline upon either side of any live question, and also a copy of the same book for the best statement of a question for debate upon a topic now in the public mind.

#### A New Basis For Scholarships

Northwestern University, Evanston, Ill., has established in the College of Liberal Arts, one hundred scholarships, open to students from any part of the country who may be able to comply

with the conditions. The basis for assigning these scholarships resembles in some respects that of the Rhodes scholarships. The emphasis will be laid upon the promise of superior fitness for public service after graduation. The principal elements to be considered in the selection of applicants are force of character and power of leadership; such qualities of manhood as energy, truth, courage; such intellection. The basis for assigning tion. McClure—"Can the South Solve the Negro Problem." Schurz, Jan., 1904; "The Negro Problem." F. N. Page, March and April, 1904. Independent—"Race Problem." March 17, 1904. World Today—"The Negro Problem From the Negro Point of View," by Washington, Dubois, Wells-Burnett, Miller, Lawson, April, 1904. Outlook—"Race Question." Dec. 26, '03; Jan. 30, '04. Sat. Eve. Post—"The Negro Problem," Joel Chandler Harris, Feb. 27, 1904. as energy, truth, courage; such intellectual ability as to make it clearly worth while to devote time, money and effort to a college education; such physical vigor as to justify the hope for good physical condition to meet the problems of life after graduation; and such qualities of temper and bearing as to give evidence of the probable acquisition of the manner of the educated gentleman. The faculties of high schools and academies are invited to nominate candidates from their graduates, and from this list the university will select the most promising applicants for the scholarships.

#### How Does This Affect American Boys?

It all goes to prove that you are on the right track while you are living up to the object of The Order of The American Boy, or while you are working in the Lyceum Club. Qualities of leadership are developed in this work. You measure yourself with others, and if you do not

#### More Questions

Almost every one who writes asks for more questions for discussion. I feel sure that if you will look over the past numbers of THE AMERICAN BOY you will find a question to please you. Here are some more, however, gleaned from the public prints and from reports of various clubs, showing what subjects the young men are thinking about.

"Resolved. That the so-called yellow journal is detrimental to the public morals."

"That the consolidation of capital is to the best interests of the American

"That the Indian has suffered more at the hand of the white man than the Negro."
"That water is more destructive than

#### Some New Questions

The University Debating Club of Harvard has had the question: "Resolved, That the interests of the world would be

hest subserved by a strict maintenance of the integrity of China."

The annual Bates-Trinity debate had for its subject: "Resolved, That under present conditions it would be to Eng-

#### A Joint Debate

The fifteenth annual joint debate between the Adelphi and Gamma Sigma Societies of Williston Seminary was especially interesting. The cup for the better collective debate was won by Adelphi, and the Amherst cup for the best individual debate, by C. N. Harmon. Each society has now won four debates since the cup was offered, and by the conditions of the gift the society winning the next time will hold the cup as a permanent possession. The subject of the last debate was, "Resolved, That the adoption of the fifteenth amendment to the constitution of the United States was wise." was wise.

#### Recent Magazine Articles

Some phase of the Negro question is up for discussion in clubs throughout the country, and there are valuable articles in the latest magazines upon this ques-

#### Question

"Resolved, That the suffrage should be extended to woman."

extended to woman."

This is only one phase of the great question of woman's place in the world. The progress of modern times includes the elevation of woman and her entrance into wider activities. Shall she have a part in the government? What would be the effect upon the government? Would it become more ideal? Or, again, what would be the effect upon woman? Would she be less refined? Would she have less influence in her chief sphere of activity, the home? What has been the results of woman's suffrage where it has been tried? Do women want the ballot? Would they vote if they had the ballot? Seek to answer some of these

Howard Burr

#### J. E. Potter

Howard Burr, a Leon, O., lad, has manufactured at his odd moments two stationary engines, one of which is one-half architect in Ohio if not in the United horse power and the other one-fourth States. He will not be sixteen years of horse power. These engines have all age for several months yet. Just rethe parts of a large one built at some cently be furnished the decimal that the desired the decimal that the decimal the decimal that the decimal keep in good temper and good self control, you lose the contest.

#### Brief For Negative

The following brief was pre-pared by A. Lea Mallory, of Al-bert Lea, Minn.:

- I. Manhood suffrage is the necessary and only just system. 1. The family is the political unit.
- Man has a natural right to represent the family.
   Women could not vote withassuming police and military.
- duties.
- Woman suffrage is unjust to woman. Woman suffrage would be a social
- evil.
  Would degrade womanhood.
  Woman's home influence would be destroyed.
  Politics would not be purified.
  Woman's influence without the ballot in greater than her power would
- Woman's influence without the ballot is greater than her power would be with it.
   Woman suffrage is unnecessary and unpopular, and therefore undesirable.
   Majority of the women do not want the suffrage.
   Ballot is not used in school elections.
- Woman suffrage bills defeated in 25 states in 1901-2.
- 4. Reforms can be secured by woman's influence.

One public meeting is held every term.

## Children of The Chinese Legation further advanced in their studies than most American boys of corresponding age. They are particularly proficient in

Copyrighted, 1908, Waldon Fawcett.

GOHE American people are apt to regard the Chinese as very unprogressive and very slow to adopt the improved, up-to-date methods of the New World and yet it must be confessed that no boys who ever came over the sea from any part of the globe to make their home temporarily or permanently in the land of the Stars and Stripes have learned the English language more rapidly or required less time to familiarize themselves with the sports and pastimes of the juvenile Yankees

BIR CHENTUNG LIANG CHENG, CHINESE MINISTER AT WARHINGTON

than the lads who now make their home at the Chinese Legation in the city of Washington

Possibly the rapidity with which these American way of doing things is due in part to the fact that Sir Chentung Liang Cheng, who is the father of two of the boys and the uncle of a third is a sort of halfway adopted son of Uncle Sam. He was educated in this country and came to believe so thoroughly in the American boy's ways of working and playing that now he wants his own sons to follow the customs of the big Republic as closely as possible.

There is not a little to Interest the young men of the United States in the career of Sir Liang his title was bestowed upon him by Queen Victoriawho after having left this country soon. after the completion of his education about fifteen years ago has lately returned in the exalted position of Minister or representative of the Emperor of China at Washington. When the present Minister first set foot on American soil he came as one of a party of 120 boys sent to this country by the Chinese government to be educated. Young Liang was sent to an academy at Andover, Massachusetts, and he had not been there long until he surprised his fellow students by his great aptness for athletics

and especially baseball. Indeed, to tell the truth he became a regular hero at the school and this tremendous popularity came to him largely because he introduced the curved ball at the institution and thereby enabled the school "nine" to win innumerable games which they never could have won without the aid rendered by the trick pitch-

ing. It was merely by accident too that the students learned that the young Chinaman was a champion pitcher. He had been given a minor position on the team, but one day he gained his long waited opportunity when the crack pitcher on whom the team depended became unable, owing to an injury, to go into the box. Finally Liang volunteered to take his place. His offer was laughed at, but as he insisted on having a chance the members of the team finally consented to allow him to try during the practice hour before the match game.

The upshot of the matter was that the young fellow from the other side of the world simply astounded all his fellow players. He pitched balls that curved away when they reached the plate—balls that curved up and balls that curved down. They had seen nothing of the kind before and none of the batters could touch the ball for a hit. The members of the nine to which Llang belonged were specific convinced that they had discovered a marvel and that with the Chinese "wizard" in the hox the rival curved countries of Yung Kwai, a Chinese "wizard" in the hox the rival curved countries of Yung Kwai, a Chinese "wizard" in the hox the rival curved cousin whose first name is Aryung, but whose last name is Liang, the same as their own, since he is the son of the Minister's brother. Perhaps the rapidity with which these newly arrived Chinese boys have acquired with several half American children—the sons and daughters of Yung Kwai, a Chinese "wizard" in the hox the rival away when they reached the plate-balls Chinese "wizard" in the box, the rival team would not have the slightest show. In this surmise they were correct. With the young man from the Celestial Empire facing the opposing batters the Andover team won that day and on many a succeeding day. For all that the boys of the school made much of their prize pitcher his head was never turned by his success.

Now after twenty years this interesting native of the Orient is beginning to carry out plans whereby his sons will follow the lead of the American boy in education and athletics and perhaps emulate his own example on the diamond. The new Chinese Minister has seven children but only three of them, two boys and a girl accompanied him to this country. The others remain with their grandmother in China, but may come to America later.

Of all the children at the great Chinese establishment at Uncle Sam's capital the spectively. In China boys start their spect.

arithmetic and also know how to read and write the Chinese language. Now they are devoting but a few hours each day to their Chinese studies and all the remainder of their study time is given over to the task of becoming acquainted with the English language. As soon as they know our language sufficiently well they will enter American public schools.

The son of the former Chinese Minister. Wu Ting-fang, although he went to an American public school and was a member of a boys' cadet company wore American dress only when at school and as soon as he returned home each evening resumed a flowing silk robe such as is worn in China. Not so with the Liang boys however. They wear American costumes at all times. Their father had no sooner returned to America than he purchased American shoes and regular sailor suits for his sons. He knew from the experience of his own school days that a boy who wants to go in for sports can do so much better in such clothing than in the cumbersome Chinese costume. The only feature out of the ordinary in connection with the suits of these little Chinese boys is that on their sailor hats appear in gold letters the names of Chinese men-of-war instead of those of American naval vessels.

One of the first things done by the sons of the new Minister was to learn to ride the bicycle and now they are known as among the most daring wheelmen in Washington and frequently indulge in perilously reckless "consting" down the long hill on the side of which is located the big brick building which constitutes their home. This new Chinese dwelling, by the way, has only recently been completed. It cost the Chinese government about one hundred thousand dollars and contains nearly fifty rooms including an automobile house where there is a horseless carriage which the young Liangs say they intend to learn how to manage as soon as they have mastered football and baseball in both of which sports they are making rapid progress.

In the accompanying picture the Minister's sons may be identified as the two tallest boys in sailor suits and tam-oshanter caps. Standing between them is their six-year-old cousin whose first the sons and daughters of Yung Kwai, a Chinese interpreter, who married an American woman. One of these half American, half Chinese lads is seen at the end of the row of children in the accompanying photo. He is seven years of age and rejoices in the American name of Burnham. His sisters are Elizabeth and Gertrude, aged four and five years respectively. respectively.

#### Senator Fairbanks as a Boy

United States Senator Fairbanks, of Indiana, who is talked of as the Republican candidate for Vice-President and running mate for Mr. Roosevelt, is another specimen of what Ohio can do in the way of producing great men. Senator Fairbanks was born and brought up on a farm near Unionville Center, Ohio, and attended college at the Ohio Wesleyan University. His youth was made up of the ordinary hard. ships of a young fellow hustling for an education. If there is any romance in doing carpenter work in order to pay college most interesting are undoubtedly the two dues, and in working as a reporter while sons of the Minister, named Arlu and studying law, his life was romantic. But Ardi and aged nine and seven years re- it assumed a romantic aspect only in retro

schooling somewhat earlier than in this | Fairbanks was a bashful youth, six feet little Mongoliaus have fallen into the country and consequently these lads are in height, and extremely thin. His trousers, of bucolic bulld, managed to reach to the top of his boots. He was freckled and had a head of tously black hair. Part of it remains, but it is not tousled now. To a man of Fairbanks's methodical and frugal mind there is a place for every hair, and he carefully brushes it up over the bald spot and down on the other side. He made up his mind early to be a lawyer. He worked for the Associated Press at for the Associated Press at Pittsburg after he had been graduated, and studied law at the same time. Then he went to Cleveland and was admitted to the bar.

While in college he edited the college paper and shared his labors with pretty Cornelia Cole. Immediately after his admission to the bar. neila Cole. Immediately after his admission to the bar young Fairbanks married Miss Cole, and they went to Indianapolis to begin the battle of life.

NHAT boys may raise their own peanuts just as easily as many of them raise their winter's supply of popcorn is a fact that is not generally known, and which, if fully understood, would work much to the disadvantage of retail peanut venders all over the country.

Somehow people generally have got the idea that peanuts are a semi-tropical product, but as a matter of fact in whatever climate corn will grow, peanuts will also flourish. Michigan or Illinois boys may plant and grow a crop of peanuts as well as the boys of Virginia or Tennessee, though, of course, their crops will not be as big ones. But the peanuts, though smaller, will be just as palatable. The farmer boy or girl who perhaps gets a bag of peanuts two or three times a year, and who looks upon them as the greatest of luxuries, can just as well have them all the year round, and at almost no expense. Even the boys and girls who live in large cities can cultivate yards to give them a pretty good winter's supply.

for every day in the year.

The choice of a "good soil" means much is a warm, sandy loam, which at all seasons is free from excessive moisture. If the soil is too heavy and damp, the nuts is thoroughly spaded and raked, crush a number of pounds of plaster and scatter about one and a half pounds on every square rod of ground, then rake it in

states the time comes later. In the latitenth, according to the warmth and earliness of the season.

Boys who may try the experiment this raw peanuts, ten cents sent to any hours if he hurries. wholesale or retail merchant in a city each row is rounded up into a little only one kernel is planted to a hill, but process should be continued until the in more northern states it is a good plan nuts are "done" to the required point.

nels" do not mean the nuts with the pods on. Every kernel must be carefully taken out of the shuck, and without breaking or cracking it. These kernels should be planted at a depth of one inch. and a foot apart in the row.

In about two weeks the plants will begin to show through the ground, and from then on the two essential points in the cultivation of the nuts are to prevent grass and weeds from growing, and to keep the soil about the plants loose and mellow. As the cultivation proceeds, and the plants increase in size, the soil should be thrown more and more to the plants, leaving them in the course of six or eight weeks on a broad flat ridge, with a furrow between the rows. After the first day of August not another weed should be pulled, for then the peanuts are forming. By this time the plants should be running all over the ground, lapping over the edges of the furrows, and perhaps hiding every bit of ground. At every inch or so along these creeping vines is what is known as a "peduncle." This is a little finger, which burrows enough peanuts in a corner of their back down into the soft soil, and at the end of that finger forms the nut.

For six or eight weeks the crop re-When the farmer boy comes to town he mains untouched. During those days the buys a sack of peanuts for five cents, and peanuts are growing bigger and heavier, if he counts the peanuts in that package just like potatoes. The time for gatherhe will find that at the most there will ing comes sometime in October, or pernot be more than seventy five nuts in haps not until early in November. Just it. Yet it often happens that one peanut so long as the vines continue green the plant will produce twice as many. So it nuts are growing, but when they begin would not take many plants, in a good to assume a yellowish color they are soil, to supply him with a bag of nuts approaching maturity. After a number of frosts, or one good one, it is time to harvest. A vine should first be gently to the boy peanut grower. The very best pulled out by the hand, and to the roots that come with it will be found attached dozens of nuts. Then the ground where the vine grew should be carefully dug will be smaller, and mottled or even up with a hoe in a hunt for the loose black. Nearly every boy can get hold of nuts left in the earth. After all have some old plaster. Now after the ground been dug comes the "curing," one of the most important processes in the raising of peanuts.

The chief thing to remember now is that if the nuts are exposed to the air they will turn a dingy, stained color. The planting time of the peanut is Under some sort of a shelter where during the month of May in Virginia plenty of air is circulating the nuts still and similar latitudes, but in northern attached to the vines should be "shocked" so that all of the nuts are in the center tude of Michigan, and northern Indiana, of the pile and the vines outside, thus Illinois and Ohio, the planting may be protecting them from both light and done anywhere from June first to the wind. The loose nuts can be scattered on boards or a table, and covered with hay. In nice bright weather the nuts will cure in from two to three weks, and year must be sure and not plant the kind then they are ready for picking. This, of peanuts they eat, that is, baked ones, of course, is easy work, and a boy can If dealers in small towns do not have pick a bushel of them in about three

Now the nuts should be placed in a window, which read: will bring back enough raw nuts to raise good dry place to await use. A peanut couple of bushels with. The rows in is not good after it has been baked a which the nuts are planted are laid out day or two, so they should be baked as about two and a half feet apart, and wanted. They may be placed in an oven, and about every three or four minutes ridge, flattened on top. In the south should be stirred with a stick, and the

# Stories of some **BOYS** who make money selling THE SATURDAY **EVENING POST** Told by themselves. These are sold at five cents each and provide capital for the following week. If you only want to read the story of how these boys made successes, ask for the book only

erably amused at our homemade appearance. As we passed them I heard one of them say: 'Boy wanted, one from the country preferred.' As we passed along Boylston street we saw a sign in the

One From the Country

Preferred.

"It was not until we saw that sign that we realized that the two city chaps were making fun of us. It riled us somewhat,

making fun of us. It riled us somewhat, especially my brother, who dropped his end of our trunk and started on the run after the two city chaps. As soon as they saw my brother in pursuit they took to their heels and ran.

"We walked through the Common, by the Frog pond and ascended the steps in front of the state house. There we rested and gazed in awe and wonderment at the state house. I little thought that in a little less than eighteen years later I would be standing in the same spot as colonel of the Sixth regiment, receiving from the hands of the Governor of the state the regimental flags, bound for the nation's capital. nation's capital.

nation's capital.

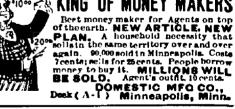

"We finally secured a boarding house on Derne street. The next morning I reported for duty at my employers—Colby & Lyman, 47 Milk street, dry goods merphants".

& Lyman, 47 Milk street, dry goods merchants."

Every school boy in the land knows by heart the story of the march of the Massachusetts Sixth through Baltimore. Shortly after the recent Baltimore fire General Jones sent his check to the Mayor of Baltimore, saying: "With a vivid recollection of the warm reception given to me on the 19th of April, 1861, by the people of Baltimore, I take pleasure in enclosing my check for one hundred dollars, which please place in your relief fund."

General Jones' regiment was the first to report at the national capital at the hreaking out of the war. On his arrival President Lincoln said: "Thank God, you are here, for had you not arrived tonight we should have been in the hands of the rebels before morning." The regiment established its headquarters in the United States senate chamber, and on the first night Gone al Jones slept in the chair of the Vice President.

#### Freight" The "Jones Pays He

There lives at Binghamton, N. Y., an interesting character in the personage of General Edward F. Jones, better known as "Jones, he pays the freight," that being the motto of his big business-that of manufacturing and selling safes. General Jones was in command of the famous old Sixth Massachusetts infantry, which made that historic and exciting march through Baltimore at the breaking out of the Civil War. To a correspondent of the Boston Globe he tells something of his boyhood, which was spent in Boston:

"I must have been fourteen or fifteen years old when I came to Boston," he says. "I can remember it just as if it were yesterday. I can picture my brother and I as we stepped off the train in the station on Beach street, opposite the United States hotel—two green country boys-the first time we had ventured away from home-alone in a big city. We went back to the baggage car and got our little haircloth trunk and carrying it between us we started to look for a boarding house. I had had a place picked out for me before leaving home. It wasn't much of a place, fifty dollars for the first year. We trudged along the streets until we reached Boylston street. Two city chaps whom we met on Boylston street sized us up and were consid-

JONES OF BINGHAMTON

New Ways of Travel on Water

By Hugo Erichsen.

Ever since the world began men have endeavored to conquer the sea. Though the first human who entrusted his precious life to the unknown dangers of the deep is nameless in history, we can vividly imagine the trepidation with which he launched his frail craft upon the suggest that the millionaire repay a loan of 11 shillings made by his aunt to aid the Carnegies to emigrate from Dunfermline in 1847. Mr. Lennox computed that at compound interest £9 was due.

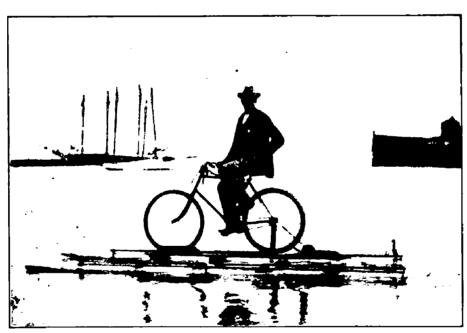

Mr. Carnegie has investigated the matter and found that Mr. Lennox was quite right in his claim. The debt will not only be paid, but the children of Mrs. Lennox will be endowed with a sum sufficient to keep them in comfort as long as they live. Mr. Lennox said in his letter:

"When the Carnegies left Dunfermline those above mentioned. A frame-work is placed on these that supports the bicycle and rider. Motive power is obviously linearing that the mother had to borrow money to take them to the bicycle and rider. Motive power is obviously linearing that the millionaire repay a loan of 11 shillings made by his aunt to aid the Carnegies to emigrate from Dunfermline in 1847. Mr. Lennox computed that at compound interest £9 was due.

Mr. Carnegie has investigated the matter and found that Mr. Lennox was quite er and found that Mr. Lennox was quite in the promote the millionaire repay a loan of 11 shillings. which he launched his frail craft upon the waves. Beaten back, mayhap, time and again, yet he persisted until he overcame his apprehensions and traveled upon the waters with the same fearlessness and feeling of security that characterized his progress upon the land. Thus was ushered in an era of exploration that will not end until the very poles of the earth have been located and there are no more lands to discover.

Personally I do not believe in arctic exploration and cannot understand why folk should want to discover barren countries no one will ever be able to live in. I believe the men who have recently turned their attention toward the invention of methods of navigation that will be of service on inland waterways have a greater claim to public recognition. Chief among these is Captain Grossmann, of Worms, on the Rhine, who constructed an apparatus that enables him to walk on the water. This contrivance resembles a Scandinavian ski and consists of two hollow itn tubes, each being about fourteen feet in length and provided with three valves that practically perform the some functions as the fins of a fish, tained by means of a propeller that is to return the loan evidently escaped the These new-fangled "shoes" weigh about situated midway between the tubes, at they never repaid the sum borrowed, forty four pounds and are capable of the rear, and operated through the rear My anni is dead, but she left two daughbearing a weight of about two hundred, wheel of the bicycle. Grossmann is enabled to make any turn that may be required by means of an oar, with which he also steadies himself when at rest. The practicability of the new invention has been demonstrated by the fact that the Captain has saved a number of lives since he first began to experiment with the apparatus.

The advantages of the water bicycle. on the other hand, are not quite so apparent, and it will probably always

THE WATER BICYCLE

they never repaid the sum borrowed. My aunt is dead, but she left two daughters, one of whom is the wife of a humble joiner in Dunfermline, while the other is a maiden lady engaged in a small drapery business in Edinburgh. Don't you think that if Mr. Carnegie knew this he would be willing to do handsomely by his mother's friends?"

Mr. Carnegie called in person on the children of his benefactors, and thanked them for the generosity of their mother. From minus 11 shillings to plus f70,-000,000 is a financial transformation that would have staggered the good genie of Aladdin's lamp, but Mr. Carnegie found it not overhard.

Henry Chadwick is a national character. He is known as the "father of baseball," and for a half century or more he has boosted the game so dear to American hearts, and argued for decent sport early and late.

And what a harvest from a small be-

ginning!
There isn't a town, from the Golden
Gate to the coast of Maine, that doesn't
have some kind of a ball team. Balls and bats and mitts and chest protectors are as staple as wheat in this country. No one item has done so much to encourage home pride as baseball. The town that has a good team is "it," and there more good teams than you could

are more good teams than you could count in a day.

And think what baseball has done for the health, and is still doing! You can talk to your boy about the evils of cigarette smoking and make a faint impression; but when he knows that "Cy" Young keeps his health and mighty muscle by living sanely and simply, and cutting out the little bad habits, it is easier to make good advice stick in the mind of a boy. Who wants to be a pale, nerveless, yellow-eyed youth, with teeth like a squirrel, when all the other boys are strong enough to whip their weight in wildcats and are training for more muscle?

muscle?

Baseball has been a fine instructor, and the big rooters and the little rooters, to the number of some millions, are ers, to the number of some minious, are to be congratulated that the father of baseball is still living, still working in the interest of the finest sport America knows.—Exchange.

#### Mr. Carnegie Pays a 54-Year-Old Debt.

An American firm doing business in London recently asked its patrons to suggest ideas for the distribution of Mr. Andrew Carnegie's wealth. Mr. Henry D. Lennox, of Glasgow, advised that the millionaire repay a loan of 11 shillings

## Baseball and It's "Father." | A Center of Attraction

#### The Inside Inn, World's Fair--Roomy Convenient, Economical.

Visitors to the World's Fair who value both time and comfort will do well to avail themselves of the convenience and facilities offered by the Inside Inn. It is situated right inside the Grounds in a charming corner of Forrest Park. It is well elevated and surrounded by beautiful trees, hence is cool and pleasant even in the hottest weather. It is three stories high, over eight hundred feet long and four hundred feet wide; contains 2,257 bed rooms and has a dining room capable of seating nearly 2,500 people at a single

Although sufficiently secluded to be quiet and restful at all times, it is very centrally situated, being in close proximity to all the State buildings, while every part of the Exposition can be readily reached from its doors by means of the Intramural Railroad which runs right past it. The saving to visitors of time and trouble, thus effected, by residing absolutely within the Grounds and doing away with all long walks and tiresome street car journeys cannot be overestimated.

The rates are exceptionally reasonable. ranging from \$1.50 to \$5.50 European plan. and from \$3.00 to \$7.00 American, including daily admission to the Fair in both cases. Reservations can be made for any period up to December 1st. A postal card addressed to the Inside Inn. Administration Bilg., Worlds Fair Grounds, will bring you an interesting booklet giving full details.

CAPTAIN GROSSMANN READY FOR THE STARS

## A Famous Boy Fisherman

adventure that has not been en- requirements of the angler's art. panion fishing from a small boat alongside the launch so that the fish could tow an anchored boat. In a few moments the towed by the big fish. In two hours or game fish ever taken with rod and reel. In the meantime I had taken two, after losing my lines and tips, it being imposa hand-line after my rods were broken fish-258, 158 and 100 pounds respectively, the largest having been taken by my companion, General Charles Viele, who demonstrated that it was possible to take these leviathans with rod and reel. This and later catches were watched with no little interest by boys who spent their vacations at Santa Catalina, many of whom quietly determined to emulate the General and others, the experiments generally resulting in broken rods, bruised fingers and lost tackle.

I recall one boy, who, anxious to catch a large fish, went out every day to a spot more than one hundred feet from the famous for them and practiced with the shore. The launch was ready soon after hand-line; but, though he hooked a num- sunrise, and an hour later she was runpulled him overboard. One lerked him cliffs painted with a hundred into the bottom of the boat, while another so creased his hands with the burning line that it was some time before he recovered from it. This, however, did not discourage him and he still continued his fishing. But while he was experimenting, another boy came and caught a

The black sea bass is very common at the Southern California islands, and is found about rocky ledges all alongshore from the Gulf of California to Santa Barbara. The islands of the Santa Catalina group are accessible by daily steamers. the town of Avalon being on Santa Catalina and having a summer population of seven thousand or more; hence more of these fishes are taken here than elsewhere, though just as good, if not better, fishing is to be had at San Clemente Island, but no one lives there, and the island does not afford the smooth bays that make Santa Catalina a perfect fishing ground. The bass is, next to the tuna, possibly the largest of all bony fishes. It attains a weight of nearly if not quite one thousand pounds, yet it is graceful in the water, resembling to some extent a titanic black bass, being more attractive in general appearance than the Florida Jewfish, with which it is often confused.

The islands of Southern California are surrounded by a ring or forest of kelpa vine-like plant which throws out huge fronds or leaves, which form a perfect off the line in feet and yards, at a rate maze, rising sometimes two or three hundred feet, affording protection to fishes and a break to the heavy sea, which comes piling in all along the Pacific

Coast. Here is the home of the giant bass. In the winter they go offshore to some deepwater feeding ground. but in early summer they come to the kelp forest and deposit their spawn at the roots of the kelp and all summer bite voraciously.

Among the boys who doubtless decided to catch a bass, was one who succeeded, perhaps due to his equipment and perfect preparation. While not over fourteen, he had been fond of athletics, according to report, and his muscles were in good condition for a long struggle. The boat he went out in was a launch about eighteen feet in length, called a "tuna boat," made on the island for this fishing. It had an eight-horse power engine well forward, was wide of beam and comfortable. In the stern on a board were two comfortable chairs, the legs cut off, the seat resting on the board. In the seat was a socket of leather into which the butt of the rod was to be placed when playing a fish. Behind the two anglers stood the engineer and steersman. The boat was really a sea automobile under perfect control; she could run slowly or rap-

THERE is hardly a field of sport or idly, as desired, and contained all the

tered by boys, but when the huge It was, in all probability, an easy matblack sea bass of Santa Catalina ter to go out and fish with a hand-line Island, California, was first seriously con- and with a long one wear out a very sidered as a game fish and finally caught large shark, but our angler was not that with the rod and reel, it was not believed kind of sportsman. The standard at the possible for a boy to capture one in the island was a rod, not under, about seven same way, yet it is the unexpected which feet in length; the line must not be over happens. I was one of the observers of a twenty four thread; a fish caught with the first black sea bass taken with a larger line would not receive any rating rod, considered a stupendous feat. We by the Tuna Club. Another condition had anchored to the kelp bed on the was that the angler must receive no assouth coast of the rocky island, my com- sistance; he must reel his fish to the boat or within reach of the gaffer. The recl was a large one, as shown in the photoit, as it would be manifestly impossible graph, holding six hundred feet of the to check and play so huge a fish from line, which was a mere thread for so large a fish. The rod, a single piece strike came, and away went the skiff, bamboo. On the reel was a leather pad fastened to the upper crossbar, to be so the bass was caught—the largest pressed upon the line to stop the rush of the fish, while the fine reel had a musical click and a brake of its own. The "leader" was of piano wire, seven sible to stop the fish; but by resorting to feet long; the hook what is known as a Van Vleck-a peculiar shaped hook, used they were brought in, and we went into by tarpon fishermen. Such was the the port of Avalon with three monster equipment of our angler as he started out one morning, and it is fully described because it is the result of careful observation and experiment on the part of veteran anglers. Such a reel costs from twenty dollars to fifty dollars; rods, from eight dollars to thirty dollars; lines, two dollars to four dollars-an expensive outfit, but all the Avalon boatmen have such, which are rented to the anglers with the boat.

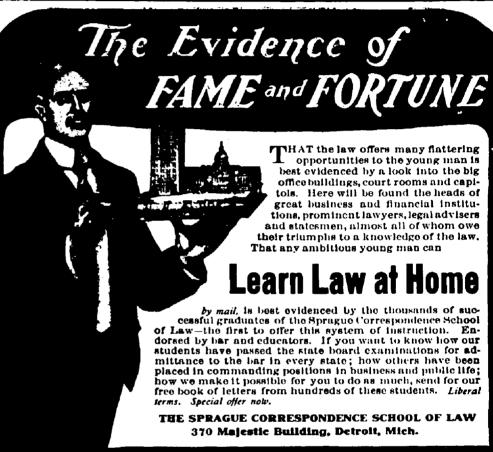

It was decided to try the best known fishing ground, which Jack, the boatman, said was the "fence," a shoal spot not ber, he never landed one. Some nearly ning along the south coast by the rugged Reaching the point, the launch was stonped and anchored to the kelp, the anchor buoyed so that it could be cast off at a moment's notice. Then the hook was baited with about five pounds of red albacore meat, supposed to be very enticing to the bass, and two lines were east off. Jack, the boatman, explained that there was another kelp bed a half mile or thereabouts offshore, and that as soon as the bass was booked he would make for this to entangle the light line in the long vines and so break it.

They waited half an hour, then a shark took the bait and was landed after a short struggle; then the lines were baited again and just as the sun came out warm and strong from the clouds, something took the balt and slowly took the line. Click, click, click! sounded the warning reel. Click, click, click! very deliberately, so slowly, in fact that it was difficult to convince the young

angler that it was not some small fish, "Give him about twenty feet, let him get holt." said the hoatman; and this advice was strictly followed. Then at the word, the boy fisherman pressed his thumb on to the leather brake, and when the line came taut, swayed back and struck home. There was no doubt about that, as the line was jerked from the reel with a force that the young fisherman had not calculated on, forcing the tlp of his rod into the water and tearing which made the reel sound in one long screaming note.

(Continued on page 257)

## I. C. S. Building, St. Louis Exposition

Erected to exhibit the International Correspondence Schools' system of training, by mail. These Schools, in twelve years, have enrolled over

650,000 students. They have enabled thousands of men and women, tied down in poorly paying positions, to advance in place and salary. The accounts of the rise of some of these students read like romance. You can qualify for promotion or a more profitable occupation. Courses from \$10 up. Textbooks furnished free. (\$100 forfeit to any one failing in our Drawing Courses, who studies as directed.)

The first step to success is to fill in and mail this coupon.

#### Early Issues of United States Stamps

There is a growing difficulty in securing fine copies of the early issues of United States stamps. The makers of these issues were not required by the government to be careful in relation to the perforating of them. The paper was of a brittle quality, very easily broken or injured by careless handling. The postmasters who canceled these stamps cared for nothing except to thoroughly obliterate them, so that they used unnecessary quantities of ink for this purpose. All these things combined make it difficult to find used copies of the early issues of our country in fine condition. There were few collectors, and therefore not many of these stamps were saved in unused condition. There consequence of this state of things is and will be an increasing difficulty in securing these stamps in such condition as is acceptable to collectors who are at all particular as to the looks of their albums. There are vast numbers of United States stamps in poor and ordinary condition. These many collectors take to fill the spaces in their albums until they can secure stamps of finer quality. This seems, on the whole, to be a mistake for the possession of a specimen, even though it be a poor one, causes a collector to neglect to secure another of the same stamp.

The desire to fill spaces that are vacant is

same stamp.

The desire to fill spaces that are vacant is greater than to improve those that are not properly filled. The best thing for the young collector, if he wishes to have a really pleasing album, is to put nothing into its spaces but unused, lightly canceled, clean copies of the stamps which he selects. The filling of the alstamps which he selects. The hims of the sub-bum properly will be appreciated within a few years by those who care more for United States stamps than for the issues of foreign countries. since the growing demand will make it even more difficult than it now is to obtain fine speci-mens—May St. Nicholas.

#### New Haitian Stamps

The Republic of Haiti has added a new set to The Republic of Haiti has added a new set to its recent commemorative issue. The values are one, two, five, ten, twenty, and fifty cents. It seems to be necessary to use upon this regular issue the same "control stamp," to prevent fraud, which was employed upon the commemorative series. This mars their appearance, and it will be good for collectors if this surcharging is discontinued—May St. Nicholas.

#### The Numismatic Sphinx

The Numismatic Sphinx

We have had repeated inquiries as to the values of our dimes and half-dimes in silver. As a series they are not as popular with collectors as the copper cents and half cents, dollars and half dollars. Half dimes were issued in 1794, 195, 196 and 197, 1800, 101, 102 and 103. These all bring good prices. Then none were issued until 1829 when we have a continued series up to 1873 when they were discontinued. Most of this last series are common with the single exception of 1846 and some of the die varieties, selling at the dealers at from twenty to twenty-five cents each. 1864 should be scarce with an Issue of only 1,370. The rarest of the half dimes is that of 1802. The mint statement that 13,010 were issued must be erroneous.

Dimes have been issued every year with the exceptions of 1799, 1806, 108, 10, 112, 115, 116, 117, 118, 119 and 125. The first issue was in 1796, and up to 1811 are scarce. 1822 and 1846, among the later issues, bring good premiums. The other years, with the exception of some die varieties and mints, can be purchased at the dealers, in good condition, at from twenty-five to forty twenty-four were struck, and only two or three being known.

Silver three-cent pieces were struck between

Silver three-cent pieces were struck between 1851 and 1873, both years inclusive. The rarest of these are the years 1864 and 1873. Of the former only 470 were issued and the latter 600, all in proof. The others can be purchased for lifteen cents each at the dealers.

This will answer many questions that have

former only 470 were issued and the latter 690, all in proof. The others can be purchased for fifteen cents each at the dealers.

This will answer many questions that have lately come to us.

Taylor Strawn, Maurice Mayer, C. H. Bennett, L. Jackson, Norris M. Feltchman, "Reader," Oscar A. Olsen, Roland Boynton, George Dorsey, Frank Blackwell, Randell McKinney, Edward R. Wood, "Fremont, Mich." You are answered in our May issue.

I'aul Lines, an octagon gold quarter of 1878 is worth a dollar. Harry Mercer, your drawing is from a 1 heller of Saxe-Saalfield, 1763. It sells for fifteen cents. Reuben Coleman, the Isabella (Columbian) quarter sells now for seventy-five cents. Jamaica coins are all in nickel and are issued in 14, 34 and pennies. There are two series, Victoria and Edward VII. Your 1721 "Louislana Purchase cent" is a French colonial coin, probably intended for her colonies in America. Your other questions are answered in this and May issue. Ernest Wenzell, the 1794, 1795 and 1797 cents in good condition sell for \$1, \$1.25 and 75c each respectively. Your copper penny of George III sells for half a dollar. Otis M. Eastman, your U. S. coins are all common. Your rubbing is from a 20 kreutzer Austrian plece, 1804 and 1809 half cents sell for a quarter each. Ernest Waterfield, Canada current coppers are very common. Your other queries are answered in this and May issue. Chas. C. Buck, see elsewhere in this column. Roy Enyeart, 1835 half cent, fifteen cents. For value of cents see May issue. Your "Dix" War Token of 1863 is the rare variety. It reads: "If anybody attempts to tear it down, shoot him on the 'spoot.'" It should have read "spot." It sells for fifteen cents. Porto Rico 1895, peso is worth \$1.25.

American Bey Advertisers get Results that Pay

First prize by Allen McGann, Midway, Ky.

In planting roses be careful to have the hole made for them so large that all roots can be spread out naturally. This is important. Never twist or cramp the roots in an effort to get them into a space too small for them. Then put plenty of fine soil about them and press it down well, until firm and hard. A looselyplanted rose refuses to grow, and never grows well. Now a heavy garden soil is best suited for growing roses, but place a little leaf mold and loam at the roots to give it a start; then the heavy soil takes hold of the roots and gives them what is most needed—firmness. Roses are great eaters; they will flourish in a poor soil and bloom annually, but if they are fed they do three times as well. Rotten manure from the cowyard is an ideal food. Just try and see what an abundant crop you will have after feeding them on cowyard manure. Oh! such beauties, too, as they will be. Be careful about using old manure; fresh manure injures on account of the heat it produces. Always plant early in the spring or in autumn, for to lift a plant after growth begins is to give it a check so severe that sometimes it never thrives afterwards. Then another important thing, plant roses in groups, not singly; set them from two and a half to three feet apart, and let each group be of the same variety. Experience has taught me that October is the very best month for planting them. Let it be well done and good results will follow. The rose has its enemies, a disease of a fungous character, known as "black spot," sometimes destroy a whole bush before you are aware of it; so keep a sharp lookout for the affected plants. If they are sprayed with some suitable mixture at once it usually kills the growth. When a child I used to hear my mother and aunt talk about their roses and make comparisons, etc., and in listening to them and observing things myself gave me this little knowledge I now write for The American Boy contest on "Rose Growing," and I will finish with a little verse I used to sing when a child:

"No beautiful palace have I on the hill,

No pictures to hang in my halls; But never a painter could match with the skilli

Of the 'roses' that bloom on my walls

Then sing me a song of the rose, A song that is tender and true,

She wears her red robes like the daintiest queen

All gleaming with jewels of dew."

Second prize by John S. Davis, Newburgh, N.Y. All boys who wish to have a successful garden should not fail to grow roses in it. It is considered by almost everyone as the most popular flower used for bouquets. It is one of the easiest flowers to grow, providing me selects hardy varieties and gives them

OF N. T. UNIVERSITY, CLEARING 5 FT. 11 Dr.

Prize Essays on Rose Growing proper care. A half-tozen or more bushes will form an excellen background for any garden, and they are also fine for planting in beds by themselves. They should be planted in an open, sunny situation, and should be protected from strong winds.

May is usually the best month for planting them. They require a very rich soil. It should be well spaded and manured before setting out the plants. Firm the soil well down around the roots when planting, and give the plants plenty of room. They require plenty of water and the soil about the plants should be manured every spring. Well rotted cow manure or bonemeal is best.

Great care should be taken by the amateur to select hardy varieties. Different colteur to select hardy varieties. Different col-ors will give the best satisfaction where they are principally used for cutting. The follow-ing is a list of the best varieties, but other very good ones may be found in any cata-logue: Magna Charta, Marshall P. Wilder, Prince Camille de Rohan, Margaret Dickson, Francois Levet, Paul Neyron, Clio, American Beauty.

Prince Camille de Rohan, Margaret Dickson, Francois Levet, Paul Neyron, Clio, American Beauty.

Do not let your roses go to seed. They will not bloom nearly as well the following year if the seed is allowed to ripen. Cut off all branches that are the least bit worthless after blooming. This is a good time for pruning them, as next year's blooms are formed on this year's growth. Pruning should be done only by one who understands it.

It is always best to cover the roots of the plants during winter with leaves, etc., to protect them from extreme cold weather, but they should not be covered too early in the fall. Do not cover the whole plant. It is also best not to uncover the roots until the spring is well advanced. Cut off all worthless branches immediately after removing the covering. By careful study of your plants and by following the above directions, you may have the finest roses grown in your neighborhood, and you will have abundant reward for your work.

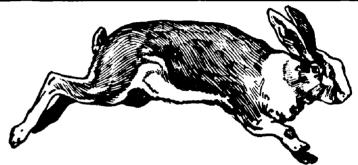

#### The I. C. S. Building at St. Louis

The International Correspondence Schools,

The International Correspondence Schools, of Scranton, Pa., is represented at the Louisiana Purchase Exposition by a handsome building. The structure faces the Plaza in the Model Village, which is one of the most interesting features of the Exposition.

The lower floor of the building is devoted to a public exhibition of the plans and methods of the Schools, with specimens of the work of students. The second floor, furnished with all conveniences and comforts, is used as a postoffice, reading room, and, in fact, a rendezvous for I. C. S. students and their friends.

"An impressive and important triumph. In boar its literary and artistic features it is of a very high degree of Acellence. Editor-in-Chief Philadelphia Public Ledger.

THE "TWENTIETH CENTURY HOME" COMPANY, IRVINGTON, NEW YORK

N THE summer of 1887, while jour-neying down the Rio Pecos from Las Vegas on my way to Fort Sumner, my attention was atsumner, my attention was attracted by the ruins of a large adobe building. It stood near the stage road, on the right bank of the Pecos, about eighty miles from Las Vegas. The roof and doors were gone, and the walls broken and tumbled down in many places

I became interested in the old ruin, but could learn nothing of its past history till my return to Las Vegas, a month later. Then I learned, from an old restdent of that place, that the old building had been erected nearly thirty years before by two venturesome ploneers, Rufus Bailey and Henry Mayheld, both young men who had come from Texas and settled there for the purpose of engaging in the cattle-raising business.

At that time there were few white settlers in the territory, the inhabitants being composed largely of a worthless class of greasers, while the predatory Navajoes. Apaches and Comanches roamed at will over the broad plains and through the mountains, often taking to dent of that place, that the old building

through the mountains, often taking to the warpath for the purpose of removing the hated whites, who had the courage to enter their domain.

Both itufus Bailey and Henry Mayfield were of that hardy class whose long acquaintance with the rough side of planeer life had made them indifferent to both hardships and danger. Reared on the frontier of a great grazing state, where dangers from both Mexican marauders and lurking Apaches ever kept them upon the alert, they looked lightly upon the perils that might surround them in their new home.

For nearly three years they remained on their ranch undisturbed by any of the wild tribes. Their business had prospered, and they had large herds of sheep

pered, and they had large herds of sheep and cattle. They gave employment to a number of Mexican herders, and prom-ised to become the leading stockraisers of the territory

But about this time the Apaches and Navajoes began to be troublesome, and stories of their many atrocious deeds were reported.

While these reports caused the young

While these reports caused the young ranchmen no serious alarm, yet they set to work to make preparations for any outbreak that might come. They first erected a large adobe building with walls three feet thick, which they intended to use as ranch house and fort. The Mexican herders were all provided with arms, and a sharp lookout was kept for any Indians that might be lurking in the vicinity.

It was about three months after the outbreak before anything further was heard of the hostile tribes.

One evening one of the herders returned to the ranch house, urging his pony at the top of its speed. Galloping up to the door, he threw himself from

up to the door, he threw himself from the saddle and pointed across the hills that lay to the west. "Los Apache!" he cried in terror. "they

"Los Apache" he cried in terror, "they are over the hill and will soon be upon

Scarcely had this startling announcement been made when a half dozen other herders came riding up at full speed, bringing the news that a large body of Indians were approaching from the southwest, about ten miles back. They had left the herds and fled for their

This startling news caused a troubled look to appear on the faces of the young ranchmen. It was evident that they were going to have trouble with the redskins, and that meant disaster to their herds even if they escaped with their lives.

Ordering the Mexicans to see to their

Ordering the Mexicans to see to their arms and hold themselves in readiness for immediate action, they went to the corral and suddled two of their best horses. Then mounting, they rode across the hill to the west for the purpose of investigating the Mexicans' report.

Each carried a rifle and a brace of heavy pistols in his belt. When they had ridden nearly a quarter of a mile, they arrived at the summit of a small hill from which they had a view of the surrounding country for miles.

Looking to the west, about a half mile away, they saw a body of some forty or fifty indians approaching at a slow canter. Ordering the Mexicans.

or fifty indians approaching at a slow canter.

The two ranchmen were in the act of wheeling their horses around for the purpose of returning to the house when the band of Indians came to a halt. Two of their number spurred their horses forward at a brisk gallop, at the same time making signals for the white men to wait for them.

"They are signaling to us," said May-

"They are signaling to us," said May-field, relning in his horse. "Shall we wait for them?"

"We'll see what they have to say," re-plied Bulley. "I can't see as they have any advantage of us as there are only two of them coming."

In a few moments the two indians had arrived in easy halling distance, when

Will Lisenbee was born in Kansas forty three years ago. He received his education mostly in the board shanty and the log and sod schoolhouses of the frontier, walking two or three miles across the bleak prairie in mid-winter to attend school. His home for a time was near the Shawnee Indians, and all the members of his family learned the Shawnee language. His first writings were published when he was eighteen years old. Since that time his name has appeared as an author in nearly all of the popular magazines, particularly as a writer of western stories for hoys. His first story appeared many years ago in Frank Leslie's illustrated newspaper—Editor.

they were brought to a halt by a gesture

they were brought to a half by a gesture from Rufus Bailey.

"What do you want?" he demanded, holding his gun ready for instant use.

"Apache heap friendly," said one of the Indians in broken English.

"That's all right, but what do you want?"

"We mant cattle and popies."

We want cattle and nonies.

"You can't have them—while we're here," answered Rufus in a firm tone, for well he knew that harsh treatment and a bold front was necessary in deal-

ing with Indians.
"Apache got heap warriors," replied the savage, significantly.

don't care for that—you are all "Me kill um heap white men," cjacu-lated the Apache flercely, slapping his

"Look out, Rufus! The devils are try-ing to surround us!" The words came in a sharp, startled tone from Henry May-

Rufus Balley was as cool as he was brave, and with marvelous quickness he threw his rifle to his shoulder and fired. One of the savages fell heavily to the ground, while the other, with a yell of deflance, sped swiftly away to join his companions.

The next instant Rufus had thrown himself to the ground and was bending over his fallen friend.

As night came on the dark forms of a score of savages could be seen stealthily and south. The two men who had held themselves in readiness for the attack.

defiance, sped swiftly away to join his companions.

The next instant Rufus had thrown himself to the ground and was bending over his fallen friend.

As he did so the wounded man rose to a sitting posture, the blood trickling from a wound on the side of his head.

"Are you hurt, Henry?" asked Rufus in an anxious voice.

"It—it was only a scale wound I

"It—it was only a scalp wound, I think," he returned, staggering to his feet, and wiping the blood from his

ART WORNERS LEAGUE

men were urging their horses swiftly

toward the ranch house.

And not a moment too soon, for already the Indians had reached a point directly to the north, and were now sweeping down with the intention of cutting them

down with the intention of cutting them off. And from the west the whole band came galloping swiftly in pursuit, lashing their ponies and yelling like demons. Now came a race for life. The small squad of Indians to the north were urging their ponies with all speed straight toward the ranch house, and unless the horses of the two ranchmen could distance those of the Apaches in the race, they would be at the mercy of the relentless foe.

Butus saw the desperate situation of

When they were within two hundred yards of the house the savages were not a hundred paces distance from them. Throwing himself forward upon his horse's nack, Rufus drew his pistol and fired six shots in rapid succession into the ranks of the advancing fot. One of the Indians dropped from his horse, while the pony ridden by another went down. This unexpected attack served to check

This unexpected attack served to check the Indians for a moment, and before they could recover their lost ground, the fugitives had reached the shelter of the house. With yells of baffled rage and disappointment the Apaches sent a shower of arrows at the building as they wheeled their horses and galloped by. Then turning to the west, they rejoined the main body who were bringing up the rear.

rear.
On reaching shelter Rufus and Henry threw themselves from their saddles and led their horses into the building with them and securely fastened the door. Here they made a startling discovery. The Mexican herders had fied, leaving them alone to defend the place the best they could they could.

The whole band of Indians had now The whole band of Indians had now halted just out of rifle range on the plain and seemd to be holding a consultation. It was evident that they thought the house contained a strong force of men and they were in no hurry to begin the

It is the first principle of Indian warfare to gain the advantage in some way, and unless they can do this, even the most flerce and warlike of them will not

bare breast.

"Get out!" cried Rufus, contemptuously.

"What do you mean by coming here to molest our stock?"

"You on Apache land—you drive game away—we take white man's cattle."

"You'll have a hot time of it if you try to take ours."

begin an attack.

The sun had now almost reached the horizon, and it was probable that no attack would be nade till dark. The line is the work of their arms consisted of lances and bows and arrows.

Described by the cowardly Mexicans, the line is the most of the cowardly mexicans, the line is the most of the cowardly mexicans, the line is the cowardly mexicans.

Described by the cowardly Mexicans, the two men found themselves in a most desperate situation. But courageous and cool under the greatest danger, they set calmly to work strengthening their fortifications and preparing themselves

for the attack.

They recognized the importance of impressing the savages with the belief that a large number of men were garrisoned in the house, and unless they could succeed in doing this, there was little hope of their being able to keep them at bay.

Through a small window in the west side of the house they could now see the

side of the house they could now see the Indians moving forward, but bearing to the south, where the corrals containing a large number of cattle and horses were

and south. The two men who had held themselves in readiness for the attack, now stationed themselves at the small windows, and when the Indians were within fifty yards of the house they opened fire on them, using their weapons as rapidly as possible, and passing from window to window as they fired. So sudden was the attack, and conducted with such energy, that the Indians were repulsed with a loss of three of their

in the house to have lasted them a month, but the supply of water was not sufficient to last over three days. This gave matters the gravest aspect, and they at once set to work to devise some

they at once set to work to devise some plan of escape.

They had their horses with them in the building, and they might mount them and fight their way through the savages' line, but surrounded as they were, the chances of escape by such a movement were small indeed.

The Indians appeared to take matters easy. Sitting in the shadows of the trees or reclining on the short grass, they calmly smoked their pipes as if confident that they were masters of the

confident that they were masters of the situation.

Escape by way of the river was also

considered, but it was soon discovered that the enemy kept a most strict watch over the ground lying east of the house, and any move in that direction would be detected.

But something must be done—and whatever they did must be done immediately. It would not do to wait till he pangs of thirst rendered them help-

Despairing of finding any other plan, they had about decided to attempt escape by mounting their horses and dashing through the enemy's lines when a thought came to Rufus like a revelation. There was a cellar beneath the house, and might not they dig a tunnel through to the river bank? It was not over twenty yards. The bank was high at that point with a dense foliage growing beneath it, next to the river.

Rufus hastily communicated his plants that your at once set to work.

Rufus hastily communicated his plan to Henry and they at once set to work to put it into execution. Taking a pick and spade which they had used for digging post holes. Rufus descended into the cellar and began a tunnel into the eastern wall, while Henry stood guard in the room above to prevent being taken by supprise. by surprise

the same time. Rufus had hopes that the Mexican herders would see their peril and come to their rescue, but in this he was disappointed.

When they were within two hundred vards of the house the savages were not the carth through which they were tunneling that it threatened to cave in, and

the earth through which they were tunneling that it threatened to cave in, and they were compelled to use the greatest care and arch the top of the tunnel typrevent a serious catastrophe.

I will not attempt to describe the day and night of toil that followed, but juy was on the evening of the fourth day after beginning work that Rufus emerged from the tunnel with the announcement that he had broken through at the river.

that he had broken through at the river brink, and they at once began to mak preparations for leaving the place.

They first filled a couple of haversack with provisions, then provided them selves with a canteen apiece for carrying water, and taking their arms and good supply of ammunition they entered the tunnel.

Darkness had set in when they emerged

Darkness had set in when they emerged Darkness had set in when they emerged from the dark tunnel and stood among the thick foliage under the high bank of the stream. For several moments the stood there in silence, listening intentifor sounds of the enemy, but naught broke the stillness save the moaning of the night wind and the plaintive cry of the Mexican whip-poor-will in a neighboring thicket of chaparral.

boring thicket of chaparral.

Their plan was to cross the river which was not over eighty feet wide at that point, and then travel to the southwest and endeavor to reach Fort Sumner. which lay sixty miles away. The stream

was shallow-not over four feet deep and could easily be waded, but there was great danger of being discovered by the Indians while crossing.

After waiting for fully fifteen minute-and hearing nothing of the enemy near them, they stepped noiselessly into the water and made their way to the opposite shore. Here they paused a moment in the shadows of the trees and listened, but hearing nothing to indicate that their flight had been discovered, the set out upon their journey down the stream.

stream.

They traveled all night and till noor, the next day, then, worn out with fatigue and loss of sleep, they sought cover in dense thicket, where they sleep till night fall when they resumed their journed reaching Fort Sumner the next evening. There were two companies of Unite States troops garrisoned at the place, at they were at once dispatched in pursuit they savages. But they had already contributed in the savages.

they were at once dispatched in pursuit the savages. But they had already committed irreparable mischief and werslowly falling back with their spoil toward the mountains in the west.

A few weeks later when Rufus Bailland Henry Mayfield returned to their ranch they found that their house had been plundered and burnt, and ever hoof of stock driven off or left dead upon the plain. the plain.

They never re-established themselve upon the ranch, but returned to Wester

## The Green Sailor Boy's Water-Spout

A waterspout is one of the first thing a green sailor boy wants to see. He h. read about it as one of the wonders of th sea, and it rouses his keenest curiosit-He gets the old sailors to promise to calhim when one is sighted. They promise winking stealthily at each other.

The ship gets down into tropical waterand the boy is told that a waterspout muc be coming along almost any time. One night he is awakened suddenly. A:

old sallor shakes him.
"Come on! Hurry up, young feller there's a waterspout on the starboard bo

bearing right down on us."

The boy hastens up the companionwa without waiting to dress, and as he darf out on deck, he is thrown down by a ma-

of water descending on him like a w-mountain. He struggles to his feet, gast ing, sputtering:
"W-s-a-s th-a-t-t a wa-a-a-ter spout?

The sailors are around him, roaring Then he looks up above the companionwa by surprise.

Rufus saw the desperate situation of himself and companion, and urged his horse forward at its greatest speed. Slight wound, took his place and worked his bunk, wipes himself dry and turns in the Apaches and it was plain to see that if the same speed was maintained by both that they would reach the house at of fifteen feet. They worked most of have no particular desire to observe them.

#### A Dog Hero.

the night time to find the house loosening from its foundation and entirely surrounded by water. In the excitement, the youngest child, a boy two years of age, was forgotten for some minutes after the family had left the house. Mr. White then started to return for the child when out through one of the lower windows came Jock carrying the baby in his teeth. The dog swam to land holding the child out of the water until he was able to deposit him safe and sound on shore. Of course Jock is now quite a hero. Besides having had his photograph taken, he is the recipient of numerous gifts, among which is a fine collar, on which is engraved his own name and that of the little boy he rescued.

throat, the monster held at the rail, send-ing bucketsful of spray over the angler. Such are the delights of a catch of the black sea bass, which the young angler. Shown in the accompanying illustration. Frank Buttolph, had before he secured his fish, which weighed 258 pounds, and was over six feet in length. At least two boys have taken these giants, and every summer numbers try their muscles in vain on the great game.

#### A Famous Boy Fisherman (Continued from Page 253.)

James White, a farmer living near lienry. Ill., is the owner of a full-blooded buildog named Jock. The White family occupy a small frame house near the illinois River. During a recent rise of the river, caused by the breaking of a dam, the family were awakened during dred feet of line went in this way until the angler was red in the face from pressing on the pad, and the fish had towed the launch one hundred feet off-shore. Suddenly the strain let up; the bass was possibly stopping to see what was the matter, and here was the opportunity of the angler. He recled as fast as he could, turning the handle of the multiplier, eating up the lost line until he had gained fifty feet when suddenly the steel throat of the reel sounded again and away went the bass tearing off line, all that had been gained, and more, too.

"You must keen him away from the

line, all that had been gained, and more, too.

"You must keep him away from the outer bed." said the boatman, pointing at the spot, "or you'll lose your fish; he's bound to dive into them vines, and then it's good-bye lines."

So the boy called upon all his resources and bracking back held the line with all his might and stopped the fish; then jumping his hands to the reel, gained on him cleverly and fortunately turned him to the south, held him as the great unseen game towed the boat slowly down

seen game towed the boat slowly down the coast.
"Don't let up on him." cried the boatman: "when you're restin' so is he. Keep a-givin' it to him." The boy reeled until man; "when you're restin so is he. Keep a-givin' it to him." The boy reeled until he was stiff and his hands almost refused to work; until his back felt as though it was paralyzed, the only relief coming when the big game made a desperate rush and carried off more line, which had to be regained. Without warning, the bass would stop in the midst of a rush and seemingly shake his head, giving to the rod and boy sturdy blows, to be followed by a quick rush in, conveying the impression that the game had escaped; but before the reel could be turned many times away went the fish again, making everything hum and creak. For an hour this battle continued, the launch being slowly towed down the coast, and then the fish displayed signs of giving in, the rushes were not so severe, the game was losing his wind. Again the young fisherman bent to his reel, turned and whirled it about with all his strength, and presently saw a mighty black shape coursing in. In it came, a giant indeed, beating the water with its ponderous tail, fighting to the last. Then the big sharp gaff hook was jerked into its throat, the monster held at the rail, sending bucketsful of spray over the angler.

#### Breeding Cages for Butterflies and Other Insects By J. CARTER BEARD

Corripillar of tortoiseshell butterfly Chrysalis bregeting ready for last change of skin caterpillar's skin

eggs. In one or two weeks a little yellowish-gray caterpillar comes from each egg; and each at once gives out a fine sliken web from the under lip and helps to of chances that the beautiful sight can be actually witnessed in wood or field; the company creeps away, all together, and travels from one leaf to another all day, feeding busily; but at night they always return to the sliken tent they have spun over the leaf where they first assembled. They think of nothing but eating. Did you ever watch caterbut eating. Did you ever watch caterbut eating. Their jaws work just the largest lamp chimney you can find, and leaf to sind a mate. It is by the rarest of chances that the beautiful sight can be catually witnessed in wood or field; R. A. Alger of Detroit has placed in bank two hundred dollars to the credit of two hundred Detroit newshoys, to the amount of one dollar to each, with the understanding that each of the newshous in whose name an account is opened shall add to the dollar out of his earn-

NE of the most interesting phases of nature study is watching the development and the astonishing transformation of insects. Some of these are quite as wonderful as if a snake should cast its skin, hang itself up by its tail and turn into a bird with brilliantly colored plumage.

Take the common tortoise-shell butterfly (Aglais milberti) for example. Comping out of her long winter sleep with worn wings and faded colors, the butterfly mother lays her cluster of eggs in the early summer or in the latter part of May, after she has crept out of the crack in the bark of some tree or in a fence post or elsewhere, in which she has been hidden away all winter. She enjoys a brief flight in the sunshine with others of ber kind, and then, leaving her eggs where her young ones will find food, she goes away to die.

It is under the fresh green shoots of the nettle that you must look to find the nettle that you must look to find the resh and bright in color, with every joint and hair accounted for and in place; and straightway they begin gorging again.

The caterpillars of the tortoise-shell

The caterpillars of the tortoise-shell butterfly go through the performance no a flower pot with earth in it. iess than five separate times before they arrive at the most important of all their new with mosquito netting, put iess than five separate times before they arrive at the most important of all their transformations, which is to change them into butterflies. For the sixth and last time the caterpiliar stops eating, and, finding a convenient spot, makes there a little cushion of silk, to which he clings with his hind feet while he lets go all holds with his fore feet and hangs head downward. The head and the shoulders begin to swell and the skin to crack, so that he can push his whole body-covering back to the tall, from which it drops at last. A curious fellow he is now, well worth careful observation, for the whole future butterfly can be dimly seen in its protecting sheath, his wings as yet small, his antennae, his sucking tube or trunk, and all of his six legs. They had begun to grow while he still was a caterpillar, but they are far from complete. To protect these organs until they are full grown, a clear fluid oozes out and flows over all, hardening into a firm, transparent case. This is the chrysalis. It is within this case that, in about three weeks' time, the butterfly's body is formed.

It is worth walking ten miles to see this sixth transformation scene, when the nerves send their first messages

It is worth walking ten miles to see this sixth transformation scene, when the nerves send their first messages through the body of the insect, and limbs begin to move, and the perfect butterfly, rending its transparent shroud, is horn again, slowly inflating its new body, spreading its wings to dry in the sun and soaring away to sip the flowers and to find a mate. It is by the rarest of chances that the beautiful sight can be actually witnessed in wood or field; but by the use of a breeding case this and hundreds of other insect transformations may be seen.

Firemen average \$15 monthly, become Engineers and average \$125. Brakemen average \$90, become Conductors and average \$105. Name occupation preferred. Send stamp for particulars. Railway Association, Box 1, Station B, Brooklyn, S. Y.

a flower pot with earth in it. Cover the top of the lantern glass or lamp chimney with mosquito netting, put it on the soil in the pot, and you have about as good a breeding case as is made. When you find caterpillars or the larvae (young) of any insect feeding on a plant, transplant the whole thing—plant and insects if possible—to your flower pot. Clap your lantern globe or lomp chimney over it, and your observation apparatus is complete. If you cannot get the plant into your flower pot, fill up the latter with wet sand and stick a portion of the food plant into it. This, of course, will have to be renewed from time to time. It is a good plan to cover the soil in the breeding cases with moss, as this tends to keep the soil moist. It should never be allowed to become quite dry, although it must by no means be dry, although it must by no means be damp.

If many large specimens are to be kept, a good breeding case can be made from a box with a pane of glass for a cover and half of one of the sides covered with wire gauze or with mosquito netting. Care should be taken that there is no smoking in the room where specimens are kept, and great or sudden changes of temperature are to be avoided. If these simple precautions are observed you may be quite sure of a successful result. If you are making a collection, this is the only way to obtain really perfect specimens. If many large specimens are to be kept

#### A Thrifty Newsboy

EDDY L. BAIER

ings and thus learn to be thrifty. In 1903 fifty dollars in prizes was offered to the thirty six boys who should save the most money. Eddy L. Baler proved to he the winner of the head prize, having heen able to save during the year \$314.76. The total amount of the savings of the boys during the year was \$1,266.69. A prominent Detroit man has offered twenty five dollars to the boy making the best showing during 1904.

#### New Tangles

TANGLED TIME.

When it is 12 o'clock noon at Washington it is the time given in each circle at some important American city, by sun time. The initials of the names of the cities, commencing at a certain one and reading in order in a certain direction, spell the name of an American city located in latitude 38 degrees 53 minutes N., longitude 77 degrees 1 minute W. Name the required cities and give their longitude.

-A. V. McCormack

FLOWER ANAGRAMS.

1. One name. 2. Lone dear. 3. We see Pat. 4. Never, lad. 5. Gordon led. 6. Inn gate. 7. Get mention. 8. O mad girl. 9. Aunt pie. —Reuben Peterson.

10 Olivet, 11, I trust Numa, 12, Air cannot, 13, I'm Leslie W Wat, 14, Teach rum bymns, 15, Most elite, 16, Negro amuser, I.—Ernest Nuttycombe.

METAMORPHOSES

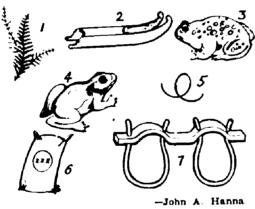

Example: Change Love to Wife in three moves. Ans.: Love, live, life, wife.

nioves. Ans.: Love, live, life, wife.

1. Change Bolt to Yard in four moves. 2.
Change Wood to Fire in four moves. 3. Change
Head to Foot in five moves. 4. Change Mine to
Gold in four moves (two ways). 5. Change
Land to Seas in four moves. 6. Change Sand to
Lime in four moves (three ways). 7. Change
Lion to Bear in four moves. 8. Change Dogs to
Cats in three moves. 9. Change Hill to Vale in
three moves. —Virgil S. Schory.

#### ILLUSTRATED ZIG-ZAG

Interpret each picture by a word of four letters. When written one below the other in the order numbered, the zig-zag from upper left across to the right of number four and back to lower left will spell a June holiday.

PROPER NAME ACROSTIC.

All the words are of the same length. The initials spell the name of a great American statesman recently deceased.

statesman recently deceased.

1. The settler who bought Manhattan Island from the Indians for \$24. 2. The American Revolutionary general who turned traitor. 3. Signer of the Declaration of Independence from Delaware. 4. Present Speaker of the House. 5 Secretary of the Navy and Secretary of State under President Tyler. 6. Commander of the Confederate cruiser Alabams. 7. The general who commanded the Federals at Chancellorville. 8. Governor-general of New England when Conwho commanded the Federals at Chancelloville.

8. Governor-general of New England when Connecticut hid her charter in the oak.

9. A great
English ndmiral. 10. The discoverer of gravitation. 11. One of our Presidents.

—Eugene Marius Stewart.

#### SCRIPTURAL DIAGONAL.

All the words have ten letters. The diagonal down from left to right spells the name of the chief commander of the Russian land forces in

the far east.

1. A desert encampment of the Israelites. (Numbers XXXIII) 2. The tempestuous wind that caused St. Paul's shipwreck. (Acts XXVII) 3. A city given to the Levites by the children of Israel. (I. Chronicles VI.) 4. David's storehouse keeper. (I. Chronicles XXVII) 5. A son of Hepher, father of five daughters. (Numbers XXVI.) 6. David's fifth son. (II. Samuel III.) 7. Any woman of Ammon, such as Rehoboam's mother. (I. Kings XIV.) 8. A desert encampment of the Israelites. (Numbers XXXIII.) 9. A city mentioned by King Sennacherib in his letter to Hezekiah. (II. Kings XIX.) 10. A grandson of Benjamin. (I. Chronicles VIII.) (II. Kings XIX) 10 (I Chronicles VIII.) 10 A grandson of Benjamin.
(I.) —G. H. Stanbery.

#### WORD SQUARES.

1. Recompense. 2. A favorite. 3. To render competent. 4. To eat sparingly. 5. The monetary standard of value of two American countries. 6. Looks of decision.

-Dan A. Chisholm.

-Leland A. Kase. COLLEGE PUBLICATIONS

Name the colleges and universities which issue the following publications:

1. Chapparal. 2. Crimson. 3. Marcon. 4. In-lander 5. Courant. 6. Illini. 7. Scholastic. 8. Scarlet and Black. 9. Aggle Life. 10. Tiger.

DEALERS For Vacation Days Get a HAMILTON RIFLE 'A Good Companion in the Woods." The handlest, nicest, most reliable little take down Rife which anyone can possibly possess. Prize Suit Ninmers

As announced in the April American Boy, the Tailor's Triumph name competition closed April 10th. The various winners of suits have been notified, and the suits they desired have been sent them through their nearest high-class clothing retailers.

Those competitors who have not received any notification from us have either sent lists which were too small to receive a prize or have sent us lists which were improperly made out according to the rules of the competition published in The American Boy.

Owing to lack of space the names of the winners in the various states cannot be given, and to all competitors who have kindly sent lists, our best thanks are due.

## American Boy Day At The St. Louis Exposition, July 5th

ment to make July 5th AMERICAN BOY less than ten stanzas. DAY at the St. Louis Exposition. The Ex-ICAN BOY has charge of the programs for on July 5th. both morning and afternoon. The morning Badges will not be sent to boys intend-program will relate to THE ORDER OF ing to be present on July 5th until late in THE AMERICAN BOY, and those taking June. part will be members of the ORDER. The afternoon will be for boys generally. Any boy wishing to attend the morning session. whether he is a member of the ORDER or not, is at liberty to do so.

WE WANT every boy in America wh is going to be at the St. Louis Exposition on July 5th to write us, so that we may enroll his name and send him a program and a badge.

WE WANT every man, woman, boy or girl who knows of a boy who is going to be at the Exposition on July 5th, who is able to do something particularly well, as for instance sing, speak, play a musical instruaddress.

WE WANT to hear from any boy orchestras or bands who will donate their services for July 5th. There is a great organ in Festival Hall, and we would like to have the name and address of any boy who will be at the St. Louis Exposition on July 5th, and can play an organ well.

WE WANT boys to write us suggesting what they would like to have in the way of a program.

WE WANT every Company of THE OR-DER OF THE AMERICAN BOY to have at least one of its members present on the morning of July 5th, and we want to know the name and address of the member in advance, where possible.

We offer \$25.00 for the best poem composed by a boy on the subject "The American Boy" (not our paper, of course, but on the BOY). The poem must be in our hands. July 5th equally grand from a boy's standby June 20th. The Editor of THE AMERI- point.

On page 206 of our May number we out- CAN BOY is to be the judge. The competilined the great project inaugurated by us tor must be under twenty-one years of age, and supported by the Exposition Manage- of course, and the poem must contain not

A prize of \$10.00 is offered to the boy position Management have donated to us under twenty-one years of age who sends Convention Hall, holding one thousand peo-ple, for the morning of July 5th, and Fes-American Boy" (not our publication) that tival Hall, at the center of the Exposition may be sung to the tune "America," progrounds, holding three thousand people, for vided that it be accepted as worthy of bethe afternoon. The Editor of THE AMER- ing printed and sung at the great gathering

ing to be present on July 5th until late in

All boys who intend to be present are asked to learn to sing America and The Star Spangled Banner.

Whether or not you will be at St. Louis July 5th send us the names and addresses of boys who will be there, so far as you know them.

Read over again page 205 of our May number. If you have not that number send us ten cents and we will send you one.

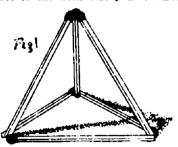

Our Editor has already listed some good attractions, but the programs are not yet full and we need your help to fill them. Do not send us the name and address of a boy whom you would like to see on the ment or what not, to give us his name and program unless you are sure that he can please a thousand people. We do not want

any dull numbers. All must be first-class.

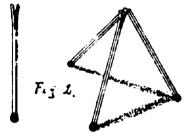

This will be the last number of THE AMERICAN BOY to reach you before you start for the Exposition, if you intend to he there July 5th, so that you must not delay sending in your name and address nor wait for any further particulars. Unless you send in your name and address as being one who intends going to the Exposition on July 5th, you will receive nothing further from us on the subject. Already we have received the names and addresses of many boys who intend to be at St. Louis, but we have scarcely yet made a start on the three thousand that we want to see in the great Festival Hall. July 4th is to be a great day at the Exposition. commemorating as it does our great National Independence Day. Let us make

## Five Minutes With A Few

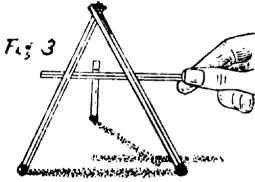

Probably tricks with matches date from the time that matches were invented, nevertheless they are as fascinating today as they were in the days of our grandparents. Many an otherwise dull evening may be brightened by the introduction of a few match tricks into your home or the homes of your friends.

Here is a very simple problem, yet it proves a poser to many until they are shown how it is done and then, of course, nothing could be caster. Lay three matches upon the table to form an equilateral triangle, then ask your friends, with the aid of three more matches, to form four such triangles. It will appear to them almost an impossibility until you fix the matches up as shown on Fig. 1.

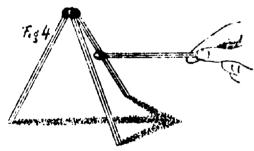

Next split the end of a match with a pen-knife and press another match into the open-ing formed, then taking a third fx them up as shown in Fig. 2. The puzzle is to raise these three with a fourth match held between the finger and the thumb. Your friends here will probably meet with but little success un-til the method is explained to them. Press

back the two upited matches until the third match fails upon the one you hold, as shown in Fig. 3. Now gently raise and allow the singly match to lock beneath the other two, when the combination may be raised at

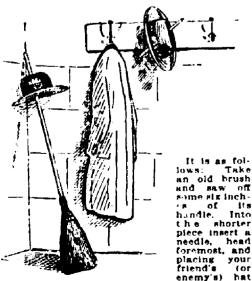

her are. The next trick looks rather more difficult at nost right, but is equally easy when you are fold how it is done. Set three matches up with their heads together, as shown in Fig. 4.

ord raise them with a fourth match. Should not find any difficulty in making these three keep their upright position, just breathe for a noment upon the heads, then they will hold to their more readily. To accomplish this trick you must strike your fourth match and five the heads of the other three as they stend, blowing them out immediately after; then you will find that the three heads have losed together and there is no difficulty at all menisting them now.

## Try This On Your Friend's Hat

the of the best jokes that the writer ever the ed was played with a hat. Some other "low—hat, of course! Fractical joking, as a "le, is objectionable and not to be encour-d but in the following, no evil results can soly nerve and the "victim" often enjoys s toke as much as those who planned it

It is as fol-ws: Take an old brush and saw off some six inchof Into handle. Into the shorter piece insert a needle, head foremost, and placing your friend's (or

controlly between the two pieces, press the boulle well home. Now, apparently, the landle passes through the crown of the hat, in needle keeping all securely in position.

Another way of playing the same trick is to take any piece of stick, roughly paint one end, saw through the mid-lie and fix through" a hat with a needle, exactive as before Hang this on a peg as shown in our trial trainer. The victim, thinking his hat tuned, will be most angry at first but as soon as he tries to release his hat, the trick is discovered and his frown is almost certain to give place to a smile.

## EARN VALUABLE PREMIUMS

BY SECURING SUBSCRIPTIONS TO "THE AMERICAN BOY"

RULES FOR CANVASSERS TO OBSERVE: (1) The subscription price of THE AMERICAN BOY is \$1.00 per year. (2) Our premium offers are made to subscribers only. (3) We do not give premiums on renewal subscriptions, but only on new ones. A transfer of a subscription from one member of a family to another does not count as a new subscription. (4) A premium cannot be given to any one for sending his own subscription or that of any member of his household. It takes time and effort to secure new subscriptions, and we are willing to reward the subscriber sending them.

THE REACH PROFESSIONAL BALL. Made regulation size and weight, of good material, good quality Horse Hide Cover. A first-class ball for

amateurs. Given to "American Boy" subscribers for 2 new yearly subscriptions; or for 1 new yearly subscription and 35c cash. Price 85c postpaid.

THE REACH BOYS' FIELDER'S GLOVE.

Is made of Fine Drab Asbestos Buck, Well Padded, Patent Hump, Web Thumb and Patent Deep Pocket

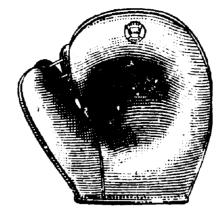

Given to "American Boy" subscrib-ers for 1 new yearly subscription. Price 65c postpaid.

# AMERICAN BOY DAY

At the St. Louis Exposition, July 5th, 1904

The Greatest Day the Boys of America Have Ever Had the Chance of Enjoying. A Day of Inspiration for Boys They Cannot Afford to Miss

OROVER C. AKER One of Our Orators.

President of the Day--WM. C. SPRAGUE, Editor of The Boy His Head quarters from July 8rd to July 6th, from 10 a. m. to 12 noon, will be the Michigan Bldg.

## **PROGRAM**

Part I.-2:30 to 4:20 O'clock, in Festival Hall

Note: Festival Hall is the central splender of the Exposition. It is a magnificent structure 200 feet high and 200 feet in diameter. It contains the largest pipe organ in the world. It seats 3,000 people: 2,000 on the main floor, 1,000 in the balcony and 50 in boxes.

The Program in orations, music messages from the U.S. and all the states, played by Prof. Roney's Boys, a organization. the prize poem of our national by Harry Steele boy traveler, a Cleveland high other talented men. A salute an address by the day. 🧀 🧀

CHAPTER XX.

#### ROB MAKES A STARTLING DISCOVERY.

Finding Rob determined to go to Pekin, Jo agreed. though with many misgivings, and at once began preparations for their dangerous journey. Thanks to the general terror inspired by the fall of the Raingod's head, the lads were secure from interruption so long as they remained in the temple. Having thought out his plan the evening before, Jo had brought with him from the city a number of things necessary to carrying it out. Among them were shears and a razor, with which he removed every trace of hair from Rob's head after the fashion of the lamas, or priests of Buddha. Then his whole body, from the crown of his head to the soles of his feet, was tinted yellow with a dye that would have to wear off, since it could not be washed away. He was further disguised in priestly robes of yellow, and, worst of all, was finally obliged to give up his cherished boots in favor of sandals, which of all forms of footwear he most despised. For head covering he was given a priest's huge straw hat, as large as a small umbrella.

As neither of the lads were sufficiently expert in "making up" features to change Rob's wide open eyes into oblique slits, he submitted to the wearing of big. round, shell-rimmed, smoked glass spectacles found among the temple properties. Another thing there obtained was an inscribed iron tablet that had hung upon the breast of the Rain-god, and to carry this to Pekin was to be the ostensible reason for their journey in that direction. Also the silence with which Rob was to conceal his ignorance of the northern dialect was to be explained as being imposed by a vow not to speak a word, even in prayer, until he had safely deposited that holy tablet in the great Pekin temple of the Rain-god. The only bit of property formerly belonging to him that he was allowed to ctain was his revolver, which, together with a belt full of cartridges, was concealed beneath his robe.

As their changed plan was to carry them in the very direction Jo had announced his intention of taking before leaving the city, he decided to maintain his character as an officer of Imperial troops, escorting the priest, rather than to assume that of a servant, as he at first had proposed. Thus he would be able to ride on horseback, carry weapons in plain sight, and disburse money for many comforts that a priest's servant could not obtain.

With these preparations completed, our lads waited impatiently for darkness, and no sooner had it descended than they set forth, exercising great caution in leaving the temple grove, but after that traveling as briskly as Jo could walk. The latter insisted that Rob, being unused to sandals, should ride his pony while he proceeded on foot until they

could beg, borrow, steal or buy another. They had gone but a few li, or Chinese miles, each of which equals one-third of an English mile, when they heard the steady beat of horse's hoofs, accompanied by a grinding noise, as of machinery. After listening until he located the sound as coming from a field at one side of the road, Jo crept softly in that direction. He quickly discovered a horse attached to a long wooden beam, traveling in a monotonous circle and thus lifting an endless chain of earthen jars full of water from a deep well. Each, as it came to the surface, emptied itself into an irrigating ditch. and then went down to be refilled. All this was simple enough and did not particularly interest Jo, for he had seen hundreds of just such irrigating plants in operation all over the Great Plain. Heretofore, however, a prominent feature of the outfit had been the man or boy who, armed with a bamboo whip, had kept the horse awake and at work; but here no human figure was to be distinguished. At the same time, there was a sound of blows, delivered at regular intervals, each of which inspired the horse to fresh exertion. Finally, becoming convinced that, in spite of the blows, there was no person in the vicinity, Jo went closer to determine their origin. At the machine he found working a scheme so practical, simple and ingenious as to arouse his admiration. A section of stiff but springy bamboo, and a stout cord fixed on the beam to which the horse was attached. That was all. Three revolutions of the beam wound up the cord and sprung back the bamboo. At the beginning of the fourth revolution the cord suddenly was slackened, and the liberated bamboo struck the horse a

blow across the quarters. Nor did these blows always descend at the same point of the circle, or at regular intervals, since their frequency depended upon the speed of the horse, who, being blindfolded, was thus made to believe that he was at the mercy of some constantly alert, though invisible, person.

So impressed was Jo with the ingenuity of this contrivance that he went back to persuade Rob to come and see it. The latter did so, though somewhat unwillingly, not caring to waste time over Chinese inventions just then; but, when he had approached close enough to the horse to discover its markings, he exclaimed:

"Hello! That's my pony! The very one I was riding yesterday when the rain dancers got after me. And here he is, being made to work all night by an infernal machine. I never heard of anything so disgusting. Here! Whoa, you beast! You have done the treadmill act long enough, and now we'll put you to a better service."

Thus it happened that the very ingenuity of this inventor of perpetual motion, by which he gained a few hours of sleep, also caused him a heavy loss; for had he been on hand Jo would have bought the horse from him at his own price, while Rob would not have appeared on the scene at all.

As no saddle could be found near the treadmill, Jo was forced to ride bareback until they reached a town where one could be purchased. At this same town they slept a few hours, during which their horses also rested, and were liberally fed on beans and chopped bamboo grass. Our young travelers were again on the road by sunrise, and after this they pushed ahead with all speed for the greater part of a week, riding early and late, but taking long rests in the middle of each day.

Although as a priest, and an officer of Imperial troops, they were suffered to pass without delay many points at which any other class of travelers would have been detained for rigorous examination, they met with ever-increasing evidences of trouble as they advanced northward. Everywhere they came across dead bodies, ruined buildings, and occasionally whole villages swept by fire. Everywhere people gazed on them with suspicion or fled at their coming. They heard of the great Boxer army gathering near Pekin. and encountered numerous small bodies of armed men hastening to swell its ranks. Also they came into constant contact with prowling bands of starving peasantry. Several times, in order to escape from the latter, our lads joined themselves to one or another of the Boxer companies, and remained with it until the immediate danger was passed. Then, on the plea of urgent haste, they would push a thead.

Finally, when thus traveling with a company who would have hacked them to bits had they discovered their identity, they crossed the Ho-Tho-ho (the river that goes where it pleases) and approached the walled city of Cheng-Ting-fu. In this city stands a Roman Catholic cathedral built of stone, and having a massive square tower that looms like a great fortress above the low roofs of the surrounding temples and native dwellings.

In this stronghold were many foreign refugees, priests, nuns, Belgian engineers who had been engaged on the railway running south from Pekin, and several

American missionaries, who, wounded and plundered of everything, had gained this asylum barely in time to save their lives. For more than a month

the great gate of Cheng-Ting-fu had been kept closed to all companies of friends and foes alike, only the little wicket being occasionally opened for the passage in or out of one or two persons at a time. In addition to this precaution, which was taken by the Chinese authorities of the city, the foreign refugees

inside the cathedral were compelled to remain hidden behind its stout doors, for fear lest their appearance on the streets should excite the local population to acts of violence. On the sandy plain beyond the city wall was a large and ever-changing encampment of Boxers thirsting for foreign blood, undisciplined soldiers. highwaymen, and outlaws of every description. Upon reaching Cheng-Ting-fu, our lads, wearled by a day of continuous riding, felt that they could go no farther that night. In fact, there was no place for them to go nearer than the city of Poa-Ting-fu, a long day's journey away, so bare had this section of country been swept of inhabitants. At the same time they regarded with dismay the prospect of spending a night amid the horrors and dangers of the lawless outside camp, where robbery and murder were committed unchecked and unpunished at all hours of the day and night.

"We must try to get inside the wall," said Jo in a low tone, "for if we stay out here it is pretty certain that neither of us will live to see another sunrise."

With this they turned their jaded ponies towards the city gate and rode to it, followed at a short distance by a small crowd of pig-tailed cutthroats who only awaited a favorable opportunity for making a rush upon them. So desperately hungry were these wretches that they joyfully would have killed even a priest and an imperial officer for the sake of the meagre food supply represented by the animals they rode.

At the gate Jo's demand for admittance was at first received with stout refusal by a guard who gazed carelessly at the travelers from behind a small, heavily barred opening. Fortunately, Jo still had money with him, and a handful of silver temptingly displayed finally unclosed the coveted entrance. As the wicket opened, the starving rabble, seeing their prey about to escape them, made their threatened rush; but Jo, leaping to the ground and calling on Rob to get the horses through the gate, held them at bay with his revolver. Only one minute was necessary, for the ponies, as though aware of their danger, scrambled through the narrow wicket like cats. Rob followed close on their heels; Jo, firing one shot over the heads of the crowd for effect, sprang after him and the gate was slammed shut, not again to be opened that night.

Even now, the officer of the guard, who had yielded to the silver influence, dared not give the strangers the freedom of the city; but, under threat of again being thrust outside, compelled their promise to spend the night in a temple to which he would conduct them, without attempting to leave it before morning. They must not hold communication with a soul outside the temple walls, and they must depart from the city at surrise.

When Jo had given this promise in words and Rob had assented to it by nodding his priestly head, they were conducted to the temple selected as their lodging under an escort of soldiers, detailed to act as their guard during the night. On their way, the travelers thus cautiously welcomed gazed curiously about them at the sights of the beleaguered city, and especially at the grim walls of the great cathedral, uplifted above its houses. Especially was Rob affected by this ecclesiastical fortress, which at that very moment was giving safe shelter to persons of his own race.

As they passed it, he stared hard at a row of narrow windows with the hope of seeing an American face; but none presented itself until the last window was reached. In it was dimly outlined the form of a woman, who turned upon the passersby a face expressive of hopeless weariness. She gave them one listless glance and then stepped from sight; but that fleeting view caused Rob Hinckley to utter a choking exclamation and to reel in his saddle, until only a supreme effort saved him from falling. He had seen his mother.

#### CHAPTER XXI.

#### THE REFUGEES OF CHENG-TING-FU.

The malady with which Dr. Mason Hinckley had lain critically ill at Wu-Hsing was of so strange a nature, that, directly after the cablegram calling Rob to his supposed deathbed was sent, it took a surprising turn for the better. As he longed for a change of air and scene, and felt that with them a full recovery of health might be effected, he decided to resign his position at Wu-Hsing and with his wife travel as far as Nagasaki. There they would meet the steamer on which, as they had been notified by cablegram from America, Rob was coming to them, and the reunited family would spend together a delightful holiday on the lovely Japanese coast.

So they set forth full of hopeful anticipations, and traveled down the Si Kiang to Hong Kong, where they were so fortunate as to find the China on the point of sailing for San Francisco by way of Nagasaki. They told an acquaintance, who assisted the invalid to a carriage, that they were going to Japan to meet an American steamer, but in the confusion of the moment he understood them to say that they were going to America, and so reported to Mr. Bishop, who, in turn, repeated the story to Rob a few weeks later.

In the meantime the doctor and his wife journeyed to Nagasaki, the former so gaining strength with every mile of the voyage, that, upon reaching Japan, he deemed himself to be practically a well man. Thus they were prepared to give Rob a most joyful surprise; but, when, only three days after their own arrival, the Occidental steamed into Nagasaki harbor, they were met by the bitter disappointment of finding that their boy was not on board. From the purser as well as from the gentleman who had taken Rob's cabin, they learned that somehow he had missed connection and been left behind. After that the anxious parents waited in Nagasaki a month, boarding every incoming ship from the States; but without finding their boy, or hearing a word from him. They had written to Hatton immediately upon their arrival; and finally from there came the cabled message:

"Rob. transport, Manila."

What could it mean? Why had their boy gone to Manila? Where would he go from there? Where was he now? How in the world did he happen to be on board a transport? Had he enlisted in the army? These and a thousand other equally puzzling questions presented themselves; but no one of them was accompanied by an answer. They had received news of the murder of missionaries at Wu-Hsing. Could Rob have reached there in time to become involved in the trouble? If so, was he alive or dead? They no longer could remain in Japan, but must return to China, where news might more readily be obtained. So they sailed for Shanghai, from which place they sent letters of inquiry to Manila, Wu-Hsing, Hong Kong, and Canton.

Then ensued another month of anxious waiting, during which time, Dr. Hinckley, now restored to perfect health, received from Pekin a fine offer to become missionary medical director for the province of Shan Si. It was an offer that he gladly would have accepted, but for his uncertainty concerning Rob.

At length came a letter from Canton, informing the anxious parents that their boy had been there a month earlier, but had almost immediately joined an expedition that was to traverse the interior from that point to Pekin, in the interests of an American railway syndicate.

Again did the puzzled parents ask each other questions concerning the erratic movements of their son, that neither could answer. Finally Dr. Hinckley "It is useless to worry ourselves any more said: about the boy, since it is evident that he has passed entirely beyond our reach. He is in God's hands, and that there is some good reason for the apparent strangeness of his actions, will sooner or later be made plain. Let us be (bankful that he is alive and in the same country as ourselves. Also we now can accept that offer from Pekin where, as it seems, we are most likely to meet him."

So the bewildered but still hopeful parents took steamer from Shanghai to Tientsin and rail from there to China's capital, at that time a wonderland of mystery to the greater part of the outside world. From Pekin they traveled south to Cheng-Ting-fu. which then was the extreme terminus of railway construction, and here Dr. Hinckley left his wife while he should go on by horseback to Tai-Yuan, the capital of Shan-Si, and prepare their new home.

Then, almost without warning, came the terrible Boxer uprising, sweeping over the northern provinces with the fatal speed of a storm-driven prairie fire. From every direction were heard reports of murder and outrage; some of them simple relations of actual happenings, others gross exaggerations based upon fact, and, still others, pure inventions; but all equally terrifying to the handful of foreigners within the walls of Cheng-Ting-fu. A little later refugees, bearing evidence of the terrible sufferings through which they had passed, began to straggle in. Some told of the beheadings and burnings to death in Pao-Ting-fu on the north, and others of the frightful tragedies enacted in Shan-Si on the west, by orders of the infamous governor Yu-Hsien, credited with being the originator of the great Sword Society, and the most vindictive hater of foreigners in all China. The Shan-Si refugees reported that one day in Tai-Yuan this monster personally superintended the beheading of forty-five foreigners, men, women and little children, besides a much larger number of native Christians: and, on hearing this, Mrs. Hinckley lost all hope of ever seeing the husband who had gone to prepare a home for her in that very city. Also she mourned for her boy, who, if he had carried out his reported intention of traversing the interior provinces to Pekin, must have been overtaken by this same all-devouring storm of wrath.

Although the southern end of the railway as far as

Pao-Ting-fu was kept open by the Chinese for the transportation of their own troops, it was reported that everything north of that point, including the telegraph lines had been destroyed. Thus, Cheng-Tingfu, with closed gate and surrounded by enemies, was cut off from all news of the outside world. rumors drifted in, and these were of such a nature that the handful of refugees facing an almost certain death in the cathedral, believed themselves to be the only foreigners left alive in Northern China.

Such was the state of affairs on that evening of early summer, when Mrs. Hinckley, hopelessly weary of life, happened to glance from one of the cathedral windows just as a yellow-robed priest was passing along the narrow street. She turned quickly away, for of all Chinese, the priests had been most active in persecuting foreigners, and she never saw one without thinking that he might be the murderer of either her husband or son.

An hour later the "boy" who brought in her supper of tea and toast, laid something else on the tray beside it, and disappeared without having spoken. For a minute Mrs. Hinckley did not notice the strange object, but finally it caught her eye and she picked it up. It was a narrow strip about six inches long, cut from the dried leaf of a talipot palm, the material used instead of writing paper in certain Buddhist temples. Characters traced on the smooth surface with a stylus, afterwards are rubbed with lamp black, which brings them out in bold relief. In the present case, to Mrs. Hinckley's amazement, she found the strip of palm leaf to be written in English and beginning, "My own dear mother!

The poor woman uttered a stifled cry, and a blur so dimmed her sight, that, for a moment, she could read no more. Then it passed and she eagerly scanned the following message, written on both sides of the slip:

"I hardly could believe my eyes when I saw you at the cathedral window. How did you get here? Where is father? I am the priest who rode past on horseback with a guard of soldiers. Am safe, and on way to Pekin. They will not let us come to you nor even leave this temple, where I am spending the night under guard. I must go on at sunrise, when they will put us out of the city. Jo is with me. Perhaps I shall again pass window. So please stand in same place on chance. I will come back to you from Pekin quick as possible. Don't worry a single little bit about me, for I am all right. Your own loving Rob. Send answer by the one who gives

Over and over did the happy mother read this message from the boy whom she had just been mourning as dead, until she knew every word of it by heart.

Then, on a leaf torn from her journal, she wrote with lead pencil, an outpouring of love, joy, and anxiety such as only a mother, situated as she was. could write. She begged Rob to be careful for her sake, and warned him of the danger of going to Pekin, though she added that if his father still were alive, that city would be the most likely place in which to obtain news of him. She said she should remain near the window all night for fear of missing her boy when he again passed. Then the servant came for the untouched tea tray, looked at her inquiringly, and she only had time to sign:

"Ever your own devoted mother," fold the note and slip it into his hand, ere he again left the room.

The shock of seeing his mother in that dreadful place when he supposed her to be safe in America was so great that Rob had been on the point of proclaiming his amazement aloud, when Jo. always keenly on the watch for some such slip on the part of the pretended priest, checked him.

"It is but little more to go." he said in Chinese, so that all might understand him, "and then the holy one shall find a place of rest. He is very weary," added Jo to the officer of the guard, "and his vow

of silence sits heavy upon ham."
"Yet he does not look so old," replied the officer. "It is true that he is well preserved, and may give us the joy of his presence for some years to come; but mere looks cannot restore to age the lost strength of youth. I pray you, therefore, find for him a place of quietness."

Thus it came about that a small building of the apart for them and orders were given that no other person should enter it that night.

When they were alone and Rob had explained to Jo the cause of his excitement, he added: "And I must go to her for a long talk."

It took Jo some time to persuade his friend of the impossibility of what he proposed and that to attempt it would only endanger all their lives, including that

"Then," said Rob, finally convinced, "I must write, and you must somehow manage to get the letter to

The letter was prepared with the only materials that the temple afforded and by the liberal use of money. Jo got it sent to its destination, and had the answer brought back. After that, much as Rob hated to leave his mother behind, he had the sense to realize that she probably was safer in the cathedral of Cheng-Ting-fu just then than she would be anywhere else in North China. Also what she had written concerning the possibility of gaining news of his father in Pekin made him more than ever desirous of reaching that city.

Jo warned him against the danger of allowing any sign of recognition to escape him in case he again saw his mother. So he was able to gaze calmly at her the next morning when they once more were escorted past the cathedral and she stood at the same window, watching eagerly for him to pass. She, too, realized the danger to him of any show of interest on the part of a foreigner, and no one could have guessed from their faces as they exchanged farewell glances that thus a mother and son, with a full knowledge of the perils besetting both, were parting, perhaps, forever.

#### CHAPTER XXII.

#### A CHARGE AND A RACE FOR LIFE.

There is but one gateway to the walled city of Cheng-Ting-fu, and this opens on the west. Consequently it was on this side that most of the Boxer rabble, who longed for an opportunity to loot the valuable mission property within its walls, were gathered. Their object was to starve the stubborn city into submission, and they watched always for the opening of its gate in token of surrender. If our lads had been willing to leave their ponies in the city, they could have been let down from the vall on the opposite side and made good their escape on foot. This, however, they would not do, for, without horses, the long journey still before them through a region swarming with footpads was practically impossible. So they issued from the wicket, which instantly was closed behind them, sprang into their saddles, and turned northward, hoping to ride for some distance unnoticed, in the shadow of the lofty wall.

But this hope was doomed to a quick disappointment, for almost instantly they were discovered, and a crowd of men were seen running so as to head them

"We've got to ride through them," said Rob, "and shoot down anyone who tries to stop us. I will go first, and do you follow close. Don't fire a shot until my pistol is empty. Then I'll drop behind and reload while you clear the way. It's our only show for life, Jo. Come on!"

With this, Rob wheeled his pony, and dashed at full sped straight at the swarming encampment with Jo close at his heels. It was a glorious charge, that of two against a thousand, but it could not have lasted a minute had the latter been anything save a wretched rabble, unprovided with fire-arms and without leaders. As it was, they were scattered like chaff by the madly racing ponies. The few who attempted interference were shot down, and three minutes later our lads, still yelling with excitement, drove through the last of their enemies and found themselves safe on the open plain.

"After that experience I would undertake to ride through the whole Chinese army with twenty American cowboys," boasted Rob as he reined his panting steed down to a walk.

"Of course it might be done," answered Jo quietly, "only it would be well to consider that an army is made up of soldiers provided with guns, and that even a Chinese bullet sometimes finds its mark."

"I beg your pardon, old fellow! It was a mean thing to say," cried Rob contritely. "I ought to be ashamed of myself, especially when I remember how splendidly one Chinese, by the name of Jo Lee, rode through that howling mob only a few minutes ago. But Americans can't help bragging, you know, and I surely am an American.'

"If they do brag," replied Jo, "it is because they temple to which our lads were conducted was set have so much to brag of, while my poor country has so little.'

"Your country has a history older than that of any other nation on earth," said Rob, consolingly. you invented more than half the things that go to make the civilization of the world, such as the compass, and printing, and gunpowder, and ever so many

more; for, I remember our history teacher telling us about them. He said the civilization that started in China thousands of years ago had been spreading westward from this country ever since; first over Asia, then over Europe, and finally over America. 'At length,' he said, 'the great wave of enlightenment has swept across the Pacific and again is making itself felt on the coasts of Asia. Japan already is uplifted by the flood, and China, now at the lowest ebh of her fortunes, will soon feel the life-giving influence of the rising tide.'

"I remember it particularly," continued Rob, "because of course I always was interested in everything about China; but I never realized just what he meant until I came back, and saw what a splendid country this has been, and what a splendid country it could be again. Why, Mr. Bishop said that China's wealth of coal and iron alone was sufficient to make her one of the greatest nations of the world."

"I expect your teacher was right when he said that China was at the lowest point of her fortunes," marked Jo. "I don't see how she could very well sink any lower, and she will stay down just so long as the Empress Dowager lives and rules the country. She hates foreigners, and is bitterly opposed to progress, reformers, and changes of any kind. It is certain that she is encouraging and helping on this Boxer uprising, for if she wanted to, she could have it put down and stamped out within a week. I told you of my orders, not to interfere with them no matter what they did, and while we were charging through that encampment just now, I caught sight of a Boxer banner on which was written: 'By official Decree. Exterminate Foreigners.' They never would dare display such a flag if they really didn't have official backing; and in China to-day the only 'official' whose word is law is the Empress Dowager.

"I don't see how you found time to read what was on a flag," said Rob, "or even to notice it. I didn't see a thing except the crowd, that looked like so many wolves snarling at us, and especially those who tried to stop us. If it hadn't been for our pistols they would have got us sure. I only hope we didn't kill any of them.

"Why?" asked Jo. "They were trying to kill us, and if we don't look out," he added sharply, "they will do it yet."

Thus saying, he pointed over his shoulder to a rapidly advancing cloud of dust, moving from the direction of the Boxer encampment they had so recently charged. The dust cloud hung above a road that ran parallel to the direction they were taking. In fact, it was the road over which they now would be riding, had the bare fields that they had chosen instead, been covered with their usual crops. they could not see the horsemen raising the dust, was because the highway, along which the latter were moving, was a "low-way," worn by generations of travel, scoured by floods in winter, and swept by the strong winds of summer until it was many feet below the level of the adjoining land.

Jo was convinced that the dust cloud was raised by horsemen, because of its volume, and its rapid advance. That they were enemies was almost certain. since they came from the direction of the angry encampment; and he believed them to be endeavoring to cut off Rob and himself, because otherwise they too would be riding in the open fields, instead of through the smothering dust of the gully-like road.

Our lads had allowed their ponies to walk for the last mile or so, but now they urged them forward at a brisk "lope," for they were determined that no man or body of men from that encampment should get in advance of them, if they could help it. Every few seconds one or the other of them glanced over his shoulder at the dust cloud to see if they were gaining on it; and, finally Rob uttered a shout of:

"Here they come helter-skelter, and enough of them to eat us alive if they catch us. Now we've got to make time. Great Scott! They've got guns, too.

The horsemen, having discovered that their object was suspected and that their prey was likely to escape, had left the sunken road, and now were streaming across the fields in open and hot pursuit. Also, just as Rob glanced back, one of them fired a shot. Where the bullet went to, no one knows. Certainly it did no harm to our friends, but the shot itself filled them with dismay, as it showed their present pursuers to be better armed than any of the vagrant bands they had yet encountered.

"I believe they are Imperial cavalry!" exclaimed Jo. "Yes, I am sure of it," he added a moment later as he detected a triangular yellow pennon fluttering from a lance, borne by one of the pursuing horsemen. "They must have been sent out from the city. and must have some reason for suspecting us. I wonder if it has become known that we communicated with your mother? That would be a sufficient cause for beheading us both if we are caught. So we must not be.'

"I won't be," declared Rob, clenching his teeth, and urging his pony to greater effort. "I'll die first." On they swept, mile after mile, over the parched land, and under the blazing sun. How they longed

for rest and water, and shade, and coolness; but none of these things were for them so long as that deadly pursuit was kept up. It did not seem to gain on them; but neither did it lose ground. To be sure some of the cavalrymen straggled, so that they came on in a long irregular line; but a group of half a

dozen leaders kept well together.

A river came into view, and Rob wondered what would happen when they reached it. He began to think he didn't much care though so long as he could get a drink of its water. All at once he almost jumped from his saddle, for from beyond the river came a sound both startling and familiar, such as he had not heard since leaving America. At Cheng-Ting-fu he had seen the torn-up track of the recently constructed railway, but he had forgotten it, as he also had the fact that a portion of it somewhere to the northward still was in working order. Thus, for a moment, he could hardly believe to be real, the

sound that came echoing across the Hsu-ho. was the sharp whistle of a locomotive, calling for the brakes, and as our lads plunged down the steep river bank, they saw a train of open "gondolas" slowly backing towards the stream on the opposite They also saw a crowd of people evidently awaiting its coming.

For half a mile they forced their nearly spent ponies across the sand and gravel of the dry river Then appeared a channel so shallow as easily to be forded. Directly from this rose the steep farther bank; but, in an effort to climb it, Rob's exhausted steed fell and rolled to the bottom, while Jo's pony refused even to attempt the ascent.

Rob disentangled himself from the struggling beact, and gained his feet bruised, but sound in limb. As he stood up, a yell of triumph came from across the narrow water, and a quick glance showed that the pursuing Chinese cavalrymen were close at hand. At this same moment, Jo sprang from his exhausted

"We must run," he cried, "and mix with the people on the bank. Perhaps we can hide in one of the cars."

So the lads, one still in the yellow robes of a priest. and the other in the dark blouse with red facings. full trousers, and short boots of the Imperial troops, dashed up the bank together, and ran towards a throng of soldiers now crowding aboard the cars, as though they, too, sought passage on the train.

As they began to push their way into the crowd, one of the soldiers, staring hard at Rob uttered an ejaculation that caused Jo to turn and look at his friend with sudden dismay. In the haste of leaving their ponies and running for the train he had not noticed that Rob had lost both his priestly headcovering, and the great shell-rimmed spectacles that had proved so complete a disguise. Now, without them, though he still was tinted yellow and robed as a priest, there was no mistaking him for anything but a foreigner, and "Fan Kwel" (Foreign Devil) was what the soldier just had called him.

Others, attracted by the man's exclamation were turning to look, and at the same moment came a loud shouting from the rear. Those who had chased our lads so persistently all that morning were close at

For an instant Jo's heart sank like lead, and he believed they were lost. Then like a flash came a thought of one thing that they still might do.

#### CHAPTER XXIII.

#### STEALING A LOCOMOTIVE.

Jo's plan was communicated to Rob in a few breathless words, as the lads dashed up the platform towards the head of the train. The crowd of soldiers, not yet understanding that they were fugitives, and awed by the sight of Jo's uniform, parted before them, only stupidly wondering at their haste. Rob's mind instantly seized the possibilities of Jo's suggestion, and, as they ran, he gasped:

"You get aboard, Jo, while I cut it loose. Persuade the driver to start her. Never mind me, I'll climb aboard somehow."

Even as he spoke, Rob turned in betwen the locomotive and the foremost car, which already was filled with Chinese craning their necks over the side to see what was going on. Fortunately there were no patent couplers to be dealt with, and no pneumatic tubes; for, on this primitive train brakes were applied by hand, while the connections were simple link and pin affairs that anyone could understand. Rob pulled the pin and scrambled across the bumpers to the opposite side of the train. As he did so his flowing priestly robe caught and was torn from his shoulders, leaving him fully revealed in unmistakable European costume.

Instantly there arose a yell of "Fan Kwei!" from the soldiers in the car above him, but a sudden shot from his pistol cut it thort and sent those who were uttering it tumbling over backward in pell-mell consternation.

The locomotive already was moving as Rob ran forward and sprang into the cab. He was just in time to break up a most startling tableau. The Chinese engine-driver, with hand on the open throttle, was cowering beneath the threatening muzzle of Jo's cocked revolver. The latter's back was turned, and behind him, with an uplifted bar of iron, crept the overlooked fireman. In another instant the blow would have fallen, and the whole course of Chinese history might have been changed; but as it was about to descend, Rob caught the unsuspecting man by his convenient pigtail and jerked him violently backwards; while the murderous bar clattered to the iron floor of the cab. The next moment Rob had bundled the fireman overboard, and the locomotive sprang forward as though relieved of a clogging weight.

A tremendous clamor of yells and shooting rose from behind, while half a dozen bullets splintered the woodwork and shivered the glass of the cab; 'but no one was hurt, and no one minded the fusillade except the poor engine driver, who was scared almost white. Rob sprang on to the coal in the tender and waved his pistol defiantly above his head. At the same time he shouted derisive farewells to the baffled soldiers, many of whom were hopelessly running after the vanishing locomotive. He remained there until these dwindled to the size of distracted ants, wandering aimlessly about a ruined hill, and then he returned to the cab, where Jo still remained as

"I say, old man," cried the young American, speaking loudly to make himself heard above the roar-and rattle of the on-rushing engine, "This beats anything I've struck in China yet. Isn't it the greatest bit of luck in the world? And isn't it fun, running off with a locomotive? I never before stole anything worth speaking of, and I'm glad my first burglary is something worth while. I don't suppose it comes under the head of burglary, though. Perhaps we'd

be called sneak thieves, only I hardly like the sound of that either. How would highwaymen do, or stage robbers, or land pirates? That's it, Jo, we are land pirates. We've just captured a ship and made her crew walk the plank and now-

"I'm hungry," interrupted the young Chinese, who never having read any pirate stories, didn't know what his companion was talking about, "and thirsty," he added, looking longingly at the faucet of the tender's water tank.

"So am .." shouted back Rob. "Make your slave there slow down a bit, for we're in no hurry anyhow, and I'll get you a drink."

As the speed with which they had started began to slacken, Rob suddenly added:

"Great Scott! There's another thing I hadn't thought of. Stop her, quick, Jo. We've got to cut that telegraph wire, or they'll run us off the track at the first station. What a chuckle head I am!"

Before the locomotive had come to a standstill, the active young fellow was off and swarming up a short iron telegraph pole near the track. Thus it was owing to his prompt action that a hurry message at that moment clicking into the Ting-Chow station, a few miles ahead, was interrupted after the words "Look out for engine, open——." Probably the sender at Hso river would have added "derailing switch" and then proceeded to give enlightening particulars of what had happened if he had been allowed the opportunity; but he was not and the Ting Chow operator was left to think what he pleased. latter, however, had been warned that for some unknown reason, an engine might be expected from the south, so he side-tracked and held a train of empty cars that was just about to proceed in that direction. Thus he left an open track for our friends and saved them an awkward, if not a disastrous, meeting.

Without knowing whether he had cut the wire in time to prevent mischief or not, Rob returned to the locomotive, got a big, satisfying drink of water from the tank, shucked a lot of coal into the furnace, assumed a new disguise in shape of the cap, jumper and overalls of the engine driver, which he calmly approprinted to his own use, and as the great swaying machine again sped forward over the shining rail he reopened conversation with his comrade.

"How far is the line open?" he asked.

"To Fao-Ting-fu at any rate," replied Jo, "and perhaps some distance beyond."

"That's the worst place between here and Pekin,

"Yes, the Boxers are in complete control of the city. and more foreigners have been killed there than at any other point in this province.'

"Then it won't be good for our health to stop there too long.'

"I should think not."

"How far is it from Pao-Ting-fu to Pekin?"

"About three hundred li."

"That's about a hundred miles, three or four days, if we have to walk it; two days if we can steal a couple of ponies, and less than half a day if we only could carry this old rattle trap the whole distance," mused Rob. Then again speaking to Jo, he said:

"Ask your friend what's wrong with the road be-

yond Pao-Ting." Jo did as requested and after a short conversation with the frightened engine driver, reported that two bridges had been destroyed, one at Ting Shang, about half way between Pao-Ting-fu and Pekin, and the other at Lu Kow, only a few miles from the capital.

"The first would be enough to stop us," said Rob, gloomily. "What other damage has been done?"

"He says, not much, only a rail torn up here and there.'

"Well," said Rob, "we might as well play this game for all it is worth. So suppose we make the operator at the next station telegraph for a car with a dozen or so of rails on it and a gang of track-layers to be ready for us at Pao-Ting. Sign the message with the biggest name you can think of in this part of the country. Say that it is a matter of life or death to the Emperor himself, for this engine to get as near Pekin as possible in the shortest possible time. It will be an awful bluff, of course, but bluffs sometimes work when you least expect them to. At any rate we won't lose anything by trying. Hello! There's a station now and a train headed this way on the siding. Lucky for us that it waited here, for there's ant to be trouble when two trains meet on a single track. I hope it doesn't mean, though, that they have heard of our coming. You run in and do your best with the telegraph man, while I stay here and keep this chap from getting busy. Better tell the agent, or whatever you call him, to rush that train out in a hurry, so its hands won't come rubbering round us for news. See if you can't pick up something to eat

(Continued on page 267.)

capture.

was some time near my fifteenth birtliday when I first thought of running away from home. I was led to this by what seemed to me uncomfortable experiences, one of which was a two-acre patch of potatoes and another of onlors in which I was expected to spend a great deal of my time during the long, hot summer days.

There was a field of very weedy corn near the potato patch, and I was expected to engage in continual warfare with those weeds until they were exterminated, when a new crop would immediately take their place. Then there were chores of various kinds that fell to my portion every day in the year. I had three cows to milk, and one of them was you might talk about wanting to change a "kicker" of the most pronounced type. She was one of the causes that finally led me to determine to leave my home, for she kicked me over one day, stepped on the skirt of my coat, and bathed me in a pail of her own milk I had Just drawn from her udder. Two city girls who were visiting at our house witnessed the occurrence, and their shouts of laughter caused me to adhere to a partly formed resolution to become an exile from home.

Farm life had never been agreeable to me, and it became less so when I one day secured possession of a book with a bright yellow cover, entitled "Roger of the Red Hand; or, the Terror of the Trail." I read in this book of a man whose boyhood had been similar to my own. He had been made to hoe corn and weed onion beds and feed pigs on a farm, and he had been but fifteen years old when he rebelled against such tyranny. and ran away from home in the dead of night, accompanied by five other boys.

They had outridden, outrun and outwitted the six fathers and a host of other relatives who had pursued them for nine days and nights, and they had gone to the Black Hills, where they had organ-Ized themselves into a band called "Menof the Red Hand," each of them painting the right hand red. Roger was the chief of the hand, which led a life of luxury and blissful laziness, each of them having discovered a gold mine of fabulous value. Their chief diversion consisted in killing Indians, in which pleasing pastime Roger of the Red Hand had earned his title of the "Terror of the Trail."

I had full confidence in the truth of this the part of my parents should come to an end that day. I could think of but can of fruit, some cold meat and the one boy likely to join me in my flight, cookies and ple set apart for me. I carand he was my cousin who lived on an ried them up to my little room over the adjoining farm. His name was Amina- kitchen and put them with the other dab Dill. Some inconsiderate person had things I was to take. My voice trembled nicknamed him Dab in his Infancy, and a little when I bade father and mother Dab he had been ever since, to his in- and my sister Nellie good night and went finite regret.

Dab Dill was a very lazy boy. My

covered book had been a day of trial. fortunes. Later in the day an old white mule I was riding to mill was treacherous enough to kick up its heels while we were fording a muddy little stream, and the grist and I went into the air and came down in three feet of muddy water with a green scum over it.

The cow before referred to kicked me over again that night, and I felt that the time of my departure was near at hand. When all the despised chores were done, I ran over to Dab's house and carried him the yellow-covered book. I told him of my plan and asked him to join me. The next night Dab came over to our house. We went out into the barn, and Dab said with great enthusiasm:

"Hooray, Ted! I'm with you! I'll be Roger of the Red Hand!"

I had intended being Roger myself, and I told Dab so.

"Oh, your name is good enough as it is," said Dab. "Edward, or Ted, is a first-rate name. If you were named Dab

Finally we drew straws to decide which should be allowed to call himself Roger. Dab drew the longer straw and I relinquished the name to him, but I changed my own to Edwardo. We agreed to start within forty eight hours.
"I'm tired of being a slave," said Dab.

"And I am never going to tie myself down to the drudgery of farm life," I said.

"I tell you what we must do, Ted," said "We must send our folks five or Dab. six thousand dollars to kind o' pay them for losing us. I s'pose they really have some sort of a claim on us until we're twenty one, although Roger of the Red Hand does not intend to be held by any such claim. Still, it would look well and make them feel ashamed of the way they have treated us if we send them, say, ten thousand each."

I finally concluded that perhaps ten thousand would perhaps be a fair compensation for the loss of my services, and agreed to Dab's proposition.

It rained nearly all of the next day so that I had ample time in which to gather together my few possessions and complete my preparations for flight. My conscience smote me often during the day when I thought of the grief into which I was about to plunge my family. It was baking day, and my mother made one of my favorite apple turnovers and some ginger cookies of which I was very fond.

of the brownest cookles to take for your dinner tomorrow when you go over to the south field to work," said mother.

and took therefrom a loaf of bread, a dry leaf or twig. Finally Dub said: up to my room.

A flight of stairs led from my room to father said that there were times when the kitchen, and I could easily have gone it really seemed to him that Dab was out undetected in that way, but Roger of lazier than I. We were of the same age the Red Hand had escaped by lowering and had been boon companions all our himself with a rope from the window, and I resolved to do likewise. I there-The day I finished reading the yellow- fore made a rope out of the sheets and

asked.

'We must put miles between us and our foes ere the sun rises," said Dab. remember that it must be death before

It had stopped raining early in the evening, but the road was muddy and the branches of the trees dripped water as we walked under them through the woods. Dab had an ild pistol, but he expressed his doubts in regard to its ability to "go off" even if foes menaced us.

I had left a brief note on the stand in my room. In this note I had generously forgiven my parents their treatment of me and had bade them good-bye forever, promising, however, to see that they did not lack anything that would add to their comfort in their old age and that a large remittance would soon reach them.

"It's as dark as a stack of black cats, isn't it?" said Dab as we blundered along in the woods.

It was really intensely dark, heavy black clouds hiding the stars and there was no moon. The candle in Dab's lantern soon burned out, and after that we fell in the mud a good many times and both of us walked into a pond. Then my rifle caught on the branch of a tree and was discharged with a roar that made the dark, still woods ring and frightened us almost out of our senses. We were near a farm house at the time, and when the gunshot "set the wild echoes ringing," a window was raised and a man's voice cried out harshly:

"Sic 'em, Tige! Take 'em, Maje! Ketch

We heard the growling and barking of dogs. Roger of the Red Hand gave a after that.

dogs. Roger of the Red Hand gave a wild yell and I another as we took to our heels and ran with all speed down the road. Neither of us stopped or spoke until we had gone fully a mile; then Roger of the Red Hand said in such a strange, gasping voice that I felt sure he had been crying:

"Pooh! Who is afraid of dogs? I ain't."

"Neither am I," said I. "I never saw the dog yet that I was really afraid of." It now began to rain very hard again, and the darkness grew more intense. We ran against trees and fences as we plodded on, not knowing just where we were. Our vaunting spirits were a good deal subdued, and the darkness and stillness. subdued, and the darkness and stillness "Hello, Roger of the Red Hand! Is it were very depressing. Roger of the Red Hall with our Brotherhood?" "Brotherhood be hanged!" retorted Roger of the Red Hand as he shook his toward me. "You 'Roger of the Red Hand as he shook his toward me. "You 'Roger of the Red Hand!" me again if you dare!"

"It must be a queer looking pie by this time," I said.

pie in my bun-

dle."

"You are too fussy for one of the Red Hand Brotherhood, retorted Dab.

We were sitting in a fence corner with the rain coming down in torrents. At last we got up and wandered on aimlessly. Suddenly we ran against an animal of some kind lying on 1 the ground. started back the moment my hand touched its dank, warm hide, but Dab stumbled and fell directly across the animal, which rose to its feet with Dab clinging to

its back.
"Oh, it's a horse! it's a horse!" cried

Dab. "Whea! whoa! Stop him, can't

I could hear Dab crying "Whoa!" as Dab had an old lantern, and by its light the horse carried him away in the dark-

With the leader of the Brotherhood "What you got on your hand?" I asked. carried away, the rest of the band be"Red paint," he said. "That's the way came thoroughly demoralized and bereft came thoroughly demoralized and bereft of courage. I ran speedily from the spot, "Oh, I forgot. But aren't you afraid it not knowing or caring whither I went. will poison your blood or make you sick It seemed to me that I ran for an hour. and then, breathless, bedraggled and mud-bespattered, I ran against a house in the darkness. I was now completely "Well, where shall we go now?" I unnerved and in a state bordering on hysteria.

"Help! help!" I screamed. "Let me in! "And Open the door, please, please!"

I kicked against the side of the house as I screamed and, in my frenzy, battered it with my gun stock. A light shone forth from an upper window, the door opened and a cheerful ray of light streamed out into the dense darkness. I ran in at the open door and-a creeping feeling comes over me even now when I

think of it—into the arms of my father!
He grasped me firmly by the wrist, held
the lamp above my head and said sternly:
"What does this mean, young man?"
Mother came forward from her bedroom, threw up her hands and cried out:
"Why, Toddy Carver! Where have you
been? It's nearly three o'clock in the
morning!"
An elderly aunt of my father's who

An elderly aunt of my father's who lived at our house, and who had always said that I would come to a bad end, now appeared with a "log-cabin" quilt around

her.
"Daniel." she said severely to father.

"Daniel." she said severely to father. "I always said that that boy would some day disgrace the family, and he looks as if he had done it!"

I stood with downcast eyes, dripping dejected, tearful, my bundle in one hand and the shotgun in the other. Peter, the hired man, was the last to make his appearance. The moment he saw me he burst into a roar of laughter, clapped his hands to his sides and swayed to and fro in his boisterous merriment.

hands to his sides and swayed to and fro in his boisterous merriment.
"Ho! ho! ho!" he finally said, pointing one finger toward me. "He's been runnin away—an' runnin' back ag'in! I heard him and Dab Dill talkin' it all over out in the barn tother night, but I reckoned they was just foolin. How did you get along fightin' Injuns? You look as if they had fit back pretty hard. Hee, hee, hee!"

No explanation was required from me

me, and I said:

separated for an instant he would cry out;
"O, Ted! Ted! Wait! Where are you?"
We blundered around in the darkness for a long time, not having the least idea as to where we were, but vainly seeking some place of shelter for our chilled bodies and tired limbs.
We climbed fences, fell into ditches, stumbled over plowed fields and bumped against trees. I fell so violently against a tree that my nose bled profusely. Roger felt sure that there was a panther after us, and my own heart beat like a trip hammer when we heard noises we could not account for. We tried to kindle

" WHAT DOES THIS MEAN, YOUNG MAN?"

## The Blue Dragon

(Continued from page 265.)

too, for I'm starving. We'll run up and take in water from that tank while you are gone. I'll make our friend here sabe somehow, what I want him to do.'

Rob's "bluff" worked to perfection. The waiting train pulled out the moment they had passed the siding switch and went on its southward way without carrying a suspicion of anything having gone wrong. Rob got his tank full of water without trouble, and had hardly done so when Jo reappeared hurrying towards the locomotive. He was followed by a boy bearing a basket full of cooked rice and Chinese cakes. The young officer had ordered the few employes of the station about with such a lordly air that they had obeyed him without questions.

"Did they know we were coming?" asked Rob as

the engine again gathered headway.
"Yes," replied Jo. "They had received part of a message telling them to look out for us. Then it was cut off, and they were a good deal troubled at not hearing a word from the south since."

"Good!" cried Rob. "We cut the wire just in time, then.'

"Yes. I told them I saw somebody destroying the line, and said I thought he was a Boxer."

"So I am," laughed Rob, munching a Chinese sweet cake as he spoke. "But how about the message to

"Oh, he sent it off all right. That is, I suppose he did. Anyhow he seemed a good deal impressed by the name I signed to it.'

"What name was it?"

"Yu Hsien."

"What! The Governor of Shan-Si! The big man of all the Boxers? You didn't have the cheek?

"I did, though," declared Jo stoutly, "and if it can't get us what we want at Pao-Ting, there isn't another name in all China that can."

They were barely out of sight of the station before they came to a bridge across a small river. Here, as the telegraph line was strung on it within easy reach, the locomotive was brought to a standstill, while Rob again tried his hand at wire-cutting. Jo leaned from the cab to watch him, thus relaxing for a minute his close watch of their useful prisoner.

As Rob came back, calling out: "Let her go again, I'm aboard," Jo turned to give the necessary order, only to discover to his consternation that the engine driver was nowhere in sight. In vain did they search through the cab and its tender, in the water tanks, and even under the coal. In vain did they look up and down the track at the bridge on both sides, even staring down into the water fifty feet below them. The man had disappeared, so far as they could discover, as absolutely as though the ground had opened and swallowed him.

"Well," remarked Rob, in a melancholy tone, "that beats anything I ever experienced. We certainly have got the old wagon to ourselves now, and the question is, what shall we do with it?"

"I say, run it," replied Jo. "I've watched him until I know how to start and stop, and how to go slow or fast. I'll do that part if you will keep up the fire. and I don't believe there is anything else to be looked

"All right," agreed Rob, "go ahead. I don't like it and I expect we shall come to grief; but I can stand it if you can."

(To be continued.)

#### Caesar Rodney's Ride 👺 A Story of Independence Day By FRED MYRON COLBY

THE ride of Paul Revere, so beautifully sung by Longfellow, was not the only great ride of the Revolution. There was another still more important than that; it was the ride of Caesar Rodto Philadelphia, to save the Declaration of Inde pendence. It is quite as historic as the other, and is an interesting episode that should be familiar to every young American.

Caesar Rodney was a member of the Provincial Congress from Delaware, and probably was the most important citizen of that little state. He was not only a delegate, but at the same time he was President of the rallying committee of the colony and a brigadier general of militia. It thus happened that while the momentous question of independence was being discussed by Congress he was absent in the southern part of the state raising and drilling volunteers for the coming struggle.

The two other delegates from Delaware, Thomas McKean and George Read, were both in Philadelphia, but they did not agree. McKean was strongly in favor of the Declaration, but Mr. Read at this time was opposed to it, not from any lack of patriotism but as a matter of policy. Nor was Mr. Read alone in his opposition to the measure. Quite a number of the delegates, who were ardent patriots, did not believe in separation at this juncture from the mother country. Four of the seven delegates from Pennsylvania were opposed to the Declaration of Independence, but Franklin and John Adams prevailed on two of them to absent themselves from Congress. This made the Keystone State favorable to independence. As McKean and Read made it a tie it was necessary to have Caesar Rodney's vote to carry Delaware.

Benjamin Harrison, of Virginia, presented the Declaration of Independence to the Continental Congress

Corporate 1904, by Waldon Fawcett.

SECRETARY SHAW SIGNING THE PANAMA CANAL WARRANT

on Monday, July 1, 1776. On Thursday, July 4, Congress was to vote upon the question. Before that time Caesar Rodney must be found and informed so that he could be on hand to vote for freedom. The messenger found him in Sussex County in the southern part of the state, more than eighty miles from Philadelphia. He had sixteen hours in which to reach Congress.

## Boys of Naples A Series by Minnie J. Reynolds

No. II—The Boy Fisher

Naples is a great fishing town, ower quarters seldom eat meat. The people in the Fish is generally the only flesh they taste from one year's end to another; so there are a great many fishermen, most whom live in the Santa Lucia quarter. The fisher-men's sons sell the fish their fathers catch, and, as they grow older, go out in the boats with the men. This boy is carrying home his father's fish traps from the shore. They are wooden traps, made on the principle of a rat trap, very easy to get into, but impossible to get out of. The basket under his arm is the one from which he sells his fish. He wears the typical fisherman's cap of Naples.—the heretta. This is really the Oriental fez, for in Naples one begins to tread the outskirts of the Orient. All the fishermen wear the heretta, and as it is usually red it adds much to the picturesqueness of the streets. A fisher-man's beretta is quite a treasure box. Four things one will invariably find in the long, hanging end—a pipe, matches, a mass of clear stubs, and a card on which are stamped the numbers he has played at the lottery that week. The clear stubs furnish his smoking tobacco. He buys them of another boy, who makes a business of gathering them from the streets. The fisherman chews them into a mass, and then puts the wet lump into the end of his beretta to dry.

Rodney immediately ordered his horse saddled and started on his journey northward. He rode all the hot July night, pausing only long enough for his black charger to drink and breathe occasionally. It was a momentous ride. That solitary horseman, galloping past farm houses and villages, and fording rivers, carried the destinies of America. It was this thought which urged him on through all his wild journey to the north. He must be there in time to vote for independence.

When the sun came up hot and fiery that sultry Fourth of July morning, and the delegates began to gather in Independence Hall, Caesar Rodney was still many miles away. But he urged his jaded horse onward with determined will, and the dust clouds showed where the patriot made his way along the summer highways. It was one of the most sultry of summer days, but neither heat nor weariness deterred the brave Delaware patriot. On and on he rode till, when his faithful horse was almost spent, he could see in the distance the chimneys and roofs of Phila-

It was a little after noon when Caesar Rodney reined up before Independence Hall. Would he be in time to vote? Yes, Congress was still in session. and the colonies were voting one after the other. His friend, Thomas McKean, met him at the door, and all booted and spurred, tired and dusty as he was, the belated delegate entered the historic hall.

The vote of Delaware was taken. McKean voted "aye" and Read "nay," and then the famous rider arose and in ringing tones gave his vote for independence. "As I believe in the voice of my constitu ents," he said, "and as all fair, sensible and honest men are in favor of independence, and as my owa judgment concurs with them, I vote for the passage of this resolution."

They were strong, stirring words, and they were spoken with force and deliberation. The tide was carried, and the colonies had entered upon a new era They had been in revolution, and now they were to achieve independence. So Caesar Rodney's vote carried his state for freedom, and his historic ride made the union of the colonies possible and assured the future glory of free America.

#### How To Educate The Boy

Not a few fathers hurt their sons and damage the careers of those sons by picking out careers for them. Train up the boy in the way he should go, and then let him choose his own work. In the choice of a vocation, as in the choice of a wife, every young man should be left alone. If he is not worthy of being left alone the parent has grievously injured the boy in the preceding decade of his life. These interpretations mean that I would not educate my boy under a private tutor. I would educate my boy with boys. although not entirely by boys. Boys do, however, educate boys; but a boy who is trained alone is liable to fail in adjusting himself to his membership in humanity. He is to become a brother of the common lot. He therefore should learn early how to adjust himself to his fellows. Neither would I educate my son abroad; he is an American boy. I should be glad to have him get all that is best from the private school in Lausanne or Geneva, but not for one instant would I have his ideals formed by the French master or his methods by the German. A primary note in his character should be the American, although a note more fundamental is the human. He is, as a human boy, to be trained up for service in this great, interesting, new life of our New World.—Prof. Thwing in Harper's Weekly.

MANSFIELD OHIO, HIGH SCHOOL BAND

## Attractions For Boys At The World's Fair

O tour of the world would bring to the vision such an array of sights as may be witnessed at the World's Fair, and it is intended as much for the boy or girl as for the adult. Science, history and romance are combined

in such a wenderful manner as to give novelty to that which is instructive and knowledge with that which is novel. Youthful minds do not readily the of such scenes.

Historic buildings spoken of in the school books are reproduced with relies of their times. The Grand Trianon where Napoleon and the Empress Josephine once lived, Germany's famed Castle of Charlottenburg and the Orangery of Kensington Palace are among some of Europe's contributions, while the old Cabildo at New Orleans, "Monticello," "The Hermitage," and other structures familiar to American history, are seen in replies,

Eight large exhibit palaces are filled with displays; the United States Government has a large structure in which is shown such a collection as has not been seen outside the city of Washington; nearty forty state buildings are on the ground, and a core of foreign nations have payilions. Iesides there is the Philippine exhibit, covering forty acres, and a similar amount of space devoted to the American Indian.

Days may be pent in the foreign payilions, art galleries, exhibit palaces and state buildings and the boy or girl has yet much of the best of the Exposition to

state buildings, and the boy or girl has yet much of the best of the Exposition to see, the sights that most excite their young blood thrilling airship races; the glorious Pike, where the laugh-makers and illusionists have assembled, and the olympic games, where glants of strength and endurance contest for world honors as they did in ancient arenas before kings and potentates.

Lit is a pleasure that every little Americal and whave to visit the famous Crangery, reproduced from Kensington Palace in England, where Queen Victoria spent her childhood, and see the very while being fed drows great the attention of the world, Cyrus That is because to tall railsplitter and The average you while being fed drows great the attention of the world, Cyrus That is because to the post of the world, Cyrus That is because the very little Americal and the famous corrected from Kensington Palace in England, where Queen Victoria spent her childhood, and see the very while being fed drows great the attention of the world, Cyrus That is because the post of the world and see the very while plant is provided in England, where Queen Victoria spent her childhood, and see the very little Americal and the form the famous of the world, Cyrus That is because the very little Americal and the famous of the world and the famous of the world of state buildings, and the boy or girl has and potentates.

Kite-flying is a pastime usually followed only by small boys, but at the World's Fair the little fellow may see grown-up men sailling these craft, made of paper and sticks, according to the latest scientific methods. There will be baseball and football, hammer throwing, running contests, and every other game known to the field or gymnasium.

After the military comps have been visited and the drills of the soldiers seen. after a ride on the Intramural railway and a voyage in a pleturesque Venetian gondola through the Exposition lagoons. after a merry jaunt on the Pike, if the youth longs for more knowledge he may turn again to the main features of the Exposition and see some of the things previously overlooked.

Previously overlooked.

There is the historic Laberty Bell, dear to the heart of every boy. It is a privilege not to be missed to see this relie of the Revolution, for the bell is not often permitted to be taken from Philadelphia. Then there is the log cabin built by General U.S. Grant when the great soldier was a modest farmer near St. Louis, now removed to the World's Pair grounds. Hours may be spent in admiring the beauty of the Cascades and the sculpture grouped about the towering Festival hall. The floral clock, 112 feet in diameter, which records the passing

Exposition Spectacle a Means of Broadening the Youthful Mind as Well as Pleasing the Eye

ence, history and romance are combined in such a wenderful manner as to give novelty to man which is instructive and knowledge with that which is novel. Youthful minds do not readily the of such scenes.

Thistoric buildings spoken of in the school books are reproduced with relies of their times. The Grand Trianon where Napoleon and the Empress Josephine once lived, Germany's famed Castle of Charlottenburg and the Orangery of Kennal Trianon of Kennal Trianon of Kennal Charlottenburg and the Orangery of Kennal Trianon of Kennal Trianon of Kennal Charlottenburg and the Orangery of Kennal Charlottenburg and the State of Missouri has reproduced to the United States of the United States of the United States of the United States are features to be seen.

The Grand Trianon where the Charlottenburg and the Orangery of Kennal Charlottenburg and the Orangery of Charlot

the child.

Nothing has been said of wireless telegraphy, but there will be stations in operation at the World's Fair, and boys and girls may know how it is possible to communicate through the air. There is also an exhibit of radium, the newest discovery of science. In the Palace of Electricity, Thomas Edison, the great inventor, has an individual display which shows how the incandescent light was conceived and perfected by him.

Such entertainment as this is expected to broaden the mind of youth, and the great Louisiana Purchase Exposition as a speciacle for the school boy or girl is emphatically an aid to the schoolmaster.

#### Cy Young and Good Morals

First and last we have had a good deal to say about the premier baseball pitcher

That is because there is a moral in the tall railsplitter and ex-farmer boy.

The average youth would go to sleep while being fed dry theology, no matter how great the attempt to make it palatable. And the good advice that came from a prosy individual attired in a long black coat and white tie wouldn't weigh as

But talk to your boy something like this "Cy Young pitched the greatest game of ball on record. He is old, as men go in the baseball world. He has pitched seventeen seasons. Most pitchers drop out after a few years. Their joints become stiff and

seasons. Most pitchers drop out after a few years. Their joints become stiff and their muscles play out. They hunt for soft jobs as umpires, and when they can't get them they find smaller jobs with minor teams and feel right hadly when they think of former greatness.

"Cy Young started right. He cut out whisky and cigarettes. There was temptation in abundance. It is always waiting for a successful man. He preferred to remain clean, inside and out. It was a matter of business. There was nothing of the goody-goody boy about him. He was a healthy, bright, ambitious American.

"Then he came to his record game. In effect, he played it alone. In nine linnings there was not a hit by the opposing batsimen, nor anything that approached a hit. In the pitcher's box a pair of mighty muscles commanded by a quick brain, were working. There were curves of various kinds, puzzling shoots, and speed that worried the catcher. Not one man on the opposing team reached first base.

"Do you wonder that Boston is tumultuously enthusiastic over Young? He is the most popular, the most talked-of man in that city. He is the biggest man in baseball today.

"It is all because he started right and kept right. He has made the most of the

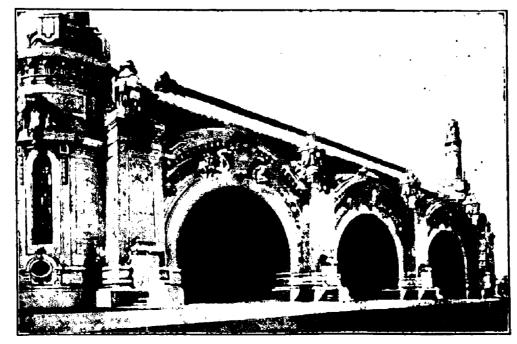

"It is all because he started right and kept right. He has made the most of the grand body that Nature gave him."

Tell that story of Cy Young to your hoy the will at least be interested, and out of it he may get an idea.—Kansas City World.

#### Yale Carries Off Honors

Yale University carried off first honors in the intercollegiate championship contests on Franklin Field, Philadelphia, May 28th. Harvard was only 9 points behind and 11-3 ahead of Pennsylvania. Then followed Princeton, Cornell, Syracuse, Colgate, Columbia, Amberst, New York University and Harvard. Two intercollegiate records were broken and a third was equaled. J. B. Taylor, the negro runner of Pennsylvania's team, broke the record of 49.2-5 seconds in winning the quarter mile race.

The pole vault record of 11 feet 7 inches The pole vault record of 11 feet 7 inches was passed and the new figures placed at 11 feet 74 inches by R. B. Gring of Harvard, H. L. Gardiner of Syracuse, and W. McLanahan of Yale, who were tied for first honors. On the jump-off for medals McLanahan cleared the bar at 11 feet 9 inches, but these figures will not stand as a record, because they were made after the event had ended. The record equaled was that for the half mile, 1:56 4-5, and was done by E. B. Parsons of Yale. Arthur Duffey failed to enter the 100-yard dash with Shick of Harvard. With Duffey out Shick won the 100-yard dash easily in ten seconds. He also won the 220-yard dash five yards in the lead. Just as he crossed the tape he fell and injured his leg so badly that he had to be carried from the field. The winners in the various contests were as follows: Half mile run. Parsons of Yale; running broad jump. Stangland of Columbia: 220-yard hurdle, Clapp of Yale; Schoenfuss of Harvard; one mile run. Munson of Cornell; pole vault. Gring of Harvard, Gardiner of Syracuse, and McLanahan of Yale, tied; 220-yard dash, Shick of Harvard; 120-yard hurdle, Clapp of Yale; running high jump. Lowe of Syracuse; 100-yard dash, Shick of Harvard; two-mile run. Schutt of Cornell. was passed and the new figures placed at

# American Boy Day, July 5th, at the St. Couis Exposition

330

Program (Preliminary Announcement)

30

## Wm. C. Sprague, Editor of The American Boy

President of the Day

Assisted by HENRY B. RONEY, Trainer and Manager of "Roney's Boys' Concert Co. of Chicago"

38

#### Part I.—Festival Hall, Exposition Grounds 2:30 to 4:30 P. M.

- 1. Organ Solo—March from Tannhauser, Wagner
  By Henry B. Roney
  - Note-The pipe organ used is the largest pipe organ in the world.
- 2. Address of Welcome on behalf of the Exposition Management
  By Honorable D. R. Francis, President of the Exposition
- 3. Address of Welcome on behalf of Boys of St. Louis
  - By Charlie N. Fenwick, St. Louis
- 4. Response
  - By Jack Skinner, Detroit, Mich., age 11
- 5. Music by Exposition Band
- 6. Introductory Remarks
  By Wm. C. Sprague, Editor of The American Boy
- 7. Salute to the Flag
  Band playing "The Star Spangled Banner"
- 8. Oration—"The Coming Men"

  By Grover C. Aker, Blair, Neb., age 16
- 9. Address—"The American Government"

  By James G. Card, of Central High School,
  Cleveland, O., age 18
- 10. Vocal Solo—"The Deathless Army," Trotere
  By Charlie Lenzen, of "Roney's Boys' Concert Co.,
  of Chicago," age 11, in concert uniform
  - Note-This solo was sung by Charlie Lenzen for President and Mrs. Roosevelt and 500 invited guests last Christmas at the concert given by Roney's Boys at the White House.
- 11. Oration—"The American Boy"
  By Courtland Feuquay, Chandler, Okla., age 14
- 12. Recitation
  - By Albert Cooper, Van Buren, Ark., age 11
- 13. Message from the President of the United States to American Boys
- 14. Singing of Prize American Boy Song and Presentation of Prize
- 15. Recitation—"Deathbed of Benedict Arnold"
  By Earl Stanza, St. Louis, age 16
- 16. Oration—"America and Her Boys"
  By Victor A. Bullman, Bunker Hill, Ill., age 13

- 17. Music by Exposition Band
- 18. Address—"The Heritage of the American Boy"
  - By Harry Steele Morrison, of New York City, Author of "A Yankee Boy's Success," "The Adventures of a Boy Reporter," and "How I Worked My Way Around the World."
- 19. Tumbling by "Tom Robodou's Big Four"
- 20. Violin Solo, de Berceuse of Jocelia, Godard Mazurka Russe, By Benton C. Farra, St. Louis, age 14
- 21. Messages to American Boys from the Governors of all the States and Territories
- 22. Soprano Solo—"Angels Ever Bright and Fair," - - Handel

  By Charlie Lenzen, in choir boy costume
- 23. Address—"The Hope of Our Country"

  By F. Frederick Bliss, St. Louis, founder of the Junior

  American Republic
- 24. Reading of Prize Poem by its Author, and Presentation of Prize
- 25. Singing of "America" by 3000 Boys, to Accompaniment of Exposition Band

500

## Part II.—Pennsylvania Building 4:30 to 5:30 P. M.

Procession from Festival Hall to Pennsylvania Building, led by members of O. A. B., where the boys will pay their tribute of love to Old Liberty Bell. Master Willie Sprague, of Detroit, age 10, will crown the bell with a floral offering.

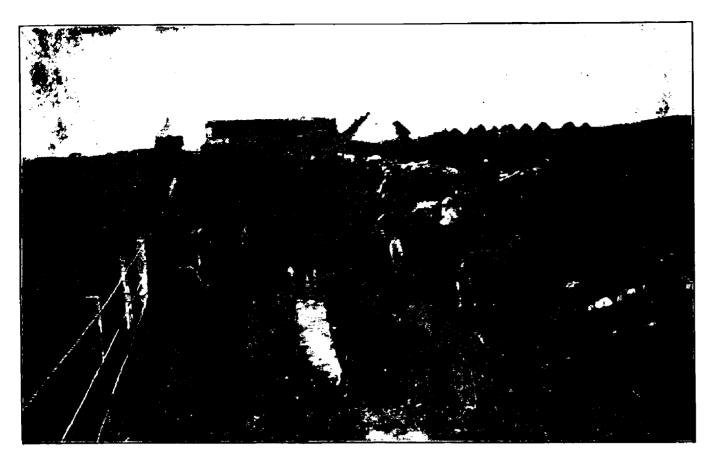

30

## Part III.—Michigan Building 5:30 to 6:30 P. M.

The processio i will proceed to the Michigan Building where those who take a prominent part in the proceedings of the day will hold a reception and meet all boys personally. Address of Welcome by Sec'y Smith of the Michigan Commission.

NOTE---The foregoing program represents everything arranged for up to June 17th. Any change will be in the way of adding further attractions.

## Where The Ponies Come From

WAY to the north of Scotland lie the group of islands in which the diminutive horses, commonly called Shelties, have their home. The Shetlands, to give the islands their proper appellation, are not all inhabited, some of the smaller islets being used merely as pasturage for a few sheep. There is little to attract either the agriculturist or the merchant, so progress is but slow; the islanders till their land by very old-fashioned methods, and many of them still have recourse to barter as a means of obtaining necessities.

To the lover of the beautiful and the artist there is much to charm. Some, perhaps, would describe the islands as barren -but what barrenness! the country, though absolutely destitute of trees, is so varied in the nature of the scenery that their absence in no way detracts from the general beauty of the landscape. Countless tarns, streamlets, and lochs all serve to make the coloring of the heather-covered hills and the gloomy tints of the moors stand out in pleasing contrasts, while near the sea bold cliffs tower in rugged beauty over the blue waters, whose waves dash ceaselessly against their rocky sides. Overhead numerous sea-birds circle around on their way to the nests they have built on convenient ledges out of harm's way. The islands are divided by narrow straits, in which the tides are very rapid and often dangerous, and it takes all the canniness and caution of the Shetland fishermen to

guide their boats into the voes—long arms of the sea—which intersect the islands in all directions, making natural and safe harbors for the seafarers and their craft. The little ponies who are natives of Shetland, with their rough, shaggy coats, flowing manes and tails, seem somehow to suit their wild, rugged surroundings, and the groups of them that are scattered about seem to add the necessary life to the landscape.

Perhaps it is a question of the survival of the fittest that makes these little creatures so very small, as horses of a larger type would be useless on the boggy moors or on the stony hillsides. Brand, the historian, in a book published in 1701, wrote: "The coolness of the air, the barrenness of the mountains on which they feed and their hard usage may occasion them to keep so little, for if bigger horses be brought into the country their kind within a little time will degenerate; and, indeed, in the present case we may see the wisdom of Providence, for their way being deep and mossy in many places, these lighter horses come through when the greater and heavier would sink down; and they leap over ditches very nimbly, year up and down rugged mossie braes or hillocks, with heavy riders upon them, which I could not look upon but with admiration. Yea, I have seen them climb up braes upon their knees, when otherwise they could not get the height overcome, so that our horses would be little, if at all, serviceable there" (in Shetland).

With the exception of a few sheep farms, the greater part of the islands are occupied by crofters, and these, being but poor folk, cannot afford to give much feeding to their ponies, so these hardy little animals run wild in herds on the hills or scatholds, picking up what food they can find. When the bleak wintry weather comes on they find their way down to the seashore, where they derive a scanty living from the seaweed which grows upon the rocks, or has been left by the high autumn tides and freshened by melted

WAY to the north of Scotland lie the group of snow or rain. At this time of year, too, they will islands in which the diminutive horses, commonly called Shelties, have their home. The warded with an occasional truss of hay.

In spite of this precarious existence, the shelties seem happy enough, and they are extremely hardy. They are possessed of extraordinary strength for such small creatures, being able to carry a man or woman with apparent ease quite long distances. They are not much used for agricultural purposes, and though very docile and tractable, do not seem suited

SHIPPING PONIES

for this work. Their owners use them chiefly for carrying peats from the moors, or for taking farm produce to market. When employed in this manner a special saddle is used, which is locally called a klibber. This contrivance consists of two flat pieces of wood, roughly rounded off to fit the back of the shel-

ties. These pieces of wood are fastened together by two more, which fit diagonally into one another, the top ends projecting. The two protruding ends are used as hooks to hang the baskets on. The baskets are made of straw, and are called caishies. The nature of the ground is so soft and boggy that it would be impossible to cart the peats, but the nimble shelty carries home his master's fuel in safety. Often one meets a small herd of these sturdy little creatures, the caishies on their saddles loaded with peat, and accompanying them a number of picturesque women and girls all busily knitting as they walk along. In former times there were few or no roads in the islands, and the shelties performed all the carrying that went on between one place and another. Even now, with the introduction of roads and carts, the fishermen and crofters find it hard to depart from the old custom.

Unfortunately for the shelty, it was not long before the eagle eye of the coal proprietors discovered

the utility of so small an animal in the narrow seams of the coal mines, and large quantities of the little creatures were bought up and transported to England and parts of Scotland. As the supply was hardly enough for the demand, several years ago some enterprising persons bought up some of the best ponies and started breeding them in large numbers for export. It is quite a pathetic sight to see a big boat load of these little creatures, who have hitherto been as free as air, leaving their home forever. Most of this living cargo is destined for the mines, but some of the best specimens are bought by private persons as riding ponies for children. They are admirably suited for this purpose, as they are most sagacious, and, as a rule, when kindly treated, very good tempered. In the coal mines their value may be understood when the amount of work they do is realized. It has been stated on good authority that each of these little horses travels over three thousand miles during the year, and "shifts" as many tons of coal. It seems cruel to bring the ponies from the fine air of their native hills and moors to the black darkness of the mines; but, though their lot is undoubtedly hard. they are well fed and usually kindly treated, and their drivers are, as a rule, much attached to the clever little steeds, which learn their work with surprising quickness, and give little or no trouble. Owing to the even temperature of the mines they are hardly ever ill, and the popular fallacy that all pit ponies go blind is not the case, blindness only oc curring as the result of accidental injury.

Formerly, Lord Londonderry possessed the largest herd of Shetlands at Bressay and other localities. but he had a dispersal sale some years ago, and Mr. Anderson Manson, who has been breeding ponies for forty years, is now probably the largest owner. In order to supply the demand he always requires to have in his possession several hundred ponies. Most of the photographs illustrating this article were taken

either at his farm at Maryfield or at Veengarth. Nearly all the animals in the pictures are either prize winners themselves or from prize stock.

Shelties are charming pets, and for those who can afford it prove an interesting hobby. It must be remembered, however, that with richer feeding and a more genial climate they are apt to increase in size unless very great care is exercised. It is, perhaps, to guard against this, and as a warning to English breeders, that no pony over forty inches is allowed to be entered in the Shetland Stud Book.

#### The Worth of a Young Man

The following interesting facts concerning young men have recently been published, and give a graphic outline of their worth:

"Over two thousand boys become young men every day in our nation."

"There are 12,000,000 young men in the United

States."
"In line, twelve abreast, they would form a col-

umn two thousand miles long."
"For each to be idle one week is equal to over

two hundred thousand being idle one year."
"Two cents daily from each would send three

hundred thousand young men to college.

SUCH A LITTLE FELLOW!

## The Boy Photographer

FIRST PRIZE PHOTO BY EDISON BELT, PREDONIA, KANS.

#### The Roll of Honor

The number of meritorious photographs re-

#### Queries and Answers

John B. Donovan, Jr., Alfred, Me.—After an examination of your film, it appears to me as though your fixing solution crystallized upon it for some reason or other; perhaps you did not wash it in running water long enough. Robt. Labberton, Salem, N. C.—Photographic Times, New York, Photo.-Era, Boston, or Photo. Beacon, Chicago, Arthur S. Trafford, East Orange, N. J.—By a description of the photograph is meant, nature of camera, lens, and plate employed, length of exposure, size of stop, and name of developer and paper.

#### Made a Camera

Louis M. Schapiro, New York City, must be a rather ingenious boy, for he writes us that he made a new camera for himself, which was patterned after one of the best cameras on the market. As an evidence of his achievement, he sent us a photograph of a large yacht, which was taken with the new apparatus and is quite creditable.

#### The Practical Photographer

Under the above title the Photo-Era Publishing Co., of Boston, Mass., is issuing a series of valuable handbooks on photographic topics, which will commend itself to the amateur as well as the professional. The series is edited by Rev. F. C. Lambert and Thos. H. Cummings. Thus far two of the handbooks have been published: No, 1 being devoted to "Trimming. Mounting and Framing." and No. 2 to "Printing on Bromide and Gaslight Papers." They are bound in paper and are obtainable from the publishers of THE AMERICAN BOY at 25 cents a copy.

#### Food Facts

#### What an M. D. Learned.

A prominent physician of Rome, Georgia, went through a food experience which he makes public:

"It was my own experience that first led me to advocate Grape-Nuts food and I also know from having prescribed it to convalescents and other weak patients that the food is a wonderful rebuilder and restorer of nerve and brain tissue, as well as muscle. It improves the digestion and sick patients always gain just as I did in strength and weight very rapidly

"I was in such a low state that I had to give up my work entirely and go to the mountains of this state, but two months there did not improve me; in fact, I was not quite as well as when I left home. My food absolutely refused to sustain me and it became plain that I must change, then I began to use Grape-Nuts food and in two weeks I could walk a mile without the least fatigue and in five weeks returned to my home and practice, taking up hard work again. Since that time I have felt as well and strong as I ever did in my

"As a physician who seeks to help all sufferers I consider it a duty to make these facts public." Name given by Postum Co., Battle Creek, Mich.

Trial 10 days on Grape-Nuts when the regular food does not seem to sustain the body will work miracles.

"There's a reason."

Look in each pkg, for the famous little book, "The Road to Wellville."

#### Current Comments

The number of meritorious photographs received in this month's competition was unusually large. Particular distinction is due to the following four contestants, whose photographs were among those finally picked out by the editor for the selection of prize-winners: Innes M. Boyd, Brooklyn, N. Y.; Perry N. Trask, Silver Creck, N. Y.; R. D. Von Nieda, Ephrata, Pa., and Miss Sarah Weaver, Plattsburg, N. Y., whose photo, "Evening on Lake Worth," might have obtained the first prize, if composition had not been too regular and, therefore, inartistic.

The remainder of the participants in the competition entitled to Honorable Mention include Ernest Brunke, W. Hoboken, N. J.; V. W. Hutchins, Laconia, N. II.; E. E. Trumbuil, Plattsburg, N. Y.; D. J. Steel, Mapleton, Minn.; H. S. Fox, Detroit, Mich.; A. R. Lamb, Poynette, Wis.; Francis Carraine, Glenside, Pa. Chas, S. Smith, Detroit, Mich.; Geo. P. Dennis, Goldfield, Col.; John Ginbord, Plattsburg, N. Y.; W. Kelly, Hutchinson, Kans.; C. M. Smith, Raltimore, Md.; W. C. Sample, Kingman, Kans. and Chas, T. Gill, Larned, Kans. Wm. E. Johnson, Towson, Md.-Your prints and have a faded appearance; negatives seem to be all right; Leroy Perkins, Nashville, Mich.—Technically your photograph is a success, but it does not appear to be natural; no aged man would sit down and take his comfort in the winter woods. Claye Parker, Lisbon, N. D.—Your "Two Pairs" is indistinct and should be printed more deeply. J. W. Wadsworth, Harbor Creek, Pa.—Lack of detail in your prints is due to lack of density in your negatives; don't take the latter out of developing bath too soon. Sarah Weaver, Plattsburg, N. Y.—Your whites are too chalky. Detail is wholly lacking in child's dress and hat. Bright sunlight made little one squint. Photo would have been a success if it had been taken in the shade. M. B. Randall, East Oakland, Cal.—You have evidently mastered photography from a technical point of view. But. in "taking" full length portraits, be sure to include the whole figure. Theo. Beilharz, Jr., Dallas, Tex.—Your "Sport" is fair, but according to your photo of the Episcopal church, that edifice is in danger of toppling over. This is either due to not holding the hand-camera straight or employing a single

moves the interest in the flowers. A semiopaque vase without a design should, if
possible, be used. It will then show the
stems of the flowers, and add to their
picturesqueness. Great care and artistic
judgment should be used in arranging the
flowers, and they should not be crowded
together, or deep shadows will be thrown,
thus making a harsh and spotty picture.
They must be arranged distinctly, taking
care not to have them too rigid. If an
opaque vase is used, it may be partly filled
with sand and water. The flowers may
then he held in position by sticking in the
sand, or tissue paper may be tightly
wrapped round them and wedged in the
neck of the vase. They must be fixed
tight, or they may move during the exposure, which would spoil the picture. The
camera must never look down, or up, on to
a group of flowers, as it will distort them. camera must never look down, or up, on to a group of flowers, as it will distort them, and will spoil the effectiveness of the design. In photographing them out of doors, no difficulty will be found in planting the tripod firmly; but if taken indoors, the trouble is to get the tripod to firmly bite the floor. This can easily be overcome, after focusing, by slightly tacking some pieces of cork on the floor against the points of the tripod. Flowers may be photographed by day, lamp, gas, electric, acetylene, or flash light. Daylight is preferable, as giving softer half-tones. If possible, they should be photographed indoors in a bright light, as out of doors the light is, except on dull days, too bright, which causes the flowers to come out too white.

The flowers should be arranged about five

SECOND PRIZE PHOTO BY E. W. LEWIS, ANNISTON, ALA.

#### Floral Photography

Many amateur photographers are finding in flower photography a very alluring field of experiment and study, and are producing results that are full of beauty and feeling. The following article by Osborn Thornbery, in the Amateur Photographer, will be read with interest and profit by all who may intend to devote spare hours flower photography this summer and fall:

flower photography this summer and fall:
Flowers form one of the most fascinating branches of study it is possible to make by means of the camera. They may be photographed at home, either by artificial light or daylight, and with a little artistic skill many beautiful effects may be obtained. This is much better than having to trudge miles in a broiling sun to obtain a pretty view. Targe flowers, such as chryspretty view. Large flowers, such as chrys-anthemums, marguerites, lilles, roses, tulips and hyacinths are the best to photograph, as small ones, like violets, cannot be arranged so easily. Light-colored flowers as small ones, like violets, cannot be arranged so easily. Light-colored flowers should be used, as the dark varieties do not photograph well. A dark background, such as a black velvet one, is the best to use, so that the flowers will stand out in relief from it. A background with a design should be avoided, as it will interfere with the arrangement of the flowers. The simpler the background the more effective will be the result. It should be stretched on a frame to remove all creases, as they will show, and should be fixed up about a foot from the place where the flowers are to stand. If the flowers are to be photographed in a vase, one with a simple design should be chosen, as a gaudy design reshould be chosen, as a gaudy design re-

lens which is not adapted to architectural photography. Frank Van Name. Brooklyn, N. Y.—
There is little difference between your p. p. p.
print and gaslight photo; you seem to handle
both processes equally well. Max Griffin, Opelika, Ala.—Your prints are improperly toned.
Print them more deeply and do not leave them
in bath too long. Visit your local photographer
and look at well-toned print.

lect from the window, with the back, and
a large piece of white cardboard should be
light, so as to reflect some of it back on
to the shadow side of the flowers. In lighting the flowers, that which must be almed
at is to obtain delicate half-tones, not
heavy shadows, as they will appear to run at is to obtain delicate half-tones, not heavy shadows, as they will appear to run into the background, thus destroying the effect. The flowers must not be lighted from the front, as this will give them a flat appearance; but one side should be lighter than the other, and the background, being dark, will give the relief. The advantage of using a black background is that the flowers cannot throw shadows on it, where as, with a light one, the shadows will some times appear so grotesque as to utterly destroy the effectiveness.

The greatest care must be taken in focusing, on account of the various positions of the flowers. A small stop should also be used. The exposures cannot, of course, be given absolutely correct without knowing the circumstances under which they are to be taken; but it must be distinctly understood that it is copying, therefore the (Continued on page 288.)

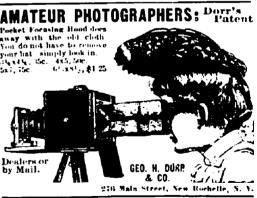

THE AMERICAN BOY offers twelve prizes of Two Dollars each for the best Amateur Photograph received during the twelve months in the year, one prize for each month, also a second prize each month, of one dollar, for the next best photograph, the competition to be based upon the originality of the subject and the perfection of the photograph. The contest is open to subscribers only. Photographs will be returned if stamps are sent for the purpose. All photographs entered in the contest and not prize winners will be subject to our use unless otherwise directed by the sender, and fifty cents will be paid for each photograph that may be used, the prize photographs in any event to be our own, without further payment than the payment of the prizes. Write on the back of the photograph its title, with a description of the picture, and the full name and address of the contestant, who in every case must be the artist who took the picture.

they had chiefly been for many the fields and among the morass of the southern states.

To be candid, as even the side lights of history compel, the harvest of laurels was not over plentiful for either side in the struggle. The fluctuating fortunes of war, mainly of a guerrilla character, after wavering long to and fro, finally brought about a condition of affairs wholly unforeseen, unsought; but not,-thanks to the watchful eye of Washington,-unprepared for. The northern troops, some stationed in New Jersey, some along the Canadian frontier, but most among the Highlands of the Hudson, were now chafing at the intolerable inaction. Besides this, the financial department of the general government had fallen again into arrears; pay and supplies for the troops were lacking, and a general spirit of discontent began once more to show itself. At this time Robert Morris, of Pennsylvania, was the financial minister, and his private purse, which was a large one, often supplemented the states' deficiencies. Still, in spite of his and Washington's generosity, and their piteous appeals to the thirteen "presidents," there were large and growing deficits. In a sense there was a "general government," as the several colonies, after their first coming together by delegates in a Congress, had rather informally perpetuated the limited powers permitted rather than conferred. But the Congress, even after the "Articles of Confederation" were adopted, was advisory rather than mandatory; Corgress could declare to the states what ought to be done, but could not compel them to do what was advised; could pass laws, but lacked the power to enforce them.

So, from this cause mainly, the looseness of the tie binding the several sovereign states into a national whole, the army suffered and chafed. There was at New Windsor no possible pretext for another "Fort The fortifications of West Nonsense." Point were ample. Still some device must be provided to keep the troops from apathy, brooding over their troubles, or even,as in fact happened in another quarter .open mutiny. Washington decided to make a movement upon New York. In May he 1 4d an interview with Rochambeau at Weathersfield on the Connecticut river, with the result that in July following, the two armies, French and American, joined forces and went into camp, side by side, at a little place called "Dobb's Ferry." few miles north of New York, and directly upon the Hudson river. The Americans who had been encamped at Peekskill were

upon the British in New York were being the high officials of government, chiefly. I can imagine this great, simple-hearted made, word came from La Fayette in the with the minister of finance, Morris, at man, relieved for but a few brief hours south, and from the French admiral, the whose stately house he made his head- from the strain of his great responsibility. Count de Grasse, which changed the en- quarters, while the army continued on the relaxing the long bent bow, and for a tire plan. Cornwallis, now in command of the British forces in Virginia, was in a condition (as La Fayette wrote) where a ginia. With consummate tact and discreown officers the intention, and yet at once broke camp, crossed the Hudson, and set out for the south.

WASHINGTON'S HEADQUARTERS, YORKTOWN, VA.

there were to cerned in these calm pages a disposition to be gathered by deal justly with both sides in that unhe Americans, as happy controversy. The partisan writer can hardly ever be strictly just; the dictionary is at his elbow with its ample stock weary months, were upon of adjectives, mostly superlatives, and if he has a hero, the tendency is always to fastnesses of mountain and bespatter him liberally with these. I do not like to say of one for whom my admiration is so nearly unqualified that he "lied," but where is there a fitter word for untruth. I have called some of Washington's strategy "tact and discretion;" probably if I had been inimical to him, or were writing of similar expedients upon the part of one whom I detest, as for instance, Benedict Arnold, these terms of praise would somehow wriggle out of their skin, and hiss as "duplicity" and "low cunning." Let us therefore be just and frank, and use plain, honest Saxon-English. -Washington lied. He deceived the British in New York; he deceived Cornwallis in Virginia, and Le deceived his best friends in the American army. He said that the WASHINGTON'S HEADQUARTERS, NEW WINDSOR, N. Y. Army was taking up new positions the better to assail New York; but the next tion who does not realize that human slav-British did not know what had become of famous of outrages? their "friends the enemy" till the last man of the rear guard had passed the Del- coming in the full foreground, stands vividaware river. This sort of lying is called by forth the illustration of the truth of "strategy."

MOUNT VERNON

dogged the footsteps of this patient host, sacred right, none was more consciwhether on the march, or in most of the entious than he as to the manner in battles, and especially in their cold and which he dealt with these people whom famished cantonments, now appeared to God (as he believed) had committed to his in the best of spirits, receiving not only have given over the pursuit, as if discom- ownership. If masters there must be, none the and of good fellowship from their fited or disgusted at their constancy. At was better fitted than he to be a master; more fortunate allies, but a share in the the head of Chesapeake Bay they were told and because of this and his unswerving good cheer which they had brought with transports, furnished by the French, await- kindness, came the welcome of Washinged them. While great preparations for an assault while at Philadelphia, in conference with Mount Vernon. march through Maryland and Delaware. time laying aside the quiver of barbed ar-

French fleet in Hampton Roads would re- the chronicles of those times inform us, de- how delicious to wander here and there sult in his destruction. The tidings from voted to an almost continuous round of over the broad fields of the plantation; to de Grasse were that he would sail from the gayety; the citizens of the city, then the note the new fields redeemed from the en-West Indies for those very Roads on the most populous and luxurious of any in circling forest; to see the improvements he third of August. It was then past that America, vieing with each other in doing had, while absent, planned and ordered. date. No time was to be lost in hurrying honor to their French guests and feting How pleasant too, after so long an interthe entire force of the allied army to Vir- their own officers. The situation of Ameri- val, to see the growth of trees and shrubs can affairs had manifestly brightened, and perhaps planted by his own hand. These tion the leaders disguised even from their the hopes for the immediate future were all are the delights of the simple rural citigreater than at any other period of the zen, and such were the tastes and inclinawar. Washington left Philadelphia on the tions of this eminent public man, whose fifth of September to embark at Elkton on the Chesapeake. A few miles below the when he could claim a share of privacy town of Chester an express from La Fayette reached him with the information of the arrival of the Count de Grasse with a large number of ships of the line. Washington returned at once to Chester, where Rochambeau was quartered. They had dinner together, arranged their plans, and the same evening Washington continued his journey. Most of the troops proceeded to the south on the transports, but a numher of the regiments of both French and Americans marched overland by way of Baltimore. In this city there was a repetition of the dining and toasting, and the night of Washington's arrival was cele-

brated by a general illumination by the inhabitants. Immediately after daybreak of September 9th, Washington set out, accompanied by an officer of his staff, and by hard riding all that day, was enabled to reach his home at Mount Vernon by nightfall.

With what depth of emotion must Washington have again revisited his beloved home. For six years he had been absent, bravely fulfilling the claim and obeying the call of duty. How great must have been his joy; to see that joy reflected in the sparkling eyes, and illuminating the dusky features of his lowly friends clustering about the portal to bid him welcome to his home. With laggard, halting footsteps the pure spirit of Christian charity has tottered along the rugged pathway of the years; poor human nature, selfish and sordid, baffling her divine progress at every step, and worse than all, more pitiful than all, stronger than all to prevent the coming of a nobler and purer era, to keep aloof peace and good will of man to his fellowmen, has ever been the intolerant apathy, the indifference and the ignorance of even the wisest and best of men. Who is there now living within the boundaries of civiliza-

morning (August 25th), after reveille and cry, the holding by force of innocent and 'pease upon a tren ner," the entire army helpless men and women in bondage, is set forth upon the march westward. The not the cruclest of wrongs, the most in-

Yet in this picture of Washington's home, these serious reflections. Washington was

met and welcomed by his slaves. Slaves! Is not that an awful word? Slaves! and yet this man, wise and good beyond the wisdom and goodness of contemporaries, fighting for freedom, yet looked complacently upon the horde of blacks, his property, and the horrible irony of the contrast never once disturbed or vexed his soul, In common with the common sentiment of his time, Washington not only ignored the claim of the negro to manhood, but actually never once thought of it as a claim. It was a vested right, to be accepted in much the same spirit that the storm and cold and darkness are accepted. Yet, though so appar-

The ill-fortune that seemed to have ently indifferent to the voice of a Washington remained for a ton's bond-people when he came back to

The few days that the chief officers were rows of battle, and luxuriating in a sense enabled to remain in Philadelphia were, as of perfect peace. After so long an absence whole life, save on the rare occasions

and domestic life, had been devoted to great, if transient changes have been their affairs. It was the home of his life of peace once, and long after became so again; but on the occasion of this visit it was in very fact a "war home," a tarrying place on the march, his headquarters between the Hudson and the York rivers. The privacy so keenly have enjoyed was broken in upon

ROBERT MORRIS' HOUSE, PHILADELPHIA

the following day by the arrival of many of his officers; his immediate staff arrived in the afternoon of the following day; Rochambeau came in the evening; a day or two after de Chastellux and his retinue. Mount Vernon was thronged with guests, who were, it is needless to state, entertained with all the hospitality of a Virginia gentieman.

Washington inherited the estate of Mount Vernon from his brother Lawrence, a warm friend of Admiral Vernon of the British navy, after whom Lawrence named the mansion. The main building is very large, and is connected with a long line of outbuildings used in the days of slavery as servants' quarters. It is constructed entirely of wood, and though imposing in appearance as seen from the Potomac, not altogether in the best of taste. The wood is blocked off in such a fashion as to resemble stone, in itself a violation of one of the cardinal principles of taste, which demands truth to materials as an essential. The main front is on the side away from the river; but the river front is far pleasanter. At the present time the estate is the property of an association, whose members purchased it from the owner. Colonel John Washington, a nephew of the general, about the year 1858. It is kept in excellent order, and the mansion contains numerous and interesting relics of Washington. These are freely shown to visitors, who come there from all parts of the world. The house is about nine miles by the road,-an uncommonly poor one, even for Virginia,-but the usual route for tourists is by boat from Washington city.

But let us return to the war record. The duty of the hour manifestly prevented long lingering in any locality, even one so delightful as Mount Vernon; so, after three days of rest and refreshment, Washington and Rochambeau, with the generals of their respective armies, set out to join La Fayette, now confronting Cornwallis upon the peninsula between the York and James rivers, and intent upon preventing his escape by crossing either. To escape by the sea was impossible, as de Grasse, with the entire French fleet, barred exit that way.

Hemmed in upon every side, no alternative was left Cornwallis, but to fortify and defend, as best he could, the position he had chosen in the little town of Yorktown. By the end of the month the place was the American right flank and the French left resting upon the York river.

#### Coffee Catarrh An Unsuspected Chuse.

It is curious how many diseases come from a disordered nervous system which locates disease in some parts of the body and the primary cause can often be traced to coffee which first breaks down the nervous system. A Georgian says:

There is no doubt coffee gave me nasal catarrh. The ceptim in my nose was all gone and the catarrh was eating its way, getting hold of the main bone of the nose It also affected my sight very much.

"My nose was constantly dripping bloody water but in two weeks' time after l sult coffee and used Postum Food Coffee m its place, I could see my way very well, the dripping from my nose stopped and my nose finally got perfectly well and healthy as far as is possible for the ceptim to grow back.

"There is no doubt it was a case of coffee catarrh and the cure was made entirely by changing from coffee to Postum. The rest of my family took up the new drink and Postum relieved my wife and little boy of frequent headaches and what is called 'coffee headache' is not known in our family any more. Our sleep is so much more refreshing.

"We have influenced many people to try Postum and all of them like it better the longer they use it and most of them say it is better than coffee." Name given by Postum Co., Battle Creek, Mich.

Ten days trial Postum in place of coffee often works wonders. There's a reason.

Look in each pkg. for the famous little book, "The Road to Wellville."

from the worry of expedients of war and they had contrived to get far away from himself once more under a roof-tree. all the turmoil of marches and battles, to all possibility of interference by the British rest once more at home at Mount Vernon. in New York had been successful beyond all to hasten, that of the allies. Full as well expectation, and seemed to have set a pat- as Cornwallis, Washington realized the imtern for the many and great successes that minent peril that lay with the ships and followed. The presence of the French land men of Clinton under full sail bearing down forces alone was an aid to the forlorn and the coast to the rescue. Slowly the paralragged Continentals, not to be measured lels were advanced; the British gallantly or weighed till long afterwards. But these disputing every inch of gained ground. But which that first night Washington must troops were not only to be reckoned as so many men; they were trained and disciplined, the flower of the lilies of France. The fleet also was of immense assistance, not as taking direct part in the military events that followed, but that, stationed where they were, at the mouth of the broad rivers in the Chesapeake, they not only wholly prevented all thought of escape for Cornwallis by water, but interposed the barrier of their guns and valor between the besiegers and the chance of succor for the besieged. Sir Henry Clinton, at first imagining himself in sorer need than Cornwallis, had begged of the latter some of his troops for the defense of New York. But by the time the messenger arrived, declining to spare a man, another was close upon his heels asking aid from Clinton himself.

Tardily the idea dawned upon the British commander in New York of the peril of Cornwallis. For the second time in the render or to perish. With supplies entirely history of the American war one British general failed to co-operate with another, who else, in all human probability, would have achieved a success, which might have been as great as the failure that actually happened. Sir Henry Clinton, full of promises to Burgoyne, permitted him to advance so far from the Canadian frontier that he was compelled to surrender. The position of Cornwallis was not dissimilar, except that his own blundering, rather than illusory expectations of aid from New York. led to his disaster. Clinton at last set sail to the rescue of the beleaguered town; but when he arrived off the capes of the Chesapeake the surrender of Yorktown had taken place, and the army of Cornwallis was either paroled, or on its weary way under guard to the west-prisoners of war.

When thoroughly awakened to his danger by the presence of the French fleet. Cornwallis at once meditated a retreat to

WASHINGTON'S HEADQUARTERS, DOBB'S FERRY, N. Y.

the Carolinas. But this course was now impracticable; the York river was blockaded, and now the James was filled with armed vessels prepared to dispute to the uttermost all attempts to cross that river, while La Fayette, now largely reinforced. stood ready to intercept him on the land route to the south. One desperate expedient, and one only, remained-to cross the York river, gather his forces together, and by forced marches to the north elude the allies and ultimately join Clinton. Some completely invested by the allied armies, approach to a beginning of such a venture was made by Cornwallis, but now the very the war was over. elements seemed to conspire against him; his boats were driven ashore by a terrific storm that suddenly arose, and the attempt escape in this direction was sullenly abandoned. A glance at any map of Virginia will show at once Cornwallis' dilemma. There was now no hope for him exbeen at first greatly extended; he now drew these in, abandoning the exterior line of earthworks and strengthening the inner, awaiting there, pent up within the narrow confines of the shabby town, whatever measures the allies saw fit to take for its capture. The American engineers set immediately to the task of constructing parallels-protected ditches-by which, under cover of the earth they threw up as they advanced, the sappors prepared a safe and near approach for assaulting parties. Siege guns-trivial affairs compared to the ponderous and powerful ordnance of to-day, were gotten into place behind strong parapets-the very outer lines abandoned by Cornwallis—and soon a torrent of missiles began raining upon the wretched town. Governor Nelson, of the State of Virginia, himself a volunteer at the head of his militia, pointed out to Washington a fine mansion in the heart of the little city, advising that the gunners try their skill in that direction, inasmuch as he believed (which was the fact) that there Cornwallis had his headquarters. The counsel thus given was as disinterested as it was cunning, for that mansion was Governor Nelon's home

> While the siege-begun on the sixth of October - continued. Washington's headquarters were in the field; his war home a big marquee on a slope at the rear just York City, on May 28.

Everything had conspired to assist the beyond range of the British guns. It was public service. Pleasant indeed must the Americans in this supreme juncture of not till at last the British flag fluttered The stratagems by which down from the ramparts that he found

To delay was now Cornwallis' chief hope;

THE TEMPLE, NEW WINDSOR, N. Y.

all their endeavors were futile; the alternative came all too quickly, either to surcut off, and famine imminent; in an exposed and untenable position, shot and shell hurled with deadly accuracy into their faces-what a. ernative was left but surrender? Yet they fought on with all the heroism that comes so natural to British blood, east or west of the Atlantic, fought till redoubt after redoubt fell, stormed and carried by the allies at the point of the bayonet. At the last, and only the very last extremity, Cornwallis called for a truce. With wistful, anxious eyes he had long scanned the blue horizon for the signal that had been agreed upon announcing the arrival of Clinton in those waters. It was in vain; from the far verge of the horizon no signal smoke stained the bright blue of the October days. With a heavy heart indeed Cornwallis addressed himself to the unwelcome task of arranging for capitulation. On the morning of the 17th an armistice was roposed with a view to surrender. The conferences that ensued were prolonged until the 19th, on which day of October, 1781, the British under Cornwallis, to the number of about seven thousand men, surrendered to the combined American and French armies under Washington.

The task set for him in the south having thus been so signally successful. Washington's footsteps were once more towards the banks of the Hudson river. He was as yet unaware how forcible the blow had been to the proud Lord North, whose tenacity of purpose and devotion to the supposed interests of his king had till now never grown weary. Washington knew that the British still possessed powerful armaments in America. Having detached a considerable body of troops to the aid of Greene, hard pressed in the Carolinas, the rest of the Continental forces were ordered to resume their former position among the Highlands of the Hudson. By slow and easy marches they made this long journey, while the shouts and plaudits of the people hailed them in every town and hamlet as they passed along, echoes of the watchman's cries in Baltimore and Philadelphia: "Twelve o'clock, and all's well, and Cornwallis is taken."

Washington, the prudent strategist, might yet feel it a duty to prepare for other campaigns, but the people knew that

## The Story of Arthur F. Duffey's Triumphs Over Old World Champions Told by Himself

Since I had done considerable sightseeing during my short stay in the lowlands of Scotland, and as I had almost
entirely let up my training, when the
day draw near for the Ranger's Sports,
which were to be held at the celebrated
librox Park, I must admit that I became
little worried, for upon returning to
Glasgow, billed all over the city were
great posters about "The Grand International Handleap." At once I observed
that the Rangers, noticing the great interest that had been manifested in the
previous sprint at Ayr, and profiting by that the Rangers, noticing the great interest that had been manifested in the previous sprint at Ayr, and profiting by this knowledge, had added the same race with some of the marks changed a trifle. I saw here an opportunity to even scores with Westney, my conqueror at Ayr, and I hoped that it would be possible for me to repeat my Edinburgh performance.

A fine day dawned for the Olympian sports of the Rangers Athletic Club, and although I have competed in many con-

although I have competed in many con-tests both at home and abroad. I feel tests both at home and abroad. I feel justified in awarding the palm to the Brox meeting as the greatest athletle games in which I ever took part. My friends, desirous of seeing me hattle against the many foreign champions, were all present with American flags to cheer me in my difficult task, and, complying with their requests. I were a little attle American flag upon my running iersilk American flag upon my running jer- delightful little speech Lady Primrose

speed. It was undoubtedly one of the fastest crowds of sprinters ever gotten together, and after winning my heat I realized that in order to win the final it was necessary to run as I had never run before. Nevertheless, I was confident, Breathlessly we awaited the crack of the pistol and, all getting away at the sound pistol and, all getting away at the sound of the gun like one person, we fought the entire way. Without any exception it was the hardest race I ever ran; but as I was in my best form I gradually wore down my opponents and won by a close margin. It was probably one of the happlest moments in my life, and as I returned to the judges' stand I was announced that I had broken all previous Scotch records by going the distance in nine and four-fifths seconds on turf. But the best part of my victory was yet nine and four-fifths seconds on turf. But the best part of my victory was yet to come. I was escorted by the chairman of the committee to the invited guests' stand, and there had the honor of being introduced to the Lord Provost of Glasgow, Lady Ure Primrose, and other notable characters. All heartily congratuations in the property of the characters of the characters of the characters. All heartily congratuations in the characters of the characters of the characters. Rey. Approaching the scene of the conservation of the international rest, it was with a read difficulty that we mailly grined admittance to the enclosure, and active the change in the temperature, and although I arrived long before the conservation of the international reads as all my former contests in Scotland as all my former contests in the scotland as all my former co

knew me from former visits, it was amid great handshaking and cheers that I was great handshaking and cheers that I was received at the hotel and on the athletic field. It was a most picturesque spot for athletic contests, being completely surrounded by hills. I was taken up much more by the grandeur of the scenery than by thought of my coming race, which I sincerely wished was over. On the way to the field I heard my little strategy at Pontypridd spoken of on all On the way to the field I heard my little strategy at Pontypridd spoken of on all sides. The whole town was talking of how I beat their popular starter, who was known for miles around as a man who had never let an athlete best him on the mark. Before a fine crowd, most of whom had some over from Pontypridd. who had never to the new of the mark. Before a fine crowd, most of whom had come over from Pontyprid and Cardiff to see the races, we all came to the mark. Completely worn out by to the mark. Completely worn out by my previous day's racing. I faced the starter with the determination to take my chances; but it was with great difficulty that I plodded through the dis-

crossed the Irish Sea to the dear old Emerald Isle.

The journey to Belfast was a wearisome one, and though the crossing taked but a few hours, it was the roughest passage one would care to take. Arriving in Belfast after a bad attack of seasickness, I summoned up courage enough to meet the Irish runners the next day. Unfortunately the day proved a most unsuitable one for sports, yet in a most unsultanie one for sports, yet in spite of the torrents of rain which fell incessantly throughout the day a great crowd of Irish enthusiasts were present to see the Booth-Hall sprint. Fearing crowd of Irish enthusiasts were present to see the Booth-Hall sprint. Fearing that the cold day and muddy track would defeat me. I picked my way through the preliminary heats, and though tired and drenched to the skin, in the final I gradually wore down my opponents and won on the tape in ten seconds breaking the Irish record. Never onds, breaking the Irish record. Never shall I forget the mad rush of spectators my chances; but it was with great difficulty that I plodded through the distance, and after a brush with my opponents I was beaten hadly at the tape. My Their enthusiasm knew no bounds, and showing was most unsatisfactory to the people, for the hest I could do was to receive third. Realizing that my form finally raced with the people lined up on

FINISH OF THE 9 8-5 SECONDS 100-YARD WORLD BREAKING RECORD MADE BY ARTHUR P. DUPPEY. SEE PICTURE OF START IN JUNE NUMBER.

both sides of the track and finish, so that after I hit the "worsted" I was totally engulfed by the surging mob, and only with great trouble did I succeed in getting safely to the dressing room. With the unpleasant prospect before me of recrossing the Irish sea, that night I left the "Ould Sod" and made my way to Bolton, England, racing there on Monday. Though in fine form in this race, I was outclassed, owing to the poor condition of the track and the handicaps I was conceding.

was conceding.

I now felt that my form still remained with me, and I was confident when I left Bolton and went to Leeds. My stay it. Leeds was one of the most delightful visits of my trip. There, on an admirable cricket course, I again succeeded in smashing the Yorkshire record by winning the handicap sprint in nine and four-fifths seconds. At these sports I also had the pleasure of seeing Robert Baker, the champion jumper, break the world's record for a high jump with weights. In our respective events we posed for the biograph, and the night after the sports we were invited by the management of the theater to attend the performance, and had the unique pleasure of seeing ourselves as others saw us. I remained till the end of the week with some American friends, sightseeing, and the next scene of my endeavors was Barrow-in-Furness, a shipbuilding town in Northern England. The town was gally dressed in bunting and flags in honor of the royal visit of Princess Louise, Duke of Argyle, and other nobility. As I was desirous of seeing the launching ceremonies by the Princess, the sports committee obtained for me a seat in the special stand for the Princess with dukes and earls, and, to a certain extent. I must admit that I felt considerably honored.

The races, which were held in conjunction with the Princess' visit, became the center of attraction after the hunching, and when I came upon the track I noticed in the audience many of the nobility whom I had seen at the hunching. Fortunately I was in fine form, and on a superb track I ran as I had never run before, going the distance in nine and three-fifths seconds, and winning by six or seven yards. As I was materially aided by a breeze in this race, the record was not allowed.

The athletic season was rapidly coming to an end, and the remainder of my races. was conceding.

I now felt that my form still remained

not allowed

The athletic season was rapidly coming The athletic season was rapidly coming to an end, and the remainder of my races at Burnley, Oakengates and Burton-on-Trent were productive of no extraordinary results. At Burnley on a water-soaked track I was hopelessly defeated, and at Oakengates, though I ran a heat in the handleap 120 yards in eleven and four-offthe geograph. In the final I was beaten by my opponents, who had generous handleaps.

After the Oakengates meet I had the In sliver music from its hallowed throat opportunity of attending one of England's greatest horse races, second only to the Derby, and called the St. Leger. While there I saw King Edward, who is a thorough sportsman, and other mem-bers of the royal family, and also met one of America's premier jockeys, Danny Maher, who successfully piloted Rock Sands, the favorite, to victory.

Leaving Doncaster, it was with great pleasure that I looked forward to my last race at Burton, where I ran in the Brewery Sports. Spending a few days in training here, previous to the race, it was surprising to notice what a depressing effect the atmosphere had upon me: this I learned from the inhabitants was the effect on all visitors. Upon inquiring the cause. I was informed that, as Burton was the station for all the larger brewerles, the fumes arising from the vals caused the atmosphere to become heavy caused the atmosphere to become heavy, and thus induced drowsiness in strangers.

Perhaps one of the happiest moments of

Perhaps one of the happlest moments of my life was when I hit the tape a winner in this, my last race, and many of the athletes and spectators present, upon learning that this was my last contest, flocked to my dressing room to obtain from me some athletic souvenir or other before I sailed for America. As a consequence everything I wore went to different athletes to whom I had promised them, and so I departed from England without a reminiscence of any of my hard-fought battles. True, it was rather hard to part with some of these remembrances, for it was with great satisfactions I looked back on my past year's racing, which I consider the most satisfactory period of my career. I now set out for Liverpool, from which place I was to sail on the following Friday for America, eager to see again my native land. The trophies and medals I had won and corefully packed away in my trunk sailed

from Liverpool, September 11th, on the steamship Cymric for New York.

In conclusion, boys, let me add that, while fortune has not been running after me. I find that success has been at my heels more than once during the past year; and though sprinting is one of the minor accomplishments, it is, nevertheless, gratifying to gain some sort of footing, even in the humblest of pursuits, in this great world of achievement. For

## The Liberty Bell

"—That bell, now hanging speechless, dead, Which rang for Freedom, broke, and rung no Philadelphia was built about more;

four-fifths seconds, in the final I was beaten by my opponents, who had generous handicaps.

more:

more:

Broke with the welcome tidings on its tongue:

Broke, like a heart, with joy's excessive note.

Tis well no cause less glorious ere hath rung.

America has no relic of the days of the Revolution more highly prized than the old Liberty Bell, silent since the year 1835, when it tolled its own death knell along with that of Chief Justice Marshall. A great rent came in its side at that time. and the bell has never been recast. Thousands of our American boys will see this historic bell at the St. Louis Exposition to which it has gone on a visit. Its home is in the old State House in Philadelphia. but now and then it goes on a journey, and when this happens it travels in state and hundreds of people gather at railroad stations to see it. This was the case when the old bell took a little trip to Boston to be present at the Bunker Hill day celebration in that city on the seventeenth of June last year. The mayor of Philadelphia es-

cast. It rang on a great many important been uncovered.

may now see above the old State House in seventy-five years ago, and it is, with very slight changes, a reproduction of the tower in which the bell hung when it rang forth its messages of joy or sorrow so many years ago, for it tolled solemnly when men like Washington and Adams and Jefferson and Franklin died, even as it rang joyfully when events that made the nation glad came to pass.

On the bell are the words: "Proclaim liberty throughout all the land, unto all the inhabitants thereof."

It is rather a curious fact that these words should have been inscribed on the bell nearly a quarter of a century before there was any thought of the colonies severing their relations with the mother country. The words were lettered on the bell under the direction of the Assembly of Pennsylvania, and that body had no idea that the words were in a certain sense a prophecy and that they would come to have a special significance.

It is a long time since the old bell hung in the tower of the old State House in Philadelphia, and, when it has not "gone a-visiting" it stands under a great glass case in the State House corridor, and here it is an object of interest to thousands who come every year to pay their respects to it. Many men take off their hats when in its presence, and more than one man woman has stooped to kiss it when it has

been uncovered.

The Liberty Bell was to many one of the most interesting objects at the great Columbian Exhibition in Chicago in 1893, and it honored the Atlanta Exposition by its presence. Whatever the failings of the American people may be, they are not lacking in patriotism. We honor this silent old bell as we honor the fing, and he who would do violence to either would do so at his peril.

#### **VACATIONS**

Those who from experience know how much of pleasure is contributed to the vaca-tion in the choice of a route select the

#### Lake Shore & Michigan Southern Ry.

This is the road which reaches by its famous through trains, or by its direct connections the entire resort country of the eastern, middle and western states, including Lake Chautauqua, south shore Lake Eric country, and its Islands, lake region northern Indiana and southern Michigan, Colorado, Yellowstone country, St. Lawrence River, Adirondack and White Mountains, Atlantic Coast, etc.

#### Ladies and Children are Perfectly Safe

The Inside Inn, World's Fair, St. Louis, Makes Special Provision for Their Comfort and Care.

Comfort and Care.

Ladies unattended, or traveling with their children, find the Inside Inn at the World's Fair an ideal spot in which to stay during their visit to the big Exposition.

The fact that it is right inside the grounds and, therefore, eliminates all the annoyance of crowded street-car journeys to and fro, which, with little folks, is always a source of danger and annoyance, renders it especially desirable as a family residence. The management have taken special pains to provide every facility, comfort and convenience for families and parties, and ladies will be delighted to find that they can enjoy the pleasures and entertainments of the Fair, surrounded by all the comforts and conveniences of home life.

The rooms of this charming hotel, of which there are 2.257, are spacious and airy, many of them being fitted with bath rooms en suite.

The sanitary equipment is of the most modern and complete description absolute.

rooms en suite.

The sanitary equipment is of the most modern and complete description, absolut safety against fire is assured, and everything which money and skill can devise has been brought to bear to add to the comfort and pleasure of the guests.

The rates range from \$1.59 to \$5.50 per day, European plan and from \$2.00 to \$7.00 per day American plan. These rates include daily admission to the Fair in all cases. Iteservations and a booklet with full details may be obtained by addressing a postal to the Inside Inn, Administration Bldg., World's Fair, St. Louis.

## American Boy Day

At the St. Louis Exposition &

See our Editor's letter entitled "Just Between Ourselves," in this issue; also inside front cover page. 🚜 🚜

## Just Between Gurselves

Dear Boys:

Look at the picture on the front cover page this month, and then hear me when I say that no boy in the world equals the American boy in physique and all those good qualities of mind and heart that show out through clear eyes and fine expression, in manly posture and free, independent bearing. These boys look as if they were ready to walk right out of the Picture into any sort of sport or work and excel. You want to know who these boys are. They are the members of General Lafayette Co. No. 3, Washington City, Order of the American Boy. I have traveled much on this continent and in Europe, and after seeing boys of all lands I take off my hat to the American boy. And I am vain enough to think that these boys are just fair samples of the quarter of a million of American boys who read this paper. On the 5th of this month when I face hundreds of these boys in the great Festival Hall at St. Louis I shall be sure that my vanity is warranted. You see my mind WILL run on American Boy Day at the Exposition, now so near at hand.

#### AMERICAN BOY DAY.

As I had given so much space this month to American Boy Day, I hoped to be able to write this page without saying another word about it, but that seems impossible, for there is so much to say on the subject. Let me tell you that on July 4th, 5th and 6th there will be great athletic contests in the Exposition Stadium. One series is for High school boys under 19 years of age and another for Elementary school boys under 12. The contests begin at 10 o'clock each morning. Entries for these contests closed June 25th. so if you have not already entered you cannot compete. I hope you will spend some time in the Stadium each of these days, but don't forget that from 2:30 to 6:30, July 5th your time belongs to the American boy exercises in Festival Hall and the Pennsylvania and Michigan buildings. I expect to make my headquarters on and after July 3d for several days at the Michigan building, and shall be glad to see you between 10 and 12 o'clock on any of these days.

#### MANLY BOYS.

Talking about manly boys, I am reminded that when I was in St. Louis a few weeks ago I had the privilege of seeing the West Point cadets on and off parade. I had seen this best drilled body of young soldiers in the world on several former occasionsnot identically the same boys, but they might as well have been. I saw them at the second inauguration of General Grant nearly thirty years ago as they marched down Pennsylvania avenue that freezing fourth of March, preceded and followed by the admiring glances and the brave huzzahs of proud citizens of a country that could boast such a magnificent body of young men. I saw them years afterwards in daring feats of horsemanship in Madison Square Garden, New York, and then at the Buffalo Exposition, and now at St. Louis. They swarmed in and about the hotel where I stopped and I marked how straight they stood, how clean and well-groomed they looked, how faultless their dress, how polite their manners, how deferential to officers and to the ladies. No matter where they might be standing, whether in or out of doors, when talking to ladies their caps were in their hands and their attitude and manner of address free, yet courteous and respectful. Would that every boy might have a soldier's training-not for war, but for the straight backbone, the clean body, the gentlemanly bearing, the courteous treatment of superiors and particularly of women. Speaking of West Point boys to one of my friends recently he said, "Yes, all this you say is characteristic of West Pointers, but best of all, these characteristics seldom desert these boys when they become men. The West Point officer in our regular army is the highest type of the American gentleman in appearance and bearing."

Do you know, boys, I believe the greatest lack in you today, fine as you are, is a lack of refinement of manner, which we call by various names—politeness, courtesy, gentleness; and a boy can have all these and be a big, brave, honest, true boy; for these same gentlemanly fellows whom I saw deporting themselves so delightfully in society that same aftertion had done feats of valor, on and off their horses, that almost made my hair stand on end, and had one of these boys been my boy, my heart would have been in my throat for him the whole blessed time, for a misstep or a stumbling horse might have meant his death.

#### A WEST POINT STORY.

This brings me to say that with our August numter the serial "Camps and Campaigns of Washington" will have run through six numbers and there end. Immediately thereafter we shall begin the publishing of a splendid serial entitled "My Four Years at West Point," written by a West Point graduate who has become distinguished not only in the military but in the literary world. It contains twentyseven chapters and is a truthful account of the writer's experience from the date of his appointment to the day of his graduation, covering the entire ground; such matters as the qualifications necessary to secure entrance to the Academy, the course of study, hazing, drill, and all the thousand and one

ALL ABOARD FOR ST. LOUIS, AMERICAN BOY DAY, JULY 5TH

things that go to make up the life of the future educated officer of the U.S. Army. I am gathering spirited pictures that will add interest to the story, and I hope every one of our readers will read every word of it.

#### GIVE EVERY BOY A CHANCE

I have received from a boy a very bitter letter, taking me to task because several times in the paper I have called attention to some success achieved by a negro boy. The letter is full of hatred of the negro race and bitterly takes to task President Roosevelt and the whole north, calling some very hard names and in every way snowing bad spirit. The American Boy prides itself on being above sectionalism. If an American boy, be he of the North or South, East or West, black, white or red, educated or ignorant, does something to distinguish himself and earn the applause of others, the pages of this paper are open to the limit of their capacity for a statement of the facts and an expression of encouragement and congratulation.

THE AMERICAN Boy has nothing to do whatever with the race problem, so-called. It is not in the field to settle great economic questions. It tries to keep above party strife and party spleen and hatred, and tries to be just to all boys, drawing no line excepting that between the good and the bad boy, believing that every boy living under the flag has a right to be ambitious, to do good and great things, and to expect encouragement in every laudable effort. Now, isn't this right?

#### ONE NATION. INDIVISIBLE

A Southern boy living in North Carolina writes, asking me to publish his letter: "I want the Northern boys to know that the Southern boys have no hard feelings against them, but that sometimes a hotheaded fellow stirs up my blood. The Spanish war united the sections as nothing else could have done, and no question of the South's loyalty to the Union will ever again arise. It will never be forgotten that the men of the Southern states rallied to the first call for troops." He closes his letter by saying: "Hurrah! for the Union and no more sectional troubles."

I am wondering what brought forth this letter. We have received a half a dozen letters this month from Southern boys something after the tenor of this one. It is strange, but in all the history of THE AMERICAN Boy we have never received a letter from a Northern boy saying one word with reference to sectionalism nor in any way claiming anything for the North in the way of devotion to the Union or pride in its achievements in war or otherwise. Let me suggest to the boys of both the North and the South that the best way to forget past differences is to quit talking about them. We all know that the Southern boys are loyal to the Stars and Stripes. There is no need that they keep on telling us there are no "sections." The Northern boys, I am sure, are not worrying about the loyalty of the Southern boys. Then what is the use of keeping up this talk? Are we not one land? Are we not all happy in that fact? No one in the North loves the South and the Southern people more than I do. I have friends scattered through every part of the South and my visits to the Southland have been the most delightful experiences of my life. And I have friends there

who keep constantly pressing upon me the statement that the South is loyal. I did not know there was any dispute about that. If there is anything that will raise a suspicion of a man's sincerity, it is the constant repetition of the cry that he is sincere. Come now, boys of the South, let's drop the subject. This country was made one by an awful war in which your fathers and mothers and ours of the North suffered enough for us and for all generations to come. We may misunderstand one another in some matters, but nothing will ever arise, I am sure, that can divide North and South as in the early sixties. So, let us quit talking about it. If our fathers had a difference in the past and have shaken hands and pledged their friendship, what is the use of our keeping alive the memory of the quarrel? I love the Southern boys. I know hundreds of them, some of them personally, and there are no better boys in the world. Let us quit looking backward.

#### THE SHUT-IN BOY

Among the letters that I receive every day there are always some that bring a feeling of sadness,letters from poor boys, boys who are sick and confined perhaps for all their lives to their beds, boys who are discouraged. Some of the saddest letters are letters written by grown-ups in which they tell about boys who have been unfortunate and ofttimes ask aid. Here is one from New Jersey, in which a mother writes about her sixteen-year-old boy who has been confined to his bed for eleven years troin spinal trouble, and has not the strength even to sit up. The boy is fond of reading and the mother wants to know if we can not send the paper to him free of of charge. Now, ninety-nine out of one hundred of you would say, "Of course you will do it." but in a few hours I shall pick up another letter pulling even harder on my sympathies than this one does, and then of course I am bound to do it again. Several years ago we gave it out publicly that we would furnish THE AMERICAN BOY free of charge to every "shut-in" boy in America. You cannot imagine the result. Our mails for weeks and months were filled with the most pitiful stories of suffering on the part of boys that you could possibly imagine,-letters written by physicians, by mothers and fathers, by brothers and sisters, and by the boys themselves. Hundreds upon hundreds of cases immediately came before us to be passed upon and ere long we found ourselves carrying an expensive and a harrowing burden. The time came in the history of THE AMERICAN Boy when we had to economize in order to successfully conduct the magazine for those who paid their money for it. There came a time when we had to tell the great army of 'shut-ins" that we were compelled to stop sending the paper, and still requests continued to come; even now, although we have repeatedly stated through our columns that we are unable to furnish the paper free of charge, the calls are frequent. We are just waiting for some Carnegie, or Rockefeller, or Helen Gould to say to us "Here is \$100 or \$500, or \$1,000. Give THE AMERICAN BOY to as many 'shut-in' boys as you can for that amount of money." We are ready to meet any such philanthropist half way and will give the paper at below cost. This offer does not apply to a single subscription, but to wholesale liberality such as suggested. There are several cases where good men are doing this very thing, as in Denver, where through the liberality of Judge Lindsay and several of Denver's rich men all the boys who come before the Delinquent Court are given subscriptions to THE AMERICAN Boy as an inducement for them to do better in the future, and the result is surprisingly good.

#### THE POOR BOY

A Cleveland boy, in a little confidential talk with us, says he is fourteen years old and the oldest of seven children, that his father is sick in bed all the time and that there is nobody carning anything for the family. There is a small income on which the family is just able to live, and he cannot afford to pay a dollar for THE AMERICAN BOY, much as he wants it. He expects to graduate from the public school in June and then "go to work for the rest of his life." It would seem to me that if this boy were really in earnest about wanting THE AMERICAN BOY he could induce some other boy to subscribe and in that way receive sufficient in the way of a commission from us to enable him to receive the paper himself for at least six months. The fact is we would rather that he would get another subscriber and take his commission in a subscription for himself than to simply send us one dollar for his own subscription, because we would rather have two readers than one. There certainly ought not to be a boy in a great city like Cleveland, and an intelligent schoolboy like this boy is, judging from the kind of a letter he writes. who cannot induce some other boy to subscribe \$1.00 for the best boys' paper in the world. There is no excuse for any boy in a city going without THE AMER-ICAN Boy for a single month. Poverty is not a good excuse, so long as there are scores of boys within easy walking distance of one's home who are not taking THE AMERICAN BOY but would do so if the paper were brought to their attention.

Thus the ment in literary work.

Nixon's History, amateur papers were pub- other way. lished as early as 1812, but it was not until . "At the same time, a three months' trial the close of the Civil War that they were as a reporter in a newspaper office would issued in any considerable number. The demonstrate whether or not a young man introduction of cheap printing presses a few years later heralded the birth of many new amateur publications.

In 1876, amateur Journalism was at the zenith of its popularity. It is said that fully 900 papers sprang into existence that year, which opened the era known as the thaleyon days of amateur journalism.

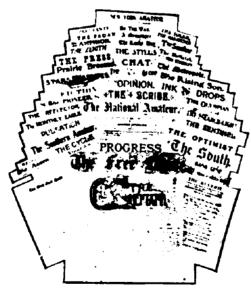

There is so much that is good in amateur Journalism, so much in it that mature minds can approve of for young people, that it is a matter of some surprise to me that the institution has not enlisted the interest of more young people than it has, Still, there are so many other things to attract their attention, that activity in amateur affairs has been somewhat lacking of late. An additional reason, perhaps, is the enforcement of a postal law which deprives amateur publishers of the secondclass privilege hitherto enjoyed by them, and they are now taxed one cent by Uncle Sam for every copy of an amateur paper mailed. Earnest efforts are being made, however, by influential persons for the return of the old rate of one cent per pound. and it is the prayer of every amateur that is fitted for journalistic work, and the fact they will succeed, so that prosperity may reign once more in their amateur realm.

The advantages of amateur journalism enn no longer be overlooked. It is, without doubt, one of the most fascinating, interesting and wholesome pursuits in which young people can enter; for it combines both pleasure and profit, and brings them in contact with other bright minds, broad- inary training for newspaper work is an ening their outlook, and giving them a affiliation with amateur journalism, proclearer insight into men, women and affairs generally.

journalism, no better training school can gains confidence with experience; he exthrough amateur work; for amateur jourism as a training school, it seems rather and confidence in himself to express them. graduated into the ranks of professional experience that lights him almost unconjournalism. thraldom of their early love. I can call | to mind a score or more of these lotuseaters who were active in my day, who are still closely identified with amateur journalism. I remember them as gifted young men, many of them older than myself, and on a much higher plane, young men to be looked up to-poets, essayists, thinkersyoung men who wrote Addisonian English, and whose conversation and correspondence possessed equal charm. And they are still amateurs. Why, bless me, some of them must be over forty!"

Mr. Dunlap is another successful newspaper man, and, like Mr. Stinson, is an Ex-President of the N. A. P. A. Speaking about amateur journalism recently, Mr. Dunlap said:

"I have never had occasion to regret my connection with amateur journalism. Perhaps the time and money might have been better employed, but I am sure they could have been put to worse purpose.

Amateur journalism is a valuable adjunct to school and college education, promoting an independence of thought and action scarcely to be obtained elsewhere by young people. It is a stimulus to mental development to those whose schooling ends with the district schools or a year or so in a high school or an academy. The amateur journalist has an incentive to study and to broaden his mind which professional teachers are not always able to instill into their pupils. The influence of amateur journalism is to make the study of literature, history, politics and the like a pleasure, instead of a task, as it is to so many young people who do not realize the value of these things until after they have passed the school age.

With all the immense sums spent in this country for education, it is surprising how poorly educated many people are in the fundamentals. When I see a poorly written letter from a man who ought to be able all the hobbies engaged in by this, and has been continually in the har- to do better, or when I see a man of standthe American youth, the most ress, while yet finding time to do consider- ing who is unable to correctly frame a fascinating of all is perhaps that able literary work in the magazine field, simple announcement which he wishes inof amateur journal'sm. Stamp During the course of a recent conversation serted in a daily paper, I wish that the person had, in his youth, been an amateur journalist, for in that fraternity he would speedily have learned better.

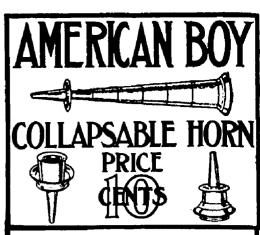

Scores of manuscripts are received daily by professional editors from inexperienced writers, and while a large proportion of traction about this that one cannot shake anything to do with amateur journalism these are meritorious, the writers usually off. Even after one has left its ranks and during his boyhood days. There have been lack the technical skill to construct their articles, and as the editor has neither the time nor the inclination to point out these hankering after the pen that is mightier ties, notably at Harvard, Cornell and the defects, he promptly returns the manuscript with a note, courteous or otherwise, regretting that the article is not available for his publication.

It is here that amateur journalism extends a helping hand to the aspirant. No matter how crude or amateurish his efforts may be, the amateur editor, to whom it is submitted, will give it a careful perusal, and if it contains any merit he will print it. Being non-professional work, it will meet with discriminating censure from the critics. They will point out to the novice the weak points of the story; where it lacks force, and how it may be improved.

Frequently some friendly editor will rewrite the entire story in order not to discourage an incompetent author. While the intentions of the editor are generous, this is not always the best policy, as it is apt to make the author careless, and he derives no real benefit from the remodeled article, unless he is an exceptionally bright fellow and will take the lesson to heart. Thus it is always best to print the story in its original form, as it gives the critics worthy work to do. While sometimes unpleasant, hard knocks profit the young and inexperienced author and spur him on to do better work the next time.

Amateur journalism never offered greater inducements nor promised higher attainments than it does today. Many of its raduates are men well known throughout the country, who have made successes in various vocations, and who all lay particular stress on the benefit derived from their active work in amateur journalism. The following list is given: Charles Scrib-ner, proprietor of "Scribner's Magazine," was a very enthusiastic amateur journalist, and at the present time takes a very keen interest in its affairs; John Wanamaker published an amateur paper in his younger days; Ex-Assistant Attorney General of the United States, James M. Beck, was a famous amateur essayist, and Reed's "Modern Eloquence" classes him with the best writers of today; Cyrus H. K. Curtis proprietor of the "Ladies' Home Journal." published an amateur paper called "Young America" when he was twelve years old; John E. Wilkie, Chief of the Secret Service Department, Washington, D. C.; J. Austin Fynes, General Manager of Proctor's theatrical enterprises: Louis Kempner, Superintendent of Registry Division, Postoffice, Washington; Henry E. Legler, head of Milwaukee School Board; Warren E. Price. publisher of the "Booklover"; Edith Miniter, editress of the "Boston Home Jour-nal"; James J. O'Connell, special writer for

## Putting The Shot By L. E. J. FEUERBACH American, Canadian and Metropolitan Champion, 1903

T ALL athletic games of any prominence will be found among the field events the putting of the shot.

This contest has become popular because it is not confined to any particular class of men. A short man, with training, has the opportunity of becoming as good as the tall man, or the middle-weight as good as his heavier rival. It is a mistake to imagine that it is brute strength that makes a shot putter. It is not. It is rather a combination of training and intellectual studying of effects of movement. In learning to put the shot it must be done from the feet up. The principal thing to learn is the accurate movement of the feet and legs within the circle.

In acquiring the three steps or shifts which comprise the leg action it is not necessary to use a shot or to do any actual

Get the combination of movement down accurately first.

First stand at the back of the ring on the ball of the right foot, using the left toe to balance with. The right hand should be close up to the shoulder, elbow well in to side. Having made up your mind that you are prepared, take a side skip forward of about two and a half feet. This will bring the left toe well up to the mark. with the right leg about two feet behind the knee, well bent. Without hesitating, make a quick turn of the body, reversing the positions of the feet by a lightning shift. At the same time that this shift is being made and the body is coming around, shoot the right arm outward and upward at an angle of forty-four or fortyfive degrees. The arm movement should be timed so that its complete extension will occur at the same time as the shoulders are reversed.

This motion is the secret of success in shot putting and must be practiced assidu-

L. E. J. FEUERBACH

other to finish as near the footboard as possible.

In making the foot movements take care that the feet are not lifted from the ground, as it has a tendency to transform the arm motion into an overhand throw instead of a "put" in an upward direc-

As soon as the athlete thinks he has got ously with two objects in view: one to the various motions down to a fine point acquire speed in the combination and the he may commence handling the shot. This

should be held in front of his shoulder, with the elbow well in.

Don't try right away to make records, but be sure that every put is made in perfect style. Distance will come later. In practice it is well not to put the shot more than a dozen times in one day; rather do a little work with it every day.

Should the arm and shoulder become tired it is wise to stop, for these muscles are delicate ones, and in a weakened condition are liable to a strain.

There are many ways in which the arms and legs can be assisted for this event. Light dumb-bells and chest machines worked with movements similar to the "put" will strengthen without injuring the pliability of the body muscles, while jumping on the toes and skipping the rope will materially increase the power of the lower limbs for the shift.

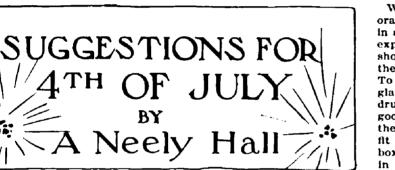

There is one thing that I would like to impress upon the shot putter who is after a championship, and that is at this game "he who hesitates is lost." When once he starts to go he must complete the series of leg and arm movements, which terminate in the shot being delivered into the air.

Everything must fit in and add to the impetus. A halt would mean the loss of previous motion, and consequently of the final momentum.

I would advise all athletes who wish to ex-cel at this sport that if they expect to have complete control over the nerves which command the limbs, smoking and drinking of liquor should be abjured. Care should be taken of the stomach; a bad one takes the vim out of a man. The muscles should be kept warm; cold muscles won't work in the way they are desired by the brain.

If any athlete is trying to attain cham-pionship form in a way which is not in pionship form in a way which is not in conformity with the suggestions herein laid down, he would do well to start all over again and learn the movements I have described and which won me many championships last year.

This method is also the one used by Gray, Horgan and Beck, who have held successively many records at putting the shot.

money.

Attach a piece of twine two by means of a cross-bow presents another

While experimenting in the chemical laboratory, it was found that a match placed in a tube which had been sealed at one end explodes when the closed end is heated and shoots out of the opening. This furnished the idea for the toy cannon shown in Fig. 5. To make this, first buy a short piece of glass tubing at a drug store and have your druggist seal one end of it. Then secure a good-sized cork and cut a hole through the side at A, large enough for the tube to fit in. Cut a pair of wheels out of cigarbox wood, making them about three inches in diameter, and fasten them to the ends of the cork. Point two sticks for cannon shafts and stick them into the cork at B and C. The open end of the tube should be at D and the closed end at E.

To fire the cannon, slip a match into the E, and hold a match at the closed end. As soon as the heat ignites the phosphorus, the match shoots out of the open end of the

After firing off all of your fireworks, you should have a final set-piece to close the exhibition. Fig. 6 illustrates one which works very well.

Mark out the letters upon a board and then with a one-quarter inch bit bore holes about one-half inch apart along the outlines of each letter. Cut enough sticks of punk two inches long to fit all the holes and put them to soak in kerosene. The oil makes the punk burn much brighter than it would in its dry state. When the punk is thoroughly soaked, stick the pieces in the holes. A candle will be found convenient for lighting the punk.

Nall the board to a tree or post and place several cannon crackers in the holes bored near the bottom of the board. When the punk has burned fairly well down light the cannon crackers and blow up the set-piece as a grand finish.

eation season, only a sufficient number remain to perform the necessary work. It is not a free school, for those who conduct the school believe that such a plan would not pro-duce the best results; so every hoy is asked to pay what he can, and whether the sum is a trifle or meets the fixed fee, the boy feels that he is not

the boy feels that he is not the recipient of charity.

In order to give the boys a chance to earn, a number of them are employed at the farm during the vacation season, and the wages they receive are paid over by them to the superintendent of the school, by whom they are applied in payment of the bills for board, tuition and clothing. Besides doing farm work, the boys are employed at carpentering and other tasks akin to the trades, so really nkin to the trades, so really their studies go on during the period of vacation employment, except the work of the school room.
There are 420 acres of farm

land, 160 of which are under cultivation. The balance of the

EN miles from Asheville, where the Black Mountains frown on the beautiful Swannanoa river, is the school that is doing the most to teach the mountain boys how best to use their brains and hands—the Asheville Farm School, conducted under the fostering care of the Woman's Board of Missions of the Presbyterian Church. Nine months in the year it contains 150 boys of all ages. During the other three months, the vacation season, only a sufficient

learn and improve. Some of the students have no thought of eventually making homes for themselves away from the sections from whence they came to the school. Their hope is to make as much of them-selves and their surroundings as the knowlselves and their surroundings as the knowledge they gain will permit. Others have already entered college, spurred on by professional ambition. These boys represent a splendid type of young Americans, the same from whose ranks came Lincoln, Grant, Garfield and McKinley.

Self-denial and sacrifice are Self-denial and sacrifice are everyday companions of the young men. Their efforts recall the stories of boys who studied by the light of the nreplace, or guided the plow with one hand, while the other badden accordance. er held a schoolbook. Incidents of the sturdiest perseverance are plenty. One instance that came to my attention is particularly impres sive as showing the spirit of the average boy of the Blue Ridge mountains.

Several years ago a farmer named Slagel owned a little named Siagel owned a little land and a comfortable home in Buncombe county, North Carolina, Times were hard with him and he was com-pelled to mortgage his home. Before the man had opportu-nity to lift the mortgage he died, leaving a widow and two boys, eleven and thirteen years old. In the most pros-perous section of the country this situation would have been bad enough, but bere, where money is rarely plentiful, and

This trio of mountaineers, the widow and the fatherless, looked fate in the face. It was determined that not only would they carry on the farm and pay off the mortgage, but the boys should have an education. There was no bank account, no savings, but there was a vast store of courage which in the end proved all-sufficient. What would have discouraged most men was accomplished by these boys and their mother in two years' time, and it was done by working every moment possible. The boys paid the mortgage with money earned by cutting and hauling wood from the mountains to the nearest town, where the wood was sold for one dollar a cord. Enough money was thus obtained to buy such of the necessaries of life as the farm did not produce, and enable the older of the two boys to enter at the Farm School and begin getting an education. When this boy finishes, the younger, who is even now working sturdily at the farm, will take his place. The road to success is plain to boys of this stamp. the farm, will take his place. The road success is plain to boys of this stamp.

opportunities for earning it restricted, a more serious situation would be hard to

## How To Tie Knots Every Boy Should Know How

No. 1—The Bowline Knot

boop in which to sit suspended over the side of a ship or from some dizzy point above the deck. The cliff climber uses this knot when lowering a companion down some precipitous

The bowline knot is one of the most useful. It is a knot that will never slip. It is the kind that a suilor makes when he wants a boy of thirty pounds. At a fire in New York City the other day a man who was quickwitted and who knew how to make this bowline knot succeeded in rescuing a family of five persons from a two-story window by means of a rope. Had the man tied the rope in the usual bungling way he would probably not have saved so many lives and might have lost his own because of the time that would have been lost in tying and untying. As it was he made a bowline knot which could be so rapidly made and unmade as that not an instant was lost. Special knowledge becomes extremely valuable in emergencies. The usual knot that a boy makes, or that anyone makes for that matter, when tying two cords or ropes together is what is known as the "granny." This is the very worst and stupidest of knots, it being slack to hold and slew to loosen, whereas the perfect knot should hold tighter the greater the strain and loosen easily. The picture will show you how the bowline knot is made. Practice making it so you will not forget.

Other knots to follow.

The only shots that count are those that hit.—Theodore Roosevelt.

A small boy who lived with his aunt and grandma noticed that the regular black pepper standing noticed that the regular mack papper shaker was filled with red papper. This startled him and, turning to his aunt, who sat next at the table, he said:
"You better not eat any of that red papper, Aunt Harriet; grandma says that red papper

#### Amateur Journalism

(Continued from page 278.)

the "New York Sun"; C. E. Chapin, city ditor of the "New York Evening World"; Juseph Dana Miller, the poet; Burton E. Stevenson, author of "Soldiers of Virginia" and other popular novels; Edwin Markham, author of "The Man with the Hoe"; Thomas A. Edison, and many others were or still continue to be interested in mateur journalism.

One of the best testimonials as to the value of amateur journalism is the sentiments recently expressed by the Hon. John Winslow Snyder, one of the leading members of the bar in Missouri, and who had the honor of being the first President of the National Amateur Press Association.

Mr. Snyder writes: "Whatever I have

JAMES M. BECK FOUNDER OF THE NATIONAL AMATEUR PRESS ASS'N

ever written or spoken to the praise of amateur journalism, I can honestly endorse in the light of subsequent years. It supand minds are broadened; our love for literature quickened; our powers of thought and expression enlarged and our ambitions and self-confidence strengthened. Beside and beyond all this, amateur journalism is so strangely fascinating that the sacrifices demanded are converted into constant joys, and no one of its truest devotees can permanently forsake its altars."

Of no other amateur calling can so much be truthfully said, and if space permitted, I could quote others equally as enthusiastic.

Before concluding these rambling remarks on amateur journalism, I would like to say a few words about the National Amateur Press Association, for it is this organization that has kept amateur journalism alive. It was organized during the Centennial anniversary, and held its first convention in the City Institute Hall in Philadelphia, July 4, 1876, one hundred years after the Declaration of Independence was adopted. Sixty-five representative amateurs were present. The convention was a grand success, and the following efficers were elected, after a hot and spirned contest: President, J. W. Snyder; Vice-Presidents, Richard Gerner, Wm. E. Leaning, George Vertron, Chas. C. Heuman

and Wm. \.inslow; Secretaries, W. T. Hall and E. R. Riale; Treasurer, J. A. Fynes, Jr. The "New England Star" was made the official organ. There has been considerable discussion indulged in as to whom the honor belongs for suggesting the National Amateur Press Association, as there are a number of claimants. Some say it was E. C. Williams, of Portland, Me., but the majority say the honor belongs to the Hon. James M. Beck. In a recent letter received by the writer from Mr. Beck, the latter has this to say:

"Let me add, that the Association does me too much honor in regarding me as its founder. I was among the first, if not the first, to suggest that a convention be held on July 4th, 1876. I think, however, the expression 'founder' is misleading and exaggerated."

Nevertheless, the society looks to Mr. Beck as its original founder. He certainly was the leading light of the organization, and their ever ready leader and spokesman. Twenty-eight years have gone by since the birth of the organization, but Mr. Beck's love for the Association has not waned. The Hon. James M. Beck was born in Philadelphia on July 9, 1861, which would make him but fifteen years old when he organized the National Amateur Press Association.

Mr. Beck is a graduate of the Moravian College at Bethlehem. He took up the study of law, and in 1884 was admitted to the bar, and, through hard work, he soon established a large practice in Philadelphia. In 1888, Mr. Beck was appointed Assistant United States Attorney, but resigned in 1892 to resume his private practice.

In 1896, he was again called into the government service, and was appointed by President Cleveland as United States Attorney of the Eastern District of Pennsylvania. In recognition of his valuable services, President McKinley made him Assistant Attorney General of the United States, which brought him within one round of the top of the ladder in his profession. As a platform orator, Mr. Beck stands in the front rank of America's public speakers. He possesses a splendid voice, choice vocabulary, superb magnetism and graceful gestures. He never fails to hold the attention of his audience from start to finish.

The National Amateur Press Association was organized for the purpose of uniting plies a training of peculiar service and amateur journalists into one body, to enstrength to the thinker or actor in the courage literary work and cement good fel-practical affairs of life. Our scholarship lowship among its members. Another comand minds are broadened; our love for lit- mendable feature of the Association is the

gaged in by the antagonistic parties before the election takes place, as each, of course, is imbued with the idea that his candidate is the best man.

The election takes place on the second The election takes place on the second day, and the real struggle for supremacy now begins, for the various factions are arrayed against each other, and for hours contention is rife. The candidate who has the best orators on his side, however, usually carries off the honors. The election is followed by an elaborate banquet, at which all political rivalry is put aside and enemies become friends. Very little business is transacted on the last day, and it is usually spent in sight-seeing and other amusements.

HAMUEL S. STINSON AN EX-PRESIDENT OF THE N. A. P. A.

Any person who edits, publishes or con-tributes in prose or poetry to an amateur paper, and who resides in the United States or Canada, is eligible to membership in the Association.

in the Association.

Probably the best known amateur journalist is Edwin Hadley Smith, of New York. His hobby is collecting amateur papers and photographs. His collection consists of over 18,000 American and 2,000 foreign papers. The oldest of these papers dates back to 1846. Mr. Smith's collection also includes 325 amateur books and photographs of 450 well-known amateur journalists

Other men who have done much toward other men who have done much toward the advancement of amateur journalism are Anthony E. Wills, Charles R. Burger, John T. Nixon; Samuel J. Steinburg; Tru-man J. Spencer; Warren J. Brodie; Frank J. Martin, Frederic F. Heath, Edwin B. Swift, James F. Morton, Jr., Alson L. Brubaker and a host of others too numerous to mention.

The oldest living amateur journalist is Nathaniel H. Egleston, of New Hampshire. Mr. Egleston was born in 1822, and at the

Mr. Eglesten was born in 1822, and at the age of twelve published an amateur paper called "The Boy."

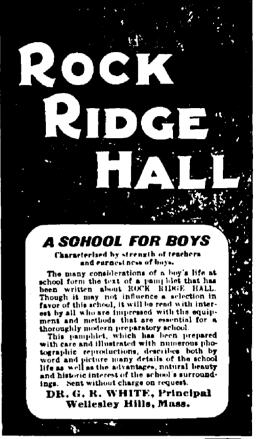

In conclusion, I would say that as time goes on I hope to see the press and public of this country pay to amateur journalism the attention it deserves, for it is to the ideals which the best class of literary work cherishes, that this great republic owes its foundation and its perfect Nation through "ages yet unborn." "ages yet unborn.

> Work was laid out each afternoon for the following day. Three boys took care of the day's meals, three procured wood and two tail must be up an hour before the rest of

Just here I must say that with all his The church had purchased a lake which admirable qualities Jared seemed to harbor some resentment against the sun, for the indignities to which he submitted the poor luminary were remarkable. One morning concert had purchased seven 14x14 army the gun would make him appear to rise at 6 o'clock-the next at 8:30-then at 5:30. also a large mess tent-and there was the However, as a camp, we did not love early rising and no one complained no matter

A table was constructed on three sides of Decatur that two dollars was very cheap the mess tent and here when breakfast was ready the party found seats, each boy bringing his own tin plate, cup, bowl, knife note, meekly asked the best way to make and fork. After breakfast, which generally consisted of some cereal, coffee, bread and a much-bruised Spalding bat. Decatur and butter, with perhaps flapjacks or scrambled Billy broke one or two running records as eggs, morning prayer was read and the they came down a leading residence street camp betook itself to cleaning up the tents, early on the morning of our departure-at arranging the cots and making things shipshape for the day.

The tent I knew best had all the cots side individual boxes mostly made by the boys by side with the heads against one wall; themselves. They contained the roughest against the opposite wall were placed the natives. of trousers, sweaters, gym. shirts, etc., chests which also served for chairs. A and in many instances a private stock of small table and chair with mirror above of wood and when the shadows had fallen,

goat disposed of them, and they were not missed. The morning was spent as indi-vidual fancy dictated. Small parties found their pleasure in the pine woods or on the water, looking for small game, collecting insects or fishing, and at one o'clock everybody was ready for dinner. A sample dinner menu was-tomato soup, fried ham, rice with maple syrup, bread and coffee. Afternoons were devoted either to baseball or to

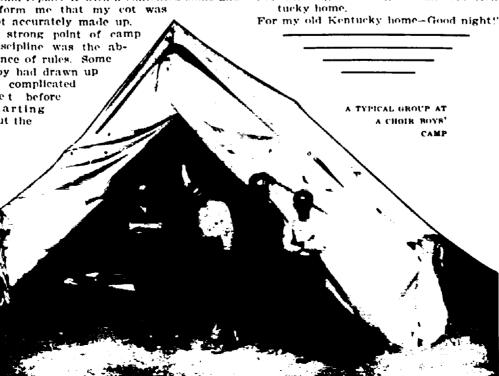

an expedition over some mountain or to a three mile-distant village. If to the latter our visit never failed to make an impression, particularly on the till of the sodawater man. The boys' singing, too, was a constant source of admiration to the

After supper the boys collected quantities sweet biscuit and the like for rainy days, occupied the rear and a clothes line a stream of fire would leap up in the midst of the camp and story and song would speed the mest delightful two hours of the day. By half past nine every one was in his tent, the flaps were closely tled and each might suit himself about going to bed. Generally there were sticks to be carved. clothes to be mended and private vendettas (of an innocuous kind) to be carried out. Quite often when all lights were out a boy at one end of camp would at the top of his voice express a cold, unfeeling conviction about the character of somebody at the other end, a reply would be returned in kind and the chorus would be taken up; but sleep always descended sooner or later.

Much of the success of such a camp depends on a good adjutant. We had the best. Jared is barely seventeen, but as an ideal disciplinarian who makes himself both respected and loved, he surpasses most men-

Perhaps my pleasantest camp memory is of a starlit evening when with Decatur I had slipped away from the noisy fun and had rowed out on the water. At the middle of the lake we rested on our oars and waited for a full in the noise on shore. Then supported by my improvised bass Decatur began to sing, and sing as he had never done in church. The camp was hushed as with his great, sweet soprano he took up one after another the dear, old ballads "Annie Laurie," "Loch Lomond," "Old Kentucky Home" and the rest. The bread, butter, milk, eggs and fresh vege- and right vigilantly did he superintend the high, clear tones filled the valley and

Jared, who is crucifer and choir librarian. had been appointed adjutant of the camp. and he now produced an imposing leather book and after calling the roll announced boy had drawn up that all were present. The bugle sounded, a complicated the goat was hoisted to a place of honor, set before everybody found a point (literally a point) starting of repose and we were off.

The boys had assessed themselves \$3.50 each for camp expenses and this sum practically covered cost of transportation and food. A gentleman of the congregation, who is Past Master of the Craft of Campers, was in charge of all camp details, and under his skilled direction the tents well pegged down stood in a ghostly semi-circle to greet the full moon as it rose over the east range. The camp stove and commissary tent had been erected first and a detail. told off to make coffee and cut bread. Bread and butter and coffee form a banquet after labor such as ours.

The parties who were to occupy each tent had been carefully arranged some days before, care being taken that there should be at least one older boy in each, upon whom rested the responsibility of administration. I had entered into a dark conspiracy with Decatur by which a particularly orderly but mirth-loving group had

tables we had contracted with neighboring housekeeping, and the conduct of chance seemed to rise to the stars and then fade farmers. Most of the boys had purchased guests from other tents. A rake is quickly away and disappear in the shadows which canvas cots at \$1.25 and these, with the converted into a weapon of offense, and in faintly re-echoed the words which were Decatur's hands it cleared the tent of coming to have a new meaning for us, as pactly folded and put in place. Then the belligerents more than once. Then he the camp had indeed become a home: cans of kerosene and gasoline were added, would replace it with a contented smile and not accurately made up. A strong point of camp discipline was the absence of rules. Some

work, and if pocket money may be earned there-

by the work is all the more eagerly taken

The very latest industrial pastime for boys is the making of ornamental and useful objects of bent iron. It is a new hobby and comes originally from Italy where much bent iron ornamentation is used.

With very little practice anyone can make these iron things. In the first place it is well to be able to rivet and solder a little, although one may easily have these things done by a professional artisan if one does not care to do it one's self; still it is more amusing to be able to do all the work and feel that the completed object is entirely one's own handiwork; so it is better to be one's own jack of all trades.

This is not an expensive pursuit, in fact it is far cheaper than any of the other fads. About a dozen tools are required, although many work with less. The absolutely many work with less. The absolutely necessary articles are first—a pair of stout, short shears; one pair of good-sized cutting-nippers or pliers, these are for holding a piece of iron while twisting, or for turning a curve; one pair of large, and one pair of small long-nosed pliers will be required. These are used for finishing curves and for riveting clamps, both pliers being frequently required at once. A pair of ordinary pincers will be found very useful for many things. Large and small round-nosed pliers are required for tightening coils in the beginning of each iron strip. Two bradawls, one fine, and one stout, are required for making rivet holes; also a rimer set in a handle for enlarging these holes made by the bradawls. A medium hammer, a small vise, and some small tin rivets complete one's bradawls. A medium hammer, a small vise, and some small tin rivets complete one's outfit of tools. The strips of iron are bought ready cut at hardware dealers, any width required, and it is well to have some chocolate or baking powder tins cut into strips for clamping, as this saves expense and the tin is easily blackened.

I might mention that tiny steel bolts and nuts, are very useful for fastening together the heavier parts of objects, such as candlesticks, lamps, lantern-frames, etc. These need a small screw wrench for tightening.

The iron work when finished, must be

The iron work when finished, must be The iron work when finished, must be blackened, not only for the sake of appearance, but to preserve it as well. A dead, rich black should be used, and never a bright Brunswick black, as that takes away the Italian character of the work and makes it hideous. A mixture of drop black, ground with a fine powder mixed with gold size and laid on thinly, is the best; it should be polished with leather or chamois when

mikes it hideous. A mixture of drop black, ground with a fine powder mixed with gold size and hid on thinly, is the best; it should be polished with leather or chamols when dry making a dead gloss. Although this is when dry making a dead gloss. Although this disease of clamped, as the weight is too and clamped in the usual way at each end of the polished with leather or chamols when dry making a dead gloss. Although this disease of clamped, as the weight is too and clamped in the usual way at each end of the polished with leather or chamols when dry making a dead gloss. Although this disease or copper strips, and a mixture of all three materials gives a very included curve, and the second with bent brass or copper strips, and a mixture of all three materials gives a very rich and pleasing effect, and is highly artistic.

Let the bent iron worker remember that it is wise to wear a pair of easy gloves, for the metal strips sometimes bruise the foundation of most of the forms employed. Take a strip of iron in the long-nosed, large pliers, hold the pliers very firmly in the left hand, leaving about an inch of iron to twist, and with the round-nosed pliers form a small, carefully rounded curve by bending a plece is twisted shift the holding large size. Having thus formed the two ends of the curve, take the heavy pliers and perfectly symmetrical and smooth curve. After this, the small, long-nosed pliers hold the used to finish up inside the curve. The wavy border up the sides of the curve, take the heavy pliers and perfectly symmetrical and smooth curve. The wavy border up the sides of the curve, take the heavy pliers and perfectly symmetrical and smooth curve. The care of a curve is a constant of the strip. The secret of success, and so on to the end of the copper flowers introduced, its should be used to finish up inside the curve. The wavy border up the sides of the curve, can be worked to curve are all C shape. The inches the iron for the main frame is the top. The curve are all to should be rich to provide and t

angularities.

The great secret in turning perfectly mooth, and regular curves, lies in the rapid fingering of the pliers with a quick movement up and down the iron, combined with a slight twisting movement. Very tightly-twisted ends must be avoided, for when there are many curves of small dimensions close together, the effect is not pleasing to the eye; and, moreover, these tightly-twisted ends are never found in the tightly-twisted ends are never found in the really and it is well for beginners to practice on a strip of tin. The bottom of the lamp holder is cut out of hardwood and a hole bored through it hy an auger; then a metal flower is fixed real Italian iron work, nor in the really exquisite work of the English iron workers who still follow the old English designs, such as were used hundreds of years ago, and are among the most artistic creations

An easy piece of work for a beginner, is an angular bracket such as is shown under the title. The framework of this may be made by a local blacksmith. The curves are mostly of the C shape, and one merely fills up the space between the angles with curves, and it is not at all necessary to make them exactly as they are shown in this particular sketch; one can make up a number of C curves of different sizes, and then fit them into the space. It is wise to start from the inside angle of the iron and to fasten the curves to the iron support, by winding fine copper wire round both curves and support, winding the wire very close and firm. This is a better way than clamping with iron or tin, the inner curves being clamped, however. Each curve should be placed in position and then a small strip of tin should be taken, one end being hooked by the small, long-nosed pliers, put on to the two curves to be united, and held with one hand, then the surplus should be snipped off with the shears, and bent over with the thumb and a good crush should be given with the larger pilers to make all

snipped off with the shears, and bent over with the thumb and a good crush should be given with the larger pliers, to make all firm. The ends of the clamp should join, but not overlap, as that looks careless and untidy. The join should be at the under side, or where it will show the least.

One of the prettiest things to make in bent iron, is a photograph frame, one such as is illustrated here, although many prettier designs may be arranged. This model is given because it is simple in its construction. To make this, rather stout iron should be chosen for the main part of the frame. In bending heavy strips of iron, it is well to heat it over the gas and bend it with a vice. Before bending this heavy strip, however, it is well to have eight holes, two at the top and bottom, and two strip, however, it is well to have eight holes, two at the top and bottom, and two on each side. These are to carry the clips which are intended to hold the glass and the mount from falling out in front, and also to secure the back in its place. These clips are merely bits of tin, half an inch broad and one and a half inches long. A hole is punched in the middle and they are riveted all round the frame, projecting equally on both sides. The sketch of the frame given here describes itself, as it is of the simplest curves.

the simplest curves.

#### Henty's Victory By WILLIAM HEYLIGER By WILLIAM

ICK HENTY tossed a cushion across the room and scowled. "I won't do it," he said.

"But we need you," cried Darrow, captain of the nine; "we need you, man."

"Since when?" demanded Henty. "When I answered the call for candidates, the coach laughed at the thought of me pitching. Everything was Lang, and

Wilson had no use for me. Now, when he finds Lang's arm has given out, he suddenly discovers he has made a mistake. Why didn't he find that out before he needed me, before he had an ax to grind?"

"He has no ax to grind," said Darrow, stoutly. "Every man has his likes and dislikes, and Wilson has his. He made a mistake; he admits it. He doesn't expect to flatter you into pitching; he expects you to come forward for the honor of the school.

St. Paul needs to morrow's game, and she needs you."
"You didn't need me before," persisted Henty.
"We need you now." Darrow wiped the perspiration from his face. "We have not lost a game, and neither has Union. On to-morrow's game depends the championship. If you pitch, regardless of whether you win or lose, next year—"

"I'm not coming back next year," said Henty. "I'm going to Union.'

Darrow stiffened and reached for his cap. "You mean you won't pitch?"

"I mean I won't pitch. Good-day," and closing the door on his visitor, Henty walked across the room, sank down on a chair near the window, and stared out into the quiet street. "I'm glad," he said.

That night he had some studying to do, and early in the evening he lit his student's lamp. But try as he might, he could not concentrate his mind on his work. Greek verbs seemed to be chasing each other around a miniature diamond, and finally putting away his books, he blew out the lamp and sat alone in the dark. He wanted to think.

Over at the gymnasium the glee club were serenading the nine, and the sound of their voices drifted in faintly with the breeze. That was the way; -even though they knew they were going to defeat, they sang and cheered loyally for their college. He wondered whether they would do that in Union. In imagination he could see the team leaving the field on the morrow, dust-stained and defeated, but with that same crowd still around them, and with that crowd still singing and cheering. He came to his feet, stumbled across the room, and began to undress.

"It's nothing to me," he muttered, hoarsely. "Even though I won't help them they'll sing and— I guess they don't care much," he added, bitterly.

It was after midnight before he slept, and the sun was hours high and the streets of the little college town were noisy with cheers when he finally awoke. As he finished dressing, and began to brush his hair, he noticed that his hands were trembling. Once, as he stood at the window, a crowd of St. Paul boys stopped before the house, and with a face the color of

watched them until they were gone. If they had hooted him, he would have taken a savage joy in their dislike; but their silent contempt cut him to the quick. He held out his arm and twisted his supple, strong wrist from side to side.

"I'll show them yet," he muttered. "Next year I'll pitch for Union. I'll show them."

Up on the bluffs above the town, a factory whistle blew the noon hour, reminding him that he had not eaten. He did not care to meet any of the boys; he would go out and take his dinner alone. He found the restaurant crowded, and selecting a table far to the rear, he gave his order. Then for the first time he noticed that a throng of Union students were on his right.

"St. Paul hasn't even a chance," he heard one say. "Lang's arm has given out, and they haven't a pitcher they can put in.'

"Somebody said they might use a chap named Henty." cut in another.

The first speaker laughed.

"Who's Henty?" he demanded. "He can't be very much, or we would have heard of him. No, boys, we've got St. Paul beaten," and with another laugh he pushed back his chair.

Henty waited until they had left the restaurant. Then, rising from an untasted meal, he made his way to the street. Off to the left, in the direction of the athletic field, he heard the ponderous cheers of Union mingling with the sharp yells of St. Paul. Disgruntled though he was, the sound quickened his pulse, and following the crowd, he passed through the turnstiles and came out on the field. The black and gold of St. Paul showed everywhere in the stands behind third base, and muttering to himself, he climbed into a stand that quivered with brilliant red. He had taken off his college cap and stuffed it in his pocket, and now, even as one of them, he sat among the Union boys.

The students he had seen in the restaurant were directly in front of him. A bell clanged, and St. Paul came out for practice. Cross, the little short-stop, fumbled miserably, and the boys in front laughed.

"Take him out," they yelled.

Henty bit his lips. Cross was a friend-, He started. Would Cross be his friend after this day's work? Two little lines formed in his brow, and he stared dumbly across the field at the stands of black and gold.

The bell, clanging again, seemed to bring him from a waking sleep, and leaning forward, he watched Lang take his place in the box. A Union player stepped to the plate. Lang whirled his arm above his head, and the ball shot in toward the catcher.

The first man up hit to the outfield, and went to third. Then in rapid succession came four wide balls and a hit batter, and the bases were full. Amid cries of "Line it out, Phil," Darrow struck out, and Henty smiled. Cross came to the plate. The students in front of Henty were cheering on their nine, but Henty

bench, only to come back and sit down again. Twice Cross swung, and twice he missed, and all around Henty men fldgeted in their seats. The students in front of him rose to their feet shutting out his view. He did not leave his seat, and as a sudden, wild yell broke out across the field, and then spread and grew into a thundering cheer, a thrill ran through his body.

blinding shower of tears sprang to his eyes. When

passed, a frown gathered slowly over his eyes. He weakening. Every time the big pitcher sent in the ball, his face twitched with pain, and once Henty about that, and suddenly catching his breath as he

an uncertain hand in his pocket and drew out his college cap. For many minutes he stared uncertainly at its black and gold design; then, with shaking fingers he placed it on his head.

but he did not look around. The seventh inning was beginning. His eyes were on Lang, and as the pitcher's first ball was hammered to the outfield, he arose to his feet.

"Come on, Union! At them, at them," he heard a voice cry, and his lips began to move. Wilson was nervously pacing the coaching lines, and the stands of black and gold were silent. Had he made a mistake? Would they now take him? Should he go? Again a Union player hit safely, and turning, he began to fight his way through the crowd.

stand and start across the field. The club-house was chalk, he leaned back behind the curtains and deserted. As he slipped on a uniform, he heard the

"One strike."

Henty did not move, but as the batter swung twice again and walked away from the plate, the muscles round his mouth twitched. The next Union player flied out, and the third man to face Lang went out on three pitched balls. Then St. Paul came in to bat.

sat stonily silent.

Wilson, the coach, left his seat on the player's

"A home run," he heard somebody groan, and a

he looked out on the field again, the inning was over. "Two out." He turned his head and stared at the score-board: Union St. Paul "I'm glad," he muttered; "I'm glad Cross did it." His hands were clenched, and as inning after inning was watching Lang, and he knew that Lang was thought he saw him wipe tears from his eyes. But the distance between them was too great to be certain mouth bardened. saw him throw a wrist-breaking drop, Henty put Behind him he heard an exclamation of surprise, læst effort.

In the excitement nobody noticed him leave the

heavy "Rah! Rah!" of Union floating from the stands, and the sound added deftness to his hands. He caught up a glove and hurried out on the field. He found Wilson on the lines behind third base.

"I'm going in," he said. The coach turned away.

"I'm going in," he persisted.
"You cur," cried Wilson, hoarsely. "You wanted us to lose this game, and we've lost it. Now, when Union has scored five runs, you think you can set yourself right by pretending you want to pitch. I see through your little game-you cur."

Henty's face was white.

"I'm going in," he said, steadily, "and you had better let me stay in. I'll see you after the game, Wilson, and I'll break you in half for those words. I'm going in."

He walked out on the diamond, and the Union crowd suddenly stopped cheering. As he passed Cross, the little short-stop nodded encouragingly, and Henty smiled. At least one of the nine was with him.

"All right, Lang," he said, and with a sigh the pitcher handed him the ball.

The beating of his heart sounded in his ears like claps of thunder. The runner on first was taking a big lead. Henty stared at the stands- He turned. and as the runner slid for the bag, he sent the ball to first.

"Out," called the umpire.

A cheer swept across the field, and Henty's nervousness passed. "Good work, old man," he heard Cross cry, and then the catcher signaled for a drop. He threw the ball, and the batter dumped a puny fly to the infield.

Henty drew himself up. Five runs-he must hold them down. He sent the ball in swift and straight, and the bat met it fairly. Cross reached forward. straightened up and threw out his man at first.

He had held them down, and as he walked toward the players' bench, the sputtering, jerky cheers of St. Paul sounded in his ears. The coach did not come near him, but Darrow rung his hand, and there was welcome and gladness in his greeting. Ah! it was good to be a St. Paul man, but a cur- His

St. Paul did not get a man past second in her half of the inning, and neither side scored in the eighth. Henty was pitching magnificent ball, and the Union batters went down before his delivery like so many men of paper. In the ninth they were blanked, and then, grim and stern, St. Paul came in to make one

Darrow, the first man up, sent the ball along the left field foul line for two bases, and the crowd, flowing out through the gates, paused and came back. Black and gold were waving everywhere. With a thousand voices shricking about him, Cross put a single through the infield, and Darrow went to third.

In the stands they were telling each other that St. Paul would surely score. But the next batter struck out, and Wilson came over to the players' bench. His lips were dry; his hands trembled.

The Union pitcher was regaining his form. Twice the batter went after curves he could never have reached, and then, flustered and nervous, he allowed a good ball to pass. The umpire waved him aside, and Wilson groaned.

"Who's up?" he demanded.

"Henty."

The coach wet his lips and shivered. Henty selected a bat and walked away. The coach followed him.

"L-line it out, old man," he begged. "I—! take back that cur talk; I didn't know what I was saying. Line it out, Dick."

Henty's lips quivered. The coach apologizing, Darrow and Cross his friends- It was too good to be true, but he would try to deserve it, and squaring his shoulders, hfaced the pitcher.

Would he succeed? He let the first ball pass, and as the umpire called "Strike!" the Union crowd cheered. Henty's lips straight ened out into a thin, cold line. The next ball was too high, the next too low. Then-A little laugh quavered in his throat, and stepping in, he met the ball as it began to curve.

He saw Wilson throw his hands in the air. and he began to run. Was it a good hit? He did not know. A mighty roar was sounding in his ears, a mighty roar that soon developed into steady, organized cheering. As he passed first, he looked back and saw the crowd climbing from the stands. What did it mean? He turned second, and ran into Darrow's arms. Behind Darrow was a waying sea of black and gold.

"It's all right," called the captain. "We've won, we've won. That was a fine hit, Dick. a fine hit. Here, boys, take him," and in a moment Henty found himself in the air, rid ing on the shoulders of the crowd.

'Henty! Henty! Henty!" they shouted and his eyes filled. Ah! what a fool he had been. He looked down at the crowd, and his eyes met the eyes of Cross.

"I hear you're going to Union," cried the short-stop.

A hush fell over the crowd. Henty took

off his cap. "St. Paul," he cried, "St. Paul first, last and all the time.'

The cheering began again.

Take off your shoes and stockings And let your feet go bare; For we are the Boys of the Boys' Club Camp And touch us if you dare.

Written for THE AMERICAN BOY by Frank J. Sullivan, of the Central Y. M. C. A., Chicago, alled by some "the human duck," who on February the 20th last swam two hundred and wenty-eight feet under water, smashing by just nine feet the best previous amateur mark in the United States. Again, on April 16th last, at the contests of the Central Amateur Athletic Union, add in Milwaukee, he won the under-water swimming contest, equaling his February record two hundred and twenty-eight feet and winning the title of "Champion under-water minimer."

WIMMING and running are pernaps the oldest forms of exercise known to man; the former I believe to be the most health-promoting sport known. I myself, in my day, have engaged in all of the routine sports of the American boy, but never have I telt from any of them the exhibitant of the them to the them to the tell by the swimmer after a stiff 220 or an eight-minute half of water polo. The langs are immeasurably benefited by the quick full breaths taken in swimming, and the legs and arms develop not the land, knotty bands of the gymnast, but the long, symmetrical hard, knotty bands of the gymnast, but the long, symmetrical muscles so prized by the lover of art. A recent experiment at the University of Pennsylvania has conclusively shown that the number of red corpuscles in the blant of a swimner is many blood of a swim.ner is many times those contained in that of a numer; and these red corpuscles are not to be despised as factors in health.

Having, I hope, convinced the reader of the value of the swim, I turn to what is a more important part of my article, namely, instruction of the beginner or novice in the art of swimming, with a few more ad-

swimming, with a few more advanced saggestions to the boy who knows how to swim the rimitive breast stroke, but wishes to tearn something of racing swimming.

The breast stroke consists of three definite movements. The would-be swimmer takes a horizontal position upon the water—or rather in the water, as he is a beginner—and stretches out both hands and legs as far as he is able, supported by a life-preserver, a rope from above, or by the hand of a friend gripping his trunks at the back of the waist, the last-named method being perhaps the best. To a mental od being perhaps the best. To a mental count of one-two-three he brings his arms, with palms spread against the water, to a position directly opposite his shoulders, taking great care to keep his legs motionless. At the count of two he brings his legs, with At the count of two he brings his legs, with knees not more than a foot apart, up under his stomach, and at the same time drawing his hands from their outstretched position to below his face, with clows close to the sides. At three he does what he has felt only too much inclined to do all along—kicks out his legs wide apart, and thrusts his hands, palms together, forward, while with straight knees he brings his feet tokick into bringing the feet together, not in straightening them out. For the first-named movement is the one that keeps the body in motion, and it is the motion forward which keeps one from sinking. Remember not to spend yourself trying to keep above the water, but to make all your work tell toward propelling yourself. These instructions, if followed, will make you what is often called a swimmer, but you must practice every time it is possible, for without almost daily trials you cannot learn to swim.

without almost daily trials you cannot learn to swim.

The next stroke to be learned when you have mastered the breast stroke, is the single overband or side stroke. With his first attempt at this the swimmer encounters his first breathing troubles, and before anything can be accomplished further towards becoming an expert, he must learn the art of breathing as it is done in the water. The breaths must be short and regions, taken above the water and exhaled which is submerged. Nothing can about the idea of being submerged; but anything can be accomplished further to-wards becoming an expert, he must learn the art of breathing as it is done in the water. The breaths must be short and reg-dar, taken above the water and exhaled child the face is submerged. Nothing can trouble the swimmer in trying either for speed or endurance, so much as not being able to take quick, deep and absolutely regular breaths.

The motions of the single overhand are must from those of the breast stroke in both arm swing and kick. The solve must first be put in motion by either dive or a few strokes on the breast. The consistency of the stroke in both arm swing and kick. The water stunts. In even the dive there is a wonderful source of pleasure. It sounds to the uninitiated almost foolish, then a position on either right or left side. preferred, having been assumed, the unbr arm outstretched with palm against the oter is brought down to the side, while the upper arm is stretched out ahead and the upper leg is reached forward as if to limb or the stretched stretched.

the upper arm is stretched out ahead and the upper leg is reached forward as if to limb, and the other is stretched out beind in much the same manner. Simultanelly the upper arm is carried down close at the body, back as far as the reach alwa, and the two spread legs are brought gether with a strong selssor-like motion ich shoots the swimmer ahead. Before a motion has ceased, the under arm is min pulled down under the water and anier stroke is commenced. This method flers from the breast stroke in that a mounced coast should follow each stroke, bough no pause in the forward movement ast be allowed. On the other hand, in first named method each move should intain a part of the one which precedes it to face should be kept half under the ster, allowing the mouth to rise on the k and go under during the recovery, a breath is drawn through the mouth, smaled with the kick and exhaled on the sing of the under arm. A slight roll from the to stomach as the legs are brought gether is permissible and by some swimers is found advantageous both for restrs is found advantageous both for rest-

F is found advantageous both for rest-K and as a means of increasing speed. Having mastered the single overhand, here now remains but the double over-and to be learned of the three prominent brokes used in swimming, and it is quite asy to learn this when one first knows the ther two, for it is a hybrid of these, so

To speak.

The double overhand may be swum in two mite different ways. In the first, which is sentially a distance stroke, the seissors kick and a long roll is used; in the second the swimmer uses the straight breast stroke biots and memains on his breast throughout the swimmer uses the straight breast through the swimmer uses the straight breast through the swimmer uses the straight breast through the swimmer uses the straight breast stroke kick and remains on his breast throughout fach set of motions. The first is the Double (werhand proper; the second is named the Trudgeon stroke, after its originator. Perhaps the best way to learn the double overhand is to begin by swimming the single, and after acquiring the roll which

FRANK J. SULLIVAN

is easily given in that stroke, gradually increase the length of gradually increase the length of the roll until you are able to bring the under arm clear of the water when it is pushed forward. Now cut off the roll at the end you began with and add a little more at the other end, and you have a double overhand. The finished stroke is only to be acquired by practice. You may turn clear over upon your side at the finish of the stroke, or you may swim it the stroke, or you may swim it entirely upon the breast, sim-ply turning the face for the breath.

The Trudgeon movement is a

little more difficult, perhaps, and is not necessarily one of the attainments of an accomplished swimmer, although when well executed it becomes an excellent speed stroke. The swimmer starts either with a dive or a strong breast stroke kick, and using that leg motion and alternation. using that leg motion and after-nately reaching his arms out in front of him and pulling them back under the water, he uses one with his kick and one for re-covery. The head is held high above the surface through the aid of the arms, thus present-ing very little resistance to the water. In general, however, the stroke is hardly one to be at-

water. In general, however, the stroke is hardly one to be attempted until one has been swimming long enough to have developed both endurance and perseverance, as the stroke, although not really difficult, requires trained strength, especially for holding up the head without straining in such a way as to deter progress. But as I said before when properly swum this stroke proves a mine of speed for all distances up to a hundred yards.

There are many other more form

hundred yards.

There are many other more fancy strokes for the enthusiast to learn, but few of them are of practical value. However, there is one other that may well be mentioned. This is the so-called, and well-named, crawl stroke. This stroke, although the main support of that clever clique of Australian swimmers—Cavill, Healy and Wickham—who are without doubt the fastest swimmers in the world, is hardly known and would scarcely be recognized on this side of the Atlantic. The stroke as described to me by Handy, the crack Chicago middle-distance swimmer and one of the few American exponents of the crawl, is as follows: "The crawl stroke is little more than a scientific exposition of is little more than a scientific exposition of the well-known 'dog fashlon' kick with a more effective arm motion. The would-be crawler lies flat on his stomach and swimwith straight knees he brings his feet together. He is now back in the first position and is ready to start once more. Care must be taken to put the better part of the kick into bringing the feet together, not in straightening them out. For the first-named movement is the one that keeps the hody in motion, and it is the motion forward which keeps one from sinking. Remember not to spend yourself trying to keep above the water, but to make all your work tell toward propelling yourself. These instructions, if followed, will make you must practice every time it is possible, for fect equilibrium of the body which gives the swimmer his speed. There is no form

surface, there is not much attractiveness about the idea of being submerged; but the swimmer who really enjoys and loves the water feels a wonderfully strong fascination for remaining below the surface. You will rarely see a large crowd of swimmers remain in the water for a length of time without starting some kind of endors.

I have no doubt, but I can yet remember the mental and physical exhilaration I used to feel when trying to see how great a distance I could cover while "under." The mere staying under was monotonous, but the racing against time, and the (as it seemed) hand to hand combat with that mighty element, water, was exhilarating in the extreme. It seems now no less so, and the farther the distance covered, the more agger does one feel to do more. It was the eager does one feel to do more. It was this feeling that made me specialize upon the

feeling that made me specialize upon the under-water swimming.

In 1902 I took up this branch of aquatic sports, and have devoted almost all my practice since to perfecting myself in it, which probably accounts for my success. Time and again my friends have told me that I was in great danger of hurting myself, but I can honestly say that I have never felt anything but beneficial effects from it. On the contrary, I feel that I owe a great deal to my work in that line, having not only increased my lung capacity to a great deal to my work in that line, having not only increased ray lung capacity to three hundred and ninety-five cubic inches, but have rendered myself immune to colds and lung troubles. Thus I feel safe in recommending this sport to those who have weak and undeveloped lungs.

The chief requisite of the under-water swimmer besides good lungs, is a knowledge of how to breathe. The breath is not the quick-drawn breath of the sprinter, nor the regular inhalation of the distance swimmer, but a long, deep breath, repeated un-

the regular inhalation of the distance swimmer, but a long, deep breath, repeated until the farthermost corner of each lung reeks with oxygen. When the lungs are thus filled the swimmer is ready to go under. These deep breaths spoken of, it must be remembered, are not to be taken on going in the water, but before you are ready, the object being rather to thoroughly oxygenate the blood, than to fill up upon air. The body must be so full of this element as not to require it for some moments. The surplus air is in the way, and should be expelled little by little as the oxygen is used, the nitrogen and carbonic acid gas being harmful when held too long. The beginner should go through daily breathing exercises, and each day in his

THE Savage 22 Caliber Repeating Rifle is a clean cut and beautifully finished little THE Savage 22 Califer Repeating Kine is a clean cut and beautifully nuisaed fluid gun. Besides being the best arm for small game and target practice, it is safe and simple to handle—in fact, it is "Savage Quality" all through, and quality tells every time in the end. Anyone who takes pleasure in out-of-door life can enjoy this Savage. We have many other sizes for all sorts of shooting. Send for Catalog No. 39.

hoys had read in the newspapers within the week

This is Jack's story

#### LITTLE FRANK

Little Frank Robinson was a poor boy. His father was a man who didn't work much because there wasn't any work for him to do. Frank was a good boy, and he liked to go to school. He wanted to build a factory where they built engine But he didn't have any money to bulld

the factory.
One day he read in the paper how there was a thing called radium, and he said, "I will go out and find some."

So Frank went out in a place where there was a hill and he dug in the hill, and he didn't find any, but he said to himself. "The teacher told me when he read it in the paper that radium was worth eight million dollars a pound."

So Frank kept on digging in the hill. After a long time he found a ton of radium and he took to her factors.

After a long time he found a ton of radium and he took it back to his father, and his father took it to the radium store, and sold it for eight million dollars

Frank found a lot of other pounds of it, and he gave a pound to each of the boys who had helped him dig in the hill, and all the boys sold the radium for eight million dollars a pound, and they lived ever afterward.

And Frank Robinson built a big factory, and made an engine so that his mother could run her sewing machine without the treadle. And then he went to school and went to college, and he learned a lot of things about things he didn't know anything about before. When he knew all these things he graduated, and the professor gave him a diploma and he went away. gave him a diploma, and he went away and built another factory, and made some more engines, all because he was a good how and learned his lessons and knew where to go and find the radium mine.

the stamp and the other half to the album, so that the stamp can swing on it like a door on a hinge. Then if the stamp is to be removed at any time there is no need of tearing or injuring either the stamp or the album. These stamp hinges are put up in packages of one thousand, and are sold for ten cents a

Third, every collector should have a catalogue. At first, most collectors think that a stamp is a stamp, and strive only to secure a large number of varieties. Later, he will find that each stamp has a value, some being worth only one cent, while other stamps are worth many details. while other stamps are worth many dol-lars, and sometimes he finds to his sor-row, that he has parted with his valuable stamps in trading for the common ones. There is a catalogue printed every year that is just as complete as the album, and this is absolutely necessary to the intelligent collector. This catalogue can

be purchased for about sixty cents, and is worth many times its price.

Thus with the expenditure of a little over two dollars the beginner can secure his album, hinges and catalogue, and is ready to look over the stamps he has accumulated, find their value, place them in his album and call himself a collector.

The foregoing article was written by Rev. George A. Joplin, Pastor of the First Presby-terian Church of Mt. Sterling, Ky., who says that as a pastor it has been his privilege to organize a number of stamp clubs among the boys and that he has found few things so useful and helpful, where boys are properly directed in their work. in their work.

one solid stick into a chain having mov- is nothing more than common, everyday able, inseparable links, may seem a marvelous feat to those uninitiated in the art of wood-sculpture; but considered expertly, step by step, it becomes simple and easy to accomplish. The beauty of the finished article depends, of course, on the ingenuity of the maker and the time and care he expends in perfecting it. Tools, even in this case, where so few are required, are an important consideration. A knife having two finely tempered blades (one large, one small) is the proper kind to use. Material, you can select at your pleasure. Any wood that is clear and straight-grained will do. Hardwoods are more difficult to work than the softer grades, but are not so apt to warp, and take a better finish. Basswood, boxwood or pine are suitable. A discarded flour-barrel head is easily obtainable and answers the purpose admirably. The piece to begin on should be one inch wide, one-half inch thick and twelve inches long. The first thing to do is to mark the piece with guide lines as shown in Fig. 1. The lines are made in the following manner: Find the center of width and the center of thickness; draw two parallel lines on each of the four sides, one line one-eighth of an inch to the left of the central point and the other one-eighth to the right of it. These lines reach from end to end, and are also drawn on the end; the latter pattern resembles a cross, the arms being at right angles to each other. It is somewhat difficult for a beginner to get these lines straight and carefully. Study Fig. 1 until you get the right idea. The square sections ("a," "b," "c," "d") are to be cut away. This, too, requires some skill. Be careful not to bear too hard or the knife point will sink deeper than the center, and spoil the whole job. A fine-toothed steel hack-saw can be used to advantage wherever a portion of considerable size is to be cut away. After the gated cross like Fig. 2. Next comes the

isk of dividing it into links. In order to it them of uniform size you should mark he whole piece before doing any farther atting. If the stick is twelve inches long nd you wish the chain to have twelve links is obvious that each will be one inch in ingth. If you want only six links, each ill be two inches long, and so on. Lay out · edges opposite each other, on what apwars to be the horizontal arm of the cross and "b") in Fig. 2. The two remainor edges are also divided into inch spaces, at because the links of a chain overlap ich other, you must mark the point midnches from end, the second two and a alf, the third three and a half, and so on.
The bridge was saved, and, in my judgdistance between the points consecument, saved by the preachers and boys.

ATHITTLING has always been a tively will of course be one inch. Now cut. favorite pastime for the younger not on the marks but an equal distance to generation, and judging by the each side, say one-sixteenth of an inch, enthusiasm that some of my thus making the space between links onehumble efforts in this line have created, it eighth of an inch (in the rough). When is by no means on the wane. The list of you have done this and properly curved articles an ingenious lad can make with the corners your work will look like Fig. 3. the aid of a common pocketknife is almost And now comes the interesting task of endless. There is as much difference in loosening the links. Study the drawing whittlers as there is in poets or painters, thoroughly, or better still, your work at its I think a great majority of boys prefer present stage, and you will readily see what may be called problematical whit- what parts have to be cut away. This part tling, that is, the carving out of a design of the work will give you a chance to which at first seems impossible. To whittle exercise your ingenuity, which, by the way,

Use the small blade of your knife and dig away carefully. Be content to take out a small splinter at a time; it is by far the safest method. When the links are all made movable, smooth them with sandpaper. You can get at the interior of the links by wrapping the paper around the knife blade, or a small stick. The picture at the beginning of this article is an exact likeness of a chain I whittled out in one hour. This idea of making movable, inseparable links out of one solid block opens up the way to a score of beautiful designs, some of which we will describe in subsequent numbers.

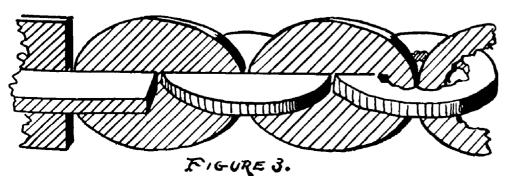

#### Schoolboys Defend A Bridge

An order came from Gen. Lee for every sick and wounded man who was able to report at Staunton River Bridge, as Gen. Cortz with 2.700 men was advancing to burn beginner to get these lines straight and true, and as they are a very important part the bridge. I mounted my horse and of the work, we advise you to draw them started at once, says W. C. Marshall, of carefully Study Fig. 1 until you get the Morgantown, W. Va., in the Richmond Times-Dispatch. When I arrived I found Col. Farrington in command and the artillery under an officer who had never fired a gun, and I might add that his men were in the same predicament.

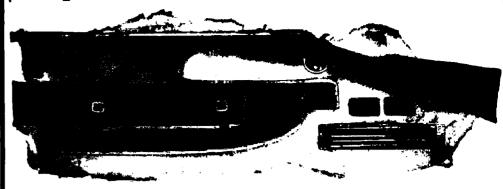

Col. Farrington put me in command of the artillery. After telling each man what I expected him to do and how to do it, I first operation the piece will be an elon- received an order from Col. Farrington to report at once to his headquarters. I found he wished to hold a council of war. During our talk, two, and. I think, three old grayheaded ministers reported that they were there with their schoolboys to help save the

It occurred to me at once that this was our chance, and I advised Col. Farrington to put the boys in the breastworks on the other side of the river, the river being behind them and the enemy in front of them. The colonel agreed at once. The ministers began to protest on account of the age of the boys. The colonel asked if they did not come to help save the bridge, and he insisted upon their holding their position. This seemed fearfully cruel, but the result proved to the satisfaction of the ministers it was the right thing to do

The rest of the command was then place in breastworks on the south side of the river. I then went at once back to the artillery. I had scarcely reached it when I saw the enemy come out and form in line of battle to charge the brigade, four times of battle to charge the brigade, four times our number. My heart went out to these boys. I opened from the enemy at once with the four gun, and did all the harm I could. I tried to make them think that we had a large force in their front. At this time the order on the other side was given to "Charge." Down came 2,500 men on those boys and disabled soldiers. Not a word did we hear from the boys until the word did we hear from the boys until the enemy were within about 290 yards of them, when one of the dear old ministers sprang upon the works and gave the order: "Fire low and fast!" The little fellows swarmed up from the ground like "yellow jackets, do not know that they killed many, but be first mark will be one and one-half and as badly frightened as I ever saw. They rallied and made a second charge,

#### From a 70-Year-Old Boy

Although hearly seventy years young, I am intensely American and, at times, quite hoyish. I very much admire THE AMERICAN BOY. My grandson sometimes brings me his copy, after he has read it. The May number has an article about "Old Abe," the War Eagle, which makes me want to put in a few words. It was my fortune to see the noble bird several times one day, on the march, near Vicksharg, Miss. About two years later there was a sale of pictures of "Old Abe," realizing about \$16,000, which was used by the "Christian Commission" in their work of mercy and goodness. Those selling the pictures were given a commission in "The Army of the American Eagle," My brother Although hearly seventy years young, I Army of the American Eagle." My brother (then about twelve years old) sold 20 pie-

(then about twelve years old) sold 20 pictures, at 15 cents each, and received a commission as corporal. I do not know if he has preserved the document.

The most amusing thing I heard about "Old Abe" was related by a lady speaker in Jackson, Mich., about twenty-live years ago. I am not certain, but think it was Rev. Atma Shaw, who said that after being returned to Wisconsin, he laid a number of eggs. I was very sorry to learn of the cremation of the remains.

12. W. SEDGWICK.

Parma, Mich., May 16.

MONG the heroic deeds which re-cently prompted Andrew Carnegie to contribute a five million dollar fund contribute a five million dollar fund for American heroes and heroines, there were few more commendable than those performed by some of our American boys, aged seven years old and upwards. To risk one's life to save the life of another requires true heroism, a qualification which is admired the world over. Especially is this true when it applies to one who is young in years and experience. The incidents referred to in this article were all truly heroic, and the better for the fact that they were performed prior to the announcement of Mr. Carnegie's hero endowment, and, therefore, without any thought of reward.

Frederick Ridder, of Springfield, O., aged

Frederick Ridder, of Springfield, O., aged 10 years, recently rescued his brother, George, who is a year younger, from drowning just as he was going down the third time. Frederick cannot swim a stroke, but he succeeded in performing the rescue by weating in the water as to be stroke, but he succeeded in performing the rescue by wading in the water up to his neck, the current several times nearly taking him off his feet. When he had succeeded in bringing his brother to shore, another playmate helped to get the unconscious boy out of the water and up on to the bank. Then the two rolled the half drowned boy over several times and stood him upon his head, and afterward walked him home, a distance of nearly two miles, and these heroic methods saved his life. When George complained of being cold, Frederick took off his own coat and placed it about his brother, although he himself It about his brother, although he himself was as wet as George. The methods which Frederick employed to resuscitate his half-drowned brother were familiar to him from having read them in a book some time pre-vious. Frederick is a regular bookworm.

vious, Frederick is a regular bookworm.

Lawrence Templeton, of Toledo, O., is seven years of age. He is the son of Judge Templeton, of that city. One day while out at the skating place on Swan Creek, a companion, Arnold Ward, broke through the ice and struggled helplessly in the water. Lawrence, with great heroism, crept out upon the thin ice and grasped the hand of his companion. His hold broke but he made a second attempt, and again but he made a second attempt, and again clutching him, succeeded in holding Arnold until help

came and rescued both of them from the perllous posi-tion into which they had gotten. tion Otto Bay, a four-teen-year-old lad of the same city, rescued William Mc-Cormick from the river at Walbrige park in a similar

manner.

The club itself contains eleven boys, and in addition to the Cue Alley Team it has a basket ball team, a football team, a baseball team and a track team. The average age of the boys is fourteen.

tion. At the age of 12 years, he took his own life in his hands, to rescue a lad much larger and older than himself. The name of the rescued boy is Herman Moskowitz. He resides on Eric street in Cleveland. The rescue was performed in Lake Eric, near one of the city, piers, where the water was more than twenty

#### Floral Photography

(Continued from page 271.)

object being nearer, will require a greater exposure than an interior or other distant object. Ordinary plates may be used; but if the flowers have any red or yellow in them, better results will be obtained with the so-called isochromatic plates. Whichever is used, they should be backed with some caramel or red backing paper, as the flowers, being of a light color against a flowers, being of a light color against a black background, are very liable to have a halo round them, which the backing will prevent.

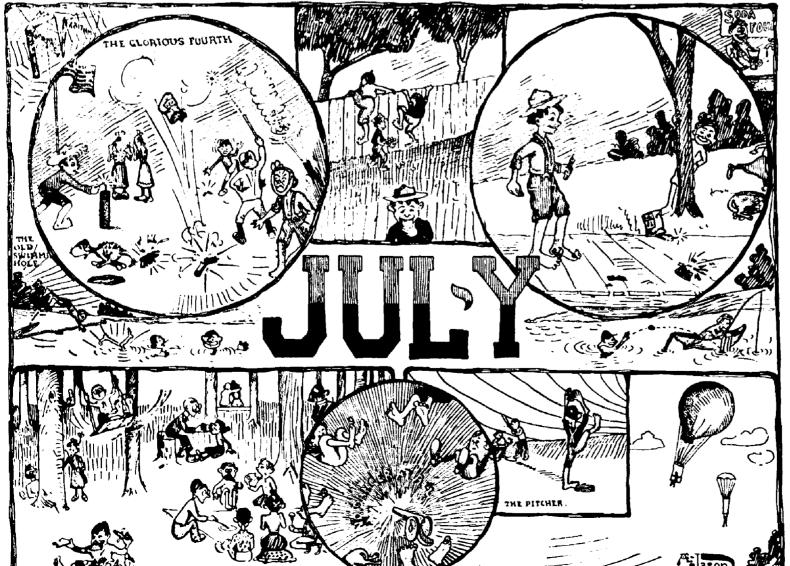

It must be remembered that isochromate plates will considerably shorten the exposure if the flowers are of a yellow or red color, as they are more sensitive to these colors than ordinary plates. If ordinary plates are used to photograph a yellow flower, it will come out considerably darked than it ought to, unless the exposure is very long, then the stems and other part being over-exposed, come out flatly; therefore it is best to use isochromatic for colored flowers, but white ones are best photographed with ordinary plates. Splendigraphed with ordinary plates. Splendigraphed with ordinary plates. Splendigraphed with ordinary plates, can be obtained with either of the artificial lights mentioned above, if care taken in illuminating the flowers.

Ordinary plates are almost useless for photographing flowers by night, as all artificial lights have a certain amount of yelowness in them, which these plates are not yery sensitive to. Isochromatic plates must be used, and a rapid brand selected, so to shorten the exposure as much as posble. The focusing must be done by arraeling lighted candles near the flowers, taking that they are not too close, or the It must be remembered that isochromati-

ble. The focusing must be done by arrae ing lighted candles near the flowers, take care that they are not too close, or the heat will cause them to rapidly fade. The effectiveness of the results will of course, depend upon the artistic skill of the operator; but if the above is careful followed, good results ought to be obtained. Color sensitive plates are also known orthochromatic plates.

AT THE PICNIC.

### The Science of Jumping

Written for "The American Boy" by W. S. Farrant, :: Western Champion A. A. U. and W. A. A. ::

EXERCISE NO. 1

It is a well known fact that the practice of broad jumping hinders the speed of a sprinter, but many a sprinter has learned that while he has not quite sufficient speed that while he has not quite sufficient speed for championship honors, he has developed the ability to "get there" in the "long jump." This fact amply repays him for the triffing loss of speed. All that is necessary to make the change from sprinter to jumper is to devote a few weeks' times to careful, gradual effort along the following lines:

The most necessary quality for a broad jumper to have, is the ability to reach his "take-off" under full speed, without the dightest waste of energy, in order that at the moment of leaping, every nerve and muscle in the body is concentrated into one supreme effort to "raise" properly.

The proper way to avoid either overtoaching or falling short of the take-off, is to start gradually into a rapid sprint over-

to start gradually into a rapid sprint over clear piece of cinder path, where the pike marks from the shoes will leave their imprint. Care should be taken to notice the very exhausting, but if persevered in daily, marks spot where full speed is attained; at weeks time.

EXERCISE NO. 2

down mark No. 2.

Now start your run from mark No. 2, and work gradually faster so that you will be in full speed and regular stride when you reach mark No. 1 with the foot from which you jump. This will bring you squarely to the take-off with the proper foot, so as to avoid either a foul from over-reaching, or a loss of distance due to take-off too far back. A trial or two will show you whether or not your marks are correctly placed. A head wind may make it necessary to advance mark No. 1 a few inches, or put it back a trifle for a wind from behind.

On the day of competition, these marks

On the day of competition, these marks should always be correctly placed and tried before the contest starts. The field judge's tape is always available for this purpose. Place the marks to the side of the path where they will not be interfered with by

where they will not be interfered with by the other contestants and pin them to the earth with small wooden pegs.

Jumping is a rather severe effort for the beginner, and full distance should never be striven for only in competition. During practice and training, full speed to the take-off should always be the aim, but the jump must be merely a gentle effort, say two to three feet short of your capabilities. There are three exercises which will develop the raise or spring far more than actual effort. The first is stand erect in military position with the heels together, slowly lift to the toes and drop back to original position. Repeat until tired, never longer or shorter.

The second is started in the same posi-

longer or shorter.

The second is started in the same position, slowly stoop until the buttocks strike the heels, raise to the toes at the same time, and then raise slowly to an erect position again, repeating until tired.

The third is the same as the last on one foot, holding the free limb extended in front. Repeat until tired. Change to the other foot and repeat.

EXERCISE NO. 3

These exercises should never be indulged in during the three days prior to competi-tion; they tend to slow the speed. Perfect rest is better than any exercise at this

#### Boys' Books Reviewed

BTEPPING STONES TO MANHOOD; a Book of Inspiration for Boys and Young Men, by William P. Pearce. We question whether among helpful books of today there could be a better placed in the hands of the boy from twelve years up to twenty-one. From the first to the last of the thirty chapters making up this volume every aspect of relationship to oneself, to others and to God is discussed. There are many problems encountered by the boy as he begins the serious part of life's journey wherein he needs assistance, advice and encouragement, and he will be dull indeed if he falls to receive them from these pages. and encouragement, and ne will be dult indeed if he falls to receive them from these pages. The best and noblest ideals are here inculcated. while the stirring, inspiring, helpful illustra-tions and stories cannot but rouse and enthuse the reader. The introductions to the chapters the reader. The introductions to the chapters are contributed by such men as Rev. Robert J. Rurdette, Major-General O. O. Howard, Marshall Field. Booker T. Washington, General Thomas J. Morgan, Anthony Comstock, Lyman J. Gage, Rev. George C. Lorimer. Bishop McCabe and others. No boy should fail to read this book. 352 pages. Price \$1.50. Harper & Brother Company.

CHILDREN OF THE TENEMENTS, by Jacob A Riis. Every one of the forty stories told in the pages of this, the latest of Mr. Riis's books, actually happened in the course of his twenty-five years' struggle for improving the condition of the dwellers in the slums of New York. There is pathos to draw tears and humor to make laughter. The condition of the children of the tenements is described. children of the tenements is drawn by a mas-

# MANUAL TRAINI

OVER twenty-five thousand boys in the city of Chicago alone, have taken manual training under the supervision of our director.

OUR SYSTEM of individual instruction extends everywhere—the boy in California or Maine makes the same progress as the boy in Chicago.

See Those Tools and That Work Bench the Industrious Boy is Using? The tools are full size and the very best made. The bench is hard maple and splendidly constructed.

maple and splendidly constructed.

We tend Every Boy an Outfit Just Like II.

We do this because we want every one of our pupils to have the proper equipment. Our instruction is not play—it is serious, educative, carnest effort that keepe the boy happily husy at home. We are not teaching boys trades, but showing them how to make practical application of school-book learning which most children regard theoretically. Now is a splendid time to start your boy, for it will keep him besy and happy during vacation. His rapid acquirement of manliness and industry will surprise and please you. Boys 8 years of age are old enough to grasp it. Special course for girls. Inquiry should be made in name of parent.

1 jest hate school an' jogerfy, An' 'rithmertic an' all! It makes me sick to see them maps An' blackboards on the wall! An' teacher (mean ole hateful thing!) Jest doin' all she can To spoil our fun! Oh golly! Don't I wisht I was a man!

It's orful, drivin' us to school An' crowdin' us together Inside a hot ole smelly room This bully fishin' weather; An' makin' us set jest as still, (Won't even let us speak!) My! Don't I wisht that me an' Bob Could git off to the creek!

Las' Friday evenin' after school Bob he went home with me: I sneaked up in the garret stairs As kyeerful's I could be

To git my pole; an' Bob he took The spade an' dug some bait, An' then laid low till I could slip Out thru the hoss-lot gate.

But jest as I was sneakin' out, Ma caught a glimpse o' me An' hollered "Jim!" I broke an' run But she yells "Yo-o-u-u Jim-me-e-e, Come right here an' split some wood!" Well, sir, I like to've died! I th'owd my pole jest far's I could An' flopped right down an' cried!

An' purt' near cussed! Leastwise I said 'Doggon the doggen wood!" My! Wa'nt I hot! But gittin' mad Don't do a speck o' good With ma-you bet I've found that out Of settin' on a tree-root An' so I had to ston An' split 'hout forty-leb'n cords Till I jest thought I'd drop!

For workin'-Jim, you git the fork An' hit them plant beds steady Till dinner time: I'll bring the seed An' you can he'p me sow it." Well, say! Now maybe I wa'nt sore! But shucks! I had to go it!

Las' Satd'y! Now I've got to wait Purt' near another week 'Fore me and Bob can git a chanst To make another sneak; An,' like as not, when Sat'dy comes There'll be some work to do, Er else they'll make me work my sums An' learn my lessons too.

Aw, shucks! It's almost 'nuff to make A feller wisht he's dead, To set an' fool with jogerfy, Or workin' sums, instead Where the water's deep an' slow, A-watchin' for your cork to jump-By jings! I've got to go!

# What Hop Thief Did A Fourth of July Story By ROSS B. FRANKLIN

cabin on Teton Mountain one sum- forgiveness always resulted. mer day. He was in a bad fix, for possibly an eigle or a large hawk. Anyso thoroughly frightened that he allowed the Austin boys to pick him up. He was carried into the house, where, after an hour's rest, he painfully hopped out into the center of the room, shook himself and sought his corner, where he remained during the balance of the day.

It was decided to keep the newcomer, a limp occasioned by the loss of the toe. Later, when Hop had been with the Austins several weeks and had developed into a mischief-maker and a great thief, the boys lengthened his name to "Hop Thief." A droll specimen, indeed, he was, for his tall never grew again and he never got over his limp. These infirmities, however, did not prevent this funny magple from getting around as lively as any other bird, for he was swift on the wing and never quiet for any length of time between daylight and sunset. He pestered the cattle of the valley below by perching on their backs and clawing until the animals ran, bellowpulling wool from the range sheeps' backs, and seemed to especially enjoy carrying rocks to the cabin roof and dropping them down the chimney, a proceeding which always brought Mrs. Austin to the door in a scolding mood, when Hop Thief would take to the air with a hoarse cry, "Awhiding for several hours, reappearing generally at meal-time, to perch on a window-

omitted.

"I can't afford it this year, sons," Mr. Austin said kindly. "I'd like to send down house-top. town for fireworks and crackers and such for you; but dad's poor this year. If we be a hard matter to get next winter's food

A shade of disappointment passed over and the boys named him "Hop," because of the boys' faces, but they did not remonstrate, for children reared in the humble home of the mountaineer have few enjoyments other than those which nature pro-They are taught frugality from babyhood, and know that disappointment must be taken philosophically.

When their father had gone to work, the Austin boys held a council. It was agreed that some sort of exercises must be devised cussion a program was outlined. would take a few sticks of giant blasting the explosion, where the Declaration of In- breeze. dependence would be read; Hop Thief made" manner.

Accordingly, towards evening the boys sesill, peck in at the family, and wink one lected a spot for the early morning salute, how did he light the fuse?

THIEF came to the Austins' yellow eye in such a comical manner that putting the charge carefully in place, while Hop Thief stood near, chattering as if he It was the day before the Fourth. The knew just what it all meant. The flag was his feathers were ruffled, his tall Austin claim had not panned out well dur- set nearby, and the boys, chuckling at the nearly all pulled out, and one too ing the season, for the mineral vein had surprise planned for their parents, returned was missing. It was evident that the dwindled away and pay rock was to the cabin. They retired early, with a bird-he was a large magpic-had just scarce in the mine. Therefore, it was an- handful of matches near their bed. Long ceived a sound thrashing from some foc- nounced at the breakfast table that the afterwards, Hop Thief, who came home customary elaborate preparations for the late from a prowling expedition in the how, Hop Thief was so badly used up and morrow's celebration would have to be woods, knocked at the window until he was tired. None heard him, and he was obliged to settle down for a roost on the

The serenades of the night minstrels were dying away in the thickets and the eried: "Aw-ou-ou" after which he again don't have better luck soon, it's going to woods. Only a few persistent katydids sawed here and there their monotonous lays, followed by the occasional chirp of a cricket. The owls and the bats were homeward bound, and the first gray streaks of dawn struggled through the gloom, when the Austin boys awoke, and, grasping their clothes, began hastily to dress. Finishing, they tiptoed to the door, succeeded in lifting the letch without alarming their parents, and were in the act of passing to the outside for the purpose of setting off the salute which was to awaken many an echo to be used as stated. in the canons and along the drowsy mounfor the Fourth, and after a lengthy distain sides, when something happened. There was a terrific boom; the earth trembled, followed quickly by a crash here and powder, a dynamite cap and a few feet of there, as pieces of rock and dirt fell from fuse from their father's stock; back of the above. Bits of gravel tattooed on the cabin cabin, on the mountain side, they would roof. The boys were astounded, and, runing with fright and pain; he delighted in dig a hole and prepare the charge to be ex- ning to where their powder had been The spot would be placed, found a gaping hole in the mounploded at daylight. The spot would be placed, found a gaping hole in the mounth is fifteen years of age. He is already marked by a flag. After breakfast, the tain side. The flag still stood, somewhat master of higher mathematics and of somewhat mathematics and higher mathematics and higher mathematics are not somewhat mathematical mathematics and higher mathematics are not somewhat mathematical mathematics and higher mathematical mathematics and higher mathematical mathematics and higher mathematical mathematics and higher mathematics are not somewhat mathematical mathematical mathematics are not somewhat mathematical mathematics and higher mathematical mathematics are not somewhat mathematical mathematics and higher mathematical mathematical mathematics are not somewhat mathematical mathematics and higher mathematical mathematical mathematics are not somewhat mathematical mathematics and higher mathematical mathematical mathematics are not somewhat mathematical mathematics and higher mathematical mathematical mathematical mathematical math family would be marched to the scene of torn, but waving proudly in the slight

"Who could have done it?" cried the diswould be the veteran at the ceremonies. It appointed youths; and an instant after, as was determined that the natal day of the if in reply, from the uppermost branches which sounded not unlike a laugh, greatest country in the world should be of a tall tree came a hoarse cry uttered After such performances he remained in celebrated, even if it must be in a "home- partly in triumph, partly in fear: "Ah-ouou! Not me-e-e! not me-e-e!"

There, indeed, was the guilty fellow, But

"Not me-e-e! not me-e-e!" screamed the bird, as his young masters began to in vestigate. The fuse, bearing no sign of having been lighted, was found some dis tance away. It was evident that Ho; Thief, who witnessed the placing of the powder sticks the evening before, revisited the spot and, through pure mischief, dug down to the charge. Upon reaching the explosive a loose rock probably struck th dynamite cap as Hop Thief clawed, thereby setting off the blast.

How the magpie escaped being blown to atoms was a mystery, but the fact of hi being in the tree-top and lustily endeavoring to exonerate himself, proved that hwas not seriously injured.

Mr. Austin soon arrived on the scen-He was greatly alarmed, fearing some ter rible catastrophe, but after a hasty glancat the surroundings, he grasped the situa tion and his eyes filled with tears. Ten derly placing his arms about the shoulder of his two sons, he silently led them to the cabin.

"Lads," he said, arriving at the door "your dad has but fifty cents to his name. and luck seems to be against him. If he could give you a decent Fourth, he'd do it lads; but he can't, he can't. The old hill won't give up its treasure. Maybe, next year, if we're all alive-"

"Not me-e-e! not me-e-e!" Hop Thief interrupted Mr. Austin's words. The bird was following close behind, limping morthan ever, and greatly excited. "Aw-ou-ounot me-e-e!" he cried continually; and even later, while devouring his breakfast, he often paused to look up at the family and avow, "Not me-e-e!"

At 'ten o'clock the Austins repaired to the flag, where the program was finished Hop Thief sat on the flagstaff looking very solemn and remaining silent throughout the reading of the words which our forefather fashioned one hundred and twenty-eight years ago in the Declaration of Independence for which Washington and his patient, humble followers fought, bled and

Before the party left the spot, Mr. Aus-Before the party left the spot, Mr. Austin in an inquisitive spirit examined the hole which Hop Thief's salute had made From force of a miner's habit, he picked out pieces of rock here and there and looked them over. Suddenly a cry of exultation startled the family. Mr. Austin grasping a small specimen, threw his hat into the air and ran excitedly towards the house. Arriving at the cabin, he feverishly sought his magnifying glass, and when his wife and boys reached him he was dancing with glee.

"The mineral vein! The mineral vein' We've found it again, richer than ever' Look!"

In another instant the bright sunlight ri another instant the bright sunlight glistened upon the silver-streaked hair of the old miner, who sank, bareheaded, to his knees before a large boulder, where with clasped hands, he sang the first few words of the Doxology:
"Praise God from Whom all blessings

The canon echoed the words to the low-lands, and the songs of the birds in the pines seemed to grow louder. From a dis-tance came the deep, rolling sound of a mighty blast which some neighboring miner

had just set off. It seemed that the whole country was joining in to emphasize the words of thanksgiving.

Mr. Austin arose and, turning to his boys, exclaimed: "Sons, years ago powder gave to a patient, God-fearing people the independence of our country. To-day, an independence of our country. To-day, an anniversary of that event, powder has given to your struggling old father and he family an independence from want. Your family an independence from want. Your morning salute to this glorious Fourth of July has laid bare the secret of our mine. "Not me-e-e! not me-e-e!" chirped Hop Third.

Thief.

"Yes, it was you. Hop Thief, you blessed magpie!" laughed the old miner. "You! never regret this morning's work while w

And so it happened that Hop Thief's michief on Independence Day brought ind pendence to the Austins.

#### The United Association of Amateur Printers

The Master Passion

A Captivating Romance of Border Life

#### By WILLIAM C. SPRAGUE

President of the Sprague Correspondence Schools and of The Sprague Publishing Co.

#### PRESS COMMENT

Extremely clever, Extremely clever,
A charming story,
A thrilling volume.
A unique production.
Every page interesting,
A creditable production.
A romance of exceptional merit.
One regrets there is not more to tell.
The author has won his spurs gallantly.
Captivates the reader from start to finish.
There is no dearth of action and incident.
It will be read by all lovers of good fiction.
The interest is sustained from start to finish.

Sprague uses a skill that promises

One feels over again the charm of romanthe days.

A sweet love story interwoven with deeds

of herutam.

Keeps the reader in a condition of breath-less suspense.

Fine description, delicate sentiment, fluent

expression.
In his descriptive writing the author takes

Creditable to the author's Industry, loyalty to Detroit, and literary ability.

To say that it meets the approval of popular taste is but mild praise.

A stirring plot and a dash and romance which carry it easily to its close.

Written with the same strong, virile, original force characteristic of the author's previous works.

previous works
Love and war, dashing romance and crim-son stained history are mingled and interwoven with pleasant if somewhat

interwoven with pleasant if somewhat daring effect.

It is a revelation of a hitherto unknown side of the author's character. His strenuous life and practical efforts have not prepared his friends for so great a display of imagination and poetic grace. In unity of plot, in a highly sustained interest from cover to cover in a possible though not probable denouement, hits poetic description, in its intensity of passion, Felice Constant bears out its elemans a romance and one that will hole the reader's undivided attention.

READ EVERY WORD THAT FOLLOWS

NENT INSTITUTION? our announcements, setting some particular day in the year 1905 as American Boy Day, the country over. We call upon good men and

women to enroll their names as our assistants in culisting the best boy

talent everywhere, and planning for the day. No one can calculate the immense good to come from such a day. The Fourth of July, which should be consecrated to holy ends, has degenerated into a day of noise and bluster and bunkum, leaving no

real impression for good on the youth of the land. Let the boys themselves make a start for a day of real patriotism, commemorating some great event in our country's history and devoting it to uplifting and inspiring American youth to wider ideas and loftier ambitions. The same concentrated zeal and love for the hows of America that made possible the wonderful success of American Boy Day at the World's Fair can carry out this new and greater undertaking, and we now pledge ourselves to accomplish it.

We invite correspondence on the subject, particularly from men and women whom we can depen t upon to assist us in rousing interest and planning for local celebrations. As to the boys we shall depend upon them, especially, for our success,-and greatly shall we depend upon THE ORDER OF THE AMERICAN Boy, which now has companies in a thousand American towns.

Awaiting your assurance of support, which we

know will be sure and hearty, but proceeding in the meantime at once to the carrying out of this great project, we remain,

Sincerely yours.

The Publishers of The American Boy.

The great's ices of American Boy Day at the St. Louis Exposition held ander the auspices of The American Boy and the letters received by the cliffor of that publication since that day indicate that the boys of Are given will had with delight the announcement of

a permanent American Boy Day which shall become as neich a feature of American life as the Fourth of J. ly. Thanksgiving or Christmas is now.

If talented boys can produce a successful and inspiring celebration on a day called American Boy Day at the St. Louis Exposition, why may they not do se ou some certain day in every city, town and country village in America? There are talented Loys in every community. There are good men and we men who appreciate boys and love to help them. There are bundreds of boys in every community who need the encouragement and inspiration to be received from an American Boy Day, not a day of fire-crackers, pichies and general hurrali, followed by headache the next morning, but a day on which Young America shall celebrate the achievements of American boyhood and gird itself for the coming years of citizenship; where talented boys may be giver an opportunity to display their talents, and thus encourage and inspire their fellows; where grown people may eatch the in-piration of youth and form something more of their own daties and responsibilities; where boys may imbibe from one another a spirit of loyalty and of independent

thought and effort. Why not? Who is there to object?

We, the publishers of Tite American Boy, will lead the way. We shall for a few weeks listen attentively to any suggestions with reference to the day, the character of the program, etc., etc., then we shall make

CHAPTER XXIV.

#### THE TIMELY EXPLOSION OF A BOILER.

Greatly depressed by the unexplained disappearance of their Chinese engine driver, our lads, ignorant of everything connected with machinery, set themselves the hazardous task of running a locomotive. They got it started without difficulty, and two minutes later were running at tremendous speed over the level line that extended without grade or curve as far as they could see. While Rob shovelled coal until his back ached and his face was as black as that of a negro, Jo occupied the engine driver's seat and anxiously stared ahead. Neither of them spoke, for the strain on their nerves was too great; since each knew that at any moment they were likely to be blown up, flung from the track, or sent plunging through some weakened bridge. They were facing death in a dozen forms, but stuck to their posts without flinching, for they knew that a like fate, absolutely certain, awaited the unprotected foreigner who should be caught attempting to cross those plains on foot.

So they drove on mile after mile, dashing past the station of Sing Yang without a pause or even a slow down; and shortly before sunset came within sight

of the gray walls of Pao-Ting-fu. "Shut her off, Jo. We've done the act so far, all right," said Rob, speaking jerkily and with ill-repressed excitement. "Now comes the real danger. What a crowd there is about the station. There's an engine, though, with a single car attached. Waiting up by the tank. Perhaps our bluff has

worked. Steady! Here they come.' The stolen locomotive had stopped at the lower end of the station platform, pant-

ing as though exhausted by its long run, and a group of Chinese officials were hurrying to meet it.

"Where is his Excellency Yu Hsien?" asked one of these, peering with an expectant air into the cab.

"He is following on a special train," replied Jo, promptly, but I am his representative sent ahead to prepare the way for him. Is the track repairing car ready as the Governor requested? If not he will cause the officials of Pao-Ting-fu to suffer the same bitterness that has gained for him fame among the foreigners of Shan

"It has been prepared according to the most noble Governor's defire, replied the official hesitatingly, "but-

"Let us then go to it," interrupted Jo stepping from the locomotive as he spoke and starting up the platform.

Rob followed him closely. As he left the cab he caught a glimpse of a be-

grimed, dishevelled, and nearly naked man, crawling from beneath the tender. In an instant it flashed across him that this was their lost engine driver. Looking back a moment later, he saw the same figure following them.

They, in the meantime, were being conducted towards the agent's quarters, in the station house, where refreshments had been prepared for Governor Yu Hsien

"If he were but here," remarked the official spokesman deprecatingly, "of course everything would be at his disposal; but we have been so expressly ordered not to allow the passage north of any save troops, or mandarins of the highest rank, that we are at a loss how to act.

"Am I not a representative of one of the greatest mandarins of the Empire?" demanded Jo flercely. "And am I not come to prepare the way for him? Has it not already been told to your dull ears that, upon his reaching the imperial city within two days depends the very life of the Son of Heaven?" At this august name, every one present, excepting Rob and including the speaker himself, made a deep reverence.

"But the Emperor is no longer in danger, since the Ocean Devil army has been driven back, and now is being cut to pieces by his own invincible troops." boasted the official.

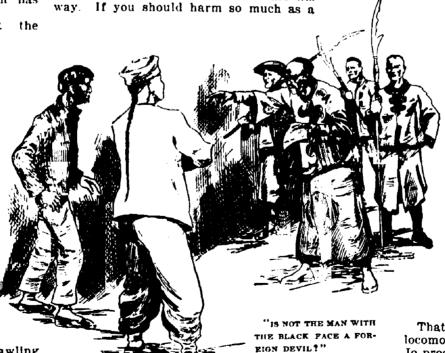

"What do you mean?" asked Jo. "No such news has come to the ears of his Excellency the Governor."

"It is nevertheless true that from the ships gathered off Taku bar thousands of Ocean men were landed to go to Pekin. They traveled by the road of iron-fire, restoring the track, even as you now propose to do. Slower and slower they moved, being beset on all sides by sons of the Great Sword. Beyond An Ting they could not go; for there they were met by Imperial cavalry from the South Hunting Park and turned back in disorderly flight. Hundreds were killed and hundreds more are being cut down at this moment. All their guns and banners are captured, and it is certain that not one of them will escape alive. The Ocean Devils still on their ships, have threatened to fire on the Taku forts, but they dare not do it. General Nieh has made answer that with the firing of the first shot, every foreigner in Tientsin and Pekin will be put to death; for so commands an edict from the Imperial City

"What has all this to do with us?" inquired Jo. pretending not to be at all affected by this startling news. "The Governor of Shan-si must pass in spite of everything. Let him be delayed by so much as the fraction of an hour, and those whom he will hold responsible may tremble in their shoes.'

"Is not the man with the black face standing by your side at this moment a Foreign Devil?" suddenly demanded the official, ignoring Jo's threat and pointing an accusing, claw-like finger at Rob.

'No," answered Jo, stoutly. "He is a native of the Middle Kingdom; but he comes from the far south, where he was born. He is also wise in the science of iron-fire, and has been sent on in advance of the Great Governor to make safe his

hair of his head, the vengeance of Yu Hsien would be swift and terrible as that of Heaven itself."

"He is Yang Kwei!" (Foreign Devil, Northern dialect), cried a voice from the back of the room, and Rob, turning quickly, caught a glimpse of the begrimed engine driver, whom he had seen crawl out from under the tender, and who afterwards had followed them.

At that same instant he, together with every one in the room, was hurled violently to the floor, the walls of the building were blown in as though they were of cardboard, and the city of Pao-Ting-fu was shaken by an explosion so terrific that its inhabitants ran shricking from their houses into the streets.

Some of the occupants of the station agent's room fled from it unharmed, while others, and among them our lads, more or less bruised by falling bricks and tiles, crawled out from the debris and made exit more slowly. Only one remained behind, crushed to death beneath a heavy roof timber, and he was the engine driver, killed in the very act of denouncing Rob, by the blowing up of his own locomotive. It had been left with a roaring fire behind its closed furnace door and very little water in its boiler.

'Are you hurt, Rob?' "Nothing to speak of. Are you?" "No."

"Then, what do you say-shall we take advantage of the confusion to light out? The situation seemed to be getting pretty hot for us when that blessed old engine interrupted the proceedings."

"What do you mean—run away? No, indeed!" replied Jo earnestly. "Things are just as we want them now. Don't you remember that I was telling them what Yu Hsien would do if they interfered with his plans. He is the head Boxer, and just now the I-Ho-Chuan are credited with being masters of magic. Wait till I speak to these big men.'

The official, or, as Jo called him. "the big man," who had been foremost in examining our lads, was excitedly chattering with one of his fellows when Jo and Rob stepped up to him.

"You are alive and not harmed?" he gasped at sight of them.

"Of course we are not harmed," replied Jo. Did 1 not tell you that we are the servants of Yu Hsien, and do you think he would harm his own?"

"Is this terrible thing the work of the Great Box-

"Certainly it is. I warned you how it would be. He has killed one who defied him, that you may have evidence of his strength; and if you still go against his wishes, your own sons will shortly erect a new ancestral tablet."

"It is true, most honorable one," admitted the frightened official humbly, "and we are not so dense but that we can learn the lesson thus plainly stated. Tell us, then, how we can serve you, and thus appease the wrath of the mighty Boxer, that he may not visit farther destruction upon us.'

Give us the slight thing for which we asked—a few rails, a few track-layers, and a fresh enginethat we may go about our work, and prepare the way for our master," replied Jo boldly. "Then shall all go well with you, and with this city of Pao Ting, which otherwise might be bereft of its walls by the next exhibition of Yu Hsien's wrath."

So superstitious are the Chinese, so dreaded were the mysterious incantations of the I-Ho-Chuan, and so unnerved were the officials of Pao-Ting-fu by the explosion of a few minutes before, that they yielded to Jo's demands.

A locomotive, attached to a car holding rails and a gang of coolies, had been made ready in anticipation

of Yu Hsien's coming. This train, standing by the water tank at a distance from the scene of explosion, had remained uninjured, and now was placed at the disposal of our lads. They were told that for fifty li the track still was in good condition. After that, they could readily repair it with the means at their disposal until they came to the great bridge at Cho-Chou, which had been hopelessly de-

So our young adventurers left the of ficials of Pao-Ting-fu, promising them that Yu Hsien should be informed of their efforts in his behalf, and were thankfully seen to disappear in the gathering twilight.

"Well!" exclaimed Rob, who had not spoken during all these negotiations, and heaving a great sigh of relief, as they pulled out from the deadly neighborhood. "our bluff worked after all, but, take it all around, it was about as close a call as I ever want to experience."

"Yes," replied Jo. "I never expected to be saved from sudden death by the blowing up of a boiler.'

That night they remained on board of their new locomotive at the little town of An-Su-Hsien, where Jo procured for each of them the red hats, sashes and shoes worn by Boxers. At daylight they again were under way, and, though they were obliged to stop a dozen times to replace missing rails, they had reached Cho-Chou, only forty miles from Pekin, before dark. Here they were able to hire horses, that, by late afternoon of the following day, had carried them within sight of the far-extended walls of the great Chinese capital. Beyond the wall rolled dense clouds of smoke, as though the whole city were on fire, while distinct above all other sounds rose the sharp rattle of musketry mingled with the deeper roar of heavier

At these evidences of a deadly strife, our lads drew rein and looked inquiringly at each other. After all, was the city of Pekin a good place for a young American and a Chinese who had befriended him to enter at that moment?

"Yes," said Rob at length, "I think we will keep on, only we will give up our horses here. I don't see that we are any worse off in any event inside the city than where we are. There is fighting going on. to be sure; but it must be between our friends and our enemies. If the former are getting the worst of it, they need our help; while, if the fight is going the other way, we have nothing to fear.'

"I wonder," remarked Jo bitterly, as they moved slowly forward on foot, "which side will prove friendly to me, or will all prove enemies of the Chinese

who has befriended a foreigner?"

#### CHAPTER XXV.

#### IN CHINA'S CAPITAL CITY.

China's capital, the great Northern city of Pekin. is situated on a plain, one hundred and twenty miles from the sea, and near the eastern base of a low mountain range, known as the Western Hills. It is divided into two nearly equal parts, the Northern being the Manchu or Tartar City, while the other is called the Southern or Chinese City. The Northern City is surrounded by a vast brick wall, nearly square-sided. eight miles in length, fifty feet thick at the base, sixty feet high and forty feet wide on top; it is pierced by nine massive gateways, two on the north side, two on the east, two on the west and three on the south. These last open into the Southern City, which is about the same size as the other and also is surrounded by a lofty wall having seven gates. In the Southern City, standing in the middle of a fortyacre park, is the great Temple of Heaven, in which the Emperor alone may worship.

In the centre of the Northern or Tartar City, and occupying one-eighth of the enclosed space, is located the Forbidden City, surrounded by a fifty-foot wall of red brick, coped with tiles of imperial yellow. This wall has but four gates, and within it are the yamens or palaces of high rank mandarins, besides parks and pleasure grounds. Inside of the Forbidden City is yet another known as the Imperial City, strongly fortified and containing the palaces, pleasure grounds, lakes and lotus ponds of the imperial family.

While Canton, in the far south, has been called the most wonderful city of the world. Pekin is almost as remarkable, although in an entirely different way. Canton streets are noted for their extreme narrowness, and those of Pekin for their width, some of the latter being one hundred feet wide. In Canton there are no wheeled vehicles and no beasts of burden, while Pekin streets swarm with blue-covered twowheeled carts, very heavy, and drawn by large, finelooking mules: two coolie jinrickishas, bullock carts, wheel barrows loaded with passengers or freight, pushed by one coolie, and pulled by another, long caravans of shaggy, two-humped camels, besides innumerable riding ponies, and donkeys. Also in Pekin may occasionally be seen the smart European brougham, drawn by a high-stepping American horse, of some wealthy mandarin, though most of those who can afford to ride, prefer to do so in sedan chairs. Of these chairs, those used by members of the Imperial family are roofed and curtained in yellow, those of the higher class of mandarins are red, those of the next lower grade are blue, and so the descent is continued through green to black, while mourning chairs of every class invariably are white.

In Canton a large proportion of the houses have two stories while in all directions tower the lofty six to nine storied pawnshops, looking like flat-topped grain elevators; but in Pekin all dwellings and shops, even including the Imperial palaces, have but a single story. The only buildings in all the city that exceed this height are the pagoda-like Temple of Heaven, the great drum tower, the great bell tower, the fortifled gate towers surmounting the city wall, and certain foreign establishments belonging to missions, legations, or business firms, that have been erected since 1900.

Pekin is well provided with wide breathing spaces in the shape of temple and palace grounds, and shade trees are fairly abundant throughout the city. Most of its broad avenues are unpaved and it is visited by suffocating dust storms at certain seasons of the year, while at others it wades through fathomless mud.

In 1897 the capital was connected with Tientsin. eighty miles away, and with the sea by rail, but the track was compelled to end two miles outside the southern wall. In 1900 came the great Boxer uprising, the siege of the foreign legations in Pekin, and the capture, occupation and terrible punishment of the city by the troops of nine foreign powers. These retained possession for a year; during which time they carried the railroad into the very heart of the city, largely increased the area of legation "Concessions," established a clean swept neutral zone three hundred feet wide around the legation territory paved Legation street, built commodious barracks for the foreign troops that are to remain as permanent legation guards, and erected handsome legation buildings, while the United States and Germany have taken possession of, and will permanently control a quarter of a mile of the city wall adjoining their legations. After a year of foreign control, Pekin was restored to its Chinese rulers and the self-exiled Imperial Court returned to their capital city. During 1903 a number of large foreign buildings, including a European hotel, banks, hospitals, chapels, schools, etc., were erected, and many more were projected for this year (1901). Electric lighting on an extensive scale. as well as electric trams, are already planned for. The Pe-Han (Pekin-Hankow) Railway, over a portion of which our lads traveled, and which was wholly destroyed by Boxers immediately afterwards, has been restored and the track extended southward to the Yellow River. Beyond this construction is being so rapidly pushed from both ends that the completion of the whole line is promised by 1906.

Thus China's capital, rudely roused by foreign guns from the sleep of ages, is now awake and in a fair way speedily to take a prominent place among the progressive cities of the world.

None of these things were thought of, however, on the June day of 1900 when Rob Hinckley accompanied by his stanuch friend. Chinese Jo, hesitatingly approached the great city, for at that moment it was shadowed by the darkness of despair. The tidal wave of Boxer uprising had reached and overwhelmed it. The I-Ho-Chuan were in complete possession, and Pekin, with its teeming population, its accumulated wealth of years, and above all with its hundreds of hated foreigners, diplomats, missionaries, business men, and legation guards, lay at their mercy. They had nothing to fear from Imperial troops, for these, always in sympathy with their movement, already had begun to co-operate with them in their killing of

Christian converts, their burnings and their lootings. Bolder and bolder they became, wilder and wilder grew their excesses, until shortly before the arrival of Rob and Jo, they had started flerce conflagrations in all parts of the city, had destroyed two Roman Catholic cathedrals, and were regularly besieging a third with cannon and rifle fire. In this great fortress, and within its spacious wall-enclosed grounds, ninety foreigners, forty-three of whom were French and Italian marines, and more than three thousand native converts, had taken refuge. For sixty days this isolated stronghold of Christianity was shelled and bombarded with cannon ball and rifle bullet, without a moment's intermission, but it held out to the end, and stands to-day a monument to the heroic endurance of its defenders. The attack on it had been begun three days before the arrival of our lads; and the sounds of heavy firing that had so aroused their anxiety was the cannonade directed against its walls.

With many misgivings they skirted the Southern City, which seemed a seething caldron of riot and flame, and sought an entrance to the Tartar City through one of its western gates. Here, to Jo's great satisfaction, he found, in the officer of the guard, who examined them, an acquaintance, not only willing to admit them, but of whom he could ask questions. Believing Jo to feel even more bitterly than himself, concerning foreigners, this officer did not hesitate to give him the very latest news. He confirmed the report heard at Pao-Ting-fu of the defeat and driving back towards Tientsin of the combined American and British relief expedition, under Admiral Seymour, told of the siege of the Northern Cathedral, and, most startling of all, informed Jo of the Imperial edict. issued that very day, ordering the destruction of every foreigner within the walls of Pekin.

"Already," he said, "have the invincible troops of Jung Lu entered the city, and with them are the Kansu tigers under the terrible Tung-Fu-Hsang, who thirsts for foreign blood as does a babe for its mother's milk. To-day they are placing guns to command the legations, and to-morrow at four o'clock if the Ocean Devils have not left the city, they will be attacked and killed like rats in their holes."

It was fortunate that Rob failed to comprehend what the officer said, for he could not have listened unmoved as Jo did. That the latter did so was because he was not quite certain that he did not approve the plan for driving all foreigners from China. Foreigners, and especially Americans, expelled Chinese from their countries; so why should not his people in turn expel foreigners from China? Still he did not express any views on the subject at that time, but changed the topic of conversation by asking the officer if he could tell him where his father might be found.

For a moment the latter hesitated and his face assumed a peculiar expression. "Did you not know that his excellency, Li Chong Chee had been given a position on the Board of Punishment? It is doubtless at the yamen of that illustrious Board that you will find him."

Thanking the officer for his courtesy, Jo and his companion took their departure; and, making their way through alleys and the quieter streets as remote as possible from conflagrations, and all scenes of disturbance, they finally reached the yamen of the Board of Punishment, which corresponds to what in an American city would be a combined courthouse and jail.

A main entrance through the street wall led to a court, reached by the descent of several steps. This court was surrounded by low buildings occupied as offices of the Board, and in its middle was a pond of water. As no person of whom they could ask questions was to be seen here, our lads passed on to a second, or inner court, that opened from the first. It also contained a stone-bordered reservoir of water, and was surrounded by fantastically ornamented buildings. In one feature, that was immediately noticeable these low buildings differed from any other that Rob had ever seen in China. They were provided with cellar-like basements, divided into small compartments, from each of which a little grated window opened into a tiny outside well-hole.

About one of these well-holes stood a group of half a dozen Chinese officials, towards whom Jo made his way, intending to ask one of them where his father might be found. As he drew near and was about to speak, he glanced downward to see what had so attracted their curiosity, that no one of them turned at his approach. What he saw was a human face, tortured and livid, pressed against the grating and straining upwards in mute agony. The man was supporting himself by hands clenched about two bars of the grating, and evidently was standing on tin toes.

Rob, looking over Jo's shoulder, also saw the awful face, and for an instant wondered at the black line that seemed to cut it at the uplifted chin. Then it flashed across him that this was a line of black water, slowly, but surely rising, and that in another moment the man would be drowned. And no one dared try to save him even were it possible to do so, for he was a condemned prisoner, suffering one of the innumerable ingeniously awful forms of Chinese capital punishment.

"What was his crime?" asked one of the fascinated spectators of another.

"He was that member of the Tsung Li Yamen, who, before circulating the palace edict *Feng Yang jen pi sha* (whenever meeting foreigners kill them), dared alter *pi* (kill) into *pao* (protect)."

"It is enough, and his punishment is righteous," declared the other.

Rob did not quite understand this; but Jo did, and seizing his comrade's arm with so flerce a grip that the latter winced, he dragged him from the awful scene. As they gained the street, he whispered in choking voice:

"From this moment I am with you and with the foreign people, until the Empress is overthrown. Let us get to your legation."

"Was it any one you knew?" asked Rob, not yet comprehending.

"He was my father."

#### CHAPTER XXVI.

#### WAR CLOUDS.

China, in her ignorant self-confidence, and goaded to desperation by foreign aggressions was defying the world. Not only was she killing missionaries together with their converts wherever found, and putting to shameful death such of her own people, from highest mandarin to lewest coolie as dared lift a hand to save them, or speak a word in their behalf, but by Imperial order, Chinese troops were preparing to attack foreign ministers in their own legations. Thus China deliberately was about to commit the gravest of international crimes. For sometime the foreign ministers, foreseeing the dangers of the apparently uncontrollable Boxer uprising had been calling upon their respective governments for protection. In response an ever-increasing fleet of warships was gathered off the mouth of the Pel-ho, which was as near as they could approach to Pekin. From those ships which first arrived a mixed force of marines. four hundred in all, and representing eight nations, was sent to the capital to act as legation guards, and the train that brought them was the last to reach Pekin for many weeks.

These marines arrived on the first day of June and forty-five of them immediately were detailed to protect the Great Northern Cathedral, while twenty more were sent to the compound of the American Methodist Mission. A week later the Empress Dowager returned to Pekin from her summer palace in the western hills. From that moment the situation grew so rapidly worse that the ministers again telegraphed the foreign fleet to send at once a strong force for their further protection.

In response to this urgent request Captain McCalla, the senior American naval officer with the fleet, declared that he should start for Pekin the next day. The British Admiral Seymour promptly proposed to join him, and other commanding officers entered so heartily into the project that on the following morning when the expedition started by rail from Tong Ku, the nearest landing point, it comprised 2,066 troops. Of these 112 were Americans, 915 British, 450 Germans, 312 Russians, 158 French, 54 Japanese, 40 Italians and 25 Austrians.

This force, made up of sailors and marines, well provided with light artillery and rapid fire guns, set forth in high spirits expecting to reach Pekin that very night, or at any rate within twenty-four hours. Nine days later saw them still twenty miles from their destination, short of ammunition and food, encumbered with two hundred wounded men, cut off from their base of supplies by the destruction of the railway behind them, as well as in front, and unable to communicate either with Pekin or the outside world on account of the telegraph line having absolutely disappeared, while couriers with despatches were caught and killed as fast as sent out.

From the beginning they had been harassed by hordes of Boxers, and now they were confronted by five thousand Imperial troops, including a strong body of cavalry, armed with modern rifles and well supplied with artillery. Under the circumstances a farther advance was impossible, and a retreat was ordered. At the end of another week, the unfortunate expedition reached Tientsin exhausted, demoralized and sadly depleted in numbers; but having learned the bitter lesson that no small force of foreigners, no matter how brave and well-armed, could traverse the interior of China against the wishes of the Chinese.

During the absence of this expedition the fleet of warships lying off the Taku bar at the mouth of the Pei-ho had been strengthened by numerous additions, the Taku forts had been captured after six hours of fighting; and an army of ten thousand troops had advanced to the relief of the foreign portion of Tientsin, which was being besieged by Boxers, from the walled city of Tientsin proper. Next the allied foreign troops turned their attention to this stronghold and set about its capture; but it held out for three weeks and did not fall into their hands until the 14th of July.

Now let us return to the middle of June and the city of Pekin, where a handful of foreigners, cut off from all communication with the outside world were anxiously, but confidently awaiting the coming of the

McCalla-Seymour relief expedition. All sorts of rumors were afloat concerning its progress and position, and one of these so persistently asserted that it would reach the city by the very evening on which Rob and Jo entered Pekin, that many persons ascended the lofty wall near the American Legation and remained there for hours straining their eyes for a sight of the exsected troops. But they did not come; and as the sun, turned to a blood-red ball by the smoke from many conflagrations, disappeared in the lowering west, the disappointed ones returned to their homes. loubly weighted with anxiety.

After dinner that evening two guests sat with the United States Minister and his wife, earnestly discussing the situation. They were an American tourist and his daughter who, not realizing the danger of their position, had lingered one day too long in Pekin. and then, owing to the sudden destruction of the railway, found it impossible to leave. The subject of their present conversation was a note from the Tsung Li Yamen (Chinese State Department) received by the minister a few hours earlier. It declared the situation in Pekin to have reached such a stage that the authorities could not undertake to protect the ministers longer than twenty-four hours from the date of the note, which also urged their departure under Chinese escort for Tientsin.

Are you going to accept that proposition?" asked the tourist.

"Frankly, I don't know," replied the minister, "cerrainly we cannot leave within the time limit specified. It won't do for us to abandon the missionaries, and they declare they will not desert their converts, whom we, of course, could not take with us."

"What means of transportation should we have if you did decide to leave, now that the railway is no longer in operation?"

"We have demanded carts, boats, provisions, and that a member of the Tsung Li Yamen, high in authority, shall accompany us. This, of course, is playing for delay, that we may have more time in which to hear from Seymour's expedition. It is now four days since the last word came from it, and we must know its position before starting. No. I don't believe we will leave within twenty-four hours, though some of my colleagues think differently and already are packing their effects.'

"My daughter and I will not try to carry out anything but our hand-bags, which can be made ready at

a moment's notice," said the tourist.
"You are wise. I shall attempt to carry very little myself, and my baggage will consist largely of state papers, which already are packed for transportation.' "Then you are pretty certain that we will go sooner or later?

"Yes, sooner or later, for the city is growing untenable. The hour of our departure probably will be decided by the morning advices from the Tsung Li Yamen. If no word should come from them Von Ketteler, who does not agree that it is necessary for us to leave Pekin, declares he will go to them and de-

mand satisfactory guarantees for our safety." "It would be a bold thing to do."

"Yes, it will, especially as Von Ketteler recently incurred the additional ill-will of all Boxers by personally beating with his stick one of them whom he caught parading Legation street in the full regalia of his infamous society. He is a brave man, but unfortunately he regards the Chinese with a contempt that will, I fear, lead him into difficulties.'

At this moment, a servant announced Lieutenant Hibbard.

"Excuse me, sir, for disturbing you," said this individual, after he had saluted those present, "but it seemed best to report a rather peculiar case. Two young Chinese, wearing the Boxer uniform, have just been arrested, and are now held by the guard at the

gate. They demand an interview with the American minister, and, curiously enough, both of them speak English remarkably well. At least, so the corporal of the guard says, for I have not yet seem them my-

"Are they armed?" asked the minister.

"Yes, sir. That is, they were armed with revolvers; but of course those were taken from them.'

ery well, let these English-speaking Boxers brought in, under guard, and we will hear what they have to say for themselves. Unless this young lady objects to their presence," he added.

"Oh, no, sir! Of course I don't," exclaimed the girl, who hitherto had listened in silence but with intense interest to the conversation between her father and the minister. "I want ever so much to see a Boxer, whom I can be certain really is one."

In another minute the prisoners, guarded by two carines, were ushered into the room.

"Pretty tough looking customers, aren't they?" asked the lieutenant of the girl by whose side he had taken a position as though to project her in case of

"Yes," she replied, hesitatingly, "But do you know," he added in a low tone, "the face of one of them -eems very familiar. I mean the one with the queue.'

"Oh! all Chinamen look alike," replied the officer carelessly. "I've seen a hundred that you'd think were twin brothers of the other one, the tougher appearing of the two. I expect he has murdered more converts than he could count."

Just here the minister who had stepped for 3 minute into his office, returned, and at once proceeded to question the prisoners.

"I am told that you speak English. Who are you? and why do you come here?" he asked.

"Are you the American minister?" cautiously inquired the one whom the lieutenant had indicated as being the tougher appearing of the two.

"I am."

"Well, then, we've come to tell you that the American and British relief expedition you are expecting has been attacked by more than five thousand Imperial troops. It has already been badly cut up and now is in full retreat towards Tientsin.

"Impossible!" gasped the minister.

"It is true, sir; and if you leave this city to-morrow in the hope of reaching Tientsin, you will be killed as soon as you pass the city gates. An edict was issued from the Palace to-day for the extermination of all foreigners in Pekin, and an attack on the legations will be begun at four o'clock to-morrow afternoon.'

"Who are you?" demanded the startled minister. "and what proof can you give that your astounding statements are true?'

"I am an American, of course," replied Rob in a tone expressive of surprise that anyone should question his nationality, "and my friend here is a son of Mandarin Li Chong Chee, recently a member of the Tsung Li Yamen. He was put to death a few hours since for having tried to protect foreigners, instead of killing them. My friend and I got acquainted in the States where he was being educated, and-

"His name is Joseph Lee!" cried the American girl, no longer able to restrain herself, and springing to her feet in her excitement; "I knew I had seen him before."

"Lut who are you, sir? What is your own name?" interrupted the minister sternly.

"Hinckley," replied Rob; but not withdrawing his eyes from the flushed face of the girl; and, speaking to her he added: "I knew you and your father as soon as I saw you, Miss Lorimer, but I thought that perhaps you wouldn't care to recognize me in this costume.

"As if anyone could!" cried Annabel Lorimer. "I am sure you wouldn't recognize yourself if you could see how horrible you look. Even now I only recognize your voice. Should you have known him, papa?

"No," replied Mr. Lorimer, staring hard at Rob, "and I am not certain that I do even now."

'Is your first name Robert?" asked the lieutenant of marines, "and were you ever on board the United States monitor Monterey?"

'Yes, my name is Robert Hinckley. I was on board the Monterey about four months ago, and you are Ensign Hibbard," was the reply.

"He's all right, sir!" exclaimed the lieutenant turning to the minister. "I know him well, and can swear that somewhere about him he's got skin as white as mine."

"Well," said the minister, his stern face breaking into a smile, "I'll take your word for it, Mr. Hibbard; but even you must acknowledge that its whiteness is pretty effectually concealed at present. Mr. Hinckley, I am much pleased to meet you, especially as you must be a son of Dr. Mason Hinckley, whom I long have counted as among my friends. But the news you bring is of such momentous character that I must ask for further details, even before extending to you the hospitalities of the legation. Will you and your friend sit down and kindly tell us everything that you know concerning the situation?"

#### CHAPTER XXVII.

#### CHINA DEFIES THE WORLD.

The startling news conveyed to the American legation by our lads was transmitted to all the other ministers that same night; and it at once put an end to the preparations for departure. It was further discussed at a meeting held the next morring when it was determined that their only chance for safety lay in remaining where they were and defending them-

selves to the best of their ability. It had been hoped that some members of the Tsung Li Yamen would attend this meeting, but none appeared. The German minister. Baron Von Ketteler, thereupon reaffirmed his intention of going to the Yamen and demanding a conference. Moreover, to show his contempt for the Chinese, he declared that he would go unarmed and unescorted save by his official interpreter, Mr. Cordes.

No entreaties served to deter the brave but obstinate man from his mad enterprise. Entering his sedan chair, which he had furnished with cigars and reading matter to aid him in passing the time if he should be compelled to wait at the Yamen, he set forth, followed by his interpreter in another chair, and preceded by a Chinese outrider attached to the legation.

Just before this departure, the American minister had requested Rob Hinckley, who, still disguised as a Chinese might traverse the streets without detection as a foreigner, to proceed to the Methodist Mission, nearly a mile away, and warn its inmates to make ready for a speedy retreat to the lega-

special note of what the people of the city were saying.

So the two lads set forth, going by way of Instruct the People street, called by foreigners Legation street, past the Hotel de Pekin in which the Lorimers were staying, and where Rob wished he might make a call. From there they held their way eastward to Ha-ta Great street, which they found thronged with citizens and soldiery. They walked slowly up this broad avenue, paying close attention to scraps of conversation until they came to Filial Piety alley, into which they should have turned to gain the Mission compound by the shortest route.

Instead of doing this, they hesitated, attracted by a decided and excited movement of the swarming populace towards the north. Involuntarily they joined it and continued slowly to make their way up Ha-ta Great street until they had nearly reached the Pai-lou or wooden arch that spanned the middle of

the roadway just below Tsung Pu alley. At this point they saw two sedan chairs preceded by an outrider in the livery of the German legation come from the street of Permanent Peace into Ha-ta Great street, and turn north ahead or hem. As they halted in their walk and stood watching this little procession, Jo was saying:

"In case of serious trouble, Rob, I believe I could do more good outside than if I were to stay shut up in a legation. There I always should be an object of more or less suspicion on account of being a Chinese. Of course I shan't leave you unless it seems best to do so; but if we are separated don't forget the old academy call."

'Do you mean the 'Hi-ho' call?"

"Yes, and isn't it queer that it should be the same as the first two names of the I-Ho-Chaun?"

At that instant the sharp report of a rifle rang out, a short distance up the street. For a moment it was followed by a death-like hush. Then pandemonium broke loose. Other shots were fixed in quick succession, and the street populace transformed into a howiing mob, swarmed towards the scene of tragedy yelling like demons: "Kill the foreign devils! Kill! Kill! Kill!"

A horseman fled before them. Two sedan chairs were dropped by their terrified bearers, who also took to their heels. From one of the chairs a man leaped and ran for his life; but from the other came neither sound nor motion. In it sat Baron Von Ketteler, the Kaiser's representative in China, shot to death by a Chinese officer of Imperial troops. To-day a magnifi-cent memorial arch of marble spans the busy roadway above the spot where he was killed.

'Come!" gasped Rob, as he realized the awful na ture of the tragedy. "That shot is China's declaration of war against the world. We must warn the Mission."

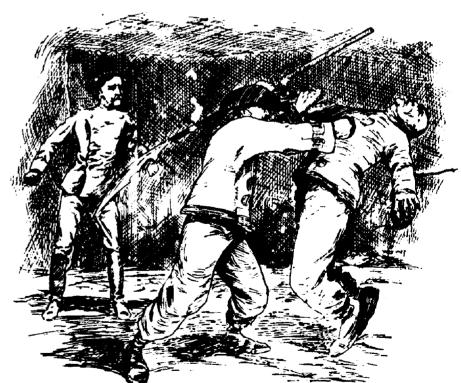

With this the lads darted into the nearby Tsung Pu alley. At first their progress was impeded by people running in the opposite direction, but in a couple of minutes these had been left behind, and they were free to hasten on at full speed. All at once a foreigner, hatless, haggard and bleeding, dropped from a low compound wall into the alley close beside them. Behind him sounded the fierce cries of a pursuing

"It is the interpreter!" exclaimed Jo; "Go with him and get him to the Mission! Take the first right and second left. I will lead those who are after him another way. Quick! Good-bye."

Rob instantly comprehended and started after the fugitive, who now was staggering from weakness caused by loss of blood. At sight of the lad's Boxer uniform, the German tried to beat him off, but on hearing the words in English: "It is all right! I am American," he submitted to Rob's guidance.

As they hurried around the first right hand turn they came face to face with a Boxer armed with a spear. Without giving him time to recognize them. our young American sprang upon him, knocked him down, took away his weapon and left him in a state of dazed uncertainty as to what had happened.

After running a little farther the fugitives paused to listen, but could hear no sounds of pursuit. Jo had succeeded in diverting it to another direction Then they proceeded more slowly, the wounded man Icaning heavily on Rob's shoulder. Curious faces peered at them from dark portals as they passed, and more than one whom they met turned to give

OUR YOUNG AMERICAN SPRANG UPON HIM

tion grounds. Jo also was asked to go out and make them a wondering look, but Rob's uniform and spear protected them from interference, and finally they reached a side gateway of the Mission compound. Here the wounded man fell in a faint, but the American marine on guard sprang to his aid and, recognizing in Rob's voice that of a fellow countryman, assisted him to carry the German inside.

"Call your officer, quick as you can," ordered our lad as he knelt beside the wounded man and dashed water in his face. "It is a matter of life or death for us all."

In another minute Captain Hall came running to the post and in a few words Rob explained who he was and what had happened, at the same time exhibiting a proof of identity given him by the American minister.

"He sent word," continued Rob, "for all foreign inmates of this compound to pack up immediately and be prepared to retreat to the legation at a moment's notice. Now I will leave this wounded man in your

care; for I must hurry back and let him know what has happened. Can you let me have one of your men to identify me at the Italian barricade across Legation street? If I go alone I am afraid they won't let me pass, for they vice ugly and threatened us when we came out.'

"Certainly. Turner, go with Mr. Hinckley and see him safely past the barricade."

"This is a rum go," said the marine as they left the gate and hurried towards the Hada street. "I've done a lot of funny things in the Philippines, and seen a lot more in China, but I'm blest if ever I expected to safe conduct a bloody Boxer through the streets of Pekin."

"Perhaps he is safe-conducting you," replied Rob, indicating as he spoke a group of Chinese soldiers wearing red Boxer hats who were regarding the marine with very ugly looks.

"I don't know but what you are right," admitted Turner. "They do look wolfy and I almost wish I had another pukka Johnny along to come back with

"I'll come back with you if you will go all the way to the legation with me."

"Done! The Cap'n didn't say how far I was to escort you. He only said, past the barricade, and may be there's more than one by this time. But what's the matter with riding? We'd get there twice as quickly. Hi there, 'ricksha coolie,' you wanched catance one piecee dollar? You makee go ossoty Melican Consoo house, savvy?"

"All litee sojo man can do," was the reply, and a big double jinrickisha drawn by two coolies and pushed by two more rolled up to where the Americans were standing. Even on the eve of open hostilities the thrifty Chinese of Pekin were perfectly willing to make an honest dollar by serving their enemies.

Jumping in they set off at a great pace, the ricksha men yelling at the top of their voices for pedestrians to clear the way, and not hesitating to knock right and left those who failed to heed their warn

Acting on Turner's advice, Rob took off his red hat and, sitting as low as possible, was partially screened from observation by the marine, who held himself very straight and sat well forward. The guard at the Italian barricade made a motion as though to halt them, but Turner yelling to his coolies to keep on or he would jab them with his bayonet called out:

"It's all right, Dagoes! Official business! Can't stop! So long! See you later"

Then they bowled up Legation street at a rattling pace, clattered over the Imperial canal bridge and in another minute were at the American legation. Five minutes later the electrifying news of Baron Von Ketteler's assassination had been told.

"That settles it!" cried the minister, who was a veteran soldier of the great American Civil War. "Now we know exactly where we stand. The Chinese have declared for war, and they shall have war to their heart's content. As for us who are in Pekin, we will stay right here and fight for our lives. If we are wiped out, the Chinese nation will cease to exist shortly afterwards. Even if we survive to be rescued the punishment visited upon it for this day's crime will be one of the bitterest in history. But

now we haven't a moment to lose. Are you willing to return to the mission with an order for its inmates to set out for this place within half an hour?"

'Of course I am, sir," replied Rob. "Then go, and come back with them. I will at once

notify the German legation of this terrible happening and advise that they send a squad of marines to bring back their wounded interpreter. God bless you, lad! I am glad to have you with us in this time of our trouble.

"And I, sir, am mighty glad to be here."

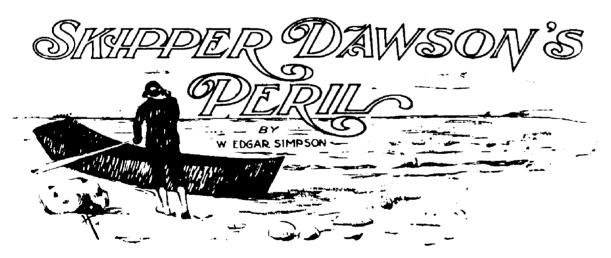

In less than an hour after Rob's report to the minister a long procession of refugees issued from the mouth of Filial Piety alley and turned into Ha-ta Great street, where it was watched by crowding thousands of impassive Chinese. First came twenty American marines, hardy-looking fellows, bronzed by long service in the Philippines, under command of Captain Hall. These were followed by the American women and children of the mission and 126 Chinese girl pupils of the mission school. Then came Chinese Christian women with their children, followed by a large body of Chinese men and boy converts. After them marched a stern-looking group of German marines. bearing and guarding a stretcher on which lay the wounded legation interpreter whom Rob had been so instrumental in saving. The rear was brought up by a body of resolute appearing missionaries armed with rifles and revolvers; with these marched Rob Hinckley, no longer disguised as a Boxer, but clad in the costume of his own people, and bearing himself with the self-confidence of one who had undergone a long experience in affairs like the present. The Chinese converts numbered over one thousand, and every member of the long procession was laden with food, clothing, household effects or whatever portable things had been considered of greatest value.

At the Italian barricade on Legation street it was met by the remaining marines of the American guard and escorted to the legation. Although the streets were crowded with Chinese soldiers, Boxers and citizens, no attempt was made to interfere in any way with the flight of these refugees, and that afternoon they were quartered within the spacious walls of the British legation compound, where all foreigners, except those already sustaining attack in the Roman Catholic cathedral, were gathered for protection.

Here was a scene to beggar description. Streams of carts and swarms of coolies laden with provisions, baggage and household effects were pouring in from every direction. The numerous low, one-story buildings of the legation were being assigned to different nationalities, or set apart for specific purposes. Men, women and children, diplomats, soldiers, missionaries, railway engineers, bank clerks, customs employes, servants and coolies speaking every language under the sun; dogs and ponies, rapid-fire guns, jinrickishas, carts and wheelbarrows, furniture, bedding, provisions, cases of wine, barrels of beer, and a thousand other things all were mixed in apparently inextricable confusion.

At precisely four o'clock General Tung Fu Hsiang's soldiers from Kang-Su opened fire with a sharp volley of musketry from the city streets and the siege of the Pekin legations was begun.

(To be concluded in our next number.)

10 HE waters of Pelican Bay glistened in the light of the full moon. Now and then the glorious effulgence of its rays, was hidden from sight by the thickening mist that came rolling landward from the ice-fields of the North, and finally eclipsing the sirvery rays entirely, shrouded Deadman's Point with its dangerous canopy. Slowly, but with ever increasing density, the fog rolled in tantastic wreaths over the highland bounding the bay; and crept like some gigantic phantom nearer Bennet's Tickle until, save for the rappling water moving the shingle on the beach to and fro with musical notes, the location of this cleft in the hills was lost,

On the edge of the bay, close beside the place where the Tickle yawned, lay one tiny fishing dory drawn well up on the beach. Projecting over it. upheld by a number of pine trees, denuded of branch and foliage, stood the fish-flake of Skipper Dawson. A rude ladder led from the beach to the top of the flake whose yielding flooring of spruce boughs. interlaced securely, bent under the fread of a youth who had stood on the edge thereof until the fog obscured his gaze, which had been directed seaward for some time.

Tom Dawson, clad in blue guernsey and sou'wester, hitched his belt a hole or two tighter as he walked over the flake toward the welcome light of a blazing fire shining through the open door of his father's tilt, and giving the fog a crimson glow. Once or twice he paused in his walk and peering through the fog listened intently.
"Mary! Mary!" he shouted at the last pause in his

"Aye, aye, Tom!" came the response from the tilt. "Be a kimmen out here, lass. Th' fog's that thick th' night, that every place I moves I lave a hole after me. Be a takin' care, lass. There-that's me! Hush! Hear the noise av Spoutin' Rock.

Bad th' skipper's kimmen in th' nigl . Better ee ud stan' off an' on till sun-up; though no one knows Deadman's Point better nor ee."

What fear, Tom? Certain 'tis th' skipper knows ees way home. I've caplin afryin': an' ee allus says 'tis this ee smells ten mile away, whun th' wind's a blowin'. 'Tis better nor a light to give th' lay uv th' land.' says ee."

'Aye, aye, lass! True 'tis, too. I've a smelled et half across th' bay, but thur's nowt wind th' night; and here's what I be a fearing. Th' eddy makes ashore aff th' Point. 'Tis three mile away: but many is th' hand layin' thur in Davy Jones' locker waitin for ees watch aloft-

Just at this point in the lad's conversation a deep T-h-rrr-oom. T-h-rrr-oom" sounded on their ears. "A steamer! Th' Coastal boat, like's not. Her do be havin' a thickesh night to be a creepin' along shore," he continued.

"T-h-rrr-oom-T-h-rrr-oom," again pierced the fog: but fainter now.

"Her do be standin' aff to set. Skipper Norman kin tell whur ee be, fog or clear, light or dark, lass; niver better sailorman hoisted 'Tis bad, though, having none on steamers. Gettin' home, lass! I ull traipse along beach an' help fayther along uth ee's catch. Mayhap et wull be a biggish load. Maundy Phil is nowt so spry on ee's legs, lass, as whun ee used to go out uth th' skipper. Bide ye quiet in th' tilt until I be a kimmen' back. Fetch I th' oliskin, lass. dampnin'-th' fog: and like's not 'twull rain afore long. Thanks, lass," he added a few moments later as he donned the yellow coat his sister brought him and left her side,

Young Tom Dawson picked his way to the edge of the fish-flake with cautious steps. Instinctively he reached the ladder whose side rails projected a

couple of feet above the platform of the flake. Swinging himself on to it, he descended quickly to the beach. Here he sought the little dory. It was a very small craft not made for any real work but built by the lad during the long hours of winter; when, after all the duty had been done, the time hung heavily on his hands. Unlike most of the youths on the bay Tom had no liking for the pleasures of the grog shop and he had taken genuine joy in fashioning the little craft, naming it the "Mary," and setting it aside for his sister's own use; when, during the summer, she could take a line and fish in the waters that lapped the beach in front of their tilt and gain twofold experience in thus doing.

The stillness of the night was broken a few moments later by the sharp rasping noise of the dragging dory as his sturdy arms pulled it toward the water leaving one end ashore at the tide-wash. Following this came the sound of oars tossed into the boat; and, with a soft splash as Tom jumped into it, the falling of the oar blades into the water, and the creaking of the thole pins, gave evidence that the lad was rowing out into the mist.

Hard work it was for the inmate of that little boat to see either end of the small cockleshell; but, with an intelligence born of his calling, his sharp eyes could discern through the fog the darkish coloring of the rocks along shore, and he pulled steadily onward, keeping well within touch of this guiding shade.

The steamer's whistle sounded now and then, fainter and fainter; and the noise of the sea breaking on Spouting Rock, guided him somewhat in the direction he was going.

Deadman's Point lay on his left three miles out to sea; while, on his right, lay an unbroken stretch of water reaching to the other shore of the bay; and right ahead the great bosom of the Atlantic Ccean rolled, peacefully tossing his little boat up and down on its broad swell.

#### CHAPTER II.

Far and wide Deadman's Point held its record for treachery to the mariner. Its low point of rocks. standing a half mile seaward, rose gradually into a massive mountain at whose base the sea thundered and broke as though in constant effort to destroy its rugged walls; only to fall back in a whirling spume of seeming despair. Many a form lay buried beneath the sea at this point; and, of those washed ashore, the little village churchyard at Babe's Cove. across the bay, with the little white crosses bearing no name dotting its green sward, bore mute evidence of its cruelty.

Slowly but steadily Tom Dawson rowed on. Past the "Hen" with its half dozen stony "chickens" clustering about its base; past Lobster Cove. past a long stretch of bluff rocky shore when, still enveloped in the white pall of fog, he rested on his oars and the deep "boom—swish" of Spouting Rock sounded close at hand.

"Gar, but it do be thick!" he muttered as he passed the handle of one oar beneath his knee and wiped the moisture from his eyes. "Skipper's nowt in good company ith Maundy Phil an' th' dory th' night along shore. Better 'tis outen sea. God be a keepin ee offen th' breakers at th' Point." from beneath the shelter of his oilskin coat, he drew a match and tried to light a torch of pine knots he took from beneath an overturned bucket resting between his feet. He knew too much to attempt to strike the match elsewhere than on one of the buttons of his coat from whose surface he carefully wiped the moisture. One-two-three-a half dozen matches he lit; but the torch would not ignite. Try as he might, the resinous knot would not yield to the moisture covering it, and he threw it down into the bottom of the boat with an exclamation of disgust.

It was no unusual thing that Tom Dawson tried to do in lighting his torch. It was the well-known means of signalling between the dories of the fishermen when fog enveloped them at sea. The crimson rays of light penetrated the fog a much greater distance than the light of any other portable means of illumination known to them. He hoped in doing this to let his father and Maundy Phil in their dory. there they had been since break of day fishing, know that some one was within reach, in case of need.

Though but sixteen years of age Tom knew the ways of the fishermen thereabouts in their entirety. The perils-the pains-the slight, very slight, pleasures; the latter mainly consisting of the intermittent Sunday services of the parish priest on his rounds of the coast. This visit was always welcomed by the fishermen with cleanly attire, profound reverence. and studious faces; as though realizing through their calling, how ceaselessly they were under His sheltering care on the mighty deep, they would on this day of days render homage in His house.
"Boon:—swish!" sounded Spouting Rock, as Tom

resumed his oars. He had rowed perhaps a half mile farther leaving the sound in his wake, when he felt something strike the side of his dory. It was not a plow sufficiently strong to suggest the possibility of his boat touching the beach; besides he could hear the breakers rolling shoreward. Again it struck his boat: and quickly slipping the oars inboard he leaned over the side and groped about in the water. This way and that, he swept the surface with his hands, and was on the point of ceasing and resuming his oars, deciding that it was only some piece of soft drift wood, when his hand came in contact with something. In an instant his fingers closed over the handle of an oar: and in another instant the oar itself was within his dory and his fingers were busily engaged in determining its shape. At last he reached the blade which he examined most carcfully. Something in the manner in which the metal strap bound it held his attention and he fingered if most particularly. Over and over he turned the blade until he was assured that it was one of the oars used by the fishermen: and not one that had come ashore from some passing ship. At last he recognized it as belonging to his father, by the nails in a cluster on the blade and his heart stood still at the possi-

bilities staring him in the face. It might, true, be a spare oar, for no dory ever put to sea that did not carry one or more of these useful articles, which were often lost in the struggle with the fish.

"What be et doin' floatin' athout no dory?" he asked himself; adding, "mubbe 'twas lossen from th' thole pins. It do be th' skipper's, too. I 'ud know et an' th' night be blacker nor this-if so may be. Nobbut doubt th' skipper lossen et, but 'tis no night to be affoat near shore uthout ivery oar thut kin be kept aboard.

Could it be possible that the dory had been cast ashore by the breakers at the low ledge of rocks off the Point, and breaking up given two more victims

to the cruel grasp of the sea? He felt a strange weakness in his arms torally unnatural to one who had, from his childhood, n' ard about the terrors of the sea; and in later years had, himself, participated in them. He could hardly and the oars belonging to his own boat. The fog still hung heavily about him but the sound of his voice as he muttered "God pity ee an' it be so, roused him to a realizing sense that something must be done. To row in the direction of the Point where the breakers would soon draw his little craft within their clutch, and engulf him also, was utterly impossible. He must keep away from this dan-

Suddenly he rose in his dory, put his hands about his mouth and gave one wild yell. "Boat ahoy!" Then he stood and listened. Nothing but the roll of the sea, the sound of Spouting Rock, and the breakers on the Point answered him. Again, and again he shouted, "Boat ahoy! Boat ahoy!" Hark! Was he right? Did his

"Ahoy!" or was it but the echo of his own call, mockingly thrown at him, from the bluff at the Point?

#### CHAPTER III.

"Boat aboy! Boat aboy!" "Skipper!" Tom called louder; and to his waiting ears came faintly—very faintly—the answering call, "Where a-w-a-y!" Then silence. The fog rolled from his sou-wester in sullen drops upon his shoulders; and they sounded like the loud ticking of a clock, so regularly they fell. "Where a-w-a-y!" came again from the distance. He could not locate it, except generally; but, bending to his oars, he left the guiding shadow along shore and pulled straight out into the bay. Every few strokes he paused and again shouted. The answer came nearer and nearer until it was so close that he recognized the voice as that of Maundy Phil. A quick pull on the oars, a sudden flinging of them into the boat, and Tom seized a form floating by him.

It was Maundy Phil, and it required the youth's utmost strength to haul the heavy form into his boat. "Whur be th' skipper?" Tom demanded of the halfdemented old fisherman who now lay on the bottom of the dory crying and wringing his hands.

'Outen thur-outen thur!" he replied, pointing with his trembling hands into the distance.

"On th' Point?" he demanded, for the direction in which the man pointed might as well have been toward that dreaded place as in any other while the fog

held so thick. "Be ee affoat?" he queried anxiously.
"Aye, aye," was all the answer he received and bending to his oars, Tom forced the dory with vigorous strokes out into the wide expanse of water and thick mist. He again resumed his cry of "Boat ahoy!" while rowing and an instant later the faint answer came to him. Redoubling his efforts the lad shouted in reply, "Be a keepin' up, Skipper. Be a keepin' up." A few more strokes and he came alongside a pitiable object clinging to the shattered hull of what had once been their staunchest dory, now

replied while his father, feeling the security offered by the rope beneath his arms, remained quiet.

Tom knew that this situation could not be maintained for any length of time; he also realized that his boat could not hold any greater burden, and he was greatly troubled to find a means of completing the rescue he had so far been successful in mak-

Brighter and brighter grew the dawn. The breeze. faint at first, freshened with the rising sun; and the for curtain thinned—thickened—thinned again and rolled majestically out to sea, exposing to the sight of this little group the high bluff of Deadman's Point, distant many weary miles.

Alone on the broad ocean they floated; and the sun, now piercing the fog with its welcome rays, warmed their weary frames.

What could be done? How could Tom complete the rescue? It was a problem not easily solved; until, after revolving many schemes in his mind, the lad threw aside his oilskin and drawing off his heavy sea boots dropped over the side of the dory and worked his way around the hull until he was beside his father. "Be agettin' t'other side dory. Phil," he commanded. "Climb aboard, Skipper," he added, seeing that Phil's position would balance his father's weight as the latter left the water; thus preventing the upsetting of the little craft.

Assisting his father all possible, Tom saw him safely into the dory. where utterly exhausted the aged fisherman lay upon the bottom.

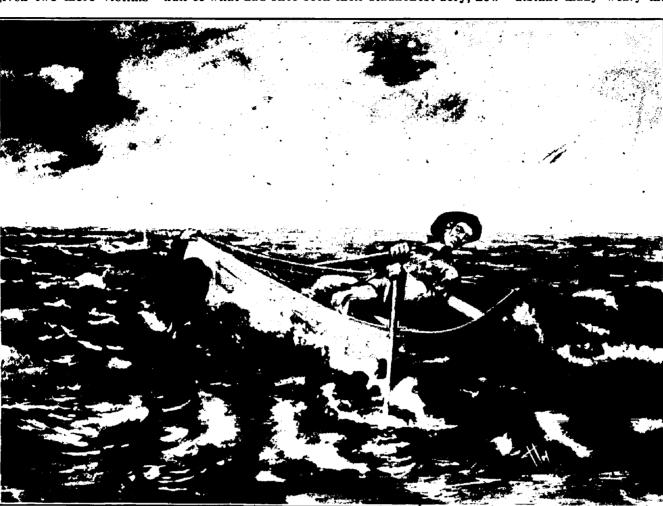

"Ship oars, Phil, an' be a pullin' steady like towardth' tilt," the lad said.

"An' ye, Tom?" Phil stammered; at the same time obeying the order, and putting the oars between the

"Niver fear uv I. Do as told, Phil. I ull hang astarn, an' ye be a pullin' steady. Give way, now! Tom replied, as he moved cautiously toward the seaward end of the dory, where he held fast with one hand and then the other

All that Sabbath morn the little boat toiled slowly toward shore; while within the chapel at Babe's Cove the grave-faced clergyman prayed for the safety of "they who go down to the sea in ships, that do business in great waters." little thinking that the heart of Mary Dawson, on the dreary tilt at Bennet's Tickle, was made glad through God's mercy; using as His instrument her younger brother; while the lad, worn with his night's successful endeavor. lay sleeping beside the chimney-hearth where, wet as he was, he had thrown himself down not being able even so much as to drink the dish of steaming tea she held to his lips.

Today, years having flown by, the tale is told in many households. How the Coastal boat's sharp prow, piercing the fog, cut the dory in twain; and how, but for the lad's faithfulness. Skipp'r Dawson would be lying beneath the sea instead of resting neacefully beneath the pine trees in God's acre at Babe's Cove.

hearing strained to the utmost point receive a faint a battered mass of broken plank; upturned and rearcely affoat. Upon it lay his father grasping in his hands a plank that held its fastenings only at one end; and which the motion of the sea threatened to dislodge momentarily.

Crasping his father by his oilskin coat at the shoulder, Tom tried to haul him aboard the little dory now overloaded with the two men within it, but his strength, worn and spent with the night's exertion and anxiety, was not enough.

To ask Maundy Phil, in his present condition, to assist him would, without doubt, result in throwing them all into the sea. For an instant he paused: then he said, "Bear up, Skipper," while the father realizing that help was at hand lay quiet, tossing up and down on the ocean's swell. Tom untied the anchor rope and commanding Phil to lie quiet in the dory he quickly passed the rope about the shoulders of his father and bade him slip into the sea. When he had done this Tom carefully drew the form of the fisherman toward his little boat and holding the rope beneath his feet placed his father's hands on the gunwale of the dory.

"God be praised!" the old man said. "Ye never failed I yet, lad! an' nowt but His mercy set ye afloat th' night."

"Be a restin' quiet, Skipper. 'Tis lightening to east-ard an' thurs a bit of a breeze stirrin'." Tom

# The Death Plant of Guatemala

#### By ARTHUR J. BURDICK

'La yerba muerta allah!" cried Martina, the Carib in a tone of horror. "Death, senor, death! Come back, come back! Him suck yo' blood fo' suah!"

Alfred Wiston, a New Mexico gold-miner, his fourteen year old son Willie, and Martina, their Carib guide and servant, were on a prospecting tour through the interior of Guatemala. It was unfamiliar ground to the Wistons but not to the Carib, who had several times traversed the wilds of the territory.

The party had encamped, the previous evening, on the bank of a small stream that followed along an ancient watercourse of much greater caliber, judging by the deep channel it had cut through the tablelands. Tropical foliage abounded in the valley made by the ancient river, but the mesa above was devoid of timber and for the most part bare of vegetation, little soil having found lodgment upon the rocks of which it was composed. Here and there over the rocky wall of the cliffs to the west of the camp could be seen the trailing foliage of vines which had taken root upon the level above, indicating that some soil had found a resting there.

In places the rocks rose perpendicular and smooth from the valley, offering no opportunity to scale their heights, but not far from the camp the elements had worn a series of ridges in the face of the bluff not unlike steps, and it was here that the party determined to attempt an ascent.

Mr. Wiston took the lead and was closely followed by Willie, the Carib bringing up in he rear. The climb was not so difficult as war expected and all

were soon safely landed at the top. At the particular point at which they gained the summit of the mesa the rocks were bare for several rods around, but beyond the bare space was to be seen a luxuriant mass of green vines extending in

had advanced but a few steps, Mr. Wiston being still in the lead, when Martina uttered the excited warning: "La yerba muerta!"

"What is the matter, Martina?" asked Mr. Wiston. 'What do you mean by 'ia yerba muerta?'

"Oh, senor, de vine yonder upon de mesa. It is de vine ob death, 'la yerba muerta?'

"Do you mean that it will poison me to go near it?" asked Mr. Wiston.

'Oh, worse dan dat. Much worse dan dat! It will drag yo' down an' suck yo' blood. Dat vine am alibe, sah, an' it am a fiend fo' suah. He show mercy to no one.'

"I think you are the victim of an idle superstition," said Mr. Wiston, "and I propose to investi-gate." So saying, he started toward the stretch of

The Carib fairly blanched with fear and earnestly begged Mr. Wiston to return and not venture within reach of the "monster," as he termed the vine. Willie wanted to be allowed to go with his father, but Mr. Wiston would not consent to his doing so.

As he neared the mass of green, Mr. Wiston saw that the vine was a species of cactus, the foliage consisting of long, slender, roundish leaves and pipelike stalks, the under sides of which were covered with needle-like thorns. In the center of each leaf was a cup-shaped sucker, not unlike in appearance those found upon the arms of the octopus.

When within ten or twelve feet of the vine a strange agitation began to take place in the foliage. First the mass of vines heaved and squirmed as though some living things beneath were struggling to get out. Then the separate tendrils and branches began to quiver and the long arms of the vine reared several feet in the air, waving to and fro, for a few every direction and covering many acres. The party moments, as though feeling for something, then

swinging toward the astonished man, who sprang back and beat a hasty retreat.

"I believe the Carib is right about that vine," said he to Willie. It certainly acted as though it meant to encircle me with its spiny arms.

"It did, 'deed it did," urged the Carib. "It would suttenly hab cotched yo' ef yo' hadn't run, sah. Doan' yo' nebber go ncan him again.

"Papa." said Willie, "let me go back to camp and get that rabbit I shot this morning, and let us throw that to the vine and see what it will do.'

Mr. Wiston gave his consent to this arrangement, and in a very short time Willie returned with the game he had intended for their dinner. Mr. Wiston took the rabbit and again approached the vine, notwithstanding the emphatic warnings and earnest pleadings of their guide. When within a few steps the vine again became agitated and soon the swaying arms were reaching toward him. Then he tossed the dead rabbit toward the vine and hurried back to the watchers at the edge of the mesa. He turned in time to see the branches settle down upon the carcass of the rabbit, curling about it so thickly and quickly that it was soon lost to view. The vine, seemingly alive in every part to the fact that a victim was at hand, became agitated for rods around and thousands of sinister branches were seen waving in the air. Soon the leaves which hid the rabbit began to change color. From a pale green they became first pink and then blood red, as they became gorged with the blood of the rabbit.

Willie, his father, and the black man stood spellbound watching the gruesome vine at its strange feast. Half an hour later the arms of the vine uncoiled and the branches dropped back from the concentrated mass and out rolled the bones and skin of the rabbit—all that the greedy vine had left. Its feast being ended, it resumed its normal composure and the spectators clambered down the rocks and returned to camp to discuss one of the strangest sights they had yet seen in a land abounding in strange sights.

# The Boy

#### How to Build a Cheap Though

AIIIS type of small boat, as its name within bounds as regards cost. It can be constructed by any amateur of ordinary ability provided with the necessary simple tools on the outlay of less than a dollar. The writer himself built one of this stamp in the summer of 1901, and, up to the time of writing, it has proved itself thoroughly efficient in every way, though the unbleached called with which it is covered is at last growing rotten and will have to be renewed before this summer. As regards portability, the boat can easily be carried by one person for any distance up to a mile, though the writer constructed a small boat-carriage for the purpose. For fishing, also, this sort of boat would be very serviceable, though a slightly broader beam would be required than that given below.

The main dimensions are as follows: Keel, to ft by 3 in, by 1 in.; bow and stern posts, 1 ft by 1 in, by 1 in; gunwale and stringers, 11 ft. by 12 in. by 1 in; side ribs (from gunwale to bottom stringer), 1 ft. by 1 in, by 4 in; seat, 8 in, by 2 ft by 1, in

Keel \_.\_ \_. Saw Cut

On beginning to build the boat, the part to start work on is, of course, the keel. This should be of some well-seasoned should now be measured off one side and wards. the corner cut off.

Now take the bow and stern posts, which should be 1 ft by 1 in, by 1 in. and either halve or mortise them into the keel, and peg or serew them together securely. A dummy board, two feet long should now be screwed to the middle of the keel. Round this the two bottom stringers (11 ft. by 12 in. by 1 in.) should be strained and fied to the bow and stern posts. A groove should next be cut in each post and the stringers fitted and screwed into them. The same should now be done with the two middle stringers and the two top stringers, which act as a gunwale. Another dummy board as a gunwale.

standing upright on the first should be fitted before putting the last stringers on. Its di-mensions should be 1 ft. high and 2 ft. wide at the bottom, widenin to 2 ft. 4 in, at the

FIG. 2.-Marrion of Jouvish Bow at a Stern Posts to the Keel.

exactly where the upright board taken away from, and should be of exactly the same dimensions. The seat itself should be 2 ft. wide by 8 in. by 4 in, and should be fixed slightly in front of the back.

Ribs should now be fitted to the sides, reaching from the bottom stringer to the gunwale. These should be 1 ft. by 1 in.

gunwale. These should be 1 ft. by 1 in. by 14 in. and should be screwed at intervals of about nine or ten inches.
Bottom boards should next be fitted for about four feet in front of the seat.
The frame of the boat is now finished, and attention should be turned to the covering. This can either be of canvas or unbleached calico. The latter is the easier to put on and is the cheaper, but wants renewing in three or four years. Canvas, on the other hand, is slightly dearer and heavier, and the creases canput be stretched out as they can with calico; but, as against this, it wears longer.

ow to Build a Cheap Though
Efficient Canvas Canoc

His type of small boat, as its name implies, aims at combining portability and compactness with lightness, at the same time keeping well n bounds as regards cost. It can

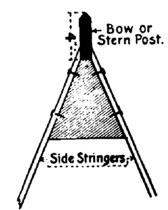

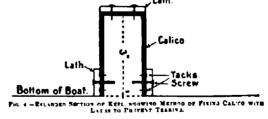

FIG. 3.-TOP VIEW OF BOW OR STERN.

operation must be continued until the calico lies quite evenly all over the frame, when the tacks may be driven right up to the head. Care must be taken, however, not to drive them in too far or the heads will fall off. Strips of wood must now be screwed along each side of the keel so as to prevent the tacks from tearing out (Fig. 4). Light strips may also be placed along the gunwale to serve a similar purpose.

When the calico has been satisfactorily stretched on, it should be thoroughly waterproofed with the following composition: Three pints of linseed oil, three ounces of candle grease, four ounces of white lead. These ingredients must be boiled together and painted on operation must be continued until the

ounces of white lead. These ingredients must be boiled together and painted on the boat while hot. It will probably take about three or four days to dry, but when it is dry, it should be treated with two coats of paint, one outside and one inside. When this is quite dry the boat is ready for use. A readile may easily be wood, such as ash; in fact, it is advisable to build the heat throughout with that wood, as in such small dimensions the wood, as in such small dimensions the extra strength does not seriously detract from its lightness, and the extra slight outlay will certainly not be regretted. Into return to the keel. It should be carefully and evenly planed. One inch as to give the mast a slight slant backwards

The mast should be a six-foot bamboo with a ring screwed into the top. The sall should be a lug-sall, about five feet at the leech. The boat will easily carry this in a fair breeze with eight to ten stone on board. Of course, if a mast is fitted, a rudder must also be made. This can be easily fitted, however, to work with the foot on a lever.

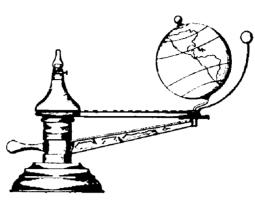

Finally, if any sticks or stones happen to puncture the calico, it can easily be mended by sewing the hole up with thick twine and coating the mend over with some of the waterproofing mixture men-

some of the waterproofing mixture men-

When all the stringers have been securely fixed cross-stays should be inserted wherever it is thought necessary, and firmly acrewed. The cross-stays should of course be introduced only between the top and bottom stringers and not between the two middle ones. When this has been done triangular wedges should be screwed between the two top stringers where they ioin the bow and stern posts after which the dummy boards across the center of the keel can be removed and the sent and its back put in in their place. The back of the seat should be screwed. SEYMOUR BLISS, Holly, N. Y. writes us a

in reference to the sun, moon and Teachers may talk wisely about the daily revolution of the earth on its axis, its yearly revolution about the sun, at the monthly revolution of the moon about the earth, and about the inclination and parallelism of the earth's axis gone down. and variation in the length of night and day with latitude and season, without making these subjects altogether clear.

The inventor of the appliance shown must clearly have had young folks' interest in mind when he produced this

machine to make all these things clear. on the standard you will notice he has placed a lamp, which represents the sun. On the movable arm he mounts a globe, representing the earth, with its axis correpresenting the earth, with its axis correctly inclined, and from the support of the globe projects a long arm carrying a small ball, which represents the moon.

By means of a belt he connects the

support of the earth and moon so that when the long arm is rotated about the lamp, representing the movement of the earth about the sun, the globe—that is to say, the earth—not only rotates upon its axis, but the moon revolves about this axis, but the moon revolves about this earth, and when the room is darkened the light from the lamp, falling upon the nearest side of the earth, lights it up, illustrating in a very impressive manner the cause of day and right. Many other troublesome facts which young folks have to learn about the earth and its movements are illustrated by this ingenious device. ous device.

#### A Snow Skate

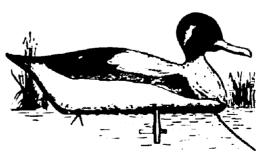

Skating has always been considered to Skating has always been considered to be a sport to be enjoyed in winter only by those to whom some sheet of ice is accessible, but the invention of what might be termed "land skates" promises to make it possible for this sport to be enjoyed wherever there is packed snow or crust. The broad runner of the skate illustrated keeps the wearer from sinking into the snow or breaking through

crust, while the sharpened downwardly curved edges prevent lateral slipping and give the skater a hold upon ice or packed snow. As this skate is intended for use on somewhat rough sur-faces, the runner is made of metal having sufficient elasticity to take up the shock and jars caused by the irregular-Itles in the skater's course

#### A Knock-Down Decoy Duck

Some boys will never know nor ever care anything about duck shooting, and it is hoped none of them will ever have any part in the senseless and wicked shughter of wild fowls in the numbers sometimes mentioned in the papers in giving accounts of results of some hunting trips. All boys will, however, it is thought, be interested in the invention of a decoy that can be folded so as to occupy but little space when not in use,

and which can be inflated so as to have the appearance of a life-size duck. The inner part of the decoy consists of a casing of sheet rubber having a tube connected therewith which enables this casing to be inflated by the breath. This outside covering of the decoy consists of muslin or canvas painted to resemble the different fowls which are to be decoyed, as teal, mallard or canvasback duck,

#### A New Baseball Bat

Boys who keep posted in reference to matters pertaining to baseball should give more than a passing notice to this

Baseball players know that, to use a Other interesting debat effectively, it must be properly bal-forthcoming numbers.

Mechanic and Artisan What Inventors Are Doing For Boys

Astronomy by Demonstration

Astronomy by Demonstration

Astronomy by Demonstration

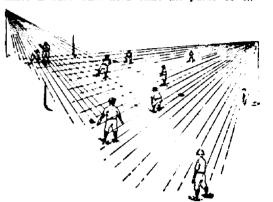

T is no easy matter for boys, or girls either for that matter, to understand the movements of the earth in reference to the sun, moon and the striking the ball with the greatest so as to utilize his strength most effectively. It also appears that the ridge would be of advantage in preventing the batt slipping through a player's fingers when he is striking the ball.

#### Base Ball at Night

Base ball is never played at night; in fact, it has generally been thought to be impossible, even with the most powerful searchights, to illuminate a base ball field so that the game could be played after the sun has

gone down.

The trouble has been, not to get light enough, but rather to throw a light upon the field and into the space above, where the batted balls may pass, sufficient to make the ball clearly visible at all times, without so dazzling the eyes of the players that they would be unable to play their parts in the game. By a system of illumination, recently invented, it has become possible to so illuminate a base ball field that all parts of the

same are brilliantly illuminated without having the direct glare of the searchlights thrown into the faces of the players, no matter what positions they may occupy. As shown in the accompanying illustration, the light which illuminates the part of the field occupied by each player, is so located that it is thrown from the backs of the players so that the glare of the lights is never thrown into the faces. The light in front of each player is provided with an obstructing shield which prevents such light being visible to such player.

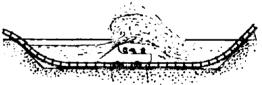

to such player.

If this invention comes into use, the reports of baseball games "called on account of darkness" will be a thing of the past.

#### A New "Shoot-the-Chutes" Apparatus

In shooting the chutes it has generally been thought that sufficient anusement and excitement are provided by the cars striking the water of the basin with a sudden splash and then sliding smoothly over the surface to the landing place.

A recent invention provides a startling innovation over the accustomed form of this amusement by providing a car which is intended to plunge beneath the surface and fol-

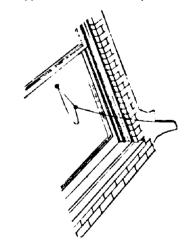

low the track from one side of the basin to the other like a miniature submarine boat. The front of the car is so shaped that its rapid movement through the water deflects the water above and to each side of the car in such a way that the car passengers, while exposed to the water, do not come in contact with it.

with it.

It is probable that most people would want to see other passengers take the plunge be neath the water a number of times before they would themselves care to try the experiment

#### A New Form of Tick-Tack

Most boys are familiar with some form of tick-tack by means of which a startling tap-ping on a window pane may be produced. An improvement in the form of this in-genious toy consists in providing a flexible rubber support which, when pressed against

the window pane, will adhere thereto by the suction of the elastic rubber. Attached to a knob on this suction support, by a rubber connection, is a tapping device which may be thrown against the window pane, from a considerable distance, by manipulating the long cord shown.

#### Bicycle Roadway

The bicycle path shown is not intended for the entertainment of the rider, but for that of the on-lookers. You will notice that be-tween the right and left hand sections of the

track there is a space about three times the length of a bicycle; this the rider jumps on his wheel by reason of the momentum he has acquired in his plunge down the long steep incline shown.

Other interesting devices will be shown in

# PIRATICAL TRAMP at a loss to know what to do. We were in a very lonely neighborhood and I knew it would be useless to shout. No one would hear us.

By WILLIAM MURRAY GRAYDON

HE Conewago Creek rises in the southeastern part of Pennsylvania very near the Maryland line. It flows to the north-east, and after a very crooked journey of nearly seventy miles, empties into the Susquehanna River I wilded the paddles briskly, wishing which are so justly dreaded by all raftsmen from Lake Otsego to Havre leftrace.

For a long time Ralph Forgton and I will be the mobile dog who was only trying to protect his master's property.

from time to time that we were enabled to get our proposed trip into definite

we chose the latter part of August as the most favorable time, and after a pourney of a day and a half, partly by mail down the Cumberland Valley, and the remainder in a farmer's big wagon, we reached the Conewago Creek at a point where it was barely navigable for a small boat. We had decided to make a change in our usual method of traveling, which was by canvas canoes, and had brought with us a light cedar boat out with lockers fore and aft, and a canvas awning. This we proposed to use as a covering at night, and a protection from rain or sun by day. The boat's seats could be lifted out to give us sleeping crackers that the pound of the could be lifted out to give us sleeping crackers that the country and the could be lifted out to give us sleeping crackers that the country and the coun

Our baggage consisted of provisions, simple cooking utensils, rubber coats, blankets, and a change of clothes. We had fishing-tackle, of course, and Ralph brought along a small muzzle-loading

brought along a small muzzle-loading shot gun.

Nothing worthy of special note occurred during the first two days of our cruise. We paddled very slowly, and owing to the shallowness of the channel were compelled to do a great deal of wading.

Farm houses were few and far between, and the scenery was very beautiful; high rocky ledges and hills timbered with spruce and pine overhung the creek on both sides, and it was possible to travel in a cool shade most of the time. The fishing proved to be splendid, and we caught some very large bass and pike.

At night we always chose a good camping place, and lifting the boat on shore, slept snugly under our blankets, without minding in the least the chilliness that came with sunset.

On the third day, the creek became wider and deeper. Late that afternoon the boat was drifting sluggishly with the current toward a sharp bend not far below us, and Ralph and I were trailing our fishing lines from the bow, hoping to book something for supper in the deep calm water.

ook something for supper in the deep

colk something for supper in the deep calm water.
Suddenly we heard the angry barking of a dog at no great distance away, and then a man's voice chimed in shrilly:
"Get out, you brute! Consarn you—ouch! help! help!"
With one accord, Ralph and I jerked in

With one accord, Ralph and I jerked in our rods, and then, seizing the paddles, we sent the boat swiftly down stream. As we swept around the bend, the scene of the struggle was before us—a narrow tretch of level ground lying on the right bank of the creek beyond which rose a thickly wooded hillside. Close to the water's edge stood a man swinging a short club at a huge yellow dog which was making desperate efforts to seize his legs.

Even as we looked the brute darted in, Even as we looked the brute darted in, nipped the man's ankle, and then retreated in good order, narrowly missing blow from the club.

The unfortunate fellow was in a bad plight, and his outcries only seemed to enrage the dog the more.

"Stick to it!" cried Ralph loudly; "we'll be there in a minute."

This encouragement was well meant

be there in a minute."

This encouragement was well meant but the result was disastrous. The stranger was thrown off his guard and as he turned to look the dog made a rush and seized him savagely above the knee. A brief struggle followed during which the club pelted the brute's head in vain, and then man and day went into the

The former climbed in over the stern and with Ralph's assistance, while I throughly agreed with him. It looked as though a stern retribution was at the sharing brute with my paddle and drove him sullenly back to hore.

A swift current now caught the boat, A sword with the boat, a stern retribution was at the share of the island.

As soon as the keel grated, Clegg was soon as the mill came in sight Mr. Hickson began to pull for the shore.

A swift current now caught the boat, and as it swept us rapidly down the stream the dog followed along the bank barking hoarsely, until a steep ledge of tooks made farther pursuit impossible.

"You fellers just come in time," said our new passenger as he stood up and shook the water from his dripping garments. "That was a savage critter, and no mistake; it wasn't me he wanted as much as he did these here," and drawing from the lining of his coat a chicken and a duck, both dead, he flung them to the

a duck, both dead, he flung them to the bottom of the boat.

"I was out buyin' supplies," he added with a chuckle. "My name's Dick Clegg, in' I'm a perfessional walker. Sorry I sin't a card about me."

Ralph and I ceased paddling and turned in our weets to look at the follows.

round in our seats to look at the follow, life appearance told his character as plainly as the presence of the stolen fowls. His clothes were torn and shabby, his coat was buttoned tightly over a

ollarless shirt, and his sinister unshaven face was crowned by a faded greasy derby.

The man read mistrust in our faces, and resented it with an ugly scowl.

"Yer judgin' me by my looks," he said sullenly. "That's the way with this 'ere world, when a feller's poor an' unfortunate, then every one give a small over a small over a small of the paddle could no longer world. "Well," said Ralph bloom a sign and the faint dip of the paddle could no longer world, when a feller's poor an' unfortunate, then every one give a small of the paddle could no longer world. "Well," said Ralph bloom was a sign and then heading the strained our eyes into the gloom until he disappeared from sight, and the faint dip of the paddle could no longer world, when a feller's poor an' unfortunate, then every one give a small of the words of which were lost, and then heading the strained our eyes into the gloom until he disappeared from sight, and the faint dip of the paddle could no longer world, when a feller's poor an' unfortunate, then every one give a small of which were lost, and then heading the strained our eyes into the gloom until he disappeared from sight, and the faint dip of the paddle could no longer world. "Well," said Ralph bloom until he disappeared from sight, and the faint dip of the paddle could no longer world. "Well," said Ralph bloom until he disappeared from sight, and the faint dip of the paddle could no longer world. "Weil, world, when a feller's poor an' unfortunate, then every one gits down on him. Yer wouldn't think I was a circuit minister travelin' my district now, would ver?"

We candidly admitted that we would water is deep but it is only a short distance to the shore."

"Weil, worst case of ingratitude worst

An I ain't neither," he replied. I'm "It might as well be twice as far," said a tramp, that's what I am, an' I don't Ralph, "I can't swim six yards, you care who knows it. There's a farmer know." back here what's mighty anxious ter interview me, an' I reckon you fellers gotten that fact. For a little while I was

For a long time Ralph Forster and I rad contemplated a cruise down this little stream, principally because it flowed through a comparatively wild country, and was said to afford splendid fishing. Its head waters, however, were very difficult of access, and it was only through stray bits of information gleaned from time to time that we were enabled to get our property.

The tramp paid little attention to our movements, but watched the shore furtively, as though he feared to see the farmer coming in pursuit. It was now almost six o'clock, and the usual hour at which we looked for a cambing place, but our unpleasant passenger scowled so feroclously every time. we slackened speed that we paddled on, round bend after bend, until the sun was

round bend after bend, until the sun was almost below the horizon.

Mr. Clegg began to shiver visibly in his damp clothes, and finally he coolly appropriated one of our blankets that was lying at his feet and wrapped it about his shoulders. In doing this, he exposed to view the stock of Ralph's gun which lay partly under the front seat.

Neither of us paid any attention to the incident at the time, and the tramp merely glanced at the weapon in a careless manner.

less manner.

The shadow of twilight was now on the water, and we were beginning to feel rather blue at the prospect of paddling on in the darkness. We were ravenously hungry, too, having eaten only a few crackers that noon.

Presently a dark object loomed out of the shadows in front of us, and, as we paddled nearer, it proved to be a small bit of an island—a mere patch of weeds and gravel fifteen or twenty yards long with a ridge in the center.

Our passenger, whose back was turned

All at once a possible expedient flashed into my mind. I hurriedly searched through the weeds and bushes that covered the island and found just what I wanted—a quantity of drift-wood that had been left there by high water. Among this was one good sized log three feet long by a foot and a half in diameter. feet long by a foot and a half in diameter, and another slightly smaller.

I dragged them down to the shore, much to Ralph's curlosity.
"Now," said I, "get undressed as quickly as you can. I'll soon have you across the creek."

I dropped the logs into the water and

I dropped the logs into the water and tied them together with a piece of fishing line so that they could not roll. On this hastily improvised raft we piled our clothes, and then waded out into the creek pushing it before us. After the first plunge we did not mind the cold.

The water soon reached to our necks, and then bidding Ralph cling to the raft as lightly as possible, I swam by his side pushing the logs towards the shore a little at a time.

Our progress was painfully slow, for we had pretty swift current to combat, but with every three feet that we drifted down straum we moved at least one foot toward the goal. The wooded bank of the creek was still eight or ten yards away when we heard the steady click of cars some distance up stream. "A boat is coming!" exclaimed Ralph joyfully. I stopped swimming and clung gently to the edge of the raft. At first we could see nothing in the darkness, but the rattle of oars grew more distinct, and when the boat did come in sight it was moving so rapidly that we narowly missed being run down.

Our loud hail brought the craft to a stop within three feet of us. The two

Our loud hail brought the craft to a stop within three feet of us. The two men who were in it rose to their feet, and with many exclamations of surprise

helped us on board.

"Are you the fellows what took that thieving tramp away in a boat?" demanded the elder of the strangers. "I got down to the creek just in time ter see the rascal disappearin' round the bend."

We saddy admitted that we were and with a ridge in the center.

Our passenger, whose back was turned down stream, did not see this until we were fully abreast of it.

"An island," he muttered. "Say, what's that moving on it?"

Ralph and I incautiously turned sideways to look but saw nothing, of course, and when we faced about again we were staring directly into the barrel of Ralph's shot gun.

"Are you the fellows what took that theving tramp away in a boat?" demanded the elder of the strangers. "I got down to the creek just in time ter see the rascal disappearin' round the bend."

We sadly admitted that we were, and related our story with chattering teeth, as we slipped into our clothes, which had fortunately escaped a wetting.

"Wal, my name's Hickson," replied the

WITH AN OAR DASHED THE WEAPON FROM CLEGG'S HANDS

He stepped from the side of the boat into water knee deep and I followed him very reluctantly. As we waded through the shallowing water to the pebbly shore Clegg seized one of the paddles and with a single stroke sent the boat half a dozen yards into the current, keeping a careful

eye on us meanwhile.
"You will pay dearly for this." cried Ralph, forgetting prudence in his anger.
Clegg made some harsh reply the words

A brief struggle followed during which the club pelted the brute's head in vain, and then man and dog went into the creek with a great splash.

A few strokes of the paddle brought as within half a dozen yards of the spot.

The combatants had become separated and the man was swimming for the boat, alarmed to see that the scoundrel was in and the man was swimming for the boat, and the man was swimming for the boat and the man, "an' this is my son John. If that island," said Mr. man, "an' this is my son John. If that island," said Mr. man, "an' this is my son John. If that island," said Mr. man, "an' this is my son John. If that island," said Mr. man, "an' this is my son John. If that island," said Mr. man, "an' this is my son John. If that island," said Mr. man, "an' this is my son John. If that island," said Mr. man, "an' this is my son John. If that island," said Mr. man, "an' thi

"Now, don't make any noise, John," he cautioned: "we'll catch him just about the time he is draggin' the boat round the dam." the dam.

We were now under the shadow of the trees, and the farmer was about to land a dozen yards or so above the mill.

At this juncture I heard distinctly a couple of low splashes, and glancing out

along the breast of the dam saw a dark

along the breast of the dam saw a dark object midway between the shores.

I touched Mr. Hickson's shoulder, and silently pointed to the spot.

"By gum!" he exclaimed in a tone of suppressed excitement: "thar's our man, sure enough; the creek's purty low now, an' he's run the boat aground on the edge of the dam."

an nes run the noat aground on the edge of the dam."
"Give me one of the oars," I whispered. "and I'll paddle right alongside of him without any noise."
"That's the idea," said the farmer.

handing it over.

I quickly headed the hoat obliquely down stream, and sent it quietly toward the dark object. We were soon close enough to discern the situation. The stolen bateau was projecting partly over the breastwork of the dam, and the thief was tugging at the stern end waist deep in water with his back toward us.

I was trembling with excitement as we drew nearer and nearer. When less than ten feet intervened, some slight noise drew Clegg's attention, and he wheeled suddenly about. He uttered a savage cry and snatched up the gun which was lying on the stern seat of the bateau, but be-I quickly headed the boat obliquely

" PLAYING HOUSE" - SECOND PRIZE PROTO, BY HENRY J. RETTER, MARINETTE, WIS,

#### World's Fair Photographs

For the benefit of those of our readers who failed to visit the Louisiana Purchase Exposition on American Boy Day, owing to circumstances over which they had no control, and who propose to see the great exhibition at a later date, we wish to call attention to some of the pictorial photographs from nature at the fair, which are really remarkable and will prove very instructive. In the Danish section of the Varieu industries building, there are a number of time photographs that are particularly interesting on account of the lighting effects and should not be missed by those who are fond of portraiture. Some of Sir Benjamin Stone's historical photographs in the Liberal Arts building illustrative of the ancient customs of Great Britain, are also worthy of inspection. A large collection of the artistic photographs of the most notable amateurs of England is exhibited in the French section of the Liberal Arts building and includes some of to circumstances over which they had no the reach section of the Liberal Arts building and includes some of the beautiful lan iscapes of Horsley Hinton and some of the ethereal flower studies of Carine Cadby. Of our own photographers, Mr. Rudolph Elckemeyer is prominently

represented.
It seems the "Protest And Pleat" of the It seems the "Protest And Plea" of the undersigned, in the American Annual of Photography for 1993, had some effect on the exposition management. At any rate, no fees are exacted for the use of small cameras on the grounds. Amateurs may take snap-shots to their heart's content. For changing plates or loading film cameras our readers will find it convenient to have recourse to the dark-room the official photographer has kindly placed at the disposal of the public.

#### Black Paper Vignetter

One of our triends, W. H. Crooks, of Forest, chio, writes us as follows: Thor those who have film cameras. I would suggest the trial of the black paper as a vignetter. I have used it and it does very well. You can take a pair of set fors and cut out an opening for any part of the negative. The paper is lable next to the wlass in the printing frame.

#### Pyro Development For Amateurs

The tenoda recommended enables the worker to keep his pyro in a dry state until ready to develop:

+J. E. Taggart in May Camera and Dark Room.

#### The Roll of Honor

This month the roll of honor includes the mines of: Peter C Whyte Carlondale, P.1.; E E Trumbull, Plattsburgh, N Y.; Petry N. Trusk, Silver Creek, N Y; F L. Venning, Chleuge, III.; John Edgar Thomson, New York City, F B Pavis, Ivanhee, Ks; Win, Lund, Milwankee, Wis, Trol Potter, Woodbridge, N. J. M A. Yanch, Rochester, N. Y., and Henry G, Ellis, La Grange, III.

#### Current Comments

Extreet, Webster, Colo.: Your photograph of a mountain qualt is very interesting and would be suitable for reproduction if the picture of the birt were not so small. Photographs of living birds should be taken by means of a relephoto lens, which acts similarly to an opera glass and makes it possible to take a large-sized picture of a distant bird or animal—clinton Y. Wilgus, Frankford, Pr.: Your photographs are poorly toned and the negatives soon to lack density; at least one would infer as much from the difference between the builted to crusters and the sky.

#### A Concentrated Developer For Sepia Tones on Velox Paper

Pormula:

Water, 100 c. c. Metablishbite of potash, 25 grms, Salihity of soda, cryst, 8 grms.

Anidol 8 grins Chloride of sodium (common salt), 2, 5 grms. This concentrated solution, which will keep for some days, must be diluted with 10 parts of witer, and yields sopia tones when a ten-fold exposure of the paper has taken place.—The Photographic

#### How to Clean Lenses

Brashear, the great astronomer, says that anyone may venture to clean a lens, provided he does it carefully. In the first place, he states: "Do not use either the chamels skin, tissue paper, or an old silk hindkerchief. Use cheese cloth. It is not the wiping material, that is apt to do the missipaper.

chief, but the fine dust particles, which may become attached to the glass. Take a wooden bowl, cleaned with soap and water, then half ill it with clean water of about the same temperature as the glass, and put in a teaspoonful of animonia in half a pail of water. First wash a piece of cheese cloth thoroughly with soap and water, and rinse and clean. Then place it in the bowl or pail, so that the lens won't slip. When thoroughly washed, take the lens out, lay it on a bundle of cheese cloth, previously washed clean, and dry it."

#### Queries and Answers

Queries and Answers

E. D. Sargent, Ezra, Ky.: No, the absence of a view-finder is not to blame. Two by two is an odd size for plates, I would advise you to procure them through the dealer who supplied you the camera.—Harold Loch, Cincinnati, O.: Yes, three ruby lamps in a dark-room might fog a 25 sensitometer Seed plate. This plate is very sensitive, as I found out the other day at the World's Fair. I made two instantaneous exposures, with a full opening. The day was very cloudy, yet both were over-exposed. The size of a diaphragm to be used depends upon many things, the nature of the hight, etc. Perhaps one of our readers can give you the formula for a solution that would take the scratches out of a leather carrying case. I cannot The Eastman paper referred to is for smillyth printing. There are several systems by which the diaphragms are numbered. That in which the diaphragms are numbered. That in which the diaphragms are numbered. That in which the diaphragms are numbered from any dealer in photographic supplies, provides such a solution. Cat.: Sensited, obtainable from any dealer in photographic supplies, provides such a solution. Hielart Place. Milwaukee, Wis: Your inquiry concerning film could be most readily answered by the Eastman Kodak Co., and we wild advise you to address them, giving full particulars—H. D. Lippincott. Germantown, Fa: Photographs schmitted in our contests may be mounted or unmounted Wm. Pearce, Denver, Colo.: Any soull light-tight box will do. Insert a thin metal plate, plerced with a minute hole, at one end in place of the lens and provide some rrangement to hold your plate at the other—Robert Fithian, Bribleton, N. J.: Yes, any one end in place of the lens and provide some transcement to hold your plate at the other—Robert Fithian, Bridgeton, N. J.: Yes, any lind of a photograph but a blue print.—Clarence A Rocce, Pittsburg, Ua.: Dark-rooms may be ventilated in various ways. Probably a large Z-shaped tin bipe that admits air but no light is most satisfactory. Some amateurs praise the paper you mention very highly

#### Wonders of Photography

Two novel applications of photography have been recently made, that are interesting and worthy of special attention. One is testing but-ter by photography, the other is tailoring by photography

J. A. Hummel state chemist of Minnesota, by a combination of Nicol prisms, microscopes,

'AN OLD TIME BAND". FIRST PRIZE PHOTO, BY SETH HART, OTHO, 1A.

a lensless camera, and a sensitive plate, has hit upon a plan to detect good butter from the spurious article at a glance. It appears that pure butter contains only amorphous fat, and try heating process will generate crystals. Consequently, if the butter is free from crystals, and therefore pure, when it is photographed, there are no polarized rays and only a dull translucent light will pass through to the plate. But if there are crystals as in alcoplane. But if there are crystals, as in oleo-margarine, butterine, etc., the bright and dark spits will come together and form a peculiarly shaded pleture on the negative that is unmis-takable. The proof is said to be absolute and

shaded picture on the negative that is unmistakable. The proof is said to be absolute and
convincing.

From Paris comes a new patented process, entitled Tatloring by Photography." The person
to be measured is placed before the camera,
and between them is introduced a network that
is photographed at the same time and serves
as a standard. Certain artifices are necessary
to obtain a complete result; thus, certain hid
den parts, like the armpits etc., must be ine
cated by objects visible from without, and,
the ally, several views must be taken from various standpoints. These parts may, however, he
marked afreetly on the person instead. The re',
ative positions of the camera, the network, and
the subject are carefully adjusted so that the
subject appears always on the same scale, and
then the photograph is taken from the various
necessary standpoints. And now photography,
like Alexander of old, is seeking for new worlds
to conquer.—Photo-Era.

#### Photography For Profit

Photography For Profit

The pursuit of amateur photography is, as a rule, a state of continual outgo and no income. Unless one has an unusually deep purse this constant taking out and juitting nothing in comes in time to the bottom, and one must either give up his favorite avocation, or clee devise, some means of making his camera earn its keep. This latter plan is not so difficult as one may imagine, especially in this day of pictures when even our "ads" are passed by if they have not some catchy i'lustration to arrest the eye.

There are more roads to Italy than the one across the Alps, and there are more ways than one to use the camera as a financial aid. A young woman who, like the clan of the amateur photographers, loved an out-door life, was wandering one day in the woods when she came across some very interesting and rare specimens of mushrooms. She had a friend who made a specialty of the study of mycology, and she longed to send her the heautiful specimens she had found; but unfortunately the friend lived in Minnesota, and she lived in New York, and mushrooms object to transportation. She had her camera with her, and it occurred to her that she might photograph her "find" and send the pictures, which would be the next best thing to the mushrooms were transferred from the ground to a study hear being taken with them so as to preceive the effect of still being on their mative heath" The photographs turned out to be everything that could make photographs of rare species of mushrooms, she could find and would make photographs of rare species of mushrooms, she could ind for them a ready sale. So our amateur began the pursuit of rare and curious specimens of fungits has had the good fortune to dispose of many of her prints to colleges and societies, liarvard having a number in its natural history collection.

Our amateur was clever enough to seize her opportunity, and there are plenty of such our

collection.

Our amateur was elever enough to seize he opportunity, and there are plenty of such op-portunities, for as Van Dyke says, "Oppor-tunities are swarming around us all the time thicker than gnats at sundown."—Photo.-Era

#### Photographing Animals

Photographing Animals

According to Mr. Ringling, the circus man. "The hardest of wild animals to photograph is the kangaroo. He is forever hopping around, getting out of range and out of focus, and his color is of that dark, neutral tone that requires long exposure to get the details.

The head of the giaffe, with its long neck for a stem, is exasperatingly like the pendulum of a big clock inverted. This ladylike animal has a soft eye and graceful pose, which the camera man makes good use of for picture effect. It is not hard to get the giraffe's attention, and its movements are not nervous, or swiftly changeful. Hence, this shapely beast generally looks at her best in the photograph.

The leopard is a restless beast and difficult to catch just right. With him the chances are that just as you press the bulle a fly may be twitching on the small of his back, with tho result that, in addition to his spots, you develop a caudal appendage on your plate that looks like a watermelon.

Thut the monkey makes the picture maker earn his wages He is a half human cuss, with a sense of humor all his own He is as full of mischlef as a healthy boy, but he has the boy distanced when it comes to wit. Jasper is the prize 'caser and fighting master of the troupe of our show. He has a long head, and is a wonder for spelling ways and means to cut up didoes and escape the blame. He can

troupe of our show. He has a long head, and is a wonder for spelling ways and means to cut up didoes and escape the blame. He can tell a camera man a block away. By the same intuition he can pick out a clergyman, an actor or a detective. His expression changes to suit the occasion.

The cassowary is a pretty girl, in that it knows its heatity and puts on its best manners before people. It is a sure prophet of the weather, and always squeals in a rasping way just before a storm. She makes a good picture, and acts as if she knew what the photographer was about and wished to be taken at her best.

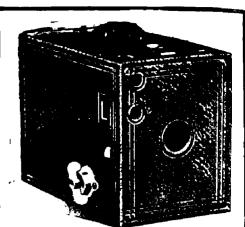

and acts as if she knew what the photographer was about and wished to be taken at her best. "For vanity, however, the lion is easily a leader. He is aptly called 'King of Boasts.' The ideal of a king, I suppose, is imposing flaure, loss and bearing. The lion has all these points, His fighting reputation is overrated. He is a fine actor, as a self-sufficient and almost contemptions air he wears before people in his steel lar cage suggests.

"He rather fancles the commerc was and

"He rather fancies the camera man, and whenever one comes in view will seitle him-self into a graceful pose and keep it until the self into a graceful operator turns away

operator turns away.
"A camera seems to terrify the tiger. At first he looks at it in quiet amazement. When the operator draws nearer the look of wonder gives place to one of annoyance, and the pre-sed back ears suggest a trace of anger."—The Photographic tographer.

THE AMERICAN BOY offers twelve prizes of Two Dollars each for the best Amateur Photograph received during the twelve months in the year, one prize for each month, also a second prize each month, of one dollar, for the next best photograph, the competition to be based upon the originality of the subject and the perfection of the photograph. The contest is open to subscribers only. Photographs will be returned if stamps are sent for the purpose. All photographs entered in the contest and not prize winners will be subject to our use willess otherwise directed by the sender, and fifty cents will be paid for each photographs that may be used, the prize photographs in any event to be our own, without further payment than the payment of the prizes. Write on the back of the photograph its title, with a description of the picture, and the full name and address of the contestant, who in every case must be the artist who took the picture.

#### The Best Out

THE AMERICAN BOY is all O. K. 'Tis the best hoys' paper in every way. It makes me laugh and sing and shout Because 'tis the best hovs' paper out. Ray Allen, Callender, Ia.

LEO JULIAN LACROSSE'S WORE IN THE TEXAS BUILDING AT THE EXPOSITION

HE editor of THE AMERICAN BOY expected to be able to introluce an exiral number into the Festival Hall program on American Boy Day by introducing to the audience Leo Julian LaCrosse, of Luling, Texas, age thirteen, who has shown talent to a remarkable degree as an artist with the saw, the plane, and the hammer. Young Lacrosse built the cabinet which you see in the picture, and the people of Luling had it placed among the Texas exhibits at the strong the boy a handsome gold medal to show their appreciation of his work. Mr. Sprague's proposal was to have this medal presented to the boy on the stage during the Festival Hall exercises but at the last Race Done?

Moment it was found that the young man could not be present, altiough our correspondence led to the hope hat the correspondence led

Race Done? Not a Bit of It.

A man who thought his race was run hade a food find that brought him back

made a food find that brought him bles to perfect health.

"One year ago I was unable to perform any labor in fact I was told by my physicians that they could do nothing further for me. I was fast sinking away, for an attack of grip had left my stomach so weak it could not digest any food sufficient

"There I was just wasting away, growing thinner every day and weaker, really being snuffed out simply because I could not get any nourishment from food.
"Then my sister got after me to try Grape-Nuts food which had done much good for her and she finally persuaded me and although no other food had done me the least bit of good my stomach handled the Grape-Nuts from the first and this food supplied the nourishment I had needed. In the Grape-Nuts from the first and this food supplied the nourishment I had needed. In three months I was so strong I moved from Albany to San Francisco and now on my three meals of Grape-Nuts and cream every day I am strong and vigorous and do fifteen hours work. teen hours work.
"I believe the sickest person in the world

could do as I do, eat three meals of nothing but Grape-Nuts and cream and soon be on their feet again in the flush of best health like me.

Not only am I in perfect physical health

"Not only am I in perfect physical health again but my brain is stronger and clearer than it ever was on the old diet. I hope you will write to the names I send you about Grape-Nuts for I want to see my friends well and strong.

"Just think that a year ago I was dying but today, although I am over 55 years of age most people take me to be less than 40, and I feel just as young as I look." Name given by Postum Co., Battle Creck, Mich.

There's a reason.

Look for the little book, "The Road to Wellville" in each pkg.

Texas and is inlaid, the hair being of walnut, the fiesh of maple, the tunic of holly and the mantle and cap of red cedar. Lack of space precludes our mentioning other interesting features. The designing and most of the ornamenting was mainly suggested by the boy and drawn by his father. All the work was actually executed by the youngster except slight assistance given by the father and mother in sawing the wood specimens from the rough timber and putting the work together. The boy spent nearly three months on the work, giving his nights to study that he might keep up with his classes. That he succeeded is indicated by the fact that in the examinations he passed with a general average of ninety-five per cent. The boy has been a lover of tools from his infancy. He was happy as a very small boy with has been a lover of tools from his infancy. He was happy as a very small boy with hammer and nails and at the age of five he surprised everyone by his ingenuity. When he was seven he sold his first lot of work and realized nearly twenty dollars for it. Later he attended state fairs where he gave exhibitions of his handicraft. At four fairs he has taken first premiums and diplomas, among them the fair at San Antonio in 1900. He is accurate in his work, discovering errors in form and pr. portion at sight. Since his seventh year he has practically supported himself by his tools which, together with materials he has collected, are easily worth a hundred dollars. Leo crayes a classical education and from Leo craves a classical education and from the sale of his exhibit at St. Louis and the work he has on exhibition at home he expects to realize enough to begin at least a college course.

Messages From Authors of Boys' Books to American Boys on American Boy Day at the St. Louis Exposition, July 5

Kirk Munroe

July 5th, 1904.

My dear American Boys:-My dear American Boys:—
Although circumstances prevent me from accepting Mr. Sprague's kind invitation to visit St. Louis at this time, and so rob me of the pleasure of meeting you face to face. I hope you will believe me when I say that I would rather be with you today, than to be anywhere else in all the world.

How I should enjoy meeting those correspondents whose multitudinous letters greeted me a year ago at Hong Kong, with cheery messages and loving words from my

cheery messages and loving words from my own, far away, home country. Many more letters from American boys, that came a little late, followed me north to Pekin and Port Arthur, and still others only overtook me in Japan just as I was about to start across the Pacific for San Francisco. But you may be sure that every one of them was most gladly welcomed and eagerly read. In fact I think that maker is all two cheery messages and loving words from my was most kindly welcomen and eagerly read. In fact I think that never in all mylife have I so appreciated a lot of letters as I did those from hundreds of my American boy friends that found their way to me on the other side of the world last

year.
Then, too, how I should love to meet those other lads who were too busy to write, but who are all the time doing things of the greatest interest to themselves, and to all who care for boys. I should be proud to know those who are striving to gain the head of their classes, or who are earning money, in spare hours, for some coveted prize, which, when finally gained, will be appreciated and enjoyed a thousand times more than if it had been a gained, will be appreciated and enjoyed a thousand times more than if it had been a gift. What a pleasure it would be to shake hands with the sturdy young fellows who are winning their way upwards, in spite of obstacles, in spite of temptations, an! in spite of failures. How I should like to talk with them about these things, and especially about their failures; for it is our failures; that teach the most valuable losfailures that teach the most valuable lessons of life, and often result in our greatest good. They show up, as could nothing else, the weak points of our plans, or our methods, that must be strengthened before success can be attained. One little weakness, in an otherwise perfect structure, will surely bring it to the ground sooner or later. If the weakness is discovered early in the process of building, it can be remedied at slight cost; but the expense of correcting errors or eradicating flaws increases rapidly with the growth of the edifice, until finally it is too heavy to be paid. Then, for good or ill, the structure must stand as it has been built. Therefore, my dear young friends, be grateful for the failures that come to you early in life; study them carefully, discover the reason of each one, do away with that reuson promptly and thoroughly, and in a surprisingly short time you will find weakness replaced by strength, sorrow by joy, and triumphant successes crowning your every effort.

You lads of today are the men of tomorrow. By your strength or weakness must our great, splendld nation stand or (Continued on page 323) sons of life, and often result in our greatest

#### GURED

BY BENJ. N. BOGUE, S. S.

WHO CURED HUSSPLE AFTER HEING APPLICATED WITH STANDSRING IN THE WORST FORD FOR NEARLY TWENTY YEARS

I was an inveterate stammerer from infancy. Many eminent doctors and specialists treated me at great expense, and yet did not cure me. My case was pronounced incurable. My stammering tormented me. I became very sensitive about my defect and was daily becoming a recluse, avoiding the companionship of people because of the annoyance of my affliction. I grew desperate. Finally I began to experiment on myself, and with patient study and persistent hard work from day to day I at last, when almost ready to give up in despair, originated a method, which accomplished what money and time had failed to secure for me—my perfect, normal and fluent speech. was an inveterate stammerer from infancy

time had failed to secure for me—my perfect, normal and fluent specch.

After I cured myself I became an entirely changed man. My general health improved because of the great change my cure made in me-I gained self-confidence immediately and myspirits became bright and cheerful. I could join in general conversation, and in fact could converse freely under any conditions or circumstances. As I realized through my own experience the terrible difficulties under which u stammerer must labor I decided to devote my future life in curing other unfortunate stammerers, whose success I knew depended upon their perfect speech.

their perfect speech.

Since I originated this method, cured myself and scores and scores of other sufferers, it is no longer necessary for any one to continue stammering. By the application of my method I can mering. By the application of my method I can positively cure any case of stammering or stuttering no matter how severe, or of how long standing. My common sense method will cure, absolutely cure any person of stammering, regardless of the cause of the difficulty, whether acquired from catarrh, scarlet fever, typhoid or brain fever, measles, whooping cough, diphtheria, fright, mimicry, accident, heredity or an unknown cause. It cures stammering in a simple, sure and scientific way.

It is highly recommended by physicians, teach-

ple, sure and scientific way.

It is highly recommended by physicians, teachers, clergymen, bankers, presidents of colleges, business men and prominent persons in every walk of life, everywhere. I have enrolled pupils from all parts of this country and abroad. My graduates stand ever willing and glad to testify as to the me it and efficiency of my method.

Persons who wish to know of my experience and bow I circul myself can

Persons who wish to know of my experience as a stammerer, and how I cured myself, can secure a copy of my book, "Advice to Stammerers," free of charge by writing me. The book contains much valuable information for stammerers, and also gives the names and addresses of persons I have cured. Wite to-day, stating your age, length of time you have stammered, cause, etc., and I will send you my advice toyour age, length of time you have stammered, cause, etc., and I will send you my advice together with my book and full information concerning my method. Ask also for a copy of "Practical Information for Stammerers." The entire package will be sent free of charge. Address Benj. N. Bogue Founder and Principal, The Bogue Phono-Logic Institute for Stammerers, 203 State Life Bidg., Indianapolis, Ind.

non. Towards the of him. end of November he All th he remained until March, when he set out for the Highlands of the Hudson. In May, Sir Guy Carleton relieved Clinton of the command at New York, and in this month also word came to America of the Proceedings in Parlament, the votes having for their

object the restoration of peace on the western continent, and the changed and pacific intentions of the British ministry. Independence and peace are two grand words to conjure with, but they availed the magician only when a real and vital and imminent danger threatened. Now, after more than six years, when at last the dove seemed to have replaced the raven in the heart of Great Britain, they served no other purpose than to full the feelings of the great mass of the American people into a serenity that the leaders could not but believe might, after all, have but slender foundation. To cease due and strenuous preparation for further conflict; to grow lax in the finances and in recruiting men; to cease laying up treasure of hard cash and powder and ball, and in fortifying and maintaining adequate armies; these were by no means the best methods to advance the two great causes for which the war had been begun; peace and independence. If he is "thrice armed who bath his quarrel just," four times is he whose cause is not only good, but whose battallons are full, and whose guns are shotted. Washington's heart was for a long time, almost a full year, illied with anxolus forebodings. On this, his second long tarrying on the banks of the upper Hudson, he made his headquarters at the house of Colonel Jonathan Hasbrouck, at Newburgh, about two miles from his previous resting place at New Windsor. The disquietude which at first he felt as to the possible attitude of Great Britain, turned to another sort of anxiety, not less deep, as time went on. From this time, March, 1782, until the final disbandment of the army in November, 1783, the interest centers at Newburgh and the vicinity on both sides of the Hudson. At first. in excellent spirits and full of Joy for their great success at Yorktown, the troops went into their cantonments on the heights in the township of New Windson, about two miles from the Hasbrouck house, Here, more than at any other of the numerous headquarters which from time to time were occupied by Washington, was a genuine home. There was little damer, after the first few months, of being suddenly called to take the field, and here, more than anywhere else in America, was there peace and safety. Mrs. Washington came from Mount. Vernon, and a reality of social and domestie life was established under far more favorable conditions than when at Valley Forge and Morristown there was some attempt at sociability. The major generals had their quarters in the neighborhood; La Pavette was at the settlement called "Little Britain;" Gates and St. Clair were

GREENE'S HEADQUARTERS, NEW WINDSOR, N. Y.

quartered together in the same vicinity; Baron Steuben was across the river at Fishkill in the Verplanck house; while General Knox, who afterwards became the first Secretary of War, lived with his wife at a large stone editice in New Windsor, built by that the old colonial aristocrat whose house by the river Washington occupied in 1779 Colonel Thomas Ellison. Here also General Greene had his quarters. In ad-

Washington re- the United States. A statue of George Clinturned for a few ton stands in one of the public squares of days to Mount Ver. Newburgh, and as a work of art is worthy

All the historic buildings, with the single was in Philadelphia, where exception of the Ellison house, at New Windsor, occupied by Washington, are still standing; the headquarters building at Newburgh is owned by the state and is kept in admirable order. The mementos of Washington collected here are well worth making a pilgrimage to see.

> The remains of the cantonments are still to be seen, though now overgrown with forest trees; the huts were built of logs upon solid stone foundations, and it is these latter that time has spared. Upon a height overlooking the Hudson and the entire

VERPLANCK HOUSE, FISHKILL, N. Y.

country for many miles around, was erected a large frame structure for public meetexample of Washington's character and of revolt, and the appearance of the troops the vast influence which his personality had acquired over the officers and men.

It has been told how many times during

the course of the long struggle the troops had been reduced to the verge of penury. At Newburgh they were called upon once more to face the spectre of distress, with the addition of something akin to hopelessness. The prospect of the dawn of peace, which ought to have animated the Congress with the liveliest sense of responsibility to the gallant defenders whose exertions had procured it, seemed rather to have dulled their ideas of duty, and rendered them apathetic to the just claims of the army. Petition and appeal were alike unheeded, and the memorials of the sufferers met with scant attention and no fitting replies. It seemed to the army clustered upon the Highland hills as if they were of the Pennsylvania line, quartered at Philbeing abandoned, if not actually betrayed. by those delegates of the people to whom the doors of Congress. of right they were entitled to look for justice. The proverb concerning the ingratitude of republics (stated in homely fashion that "what is everybody's business is nobody's business") seemed never to have found fitter application. Stirrers up of sedition were now not lacking. A committee of officers, at the head of which was General McDougal, was selected to proceed to Philadelphia, and urge as best they could some action. The Congress, hardly alive to the condition that confronted the country. passed resolutions, full enough of tine phrases, but empty of real assistance. The committee returned to the camp with little but an engrossed copy of compliments and good intentions. At once the smouldering tires of indignation burst forth. Quietly and insidiously a few prime movers in a movement which was in fact seditious and mutinous, prepared for a sterner and more portentous action than that of any memorial or petition. The leaders selected as their mouthpiece a young officer, Captain John Armstrong, whose literary ability fitted him admirably for the task of inciting the army. He was not known to be the writer of the address that was now circulated, and his identity remained concented for upwards of forty years.

The address, distributed throughout the camp, consisted of a lengthy statement of the condition of the army and a calm and exceedingly able review of the many and futile efforts that had been made by peaceful means, by prayers and petitions for redition, this vicinity was the home of the dress of present grievances and for a guar-Clinton family, a name dear to every New antee of justice in the future. Having in Yorker, dignified by many distinguished temperate language (stronger and more insons, one of whom was a major general fluential for its tone of moderation) called during the Revolution; another, George, a attention to the utfer failure that had atbrigadier general, first governor of the tended all their endeavors, the writer sud-

denly dropped his calmness and mild mannered words:

"Faith," he exclaimed, "has its limits as well as temper. There are points beyond which neither can be stretched without sinking into cowardice or plunging into credulity. Hurried to the verge of both, another step would ruin you forever. To be tame and unprovoked when injuries press hard upon you is more than weakness; but to look up for kinder usage, without one manly effort of your own, would fix your character and show the world how richly you deserved the chains you broke. If this, then, be your treatment while the swords you wear are necessary to the defense of America, what have you to expect from peace, when your voice shall sink and your strength dissipate by division; when those very swords, the instruments and companions of your glory, shall be taken from your sides, and no remaining mark of military distinction left but your wants, infirmitles and scars? Can you then consent to be the only sufferers by the Revolution, and, retiring from the field, grow old in poverty, wretchedness and contempt? Can you consent to wade through the vile mire of dependency, and owe the miserable remnant of that life to charity, which has hitherto been spent in honor? If you can, go, and carry with you the jest of Tories and the scorn of Whigs; the ridicule, and, what is worse, the pity of the world! Go, starve, and be forgotten."

It is thus, with consummate ability, the writer of the anonymous letter delineates the picture of the distress and sketches with cartoon boldness of stroke the consequences of further patience and forbearance. In closing his tone changes again. He is calm, cool, cautious, deliberate and practical in his advice, especially so to men with swords in their hands and a great wrong in their souls:

"I would advise you, therefore, to come to some final opinion apon what you can bear, and what you will suffer. If your determination be in proportion to your wrongs carry your appeal from the justice to the fears of government. Change the milk-andwater style of your last memorial; assume a bolder tone, decent, but lively, spirited and determined; and suspect the man who would advise to more moderation and longer forbearance. Draw up your last remonstrance; for I would no longer give it the suing, soft, unsuccessful epithet of memorial.

Such language, firm in its facts, dignified in its presentment, and flery in voicing the ings and worship and for use by the fra- universal sentiment of the army, was well ternity of Freemasons, to which society a calculated to bring about the purpose for considerable number of the officers be- which it was written, even though that longed. This which came to be known as purpose was to be enforced by the sword. 'The Temple," was the scene of a most re- Though, as will be seen, it failed of its markable meeting, and furnishes, perhaps effect at Newburgh, the ideas thus exof all the incidents of the war, the best pressed resulted the following June in open

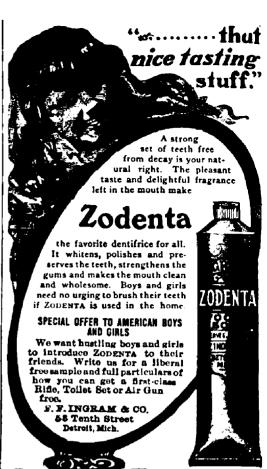

ETTRICK'S MILL, NEWBURGH, N. Y.

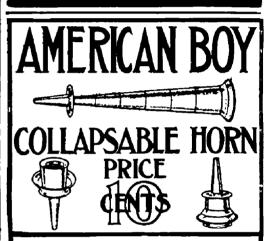

adelphia, with arms in their hands, before

Armstrong's address closed by calling a meeting to be held the following day at the public building on Temple Hill. The document was in Washington's hands immediately. He determined (rather than attempt to check or discourage them) to guide and control the proceedings. He issued an order directing the officers of the field and staff and one from each company, to assemble at the Temple building, there to discuss the subject matter of the address. The meeting was held at the time appointed: General Gates (though generally believed to be the chief instigator of the movement) was called to the chair. Several who were present have left accounts of what happened. Washington arose to read a paper he had prepared for the occasion. He endeavored to read it, but, finding the light too dim, he laid the manuscript down, and took out his glasses, saying as he put them on: "You see, gentlemen. I have grown, not only gray, but blind in your service."

Washington then resumed his manuscript and read without a pause to the end.

More noise for ten cents than anything you can buy. This is what you want for the foot ball, base ball game or campaign. Presidential year is the year of noise.

WASHINGTON'S HEADQUARTERS, ROCKY HILL, N. J.

There are men, men of influence, even men reckoned to have been great, of whom some one at least might have been found to say and to believe that the opening episode was artfully dramatic. Bonaparte, we know, called in Talma, artist in deportment, to instruct him. But, with Washington, such an incident was felt intuitively to he no more than natural, and it was known to be natural chiefly that it was known to

I will not attempt to paraphrase, even briefly, on the substance of Washington's reply to this "Newburgh letter." "Exitus acta probat;" this, the motto of the Washington family, justly gained and wisely borne, never found ampler justification.

After reading his reply, Washington retired without a word. He had arranged no plans for the action of the assemblage; he left them free to act, as he had been to speak. Such was the effect of his words that they immediately and unanimously re-"Thanks to their chief for the course he had pursued; their unabated attachment to his person and to their country; their unshaken confidence in the good faith of Congress, and their determination to bear with patience their grievances until in due time they should be redressed. In allusion to the sentiments of Armstrong's letter one of the resolutions was as follows: "That the officers of the American army view with abhorrence and reject with disdain the infamous propositions."

Serious as this attempt was to commit the army to a course of usurpation, it has not had the extreme notoriety attaching to what has been called (without perhaps due regard for accuracy) the offer of the crown of America to Washington. This event occurred some time previously, and was, in a manner, the culmination of much discussion concerning the probable course of political affairs, and especially as to the character and form of government which the states should adopt after the tle that bound them to Great Britain should be finally severed.

The laxity and inefficiency of the Articles of Confederation were well known and understood. Nothing better appeared even as a suggestion; the admirable constitution which, six years afterward, became Ameriea's "Magna Charta," was then unthought of, or if already taking shape in a few discerning minds, deemed no better than a too glorious dream.

Confusion and divided counsels were supreme; none could look forward to anything like political certainty. With im-

#### Fair Folks

#### Don't Blame Nature But Investigate.

Many claim they are nervous "by nature" when it is really only because they are is easily proved by cutting out the coffee or tea for 10 days and using well boiled Postum Food Coffee instead-then comes the change.

"I seemed endowed by nature with a nervous constitution," says a lady of Knox- themselves into an association with a view ville, Tenn., "and although I felt tea and coffee were had for me the force of habit was so strong I just couldn't give them up.

"Someone suggested that I try cereal coffee, but I remembered what insipld drinks we used under that name during the Civil War and so without ever looking into the subject or realizing what progress science has made in this direction I just wouldn't ive Postum a trial until finally the W. C.

. I'. in our city started an exchange where there were so many calls for Postum it was rved regularly and many were thus inneed to try it, myself among the number. How delighted I was to find it so agreeable. d licious and satisfying. As I had suffered from nervous prostration a change from teaand coffee was imperative, but all these troubles disappeared after I had used the Postum faithfully for a few weeks.

"A sister and a son-in-law were converted to Postum at the same time and now we all enjoy it as well as we ever did coffee, but instead of making us nervous like coffee we enjoy steady nerves, sleep sound and are in every way better for the change." Name given by Postum Co., Battle Creek, Mich.

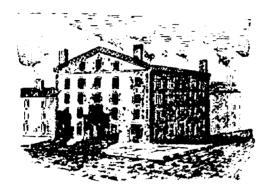

This lady found what she thought was natural nervousness was only due to an acquired taste for coffee that is to some people a sure destroyer of nerves and health. Like her, anyone who cuts off coffee altogether and uses well boiled Postum in its place will be greatly benefited after a few days and the return to health is a joyful journey.

There's a reason.

book in each pkg. for the famous little book, "The Road to Wellville."

paired credit and no real authority, the expression "United" as applied to the thirteen states was a delusion. The people had achieved liberty; but Webster had not yet said: "Liberty and Union, one and inseparable."

In this chaotic condition the thoughts of many of America's most sagacious men looked longingly back upon the stable and secure institutions of England. In these they found the best guarantees which the wit of man, precedent after precedent, had established in the world. The violence and folly of the French Revolution had not then burst upon that unhappy country, else, it is certain, the final choice would have taken shape quicker than it did. Still some, deeply alarmed at the prospect of an unrestricted democracy, sought to prepare against it. As Armstrong had been the mouthpiece of a present discontent, so the remote fear now found expression in the person of Colonel Lewis Nicola, an officer of merit, whose weight of character entitled his words to consideration. Nicola wrote a lengthy letter to Washington, in which, after recounting the various difficulties under which the country staggered, he entered upon the question of the future form of government. His conclusions were that a republic was "the least capable of securing the rights, freedom, and power of indi-

PRAUNCE'S TAVERN, N. Y.

viduals." The alternative, he believed, lay in establishing a constitution based upon that of England, whose head should be given some title less likely to offend than that of a monarch; though, he adds: "If all other things were once adjusted I believe strong arguments might be produced for admitting the title of king."

There is no doubt that Nicola wrote thus as representing a very large and influential public opinion; and there is little reason to believe that if Washington had permitted his name to be so used, no power or title would have been too great for an enthusiastic people.

In soberly, seriously and decidedly replying to Nicola's letter; in expressing himself as being "at a loss to conceive what part of his conduct could have given encouragement" to such an offer, and in declining it as a "scheme most disagreeable," Washington may be said to have refused the throne.

In August, by which time peace had been proclaimed amid great rejoicing, and the larger part of the army had been disbanded, Washington received a summons from the Congress, requesting his attendance. In consequence of the insulting attitude of the Pennsylvania troops (of which mention has been previously made) the Congress had adjourned from Philadelphia to Princeton, and it was thither Washington proceeded.

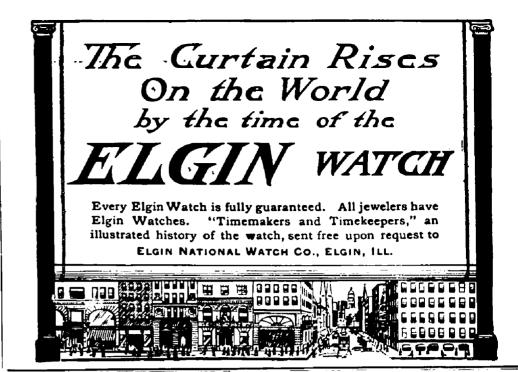

Before following farther the fortunes of Washington, now become peaceful rather slaves to the coffee or tea habit, and this than warlike, one event seems to demand mention: When it had become assured that the war was indeed over, the officers began to experience the stirring of those fraternal feelings which inevitably link companionsin-arms together. They resolved to unite

STATE HOUSE, ANNAPOLIS, MD.

to perpetuating their brotherly union and to keeping alive for themselves and their posterity the memory of "the times that tried men's souls." They met first at the Temple, and there effected a temporary union, which was afterwards elaborated at the Verplanck house in Fishkill, and became the association known as "The Soclety of the Cincinnati.'

The kindly and brotherly objects of this association; its tendency towards liberty and equality, as well as fraternity, and above all the avowed principles of its members, might well have shielded it against the jealousy or distrust of the country. But the jealousy or distrust of the country. But all these, embodied in the motto of the society: "Omnia relinquit servare republicam," were afterwards no protection against the carping criticism of red and rabid populism. So great, indeed, was the enmity excited by its continuance that the majority of the members withdrew from the order. There were thirteen branches, one for each state, and of these, within a few years, all but five were disbanded. It was

claimed by ultra republicans that the society was aristocratic, and had for its prime object the founding of an aristocracy based upon a recognition of the inheritance by the eldest son of each member of the privileges of his father. Those who still kept up their organization hastened to disayow all feudal intentions, and were careful for many years that as little attention as possible was called to their proceedings, though these were, first or last, sufficiently though these were, first or last, sufficiently

Harmless they were, and yet, to do ample justice to the foibles and suspicions of the newly emancipated, these were not altogether destitute of at least a verbal foundation. In revolutions it is seldom that the true lovers of liberty find themselves in power; the mild Girondists give room to the control of the c in power; the mild Girondists give room to the Jacobins; so in the approaches of tyran-ny, class privilege is the first step. Both in the new world and the old, time has taught the lesson that in revering the old we are under no obligation to neglect the new; that we may be radical against evil, and yet conscrivative of good. In the republican Society of the Cincinnati is to be found a verificile order of nobility. I know not how it may be now, but a few years ago a member of that society was entitled by custom if not code to the salute of "present arms" at any French military post.
And yet it may be safely affirmed that
American institutions are safe from all encroachments from this direction. Many of the present members of the order are men of large wealth, and high social and politi-cal standing; but others are quite "of the

The village of Fishkill, where the old Verplanck house still stands, is full of reminders of the Revolution. The "Dutch" church was used then as a prison, and the 'English" church as a hospital, while the

ancient graves of the cemetery bear many an inscription of a soldier's record.

Washington, accompanied by his wife, remained near Princeton until November, when he returned for a few days to West Point preparatory to entering New York with the remnant of the Continental army. While in attendance upon the sessions of the Congress he occupied a mansion at Hocky Hill, on the banks of the Millstone river; this, in its day a comfortable abode, is now in the last stages of decay, if it has not, in fact, within the last few years been torn down, as so many of the lesser "war homes" of Washington have been.

After the occupation of New York by the Americans (November 25th, 1783) Washington left for Annapolis, Maryland, where the Congress was then in session. At the building known as "Fraunce's tavern," at the corner of Broad and Pearl streets in New York, Washington bade a final farewell to the higher officers of the army, close companions of his long and arduous campaigns, sharers of his bivouacs and cantonments, partners of peril and privation, and partakers with him, when such

campaigns, sharers of his bivouacs and cantonments, partners of peril and privation, and partakers with him, when such came, of the infrequent plenty. One by one they approached and took their general's hand. Few, indeed, were there whose eyes were not filled with tears at the severance of friendly relations so long held and so highly esteemed.

A few days afterwards, before the assembled Compress at the State House at Analysis.

bled Congress at the State House at Annapolis, Washington surrendered his commapous, Washington surrendered his commission. General Mifflin, whose ardor had once led him to join, if not instigate, the "Conway cabal," with a view of substituting Gates as commander-inchief, presided. His reply to Washington is noteworthy. "You retire," said Mifflin, "from the theatre of action with the bloomings of your fellow-aftigens; but the blessings of your fellow-citizens; but the glory of your virtues will not terminate with your military command; it will con-tinue to animate remotest ages."

The next morning Washington set out for his home at Mount Vernon.

# American Boy Day at the St. Louis

Exposition

A Splendid Success, Viewed From Every Standpoint-5,000 People Participate in Parts of a Five-Hour Program

American Boy Day at the St. Louis Exposition, July 5th, has passed into history, and with thousands, old and young, it will continue for the remainder of their lives a very happy memory. Fully five thousand people participated in some part of the five-hour program which began at 2:30 o'clock with the neals of the great organ in Festival Hall and ended at 7:30 at the Michigan Building with rousing cheers for Mr. Sprague. who had conceived the idea of American Boy Day and carried it to a successful completion.

The success of the affair is not to be attributed to the weather, nor to the Exposition management, for rain, which threatened all the morning of the eventful day, began to fall just before the exercises began in Festival Hall and continued for nearly two hours, and the Exposition management, while co-operating in a general way toward the success of the enterprise, yet in all matters relating to the program and the arrangements for the day, proved utterly indifferent and incompetent. Nothing. however, can daunt the ardor or weaken the spirit of the American boy, so that despite all obstacles he went ahead and made the 5th of July one of the most notable days in the history of the Exposition. From 11 o'clock in the morning until 2 in the afternoon Mr. Sprague, the Editor of THE AMERICAN BOY and President of the Day, welcomed in the Michigan Building his boy friends and their fathers, mothers, sisters, cousins and aunts, while Mr. Hugh D. Montgomerie, of THE AMERICAN BOY office, assisted in distributing badges and making the boys feel at home and at ease.

A few minutes before 2:30 o'clock the great doors of Festival Hall were thrown open, and within thirty minutes every one of the two thousand flags provided for distribution among the audience had been handed out, with hundreds of people arriving later who could not be supplied. Handsome programs, on the front cover of which appeared a picture in red, white and blue of the American flag, had been printed by the publishers of THE AMERICAN BOY for free distribution among the audience. These were taken charge of by the Exposition Program Company, and sold in the hall at 5 cents each, notwithstanding the fact that the publishers of THE AMERICAN Boy had paid the entire expense of printing the programs and had proposed to give them away free of charge. The result was that the program which was intended for everyone found its way to only about one in ten of the audience. This was one of the many instances where the Exposition management stepped in to endanger the success of the day.

Promptly at 2:30 o'clock Professor Henry B. Roney, Trainer and Manager

GEORGE T. COXHEAD General Secretary St. Louis Y. M. C. A.

of "Roney's Boys' Concert Company," took his seat at the grand organ and young manhood of this city would gladbegan the "March from Tannhauser." ly, if they could. Seated on the stage at the time was the unite heart and voice World's Fair Indian Band, fifty pieces, in a welcome as furnished by the Government, through the kindness of Mr. S. M. McCowan, ern clime, as low! as Superintendent of the Government In a thousand college cheers, in words as the dian exhibit. A burst of applause followers in words as the lowed the appearance upon the stage of the President of the Day, Mr. William C. Sprague, Editor of The American Boy, who held by his right hand little beautiful as the tandscape and architant poetry of this exposition, and architant poetry of this exposition, and architant poetry of the equipment of the poetry of the exposition, and architant poetry of the exposition and poetry of the exposition and present poetry

rapped upon the table with his gavel, made for the occasion from a piece of the hull of the "Porcupine," one of the boats that helped win Perry's victory on Lake Erie, nearly 100 years ago, and announced that the Address of Welcome in behalf of the St. Louis boys would be made by Charlie N. Fenwick, of St. Louis. Applause followed the appearance of the proudest days of the world's history—we shall observe that everything here exhibited is the most perfect of its kind. May I venture, therefore, to call upon you, as I give command to myself, to make our lives such, that if there were to be added to a universal exposition like this, an exhibit of the sturdest, truest, most studious, most God-fear-ing and manifest boys of all the world, you all and I might be selected.

st these.
So now, in order that these poor words of welcone may include I they should. I repeat to you, Boys of America, the warm and hearty recent on St. hearty reception St. Louis would have me give you; and to you. Mr. Sprague, and to a hundred years.

The applause that greeted this ad-

sponse would be made by Jack Skinner, of Detroit, and there appeared at the front of the platform a little, trim-set fellow of eleven, in soldier costume, with snapping eyes and handsome, intelligent face, who from the first opening of his lips showed that he was master of the situation. Every word of his little address, which was in verse. was heard to the farthest corner of the great auditorium, and when he finished and started to retire to the back of the stage and was stopped by Mr. Sprague and given a kiss, thunders of applause went through the building, which threatened to bring down the roof. His address was as follows:

Mr. Chairman, and Boys of St. Louis: In behalf of the boys of our nation, Whose hearts are most loyal and true, Whose watchward is—Freedom forever, Whose banner is—Red, White and Blue, We offer our thanks for the welcome So graciously tendered today. From near and from far we have gathered Our tributes of honor to pay.

To heroes who labored and struggled For what they belleved to be right; Who laid the foundation here built on, Who walked more by faith than by sight. To heroes who've shouldered the E'er since the foundation was laid. We boys here assembled, acknowledge
The debt, which by us must be pa.d.

We'll pay it, by lives that are noble. By lives fraught with purposes strong To stand firm for truth and for honor, We'll shun e'en the semblance of wrong, We'll tread with unfaltering footsteps "The paths that our forefathers trod."
Our march shall be onward and upward T'ward purity-principle-God

As sons we revere our blest country, And pledge her allegiance anew; We meet here together as brothers Determined each one to be true. Our hopes of the last days of waiting Are crowned with unspeakable joys; Exultant, we hall the proud dawn, of A day for American boys.

Then the World's Fair Indian Band played a medley of popular airs, followed by Mr. Sprame's introductory address. He said in substance:

There was a time when it was a great thing for a man to say "I am a Roman citizen." The time came in the history of the world when it was an infinitely greater thing for a man to say "I am an American citizen," but better than all is to be an WILLIAM C. SPRAGUE

Editor of The American Boy and President of the Day

Jack Skinner, an 11-year-old Detroit boy, and by his left, Louis Youpee, a 10-year-old Chippewa Indian boy, and was followed by some twenty boys who were to take part in the program. Immediately at the conclusion of the organ solo an invocation was delivered by George T. Coxhead, General Secretary of the St. Louis Y. M. C. A., who asked for divine blessing on the

publishing associates, and to your editorial and publishing associates, and to your monificent publication. THE AMERICAN ROY, to you all the boyhood and young manhood of the World's Fair City, give a hearty and a perpetual welcome. May you stay a hundred years. schools than there were people at the time this country was founded, every one of them proud of his country, reverencing her institutions, and ready when the time shall come to hand this nation down to posterity with ever increasing glory. What this nadress was repeated on the announcement that the Rement that the

JAMES G. CARD. Cleveland Address on "The American Government"

hand was a little flag and a slip of paper on which was printed a pledge of allegiance. A boy made his way down the main aisle carrying an immense American flag, followed by the cheers of the people, which increased as he approached the stage. Upon the stage, at the side of the president stood Blakeslee White, son of Governor Albert B. White of West Virginia, who was to be flagbearer. The boy handed the flag over the footlights to Blakeslee, who waved it in unison with the strains of the great national anthem, amid an ever increasing volume of cheers. When the band had ceased, the audience, from the smallest little tot on the stage to the gray heads that made up a part of the audience, every one, extended the right hand toward the flag and repeated the following pledge:

"I pledge allegiance to my flag, whose stars and stripes stand for bravery, purity, truth and union. I pledge my life, my heart, and my sacred honor to love and protect it. I pledge alleglance to my country-one nation, indivisible, with liberty and justice for all."

The scene at this point was inspiring in the extreme, and many a handkerchief went to the eyes as a sure evidence that the ceremony was producing a profound effect. At once on the conclusion of the pledge the leader of the band stepped to the front and with a wave of his baton three thousand people to the accompaniment of fifty instruments sang the first and last verses of "My Country, Tis of Thee." When the audience had again taken its seat, Grover C. Aker, a 16-year-old lad from Blair, Nebraska, stepped to the front and delivered an oration on "The Coming Men." As in the cases of the boys who preceded him, his tones were clear and distinct, the audience giving hearty and frequent applause.

James G. Card, a fine-looking boy from the Central High School of Cleveland, silence was obtained Courtland Feuquay, the platform had to request persons greater had there been a place where all Ohio, who several months ago was sent a Chandler, Okla., boy of fine presence standing in and crowding the main could have gathered conveniently in one to Washington by the choice of his and good voice, stepped to the front of aisles to come forward to the few vacant great group and time had been given for schoolmates to examine the workings of the platform and delivered a fifteen-seats scattered immediately in front of all to assemble. As it is the reader sees the Government and return to them minute oration on "The American Boy" the stage. The program was proving to only a portion of the great crowd that with a report, spoke on "The American without a skip or tremor, deliberately be an audience holder, and only those filled Festival Hall and enjoyed the Government." His manly appearance and with the confidence of a grown man, who had most urgent engagements, as American Boy Day program. In the and well-turned sentences caught the audience from the start.

Everyone waited with breathless interest for little Charlie Lenzen to come

The chairs were cleared from the from the from the cleared from the from the stances and against all comers. It is only on these conditions that he will grow into the kind of American man of whom American man of who Then came a surprise of which the markably clever work. Harry Steele Morrison's address on "The Heritage of at the piano and then Charlie's little Mr. Sprague led to the front of the plat- the American Boy" and messages from the governors of states had to be deferred to part three of the program. Benthroughout the singing, but scarcely had on being introduced as a real American ton C. Farra, of St. Louis, then rendered the last note died away when such a tre- boy spoke for some five minutes in such a two-part violin solo, being (a) Ber ceuse of Jocelin by Godard; (b) Mazurka from the audience that Charlie was com- were captivated and led to give round Russe by H. Wieniawski, and won hearty pelled to come again to the front of the after round of applause. It now seemed applause. Then little Charlie Lenzen, to platform. As an encore he sang a touch- as if every number was better than the the accompaniment of hand clapping ing little ballad entitled "Daddy," which one preceding it, so that the bulk of and waving of handkerchiefs from all brought tears to hundreds of eyes, the great audience remained, even over the hall, stepped to the front, and, Charlie had won his way into the hearts with the program extending itself in choir boy costume, sang the beautiful of old and young and was the hero of out longer than anticipated. Only those soprano solo, "Angels Ever Bright and the occasion. It was with difficulty Mr. in the very back of the great hall moved Fair," by Handel. In this Charlie Sprague was able to announce the next restlessly, some going out but only showed his splendid talent to the best effect. His singing is from the heart; he feels every word. Time and time again, says his manager and trainer, he has come off the stage, after singing some tender song, with the tears running down his cheeks. In "Angels Ever Bright and Fair" he sang like an angel. The people could have sat and listened to him for the remainder of the afternoon, but an encore at the late hour could not be allowed.

With the singing of "The Lost Chord" by a quartette of Indian girls from the Government Indian School, the great Festival Hall meeting was at an end. The audience then took up the line of march from Festival Hall to the Pennsylvania Building, under the direction of Professor W. C. Skinner, of Detroit, late superintendent of the Toledo University Manual Training School, marshal of the day. At the foot of the grand stairway in front of Festival Hall the head of the procession halted for the taking of the photograph, a reproduction of which is given in connection with this account. It may be said that the picture was taken before the entire audience had left the building, as may be seen from the number who are coming down

COURTLAND M. FEUQUAY, Chandler, Okla.

sun in his eyes. Immediately behind him is little Jack Skinner, and on his right is his son, in military costume, with the wreath of flowers in his hand with which to crown old Liberty Bell in the Pennsylvania Building a little later. Professor Roney is seen a short distance to the right and in the rear of Mr. Sprague, with his hand upon the shoulder of little Charlie Lenzen, the singer. Interspersed among the crowd will be seen a few of the St. Louis newsboys who came as the invited guests of THE AMERICAN BOY, and who were admitted to the exposition free of charge. They numbered some fifty, and sat in the front of the hall in charge of F. Frederick Bliss, Tom Robodou and J. E. How, of St. Louis, prominent patrons of the newsboys of that city.

Immediately after the taking of the picture Blakeslee White stepped to the front with the big flag and led the procession to the Pennsylvania Building. A great crowd had preceded the procession, and when all had gathered not only in the rotunda of the building around Liberty Bell, which rested upon a low platform, surrounded by a railing and guarded by four Philadelphia policemen, and filling the galleries above, there was scarcely room to breathe. A box covered with a flag had been placed immediately behind the bell, on which the young orators of the occasion stood, so that as they spoke they were immediately over the famous relic of Inde-pendence Hall. Little Willie Sprague, son of the Editor of THE AMERICAN BOY, took his place within the railing, holding in his hands a large wreath of roses. Mr. Garvin, superintendent of the Pennsylvania Building, mounted the extemporized platform, and in a few words welcomed every one to the Pennsylvania Building, and then introduced Casper S. Yost, jr., of St. Louis, the son of the assistant managing editor of the St. Louis Globe-Democrat, who pronounced a beautiful apostrophe on the bell, which many declared to be the best written. Thou could'st not be more prized by true many declared to be the best written and best spoken production of the after- A royal guard surrounds thee night and noon. It was as follows:

Mr. Sprague then read The American A coming man! Undaunted, brave, oy prize hymn for which The American A coming man! Undaunted, brave, He stands before your searching gaze; Keen-eyed, athletic, kind and true, And sterling in an hundred ways. Boy prize hymn for which THE AMERI-CAN Boy had offered \$10, and stated that the 14-year-old author, Edward Langdon Fernald, of West Medford, Mass., had hean unable to be present—the only one in the entire program, excepting President Francis of the exposition (who had Come, gather round. I'll tell you how not even deigned a reply to the invitation to deliver an address of welcome) that had failed to take the part assigned

#### AMERICAN BOY PRIZE HYMN.

Tune, "America."

Author, Edward Langdon Fernald, West It is a sultry summer day. Medford, Mass. Age 14.

Sons of our native land. One firm unbroken band, This day we meet. Gathered from far and near. We come as brothers dear And give a rousing cheer, Our flag to greet.

Brave sons of worthy sires, Glowing with freedom's fires, We tribute pay. We stand in courage strong, And lift glad hearts in song; Pass the proud word along This festal day.

Where'er our boys are found, There valiant hearts abound, Loyal and strong. Our watchword ever be "Live lives of purity, Speak truth, whate'er it be, And right the wrong."

Dear brothers, one and all, Here in this festal hall We conquerors are: Join hands, as now we stand, Sing loud, a noble band, "God bless our mother-land, America."

poem was recited by its author, Angus the Declaration of Independence, three M. Berry, a 17-year-old Logan (lowa) cheers for Thomas Jefferson and three Note:—The messages of the bell were in-oned by the speaker in imitation of the boy, who, on being introduced by Mr. cheers for the President of the United boy, who, on being introduced by Mr. States. The cheers were given with a Sprague, was handed the \$25 prize States. The cheers were given with a At the conclusion of the apostrophe awarded to him by THE AMERICAN BOY will, and then Professor Roney stepped Willie Sprague placed lovingly upon the as the successful competitor. The to the front. "Boys," he said, "we have top of the old bell, in behalf of the boys poem won the admiration of every cheered every one to-day excepting one of America, his wreath of roses, amid one, but not more so than did person, and that is Mr. William C. applause from all sides. Bull- By Angus M. Berry, Logan, Iowa; Age 17, tention. It was a welcome announce-When all is pure and bright and fair.
Our country's boys, we think of three!

> Strong in his zeal to stand for right, Too noble to abide the wrong; Faithful and carnest, thoughtful too. But ready for a jest or song.

The passing seasons bring him joys: It seems that all the years were made Expressly for the good of boys.

Springtime—does that word not recall Long rambles in the forest land? Great hunting trips and swimming holes.
And sports that train both mind and hand?

Around me gleam the waters blue. The sail is set; the bounding keel In gladness cuts the surges through.
Oh, summer days, on summer seas,
Your joys forever will be mine
As long as mem'ry's halo glows. Or fancy pours her magic wine,

A bright October day has come.
The youthful throng goes wild with glee. A football circles through the air:
The sport's begun. Look! look! You'll see A gallant fight of blue and gold.
Against the men in red and green.
Hurrah! Hurrah! The vict'ry's won!
Was such excitement ever seen?

The scene has changed. The gleaming hills
Are clad in virgin snow.
Up, up we climb and haul our sleds
Beneath the moonlight's silver glow.

Get on; hold tight. We're off! Hurrah!

Down, down we go at lightning speed.

On winter nights like these 'tis joy To ride on such a gallant steed.

Sometimes in roseate dreams I see, Beyond the skyline's narrow rim Where templed domes and spires rise That point to far off regions dim. I see the dawn. Its gilded haze Floods, flames and flushes into fire: The daybreak of a golden day Hangs o'er the city of desire!

In those inviting ways of gold Are pomp and pride of vanished years. Are point and pride of vanished years.

I see an arch triumphal stand
For victories born in hopes and tears.

A flood of fancy bears me on;
The glowing day in grandeur lies
But half removed from common clay,
And half exalted to the skies.

When nighttime comes the dream is done. All, all the world has sunk to rest.

The stars come out to gem the skies,
And e'en the sunset leaves the west.

The changing hours have come and gone
With all their toll and pain and joy,
Look down, oh, heavenly hosts, and bless
The fortunes of each sleeping boy.

Oh, God, we ask that day by day
Our hearts shall beat more near to thee.
May heaven grant that right may rule
Where somber evil now may be.
And when the coming years have fled.
And twilight shadows darkly fall.
Bring riches, honor, fame,—but, Lord.
Bring virture more than all.

There now remained part three of the program, which was slated to take place at the Michigan Building from 5:30 to 6:30 o'clock. The hour of 5:30 had long passed, but the great company that filled the Pennsylvania Building, notwithstanding the lateness of the hour, joined in the procession to the Michigan Building, where they crowded the main floor. Secretary Hal Smith, of the Michigan Commission, delivered an address of welcome, standing on the stairway leading to the second floor. When Mr. Smith had concluded his happy remarks and the applause had subsided. Mr. Sprague read letters from authors of boys' books among them Dan Beard. Kirk Munroe, Edward Stratemeyer, and J. L. Harbour.

Harry Steele Morrison, the "boy traveler," then addressed the boys, after which Mr. Sprague took up a bundle of letters, over thirty in all, written by governors of states, all addressed to the boys, and from these selected the words of Governor Bliss of Michigan, Governor Herrick of Ohio and Governor Dockery of Missouri, which he read, promising that the remainder would appear in the pages of THE AMERICAN BOY. Dan Beard Then The American Boy Day prize in his letter proposed three cheers for of effort on behalf of American Boy Day.

The announcement was then made that a bowl of punch was awaiting atment, as most of those present had been in continuous session during a warm afternoon for nearly five hours, was long after the time for the usual evening meal. Mr. Sprague, standing upon the bottom step of the stairway that led to the second floor of the Michigan Building, was kept busy for over half an hour shaking hands with men, women, boys and girls who pressed forward for

(Continued on page 322.)

CASPER S. YOST, Jr., of St. Louis Who Delivered an Apostrophe to Liberty Bell

# How Wild Animals Earn Their Keep fare better in our zoos and menageries, where they are petted and fed and substands transportation from his native wilds is usually in clover when he finds his proper niche in some museum in this country.

By KATHERINE LOUISE SMITH

PEEP behind the scenes at the animals in a menageric is one of the most interesting sights in the world, especially in winter, when the animals are in rest quarters. Bridgeport, Connecticut, has been famed for many years as being the winter home of one of our largest menageries, but this place is now eclipsed by Baraboo, Wismenagerie in the country. When the winter season comes and business shuts down, this place is made lively with the largest menageries and trappings for the winter are reserve stalls or stables for those on sick leave or dation of elephants, who travel on a bishing up charlots and trappings for the coming season. While animals are seldom sick on the

TRAINING A ZEBRA

road, long experience has shown they need periods of rest. Especially is this so with elephants and other animals who travel by foot or draw heavy loads. For this reason it seems to be a season of joyous satisfaction all around when the menagerie goes into winter quarters.

A somewhat more practical use for draw the town, many citizens turn out, the animals appear glad to get back, and it is with difficulty that the keepers keep them in line. As the cars are unloaded the lious, tigers, hyenas and leopards prance with joy, and their cries mingle with the trumpeting of the huge ciephants, who march joyfully to their road, long experience has shown they

crowds are trying to animal nerves, and even the hippopotamus bellows with content as he sinks into his accustomed tank. During the first days the animals have to draw the tents and materials used on the road, but within a week the rush is over and they settle down to some months of solid comfort. Everything is provided for their well-being, even to the hospital, where there are reserve stalls or stables for those on sick leave or undergoing the "rest cure." Before the menageric arrives the animal houses are washed with whitewash and thoroughly cleaned. This process is repeated several times a week, and in the early morning the elephants and other beasts of burden are taken to a neighboring pond or some stream of water for a bath pond or some stream of water for a bath

of burden are taken to a neighboring pond or some stream of water for a bath and exercise.

As a rule the trainer is kind, for he knows a bit of sugar will accomplish more than a whip, and the performing elephants, dividing pigs and trick dogs must go through their paces or by spring they will have lost their cunning. Even the Shetland pony comes in for his share of culture, and dozens of these tiny ponies are imported from Shetland, for ponies born in this country are larger than their progenitors, a fact attributed to our climate, which is more salubrious than their native home. Of course the death of a fine animal, especially an elephant, means a loss of many thousand dollars, a fact that is appreciated in the zoos as well as in the circus, for in these places the elephant has a greater earning capacity than any other animal. It is said that in one of the largest zoos three elephants net ten thousand dollars a year. They carn this by carrying on their backs the patrons of the gardens, and on holidays one elephant has been known to carry one thousand persons. The animals seem to enjoy it as much as the boys and girls, and look condescend-The animals seem to enjoy it as much as the hoys and girls, and look condescendingly at the camels, who earn about one thousand dollars a year, jogging people around the track with the uneven motion

animals were brought to this country with the greatest care, and might not have lived were it not that they were with their masters.

Quite as much care is expended in the transportation of other animals, for Hagenbeck, the noted animal trainer and owner of the best menageric to be found, is said to have once carried leopards, hyenas and rhinoceroses across the desert in padded cages and litters laid across the backs of camels. In India railway carriages are provided for the accommodation of elephants, who travel on a truck with a steel hood in front to protect the animals from draught and dirt. The rear of the truck is arched over with steel, and elephants trained in the service of the railroads are kept for the express purpose of coaxing and pushing finid stranger elephants, who have never seen a train, into the compartments provided for them.

The good care given elephants in India is largely the result of the determination of the British to not let the race die out. A regular department of the government looks after them, and bands of wild elephants are often corralled. A curious thing about this process is that as soon as an elephant becomes tame he seems to experience great delight in assisting to catch his wild brethren, and on a scouting expedition will try to lure the wild elephants so that they are easily captured by the trainers. While the maintenance of these elephants has cost England a tremendous sum, they pay their way by carrying commissary stores in places where horses cannot go. They drag the heavy cannon, and even partici-

their way by carrying commissary stores in places where horses cannot go. They drag the heavy cannon, and even participate in battles, for whole hattalions of elephants have been trained to stand at attention and salute as well as a corresponding number of Tommy Atkinses. Not a little of the gorgeousness of the lote Durbor was due to these magnificent animals, and it is sad to note that recent reports say that, though the ordinary life of an animal is about one hundred and tifty years, they frequently die in three years after capture from disease or injury. As a matter of fact, most animals, unless left in the wild state,

#### The Rocky Mountain Canary

The Rocky Mountain Canary

Were you asked if you had ever heard
the song of a four-legged canary, one
which is a faithful friend, a watch dog
and a beast of burden, you would, perhaps, smile skeptically. But the fourlegged canary exists. His native home
is among the western mountains, and it
would indeed be hard to find a prospector for the precious metals which Mother
Earth has hidden in her strong boxes,
who has accomplished anything without
the aid of the canary which trudgealong behind his master, bearing upon
his back the folded tent, the pick and
the shovel, the roll of blankets and the
food. And this canary can follow at almost any place where man can lead. At
night, when camp is prepared and his
burden is removed, he gleans his evening
meal from the sage-brush and the wire
grass, keeping close always to the camp grass, keeping close always to the camp

fire, never deserting. When his master sleeps, his four-footed friend stands quietly nearby, with ears braced to catch the slightest sound of approaching danger; for this canary has monstrous ears, and the coming of man or beast is sure to be heralded by a song which echoes and re-echoes in the solitudes of the range. The only time that the Rocky Mountain canary sings is when startled or when in distress. Although he has no feathers, cannot fly and possesses a head almost half as large as his body, crowned with two extravagant ears, he is never called anything but "canary" in his native haunts. If you were to ask for a burro in the Rocky Mountain regions, half the people would not know what you wanted. The origin of the name "canary" is not known, but it has clung to the funny little animal through many, many years, and came to him, perhaps, because of his ludicrous song, "He, ah he, aw he-e-e!"

#### Prize Essavs on Rose Growing

In our March number we offered prizes for essays on rose growing. Some of the essays sent says on rose growing. Some of the essays sent in were quite amusing, particularly that of one-boy who said that he planted sdips. According to his story he accomplished something that no tose grower ever accomplished hefore. We aristraid that this essayist drew a little too much on his imagination. In many cases the boy-evidently did some copying. There are several essays that we are sure were copied verbating. There are really few of the essays in that are natified to be considered. Of the few that are halfway good that of Alden McGann, Midway Kv., is best and that of John S. Davis, New purg. N. Y., is next best. They will receive the prizes.

Two Boys Who

THIS is a true story of two boys who of the American spirit,

James Hackett was not in need of additional help, but an indescribable something about the latest applicant compelled his attention.

period his attention.

"So you want work," he said, after a moment's thought.

"Yes, sir," came the quick and decisive reply from the lips of the applicant.

"It strikes me that you're pretty young for a lumber-millman," Mr. Hackett could not refrain from smiling at the thought.

"I'm eleven, sir, and, if you'll give me a chance, I will show you that I can

Hackett was evidently in good Mr. Hackett was evidently in good humor, for he called the foreman and told him to give the boy something to do. Thus it was that John Alron gave the first evidence of the character which the first evidence of the character which should some day make him a power in the state of Washington. His mother was dead, and his father was away in the woods, thus leaving John and his brother Carl, aged thirteen years, to fight their battles with the world. One day the foreman of the mill said to Mr. Hackett "That is a bright boy you turned over to me." over to me.

"Good," said Mr Hackett, "raise his wages to one dollar a day."
"He is worth it," replied the foreman. John was elated at this turn in affairs, but, to the surprise of Mr Hackett he requested permission for his brother Carl to take his place at the mill.
"If he is like you, it will be all right," said Mr. Hackett.
"Indeed, sir, he is just as good a worker

"Indeed, sir, he is just as good a worker as I am," said John, and his face lightened with a look of pride.

foreman to see that Carl's salary went on just the same. In due time, John and Carl compeleted their "mansion" It has two rooms and the same num-

thas two rooms and the same number of doors and windows. The roof is well shingled. Carl has returned to work in the mill, and John continues to attend school when not engaged in household duties. In the evening the two lads study and read. They are happy in their independence.—Success.

he asked.

emergency," was my reply.
"That's good," he said, knocking the ashes from his cigar. "I have just been advised, unofficially, that a messenger has arrived from Cheyenne, with important telegrams for the commanding officer, and it is quite likely that our troop may be ordered out before morning."

As I crossed the parade ground lights were noticed in a number of the officers' quarters; orderlies were seen hurrying towards the adjutant's office, while messengers were running back and forth, all more or less excited.

Ten minutes later we were told by one of the orderlies that the commanding officer had received orders to select two troops of cavalry for field service, to be ready to leave on short notice.

"No particular hurry, sergeant—the troop cannot leave before morning," said the captain, when I again reported. "Our orders are to proceed by rail, and the railroad officials will not have the equipment ready before eight o'clock in the morning. Get everything in shape for an early start, and have the troop, fully armed and equipped, on the parade ground at daylight, ready for inspection '

When I again returned to the troop barracks, I found the men busily engaged in packing in their saddlebags such articles of clothing as they intended taking with them, dress uniforms, extra

Third United States cavalry, was packed in lockers, to be stored at the ably headed for the Shoshone reservation, stationed at Fort D. A. Russell, a post. Everything was bustle and con- to enlist the sympathies of that tribe, and frontier post situated three miles fusion. Noncommissioned officers were that the local sheriffs were offering cownorth of Cheyenne, Wyoming. The troop issuing one hundred rounds of ball carthad been at the post for about a year, ridges to each trooper; carbines, sabers with little or nothing to do, and both and revolvers were being oiled and officers and men were hoping that some- cleaned; the sergeant in charge of the troop mess was arranging to draw field One evening early in May, soon after and coffee, from the commissary departtaps had sounded and lights only ap- ment, while here and there men were peared in the adjutant's office and the gathered around flickering candles, writ-

At eight o'clock the next morning mander desired me to report to him at Troops C and L. Third cavalry, marched out of the post with guidons gayly flying, "What's the trouble-unother Indian and started for Camp Carling, between Fort Russell and Cheyenne, where a special train was in waiting. An hour later the horses and mules had been loaded. army wagons had been taken apart and daylight," replied the orderly, as ne loaded on flat cars, the forage, baggage River, now mind what I'm a-tellin' yer." and camp equipage placed in box cars. The troopers, with few exceptions, were all veterans. The noncommissioned officers went about their work quietly and systematically, and in a short time the conductor shouted "All a-b-o-a-r-d!" Three short blasts of the whistle were given and we were soon speeding along at the rate of forty miles an hour.

Not until Laramie City was reached Rawlings, Wyoming, where we were to disembark and proceed to camp on White River, now known as Meeker, one hundred and forty four miles south of the main line of the Union Pacific railroad.

The morning papers contained dispatches that the Ute Indians had again broken out and were on the warpath; that settlers were fleeing for their lives, and that Uncle Sam was rushing troops to the scene of the disturbance. This was the only information obtainable until we reached Rawlings at six o'clock that evening.

As our train pulled into the town our curs were surrounded by an excited crowd of men, women and children. We were told that runners had arrived from the camp on White River, who stated that the Utes, the same tribe that massacred Major Thornburg and the greater part of his little band of soldiers in 1879. had gone on the warpath; that they were pened that required my presence at that murdering prospectors and ranchmen, burning bridges and driving away stock. No word had been received from the two quarters and reported, he asked how soon companies of infantry stationed at the the troop could be prepared for field ser- camp, and it was assumed that all had been massacred.

our horses and baggage unloaded and the wagons set up, our command moved over to the south side of the town and went into camp for the night.

We were up bright and early the next morning, and by the time the people in Rawlins were astir we were on the march. As we were unfortunately hampered with wagons and the roads were did we learn that our destination was not in the best condition, we made but twenty eight miles the first day.

In the command were six or eight recruits, recently assigned to the troops from the recruiting rendezvous at Jefferson barracks, and it so happened that two were placed on guard the first night out from Rawlins. While the troopers were wrapped in their blankets, and just after the "Ten o'clock and a-1-1-'s w-e-1-1!" had been passed by the sentries, a shot was fired, then another and another, from one of the outposts. Instantly all was confusion-men slipped on their boots, buckled on belts filled with ammunition, snatched up carbines and responded to the sharp command. 'Fall in'" Members of the guard rushed through the camp in the direction from whence the shots were fired, but before they had passed beyond the camp limits one of the sentries was observed running towards us, firing his carbine at every jump and yelling at the top of his

"Indians! Indians! Look out, boys, they're coming!" he shouted, stopping as he finished the sentence and firing a shot into the darkness.

Skirmishers were hurriedly ordered to he front, to locate the enemy, While we were waiting for the cars to proved to be a long-horned cow, standbe placed on the sidetrack, to enable us ing by the side of a badly wounded calf. endeavoring to force their way through the picket line.

The next day at noon it commenced snowing, and for three hours the big flakes came down thick and fast, making the troopers look like a lot of phantoms. At four o'clock we struck camp near a small stream, where we found a couple of trappers cooking the evening meal. They had heard some of the settlers talking about the Indians being uneasy," and had been warned repeatedly to get out of the country before they lost their scalps. As the country was full of game and the stream furnished good fishing, they had concluded to remain "a spell longer." as one expressed it. We exchanged some bacon and coffee for fresh meat, and entertained the old hunters and trappers at supper that afternoon.

On the afternoon of the fourth day out from Rawlins we reached Coal Canon. The canon was about twenty miles in length, and in some places so narrow that two teams could not pass each other. When we first learned of the canon and were informed that we would have to pass through it or make a long detour, we concluded it would be an ideal place for the Utes to attack us, if they intended to give us battle. They could have rolled huge boulders down the sides of the mountain, which would have caused as much damage as a gatling gun or mountain howitzer.

ling gun or mountain howitzer.

Camp was made about half a mile from the mouth of the canon, the commanding officer deciding to march through it the next day. As the troopers were scattered around the camp fires, eating their rations, two horsemen dashed out of the canon and headed for our camp. They proved to be "Hank" Baker and "Yellowstone Kelly," two government scouts stationed at camp on White River. They were out on a scout, and noticing our command, rode up and volunteered to conduct the command through the canon the next day. They informed us that the reports sent out regarding the Utes had been greatly exertial large parties ready to take the warpath at a moment's notice. The Indians had beld a number of now wows and had path at a moment's notice. The Indians had held a number of powwows and had made threats, which had frightened a number of the ranchmen and caused them to desert their ranches and stock, fearing they would be killed if they remained.

During the night we noticed a dozen or more signal fires on the mountains, indicating plainly that the Utes had been advised of our movements and were exadvised of our movements and were exchanging signals concerning the strength of our command. As a precautionary measure, the guard was doubled and the sentries instructed to be on the alert. Just as the camp fires were dying into ashes, and we were all dozing gently off to dreamland, there arose on the frosty air a long, blood-curdling shrick. Instantly sleep was dispelled. A sergeant and a corporal, sleeping in my tent, sprang from under the warm blankets, every hair on their heads erect with horror, and huddled together in the corner.

the corner.
"W-hat w-was t-hat?" gasped the sergeant, whose teeth were chattering like an alarm clock in action,
"What a dreadful n-o-i-s-e! Did you hear it?" whispered the corner,
Others too had heen awakened, several

ing still farther in the corner.

Others, too, had been awakened, several stepping out of their tents, with carbines in hand, just as that unearthly wail again pierced the air.

There was no sleep for either the serkeant or the corporal that night. As soon as the camp was astir, they hunted the "Hank" Baker, told him of their extreince, and asked if he knew what made the frightful noise.

That? Why, it wasn't nothin' but a blamed old mountain lion, hangin' round the camp, lookin' for somethin' to eat."

the camp, lookin' for somethin' to eat. The answered, with a disgusted look.

As soon as breakfast was dispatched, "Boots and Saddles" was sounded, and flankers were thrown out, under command of the two scouts, who climbed to the top of the mountains on both sides of the canon. When they reached the top and signaled that the coast was clear the command, "Forward, march!" was given, and we proceeded on our way, the wagons containing our mess outfits and camp equipage bringing up the rear. Owing to the difficulty experienced by the flankers in picking their way along the mountains, we were obliged to travel very slowly. Although satisfied that the Indians were carefully watching every move we made, they allowed us to pass through the long canon without an ambush or even a skirmish. Camp on White River was reached at

Camp on White River was reached at three o'clock in the afternoon, a number of the "doughboys," as the infantrymen are styled by the cavalrymen, coming out to meet and escort us into their camp. Sentries were doubled at night and strict orders issued for them to fire upon any person approaching their beats after "taps" had sounded, who failed to respond promptly to the challenge.

The timely arrival of our little command of one hundred troopers no doubt

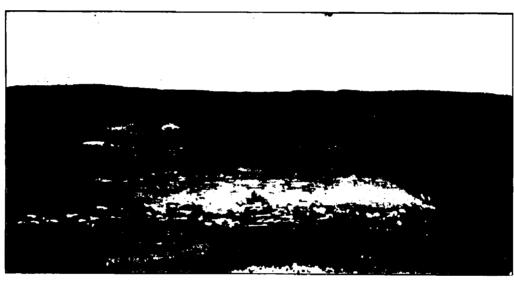

caused the Indians considerable uneasiness, for it showed that the government had taken prompt measures to check an uprising, and they could not tell what larger bodies of troops were hastening to the scene by forced marches.

The scare soon subsided, and as game was pientiful in that section, hunting parties of eight and ten men were kept in the mountains all the time. A dein the mountains all the time. A detachment would remain out for a week or ten days, when another party would relieve them. When the hunters would come into camp, with their horses loaded with bear, elk and deer, the troopers would cast aside their allowance of greasy bacon and subsist almost entirely upon game and fish. White River, which was within five hundred yards of our camp, was filled with mountain trout, and in half an hour a few men could catch sufficient to last the command for the day.

Six months having passed without an opportunity to raise a scalp, our com-mand was ordered to return to Fort Russell for the winter. A young cub, cap-tured by the troopers. was taken along and became a great pet.

lowed by a cloud of hay and bedding. Two or three troopers rushed to the assistance of the colonel's dog, but all they were able to find of the animal was a part of one foot, its tail, a piece of an ear and a silver-mounted collar. The colonel was so angry over the loss of his pet that he issued an order directing that the cub be taken out and shot. Whether the troopers detailed for this duty carried out their orders or not will never be known, but there was a rumor cur-

ROUNDING UP THE CATTLE

Soon after our return to Fort Russell, the department inspector visited the post, on a tour of inspection, and was escorted through the buildings and stables by the commanding officer. The latter owned a flat-nosed pug, which had a habit of sticking its nose into every hole and corner. While the inspector and the colonel were examining the troopers' saddles, the dog rushed into the stall where our pet cub was confined. Instantly there was a yelp, fol-

It is said that only fifteen per cent of the young men born in our great cities acceed in business. As a rule the country ads become the strong, resourceful men in ther life, and much of this is due to the that they have ten times better that they have ten times better should follow his bent.

The children of to-day are under too many restrictions, too much discipline.

DR. G.O. P. SHRADY

merous gymnasia with their complicated and so-called developing apparatus.

Nothing is better for a boy than exercise in the proper way. A sensible way of liv-

velopment. Give a boy plenty of good food and plenty of sleep, but do not experiment with him on the basis of mere muscular development. He is a child of nature and should follow his bent.

The children of to-day are under too many restrictions, too much discipline. The child of the rich is under the eye of the autocratic nurse; the poor boy is under the discipline of the imperious and exacting employer; as to opportunity for ra-tional exercise, they are all growing up under unnatural restraint. The nurse tells the rich child what he shall eat, and for this reason many of the young millionaires are starving for want of proper, wholesome food. There are now so many absurd theoretical notions concerning the relative value of different food products that the children who have apparently the most care are really the ones that are most neglected. The poor boy who eats everything

he can get is always more than a match for the machine-fed weakling.

Too much cannot be said against the growing use of cigarettes among our city boys. There is never any excuse for this hurtful habit. Tobacco in any form is in-furious to the brain and nerves of the nurtrul habit. Tobacco in any form is in-jurious to the brain and nerves of the growing youth, besides being harmful to his digestion, his throat and his lungs. If he must smoke when he comes to the years of discretion he may then be able to decide on his own account if it is worth while to try.

Of liquor the same thing and more may be said of its detrimental influences. It has never been of any essential benefit to a healthy person, though it may be used

a healthy person, though it may be used to great advantage in cases of sickness when prescribed by a physician.

There is in fact no degree of moral or physical degeneration that cannot be reached by a persistent indulgence in the habit. Not only does it dull the intellect, weaken the will, lower self-respect and degreed the moral responsibility of the indigrade the moral responsibility of the individual, but there is hardly a chronic or ing i
incurable disease of after life that does else.

Dangers of Overtraining

By Dr. Geo. F. Shrady: Editor Medical Record

It is said that only fifteen per cent of the young men born in our great cities velopment. Give a boy plenty of good food to huse its beginning to this abuse of motor of the freedom to have its beginning to this abuse of motor of the matter of exercise I am strongly opposed to all matchine methods. Let our boys have plenty of exercise, but give them freedom to have it in their own way. True exercise is not a matter of so many motor of the positions of particular muscles, so many exercises with a weight and so much running cises with a weight and so much running

on a level floor.

By all means let the boys get out into the open air and they will find some more the open air and they will find some more legitimate way of amusing themselves. A boy does not vault by rule, nor turn somersaults by music, but if left to himself he will get as much free and healthful exercise as an unhaltered colt in pasture. He is a colt, only in another sense, and should kick, jump, gallop and roll in his own way. We have recognized the importance of physical development, but we should be careful and not overdo the thing. There is too much overtraining. Our physical instructors are not satisfied with going ahead gently, but spur their pupils to make absurd records as if each of their subjects were destined for a circus or race track. Health is not benefited by the mere development of muscle. The integrity of the vital organs constitutes real health. Aman with hig bleeps may have a weak heart. He may be able to lift hundreds of pounds and still have poor lungs.

pounds and still have poor lungs.

As a rule the school hours are too long.

A child cannot keep his attention riveted on mental work for more than three hours. continuously; anything over that is usually wasted, and more would be gained by glving our boys more opportunities in the open air.

It has been said, and with some justification, that our city children are under a disadvantage physically as compared with the children of the country, but they do not use even the opportunities which are open to them. If every boy would make it a rule to run around three or four city squares every morning he would not need a gymnasium.

Our gymnastic teachers are too prone to forget that the harmonious development of the body is the main thing. Many a strong body has been ruined by overtraining in an effort to do better than some one

The interest in athletics is often going too far and in the wrong direction. Boys will conceal their physical defects for the sake of gaining a place in the boat crews or football teams of our schools and colleges, and even those who are physically fit break down because of overtraining. In old college days the ambition of the student was to graduate at the head of his dent was to graduate at the head of his class; but now he vents his best energies in kicking the ball. These methods of overdoing result in athletes getting stale before they are forty. They burn their fire with the blower up.

A person has only so much fuel to con-A person has only so much fuel to consume, and if he uses it up before he is forty he cannot have it at eighty; and it is one of the greatest arguments against overtraining that the man who lives normally, quietly, and takes his exercise for health and nothing more, always lives the longest a fact which should be home in longest, a fact which should be borne in mind by the well-meaning people who are doing their best to bring un boys to the old ideal of "a sound mind in a sound body."

fulness have a better fate in store Ryerss Infirmary. for them now than the bone-yard. Through the generosity of Mrs. Rye- a for equine heroes who have had their day, and to this unique establishment, owners of horses no longer fit for and be permitted to end their lives in rest- and send him a print." ful contentment. It costs nothing to keep almshouse for horses is called. The horse tution; after that all expenses are borne by the executors of the Ryerss will.

About two score animals are at present enjoying the placid seclusion of the home. Among them are old fire horses, heroes of cient Shetland pony, the prettiest of the himself. lot even in his ragged age.

The oldest horse in the home is Ralph, a thirty-five-year-old, who is the terror of the rest of the clan, despite his great age. When the writer visited the colony Ralph pare notes and rub shoulders, and then, was found grazing far apart from the rest of the almshouse inmates. The latter, for the most part, seemed to live together in amity, although one or two of the ancient animals were disposed to display a kittenish activity at times that was not relished by the more staid steeds. But

A THIRTY FIVE YEAR-OLD WHO IS THE TERROR OF THE OTHERS

Ralph was given a wide berth by every horse in the herd and seemed to want

none of their company.
"He's the oldest here," said James Keenen, superintendent of the home, "and Le's the worst of the lot. His lay is breakng through fences when none of the men-Then he's especially + inding a swift pair of boofs into the lace of some quiet old bag of bones too oid to retaliate, or rather too feeble to fight back, for they are all younger than this loosky villain of thirty-five. We have to keep Ralph roped as you see him in order to prevent his doing more damage than he does. If we let him loose he would be over the fence at a jump and off up the road in search of some mischlef. He may be too old to work, but he isn't too feeble to keep the peace with the rest of the family."

A great gray horse ceased grazing at the sound of voices and ambled towards the superintendent. A camera leveled at him attracted his attention and he turned towards it and drooped his muzzle in search of oats in the interior of the machine. Not finding sustenance there, he looked reproachfully around and ambled off towards the barn. What recollections of days of activity crossed the equine mind. or what sagactous promptings were responsible for the old horse's action, it is impossible to say, but when followed to the barn yard he was found standing against the side of the structure, head erect as he could hold it, feet in the conventional attitude for borse photography, calmly waiting, it seemed certain, to have "his picture taken." For fully five minutes the old gray stood thus, not a hair moving. Then he looked intelligently at the camera man, whisked his tall and trotted out of the yard to the grazing ground

It was Chief, a famous old police horse, who served as a patrolman's steed and afterwards did duty in the police

#### America and The Philippines

Without expressing any opinion as to the position of Senator Hoar, of Massachusetts, with relation to the course of this country in the Philippines, we quote, as an example of finoratory, the following from the Senator's speech in the United States Senate, delivered in May 1903.—The Editor.

HAVE sometimes fancied that we might erect here in the capital of the country a column to American the country a column to American liberty which alone might rival in height the beautiful and simple shaft which we have erected to the fame of the Father of the Country. I can fancy each genera tion bringing its inscription, which should recite its own contribution to the great structure of which the column should b but the symbol.

The generation of the Puritan and the Pilgrim and the Huguenot claims the place of honor at the base. "I brought the torch of freedom across the sea. I cleared the forest. I subdued the savage and the wild s acts that way when he sees (Continued from page 301) beast. I laid in Christian liberty and law explained Mr. Keenan. "I fore he could make use of it, I drove the the foundations of empire." The next generation says: "What my fathers founded I builded. I left the seashore to penetrate Farmer Hickson rushed forward with the wilderness. I planted schools and col-

> Then comes the generation of the great Colonial day. "I stood by the side of England on many a hard-fought field. I helped humble the power of France. I saw the lilies go down before the lion at Louis-St. George in triumph in Martinique and the Havana. I knew the stormy pathways of the ocean. I followed the whale from the Arctic to the Antarctic Seas, among tumbling mountains of ice and under equinoctial heat. As the great English orator said, 'No sea not vexed by my fisheries; no climate not witness to my toil.'"

> Then comes the generation of the Revolutionary time. "I encountered the power of England. I declared and won the independence of my country. I placed that declaration on the eternal principles of justice and righteousness which all mankinj have read and on which all mankind will one day stand. I affirmed the dignity of human nature and the right of the people to govern themselves. I devised the securities against popular haste and delusion which made that right secure. I created the Supreme Court and the Senate. For the first time in history I made the right of the people to govern themselves safe and established institutions for that

end which will endure forever."
The next generation says: "I encountered England again. I vindicated the right of an American ship to sail the seas the wide world over without molestation. I made the American sailor as safe at the ends of the earth as my fathers had made the American farmer safe in his home, I proclaimed the Monroe doctrine in the face of the Holy Alliance, under which sixteen republics have joined the family of nations. I filled the Western Hemisphere with republics from the lakes to Cape Horn, each controlling its own destiny in safety and honor.'

Then comes the next generation: "I did the mighty deeds which in your younger years you sow and which your fathers told I saved the Union. I put down the rebellion. I freed the slave. I made of every slave a freeman and of every freeman a citizen and of every citizen a voter.'

Then comes another who did the great work in peace, in which so many of you had an honorable share: "I kept the faith I paid the debt. I brought in conciliation I paid the debt. I brought in conclusions and peace instead of war. I secured in the practice of nations the great doctrine of expatriation. I devised the homestead system. I covered the prairie and the plain the beauty homestead and with mighty states. with barry homes and with mighty.

system. I covered the prairle and the plain with happy homes and with mighty states I crosed the continent and joined together the seas with my great railroads. I declared the manufacturing independence of America, as my fathers affirmed its political independence. I built up our vast domestle commerce. I made my country the richest, freest, strongest, happiest people on the face of the earth.'

And now what have we to say? What have we to say? Are we to have a placin that homorable company? Must we engrave on that column, "We repealed the Declaration of Independence. We change the Monroe doctrine from a doctrine cernal righteousness and justice resting on the consent of the governed to a doctrin of brutal selfishness looking only to our own advantage. We crushed the only republic in Asia. We made war on the on Christian people in the East. We converted a war of glory to a war of sham we vulgarized the American flag. We it troduced periody into the practice of war. We inflicted torture on unarmed men textort confession. We put children to death. We devastated provinces We bar

We inflicted terture on unarmed men textort confession. We put children teath. We established reconcentrate camps. We devastated provinces. We basefied the aspirations of a people for liberty. No, Mr. President. Never! Never! Other and better counsels will yet prevail. The hours are long in the life of a great people. The irrevocable step is not yet taken. Let us at least have this to say: "We too have kept the faith of the Fathers We took Cuba by the hand. We delivered her from her age-long bondage. We welcomed her to the family of nations. We set mankind an example never beheld before of moderation in victory. We led hesitating and halting Europe to the deliverance of their beleaguered ambassadors in Chim We marched through a hostile country—a country cruel and barbarous—without anger We marched through a hostile country—a country cruel and barbarous—without anger or revenge. We returned benefit for injury and pity for cruelty. We made the name of America beloved in the East as in the West. We kept faith with the Phillippine We kept our national honor unsulled. The flag which we received without a rent we handed down without a stain."

# Scientific Running

Written for The American Boy by Philip Everett Curtiss, Member of the Trinity College Track Team

THE CHOUCHING START, POSITION 1. MARKS " "ON YOUR

to give a few general hints by which a boy may be able to improve greatly his form and speed in running.

First, always bring the knees up 'n front of the body as high as possible. Do not make a hop or spring into the air (in fact the shoulders should be on nearly the same level all the time) but as each leg comes forward raise the knee to as near the height of the waist as posto as near the height of the waist as possible. It is even advisable for a beginner to exaggerate this movement. Watch a fast trotting horse and see how he does it. Incline the body forward slightly.

from the hips.

But while the knees should be raised But while the knees snound be taken as high as possible in front of the body, the feet should hardly leave the ground, behind the body. Some boys almost kick their backs when they run. This is en-

behind the body. Some boys almost kick their backs when they run. This is entirely wrong. A step once taken should be finished as soon as possible.

The position of the arms, in running, varies according to the distance to be run. In any race longer than a quarter of a mile the arms should be allowed to take their own position—any that is the easiest and requires the least effort. the easiest and requires the least effort. On the contrary, in a short race, where the highest possible speed is required, the arm motion is of almost as much importance as the leg form. The arms should be kept fairly stiff and rigid, with a slight bend at the elbow, and should be moved backwards and forwards close to the effect of the motion to the sides and in time with the motion of the legs, the right arm coming forward with the left leg and vice versa. By bringing the fists well up in front of

THE CROUCHING START, POSITION 2. "GET SET"

the face and putting lots of force into the arm strokes, several inches can be added to each stride.

the arm strokes, several inches can be added to each stride.

In regard to starting. For a sprint, the crouching start is the best. For this, put the fingers on the ground, close to the starting line, with the thumb and tart finger both on line so that the hand takes the position of an acute angle. Place the left foot, or the right, if more natural, about six or eight inches back of the line, and the other knee on the cround beside the instep of the first foot. This position is called "On your marks." for these words form the preparatory command given in a race. The next commind is "Get set." When this is given, raise the knee from the ground until the back is perfectly horizontal and fix the eyes on the mark at the finish. Have the muscles all braced, put at least half the weight of the body on the arms, and when the pistol is fired spring off like a rabbit. Do not straighten up at once as impulse leads you to, but straighten up gradually during the first four or five strides. It is well, when starting a race, to scratch little holes, two or three inches deep, in the proper places, to fit the feet into and prevent slipping.

The start described above may seem yerv absurd to one who has never seen it, but it is the start used by all sprint-

very absurd to one who has never seen it, but it is the start used by all sprintit but it is the start used by all sprint-ers, and when perfected by practice gives a runner using it an immense ad-vantage over one not using it. In fact, it would be no exaggeration to say that in a race between a trained starter and an untrained one, the experienced man would be from six to nine feet down the track before the other man had even left track before the other man had even left

his marks.

The start for a long distance race is much simpler. It is an upright start and

Of course every able-bodied boy can run, after a fashion, and some boys can advancing one foot and the opposite arm, run very well; but real running, the kind of running that wins races, is something that needs as much study and practice as good boxing. It is possible, here,

a quick, long one.
In a long distance race, never set the In a long distance race, never set the pace unless you are absolutely sure that you can hold a fast pace longer than all your opponents or unless you are poor in sprinting and strong in endurance. In that case get a big lead and keep it. Otherwise hold an average position in the race until the last sprint; then cut out for yourself. In a long race, on a circular track, keep a position on the inside. If you don't, you will have to run a great many yards farther than the others.

A short race is a scrabble from start to

A short race is a scrabble from start to finish. Start the instant the gun goes finish. Start the instant the gun goes off, don't wait to see somebody else go, and run for all there is in you until you have passed the finish. Even if there is somebody 'way ahead of you when you are close to the tape, don't relax a bit but run all the harder. More than one race has been won in that way.

The above hints apply in particular to racing but a great deal of fun may be had by practicing them all by yourself. Running, either in short sprints or in cross-country runs over the hills, is one of the best forms of exercise that there is and can be practiced profitably by any one.

THE LONG DISTANCE START

#### Duffey to Make Extended Tour

#### How City Boys Learn to Swim

In all the world there are no better swimmers than the boys of the far east and west sides of New York in the tenement districts. These boys are perfect water rats, and the famous feats of the diving boys of Port Said and Key West are nothing compared to their skill in the water. They usually learn to swim by being thrown overboard from some one of the long piers, twenty and more feet high, that jut out into the swift currents of the East and Hudson rivers. It is a simple method.

and Hudson rivers. It is a simple method, and every season there are a few drowning accidents from it; but most of the boys manage to flounder long enough till one of the good swimmers can get over to them and pick them up.

and pick them up.

As may be imagined, these city boys don't get much opportunity for fooling around and thrusting first one toe and then another into the water before venturing in. There are no shallow spots for miles along the city's shores. Pier succeeds pier, and everywhere the water is deep enough to permit the entrance of a big ship.

Once in the water, therefore, it's a case of swim or drown. There isn't even anything to hold on to in case of need. The sides of the piers are smooth and slippery, and the tides are so strong and treacherous that only a good swimmer can dare them.

that only a good swimmer can dare them.

These boys think nothing of diving down to the bottom, lifteen and twenty feet below, and bringing up shells and stones that have been thrown in for them to find. Neither does it frighten them to venture far out on the broad, tossing breast of the rivers, in among the hurrying steam ship-

Even among the small boys, not more than ten or twelve years old, there is intense rivalry as to swimming clear across the widest and most turbulent part of the East river. There is a great government spar buoy about half way out in the river which is the goal of every lad as soon as he can swim at all.

All day long, and even in the night, from May to September, swarms of small boys will be seen diving head-first off the piers and scurrying around in the water more

Duffey's foreign itinerary has him scheduled to make his first appearance at the English championships on July 2. Then he will exhibit and compete in the various county meets in England, Scotland, and Ireland, later crossing to the continent for a short stay. Arriving in Australia the later part of August, he expects to compete in the national championships at Sydney en September 1.

During the remainder of that month he

THE BONS AND DAUGHTERS OF SENATOR DICK, OF ORIO

The three Doys and two girls shown in the photograph, out driving with their team of pories, are the children of General Charles Dick—the successor of Marcus A. Hanna in the United States Senate, from Ohio. They are rugged, healthy children and good playmates. They attend school in Akron and out of school hours spend much of their time in outdoor life. Their pony team is a familiar sight upon the streets of Akron. Their names are Carl. James, Lucius, Grace and Dorothy. General Dick was once a poor boy and has risen by hard work to one of the highest places in the nation.

week in December until May or June.

All the pages receive a monthly wage and naturally the longer they work the more money they make. Moreover Uncle Sam is the most generous of employers and these lucky lads are never paid less than a full month's salary. The boys draw the tildy salary of two dollars and fifty cents per day and according to the rules if Congress is in session but one day or one week out of a month the fortunate pages draw their seventy five dollars or seventy seven dollars and fifty cents each just as though they had tolled the entire thirty or thirty one days.

The work for which the boys employed in the great white-domed building at Washington draw men's wages is by no means hard. They are virtually the messengers and errand boys of the nation's lawmakers, but they cannot be sent outside the immense building so that they suffer none of the discomforts that confront the average errand boy in winter or in inclement weather. However there is enough for them to do. Members of Congress are constantly calling for copies of reports and documents; reference books in which to look up matters; pens, ink and paper and a hundred and one other things which it is the duty of a page to bring in the shortest possible time.

A Congressman does not have his special page to look after his individual

A Congressman does not have his special page to look after his individual wants. Instead the work is distributed acoung the boys just as tasks are assaumed to bell boys in a hotel or messenger boys at a telegraph office. When a Senator or Representative calls for a page the nearest boy who is not busy A Congressman does not have

U. S. SUPREME COURT PAGES

at the U.S. Capitol at Washington are busy only widle Congress in a session, and there are some years when our national lawmaking body is assembled for only about three months. Every alternate year, however, Congress meets in what is known as the "long session," that is, it is busy from the first week in December until May or June.

All the pages receive a monthly wage and naturally the longer they work the more money they make. Moreover Uncle Sam is the most generous of employers and these lucky lads are never paid less than a full month's salary. The boys draw the tidy salary of two dollars and lifty cents. quarters in the Capitol building is served by three pages and these young men are even better paid than the Congressional pages. They receive ninety dollars per month or the equivalent of three dollars per day although, to be sure, the Su-preme Court is not in session anywhere near thirty days per month. For that matter none of the pages at the Capitol are ever "docked" for Sundays and holi-days and this is especially appreciated by the boys at Christmas time when Congress takes a recess for more than two weeks.

by the boys at Christmas time when Congress takes a recess for more than two weeks.

As a rule the page boys at Washington do not have to work very hard. The congressional pages do not have to report for duty until nine o'clock in the morning and even then their only work is filling ink wells and other light chores until Congress assembles at noon. Usually they are through work at half past five o'clock in the afternoon but occasionally of course Congress meets in night session and then the boys are likely to be busy until eleven o'clock at night or even midnight. On one occasion just previous to the Spanish-American war Congress was in session all night and the boys had to take turns catching a few hours sleep. The pages at the Supreme Court have the shortest hours as well as the best pay. They do not need to put in an appearance before noon each day and their work is finished long before meal time in the evening.

fighting for his life. Although he tot-tered with exhaustion, not for an instant did his fine eyes lose the proud flash of deliance, and his antier-crowned head was held erect.

From a safe distance, two angry coyotes

rrom a safe distance, two angry coyotes watched me as I guarded the deer while he recovered his strength; and, finally, when the noble fellow disappeared among the mountain pines just beyond, they set up a dismal howl and ran to cover.

"Good-bye!" I shouted to them, as they ran, but they didn't even look back.

#### Boys' Books Reviewed

FAMOUS MEN OF THE OLD TESTAMENT, by M. B. Wharton, D. D. The reading and study of biography is of peculiar and special importance to the formation and development of the of biography is of peculiar and special importance to the formation and development of the characters of young people and in these days of Christian Endeavor, Epworth Leagues. Young People's Baptist Unions and kindred selecties, there can be no better study than the lives of those men and women of the Bibliwho were the special instruments of Jehovah in working out His plans. It is, therefore, with considerable satisfaction that we bring to the knowledge of our readers this latest work of Dr. Wharton, who is eminently fitted for the task by his previous writings along similar lines. This book contains seventeen lectures, each lecture describing one of the eminent characters of the Old Testament. Beginning with Abraham, the Friend of God and Father of the Falthful, and ending with Nehemlah, the Jewish Patriot and Reformer, the author has delineated his subjects with such rare insight and deep religious sympathy, as will give the student of scripture a sensiof greater reality as well as of spiritual helpfulness. There is nothing dry or monotonous in the reading, but there is the charm of simplicity, attractiveness and instruction. In faithfulness to our duty however, we would draw the author's attention to the fact that Butler never wrote:

"Convince a man against his will,"

"Convince a man against his will,"
He's of the same opinion still,"

and the use of the lines quoted rather spoil the soundness of the author's argument concerning Jephthah's vow. This, so far as we have read, is the only discordant note in an otherwise harmonious whole. The book should find its way into many homes. 333 pages. Price \$1.50. E. B. Treat & Company.

\$1.50. E. B. Treat & Company.

A NEW SCHOOL MANAGEMENT, by Levi Sceley, Ph. D. We acknowledge having had considerable curiosity when we took up this book. Our memory carried us back to the "good old days" when the teacher's instruction was re-enforced by the, as we thought, altogether too vigorous use of the ferule and the witch. While good scholars were made in these old days of little method and less system, we confess to a feeling of relief that the present generation of boys and girls receive scholars to the proper humans and entem, we confess to a feeling of relief that the present generation of boys and girls receive scholastic training under more humane and enlightened conditions. Yet, while teacher and teaching have undergone a tremendous revolution within the last three decades, the value of Dr. Seeley's book cannot be overestimatel. In fact, we think, while it ought to be the constant companion of the young teacher, the olitea he will find much in the book to revive, freshen and guide him away from the ruts and wormout tracks in which he may find himself to be going. While in discoursing of the teacher's personality and character asid-from his training there may appear more of the ideal than the practical, yet as the authorials: "Let the standard however, be high, and I thall teachers seek to attain to the high est ideals." One thing the reader of this book will observe with satisfaction is the pleasing dimplity with which Dr. Seeley sets forth his views, and the many concrete examples he cites from his own experience to clinch his case. Dr. Seeley's long and honorable career as teacher and Professor of Pelagogy is amplicating more to the worth of this book and we heartly commend it to the careful reading of our young and old renders alike. In addition to the text there is an appendix which will be of creat value as a help to the teacher, and a copious index. 22 pages. Price, \$1.25. Hinds & Noble.

& Noble HOMOPHONIC CONVERSATIONS, by C. B on I C V Waite. The authors here give conversations in English German, French and Italian, and claim that their system is a natural aid to the memory in acquiring a knowledge of these languages. The little book will be found exceedingly useful by travelets and tourists who want to get a "working" accomplished to the second travelets and the second travelets and the second travelets and the second travelets are second to the second travelets and the second travelets are second travelets. be found exceedingly useful by travelers and turists who want to get a "working" acquaintance with foreign luminates. As the principal words in each of the sentences given have a similarity of socid and meaning in all the four tongues, not only the words but the sentences and their structure will impress themselves readily upon the memory. Nearly 500 homophonic words are used, and listed niphabetically with the form each word assumes in each of the languiges. The idea is sound, well thought out and ably presented, and the book chould have a ready sale. 137 pages. Price \$1.00. C.V. Waite & Co.

consisting of reprints of standard and classical works add by the page, every 25 pages costing the purchaser one cent. The publisher has in this instance at least made an admirable selection in putting before the public these letterand addresses of our beloved President. At the price charged every boy in the land should possess a copy. The paper is thin but firm and the type clear and distinct. 400 pages Paper cover 16 cents, cloth 46 cents, leather 66 cents. Howard Wilford Rell.

SOME FAMOUS AMERICAN SCHOOLS, by OME FAMOUS AMERICAN SCHOOLS, by Oscar Fay Adams. While the oblest of American schools may be called modern as compared with Rughy, Eton, Winchester and others of Great Britain, and their traditional may contain few of the associations which have made these British schools take a prominent position in their country's pre-eminence among the nations; yet the honorable record of the ten schools whose foundation, upbuilding and progress are so graphically and symof the ten schools whose foundation, upbuild-ing and progress are so graphically and sym-pathetically described by the author, are of great interest to the fathers and mothers as well as the boys of America, and will, we doubt not, find very many readers. The in-herent value of the volume is greatly increased by the fifty or more beautiful half-tone il-lustrations of the different school buildings scattered throughout its pages. 341 pages. Price \$1.20. Dana Estes & Co.

FOUR GREAT AMERICAN PRESIDENTS, by Frances M. Perry and Henry W. Fison. The names of the Presidents are Garfield, McKinley, Cleveland and Roosevelt, and the sketches of their carcers are eiven in a way which will attract, interest, inform and inspire patriotic American boys, Simplicity of language and clearness of thought are dominant throughout this little work. History is here made a delight. School principals and teachers will appreciate this volume for the school room and parents could hardly place a more helpful book in the hands of their boys. It forms No. 2 of the Famous American Series. 309 pages. FOUR GREAT AMERICAN PRESIDENTS, by 2 of the Famous American Series 369 pages, large type, good paper. J. M. Stradling & Co.

#### A Dinner That the Coyotes Didn't Get

Itere were three of them, and they came so swittly that they looked like three yellow streaks across the mesa. Their partially suppressed yip, yips could be very plainly heard, and the eagerness with which they made for a goal somewhere in the distance, told plainly that they were not being pursued, but that they were not being pursued, but that they were pursuers. Suddenly one of them wheeled about and sat upon his haanches, the while fixing his eyes upon some object which I could not as yet make out. Then, there were only two yellow streaks disappearing in a cloud of alkali dust, to the north. With a field glass I watched them. Perhaps a half mite farther on, another dropped out of ine run and sat down. The remaining streak of yellow turned to the east for a distance of perhaps two

The remaining streak of yellow turned "O, ho! So you are to eateh the deer, to the east for a distance of perhaps two are you, Mr. Skulk? That's a good joke.

for you will never win the prize."

The idea of a coyote catching a deer!

He didn't even notice me, and be didn't seem to care what I thought of him, but followed his nose on to the own and level country, where only a smattering of cactus and wire grass, here and there, broke the monotony of a great expanse of desert land.

The coyote wained on his greats.

of desert land.

The coyote gained on his quarry. He circled to the west, then southwest, then south. He turned the deer. The first of the yellow flends lay flat on the ground and waited while the deer was being driven toward him. Was he foolish chough to think that he could bring down the big game as it passed? Without a sound he sprang to the chase, and the coyote, which had driven the deer to him dropped out and took the vacated place.

The chase continued to the north. such and pursuer neared the second will beast, and now he crouched as closely to the ground as he could. At the proper moment he was up and away, while the wolf, which had driven the deer to him, took up the vigil which his comrade had left.

To the northeast the fleeing buck dashed on, he was slowly turned to the east. The coyote was at his heels, for the game was growing weary. At length the game was growing weary. At length the deer was adroitly put on a straight line to the south and directly toward the third yellow schemer.

I marveled at the ingenuity of the coyotes as I realized what they were

up to.
Again the deer passed me, this time running north. He had been driven over a complete circle with his endurance pitted against that of four fresh ene-

Again the range tramps fell in in turn Again the range tramps fell in in turn doing their relay work and this was kept up until, exhausted, the hig buck could no longer keep out of his pursuers' reach. Quickly the four of them noticed this and, with a series of exultant cries, they made for the victim in a bunch. Now one snapped at the deer's heels, another sprang at his sides.

"Ah! he is down! So, that's how you get your dinner is it, Mr. Wolf?"

Then I took a hand at the game. Crack! crack! The rifle's bark was answered with a "Yi. yi. yi! O-o-o" as one yellow streak hopped painfully and

answered with a 11. yl. yl. (7-0-0) as the vellow streak hopped painfully and slowly across the mesa.

Closer I ran. Crack! crack! Another covote rolled over in the sand, and the remaining two scampered away, snarling and veloing at having been cheated out

The deer regained his reet. He did not recognize in me a friend, and, consequently, with what strength he yet possessed, faced me at bay, resolved to die

If a certain watch comes timepiece. station to set the clock right by Washington time, and from this clock every employe attached to that station must set his watch, so that by this simple method the entire staff of a railroad is Half-Mile Run By H. V. Valentine: American, Canadian, Metropolitan and Military Champion, 1903 enabled to carry perfectly accurate timepieces.

in order, and when found to vary from

the standard time to turn it in to the

correct time to a second. If by any a notice is affixed to the clock stating the exact variation. Upon returning from a trip or before beginning the return trip after a run, the train men must compare their watches with this carefully regulated clock. If it is found that the watch has lost or gained during the trip, the timepiece must be detached from the guard and handed in to the timekeeping department. Here the railroad man recrives another watch for temporary use while his own is being regulated, and the expert employed by the company overbinls the condemned watch and returns it later to the owner, a perfect timebeeper. With the watch is given a certificate showing that the department has regulated it and it is again a good railroad timeplece.

This provides for the accuracy of the watches of the train crews. But railroad

With this perfect system of regulating The railroad company will not permit the clocks of a railroad, anyone asking

stations there is a clock that records the might at the crack of the pistol. The Likewise, if you are pitted against a man sprint, is fast enough to eat up ground at loose in the last eighth, making sure not a startling rate.

In my short athletic career I have noticed that most beginning athletes regard the 880-yard run as purely a distance race. This is a great mistake. The half-miler must train to travel the first 600 yards on his speed. This is the point where endurance comes into play. Without it the runner will begin to go to pieces and make a miserable finish. A moderate amount of endurance enables the runner to "fight it out" in the last 200 yards. Thus we see that a fellow must have the two great qualities-speed and endurance-to run a good half mile. In training for any race a man must know his own requirements. If he is inclined to take on flesh he must do lots of good hard work to reduce himself to racing trim. On the other hand, a man who never gets heavy should be very careful not to overwork himself. It should be his aim to build up his general condition. to leave it until too late. When you pass Once overtrained it very often takes weeks a man go by him like the wind. It takes or even months to get back into good all the run out of him. I have taken it for trained man is a complete rest for six or eight weeks.

Begin training very easily. around a couple of laps the first week you train. This will strengthen your legs for the hard work to come. Start in to run faster when your muscles feel good and strong. The first time out go three-quarters of a mile, at a mile clip. The next time tackle by William C. Sprague, our editor, is jus speed. Vary these distances as you think you need them. Do not forget your speed. Run through a fast "two-twenty" now and then, trying to stride out in as easy fashmoderation in training. week, with a good race on Saturday, is young man. It is quite necessary to condition the muscles of the body also. A few minutes' light exercise each day, bringing into play the muscles of the arms, back and stomach, will prepare these auxiliaries to stand the strain of hard racing. To realize how much these muscles are used one simply has to run a good hard race without any training whatever. The next day your body will feel as though you had been on the rack.

Half the battle in running a race is good head work. For instance, if the man you have to beat is a fine sprinter, go all the way as fast as you can afford to. Make the first quarter so lively that his legs will be too tired to answer his call for a sprint in the last hundred. Always be careful to

By H. V. Valentine: American, Canadian,

The half mile is a race of sustained keep a little "up your sleeve" for that last At each station there is a clock that speed. By speed I do not mean that the right which is bound to come if the other records standard time. At the larger runner should get out and run with all his man has the right kind of stuff in him. kind of speed for half-mile work is an easy, who has a reputation as a plugger, fall in chance it varies from the standard time, long-striding gait, which while not a behind him, and let him do the work. in the exercises, and a group picture taken by its own photographer, showing a group of the boys just after they left Festival Hall. There was in addition a column article entitled "The American Boy and His Friends at the Fair," and under "Echoes of the Exhibition" another paragraph reading: "If yesterday was American Boy Day and there is no American girl day there is no explanation of it except that every day is her day."

The fact that the flag used in the Salute to the Flag ceremony was too large for the boy is accounted for by the fact that the Department of Music, whose office is in Festival Hall, promised Mr. Sprague, once orally and twice by letter, that they would have a suitable flag ready for the occasion, and failed to keep their promise.

We hope that no one who attended the American Roy Day exercises in Festival Hall imagined for one moment that the programs which were being sold in the corridor and aisles at five cents each were being sold for the benefit of the publishers of THE AMERICAN ROY. On the contrary, we furnished these programs at an expense of over fifty dollars and expected to circulate them free of charge. The World's Fair Program Company, however, protested against our using these programs, insisting that they had the right to print all programs and sell them. The right they undoubtedly had, and yet Mr. Sprague, who had been on the grounds interviewing every department of the Fair in order that there might be no hitch in the proceeding, was never given even a in order that there might be no lifeth in the proceeding, was never given even a hint of the fact that somehody had a "graft" in the matter of programs and that it had to be printed by that some-body and that all programs were sold for the benefit of that somebody. It was only another instance of the incompetency shown by the business end of the Exposi-

It is remarkable that in a program lasting over five hours no individual or organization advertised to appear falled to be on hand excepting a 14 year old Massachusetts boy and President Francis. The latter not only falled to put in an appearance but failed to respond to three letters and a before health or the put in the second to the second to be second to the second to be seco and a telegram inviting him to make an address of welcome. American Boy Day was a tremendous success but not because of the co-operation of the Exposition Management but in spite of what appeared to be addifference and incompetency.

especially for working boys.

American Boy Doy at the Fair was no without its comical features. One of the funny scenes was enacted on the grounds funny scenes was emacted on the globals commediately after the taking of the picture of the foot of the Festival Hall steps. When the march was begun to the Pennsylvania Building young Blakeslee White carried the flag, a hig one, by the way, that weighed more than he did, but not-withstanding that he could scarcely be resembled from running. As is usual with Se small boys, there were at the head of the procession several hundred of them cheer-WANTED ing and shouting like wild Indians. At The new St. Louis stamps. Send for our buying one point in the march the leader lost his one point in the march the leader lost his vay and as the procession started up a steep incline of several hundred feet some boy shouted "Up San Juan Hill!" At this the flag shot forward with lightning sweed, followed by several hundred boys velling like Comanches who never stopped entill they reached the top of the hill, charged on a restaurant, rushed in and through it to the astonishment of the matters and prothe astonishment of the waiters and pro-dic prietors, and down the other side. The remainder of the procession, made un-ited of grown people—men and women did their best to keep up but fell hope-lessie behind. It was only when Mr. Sprague got on his sprinting less and succeeded in heading off the flag-hearer that the procession became anything like an or-

# How Four Boys Earned Their An American Boy's

LEMOURD

Four boys of Bellefontaine, Ohio, about six years ago organized themselves into a "string quartet." Two of the boys were each twelve years old and the other two thirteen. So well did they play together with guitar and mandolin that with some little practice they found themselves in demand at one dollar each for an evening's reception or entertainment. A little later they raised their price until they were receiving four dollars each for an entertainment. Their combination of instruments came finally to be violin, 'cello, flute and harp. During their junior and senior years in high school they were constantly engaged for social affairs and during their summer vacation took hotel engagements in northern Michigan, receiving each nine dollars a week and all expenses. The result was that during the past winter they have all been in college and are now looking forward to another summer in their pleasant summer resort hotel, where they hope to make enough to carry them well through another college year. Such boys deserve and will have success. The father of one of these boys was a fellow student in college with the editor of THE AMERICAN BOY.

# A Word to the Boys

If you have anything to do, do it at once. Don't sit down in the rocking clar and less three-quarters of an hour in dreading the job. Be sure that it will seem teatimes harder than it did at first. Keep this motto, Be on time in small things as well as great. The boy who is behind time at breakfast and school will be sure to get "left" in the important things of life. If you have a chronic habit of dreading and putting off things, make a great effort to cure yourself. Erace up! Make up your mind that you will have some backbone. Don't be a limp, jelly-fish kind of a person. Depend upon it, that life is very much as you make it. The first thing to decide is, what are you going to make it. The next thing is to take off your coat and go to work. Make yourself necessary If you have anything to do, do it at once. one next thing is to take off your cont and go to work. Make yourself necessary somewhere. There are thousands of boys and young men who wouldn't be missed if they would drop out of it to-morrow. Don't be one of this sort. Be a power in your own little world, and then, depend upon it, the big world will hear from you.—Standard.

Binffalo, N. Y. June 1, 1901

Although I am a girl, there is no magazine that I have read which is equal to the 'American Boy,' and I knew that it has helped my brother wonderfully. I am sure that your magazine instills nobler impulses into the boys who read it, and each one tends a little more to lead them to greater and better things Yours respectfully.

(Miso HELEN M. BATES.

George Stephenson gave Dr. Samuel Smiles the text of his great book, "Self-Help," in these words, "Young man, persevere, pe severe, it's been the making of me."

A healthy young man or young woman who can find excuses for ignorance or failure in the twentieth century would not attain to knowledge or success under any circumstances. "Success."

on this era of education, of books and lib-raries, of newspapers and periodicals, of schools and universities, evening schools, be-tures, and the other endless opportunities for self-culture which our country in particular affords all classes, there is no excuse for ignorance. It is only will that is wanting. "Success."

One of the most pitiable tragedies in human life is that of strong young men and young women letting their powers go to waste for lack of education. Many of them lament their ignorance, but excuse it on the ground of "no chance" or opportunity. Such excuses, in a land which teems with chances, deceive no one but those who make them.—Success.

Reading ward Macauley

There are two books that I know of, which, perhaps, are not yet so widely known as are those by Castlemon or Ellis, but it seems to me they are better stories than those authors usually write. The author of both is Sidney Marlow. The titles are "ilarry Ambler" and "The Moncasket "ilarry Ambler" and "The Moncasket with plots quite out of the ordi-"Harry Ambler" and "The Moncasket Mystery." They are both very interesting stories, with plots quite out of the ordinary. There are complications in the stories which keep the reader keenly alert as to what is coming next. Of the two. "The Moncasket Mystery" is the better. If you care to study what a good plot really is, I advise you to read this story. When you do so, note how well it fits together in all details. Notice the apparently unimportant item at the start that proves to be the key to the whole plot at the end. Notice how well the idea is carried out; how natural it all seems. If you do this, you will understand the difference between a man who is writing a story that he really has to tell, and a man making a book from a plot that has been used many times before, possibly even by himself. The stories written by Judge D. P. Thompson have entertained thousands of readers, both boys and girls, and men and women, and I hope that they may continue to do so. They are old-fashioned, out they is good. "Green Mountain Boys" is recognized as Judge Thompson's best story. It is a thrilling tale full of the adventures and narrow escapes that are a necessary fart of the successful story for boys. What situation can be imagned better calculated

and narrow escapes that are a necessary introf the successful story for boys. What situation can be imagined better calculated to stir a boy than the one where the hero and his friends seek to save themselves from besleging foes, by attempting to blow those foes to pieces? The difficulty lay in the fact that the foes might not be the only ones to suffer from the explosion. Of course, a solution is found. The author handles the scene capitally, and not many readers will go to bed until the hero gets out of that mess, anyway. "Green Mountain Boys" gives a first-class account of a portion of the life of Ethan Allen, the man who captured Fort Ticonderoga by surprise, during the Revolution. He is really the most important character, next to the hero. "Locke Amsden" tells interestingly of the life of a schoolmaster, in the early days in New England. It is not exciting like "Green Mountain Boys," but it is especially good in studying character among the people who used molasses to sweeten their coffee. Judge Thompson also wrote a book entitled "May Martin, or the Money Diggers," which was made up of a number of short stories.

William L. Alden wrote a number of fine boys' stories. Their best quality lies in the fact that they are very funny. Boys like to laugh, yet in many of the books written for them, anything humorous is painstakingly left out, or if a joke is put in, the point is so very evident that a smart boy would be ashamed to laugh at it. These books of Mr. Alden's are among the few juvenile stories that are humorous aff the way through. "A New Robinson Crusoe" is what we Americans call a "take-off." In other words, it tries to show the ridiculous things in the book it takes off, which in this case, of course, is the old tamiliar classic named in the title. In this story, Mr. Alden tells of a crazy man who believed himself to be Robinson Crusoe. He goes on a long voyage for his health and really gets shipwrecked and washed on the shore of an island. His art of the successful story for boys. What i union can be imagined better calculated

man who believed himself to be Robinson Crusoc. He goes on a long voyage for his health and really gets shipwrecked and washed on the shore of an island. His only companion was a boy, one of the ship's crew. Mr. "Grusoc" made things quit lively, in trying to make his adventures similar to those of the hero of the novel. At first, he wanted to kill the boy, M k ; as Robinson Crusoc was washed ashore alone. Mike suggested that he might take the part of Friday. This, Mr. Crusoc consented to, on condition that Mike go without his clothes, and blacken himself all over. This was quite trying as Mike liked to go in bathing. I can certainly promise a treat to the boys who will read "A New Robinson Crusoc."

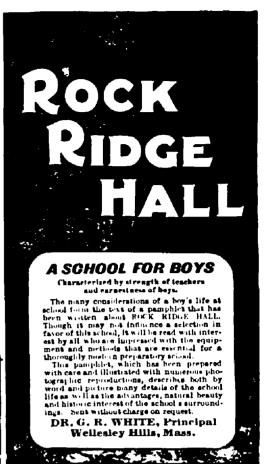

### A Business Boy

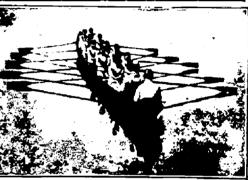

John Hirstrio, of Eveleth, Manna, who is only ten years old, transacts business like a man of many years' experience. He is a femiander, and his father is a pulpowood contractor who operates on the Mesaba range. The little boy goes to Dujuth and contracts for ears, sells and receives the proceeds from the pulpowood and performs all the other business details relating to such transactions. He goes to hotels and registers like a veteran. Mr. Hirstrio remains at camp directing the work of cutting the pulpowood and loading it on the cars, and I is ten-year-old son does the rest. cars, and lis ten-year-old son does the rest.

### Four Errors on One Try

Charles Dexter of the Boston Nationals declares he is the only infielder who ever made four errors on one grounder.

made four errors on one grounder. "It happened on the trip of the All-American and All-Nationals to the coast," said better. "Ad Jose batted a grounder to me, and just as I reached out to pick it up it bounded into my face. That was error No. 1, and Jose reached first. With my eyes full of dirt I ran after the ball and booted it far enough to allow Jose to reach second. That was error No. 2. I picked the ball up, but in my excitement dropped it again, and the SLit went to third. Error No. 3. By this time I didn't know whether I was playing baseball or indoor golf. I was playing baseball or indoor golf—1 picked up the bill and made a wild throw to third, and Joss scored. That was error No. 4. If there had been any more bases 1 would have made some more." would have made some more

# HOW TO USE COMMON TOOLS the first lesson. The left hand is needed to support the wood. If you use the fingers of your left hand to do this, be

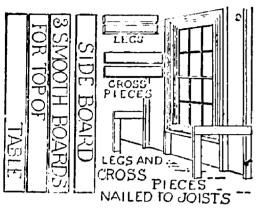

The Making of the Work Bench

HE first thing requisite to the proper use of tools is something firm and substantial on which to work.

A penman cannot write well without a sound desk; an artist has to have a stiff easel to support his canvas, and it is equally necessary for the worker in wood, be he man or boy, to have something solid in the way of a work bench

or table.

The best place for a work shop is a shed or garret, and this for more than one reason—such places are apt to be out of the way; the noise the workman makes does not disturb the family; the

PARTS OF THE WORK BENCH

workman himself is not likely to be disturbed, and last, not least, the place is

not plastered.

The beach should be placed, if possible,

The beach should be placed, if possible, in front of a window, for the workman needs all the light he can get.

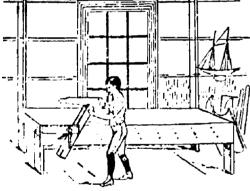

The materials needed for the beach are made of pine wood. Two pleces of wood each about three inches thick, four or five inches wide, and two feet six inches long, must be prepared first. They are for the front legs. Then two boards, one-half inch thick, six inches wide and three and one-half feet long, must be made for crosspieces. These cross-pieces are for the ends of the table.

The third step is to cut a board two inches thick, twelve inches wide and ten feet long, which is to act as the side of

inches thick, twelve inches wide and ten feet long, which is to act as the side of the table. This length is the maximum. The table can be made as much shorter as may be desired, the other dimensions remaining the same. Now make three smooth planks one foot wide, two inches thick and ten feet long. These are for the top of the bench or table. Set the two pieces of wood first mentioned (the front legs of the table) upright on the floor three feet from the wall and six feet apart. Then nail one end of each of the two boards that are to form the cross-pieces for the ends of the table to the side of the legs at top, while the other ends are fastened to joists in the wall just opposite to which the legs should be placed. Now you see why a plastered wall will not answer see why a plastered wall will not answer your purpose.

Nail the board that is to form the side

of the table to the two legs so that the upper edge is even with the tops of the legs, while the part of the board that projects beyond them at one end is equal to that which extends beyond them at

WORK TABLE COMPLETED

Nail one of the smooth planks that are of the board beneath, forming the side of the table, and to the cross-pleces. Then alongside of this place the other two boards that go with it, and nail them to the cross-pieces.

Buy a carpenter's bench screw at a hardware store. A wooden screw is cheaper than an iron one, and will answer every purpose. This, when adjusted to your table, will serve to hold securely almost any piece of work on which you may be engaged.

which you may be engaged.
Additional supports can be provided by boring holes through the side board, about large enough to admit the end of an ordinary broomstick.

Saw a broomstick into lengths of about seven inches each for pegs, to go into the holes, which should be bored unequal distances apart to fit planks of required lengths. Set in two rather large screw eyes close tagether on too of the table five close together on top of the table five inches from the side, and the same distance from the left-hand end of the table. This forms a "stop," which prevents any wood that is being sawed from sliding with the tool.

### The Much Misunderstood Plane

There is no tool used by woodworkers which causes so much trouble to the amateur as the plane. Yet there is none from which better results can be obtained by

proper use.

If you find, for instance, that your plane scores grooves and channels in the surfaces to which it is applied you may be sure that the edge of the cutting iron has not been rounded off a little at each corner, as it should have been, or else that it has not been ground truly groupe.

The smaller, or the "break iron." whose office it is to bend up the shaving some-

Written and Illustrated By J. C. BEARD

to prevent it from splitting off the surface of the work, should be placed to come within one-eighth of an inch, or for finer and finishing work one-twentieth of an inch, of the extreme edge of the cutter. The two irons should be then placed in position so that the cutting edge projects the smallest possible degree beyond the "sole" or the bottom of the place the plane.

To determine the position, turn the end of the plane farthest from the handle toward you. Lift the sole to a level with your eye, and look carefully along it.

If correctly ground and placed, the edge will be exactly parallel with the surface of the sole. It is then ready for

surface of the sole. It is then ready for use.

In jackplanes, which are used for roughing down surfaces, the iron projects a little more.

When in use the plane is held with the right hand on the "toat" or horn, or handle, and the forefinger on the wedge. The left hand is placed on the front part of the plane in such a position that the thumb is turned towards the workman. In using the plane in "facing up" or to even off a surface press heavily with the left hand, to keep the sole of the plane firmly down in contact with the wood during the first part of its passage across. When it is leaving the work lighten the pressure in front and press on the back part.

When you are "shooting," that is, planing the edge of a piece of work, the thumb of your left hand should rest upon the top of the plane, two of the lingers upon the side and two on the bottom. These last two fingers serve as a gauge, regulate the plane and make the work even. The advice given in regard to pressure on plane on entering and in leaving the wood must be attended to in this as in the former case, or you will have a curved instead of a straight edge. this as in the former case, or you will have a curved instead of a straight edge.

HOW A PLANE SHOULD BE HELD IN "FACING UP" AND IN "SHOOTING"

When the iron needs sharpening, grasp the middle of the stock firmly with the left hand, placing the thumb in the mouth or opening. Hit the stock on the front with a mallet. This will loosen the wedge and release the Iron. All that remains then is to loosen the screw and take off the backgiron. take off the back-iron.

When the iron is thus taken out to be sharpened, do not drive the wedge in too tightly, or it may "spring the plane," that is, the sole of your plane will be-come curved and it will be impossible to use it so that you can get a level surface

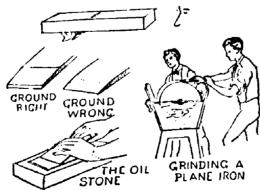

on your work.
You will find that a little sweet oil or machine oil rubbed on the sole of your plane before using it will make it work more smoothly.

Now as to sharpening the plane iron, and what is said here with regard to it will apply to chisels as well. If you examine the chisel or plane iron belongexamine the chisel or plane iron belonging to a good carpenter you will see at the cutting end of the tool a long bevel formed by the grindstone and a much smaller, brighter one at a more abrupt angle made by the olistone. The angles forming these two faces should always appear distinct. If the two faces are ground rounding and not flat, so that the separation between them ceases to appear, the tool so sharpened is quite unit for good work.

In grinding a plane iron place your right hand on the unsharpened end of the iron with the forefingers extended downwards. But the left hand upon the right to straighten it. Let the stone revolve toward the tool. This keeps the edge clean and prevents it from becoming ragged.

ing ragged.

The hands are to be held in the same as in grinding.

The saw and the plane both require to be thoroughly understood to be properly handled, as there are few if any tools more important in carpenter's and ioiner's work.

There are a great number of different kinds of planes. What is here said applies to that one in most general use, the trying plane.

### Precautions Against Injury

The proper use of tools is entirely safe if few simple rules and precautions are observed.

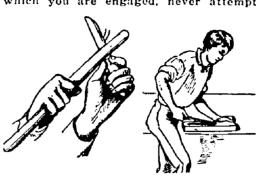

tions are observed.

In the first place, never use an edged tool in such a way that a slip can possibly result in a wound. Never whittle with the edge of the knife toward you. Never hold your left hand in front of the tool on a piece of wood upon which you are using a gouge or a chisel. Never put your foot on a piece of wood so that the axe or hatchet, in splitting it, can by any chance strike it. In driving a pall what abruptly in order to give the cutthe axe or hatchet, in splitting it, can by
ting iron its best opportunity to cut and any chance strike it. In driving a nail

make a few short, gentle taps with the nammer first, to fix it in place. After that, heavier blows, delivered exactly in the center of the head, will drive it home properly. Never strike a violent blow on a nall while holding it with your tingers. tingers.

To prevent breaking or injuring a tool, never employ it for any purpose for which it was not intended originally. Do not use your screw-driver to extract carpet tacks or nails, or your chisel or gouge in place of a screw-driver. Do not substitute your pocket-knife for a tack hammer, or use it to split heavy sticks, or attempt to pry the split parts apart with its blades, on pains of having the latter broken short off.

To prevent injury to the work upon which you are engaged, never attempt

THIS IS THE WAY HANDS ARE CUT

to drive a large nail into a small piece of wood without first making a hole gradually and carefully with a brad-awl or with a gimlet for the nail to go into. Indeed, it is advisable always to bore a place for the nail, except in large and heavy work, and the holes bored ought to be one size smaller than the nails. In soft woods the nail can be driven easily to be one size smaller than the nails. In soft woods the nail can be driven easily into the work without a hole being made, but the wood is almost certain to split. There is a nail called "flat point" or "flat point rose." which is designed to be used when the work is of a kind that carries danger of splitting the boards with the ordinary nails, whose sharp points act as wedges. The flat edge of the "flat point" nail must be placed and driven across danger of splitting the boards with the ordinary nails, whose sharp points act as wedges. The flat edge of the "flat point" nail must be placed and driven across the grain every time. Nails, when properly driven home, hold well. According to the best authorities on the subject, it requires 178 pounds pull to extract a nail from white pine, 512 pounds from sycamore, 667 pounds from beech, and 507 pounds from oak. A screw holds with three times the force of a nail.

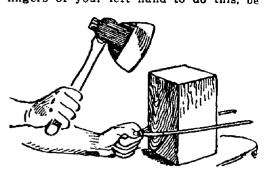

In screwing two pieces of wood together, the upper one must be free or loose on the screw. In boring a hole in wood for the screw, don't make it too large or the screw will not hold properly; yet the hole must be large enough or the wood will be split. For very small screws, a brad-awl will make a sufficient hole.

In "glueing up" your work, the first quality of glue should always be used, as it is not affected by changes of the atmosphere. The best is easily distinguished from the commoner sorts because it is much cleaner and more transparent

guished from the commoner sorts because it is much cleaner and more transparent than the other. Don't smear glue too thickly over your work. The smaller the quantity that can be made to cover the surface, the better the results will be. Both edges of the wood to be joined must be covered with glue while it is quite

hatchet with both hands when chopping or splitting a piece of timber. That is

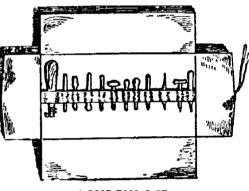

HOW TO USE A HATCHET

very careful to hold them back as far as possible to the left side of the wood, so that there will be less danger of cutting possible to the left side of the wood, so that there will be less danger of cutting them. A loop of string at the end of a stick may be substituted with great advantage for the hand in holding the wood, or the fork of a branch of hickory, or some other elastic wood, will answer the purpose still better, and save your precious fingers from all possibility of being wounded. Of course, the longer the piece of wood to be chopped, the higher up it has to be held. Some carpenters place the left hand quite on the top of the left edge of the timber they are cutting. This is not a practice to be recommended.

The chisel is another necessary tool. In cutting away at large work, the work, man either sits sideways or astride of the plece of timber upon which he is working, the plece being supported by trestles. He holds his chisel in the left hand and a mallet or hammer in his right. Remember that in cutting out any opening into which a tenon is to be fitted, the first cut of the chisel should be midway in the space marked out for the mortise, and the cutting must be made from the middle toward either end. The chisel always cuts across the grain, and the bevel of the chisel must in every case be held toward the center of the

case be held toward the center of the

A GOOD TOOL CASE

mortise. Do not attempt to rush your work by cutting away too much wood at once. If the mortise is large you will save time by boring holes with an auger, covering an area as nearly the size of the mortise as you can, and then finishing your work with your chisel. Small work can be done upon the carpenter's bench.

thickly over your work. The smaller the quantity that can be made to cover the quantity that can be made to cover the surface, the better the results will be lead to be joined mist be covered with glue while it is quite the covered with glue while it is quite to covered with a hot spone. Sandpaper of purice stone will complete the cleaning up of the work.

How To CUT YOUR FOOT AND HOW TO POUND YOUR FINGERS

How To CUT YOUR FOOT AND HOW TO POUND YOUR FINGERS

### To Name All the Cards In a Pack

HIS is a somewhat amateurish trick, which may easily be performed, yet I give it here on account of its effect, for although common enough to those ho know anything of card tricks, it al-ays seems to commend itself to the specta-The performer borrows and offers be shuffled, a pack of ordinary playing rds. He then announces that by the nse of touch alone, he will name every rd in the pack, holding them behind him in order to prove that he does not the time.

time in order to prove that he does not the them, and then drawing them out one a time.

However, the first card he names is cenerally wrong—that is because the pirits are not in attendance—but in very other case the card, as it is drawn named unfailingly. Now, for this trick teither prepared cards nor preparations of any kind are required. You receive the pack, hold it behind you, drawing off the first card, which you either ask a member of your audience to name or you make a guess at its identity, in which case you are almost sure to be wrong; but the former method is preferable, as you can conscientiously ask someone to name the top card—just to see whether he knows a card when it is placed before him. Again you put the pack behind you, but as you took the precaution last time of placing a card at the bottom of the pack in such a position that when the whole pack was held in front of you, the faces of the cards beling turned towards the audience, you also had turned towards yourself the face of a card, and, moreover, when requesting the identity of the first, you took the added and very necessary precaution of glancing at the one facing you (let us say, for example, that it was the three of hearts), when you bring this card (the three of hearts), to the top of the pack and again turn over the bottom card, it is very evident you will have no difficulty in telling the spectators that the card facing them is the three of hearts, and again taking note of the card now facing you, you are equally certain of being right next time. In brief, what you have in your hands when the pack is held in front of you is this: All the cards except one turned with their faces towards the audience, and one, the bottom card, turned with its back to the audience, i. e., with its face towards you. Thus you are enabled

Another Method of Naming a Card

with their faces towards the audience, and one, the bottom card, turned with its back to the audience, i. e., with its face towards you. Thus you are enabled to name every one correctly, and a little practice will make this a very quick and effective trick.

As before, the pack is shuffled. Holding As before, the pack is shuffled. Holding them face downwards in your right hand you pull them down an inch or so, one by one, asking someone, looking on to tell you at which card to stop. Immediately upon saying the word "Stop!" you draw off the cards at the place mentioned, exhibit the selected one and then

tioned, exhibit the selected one and then announce you are prepared to say which card it was. This is very easy of accomplishment. As the shuffled cards are handed back to you, again cut them—for safety's sake, you add—noticing, however, what card is now at the bottom. Now, with them face downwards, you commence to draw them down with finger of the left hand, but while so doing, you also draw down the known bottom card to the same extent as those above. On hearing the word "Stop!" you draw off the top cards, with the bottom one at the ame time, so that when you hold the cards up the one apparently selected is your known card.

### Cards by Reflection

A trick even simpler than the one just mentioned, but which frequently is productive of much mystification, is one by which the conjurer convinces his addence that when he takes a pack of ords and holds them before a person's eves he can tell what each card is; and quite naturally they believe that he does by observing the reflection in the eyes until they try it for themselves and find they are wrong.

The way to do the trick is this: With the pack (previously shuffled) in the left and a person facing you, take out and passed the newspaper may be broken open, and the newspaper may

ond, and a person facing you, take out-ely eard, holding it straight in front of out before the person's eyes. You can we tell what that eard is, not by seeing grough the back, but by applying presrough the back, but by applying pres-rice to the top and bottom edges so that assumes a concave form, the back beling towards you, the result being it one of the lower corners is visible you, although the card is being held most straight in front. Try this on "one who doesn't know the secret; it ill greatly perplex them.

Tricks With Handkerchiefs

Of Lite years these have been very poper, evidently on account of the many using effects which a little ingenuity Il produce. Like feats with coins and these are to be recommended, as apparatus required is quite portde, and they have this advantage over e former kind of tricks, that they are pally suitable for both drawing-room

d stage exhibition.
For general use small colored silk adverchiefs, about eight or nine inches are, are advised. If not hought ready ole a yord of each of red, blue, and ellow, will provide sufficient material make a supply for some seasons at a dal cost of not much more than seventy

A decided acquisition to the foregoing ill be two or three flags of different des. the largest being about twenty four thes by eighteen.

### Dyeing Extraordinary

The conjurer having first turned back sleeves and shown his hands perfect-empty, makes a few preliminary obervations.

Tadles and gentlemen: With your kind permission I will endeavor to bring to your notice a few feats of sleight-of-hand, involving particularly the use of

handkerchiefs. Now, for my first experiment I shall take a small piece of tissue paper which I shall light." (He strikes match and lights paper.) "You will agree with me that if you light paper it burns much better. I shall next rub these burnt ashes between my hands—so!" and, suiting the action to the words, he rubs them away, producing in their stead a small red silk handkerchief.

He then continues as follows: "Now, for a considerable time I have earned my living by conjuring. I will now show you how I dye by conjuring. Taking the red pocket handkerchief in my hand thus, I roll it into a ball, pass my wand over it, when lo! it has changed in color to yellow. Having been successful in this part of my trick, I will now show you how from this one article I produce several. For this purpose I take a sheet of newspaper, showing back and front so that you may not think it is prepared, wrap up the handkerchief into a small bundle, break open the package, and you see we have not the original yellow handkerchief alone, but three more of the same color. These I pass round for your examination."

chief alone, but three more of the same color. These I pass round for your examination."

This really smart trick is not at all difficult of performance; the part which needs a little dexterity is the changing of the red to the yellow. Now, you may have wondered how the first handker-chief was obtained. The whole thing is

simplicity in itself. On your table you have a box of matches, the part containing the matches being pushed out about an inch. In the space thus afforded by the cover is placed the small red silk, folded neatly into small compass. (See Fig. 17.) You pick up the matches with one hand, the piece of paper with the other. As soon as you have struck the match you close the box, the result being that the handkerchief is forced into the hand, where it is "palmed." Then, rubbing the ashes together, this is apparently produced from them.

Thus for the first part of the trick. The next is slightly more difficult, and for it you must have concealed up your waist-coat a yellow silk handkerchief rolled into a ball. Shaking out the red one, you announce you will change its color, at the same time transferring it to the left hand. However, as you walk back to your place (for whilst talking you have moved towards the spectators), you stuff the red handkerchief up your waistcoat quickly bringing down the yellow. As this is done during the momentary cover afforded by the turning of your back, it will pass quite unnoticed, and as you hold the hand into which the red handkerchief was originally put closed, your audience naturally imagines it still to be there—in reality it contains the other one, which, with a little sultable patter, you produce. Now for the last part.

Although both sides of the newspaper are shown, it is a prepared one, made by pasting one sheet on top of another, the edges only being stuck together; but, before you close all the sides up, the three yellow silks, folded as flat as possible, are introduced. If care is taken with the work the paper will have the appearance of one selected at random. As soon as the one handkerchief is wrapped up, the newspaper may be broken open, and the four silks taken out and passed round for examination.

rolls up into a ball, rubs it between his hands, when, on shaking it out, it is found to have increased to almost twice found to have increased to almost twice its original size. It has, however, in the center a small hole, to which the conjurer casually draws attention. This ball the performer takes in his hand and closes it up, saying he will throw the handkerchief invisibly into a pocket of one of the spectators. It vanishes from his hand, but, as no one can find it in the proceeds the entertainer suggests that any pocket, the entertainer suggests that

perhaps it may have flown into the candle burning on his table. He thereupon picks up the candle and wraps it in a piece of paper, which he gives to a boy to hold. Meanwhile—to make sure (?)—he searches for the missing article

among his audience, but, as all efforts to trace the handkerchief in that direction

Hunting wild and dangerous game by the light of the camp fire is attractive.

The actual experience of the trail is rough and hard.
Under such conditions you need a rifat built to stand hard usage, one that will reach your game at long range if necessry, and strike with deadly effect. We have four excellent sizes for such work.

Write to-day for catalogue No. 39.

rolled up into a ball and fixed together with a pin. See Fig. 18.) The conjurer takes the small flag in this hand, retakes the small flag in this hand, remarking that he will attempt to increase its size. To this effect he rolls it up, makes the "pass." pretending to put it in the left hand, instead retaining it "palmed" in the right, which he allows to hang near the chair. This affords an opportunity for dropping ball No. 1 and pleking up the large one previously picking up the large one, previously mentioned, the audience meanwhile thinking the small flag is still in the closed left hand. This little maneuvre will not take more than a fraction of a second, but it will give the conjurer an excellent opportunity for showing his tact in the matter of "patter" at a necessary moment.

Both hands are now brought together and, after an instant's rubbing, the large flag is taken out. This in its turn trace the handkerchief in that direction fall, he opens the package to see whether it is inside the candle. To the amazement of all, when the paper is undone the candle has disappeared, and in its place is the large flag handkerchief.

To perform this trick properly the conjurer should provide himself with a chair, covered by an antimacassar, in order that the servante which is fixed behind may not he seen.

On this servante is a large sized flag

Go! You observe it has disappeared from my hand." as he exhibits that member perfectly empty. Then he turns to the candle, which is a specially prepared one and may be made in the following manner. ner: Procure a sheet of stiff cartridge paper as near as possible in color matching an ordinary wax candle. Cut a piece about seven inches by four rolling it up into a cylinder the size of a candle. Next into a cylinder the size of a candle. Next glue down the edge, insert in one end a small piece of candle, stick the whole into a candle stick and light. Apparently you have an ordinary candle burning; in reality it is almost entirely an empty cylinder. Now, into this empty cylinder has previously been put a flag corresponding in every respect to the large one (even to the small hole in it); the one (even to the small hole in it); the candle (?) is wrapped in the newspaper, and when the performer falls to find the vanished article among his audience, he removes the paper package from the lad's hand and unceremoniously screws it up—thus showing that the wax candle has disappeared, while, as he breaks open the paper cylinder, he pulls out the substitute handkerchief which all he-lieve, especially as it has in it the identical hole to be the one ordered. tical hole, to be the one originally used, (Other articles later.)

### AMERICAN BOY DAY

(Continued from page 309.)

WM. C. SKINNER, Detroit Chief Marshal of the Day

the opportunity of greeting the Editor of THE AMERICAN BOY, whom they had heretofore known only at long range. It was a happy close of a splendia day. We wish it were possible to here reproduce many words and expressions that accompanied the handshakes. "My boy takes your paper and thinks it is the besi paper in the world." "I am not a boy, but I read your paper." "I am the mother of two boys, and I want to thank you for the good your paper is doing in portunities, our home." "I am only a girl and do As one of not feel of much importance to-day, but I want to shake hands with the Editor of The American Boy." "You are doing a great work." "This day is the biggest day the boys of America ever had." "We will now read The American Boy with increased interest, as we know the editor." "I have never heard of The American Boy before, but I now want you to send it to my boy." "I have taken your paper for two years, and I will take it forever," and hundreds of similar expressions. When the las visitor had left the Michigan Building and the editor retired to the Inside Inc. for a late dinner it was with a heart full of gratitude to the boys who had made American Boy Day such a tremendous success, and of pride in the achievements of those who had in the great Festival Hall, in the case of every one of them, inspired listening hundreds and brought honor and glory to them selves and to American boyhood throughout the land.

### Messages From Covernors of States to American Boys on American Boy Day

I feel honored in addressing representa-tives of American holyhood, Young men, to monly, do right. Remember that you re-building a foundation for the future, and that the world often judges the man and that the world often judges the man by his record as a boy,

A. T. BLISS,

Governor of Michigan.

He who has the acumen to learn life's lessons by daily observation, and the truth its revealed by the lives of others rather than by the costly experiment of personal experiment, is the wearer of seven-league boots in lite's race for success.

FENIMORE CHATTERTON.

Covernor of Wyoming the good government, of your States.

ALBERT COOPER, Van Buren, Ark Who Recited

the young man having as his equipment for his work in the world industry, ambition and integrity.
WINFIELD T. DURBIN.

Governor of Indiana.

Please say to the boys for me that from Please say to the boys for me that from the bottom of my heart I envy them. Life has never lacked in opportunity, but the gates which open into the field of successful labor were never so numerous and so invitingly open as in the year of our Lord. 1904. The world needs faithful, persistent work more than in any age of the past, and it will reward honest industry more light, then ever before.

richly than ever before.
I compress all the advice I have to give in a single sentence: Select the thing you want to do, and then resolve to do it berter than anybody else ever did it.
ALBERT B. CUMMINS.

Governor of lowa.

The American boy has always had a bet-The American boy has always had a better chance than any other boy in the world, and the American boy of the 20th century will have a better chance than any of his predecessors have had, a should be his best endeavor to be worthy of his opportunities.

GEO. C. PARPEE.

Governor of California.

To the Boys of America:

It should be impressed on the mind of every boy that industry is the great key to success. Capacity and inclination to work, coupled with correct habits, will enable one to indulge the loftlest ambition. Wealth and social position count but for little in the accomplishment of final results. Persistent industry is everything. Let it be remembered that "There is no excellence without labor."

JOHN H. MICKEY,

Governor of Nebraska. To the Boys of America:

Be manly; despise meaness; fight down sensions and evil thoughts; always honor your mother, and don't shirk duty. Put your heart into your work as well as into your play. Deserve success by earning it. Be thorough American and patricke. Rejoice in your youth and its glorious opportunities.

As one of the boys who has not forgotten that he was once a boy, I am, Sincerely yours, ALDERT B, WHITE,

Governor of W. Virginia,

VI. TOL A. BULLMAN, Bunker Hill, in

would approve; never do what you believe they would approve; never do what you know they would condenin. Preserve your self-respect and keep your conscience clean.

Respectfully, etc.,
S. W. T. LANHAM.

Governor of Texas.

Be good, healthy, industrious, stalwart

than by the costly experiment of personal experiments in the wearer of seven-league boots in lite's race for success.

FENIMORE CHATTHETON.

Governor of Wyoming.

The boys of the United States have as their own the richest heritage ever handed down to a riching generation in any age or country,—for this nation is theirs, this nation with its limitle's opportunities for individual to the dates of the morrow; and your future will be honorable and the nation secure a distortion.

Your friend and well wisher.

JOHN G. McCULLOUGH.

Governor of Vermont.

Permit me to offer the following message from the lips of Massachusetts great philosopher, Ralph Waldo Emerson: "I call upon you, you men, to obey your beart and be the nobility of this land. In every age of the world there has been a leading nation, one of a more generous sentiment, whose embent citizens were willing to stand for the interests of general institution, and humanity, at the sisk of

willing to stand for the interests of general justice and humanity, at the risk of being called, by the men of the moment, chimerical and fantastic. Which should be that nation but these states? Who should be the leaders, but the young Americans."

JOHN L. BATES.

Governor of Massachusetts.

The American boy has wonderful possibilities for success in life, but he must not forget that grave responsibilities confront

forget that grave responsibilities confront him. He inherits no special privileges, no benors:—only an equality of opportunity with hows of all nationalities.

All privileges and benors must be wen through his own efforts. Grit must be a leading factor in his success.

The American boy must not expect an easy life. He should pray, not for tasks equal to his own powers, but for powers equal to his tasks.

He should be loval to his own State and to his own country. He should give to both his best efforts to secure honest,

clean politics and fidelity in administrative matters. Above all things he should remember that "Worth makes the man, and want of it the fellow."

EDWIN WARFIELD.

Governor of Maryland.

The future welfare of this country rests with the American boy. He must study hard and play hard, to fit himself for the responsibilities of American citizenship, which will soon be his.

A. CHAMBERLAIN.

A. CHAMBERGAM.
Governor of Connecticut.

The boys of America should understand The boys of America should understand that they have had bequeathed to them through blood and sacrifice, an unsulfied patriotism, a richer legacy than was ever left to youth by all the powers of monarrhy and titled classes, in the history of civilization: the heritage of sovereignty. They should be educated in that breadth of patriotism which is not bound by sectional lines, and which is never to be crushed by sectional arrogance and oppression. A patriotism that flows unimpeded sion. A patriotism that flows unimpeded from the fountain of the freside, to purify, another and make strong the broad unstemmed ocean of American Ilberty.

J. M. TERRELLE.

Governor of Georgia,

The American boy most needs education, bonesty and courage, because of all boyshe must encounter the greatest opportunity, responsibility and tempration. His character, therefore, is his strength as it is his country's need.

A. J. MONTAGUE.

Governor of Virginia.

To American boys, in whose hands rests the suture of the republic, I would say.
Never allow your thoughts to dwell upon
anything which you would be unwilling to
make fully known to your mothers or older sisters. LUCIUS F. C. GARVIN.
Governor of Rhode Island.

one American boy with a good bratu, a good constitution and good red blood is worth more to the world than all the princes and potentates of Eprope.

Remamber this—Nor wealth, nor state, Hat rustling hard that makes men great, HEBER M. WELLS, Governor of I tah

I take pleasure in extending by greeting to The American Boy of 1994," and add one word of encouragement to his faithful performance of such duties as devolve upon im in a manly, truthful, energetic mar-ier. Success invariably follows effort Success congratulations to the American boy of today.

JAMES H. PEABODY.

There never was a country like ours and here is no time like the present, offering it you many opportunities to aspiring youth. Every boy, by means of industry and economy may attain to a useful and successful. The model ife, as in no other country in the world. S. R. VAN SANT. Governor of Minnesota.

To American Boys

Tell the American boys that success de-inds upon untiring energy and well-direc-ted effort. There is plenty of room at the top in every occupation and profession, and the fellow who does things and does them better than others do them, is sure to get there

NAHUM J. BACHELDER. Governor of New Hampshire

My Greetings to the Boys of America Born to a splendid heritage of unsurpas sed governmental institutions, and living in a country of unrivated resources, their op-

portunities are great.

May they prove equal to them

NEWTON C. BLANCHARD,

Governor of Louisiana.

The American boy should always bear in mind that he is not simply to grow up, but is to become a man.

Yours very truly,

SAM W PENNYPACKER,

Governor of Pennsylvania.

To the Boys of America:

Don't be in a hurry to get rich. Money is not the only thing worth striving for.

But from whatever point of view you consider the future, sobriety, honesty, industry and patience will count the most in the long run.

J. K. TOOLE.

Governor of Montana.

KIRK MUNROE

Boys of America:

This is a great day! Think of it for a moment; this is the first time in the history of this country that we ever had a day all to ourselves.

The more we see of our American boys the stronger our faith in the future of the great republic. With truth, human free-dom. Christianity and education, as their platform our nation's growth and greatness is assured.

JOHN HUNN, Governor of Delaware.

The American boy, God bless him, he is the best specimen of the twentieth century civilization; he is the sentinel guarding the cross roads of human progress and in han center the hopes of our country's future.

CHAS. N. HERREID.

Governor South Dakota,

The American boy has the largest oppor tunities in life of any in the whole world. All that is necessary is for him to be honest, to be true, to be fair to all in his every day life, and reward will surely come

MYRON T. HERRICK. Governor of Ohio.

I greet the American boy as the citizen of the future. May his career be one of con-tinuous honor, hamself an example for future generations. His is the mission of broadening and strengthening our country's greatness, and I leave the natter in his hands with the full assurance that the task will be well performed. There can be no greater honor bestowed upon him than to be a true American box

be a true American boy.

With assurances of my sincere sympathy in any movement which looks to his dvancement, I have the honor to remain,

Very sincerely,

A. M. DOCKERY,

Gevernor of Missouri.

To the Boys of America:

Words should fail to express your appre clation of being American boys. In no country other than America has the boy the opportunity to develop as in America. Here all boys are born equal and the life and career of each one is in his own hands. No matter how humble his origin-no matter what his environment, if he will but be true to himself and do bis part, the highest positions in the world of government. Iterature, religion, finance, and education are all open to him. There is always room at the top, and by application, industry and a moral life, every boy can steadily climb the ladder and from its top, reflect upon the success which comes to him who is true to himself.

RICHARD YATES. Covernor of Illinois.

In the United States every avenue is open to you. There is not a position in the religious, political or commercial world that

BLAKESLEE WHITE Son of Gov. A. B. White of West Virginia. Flug Bearer

is not open to you if you begin now to lay the foundation necessary to attain it. To

If you wish to begin at once earning money, write to-day asking us to send the magazines. We will also send booklet, "How Boys Make Money," written by some of our successful boys.

\$250.00 IN EXTRA CASH PRIZES for good work next month

THE CURTIS PUBLISHING COMPANY, 2960 Arch Street, PHILADELPHIA, PA.

You see, I count myself in with the crowd

You see, I count myself in with the crowd because yesterday was my birthday and I know that I am as old as any of the rest of you and I would rather be an American boy than an English, German, Zulu, Dutch, Chinese, Russain, or may other kind of boy, not even excepting a Jap. That is not all, I would rather be a Tom Sawyer or a Ruck Pinn than to be a dozen degenrate little Lord Fauntleroys. It would take more than a dezen of such little sissy chaps to make one wholesome American boy: but its a privilege to a boy even to be a boy of dinost any kind.

Have a good time while you are still young and you will be the better for it, but don't fail to be manly, honorable, just and fair. Brave you all are, but whenever you wish to test your courage try standing up for some good principle against the jerrs of your companions, any one of you can do it but it will take more nerve than it does to lead a forlorn hope in battle.

Cultivate a high standard of honesty and never be content with your position in the world, but ever strive to improve it; adopt a lofty arbition, resolve to be a man among men and not a champ. Chance may endow a champ with vast wealth but chance won't make a man of him, he can die of money disease and still die a champ. By this you may see that I do not mean by a lofty ambition, an ambition for wealth, but an embition to be real man like George, all hear of lofty ambition and wholerome principle. The world is better because such a en have lived. They were not champs in any sense of the word, for a champ is a fellow incapable of making in a fallow incapable of ma not clamps in any sense of the word, for a chine is a fellow incapable of making a

name for himself and belongs to a class which thrives best in countries where they may inherit titles. An interited title is like a life preserver, for it serves to keep its possessors' head above the level when he might otherwise sink out of sight.

This great Republic belongs to you, hoys of America and its destiny lies in your brawny young bands. Some one of you will form the chinet, some of you will fill the Congress and the Senate, for the gray headed boys who now run the government machine are all playing their last immiss and their places will soon be filled by the lads who are now celebrating the American Boys' Day at St. Louis or read Governor of Colorado.

This country was made glorious by participate Americans. A noble heritage has been given to the boys of the United States. It is their duty to guard well and with their best blood the noble country and the noble trust to which they have fallen heir.

The American boy may exclaim with the Country of Arkansus.

The American boy may exclaim with the Country of Arkansus.

The American boy may exclaim with the Country of Arkansus of American and its destiny lies in your brown young bands. Some one of you will occupy the President's chair; some of an are you will be honest with every one, the first of all, then, be bonest with vourseives.

ter in the first row and taking a letter at regular intervals until every letter is used once only, find a great debate of historical inname of that state. The six words are six counties in a certain state. The initials, read downward, spell the name of that state. The stars, read downward spell the name of another state. -Wilfred S. Baker.

### Messages From Authors

(From page 823)
must never forget the great document to
which we owe the opportunity which has
produced the finest type of manhood, I re-

produced the finest type of mannood, I refer to the inspired message penned by Jefferson and the signing of which we will celebrate before you get this letter.

Now give three cheers for the Declaration of Independence; three cheers more for Jefferson, and end up with three for the President of the United States of America. And now, 'as the great and only Dow. the President of the United States of America. And now, 'as the great and only Dowie would say,
"Peace be with you." Good bye.

Hastily but cordially yours,

DAN BEARD.

### J. L. Harbour

To the American boys of today who are to be the American men of tomorrow I send from the hills of New Hampshire a greeting of good-will and of congratulation. I congratulate them on the fact that they are American boys born to a heritage of all that makes life worth living; that they live in one of the greatest republics in the world and that it is their privilege to have so large a part in helping that republic to take on its appointed honor and glory. Got bless the American boy! take on its appointed house bless the American boy!

J. L. HARBOUR.

### Everett T. Tomlison

Congratulations and best wishes for the American boy. It certainly is his day in every sense of the word. Born with a rugged love of justice, fair play and honesty, he acquires for himself mercy and gentleness. The boy, the man, the gentlemanmay he gain all there is to be had in the three degrees!

EVERETT T. TOMLINSON. Elizabeth, N. J., June 24, 1994.

### Edward Stratemeyer

Newark, N. J., July 5, W. C. Sprague, Mich. Bldg.:—
Best wishes for success of meeting; a handshake for every boy present.
EDWARD STRATEMEYER.

### Notice

Readers are requested to note particularly what we say on the second page of the cover with reference to our making American Boy Day a permanent institution. We wish very much to hear from men and women who have the interest of boys at heart, and who will join with us in arranging for local celebrations on the date to be fixed.

HOME OF THE COSMOPOLITAN AND THE "TWENTIETH CENTURY HOME, " IRVINGTON, N. T.

If condemned for life to a desert island. and allowed a choice of Five Hundred Books, you would take the World's Best.

WHAT ARE THEY?

# The "Twentieth Century Home"

has a commission of college professors preparing the list.

SEE JULY ISSUE

PRICE TEN CENTS

The "Twentieth Century Home," the new periodical "for women who plan their lives and do," is published from the office of the "Cosmopolitan Magazine." It is issued in the belief that there are many millions of people who have arrived at the point of demanding the treatment of household topics in a scientific way; that everything affecting the home and the members of the family deserves the most thoughtful consideration of the ablest men and women who have in mind the improvement of the conditions which make for happiness.

Among the features are: "Home Education"-"The Fairyland of Science"-"Home Entertainments"-"The Laboratory of the Kitchen"-"Women's Virtues that are Vices," etc. Each month a number of short stories and articles to interest the woman of fashion and the woman of the home-beautifully illustrated.

for carrying water. 5 to 2, ferrules. 5 to 4, to the Chinese ounce, the unit of monetary recknoning in China. 4 to 3, a sly look. 3 to 2, indents. 2 to 5, a narrow point of land extending into the sea. —Roger Williams.

TRANSPOSED SYLLABLES.

The following changes in meaning are effected

The following changes in meaning are effected by transposing the two syllables of the required words. Example: Change one whose occupation is under water, to a great composer. Answer: Di-ver, Ver-di.

1. Change a language of Europe to a place for a horse's food.

2. Change send back to a bishop's head covering.

3. Change a perron who goes to therefore.

4. Change a perron who goes to therefore.

5. Change a mixture of metals to faithful.

6. Change a mixture of metals to faithful.

6. Change the christian name of the father of Henry Ward Beecher and Harriet Beecher Stowe to marked by the quality of manhood.

7. Change whirling water to colored, & Change a machinworked by hand power to a person that works in a factory.

—Willie R. Schoenberger.

HISTORICAL CHESS.

Commencing with a certain letter and moving from square to square, using each letter but once, find a great event in commercial history, the American by whom it was successfully accomplished and the year of its occurrence.

### Notice

Readers are requested to note particularly what we say on the second page of the cover with reference to our making American Boy Day a permanent institution. We wish very much to hear from men and women who have the interest of boys at heart, and who will join with us in arranging for local celebrations on the date to be fixed.

HOME OF THE COSMOPOLITAN AND THE TWENTIETH CENTURY HOME. TRVINGTON, N. M.

If condemned for life to a desert island, and allowed a choice of Five Hundred Books, you would take the World's Best.

WHAT ARE THEY?

# The "Twentieth Century Home"

has a commission of college professors preparing the list.

SEE JULY ISSUE

PRICE TEN CENTS

The "Twentieth Century Home," the new periodical "for women who plan their lives and do," is published from the office of the "Cosmopolitan Magazine." It is issued in the belief that there are many millions of people who have arrived at the point of demanding the treatment of household topics in a scientific way; that everything affecting the home and the members of the family deserves the most thoughtful consideration of the ablest men and women who have in mind the improvement of the conditions which make for happiness.

Among the features are: "Home Education"-"The Fairyland of Science"-"Home Entertainments"—"The Laboratory of the Kitchen"—"Women's Virtues that are Vices," etc. Each month a number of short stories and articles to interest the woman of fashion and the woman of the home-beautifully illustrated.

IN TWO PARTS-PART I

MMYBOY was saying good-bye to his little boy days and he had a lonely feeling about the heart. After the dinner, they had mercifully left him alone for a while. It was his wise little mother who arranged that.

His hat was very low over his eyes as he strolled down officers' row past the hospital. One of his trousers' legs was turned up and he didn't know it;

which was queer for Jimmyboy. One of the light batteries was coming in from drill, toiling up the incline to the gun sheds. The black gun horses were caked with sweat and mud, and drooped their heads; the cannoneers sat listlessly on the caissons, so Jimmyboy knew that the "old man" had been "putting them through."

He had heard the rumble as the battery charged across the parade at drill while he and his mother

were packing his things. The battery captain nodded pleasantly as they passed, and Jimmyboy's old friend, the guidon bearer, winked the eye most remote from official observation. with much gravity.

After the battery passed, a herd guard went by in the opposite direction, driving the horses of the bay troop to the shore meadows, where the Presidio reservation slopes down to the waters of San Fran-

cisco Bay. Jimmyboy followed slowly down the road after them. In the shore meadows between the government wharf and the rifle ranges Sergeant McCafferty was making some dozen cavalry recruits unhappy.

It was old McCafferty that Jimmyboy wanted to see. He could hear the old fellow from the road laboring to mould the raw civilians into fit troopers for Uncle

"R-right forward-fours right-mar-rch," his touch

of brogue rang across the low lands.

The first four did not march straight to the front as it should have done, but wavered, and then huddled over to the right in a jumble.

Jimmyboy could see McCafferty's troop horse leap under the prick of the spurs to head off the first four. "Halt!" thundered that glorious old voice the gar-

rison had learned to know so well. The recruit squad guiltily stumbled over each other to a standstill.

"As you were!" ordered McCafferty, furiously The scared "rookies" hustled themselves back into

McCafferty wheeled his horse about to lace the line, and Jimmyboy knew that he was glowering so blackly that chills were shooting down the spine of each

hapless recruit. "Now," thundered McCafferty, "you first four lunk-

heads, come out here. Come out here, I say." The first four men huddled sheepishly out to the front. Even the troop horses seemed to feel the disgrace and to wither under McCafferty's eye. The old sergeant let a moment of terrible suspense go by; then he demanded, "Fwhat order did I give?

The recruits looked from one to the other, too frightened to volunteer until one of them stammered, "Right forward, fours right, a sir."

McCafferty's voice fell like an explosion: "Thin

whoi didn't you do it?"

When he said the word, the four recruits scurried back to their places in line. They never had to be told again how to do "Right forward, fours right."

When the recruits came in, Jimmyboy waited for McCafferty in the quadrangle in front of the battery stables.

"I came down to say good-bye," he said, coming straight to the point, as was his way.

McCafferty meditatively crammed his gauntlets into the tops of his big trooper hoots and gave one of the grunts for which he was famous. McCafferty's grunts had to be interpreted by experience.

When the second lieutenant just out of West Point ordered, "On right into line" and heard McCafferty grunt behind him-McCafferty being a privileged character—he knew that he should have given "Right front into line," and felt accordingly abashed.

When his old bunkle was shot at his side in the used to show them around the post.

last Geronimo campaign in Arizona, McCafferty grunted and picked up the bleeding body and held it before him on the saddle as the squad he led fled for cover. McCafferty grunted at the rude little grave they dug in the desert, and said no word.

McCafferty grunted that time when he was published with honor in general orders for a frightful night ride with dispatches.

McCafferty grunted now, and it might mean most anything, but Jimmyboy knew that he was to go on.

"I am going away to attend school, McCafferty, he said.

McCafferty's big Irish mug expanded in a grin of pure delight. McCafferty beamed. "When did you get the appointment?" he asked, gripping Jimmyboy's slim fingers in his enormous fist.

The boy's heart sank. "It ain't West Point, McCafferty. I am going to another school."

You're not going to be a sailor?" demanded

McCafferty, indignantly.

That Jimmyboy—son of the major he had seen rise step by step from second lieutenant-could by any physical possibility fall to the level of civil life had never entered his head.

Jimmyboy shook his head mournfully. "No, it ain't a sailor either," he said, too miserable to bother about the king's English. "I ain't going to Annapolis,

McCafferty looked at him, completely bewildered. "McCafferty," said Jimmyboy, solemnly, "McCafferty, I am going to be an artist."

asked McCafferty, who couldn't "What's that?"

believe his ears. "You know," said the boy miserably. "Paint, and all that."

"Picture man," said McCafferty, with such cutting scorn that the tears came into Jimmyboy's eyes.
"It ain't a camera man," he pleaded. "I paint with

brushes; you know the picture I made for you.' "It might better be a camera," said McCafferty "The Department recognizes the camera as

a valuable adjunct to military operations. "An artist told my father I would be a great painter if I could study," said Jimmyboy, on the defensive.

McCafferty grunted with fine disdain and nearly broke Jimmyboy's heart.

"Aw, McCafferty, I can't help it," he begged. "You know you liked to see me draw. Why, you asked me to draw a picture of your horse. You did, McCaf-

McCafferty's grunt was a little softer. "Maybe you can't help it," he said, offering his sympathy in this affliction. "How did it happen?" he asked, as if the boy's leg had been cut off.

'Mamma wanted me to." "Her not being a soldier, of course," said McCafferty, gallantly finding an excuse for the major's lady. "Well, father didn't want me to go into the army,

either," said Jimmyboy stoutly.

McCafferty shut his lips tight together and walked twice the length of the quadrangle without speaking. He stopped at last before Jimmyboy and said loyally: "Your father, me son, is the foinest soldier that ever sat straddle of a horse."

McCafferty did not consider that discipline permitted any further comments on the course of action of Jimmyboy's father. He passed on into the barracks, leaving Jimmyboy much discomforted and feeling that disgrace had befallen the family. He wasn't sure whether he or his father was to blame.

The next day he set out for New York to enter an art school.

Poor Jimmyboy! We will still call him Jimmyboy. for the boyish nickname clung to him all his life. The artist in his nature drank in gulps of rapture during those winter months in the studios. And how

The artists who came to the life class sometimes used to stand behind his easel and exchange glances. and they got to know his name. Jimmyboy was discussed at more than one atelier.

But sometimes, at sunset, he would hear the gun at one of the forts saying good-bye to the day. It would bring back to him a picture of the troops at parade, with the glint of the dying sun on their arms and the sea air from the Pacific just lifting their plumes of scarlet and gold. He could hear the band trooping smartly past the line of captains at "Sound off!" under the eye of the adjutant. He could see the commanding officer far out to the front and center, standing with folded arms.

It made his heart sick.

Jimmyboy could draw!

Jimmybov knew what sacrifices his people were making to keep him in the art school, and his letters to them were always cheery and gay. His mother

Several times, however, he wrote furious letters to McCafferty, railing against fate.

Whereat, McCafferty would square himself off at a table in the post library and devote laborious hours to a reply. Intending to be consoling, McCafferty studiously avoided all mention of painting, which he adjudged ought not to be thrown in the face of a man who couldn't help it, and told all about the troopabout the new horse with an ugly temper, and the new carbines concerning which McCafferty had mis-

All of which made Jimmyboy feel considerably worse-thank you.

givings.

It was not until summer vacation that Jimmyboy was made to feel the real depths of his degradation.

His father had bragged about him until he was a nuisance all over the Department of the Pacific. There is a cavalry captain who offers to take his oath that the major once interrupted the decorous deliberations of a court martial over which he presided to tell about this wonderful Jimmyboy of his who had just come home. Every girl at the post gave a party for him, but Jimmyboy had eyes for no sweethearts but his mother.

Perhaps Jimmyboy might have been spoiled by so much attention had it not been for McCafferty. Old McCafferty made him feel his true position.

McCafferty was rather over-profuse in the warmth of his greeting to Jimmyboy, but it was painfully evident that he was trying to make it easier for him to bear the disgrace of his not being a soldier. It amused Jimmyboy's father, but it hurt Jimmyboy.

McCafferty was very polite, but he didn't invite Jimmyboy down any more while he cleaned the big sabre or fluffed out his helmet plume. There are certain privileges barred to civilians.

The worst was when McCafferty sent around a horse for Jimmyboy to ride. Instead of the big trooper saddle which McCafferty had taught him to sit, the horse was decked out in a natty English pig-skin with the martingales that he knew McCafferty scorned.

He felt then that he was beyond the pale.

The next was a great winter for Jimmyboy. The life class instructors still talk of his work. Between times, he did a little picture of his own in water color and called it "The Last Cartridge." Because his heart was in it, it was the finest picture he ever painted.

A great artist saw it and asked that Jimmyboy be brought to be introduced to him. He told him he must send the picture to the Academy and go himself to study in Munich. He said that was the greatest art school in the world.

But Jimmyboy packed the picture off to McCafferty. who hung it over his bed in the dark barracks. He didn't think much of it for various reasons. Jimmyboy didn't say anything about Germany to his parents -for reasons as various.

It must have been one of the instructors, or maybe the great artist himself, who wrote to Jimmyboy's father. Anyhow it was decided that Jimmyboy should go to Munich the next August. As summer came on it was considered to be a fortunate circumstance, because Jimmyboy's father was to be detached from his regiment and sent as military attache to the American legation at Pekin.

Jimmyboy came across the continent in July to bid them good-bye. It was sweet comfort to his mother that she could have the labor of love of getting him ready to go abroad. It would be so long before they could see each other again.

His father and mother sailed first, and Jimmyboy went down to see them off. McCafferty went, too. Everybody cried—including McCafferty.

The next day Jimmyboy was to leave. Ine quartermaster sent his baggage down to the ferry in a government van, and Jimmyboy said good-bye to them all at the post. McCafferty alone went down to the ferry with him.

They didn't say much, but walked up and down the ferry slip, up and down, up and down, in military step-one, two, three, four-to the rear, one, two, three, four-until the ferry bell rang.

Then McCafferty held out his fist and gulped. His words came in jerks: "If-you get short of money or anything-or want any paint-or varnish-or anything, or any of them-paint fellows make troublefor you-or anything, and you can't handle 'em alone -you send for me and—I'll come if—I have to desert."

Jimmyboy took his hand, but he could not speak. "Good-bye," said McCafferty. The ferry chains were beginning to creak, but

Jimmyboy stood there gripping McCafferty's hand. "Good-bye, sor," said McCafferty again.

"McCafferty, I am not going to go," said Jimmyboy

tempestuously. "Fwhat?" said McCafferty, whose brogue was get-

ting the better of him. "I am not going." Jimmyboy spoke calmly now,

but his lips were pressed tightly together. -" began McCafferty, at a loss to "Thin fwhat—

understand. "I'm going to enlist in the old troop this afternoon." burst out the boy. Old McCafferty's heart gave one

big bound. The ferry host steamed out of the slip and they went back to the post together. The first thing

McCafferty did was to hang a dreadful lithograph of Gen. Grant in place of "The Last Cartridge."

He said tactfully: "We won't never speak of that painting no more!" the said tactfully are to cry over spilled milk, and it wasn't your fault anyhow.'

The next day the prize pupil of the art class took the oath of allegiance and was fitted with the uniform of Uncle Sam's cavalry. The happiest day of Jimmy boy's life up to that point was when he got his troop horse and his carbine and his big cavalry boots, and went out to troop drill. There was no recruit squad for Jimmyboy. He knew as much about cavalry tactics as did McCafferty.

He wrote a long letter to his father.

"My dear father," he said, among other things, "I enlisted in your old troop this morning." (You see, Jimmyboy was getting straight to the point as usual.) "I hope this will bring you no pain. I know it must bring you disappointment. The fear that you and the dear little mother may think I do not appreciate all the efforts and sacrifices you have made for me makes me feel very badly.

"I tried, father. Indeed, I tried. I did the best I could to be an artist, but my heart is in the army. Ever since I can remember it has been a part of my

"It has been your life, too, and you don t know what it is to be sick with longing for the bugle when you wake in the morning. You don't know what it is to miss the sunset gun at retreat; to listen for the sound of the batteries at drill; to listen for the sound of the horses' feet on the gravel; to lay awake at night listening for the sentries calling the hours: to listen for all this, and not to hear. Father, I just couldn't stand it.

"Whatever the consequences are, I am willing to bear them. I don't want you to use one bit of influence to get me a commission. If I can't win one myself I am not worthy to be your son."

After he had waited many anxious weeks, the Oriental steamer brought Jimmyboy a letter from his father in Pekin. He told Jimmyboy not to feel badly.

"It was not our choice of a career for you, but it is all right, my boy. We have no reproach in our hearts. The army does not offer such a future as I believed you capable of achieving, but, after all, art could bring you no greater honor than wearing the army blue. And of the future that is now to be yours, my son, I have only this to say: There are plenty of men ready enough to die for the service; the point is to live for it. Too many officers are content to stagnate in a soft snap and wait for the next war. Live for it, Jimmyboy. Put your heart and soul in it. Make it a better army because you are wearing its uniform. If you are an honor to the flag and the service, that will be better than painting the best picture ever put on canvas. So it's all right, Jimmyboy. Go in and win your commission."

When the Maine was blown up in the winter of 1898 in the harbor of Havana, Jimmyboy's troop was stationed at a cavalry post in Kansas.

He had been in the service nearly a year and had been promoted corporal.

Jimmyboy was almost the beau ideal cavalryman, although McCafferty thought his wrist a little light

for the sabre. He had been studying hard for his commission, but there wasn't any more study for him when the news came. He talked it over with McCafferty after stables and they decided that it meant war.

Jimmyboy never forgot the day the orders came. He never forgot the great vans that came toiling up to the whitewashed magazine laden with innocentlooking boxes marked "U. S. Ball Cartridges."

Cavalry troopers in snowy white stable rigs went staggering by to the blacksmith shop with arm loads of sabres to be sharpened. Over by the artillery stables the batterymen were hurling imaginary death and destruction into their own barracks with the Hotchkiss rapid fire guns.
"War, war," was the song that was singing

in Jimmyboy's heart.

He felt sorry for the prisoners as they went out with the post dump carts to clean up the roads, guarded by a trooper with a loaded carbine.

Under the most favorable circumstances a squad of military prisoners can be driven to do about half as much work as a boy kept home from fishing Saturday afternoon to hoe. But now the carts did nothing but weave busily from one end of the post to the other, passing and repassing as near as they dared to the bustle of preparations. Poor, heartsick wretches.

One of them was old Terry O'Toole, doing pennance for his regular pay-day drunk. He had still a week to serve, as his last jubilation had been unusually riotous. It was breaking his heart to see his battery getting ready to go without him.

That night, when the officer of the day looked in at the guardhouse with new vigilance, he was astonished to see a ghostly figure in a nightshirt standing at "Attention" before him in the lantern light. It was old Terence.

"Av ye plaze, sor," he said, "Oi would like fer to git permission fer to git out of the clink.'

It was just the way an old soldier had of hitting the point first thing.

Terry's face was twitching and his mouth was ariwn. Suddenly the old drunkard burst into tears. "Aw, captain," he begged, "Oi can't stay here and see the ould battery go into action widout me. I sarved wid thot ould battery at Chancellorsville. I bin in thot ould battery since I was a boy recruit. Sure you won't let it go to war widout me. Captain, git the colonel to lemme go now and Oi'll sarve double the time after the war."

When the battery was packed into the troop train two days afterward on the wild dash for the sea, old Terry was the most hilarious youngster on board. But he never did the double time. He was the first man killed in action.

That afternoon the commanding officer's orderly came to the barracks to summon Jimmyboy to the headquarters' office.

When he got there the office was blazing with light, and through the open windows Jimmyboy could see the colonel and the adjutant and a couple of clerks plowing through a pile of papers.

The sergeant major took in his name to the inner sanctum, and in a minute Jimmyboy was standing at "Attention" in front of the commanding officer.

The colonel looked up at him and grunted, but left

him standing there while he and the adjutant consulted over something in low tones.

Suddenly the colonel whirled out of his chair in his queer, abrupt way, and, growling for Jimmyboy to follow, left the office.

Jimmyboy had no idea what was coming as they marched across the parade ground to the colonel's house, Jimmyboy keeping the traditional six paces to

At the door, the colonel said abruptly, "come in." Jimmyboy followed wonderingly into the dark hall. As the door closed, the bluff old officer said: "Jimmyboy, I'm starved. Come in while I eat." And he stood courteously aside to let the enlisted men pass first into the dining room.

Jimmyboy knew from that that the colonel for some reason wished the bars of discipline to be temporarily let down, so he let 'em down. There was presently the strange spectacle of a colonel of horse dining at the same table with one of his own troopers.

As they dined, the colonel chatted of everything but army in his jerky way. The colonel had a grim, dry humor that made his sayings famous all over the Department.

When he had finished, the colonel tilted up his empty coffee cup in the hope of getting the last drop and said over the rim: "Jimmyboy, there's going to

"Yes, sir," said Jimmyboy, growing constrained.

"We're going to the Philippines."

"Yes, sir."
"Well," said the colonel, "this is your great chance, Jimmyboy. I am going to move heaven and earthalthough it is precious little that we of the service have to say about the army-to get you a commission in one of these new volunteer regiments."

Jimmyboy flushed and started to speak, but the colonel cut him short. "Don't say a word," he said. Your father is the best friend I ever had."

Jimmyboy had risen, and the colonel rose, too, and put his hand on the boy's shoulder.

"But I am doing it more for you than for him." he said kindly. "You are a fine soldier, my boy; I have been watching you."

The boy flushed deep with pleasure, and the colonel shoved him brusquely along toward the door. "Go along," he said.

Jimmyboy had to wriggle himself free. "Much obliged," he said simply, "but I'd rather stay with the old regiment."

"Well, I don't know about a commission here," said the colonel doubtfully.

"I don't want a commission anywhere if it has to come through a 'pull,' " said the boy, bluntly.

The colonel gave a grunt and stalked out into the hall, and shoved Jimmyboy along before him. The boy was afraid he had seemed ungrateful and hurt the old man's feelings, but at the door the colonel patted him roughly on the arm just where his chevrons shone gold in the gas light.

"You're the son of your father," he said, and Jimmyboy went back to bed very happy. He dreamed he was leading a charge against a band of natives. each one as big as an elephant.

(To be continued.)

### CHILDREN'S CRUSADE THE FAMOUS

ECENT investigations into the history of the fam- on a crusade to the Holy Land and sought the port ous Children's Crusade have developed facts that make it apparent that it was the result of one of the most diabolical plots of which history makes mention.

Early in the spring of 1213 two men, wearing the garb of monks and claiming to be such, appeared in France and Germany calling all the children they met to take the Cross and journey to the Holy Land. The two men gathered the children about them in the streets of cities and towns and urged them to join in the new crusade. All the idle and deserted children who usually are to be found in large numbers in big cities were sought out by the two men and formed into bands, which were started on the march for the French seaport of Marseilles.

As they marched along the country roads they were joined by other children. The frenzy spread throughout the countries where the two men preached. In all about 30,000 boys and girls set out on the march for Palestine.

Now these two men who had gone about preaching the Children's Crusade were not monks at all, but two emissaries of some merchants of Marseilles, who saw an opportunity to gain a great deal of money if they could inveigle children into ships, take them to the coast of Africa and there sell them to the Mohammedans as slaves.

The children who marched to Marseilles were taken on board a fleet of ships belonging to these merchants and sail was made ostensibly for the Holy Land, but in reality for Africa.

But the ships were scarcely well off the coast when a great storm came up and drove them toward the shores of Italy. On the Italian coast all except two of the vessels were wrecked and every soul on board of them was drowned.

The two ships which escaped made their way to Africa, and the unhappy children in them were all

sold into slavery

Although all the children had been told to march to Marseilles, and had been started on their journey in that direction, they did not all arrive at that port. A large band of them missed the way and arrived at the Italian city of Genoa.

The merchants had not expected them at that port and so there were no ships waiting for them. The people of Genoa were greatly surprised when the small army of boys and girls came marching into their city bearing crosses and singing hymns.

When the children told the citizens that they were

of Marseilles, where they were to embark, the good people suspected that some wretches had been entrapping the young crusaders for their own ends. The Genoese, having a shrewd idea that the whole thing was an attempt to get slaves for the African trade, compelled the children to return to their

Boys of Naples A Series by Minnie J. Reynolds

No. III—The Scissors Grinder

The seissors grinder works for his father or some other man He sharpens three pairs of scissors for a cent, and his wages also will not amount to more than five cents a day, for which he packs the heavy grindstone and utters his curious, long-drawn cry through the streets all day.

homes, and told them of their great danger. Many of the children were already ill from the fatigues of their long journey, and most of them were beginning to think of home and their parents with a great longing.

Genoa is called "the Superb," from the great number of pulaces and other stately buildings which look out from its heights over the blue waters of the Mediterranean, upon which most of the children had never looked before. But their far-away homes seemed dearer to them than Genoa the Superb, when weary and footsore, they reached that city.

So the citizens had not much trouble in persuad ing them to take up the march for home again.

Many of the children never saw the homes for which they longed, but died on the return journey along the course of which they begged their way.

The merchants who planned the crime of the so called Children's Crusade were arrested for some other crime some time afterward and put to death upon the scaffold. It is supposed that they made a complete confession of the part they had played in arranging the kidnaping of the French and German boys and girls; but the names of their agents who went about gathering the children together have never been known to a certainty.

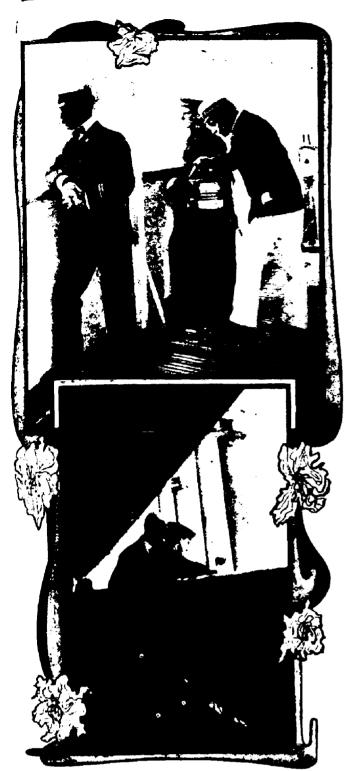

### And The Dog Laughed

The proprietor of a Third avenue store owns a little black kitten that cultivates a habit of squatting on its haunches, like a bear or a kangaroo, and then sparring with its forepaws, as if it had taken lessons from a pugilist.

A gentleman took into the store the other evening an enormous black dog, half Newfoundland, half collie, fat, good-natured, and intelligent. The tiny black kitten, instead of bolting at once for shelter. retreated a few paces, sat erect on its hind legs, and "put its fists" in an attitude of defiance. The contrast in size between the two was intensely amusing. It reminded one of Jack the Giant Killer preparing to demolish a giant.

Slowly and without a sign of excitability the huge dog walked as far as his chain would allow him, and gazed intently at the kitten and its odd posture. Then, as the comicality of the situation struck him. he turned his head and shoulders around to the spectators, and if animal ever laughed in the world that dog assuredly did so then and there. He neither barked nor growled, but indulged in a low chuckle. while eyes and mouth beamed with merriment.—New York Telegram.

# THE BOY WHO WOULD GO TO SEA

TONS there ever lived a healthy, wideawake boy, a thorough boy, who has not longed at some stage of his boyhood career to go to sea? Up under the attic rafters on a rainy day, poring over thumbed volumes of Cooper or Marryat, or out on a raft on the village mill pond engaged in fierce encounter with rival piratical craft, the instinctive love for the sea is still strong in the blood of the youthful American. It is the survival of the primeval instinct which led the ancestors of the present generation of boys, three centuries and more ago, to discover unknown lands by sailing across unknown waters, and which, in the intervening centuries, has built up the great fabric of world-commerce.

Most boys of the present day are forced to satisfy their ambitions for a scafaring life with story books and the village pond. Three quarters of a century ago the youngster on whom the salt sea laid its spell of witchery usually could become a cabin boy, or, if he was large and strong enough, a sailor on one of the fast clipper ships that were the pride of the Yankee nation and carried the Stars and Stripes into every commercial port.

But times have changed since then. While it has been taking the lead in so many lines of industrial activity, the United States has fallen sadly behind the procession in this, the "noblest of all trades." Through failure to meet with necessary legislation. bethaps, the requirements of modern conditions, the eets that once gave America the right to be conblered a maritime nation second only to Great Britain have disappeared and have not been replaced; that the greatest exporting nation in the world now carries less than ten per cent of its own exports. There is hope, however, that this humiliating state of affairs will be remedied in time and that the Stars and Stripes will cease to be an object of curiosity in oreign ports. In fact, for the boy who is persistently rnest in his desire for an ocean career there are suportunities today which, if more restricted in numher, are more favorable in all other respects than those that offered his father or his grandfather.

There is one transatlantic steamship company that tarts a certain number of young Americans every year on careers in the merchant marine that will lead them, in the course of time, to the command of great steamships. To be sure the number of young men that a single line can train in the art of modern steamship navigation is not large—on the ships of the American Line there are forty six of these cadets. as they are called, while the number of applications yearly runs up to three or four hundred-but the opportunities afforded those who are fortunate enough to secure appointments are far better than ever before were placed within the reach of young men going to sea.

It is ten years now since our only national transatlantic steamship line began the work of fitting young Americans to become officers of the great ocean flyers. By the terms of the agreement the company

By SIDNEY ALBRET

made then with the government it was to carry one cadet for each thousand tons of each of its vessels, and under this arrangement several hundred ambitious youngsters have received a practical course of instruction on the famous greyhounds "New York," "Philadelphia," "St. Louis" and "St. Paul," which have kept our flag well to the fore-front in the keen competition of the Atlantic trade. It was the good fortune of a number of these cadets also to take part with their vessels in the stirring events of the Spanish war, for the cadets, like the American Line ships, are subject to the call of the government and become part of the navy in wartime.

But a berth on one of these fine ocean cruisers, even if it were to be had for the asking, should not be the first object of the boy who is ambitious some day to walk the bridge of a big ocean liner. As a matter of fact, so great is the press of applicants that a boy is not likely to secure a place unless he already knows something of modern seamanship. The command of an ocean liner is a position of great power and responsibility, and can be reached only by long and thorough preparation; so our embryo captain should begin when about sixteen to fit himself for it by acquiring the rudiments of a sea education.

The best way to do this is to spend two years on one of the schouships maintained for this very purpose. There are three of these schoolships on the Atlantic coast-the "St. Mary's" of New York, the 'Enterprise" of Boston and the "Saratoga" of Philadelphia-and they are under the control of the Boards of Education of the cities from which they hail. They are officered and manned by thoroughgoing seamen, and the boys who are received on board each year are taught to be good sailors and manly men. Their tuition is practically free, for the entire cost of the two years' course is not more than fifty dollars.

On board the schoolships the boys are taught mathematics, English, and the different branches of seamanship, including the making and handling of sails, the art of navigation—the laying of courses by sun, moon and stars, great-circle sailing, the adjustment of compasses—and many other things connected with the proper management of a ship at sea.

Another subject of great importance in these days of big ships carrying thousands of tons of freight on every voyage, and one in which the boys receive instruction, is the proper stowage of cargo. Part of all this is book learning, but a good deal of it is not: the schoolships go on long cruises every year, and besides learning how to do things by actual experience the boys have a chance to become accustomed to sea life and to see some interesting parts of the world in

By the time he completes his work on the schoolshin a boy is eighteen and ready for a berth on one of the big liners. Here he escapes many of the hard experiences that fell to the lot of boys who went to sea in the books he has read. To be sure the discipline is strict and a cadet must pay steady attention to business, but he is not made an errand boy or their work and gives them their instruction.

knocked about by everybody on board: he is destined to become an officer, and from the first he is treated as a gentleman. The cadets have their own messroom and their own sleeping quarters, and they have certain well-defined duties to perform. They rank as petty officers, and those in the deck department are under the command of the chief officer, who directs in the engineer department, who are in training to become engineer officers, are under the direction of the chief engineer. They are paid for their work. receiving ten dollars a month for their first voyage and fifteen dollars a month after that, so that from the day they start they are practically self-supporting. After three years of constant training, at the age of twenty one, the cadets are ready to become merchant officers. They enter the lowest grade, the designation of which varies

Comparatively few of the boys who enter the service as cadets will ever reach this goal. The path leading to it, as to all very desirable things, is a long and hard one, and many who are attracted by the glamor of a life at sea are soon cured of the fancy by its stern realities and by the severe discipline to which they are forced to conform. Others drift into other lines of work, and still others show in the course of time that they are unfitted for high command. Broad as is the sea, it has no room for sluggards or for weaklings, and the boy who wants to go to sea because he thinks that he will have an easy job and a jolly time of it would better abandon the idea at the very outset, for he is not likely to last long as a cadet.

For those few who "have the right stuff in them' and who persist the prize is worth all that it costs. There is no nobler calling than that the sea offers, and no post more worthy of a boy's best efforts than that of commander of a great ocean steamship. It requires a man who has the strong qualities of a leader of men, whose character includes steadiness. sound judgment and thorough uprightness.

Aside from its reward in making one a very useful and highly respected man, the steamship captain's post offers satisfactory material attractions. The captains of the big American liners, for example, receive from \$3,600 to \$5,000 a year, and on any first class passenger ship the captain's pay is not much less than \$2,000, while of course he lives on his ship and at the company's expense.

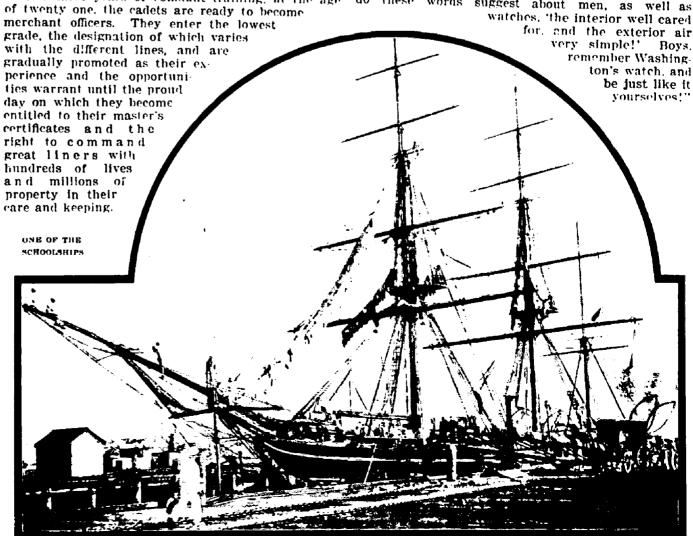

There are other lines besides the one mentioned which offer opportunities to the boy desirous of going to sea. Some of the large coasting vessels running to Gulf ports and to the West Indies also carry cadets, but of course the berths in the transatlantic service of the American Line are most coveted. In spite of the fact that the American registry of its vessels has necessitated its paying more for its ships and more by thousands of dollars for operating them every year, the American Line, under the direction of Mr. Clement A. Griscom, now the President of the International Mercantile Marine Company, has persisted in its patriotic determination to keep the Stars and Stripes affoat on the Atlantic and to offer a sea career to aspiring young Americans. For this reason as well as for their fine records its ships have earned the admiration of loyal Americans.

### High Places Affect Watches

It has been found that watches and clocks cannot withstand the effect of great heights with perfect immunity any more than human beings can. Like them, they suffer from the change in the air pressure. A watch taken to the top of Mont Blanc will gain thirty-six seconds in twenty-four hours. The thinness of the air, with its decreased pressure, makes the poor watch dizzy and leads it to run faster, just as a man's blood runs faster. Watches will change a little even when carried from the lower floors of a house to the higher ones, although the variation is too slight to be considered for practical purposes,

Washington's Watch

The Christian Watchman relates the following striking anecdote of Washington, in illustration of the practical good sense which he manifested in everything. The incident speaks volumes upon the character of the Father of His Country: "His personal friend, Governor Morris, was about going to Europe, and Washington, along with several letters of introduction, gave him this charge, to buy him, at Paris, a flat gold watch; not the watch of a fool, or of a man who desires to make a show, but of which the interior construction shall be extremely well cared for, and the exterior air very simple.' What a mind of wisdom do these words suggest about men, as well as

# MILLIONS OF FROGS WANTED

ROGS!" exclaimed the marketman. "I could sell a thousand of them this minute if I had them. There is a heavy penalty for catching them at this time of year and while the clubs and hig hotels are crying for them we can't get a baker's dozen in a week."

Recognizing the growing demand for frogs as an article of epicurean diet, the Fishing Commission of the State of Pennsylvania has decided to encourage the raising of frogs by distributing free, millions of tadpoles to farmers and others who are in a position to take up frog-raising as an industry. Heretofore there has been no systematic attempt to supply the market with frogs. In vacation days bands of boys have hunted the marsh lands in the vicinity of their homes in search of the croakers, knowing that they are sure of a little pocket money for the trouble of taking a basketful of "bulls" to market.

The method of catching the frogs has been to fish for them with a hook and line, the bait being a piece of red flannel. The game will jump for this delusive temptation and find itself caught on the hook. Another way the boys have of obtaining a supply of frogs for the market is to shoot them with small shot from a flobert rifle. The regular fishermen, those who eke out a living by catching frogs when fish are scarce, and who ply their trade in the swamp lands of Jersey and elsewhere rely upon a net and the quickness of their hand to capture the clusive quarry.

With only these irregular sources of supply the marketmen have been quite unable to furnish their customers with a steady quantity of frogs, and at times the caterers have been compoded to withdraw the item 4rom their menus. The law governing supply and demand has put the price of frogs in these famine times to a figure that makes it actually profitable to raise them for market purposes, and the State of Pennsylvania intends to assist all who wish to take up the industry by supplying the nucleus for a froggery

The old hands at the markets are not optimistic

ever, frogs are exhibited in their entirety minus the skin. It is said that all parts of the frog are edible, but some limit their desires to the hind legs. The appearance of the frog, both before and after he has been prepared for sale in the market, is not appetizing, but those who are able to close their eyes to this drawback say that as between fried frog and fried chicken their preferences are decidedly with the former.

### More Animals Being Exterminated

Another wild animal has been almost exterminated by fur hunters. It is the heautiful Satan Ape of New Guinea, which once was so plentiful in the forests there that travelers told how almost every tree bore its load of handsome monkeys.

The beauty of the Satan Ape was its doom. Its wonderful shining fur, composed of immensely long silken hair, became popular for furs about twelve years ago, and at once fur hunters penetrated the wild home of the monkeys to supply the markets of Europe.

In 1892 the government figures showed that 175,000 skins had been shipped in that one year. Within two years so many monkeys had been killed that only 67,600 skins were exported in 1896. In many places the forests are absolutely lifeless now, and it is calculated that there will be no Satan Apes left at all in a few years.

The white heron, although it still exists in great numbers in certain parts of South America, is doomed, like the monkey, for \$100,000 worth of

skins are exported annually from Argentina alone, while Venezuela sends out about \$90,000 each year. It has been estimated that in the worst years of plume hunting in Florida the annual slaughter of these grand birds amounted to one and one-half millions in a year.

The beautiful humming bird is another victim of the feather hunter, and it is only a question of time before this tiny creature will cease to dazzle the traveler even in the deepest forest, for there is no place where it can escape the hunter. In London alone the weekly sales of the ruby and emerald skins of the wonderful bird amount to 50,000.

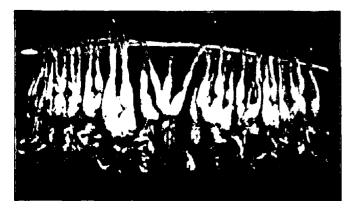

IN VACATION DAYS BANDS OF BOYS HUNT THE MARSHES

about the new industry. Said one of these to the writer:

"It's all very well to talk of raising frogs as though you can breed and grow them like chickens. It takes years for a frog to attain the size that the large hotels and clubs require. They don't want little scrubs, but those of such a size that a leg looks like the leg of a chicken. I am not a frog expert, but I should think it would take five or six years for a frog to grow to full size. Meanwhile the frog farmer must be feeding and caring for the frogs. How is he going to feed them? They won't eat anything that is still. Their food must be on the jump. They will swallow a stone if it is a rolling stone, but they won't even notice enything that can be got without the effort of a jump. In time, of course, any one taking up frograising as an industry and devising some means of keeping the stock in good condition by maintaining an even supply of food in the shape of flies or whatever frogs thrive best upon will have a valuable source of income, but it will take time and patience and the money will not begin to come in for a long time. It will be a great relief to us marketmen if the frog business can ever reach the point where there is a substantial source of supply, for there is a constant howl for them, and now that they have been classed as game and a close season has been arranged for their protection, it is almost impossible to get any." Epicures say that fried frog is a dainty fit for a

Epicures say that fried frog is a dainty fit for a king. Some eat only the legs. In the markets, how-

A BUNCH FOR SALE IN THE MARKET

# Cheerful Tips to "Young America" & By OLIVER A. HARTLEY

It hasn't been very long since I was a boy—a great hulk of a fellow, who, like you, had a kind of halfcocked notion that I should some day become a noted slayer of Red Men and be called "Red Handed Pete," or some such wonderfully inappropriate cognomen.

Somehow you've gained the idea that Indian blood is not employed satisfactorily, except it be set gurgling through the sward by the agency of the thirsty, trusty bowie. You may think that countless Indians are spoiling for want of carving by a Boy Avenger, and that you are the B. A. to a t-i, ti. Well, all the Indians in this country have been washed of their sins of savagery. They are now as white as snow, as far as civilized attributes count.

Old Rain-in-the-Face out in the Black Hills section, doesn't need killing any worse, it's likely, than does your chum. Johnny Smith's pa. Old Rain is under the care of the law just as are you and I. The Poy Avenger who tip-toes up behind and jabs a knife in him had better crawl in a hole somewhere.

You have read of boys becoming rip-roaring villains in velvet pants and three-story boots. Our musty jails have kept the dew and sunshine off lots of little fellows about your age before now. They started out to subdue Sioux, or hold up trains, and when looking themselves over in the lock-up, discovered, instead of yellow pants, or one of the stylish brigand colors, that there was not much left of the old blue-mollies save the waist-band and a fringe of

tatters. No girls came around with whom they might fall in love, unless they had no objections to great, fat, colored women who brought cold potatoes, sliced bread and cups of water on trays. Jallors don't feed hoys as well as healthy stomachs might wish.

But if you want to raise a rumpus in your time-knock a home run with the bases full, as we can put it—I can tell you the shortest cut to the highest point. That school bell is not rung for the heauty of it. Old man Opportunity is pulling the rope. If you know who he is you'll not anger him by having to be driven to obey him. Jump up and scamper at his call—he's an excellent fellow if you treat him right.

It is just so far to a place called Success. Every time you go to school and study well, you will have traveled just that much farther on your road.

A boy that can play baseball, run, jump and—well, yes, and fight, can get the best of any book ever printed, if he'll try.

If you can jump farther than Willie Good, you have the stuff in you to spell a longer word than he can. You have worked out the problem of swinning or riding a wheel. Give your arithmetic as fair trial You'll soon have it broken to bit and bridle. Dollars and arithmetic go hand in hand. When you grow some and earn a dollar your figures will show you how to make it go farther and last longer.

You can make play of school work. Much hearty laughter lurks in your text books. Do your work cheerfully and you will do it well. Do it so that when old man Opportunity begins to like you, you can grasp his hand in good grace. Responsibilities in later life will not frighten you if you are armed with sharp wits.

Study your books now and you won't have to study how to get out of some iron-barred penitentiary some other time. Good old sport-loving, studious boys don't grow up to wear stripes. There are bushels of places in stores, offices and manufactories for such fellows.

Tear a problem to smithereens. If it looks hard, cut it open to see what's inside—like you did your first drum, you know. Probe it through and through Don't let it pass until it has shown you the counter-sign.

First thing you know some of the fellows will be calling you "the Human Prodigy, or the Boy Who Eats Problems." When they do such things it means that some one is attracting attention in some particular way.

At the end of the term when the schoolroom is full of visitors for the "last day" exercises, some body will point you out as a "Double Barreled Terror" at forcing school books to surrender. Peoplare beginning to be proud of you. Fifth ward people are glad you don't belong to the Sixth ward school. Beats holding-up a stage-coach all hollow.

That's not all. You will be getting more and more real pleasure out of your books. Time's coming when you'll prefer a book any time to a 22-calibre rifle for hunting purposes. Education's a good field in which to go hunting. You can be sure of getting somethin

Learning is pretty much like a circus. The more there is, the more you want.

Long about the next thing you'll be showing the family your big sheep-skin diploma, done up in flash; ribbons. Your mother will kiss you, father will his hand on your shoulder and little sister will giggle

A young fellow starting out with his mother's kiss on his lips and a diploma in his trunk, is going to "get there, Eli," and no mistake.

One day your hard work will bud and blossom You will be a "worth-while" plant in the "world garden," not a common dandelion sort of man that don't amount to shucks.

Perhaps you'll be a lawyer, physician or banker. Sounds good, doesn't it? People will think so much of your ability, no matter what you follow, that

A RIDE ON A FLORIDA TURTLE

The Turtle is Four Feet Long and Three Feet Wide and WestPounds, Captured and Photographed by D. Waldo
Brown, Eastpoint, Florida

they'll come to you for advice, and they'll pay  $^{\rm crit}$  dollars for your opinions.

Dollars are fine! Anyhow long bout the Fourth or Christmas time. You'll have plenty of them when you have education to sell. One thing about education, you can use and give of it and still have it all left. Wouldn't it be fine if it were that way with marbles and things?

Of course you'll die some day, but probably not see soon as if you had set out to be a "holy terror." See

many terrors starve to death, you know!

Brace up now! Get your book-digester at work
Your teeth are firm, and you are to blame if you
don't get a good, square meal of learning every day
this year. Eat your mental food slowly, and chew
it well. Lazy eating causes indigestion. Indigestion
in this sense means ignorance.

Hip, hurrah! for the day when you put out you sign-board and are known as the bald-headed philoso pher or best known business man of the 20th century

Ву

H. D. M.

### The Crown Prince of Bulgaria

OCTOBER, 1904]

The little principality of Bulgaria was created by the Treaty of Berlin in the year 1878, and Prince Ferdinand of Saxe-Coburg, was made Prince of Bulgaria. The Prince married a daughter of Duke Robert of Parma. She died very suddenly five years ago and left the prince with four children, the eldest of whom is Prince Boris, now ten years of age and the

PRINCE BORIS, BORN 1891, CROWN PRINCE OF BULGARIA

crown prince of Bulgaria. If the future of the young crown prince is to be like that of his father, he is not to be envied, for Prince Ferdinand of Bulgaria is said to be the most closely guarded ruler in all Europe because of the eagerness of his enemies to take his life. The royal palace at Sofia is always closely guarded by soldiers, and when the prince goes forth to walk or drive he is always under the protection of an armed escort. His predecessor was kidnapped and expelled from the principality, and a few years ago his prime minister, Stambouloff, was literally cut to pieces in the streets of Sofia. The little principality has been "in hot water" for several years. There have been insurrections and many disturbing occurrences within its borders, in addition to serious trouble with Turkey, resulting from the Macedonian massacres. The result is that Prince Ferdinand is almost constantly in danger of his life, and even the little Prince Boris might fall a victim to the cruelty of the fanatic, the madman or the anarchist assassin.

Royal rulers of to-day are verifying in their own unhappy experience the truth of the old adage: "Uneasy lies the head that wears a crown," for never in the history of the world were thrones surrounded by so many dangers. The fear of assassination makes it necessary for rulers to take the utmost precautions for their personal safety, and all of their power gives them less liberty than their humblest subjects have. A recent writer, discussing the subject of the way in which modern rulers must be guarded, says:

"Prudent considerations of statecraft compel the modern monarch to submit to a system of espionage always unpleasant and often intolerable. No strong man likes to feel that another's eye is upon his every provement, and kings are but men, with a more than ordinary dislike of restraint.

Prince Boris of Bulgaria is said to be a very manly and attractive boy, and his pictures would seem to bear out this testimony. His future is one of care and probable danger, for a king or a reigning prince has little freedom from the cares of state, and a crown is not a possession to be coveted.

### A Bit of History

Just after the completion of the Louisiana Purchase of 1803-which is commemorated by the World's Fair of this year at St. Louis-the American Congress, urged by President Jefferson, authorized an expedition to explore the newly acquired territory. President Jefferson's private secretary, Meriweather Lewis, was appointed commander of this expedition. and he chose as his associate Capt. William Clark, an old army friend.

A hundred years ago last July these intrepid men, with a small party of about thirty explorers, were well away on their journey up the Missouri River, as far as the mouth of the Platte. In May of the following year they had their first glimpse of the Rockies, and before that year (1805) was ended they had crossed the Great Range and pushed on to the Pacific Ocean by way of the Columbia River. During certain parts of their journey they endured great hardships, and for fifteen months they were cut off from all communication with the outer world.

It was one of the most famous of American expeditions, and to the pluck and perseverance of this little band of explorers we owe the acquisition, later. of the territory now embraced in the three great states of our northwestern boundary-Washington,

Oregon and Idaho.

# OWEEN

OTHING certain is known of the origin of Halloween, October 31st, except that it is very old. It was thought to be the special night of the year for witches, fairies and spirits to walk abroad, and for persons to find out about their fu-

The child born on Halloween was supposed to have the power to talk with spirits. Throughout Great Britain and Ireland nuts and apples played an important part in the celebration of Halloween, immense quantities of both being eaten, hence the names Nutcrack Night and Snapapple Night. The practice of eating nuts and apples on Halloween is said to have come from the Romans who, on November 1st, held a great feast in honor of Pomona, whom the boys who are studying Latin will remember was the goddess of fruits and seeds. At this feast the nuts and fruits which had been gathered and stored away during summer for the winter's use were first brought out.

Those who have read the poem of Robert Burns, Scotland's poet, entitled "Halloween," will have a good idea of the manner of celebrating this festival. One of the games played was the putting of three nuts on the glowing bars of the fire by a young man or maiden, the idea being that if one of the nuts cracked or jumped away, his or her sweetheart would prove false; if one of the nuts blazed up there was only regard on the part of the swain, while if the nuts burned quietly away into ashes there would be a marriage within the year. Another game, which would delight the boys of today, was to hang a stick horizontally by a piece of string to the ceiling. To one end of the stick was attached an apple and to the other end a candle. One of the company would then twirl the stick around, and the merrymakers would each in turn snatch at the apple with his teeth, the use of the hands not being allowed; but so quickly would the stick whirl round that a face scorched or well greased from the candle often re-

Ducking for apples is even yet a favorite sport among boys and girls in Scotland and Ireland on Halloween. A large tub half filled with water is placed in the center of the kitchen floor, a goodly number of apples are set affoat, and the young people duck their heads in the water to catch an apple if possible with their teeth, the use of the hands being forbidden. As the only sure way to get the apple was to force it to the bottom of the tub, the result was wet faces and hair, and great aputtering when the face appeared with a large apple fixed firmly in the wide open mouth. Many of the games are obsolete now and new sports and merrymaking have taken their place. A writer in one of the magazines some time ago told how a company of young people might have a splendid time:

Begin the evening's fun by pinning on the guests as they enter the room a ribbon on which is written their names in anagram form and numbered. When all have arrived, pass tally cards bearing corresponding numbers. To the two who in fifteen minutes make the most correct guesses present a prize.

Let the first game be played by forming the guests in two lines, the lads in one row and the lassies in

another. When all are ready, let the one who has been appointed master of ceremonies say, as ne takes up a hat, "What is this for?" Immediately all must nod their heads. If the next article shown is a pair of slippers, all nod and make their feet move in addition; a fan, their hands in addition; a belt, the hips, and so on until the whole body is in motion. And all the movements must be continued until one after another are overcome by the comical sight and have to sit down. It will not be long before all will be convulsed with laughter.

For another game, stretch a cord the entire length of the parlors. At one end, on a small table, put a plate holding an apple, an orange and a banana made of confectionery. Blindfold the guests in turn and place them on the opposite end of the cord, and let them walk it to the dish of fruit. When all have done so give the fruit as a prize to the three who have kept nearest the line, having attached to it the following jingles:

> Surely marry ere again we meet, Now you have the apple sweet.

This golden orange will happiness bring, It may be a wedding or it may be a ring.

You'll be married happily some day, But just how soon I cannot say.

For a Halloween test to be tried at the close of the evening, give to every one a thread, all of equal lengths, and have each in turn hold his thread over a lamp while some one counts slowly until the thread blackens and breaks. This is said to be a sure way of telling how many years will elapse before the holder is married.

### Horned Saddle Beasts

If there were no such animals as horses in the world, people might get along with cows for riding and driving. A Frenchman, Marquis d'Ayguesvives. has a cow named Suzanne which he rides with a bit and saddle exactly like a horse. Also he feeds her on oats, and has taught her to jump so that he can ride "cross country" with her after a fashion.

The Marquis is extremely proud of Suzanne and her accomplishments, and declares that she is more intelligent than the ordinary horse and has considcrable speed.

Eddie Sullivan, a cowboy on a California ranch, has a steer which he prefers to a horse.

Not only does he ride the steer in his ordinary business, but he is always ready to race him against

the California ponies. Neither the French Marquis nor the American

cowboy can claim to be the first to discover the possibilities of the cow family in the way of saddle beasts. Many years ago James Hirst, who lived in Yorkshire, England, and was known as "Old Comical," had a bull on which he always followed the hounds. "Old Comical" was a keen sportsman and was present at every hunt in the neighborhood, always mounted on his horned steed. This bull could equal most of the horses of the hunters in jumping and beat some of them in speed, and many an accident occurred because of risks taken by huntsmen who did not like to be outdone by "Old Comical" and his strange "mount."

ANNAPOLIS, MARTLAND

The American Boy has wonderful possibilities

## Messages of The Governors to American Boys

Number 2

To the American Boy

for succees in life, but he must not forget that grave responsibilities confront him. He inherits no special privileges, no honors. --- only an equality of opportunity with boys of all nationalities. All privileges and honors must be wes through Grit will be a lending factor in his success The American Boy must not expect on easy life. He should pray not for tasks equal to his powers, but for rowers equal to him tanks He should be loyal to him own State and to him He should give to both his best efforts to secure honest, clean politics and fidelity in administrative matters. Atove all things he should remember that worth makes the man, and want of it the fellow. PHOTOGRAPHIC REPRODUCTION, REDUCED, OF GOVERNOR WARFIELD'S LETTER

# Three Yankee Boys in Ireland

O'CONNELL BRIDGE

Synopsis of preceding chapters: Professor Jack Wiley (familiarly known as "Professor Jack") with three of the students of Somerton Academy, namely, Joe Cadman, Hal Jameson and Ned Flanigan. New England boys, are together making a tour of Ireland. Joe is a Boston boy. Hal the son of a New Hampshire farmer, and Ned the son of a rich Maine lumberman. Chipter I. (November, 1903), describes the events that led up to the trip, as well as some of the boys' experience on shipboard. Chapter II. (December), continues the story of their life on shipboard. Chapter III. (January), relates what happened at Cork and how the boys kissed the Blarney Stone. Chapter V (March), deals more fully with the boys' experiences in Cork. Chapter VI. (April). takes our heroes to the Lakes of Killarney, where in the "Edden of the West" they spend one of the happelest days of their lives. Chapter VII. (September) describes the trip from Killarney to Dublin.

### CHAPTER VIII

After their ride of seven hours, during which they had covered the 186 miles from Killarney to Dublin, Professor Jack and his three boys had little energy left for more than an evening dinner, a short stroll after dusk, and then to bed.

The next morning, as fully rested they sat at their breakfast of coffee, rolls and syrup in the hotel dining room on the ground floor, looking out upon the famous Sackville Street, the Professor prepared the boys for intelligent sight-seeing in the Irish capital by telling them something of the city's history.

Dismissing the early centuries with the statement that their story was principally legend, he began with the ninth century, when the Danes invaded Ireland, captured Dublin and became rulers of a part of Ire-"Subsequently," said he, "the Danes were defeated by the Irish King, Malachy, and still later by the famous Brian Boru, King of Munster, but with a loss to Ireland of the king himself, his son and eleven hundred men.

"Again the Danes took the city and held it until 1170, when the Anglo-Saxons, under Henry II, King of England, entered Dublin and gave a great and splendid feast to the Irish chiefs, by which he gained their allegiance and first forged upon Ireland the chains which made her for all time a part of the British Empire.

"In 1177 Strongbow, a great leader of the Anglo-Saxons, died in Dublin and his remains were buried in Christ Church Cathedral, where his monument is still preserved.

"The native Irish were not content to allow Dublin to remain under foreign rule, so in 1646 they besieged Dublin with eighteen thousand foot and horse, but without success. Three years later the great Oliver Cromwell, who with his parliamentary forces had defeated the army of the English King and become virtually ruler of England, crossed over the Irish Sea to Dublin and there began his conquest of Ireland with thirteen thousand foot and horse. They tell you all over Ireland, as they point out the ruins of castles, churches and monasteries, that these have been ruins since the time of Cromwell, just as throughout Europe they date their sorrows back to the time when Napoleon Bonaparte spread dismay and ruin throughout the cities of Europe,

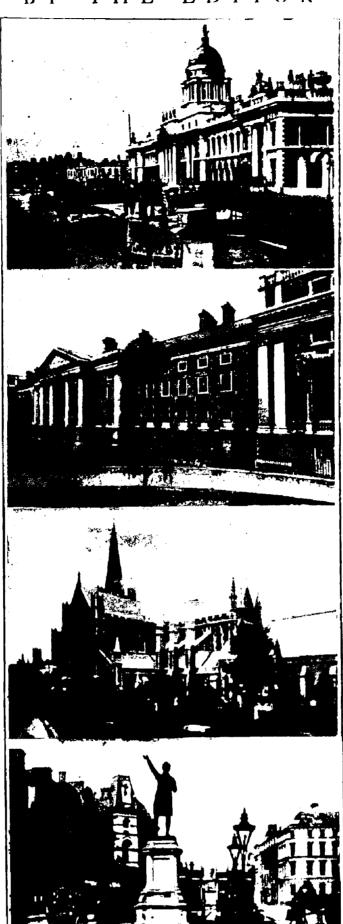

"In 1689 James H. a devout Catholic who claimed to be the rightful King of England, landed in Ireland, held a parliament in Dublin, ordered nearly all of the Protestants out of the city on pain of death, and proceeded to erect a mint and to coin money out of old guns and refuse metal with which to pay his numerous debts, compelling the people to take it or be hanged. But James II was defeated at the Battle of the Boyne (July 1, 1690) by William III, the Protestant King of England, who, entering Dublin in triumph, proceeded in great state to St. Patrick's Cathedral to return thanks for his victory.

"In 1800 the Parliaments of Ireland and of Great Britain passed the 'Act of Union,' and thenceforth the flag of Great Britain and Ireland floated over Dublin Castle

"Three years later Robert Emmet, a young barrister twenty-three years of age, headed an insurrection against English rule, and paid the penalty of his rashness a short time later by death on a scaffold in the streets of Dublin. Emmet's memory has been perpetuated in many ways among the Irish. Boys have been reciting a description of his trial and his address in the dock after sentence for the past hundred years. Two women are known in connection with the name of this widely loved patriot, namely, Sarah Curran, a daughter of the famous Irish barrister of that name, who was his sweetheart, and Anne Devlin, the Irishwoman who refused to betray his place of hiding and preferred to go to prison rather than reveal it. It was when Emmet was secretly in Dublin to take leave of his sweetheart that he was arrested. Tom Moore celebrates Emmet's attachment for Sarah Curran in his beautiful poem beginning, 'She is far from the land where her young hero sleeps." Irish differ among themselves over many questions, but there is no difference among Irishmen when it comes to Robert Emmet.

"In 1867 another great conspiracy against the gov-

RIVER LIFFEY

ernment was discovered, and nine hundred and sixty arrests were made in a few hours. Since that time agitation has followed agitation, the Irish seeking reforms of real or fancied abuses imposed on them by their rulers until the present day, when, through wise land legislation, the common people of Ireland are again to come into possession of homes of their own and the country at large is about to shake off the shackes of poverty and enjoy prosperity and contenment, to which, favored as it is richly by nature, she is entitled.

There was some question in the mind of the Professor as to just how much of the lecture the boys took in with their rolls and syrup, a breakfast that they had come very much to like. There was no question, however, about their anxiety to get out into the open air and begin doing the city. The Professor gave them the choice of how they should spend the first of the two days they were to stay in Dublin. There was Dublin Castle, the old cathedrals, the colleges, the art galleries and libraries, the monuments, the streets and the parks. It did not take the boys long to decide on the streets, the monuments and the parks, for they wanted to be out of doors and enjoy the beautiful sunshine while it lasted, for there was always a likely bood that on awakening in the morning they would find rain. It was decided, therefore, to take a tram ride in order to get a view of the whole city, and close up the day at Phoenix Park.

At once on stepping out of the hotel they found themselves on Sackville Street, quite close to the Nelson Monument, a column one hundred and twenty feet high, standing in the center of the street upon a massive pedestal, showing in bas-relief on its four sides the battles of the Nile, Copenhagen, St. Vincent and Trafalgar, which were the great battles fough by the greatest of English admirals, the top crewne by a thirteen-foot statue of the old "sea dog" himself.

"It will make a nice start for us to climb to the top of the column and get a bird's-eye view," suggested the Professor. The boys looked at one another and laughed, and Joe was impudent enough to ask the Professor if he thought they were flies to be able to climb a smooth column a hundred and twenty feet in the air.

"It's as easy as walking up stairs at home," said the Professor. "Just follow me." Then with a few brisk strides the Professor led the way around the base of the monument to a place where a door opened into its dark interior, from which a spiral stairway ran up-up till it was lost in the gloom.

The boys felt a little sheepish, but trailed up after the Professor, saying very little, but puffing hard as they mounted step after step to the top. When at last they stood upon the platform at the foot of the figure of Nelson, protected by a circular balustrade, the Professor quietly remarked, "You see, boys, as we used to say when I was a boy. There is more than one way of skinning a cat." Then, directing the boys' attention to the wide panorama now spread out before them, he continued:

"You now see something of the plan of Dublinor rather lack of plan. You see yonder the river Liffey. That river flows through the center of the city from west to east, and is spanned, as you see. by numerous bridges, one of which is O'Connell Bridge, named after the great 'Liberator,' Right at our feet is Sackville Street, which, though a very short one, is the finest street in Dublin. That statue at the end of the street is Daniel O'Connell's, erected at a cost of some seventy-five thousand dollars."

The boys wanted to know who O'Connell was, and the Professor suggested that Joe give the needed information, but Joe could not do it, so Hal was called upon: but he, too, was silent.

"What! Not one of you acquainted with the name of Ireland's 'Liberator'? Daniel O'Connell deserves to rank among the world's great advocates and orators. He was born in Ireland the year before the signing of our Declaration of Independence, and learned early to look with distrust upon English rule. as his father's family had been reduced to poverty through the loss of their lands and the burden of excessive rents. O'Connell was a devout Catholic and was educated in the schools of the church. At the age of twenty-three he began the practice of law, and though shut out from promotion, because of his religion, he overcame all obstacles and rose to become one of the greatest, if not the greatest, barrister or lawyer of Ireland. No lawyer of any country perhaps was more gifted in the art of examining witnesses and the winning of verdicts from juries than was he. He stood first at all times for Ireland, pleading for equality of right and opportunity for his countrymen against what he deemed the injustice of Eng. lish rule. When about seventy years old, he was arrested and convicted for the part it was claimed be had taken in stirring up the Irish against England: but he was saved from punishment by the House of

DANIEL O'CONNELL "The Liberator." A Great Irish Advocate and Orator of the Early Part of the 19th Century.

Lords. At the age of seventy-two he died. The Catholic Irish still refer to him as 'The Liberator.'

"Those two buildings across the river are the Bank of Ireland, formerly the Irish House of Parliament, covering five acres of ground, and Trinity College, founded nearly six hundred years ago, with its great museum and its library of three hundred thousand volumes.

"There," continued the Professor, pointing to a dingy pile of brick and stone, above which rose a tower, "is Dublin Castle, where the Lord lieutenant of Ireland makes his home in the winter time.'

'What is the Lord lieutenant?" asked Joe.

"He is the head of the Imperial Government in Ireland, appointed by the King, just as the Governor general is the head of the English government in Canada. In the summer the Lord lieutenant lives in the Vice-regal lodge in Phoenix Park, which lies off yonder to the northwest where you see that tall shaft, which is the Wellington Monument, and the woods

"It seems to me there are enough monuments in Dublin," remarked Hal. "People may be poor in Ire-

land, but they have enough money for statues." "Yes, Irishmen have been loyal to the memory of their heroes," replied the Professor.

"But Wellington was not an Irishman," said Ned confidently.

"Then you have studied a different history than the one I have studied," said the Professor. "Wellington, the conqueror of Napoleon, was born in Dublin. You tell a Dublin Irishman that the 'Iron Duke' was born in any place other than Dublin and you will get into trouble. Yes, there are many monuments in Dublin. For instance, the monuments to the Prince Consort (the husband of Queen Victoria), Grattan, Burke, Goldsmith, Guinness, Stokes, Corrigan, Lord Carlisle, O'Connell, three of the Georges, William III, Smith O'Brien, Lord Eglinton, William Dargan, Thomas Moore, Lord Nelson and many others,

'Do you see that building on the river yonder?" asked the Professor, pointing to a long building on the opposite banks of the Liffey, from the center of which "That is the Four Courts a come. the law is administered for Ireland by blackcowned and white bewigged judges. creat church-like edifices off to the left are the two great cathedrals of Dublin-Christ Church Cathedral and St. Patrick's Cathedral; we shall see them later. Now let us go down and take a car and see the city at closer view. Dublin has as fine electric street car service as any city in the world. From this monument you can take a car in almost any direction far into the suburbs. It would surprise ome of our folks at home were I to tell them that, for we are not in the habit of thinking of Ireland, particularly Dublin, as very progressive."

Soon the four were comfortably seated in a car

and moving rapidly through the streets, noting with interest all they saw and wondering, as everyone does who visits Dublin, at the strange intermingling of wealth and poverty that is seen on every side.

The Professor was on the lookout for No. 12 Aungier Street, and when they reached it, he pointed it out as the house where lived Tom Moore, Ireland's sweetest singer, who wrote "Lalla Rookh" and "The Last Rose of Summer.'

The boys were more than pleased to have pointed out to them the house at No. 24 Merrion Row in which the Duke of Wellington was born, and afterwards when at No. 58 Merrion Square they looked with interest upon the house which for a long time was the residence of Daniel O'Connell. They gazed on these memorials of former day greatness with open-eyed interest. The houses themselves seemed plain and uninteresting enough, Wellington's birthplace being now occupied by offices, but there was glory enough for them in having looked upon wood and brick that were associated with the lives of men so famous in the world's history.

After an hour's ride the car came to the edge of

a great, open, treeless tract of green sward, through which ran straight away a beautiful, wide, park road, and in the midst of which a huge obelisk rose to a height of two hundred feet. The boys now knew that they had reached Phoenix Park.

"Here, we can stretch our legs," said the Professor, with a tone of relief. The boys did not need a second invitation, for they had seen a crowd of men and women in the distance who seemed to be engaged in witnessing a ball game—and what American boy is not excited by a ball game? So off they started for a race up the broad parkway, each endeavoring to be first on the scene, all thoughts of the Wellington Monument gone glimmering.

The Professor followed the boys leisurely, and when he finally came up to them they were in a hot discussion as to what sort of a game the men were playing. They had expected to see a ball game, but when they came up to the crowd they found a ball sure enough, something that looked like bats, but more like paddles, a man standing in front of three sticks in the ground and seeming to be engaged in doing nothing but keeping the ball from hitting the sticks, a game in which they could see very little interest and nothing at all to excite one like a game of baseball. It was a pretty scene, however, as the players wore white duck trousers, white woolen shirts, white caps and white shoes. The grounds were of a beautiful green and the large company of men and women were evidently people of the wellto-do class dressed as for a gay picnic. The boys at once asked the Professor for an explanation.

"This is cricket, boys; one of the games of Britain."

"I thought hand ball was the Irish game," said Ned.

"True, it is, or was. I presume these men are not Irishmen. A great many English live in Dublin. It is, as you know, the English capital of Ireland. A great many young Englishmen are in the government offices and a great many others hang about the court that exists here. I imagine that these are young Englishmen, but the Irish play cricket. too. If you want to see a real Irish game, however, hunt it up in some of the small Irish cities or villages. Along in the evening after work is done you will find the whole village assembled on the alley ball grounds, where the champions of the town will display remarkable feats of strength, endurance and quickness in the really fine game of alley ball.'

The boys had never seen the famous old game of cricket played by experts, so this was a rare treat. The Professor got interested, too, for it was his old game, and so the morning slipped by and part of the afternoon before they realized it. They paid their respects to the Wellington Monument, walked about the grounds of the Vice-regal lodge, situated among the forest trees that make up a great part of the park's 1,751 acres, and then started for the

On the way out of the park they stopped to gaze upon a stone imbedded in the grass at the side of the broad and beautiful park drive.

"Here," said Professor Jack, "was committed a crime that made all the world shudder, and almost destroyed for the time being the cause of Irish independence. Lord Frederick Cavendish, who had but

PARKWAY IN PHOENIX PARK With Stone Marking the Place of the Tragedy of May 6th, 1882.

a short time before been appointed Chief Secretary for Ireland, and Thomas Henry Burke, a man of distinction, were, on the evening of May 6, 1882, riding through the park, when on this spot they were attacked by four men, partly disguised under slouch hats, and cruelly stabbed to death, the men making their escape. Charles Stewart Parnell and Michael Davitt, the Irish leaders at that time, denied that the Home Rule party were instigators of the crime. but the inevitable effect was to discredit the cause in the world's mind for the time being at least."

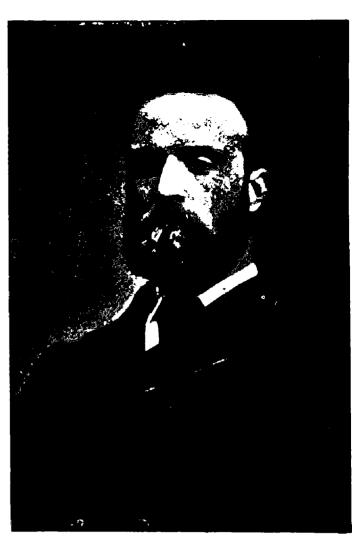

With tired heads and feet the Professor and his boys made their way back to the hotel, well satisfied with their first day in Dublin.

(To be continued.)

### The Boy Who Dares

By J. L. HARBOUR

When I was a boy in my native town there was a boy in the same town who would "never take a dare." and who was always daring to do all sorts of foolhardy things on his own account. I remember that he used to dare to stand on the railroad track until the engine was almost upon him, and he would dare to climb away out on the branches of the tallest trees. He would dare to walk on the tops of high walls of unfinished buildings. He would dare to do even sillier things than those I have mentioned, for I remember that once when the other boys dared him to do it, he walked the entire length of the main street of the town wearing an enormously large

CHARLES STEWART PARNELL The Foremost Irish Leader at the Close of the 19th Century.

hoopskirt, while he had a tin pan on his head for a hat.

Of course a boy like this would dare to do things that were not only silly, but he would dare do things that were wrong and that were a source of annoyance and trouble to others. One day he dared bring a dead mouse to school and throw it over on the girls' side of the room during the session of the school. Of course there was a wild scramble for the tops of their seats on the part of the girls, who did not know that the mouse was dead. This threw the school into an uproar and the boy who threw the mouse dared to tell a lie and declare that some one else threw it. The proof against him was overwhelming and he received the whipping he deserved.

I have never known one of these "never-take-adare" boys to do anything really brave and heroic. Standing on a railroad track until the train is almost upon one is not the act of a brave nor of a sensible boy. It is not proof of either physical or moral cour-The man or the boy who rushes in front of an advancing train to save a little child from death is a real hero, because the deed is inspired by a desire to save another at the risk of one's own life; but to deliberately place one's life in jeopardy merely to "take up a dare" is as silly a deed as a boy can perform.

The boy who dares to do a thing of this kind will some time dare to smoke and drink, and he is quite sure to be a boy who has such full confidence in his ability to take care of himself that he will go where he pleases and do as he pleases with impunity. It is doing the boy who dares to do anything and everything no injustice to say that he is a fool, but unfortunately for him he belongs to the class of fools of whom it has been written that "the follies of the fool are known to the world, but are hidden from himself."

The boy who rushes into danger merely to "show off," or because he will not "take a dare," is not nearly so wise or brave as the boy who, seeing danger, does not overlook nor rush into it unless it is necessary to do so.

"A valiant man

Ought not to undergo or tempt a danger But worthily, and by selected ways: He undertakes by reason, not by chance."

### Building a Camp Fire

Nobody should boast of being able to build a fire unless he can do it in a rain, when all the forest is wet, and succeed in lighting the fire with the first match.

Even in a driving rain that has lasted for days, the clever woodsman can find bits of twig and other inflammable material that may be damp, but not sodden. He can always find perfectly dry stuff in hollow trees and under roots. He will spend perhaps half an hour, perhaps even an hour, looking for the stuff of this kind, and will not dream of starting his fire till he has collected at least a hatful of tindery stuff and an armful of small twigs and branches as dry as any that can be found.

Having deposited all this stuff under the best shelter possible, he drags a log to the place where the fire is to be and turns it over, when, of course, it exposes a dry side, in which the tinder may be placed without getting wet. Then other logs are piled to form a wall against the wind.

Now the tinder is piled up, and then with a sharp knife the driest sticks are whittled so that a pile of thin shavings is accumulated. The more shavings there are the better.

Then the driest sticks are laid over these and the shavings set fire. Carefully add wood as the fire burns up, but never put enough on to smother the flame. One wet twig will blaze where two may choke the fire.

The very next day after our bundle of suspenders arrived there came a glorious freeze, and the meadows near our town having been covered by flood-water freeze, and the meadows near our town having been covered by flood-water from late fall rain, were frozen tight as a drum. Of course, the skating was magnificent, and the temptation to enjoy it, rather than spend our holiday canvassing for the sale of suspenders, was more than my partner and I could resist. However, we decided to compromise the matter by taking half a dozen pairs of suspenders where the sale of suspenders and the temptation to enjoy it, rather than spend our holiday canvassing for the sale of suspenders, was more than my partner and I could resist. However, we decided to compromise the matter by taking half a dozen pairs of suspenders whith us, in the hope of doing a little informal business, should the opportunity found a good the sale of the bar and the bag and the broken bottles had become a sort of miscellaneous annex to my person. There I had to stay, until the "men-foiks" came, carried me to the barn, sawed me out and suffered me to depart, amid shouts of gratultous merriment, with a disc of pine wood as large as a pie-plate attached to my trousers.

That ended my dealings in cement, and also my career as a canvasser. I had followed my father's rule, persisted until I found a good the broken bottles had become a sort of miscellaneous annex to my person. There I had to stay, until the "men-foiks" came, carried me to the barn, sawed me out, and to stay, until the "men-foiks" came, carried me to the barn, sawed me out, and to stay, until the "men-foiks" came, carried me to the barn, sawed me out, and to stay, until the "men-foiks" came, carried me to the barn, sawed me out, and to stay, until the "men-foiks" came, carried me to the barn, sawed me out, and to stay, until the "men-foiks" came, carried me to the barn, sawed me out, and to stay, until the "men-foiks" came, carried me to the barn, sawed me out and to stay, until the "men-foiks" came, carried me to the barn, sawed me out, and to stay, until the "men-foiks" came, carried me to the barn, sawed me out, and to stay, until the "men-foi formal business, should the opportunity come in our way. So each of us concealed three pairs of trousers-supporters in our overcoat pockets, and thus equipped we started for the ice.

The skating was superb, and I am obliged to confess that we both forgot all about our plans for business until nearly noon, when we saw one of the boys suddenly drop down behind a half-submerged fence remove his skates and begin a sort of skulking, stooping march for the railroad bank, glancing furtively now and then at a group of girls who were chattering

"What's the matter with Skinny John-

"What's the matter with Skinny Johnson?" asked my companion, swinging up to me with the heels of his skates grinding hard. "I'll bet he's busted his suspenders. Come on! Now's our chance!"

We peeled off our skates and overtook "Skinny" before he had covered forty yards of the rough frozen ground. He was clutching his nether garments convulsively when we came up with him, and pather rescated being interviewed. But rather resented being interviewed. But when I hauled out a brand-new and com But plete pair of suspenders from my overcoat pocket and said in low tones. "I say, Skinny, don't y' want to invest? Only a quarter, and no questions asked." he tumbled like a ripe pear. My partner and 1 considerately stood between him and the skaters while be harnessed up in the new "galluses." Three happy boys then re-turned to the ice field-two of us con-vinced that business and pleasure do sometimes mix as satisfactorily as maple wax and pickles.

wax and pickles.

By the way, I may add that this was the only pair of suspenders we ever succeeded in selling although we spent many holidays that winter in soliciting the public, with our stock of goods in our pockets. I believe there are still six or seven pairs of those suspenders, frayed and soiled, hanging up in father's shed chamber.

One other rule, however, "Choose some one thing and stick to it" (my father's favorite maxim) was followed by me in the most literal and faithful manner, before I gave up the illusive pursuit of can-

fore I gave up the illusive pursuit of canthe country with some six dozen small hottles of "domestic cement," for mending broken crockery, wooden articles, combs, etc. These bottles I carried in an old, soft hand begre hand bug

Houses were few and far between in that section, yet I passed three of them before I could muster up courage to go to the door and rap. Finally I made up my mind I would certainly visit the next house, no matter how forbidding the circumstances might be. It proved to be a large, imposing farmhouse, but I plunged through the gate and got to the back door somehow, though I dreaded the ordeal worse than elimbing a dentist's stairs. A pretty girl came to the door, which increased my embarrassment, of course. I stammered for a moment, and then asked her if she could kindly oblige me with a drink of water. She said she could, and smillingly invited me in while she went to fetch it. I found myself conducted into a were few and far between in I found myself conducted into : fetch it. I found myself conducted into a large sitting-room where two middle-aged ladies were engaged in sewing. "Now or never!" said I to myself, and addressing the nearer of the two ladies, I said, "Madam, do you happen to have a broken plate in the house?"
"No, sir! We don't," was the prompt reply. "Every plate in this house is whole. If you want something to eat, I hope we aren't so shiftless but what we can give it to you on a whole plate."

"Rut— but— ma'm," 1 stammered, "1

don't want anything to eat. I'm a can-

"Here's your glass of water," said the pretty girl, coming up to me so suddenly pretty girl, coming up to me so suddenly that, as I was still standing, I involuntarily retreated a step. As I did so, I stumbled backward over the cat and came down with a crash on a wooden-bottomed chair, where I had placed my bag. The shock burst the insecure hag open, and I snot down squarely on six dezen bottles of "Never-let-go Household Cement."

"Never-let-go Household Cement."
It would be graiffying to my feelings to draw the curtain over what followed. Nevertheless, I owe it to other boys who may be disposed to try the profession of canvassing, to counsel them against doing what I did at that time, should they ever be placed in similar circumstances. I

N my youth one of the economic wise saws continually repeated in my hearing was, "You can't combine business with pleasure." Yet my first business success was achieved in conjunction with a pleasure trip. A boy friend and myself, having decided to try canvassing as a means of securing some much desired pocket-money, invested in a dozen pairs of cheap suspenders. We felt that, in order to sell staple; and our own experience taught us that suspenders were about as staple articles as any employed by mankind.

The very next day after our bundle of suspenders arrived there came a glorious freeze, and the meadows near our There's mand the bag and the broken bottles had become a sort of misperson. There's mand the bag and the broken bottles had become a sort of misperson. cellaneous annex to my person. There I start through the ignorance of their boards to stay, until the "men-foiks" came, of editors and managers. This is most uncarried me to the barn, sawed me out and fortunate, as there is nothing more resuffered me to depart, amid shouts of freshing than a bright, breezy little paper gratuitous merriment, with a disc of pine edited by enterprising young spirits of wood as large as a pie-plate attached to my trousers.

But one experience of the kind proved to be enough.

### Fairy Rings

How few among our readers have failed to notice, at times, the strange, bare, cir-cular patches which are found in the meadows? Nearly all of us have seen them and many, perhaps, have wondered how they came there.

for very many years it was believed that it was the work of the fairies, who came

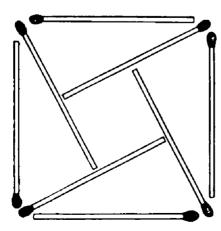

THE FAIRY RING CHAMPIGNON

out at night time in numbers and, joining hands, danced around merrily throughout the hours of darkness.

But cold, hard science exploded this theory, just as it has other theories, and pretty little stories which were once be lieved pass away into mere myths. It is now proved beyond the question of a doubt

is the ground bare? This will explain both questions. A single mushroom springs up, probably from the droppings of some bird or animal the fungus ripens and from its mycellum or spawn springs up a crop around it.

These mushrooms exhaust all the nour-ishment from the earth, in turn, they ripen and from their spawn another and larger family of mushrooms spring. These cannot grow where the parent fungus flourished for no nourishment remains, but they can grow outwards, and this is what they do. Nothing but the rankest and coarsest grass will grow within these circles.

Examine one of these circles when opportunity permits and you will probably find a fringe, more or less complete, of these mushrooms upon its outer edge. And so year after year these circles grow larger until some causes intervene to check or to destroy it.

In color, the mushroom is reddish buff, but turns to a creamy white as it grows

It is not generally known, but this variety is one of the choicest and most palatable of the fungus family. Some few recognize the fact, however, and by them it is held in great esteem and is much sought after.

is much sought after.

### Hints on Conducting a School THE MOST Paper

BY WILLIAM H. STONE.

A great many school papers fail at their

The first thing to do is to select the hoard of editors and managers. With a school paper of the ordinary size, there ought not to be more than five on the board at the most—an editor-in-chief, two associate editors, an art editor, and last, but not least, a husiness manager.

The editor-in-chief should be a boy with

a good business head and capable of directing those about him. He must also be able to write editorials that are clear and to the point. The brunt of the work will full upon the contents. point. The brunt of the work will full upon him. He must decide upon the contents and appearance of the paper. The work of the rest of the staff will be along lines selected by him. It is not necessary for him to write more than the editorials. The rest of the writing should be left to the two associate editors. In a great many schools each of the associate editors is required to write on a special line of subjects. To to write on a special line of subjects. To one is assigned entire charge of the athletic

one is assigned entire charge of the athletic department. He should make it his business to write up a brief but interesting account of all the athletic contests of any importance that take place in the school. The other associate editor should make it his duty to do most of the literary work for the paper, and needs to have the most literary talent. He should be able to write an interesting story and should have some talent at writing poetry. All outside contributions should be read over and criticised by him before they are handed to the editor-in-chief.

The art editor should do all drawing for

The art editor should do all drawing for the magazine under the direction of the editor-in-chief. He may design covers, il-

Instrate stories, etc.

The position of business manager is the The position of business manager is the most trying one of the lot. To him falls the thankless duty of collecting advertisements. Everything connected with advertisements should be left entirely in his charge. Some papers have him attend to all arrangements as to the papers' going to print and as to subscriptions. But if the paper has a good list of advertisers it is generally the custom to leave the cure of is generally the custom to leave the care of the printing and the subscription list to the editor-in-chief or else to an assistant business manager.

iness manager.

The next thing to consider is how often to issue the paper. A weekly should never be attempted by beginners under any circumstances. It soon degenerates into nothing but a little two page folder bearing little more than its title. If the school is a large one a monthly can be carried on successfully, but even then the editors will find trouble getting good, interesting material. After several years' experience at school journalism the writer finds the quarterly by far the most satisfactory of them all. Ample time elapses in between the different issues to allow the editor to the different issues to allow the editor to make improvements and changes.

### Two Tricks—Try Them

Take ten matches and lay them upon the table, side by side, about half an inch

Now, see whether you are able to arrange Now, see whether you are able to arrange them into pairs, taking each of five matches, in turn, across two others.

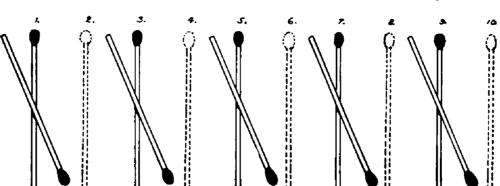

Mentally numbering the matches from left to right, the solution is as follows: 4 to 1; 6 to 9; 8 to 3; 10 to 7, and 2 to 5.

Now, discarding two from your number

of matches, arrange the remaining eight in such a way that they shall form two perfect squares and four right-angled triangles.

The diagram will show you, much more clearly than words, just how this may be

When quite familiar with the above tricks, lay them before your friends:—you may derive much amusement in watching their many unsuccessful attempts.

Perfectly safe to carry without danger of leakage. Fir-and recharges by pulling trigger. Loads from any liquid No cartridges required. Over 10 shots in one loading. All Dealers, or by mail, 50c.

ASN'T that a dandy tackle, mother?"

"Fine," I answered.
"Did you see that last touchdown? It will be a good game all right! We will swipe the P. A. C.'s clean off the field." With this announcement my small boy executed a wild jig around the kitchen, giving vent to part of the club yell with full lung power, demanding. "Who are we? we are the members of the K. O. D.!" The gray cat arched her tail and fied back of the range for safety. I held my hands over my ears, but Tony, the bull terrier, was in high glee. He frisked and barked at the feet of his little master, biting at the shin guards and padded trousers as if to test their protective qualities, while confusion reigned.

fusion reigned.

For two weeks, now, this had been a daily occurrence and the great game was but three days off. We, as a family, simply ate football, so to speak, for at meal hours father's experience and knowledge was called to bear on the subject and his advice sought to the exclusion of all other topics of conversation, while and his advice sought to the exclusion of all other topics of conversation, while mother had to listen attentively to the different yells to judge which was the most effective at a distance, until she found that she was repeating them to herself as she moved about her daily home duties, and found it very tiring to keep step with the merry march time in which they were shouted.

they were shouted.

The morning dawned bright and clear, the very air seemed charged with an electric thrill. Boys of all sizes, in many-hued jerseys with white lettering on their

breasts, appeared at an early hour conversing in twos and threes on the corners.

At eight-thirty our porch was filled with the "K. O. D." boys and preparations were the "K. O. D." boys and preparations were volferously going forward, while last instructions were being absorbed. Feeling the tension of the surroundings. I hardly dared ask my "K. O. D." to get the morning mail as usual, but it was a busy home day so I took courage and with all diplomary to my command and the surroundings. acy at my command put the question to the "quarter back."

"Certainly mother, but I shall have to wear my suit down," was the answer, while a very serious, matured look was turned upon me and a sigh drawn, which made me feel that mail was a most frivoleus things to desire an author and a constant.

made me feel that mail was a most frivolous thing to desire on such an occasion.

"Very well," I answered, "only wear a cap instead of your helmet and leave your shin guards here until you come back."

At nine o'clock all was ready and the club grouped themselves on the lawn, the "P. A. C.'s" doing likewise on a neighboring lawn. At a sign from the captain, the "K. O. D.'s" gave vent to their yell of defiance, which was promptly answered from over the way; then they solemnly stalked off followed by referees, substitutes, water off followed by referees, substitutes, water carriers and their mascot, each armed with a sponge. I watched them disappear and turned into the house with the certain knowledge that next to being a soldier's wife or a sailor's wife, to be a football boy's mother was the most strenuous life to lead.

I was a little undecided as to whether I had best prepare bandages and splints, or laurel wreaths, but finally compromised on a good luncheon with one or two of the "quarter back's" favorite dishes, and made a nice big platter of "fudge."

### The Doctor's Wife

### Agrees With Him About Food.

A trained nurse says: "In the practice o my profession I have found so many points in favor of Grape-Nuts food that I unhest tatingly recommend it to all my patients.

"It is delicate and pleasing to the palate (an essential in food for the sick) and can be adapted to all ages, being softened with milk or cream for bables or the aged when deficiency of teeth renders mastication impossible. For fever patients or those on liquid diet I find 'Grape-Nuts and albumen water very nourishing and refreshing.' This recipe is my own idea and is made as follows: Soak a teaspoonful of Grape-Nuts in a glass of water for an hour, strain and serve with the beaten white of an egg and a spoonful of fruit juice for flavoring. This affords a great deal of nourishment that even the weakest stomach can assimilate without any distress.

"My husband is a physician and he uses Grape-Nuts himself and orders it many times for his patients.

"Personally I regard a dish of Grape-Nuts with fresh or stewed fruit as the ideal breakfast for anyone-well or sick." Name given by Postum Co., Battle Creek, Mich.

In any case of stomach trouble, nervous prostration or brain fag, a 10 days' trial of Grape-Nuts will work wonders toward nourishing and rebuilding, and in this way ending the trouble. "There's a reaway ending the trouble. son" and trial proves.

Look in each pkg, for the famous little book, "The Road to Wellville."

ROBERT HUNTER, POOTBALL TRAINER

One hour rolled quietly, anxiously along; another followed, and a third dragged to its last quarter and no news; so, feeling I could not stand the suspense indoors, I wandered out where the gardener was taking up the dahlia and canna roots and preparing for winter. Glancing up the road my eyes fell upon a strange and motley crew. Were these indeed my "K. O. D.'s," soiled and serious as to faces, limping and bruised, defeat shown in every line and feature, their flags trailed in the dust and the mascot forgotten, perhaps, I thought with horror, lying dead upon the field with the umpire.

I asked no questions, merely announced "luncheon is ready, dear," realizing how many great situations in life have been saved by the announcement of a meal hour, and I followed the "quarter back" into the house, helping unbuckle the shin guards and trappings of war, or rather woe, on pretense of haste. One hour rolled quietly, anxiously along;

guards and trappings of war, or rather woe, on pretense of haste.

In a minute the yellow head was smothered on my breast and the agonized tale was told, while I burned with the unholy desire to spank the entire membership of the "P. A. C.'s" and longed to cuddle and comfort my "K. O. D.'s." Ah! we women are unwisely loyal to those we love, perhaps, and fire ambitions which oft-times brings us woe; but I said, soothingly, "Next time you will win. Don't let them think you back down with one whipping. Have more spunk."

A good wash, then luncheon enjoyed leisurely, and the world looked brighter; a dish of "fudge" and the sun shone, courage rose and going to the lawn the "quarter back" called together the clans. An hour

age rose and going to the lawn the "quarter back" called together the clans. An hour later a furious game of "I spy" was on, and in the breathless chase for goal I noticed a liberal sprinkling of jerseys bearing the symbolical letters "P. A. C." The battle was well forgotten, and a glimpse of the masset's curity head reening from of the mascot's curly head peeping from under the cellar door, assured me he still

At sunset, on the calm air arose two At sunset, on the calm air arose two familiar yells, and I knew what had happened even before the door was thrown violently open, and my dear little "quarter back" announced with a glowing face, "We play them again Saturday, mother dear. Zip, zap, zee. Who are we! we are the members of the K. O. D. Razo, dazo, Johnny get your bazo. Up skiddy, up skiddy boom Boomer-lacer-Johnny get your bazo. Up skiddy, up skiddy, boom. Boom-a-laca-boom-a-laca; siss boom ah! K. O. D.-K. O. D. Rah-rah-rah!!!"

### Training a Football By ROBERT HUNTER

Team 1 eam
An English Athlete, Who
Has Been Training Teams for Twenty Years

Story

Story

Story

In pursuance of our offer made in the August number of THE AMERICAN BOY to give to the first person sending the Updounters, and the training now consists to date Biographical Story correctly filled out, a copy of Mr. Sprague's new book, bell exercise, and sprinting. If, however, the weather is very bad skipping is substituted for sprinting. Skipping is an Admirable exercise; it makes you fast on your feet, while, further, if you are inclined to be too fleshy it reduces your superfluous weight.

The men don't all have the same kind

The men don't all have the same kind

The second arrived from Owatones also found.

of work to do. We have to study closely individual requirements. What suits one does not suit another; besides which a player's condition fluctuates. For instance, I might order a man three sprints of fifty yards, three of a hundred, and a run twice round the field. He might do this for a week and the next week his this for a week, and the next week his physical condition might be such that he

physical condition might be such that he would only need half this amount of exercise. As you can readily perceive, we have to be careful not to overdo things. Practically speaking—I am talking now of our first team—we only train on three days during the week. Training is suspended on the day of a match and on the day following, and as we usually have a couple of fixtures a week there are only three days left. However, whether there is training or no training, the men come to the ground because it is one of the rules that they shall have a shower bath daily. Once a week they have a hot bath. Hot baths I can recommend strongly, one reason being that they take your wounds and bruises out. After this bath a man has an invigorating "rub down." 'rub down.

We practice with the ball only during

rub down."

We practice with the ball only during the first three weeks of the campaign. Then about half an hour is devoted daily to shooting at the goal. When the season is in full swing and matches follow each other in rapid succession, practice with the ball is unnecessary.

I do not believe in lengthy runs as a part of a system of training. The effect of long runs is to render a player slow, whereas one of the great points in football is to get to the ball as quickly as possible. Some boys are in the habit of doing their four or five miles daily. An effort of this sort improves the wind, but if repeated constantly it unquestionably reduces your speed. Moreover, it is exhausting, especially to growing youths; and while on the subject it may be useful if I say that the best hint I can offer is this—don't overdo things, don't overtax yourself. Many of the youngsters in this neighborhood are to be seen running about morning, noon, and night, and some of them are so enthusiastic that they take an active part in no fewer than three matches on a Saturday, beginning at ten o'clock in the morning.

Excessive work of this description is harmful, and it doesn't improve your football. An hour's practice on three days a week is ample; and if you cannot practice then do a little running at night, say a distance of half a mile and two or three short sprints, which try the wind more than anything else.

Another important piece of advice is this: Take care that you are well shod, that the bars or studs on your boots are in first-rate condition. By neglecting this precaution you court disaster. Large numbers of lads pay no attenton what-spects to the condition.

that the bars or studs on your boots are in first-rate condition. By neglecting this precaution you court disaster. Large numbers of lads pay no attenton whatsoever to the condition of their boots, their footgear being absolutely broken down. Defective boots cause strains which often have serious consequences later on, a fact which should not be lost sight of either by men or by lads. Further, let me recommend you always to have a brisk rub down after a match to have a brisk rub down after a match and never to play in your ordinary clothes. If you don't change your things after playing you are liable to contract

As a rule the men may eat precisely what they please, but on the day of a match we exercise a certain amount of care in respect to our dietary. Breakfast care in respect to our dietary. Breakfast is served at nine o'clock, and each man has a mutton chop or a steak. For dinner the joint is often a boiled leg of mutton, which is the lightest meat you can get and possesses the additional advantage of being free from fat and grease. With the mutton a slice of dry toast and cups of tea are served. Tea is the best drink a footballer can have, as any doctor who is interested in the game will tell you. It is a grand thing to drink not only after a match, but at half-time. Its stimulating properties are wonderful. With regard to smoking we have no hard and fast rule, although we don't

With regard to smoking we have no hard and fast rule, although we don't expect a man to light up within an hour of the start of a match. Personally I consider that one oughtn't to smoke on the day of a match, and of course it would be wise to abstain from tobacco altogether.

These boys could not have wasted much time in filling out the story after receiving the paper, and shows that they take an active interest in the prominent men and affairs of their country.

American Boy Day "Merits

# Approval"

Luling, Texas. 1904.

Mr. Wm. C. Sprague, Detroit, Mich.:

Dear Sir—Your suggestion of devoting a day annually to American Boys is certainly timely and merits the approval of all parents. The noisy Fourth of July is a custom and not an evidence of patriotism. Scarcely one in ten who squanders his loose change in fireworks thinks of the meaning of the day celebrated. Your idea to develop the talents of American boys to develop the talents of American boys by this annual assembly in every town and hamlet is praiseworthy, and were the boys in our little town encouraged by their parents to subscribe for a good boys' paper like THE AMERICAN BOY instead of spending their little money foolishly, we would have less street runners and more intelligent young men.

Respectfully yours,

L. A. LaCROSSE.

Kirk Munroe, the favorite story-writer for boys, is now at work on a second con-tinued story for THE AMERICAN BOY, to begin during the coming winter.

That is the universal verdict of sportsmen in all sections of the globe, in commending our fire-arms. Equipped with a "Stev-ens" means if you point the weapon right, you cannot help hitting the mark! We manufacture a complete line of:

of HE only body of men actually forced IIE only body of men actually forced to play baseball whether they like it or not are the sollors and marines of our warships. The national game has been made part of the "setting up drill" of the service and the crews of the fighting craft are expected to devote so many hours to baseball, when the ship is in harbor, as a regular feature of the duties of the day. On any fine afternoon, but particularly on Saturday, the Jackies and marines of the warships can he seen marching to the ball ground, carrying with them the paraphernalla of the

RATTER AND CATCHER

great game. By the side of the column marches the bugler. It is all done in mili-tary fashion. So many men detalled to carry the bats, masks, balls and gloves; one little squad set apart as fielders, another as pitchers and catchers, a third as umpires. Nothing is left to be wrangled over on the ball ground. Everything is cut and dried as systematically and carefully as though the national game were one of the important features of the management of a great ship of war.

compelled to take part in the practice without regard to their aptitude for base-bill playing.

When the "drill" is considered over, the bugles are sounded once more and the men gather up their belongings and fall in line again for the march to the ships. Apart gather up their belongings and fall in line again for the march to the ships. Apart from the small amount of grumbling; from those who have never played the game the compulsory baseball is regarded as a great relief from the monotony of life aboard ships. and the meaningless exercises of other forms of "setting up drill." By playing baseball the Jackies and marines derive all the benefit of calisthenic movements while scenes among the Catskills and the Adirondacks and the Green Mountains, in the
midst of which he lived and moved and had
his summer holidays—all these stand out
sharp and clear, as the 'Bab Ballads' say,
'Photographically lined
On the tablets of your mind.'
And most vivid do these scenes and people
become when the vague and irrecoverable
boy who walks among them carries a rod
over his shoulder, and you detect the soft
bulginess of wet fish about his clothing,
and perhaps the tail of a big one emerging
from his pocket. Then it seems almost as
if these were things that had really happened, and of which you yourself were a
great part. enjoying the excitement of the national

Baseball is to be part of the setting up exercise whenever American warships are near enough to land for boating parties to reach a convenient ground. Whether in Turkey, Japan or Hawaii the sailors will be taken ashore to play ball provided the conditions are propitious, in order that they may improve their physique and be better fitted for the duties of fighting men of the United States navy. It is a curious drill but on the whole the most popular of all the exercises arranged for the "setting up" of the American rather. of the American sailor.

# a Boy and a Rod

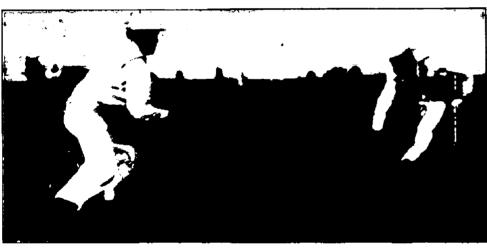

lea's most charming writer of nature studies and open-air stor-les-tells in his "Little Rivers" how he caught his first trout. Here is the

within his knowledge and the reach of his short legs. It seemed large enough to the boy, and he had long had his eye upon it as a fitting theater for the beginning of a real angler's life. Those rapids, those falls, those deep, whirling pools with beautiful foam on them like soft, white custard, were they not such places as the trout loved to hide in?

"You can see the long hotel piazza, with the gossion groups of wooden chairs stand-The Recollections of "You can see the long hotel piazza, with the gossipy groups of wooden chairs standing vacant in the early afternoon; for the grown-up people are dallying with the ultimate nuts and raisins of their midday dinner. A villatious clatter of innumerable little vegetable dishes comes from the open windows of the pantry as the boy steals past the kitchen end of the house, with Horace's lightest bamboo pule over his shoulder, and a little brother in skirts and short white stockings tagging along behind him. With suppressed excitement, they steal past the house, and 'emerge in the field of the cloth of buttercups and dastes." MENRY VAN DYKE-perhaps Amer-

impires. Nothing is left to be wrangled over on the ball ground. Everything is just and dried as systematically and carefully as though the national game were one of the important features of the management of a great ship of war.

To listen to the conversation of the overtop the falling water. You pluck a

THE WIDE TROUBERS INTERFERE WITH GOOD BASE RUNNING

Jackies as they swing along towards the ball ground one would think that some of them regard the compulsory playing of the national game as an unmitigated nuisince. Not all the men who callst on American ships of war are native born and some of the sailors have never played baseball in their lives. These find it a decided hard-hip to be compelled to take their place besind the bal and fan the atmosphere in abortive attempts to find the clusive ball. Said a German Jackie who was wending 'is way to the ball field at Leigue Island New Yord bast Saturday.'

Said a German Jackie who was wending 'is way to the ball field at Leigue Island New Yord bast Saturday.'

There is only the faintest image of him on slippery—how pretty! Just like a piece of rainbow!'

The stream out of the stream to see the red spots? Did you notice how gamy he was, little brother; how the played? It is a trout, for sure; a real trout, almost as long as your hand. "So the two lads trainp along up the stream that runs through the country of Auld Lang Syne, and fill your creel with the recoilections of a boy and a rod.

"And yet, strangely enough, you cannot recall the boy himself at all distinctly. There is only the faintest image of him on the later of the red spots? Did you notice how gamy he was, little brother; how the played? It is a trout, for sure; a real trout, almost as long as your hand. "So the two lads trainp along up the stream that runs through the country of Auld Lang Syne, and fill your creel with the recoilections of a boy and a rod.

"And yet, strangely enough, you cannot they legin already, being human, to wish for something larger. In the very last pool that they dare attempt—a dark hole under Navy Yard last Saturday:

'Vot for is this foolishness. Shall I make a onse gunner for not being able to hit der base ball already? I hit der target at gun practice better as anyone on board. Yhy den must I make sport for der oders

der base ball already? I hit der target at gun practice better as anyone on board. Vhy den must I make sport for der oders by blaying ball ven I know not how?"

Whatever their feelings about it, however, 'be sailors must play ball, so to the grounds at the Navy Yard they go when time for play comes. At the grounds they are notified by signal from the bugle when the games may begin. The Jackles are divided into squads so as to form as many nines as possible. As the grounds used for the baseball "setting up drill" at the League Island Navy Yard are very commodious there is usually room for all and plenty to spare. The sailors are not allowed to remove any part of their uniform. As they go about the ship so must they go about the ball grounds during the baseball drill, and the unusual sight is presented of Jackles flying around the bases with their wide trousers threatening to trip them up at every step, of the pitcher performing more than were mover means for sallow wide trousers intratening to trip them up at every step, of the pitcher performing gyrations that were never meant for ankles enveloped in flowing white ducks, and of men accustomed to hit a target at five miles perspiring profusely in a vain effort to hit a small sphere at as many yards.

There is great rivalry among the men

of the various ships to surpass each other in the scores, and so far as is possible games are arranged between the rival teams for Saturday afternoons. On these special occasions it is not difficult to oust the poor players from the teams on some pretext, leaving only the crack men to up-hold the honor of the ship. Apart from these special games, however, the men are

warred through the air and landed thirty feet back in the meadow.
"Teor pity's sake, don't lose him! There he is among the roots of the blue flag."
"Tve got him! How cold he is how slippery—how pretty! Just like a piece of rainbow!"
"The year good the real state of the land of the land."

THE GRAND STAND

a steep bank, where the brook issues from the woods—the boy drags out the hoped-for prize, a splendid trout, longer than a new leadpencil. But he feels sure that there must be another, even larger, in the same must be another, even larger, in the same place. He swings his line out carefully over the water, and just as he is about to drop it in, the little brother, perched on the sloping brink, slips on the smooth pine-needles, and goes sliddering down into the pool up to his waist. How he weeps with damay, and how funnily his dress sticks to him as he crawls out! But his grief is soon assuaged by the privilege of carrying the trout strong on an alder twiz; and it the trout strung on an alder twig; and it is a happy, muddy, proud pair of urchins that climb over the fence out of the field of triumph at the close of the day." triumph at the close of the day."

The best Air Rifle made. Shoots accurately and with great force. Brings down the game and makes the "bull's eye" every time.

Made of polished steel. Rounded walnut stock with pistol grip. Finely nickeled and polished. Shoots B B shot or darts. All parts interchangeable.

Price Single Shot, \$1.00, Repeating, 1.25

Boys, insist on having the "KING" Air Rifle and you won't be disappointed.

### WONDERFUL BOY SWIMMERS OF NEW YORK A. L. HAZZARD 333

READY TO DIVE FROM THE BOWSPRIT OF A SHIP

mg nown—proad railroad noats loaded with whole trains, with a bow wave cascading ahead of them whose roar can be heard clear in shore; tugs, single and tandem, tearing down with wallowing lighters and schooners, sometimes fastened five and six abreast, sometimes strung out in single file for a quarter of a mile; stamphine harmonic for a quarter of a mile; steamships, barges, sali and steam and gasoline and oar—all pouring through the water gate of New York to the sea.

York to the sea.

And out into this plunging, clustered arrosy, into the heavy waves that always toss in the strait and are made ten times more violent by the rending and beating of paddlewheels and screws, darts a tiny, brown thing, four feet long, lean shanked, ribs showing under a brown skin-Jimmy, heading through a world's hurrying commerce to swim to the spar buoy on a dare. And Jimmy does it. A few Jimmies get drowned every year, but the drowners are only a tiny percentage of the ten thousand swimmers whose round heads bob all bround New York from dawn to night and even at night from the first warm sun of Mry to the last days of September.

### BEST SWIMMERS IN THE WORLD.

"I have seen the negro boys diving for West and in the lear, blue waters off Key whirls."
West and in the lapus lazuli sea off St. Jimmy of Thomas. I've seen the famous Port Said compliment.

### Lazy Coffee

some other triend who canno swim to undergo the same glorious experience of the heights of the pler above the surface of the rivers, the tenement house boys become fine divers. The boy who cannot take a clean-cut header is

swim out to de spar buoy!"

swim out to de spar buoy!"

The spar buoy, red and flashing, is straining in the glare of sun on the East River half a mile off shore in the wickedest tide that ever raced from a fitty named fiell Gate to the sea.

With that ebb tide, eager to profit by its rush, the daily wonder of fleet comes driving down—broad railroad floats loaded with whole trains, with a bow wave cascading ahead of them whose roar can be heard clear in shore; tugs, single and tandem,

A GANG OF SWIMMERS AT AN EAST RIVER PIER

cut criss-cross by tides and eddies and whirls."  $\,$ 

Jimmy of the river front deserves the

This swimming hole is from thirty to themselves headfirst into any old garment, and, snatching what is left, race away, a mile wide, without a shoal spot in it.

the tidal flow

### SWIMMING LESSONS IN FIVE FATH OMS.

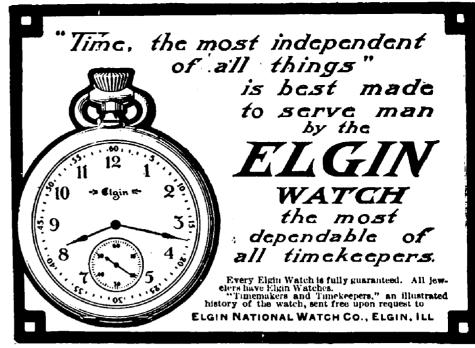

There isn't a shelving beach or a foot of natural shore of any kind left along the sides of this East River. It runs between banks fifteen and more feet high made of

standing straight in water thirty feet deep. The tenement house boy can learn to some straight in water thirty feet deep. The tenement house boy can learn to some straight in water thirty feet deep. The tenement house boy can learn to some straight in water thirty feet deep. The tenement house boy can learn to some some in two ways. He can go into the some in two ways. He can go into the some in two ways. He can go into the some in two ways. He can go into the some in two ways. He can go into the some in two ways. He can go into the which is a refuge of paltry souls, or he can walk holdly out to the end of a pler where, within a few moments, somehold will come to the rescue of his possible hesitation by heaving him far out into the racing river.

Around him will be three or four lean

then they will snatch at him and haul nime to the surface and there, in the deep, open river, in the grip of a current that carries them all along like chips, the novice gets his swimming lesson.

It being mostly a case of "swim or drown," the novice usually learns to swim before he gets ashore. And the next day he will burn with noble impatience to lure some other friend who cannot swim to undergo the same glorious experience.

viewed with open scorn, and kind hands are ever ready to seize him, hold him out over the brink by his feet and drop him in head first, thus teaching him in boisterous, but explicit, fashion how to dive.

### MAGNIFICENT DIVERS ARE THEY.

They can't dive for coins like the boys of the sub-tropics, for the water of the North and East Rivers is black-green, and no coin could be seen a foot below the no coin could be seen a foot below the surface. Also, the bottom being of the inkiest of black mud, the poor coin would be swallowed in forty feet of ooze the moment it reached there. But throw a white oyster shell or any similar bright object that is not heavy enough to sink in the mud, and the average New York riverfront boy will bring it up every time from water thirty feet deep.

front boy will bring it up every time from water thirty feet deep.

He can catch most objects before they reach bottom. But if he has to get clear down into the marine night and grope around in the swirling mud, he will do it. And if you hold a stop-watch on him, the second hand will make a good journey before the water gives him up again.

When the heat blasts the rookerles and fills the dirty streets of the poor districts with sodden vapor and stenches and the lamentation of wilting bables, the boys practically live in the river.

It is nothing uncommon for boys to dive

practically live in the river.

It is nothing uncommon for boys to dive into the stream at eight in the morning and not to climb out again till noon.

Thin, si ering, with teeth chattering, they still manage to escape cramps and all the other terrors of water. And in the hours that they spend in the river they get no rest other than that to be obtained by clinging now and then, snail-like to the slippery slimy spiles.

### MORE FISH THAN BOY.

They do everything that a fish does. They an swim under water as well as on top. They catch each other by the feet and full each other under. They struggle, with arms locked around necks, deep below the surface, till there isn't a breath left in their tough little bodies. They play tag, prisoner's base, and even ball in the river. They will, on proper occasion, engage in a regular fight with all the rules, pummeling one another with as much attention to detail as if they were on dry land.

The plutocrats among them wear those apologies for fig leaves that are known as tights. The more rugged citizens wear

as tights. The more rugged citizens wear their skin alone.

The perfection to which they have brought the art of dressing and undressing is worth a chapter in the history of clothes. Arrived at the end of the pier, the tenement house boy gives himself a shake and a wriggle. The shake sheds the trousers. The wriggle sends the shirt into the air. The next instant he is overboard. The lot of the policemen assigned to duty at the piers is one of heartrending humor.

at the piers is one of heartrending humor, if one is sighted heading down the pier, and there is time, the spiles are alive at the warning signal with boys, who filt up the smooth, wet wood like lizards, fall wildly on the tangled mess of clothes, hurlibermeaking headfirst into any old garment.

a mile wide, without a shoal spot in it.

That mad strait known as East River is a pot that is a-boll all the time.

Its waves do not roll. They tumble. Its currents carry steam craft along like toys, unless they head straight into the pull of the tidal flow.

It there isn't time to do this, the boys on the pler grab the clothes and rush away to aiding places or around to the next pier, while the swimmers, resting contentedly in the water, make shrill rethe tidal flow.

(Continued on page 373.)

### American Boys' :: Life of :: Theodore Roosevelt

Companion volume to "American Boys' Life of William McKinley"

### By EDWARD STRATEMEYER

HIS book covers the whole life of our This book covers the whole life of our honored executive as schoolboy, college student, traveller, author, State assemblyman, civil service and police commissioner, governor of New York, as a leader of the Rough Riders in Cuba, as Vice-President, and finally as President. Many chapters have also been devoted to Mr. Roosevelt's numerous adventures as hunter and ranchman (true stories, which are er and ranchman (true stories, which are bound to be dear to the heart of all boys who love the strenuous life), and full particulars are given of the daring battles for Cuban liberty in which our worthy Presi-dent, as lieutenant-colonel of the Rough Riders, took such a conspicuous part. With appendix. Finely illustrated from photographs, \$1.25, postpaid.

Sight, Automatic Shell Extractor, shoots 22 caliber cartridges, and just the thing for target practice, or rabbits, squirrels, fox, or other small game. We will give any honest boy one

or more rowing crews, and the sport has likewise been taken up in many preparatory schools, private military academies and institutions attended principally by younger lads.

Of late years the boat racing at schools and colleges has mainly taken the form of contests between eightoared crews, but in many hoat clubs made up of lads in their teens there are com-

oared crews, but in many boat clubs made up of lads in their teens there are com-petitive trials of skill be-tween oarsmen in single sculls, that is, racing boats with but one pair of oars each, and between teams of two and four rowers each each, and between teams of two and four rowers each. Scientific rowing as a sport for young men has never been a fad or a craze but it has enjoyed a long period of favor which, as has been said, is constantly increasing. As a college sport it is older than either football or beschall in their present form, and incidentally it may be noted that not even a champlonship football game arouses such supreme excitement as is manifested game arouses such supreme excitement as is manifested at the great heat races on the Hudson River at Pough-Leepsie, N. Y., and on the Thames River, at New London, Conn., the scene of many historic contests between the oarsmen of Yale and Harvard colleges.

Many a how who has not

The training of an oarsman as carried on today at most American schools and coltoday at most American schools and colleges is quite as strenuous as that of the football players. Indeed the all-invortaniboat race, when it is finally pulled off, is to the rowers but a repetition of the work they have gone through with every day for weeks previous. At most schools or colleges the preparation for the summer hoat races begins in January and at some institutions the training of the young oarsmen is taken up soon after the opening of the school year in the autumn.

school year in the autumn. The boy who wishes to practice rowing at all seasons of the year must of course get his training indoors during the winter months, unless mayhap he lives in the far South. At some of our educational institumonths, unless mayhap he lives in the far South. At some of our educational institutions there is in connection with the gymnasium a great tank in which the boys can row, but most schools do not enjoy this luxury and the winter work must be done on rowing machines. In either case a sliding seat is used such as would be found in a racing shell, and in the case of members of a prospective racing crew the young tree occupy the same positions with relation to one another that they will when actually in the racing boat.

A rowing machine is, of course, vastly

A rowing machine is, of course, vastly better than nothing, but about all that can

Stantly growing in favor and by this is not meant merely those excursions in scow or row-boat-very excellent in their way-which are a feature of the camping exceditions of most boys, but the more strenaous and somewhat more hazardous diversion of rowing in frail and easily capsized shells, or, as the sport is commonly known,—college boat racing. Nowadays almost every one of our prominent colleges, situated near any suitable body of water, maintain one or more rowing crews, and the sport has likewise been taken up in many prepara-

their muscles plient and sup-ple and to strengthen their ple and to strengthen their wind. A boy who has taken up rowing at senool during the winter mouths usually finds it very difficult to make the change from a securely fastened towing machine to an unstable ruong shell, and as a rule takes many an involuntary bath are he is able as a rule takes many an involuntary bath ere he is able to balance himself in the shaky craft. In many instances hoys who wesh to row in races do not autempt to row in a reguer racin; shell until they have practiced for some time in what is known as a "working or heavy." These work. is known as a "working boat" or barge. These work-ing boats have the same kind of sliding seat and oars as a racing shell but are broader, heavier and do not tip over at each slight pro-

SHOVING OFF

FTER a rapid descent of (11 Round little fellows had several thousand eyes, ing me that he did this so that he could of the valley, and at once struck out for home in their quest for honey, and that

The day before, a flock of wild turkeys pany with my companion and neighbor, Sam Taylor, I had taken a climb at day relieved at stated periods. break to see if any trace of those turks could be found.

19:30 a. m., and although the atmosphere risk of being stung, so before I realized had been pretty crisp when we started out it, we were actually home, and I, most at five, it was now quite warm, especially for the last of October, and here and there bloom, even though the trees had begun to take on their autumn blush.

Leaving the woods that skirted the base through which we would have to pass to

footpath that struck through the strip, Taylor suddenly stopped, and touching me on the arm, said:

"Look, do you see that?"

"See what?"

"Why, that little fellow."

my companion was pointing, I observed upon the petals of which a beautiful Italfan honey-bee had settled.

My friend Taylor had been a bee keeper reached the place where we had flup in "York State," as he expressed it, our friend, the bee, the day before, previous to his moving to the south-land, never have noticed.

to extract the last drop of nectar.

Not knowing how the thing was to be be to me a new experience, I quickly as-

sented to Taylor's proposal.

I had hardly finished speaking before the little bee, having filled its honey sac, began to rice, and slowly circling, to strike the manufacture of the manufacture of the sample of the proposal to rice, and slowly circling, to strike carrying the number of the sample of the sampl off in a northwesterly direction, in a line so straight that Taylor exclaimed;

As we continued our journey home, my companion gave me so many remarkable companion gave me so many remarkable huzzing about the melted wax, and one by and fascinating facts concerning the habits one they settled on the rock, to the great of the bee that I at once became an enthusiast on the subject.

I learned that a swarm, or colony of bees, was made up of a population of from sized piece of bark, and then creeping up to twenty-five to thirty-five thousand inhabitants, known as worker bees, and that this teeming little kingdom was presided this teeming little kingdom was presided the sure by a queen bee, only one of which was made up of a population of from over by a queen bee, only one of which was in the bive, and how she had her retinue of attendants who fulfilled her every wish as she moved majestically from cell to cell; how the queen was the mother of the whole crowd, because being the only perfectly developed female bee in the catch the odor of the sweet, for it at once hive, she laid all the eggs, laying as many as two to three thousand a day.

Great was my surprise also to learn that the thousands that composed the main population were imperfectly developed femal's; that their average life was but five weeks, and that they literally worked themselves to death in their al- line, truistic career, whereas the mother queen lived for several years.

Another thing that surprised me much

Ton Mountain, we finally reached which accounted for the fact that they the undulating foot hills at the head would range as far as five miles from the colony was thoroughly organized, some bees acting as nurses for the young brood. had been seen to disappear in the woods others ventilating the hive, others ranging that covered the mountain, and in com- as field bees, while the entrance to the home was guarded by sentinels who were

These, and many other facts gave me an intense desire for a closer acquaint-When we reached the valley it was about ance with the little fellows even at the eager for the morrow to dawn.

It seemed that I had been in bed but a could be seen a late wildflower in full moment when I heard the cheery voice of my neighbor calling me to get up and get ready to start.

I at once became much interested in the the fertile valley and in about an hour's the hunt, for it was made up of things I time reached the edge of a dense piece of had never heard of before, and I was more woods, about two miles long by five wide, than puzzled to know how each implement was to be used. There was a peculiar little tin furnace affair with a leather bellows, Just as we were about to enter the little which he called a smoker, and with which he had subdued many a swarm up in "York State." In addition to this he had a pair of steel climbers, such as telegraph linemen use, a brace and bit, a saw, an ax, a piece of beeswax, a glass tumbler, a bottle of thick sugar syrup, a pepper box And looking in the direction in which filled with corn starch, a piece of rope, and two veils made of mosquito net. This outabout five yards off a lone wildflower, fit, with our lunch, we crammed into two good-sized baskets.

> Striking off through the woods, we soon reached the place where we had first met

"Yes," said Taylor, "this is the spot all and his former associations had led him to right," and upon examining the flower he quickly observe what I would possibly found that the little fellow had not visited it as yet, for deep in its corolla lay a Moving nearer, Taylor carefully studied bright, clear drop of nectar that had been the busy little fellow as it buri-d its head distilled over night, so throwing ourselves in the corolla of the flower in an endeavor, on the ground we patiently waited the bee's coming.

"I don't know what to make of that. One hour passed, then two, and no signs little fellow's presence, for to my certain of the bee. What could it mean? I began knowledge, there are no bee keepers within to think that our bee hunt would fizzle. seven miles of here. The fact is, that bee when Taylor, rising, remarked, "I guess seven miles of here. The fact is, that bee when Taylor, rising, remarked, "I guess is but one of a swarm that has a home in the mode of a swarm that has a home in the mode of a swarm that has a home in the mode of a swarm that has a home in the mode of a swarm that has a home in the mup;" so gathering a few sticks together, he soon had a fire, in the center of which he placed a stone about the size of a cocoanut in about ten minutes the stone was smoking hot, then taking it from the fire he placed upon it a small place of beeswax and soon had the air home."

how the thing was to be "I guess that will bring them if anyous to join in what would thing will," said my guide, "for if they eatch a whiff of that wax they will come

carrying the pungent odor of the wax in

of in a northwesterly direction, in a line every direction.

Ostraight that Taylor exclaimed:

"Now you see what is meant by a "bee before we were made aware that our scheme had been a success, for bees came apparently from every quarter, not one or two, but fully two dozen; they came delight of my friend, who at once began to make an effort to capture one of them.

Taking the bottle of syrup from his pocket, he poured a little of it on a goodits crystal prison, in a wild effort to escape. Finding that its efforts were vain, it at last quietly settled on the side of the tumbler, which my friend gently lifted for a second as he slipped beneath it the syrup covered bark.

did not take the little fellow long to crawled down the side of the glass, and dipping the end of its little tongue in the

yrup, proceeded to fill its little sac.
"Watch it closely now" said my gide,
for as soon as it fills its sac it will circle a few times, to mark the location of that syrup for another trip, and then it will strike off in a bee line for home, and we must carefully observe the direction of that

line, or we lose the object of our hunt."

Lifting the glass, my friend took from his pocket a tin pepper box, containing some even starch, and coolly proceeded to sprinkle it over the feeding bee until the little fellow was as white as snow; assur-

identify it when it returned after a while with some of its companions, for the re-

mainder of the syrun.

Having sipped all that it could conveniently carry, the bee began to slowly rise. and fly in ever widening circles, above the syrup it had left. Each time it came round, the circle of its flight veered off to the northwest, instead of directly over the bark, until as Taylor remarked. "On its last two or three circles it comes back, after it has notwelle greated between ofter it has actually started home, to throw a final loop about the syrup to make sure that it is there, for the reason its circles veered to the northwest was because its home was in that direction, and it had that constantly on its mind, and only continued to circle to be sure it could

"Look, look," my friend suddenly cried, pointing at the swiftly moving bee, "there it goes in its bee line for home;" and sure enough, away it went in a line so straight that we were able to observe its flight for Leaving the woods that skirted the base. I at once became much interested in the only about two hundred yards, and then of the mount, we wended our way across outfit which my neighbor had brought for as a little black speek against the sky, it passed out of sight

"Well, the only thing we can do now. remarked my guide, "is to wait for that bee's return, and that will be determined by the distance it has to travel to its home." So making ourselves comfortable, we waited and watched for possibly thirty

minutes, when we were finally rewarded by seeing not only one but six, of the little fellows light upon the bark.
"You notice," said Taylor, "that one of those little follows is white; that's the one I marked, and it has brought those others Thatsen, and it has brought those others along to help carry the syrup to its home. When all were quietly sipping the syrup. Taylor gently placed the glass tumbler over them, and throwing a handkerchief about the glass to keep them from becoming alarmed, he took the whole affair in his hand and attention.

his hand and started off in the direction in which we had observed the former flight of our powdered captive, and when he had gone three hundred yards, he gently placed his burden on the ground and quietly lifted the glass.

After filling their little sacs, the bees rose one after another, and circling, flew for home, but Taylor paid no attention to any of them until the flight of the one that had been powdered, for as he said, "sometimes a bre from another swarm will find filled with honey comb from which we taken from a colony that had died, so that when the bees were all ready for housekeeping. The next day about 10 o'clock, we began the work of transferring. After smoking any of them until the flight of the one that had been powdered, for as he said, "sometimes a bre from another swarm will find them with honey comb from a colony that which had been taken from a colony that had died, so that when the bees were all ready for housekeeping. The next day about 10 o'clock, we began any of them until the flight of the one that had died, so that when the bees were all ready for housekeeping. had been powdered, for as he said, "some- and found that it was quite hollow and times a bee from another swarm will find filled with honey comb from which we took your syrup, and unless you are following the same bee every time you will be thrown off the track. So keeping our eyes on the little white fellow, we watched its circles, and followed its flight for about the same distance as before

We waited now as before, but found that the little fellow returned much sooner than the last time but this was not surprising for we were about 300 yards nearer its home, which lessened the distance of its flight going and coming, so that in about fifteen minutes we again beheld our little friend, whom we called "pale face" because of its coat of white. After it had settled we went through the same process of covering it with the tumbler and carry-ing it about three hundred yards nearer its

home, before releasing it.

"You have noticed." remarked Taylor,
"that the little fellow takes its bearings
anew each time, and if it should fail to do so, it would go back to the spot when it first discovered the syrup and we would was Taylor's statement that each of the little fellow was as white as snow; assur- never be able to trail it to its home."

After going through this process several times, it soon became evident that we were getting very near the little fellow's home, for it would apparently no sooner home, for it would apparently no somer leave us before it would return again, so carrying it forward once more we placed it on the ground, and had no sooner lifted the tumbler before we were treated to a genuine surprise, for as soon as the little fello rose and circled, instead of veering off toward the northwest, it bore toward the southeast, and as soon as it struck out on its bee line for home, it went back

over the trail we had just traversed.
"Well: well well:" laughingly cried Taylor, "we have gone beyond the little fellow's home, and that home is somewhere between here and our last stop. low's home, and that home is somewhere between here and our last stop. But never mind, that often happens; we'll fool little pale face yet." Sure enough, it soon returned, and when it had settled we simply carried it back about half the distance of our last move, and when it rose and circled we were delighted to see it make a short "bee line" for an old oak tree, and lighting upon one of its limbs, at once passout of sight through a small opening about out of sight through a small opening about an inch in diameter.
"Well, we've trapped you at last," cried

Taylor, as he becan strapping on his steel climbers preparatory to a climb of investi-

After starting a fire in the smoker, by cramming it full of dead leaves, he tied one end of the rope to his belt, and in a minute minute of the role o

one end of the rope to his belt, and in a minute was nimbly climbing the sides of the oak, and in a few moments was astride the limb, about two feet from the entranc to the rustic hive into which bees could occasionally be seen going.

Before the bees had a chance to resent his intrusion, he coolly placed the nozzle of the smoker in the entrance of their home, and pressing the bellows, sent a dense cloud of smoke among them that set every bee buzzing at such a rate that it seemed

cloud of smoke among them that set every bee buzzing at such a rate that it seemed like a saw mill under full swing, as I placed my ear against the side of the tree. "That will give them something to think about for a while." he shouted down. "Now tie the other end of this rope on one of those buckets, and put in it the saw, and the brace and bit." Upon my so doing he soon had them hauled up to the limb.

the brace and bit." Upon my so doing he soon had them hauled up to the limb.
"Sometimes we have to chop the whole tree down." shouted Taylor, "if the swarm has made its home in the body but as this is in the hollow part of the limb. I will saw it off at each end, just a little beyond the home of the colony, and let it down with the rone." with the rope,

After boring two or three times, Taylor at last found where the limit of their home was, and in few minutes the outer home was, and in few minutes the outer end of the limb came crashing to the earth, leaving. Four eight feet of the old limb projecting from the side of the tree. When this was nearly sawed through, he tied the rope about it, and throwing the other end over a branch just overhead, let it dangle to the earth, directing me to hold on tight and keep the limb from falling when it should swing clear of the tree, which it did after a few more strokes of the saw.

Climbing down the tree, Taylor soon stood at my side, and wiping the perspiration from his face, triumphantly surveyed the limb as it slowly swung to and fro, a stubby piece of oak about nine inches thick and about five feet long, full of bees,

that were keeping up a constant buzzing, but making no attempt to sting us.

My guide afterward told me that our safety was due to the smoke, which, while it did not harm the bees, yet so thoroughly alarmed them. alarmed them, that, thinking they were to be driven from their home, each and everyone of them had gorged itself with honey, which so distended the abdomen that it was a physical impossibility for it to sting, as a bee has to bend the abdomen in order to sting, and this gold had men in order to sting; and this, said he, is the reason why bees that have swarmed can be handled so freely, because at that time every fellow is as full of honey as it

can stick.

"If I should do as most bee hunters do. I would burn sulphur and brimstone, an i by killing the bees with its furnes I coult then take the honey without trouble or ceremony, but it's against my principles to kill the bees."

"What can we do."

"What can we do then?" I inquired.
"Why we will just leave them here until tomerrow and then drive over for them and cart the whole concern home, and thus get honey and bees both." It was now quite late in the afternoon, and this seemed the wisest course to pursue.

The next morning found transfer beatles.

The next morning found us again beside had tacked a pieco of wre mosquito netting over the entrance to the bees' home to prevent their getting out, we lifted the limb to our shoulders and in a few minutes had it out at the road where we loaded it on our light

Placing the rustic hive on a board down in the garden near the house, Taylor started off after dinner for a drive of eight miles over the mountains to visit a bee keeper in the neighboring town, and when he returned at night, brought with him a frame hive with combs already built up.

about seventy pounds of beautiful golden

honey.
While I was wondering what the little while I was wondering what the little fellows were going to do for foed for the winter, now that we were taking their hard-earned stores. Taylor soon put my mind at rest, for he had already anticipated this, by making about thirty pounds of syrup with sugar and hot water, which he placed in a wooden feeder in the upper story of the frame hive, into which we had already brushed the bees, and when we peeped in at the end of the week we found that they had taken every drop of that syrup down stairs, having converted it into honey, and had safely stored it in the combs for the winter. They were humming away as contentedly as could be.

perfectly satisfied with their new home.
Several times during the next few days we ranged the forest over, and ere the winter had fairly set in secured several good swarms, and had a good sized aplary, every colony of which we had trailed and captured in the woods.

captured in the woods.

BOYS OVERCOAT

URDLE racing is one of the events in athletics which finds great popularity with the young a hlete, who is full of snap and energy.

While it is hard to lay down any absolute rules in order to secure success as a hurdler, owing to the diversity of styles used by the athletes in starting and negotiating the humbles in starting and negotiating the success. tiating the hurdles, there is much in a general way which all must observe if they expect ever to lead at the tape in this

The first thing a novice at this game needs to learn is to clear the hurdle in orthodox fashion, which will make his course as smooth as possible and devoid of any semblance of halt in clearing the obstacle. Supposing the regulation two feet six inches hurdles are being used, the best way to become proficient is to practice going over the hurdle with two or three strides, making sure that the jump is made in the proper way, and wasting as little energy as possible. It might be well to have the top of the hurdle loose to avoid a fall.

The correct way to clear the hurdle is to account the proper way to clear the hurdle is to account the hurdle is to acco

the opposite foot from which you spring, which is usually the left, so that it passes over the hurdle first and is ready to put to the ground for another stride as soon as you are over. The leg from which you jump should be extended behind and lifted as much as possible, to avoid hitting the hurdle.

land on the other side in such a position ning helps greatly to strengthen a hurdler that there will be no halt, but the run, in making a good finish.

Be careful not to overtrain, as the man

less this is done in a proper style no boy can ever hope to excel in hurdle racing.

As soon as the first hurdle can be taken without hesitation, find out if you can make the distance between that and the next hurdle in the usual seven strides. If not, practice it in nine, until you can negative the second hurdle mithout a half

gotiate the second hurdle without a halt.
The distance being the same between all

in making a good finish.

Be careful not to overtrain, as the man who is fit and fresh has an enormous advantage in this event over one who is "stale." 'stale.

Gymnasium work will be found very beneficial to the hurdler, especially free exercises and pulley work, that help to strengthen the abdominal muscles.

Smoking must not be indulged in, as it affects the wind.

the other hurdles as between the first and the second, the flight can then be tried, and improvement becomes a matter of perseverance.

In a 220-yard hurdle race there are ten flights, two feet six inches in height, twenty yards from the start to the first hurdle and twenty yards between each hurdle.

It is not necessary in training to run the full distance every day. A race is often won over the first two hurdles.

If these are properly taken and you do not tire yourself out in the attempt, the rest of the race is a matter of so many strides and a jump, repeated until the tape is reached.

In a 220-yard hurdle race there are ten flights, two feet six inches in height, twential for the racer that his stomach. It is essential for the racer that his stomach be in good condition. With the exception of these two things almost any food can be eaten, and if the runner feels that he needs any simulant, a raw egg swallowed whole will be very beneficial.

On no account take any alcoholic liquor. For hurdle racing always wear regular jumping shoes, with spikes in the heels. This will prevent any slipping after clearing the hurdle.

A boy learning to hurdle is liable to get

is reached.

Speed and condition are the only other factors in such a race. Quarter-mile run-this branch of sport.

discouraged at first, but if he sticks to it he will eventually take a great interest in this branch of sport.

### WONDERFUL BOY SWIMMERS OF NEW YORK

August 1 is the fete day of the New York water boys. On that day whoever ventures near the edge of a pier is more than likely to be hurled into the water. It is a sacred rite whose origin is lost in the past. "Launching Day" they call it, and many a silk-hatted, frock-coated stranger, visiting a pier in the tenement districts on business, has learned about it suddenly by finding himself struggling in the river, while a crowd of elaborately innocent loungers watch the kindly but strangely clumsy efforts of the swimmers around trying to save him.

Most tenement house boys whose timid-

Most tenement house boys whose timid-Most tenement house boys whose timidity has kept them from learning to swim until that day, are impelled to the piers then by the same irresistible impulse that used to lead persons to throw themselves under the car of old Juggernaut. Down they wander, with palpitating hearts, and over they go, to scramble ashore presently as full-fledged swimmers or else to be grappled for and brought up as corpses, which is something that happens on occasion.

casion.

"Launching Day" isn't the ferocious feast of riot that it used to be on the river fronts years ago, when absolutely everybody who ventured on a pier went overboard as soon as some one could get behind him to administer the shove. Nowedays strangers generally are left alone. But it is just as well to remain from piers if one does not wish to be "launched." Among the boys it remains the same wild

ceremony that it has been; and he is a singularly fortunate boy who escapes a

### "SAVING" A DROWNING LAD

The way in which a sputtering, water-blinded, terrified victim is handled by the hoys who wait for him in the river is a liberal education in the art of saving life. The boy swimmers of New York can handle a drowning lad as easily as the athletes in a swimming tank handle the ball in water polo. They dive for the sinking one, drag him upward by the hair, hold him up till he has his breath, pull hold him up till he has his breath, pull him under again, pass him from hand to hand, join hands and dance in a ring around him in the water, and altogether do everything that mischief and recklessness can lead imps to do.

A favorite feat of these wonderful little swimmers is to dive from high places; and there are high places enough and to spare for the nurpose. No boy is considered as worth real consideration and applicable unless he can dive straight and

Don't jump too high; rather endeavor to traverse as great a distance as possible each time you leave the ground.

Take great care that the foot that reaches the ground first after clearing the hurdle strikes the ground straight forward, otherwise a sprained ankle may be the result.

The arms are a very important factor to a hurdler, and they should be used both for lifting the body at the jumps and also to balance the body while going over.

In practicing over the hurdles it is well to bandage the jumping foot, so as to save scraping if it should touch the hurdle.

Having found out how many strides it takes you from the starting line to the first hurdle, practice starts and take the hurdle in the proper style.

If the crouch is properly performed when going over the hurdles you are bound to

(Continued from page 369.)

marks to the policeman that are calculated with deep cunning to affect his holiest private feelings.

QUEER "LAUNCHING DAY."

don't see them go over and never know anything about it till the crv is set up on the pier by small brothers and sisters:

"Hey, fellers, Jimmy has just went down, and he ain't come up again!"

Then all hands dive and grope around, swim incredible distances under water, wriggle into deadly spaces between timbers deep in the dark swirls of tide to search for Jimmy. Generally they get him: but generally Jimmy is a dead Jimmy.

Yet day after day in the summer other boys, totally innocent of swimming a stroke, jump over bravely and trust to

### CLEVER WORK WITH THE to form the fan. Note that they are uniformly spaced. The handle is a matter best left to your own taste. Carve it as artistically as you can and have the body of it POCKET KNIFE JOHN L. DOUGHENY

No. 3—The Fancy Fan

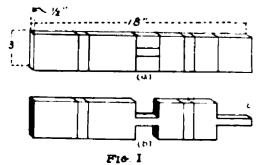

MONG the multitude of articles that can be whittled from a single stick, there is none more beautiful than the "fan." The term "fan" in this connection applies to a score or more of designs, all derived from the same general idea. The fan is a good barometer of a boy's whittling ability; and no matter how long he practices whittling

he will have a chance to improve in fan making. Some of the designs are so marvelously intricate that one really wonders how they were made. The specimen we take for our subject is about midway between the simple and the difficult. The execution of our plans call for no extraordinary skill with the knife, but the peculiar character of the design affords a boy an excellent opportunity to exercise whatever artistic talent he may possess. The selection of material is more than usually important. Clear white pine is the best wood to choose, and, before using, it should be either steamed, boiled or soaked, until it is soft and pliable. If you can not finish the job in one sitting, be sure and leave it immersed in water till you begin again. The piece to begin work on is eighteen inches long, three inches wide and one-half inch thick. These dimensions need not be adhered to strictly; they are given merely to show the relative proportions. The difinch thick. These dimensions need not be adhered to strictly; they are given merely to shew the relative proportions. The dif-

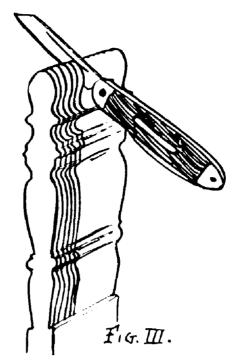

ference in size will of course affect the finished article. Before beginning actual work we will draw a diagram on each side of the stick. Lay it down on a flat surface of the stick. Lay it down on a flat surface and find a point four inches from end, there draw a straight line across the grain. Draw another line parallel with the first at a point one inch below it, and a third line four inches below the second. These guide marks should be on all four sides of the stick. The shape of our finished article with the like and the second strains and the stick. will be like one large wheel surmounting another and smaller one. The lines now another and smaller one. The lines now drawn constitute a rudimentary diagram of the first wheel. Our next concern is to separate the diagrams. We do this by cutting the connecting neck down to a width of three-fourths of an inch. The stick is three inches wide, therefore we will cut with saw one and a quarter inches from each side. Cut first on the lowest line you have drawn and again two inches

above it. Connect the inside extremities of the whole idea. Fig. 5 is a picture of the saw marks with a long straight line running with grain and cut away the portions outside of the fligure thus formed. The second wheel is laid out like the first, only its ends are five inches apart and search of its divisions is two inches long. A solid space of one inch is left between. Fig. 1, part a, shows the stick properly marked; part b shows what has to be cut away. Our next cutling is done with a knife on the three-inch face of the piece. It is by far the most important part of the work and largely decides the appearance of the finished article. Cut in all the curves and scallops you have a mind to, but don't go deep enough to weaken the stick. Fig. 2 shows a neat way of doing it. You can copy it by keeping the paper before you while you work. Be sure and have the indentations on both sides accurate and uniform. To make the fan we slimply split the top and bottom sections, as far as the lines. The splits are about the thickness of a knife blade. It is rather ticklish work to make them, but if you have obeyed instructions, especially those dealing with the treating of the wood, you should be able to manage it successfully. Don't bear straight down on the knife. Hold it rather lightly and saw back and forth till it reaches the limit. When the entire piece is split satisfactorily, grasp the end splinter and draw it slightly forward; then do the same to the second, and continue until you have reached the other end and increased the width of the stick to about four inches. Go over them consecutively again and keep at it till the section grows to be a half circle. Treat the one above it in the same manner and the first wheel is complete. The manner of making the second wheel is substantially like that of the first. Fig. 3 shows a section of the piece split. In the same manner and will frightly and manner of making the second wheel is substantially like that of the first. Fig. 4 shows the splinters partly drawn out, whitting

slender enough to conform to the general outlines of the whole idea. Fig. 5 is a picture of the completed fan. We have

# The Drawing-Room Magician

Articles on Same Subject in Last December, January, February and August Numbers

Now, although this is a thoroughly good and presentable illusion, you must not run away with the idea that it is going to cost you a lot of money. As I outline it here, the outside expense for all apparatus connected with it should not be more than 51 or 75 cents; and the apparatus has been so chosen that each part may be used separately for other tricks.

Unlike those I have hitherto described,

the young magician will find in this case the aid of an assistant of great service. He should also have on his stage (if I may call it such) a fairly sized screen; the use

of this will be seen presently.
With an opening something like this the

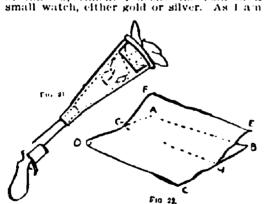

A Watch-Shooting Trick—The Use and Construction of The Magic Pistol

Number of make for you a funnel-shaped barrel about ten inches long, to fit on the pistol—(see fig. 19)—the width at the end being about 2½ or 2¾ in. Into this you must get made a little cup of the shape shown in fig. 20 (A), and of such a size that it fits well, but not too tightly, into the mouth of the funnel. (See fig. 20 (B). You will notice there is a rim round the edge of this cup, and its use is this. When the performer picks up his magic piscol for the purpose of placing in it the borrowed watch, it is as seen in fig. 21. the borrowed watch, it is as seen in fig. 21, having the cup fitted into the funnel, with a piece of paper spread inside, whilst un-derneath this in the barrel itself is another conjurer sets to work:

"Ladies and gentlemen,—For the purpose place of paper of the same color,

Now, at the opportunity afforded when

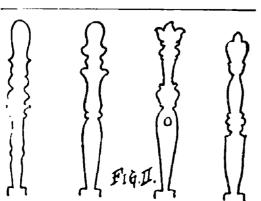

the conjurer walks towards the screen and then turns round to face his audience, talk-

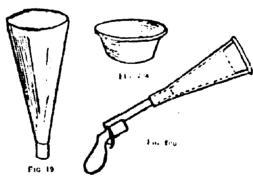

badly in need of a watch I frink I should ing to them meanwhile, he may adopt one badly in need of a watch I chick I should prefer a gold one. Now, this ady has kindly lent me hers. Is it a level, madam? Yes! Thank you. The lady says it is a lever" (leave her), "you will olserve it is going to leave her; in fact, it has now left her. You are sure it was going, madam? The lady is quite sure the watch is going. Yes, madam, it is going—to a different part of the room.

'I shall now wrap this lady's watch in a small piece of thin brown paper. You will all notice the paper is brown, it has to be brown or you can't do the trick—but that's brown or you can't do the trick—but that's by the way. I shall next put this little packet into my magic pistol, so!" (He walks back to where the screen is, then again addresses the audience.) "Now, John" (calling to assistant), "I wish you to bring me that black cloth you have behind there. Thank you' Will you kindly turn both sides towards the ladies and gentlemen. You will notice my assistant holds in his hands a small cloth, and in the pistol I have the lady's watch done up in paper. Now, John, you don't mind having a watch fired at you, do you?"

John says he has no objection: the per-

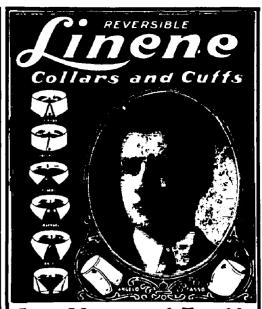

ing to them meanwhile, he may adopt one of two methods to place the watch in the possession of his assistant. He may (1) either "palm" off the cup while he turns his back (to render this easy there is, as has already been said, a rim round it) and slip it up his waistcoat at the same time putting down the pistol on the table, or (2) he can "palm" off the cup in that hand, which, when he (the performer) is facing the spectators, will be nearer to his assistant behind the screen, and as he is talking to the people just slip the "watch hand" an inch or two behind the screen where the assistant will be waiting to relieve the conan inch of two belind the screen where the assistant will be waiting to relieve the conjurer of the cup; or, if the former method be adopted, with the watch still up his waistcoat the conjurer may walk behind the screen himself to call John, but really Personally, I prefer the second method for it is better the conjuror should not go out of sight of the audience.

Now let us see what John does with the watch in the cup. He quickly takes it out, unwraps it, and then brings forward a black cloth about 15 in, square, the peculplack cloth about 15 in, square, the peculiarity of which is best seen in the accompanying rough sketches. Horizontally, across the middle of the cloth, and stretching from side to side, is very neatly sewn another piece of exactly the same material, being, however, just a trifle over 15 in across, and measuring a trifle over 7½ in, from where it joins the main cloth to the bottom. (See 56.22) bottom. (See fig. 22.)

Suppose the whole cloth was held by its suppose the whole corn was held by its four corners in a horizontal position, then this flan, as we may call it, would hang as shown in flg. 23, so that, when holding the whole fabric vertically by its two upper corners and the two corners of the flan, what we have the corners of the flan. what we really have will be as seen in fig. 24—1. e. although the people apparently see only an ordinary cloth what there is in reality is a "flap" covering the upper half of the background. I hope I have made

# A Miniature Theatre a. NEELY HALL

WITH ILLUSTRATIONS BY THE AUTHOR

ROBABLY nothing can be found which will make a more interesting entertainment for a winter evening than a miniature theater, such as illustrated in this article. The construction is not difficult, and when several work together it is possible to complete it in a short time. While the boys

PIG. 1-THE FRAMEWORK

are building the play-house and doing the carpenter work, the girls will find plenty to do in painting scenery, making costumes for the doll actors, and arranging the many details of the performance.

The necessary material can probably be found in the attic, cellar, and wood-shed, or can be height as a small cost. A silt

or can be bought at a small cost. A gilt picture frame makes an excellent proscenium for the front of the stage. The frame should have an opening about twenty-four by thirty-six inches.

The framework of the stage is made of

narrow boards and is built upon two horses the width of the picture frame, one two feet six inches high and

other two feet nine inches high.

Figure I shows the first and rear frames, consisting of two uprights, A and B, seven feet long, which are nailed to the ends of the horses, and a crosspice C, nailed across the tops. After making the frames, place them five feet apart with the lower horse in front, and screw three boards to the tops of the horses, as shown at D, E, and F in figure I. Cut three narrow strips of wood and screw them to the tops of the frames, as shown at K, L, and M. By fastening the frames together with screws, they may be taken apart after a performance and set out of the way.

The stage floor rests upon the large Figure and strong the frame and set out of the way. Figure 1 shows the hart and

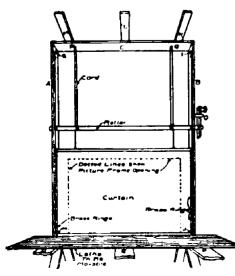

The stage floor rests upon the boards D, E, and F, and pitches from the back toward the front, It is made of laths laid close together parallel to the front of the stage, but not nailed.

Now set the picture frame between the uprights of the front frame so that the opening will come on a level with the stage floor, and wire it to framework, running the wires through the screw-eyes in the back of the frame.

Make a drop curtain out of white muslin, and after hemming it along the two side edges, sew small brass rings on to them two inches apart. Tack the top and bottom to two strips of wood. A scene of some sort may be painted upon the curtain, but a picture pasted to the cloth will serve.

In figure 2 we have a view from the stage of the arrangement by which the curtain is the arrangement by which the rings of the arrangement by which the property will serve.

In figure 2 we have a view that the curtain is suspend the frames by means of cords of the arrangement by which the curtain is suspend the frames by means of cords and lowered. Two heavy wires are from the tacks in the top of the framework. raised and lowered. Two heavy wires are slipped through the rings on the curtain and their ends are fastened to four screweyes placed in the uprights at G. H. I and J. Slip a broomstick through two holes bored in the uprights A and B and make a bored in the uprights A and B and make a crank on one end as shown in figure 2. Fasten two screw-eyes in the cross-piece at P and Q and slip two cords through them, fastening one end of each to the top of the curtain and the other end to the roller. When the crank is turned the string winds around the roller and raises the curtain the little by necessary to screw a buttain It will be necessary to screw a but-ton to the upright B at O to hold the crank when the curtain is up.

F1G. 2

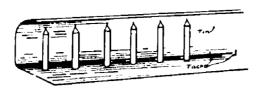

FIG. 3

the footlights. A piece of tin, the length of the picture-frame opening and ten inches wide, should be bent into the shape shown in the illustration, and candles should be placed on this three inches apart. Paint the outside of the tin black.

Secure several boxes about ten inches square for the side lights, and hinge one side of each for a door. Cut an opening four inches square in one side of the box and, after making a groove in two strips of wood, as shown at A in the illustration (figure 4) fasten them above and below the opening. This forms a groove for glass slides to be used when you wish to throw colored lights upon a scene. The slides consist of old four-by-five camera plates with colored tissue-paper pasted upon them. A small baking-powder can with its bottom with colored tissue-paper pasted upon them. A small baking-powder can with its bottom removed should be placed in a hole cut in the top of the box for a chimney. Lining the inside of the box with tin will make a the foot of Mount Washington. I send him the foot of Mount Washington. A small baking-powder can with its bottom removed should be placed in a hole cut in the top of the box for a chimney. Lining the inside of the box with tin will make a

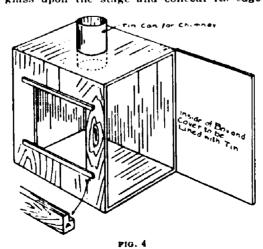

The making of the scenery.

The number of wings required is governed by the nature of the scene. Four wings will be necessary for an ocean scene, and these should be made as shown in the finished illustration. Sketch out the wings and after coloring them with chalks, cut out the openings in the center, carefully

cutting around the clouds and waves. Tack In making forest scenery, it is much easier and more satisfactory to use evergreen boughs for trees, shrubbery, etc., and sand and gravel for hills and roads, than to

attempt painting them.

To represent a pond, lay a small looking glass upon the stage and conceal its edge

with sand. A rustic bridge of twigs may

be built over it.
Paper dolls, soldiers, and horseback riders can be purchased for actors and these may be tacked to the edge of one of the laths forming the stage floor and moved by pushing the lath across the stage. The audience will not detect the moving of the lath. Toy boats, wagons or trains may be propelled by a black thread which will not show against a dark background.

An interior takes up but the front portion

of the stage and consists of three walls made of cardboard with wall paper pasted upon them and doors and windows cut out. Doll furnishings will complete the scene.

A play may be made up from any fairy story or child's book, or may illustrate some battle. Battles will probably interest the boys more than anything else.

After setting up the theatre for a performance, draperies should be hung in front of it covering all excepting the stage opening.

Detroit, Michigan.

Yours truly, GULIE A. WYMAN.

### Boy Mechanics and Artisans

Boy Mechanics and Artisans

Homer M. Frank and Joseph Asbury, Jeffersonville, Ind., have an "electrical shop" 16x12 feet, equipped with an Albert motor, miniature lights, induction coil, buzzer, bell, and a burglar alarm, and are greatly interested in electricity.—Reinhart L. Nordness. Webster, S. D., is interested in electricity and has been working with it for a year and a half. About a year and he made a complete telegraph sounder which worked well. He also put a small electric light in his room which was operated by four sulphuric acid batteries. He puts electric bells in houses and has had several orders. He recently put in an electric me alarm in the school house, getting \$1.50 for the work, the school hoard furnishing the apparatus.—R. Coie Holmes, Columbus Junction, Ia., wants plans for a small gasoline engine. He can furnish a plan for a "continuous running water motor."—ftyland S. Banks, of the Palladium Company, New Holen, Conn., wants information as to how to make a water bleyele.—Cordie H. Coffin, Crown Point, Ind., wants to know how to build a windmill about 20 feet high.—George I. Bartleson, 224 Hunting Park avenue, Philadeiphia, Pa., wants to know where and at what price he can buy blue prints for a gasoline engine, tour horse power.—G. K. Greason, Shawnee, Okin., wants to know how to build a good 12 or 14-foot wooden canoe or row bont.—John M. Coons, Manhattan, Kan., has quite a workshop of his own and among his tools is a foot power seroll saw and a home-made lethe. He wants directions for making a one-quarter horse power, 104 volt alternating motor.—

### The Drawing-Room Magician

(Continued from page 374.) this quite clear, as it is the pivot on which the whole trick turns.

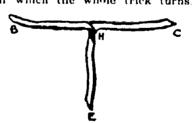

Fig. 23.

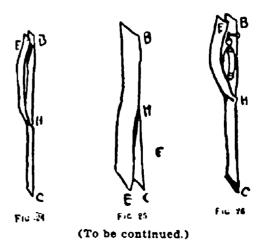

Now, along the free end of the flap, from now, along the free end of the hap, from corner to corner, a small metal rod is sewn in, so that when the assistant, holding the coth as before described, lets go of the two corners of the flap, this latter, owing to the weight of the rod, falls quickly

down as in fig. 25.

On the top half of the cloth (marked BH), at the point x, is sewn an ordinary watch swivel, and to this the assistant attacles the watch, but when before the audience holding the cloth by the four corners (the two of the flap and the upper two of the main fabric) so that the watch

is covered, as in fig. 26.

Then the performer takes up his pistol in which is a piece of paper (this is pulled forward a bit, the audience all the time believing it contains the borrowed article), points the weapon at the cloth and fires; immediately on hearing the report John drops the corners of the flap and the watch is seen attached to the cloth.

### Boys and Animals

Harold Hoover, Abilene, Kan, wants to know what ails his chickens when they cannot walk straight and are droopy. Doubtless by the time he receives an answer through these columns he receives an answer through these columns his chickens will be dead, but the answer may serve to help other boys who are having trouble with their chickens.—Leonard Gulick, Waterford, Wis., wants to correspond with boys regarding rabbits.—Lewis A. Washburn, Brewster N. Y., wants to know how to raise phensants and care for them.—Ernest Bergeson, Earlville, Ill., wants the boys to know that he has five pet coons. A boy says that his pigeons have lice and wants to know how to get rid of them. We would suggest that he hop "Figeons and All About Them." written by C. E. Trombley, Boston, Mass., price 50 cents.

### With The Boys

Ernest V Wenzel, Philadelphia, Pa., is a great admirer of THE AMERICAN BOY. He great admirer of THE AMERICAN BOY. He has taken it from the first. He is a member of the Central High School orchestra, which he says has played twenty-five times since September 1st, 1903. The orchestra received \$50 for an engagement on November 19th. He collects stamps and coins, has a Brownie camera and a Bull's-Eye camera.—E. E. Hye. Rutledge, Pa., thinks that Eugene Libby, of Denver, who wrote in praise of athletics in a recent number of THE AMERICAN ROY, put it too strong. 'It consider,' says he. 'Ithat a boy who improves himself mentally, and perhaps in the course of time becomes a successful lawyer or master of some other profession, just as good as the boy who improves himself physically and becomes a professional baseball player. Athletics are all right in their place, but I do not think a good man must necessarily be a good athlete. I consider his views on this subject rather narrow "Louie Rosenthal. Las Vegas N. Mex., complains that many boys of the Fast think that New Mexico is full of Indians. He b'ames dimenovels for this. He says that if they think New Mexico is barren and desolate they are mistaken. 'Let them visit our exhibit at the World's Fair.'' has taken it from the first. He is a member

By C. H. RUSSELL

GROUP OF DELEGATES TO BALTIMORE U. A. P. A. CONVENTION

Third Am near Press Association was held in Paltimore, Md., July 7. 8 and 9, and it will be long remembered as one of the most success-conventions that amateur journalists have ever held. The convention headquarters were at the St. James Hotel, where followers of the two leading presidential candidates opened special rooms as political headquarters. There were nearly a dozin different badges of the various candidates and an elaborate souv nir badge was given to the delegates by the Reception Committee. A pretty, illustrated, southing the Charles H. Russell, for The United Amateur, and honorable mention by Alfred Kohlberg, for The Westerner. The winning stories and essays were then read. These laureateships are titles awarded annually, a decision being made from articles published in amateur papers during the year. A judge is appointed by the President for each of the four classes of writing, the judge being some one engaged in professional, literary or newspaper work.

An address full of original and genuine humor, mixed with pathos, was delivered by Mr. Strickland W. Gillian, of the Baltimore American and President of the candidates and an elaborate souv nir badge was given to the delegates by the Reception Committee. A pretty, illustrated, souvenir program and numerous booklets, etc., were distributed. This convention was also a leader in regard to the character and extent of publicity given by the local news-

C. Albert Haugh, chairman of Reception Committee, called the convention to order on Thursday morning, introducing President Seymour. William R. Murphy was appointed secretary pro tem and Miss Hilda Jaeger Treasurer pro tem. A special Hilling Jacger Treasurer protein. A special committee appointed to investigate the claims of F. Clifford Davis, who had been declared suspended from the office of Secretary by the Board of Directors (the judicial triumal of the organization), reported that Mr. Davis had been treated unfairly. Mr. Davis then took his seat as Secretary. After adopting a regular order of business several communications were read, including one from Mayor Timmanus, of Balti-

more. Harry L Walsh, Louis 3 Cohen and Geo. W Darragh were appointed a committee to draft a new Constitution. The appointment of the Proxy Committee was next in order. This committee counts the ballots of absent in inhers, which have been mailed to the Custodian of Date resident of the committee to the Custodian of Date the late of the committee counts the both mailed to the custodian of Date the late of the committee to the custodian of Date the late of the committee to the custodian of Date the late of the committee to the custodian of Date the late of the committee to the custodian of Date the custodian of appointment of the croxy committee was next in order. This committee counts the tailets of absent in index which have the convention, adjournment sine die was been mailed to the Custodian of Ballets, a had at 3:14 p. m. Several photographs of resident of the convention city, appointed by the President. A storm of protest was Place. resident of the convention city, appointed the delegates were taken in Mt. Vernon by the President's appointments. About 3 o'clock the delegates assembled which were claimed to be unfair to the majority. During the excitement which followed Mr. Seymour resigned, but afterward reconsidered like action. The discussions of an exciting session as was this one illustrates one of the many sides of Amateur Journalism, and although the arsuments and attacks were blitter on the convention floor, fraternal friend-ship again asserted itself during the effernoon Early in the evening a chartered electric carwas hearded and the delegates enjoyed a ride through the city's suburbs, spending an hour at one of the pleasure parks. The horns and other peace disturbing instruments made it a noisy, jolly ride.

President Seymour called the convention to order Friday morning and announced the laureateships as follows: Essay: Wm. R. Milley, "Looking Backwards;" L. J. Cohen. "Local Press Clubs;" C. A. Haugh, "Baltimera A. J. C." On behalf of the delegates, James A. Clerkin, with appropriate remarks, presented ex-President Seymour with an inkanteur); honorable mention, Harry A. Nelson, "Spirit of Muslo" (Bockworm); story, Morgan D. Hite, "The Affair of the Incomer" (Westerner); honorable mention.

President Seymour called the convention to order Friday morning and announced the hureateships as follows: Essay: Wm R A. Clerkin, with Murphy, "Poetry Writing" (The United Am deur); honorable mention, Harry A. Schrift of Musle" (Bookworm); stand and ex-Off story, Morgan D. Hite, "The Affair of the Incomar" (Westerner); honorable mention, Mrs. Flora S. Emory, "Her Wedding Trip" one of the most one of the most story in the Christel Amateur). (The United Amateur)

Reports were not received of the editorial and poet entries but the editorial faureateship has since been announced as won by

timore American and President of the American Press Humorists' Association. Mr. Gillian was elected to honorary mem-bership in the Association. The reports of four officers were read and the meeting then adjourned.

The afternoon and evening were spent or The afternoon and evening were spent on board the specialty chartered steam launch, "Major Allen." Among the places visited were Fort McHenry (there the "Star Spangled Banner" was written), Fort Carroll, the steel works and ship building plant at Sparrows Point, and Riverview Park. After a moonlight sail over the broad, cool waters of the Chesapeake the launch drew up at the dock about 10 o'clock. The Proxy Committee had commenced its work on the boat and worked menced its work on the boat and worked all night at the hotel, completing the count of the vote about 6 a.m. Saturday. The final session was called to order on

Saturday morning by the President and the credentials of several members were examined with satisfactory results. A com-mittee to secure designs for an official em-blem was appointed as follows: C. H. Rus-sell, chairman, M. E. Occhsle and F. S. Emory. Several telegrams and letters and Emory. Several telegrams and letters and the President's report were read and ordered filed. Rising votes of thanks were given the President, Official Editor, Baltimore A. P. C., Baltimore press, and retiring board of officers, and the convention reporter of the Baltimore American was also thanked. The four laurenteship judges were elected to honorary membership. The election was next in order and it resulted as follows:

President, Maurice J. Cohen, Minneapolis

Vice-President, Arthur C. Block, Kansas

City, Mo. Secretary, Frank D. Murphy, 85 Albion

t., Brantford, Ont., Can. Treasurer, John J. Cleary, Baltimore, Md. Official Editor, John W. Smith, Philadel-

Boys' Books Reviewed

Boys' Books Reviewed

A SELECTION FROM THE WORLD'S GREAT ORATIONS, by Sherwin Cody. To the High School boy, the young debater and orator, or the young man who is looking forward "the applause of listening senates to command," this volume will be found interesting and most instructive. He will find in it examples of the many styles of oratory ranging from Demosthenes to Wendell Phillips. Each oration exhibits the particular diction, phrase-logy and method of the orator as pointed out in the introduction to it. Many of the orations are given complete while others are abridged in a way which still leaves the characteristics of the speaker intact. In the collection we find the names of: Cicero, Savonarola, Hossuet, Chatham, Burke, Grattan, Curran, Sheridan, Fox, Erskine, Patrick Henry, Daniel Webster, Lincoln, Gladstone, Ingersoil and Beecher, with shorter selections from Robespierre, Daniel O'Connell, Fitt, Canning, Brougham, Clay, Calbour, Hayne, Channing, Everett, Choate with shorter selections from Robesplerre, Daniel O'Connell, Fitt, Canning, Brougham, Clay, Calhoun, Hayne Channing, Everett, Choate, Sumner and Seward. There is an appendix containing Macaulay's celebrated description of the trial of Warren Hastings and an extract of Professor R. C. Jebb's "Attic Orators." The book ought to find a place on the shelves of all young orators, 518 pages. Handsomely bound, Frice, \$1.00 net. A. C. McClurg & Co. bound. Price, \$1.60 net. A. C. McClurg & Co. MERICAN BOYS' LIFE OF THEODORE ROOSEVELT, by Edward Stratemeyer. The success which attended the American Boys' Life of William McKinley was ample testimony to Mr. Stratemeyer that a biography of the present honored occupant of the White House would be received with enthusiasm by his large and ever growing constituency of American boys. We believe that this book will, on account of the stories of sport and hunting, prove a greater favorite among the boys than its predecessor. The life of President Roosevelt is one calculated to delight and inspire older readers as well as the younger spire older readers as well as the younger

boys, and Mr. Stratemeyer has withheld nothing of the "many parts" his eminent subject has played "in his time," which in the telling will arouse in the reader hearty admiration and an earnest determination to seek after those things in life that make for true manhood and worthy citizenship. There is nothing wanted to make this book a complete biography of Mr. Roosevelt, from school-room to executive mansion. The chapters describing his ranching experiences with the many stories of hunting big and little game, all of which are true, will appeal strongly to the strenuous American youth. The author also gives most vivid descriptions of the fighting in Cuba and the splendid work of Roosevelt's Rough Riders. As a holiday gift none better could be put in the hands of a boy. 311 pages. Price, \$1.25. Lee & Shepard. boys, and Mr. Stratemeyer has withheld noth-

ONE THOUSAND POEMS FOR CHILDREN, edited by Roger Ingpen. What mother does not feel a glow of pride at hearing her boy or girl "speaking a plece" before un audience of admiring relatives and sympathetic friends; the great difficulty often being the lack of a subject capable of demonstrating to the fond mother's satisfaction Johnny's or Mary's histrionic genius. In the book before us the most exacting and critical of parents will surely find what she wants. The volume shows great lab ir and research as well as rare discrimination and good taste not only in the selections themselves, but in their division. Fart one of the book consists of rhymes for little ones, cradic songs, nursery rhymes, fairy land and fables and riddles; part two is for older boys and girls. The teacher who possesses a copy of this book will hold it as one of the most useful secessories of the school-room. There is a most useful index of authors and index of first lines which will greatly aid in finding the selection wanted. The book is most tastefully gotten up. 416 pages. Price, \$1.25 net.

### Why the Flinn-Egan Stock Co. Failed

cause he stuck in the money. We also had a couple of what is called quiet pardners who don't say nothing but are interested in the concern. They were two Belgian Hairs. Me and Willie made a fine rabbit house Me and Willie made a fine rabbit house but lacked funds to get the rabbits with. My mother wouldn't help us out neither. So Bobbie Flinn said he'd get his pa to huy some if he could be a pardner, which we did. Bobbie's pa had lots of money and owned a soap factory and we all wanted to clean up a big pile. So me and Willie took Bobbie into pardnership and we all went to a man who sells fancy Hairs and Rabbits. I heard people tell about Hairs being always worth lots of money, so when the man asked us what we about Hairs being always worth lots of money, so when the man asked us what we wanted. Hairs or Rabbits, I spoke up and said we was just starting so if Hairs was as good as Rabbits give us Hairs. So he gave us a couple of brown rabbits what two dollars more than other rabbits. cost two dollars more than other rabbits because Bobbie's pa was footing the bill and the man said Hairs was the best and

hecause Boddle's pa was footing the outand the man said Hairs was the best and
we departed.

When we took them to my house my
mother was very mad at first but got over
it as usual, and we put the Hairs in there
new home. Then we had a meeting and
voted that Bobbie was to get the grain
and other boughten stuff being as he was
treasurer of the company, and me and
Willie was to get the hay. That was dead
casy for us because Willie and me knows
the man what runs the hay market and
he agreed to give us hay if we promist
him a little Hair once in a while. He
said he felt the need of Hairs more and
more. So we agreed. Besides the hay.
Willie promist to find a carat every day,
and Hairs and carats go well together
when prepared right. So he began going
over to the grocery store every day for
mother without getting mad as he always
used to do and looked for carats when Mr.
Jones was getting the stuff, with awful
good luck. good luck.

Well things went along nice for a while. Bobbie brought over the shelled corn and lettice and me and Willie got the hay. And for two hole weeks Willie kept finding carats. The Hairs loved carats and got fatter and fatter every day and were making O. K. and we all knew that in a few days more our Hairs would be eighten carats fine cause Bobble's pa said so and he ought to know. and he ought to know.

But that very night we had a big scare. I woke up in the middle of the night and heard a big dog barking furious and runging around the yard. It wasn't our dog neither for he always stade in nights. So I woke up my big brother Jim who sleeps in my bed, and me and him hustled down in the back yard in our shirt sleeves not stopping to dress at all. Then we heard the dog barking down the alley and hurried there with a lantern where he had one of our Hairs treed between a brick pile and the fence. The night wasent so very cold so Jim unpiled enough of the bricks so as to be able to pull out the Hair. Of course I dident blame Jim for teeling bad for you must know it ain't very nice to have to chase up and down dark alleys for stray Hairs at 2 a. m. In his night clothes, but at last we got him out and brought him back to the pen where his anxious mate was waiting. After we fixed the hole where he leaked out we went back to bed and Jim said he wouldent do it again for the best Hair in the mar-But that very night we had a big scare. went back to bed and Jim said he wouldent do it again for the best Hair in the mar-ket, no not even for that lovely Belgian

Hairess of ours.

Of course Bobbie was glad to bear the news and said me and my big brother was a couple of bricks for saving the pardners from loss. That mite or mitent be so I told Bobbie, but any how my mother said our bed looked like a hole brick yard on account of us bringing so much brick dust back to bed with us.

So we had a meeting after school that day as soon as Willie got back from finding his regular carat, and voted to put a new lock on the pen. Bobbie said he knew how to make a real combinashon lock, Willie and me dident know much about such things so we agreed, and then we such things so we agreed, and then we voted to build the lock the next day which was Saturday. Of course we had all the tools what was needed which were all the tools what was needed which were a boring bit, a piece of old rope and a hammer and saw. And so the door was duly fixed with a latch cord to slide a stick back and forth with. It worked fine and we tried it a lot of times to our sorrow as I will tell you about. You see our dog Skip ain't a fool by a long shot and when he saw us pull the string to open the door about ten times it pleased him.

"ME AND WILLIE PRIT AWPUL BAD, AND 80 DID SKIP"

ity, the owner must keep a watch, and, can call in the aid of one "practiced in the art," so to speak, and, if so, a personad with it, as a swarm of bees cannot be well illustration how to manipulate the bees and handle them himself in future.

If the sun be warm, it is wise to throw

By the end of the season, if all the honey the door about ten times it pleased him grately. But he sat there looking on and dident even bark to tell how glad he was because you see Skip is a fox terror and they don't always tell all they know. So when we all went to dinner, Skip sort of hung around the back yard careless like and stade out doors. But when we got out of sile he dident take long to get to bizness. I guess he got on to the combinashun lock like a regler safe cracker because when we got back from dinner both Hairs were dead and that dredful Skip was having lots of fun playdredful Skip was having lots of fun playing hall with them. Me and Willie felt awful and so did Skip you can bet when we awful and so did skip you can bet when we caught him. We let him know what it ment to ruin our company. And when Bobble came over after dinner with his peck of shelled corn and heard the bad news he was very solemn for a while.

news ne was very solemn for a while.

Of course then we had another meeting of the pardners in the wood shed and Bobbie voted to give Skip to the dog catcher but me and Willie voted that the combinashun lock was all to blame and if we was for terrors we would set institute. e was fox terrors we would act just like Skip if we got a chance. And Bobble ogreed but hoped never to be a fox terror for he thinks they can't be beat for mean-

ness.
So then we voted to divide the dead Hairs and me and Willie got the Hair and Bobble and his pa got the Hairess. My mother thought Skin did the best thing and when the Hair was cooked she said Skip was to have all the bones. Willie's

Dear Mr. Editor:

No doubt a lot of people wonder why our bizness busted up and so here are the plane facts.

It was a pardnership what belonged to me and my little brother Willie and a neighbor boy whose name is Bobbie Flinn. Bobbie's name came first in the firm because he stuck in the money. We also had a course of what is called guiet pardners and my big brother Jim he said he hoped

when skip gets done with a Hair you don't need to think of the market.

Well me and Willie skinned ours and of course it tasted like any other Hair to us and my big brother Jim he said he hoped Bobble and his pa would try it again some time for he always did like Belgian Hairs. But the pardners voted to try belgians for a charge or even plane reported. chickens for a change or even plane rab-bits because we don't fancy Belgian Hairs. They dont pay. People all say there is lots of money in it, but Bobble's pa says its an awful bother to get it out.

Yours truly. JOHNNIE EGAN.

P. S.—When the skin of our Belgian Hair got dry me and Willie cut off the stubby tale and made the old man at the hay market a present of it. And that was the end of our Belgian Hair. JOHNNIE.

### Bees for Boys

Of all branches of minor livestock hobbles perhaps bees are the most interesting. Besides, bees can give a return in pocketmoney that many of the other branches entirely fall to do.

Broadly speaking, an apiary requires little or a standard process.

the or no attention outside the summer va-cation, and any little care can well be un-dertaken by a kindly neighbor when the boy is at school.

The boy whose tastes lie in the direction of livestock, can secure a bar-framed hive and a good, healthy swarm of bees for four or five dollars. If he has not the money, or five dollars. If he has not the money, maybe his parents will give him a start financially, and should he be successful during the summer he can, if necessary, supply the household with honey to defray the original cost. A hive will usually clear its own expense the first year, and maybe leave a little to the owner besides.

The hive must be placed facing the sun, and sheltered from the winds and storms are much as possible. Any local bec-keeper

and sneitered from the winus and storms as much as possible. Any local bee-keeper will see this done, and set all in order for the beginner. If it be a good season, little or no trouble will be entailed until swarm-around the sides of the or no trouble will be entailed until swarming time comes round. By June this is likely to happen, and the owner must keep a lookout for signs of this exodus. He must have another hive ready to receive the swarm that comes off. Bees can be made to swarm artificially, but the natural plan is the better, and the beginner had better leave the bees to their own sweet will in this.

When the swarm comes off

When the swarm comes off will more than likely settle honey will flow in both hives. When necessary, sections have to be fixed on top of the hives proper, and these sections will be filled by the active workers. It is these sections that become the marketable upon some neighboring bush or low tree; but should it unfortunately rise and leave the local commodity.

thus settled they will remain in that position. Towards afternoon, when the sun has faded somewhat, secure one of those old-fashioned straw hives, and fix a small piece of honey-comb inside and well to-wards the top. Any sort of syrup spread over the inside will serve the same pur-pose. Now approach the swarm and gently place this hive over the bees. Give them a little time, and it will be found that the colony will slowly disappear from the branches and cluster inside this erection. Once the queen enters, you may rest as-sured her followers will vie with one an-

other to be heside her.
When all are in the hive, place a board underneath, and remove it wholly to the empty hive prepared for them. Before the hive, spread out the sheet, up to the entrance of the same, and turn out all the bees on to this sheet. No danger need be feared during this operation, as bees during swarming time are not over-vicious. If the owner has any dread of being stung he can guard himself by covering his face with a net, and tying his coat-sleeves and trousers with cord. He will then be shield-ed from all stings with the exception of his hands. But if steady caution be used, no harm can possibly come to the operator. Once the bees are on the sheet, it is

necessary to keep a look-out for the queen. Her majesty will be readily distinguished from the others by her size and length. Once she enters the hive, all the other bees \$2.00 Delivered. Sprague Pub. Co.

a sheet over the nomadic colony, and walt has been removed from the hives, the bees until the sun goes down. Once they are must be supplied with food, so as to create honey sufficient to cover their winter's demand. This is a most important item in bee-keeping, because a hive that has not sufficient food stored against the months in which the bees cannot get abroad, turns weakly before spring, and if it does not die out entirely, by starvation, will be so reduced by spring that it will become more a vexation than a pleasure. Besides, it is unwise from a moneyed point of view to rob the hive and neglect to give the bees sufficient to pass the winter comfortably. This artificial feeding can be done by the supplying of sugar made up into a sort of candy, and costs but little in comparison with the honey extracted.

As the years go on, hive can be added to hive, until the apiary becomes quite a business. During these years also, the honey can be gathered and sold, and, as I said in the opening sentences of this article, the pursuit will be found not only an interest-ing outdoor hobby for the average boy, but it will place money in his pocket besides. Not a few boys I know have already established bank accounts by this entertaining hobby, and by the time they reach manhood, doubtless the cash now standing at their credit will go a good way to help them along in other walks of life.

We are looking for YOU We want every energetic, ambitious boy in America to write to us, and get information about our plan of earning money in spare time on Friday afternoons and Saturdays, selling

### The Saturday Evening Post

We start boys in business without a cent of expense. If you want to begin earning money at once ask us to send you 10 copies of next week's issue of the magazine. They will be sent without any expense to you. These you can sell at 5c each, and thus provide the money for next week's supply at the wholesale price. Some boys are making \$10 to \$15 a week. You can do the same if you are willing to hustle.

Full information will go with the magazines, including a Booklet, "Boys Who Make Money," telling of the clever plans of some successful boys. Write to-day.

\$250 IN CASH and a Trip to the St. Louis Fair as extra prizes for those who do good work next month, as well as other prizes, such as Baseball Outfits, Football Suits, etc.

THE CURTIS PUBLISHING COMPANY 1550 Arch Street, Philadelphia

All that settle around the sides of the hive, or are slow in moving, can be brushed in the direction of the entrance by the aid of a feather. It is wonderful how easy they are to install

is wonderful how easy they are in new quarters.

This will give the owner an additional hive during the season, and will thus make him owner of two hives in place of one. Financially considered, he is thus clear of all expense incurred. The old hive will work away and gather honey, and, should the weather keep fine, honey will flow in both hives. When

Perhaps at no stage of a bee's existence does it exhibit anger more than when the owner attempts to rob it of its glean-ings. The young beekeeper must then be fully guarded from stings, but maybe he

DRESS PARADE

### 11. HOW I WAS "JUMPED ON."

FTER leaving the adjutant's office, an erderly conducted me to the guard-house in the south end of the area of burracks. There, with several other candidates, I was ushered into the presence of an army officer, who, I shortly learned, had been detalled over us. This gentleman give us some kindly advice. He told us among other things that we might be hazed, in which event we would be in imminent danger of a court-martial if we did not report the fact to him at once. Then he read us several impressive paragraphs from a little "blue book." I noticed its color and that was all. I was destined, however, to become familiar, all in due time, with that same innocent-looking volume.

The officer directed us to report to the cadet officer, immediately in charge of us, for assignment to quarters. The orderly conducted us to a room on the first floor in the extreme south end of the barracks. As i entered the hallway I observed a number of fellows standing in a line in front of the door of the first room to my right. The orderly, who thus far had been my faithful guide, now deserted me with an odd smile, the significance of which I did not at the time understand.

I was about to rush into the office and report in style, when a candidate, who had

I was about to rush into the office and re-port in style, when a candidate, who had his shoulders thrown back to a prodigious his shoulders thrown back to a prodigious degree and whose hands were pasted to his sides, whispered that I would do better to await my turn. A number of youths were grouped around a little notice posted on one side of the doorway. They all seemed to be studying this bit of paper very diligently. Some were evidently memorizing its contents, as they glanced at the words, stared at the ceiling and mumbled the sentences to themselves.

None of the candidates standing around the door was personally known to me. Probably they had come directly from home, and had not so many advantages in the way of "pointers" as we who had been studying and living near West Point possessed. I surmised that this important paper contained instructions as to how the candidates should comport themselves when

paper contained instructions as to how the candidates should comport themselves when entering the office. I merely glanced at it as I pessed and saw that I was right.

I had received numerous "pointers" from a friend of mine who had been "found" at the Military Academy at the end of six months. I supposed I knew it all and did not deign to study the paper. I really began to pity those poor fellows who had so few advantages as compared with myself.

who had so few advantages as compared with myself.

Meanwhile, a terrific racket was heard in the office. The man at the head of the line passed in amid a tomb-like silence. By and by a gruff voice demanded: "What do you want?" The embarrassed candidate attempted to explain, but made a bad mess of it. Finally another voice struck in with: "What is your name?" "Jones," was the meek reply. Immediately three ferocious-looking cadets surrounded the frightened candidate and thundered; "What do you mean by that, sir?" "Don't you know better than that?" "Get out of here." Mr. Jones, after a vain endeavor to answer all the questions with a meek "Yes, sir," emerged as if he expected a shower of bullets to follow him, and humbly resumed his place at the end of the line outsides, and after a parley with my new clowmates, it was decided that I, being the last comer, should sleep in one of the last comer, should sleep in one of the sleoves on the floor.

While we stood talking I heard a shout. "Candidates, turn out promptly." At the first sound, all in the room rushed for the door and went leaping down the stairs four steps at a time. I followed with more digsir." emerged as if he expected a shower of bullets to follow him, and humbly resumed his place at the end of the line outside. I saw only two more of Mr. Jones's side. I saw only two more of art, sides strips, but judging from the experience of others and myself. I can summarize the history of his various journeys as follows:—"Jones"; "Mr. Jones, sir"; "Mr. Jones, sir, with his coat unbuttoned"; "Mr. Jones, sir, with his coat buttoned." "Mr. Jones, sir, with his coat buttoned." Perhaps this answered, and Mr. Jones would be shown to his room.

would be shown to his room.

At last my turn came, and I walked in.

My name was Mr. S., sir." "Are you

a candidate?" "Yes, sir." "No, sir!

You are a 'beast,' and your coat is unbuttoned. Have you read those instructions
outside?" "I glanced at them, sir."

"Well, get out of here and study them
carefully." I went outside, buttoned my coat, conned the instructions attentively, and took my place once more at the end of the line, where I had an opportunity to witness Mr. Jones's next performance. The second time I entered. I was confident that plain sailing was before me. I passed the coat epoch in good form. My shoulders were well thrown back, my heels were together, and my toes turned out at an angle

steps at a time. I followed with more dignity. Resounding yells were heard on the first floor, and I really thought that a fire had broken out in barracks.

had broken out in barracks.

I reached the first floor (my room was on the third floor) and saw the rear of a rio.ous crowd going out of the door. Two cadets who were standing near the door roared. "Get a move on you, sir!" "Step out lively, sir!" I did step out for all I was worth, followed by indignant shouts from the cadets, who continued to urge me to "step out."

Over in one corner of barracks the reach

Over in one corner of barracks the candidates were forming in line, and I made a dash for that place. Two cadets were superintending the formation, and lying in wait for the last man in line, which have more than the manual of the proposed to be married. happened to be myself. I was again ordered to "step out," but this time from both directions at once. I was too bewildered to recall much of this experience, but I kne that these two parties of cadets had joined forces, and were urging me to "step out." I made sure that I was never the last man in line again. One of the cadets faced gether, and my toes turned out at an angle of sixty degrees, but I speedily made a bad "break." When I was asked who my ing chorus of the other three cadets. The "pred" (predecessor at West Point) was, I replied "Y" without the "mister." I "Get your hands around properly." "Get again took my place at the end of the line in time for Mr. Jones's third debut. On my next entrance, one of the cadets remembered that he was tired of seeing me, whereupon I was placed in charge of another cadet who showed me to a room where three other candidates were already installed. There were two alcoves with a bed in each, one cadet being thus combed in each, one cadet being thus combed in other effect that I had better to the left, and began to call the roll, but

step out and "get 'em back." I thought l had stepped out as far as possible already, but I made a desperate attempt and finally had the satisfaction of feeling my shoulder blades touch.

When the roll had been called and the result made known to another cadet, 1 result made known to another cadet, I learned that the cause of all these uproarious proceedings was this; the candidates who had arrived that day were to be marched over to the commissary store to draw their bedding, buckets, looking-glasses, mattresses, etc.

We had one of the riots that I have described every time we marched to meals, or were tensed out for our processes.

were turned out for any purpose,

We were required to attend reveille the we were required to attend reveille the next morning. The gun was fired, after which the fifer and drummer played for ten minutes, when the roll was called. Of course every candidate, with a dread of being late or of being the last man in ranks, was out of bed and dressed before the gun was discharged. As soon as the boom of was out of hed and dressed before the gun was discharged. As soon as the boom of the cannon was heard we all came rushing out of barracks and took our places in ranks. About nine minutes later the cadets in charge of us sauntered out of barracks, one by one, buttoning their dress-coats as

one by one, buttoning their divesticate as they came.
Two or three days after my arrival was graduation day, when a new set of officers are "made," the old ones going on leave. I was very glad to lose sight of the man who insisted that I looked like a dromedary.

There are ten divisions in the cadet barracks, and the last two were reserved for
us. The strictest orders were published to
Anyone can learn it easily in a few weeks. We are
unable to supply the demand for telegraph operators, the effect that the old cadets were in no way to interfere with us. In the evening, after supper, a cadet sentinel was always posted in the hall of the lower floor of each division. These sentinels had lots of fun with us,—that is, fun for them. Whenever we crossed the lower floor we had to misser "all right, sir," to the sentinel, and at all times of the day and night we had to go to the "office" and report our departure for and return from the hydran or whatever it may have been, I soon learned to keep away from that office as much as possible.

### III. THE MENTAL EXAMINATION.

The new detail of officers over us included two lieutenants and three corporals, the senior lieutenant being directly responsible for us to the army officer I have before mentioned. They were all excellent fellows no doubt, but my opin on

at the time was somewhat warped,
Another of the features of our life in
those days was the formation for meals
and marching to the mess hall.

For convenience, we were divided into squads and marched down at the foot of the battallon, our whole line of march being attended by a continuous volley of "Step outs!" Each man had to carry his shoulders beek down. "Step outs!" Each man had to carry his shoulders back, depress his toes, and hold the palms of his hands squarely to the front. We must have presented a striking

We entered the mess hall after the battallon, and, hat in hand, each candidate tiptoed to the seat assigned to him. He was sure to be saluted at every step of the way with personal remarks from the older cadets whom he passed en route. Our tables were separated from those of the cadets, but all were in the same room. The meals were excellent, and we were always hungry enough to do them full justice. We were were excellent, and we were always nungry enough to do them full justice. We were allowed to sit at case while eating, but, on the conclusion of the meal, were obliged to assume a posture as straight as a ramrod, and mackly fix our eyes on our plates. As soon as the cadet officers in charge of us had finished their meals, they left their seats and came around where we were eating. (I used to eat as long as possible.) Each man assumed a prodigious "brace" as the result of a number of sharp "step outs" to that effect.

Our only formations at this time were the various "turn outs" ordered for different purposes, with one called "parade" at the

CADETS STANDING AT ATTENTION ON AN OFFICER ENTERING THE ROOM

same hour that the cadets had their parade. to the method of solving a problem, work The principal features of this were the primary maneuvres of the infantry soldier, primary maneuvres of the infantry soldier, "tip-tapping" around the area with toes depressed and learning how to wear clean collars, clothes, and a supernatural brace. [At present cadets are not required to depress their toes and gazzatich hands to the contract their toes and gazzatich hands to the contract to the co press their toes and carry the hands to the front until after the result of the mental examinations has been made known, but it was not always thus.]

The examinations were to begin on the Monday after I reported. We employed our leisure in studying. On Sunday, we were inspected in the area, after which the army officer in charge of us inspected our quarters. We attended service at the widet charactery and set in the gallery. In the cadet chapel and sat in the gallery. In the afternoon, we were given permission to make down our beds.

It is hardly necessary to state that the methods adopted by the cadets who trained us were not countenanced by the authorities of the Academy. If any one of them had been reported he would have fared ill.

But the authorities cannot always be present, and cadets have a great respect for the traditions of the institution, risking expulsion in many cases for the sake of an absurd custom.

an absurd custom.

The treatment that we had received was not hazing. It was what is known as "jumping." Hazing is the term applied to the harsh treatment from the cadets who have no authority over their victims. Hazing for a number of years has been almost obsolete at West Point. The real old-time hazing has in fact gone out altogether. "Jumping" continues, and will probably continue as long as West Point, cadets, and "plebs," exist together. Any candidate who would "kick" at the really harmless practice would be looked upon as a ninny by his associates. The chief consolation to the victim is that all in good time his turn will come to "jump" his successors.

will come to "jump" hs successors.
We "turned out" bright and early Monday morning for our mental examination. We went through our usual formation and were marched down in a body. The examination was to be held in the "mess hall," or the cadets' dining-room. We were furnished with foolscap, blotting paper, ink, and pen. The ordeal was not hard, but it required keen thought and work on

the part of the candidate.

Mathematics is the leading study at the
Military Academy. If you have a natural
aptitude for mathematics and are a hard worker, ten to one you will pass and finally graduate.

As for myself, I had been trained and could solve examples in the proper way. For the benefit of those who proper way. have not been specially prepared, it may be said that correct results to all the examples will probably pass you in arithmetic. But this is not everything. You may have some incorrect answers to problems and still succeed.

Do not scratch all over your paper, and pick out some particular number from the mass and mark it "Ans." Indicate all your work, with the result, on the sheet of paper you hand in, and write it in the form of an equation. Perform the operation itof an equation. Perform the operation itself on a piece of scratch paper. If you do this, the instructor by glancing at your work can readily tell whether or not you have the right idea. You may obtain a wrong result, but provided you have indicated your work correctly you will still secure a correct amount of credit for your secure a certain amount of credit for your

To illustrate, suppose you are required to find the third term in the following proportion, 17:32::x:4.

This is all you should put down:

$$\begin{array}{r}
17 : 32 :: x : 4 \\
x \frac{4 \times 17}{82} = 2\%
\end{array}$$

Here is another problem that I take from a recent register: "5 cubic feet of gold weigh 98.20 times as much as a cubic foot of water, and 2 cubic feet of copper weigh 18 times as much as a cubic foot of water; how many cubic inches of copper weigh as much as 7-9 of a cubic inch of gold?"

Solution:

$$\frac{98.20}{5}$$

$$\frac{18}{2} \times 7.9 = 1.5244 \times 1.5244$$

Ans. 1.5244 cubic inches.

Another fact should be remembered. you have studied algebra, it may help you in securing the right results, but be careful not to use algebraic methods on the paper you hand in. If you are puzzled as

it out by algebra on your scratch paper, and then express your work arithmetically.

Again: "John and William start from the same corner of a rectangular field onehalf a mile long and thirty-six rods wide. John walks straight across to the opposite corner at the rate of three miles an hour, while William walks around to the same corner at the rate of four miles an hour; who reaches the corner first, and how far is the other from 12". is the other from it?"
"English shillings are coined from

metal which contains thirty-seven parts of silver to three parts of alloy; one pound of this metal is coined into sixty-six shillings. The U. S. silver dollar weighs 412.5 grains, and consists of nine parts of silver to one of alloy. What fraction of the U. S. dollar will contain the same amount of silver as one English shilling?"

The examinations may be written or oral, but are generally written. The student is expected to be acquainted with all the fundamental operations of arithmetic. and to be able to give the rules connected with the different operations. Very little attention is paid to purely commercial arithmetic.

The examination in reading is held before a committee of the academic board. The candidate must be able to read well, with proper emphasis and accept. The applicants proper emphasis and accent. The applicants are sent before the board in small groups and stand in a row. Each man reads in turn. The academic board pay particular attention to any defects of speech that they may detect. The examination serves another useful purpose. The members of the board are able to judge of a man's voice and have an opportunity to "size him up" in a general way

up" in a general way.

In writing and orthography, candidates must be able, from dictation, to write sentences selected from standard pieces of

sentences selected from standard pieces of English literature, both poetry and prose, sufficient in number to test their qualifications as to handwriting and spelling. In English grammar, they must be able to define the parts of speech, to name their classes and properties, and to give and apply the principal rules of syntax; to parse any ordinary sentence, giving the subject of each verb, the governing word of each objective case, the relation between prepositions and their objects, and generally to show the function of each word in the sentence; also to correct sentences and exsentence; also to correct sentences and ex-tract common grammatical errors.

In geography, questions are likely to be asked requiring a knowledge of the geography of any country. The cand date should be so familiar with that of our own country that he can describe the principal rivers, name the capitals of any of the states, bound the states, name the states along the different oceans, borders, etc.; run lines east, west, north or south from any particular place, and name the state particula place. and name intersected. More weight is attached to a knowledge of the United States than that of all other countries combined. The candidate, therefore, should acquaint himself so fully with its geographical features, as to have a perfect mental picture before him.

Arithmetic, however, is the all important branch. A good paper on that study will cover a multitude of sins in other di-rections. For the rest, an ordinary amount of knowledge only is sufficient.

Let me warn you not to attempt to cram

your mind with all kinds of knowledge. Find out your weak points and strengthen yourself there. If you have a forte, cut it more or less, and devote your efforts to those branches in which you are not so apt. Work like a man training for an athletic contest. He exercises the weak muscles systematically, and the strong ones only enough to keep up the general tone of the system.

Two days after the conclusion of the last examination, we were all drawn up in line and the names of the successful candidates were read, including those alternates who had passed, but for whom no vacancies existed. To avoid all approach to par-tiality, each candidate is designated by a number, which he places on his examina-tion paper. Consequently, the instructors who examine the papers do not know the who examine the papers do not k names of those who write them.

As a result of the examinations, our number was considerably diminished. Many of my former acquaintances, whom I had looked upon as exceptionally bright, were "found." In many cases, they were fresh from college, and had too much self-assurance to study the elements. Some of them were badly broken up over their failure, while others took it philosophically, and a few even thankfully, as they were heartily tired of "stepping out."

(To be continued.)

### Boys In Foreign Lands

George Courtney Benson, Melbourne, Australia, writes that he is delighted with THE AMERICAN BOY. "I reckon," he says, "It is just the thing for boys, as it has inspired me with a lot of ambition to make my mark." He says he bas never been outside of Victoria, and tells about going to his uncle's sheep ranch or "station," 180 miles to the northwest of Melbourne, and being there at the time of a great drought. One of his duties was to ride out every day and find out how many of the sheep were dead. Out of 5,000 sheep only 400 survived the drought. They could not be driven away because they were not fit to travel. He is a student in the "National Gallery," learning to paint pictures. He is anxious to exchange pictorial postcards, sketches, etc., with American boys.—A fine, long letter cones from a subscriber in Hernosand, Sweden, whose name is Frank Sjostrom. He owns a stamp collection worth about \$60 and is very proud of it. Writing in March, he says the harbors are all blocked with ice and will not be free until May, that he has been having fine skee riding and that he owns a pair of birch skees and enjoys the sport. A short notice regarding this boy appeared in our February number and in consequence of that notice so many American boys wrote him that he did not know how to answer them all.—B. H. Willcook, Papaaloa, Hawailan Islands, sends a written description of a ramble he made through the mountains on the island of Oahu. The boy is fourteen years old and writes a very good letter. We wish it were possible for us to print it all, but lack of space forbids.—A very good letter comes also from lionolulu, written by George A. Gonsalves, in which he tells a very interesting story that we are unable to give room.

### MY DEAR YOUNG PEOPLE: --

I never expect to meet you personally. Under the circumstances this announcement is the most fensible introduction of myself that I can devise. I extend to you as one of this publication's vast army of readers, my best wishes.

readers, my best wishes.

The readers of magazines as a rule, are ambitious people, filled with noble purposes and high revolves, Lack of resolution is accountable for three-fourths of all the misfortune of the world. This - a country of possibilities. Never before were there so many opportunities open for advancement. The one great obstacle is ignorance, or inability to perform the services required by the world. For what is known as the "rough labor of the world" there are two applicants for every job. The demand is unlimited for exceptional ability. ceptional ability.

applicants for every job. The demand is unlimited for exional ability.

President Roosevelt, Prophet Dowie, Slugger Jeffrie: Inventor Edison, Judge Parker, Mother Jones, Mrs. Eddy, tien ventor Edison, Judge Parker, Mother Jones, Mrs. Eddy, tien ventor Edison, Judge Parker, Mother Jones, Mrs. Eddy, tien ventor Edison, Judge Parker, Mother Jones, Mrs. Eddy, tien ventor Edison, Judge Parker, Mother Jones, Mrs. Eddy, tien ventor Edison, Judge Parker, Mother Jones, Mrs. Eddy, tien ventor Edison, Judge Parker, Mother Jones, Mrs. Eddy, tien ventor Edison, Judge Parker, Mother Jones Mrs. Edison, Judge Parker, Mother Jones Mrs. Edison, Judge Parker, Mother Jones Mrs. Edison, Judge Parker, Mother Jones, Mrs. Edison, Judge Parker, Mother Jones Mrs. Edison, Judge Parker, Ju

The student who takes a course and works it to the end, need not worry about the future. He has conquered success.

My associates are men of exceptional ability. They are experts in their line of work. Honorable George Howell, ex-Congressman and our Director of Instruction, is one of the best known educators in the United States. I believe him to be the highest salaried instructor employed by any correspondence school. Every student comes under Prof. Howell's direction, although the student also studies under experts in the different professions which we teach. Although each student is under the direction of one instructor, he or she needs the influence and help of the whole institute. I can not recommend to people, young or old, looking for the best

not recommend to people, young or old, looking for the best instruction, the "one man school."

In the advertising course, the advertisers come to me for advice for their pupils. My friends in the advertising business say that the Correspondence Institute of America is the best and most widely advertised school in the world. Is not my advice on advertising worth something? While not infallfille, it is the experience of a men who plane and writes as much advertising. man who plans and writes as much advertising as any single indi-

vidual in the world.

The instructors come to me in the business course for special advice for their pupils. I make a specialty of the promotion and systematizing of mercantile enterprises. This work is certainly interesting -dillicult—in some cases, spectacular. It is important. The strenuous life of to-day, and the modern tendency towards specialization, make it a necessity of the times. Take these facts into consideration, is it not reasonable to assume that I offer you the very best advice obtainable?

Have you read my annual letter which has been published in magazine form, and which now appears, with my permission, in the 148-page book "Struggles with the World," issued by the Correspondence Institute of America? Upon receipt of your address I shall send, absolutely free, charges prepaid, this big illustrated book. Thihelpful, instructive volume contains about two hundred illustrations and you can not help read it without being benefited in your life work.

If you wish to take a course by mail I will trust you for the tuition. We director vidual in the world

help read it without being benefited in your life work.

If you wish to take a course by mail I will trust you for the tuition. My directors have voted to issue Credit Scholarships in order that ambilious people who can ill-afford to pay a cash fee of \$40.00 may begin at once the study of their cosen profession. The Credit Scholarship presents the sole means for securing an education on credit. Your mere word that you will pay when satisfied is the only requirement. The only immediate expense is the small sum of one dollar. I guarantee satisfaction or lose the remainder. I take all the risk. If you are not satisfied ten-fold you do not have to pay the balance—you decide whether or not the money is due us. We employ no collectors.

To secure an education on credit mention the profession you wish to study, and write me immediately—now—before you forget it.

ALT. F. CLARK, Pres., Correspondence Institute of America, Box 642, Scranton, Pa.

### Changes in Football Rules

HANGES in detail in the football rules are to be found in "Spalding Guide," just out. Walter Camp, who edits the rules, and is the game's foremost expert, has this to say of this year's changes, as reported by the Chicago

"The changes in the rules for 1994 in the main affect most seriously the scrimmage development. Last year, between the two twenty-five yard lines in the middle of the field a team was restricted to seven men in the line, but inside the twenty-five yard line-that is, nearer the goal line-the old formations were admissible. In 1901 the quarter back could run only when in the middle of the field-that is, between the two twenty-five yard lines-and that meant when only seven men were on the rush lines or line of scrimmage. This year a team never can have fewer than six men on the rush line, and if only six are on the rush line then one of the men who play behind the line must be outside the man occupying the position on the end of the line of serlmmage. But it is admissible to run the quarter back at any time and in any part of the field, so long as the above provision is complied with, and so long as he runs at least five yards outside of the spot where the ball was put in play.

"The change next in importance is

"The change next in importance is probably that regarding scoring. Under the rules of 1901 a field kick goal, instead of scoring 5 points, as it has for many years will count but 4. This will be true, whether the goal is made by a drop-kick or a place-kick from the catch, or a kick from placement in the scrimmage.

"The other changes are of lesser moment, and are as follows:

"The unipire shall have some kind of a call distinguishing his signal from that of the referce, and the play will continue in spite of the unipire's call until the ball is dead, and then the referee will inflict the penalty called for by the umpire's decision. In case the side which has been offended against desires to refuse the penalty, they may do so and take the distance that they have gained."

against desires to refuse the penalty, they may do so and take the distance that they have gained."

Another rule regarding the serimmage makes any deliberate attempt to draw the opponents off side by a false start void, by declaring that if the ball is then snapped after such a performance it shall not be regarded as in play or the serimmage begun. The rule about which there was some discussion last year, namely, the one regarding kick-off or choice of goal, has been made clearer. It now provides that if the winner of the toss selects the goal, the loser of the toss must take the kick-off.

The penalty for kicking out of hounds twice in succession has been lessened, the bail going as a down to the opponents on the thirty-five yard line instead of on the twenty-five yard line.

In case of interference with a man making a fair catch, the offended side can have their choice of putting the ball in play by a serimmage, in which case they receive fifteen yards, or putting it in play by a free kick, in which case they receive fifteen yards. The same is true regarding a man who has been thrown to the ground after making a fair catch.

The dottes of a finesman are narrowed once more, and, in addition to his required to penaltze a side if the ends are off side on a kick or for tripping an ead going down the field after the kick, or any player for roughing the full back.

Apart from these alterations, there is nothing of moment, exe p. reading penaltics there are two groups: First, those where some other penalty than a distance penalties there are two groups: First, those where the loss is fifteen yards.

A side losses five yards for coaching or infringement of any part of rule 27 (f); d lay of game, interference with putting the ball in play, off side in the serim rage, starting before the ball is put in play in the scrimmage, violation of scrimmage rule as specified in rule 18 (b), snapper back off side the second time in the same down, passing or leatting the ball torward. specified in rule is (b), support back off side the second time in the same down, passing or batting the ball forward, unsportsmanlike conduct, bolding by defensive side of the player not carrying the ball, snapper back or man opposite touching the ball before it has touched a third man, piling up on a player after the ball has been declared dead.

A side loses fifteen yards for tripping, holding, or unlawful use of hands or arms

by the team in possession of the ball; illegal running by the man receiving the ball from the snapper back, that is, the quarter back; interference with fair cutch.

Outside of distance penalties, disqualifi-cation is given for unnecessary roughness. The game is forfeited if a side refuses to within two minutes after being ordered to by the referee, or if a team on the defense commits repeated fouls when near their own goal line in order to delay the

game.

With regard to the last paragraph, section K of rule 28 is interesting. It says:
"If a team on the defeuse commit fouls so near their goal line that these fouls are

punishable only by the halving of the distance to the line, the object being in the opinion of the referee to delay the game, the offending side shall be regarded as re-fusing to allow the game to proceed. The referee shall in such case warn the offend-ing side, and if the offense is repeated, he shall declare the game forfeited to the opponents.

There have been cases where teams with the ball close to their goal and in the other side's possession, have deliberately gotten off side, sparring for time and getting a

off side, sparrring for time and getting a half penalty each time. The above rule is expected to squelch such practices.

Since the quarter back may run with the half under certain conditions, in any part of the field, the entire field becomes a checker board, not merely the part between the twenty-five yard lines.

CHCOANUT CUP COMPLETED AND FITTED IN ITS

the strands, so as not in any way to injure the after-appearance of the under-surface.

When you have cleared away all this outer coating of the cocoanut, you must go carefully over the same with your knife, removing any ruts or inequalities that may be apparent, until you feel satisfied that be apparent, until you feel satisfied that the nut has arrived at a symmetrical form in every direction. Now proceed with sandpaper to rub the entire surface into the smoothness of a billiard ball, and wipe off all superfluous dust.

Then comes the great work of polishing. This is done by rubbing beeswax completely over and thoroughly into the nut; personning for a week or oven longer by

pletely over and thoroughly into the nut; persevering for a week, or even longer, by the use of the hands, aided by a piece of old silk (on no account use anything woolly or fluffy), you will be enabled to get a magnificently deep mahogany colored polish to your nut, so fine and hard that you can handle it without there being any feeling of stickiness left.

With a saw proceed to take off a sufficient part from the thick end, neither too much nor too little. Your judgment should have play here, for you must not have the opening too small, or it cannot answer the

opening too small, or it cannot answer the purpose of a cup or receptacle for plants; purpose of a cup or receptacle for plants; and not too much must be taken off, or you lose the beautiful oval form which should be left to show its natural merits aided by human hands.

A reference to the drawing will give a better idea of what is required than any amount of written explanation.

The sharp edge of the bowl must be cut off inside and out, and sandpapered, beeswaxed, and polished.

Having succeeded so far, still using the

This latter method will well repay the work, and at little cost, as the almost black and shining parts will stand out splendidly relieved against this gold back-

ground.

The cup being so far finished only requires a method by which it can be made to stand upright on a table or whatnot. For a few cents a carpenter possessed of a lathe will turn out, in mahogany or boxwood, a sort of fluttened execup to fit the bottom part of the cocoanut exactly; both can then be glued securely together, thus forming an ideal stand.

A more simple method, and perhaps quite as useful, if not so artistic, is to fit three short mahogany pegs into the bottom edge.

short mahogany pegs luto the bottom edge at an angle which will be quite fire

enough to support the superstructure. On the other hand, if it is intended to use your handlwork for hanging purposes, nothing is required to be added to the bot-tom; merely bore three equidistant holes in the rim and run some knotted colored cords through the holes to hang it up by

in the rim and run some knotted colored cords through the holes to hang it up by. To keep up the character of the supposed native design, the figures should be made as grotesque-looking as possible—big heads, shapeless legs and arms, goggle eyes and triangular nose, with a big mouth. The various knobs, etc., must be left to the individual taste and inventive powers of the carver.

### For Saving Drowning Persons

When you approach a person drowning in the water assure him, with a loud and firm voice, that he is safe.

On swimming to a person in the sea, if

he be struggling, do not seize him then, but keep off for a few seconds, till he gets quiet, which will be after he gets a few mouthfuls of water; for it is sheer madness to take hold of a man when he is struggling in the water, and if you do you give a great wiek.

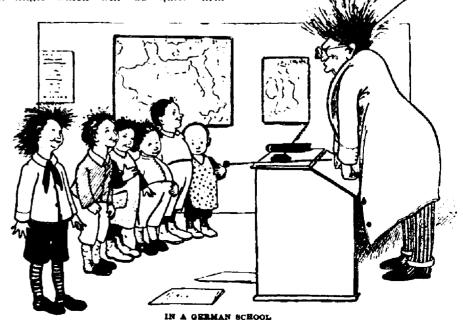

1. Kind of work or sport in which members are mainly interested.

WM. C. SPRAGUE.

President General. Majestic Building, Detroit, Mich

### He Got It All Right

Carl Wiand, Kansas City, Mo., had to work hard for the last number of his AMERICAN BOY. His aunt told him that she had got his AMERICAN BOY from the postoffice and that it was in the house. When he went to the house Carl found that it was closed, but nothing daunted, he climbed on to the roof of the porch, opened a window and got his AMERICAN BOY. It was rather a hazardous climb but he says the result was worth it.

OB DENTON whistled away at his work of making cores in the great iron works of the C. E & O. Railroad company, his heart light with the cheer of a happy seventeen-year-old lad. You saw from the vim he put into his labor that he did not measure his effort by the price set upon his day's work. He never paused save when the perspiration ran down into his eyes, necessitating a clearing of vision, which,

necessitating a clearing of vision, which, when too pressed to enjoy a copious mop with his handkerchief, he accomplished by a quick swipe with his coat sleeve.

But on this particular morning he chanced to look up as his colaborer, John Hinton, an old man, came in from the office, where, as Rob knew, he had gone to ask to lay off that afternoon in order to extend the functional of a coursing the content of the function of the content of the course of the course

gone to ask to lay on that afternoon in order to attend the funeral of a cousin. The old man's face was haggard, and he looked as if he had gone through a spell of sickness during those ten minutes since he had left Rob's side.

"What's the matter?" cried Rob, in concern. "Wouldn't they let you off for the funeral?"

"O, yes, they let me off." answered the old man bitterly, "let me off for my own funeral. I guess."

"What do you mean?" asked the boy.

"They've turned me off." said Hinton, with a laugh that added to the pathos in big old eves.

"What for? Not because you wanted off this afternoon?"
"O, no, they intended to notify me to-

of, no, they intended to notify me to-night, anyway. They say they don't need more than one coremaker now, and you were here first."

He turned to his work in moody silence. For a long while itoh stood idle, too shocked to pull himself together, un-til the foreman chanced to have that way

too shocked to pull himself together, until the foreman chanced to pass that way and exclaimed, "Hello, at last I've caught Denton killing time. Sick, Rob?"

"No," answered Rob, quietly, and resumed his work. He had been about to explain when the thought that Hinton would shrink from any comment on his misfortunes stopped him. But the cheer and vim that were such stimulus to his fellow workers were gone. He worked listlessly. His thoughts kept slipping away from his coremaking and going out to that humble home beside his own, where an old woman and three orphaned grandchildren would be awaiting Hinton's coming at noon.

He saw the three youngsters rushing out to meet their grandfather, and then

He saw the three youngsters rushing out to meet their grandfather, and then—his heart grew heavy as the Iron beside him as he saw the look that would come over the old woman's face as Hinton told her of his discharge. Poor Hinton! he had been out of work for weeks because of the closing of the factory where he had worked for years, and he had been so overjoyed at securing this place. And now winter was coming on Rob brushed something hesides perspira-Rob brushed something besides perspira-tion from his eyes at thought of the hardship that would come to these un-fortunates; for Rob's heart had felt the sting of dire poverty, and he knew what manner of pain it was.

Suddenly his pity caught an idea and flashed upon him, and he shrank back from it as one shrinks from sunlight flashed from a mirror.

flashed from a mirror.

He went to work vigorously, hoping to shut out the thought, but it seemed to gleam at him from each grain of sand as he packed it into the mold. He could not escape, and at last he faced it squarely. Could he give up his place to Hinton? Give up the place and all it meant to him? For no one besides himself and his mother knew the priceless value of the hopes that were expresented by the six dollars he received at the end by the six dollars he received at the end of a week's labor. To him those six dollars meant the foundation of his man-hood, the stepping stone to that career of which he dreamed even in the midst of his work: for Rob was saving every dollar that he might go away to a law school when he had finished the high school course. He was keeping up with the junior class of the town high school by studying noons and nights, and re-citing to Professor Allen, who had kindly consented to direct his studies.

Rob would have liked to go to college, but he had put that idea away from him because of his mother. She was getting old, and he longed to gain, as quickly as possible, a position that would enable him to make life easy for her—it had

him to make life easy for her—it had always been so hard.

He thought of her now and tried to believe he would be wronging her by giving his place to Hinton: but his mother had her pension and the Hintons had nothing. It would be privation for him, it would be starvation for them.

He glanced from time to time at Hinton

He glanced from time to time at Hinton working doggedly away. Finally the old man looked up and met his glance, and the utter despair in the old face almost caused Rob to cry out in pity. He could stand it no longer, and walking resolutely through the shop, he opened the door of the office and went in.

DB'S SELF-SACRIFICE

The superintendent was there and Rob's foreman, and with them a stranger, a distinguished looking Rob's foreman, and with them a stranger, a distinguished looking man whom Rob set down as one of the officials of the company. All three looked up as he came in and the superintendent said: "Hello. Rob. What is it?"

"Mr. Harding," began Rob, wishing the others were not there, yet determined to get through it, "Mr. Hinton tells me he has been discharged."

The superintendent looked annoyed and

The superintendent looked annoyed and the stranger looked at Rob with sudden "Well?" said Mr. Harding.

"Well?" said Mr. Harding.
"The reason, he says, is that you won't have work for us both."
"Yes, that's the reason," said the superintendent, shortly; "I can't see how it concerns you, Rob. You won't be discharged."

Rob. fearing he was antagonizing his

charged."
Rob. fearing he was antagonizing his superior, hastened to add: "I just wanted to ask you whether you would keep Hinton if I give up my place."
"Of course." answered the superintendent, his stare betraying the surprise the stranger's presence deterred him from expressing

stranger's presence deterred him from expressing.
"Thank you—then it's a bargain," said Rob, and turned to the foreman.
"Mr. Smith, won't you tell Hinton at noon that he is to stay? But don't tell him that I'm quitting."
"Well," said Smith in bewilderment; he was an old friend of Rob's and knew pretty well what the boy was giving up.

was an old friend of Rob's and knew pretty well what the boy was giving up. "But what about your schooling, Rob?" "Oh, that can wait," said Rob brightly. He was cheerful again now that the thing was done, and went back into the shop with his usual sprightliness. The stranger, who had watched the boy attentively during his talk with the superintendent, waited until he was out of hearing and then addressed some inquiries to the foreman. He listened

quiries to the foreman. He listened thoughtfully to the story of Rob's strugfind the story of two strongs are gle to develop the best that was in him. but made no comment, and completed his business with the superintendent.

He was one of the directors of the com-

pany, and there was to be a meeting that afternoon to consider the advisability of closing the car shops, adjoining the iron works, for the winter. The meeting was to be at one o'clock, and as the stranger was on his way to the place of meeting he met Rob returning to finish his last day at the iron works.

The boy's face was downcast, for although his mother had been proud of his act she had taken the loss of his place, with its consequent result to him, very hard. So it was a disconsolate face he turned when the stranger touched his aboutless.

shoulder.
"My lad," said the man, "you look as if you regret giving up your job to that other man."

other man."
"Oh, no, sir." replied Rob, smiling bravely, "I don't at all. I was only a little blue, wondering why we couldn't both hold our jobs." He laughed as at a joke on himself, and the stranger smiled at him kindly a moment before going

"No," said Merriam.
"Why not?" demanded the other.
"I'll tell you when the time comes," said Merriam, and refused to argue the matter. He stood at the window watchmatter. He stood at the window watching the rain which was falling drearlly, until the meeting opened, and then he addressed his colleagues. He was too shrewd to allow the others to declare their positions so decidedly that their obstinacy would prevent receding, and he began quietly:

"Gentlemen, before we discuss this matter I wish to relate an incident that came to my notice while I was gathering.

came to my notice while I was gathering information this morning."

He told the simple story of Hinton's discharge and Rob's resignation.

"Now, gentlemen, I make no comment. I only ask you to consider what that lad was giving up. Does there not flash before your minds the glorious promise that made your hearts leap high at seventeen? He is but seventeen, an age when the spirit chafes terribly against unpromising waiting and his mother to unpromising waiting, and his mother is so old that each day's delay heightens the risk that she may die before her son

the risk that she may die before her son comes into his own in the world's strife. "I want to say to you that I was unutterably ashamed before that boy. What is the reason advanced for closing the shops? That they will not pay this winter. My friends, I ask you what we lose by their running. Nothing. We simply fail to gain a pecuniary profit. And suppose we even lose. What, to you and me, is that loss compared to what that boy is sacrificing? It is as the drops on this pane to the flood in the street. You know that I am not given to mixing business with sentiment, but I say unto you that if I voted to close those shops I should eternally see my shriveled soul measured against that lad's great one; and I ask you as men, can we yote ourand I ask you as men, can we vote our-selves unutterably below par with a boy existence, whose existence, ordinarily, would be too insignificant to touch our conscious-

There was breathless silence as he ceased speaking, and it was sometime before his hearers recovered themselves.

Then one said:
"Merriam, why didn't you wire me you had the thing fixed, and save me this trip?"

"None of us intended to vote against "None of us intended to vote against the shops anyway." said another, and they all laughed. Merriam knew he had gained his end. The shops would not shut down, not that winter at least. That afternoon Rob was startled out of his preoccupation by a visit from Mr. Harding and a sharp featured man whose keep gray was made him feel as if they

keen gray eyes made him feel as if they were taking an x-ray picture of him. "This is Mr. Reynolds, our president, Rob." said Harding.

Rob." said Harding.

The great man put out his hand and Rob held his forth with a blush at its dirt, and Mr. Reynolds grasped it heartily. As they went away the superintendent said: "By the way, Rob, we have decided that we shall need both you and Hinton after all."

"So it turns out all right after all, mother," said Rob that night; but they might have spared us this uncomfortable afternoon. I wonder what made them change their minds." And he never knew.

In the heautiful Catskill Mountain town of Roxbury, N. Y., is "Kirkside," the summer home of Helen Miller Gould. The place takes its name from its location beside the Jay Gould Memorial churchthe gift of the Gould children to the

memory of their father.
Miss Gould's arrival is the great event of summer in Roxbury. Especially do the children look forward to her coming, for it means several parties, automobile and horseback rides. The Roxbury children love Miss Gould: seldom is she seen in the automobile town without four or five children about

For the boys of Roxbury Miss Gould has done much. All through the Catskills haseball is very popular. Of course the young shavers in Roxbury organized a team and naturally wanted uniforms just like older teams. But how to get them was the problem which bothered their youthful minds. Now whether Miss Could vouthful minds. Now whether Miss Gould learned of their wants through a little harefoot visitor or through a painstaking hand-printed note, I am not prepared to say: but that does not matter, for the little follows got their uniforms. fellows got their uniforms

On the other side of the Gould Memorial church from "Kirkside" and a little farther back from the road. Miss Gould has not only built, but also furnished a little clubhouse for the schoolboys of Roxbury. The following notice on the door of the following notice on the door of the building, copied by the writer during a recent visit to that town, explains under what conditions the clubhouse is open:

"This club and its grounds are intended for the use of the hoys of school age or who are attending the school of Roxbury. They will be open for the use of boys daily except Sunday from %a m. to 12 a.m. and from 1 to 6 p. m. On Sunday and during school hours they will not be open. The profane or improper language absolutely prohibited on the (Signed) Helen Miller Gould."

Miss Gould is especially fond of children -fond even of the unattractive ones. I supporting two cots in the Bables' Sheltera charitable institution associated with the Church of the Holy Communion—she insists that these two cots shall be reserved for the two most uninteresting bables. She has done much for the girls, especially those who have to work for a living; but she has never forgotten the boys.

# Want Wide-Awake Boys

Some wide-awake boy will have the choice before Jan. 1, at our expense, of

A Trip to New York and return and \$5.00 a day spending money; A Life Scholarship in Chicago's best business college;

Down the Mississippi to New Orleans and return, with expense funds. Are you the boy? No matter who.

what, or where you are, your chance is as good as any other boy's. No special training, no hard work, not much time required.

Simply keep your eyes and ears open and tell us what you see and hear.

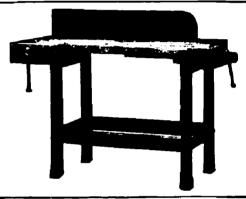

This is easy enough, isn't it? We have other treats besides the three above. Every boy is almost sure to get one or more of these, with a good chance for one of the three grand treats

besides.

### Common Philatelic Terms Defined

the impression is taken
Error: A stamp on which some mistake is
made in perforation, printing or surcharge,
Government reprints: Stoops reprinted by a
government from the original plates, after the
issue has become obsolete.

Diagonally lable Paper with lines appearing

diagonally across Enamelled Pa firmly calendered,

therizontally Inde: Paper with horizontal lines, tadia paper: A very thin fiber paper.

### Notes of Interest

The latest fad in watch fobs is composed of 3 stumps enclosed in cases ranged one after the other on the fillion.

When Spanish stamps are found punched they have been used in payment of telegrams, and therefore not postuge.

At a recent auction in Paris lasting eight days the attendance on some days was as many as 1,500 persons. The total amount of sales was more than \$10,000.

The so called reprints of the 1862 issue of Argentine Republic are in reality reprints and collectors should not purchase them, or repuiable dealers sell them.

Stamp booklets have evidently filled a lt want, so many countries are adopting t Norway and Sweden are the latest to fall into line. Uncle Sam invents, and other folks fol-

An automatic letter stamping machine, on the insertion of a penny in the slot, prints a frank upon the envelope, thus doing away with the use of stamps for local letter postage is on trial in New Zenland, with what success we have yet to learn.

nave yet to tearn.

In a recent exhibition of Japanese postal cards before the London Philatelic Society it was brought out that of the third issue of these cards it was possible to find no less than 600 varieties. What a field for a specialist with strong eyesight and a good miscroscope.

Of all the reversions of Eugene the Pope 20-

strong eyesight and a good miscroscope.

Of all the soverelens of Europe the Pope receives the largest daily mail—about 22.700 pieces, including letters, papers, circulars, packages, etc., which are examined by 40 secretaries. King Edward receives daily 3,000 papers and 1 000 letters, he leaves far behind Emperor William the Czar and our President, who are contented with 6.0 daily missives. William II, and Edward VII, themselves read a very large portion of their letters, annotate them and dictate the replies. The King of Italy receives 500 cplstles a day, Emperor Francis-Joseph 300, and Queen Will-helmina 50. helmina 50.

be shall stamps to 3 and 6 snam values respectively.

Among the most curiously engraved stamps are those of several native Indian states, which morting to assist in separating.

Dies: The engraving of stamps from which the tomoresides is taken.

The first memorial stamps ever issued were those of Great Britian, i-sued in 1887 to celebrate the fiftleth anniversary of Queen Victoria's

The original stereotype plates of the Cape of Cape Wood blocks have been presented by the government of Cape of Good Hope to the Cape. A very thin fiber paper. reign

The two annus violet queen's head stamps Chamba, either ordinary or service, should event-ually prove good things as only 2.640 of each kind were issued.

The U.S. government recently bought a copy of the 4c Columbian error of color, paying \$21.50 for the same. This is fairly good interest on original cost for eleven years.

The first surcharged stamp we have record of is the 25c of France, issued in 1856. The supply of 25c having given out, a portion of the unused 29c on hand, were surcharged 25c and used until more 25c stamps could be printed.

The United States recently used \$1,000 to of Panama stumps surcharges "Canal zone," pending the arrival of the U.S. stamps with the same surcharge. Great presautions were taken that the issue should not be absorbed by dealers and the stamps promise to be good things, better used than unused, notwithstanding the precautions

Stamps are not usually sold by weight, but a ton from the Island of Cyprus was recently bought by a London firm dealing in this com-modity. For a time British stamps with an appropriate surcharge were in use there, but owing to change in the currency from pence to plastres these became obsolete. A London firm offered \$4.000 for those left over, there being six or seven million stamps in the lot, and they weighed a ton.

### Stamp Collecting a Pleasant Pursuit

The charms of stamp collecting are only known

way to experience it is to give it a trial The way to experience it is to give it a trial. The first thing to do is to buy a stamp album, a complete illustrated catalogue of all stamps and a packet of different foreign stamps and then arrange your stamps in the album. If you have any of the instincts of a collector you will enjoy the pursuit and it will while nawny many a winter evening very profitably. The highest known value of a single stamp is the £20 of South Australia. The lowest, the ½

£20 of South Australia milestino of Cuba and Porto Rico, and the 3c others who are desirous of a quick response.

of Spain, each having a value equal to about one-twentieth of an American cent.

The plainest stamp is the 12c of British Guiana, issued in 1850. The stamp bore the following rudely printed words: "British Guiana, 12 cents," which were arranged within a circle. As to the opposing variety, no decision can be satisfactorily made. It has been the opinion of many that the 1992 issue two cent, would approach very near to it.

The first stamp ever issued by authority of the government, was the Mulready envelope stamp of Great Britain, which was first placed on sale May 6, 1840. The stamp was quite large and represented Britannia sending forth letters to all parts of the world.

### Queries and Answers

E. H. Carter, Liberty, Neb.—The combined both is employed for gelatine printing out paper; blue prints do not require toning; Jos. Baker, San Francisco, Cal.—The camera you mention is considered one of the standard makes; H. M. Biggin, Kinsman, Ohlo—1, Yes. 2. The correspondence schools of photography are useful in mastering the rudiments. V. W. Hutchins, Laconia, N. H.—Yellow stains on bromide prints can be removed by the use of diluted hydrochloric acid (1:100); Your second question is answered in the editorial of the September issue.

NINETY DEGREES IN THE SHADE First Prize, by Perry N. Trask, Silver Creek, N. Y.

### Honorable Mention

The most pleasing task of the editor in his monthly work is the award of the distinction, implied by the above caption, to those, who, in his estimation, are worthy of it. This month, the honor has been conferred upon: E. M. Hoalett, Oshkosh, Wis.; H. M. Higgin, Kinsman, O; E. E. Trumbull, Plattsburgh, N. Y.; H. G. Ellis, La Grange, Ill.; P. R. Camp. Jamestuwn, N. Y.; Perry N. Trask, Silver Creek, N. Y: H. Blankemeier, Kirkwood, Mo.; Frei Grimmer, Crown Point, Ind.; A. W. Niz, Indianapolis, Ind.; Bruce S. Wilson, Manhattan, Ks; W. Terkins, Lee, Mass., and C. W. Buckley, Worcester, Mass

### To Harden Gelatine Negatives

The negative is developed, fixed and washed in the usual manner and is then ready for treat ment with hardening solution, which is comment with hardening solution, which is composed as follows: Chloride of aluminum, 5 to
12 grains; water one ounce. The stronger the
aluminum solution the greater the amount of
heat the negative can stand without softening.
The plate is immersed in the solution and allowed to remain therein for a short time. After
immersion the negative can be dried in sun
light or by artificial heat without danger of
deterioration.—Photographic Record.

### Timing Exposures

The knowledge of just how long to expose a plate becomes, in time, almost accurate, for the plate is comes, in time, simost accurate, for the eye soon learns to measure the actinic quality of the light. The experienced amateur, knowing the speed of his plate, the quickness of the lens, the size of stops used, and noting the brilliancy of the image on the ground glass, intuitively determines the time of exposure.

itively determines the time of exposure. There are on the market instruments for measuring the correct time of exposure under different conditions of light, and the calculations made for the speed of the plate and the size of the stop in use. These little instruments, known as actinometers, actinographs, exposure meters, etc., in:licate and record the actinic effect of light on the sensitive plate. They are very ingenious, but comparatively simple. Each contains two strips of paper, one of which is called the standard tint and is used under ordinary conditions of light; and the other is of lighter int and is used for interiors where the light is tint and is used for interiors where the light is dull and weak.

To use the instrument, the camera is first ad-To use the instrument, the camera is first adjusted and the plate in readiness for exposure. A turn is given to a small wheel in the exposure meter, bringing a strip of sensitive paper parallel with the standard tint. Note is made of the length of time it takes the sensitive paper to assume the color of the standard tint, and the time is the basis of the calculation for the length of time required for a correct exposure. Tables giving the sensitiveness of the different makes of plates are furnished with each meter. makes of plates are furnished with each meter. To find the time of exposure, the pointer of the instrument is turned until the record of the time taken to color the sensitive paper is opposite the number of the plate. The time which is set opposite the size of stop is the length of

time the plate should be exposed. In turning the scale to the plate number, it turns the diaphragm to the exact time exposure.

Wille an exposure meter is very desirable for some times and occasions, it is where to learn to estimate the time of exposure than to depend on an exposure meter. This knowledge is easily acquired if one cultivates the habit of observation, and studies causes and effects as exemplified in making negatives.

Until one becomes adept in photography it is wiser to confine oneself to the same speed plate for out-of-door work. There is great latitude in the exposure of even the quickest plate. The same speed of plate which under certain conditions requires the shortest exposure possible, in others will bear an exposure of hours. Clouds, others will bear an exposure of hours. Clouds, snow scenes, and marines require scarcely an instant's exposure to impress themselves on the plate, while in a dimit lighted interior the plate might be exposed for hours without danger of OVER-EXPOSURE

over-exposure.

The best guide for the exposure of the plate is the brilliancy of the image on the ground glass. Strongly lighted scenes are very distinct, while a dim light makes it hard to distinguish the objects. Fetween these two extremes there is a great difference, and by carefully noting the clearness or dimness of the image on the ground glass one will soon learn to determine the correct time of exposure without respecting to an rect time of exposure without resorting to an exposure meter.

There are four special points that govern the There are four special points that govern the exposure of a plate: First, the sensitive quality of the plate used; second, the size of the stop before the lens; third, the a time power of the light at the time of exposure; and fourth, the character of the subject to be photographed. Some plates are so very sensitive that the exposure must be made in the fraction of a second; while others, sensitized with a slower emulsion, may be exposed a number of seconds on the same subject and with the same lighting.—Photo-Era. ### Current Comments

J T Roach, Waterloo, Wis—Contrasts in your "Four Good Chums" are too great; you would have done better, if you had taken the picture in the shade. I. Boyd, Brooklyn, N. Y.—Your "Statue of Liberty" lacks detail. I imagine it was taken on a clear day. It would probably show up better on a cloudy day, when the clouds would form a natural background. R. N. Carr, Upper Alton, III—Your photograph is a good one, but the subject is of no interest to anyone but yourself. A. H. White, Mt. Vernon, N. Y.—Niazara Falls is a difficult subject. Your photo, would be a success, however, if it were not for the fact that there are no details in the shadows. P. G. Shaw, West Troy, N. Y.—Your "Reaping Rye" is spoiled by the evident fact that the men are not reaping rye but posing for their portraits, Moreover, the photo, does not seem to have been printed deepenough and appears to have faded in the tolling bath. J. T. Roach, Waterloo, Wis.-Contrasts in your

WAITING FOR SCHOOL TO OPEN Second Prize, by Ed. Gravenstreter, Cleveland, O.

THE AMERICAN BOY offers twelve prizes of Two Dollars each for the best Amateur Photograph received during the twelve months in the year, one prize for each month, also a second prize each month, of one dollar, for the next best photograph, the competition to be based upon the originality of the subject and the perfection of the photograph. The contest is open to subscribers only. Photographs will be returned if stamps are sent for the purpose. All photographs entered in the contest and not prize winners will be subject to our use unless otherwise directed by the sender, and fifty cents will be paid for each photograph that may be used, the prize photographe in any event to be our own, without further payment than the payment of the prizes. Write on the back of the photograph is title, with a description of the picture, and the full name and address of the contestant, who in every case must be the artist who took the picture.

### How to Make and Use a Good De- | GOOD-BYE DARK ROOM veloper

The following pyro-soda developer is said to be one of the simplest and best in use at the present time. It keeps well, so had better be made up in Winchester quarts in the following

Water ... 80 ounces.
Sulphurie acid ... 1 drachm. Pyro. 1 oz. (as bought).
Add the sulphuric acid gradually to the water. avoid too rapid generation of heat, and then add the pyro. В. For use in normal exposures mix equal parts

of A and B
This developer will keep several hours after combining the two solutions, and from three to six plates can be developed with the same solu-

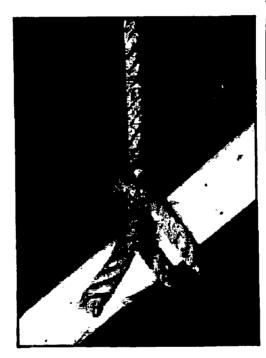

The negatives become more intense after the first, so that fresh developer should be used to develop a plate on which a short exposure has been made; old developer will be better adapted to fully exposed plates and will yield better

An excellent method of working where the exposures are nearly uniform is to use a mixture of old and new developer, say three parts of old or old and new developer, say three parts of old to one of new; or to mix old and new in differ-ent proportions as the exposures vary. In that vay the intensity of the negative may be kept under perfect control, if we bear in mind the fact that the new developer tends to rapid de-velopment and much detail, while the old solu-tion tends towards slow development and density tion tends towards of the high lights. tends towards slow development and density

The temperature of the developer is of great importance. The warmer it is, the more rapid will be the chemical action and the quicker will will be the chemical action and the ducker will the plate develop. Warming the developer makes the negative less intense in contrast, because the shadows come up before the high lights have time to gain density. Therefore, for extremely brief exposures, the developer should be warmed up to 85 degrees Fahrenheit. This will give the greatest possible amount of detail in the shadows; but a further increase of temperature would probably result in for.

greatest possible amount of detail in the shadows; but a further increase of temperature would probably result in for.
Old developer when warmed works as freshly mixed does when cold. The best temperature for normal use is about 70 degrees Fahrenhelt.—Canadian Photographic Journal

The clove hitch is a knot which can be used every day. It is the proper knot to use in fastening a horse or any other animal. or in fastening a boat.

### What He Wants to Become

Some time ago you asked us to write you and tell you what our highest aim in life is. I have taken all this time to think it over and I do not know now what it is. One day when I have heard some beautiful music or have felt like going into it and never stopping until I have finished learning it, or I have had some beautiful thought which I would like to turn into music, I want to be one of the great massters. I want to go way beyond and excel both Beethoven and Wagner and all the rest. Then again if it is a beautiful day (every day is beautiful, sunny or rainy) and I am enjoying nature and watching her creatures as they work or play I want to be a great naturalist and stuly nature. Then some other day I want to be a

judge and turn the law on the rich people and favor the poor people, but I am like Darwin, I do not want to condemn anyhody or anything, but give them a chance body or anything, but give them a chance to do it again if they wish, which I do not think they would if they were not condenined, as the law says they should be for certain crimes. I want to be a rich man and treat each person and animal as one animal would treat another. Notice I do not take any stock in the way one man treats another. Man is the only—what shall I say?—that will let another man walk on him or sit on him or rob him (when he has a family starving at home). (when he has a family starving at home). or anything else he wants to. I want to (when he has a family starving at home), or anything else he wants to. I want to abide by no laws except nature's laws, which are the only perfect laws ever made I want to love everyhody and everything that is good and I want everyhody and everything to love me. I am something of a Buddhist. I believe that animals have a good right to live and be happy and make other people happy as people have to live and make themselves unhappy and everything else around them unhappy. I believe that everything was made for some lieve that everything was made for some use and has its use, but blundering, mean humanity has kicked it around and misplaced it until humanity says it is of no use. I want to live to love and to see the beauty in everything. I do not know what I want to be.

Yours truly.

EMMETT L. FRITZ.

No. 1 Machine No. 2 Machine Most won-derful improvement in the history of photography is

Dorr's Peerless Daylight Plate Developing Machine

Just think of developing 1 to 20 plates in 6 minutes at one time, or 300 to 500 plates a day, instead of one at a time and in the dark. Why work all day or night to do a few plates when it can be done in a few minutes, and in any room or place? Better and more perfect results. Ask your dealer or send for catalogue A.

# THE ORATOR'S PREPARATION SHASFIRST SHOULDER STRAPS By WILLIAM J. BRYAN GEO. MAGREYNOLDS gracefully poised a bow and arrow.

UST before the French and Indian war had reached the stage when it could be called a war, General St. could be called a war, General St.

Clair, then a colonel, was on the plains of Chippewa in command of a body of troops watching the Indians. Of the stream. The gray rocks, among This was not very far from the source of the Mississippi River. The Chippewas, usually peaceful, had become defiant and wrilke. They pillaged and muring forms, clad in the Chippewa dress of the one side and the English and Colonists upon the other had not as yet been drawn into a general conflict. The Chippewa straightened up, some to a sitting posture, others standing. Morgan's impulse to end the career of so treacherous a bear was arrested by a strange occurrence upon the opposite bank of the stream. The gray rocks, among which he thought he detected a movement some minutes before, suddenly came to life. They were not rocks at all. Crouching forms, clad in the Chippewa dress of dered, but the French and Indians upon the one side and the English and Colonists upon the other had not as yet been drawn others standing. Morgan's impulse to end the career of so treacherous a bear was arrested by a strange occurrence upon the opposite bank which he thought he detected a movement some minutes before, suddenly came to life. They were not rocks at all. Crouching forms, clad in the Chippewa dress of dered, but the French and Indians upon the other had not as yet been drawn others. Standing. Morgan's impulse to end the career of so treacherous a bear was arrested by a plant was a rested to yet cannot be a strange occurrence upon the opposite bank transpectors at the content of the stream. The gray rocks, among the career of so treacherous a bear was arrested by a plant was a plant was a plant was a plant was a strange occurrence upon the opposite bank transpectors at the career of so treacherous a bear was a rested by a plant was a p

back into camp for burial.

The next night the same scene was repeated, and night after night thereafter until five brave fellow: were killed. Then nobody would volunteer to take the post. As Colonel St. Clair thought it was useless to place a sentinel where the Indians could so surely pick him off from the security of the forest, he left it unfilled for a night or two. Meantime a Vikinia rifeman called at the colonel's headquarters. He was a fine-looking you'h, scarcely out of his teens, broad-shouldered, sinewy, strong, over six feet tall. This young man was noted even then for his physical prowess and a courage that hordered upon rashness. Before or after that day he never ress. Before or after that day he never wavered in the face of any physical dan-ger. The young man was Daniel Morgan, afterwards the distinguished Revolutionary

He would try the post of death and find

If would try the post of death and find out how his courades met their fate. Colonel St. Clair, who like I the brave Virginian tried to distande him.
"Morgan," hald he, "give this thing up. It is not important to picket mear the woods. You are too valuable a fellow to throw yourself away upon the point of a Chippewa arrow. Letter drop it."

Morgan laughed. "Fin not afraid of that," said he; "he idea something tells me I ought to go out there tonight. I think I'll get back all right.

I ought to go out there tonight. I think I'll get back all picht.

And he went. He fell in with the guard and they leat him at the destant post as "night drepped her sable curriin" and the moon came up over the edge of the dark plains. He heard the foot teps of the retaining soldiers grow faint and fainter; then the sound died away, and there was deep silence, save the low maining of the wind among the pone boughs and oak branches.

his comrades, Colonet St. Chair also gave Lieutenant Morgan men, with orders to proceed to the post them the sound died away, and there was deep silence, save the low maining of the branches.

branches,
How "creepy the situation was! moment the tension of a low string might send an arrow upon its gruesome mission, ending Morgan's career cre it was scarcely begun. But the lenctiness and danger of the situation did not appeal to the rifle-man. His thoughts were base to appeal to the rifle-man about 7.30 man. His thoughts were busy in another there a bout 7:30 direction. He suspected that the keen eyes o'clock. The coat and hat were arranged of hostile savage were upon him at that just as upon the night before. Then the moment. But where were they? He stood soldiers hid themselves among the bushes a while in the shadow of an eak, and the rand lay down in the snow. They waited—sat down upon a fallen tree to plan and a very long time it seemed to them, but it await developments. He was partly was not more than an hour. It was a cold a while in the shadow of an eak, and the i and lay down in the snow. They waited—sat down upon a fallen tree to plan an a very long time it seemed to them, but it await developments. He was partly was not more than an hour. It was a cold screened from view on the forest side by a hed and the men were growing impatient, clump of scrub growth. The sky became overcast with clouds and it grew much darker. His rifle lay across his knees. Leaves. Every sense was keenly alive. He had chosen such a position that he could cover every avenue of approach with eye or rifle behind a dead cedar half recumbent upon once he though he saw a movement the shore of the stream a huge bear among some gray rocks back a short discovered. Walked across the ice and passed Once he though he saw a movement among some gray rocks back a short dis-tance from the opposite side of the stream. He gazed intently in that direction for some moments. The movement was not repeated and he set it down as a trick of the imagination.

But what was that? It was a sound that made Morgan's blood tingle and caused him to clutch his rifle-stock with a firmer grasp. A rustle among the leaf-drifts ungrasp. A rustle among the leaf-drifts under the creek bank a few yards below him, a familiar grunt, and out into full yiew stalked a hig bear. He shambled over the ice obliquely towards the farther side of the stream. When bruin was half way across, a rift in the clouds let a flood of silvery moonlight upon the scene. Those rays were the salvation of Daniel Morgan. for his quick eye detected a pair of gaily decorated moccasins on the hear's hind

Here was trouble, the lonely sentinel now knew. He prepared for it instantly. The instinct of the Indian hunter asserted ithear had just reached the oposite shore of Son thereafter the camp was removed and the creek. It moved into the shadow of Colonel St. Clair in a few days availed the trees, stopped, arose upon its hind feet himself of a chance to promote the gallant and faced the sentinel. In its paws were Licutenant Morgan to a captaincy.

next instant the arrow had cleft the dead limb and pierced the sentinel's coat, and coat and hat fell to the ground, with a feigned groan of agony from Morgan to make his bit of deception the more real-

Morgan's impulse to end the career of so the one side and the English and Colonists straightened up, some to a sitting posture, upon the other had not as yet been drawn others standing. Morgan counted twelve, into a general conflict. The Chippewa country was a wild region, populated by red men, savage beasts, and a few venture-some plane ers and their families.

Coloniel St. Clair had been ordered to halt and encamp near a stream. It was early winter. A beht snow had fallen and lake and stream were frozen over. Signs of recent in fill or visits were soon found. To avoid surprise the colonel threw out a line of 11 kets. The extreme of the line rested upon the edge of a vasi forest, into which it was supposed the Indians had retreated upon the approach of the troops.

At this benefy out, ost a solitary sentinel patrolled. The moon shone foil down upon the snow and it is as light almost as day. The snow crunched audibly to the sentinel's brisk tread and he swung his differenced by a possoned arrow, was carried buck into camp for burial.

The next night the same scene was religious to their tepess to prepare for the bloody work on hand

nad evidently all gone to their tepees to prepare for the bloody work on hand for the next night. As he lay behind the log Morgan meditation with the second ed upon what to do next. Deciding to return to the camp he put on his hat, wrapped his coat about him and hastened to the head-quarters of his commander. When our mander. When ad-mitted, Colonel St. Clair expressed sur-prise at his return and congratulated him upon his escape The Colonel demanded his story and Morgan eagerly re-lated it. As the Morgan eagerly re-lated it. As the young Virginian con-cluded, the Colonel commended him for his bravery and strategy and con-ferred upon him a Lieutenant's commission, made vacant by the death of one of his comrades. Colonel

After dusk the lit-

the shore of the stream a huge bear emerged, walked across the ice and passed within fifty yards of the men in ambush. The bear glanced at the bloodless sentinel, passed on and crossed to the opposite shore. The temptation was strong to send a dozen leaden balls after him, but the men had strict orders on that point. The bear walked a few paces into the forest, then suddenly reared upon his hind feet and let fly an arrow, which buzzed across the stream and pierced the hat. The sham sentinel fell to the ground. In an instant the Chippewas were upon their feet and emerging from the forest. Then the Lieutenant gave his men the command, "Fire!" A sheet of flame flashed across the stream and half the dusky warmand. Free: A sheet of name hashed across the stream and half the dusky warriors lay dead. So completely surprised were the Indians that they did not draw a how or raise a tomahawk. The squad of 'irginians sprang over the creek, reloading as they went. As the remnant of the Indian band ran through a narrow clearing to reach the main forest another volley laid several more of them low. It is a and coat he lung them upon a dead branch matter of tradition that Lieutenant Morat his side and then silently dropped behind the log on which he had been seated. French and Indian war as any one overt Peeping over his barrieade he saw that the bear had just reached the oposite shore of Soon thereafter the camp was removed and the stade of the shadew of Colonel St. Clair in a few days availed

EBSTER, the great orator, said ject of investigation. He who would sucof eloquence that it must exist ceed in public speaking must understand
"in the man, in the subject, and that a sense of justice is to be found in in the occasion." And then he every heart, and that that sense of justice proceeded to elaborate the statement, is the safest foundation upon which to build showing that it was a combination of a government. Bancroft, in the address high purpose, firm resolve and dauntless above referred to, declares that popular spirit, speaking from every feature and government is the strongest government in showing that it was a combination of high purpose, firm resolve and dauntless spirit, speaking from every feature and reaching the heart of the hearer. There are two things absolutely essential to cloquence, First, the speaker must know what he is talking about, and, second, he must mean what he says. Nothing can take the place of knowledge of the subject and cornestness. To these other things can be earnestness. To these other things can be added, such as clearness of statement, felicity of expression, aptness in illustration, beauty in ornamentation and grace in delivery.

delivery.

Eloquence is heart speaking to heart. There is no mistaking the cry of terror or the shout of joy and so there is no misunderstanding the sincere message that passes from heart to heart.

The young man who would fit himself for real influence in the forum must himself feel deeply upon the subjects which he discusses, and he cannot feel deeply without being in full sympathy with those whom he addresses. He must also be able to give them information which they do not possess or to state what they know more forcibly than they can state it themselves.

The young man ambitious to stand as the representative of his people—not as an official nominally speaking for them, but as a man actually voicing their aspirations and giving utterance to their hopes—such a young man is advised to read the address

and giving utterance to their nopes—such a young man is advised to read the address entitled "The People in Art, Government and Religion," delivered by George Bancroft at Williams college in 1835. (It will be found in Volume VII. of Modern Eloquence, known as Reed's Collection of Speeches.)

This critical is one of the greatest tributes. This oration is one of the greatest tributes ever paid to the common people, and it will furnish not only thought, but inspiration to young men. It defends not only the rights of the people, but the capacity of the people for self-government, and declares not that "the people can make right," but that "the

people can discern right." This admirable address is referred to because of the sound advice that it gives to young men, advice that is pertinent in this connection.

Bancroft says: "Let the young aspirants after glory scatter seeds of truth broadcast on the wide bosom of humanity, in the deep fertile soil of the public mind. There it will strike root and spring up and bear a hundred-fold and bloom for ages and ripen fruit through remote generations."

The difference between a demagogue and a statesman is that the former advocates what he thinks will be popular, regardless of the effect that it may ultimately have

of the effect that it may ultimately have upon the people to whom he appeals; the statesman advocates what he believes to be the best for the country, regardless of the immediate effect which it may have upon immediate effect which it may have upon himself. One is willing to sacrifice the permanent interests of others to advance his own temporary interests, while the other is willing to sacrifice his own temporary interests. willing to sacrifice his own temporary interests to advance the public welfare. While the conduct of the statesman may seem unselfish, and is unselfish in the usual acceptation of that term, yet it is really an enlightened selfishness, for no man, when he takes a broad view of his own interests, can afford to accept an anvantage which comes to him at the expense of his country. The statesman is building upon a firmer foundation than the demagogue, and in the end will find a more substantial reward for his self-denial than the demagogue will be able to secure for himself.

It has been said that the orator, more

It has been said that the orator, more than any one else, needs information upon all subjects, for questions that are no longer matters of controversy can be used

longer matters of controversy can be used as matters of argument, and no one can speak so well of the future as he who is well acquainted with the past.

A knowledge of human nature is necessary to the orator. Pope has said that the proper study of mankind is man, and in the study of man the heart is the most interesting as well as the most inverted the study.

government is the strongest government in the world, because "discarding the implements of terror, it dares to rule by moral force and has its citadel in the heart."

Moral courage is indispensable to the orator. A man cannot speak eloquently while he is running from the enemy; neither can he inspire courage if his knees smite each other, and there is a tremor in his voice. Courage rests upon conviction; a man has no convictions to speak of who is not willing to endure suffering in support of them. of them.

The orator must have falth—faith in God,

of them.

The orator must have faith—faith in God, faith in the righteousness of his cause and faith in the ultimate triumph of the truth. Belleving that right makes might, believing that every word spoken for truth and every act done in behalf of truth contributes to the final victory, he does his duty, more anxious to help the cause which he espouses than to enjoy the fruits of victory.

And, finally, let the ambitious young man understand that he is in duty bound to discard everything which in the least weakens his strength, and under obligation to do everything that in any degree increases his power to do good. Good habits, therefore, are always important, and may become vitally so. He can well afford to leave liquor to those who desire to tickle the throat or to please the appetite; it will be no help to him in his effort to advance the welfare of his fellows. He can even afford to put into books what others put into tobacco. The volumes purchased will adorn his shelves for a lifetime, while smoke from a clgar is soon lost to sight forever. He does not need to swear; logic is more convincing than oaths. Let him feed his body with food convenient for it, remembering that food is only useful in so far as it strengthens man for his work; let him train his mind to search for the truth, remembering that his power to discern the truth will increase with the effort to find it. Let him keep his heart diligently, for "out of it are the issues of life." Let him recognize service as the measure of greatness, and estimate life by its out-go rather than by its income. Let him to himself be true, "and it follows as the night the day, he cannot then be false to any man."

### An Omaha Paper Compliments the Boys

July 5 at the St Louis exposition was American Boy day and the management of the day was in the hands of William C. Sprague, of Detroit, Mich., editor of a juvenile publication Thousands of boys of every nationality were on the grounds and participated in the program Among the number were Grover C. Aker of Blair, Neb., and Angus M. Berry of Logan, ia, The former is 17 years of age and a pupil of the Plair High School. Young Aker delivered an original oration on "The Coming Man." His effort was roundly applauded. There were thousands of people in the audience and his oration was received with universal praise.

The people of Elair felt so honored that a boy of that town should have achieved such success that a few days ago they rented the opera house and had young Aker deliver his oration before a Elair audience, which packed the pretty hall At the conclusion of the address Aker was presented with a handsome gold medal.

Angus M. Berry is also 17 years of age. He was awarded a cash prize of \$25 in gold for a ten-stanza poem on "The American Boy." The poem was the result of a contest in which there were several hundred contestants. Berry carrying off the prize. The poem was read by youn; Berry and its reception was a flattering tribute to its author.—Omaha World-Herald.

### The Coin Trick

Commence by remarking how very easily a wetted silver dime will adhere to the forehead, and say you will wager any one that after you have applied it to their forehead they cannot "wrinkle" nor shake it off without touching it with their hands.

You may give a little illustration by damping a coin with the tongue and sticking it to your own forehead, then making a great fuss of working your

sticking it to your own forchead, then making a great fuss of working your face to dislodge it; naturally it falls off after a short time. Some one is sure to take up your wager.

Start by putting the dry coin to their forchead, then taking it off to damp; instead of doing so you (unperceived) wet the tip of the middle finger of your right hand and apply it to their forchead as if it were the coin you were sticking on. Now take away your hand (carefully concealing the coin). The fun then commences. Your friend imagines the silver is on his forchead, and tries to work it off, his friends meantime encouraging him to persevere; and so the fun goes on until it dawns upon him that he has been "footed". Now is the time to get out of his road.

### The Dancing Pea

This is a remarkably simple, but always

This is a remarkably simple, but always surprising and effective trick.

The performer takes the stem of a broken clay pipe or a straw and, holding it perpendicular to his mouth, places a pea quickly upon the upper end. Then he makes the pea hop up and down to a lively tune on the piano.

The whole trick consists in sticking a long thin needle into the pea. This forces it always to return to its place.

A piece of thin wire can be used instead of the needle, which, in order to remain invisible, should not be bright and shining. Care must be taken that the needle

or wire is fastened well into the pea, so that it will not drop into the performer's

### Deeply Impressed

well acquainted with the past.

A knowledge of human nature is necessary to the orator. Pone has said that the proper study of mankind is man, and in the study of man the heart is the most interesting as well as the most important sub-

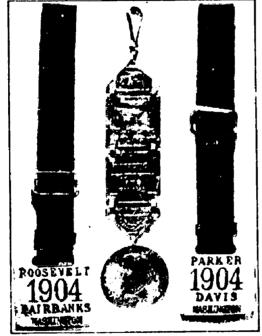

PULL THE STRING AND THE NOISE IS AWEUL

### The Campaign Will Be a Noisy One

The originators of campaign novelties have apparently concluded that noise is the most important factor in a political remonstration. With this idea uppermost will distribute to the faithful meraphones in their minds they have produced the campaign drum, a diabolical contrivence that will probably be responsible for the swelling of the number of annate, in our lunatic asylums this fall. The campaign drum requires no beating. It beats itself by antomatic means whenever the campaign enthusiast pulls a string. The sound produced by the pulling of a string is exactly that of the rolling reverberation of the sheepskin instrument beaten by an energetic stick whelder, without the rhythm of the roll directed by intelligent drammers. It is merely a rolling noise in finit tion of drumming, and after hearing one of these campaign drams these sounded the mind begins to totter at the thought of a thousand or so of the fiendish instrument, being spring at one time, without any concerted attempt on the next of the operators to sand or so of the fiendish instruments being spring at one time, without any concerted attempt on the part of the operators to keep time. It is not intended by the originators of the campaign drum that any time should be kept. Noise is the only object sought for; just pull the string and roll the drum. The more drums the more defening the din.

As a noise producer the computen mega-phenes will run the automatic drum a close second. The megaphones are being pre-pared with appropriate mottogs inscribed on their outward surface, suitable to the opin-ions of members of both parties. From a megaphone inscribed "Four years more of Roosvelt" the campaign rooter will pro-

CAMPAIGN FORS

Buttons for the lapel of the coat are being made by the million. Some of the designs are attrictively original. One shows

for the People," and "Parker for President means Prosperity," Through these voice trumpets the marching men will shout their rallying cries as they parade the streets; with their aid they will well the volume of sound ten fold when the campaign songs are sung and make the efforts of previous political rooters look but feeble mutterings her comparison. Thousands of these megaby comparison. Thousands of these megathones have been ordered by the computen-clubs. They are to be distributed broad-cast to the men who will be in line in the great parades.

An interesting novelty is the political fob.
This is being made of the familiar baggage check fastened to a strap. The adherents of the Republican party will wear a fob. the brass check of which is stamped "Roosevelt, 1904. Fairbanks, Washington." the brass check of which is stamped "Roosevelt, 1904, Fairbanks, Washington."
The Democrats will sport fobs inscribed: "Parker, 1904, Davis, Washington." This fob is one of the eleverest of the many covolute originates. noveldes originated by the makers of campaign badges. A more elaborate fob is made of gun metal. A medal, on one side of which is the face of Roosevelt and on the other that of Fairbanks, is supported by a chain, on the flat slabs of which are stamped: "Trade follows the Flag. Prostamped: tection, Prosperity and Panama Atlantic-Pacific."

signs are attrictively original. One shows a hand supporting four aces and a picture of Roosevelt. On the cards are the slogans Sound Money, Expansion. Protection, Prosperity. Below is the campaign cry. "Stand

Pat." A Democratic button shows, between the portraits of Parker and Davis, the figure of a rooster dressed in the garb made familiar to us by the cartoonists as the only costume in Uncle Sam's wardrobe. The rooster is crowing. The burden of his song is that famous chorus of the supremely confident: "Shure Mike." A campaign button that promises to be popular with the Republicans is a gilt Rough Rider's hat, stamped with the name of the President. Another novelty is an artificial rose that remains closed until some one approaches the wearer and attempts to examine it, when, presto! the leaves open out and there appears a portrait of the presidental choice of the man who sports the flower. "Teddy's Teeth" will be a popular campaign novelty. The teeth are worn by adherents of Roosevelt. They are painted on tin and can be held in the mouth by means of a support at the back. They give the

of a support at the back. They give the wearer the appearance of possessing an enormous mouth in which are two rows of magnificently even teeth. The appearance of a thousand or so of men marching with "Teddy's Teeth" as their most prominent facial feature could not fail to be most im-

pressive.

Of campaign canes there are innumerable varieties. Nearly all are gotten up in patriotic colors and all are in some way or other destined to be used as noise producers.

Khaki will be the prevailing color with the uniformed paraders. With the khaki uniforms some of the clubs will have campaign guns, unitation rifles made to hold flags bearing the campaign mottoes. These will add greatly to the picturesqueness of the parades this fall. But noise will be the prevailing note in the general inharmony.

#### The Blue and The Gray

(By Henry Cabot Lodge, Lawyer, Author, Member of Congress from Massachusetts, 1886-1893; Senator, 1895-, Born at Boston, 1896.)

From an address delivered at the dinner to Robert E. Lee Camp of Confederate Veterans, in Boston, June 17 1857. Used by permission of the author.

From an address delivered at the dinner to Robert E. Lee camp of Confederate Veterans, in Boston, June 17 1857. Used by permission of the author.

I do not stand up in this presence to indulge in any mock sentimentality. You brave men who wore the gray would be the first to hold me or any other son of the North in just contempt if I should say that, now it was all over, I thought the North was wrong and the result of the war a mistake, and that I was prepared to suppress my political opinions. I believe most profoundly that the war on our side was eternally right, that our victory was the salvation of the country, and that the results of the war were of infinite benefit to both North and South. But, however we differed, or still differ, as to the causes for which we fought them, we accept them as settled, commit them to history, and fight over them no more. To the men who fought the battles of the Confederacy we hold out our hands freely, frankly, and gladiy. To courage and faith wherever shown we how In homage with un overed heads. We respect and honor the gallantry and shed their blood in defense of what they believed to be right. We rejoice that the famous general whose name is borne upon your banner was one of the greatest soldiers of modern times, because he, too, was an American. We have no bitter memori's to revive, no reproaches to utter. Reconcillation is not to be cought, because it exists already. Differ in polities and in a thousand other ways we must and shall in all good-nature, but let us never differ with each other on sectional or State lines, by tace or ereed. We welcome you soldiers of Virginia, to New England. We welcome you to do have a not and Fanenit Hall. In your presence here, and at the sound of your resence here, and at the sound of your roless beneath this historic root, the years roll back, and we see the figure and hear again the ringing tones of your great orator. Patrick Henry declaring to the hist Continental Concress: "The distinctions between Virginian, Sen your amount and pro

A distinguished Frenchman, as he stood A distinguished Frenchman, as he stood among the graves at Arlington, said. "Chity a great people is caps ble of a great civil wir," Let us add with thankful hearts that only a great people is capsble of a great reconciliation. Side by side, Virginia and Massachusetts let the Colonis into the War of Independence. Side by side, they founded the government of the United States. Morgan and Greene, Lee and Knox, Moultrie and Present, men of the South and men of the North, fought shoulder to shoulder, and wore the same uniform of buff and

the North, fought shoulder to shoulder, and were the same uniform of huff and hine—the uniform of Washington.

Your presence here brings back their noble memories, it breathes the spirit of Concord, and unites with so many other voices in the irrevocable message of union and good will. Mere sentiment all this, some may say. But it is contiment, true sentiment, that has moved the world Sentimert fought the war, and sentiment which has reunited us. It is sentiment which so hallows a bit of tern, stained bunting. has remitted us. It is sentiment which so hallows a bit of form, stained binning, that men go gladly to their deaths to save it. So I say that the sentiment manifested by your presence here, brethren of Virginia, sitting side by side with those who wore the blue, has a farreaching and gracious influence, of more value than mony practical things. It tells us that these two grand old Commonwealths, parted in the shock of the Civil War, are once more side by side as in the days of the Revolution, accert to part again. It tells us that the sons of Virginia and Massachusetts, if war should break again upon the country, will, as in the olden days, stand once more shoulder to shoulder, with ne distinction in the colors that they wear. It is fraught with tidings of peace on earth, and you may read its meaning in the and you may read its meaning in the words on yonder picture, "Liberty and t'nion, now and forever, one and inseparable."

#### "GETTING EXCITED"

Mi \* ay Ky., Aug. 17, '04.

Dear Ein

I was tickled to pieces" nearly to see to a journal all those boys "did youralves proud" on the Fifth of July at St. Louis Expo. My! I wish I could zave been along. Come down my way next time you meet then I'll swell the "gang" and yell like "a wild Indian" for Mr. Sprague and The American Boy. Hip! Hip! Hurrah, three long, loud cheers for the boys.

> Yours in Delight, CREDON MIGANN Midway, Ky.

### Just Vetween Gurselves

Dear Boys-There are just two parties to this talk-you and I; YOU, the great crowd of a quarter of a million who read THE AMERICAN BOY, and I, the Editor.

Now, a talk between two parties, to be a real conversation, such as I wish this to be, should be mutual—that is, each should take part in it. A fellow who monopolizes all the talk soon becomes a bore, and I begin to fear you will soon be calling me by that very offensive name. Now, I do not mean to be a bore. I do not desire to do all the talking. I want you to talk back at me. Much that I say is for the purpose of leading you on and getting you to talk. Don't think that because there are some hundreds of thousands of you that I am afraid of you or shrink from the task of listening to you. Indeed, I want to get into your confidence so that you will write to me intimately, confidentially, freely, telling mo your views on matters and things, asking my advice it you need advice, recounting your difficulties and troubles, and, best of all, your successes and your ambitions, your joys.

I received a letter today from a boy whose mother recently died. His father is a traveling salesman and is much of the time away from home. The boy has been sent to a relative in a strange town and has started to school to a strange teacher, among strange boys. He winds up a pitiful, homesick sort of a letter to me by asking "What is a fellow to do?" Now, some people would say that boy is chicken hearted. No person would be mean enough to say it before his face, but some might, behind his back.

For my part, I think that the boy who wouldn't grieve and ask "what's a fellow to do" under such circumstances would be a little savage, and I am not sure but that I am slandering the savage by making that state-

The boy has lost his mother! There are boys who know what that means. She who was his best-his very dearest and best friend on earth has gone out of his life save as a memory. Every way he turns he misses her. He never realized before how necessary she was to him. What's a fellow to do, when he wants help, sympathy, encouragement, and the thousand and one little things of daily life beside, which a mother was ever at his side to furnish him leven doing for him things he ought to have been doing for himself? His father may be ever so good a father, but this boy's father cannot be with him night and day as was his mother. Fathers are so busy, you know. They can't stay home all the time. Here's a hard lesson the boy has brought home from school. What's a fellow to do who has no mother? Here's a button off. What's a fellow to do? Here's a finger cut. What's a fellow to do? Here's a cold night and no one to tuck in the covers. What's a fellow to do? Here's a sudden sickness. Send for the doctor. The doctor only stays a minute. Friends are kind and considerate, maybe. But, after all, what's a fellow to do? Here's birthdays and Christmases, and pray tell me, boys, what's a fellow without a mother to do, then? Here's a thousand avenues of evil opening to his feet. Ah, what's a fellow without a mother to do?

Then there's that strange town-not a familiar object, not a house or a street he ever saw before. He doesn't know where to play ball, if he wanted to. He doesn't know the swimming holes. The town seems like a new world, and a very unhappy, inhospitable, forlorn one. The school is strange. He has to be shown the way to reach it. The teacher isn't the friend the old teacher was. She gives him a reat among a score of boys and girls who know him only as "the new boy." He rises to recite, and his voice sounds strange even to himself. He goes out at recess and tands about waiting for the bell to summon him in to the schoolroom again: there at least he has something he can do. The day is over. He goes home-no, not home, pleasant though it be. His heart is in his month; and what wonder if he sits down to write someone whom he thinks knows a boy's heart, and amid tears cries out, "WHAT'S A FEL-LOW TO DO?"

Oh, you beys-you big, burly, care free boys with mothers, and homes, and friends, and familiar schoolinates and teachers, think twice before calling that boy chicken-hearted.

Yes, you say with a big voice and full chest, if I were that fellow I would pitch in and forget the old friends and make new ones. I would show myself a man. I wouldn't go whimpering around because every-body wasn't making a baby of me. Yes, my boy, your type is familiar enough. There are boys who forget their mothers-their living mothers, and there are boys who forget them after they are gone. There are boys who forget friends as fast as they make them. There are boys to whom one house is as good as another, and even some to whom many houses are better than that they should call "home". To such a boy-selfish, selfsufficient, boastful as he is it would never occur to ask, what is a fellow to do? The situation presents no question to him. I pity the friends and associates of this boy. I pity the wife by marries when he grows up. I picy the children that must cell him father.

It was hard for me to write the boy who asked me, "what's a fellow to do," because I knew how littl. I could by a letter fill the want in his life.

It is a good thing, boys, that the Creator has so ordered it that time heals main of our troubles-even a boy's troubles The need of the mother's hard and voice will never cease with that boy, but realization of that need, as he grows older, will grow less and less as other hands and other voices cone into his life. His recollection of the old school, the old river, the old hills, the old friends, the old home, will never pass, but they will gradually fade into a sacred, though snadowy memory, while other scenes, other friends, another home will come in to make up his life, and, if he will, that new life may be as happy a life as that other one of long ago; and it may be well for his own boys' sake if he possesses boys of Lis own, that in his boyhood days he was compelled through his tears to cry out, "What's a follow to do?"

There are thousands of boys to whom these words might apply now. To such boys 1 say, your tears and your longing for the old faces and old ways do you honor. But have courage. Do the best you can. There's a way out for you. But you are not to find a way by forgetting the past. On the other hand, let the memory of home and friends be to you an inspirat on to be and do something worthy of them. You had a good school, a good home, and a good mother, or you wouldn't now be regretting their loss. Then you have the best soil of a foundation laid for succes-

What's a fellow to do? Just do the best he can. It will go sless and hard at first with everything new and strange, but if he has the staff in him it will soon show, and then he will have friends to take the place of the old ones, to a degree at least.

You will need something of the philosophy of the stoic and the grace of the Christian, but, in that, you do not differ from people generally, for to all of us, young and old, come times when we ask, what's a fellow to do? To live, and to live nobly, takes courage at all times-but not the courage of a bully, mind you.

New, boys, write me. Don't all of you tell me your troubles, or I shall take to the woods. Sincerely yours.

M-6 Sprague

# More than five million women read The Delineator each month

THIS ANNOUNCEMENT, it is hoped, will reach some of the other sixty or seventy millions who are not so fortunate. We want them to know how THE DELINEATOR earned its title of "The most necessary of

all magazines published for Women"; why it contains more of real interest to "Her," more of actual value and helpfulness than any other periodical printed; how it enters into every phase of her life at home and abroad; her household duties; the care, amusement and education of her children: the science of her kitchen, as well as her own hours of rest and recreation.

A year of it is a veritable cyclopedia of home knowledge—a single number contains enough of economy-help to pay for many years' subscriptions. On the basis of these money-saving possibilities alone, you can ill afford not to be a regular subscriber to THE DELINEATOR. As a helper over the house-

wife's every-day doubts and difficulties, it is worth many times the dollar these twelve monthly visits will cost you.

REE The Delineator has issued a beautiful art panel, illus-

trating the progress in style in woman's dress during the past century—eleven figures, showing the costumes in vogue during each decade. It is well worthy to adom the walls of milady's boudoir or den. The illustrations of some of the figures reduced in size appear on this page. There is no printing at

all on the front of the panel with the exception of the dates under each costume, and the title line, "A Century of Delineator Girls." These are admirably suited for framing, and are in every sense works of art. We will send you one—rolled in a mailing tube, so there will be no creases in it—on receipt of four cents in stamps to cover mailing cost.

Address ART DEPARTMENT, THE BUTTERICK PUBLISHING CO., Ltd., Butterick Building, New York City

But in the meantime ask your newsdealer for a copy of this month's Delineator—Fifteen Cents each or One Dollar for an entire year

DETROIT, MICH., NOVEMBER, 1904

Number 1

HE little whitewashed cabin was very warm and cosy on the cool November evening and Aunt Hannah's round face looked out from under her snowy turban with unusual pleasantness. "Fill it up, honey, clar to de top," she called after Ramus, as he came in with an armful of wood. The thought of the hot biscuits and the odor of frying bacon made work seem easy, so the trips to the woodpile were soon ended.

"What des yo' think ob habin' a real Thanksgivin' dinnah, Hezekiah, an' invitin' der preacher an' his fambly?"

Hezekiah's face beamed with interest.

"I's bin thinkin' der very same thing, Hannah, an' yo' kin sartin cook der finest dinnah in der lan'."

"O, go 'long, Hezekiah Jones!" But Aunt Hannah's heart swelled with pride as she commenced to plan the menu for the feast. They talked long over the coffee cups and even after supper. When the work was done and Uncle Hezekiah took his banjo from the wall and Aunt Hannah took her accustomed seat before the fire, the subject had not lost interest. Yes, they would have a real old-time Thanksgiving dinner, with all the goodies displayed. Uncle Hezekiah had been unusually successful with his small garden, and not a few extra pennies had found their way into Aunt Hannah's little bank from the sale of her doughnuts and hot buns, and to entertain the new minister was a privilege and honor long coveted.

The plink, plunk, plink, plunk of the banjo seemed to have a soothing effect on Ramus, for he bowed his curly head over his arithmetic and his mother said softly: "See dar, now, dat chile's all done out; go long ter bed, honey." The truth of the matter was. Ramus felt heartsick over this great dinner which was to be, for how were they to have a Thanksgiving dinner without a turkey, and if they had a turkey, it must surely be Rox, his one pet and treasure. Old Mr. Smiley had given him the great egg and he had put it in the nest of Old Betty and the dearest little turkey in the world hatched out, and Ramus had called him Rox. He cared for him 80 tenderly, watching lest he stray into the long grass and die. His mother had said so many times, "Yo' neber raise dat turkey, chile, neber," but Ramus did raise it, and there was not a finer bird in the country round. The thought that he must be sacrificed for the benefit of the preacher and his disagreeable children was almost more than Ramus could stand, and he was glad to escape to his little room in the loft, where he could think it over. He went to bed not to sleep, for the murmur o voices from low told him that the dinner was still being discussed. He tip-toed to a crack near the chimney, and listened. Yes, just as he thought, they were talking about Rox.

"Ramus sartin raised a fine bird thar, Hannah."

"Mos' too bad ter kill 'im, Hezekiah."

"Mah goodness! For der preacher?"

Ramus did not dare to listen longer, so he crawled into bed and tried to plan how he could save his pet. The next week went by so rapidly that Thanksgiving was only two days away when Ramus decided what to do. Ramus' father watched Rox with much interest, and often offered to feed him, chuckling with delight to see him so plump and fat. Ramus' sorrowful face told the story of his trouble, but no one seemed to take any notice of it.

He was in terror while in school for fear Rox would be killed while he was away, but Uncle Hezekiah had a soft spot in his heart, and as the time drew near, he, too, felt a little sorry about the matter, but the company had been invited and it was too late now to do anything else but kill the turkey for the feast.

The day before Thanksgiving, Ramus asked that he might stay home from school, and as it was the last day of the term and Aunt Hannah thought he might be helpful, she consented, and Ramus kept a close watch over his treasure. The execution had been put off until early the next morning and thirs's seemed to be working in favor of Ramus' plan. That night, when the old people were fast asleep and the friendly moon shone in at Ramus' little window, he climbed down the side of the cabin and was soon at the shed where the turkey roosted. His voice was full of real emotion when he almost whispered: "I's come, Rox;

I's come ter save yo', honey bird." The turkey did not just understand, but he made no objection when Ramus picked him up and put him in a grain sack. Then Ramus took a small tin pail of corn, and shutting and bolting the shed door as he had found it, he hurried to a great oak tree near the cabin. "Dey'll nebber look for 'im so near de house," he said to himself, as he prepared to climb the tree and carry the turkey with him. It was quite a climb, but Ramus was determined and soon reached the center of the tree where the branches were the thickest, and with trembling and apprehension lest Rox should betray them, he finally succeeded in tying him to the limb of the tree, and then from where the turkey could reach it with his bill he fastened the pail of corn.

It was toward morning when Ramus fell asleep and it seemed but a few moments to him when he heard his father calling:

"Ramus! Ramus Washington Jones, get up dar, dis minute!"

Ramus trembled at the "Washington Jones" part, but he knew he could play innocent if the turkey would only keep quiet. Such a morning as it was! The old turkey was nowhere to be found. Ramus joined heartily in the hunt and declared he locked the turkey in the shed directly after supper and his father and mother knew he went to bed early. The guests were to come at noon and Aunt Hannah was beside herself

HURRIED TO A GREAT OAK TREE NEAR THE CABIN

with anxiety. Finally she said they had no more time to lose, and for Uncle Hezekiah to kill two of the best chickens. Ramus helped to pick them and tried not to appear nervous, for he was afraid of being discovered at the last minute, but the chickens were beautifully roasted and the table loaded with goodies before the Reverend Samuel Easyway and his beloved family arrived, and nothing had been heard from the old oak tree before the company sat down to dinner. Of course, the missing turkey was the main topic of conversation and there were many surmisings as to what had become of him, but all finally agreed he must have been kidnapped by some disreputable character about the neighborhood. Ramus offered no

opinion, but kept his eyes upon his plate, waiting for all to be first served. Suddenly there was a great screeching and flapping of wings and every one rushed to the door to see the cause of the disturbance. Ramus was faint with fear and disappointment for there hung the turkey suspended for a moment from a limb right near the kitchen window, and then came tumbling down to the Thanksgiving dinner.

Uncle Hezekiah's face was full of wrath as he said sternly: "I see der hull thing, now; dat Ramus boy dun tied 'im up dar wid strings. Come hyar, yo' Ramus, yo'; I 'low I ought ter thrash yo' for spilin' our

fine Thanksgivin' dinnah."

Brother Easyway, thinking of the good dinner growing cold, was at Hezekiah's elbow and said consolingly: "Nebber mind der turkey, Brother Hezekiah; Ramus was thinkin' ob der sufferin' ob de bird and tried ter shield 'im. We will enjoy der dinnah all de moah."

Aunt Hannah soon had the dinner again in progress and she felt sorry enough that Ramus had been sent to the loft in disgrace, but Ramus was worrying for fear there was something worse than disgrace in store for him when the company had gone.

The day seemed endless to Ramus and it was fully dark before any one came near him; then he heard Aunt Hannah slowly climbing the little stairs. "It's all right, honey; yo'r father will not whip yo', for der minister, he say he buy that turkey ter raffle off fo' der new church organ." Ramus could hardly believe his good fortune. The honor of raising a turkey for a raffle was far greater than that of entertaining the preacher. Uncle Hezekiah was proud and happy and the evening was one long jollification at the little cabin, and Ramus was an honored member of the company. His bright eyes shone with fun when he overheard his father saying to the minister, "He's sartin der mos' clever chile evah was," and forgetting his anxiety for Rox, in his relief and pride, he was happy. There was real thanksgiving in the heart of Ramus Washington Jones.

# When "Old Glory" Is Lowered J. L. HARBOUR

The American soldier is taught to reverence the flag, and there are fixed rules regarding the manner in which it must be handled at a military post. The raising and the lowering of "Old Glory" is regarded as a matter of great importance, and it may not be done "in any old way," as our American boy might put it.

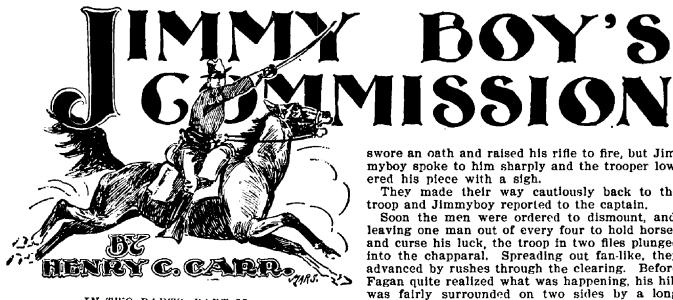

When the sunset gun is fired at a military post the beautiful stars and stripes come down under certain rules and regulations founded on the utmost respect for

"Freedom's starry banner."

Time was when the ceremony of lowering the flag was far less dignified than now. Indeed, it was run down with a rush and then bundled up in any way and carried off regardless of ceremony. But a proper spirit of patriotism engendered in recent years has brought about a marked change in the manner of lowering the flag. The Army Board on Drill Regulations a few years ago yielded to the suggestions of Captain W. R. Hamilton, of the Seventh United States Artillery, and adopted certain rules regarding the handling of the flag. One of those rules is that the stars and stripes must never be allowed to trail in the dust. One who has witnessed the lowering of the flag at an army post writes thus of it:

"Immediately before the time of lowering the flag the force at the post 'fall in' ready for roll-call at the foot of the staff, where every man can see the Stars and Stripes as they are illumined by the parting rays of the sun. Then comes the measured rollcall, followed by the buglers sounding a 'retreat.' When the last note of the bugle is heard the gun is fired, and all the men are brought to 'attention.' If they are armed, arms are 'presented,' and visitors and bystanders remove their hats. Then the band, standing on the parapet immediately below the flag, plays 'The Star Spangled Banner.' When the playing begins the flag starts down, not hurriedly, but deliberately, and in rhythm with the music. When the last bar of patriotic music is completed and the final inch of the halyards played out, the flag is not allowed to touch the ground. A sergeant and his detail stand ready to receive it, and four men appointed for the purpose fold it carefully."

After the flag is folded in the neatest manner possible it is carried to the guard-house, where it is placed in a box made purposely for it, and it is kept under guard until it is taken out and raised again the next day. Nothing so surely and so speedily arouses the ire of an American soldier as any disrespect to "Old Glory," and this is as it should be. And every American boy should learn to hold the flag of his country in the highest reverence.

IN TWO PARTS-PART II

T IS well enough to skip the year that followed. with the trip back to San Francisco in the troop trains, racing a mile a minute with double-headed sections, and the passenger trains taking to the sidings; that year with the long, dull voyage across the Pacific; skip the little farce comedy capture of the City of Manila, and come down to a still night in June in a little Filipino village with its cathedral, plaza and cluster of huts.

Just then it was quartering a troop of United States cavalry. The night was deathly still, and there fell upon the ear of a lonely sentry the distant scramble of a pony's feet through the bed of a stream above the village.

He waited a moment in silence, peering intently out into the silver night. As he watched, the pony came out of the jungle thickets and into the fitful light of the moon, making straight for him.

The sentry let the pony come on until it was twenty paces away, then he sharply ordered, "Halt!" The pony pulled up sharp and a voice replied, "Letter for capitan."

It was a Maccabbee scout.

The sentry was not convinced, however, and called out for the corporal of the guard, who presently came on the run.

The corporal, too, had suspicions.

"Git off that pony," he said, finally, for the scout only kept repeating "letter" and "capitan." Besides two swear words, "letter" was the extent of his English vocabulary.

The corporal made him dismount, and, throwing the bridle rein over his own arm, marched the scout up to the guard hut and woke the provost sergeant.

That august official was a former pupil of the Art Students' League, and all of his name that matters was Jimmyboy.

He had won his sergeant's chevrons months before, when McCafferty was promoted to be first sergeant of the troop.

Jimmyboy questioned the scout in his native tongue, and, throwing on his blouse, ran himself with the dispatches to the captain's house.

Before the captain could get his trousers on, the brazen voice of a cavalry trumpet was sounding "Boots and Saddles" and the men were tumbling out of bed and into their clothes.

McCafferty had hobbled down to the picket lines half dressed and with one of his boots in his hand. His big, strong voice went vibrating down the line of the plunging horses: "Steady, steady there, now. Here, you, Bill Hawkins, don't get that horse as rattled as you are. Don't throw the bit into his face like that. His mouth isn't made out of wood.'

When the captain hurried out of his quarters, the troop, in all kinds of undress, was "standing to horse" with the men at the bridles.

It was a long night's ride through the jungle, the troop stretching out in lonely single file into the gloomy shadows.

The captain rode first with his trumpeter, and Jimmyboy, as right guide of the troop, rode close behind him. McCafferty was in command of the second platoon and strung along the middle of the line.

The as only one lieutenant with the troop was a dapper youngster who worked a political "pull" to get a commission from civil life. McCafferty cast upon him the eye of suspicion because he wore white ducks and occasionally allowed himself to be interested in something outside of the army.

Neither McCafferty nor Jimmyboy had the slightest idea where they were going. After you have been in the army a while you stop wondering.

Dawn was just streaking through the forest when the sharp ping of a bullet turning end over end sung by McCafferty's head and tore through the foliage. In a second they heard the distant report of a rifle.

Half an hour later Jimmyboy was crawling through the jungle on foot with two troopers to reconnoiter. The captain feared an ambush, and Jimmyboy found that his apprehensions were justified.

The pathway led out of the thickets on to a barren hillside. It looked like the pate of a monk with the fringe of jungle for hair. The top of the hill was fortified with piled-up rocks. The Filipinos evidently intended to wait behind the fortifications and massacre the troopers as they came single file into the clearing. Jimmyboy estimated that there were many more natives than there were troopers.

As he lay watching through the trees, Jimmyboy's face suddenly flushed with anger. He had seen a face looking over the breastworks. It was a dark skinned face, but it was not the face of a Filipino.

Jimmyboy knew that it must be Fagan, the traitor. Fagan had been a soldier in a negro regiment, but had deserted because of some fancied harshness of discipline and became an officer of the insurgent army. He had vowed vengeance and boasted that he had killed fourteen of the men of his old company.

The other men saw Fagan, too, and one of them

swore an oath and raised his rifle to fire, but Jimmyboy spoke to him sharply and the trooper lowered his piece with a sigh.

They made their way cautiously back to the troop and Jimmyboy reported to the captain.

Soon the men were ordered to dismount, and, leaving one man out of every four to hold horses and curse his luck, the troop in two files plunged into the chapparal. Spreading out fan-like, they advanced by rushes through the clearing. Before Fagan quite realized what was happening, his hill was fairly surrounded on two sides by a long skirmish line which lay flat to the ground.

Even McCafferty admitted that he had never seen anything like that fire. Bullets sang in a chorus, and it seemed as though one solid sheet of flame was spitting death out from the breastworks. The grass and earth were torn about them as though a bad golf player had been mawling them.

Jimmyboy had shot away all of his cartridges from one side of his belt, and as he rolled over, keeping flat to the ground, to get at the other side, he discovered that the grizzled old captain was just behind him. He was the only man standing on the field of battle. The bullets were tearing the air in a screech about his head and kicking up the dirt at his feet, but he didn't seem to know it. He was leaning on his carbine that he carried instead of a sword, and was scolding a trooper who had a cartridge stuck in his rifle.

Jimmyboy could not hear what the captain said, but the trooper was getting a great raking over. The man half raised himself on his elbow as if in expostulation, but gave a sudden cough and choked with blood. In a second he was stiffened in the agonies of death.

The captain looked up indignantly as though he thought it a serious breach of decorum to kill a man he was talking to. His lips shut tight together grimly, and his voice rang out like a bugle along the scattering line of battle.

"Come on, boys," he yelled, and started forward on the run.

The men scrambled to their feet and ran after him. The breastworks burst out with renewed fury. Their fire seemed to scorch the atmosphere.

The old captain turned to face the line and, raising his carbine aloft to the full height of his arm, sent his last order ringing over the hill.

### Boys of Naples A Series by Minnie J. Reynolds

No. IV-The Macaroni Eater

street boys of Naples eat at the little open air cooking stalls which line the streets in the lower quarters. There a greater variety of penny cooked food may be found than anywhere else in the world. The macaroni blushes rosily in its eternal tomato sauce at a thousand stands, and for two cents the scugnizzo feasts like a king. Oftener, however, a bit of dry bread is all that will enter his poor little stomach in 24 hours. He has no home, no parents, and no education. One can hardly expect him to be very good under the circumstances.

Just as he yelled "Charge!" a builet plowed into his glorious old heart and he keeled over stone dead, his arm still outstretched.

With a howl of rage, the men ran forward for the breastworks, some of them fixing cruel sword bayonets as they ran.

The Filipinos broke and ran. Jimmyboy could see the traitor Fagan standing up behind the breastworks trying to rally the native soldiers; sould see him striking at them and hear him curse them vilely for cowards. But they slipped away from him, and at last he turned and shook his fist at the oncoming troopers with a taunting insult and disappeared.

Jimmyhoy stopped twice during the charge to take a careful shot at Fagan, and many other troopers singled him out for a target, but the renegade seemed to bear a charmed life.

It might have been a very pretty victory—the captain and the man he scolded were the only killedbut the boy lieutenant spoiled it all.

Oh dear, oh dear, that immaculate boy lieutenant! The Congressman who pulled wires to get him a commission in the army as good as murdered ten of his country's soldiers.

McCafferty always groaned every time to thought of that day and the pursuit of Fagan's men.

The boy officer did everything exactly as it shouldn't have been done. He finally landed the men, worn out and exhausted, in a death trap at the bend of a river over which the Filipinos had fled in retreat. There had been a bridge, but owing to the boy lieutenant's remarkable movements, the Filipinos had had time to cut it away. There was nothing left but a heap of wreckage, washing piece by piece down the mountain torrent.

As the young officer stood there bewildered and uncertain, there was a crack of a rifle across the river and one of the troopers fell. His knees seemed to crumble up under him and in a moment he was dead.

To the honor of the troop let it be said than there was no panic that day, but, in the interests of accuracy and truth, let it be said that it was uncomfortably near to one. The men were huddled in a bunch on a narrow ledge against the rocks. There was no place to form and no one to form them, for the boy lieutenant's helplessness was pathetic. The bullets were beginning to sputter death.

McCafferty stood there with silent disgust and despair. He had been soaked through with discipline so long that it never occurred to him to do other than take the pitiful boy's orders as they came without question or suggestion.

Jimmyboy, however, came quickly up to the boy and saluted.

"Beg your pardon, sir," he said, "but there is a long plank left in among that timber of the bridge. We could put it across and send the men over. They would have to go one at a time, but it would be better than this.

The boy looked at him gratefully and said with the petulant haste of a child: "Yes, get it and hurry; can't you hurry?"

He stood there on the bank and kept peevishly urging the soldiers to hurry until Jimmyboy lost his temper and told him they were hurrying as fast as they could. McCafferty was horrifled at such a breach of discipline.

The Filipinos seemed to understand the plan and directed a fierce fire at the troopers who were working with the plank.

A man at Jimmyboy's elbow was kined and a bullet kicked off Jimmyboy's hat. He picked it calmly up and went on working until at last the plank was across the tumbling mountain stream.

It did not make an inviting looking bridge. It sagged and bent under its own weight until it was a few inches above the water.
"All clear, sir," reported Jimmyboy.

"Well, let's hurry up and get across," said the boy officer with a nervous glance at his men herded into the slaughter pen behind. Some of them were kneeling to fire; others were firing where they stood; others were on the ground, wounded.

"Shall I cross first, sir?" said Jimmyboy, stepping to the end of the plank. But the boy officer suddenly flushed and a light came into his frightened eyes.

'No," he said with tremulous dignity, "I am going across first.'

His face was set and terrible. He was going to hat awful da

Jimmyboy stood aside pityingly as the boy officer stepped on the edge of the plank. He was trembling as though his knees would give way under him.

He took one step out, then holding tightly to Jimmyboy's shoulder, cautiously slid the other foot after. He stopped with a start, and, whirling half round, pitched headlong into the stream.

"They got the range pretty good," growled Mc-Cafferty.

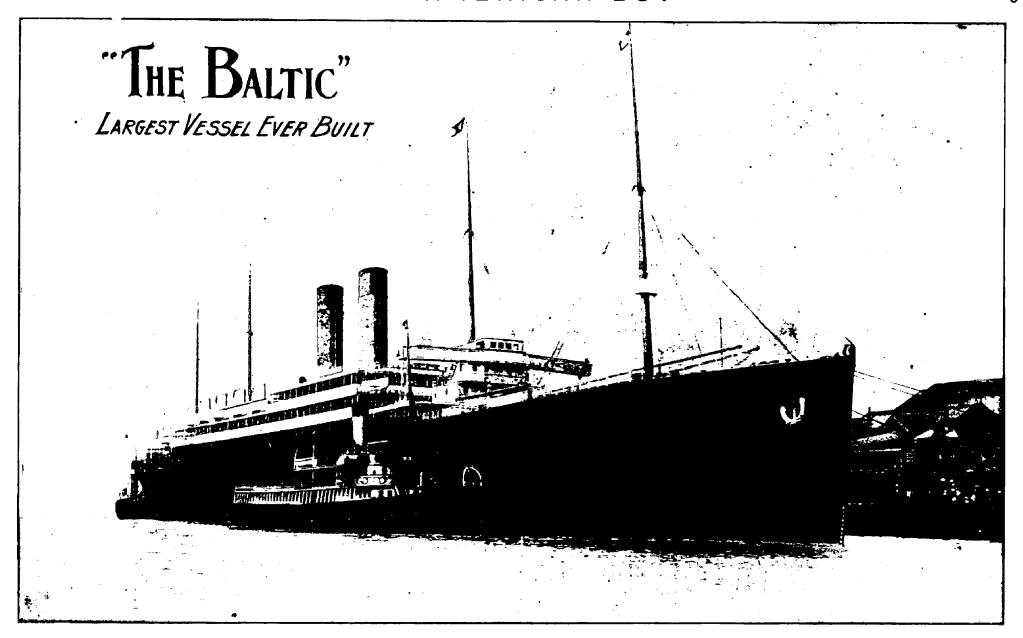

The situation was desperate now. The men were without an officer: it was worse than a ship without a rudder. Even old McCafferty seemed bewildered. The habit of obedience to a pair of shoulder straps was so strong within him that he was lost without an officer to turn to.

The fire of the Filipinos was increasing every second. They were growing bolder and coming up to shorter range. The men, huddled in against the rocks, were being shot down like condemned horses.

In a moment there would have been wild panic, when Jimmyboy stepped blithely out on the plank. There was a slight flush in his face and his smiling lips were pressed together, but he looked as calm and cool as a morning in May.

He took a few steps out and stopped in the middle of the plank, rocking it up and down so that it splashed into the turbulent waters below as he teetered.

He stood there still for a moment, a lonely target for riflemen against the river bank. Bullets fell about him in a hail and cut the plank at his feet. One went through his shirt. No one knew the terror that chilled his heart, for he stood there unconcernedly, as the soldiers thought, with his back to the rifle fire, looking down into the rapids below him as

Wonderful indeed have been the improvements made in both land and ocean travel in the past fifty years, and we are told that the end is not yet. There are enthusiasts who predict that the time will come when our rate of a mile a minute by rail will appear too slow to us, and the steamer that requires a whole week in which to cross the Atlantic will bring upon itself the odium of being very slow and "poky." Rapid transit is the imperative demand of the hour in this time of rush and hustle. Thousands of dollars are being spent in ballooning experiments, and in airships by which we are expected to travel through space with lightninglike rapidity in the years to come.

The terrors of ocean travel have been a good deal lessened by the tremendous increase in the size of our modern steamships, for the larger the vessel the more comfortable one may be made in it, and the less likely one is to feel the roll and swell of the water which is one of the prime factors in producing that indescribable malady called seasickness or mal de mer. It is a sensation so utterly demoralizing in its results that one would commit almost any crime to be rid of it, and in extreme cases one would be willing to be cast overboard and become food for whales. If one can be free from this deadly disorder, no method of travel is so altogether delightful as a trip across the water in one of our great "ocean greyhounds," large enough to accommodate several thousands persons in the greatest comfort.

Several thousands?" asks some "landlubber" who has never seen the sea, and who is not posted in regard to modern shipbuilding. "Did you say several thousands? You must be joking."

But the simple fact is that there has recently been completed a steamship licensed to carry three thousand passengers, in addition to a crew of about three hundred and fifty. This is the "Baltic," the largest steamship ever built in the history of the world.

This huge vessel was built at the shippards in Belfast and she made her first trip across the Atlantic early in July. She belongs to the White Star line, and those who have seen her have given to her the superlative praise of "beating the band." She has a cargo capacity of 28,000 tons, and the displacement at her load draft is 40,000 tons. She is 726 feet long, and seventy-five feet wide. The symmetry of her hull is so perfect that it is only when in juxtaposition to other craft that the steamer's tremendous size is apparent. She seems to dwarf the ordinary steamers when she runs alongside them. Three hundred and seventy-five persons can sit down to the table at one time in her grand dining saloon. She has rooms en suite for those who can pay for a parlor, bedroom and bathroom on shipboard. This is in tremendous advance of the usual stuffy little stateroom with two berths in it.

Life on one of these great floating palaces is very delightful, for the word palace may well apply to them. The epicure finds on them anything he could find on land, for there is simply no limit to the "good eating" on one of these great steamers. Surely "the world do move" when it comes to triumphant achievements in the line of ocean and railway travel.

though he thought it a most charming scene. The soldiers on the bank stopped firing and stood watching the boy upon whom the whole fire of the Filipinos had concentrated. There was a dead silence until Jimmyboy looked up at them and laughed.

"Come on, fellows," he said, and walked on across the plank to the river bank beyond.

Half a dozen men started for the plank, but old McCafferty swept them aside roughly and put his own

big foot kerflump on the plank.

But McCafferty was not a tight rope walker, and a teetering plank swaying over a mountain chasm was not marching to his taste. After the first step out, he stopped and hesitated like a horse in front of a mud puddle; then he creaked down on his old knees and began to crawl. All the while the bullets were whistling around him.

His difficulty in crossing struck Jimmyboy with apprehension lest it should have a demoralizing effect

on the other men.

Quick as thought, he stepped back on the plank, which bent deep under the double weight until the water from the rapids rushed over and wet McCafferty's knees. He looked up and roared for Jimmyboy to get off the plank. Jimmyboy only laughed and made the plank splash up and down in the water until McCafferty, clinging frantically to the plank like a recruit to a bucking horse, was drenched to the skin with the splashing water. He was growling like an old hear

He was swearing, and Jimmyboy would stop every little while to hear him. But the minute McCafferty tried to rise to his feet he would begin splashing again, and McCafferty would lie flat to his plank and be doused some more.

Jimmyboy's laugh peeled out so merrily that the men on the bank forgot their panic and laughed

uproariously. That plank saved the day.

McCafferty crawled out, dripping, on the other side, pretending to be furiously angry, but with a new respect for Jimmyboy in his heart. The men crowded up to follow him across the plank. Some of them walked across like Jimmyboy, and some grew dizzy like McCafferty. One poor fellow was killed on the plank and fell off into the water.

Without any special command, McCafferty led the men out in a long line of skirmishers as they came

one by one from the bridge.

It was desultory fighting for a while—exchanging courtesies at long range. A man on the end of the line suddenly stopped firing and stood shielding his eyes from the sun with one hand, looking up into the rocks at the right, where the mountain creek pitched down in waterfalls.

As McCafferty was passing behind him, the trooper called his attention, and they stood looking and pointing together. The troop was being flanked by the insurgents.

McCafferty would have led a charge into hades if there had been someone to give the orders, but he was lost without an officer. His heart turned to lead. How he longed for even that boy officer again.

He looked helplessly down the firing line to the bridge as though he half expected to see the dead lieutenant rise up again and take command, and there stood Jimmyboy, holding his carbine in the hollow of his arm and directing one of the troopers where to shoot.

There was something in his attitude so like his father that McCafferty started. He had seen his old chief stand just that way a hundred times, for Jimmyboy's father almost always carried a carbine instead of a sword in the field.

A strange impulse seized the old sergeant. He left his place and stumped down the line with great strides to where Jimmyboy was standing. There was an eerie look in old McCafferty's eyes, and Mc-Cafferty's voice had a touch of awe in it when he spoke. His spurred boots clicked together and his hand rose to his campaign hat in salute to Jimmyboy. He was so like his father.

'Sir-r-r-r," he said to Jimmyboy just as he would have said to Jimmyboy's father; "Sir-r-r-r, I have to report that the inimy is flanking us."

And the spell seemed to come over Jimmyboy, too, for there was no surprise in his voice as he said with that sharp abruptness which was his father's tone in battle: "Very well. See that the men do not fire so fast. We have lots of time for this."

McCafferty choked with emotion as he hurried back along the line muttering to himself: "Just what his father would have said."

And now a change came over McCafferty. He was all confidence again. He had his orders now. Jimmyboy could hear his big voice roaring at the

men, and he knew it was warming their hearts. "Shtop shooting like that," McCafferty roared.

"Shtop till ye see somethin' to shoot at. Do ye think ye can hit widout ye aim? Ye can't hit nothin' whin ye do aim, Bill Hawkins. Hey, there, you fool recruit, do ye think government gunpowder grows on trees? Shtop that now. Stiddy there, stiddy.

There is little of interest in the story of how a battle was won. It was won. Jimmyboy won it. If you don't believe it, read McCafferty's report. As theoretical commander of the remnants of the scouting party, McCafferty wrote out a report.

It is the most amazing report in the archives of the War Department. McCafferty applied his mind to it, and as he wouldn't let Jimmyboy see it for various ons, it was a wonder of written English. Shades of Lindley Murray!

That report did not meet the fate and the pigeonhole dust of the usual official report. It was too good to keep. It was passed round.

It was funny, sure enough, but it was a thrilling story, too, as McCafferty told it, and it fell into the hands of one of the mighty who had a sense of justice as well as humor.

The result was that a commission in the old regiment came to Jimmyboy without his asking. . . ٠

It was troop drill, and the trumpeter of the guard had come out on the parade to sound "Recall," the major signaled him from the headquarters' office to wait. The major was Jimmyboy's father, and he wanted to hear Jimmyhoy drilling his troop just a minute longer. The troop captain was on duty as officer of the day and Jimmyboy commanded.

His strong young voice floated in through the headquarters' windows.

"Right front into line; gallop; march!" he was calling, and the rush of the horses' feet on the gravel

was music to the major's ear. At last he made a sign to the trumpeter, and the

quick notes of "Recall" rang out in the quadrangle. "Sergeant major," called Jimmyboy's father, and old McCafferty, whose chevrons were now crowned with the triple arch, rasped back his chair and stood

at "Attention" before him.
"McCafferty," said the major.

"Yis, sor," said McCafferty.

"McCafferty," said the major, "you were right. That's too fine a boy to make a painter." McCafferty grunted.

(The End.)

POU don't know how much you love a Thanksgiving dinner until you find you are not going to have one; at least, that was what Ned Macomb discovered. It had never entered his head that there was such a thing as Thanksgiving without a dinner of turkey, cranberries, pumpkin pie, and all the rest of it, so when he happened to ask his mother if they could not have ice cream to finish off with, and she told him sadly that they could not even have a turkey, the world seemed to be coming to an end.

"I am afraid we can have only the pies, Ned," she told him. "You know the failure of the bank meant a great deal to father, and he has not been able to find another position. He told me last night that unless something turned up soon, he would give up all thought of another bank position and go to Preston, where he heard they had trouble getting men for work of all sorts."

"But, mother," said Ned, "it wasn't father's fault the bank failed."

"I know," his mother said, "but there are not always banks wanting men, and father knows very little of any other business. It takes a great big turkey for nine of you, not counting father and Bridget and me; so try to be brave, dear, and perhaps next year will be better."

"How much does a Thanksgiving dinner cost?" he asked, and when told that five dollars at the very least would be needed, he went out to get rid of his feelings.

He knew very well that he could not earn five dollars in four days unless something like a miracle happened. It had been hard enough to find a man who wanted a boy to run errands after school, and collecting bills for the ice company had proved very good, but all he made at that had to be handed to mother for daily expenses.

He jammed his hat over his eyes, pulled his sweater up to his mouth, and put his hands as deep in his pockets as they would go, while he slouched along disgustedly, so different from his usual way of rushing around whistling and shouting for pure joy of living, that it was no wonder Mr. Wainwright did not

recognize him in the dusk.

Now Mr. Wainwright was a good friend of Ned's and they often had long talks together of the ways and general wickedness of the world. The boy loved to hear the war stories the old gentleman could tell, and the latter got many an hour's pleasure out of the boy's young and original views. But tonight he and Dr. Barlow walked along talking, and passed Ned without knowing him. It was a sentence of their talk that suddenly put new life into Ned, and he walked a little closer to hear the rest of it; it certainly would be fair, for they would not talk secrets on the street, and besides it might mean a Thanksgiving dinner.

"I would give ten dollars to any one who could find a way to stop it," Mr. Wainwright was saying, "but I have tried everything. I offered my man, Peter, five dollars if he would break it up, but you can't blame a man for not wanting to jump in among nineteen valuable dogs that are carrying on a war, and beat them off with a stick; it might mean a pretty penny to pay if any of them were hurt. I tried the hose myself, but that greyhound of Kennedy's nearly died of pneumonia, and Kennedy threatened to bring suit, so I am perfectly helpless. I've got to suffer in silence, I suppose, or move out."

"Put up a fence." suggested the doctor.
"If a six foot fence can't keep a dog in, it won't keep nim out," remarked Mr. Wainwright.

"No, that's so," and with a cheery good night, he

left his friend at the corner.

Ned walked thoughtfully along. He knew what was meant and he wanted that ten dollars, so he set his wits to work to get it.

The trouble was this: The beautiful and valuable dogs which were owned by many people in the town were its pride, and were always pointed out to visitors at the first opportunity. They ran wild over the town for several reasons, the principal one being that it was almost impossible to prevent it. There were but few fences, the lawns meeting and making an unbroken stretch of green down the streets. Some of the owners had attempted to restrain their dogs at night, but staghounds, greyhounds, and other large dogs, had simply jumped the fences, while the seven dogs on Montgomery Avenue had raised such a disturbance on the two nights they were fastened up, that the third night they were allowed to run, and Montgomery Avenue and vicinity slept once more.

Mr. Wainwright had owned dogs, but had given them up when he found that his front door seemed to be the favorite meeting place. He now found it too late, for night after night the nineteen dogs of the neighborhood met on his walk and driveway, and a sound, all night sleep was out of the question.

That evening Ned presented himself at Mr. Wainwright's front door, and on being admitted to the big

library went right to business.

'Mr. Wainwright," he said, "I heard you tell Doctor Barlow that you would give ten dollars to stop those dog fights at your door; will you give me a chance to try for it?"

"I certainly will," replied Mr. Wainwright. "What is your plan? But Ned refused to tell and asked to nights.

"Very well," Mr. Wainwright agreed, "only don't hurt the dogs, Ned.'

"I won't, sir," he promised, and as he had come prepared to stay if he were allowed to try his plan, he went up to bed with a small bundle under his arm,

which he would not open until his host had departed. For several hours everything was quiet and then there came an ocasional bark and scuffle as the dogs began to gather; then, within half an hour, the fight began.

Suddenly there came a loud report as of a pistol shot, so close to Mr. Wainwright's head that he sprang up and started for Ned's room. A second report and the shutting of a window sent him on a run.

Jerking open the door, he was met by a smothered explosion of laughter from where Ned was doubled up in bed, trying to subdue his feelings.

"Oh, my!" he broke out. "Did you see 'em run? Scared! Hallelujah! They thought some one had 'em for sure."

"Ned!" thundered Mr. Wainwright. "How dared you shoot? You promised not to hurt those dogs and I heard two of them howl."

"I didn't shoot! Honest, I didn't, Mr. Wainwright," Ned exclaimed. "They only yelled because they were scared; I never hurt one of them. I haven't got any pistol.'

"What was that I heard, then?"

Ned hesitated. "Wait a night or two, Mr. Wainwright," he pleaded. "If you find any dog is hurt by what I did, I'll give up the ten. Indeed, I didn't shoot.'

Mr. Wainwright knew Ned was a truthful boy and after a moment's hesitation, he went back to bed and slept peacefully, for not a dog returned that night. When the third night went by and the dogs had only come back once, only to fly amid a chorus of terrifled yelps, Mr. Wainwright handed the ten dollars to Ned and demanded the explanation.

Ned's face wrinkled up in laughter. "They were only giant torpedoes, sir," he said. "You know they make an awful racket if they are thrown hard on stone, and, of course, coming from the second story it was fine. It couldn't possibly hurt them unless some of the little stones in them scattered and hit the dogs, and even then it would only sting for a minute. But they certainly did fly; it was great!"

He handed over the remainder of the package to Mr. Wainwright for future use, if necessary, and took the ten dollars with such a happy look that Mr. Wainwright asked what he intended to get with it.

"A Thanksgiving dinner," came the prompt reply, and Mr. Wainwright looked out of the window for a few minutes. "I did not know it was as bad as all that," he muttered to himself.

"Don't buy the turkey, Ned," he said, "let me give you that; ten dollars won't pay for what you have done, and besides I would like to help you in your fun. Good-bye."

There was a fine dinner at Macomb's that Thanks. giving Day, and it ended with ice cream. Ned ate as much as he possibly could hold and then went to Mr. Wainwright's to tell him about it and to watch him eat the big slice of pumpkin pie he had carried to

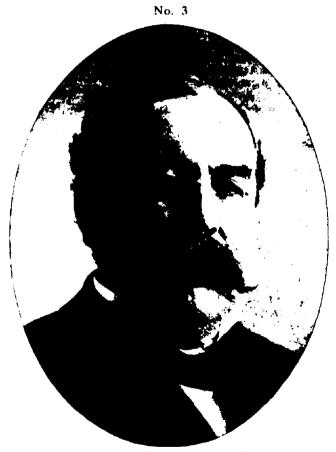

But best of all was the message he took home. asking his father to call at Mr. Wainwright's office the next morning to see about a position which had been left vacant by the business manager's resigna-

# OLD TOBY'S THANKSGIVING

By AD H. GIBSON

OYS, I'll tell you what!" remarked Ben Towne, a rugged boy of fifteen, to some half dozen of his associates, who had gathered one rainy Saturday afternoon in Mr. Towne's big wood-house, where Ben was sawing the Sunday's wood. "Somebody's been stealing our apples like the mischief. Why, those barrels," and he pointed to four large bar-

MESSAGES OF THE GOVERNORS TO AMERICAN BOYS

8. R. VAN BANT Governor of Minnesota

State of Minnesota Executive Bepartment. St. Baul.

St. Paul, Minn., June 20, 1904.

Mr. Vm. C. Sprague, Detroit, Mich.

My dear Mr. Sprague:-

The American Boy may exclaim with the Count of Monte Cristo, "The World is mine.".

There never was a country like ours and there is no time like the present, offering so many opportunities to aspiring youth. Every hoy, by means of industry and economy may attain to a useful and successful life, as in no other country in the World.

INVantant.

rels placed in one end of the building, "were full of apples only a week ago, and now there has been a bushel or more taken out of each one. I went out in the country and earned those apples myself this fall, by helping Uncle Philip Reade pick his large crop. and you can just bet I don't feel very well toward the one who carried them off."

"Have you no lock to the wood-house?" asked Jimmie Williams, munching the apple which his host

had given him.

"Yes, but we have found it unlocked several mornings lately," returned Ben.

'If you only had our Watch, he'd make your apple thief dance, I'll bet," remarked Charlie Porter. "Haven't you any idea of who took your apples?"

asked Jimmy. "No," said Ben; "father and I suspect some of the

darkies down Mud Alley.' "Well, I don't believe it's any darky this time." spoke up Ross Davis; "I'll bet you I know who the thief is!"

"Who? Who?"

"Old Toby!" answered Ross.
"Old Toby?" cried the boys incredulously.
"Old Toby!" repeated Ben.

"Pshaw! You're mistaken, Ross. Old Toby wouldn't steal, I am sure."

'Don't you fool yourself, Ben!" Ross answered, like one who was positive whereof he spoke. know we've all thought Old Toby was honest and a friend to us boys, but I don't believe so now, and I'll tell you why. This morning early I passed back of Old Toby's cabin, going after our cow. She got out of our lot, and went off down that lane back of his place. I'd been missing wood from our wood-house for some time. I saw all the fuel we use, and, of course. I know ours when I see it Well as I noticed Toby stooping over an old box outside of his cabin, and filling his arms with wood. It was ours, the very wood I'd been missing. I knew then he'd stolen it. And, Ben, I saw something else, too!

"What?" and each boy listened eagerly. "A pail of apples setting on his table," impres sively announced Ross. "The old cow ran right past his door, and it being open, I couldn't help seeing in. The pail was heaped away up with pretty red apples exactly like these. And I don't care what you say, I believe he took them from here!"

It was hard for the boys to believe Old Toby a thief. But Ross Davis, though an impulsive boy, was well known for his truth in the town in which they all lived. His evidence finally convinced them that they had been deceived in Old Toby, and that he must really be guilty of having stolen the wood and apples.

However, the boys decided to go at once past Old Toby's little dingy cabin, and, if possible, gain further proof of his theft, before taking any measures against him, as Ross proposed. So they filed off down the lane, despite the disagreeable drizzle which was coming down so steadily.

The boys halted behind the big red barn belonging to Mr. Davis, and there it was decided that all should remain, while Ross and Ben proceeded alone

to reconnoiter the premises of Old Toby. The two spies hurried off, and soon came to the wretched little old cabin where the man lived.

The building stood alone on the slope of a rocky ravine, at the end of a thinly inhabited lane. The cabin itself had a tumble-down appearance, while all pertaining to it bore the unmistakable impress of gaunt poverty.

Old Toby was an eccentric character, living alone,

and having little to say to any except the boys, whom he had sometimes joined on their fishing excursions to the river not far away. It so happened that he and our young friends had become quite intimate, for, despite his hunchback and crippled arm and gray hair and beard, he could tell them many interesting stories, when he was in the mood.

He lived by doing such odd jobs as he was able to secure. Had he not owned the little cabin and small patch of sterile ground on which it stood, he could not have kept out of the poorhouse.

The boys found Old Toby away from home, so they had little trouble in pushing their investigations around the old cabin.

It was not long before they returned to the waiting party at the barn.

"There is no mistake, boys," Ben said. "Old Toby is the thief. I saw apple parings before the door, and through the window I could see the very pailful of apples that Ross noticed this morning. Then

Ross is sure of the wood being theirs."
"What are you going to do about it?" inquired the others.

"Scare him away from his cabin and out of town," replied Ross.

"How?" cried all but Ben in chorus.

"You know Old Toby is queer and believes in ghosts and such things," said Ross. "Well, Ben and I have decided to get some big pumpkins, hollow them out and make frightful looking faces of them; then wrap sheets around ourselves, creep up that little dark ravine back of his cabin, and play ghost on the old chap. You fellows must all help us by playing guards. If there's any one coming along the lane, you must give a quick, shrill whistle like that, and Ross gave an example.

"I hate like everything to play ghoot on Old Toby," said Ben, "but one thing is sure: we can't stand it to have our wood and fruit stolen; then I can't bear to have the poor old fellow arrested for theft. That would seem too mean. So I guess we'd

better play ghost on him."

So it was arranged by the boys that they would meet again that very night in Mr. Towne's woodhouse to perfect plans for the ghost organization in view to scare out a thief. To their imaginations it appeared much kinder to try to vanquish him by frightening him out of his evil propensity than to turn him over to the law.

Accordingly, by the light of a small lantern which had been stationed on one of the apple barrels in Mr. Towne's wood-house, the would-be organization of supernatural assumptions came together.

"Boys," said Ben, as Ross and his cousin, Bedt Nanning, the last arrivals, came in, and the door was closed behind them, "I guess I'll back out of the ghost business."

"Why?" asked several voices, the owners of which had been counting on some extra sport.

"Well, I've just found out Old Toby didn't steal my apples," replied Ben.

my apples," replied Ben.
"Didn't steal them?"

"No; you see while I was gone to school father got Old Toby to come over here and sort the apples. A good many were rotting. Well, he sorted them carefully, and when the bad ones were all taken out, it is no wonder the barrels were lowered so much. Then mother gave him a half bushel to take home for his own use. Mother just told me of this at the supper table."

"And I've made a like discovery, boys," remarked Ross. "I was too hasty, for Old Toby didn't steal our wood. Father gave it to him. He's so poor, father knew he needed it, and he can't very well buy when he has no money to buy with. Old Toby was in the Union army, and he got his arm crippled in one of the hard battles. My father being a lawyer is trying to get a pension for Old Toby, and he thinks he's sure to succeed. Then father's trying to find Old Toby's only child, a daughter, that he hasn't seen for more than twenty-five years. You see, at the breaking out of the war, Old Toby's girl married a Confederate soldier, and went down in the South to live. Old Toby was very angry and never forgave her. But lately he's felt different towards her, and he wants father to find her for him, if she's alive. I heard father telling mother all about it this evening, and he says he's written dozens of letters to try to find Old Toby's daughter, but thus far to no purpose."

The silence which followed this narration told how deeply each boy felt for the lonely old man.
"I wish we could do something for him," said one

of the boys, breaking the silence at last.
"We must," cried Ben suddenly. "I'll never forgive myself for misjudging Old Toby's honesty, until

I do something for him."
"Nor I," added Ross.

"I'll tell you, boys," Ben went on.
"Next week is Thanksgiving, and
there'll be no school that day. Let's
give Old Toby a rousing good old
Thanksgiving. We'll do all we can
and ask our folks to help us."

Of course each boy entered heartily into the proposition; and from the ghost organization they speedily turned themselves into a mutual band to make Old Toby's Thanksgiving a big success.

In this the boys received the cordial co-operation of the few elder persons whom they felt obliged to let into the secret. But most of the arrangements were left to their own devising, Ross Davis and Ben Towne acting as leaders. Bright and early on Thanksgiving morning, Old Toby came over to Mr. Towne's to repair some old chairs, which had been carried to the woodhouse as a pretext to engage him all

the forenoon.

Then Ross and Ben, with their own kind mothers, and followed by all the

### INITIATIVE By ELBERT HUBBARD

HE world bestows its big prizes, both in money and honors,
for but one thing. Q And that
is Initiative. Q What is Initiative? Q I'll tell you: It is doing
the right thing without being
told. Q But next to doing the

thing without being told is to do it when you are told once. That is to say, carry the Message to Garcia: those who can carry a message get high honors, but their pay is not always in proportion. Q Next, there are those who never do a thing until they are told twice: such get no honors and small pay. Q Next, there are those who do the right thing only when necessity kicks them from behind, and these get indifference instead of honors, and a pittance for pay. This kind spends most of its time polishing a bench with a hard-luck story. Q Then, still lower down in the scale than this, we have the fellow who will not do the right thing even when some one goes along to show him how and stays to see that he does it: he is always out of a job, and receives the contempt he deserves, unless he has a rich Pa, in which case Destiny patiently awaits around the corner with a stuffed club. Q To which class do you belong?

boys of their band, stole away down the lane and made a raid upon the little dark cabin on the ravine. Soon there was a dray load of things left at the door, and busy hands set to work to renovate the dingy, comfortless interior.

Brooms and plenty of fresh water, which the boys thought it fun to carry, speedily changed the appearance of walls, windows and floors. Toby's old, rusty stove had a nice substitute in the neat but cast-off one which Mrs. Davis had donated. Very soon the boys had it looking as black and glossy as new, with a cheerful fire roaring up the chimney and filling the old rooms with a generous warmth, as if vying with their own happy, Thanksgiving spirits.

Bright curtains and some nice pictures, hung up with good taste, made the place look like a different one. Old Toby's couch received a new quilt and a warm red blanket, while a new hat and a good pair of boots were placed near by.

Then a better table than the weak-kneed one, long used by the old man, was brought in, and the boys' mothers busied themselves in spreading thereon such a Thanksgiving feast as had not gladdened Old

Toby's eyes for many a long day.

When this was finished, the mothers went home with the happy consciousness of having good boys, leaving them to witness alone Old Toby's surprise when he returned to his changed cabin.

"He's coming, boys," whispered Ben; "let's hide!"
No sooner said than done. Each boy concealed himself under or behind something, and when Old Toby opened his door the room was like the tomb.

It would be impossible to describe the astonishment and queer looks of the little old man, as his eyes fell on the well-laden table and the marvelous changes wrought in his dreary old cabin during his morning's absence.

He sat down on a new chair, which was another mystery to him, and rubbed his old eyes, as if he suspected he was dreaming.

"I've come into the wrong house," he remarked at last rising and going to the door, from which he surveyed the rocky ravine and the familiar surroundings.

"No, I'll be hanged if I have. What can—"
He had just turned away from the door appar

He had just turned away from the door, apparently more mystified than ever, when a series of smothered snickers came from under his bed.

It was useless to hide any longer, so one by one the boys came out before Old Toby.

"What does all this mean?" stammered the old man.

"Thanksgiving!" cried the boys in merry chorus.

"Thanksgiving!" repeated the old man. "And you've done all this for a lonely old codger like me? God bless your good hearts!" and there were tears in his eyes.

At that moment Ross' father slowly opened the door, and looked in. It was not a surprise to him, as the busy lawyer had freely helped in giving toward the contributions sent to Old Toby's cabin. There was a glad light in his eyes as he said:

"Boys, come out doors; I wish to see you a little while." And while the lads filed out past him, he continued: "Toby, this is indeed a Thanksgiving to you. I have good news. The government has just granted you a liberal back pension, with a snug allowance each month. Then here is one who has traveled far to enjoy Thanksgiving with you." And Mr. Davis gently pushed a lady dressed in black, who led a lovely little girl, into the cabin before Old Toby. He hastily closed the door, that no one might witness the reunion between the old soldier and his daughter, who had returned a widow with one child to be light and joy to Old Toby's heart.

The boys were very happy over what they had done for Old Toby. And as glad Thanksgiving bells rang cheerily on the frosty air, truly thankful hearts beat in unison with them in the little old cabin on the ravine.

#### The Bible and Poetry

A boy of seventeen should intimately know the English Bible. He should know it as literature quite aside from its religious teaching. He should know it from having had it read to him from his earliest years, and from reading and studying it for himself. Under this same kindly home influence, and with the same tactful personal introduction, every boy should have an opportunity to know the world's great stories, such as "Robinson Crusoe," "Gulliver's Travels," "The Swiss Family Robinson," and "The Pilgrim's Progress." A mind well stored with poetry and a taste cultivated to the love of the best is a treasure to a boy of seventeen. To give this seems so easy, if the home influence and interest begin early. The love of rhythm is inborn, and the boy will appreciate and love poetry which is beyond his exact comprehension, and which expresses thoughts to which he would not listen if expressed in prose .-H. L. Elmendorf in Review of Reviews.

#### Russell Sage's Advice to Young Men

In a recent issue of a New York paper Russell Sage, the multi-millionaire of Wall street, gives some advice to young men, the substance of which is "keep out of Wall street." Incidentally he says something about economy. We quote the following:

"Economy is the first element of success. No young man needs three or four suits of clothes. Two are enough. The only thought a young man needs to spend on his wardrobe is to look out for bargains and get all of his clothes—hats, suits, underwear, shoes, etc.—at the lowest price.

"Their ridiculous dress more than anything else proves that our boys need some one to keep them in

"Every young man should watch the clothing market as closely as a successful Wall street broker watches the stock market. Let him be on the lookout for bargains, and he is fostering a business trait which augurs well for his success.

"The boy who trains himself to look out for bargains in wearing apparel will know how to get bargains in stocks if he ever goes into Wail street trading. But the young man who pays four times more than their intrinsic value for colored neckties and polka-dot socks just because he thinks they look

pretty, had better keep away from business.

"When in need of anything to wear our young men should not only look out for bargains advertised by the big department stores, but should watch the second-hand stores and auction places as well.

"Some young men attempt to excuse their fancy dress by saying they want to make a good appearance and associate with rich people in the hope that they may make a favorable impression and thus get what they call a 'snap' position. My advice to such boys is to get the foolish notion out of their heads, and go to work in earnest.

"For the summer it seems to me that a serge suit and a linen suit are enough, and a young man should be careful and make them last at least two seasons. Seven dollars is plenty to pay for the serge, and you can get a fine, cool, linen suit for \$3.50 or \$4.

"Too much is given for straw hats. Fifty cents is enough. The straw hat should last two seasons.

The boy should be thoughtful and put on his old felt hat when it looks like rain. These extra fancy hat bands are just so much waste.

"Mind you, I do not say that a gentleman should not live in a gentlemanly manner within his income. Men who have large and fortunate investments, bringing in sure and large incomes, are not to be blamed-they are to be encouraged—if they spend largely on their living expenses. But those expenses should be for comfort, for gratifying honest tastes and luxury. What I deplore is expenditure for the purpose of exciting envy, whether it is in the outfitting of a million dollar steam yacht or the wearing of a tencent neck ribbon where the wearer could only afford a five-cent ribbon. Reasonable economy is what I preach, for our society is being ruined by unreasonable extravagances.

"I think that there is as great a chance for boys to get rich now as there was fifteen or even twenty-five years ago. At any rate, there is always room for bright young men."

### AMERICAN BOY DAY IN 1905

WHEN SHALL IT BE HELD? From suggestions we have received as to the best day for the celebration of American Boy Day in 1905, we have decided that it must be a day as near as possible to June 14th, the anniversary of the birth of the Stars and Stripes, or to April 19th, the anniversary of the firing of the first shot of the revolution. The first named date conflicts with school affairs, it being near examination and commencement season. We shall be glad to have the boys make known their choice.

WHERE SHALL IT BE HELD? In every city, town and village in the United States where there can be found a few adults willing to lead the boys in a celebration that will bring out the best of boy talent in the community, stirring the hearts of all boys and giving to the boy life of the town an impetus for good that shall last throughout the year. We desire to hear from such grown-ups as will assist—particularly teachers, editors, preachers, Sunday school superintendents and Y. M. C. A. officials.

Write on this subject to the Editor of The American Boy, and do it now.

THE GRAND ENTRY AT THE OPENING OF

# South African Boer War Exhibition at St. Louis

TF I were asked to describe the South African Boer would answer that it can't be done. What the imagination cannot compass, words cannot portray. In the way of entertainment it is far ahead of other amusement features as the Exposition is ahead of all

GENERAL PIET CRONJE

its predecessors. Its conception is a triumph of genius, its setting a work of tragic art, its execution a climax of fascinating and captivating entertainment. By comparison the exhibitions of the Roman gladiators were tame and modern shows of the Wild West pale into commonplace.

I could tell of the grand entry, in which are rep-War at the Louisiana Purchase Exposition, I resented platoons of marching infantry, regiments of dashing cavalry, and companies of maneuvering artillery; I might describe the hotly contested races between different nationalities, and I could possibly give in words a faint idea of the dancing horses, the wild antics of the Zulus, and the trekking of the Boers with their oxen, mules and ponies, and real Boer wagons; but these are incidents merely preliminary to the battles, which are the real show.

It is the fighting, struggles to the death, and dead and dying all around, that bring lumps to the throat, tears to the eyes, and cause the audience when all is over to relieve its pent-up emotions by cheer upon cheer, as lusty and as loud as ever greeted true bero.

To characterize these scenes as original, fascinating, real, does not describe them; they are thrilling. In most sham-battles the imitation is so apparent as to destroy the effect; here the fighting is so fierce, the struggle of the combatants so vividly realistic that one forgets the fallen forms are not dead, the surgeons are not binding real wounds, the burning wagons are not being consumed, or the bursting blaze from the exploding block houses is not what it seems. The thundering of cannon, reverberating above the rattle of musketry and the clash of steel, with men and animals reeling and falling to their death as one army dashes in deadly fray against the other, is a sight that thrills the soul and sets the audience wild.

It is given to few to witness a real battle. All can see the battle of the Boers, and it is so perfect an imitation that old soldiers see it and feel that they are in war again.

But, as though the management feared the fighting was not sufficient to impress the audience with a sense of realism, they introduce the real soldiers and the real officers from the armies that but a short time ago were shedding real blood and making real history in South Africa. General Viljoen, he of Boer War fame, is a conspicuous figure on the Boer side in all the fighting, and the surrender of General Cronje, the real, immortal Cronje, one of the most famous men and generals that South Africa has produced, to General Lord Roberts, after the fateful battle of Paardeburg, re-enacted here in all its fearful vividness, is a scene that carries one to the seat of recent great events and makes him forget that it is a show he is witnessing and not a great tragedy in the drama of real life. J. A. FILCHER.

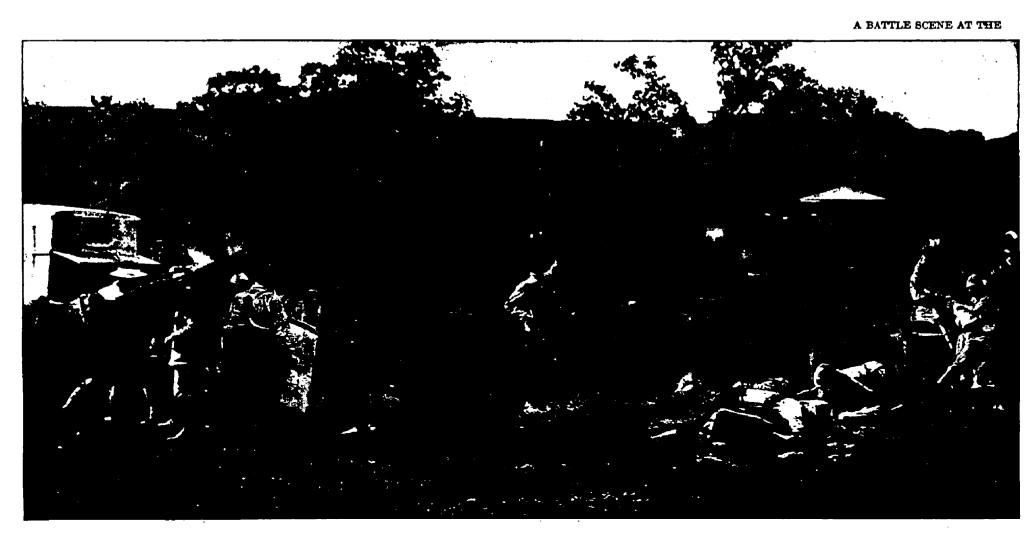

#### Gen. Cronje's Surrender at Paardeburg

By far the most pathetic scene in the Boer war spectacle is the surrender of General Piet Cronje in the memorable battle of Paardeburg, going through in detail every incident connected with the introduction of Lord Roberts, when he placed himself and his entire army in the hands of the British as prisoners of war. It seems almost incredible that the old hero

GENERAL CRONJE AND BRIDE, AS THEY APPEARED THE DAY OF THEIR WEDDING, WHICH WAS CELEBRATED AT THE EXPOSITION JULY 4, 1904

who had defeated the British at the Modder River. Belmont and Magersfontein, and who at last in turn had to acknowledge his own defeat and surrender, thrilling the entire civilized world with admiration, should within the short space of four years, after a banishment to St. Helena, be at the World's Fair, St. Louis, fighting, in mimic warfare, his battles and surrender over again and again.

THE BOER WAR EXHIBITION AT ST. LOUIS

the general public an idea of warfare so complete, with the actual participants on both sides.

In describing the battle of Paardeburg during the last few days the British adopted every means imaginable, until, by overwhelming odds, the day was won.

On either side of the river was a level plain of a thousand yards or more in extent. The only way of attack must necessarily be across these open plains.

The assault on Sunday, February 18th, was urged from every quarter.

Regardless of past experiences under similar conditions, bearing unquestionable evidence that bravery could not prevail against Mausers in trenches, the British advance was steady till within easy range of the rifles. The scene that followed was a repetition of what transpired at Colenso and Modder River. Regardless of the withering fusillade of bullets, they continued to advance by short, mad rushes, but paid dearly for their temerity. During the attack by the infantry the artillery had been shelling the dongas and scattered rifle pits with but little effect. About noon flames and smoke in the vicinity of the dongas indicated the effect of the shells on the stores and

The result of the brave but indiscreet charge was a loss of 1,100 British killed and wounded, and a contraction of the Boer lines from three miles to two miles of the river bank, with their position unshaken.

The setting sun looked sadly upon a bloody field strewn with dead, and field hospitals crowded with wounded men, but an unbroken circle concentrating upon as desperate and determined a band of men as ever resolved to sell their freedom as dearly as possible. The desperate condition of the Boers was reduced to dismay and despair on Monday morning by the appearance of Lord Roberts in person, accompanied by Tucker's entire division. Cronje's little army was now assailed by 35,000 men and 36 guns. It would be a contemptible spirit that would not admire the grit and gallantry with which these farmers contended for their homes, and place the name of Cronje high on the roll of honor for the courage with which he led them on.

Gradually the besiegers closed in on the besieged till their hampered quarters became a den of corruption caused by decaying bodies of animals lying in the broiling sun, the stench of which was wafted for miles over the plains.

Although the desperate condition of the Boers increased as the days and hours slowly dragged along. they availed themselves of every opportunity to send a deadly volley into the ranks of the slowly approaching victors. On the night of the 26th such rapid advance had been made that on the morning of February 27th, 1900, Majuba Day, after a fierce attack by the Royal Canadian Regiment, in which the latter

No greater speciacle was ever produced that gave lost upwards of 100 men, Cronje realized that the extreme limit of his resistance had come, and a white flag appeared above a trench and a haggard and worn figure came forward and said: "The Boers have had enough; what are they to do?" At 6 o'clock a. m. Lord Roberts and General Cronje met and shook hands, Lord Roberts saying: "You have made a gallant fight, sir! I am glad to see you. I am glad to get so brave a man.'

Thus ended the siege and battle of Paardeburg, at which upwards of 3,000 Boers were taken prisoners, and was the turning point of the war to final victory for the British.

GENERAL BENJAMIN J. VILJOEN

#### General Ben J. Viljoen

The Boer War, with Generals Cronje and Viljoen, and the many other illustrious heroes of the Boer war spectacle at the World's Fair, are producing one of the greatest object lessons in the terrors of war

that have ever been witnessed in the world. The President of this great production is General

Benjamin Johannes Viljoen, one of the bravest and most dashing officers of the Boer army, and one who is respected by the British soldier as a polished gentleman and a brave and generous foe.

Comparatively a young man, being only thirty-five. General Viljoen commenced his military career fifteen years ago as a private in the Transvaal Police, and in two years was given command of the Krugersdorp Cavalry Corps, the first government militia established. The corps rapidly became famous for its dash and gallantry shortly after its organization.

Some time previous to the war General Viljoen had been elected by his countrymen a senator, but on hostilities being proclaimed with Great Britain, he was given the command of the Randt Commando, 2,500 strong, distinguishing himself at Vaalkrans, on the Tugela, where he broke through the British cordon and rescued a Boer cannon, single-handed, although seventy-five cannons and General Buller's force poured a deadly fire on him at short range.

After Cronje's surrender, Commandant Viljoen was promoted to general, and led the Boer forces at the famous battles of Diamond Hill and Dalmanutha; also was in supreme command at the capture of the Royal Irish at Belfast, and was at the head of his commando when the garrison at Helvetia, manned by the Liverpool Regiment, was captured, together with the garrison, artillery and a naval gun from H. M. S. Powerful. He defeated General Paget at Rhenosterkop after twelve hours' fighting, inflicting a disastrous loss, culminating in General Paget's recall.

After two years and four months of flerce fighting against overwhelming odds, he was ambushed in northern Transvaal at midnight crossing the British lines, and captured, after his horse was shot under him and two-thirds of his escort killed. He was banished for life to St. Helena, where he wrote his famous story and romance, "My Reminiscences of the Boer War," and the historical novel, "Under the Vierkleur.'

At the declaration of peace the banishment was withdrawn.

General Viljoen has bid farewell to his fatherland forever. The late war has ruined his home and fortune. Many of his relatives were killed and maimed for life and his country is under foreign domination. Naturally the scenes and memories of such calamities are too painful: consequently he, in conjunction with General Snyman, have established a Boer colony on this side of the Atlantic, where it is intended to resurrect the fortunes of an unfortunate people.

General Viljoen, unlike General Cronje, is a fluent conversationalist in English. Although of a quiet and retiring disposition, at the same time he has made a large circle of friends, and a promising future is undoubtedly in store for him in his adopted country.

BOER WAR EXHIBITION AT ST. LOUIS

A SAMPLE OF AMERICAN BOY ENTHUSIASM

### "THE FIRST GRENADIER OF FRANCE"

Translated From the French for The American Boy by D. M. Morrell

F IT is true, as the saying tells, "that all the world loves a lover," equally true is it that all the world adores a hero, whatever his race or his time. It is the worship that weak human nature pays to its ideal.

Among the relics that France holds dear is an old flag of the Forty-sixth demi-brigade, in tatters now; and at the top near the flag is mounted a small leaden box containing the heart of an old soldier, La Tour d'Auvergne.

Theophile-Malo Corret de la Tour d'Auvergne was a descendant of Turenne, but instead of claiming any distinction in the army because of this relationship he entered the ranks as an ordinary soldier, and rose to be captain of one of the famous companies under the first Napoleon. Though so good a soldier he did not love war. He was a student and an author, and left unfinished at his death a work, Origines Gauloises, of value. To write this he had been obliged to compare material in forty-five languages. He carried with him notes from which he continued to write whenever he was at liberty in his tent. There is pathos in the thought of this man who cared to spend his days among books, giving to them only such time as the demands of active service in the army left to him.

La Tour d'Auvergne was an example of sobriety. In an age when all men were drinkers he took no wine; he did not smoke; he never swore; he slept little, preferring to give to study the hours that he counted lost when spent in sleep, but though he robbed himself of sleep he had always time to write letters for his men, few of whom could do that for themselves. How they regarded him is shown by the following incident.

The French Republic, by the Committee of Public Safety, named him for colonel of the regiment of

Champagne. When he was told of the honor to be his he called together the men whom he had commanded and said to them: "Comrades, I have called you here to consult you. Before now I have given you advice; today you are to give me some. The Government has sent me a brevet of colonel. Shall I accept it?"

History says that the grenadiers were moved, in some instances, to tears, and showed grief beyond question. At last one replied, "Our Captain, it is not that we do not think you merit promotion. If you were to ask all the army they would say there is no grade you do not merit and have not merited for a long time, but for us, if you leave us we have lost a father."

"Thank you, my children, I shall follow your advice. I can read it from your faces, and I shall refuse the advance."

So when Napoleon, then First Consul, conferred upon him the title, "Premier Grenadier de l'armee Francaise," he objected that not one of his grenadiers was not as well entitled to the honor as he.

A short time afterward when he had especially distinguished himself in battle, Bonaparte said to him, "France owes you much, Captain. What will you ask of it? A brigade, a division? Tell me."

The hero shook his white head. Then, being poor, since he shared all that he had with those who had less, he looked at his feet wrapped in bunches of straw.

"I will ask only for a pair of sabots (wooden shoes)," he answered.

Before the sabots were worn out, peace came and La Tour retired to the country where he lived happy in his books and in the society of a neighbor, himself a scientist. It seemed that his ideal was attained.

Here he did much of the work upon his book, and it would have been finished had not war again been declared. His neighbor came to La Tour in deepest grief because his son, a delicate young man, and the only child of his father, had been drafted for service and was unfit for the life.

D'Auvergne went as substitute for this young man, he old in the service, once more entered the ranks to bear all the hardships that none so old should have undertaken, but he carried with him his manuscript. Imagine what the influence of this return was upon the men who knew his record, so famous that Napoleon bimself had thanked him.

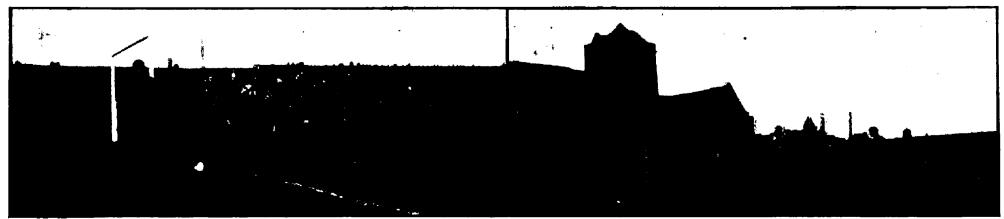

After his death his comrades bore his heart in the leaden box on the flag staff, so that in death as in life he led. France heaped honors upon his memory, but his brothers in arms waited for no public occasion to show their veneration and affection for his memory. Each morning, when the company was gathered in the court of their barracks, silent and motionless, the captain commanding said, "Corporal, the roll call."

Then the corporal presented arms, and speaking so loudly that all might hear called, "La Tour d'Auvergne," as if he were still living and among them.

The man at the head of the line took a step in advance and answered proudly, "Dead on the field of honor."

Still the call is sounded, and so has been for a hundred years. How small are other memorials compared with such as this. Was it paid alone because he was brave? Not so, but because to his bravery he added the glory of a nature gentle, modest, tender and faithful. "He regarded not himself," and the life that might have passed as unnoted as thousands of others had there been only the physical courage is still an inspiration inestimable.

OPENING OF THE FOOTBALL SEASON, SEPTEMBER 24; UNIVERSITY

PHREARMS OF PRINSYLVANIA MAKING THE ONLY TOUCH-DOWN SCORED

MECITING PLAT HEAR PENNSYLVANIA'S GOAL

James M. Dodge, the president of the American Society of Mechanical Engineers, in a speech at the commencement of the Williamson Trade School in Philadelphia, which is printed in St. Nicholas, took the novel view of a boy that he represents a "potential investment," and urged his ambitious hearers to "invest in themselves."

According to Mr. Dodge, the average boy at 16 is worth \$3,000—that is, he usually earns 5 per cent interest upon that sum, or \$3 a week. Anyone can calculate his own "capitalized" value by this rule: As many thousands invested as his salary per week amounts to for fifty weeks, allowing two weeks for vacation or illness.

The boy who goes direct into a machine shop, according to Mr. Dodge's figures, increases his capitalized value to \$7,400 at 19, when he finishes his three years; to \$13,200 at 21, when he becomes a fullfledged workman, and to \$15,000 at 24, beyond which time his value and his earnings do not vary much.

Making a plea for the trade school, Mr. Dodge traces the value of the lad who enters it, and by learning principles instead of set tasks which do not vary, increases his capitalization much more rapidly. He enters the shop at 19 at \$12 per week, or capitalized at \$12,000. At 24 he is getting \$20 per week, and at 27 he is getting \$25 per week, representing a value of \$25,000, and is still mounting. In his case there is no limit to the possibilities.

Perhaps the 5 per cent basis is rather too high for capitalization, because there is always the risk of sudden death and the certainty of death eventually. But so is there in these days danger to the man who has \$25,000 invested at a rate as high as 5 per cent. Safe investments rule lower.

Why should a young man learn his trade better in a trade guild than as an apprentice in a shop? asks Mr. Dodge.

"It has been said that a three years' course in a

The Boy as an Investment Young Men Secretaries in Washington A SERIES-NO. 4

WILLIAM LOEB, JR. Secretary to the President

trade school, in which an average of but a few hours a day are devoted to actual manual work, can in no way compare with three years' time spent in actual work in a shop. I feel that this is a popular error.

"In shop work a man may spend months in repetition of the same task, to no ultimate advantage to the worker. Instead of his skill being quickened it is dulled. He very quickly acquires the skill which is unconscious in its operation, and, like the old lady with her knitting needle, he can talk to a fellowworkman or think and dream about far distant places and matters without in any way lessening the rate of production.

"In fact, sometimes his pace might be actually quickened by some mental emotion having an exciting effect upon his nervous organization, in the same way that the old lady, in chatting with her friends, will knit fast or slow in harmony with the duliness or animation of the conversation. It is quite obvious that repetitive routine work is not desirable for a young man of natural ambition and aptitude. In the trade school he escapes routine, but is instructed in the underlying principles of his work.

"I have a letter from the president of the Williamson Trade School in which he says that the cost of training their boys is about \$500 per annum each, or \$1,500 for the three-year term. Bear in mind that during this time the boys get very little, and some get nothing, from outside sources. This result is truly astounding when you consider that Mr. Williamson's payment of \$1,500 for each of the scholars shows an increase in potential value of the individual of \$9,000, or a gain of six times the investment."

Other figures on the value of education-of investing money in the boy to improve his commercial value—are quite as striking. Of the men who have risea to success which entitles them to mention in "Who's Who," a very much higher proportion are of the highly educated than of the uneducated or of even the graduates of the ordinary schools.

### Just

Dear Boys:

Just a word this month about "Obedience." Hold on, now! Don't turn your backs. I promise not to preach. I want to have just a straight talk with you, and my word for it, you will work better, play better, feel better, and sleep better after it is over.

I never knew the practical value of the "obey habit" until I grew to be a man. I never had any one explain it to me when I was a boy as I hope to explain it to you. If some one said do a thing or don't do a thing, I thought I ought to obey just because some one told me to. Of course, I didn't always obey; I was no "boy wonder," but just an ordinary everyday boy; yet I almost always felt that I ought to obey, because I was brought up by good parents and knew that the Bible said, "Children, obey your parents in all things." I didn't stop to think why this was pleasing to God, or I might have obeyed oftener.

As I grew older and left home for college and afterwards entered business, I found to my surprise that success in life required as one of its first essentials that a man should have learned to obey orders.

You boys fondly imagine that obedience is only for boys and that when you have shaken off parental authority you will be free men to do as you please. What an awakening it will be when you become men and vou find that the years of your childhood were the freest, the least bound about by rules and regulations of any of the years of your life.

I remember my first day in college, and I recall the surprise I felt when I read the rules for the term tacked up on the bulletin board and signed by the college president. I must be in college chapel every morning at 7:30 for morning prayers. I must go to church at least once on Sunday and report every Monday morning on a slip of paper dropped into a slit in the president's office door whether or not I had done so, and if not, why. Lights must be out at night at a certain hour. Set times for study and recitations must be observed. Disobedience a certain number of times in any one of these things brought a penalty. Why, boys, in comparison with this, the rules and regulations of my father's house were child's play. Then afterwards when I entered business I found everything governed by rule. Ask your older brother who works in a successful bank. or office, or store, if this is not so. Ask him how long he could stay in his present employment if even in slight particulars he manifested a disposition to disregard rules—to fail to obey.

Then, too. I have found all through life that obedience requires that one shall not argue why. Imagine a business house laying down a rule it deems necessary to its success and the office boy asking

#### Ourselves etween

employe? In our office building certain elevators do not stop at certain floors. It is a rule of the building laid down by men who own and operate it and are in position best to know what is needed for the benefit of all the tenants as well as themselves. It is for me to obey, not for me to argue over it. Suppose the captain of a company should, on receiving an order from his regimental colonel, make up his mind that the thing ordered to be done could be done better in some other way, and refuse to obey. Suppose the engineer of a ship should differ with the captain as to the direction the ship should take. Suppose a sick man should refuse to obey his physicians, and take his own course. Suppose a citizen should refuse to obey the laws, and object on the ground that he doesn't believe in them.

Don't you see that everybody obeys or is in trouble for not obeying?

Then must I ask why should a boy obey those in authority over him? Yes—and I answer:

BECAUSE God commands it, and hence it is right. Because it is better for the boy that those older than he shall direct his course, since they know more than he does.

Because he needs early to learn how to obey, as after a while when he becomes a man he will either obey or suffer a terrible failure in life.

BECAUSE if he doesn't know how to obey, he will not know how to teach obedience to others, and the time will come when he will want others to obey

Because if every one were to lack the obedient spirit there would be no family, no society, no business, no government; for each of these requires authority or it goes to pieces.

Because he will be a happier boy for having obeyed. A disobedient boy runs big chances of becoming a disobedient young man who is sent home in disgrace from school, and later is "fired" out of every employment, and still later is ostracised from good society, and becomes obedient only behind iron bars-and sometimes not even then.

Nothing so marks a boy for success in after life as the respectful, obedient spirit toward those in authority over him. Advancement, preferment, the prizes of life fall to boys that possess it, while no one wants about him the boys or the men who lack it.

Some of you boys would like to go to West Point or Annapolis-and frequently it is the unruly boy who most longs for it. Excuse me, if I laugh at you. I see you boys who insist always at home in having your own way, arriving at West Point-and then I see you a week, a month, a year afterward. what lessons of obedience you have learned. What a different view of your own importance you have gotten. Yes, I wish every disobedient, wilful, home-

why-and if the office boy may, why not any other defying boy who reads this could take a turn in a good school where first of all authority must be respected.

Now, I am not talking to children. I am talking to you big hunk of a fellow with red cheeks, tously head, and awkward arms and legs, who would give ten years of your life if you could be in the U. of M. or the Yale football eleven, and yet if you were, if you were, you would learn to obey a big, hard-muscled, savage-voiced coach oftener in a week than you now obey your parents in a month. And the funny part of it is you would humbly obey the coach and take all manner of abuse, if necessary, to stay in the game; while if a gentle mother should ask for an armful of wood every morning before you go off to school, you would have a weak back, and she would probably believe you and maybe carry it her-

You obedient boys stand aside while I talk to the others. Don't you wilful fellows know that obedience is the first essential in a good ball-player, a good rower, a good athlete. He must obey, obey, obeynot only a coach who stands over him, but the laws of good morals, good health-in a word, the laws of God. Every blessed thing that he wants to do may have to be given up. And he does not grumble if it is to win a foot race or a ball game.

Then here's the cracker to my whip: Life is a great, hard—I was about to say cruel, game. It's a tussle with most men from boyhood to old age. Do you think it needs no preparation, no coaching, no discipline, no self-sacrifice? When do you think all this is to begin? When you are twenty-one, thirty, forty? Why, it has already begun with every boy. Did you want to be chosen on this year's football eleven? Were you left out? Why? Some weakness, some defect, some fault-that you had got maybe long ago Do you want to be a winner of the prizes of lifewealth, health, character? The choice of the world's successes twenty, twenty-five years from now will not be made then; they are being made now. And the teachable-the tractable-the obedient boys are the fellows that are being singled out for positions, and you disobedient fellows are going to be merely look-

Boys, learn obedience now. Get something now of the spirit of winners and heroes.

"Theirs not to make reply, Theirs not to reason why, Theirs but to do and die."

Sincerely yours,

SUBSCRIPTION AGENTS DEPARTMENT THE AMERICAN BOY

DETROIT, MICH.

The spectacle of a man walking on the surface of a body of water—once a miracle—has been so simplified by mechanical invention that a new sport has been evolved for those boys who are a bit handy with a kit of tools.

During the recent G. A. R. encampment in Boston, one of the big events of the week was the water carnival on the Charles River at Waltham, witnessed by 100,000 people. A feature of the water parade was a young man walking on the river surface. He gave the public at this time the first opportunity to observe the working of an invention which he has perfected for his opened by the pressure of the water, allow-opened man walking on the river surface. with a kit of tools.

During the recent G. A. R. encampment in Boston, one of the big events of the week was the water carnival on the Charles River at Waltham, witnessed by 100,000 people. A feature of the water parade was a young man walking on the river surface. He gave the public at this time the first opportunity to observe the working of an invention which he has perfected for his own amusement to emulate the famous feats of Capt. Paul Boynton and other amphibious celebrities who have walked on water. water.

phiblous celebrities who have walked on water.

Previously this walking on water was too hazardous and required too elaborate apparatus for boys to take much hope in ever performing the feat; but Arthur Saddler, keeper of the Boston Athletic Association boat-house, has made a pair of water-skees which are so simple in construction that any AMERICAN BOY reader can in a few hours make for himself the apparatus that will astound his friends. With these water-skees walking on the water need be no more dangerous than paddling a canoe. Boys living near a pond or river will find much amusement from the new sport, which the inventor desscribes as being very exhilarating and much more fascinating and better exercise than skeeing on snow.

The accompanying cut shows the construction of the skees. They are fish-shaped shoes about 11 feet long and nine inches deep. The vital principle of the linen-covered frames is the fin on the bottom which prevents capsizing, and the resistance blades on the bottom to furnish

tom which prevents capsizing, and the re-sistance blades on the bottom to furnish stable footing for the strokes. The fin is

stable footing for the strokes. The fin is a semi-circular piece of sheet iron or heavy tin fastened securely in the bottom of the skee, resembling the fin on a racing boat. The scales are square pieces of galvanized sheet iron, hinged at right angles at intervals along the length of the bottom, and provided with short chains so that they will not open back more than 45 degrees.

grees.

When the skee is shoved forward in the water these scales close against the botur splendid jowelry at 10 tom; and when the skee is drawn back-ents each. Send us your ward the scales open to the length of the stay-chains. In the cock-pit of the skees

are fastened sandals similar to the foot-

The framework of the skees is made of ash or cedar joined like the skeleton of a canvas canoe, and covered tightly with oiled linen. The air compartments forward and aft of the cock-pit are closed water-tight to prevent accident should

water-tight to prevent accident should waves slop over the cock-pit gunwales.

In using the skees, the operator stands with one foot in each shoe and should carry for protection a canoe paddle. Al-

opened by the pressure of the water, allow-

#### BOYS AS MONEY MAKERS

#### Get The Saving Habit

Get The Saving Habit

"Take care of the pennies and the dollars will take care of themselves," and "Good principles and good habits are in themselves a fortune" are good maxims. And how can we take care of the pennies, do you ask? Taking care of things means not wasting them heedlessiy. Pennies in our pockets often need taking care of when we are passing slot machines and candy shops. They have a fashion of dropping into these places where they bring us little or no return. Waste produces want and misery, whereas thoughtful economy creates good habits. Habits grow into character and good principles and good habits are indeed a fortune in a mental and moral as well as in a financial way. When we learn to deny ourselves foolish indulgences to that we may save money and time for some good use, we feel a satisfaction and self-responsibility that gives life an added joy.

#### Willie Will Get On

Willie Thompson the office boy to a large firm of publishers, was a smart lad, and when recently he was sent to one of the operative departments with a message he noticed at once that something was wrong with the machinery. He returned, gave the alarm, and thus prevented much damage. The circumstance was reported to the head of the firm, before whom Willie was summoned.

of the firm, before whom Willie was summoned.

"You have done me a very great service, my lad," said the genial chief, who had now recovered from the effects of much enforced Christmas generosity. "In future your wages will be increased by \$1 weekly." "Thank you, sir." said the bright little fellow. "I will do my best to be worth it, and to be a good servant to you."

The reply struck the chief almost as much as the lad's previous service had done.

done.
"That's the right spirit, my lad." he said.
"In all the years I have been in business no one has ever thanked me in that way. I will make the increase \$2. Now, what do you say to that?"
"Well, sir," said Willie, after a moment's hesitation, "would you mind if I said it again?"—Chicago Journal.

#### Loses Capital, Keeps Courage

Loses Capital, Keeps Courage

Arthur Roberts was the son of a poor carpenter in a small city, but he was imbitious to secure a college education when he graduated from high school he saw no way immediately to accomplish his purpose, but he was not to be easily discouraged. He obtained a place as clerk in a grocery store in his home town and saved his money carefully. He kept his place for three years and saved \$500. In June, three months before he expected to enter college, the bank in which his money was deposited falled and all his savings were lost. It was a hard blow, but he was not to be defeated. If he could not go to college with money he determined to try it without. So in September he appeared at the university with but \$50 in his pocket, an amount which he had saved during the previous three months.

He was awarded a scholarship on a competitive examination, which exempted him from his fees. He got work at once around

#### To The Roots

#### Food the Cause and Another Cure of Stomach Ails.

when sickness comes it's best to go to the root of the trouble at once—take away the kind of food used when the person got ill for the food evidently didn't keep the body up. Feed the patient on Grape-Nuts. That is the way of the food cure which has so many remarkable cases to its credit.

redit.

"Several years ago my husband became affected by a most disagreeable and painful diarrhea, lost his appetite and grew shockingly thin and haggard. I persuaded him finally to see a physician but after taking a course of medicine he was worse than ever and this discouraged him so he tried a lot of home-made remedies but they gave him only temporary relief.

"Finally I persuaded him to try another physician who treated him for indigestion, which he said was the cause of all his trouble, but after several months' treatment the physician said: 'You have let it run so long it has become chronic and exceedingly difficult to cure and you will always be troubled more or less.'

Well you can imagine how this made him feel.

"Sometime after that some friends ad-

him feel.

"Sometime after that some friends advised Grape-Nuts food and he thought he would just give it a short trial. To our surprise he began to improve at once. He kept on each day getting better and better until now he can eat anything he likes and declares he never felt so well in his life, has absolutely no trouble with his stomach or bowels and is fleshier than he has been for years. Three cheers for Grape-Nuts." Name given by Postum Co., Battle Creek, Mich.

Sounds too easy almost to be true, but 10 day's trial by anyone will prove the value of Grape-Nuts, the most scientific food in the world.

"There's a reason."

The Boy in the Store

Emanuel Mandel, of Mandel Brothers, prominent merchants of Cnicago, in a recent issue of the Chicago Tribune says: "The boy in the store must begin by becoming a specialist. My ideas with reference to the boy who comes into business nowadays is that he cannot be too well equipped for it in mental training; he cannot be too earnest, capable or industrious. He finds his employers always on the lookout for the best men for the best positions and he need not fear that his merits will not be recognized. We have passed a dozen cash boys on up until they have become heads of departments or superintendents. It has depended on the boys, of course. They may have had small opportunity for education, but they have profited by the things they learned in a business way. The fact is that the chances for the right sort of boy were never as good before as they are today."

One of the college buildings, and soon won the admiration and respect of every one. I have never seen a more cheerful fellow; no matter how unpleasant the task was to which he was set, he went at it as if it were the most delightful business in the world. He was always whistling, and had a pleasant word for every one he met. All in turn became interested in him, and he had no difficulty in finding all the work he could do. He was a good writer, careful with his work and neat in his appearance, so that throughout his college course he was some way employed about the buildings or in the college offices. He wrote college news items for the local and the Chicago in the college news items for the local and the Chicago in the college amount as a tutor in mathematic and the chicago papers, and during the last two years of his course showed ability and earned a considerable amount as a tutor in mathematic high the work has a pleasant word for every one he met. All in turn became interested in him, and he had no difficulty in finding all the work he world. He was a good writer, careful with his work and neat in his appearance, so that throughout

#### How a Chicago Clerk Won Out

How a Chicago Clerk Won Out

Frank Howard was a Chicago boy who while in high school had earned the money to pay for his books and clothing by selling newspapers, by working in a downtown department store, or by whatever means he could find. During the summer following his graduation from high school he was employed by the telephone company at \$1.50 a day, with Saturday afternoons off. Instead of taking this afternoon for vacation he spent it in working for a department store, and received an additional \$1.50 for his services. During the summer he saved \$100, with which he came to college. He obtained a scholarship, which was equivalent to his college fees.

For a time he lived in a small room and prepared his own meals, but soon he found a place to work for his board, and he earned a little additional money which, with the amount he brought with him, defrayed his other expenses.

Every summer he managed to save at least \$100, which, either in the form of clothing or in money, he took back to college with him in the fall. The second year he found a place to earn his room by tending a furnace, was given his board for conducting a boarding club, and made additional money by looking after the premises about the house in which he lived. He was about the house in which he lived. He was about the house in which he lived. He was about the house in which he lived. He was a boy who paid the strictest attention to his appearance. His clothing was always carefully pressed and neatly brushed, his shoes were polished daily, and his linen was immaculate. For these reasons he seemed one of the best dressed men on the campus, and since he gave quite as much care to his work as to his appearance he had no trouble in getting all the work he wanted.

At the beginning of his senior year he had no trouble in getting all the work he

At the beginning of his senior year he was allowed to have charge of the publica-

this as a beginning, he hoped to get

y I have

this as a beginning, he hoped to get through a college course. He was burdened by entrance conditions which he had to work off while carrying his regular freshman work; but he was a hearty, vigorous fellow, with whom hard work seemed to agree. He found a place on coming to town to earn his board and lodging in exchange for taking care of a man's horse and cow, and doing a few other regular chores about the place. This, with part of the money he had saved carried him through his first year. The summer following his freshman year he worked on a farm and made \$50.

His lodging place was remote from the college buildings, so that he was forced to consume a good deal of time in going to and from his work. For this reason he found a place nearer the campus the second year, where he was given his meals for taking

reason he found a place nearer the campus the second year, where he was given his meals for taking charge of a boarding club. But the student soon finds that board and lodging are apparently only a small part of college expenses, and through his last year.

Overcame Conditions

Samuel Post was a country boy, with little high school training, who had largely prepared himself for entrance to college. He had taught school in a country district for two years, had saved \$150, and, with the still had \$100; he got a place in a printing office, and while performing the unattractive duties of "devil" learned to set type. Before long he was able by this means to make a little money. He had a clear, sweet tener voice, which had been as well trained both at home and in college as he could afford, and he soon was given a place in one of the local church choirs and baid as small sum every Sunday. He added to his income, also, by soliciting job work among the college organizations for a local printing office. The last year of his course he was made foreman of the college printing office.

Through these means, and by what he could earn during the summer he was able to keep out of debt, and he finished his course without owing any one a cent.

to keep out of debt, and he finished his course without owing any one a cent.

#### AMONG THE BIRDS

A SERIES BY CRAIG S. THOMS

A QUARTETTE OF YOUNG BLUE JAYS

SELECTING A CHOICE MORSEL

jack or camp robber, wholly gray—the gray about the head in old birds, bleaching almost to white. The jays are quite closely related to the crows and magples. Taken altogether, they are a degenerate lot; being impudent, clownish, and tricky; having the cruelty of cowards, and possessing thievish propensities. It does not seem possible that a bird so beautiful as the blue jay can be so devoid of honor. One is reminded of a "swell" thief, dressed in latest fashion, displaying diamonds, and putting on airs of honorable prosperity.

The blue jays are noisy and querulous until other birds are nesting; then eggs are their favorite diet, and they pass stealthily from tree to tree in search of nests. At times they even devour the very young, or ruthlessly throw them from the nest. If

ruthlessly throw them from the parent birds vigorously defend their

#### Coffee Was It

#### People Slowly Learn the Facts.

"All my life I have been such a slave to coffee that the very aroma of it was enough to set my nerves quivering. I kept gradually losing my health but I used to say 'nonsense it don't hurt me.' Slowly I was forced to admit the truth and the final result was that my whole nervous force was shattered.

I was forced to admit the truth and the final result was that my whole nervous force was shattered.

"My heart became weak and uncertain in its action and that frightened me. Finally my physician told me, about a year ago, that I must stop drinking coffee or I could never expect to be well again.

"I was in despair, for the very thought of the medicines I had tried so many times nauseated me. Of course I thought of Postum but could hardly bring myself to give up the coffee. Finally I concluded that I owed it to myself to give Postum a trial. So I got a package and carefully followed the directions, and what a delicious, nourishing, rich drink it was. Do you know I found it very easy to shift from the coffee to Postum and not mind the change at all. Almost immediately after I made the change I found myself better and as the days went by I kept on improving. My nerves grew sound and steady, I slept well and felt strong and well balanced all the time. Now I am completely cured, with the old nervousness and sickness all gone. In every way I am well once more." Name given by Postum Co., Battle Creek, Mich.

It pays to give up the drink that acts on some like a poison, for health is the greatest fortune one can have.

"There's a reason."

No. 1—The Blue Jay

S I entered my home one bright spring morning a few years ago, I noticed a piece of cake fail in the middle of the lawn, and, like a flash of light, a blue jay entered the foliage of a tree that stood before the house. I recognized the where the jay had found it. "Let us feed this bird," I said, "and see if all the mean traits that he is said to possess, really belong to him." So a dish was placed in the middle of the back lawn; and that summer my wife baked cake for two families instead of one; while we studied the blue jay's history, and made observations upon his character.

Throughout the eastern United States, perhaps no bird except the English sparrow, is better known than the blue jay. The family to which it belongs is a large one, but most of its members inhabit the more mountainous portions of the country. On the Atlantic slope of the Rockles one may hody and wings and tail of black; and the Canada jay, familiarly called the whiskey

Throughout the eastern United States, but most of its members inhabit the more mountainous portions of the country. On the Atlantic slope of the Rockles one may hody and wings and tail of black; and the Canada jay, familiarly called the whiskey

The country of the country of the country than the property of the country of the countr

attack upon the nest of any one of them, the birds of the whole vicinity often come to the rescue.

The blue jays, however, have nests and eggs of their own, and these do not always escape vengeance. I one day placed my camera in an oak to photograph a mother jay upon her eggs. She would not return to her nest while the camera remained, and during her absence her eggs were punctured by English sparrows, which were numerous in the vicinity.

The jays seldom ate long at the dish of food we placed for them, but carried off large chunks, most of which they doubtless secreted, for they soon returned for more. Indeed, so filled are they with thievish propensities that they seem to thieve for the very love of it, taking nuts, kernels of corn, or any bits of food, and secreting them in all sorts of places. This is evidently not for the purpose of providing food for future contingencies, since each nut or kernel is hidden in a different place—usually under grass or leaves—so that when snow falls all are lost. It is thought by some that the reason all kinds of trees spring up when a forest is cut away is that the necessary seeds or nuts have been planted by the jays.

Despite their thievish tricks and occas-

that the necessary seeds or nuts have been planted by the jays.

Despite their thievish tricks and occasional cruelties, we could not but like the jays. All the meanness of the family cat we attribute to his nature; and notwithstanding it, we allow him to curl up in our lap, stroke his fur with our softest touch, and call him "pretty pussy." With like leniency we were disposed to treat the jays.

When robins, catbirds, kingbirds, and other summer visitors departed for their winter homes in the South, the jays became

AFTER A FULL MEAL

regular boarders at our winter table, and seldom missed a meal. There is no better place to study the characteristics of this bird than at a winter food box. Though the food dish was amply replenished each day, they never ceased to carry off large chunks of suet, seemingly in fear lest the supply be soon exhausted. Often the dish would be filled three or four times in a single day; and the amount of food thus carried away was enough to have fed a dozen birds inwas enough to have fed a dozen birds instead of three.

When nesting time arrived the following

CADETS OF THE U. S. REVENUE CUTTER SESVICE

number of lads take advants chances afforded in this interesting branch of Uncle Sam's employ. Possibly some of our readers have not a very definite knowledge of the duties of this police force of the sea. It is frequently called the "navy of the Treasury Department," but as a matter of fact Alexander Hamilton, the youngest man who ever served as Secretary of the Treasury.

Alexander Hamilton, the youngest man who ever served as Secretary of the Treasury, established it away back in 1789,—eight years before Uncle Sam even made a beginning of gathering together vessels for a regular navy.

Originally the sole duty of the revenue cutters and the brave men who sailed them was to capture pirates and smuggiers, and many a hard fight was fought with the highwaymen of the seas. Gradually piracy was put down but the work of guarding against smuggling has continued to be one of the chief tasks of the organization up to the present day. Indeed this work of preteging up to the present day. In-deed this work of protecting deed this work of protecting Uncle Sam from persons who seek to bring foreign-made goods into the country without paying the tax or duty which is imposed in order to provide money to operate the government, has increased year by year, as more and more ships sail up and down the ocean highways; for every vessel that enters an American harbor from a foreign port must be duly inspected by the Revenue Cutter officers, who ascertain whether or not

government, has increased year by year, as more and more ships sail up and down the ocean highways; for every vessel that enters an American harbor from a foreign port must be duly inspected by the Revenue Cutter officers, who ascertain whether or not the goods comprising her cargo must pay an admission fee.

Other duties have accumulated for the Revenue Cutter Service. It is now depended upon to give aid to ships wrecked anywhere along the coast of the United States; to prevent the killing of seals out of seals on an Alaska; to enforce the quarantine laws designed to prevent persons with contagious diseases entering this country; and finally, it is in the event of war expected to help the regular navy. In pursuance of this last responsibility Miss Columbia's pickets of the ocean have had a hand in every conflict in which the nation has engaged. The famous ships Constellation and Constitution, which captured so many "prizes" on the high seas at the close of the eighteenth century, were revenue cutters, and, coming down to our most recent war, the revenue cutter McCulloch was one of the vessels which steamed into Manila Bay with Dewey on that memorable May with a special contaging spars and gear while her propose. The second morning spars and gear while her propose the work of the war with admiration the agile work aloft of the more experienced boys, but Bay with Dewey on that memorable May morning.

Boys gain entrance to the Revenue Cutter States in 1876 in order to train young officers for this very interesting occupation. Any young man between eighteen and twenty-five years of age who is not less than five feet three inches in height and of vigorous constitution may gain admission. of vigorous constitution, may gain admission to the cadet corps if he can pass a

Copyright, 1904, by Waldon Pawoett,

A GRADUATING CLASS

HERE are great opportunities for strictly competitive examination in arithbright energetic American boys in the United States Revenue Cutter physics, chemistry, grammar, composition, Service and each year an increasing rhetoric, history, geography, literature, genmber of lads take advantage of the eral information and some one modern language —either German, French of United Sam's united the property of Spanish

uake—either German, French or Spanish

These examinations are conducted once or more each year by the Civil Service Commission which has branches or representatives all over the county, and thus boys do not need to go to Washington to take the examination but may make the trial at some one of the larger cities in their home State. The lads who stand highest in these examinations are appointed as cadets on board the revenue cutter practice ship Chase, which is stationed curing the winter months at Alundel Cove, near the city of Ealtimore, Md., and in summer cruises across the Allan is or up and down the coast of the United States.

Twenty-four boys can be accommissive at hims on the

Twenty-four boys can be ac-comm dated at a time on this comm dated at a time on this interesting floating school. The Chase is a bark-rigged sailing vessel, 1.8 feet in length, 26½ feet wide and drawing 11½ feet of vater. She was built fully a quarter of a century ago but her staunch and seaworthy qualities have been proven by the successful weathering of many gales, for the Chase has crossed the Atlantic about thirty times and has cruised along the coast of the United States from Maine to Alabama, entering nearly

watches with admiration the agile work aloft of the more experienced boys, but gradually he becomes more and more pro-

Each morning before breakfast the newly enrolled cadet is given the "setting up" drill or rowing exercise under the supervision of an upper classman, and then he is required to learn to "lay aloft." This last exercise he will regard with many misgivings the first time he undertakes it and will make his way very slowly and cautiously up the rope ladders of the rigging; but after a month's experience he will be racing aloft in an effort to beat some other cadet in furling a sail. There is no hazing of cadets but the newcomers of their own accord quickly learn to dispense with the Each morning before breakfast the newly

of cadets but the newcomers of their own accord quickly learn to dispense with the easy, colloquial style which may have characterized their conversation on shore and recognize the desirability of adding a "sir" to any expression, however brief, addressed to an officer or a first classman.

When the time comes for the annual cruise and the little ship feels the heave of the Atlantic, there is a probability that for a short time the new cadet will conclude that he has made a great mistake in the choice of a career, and that the most humble occupation on shore is preferable to a life at sea. But when good weather brings life at sea. But when good weather brings a rapid recovery from seasickness the young man will laugh at the despondency felt with the first tumble of the sea.

The instruction during the cruise is mainly practical, special attention being paid to seamanship, navigation, signaling and drills. The cruise occupies four months and at its conclusion the new men, some of whom may have never seen sait water be-fore, know thoroughly the gear of a sailing ship, can knot, splice, steer, reef and furl in all weathers, man a boat promptly and pull a good oar, handle a sextant, solve the

#### Among The Birds

(Continued from page 15.)

spring, one of our jays left for parts unknown, while the remaining pair searched all the trees about the premises for a suitable nesting site. At several rather likely crotches they held long and earnest conversations, evidently considering with great care all the merits and demerits of the place. They seemed reluctant to leave a vicinity where food was so plentiful; but where they placed their nest I never learned.

vicinity where food was so plentiful; but where they placed their nest I never learned.

The blue jay has many notes, most of which are harsh. Its softest, is, perhaps, the familiar "djay, djay," heard when a few are together and undisturbed in dense foliage. He has also a number of loud screams and cries, indicative of fear or hatred, besides many lesser notes of various sorts, some of which are produced with semi-comical gesticulations.

After hearing the harsh scream of this bird, one would not suspect him of attempting song; but one summer day, when the window of my study was open, in a tree that almost touched the house, I heard a new and strange bird song. It was low and uncertain. Carefully looking out, I saw perched on one of the branches, a blue jay seemingly half asleep, and piping to himself what was evidently a practice song on the quiet. There was not enough of the song to describe. It was wholly for the bird's own ear, evidently with the intention of singing it to others in case of success. The whole performance gave the impression that the bird, in starting to sing, missed the key, and after going on a few syllables, began again in the hope of striking it.

The nest of the blue jay is made of coarse materials, usually having a substantial foundation of dead twigs, and a rather unpretentious lining of fine roots. The eggs are five or six in number, drab-colored and brown-spotted.

This jay, at least in the northern Prairie States, is our only winter bird of bright

brown-spotted.

This jay, at least in the northern Prairie States, is our only winter bird of bright color—a color which blends with the deep blue of our winter sky. Most of our winter birds are black and white, gray and rusty—the color of snow, of bark, of dried grass and dead leaves. The birds of more beautiful plumage come only as they are greeted by the bright colors of returning spring.

HEN my blood-brother, Leaping Panther, and I began to play Indian we had no nice suits like we have now. He had an old shawl and I had nothing. Still we played Indian. After a month or so we made a "cooje" as we boys called it. We made it under the steps of the back porch. We put carpets on the sides and sweet clover for matting. After a bit we got tired of that and made caves. We started out on too, big a scale. We were going to dig a deep cave and "line it with rocks" and put a kind of shed on top of it. We worked after school till supper, and after supper till dark. We had it almost finished when we got "mad" at each other and that settled it. No more for us. The winter was the time we played Indian the most. We made a "den" under the cellar steps. We had our guns, bows and quivers full of arrows. Another boy brought a bow and one arrow which was crooked be and one arrow which was crooked be and one arrow which was crooked be boys called it to large the supper full of arrows. Another boy brought a bow and one arrow which was crooked be an an and one arrow which was crooked be an an and one arrow which was crooked by the could be a study to the debate was turners as sturdy lot, and from seven-year-old Adelia there wasn't one of them and the study to fourteen year-old Adelia there wasn't one of them went in. "How many boys have you in now?" is asked.

So they challenged the girls wasn't one of them went in. "How many boys and the went in. "Boys," said the gentleman espends to then went in. "Boys," is almost one of them went in. "Boys," was the reply casked.

The gray of our the boys in that the boys in that t full of arrows. Another boy brought a bow and one arrow which was crooked, he also brought a shawl. By this time we all had shawls, bows, arrows and wooden scalping knives. We played this way

many days, but we got "mad" and put one of the boys out. My chum and I were good friends after that. That month we had our mothers make us our Indian suits. We bought a fine wigwam. All we lacked was long black hair. We had knives and sheaths, pouches, tomahawk and pocketbooks. We set steel traps and caught a big rat. We afterwards skinned him and tanned the him it lit didn't smell a bit and from this made a pocketbook. There isn't much more to tell except our mothers took great interest in what we did. We have both picked up quite a bit of Indian words, we have made a lot of signs to represent the letters of the alphabet. We have got signs to represent the month, have got signs to represent the month, day of the week, plants, trees, and other things. We made it up ourselves and nobody can read it but my chum and me.

Leaping Panther, Levi M. Eaton. Black Hawk, Franklyn Thorpe.

A Christmas Present Can you think of a better Christmas present for a boy than a year's subscription to THE AMERICAN BOY?

The next day the boys were duly chal-lenged to a girls' relay race, and they ap-peared on the scene puried up with pride

and full of patronizing airs.

The track in the big lot where they had all their games had been measured off into lengths of fifty feet, and at each interval stood a girl ready to race.

ner of each relay but, of course, the biggest prize will be given to the winner of the last relay.

"Huh!" said Jim Bronson, "that's a regular cinch for us. It's just like girls."

The boys hastily selected their best runner, Dick Neville, and off the racers started. Dick teased and pulled and otherwise hindered the first four girls so that he won each relay easily. But at the fifth relay he found, to his unpleasant surprise, that he had worn himself out so in doing it that he was out of breath, and the fifth, sixth, seventh and eighth girls ran ahead of him without any effort. The ninth relay was the last, and Dick was so played out by the time he reached it that the girl romped in laughing and calling to him, while he actually had to stop running and sit down.

Then the boys saw what a trap the girls had laid for them by inducing their runner to tease the girl racers, and they had to confess that they had walked into it most clumsity.

But the idea of the girl's relay race took held of them and heaves.

But the idea of the girl's relay race took hold of them and became a regular in-stitution at Granville.

#### One Boy's Chance

"I'm not jesting; I'm in earnest," said Mr. Davis; and then, looking at one of the boys who had said nothing, he asked: "Well, what do you think of it?"

"I think I could do it," was the renly.

"How do you propose to make him see it."
"Through my eyes, sir. That's the only way he could see it."
"You're the boy I'm after," said Mr. Davis, and he arranged for him to meet the blind man.
The exhibition was in a large theater, and the blind man and his guide had a box to themselves, where they would disturb no one; but Mr. Davis from his seat in the audience his seat in the audience knew that the boy was telling what went on so that the blind man could understand. Indeed, no one ap-plauded more heartlly than the blind man him-self.

The following

day Mr. Davis a g a i n ap-peared among the messen-ger boys, and after a few words with the manager, said: said;

"Boys there was every one

suggest a girl's relay race to them."

"What's a girls' relay race?"

Then there was whispering that ended in loud laughter, and when the group separated Sue Grayson said:

"They're so stuck up now that they'll be sure to accept the challenge, because each boy thinks he can beat us all put to
"They're so stuck up now that they'll be sure to accept the challenge, because each boy thinks he can beat us all put to
"They're so stuck up now that they'll be sure to accept the challenge, because each boy thinks he can beat us all put to
"They're so stuck up now that they'll be sure to accept the challenge, because each boy thinks he can beat us all put to
"They're so stuck up now that ended in the world, but only one of you grasped it. My friend, the blind man, has felt for some time that he might get much pleasure out of life if he could find some young eyes to do his seeing for him, with an owner who could report intelligently. My friend is delighted with the experiment. He says he is sure I hit upon the boy in He says he is sure I hit upon the boy in town who will suit him, and has offered him a good position with a fine salary. Messenger boys are easy to get; but a boy who can make a blind man see is at a premium. You see that boy, though he did not know it, was on the watch for a good opportunity, and when it came he knew how to manage it."—Examiner, N. Y.

Funny McGinty Watch

In the phrase of the day, this watch "takes the cake." It is a genuine surprise party and creates intense astonishment. The watch has a handsome case, with stem-wind knob, and pretty silver-plated charm attached to ring. There is a regular dial plate, hour and minute hands, with glasse dial face. The watch can be carried in the vest, and when saked the time you can paralyze your friend by opening the watch, for up jumps H Olinty from the bottom of the sea. This is emphasically a "surprise" to everybody, and costs so little that everybody can afford it. To instruduce our movetiles this francy watch sent postpaid for 19c. AY. I'm sick. I'm sick! I'm awful sick! And ma has sent for the doctor and I'm going to die!! I wished I'd been good. I do. Oh, I wish that doctor would hurry up; it hurts. And ma,—she's in the next room, a crying and saying to sis, "Oh, Mabel, darling, you'll be all I'll have left." I wish these old tears would stay where they belong—makes everything look so

I wish these old tears would stay where they belong-makes everything look so blurry, and that old lump won't swoller neither. Oh, why don't that doctor hurry up? Say, don't a fe'ler feel soft like an't sentimental when he knows he's going to die? And I can't tell poor ma I killed myrelf,—she'd feel so bad.

Ain't it funny when a feller's sick, how he gets to thinking about all the mean things he done, and wished he hadn't? Like this morning when we played pirates. There was that measily little kid what dresses in sailor suits, and such stuff. We boys looked awful fierce. You'd oughter seen me! I just went up to that kid, and looked mean—awful mean, and I says, "Say, you'd better move on,—I killed a man

home, it was the bummiest reading you ever who sense to it at all. Why, I'd lots rather read "The Mystery of the Trail of the Serpent." Oh, it just makes a feller creep, and you're interested clear through, yes sir! Don't care if a feller did say, "It's such vulgar stuff." And I could have bought six of them books for that thirty cents; and I'm going to be a conductor, I guess—you bet.

cents; and I in guess—you bet.
Oh! Ouch! Oh. I'm going to die! Sis—
Oh! Ouch! Oh. I'm going to die! Sis she's crying too. Say, I've been awful mean to her. Wish I hadn't. These old sheets don't wipe the tears out of a feller's eyes no way. You have to get used to dying. Poor sis! She's kind of purty when dying. Poor sis! She's kind of purty when her hair is curled, almost as nice as Sueshe's the freckied-face girl next door; but say, I don't care if her hair is red, she's mighty nurty. She's nice! She kin jump any fence 'round here, and the boys is all jealous of her—'ceptin' me. She kin spin a top just the way us fellers does, and what's more, she won two marbles from me yesterday, and that's more than any other

"VULGAR STUPP"

That must be the doctor coming upstairs! Wish I didn't tremble so. But he ain't got red, curly hair. She's got some flowers for me. Say, what does a boy want with flowers? But, ain't she nice? Ma's a nodding her head, with the handkerchief to her eyes, and pointing to my room. Sue, she comes in and I feel sicker than ever. I fust let my head fall back on the piller and look at the celling. Her eyes is all red, but she don't let on she's been crying—not Sue! All girruls ought to be like her. She sets

"SUE, I DID IT; I KILLED MYSELP"

"SHE KIN JUMP ANY FENCE 'ROUND"

girrui ever done. O' course I didn't try very hard, but no other girrul ever done it. She's awful nice. Her real name is Mary Belle Margurite. All nice girruls is named Belle, but I call her Sue 'cause she said I could. You see, it happened like this here: 'ney'd just moved in next door and for meanness I said, "Hello, Sue," 'cause I knew she'd get mad. She stuck out her tongue and says, "My name ain't Sue." I says, "All red-haired girruls is Sue," and turned my back so's she couldn't stick out her tongue again, and she didn't; but, say, it s'prised me the way her fist lit on my "she kin jump any pence 'round'"

yesterday!" And that kid, he flew! I felt mean. And now that I'm going to die I wish I hadn't done it. Say, if I was goin' to live I'd play horse with that kid tomorrow—though that's awful tame for a grown-up boy like me.

Before I was growed up, people used to ask me what I was going to be when I got big, and I'd say, I guessed president of the linited States would do, or car-condictor; though I did have secret notions of being a pirate or robber—but all boys has them. Well, ma, she would say, if you are going to be president, you'll have to study awful hard; so I saved thirty cents, and one day I walked down town and bought a Webster's dictionary—that fellow in the store he made me tired the way he smiled, but I'm sorry now for what I said to myself about him. Say, I felt awful proud with that book under my arm; but when I got

down on the bed and looks so sorry that I feel I've just got to fess up, so I sez. "Sut, I u.d it,—I killed myself, don't tell muther." She almost screamed out loud.—"How, Bill?"—and I tells her how it happened:
It's just my meanness, that's all. When I was coming home a chicken ran in front of me. I don't know why, but boys loves to chase things. I'm a villun, I didn't mean to do it, but my sword just slipped and to do it, but my sword just slipped and

"I GRABBED THAT OLD CHICKEN BY THE NECK AND WRUNG HIS HEAD OFF"

hit the thing right on its head, and it just dropped. I was skeered and picked it up and sneaked in the house up to my room with it, and shoved it under the bed. Didn't know what to do with it; but I guest a feller's troubles all come in a bunch. I no more than got that chiken under the bed than he commenced moving sound and tran he commenced moving around and hegan to squeak. He was only stunned. I had to do something in a hurry. I didn't want them to hear him downstairs, so I grabbed that old chicken by the neck and (Continued on page 20.)

#### A JAPANESE CADET CORPS UNDER THE AMERICAN FLAG

Japanese boys who have come to the United States are few in number. We have one territory under the American flag, however, in which they are numerous; this is the territory of Hawaii. In the city of Honolulu, which is the capital of the territory, one sees Japanese boys and girls of all ages in the streets. Many of them are sons and daughters of wealthy men who are among the leading business men of the city.

Partly because the young Japa are so numerous, Honolulu contains one of the most unique schools in the United States. It is in many respects similar to the ordinary grammar schools in our large cities, but some of the studies usually pursued in academies are also taught. One of the chief aims of the school is to make the students good American citizens, and everything possible is done to make the pupils love their adopted country. On such holidays as Washington's birthday and the Fourth of July, elaborate exercises are held; the pupils sing America, the Star Spangled Banner and other patriotic songs, give patriotic recitations and flag drills. The American flag always waves over the school when it is in session; it is raised in the morning and lowered at night in the presence of the students with appropriate exercises. The schoolrooms are decorated with American and Japanese flags and patriotic motioes.

In connection with this school at Honolulu is an organization that will interest every American boy. It is a cadet company modeled somewhat on the order of the United Boys Brigade of America. Japanese boys are as fond of military life as the average of the United States. The older boys have rifles, but the younger use "dummy" guns until they become proficient in the manual of arms. The drill-master is an officer who was formerly in the Japanese army and is thoroughly familiar with our regular army tactics. The drills include calisthenics, the ordinary manual of arms, marching, wheeling, and the formation of picturesque figures such as stars, etc. So proficient have the young soldiers become that the corps

### A Unique Pet

All the world knows of Puss and Tiny, the tame hares, who have had their praises sung in the immortal verse of their great master poet, William Cowper; although these pets lived and died over a century ago they are still remembered.

They were unique pets indeed, for it is remarkable for hares to be tamed sufficiently to become pets, although wild hares are often kept in hutches and allowed to run about the garden in semi-freedom.

The subject of our sketch is the property of Mrs. Goodacre, of Boston, to whom he is devotedly attached.

He spends nearly all the day time in the lady's drawing-room, and sleeps in the kitchen in a neat little hutch of his own. He has to be carried down stairs every night for he is unable to go down himself because of his long hind and his short fore legs. He is a model of cleanliness in his habits and always tractable. He is fore legs. He is a model of cleanliness in his habits and always tractable. He is carried about the house on his mistress' shoulder and is very happy when she pays him attention. He is very playful when alone with Mrs. Goodacre and her family, but is very much afraid of strangers. If a stranger has been in the drawing room the previous evening he is nervous and timid. If a curtain or bit of bric-a-brac or any new thing has been introduced into a room

previous evening he is nervous and timid. If a curtain or bit of bric-a-brac or any new thing has been introduced into a room during his absence he spends hours suspiciously examining it with nose and eyes until he is satisfied that it bodes him no harm. A stranger must live in the house fully three weeks before the hare will allow any approach to sociability between them. When, however, he is alone with the family, every morning after he has assured himself that the drawing room is safe he expects a romp. One of his favorite games is to have a hassock rolled to him and as it reaches him he rolls it over and over. This must be repeated again and again, as he never tires of it. He plays ball with rollicking delight. He performs on the tambourine with surprising skill and his mistress is convinced that he must have a musical ear. He sits up and begs better than any dog and has many ways of showing gratitude for any dainty given him; in short, he never forgets his manners.

He is very fond of Mrs. Goodacre's mother and delights in sitting close beside her while she is reading or sewing. If she dozes or seems to forget his presence he reaches over and touches her arm or hand

dozes or seems to forget his presence he reaches over and touches her arm or hand gently to remind her that he is still at her side and desirous of a little of her attention.

Mr. Thomas Fall, the famous animal photographer, who took the two pictures

accompanying this sketch, says that in all its experience as a photographer of animals he never had such difficulty in catching his subject in a good nose.

his arranged his camera in a corner of

the drawing room, concealing himself from view by sitting at a table behind a large plant. Having focused a hassock about the size of his timid subject, the hare was brought into the room. He was very shy and seemed ready to bolt at every moment.

He had been kept short of food for a time that he might be less demonstrative. He was very suspicious and nervous and in the picture does not appear at all as the graceful creature that he is when alone with the family.

#### Boys' Books Reviewed

KINDLY LIGHT, by Florence M. Kingsley. Miss Kingsley has already proved her worth as a writer of pleasing books. The little volume before us contains two stories: "Kindly Light" and "A June Bride," the former tells of the inability of young people to understand why their elders still cling to old scenes and old ways and are so averse to taking up what is, in their opinion, new-fangled, and how these things become sources of misunderstandings and unconscious cruelty. The second story tells of a bride wronged at the altar who in consequence lost her reason, and of the innocent delusions which possessed her life. Both stories are pathetic, and told in such simple, pleasing, touching style as will soften the heart of the reader however unwilling. 107 pages. Price 50 cents. Henralitemus Co. Altemus Co.

Altemus Co.

STORIES FROM LIFE, a Book from Life, by Orison Swett Marden. In number of pages this book is small, but we can cordially recommend the reading of these pages to every American boy. The volume contains short sketches and incidents in the lives of men who, born amidst poverty, privation and ignorance, have been enabled by pluck, patience and perseverance to become honored and renowned. The author has not confined himself to Americans in his sketches, but he gives the reader glimpes of the lives of many eminent men of the various countries of Europe. The author's purpose in writing the book as gathered from his foreword is "to show young people that, no matter how humble their birth or circumstances, they may make lives that will be held up as examples to future generations, as these stories show how boys are held up as models to the boys of to-day." We strongly recommend this little book to parents who desire their boys to amount to something. who desire their boys to amount to something.
There are quite a number of apt illustrations.
240 pages. (Eclectic School Readings.) Price
45 cents. American Book Co.

45 cents. American Book Co.

THE CHURCH AND YOUNG MEN, by F. G. Cressey, Ph. D., Painesville, Ohio. Some one has said in relation to the non-attendance of the young men at church, "Give him something to come for and he will come fast enough." and Dr. Cressey here tells the church and those working for the religious betterment of the young man just what that "something" should be. This book is the outcome of years of labor among young men, as well as special investigation of the subject. The book presents no Utopian or fantastic ideas as to how young men may be drawn within the fold of the church, but gives as the result of personal experience and earnest

investigation many very practical methods of how such a desirable work has been and is being accomplished. In his discussion of the causes of non-attendance the author prethe causes of non-attendance the author presents statistics which should make the earnest and thoughtful "take time to pause." The good work being done by the various instrumentalities of the church along the lines of the book will be read with heartfelt interest. The introduction is by Dr. C. R. Henderson. Professor of Sociology in the University of Chicago. As a practical help to the reaching out after the welfare of young men, we gladly recommend the book to all those engaged in such work. The list of books given at the end will be found most useful. The mechanical make-up of the book merits only praise. 233 pages. Price \$1.25 net. Fleming H. Revell Co.

SCOUTING FOR WASHINGTON, a Story of the Days of Sumter and Tarleton, by John Preston True. This is a book that will delight the boys. While the days of the Revolution, with its countless stirring incidents, its heroes and heroism, have formed the themes of many stories, Mr. True has succeeded in giving to the boys a book which combines historical fact with fiction in most fascinating form. There is fighting and scouting galore, and the hero, Stuart Schuyler, is just the sort of fellow, manly and brave, a splendid horseman and a dead shot, whom boys love to read of. The tone of the book is healthy, patriotic and pure. The illustrations are from drawings by Clyde O. De Land. 311 pages. Price \$1.50. Little, Brown & Co.

THE SON OF LIGHT HORSE HARRY, by James Barnes. Beginning with a chronology of the Lee family. Mr. Barnes tells of the boyhood and youth of General Robert E. Lee. "the son of Light Horse Harry." his career at West Point, the important and mos meritorious part he played under General Scott during the Mexican war, and many incidents of his command of the Confederate army during the Civil War, down to the hero's death in 1870. Mr. Barnes has written with a sympathy and love for his subject which perhaps is unusual in the general writer, but the boys who read it, and we believe there will be many, cannot fall to be impressed with the nobility of character and the greatness of genius which General Lee's life displayed. The story contains in addition to deeds of heroism and stirring adventure, much information of an historical nature which, carefully read, will spare the youthful reader much tedious study. The author has already demonstrated his ability as a writer and the present volume will increase his popularity among the boys. The illustrations are by W. E. Mears. 243 pages. Price \$1.25. Harper & Brothers.

& Brothers.

A LIFE OF THEODORE ROOSEVELT, by Frances M. Perry. Miss Perry's previous work as a biographer amply testifies to her ability to do justice to her present illustrious subject. Within the compass of this little volume she has given to the boys and girls of America and their elders a picture of President Roosevelt not so much as politician, soldier or statesman, but as a man. She describes his life from childhood to the present time with a true, yet sympathetic pen, far removed from gross flattery or adulation. The boys of America will in reading this book get a clearer idea of moral courage and high-souled patriotism, and realize that honesty, integrity, firmness of purpose and the reaching out after noble ideals will not lack recompense. This little book should find an honored place in every American boy's book case. The illustrations are handsome and in keeping with the makeup of the book. 127 pages. Price 60 cents postpaid. J. M. Stradling & Co.

postpaid. J. M. Strading & Co.

HERO TALES FROM AMERICAN HISTORY, by Theodore Roosevelt and Henry Cabot Lodge. The authors in writing this book have placed the young people of America under great obligations. The lives of the men who are herechronicled ought to intensity the reader's feelings of pride in those who dared to do, suffer and die for home and country. The book recounts in simple, clear-cut language the deeds of daring, heroism and sublime endurance of such men as: George Washington, Daniel Boone, George Rogers Clark, General Grant. General Sheridan, Lieutenant Cushing, Admiral Farragut and Abraham Lincoln. It also tells General Sheridan, Lieutenant Cushing, Admiral Farragut and Abraham Lincoln. It also tells of the Battles of Trenton, Bennington, King's Mountain, The Storming of Stony Point, The Cruise of the "Wasp." The Battle of New Orleans, "Remember the Alamo," Hampton Roads, The Flag-Bearer. The Death of Stonewall Jackson. The Charge at Gettysburg and others, all calculated to inspire Americans, young and old, with the patriotic desire to emulate these men, and their deeds should ever occasion arise. The book is worthy of a prominent place in the library of every young American. The many fine illustrations add to the reader's interest. 325 pages. The Century Company. Company.

# Don't Be Half a Man **And Get** Half a Salary

There are many men who are getting half-sized salaries simply because they have never fully mastered any one line of work. Don't you be one of them. You can qualify yourself, while attending school if you desire, for a good position and a full-sized salary. Don't start out into the world with your abilities but half developed.

Thousands of our students have become Civil Engineers, Electricians, Architects, Illustrators, Advertising Writers, Managers, Superintendents, Foremen—all as the final result of filling in the coupon shown below. If you want to know how you can duplicate their success and make you waste bours worth dollars to you, cut out, fill in and mail us this coupon.

It costs nothing to find out. Do it mow!

### ERIFLE EARNEDE

By doing a little easy work for us, every boy can have a eautiful 23-calibre rifle without costing him a cent. Write for full particulars. AMATEUR SPORTS-MAN, 27A Park Place, New York.

small burros with which he carried various merchandise to the Indians and white settlers for nearly a hundred miles around. Sometimes he would be absent from home for weeks at a time, but his wife was like himself, a brave pioneer, and cheerfully remained at home with her two children. Bob and Nora. Small bands of Indians would often visit the place in Mr. Simpson's absence, but their visits were always friendly. When Bob and Nora were respectively fifteen and thirteen years of age the Indians made their first hostile visit to the Indians made their first hostile visit to the place.

Early one evening in May, 1855, the boy and girl were making their way home from the little stream south of the house and girl were making their way home from the little stream south of the house when they saw a small squad of Indians approaching. Presently they were surprised to see the Indians lashing their ponies and galloping down toward them, brandishing their weapons and gosticulating in the wildest marmer. At the same moment they heard a cry from the direction of the cabin and saw their father running toward them, gun in hand, motioning and calling for them to run for the house, which they did. Seeing the hunter unexpectedly at home, the Indians, five in number, stopped their horses a few hundred yards from the house, as if undecided what to do.

On reaching the house, Simpson, who had just returned after a week's absence, reported that an outbreak had occurred among the Utes and Cheyennes, and that several families had been massacred by them on the Arkansas river.

"We must get to the top of the peak at once," he said, "Those five Indians are the forerunners of the main body, and they'll attack us as soon as reinforcements arrive."

The two burros were speedily packed with provisions, a keg of water and a few other

Scarcely had the fugitives gained this re-treat, when, looking to the northeast, they discovered a large body of Indians advancing across the plain. Presently a half dozen of the savages came galloping in advance of the others. They dismounted at the base of the hill and began to ascend. Simpson halted them at the gap. Presently, as he used to tell, the leading warrior called out: "Indian want see white man."
"Well you see me. What do you want?"

come down, he kill um white man and

N southern Colorado, near the city of Trinidad, rises a small hill or peak known as "Simpson's Rest." It has a flat top, which is surrounded by a high, rocky wall. In this small enclosure are the graves of John Simpson and his wife. On the very spot where they now lie, they once stood a slege of five weeks' duration.

Simpson was a pioneer of Colorado. Early in 1852, with his wife and two children, he moved from Michigan to southern Colorado and settled where Trinidad now stands. The country was then inhabited by a few venturesome pioneers and bands of roving Utes and Cheyennes.

Simpson built a cabin near the foot of the peak, and here lived, hunting, trapping and trading. To the Indians he became known as one of the most daring and skillful of hunters. In trading he used two small burros with which he carried various merchandise to the Indians and white settlers for nearly a hundred miles around. Sometimes he would be absent from home

it, determined to starve the little family into submission.

Then followed a siege of five weeks' duration. When all the provisions which the Simpsons had carried to their fortification were consumed, they killed the burros for meat to sustain life. Luckily for them there were several heavy rains, the water forming a large pool on the top of the

I must a tore it open when I killed that chicken. I groaned awful loud. I d often heard 'bout blood poisoning,—so now I was really goin' to die. Then ma comes and says "what's the matter, Billy?" She was stumped when she seed the room, and such crying and goings-on.

says "what's the matter, Billy?" She was stumped when she seed the room, and such crving and goings-on.

Here, Sue, you kin have my top to remember me by. "Oh, no, no, Billy, don't!" says Sue. Then the door-bell rings, and i know the doctor is come. After he'd been in the room a few minutes and felt my pulse, he had a long talk with ma, and I knew it was all up with me. They made me drink a whole glassful of the awfullest medicine you ever tasted; and ma, she didn't rub her hand across my forehead the way she used to do when I was sick. I felt awful. They left me in bed 'till next morning. No supper, and I was hungry! But, say, I was skeered. Nobody came near the room, so I thought I must have something ketching. Mebbe that chicken was sick.—Chicken-pox, I guess. I cried myself to sleep. Next morning father came in—say, guess I won't tell you any more. I know that blamed doctor saw that chicken under the bed.

the bed.

That was all three weeks ago; and say, it does a feller good to expect to die once in a while—shows him how mean he is. I've licked Jimmy twice since but I gave him my 'spress wagon, and I ain't played with that kid yet but Bud got his kite. Sue,—she's got my top. Ain't sick boys funny though?

#### The Apparently Impossible

Profess yourself able to show anyone what he never saw, what you never saw, and what nobody else ever saw, and which after you two have seen, nobody else ever shall see. After requesting the company to guess this riddle, and they have professed themselves unable to do so, produce a nut, having cracked it, take out the kernel, and ask them if they ever have seen that before; they will of course answer no. "Neither have I," you reply "and I think you will confess that nobody

the hill and began to ascend. Simpson halted them at the gap. Presently, as he used to tell, the leading warrior called out: "Indian want see white man."

"Well, you see me. What do you want?"

"Well, talk away."

"Well, talk away."

"White man come down—we talk heapmebhy give um ponies for gun."

"White man 'fraid? Indian heap friend all the time."

That's all right, I'll take care of myself."

"You come down talk?"

"You come down talk?"

"You come down talk?"

"That's my business."

"Indian got many warriors. You no (Continued from page 18.)

An Take a ruler and ask whet the ground, pump over it: gust then. You bet! The bed looked awarrior called out: my shift, and O, the floor! Just then I heard mother coming upstairs. I shoved the remains of my victim under the bed, but it wasn't no use, the blood was everywhere. I had to something in a hurry if I didn't want a awful licking, and then I seed them bandages what we use for our wounded soldlers when we play war. I slipped that rag over my head and one over my hand, and crawled in bed. No time to undress; of the clasped in books. My hand commenced to ache. You see, I'd forgot all about that cut, and walk away.

peak, otherwise they must have all per-else has even seen it, and now no one shall ished from thirst at the end of the second ever see it again"; saying which, you put week.

the kernel into your mouth and eat it.

#### The Conjurer's Ball

Take a ball in each hand, and, stretching your hands as far apart as you can, say that you can bring both balls into either hand without bringing your hands together. You then accomplish the feat by simply laying the ball in one hand on the mantelpiece or table, and turning yourself half-round, taking it up with the other hand.

#### An Impossible Jump

Take a ruler, or any other piece of wood, and ask whether, if you laid it down on the ground, any of the company could jump over it: of course two or three will express their readiness to jump over so small an obstruction; then lay the ruler on the ground, close against the wall, and tell them to try.

#### An Impossible Walk

Ask one of your party whether he thinks of the room. On his saying he could walk out of the room. On his saying he could, request him to pass his arm around the leg of the table or plano, join his hands and walk away.

#### AMATEUR JOURNALISMII DEPARTMENT Edited by W. R. MURPHY

This department is for amateur printers and journalists—for boys interested in the work of the print-shop, whether as writers, compositors or otherwise. Enquiries on any miass of the subject will be cheerfully answered. Address Editor of the Amateur Journalism Department, care of THE AMERICAN BOY.

#### An Introduction of Mr. Murphy to the Boys

Dear Boys.—W. R. Murphy, the editor of this department, has held many offices in the gift of the national and local press associations and clubs. He has been secreassociations and clubs. He has been secretary of publicity of The National Amateur Press Association, chairman of the board of directors of The United Amateur Press Association, and president and treasurer of The Inter-State Amateur Press Association. For six years he has been secretary-treasurer of the Philadelphia Amateur Journalists' Club. He has every facility at his command for the editing of a live Journalists' Club. He has every facility at his command for the editing of a live, helpful department and stands ready to aid with advice and instruction all of our readers who are interested in amateur printing and publishing.

Respectfully,

WM. C. SPRAGUE,

Managing Editor.

EDWARD M. LIND, PRES. N. A. P. A.

#### The Work of Two Boys

The latest amateur journal to come to our attention is "The Speck," and the story of its publisher's experience and methods will prove interesting and helpful. The contrast between the first and last issues of "The Speck," as shown by the picture presented on this page, is marked. We have photographed the front page of the March number pasted on to the front page of the September number to on to the front page of the September number to show the increase in the size of the page. The March number is four pages, 2½x3 inches. The publisher guarantees a circulation of fifty copies. The September of fifty copies. The September of fifty copies and the circulation has jumped to five hundred copies. The subscription price in March is stated to be ten cents for twelve topies. The subscription price in March is stated to be ten cents for twelve issues; in September, twenty cents. The first issue contains no advertisements; the last issue, four. The publisher says he has to refuse advertisements every month. The advertisements in September netted the publisher five dollars. The plant of "The Speck" consists of a press, fifty pounds of body type, ten pounds of display type, and a supply of heading. It is printed at No. 320 Rural avenue, Williamsport, Pa., by Logue Brothers. I Gibson Logue Logue Brothers. J. Gibson, Lo-gue, the editor, is fifteen years old, and E. G., his assistant, is only ten. The issue on hand would be a issue on hand would be a credit to much older boys, as the typography is neat, the contents well arranged, and the text breezy. The leading article, "A Campaign Bar"l,"

ticle, "A Campaign Bar I,"
deplores corruption in
politics. The publishers
of "The Speck" have
learned one of the cardinal principles of publishing a good paper,
that is, not to let the advertisements overtrun the space that belongs to the text. The
editor writes clearly and in the main grammatically.

That decide thems is again! (Continued on the page.) | Continued on the page.) |

#### The Reviewer

In THE MARUNE, Harry L. Walsh writes with appreciation of the work of Rudyard Kipling. His article is hardly an essay, as it lacks the necessary proportions and balance which we associate with the essay proper. It is an interesting sketch, and in the main, well written. He has been careful in the choice of words, but in the case of several sentences there is an involved and awkward construction. The article reveals a considerable knowledge of Kipling's works. The author would seemingly put Kinling above Shakespeare as a literary master. Few will agree with him. My experience in the six years of criticising the products of amateur journalists has been that they usually lack the sense of perspective, which means that the figures are not in one proportion. This seems to be a fault in the work of Mr. Walsh.—FRANCIS DAILY, Washington, D. C., writes about his print-shop, which from his account is well equipped. His letterhead is submitted for criticism. The two-color In THE MARUNE, Harry L. Walsh

work is neat, the impression even, and the wording well balanced. It seems to me it would be better, considering the size of the sheet used, to distribute the wording across the page, instead of confining it to one corner.—ELMER R. REYNOLDS, Madison, N. J., has a new press, with an inside chase of 7xII, a present given him by his father, last spring. He has since then cleared fifty dollars in money, in addition to his gain in experience and pleasure. His samples of card printing are carefully spaced and show up well. He shows a little fault in his use of periods.—The fall issue of THE WESTERNER comes out in fine form. Alfred Kohlberg, the publisher, printed the entire number on a small "one-boy-power" press. As the number contains thirty-two pages, 5x7 inches and cover, the printing of the issue entailed considerable work. Simplicity is the key-note of THE WESTERNER'S typography. The spacing is good, the headings harmonious and the presswork excellent. This number is the paper's high-water mark. A poem, perfect in metre and with considerable depth of thought is contributed by Ethelwyn Dithridge. "The Man I Met in the Cafe" is a rattling good story by Morgan D. Hite. The author shows acquaintance with the technicalities of short story writing. There is proper attention given to local color and technicalities of short story writing. There is proper attention given to local color and the characters are consistent. Amateur story writers neglect these two essentials to good story writing. The editor's remarks and reviews are pleasing and full of suggestions, and his views on print-shop matters are instructive. He offers to aid boys whose presses do not work just right by giving them the benefit of his exper-ience. His address is No. 2426a Pine Street. San Francisco.

#### The National Amateur Press Association

Association
The National Amateur Press Association, which was organized at the Centennial by Hon, Jas. M. Beck and others, held its 29th annual meeting on July 2, 3, 4 and 5, at the California Hotel, San Francisco.
Owing to the great distance, the out-of-town attendance was not large. Present were C. R. Burger, Colorado Springs, Col.; Sam T. Brush, Sacramento; I. D. Magnes and M. J. Hyde, of Oakland; F. F. Thomas, Jr., and C. B. Phillips, of Berkeley, and Ed. M. Lind, Harrie C. Morris, Alfred Kohlberg, Allan Abbott, Farnsworth Wright, F. C. Mortimer, D. H. Cleft, David

SETTING UP EXERCISES BY THE CADETS AT WEST POINT

#### BEGUN IN SEPTEMBER

As a rule, the cadets troubled us very little. Occasionally, while I was "tip-tapping" around the area of the barracks with a prodigious "brace," some cadet would suggest in an undertone that I was slouched the barracks were not suggest in an undertone that I was slouching frightfully. If the remarks were not followed by an attempt to wrinkle my coat, I was warned that I would have that "b.j. ety" taken out of me when I got into camp.

Was soon as the result or the examinations was officially announced, our real "pleb" was officially announced, our real "pleb" and officially announced our real "pleb" was officially announced. Our experiences so far were only a foretaste of what was to come. In addition to the usual "parade," we I was warned that I would have that "b.j. one at 10:30 a. m., and one at 4:30 p. m. we were divided into squads of from eight to the state of the examinations as the result of the examinations as officially announced. Our real "pleb" was officially announced. Our real "pleb" was officially announced. Our real "pleb" and the pleb is the provided in the provided in the provided in the provided into squads of from eight to the provided into squads of the provided into squads of from eight to the provided into squads of from eight to the provided into squads of the pro

obliged to rule the lines, do an the briefing, addressing, etc., on each paper, after a copy of one posted on the "office" door. I averaged about seven reports a day, and considering that I had to rewrite each explanation once at least, it can be readily understood that most of my spare time was given to this unpleasant work.

Some of the reports entered were formid-

given to this unpleasant work.

Some of the reports entered were formidable. These are examples: "Slouching in area about 10:20 a. m." "Failing to depress toes after having been ordered three times to do so." "Carrying himself in a very indifferent and slouchy manner after having been twice corrected for same."

It was aggravating to be reported for such insubordinate offenses, when I was doing the best I could. Visions of courtsmartial flitted through my mind, and I was in a constant state of trepidation.

in a constant state of trepidation.

Another thing annoyed me not a little:
viz., keeping my room in order. I had
been so accustomed at home to strew my I had been so accustomed at home to strew my garments and articles around promiscuously, that it had become a confirmed habit with me never to put a thing back in the proper place. I did not know how to sew on a button, sweep out a room, or make a bed. But now all this was changed. We lived on the principle, "Every man his own chambermaid." Each article had its particular place and it must be there. The bedding had to be piled each morning after particular place and it must be there. The bedding had to be piled each morning after reveille. First, the mattress was doubled over, and the sheets, blankets and comforters were folded and piled with folded edge to the front, first the sheets, then the pillows, then the blankets, and finally the comforter, after which the room had to be thoroughly swent. This was done by the comforter, after which the room had to be thoroughly swept. This was done by the "orderly," as he was called, who was responsible for the general condition of the apartment. This office is held by each occupant of the room for a week, the change of duty taking place after each Sunday morning inspection.

Twenty minutes after reveille came the man. The first class officers have a few

Sunday morning inspection.

Twenty minutes after reveille came the police inspection, and one of the cadets over us inspected our room. He paid particular attention to the bedding, and for the first few days he would tear it all apart and make us pile it again. The shoes had to be arranged at the foot of the bed, the toes all in line. A speck of dust on the mirror or the mantelpiece, or a drop of

water on the floor, was a crime.
I remember one night when the officer in charge of us inspected our room. I had just finished washing and had left the water in the basin. Otherwise the room was in good order. Suddenly I was startled was in good order. Suddenly I was statuted by a bang on the door. My roommate and myself leaped to "attention" with our of the exercises, and were principally drill-hearts in our throats. I shall never forget the inspector's look of contemptuous amage-afternoon drill and "parade" we carried many when he saw the water in the bowl, which ought to have been empty and inverted on the washstand.

Amidst the oppressive silence he asked me who was responsible. I told him I was. "Why is not this bowl inverted?" I replied, "I did not think that you were going to inspect, sir."

Oh, what a break that was, and how he reprimanded me! I shall never forget it.
I determined that the next time he inspected, my room should be in perfect order. I cleaned and pollshed everything, even to the brass clasp on my infantry "Tactics."

IV.

NEW CADETS.

URING the examinations, we had an hour or so a day to ourselves, but the limits were strictly prescribed. We were allowed to walk only on that portion of cadet limits south of the road in front of barracks, and our period for recreation was so arranged that we were not out at the same time as the older cadets.

As a rule, the cadets troubled us very little. Occasionally, while I was "tip-tap-"

When the officer came to my room at Sunday morning inspection, I stood at attention, with a feeling of blissful assurance. He surveyed the room, but did not seem to notice the polish on the clasp of my "Tactics," nor the dazzling lustre of the brasses on my cleaning box. He did not lice, however, the shoes at the foot of my bed. One pair had the right shoe on the left side, and vice-versa.

"Are you in the habit of standing cross-legged, sir?" he demanded. Another reprimand and his dismal forebodings of my future kept me awake through many a long sultry night that followed. When the officer came to my room at the scabbard and was secured in front by a to rear, after which the hands are brought

sultry night that followed.

As soon as the result of the examinations

Shortly after the examinations were concluded, the battalion went into camp, and we had the whole barracks to ourselves. We were given three divisions to live in, and two men were assigned to each room. The examinations being now over, we clastifut to be candidates and were "new cadets."

We were all supplied with a quantity of legal cap on which to write our explanations. Whenever we were reported for an offense, we had to prepare the explanation therefor. Blanks for this purpose were provided for the older cadets, but we were obliged to rule the lines, do all the briefing, addressing, etc., on each paper, after a copy of one posted on the "office" does not be divided into squads of from eight to ten men, so as to secure efficiency in dellin. A corporal, and, in some cases, a cadet private had charge of each squad. In addition to the corporal regularly detailed over us, a squad was marched from camp in time for each drill. Most of these cadets were corporals, but as there were not enough officers available for the duty, some of the drillmasters were privates. I had always heard that it was a great object to "bone corp." (i. e., secure a corporalship), and it did not take us long to see that the private drillmasters were work in addition to the corporals and the corporals and the corporals were working just as herd for the duty.

that the private drillmasters were work not hard to become corporals and the corporals were working just as hard for higher "makes" for September. We learned this literally by the sweat of our brows, for the way those fellows drilled and marched us makes me shudder even at this late day. Just here, I will give an explanation of the class and officer system at West Point. In the first place there are four classes, first, second, third and fourth, corresponding respectively to the Senior, Junior, Sophomore and Freshmen classes at colleges. The captains, lieutenants, adjutants, and quartermaster are selected from the first class, the sergeants, sergeant-major, first class, the sergeants, sergeant-major, and quartermaster-sergeants from the second class, and the corporals from the third class. All fourth class men are privates, and as a rule march in the rear rank at all battalion formations.

There are no examinations for promotion from one grade to another. The appointments are made by the Superintendent on the recommendation of the Commandant of Cadets. The tactical officers and the cadet officers of the first class recommend in turn to the Commandant. In the selection There are no examinations for promotion from one grade to another. The appointments are made by the Superintendent on the recommendation of the Commandant of Cadets. The tactical officers and the cadet officers of the first class recommend in turn to the Commandant. In the selection of officers, military bearing, general appearance, discipline, class standing, and general deportment are all considered.

When a cadet officer shows that he is not worthy of his office his appointment is revoked, and he goes back to the ranks, and we were outside of the area of barracks, when we could carry our hands naturally. In summer, reveille is at 5:30 a. m., and consequently we had a very short time before our morning drill. At the second divided into squads according to our proficiency in drill. The first was the squad of honor, and that was the goal of every pleb's ambition. The gradation was carried down four or five squads, after

voked, and he goes back to the ranks, and a cadet private is appointed in his place.

Rank at West Point determines everything. The distinction is so fine that it is felt from the first captain to the lowest pleb. At all battalion and company formations the senior cadet officer comman's.

At all class and drill formations the cadet,

man. The first class officers have a few minor privileges in the way of burning lights late at night. All the officers march in the line of file closers, except the corp-orals, who march on the flanks of their respective companies. In Yearling camp, however, the corporals act as sergeants

while the second class men are on furlough.
Our daily drills now became a matter of routine. We knew just what to expect at each one. The early morning drill was the hardest, for as soon as we had learned the rudiments of tactics, we were out through all the setting up exercises, and we double-timed around the post. The 10:30 drill was not quite so vigorous, as we had less

Our guns and accoutrements were issued to us about a week after the examinations. My feelings on receiving this warlike paraphernalia could be compared to nothing except the manly pride I felt on assuming excent the manly order I felt on assuming the front, palms touching, then the arms my first pair of long trousers. Our milisery outfit consisted of a Springfield rife, a cartridge box, a bayonet and scabbard together with our white helts. The cartridge box hung near the right hip and was at the shoulder belt swing across the left shoulder. The scabbard was at the left shoulder. The scabbard was at the left side. The waist belt passed through

brass waist-plate. We had to keep our brasses polished to a golden lustre, and our guns free from dirt and rust. In fact most, if not all, of our and rust. In fact most, if not all, of our time, while we were not drilling, was devoted to cleaning our guns and brasses. We were inspected every night at parade, and very rigidly too. Our collars and cuffs had to be spotless and our shoes well polished. Our guns were carefully examined, and if the inspecting officer coulisoil his gloves on any part of the weapon it was magnified into a depository of uncleanliness. It was contrary to regulations to take the piece apart, but of course in the seclusion of our own rooms we all in the seclusion of our own rooms we all had to do it in order to clean the various parts. To show how thoroughly this was done, there was not a gun in which you could not see the front end of the breechblock by looking down the barrel when the breech was closed.

#### PREPARING FOR CAMP.

To give the reader an idea of a military position, and the one we had to assume on all occasions except while at "place rest," I copy the following from tactics:

Position of soldier. "Feet on the same line and as near each

other as the conformation of the man per-mits [together].

The feet turned out equally and forming with each other an angle of about sixty degrees [exactly].

The knees straight without stiffness.
The body erect on the hips, inclining a little forward. The shoulders square an ifalling equally [shoulder blades almost

touching].

The arms hanging naturally.
The elbows near the body [very near].
The palms of the hand turned slightly to the front [squarely to the front], the little fingers behind the seams of the trousers.

The head erect and square to the front.
The chin slightly drawn in without constraint [generally with].
The eyes straight to the front and strik-

ing the ground at about the distance of fifteen yards."
We were always required to carry our-

selves as prescribed above, excepting when we were outside of the area of barracks,

voked, and he goes back to the ranks, and a cadet private is appointed in his place.

a cadet private is appointed in his place. was advanced several squads, and similarly if a cadet retrograded he went down several

aquada. The various "setting up" exercises formed the feature of the morning drill, especially the second exercise. We were often kept at this until each of us had dug a little hole in front of him, started a pool of perspiration and worked his flannel jacket over his head. This exercise is a good one for making the body supple and

enabling one to retain with ease the posi-tion of the soldier.

It is executed as follows: the arms are raised from the side, extended at full length above the head until the hands meet, palms to the front, fingers pointing upward, thumbs locked, with the right thumb in chumos locked, with the right thumb in front, and the shoulders pressed back. At the command "two," bend over till the hands touch the ground, keeping the arms and knees straight. At the command "three" resume the "position of the soldier."

After we had learned how to execute all After we had learned how to execute all the exercises by the numbers, it was customary to form us in single file at convenient distances apart. The command "Continue the motion." with the number of the exercise desired, was given, and we all executed the movements in unison.

Altogether there were four exercises. Altogether there were four ex In the first the hands are raised

front, then brought to the tip of the cap. then extended upward and obliquiely to the rear, until the hands reached the side. In the third the hands are extended to the front, palms touching, then the arms are extended to the rear, inclining slightly downward and at the same time raising.

to the side again.

Another of the exercises was the "double

step." The object of this was to teach the beginner the principles of double-timing. The arms are raised until the forearms are The arms are raised until the forearms are horizontal, fingers closed, nails toward the body, elbows to the rear. The left leg is raised to the front, bending and elevating the knee as much as possible, the part of the leg between the knee and instep vertical, the toe depressed. After the left foot is replaced, the same motion is executed with the right.

After learning the double step we were exercised at each early morning drill in

exercised at each early morning drill in double-timing. We often ran the distance of

double-timing. We often ran the distance of a mile without stopping, at cadenced time and all keeping well dressed. There is one feature peculiarly charac-teristic of cadet life. I refer to the manner in which the young men live in the future. There is always something that they are

WEST EXAMINATION ROOM WHERE NEW CADETS ARE EXAMINED

anticipating. They are anxious for the present to pass and are continually counting the days that must come and go before to avoid any complications, I will state

Ing the days that must come and go before some important event arrives.

Many a "pleb" and many a yearling have found at the June examination that his dreams of furlough were dreams and nothing more. The disposition is almost irresistible to build air castles while in his room facing the plain, to gaze out over the grassy parade ground, to watch the leaves of the maples nodding in the May brieze, and, and were "driven" over to camp, and to form plans and cherish hopes of the map and cherish hopes of the map before the form the f and to form plans and cherish hopes of furlough—that easis halfway across the dreary four years' desert.
We had not begun to anticipate furlough

We had not begun to anticipate furiough as yet. My first longing was to become a cadet. This having been realized, I yearned to own a cadet uniform, for my civilian or "cit's" clothes were shockingly wrinkled, and my cutaway had a fashion of working up over my shoulders, when engaged in executing the second exercise, that was trying in the extreme. The cadets wear gray dress coats and white trousers (always known at the Academy as "pants"). Our first uniform consisted of "pants"). Our first uniform consisted of a gray flannel suit, the same colored trousers with a black stripe, and a short shell jacket. In addition to this ambition, I was eager to carry a gun, to become a pro-ficient in the second exercise, and to go into camp.

We were continually receiving instructions in our orders, and duties as cadets. with especial reference to those of as nu-nel. We expected to go into camp before the Fourth of July, and it was now the 30th of

The cadets receive their pay, on their check-books, every two months, and as provided by the Regulations, are inspect-ed and mustered on the last day of every

alternate month.

On this day we marched over to camp to be mustered at the same time with the battalion. How imposing those cadets looked to me, and how scornfully they sized us up! As each man's name was called he answered "Here" and marched called he answered "Here" and marched out in front of the mustering officer, saluted like a machine and marched to the rear. When we had all gone through this movement we were "driven" back to barracks. I was so frightened while marching by, with my hands pasted down to my sides, that I forgot to salute several officers standing in the vicinity, for which neglect I received a vigorous "jumping." This, together with the glowering looks bestowed upon me by several cadets, made me glad to get back alive to my bare and lonely room in barracks.

On the second of July, we received no-

On the second of July, we received notice that some time the next day we would go into camp. All was bustle but not con-fusion. Immediately after the morning drill on the third I began to get my worldly goods together, that is, those suited to a military life. Our citizen's clothes were kept in our trunks in a room in the basement of barracks. Everything was bundled into a comforter and a sheet and then tied up. Commissary wagons carried these bundles over to camp. We kept our guns and trimmings in our rooms pending our formal entry into camp.

While waiting for our effects to be taken away, we were busy making arrangements for tenting together. I had previously engaged myself to several different men, but, like Tom Moore's "pets," they all died (i.e., so far as I was concerned). Those who had not been remanded to civil life had been sent to other companies.

We had all been assigned to one of the goods together. that those suited to

who had not been remanded to civil life had been sent to other companies.

We had all been assigned to one of the four companies of the battalion. The whole pleb class was drawn up in line and arranged according to height. The squad was then divided into two equal divisions. The taller half were to go to "A" and "D" companies, the other half to "B" and "C." Then starting at the first man in each division, number one went to A company, number two to D, number three to A. and so on. The same was done in the "B" and "C" division.

One of the oddest features of cadet life is the way that "plebs" mentally estimate one another. First impressions are rarely correct, especially those of youth, and many a man at West Point has had to pass through months of misery before he could rid himself of the reputation of being a "slob." The cadets in charge of us had also sized us up, and their opinion in general accorded with our own. When you consider how many men there are of nearly the same height, it is not a cause of surprise that the senior cadet officer over us being an "A" company man, that all the "slobs" went over to "D" company. I don't want to offend any D company man who may happen to read this article, because the next year a "D" company cadet

mand, and were "driven" over to camp.
The news had gone before us, and, as we marched, I perceived in the intervals, when our line was directed to the front of camp, that the different company streets were filled with groups of cadets, waiting to see their new comrades in arms.

We were marched across sentinel's post number six, to the color line, brought into

tents. On the way through the company street, I overheard more than one p rsonal remark about my friends as well as myself.

remark about my friends as well as myself.

The captain was sitting in state behind a
table, placed in the front part of his tent,
in the rear of which another cadet, attired
in his undergarments, was lounging upon
a pile of bedding and coolly surveying the
awed crowd outside.

At intervals this reclining cadet removed
his pine from his mouth relead the pine from

his pipe from his mouth, raised himself on his elbow, and asked some one his name, and that of his "pred." Then, after bestowing a look of contempt and indifference upon us, he would drop back upon the bedding with a sigh, and return to his pipe. bedding with a sigh, and return to his pipe. Meanwhile, the captain, with a diagram of the company spread out before him, was busy assigning us to our tents. As there was no way of determining seniority. A ranked B, and B ranked C, etc. A was called up to the table and asked which tent he wanted. (The tents reserved for us were five or six middle ones on the sunnier aids of the street). Of course A did not were five or six middle ones on the sunnier side of the street.) Of course, A did not know by what standard to judge of the desirability of any particular tent, and so, after an embarrassing silence, interrupted by a growl of "step out," he selected the vacant one nearest the captain. Thoughtless mortal! A was asked what other cadets he wanted as tent-mates. He named has two companions in future misery, whose names were checked off with his. B was his two companions in future misery, whose names were checked off with his. B was then called up. This man had the brightest eyes I have ever seen, and just then I observed a mischlevous twinkle in them. He selected the tent most remote from the captain's. The latter gazed at him with a look almost of respect mingled with good-

ing by themselves. I saw at a glance that

I was the senior and would have the next choice. I hurriedly asked these two if they would live with me. I had not known them before reporting, and since our examination, had seen but little of them. They agreed, and we were in for it. There was but one tent left, and only three men to occupy it. However, the captain lit a cigar and meaning to do his whole duty he put me through the farce of selecting a tent, meanwhile asking me, among other questions, how I liked certain ones already occupied, his own among the number. My tent was near the middle of those reserved for the plebs, but I felt that it was superior in point of location to A's tent, and therefore congratulated myself.

Happy in settling the tent and tent-mate difficulty, I was making a bee-line to my new quarters, much to the detriment of my military brace, but had not gone far when some one behind me shouted "Core beet

military brace, but had not gone far when some one behind me shouted, "Come back here!" I went back. My captain, who a moment before seemed glowing with a moment before seemed glowing with good-humor, was now the picture of indignation. I could not have felt more awestruck had I been a slave before a sultan's throne. I was urged to "step out" on my way back, and I obeyed. Captain Smithbegan at the crown of my head and "jumped" me thoroughly down to my heels. I cannot recall his words, but it was the usual thing delivered in the most feroclous manner. ferocious manner.

While I was being ground through the mill of wrath, the captain's roommate leaped up from his couch, and struck an attitude behind him. The former wore one attitude behind him. The former wore one of those sleeveless commissary shirts the pride of all cadets. The name Shappert was tattoed in indelible ink across the front. Shappert had an immense chest, and his arms were like those of a trained puglist. I made up my mind that if Shappert wanted me to do anything. I would try very hard to obey. The man in undergarments had quite a good-natured face, and I thought that the sneering expression he now assumed ill became him. In the interims, when Captain Smith stopped talking in order to frown upon me and to look ing in order to frown upon me and to look contemptuous as well as bored. Shappert took occasion to interlude some sarcastic remark that made me wince.

At last, the ordeal was over; Smith had scolded enough, and Shappert had sneered until he was satisfied, so I started down the company street again, this time with a prodigious brace. As I approached my quarters, I saw two cadets stoop down so as to avoid the fiap of the tent, emerge into the street reassume the position of as to avoid the flap of the tent, emerge into the street, reassume the position of soldiers, "tip-tap" across the street, stoop again, enter the tent directly opposite, when they came to the regulation carriage with a start. From the excited conversation, it seemed that my tent-mates had been chuckling over my recent experience. I heard a flerce voice which showed that the owner was bent on making them afford him more entertainment than they had received from my misfortune.

from my misfortune.
Our tents were bare with the exception of a large locker placed on the side next the parade ground. Stretchers had to be brought, and swung from the ridgepole of the tent. They were obtained from the quartermaster's tent.

quartermaster's tent.

We were wholly ignorant of how to fix up our quarters. True, we had a book giving the place for everything, but we felt that there was a wrong way to begin, and, pleb-like, we would take that way. There that there was a wrong way to begin, and, pleb-like, we would take that way. There was a small square board about four inches in diameter, pivoted to the front pole at the height of the head. After a little study we concluded that this was the orderly board. The momentous question arose as to who should be orderly. The trouble was finally settled by one of my roommates, Silkins. It was the latter part of the week, and as the orderly changed after Sunday morning inspection, Silkins thought he would have less work and responsibility, by taking the first detail. My other roommate, Fletcher, and myself, were willing, so Silkins assumed the responsibility.

taking the first detail. My other roommate, Fletcher, and myself, were willing, so Silkins assumed the responsibility.

Of course we all helped vigorously, but the orderly had the responsibility, which is everything at the Point. Some one is responsible for everything that takes place there except for the weather. We secured rope, lashed the stretcher to the ridgepole, and brought in all our worldly goods, which had been dumped from the wagon at the foot of the company street. street.

look almost of respect mingled with good-natured amusement. I immediately saw the point, and concluded that among the famous names West Point was to furnish to history in the future would be found that of my bright-eyed classmate, After all the C's and D's had been dis-posed of, there were three men left stand-ing by themselves. I saw at a glance that While we were busy unpacking

and patient and faithful to their young masters as only a dog can be.

Possibly something of the respect and admiration which the average lad cherishes for a St. Bernard is due to the stories which every boy has read over and over again in the school readers and other books of the noble work of these animals in the snow-bound mountains of Europe where they are regularly employed to rescue travelers who lose their way in the fierce, blinding snow storms which sweep over these regions, quickly wiping out all trace of roads and paths. Many a half frozen and exhausted traveler has been given new life by the food and dr.nk carried in the little cask which each of these life-saving dogs wears attached to his collar, and one of the dogs who has thus discovered a helpless human being will either drag him to a place where he may be cared for or else returning to his home the dog will guide a rescuing party to the point where the body lies, perhaps well-nigh buried in the snow.

Here in America the life saving work of the St. Bernard dog has been like that of his brother animal, the Newfoundland

any other species of dog.

It is nothing unusual for rich men to pay a thousand dollars for a fine St. Berpay a thousand dollars for a fine St. Bernard and there have been not a few instances in which such dogs have commanded the extravagant prices of from \$5,000 to \$10,000 each. It is because there are in the United States men who love dogs

LMOST every boy likes dogs and there are few boys who have had an opportunity to make their acquaintance, but what have a special liking for those kings among the canines.—the lordly St. Bernards. To be sure these big dogs with their great shaggy coats and kindly eyes are not as playful as some of the smaller members of the family,—or at least they are not playful after the wild, romping fashion of, say the fox terriers, but they are almost always goodnatured and patient and faithful to their young masters as only a dog can be.

so much that they will pay these prices that Uncle Sam's country is able to boast the possession of the finest St. Bernards in the world. Not a few of the champion St. Bernards which are owned in this country were born on the other side of the Atlantic and passed their early life in England or some European country, but when the time came for them to go to new homes of their own American dog fanciers but they are almost always goodnatured and patient and faithful to their young masters as only a dog can be.

trolley car and was about to be run down when the devoted keeper without a mo-ment's hesitation sprang in front of the oncoming street car and rescued the fright-ened dog at the risk of his own life.

#### A Boy Poet Among The Iroquois Theatre Victims

One of the victims of the Iroquois fire in Chicago was Walter Bissinger, a fifteenyear-old boy. During his life he published year-old boy. During his life he published a book of a hundred pages, entitled "Thoughts in Verse and Prose," every page of which was composed by himself. Dr. Emil Hirsch, of Chicago, says, "In the death of this boy the world lost a poet of rare qualities. The promise of a larger fame among the greater bards, whose songs have cheered pligriming mankind on the path of upward tending, was richly foreshadowed in the notes which from early childhood his tender fingers drew from the lyre of his love-filled heart."

We would be glad if we could give specimens of some of this young poet's verse.

"BARON SUNDRIDGE"—THE FAMOUS ST. BERNARD FOR WHICH PRANK GOULD PAID \$10,000

As a home for the Gould dogs there was built a so-called kennel, which was introduced at the Hudson River estate of Miss Helen Gould, the sister of the dog fancier, and a woman who became known to the whole American people during the Spanish-American war when she inght.

The two that follow will have to suffice the first being a verse without a title:

Nature shows to man in many ways How she combineth gentl ness and might. Beside the mighty mountain peak she lays The peaceful river, and throughout the night.

The procedular river, and throughout the night woon doth shed her soft and glowing.

The procedular river and glowing the standard novels in paper at 10 and 15 cents each. The procedular river and glowing and reference books for exercise.

sick and wounded sailors and soldiers. In this dog palace each dog has his own stall just as a boy has his bedroom, and each stall has a cleverly arranged movable bed of straw which works somewhat on the plan of a folding bed and enables the bed to be well aired each day.

A man who has made a special study of St. Bernards is employed to devote his entire time to this canine family, washing them, taking them out for exercise and preparing medicine for them when they are sick. This man who has so good a chance to appreciate the nobility of these animals has learned to love his charges very devotedly. Some time ago some of the dogs were taken to a dog show in Chicago, and as they were passing through the streets of New York on the way to the train one big fellow got in front of a

# THE HERO OF THE FOOTBALL

**GAME** §33 333

the university."

Next week school opened and Tom and

Jack were high seniors. They both worked very hard for a scholarship and at the end of the term each boy walked home, thinking different thoughts. Jack had won one
scholarship and another boy, the other.
Jack went home and wrote a letter to his
mother in Nebraska, telling of how he had
won a scholarship. Here is the letter:

and I never had the least idea I would come anywhere near getting it, but to-day Principal James said, "I am much pleased to say that Mr. John Lane has won our scholarship to the University of California. Then he told me to come up on the platform I had to make a speech. I was thunderstruck, and when I got up on the platform I had no more idea what to say than a baby. Poor Tom was awfully disappointed. He tried to make believe that he did not care, but a blind man could have told that he was disappointed.

JACK.

Jack rode down to Tom's and found him sitting on the steple.

"Helo!" said Tom. "When will you start for Berkeley?"

"I am going to try for a scholarship, and I never had the least idea I would come anywhere near getting it, but to-day Principal Ack ran it in 25 yards. Then the second half Stanford kicked off to Lane and Jack ran it in 25 yards. Then the second half Stanford kicked off to Lane and Jack ran it in 25 yards. Then the second half Stanford kicked off to Lane and Jack ran it in 25 yards. Then the second half Stanford kicked off to Lane and Jack ran it in 25 yards. Then the california bleachers gave "Oski" and cheered for Lane. By hard line plunging on the plunging and the old lup to the 20-yard. Fourth.—Four strips of wood, two to be the kingly down the field. All at once the Stanford man was on top of the ball behind the goal. Score 5—0. Stanford man was on top of the ball behind the goal. Score 5—0. Stanford man was only five minutes more to play and California had the ball on Stanford's which he is standing on all his six feet, which is not very high, you know.

Third.—Two panes of window glass, which must be cut to fit into the pan. Charleman the 20-yard one of the panes must have the corner cut away to the extent of about an inch. Fourth.—Four strips of wood, two to be the length of the panes and the other corner out away to the extent of about an inch. Fourth.—Four strips of wood, two to be the length of the panes. These strips must be one-half inch wike and only a little bit higher th Dear Mother:-You know that I wrote you

for Berkeley?"

"I am going to-morrow morning." Jack replied, "and I have come to say good-bye to you."

Next morning Jack was on his way to Berkeley. He reached there and went to a boarding house. Nothing special happened until college opened, when Jack got acquainted with some of the boys. First he was invited to a "jolly-up" by Charlie Hold, whom he had known ever since he had come. When Jack reached the fraternity where the "jolly-up" was to be, he found that all the fellows had wanted to get acquainted with him. In a little while get acquainted with him. In a little while Charlie said, "Come on, I want to intro-duce you all around."

Before the evening was over Jack felt quite at home and knew John Rend, Ralph Crimes, Bill Winters, Lloyd Somers and "Heine" Falks, and, of course, Charlie

Hold. At about eleven o'clock Lloyd moved that Jack be admitted to the fraternity, which was named the Phi Theta Delta, and John at once seconded it. Then it was only a minute before Jack was elected and soon was initiated and became a full-fledged "frat" member.

Not long after this Jack was walking

By HOWARD HYDE ROBERTS Age About Eleven Years

T was five o'clock in the morning and Jack Lane was asleep; someone outside shouted, "Are you awake, Jack?"
"No," answered Jack as he jumped up. "What do you want, Tom?"
"Get your wheel and come out for a ride with me. I want to talk to you."

Next day, at two o'clock, the team in the form mixted the true hour ware going that a started for the Plebmond.

"Get your wheel and come out for a ride with me. I want to talk to you."

In a few minutes the two boys were going down one of Los Angeles' streets toward the park. When they had ridden into it Tom said, "You know there are two scholarships from the high school to the University of California?"

"Yes."

"Well we only have one more term in the high school. What do you say if we try for them?"

Jack looked at Tom for a minute to see if he were joking, then said:

"If you think I could win a scholarship you expect a good deal. I couldn't win one if I had to, but I will try if you do, because I would like ever so much to go to the win.

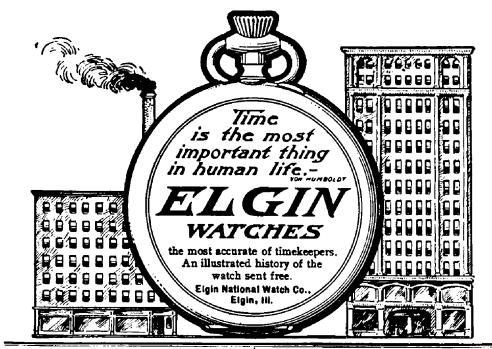

Next day, at two o'clock, the team, in their suits, started for the Richmond grounds. Everyone was anxious to do his level best and outdo his fellows in the game. When they got there Stanford was going through light practice. Soon the Berkeley boys were doing the same.

At three o'clock the men lined up. Berkeley hosen kick-off. Jack sent the ball straight and high to Stanford's five-yard line. The full-back caught it and was downed in his tracks. Stanford's quarter gave signals for a kick, and all at once he was going round left end. Most of the players just looked, but Jack turned and ran after him with all his might. At the thirty-yard line Stanford's man knocked down Berkeley's full and ran at full speed toward the goal posts, now only twenty the four was the first wing. toward the goal posts, now only twenty yards away. Just on the five-yard line Jack made a spring and caught the other quarter, squarely, sending him headlong on his face, the last white line only one yard

distant.
"Stanford's ball, first down, you have one

"Stanford's ball, first down, you have one yard to gain," sang out the referee. There was a clash of heads (and I was going to say tails) and the referee said, "Second down; three-fourths of a yard to gain." So it was that the half ended.

In the second half Stanford kicked off to Lane and Jack ran it in 25 yards. Then the California bleachers gave "Oski" and cheered for Lane. By hard line plunging California worked the ball up to the 20-yard line and then lost it. Sprott, of Stanford.

sized with shellac and covered with three or four coats of paint.

Second.—An iron or tin pan, square or rectangular in shape, and as nearly ten or twelve inches long and wide as you can procure; an old, wornout pan will answer your purpose as well as a new

Jack Lane and Heine Falks.

After that nothing special happened until two weeks before the big game with Stan-

An Ant Colony of Your Own By J. CARTER BEARD

NIERE is possibly no form of animal life that is so easy to study and observe as the ant. A little colony can be established with practically

can be established with practically no trouble.

There is no difficulty in finding ants, They are everywhere and can be caught any season of the year, either in the city or in the country, by turning over any object that has been in one spot on the ground for any considerable time and digging beneath it.

A colony can be confined within bounds easily and kept in any convenient places to study, where you may see the wonder-

to study, where you may see the wonder-ful little insects busy about their house-keeping and nursing and food-storing and toilet-making at any desirable moment. You may, if you choose, see them milk their little cows, feed their queen, caress

was initiated and became a full-fiedged
"frat" member.
Not long after this Jack was walking
down Dana street with Lloyd to a history
lesson when Lloyd said, "Did you ever play
football much in the high school?"
"Did 1?" exclaimed Jack. "Well, I guess."
"Don't get hot over it, anyway," said
Lloyd. "I am captain of the football team
and I was wondering if you could play.
But now, as you have told me you could,
what position do you play?"

"Left-half," promptly responded Jack,
"and did the punting sometimes."

Lloyd looked perplexed. "We have three
men, all good ones, trying for left-half, and
so I don't know about it; but be out in a
suit to-morrow and you can fight for the
position."

The next day Jack was out in a suit,
fighting for left-half. He made two fumbles that cost the first cleven a touchdown.

Next day the news came to college that
two of the men trying for left-half had,
decided not to play, leaving the position to
Jack Lane and Helne Falks.

A moment later a stillness fell upon the
soll thud as Jack's foot touched the
ball. The ball rose in the air and dropped
was a dull thud as Jack's foot touched the
ball. The ball rose in the air and dropped
that will keep out the light. The groove
in the paintend Jack was over. The California
was a dull thud as dareled Jack
was a dull thud as Jack's foot touched the
ball. The ball rose in the air and dropped
that will keep out the light. The groove
in the paintend Jack was over. The California
rooters rushed on the field and carried Jack
from the field; he had saved the day for
for formicary, as scientists would call it.
The ants with which you stock it are to
live between the two panes of glass.

straying. That completes your ant nest, or formicary, as scientists would call it. The ants with which you stock it are to live between the two panes of glass. These being so close together, the ants are forced to build all their passages and chambers with the lower glass for floors and the upper one for ceilings. All their work is thus opened to inspection in every part of the nest. If you want to see them act naturally, as they do in their closed nests, do not let the light in too suddenly, and do not let it be too brilliant nor last too long. They can enter and leave the nest as they like through the opening that is left for them by the corner that is cut off the upper pane of glass, but they cannot leave the formicary altogether because of the groove full of water. In collecting a colony with which to stock your formicary, be careful to get the queen with the rest. She is much larger than the others and cannot be mistaken.

rest. She is much larger than the others and cannot be mistaken.

Dump the ants and their eggs together with the soil you have collected upon the upper pane of glass and leave it there for twenty four hours. If you find by that time that the ants have not begun to build inside the formicary, but are staying in the soil on top of the glass, carefully take most of the dirt away, thus forcing the ants to look for better shelter, and they will soon seek the seclusion that is afforded by the nest you have prepared for them.

their little cows, feed their queen, caress their household pets, and bury their dead; in fact, do all the wonderful things that trained observers have often described.

The apparatus necessary to do this need cost you little or nothing.

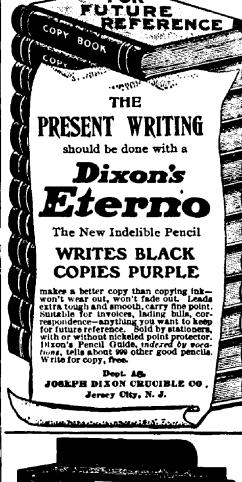

To begin, provide yourself with the following articles:

First.—A piece of well seasoned board about eighteen inches wide, twenty two inches long and one and one-half inches appeared in the April number, broke the thick. This hoard must have a good, deep groove all around it about one-half inch from the edge. This groove can be cut easily with a gouge.

The board should be then thoroughly that is afforded by the nest you have prepared for them.

The Olympic Pole Vault Record Beaten Readers of THE AMERICAN BOY will be interested in knowing that Charles E. Dvorak, who wrote the article on pole vaulting for THE AMERICAN BOY, which appeared in the April number, broke the Olympic record on the pole vault at the deep groove all around it about one-half inch from the edge. This groove can be cut easily with a gouge.

The board should be then thoroughly

### Every American Boy

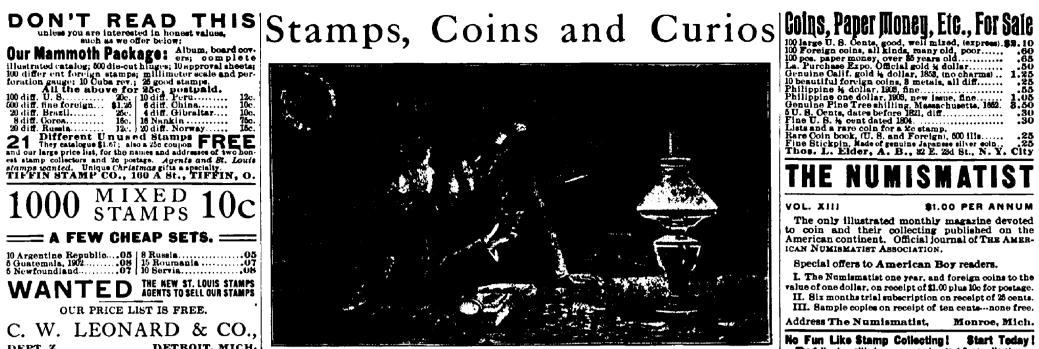

with tingling blood in his veins will want to own a copy

#### THE REAL DIARY OF A REAL BOY

by Judge HENRY A. SHUTE, of Exeter, N. H., the home of America's most famous school for boys, and of

#### "S E Q U I L"

(a continuation of "The Real Diary"), which has just been published serially in The Saturday Evening Post, with whose readers it made an immense hit. Inexhaust ible fun can be had from reading again and again of the doings of the now famous trio-"Beany," "Plupy," and "Pewt"—the first really flesh-and-blood boys in all literature. You can't realize, until you have read them, how deliciously funny these books are. They will give you the side-ache. Either book, \$1.00, post-paid. "Not since Aldrich told The Story of a Bad Boy has New England young life been so delightfully, so humorously, or so truly portrayed."-The Churchmon. Of all book

#### The A. B. C. of Stamp Collecting

The A. B. C. of Stamp Collecting

We have been fortunate in running across a splendid book for beginners in stamp collecting entitled "THE A. B. C. OF STAMP COLLECTING, a guide to the instructive and entertaining study of the world's postage stamps by Fred J. Melville." The book contains photographic reproductions of 237 varieties of stamps, and its table of contents, which we are unable to print on account of its length, indicates that the entire subject is covered in such a way that the amateur,—those beginning as well as those who have made some study of the subject, will find much valuable matter between the covers. The chapters treat of such subjects as "Starting a Collection"; "Hints for Collectors"; "Stamps of Great Price"; "Reprints"; "Forgeries and Fakes"; "Clues to Classification"; "Postal Cards"; "History of Stamps"; "Stories About Stamps"; "Collectors and their Collections." These are but sample chapter titles among thirty-one chapters. It is not often that we offer the books of another publisher over our own name but in this case we desire that all of our stamp collecting friends shall own the little book and we offer it at 54 cents. of our stamp collecting friends shall own the little book and we offer it at 54 cents. Remittances may be made in postage. Address The Sprague Publishing Com-pany, Detroit, Mich.

#### Altering Stamps

Altering Stamps

No change or alteration of any sort should be made by a collector in his stamps. It was a custom, some years ago, among collectors to erase cancelation marks from their stamps, in order to make their stamps better. The effect of the attempt was not all that could be desired. The erasures were not perfect, and the stamps in the changed condition, being neither canceled nor uncanceled, were simply inferior damaged specimens. One of the most common ways of altering stamps, at the present time, is to erase the word "specimen" from a stamp having this overprint. It cannot be done so that it will not be detected, and the stamp in the altered condition is worthless, while as a "specimen" it had some value. It has frequently happened that stamps, valuable in their original condition, have been made worthless by attempts to increase their value by alteration.—August St. Nicholas.

#### Stamp Notes

Stamp Notes

The Eagle Carrier stamp, one of the most interesting of all the early U. S. issues, is supposed to have been principally used in the cities of Cincinnati and Philadelphia.

No matter how common a stamp may be it should be handled with the same respect as a rarity of the first water. Many of the scarcest stamps were once common, and the changes of issues are always taking place. See that you pick out a lightly cancelled specimen, not torn or damaged and perforated all around. Place it carefully in your album or book with a hinge. Do not paste it down solid.

The 10c, 1877, of Cuba. Scott's No. 71, is said to be a particularly hard-to-get stamp.

D. M. Johnson, of Birmingham, Mich., is in receipt of a very curious piece of mail matter consisting of a new one-dollar bill with the address printed on the same in red ink and a two-cent stamp attached to it for postage. It was sent from New York City.

There will be no special issue of stamps for the Lewis & Clarke Exposition at Portland. Oregon. The special cancellation mark which has come in use within a few days will be the only postal evidence of the occasion.

#### The History of Postage Stamps

or so truly portrayed."—The Churchmon. Of all book sellers, or of

THE EVERETY PRESS, Publishers. 74 indis Street, Sesten

What better gift for a boy than your favorite paper, THE AMERICAN BOY?

When the communication possible.

About 25,000 different postage stamps have been issued by all countries and colonies since 1840.

#### The Numismatic Sphinx

The Numismatic Sphinx

Two most important events occurred in the numismatic world in October. The first on October 11th was the sale at auction in New York City of an 1804 dollar. This same dollar, less than a year ago, sold for \$2,000.00. The other incident was the Convention of The American Numismatic Association in St. Louis on October 15th. This Association has a nominal membership of over 600. It is the largest organized body of numismatists in the world. Dr. Geo. F. Heath, of Monroe, Mich., is the Secretary, and Dr. P. B. Wright, of Schenectady, N. Y., is the President. Officers for 1905 were elected, and some delegates traveled thousands of miles to be present.

Silver dollars have been struck every year, beginning with 1794 to the present time, with the exception of the years between 1804 and 1836. For this reason they have been called the 'dollar of our daddies.' It is now authoritatively announced that none will be issued next year, and probably quite a series of years will follow before we shall see them again issued from our mints. During the present year no dimes will be struck at the New Orleans mint and no quarters at the San Francisco mint. All the mints have supplied the other usual denominations this year.

#### Answers to Inquiries

Elmer M. Johnson: Your English coin is a Whist Token. There are several varieties of them and they are not rare. "Keep your Temper" is the usual legend found on them. Your other coin is Turkish and not Japanese. The inscription is in Arabic. The date in Arabic is 1267 A. H. or about 1850 A. D. The 1833 nickel 5-cent piece without the word "cents" will not bring a premium.—Frack's J. Fischer: (1) Greece. 1873 50 lepta, twenty cents. (3) Common 1 Crulting of Tatt. This dime has no mint mark. The rare dime of this date is from the San Francisco mint and has the letter S just beneath the wreath on the reverse.—Olin Garitser. (1) 1867 111 cent nickel, face value only. (3) Rubbing indistinct, but we believe to be from an 30 old English sliver penny coined about the time of the first Edward. We cannot state positively without seeing the coin. (4) Prince Edward Island cent of 1871, five cents.—Raymond L. Barker: You have some very nice coins in your collection. None of them are rare out in the cound or bullet-shaped tical of Siam sells usually for about two dollars. They have not been issued in this abape during the past fifty years.—Russell Harding: Your rubbing is from an oblong silver coin of Japan. It is a "bu." There are quarter and half "bu's" also. The last is tichi-bu. They were issued from 1818 to 1853, since which time the round coins have superseded them.—Robert Jones: A six-pence of Elizabeth of England (1563-1692), 1577, is worth a dollar, and if a really fine specimen, more than that.—Paul Robbins: X For coin with the part of the part

In 1865 the great French playwright, Sardou, included what may be called a philatelist in the dramatis personae of his Famille Benoiton—"a broker eight years of age, who got the best of his little comrades by buying up all the stamps of the Confederate States of America which were on the market, to sell them an hour later when a despatch announced that the Federals were the vanquishers."

Photo by Harry Buckley, Plattaburg, N. Y.

# THE AMERICAN BOY offers twelve prizes of Two Dollars each for the best Amateur Photograph received during the twelve mouths in the year, one prize for each month, also a second prize each month, of one dollar, for the next best photograph, the competition to be based upon the originality of the subject and the perfection of the photograph. The contest is open to subjection and the photograph will be returned if stamps are sent for the purpose. All photographs entered in the contest and not prize winners will be subject to our use unless otherwise directed by the sender, and fifty cents will be paid for each photograph that may be used, the prize photographs in any event to be our own, without further payment than the payment of the prizes. Write on the back of the photograph its title, with a description of the picture, and the full name and address of the contestant, who in every case must be the artist who took the picture.

#### The Roll of Honor

The number of meritorious photographs submitted this month was unusually large and the in-terest generally manifested in the "dark art" by our readers during the colder months of the year is evidently reviving. The following are entitled to honorable mention: Ralph E. Nuz-

FIRST PRIZE PHOTOGRAPH, BY MRS. B. E. TRUM-BULL, PLATTSBURG, N. Y.

sum, Viroqua, Wis.; M. Sharp, Carthage, Ill.; Wm. Lund, Milwaukee, Wis.; Edison Belt, Fredonia, Ks.; John B. Cobb, Medina, N. Y.; M. H. Tardy, Birmingham, Ala.; Walter Hoe, Avonmore, Pa.; F. Linehan, Watertown, N. Y.; Charles Meacham, Waukomis, Okla.; Wm. Loveland, Aurora, Ill.; Ralph B. Deal, Lacota, Mich.; E. L. Mack, Vergennes, Vt.; Nick Rruehl, Sherwood, Wis.; W. E. Elliott, Buffalo, N. Y.; H. V. O'Brien, Chicago, Ill.; and S. Weaver, Plattsburg, N. Y.

#### Platinotype Printing

The September issue of "The Practical Photographer" is devoted to a subject of perennial interest to advanced amateurs, namely platinotype printing. The book contains a great many useful hints and is copiously illustrated. It is obtainable from the Photo-Era Publishing Co.,

#### Restoring Light-Struck Plates

Plates which have been accidentally exposed to the light and thus spoiled for negative making may be restored to their original sensitiveness by the following method:—
Prepare a bath of 2 ounces of bichromate of potassium dissolved in 50 ounces of water. Immerse the plates in this solution for 15 minutes, then wash for 10 minutes. The temperature of the bath should be about 55 degrees F. After washing, place them in a bath containing a little ammonia water, and let them remain for 10 minutes. The operation must, of course, take place in the dark room, and the plates be dried in a dark room free from dust.—Exch.

#### Current Comments

Current Comments

A. S. Shuitz, Lancaster, Pa.—The contrast in your "Little Snowballs" is too great; try again. Morgan Calhoun, Madison, Fla.—A careful examination of your prints leads me to believe that you do not carry development far enough and that your negatives lack density. Leave your plates longer in the developer and see if you do not secure better results. If you cannot determine, by transmitted light, when to stop development, take your plates out of the developer as soon as the high-lights are visible on the back. E. C. Ellis, Boise, Idaho.—The aforesaid also applies to you. Some of your photographs, notably "The Three Bisters," are out of focus. Roscoe McLane, Jacksonville, Fla.—Your "Dewey Arch" is tumbling over, because you employed a single lens instead of a rapid rectilinear. Raymond Whitney, Flint, Mich.—Your "King of The Grove" lacks density. The other photograph is the better of the two, but, evidently, has not been printed deep enough.

#### Queries and Answers

Queries and Answers

Ralph E, Nuzzum, Viroqua, Wis.—Requests for the return of photos should be directed to the Sprague Publishing Co. and not to the editor of this department, as the latter promptly returns to the former all correspondence and photographs submitted to him; Clyde M. Stewart, Augusta, Me.—Developer may be prepared in daylight, but bottle containing stock solution should be kept in a dark place. The average amateur finds the powders more convenient. A film should remain in the developer until all the details in the view have been brought out and proper density has been acquired. You ask: "What kinds of paper are the simplest to handle, the cheapest and the best?" This is a question that would puzzle a jury of expert photographers and, therefore, remains unanswered: Jos. E. Baker, San Francisco, Cal.—The cameras you mention are very good. For all around work I should prefer the rapid recitiinear; but, really, one lens for all kinds of work is seldom satisfactory—portraits require a portrait lens, architectural views and interiors a wide angle one, landscapes a single lens, etc.; Perry N. Trask, Silver Creek, N. Y.—The only criterion in the selection of prize-winners is the excellence of the photographs submitted in competition. And by that is meant not only technical excellence but artistic value. Now the print submitted by you th's month affords an illustration of this. Technically it is perfect, but artistically it leaves much to be desired. As any person possessing artistic training will tell you, the composition is bad, the main point of interest being situated nearly in the centre of the picture. Blue prints are the only kinds of photographs that are absolutely excluded from our contests.

We are in receipt of a very interesting photograph, taken by Sr. Paul Sauer, one of our readers in the City of Mexico. It represents a raging bull racing at full speed toward a toreador (as the bull-fighters are called), who is holding a red flag that is inciting the animal to fury. As a snap-shot, illustrative of one of the most brutal sports of tropical lands, the photograph is remarkable.

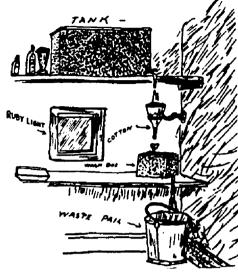

Running Water in the Dark Room Lacota, Mich., Sept. 14, 1904.

Editor AMERICAN BOY,
Detroit, Mich.

Dear Sir:—Knowing the value of running water in the dark room, and that most of my photographic brothers are without the same, I will attempt to describe how I have it in my own room at comparatively small cost, as to the value received

value received

Above the shelf, say 15 to 18 inches, on which Above the shelf, say it to its inches, on which you do your developing, place another shelf of the same size (see drawing). This done, secure a tank or boiler to fit your space into this, solder a small faucet, & inch is all right, on the sidnear either end. Place on the shelf and put in what water you think you will use. As the water is above your work you can easily secure

what is wanted. Have a pail to throw the waste

what is wanted. Have a pail to throw the waste water in.

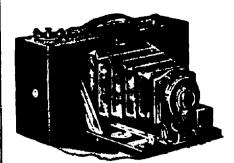

As you now have running water it is a nice thing to filter it. Get a bracket such as side lamps are placed in, and fasten on wall under faucet. Now get a pint funnel and put into this a piece of filtering or absorbent cotton and place in bracket. Allow water to run from tank into this and when it comes out it will be free from dirt, etc., which has a great tendency to stick to the sensitive film.

Now, if you have a wash-box you can wash your plates with filtered water without watching. Place your wash-box under funnel and allow water to run from faucet just fast enough so that the funnel will not run over. Place a pail under wash-box so that when it is full the water will run into it and not spill on floor. In this way you can wash your plates and go on with your other work. Respectfully yours, RALPH B. DEAL.

chair seen had seen four years of service in the Civil War and mother Dale said it "had gotten into his blood."
"Suppose," said Mr. Dale thoughtfully, "that a child suddenly finds himself in a place where there is danger in following commands; danger that could not be foregon when the commands. Were given seen when the commands were given. Where does the child's obedience end and the responsibility of the man, he is to be, begin? Suppose he must choose between obedience and disaster; what would you have him do?"

Uncle Ben hesitated a moment before he said, "Let him obey commands. He does right if he does that; he may do wrong if

he does the other."
Uncle Ben was a bachelor and had not

Uncle Ben was a bachelor and had not reared any boys; so father Dale could not prove that he might not succeed with his own theory and was silent.

Danny had been taught and had easily followed strict obedience to the powers that be. In all his thirteen years it had never occurred to him that a time could come when there would be a question in it. One day Danny's mother was in a bustle of preparation. "Son," she asked, "do you think you can take care of things if I go to town with your father and uncle Ben this afternoon?"

"The best in the world," said Danny.

'The best in the world," said Danny. "The best in the world," said Danny.
"We will start right away after dinner, and can be back by half past five. There is nothing to do really, except to keep everything quiet and see that nothing disturbs aunt Rachel."

"I won't let her hear a hen crow, mother."

The dinner was over, the kitchen put to The dinner was over, the kitchen put to rights, the spring wagon driven into the yard, and the last instructions given to Danny. "I've turned the horses." said uncle Ben. "Into the forty acre lot; all except Duchess. She is in the orchard; don't let her get through with the rest."

"All right. Uncle Ben."

"And, son," keep everything quiet. A start, or shock would be very dangerous to aunt Rachel just now; and try to keep an even or things out of doors."

aunt Rachel just now; and try to keep an eye on things out of doors."

"Yes, mother, I'll see that the chickens go to roost and the sun sets just the same as if you were here."

His mother smiled and passed her hand caressingly over his head. Danny ducked his head for Danny was getting to the age when a boy doesn't like to be "babled" when anyone is looking on.

"Say, Danny," his father called back, "whatever you do, don't try to draw water from the kitchen pump. It will cost me a rod and valve if it is used now before I can put it in order. Go to the spring for

rod and valve if it is used now before I can put it in order. Go to the spring for water if you need more." Danny nodded and the grays trotted off.

The boy stood at the doorway looking about him. How like little green hills the tree tops were; what a soft sighing song the April breeze made in the pine tree; how like a human voice was the ba-a of the lambs in the south meadow. Overhead an apple tree was showing pink buds and the green tint of coming leaves. High up was a branch in full bloom. Danny started up the tree to the dismay and indignation of a blue jay who had selected a

ed up the tree to the dismay and magna-tion of a blue jay who had selected a building site there, and who protested shrilly till left again in possession.

Danny went upstairs to the front bed-room with a soft step. He opened a door softly. Aunt Rachel's eyes were closed, and her breathing told him she slept. How thin and white her face was; how drawn her lips, that had been so quick to laugh.

her lips, that had been so quick to laugh. Lightly he laid the branch of sweet blossoms beside her pillow where she would see it when she opened her eyes, then as softly went down the stairs.

At half past four o'clock, with a comfortable consciousness that the afternoon was well over, Danny commenced preparations for the evening. He lighted a fire in the kitchen stove, filled it with seasoned hickory, filled the tea kettle, which left the water pail empty, and started to the spring for more. The spring was at the

far side of the orchard, and Danny went through the pantry and in one pocket he put a cookie and in another a late anple.

windows away from the wind, and strang-led the best he could the cough that was suffocating him. The fire was stayed for the moment, but the flerce smoke that rose in places told him it would break out

rose in places told him it would break out again quickly.

And still the sparks from the pipe! It may not have been the wisest thing, but Danny had to do what he could. Catching up the pail he ran down stairs again. "WHATEVER YOU DO," his father had said, "don't draw water from the kitchen pump." But how could he go to the spring when he must have water NOW? Perhaps if he ran—and carried two palls, it might be enough—but aunt Rachel—! "I've got to have it right away," he thought. "I will pump as long as it holds together." He had the presence of mind to turn the dampers of the stove and lift a lid to stop the draft; then to the pump with two pails. the draft; then to the pump with two pails, and oh, be thankful, it held good! Up the stairs he rushed as fast as he could. Over the fire that had again burst out he poured the fire that had again burst out he poured the water; then down stairs for more; and then again for more; and then, snap and the stream stopped. Slowly the pump handle lifted, as the valve sucked the air, but Danny was the victor. The force of the fire was spent, and in the attic it was steam and not smoke that came from the floor.

### STORY WITHOUT WORDS

### American Boys' :: Life of :: **Theodore** Roosevelt

Companion volume to "American Boys' Life of William McKinley"

#### By EDWARD STRATEMEYER

HIS book covers the whole life of our THIS book covers the whole life of our honored executive as schoolboy, college student, travelier, author, State assemblyman, civil service and police commissioner, governor of New York, as a leader of the Rough Riders in Cuba, as Vice-President, and finally as President. Many chapters have also been devoted to Mr. Roosevelt's numerous adventures as hunter and ranchman (true stories, which are bound to be dear to the heart of all boys who love the strenuous life), and full particulars are given of the daring battles for Cuban liberty in which our worthy President, as lieutenant-colonel of the Rough Riders, took such a conspicuous part. With Riders, took such a conspicuous part. With appendix. Finely illustrated from photographs, \$1.25, postpaid.

#### CLEVER WORK WITH THE POCKET KNIFE JOHN L. DOUGHENY

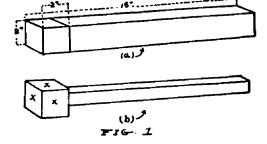

No. 4—The Rattlebox

THE so-called rattlebox we describe this month is one of the cleverest productions of the amateur wood sculptor. It is by no means an original conception of mine, but its popularity among whittlers makes the mention of it in this series of articles obligatory. There are dozens and dozens of designs derived from the old-time rattle-box idea: for instance you can have the designs derived from the old-time rattle-box idea; for instance, you can have the outer shell spherical instead of square, or have two wooden balls, one inside the other, or increase the number of bars on the cage-like part, or have a snake twined around the handle. All of those are diffi-cult for the amateur to carve unless he possesses a fine kit of tools.

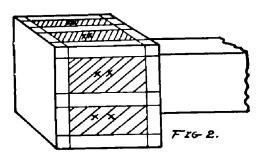

possesses a fine kit of tools.

From the rattlebox idea we have evolved a design which is really beautiful and which any boy may confidently attempt. You can make it out of any kind of wood, but for quickest and best results we recommend clear, straight-grained white pine. Procure a piece 2 inches square and about 16 or 18 inches long. Wet wood cuts easily so you had better soak it in water for a few hours before using.

The top part, or box proper, is to be a cube measuring 2 inches each way. Mark lines on the 4 sides 2 inches from end.

On these lines make cuts with saw or knife, exactly ½ inch deep. Shave off to the depth of cut from cut to end, thus reknife, exactly ½ inch deep. Shave off to the depth of cut from cut to end, thus reducing the handle to a piece 1 inch square. Fig. 1 (part a) shows the original stick with line to guide you as to the proper parts to cut away. Part "b" of the same drawing shows it after the first cutting is done. The part (x x x) is a cube 2x2x2 inches. At present it is solid, and our task is to carve it so that it will be a shell containing a ball. Mark a ½ inch margin around the 4 edges of the front, back and two side faces, but not on the bottom. Also lay out a ¼ inch bar on the centers of the surfaces mentioned (running with the grain). Fig 2 shows this marking properly done. The parts (x x) are to be carved out to a depth of about a ¼ of an inch. The one thing you need in order to do this work successfully is patience. Carve the interior into a spherical or ball-shaped piece before you go any farther. Let the top and bottom remain solid until the last, so that the piece will be solid enough to permit of cutting. The work on the interior is by far the most difficult. When you have done all you can with

the knife, wrap a piece of sandpaper or emery cloth on a small stick and rub until smooth. It is best to do this before giving the final cut which makes the ball movable. Fig. 3 shows the rattlebox part complete. The section marked (x x), which looks like a handle we will carve into a chain. Although a description of this has been already given in a previous article (see July number), we will here give a brief explanation of how it is done. Mark a bar a ¼ of an inch wide on the center of all sides (running with the grain), from the finished part to a point 3 inches away from the other end. Cut away the portions outside the bars, thus leaving the handle an side the bars, thus leaving the handle an elongated cross, except the unmarked part, which is to be a hand-hold. Divide the cross arms into links of uniform size overlapping each other halfway. Fig. 4 clearly illustrates the chain-making process. Now to finish the 3-inch section left for a handle. It should bulge out in the center, and at the extreme ends there should be small bulbs like those on the ends of clothespins. You can do this by cutting with a piece of broken glass. Scrape in short, jerky motions in the places you wish to reduce and keep turning the stick so as to get it regular. Finish with sandpaper. If you wish to add to its beauty rub in a little linseed oil. After drying, leavir handle an

خنة

bronze or gilt may be applied. Fig. 5 shows the rattlebox complete. Don't glance over this article and hastily infer that the de-sign is complicated and intricate; the work is now almost done for you, and any boy who understands what he reads should be

able to do it. Note that all the lines are either straight or curved. No artistic ability is required; simply good old-fashioned

#### The Obedience of Danny Dale

(Continued from page 28.)

(Continued from page 28.)

Half an hour later, as Danny's father bathed the poor, helpless hands with cold cream and mother spread strips of cotton batting and applied lime-water and oil, uncle Ben stood by looking intently at the scorched lips. He leaned forward, as Danny spoke, then lifted his head with an air of relieved suspense. "Thank God, Danny's safe. He hasn't inhaled the flames, and ve'll soon have him well."

"I'd like to know if aunt Rachel knew anything about it."

"Dear child," said his mother, as the tears ran down her cheeks, "I've been to her room. She says she has had such a quiet, restful afternoon, and she showed me the apple blossoms you had brought."

The next morning after the doctor had inspected both patients, prescribed for them and given all the comfort that promises of speedy recovery could give, the three were gathered round Danny's hed

inspected both patients, prescribed for them and given all the comfort that promises of speedy recovery could give, the three were gathered round Danny's bed. It was Danny who brought on the conversation by saying, "I forgot to tell you father, the pump is broken. I pumped as long as it held out. I had to." "Son—son—don't." It was all his father could say. "Well, I remembered that the last thing you said was, whatever I did, not to use that. I remember now, but I didn't then, that uncle Ben says, one ought always to do what they are told; but I couldn't; I wasn't the only one; there was aunt Rachel, and I couldn't let her know."

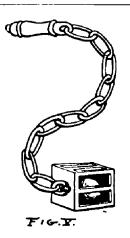

Uncle Ben was winking very fast. "Boy," he said, "I forgot to mention that sometimes the commanding officer is away. In that case the next in rank takes control. I am glad to recognize one who has the making of a general in him." Uncle Ben gave the military salute and marched out with his most soldierly air. Once outside the door he dropped the air and pulled out his handkerchief with such a flourish that the blue jay flew away with a scream. Mother was hovering about the bed. pat-

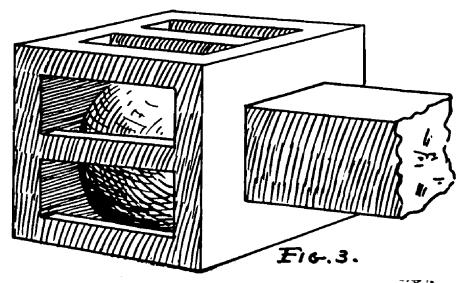

his handkerchief with such a flourish that the blue jay flew away with a scream. Mother was hovering about the bed, patting the pillow near the scorched cheeks and stroking the cover over his feet, for mothers just MUST pat their boys, and now Danny did not shrink, for every touch meant a word of loving sympathy and Danny madded it

meant a word or loving sympathy and Danny needed it.
Father had walked out. When he came in he was smiling. "I've been to the orchard," he said. "There's a handsome colt standing by Duchess this morning. I want to say it belongs to Danny."

#### The Greatest Microscope in the World

A new microscope, the most powerful in the world, is on exhibition in the German section of the Educational Building at the World's Fair. With it man can go one hundred times nearer the infinitely little than he has ever gone before. Through this instrument an entirely new field has been opened to scientific investigation. With it even metals, which are commonly thought of as absolutely devoid of all life, are shown to be as truly living as any form of animate matter. Great discoveries in germs are looked for.

# Boys, You Can Earn

The American Boy is an illustrated monthly paper of 32 pages. Its subscription price is \$1.00 a year, payable in advance. Foreign subscriptions, \$1.50. New Subscriptions can commence at any

time during the year. Payment for The American Boy when sent by mail, should be made in a Post-office Money-Order, Bank Check, or Draft, Express Money-Order, or Registered Letters tered Letter.

Silver sent through the mail is at send-

Expiration. The date opposite your name on your paper or wrapper shows to what time your subscription is paid.

what time your subscription is paid.

Important—All subscriptions are discontinued as they expire. Renewal slips are inserted in the last number to which the subscriber is entitled, calling attention to the fact that his subscription has expired. Renewals should be prompt so that no numbers may be missed. Subscribers can, by watching the expiration date on their address label, renew early and thus be sure of getting all the numbers as issued.

Letters should he addressed and drafts

Letters should be addressed and drafts made payable to The Sprague Publishing Co., Majestic Building, Detroit, Mich.

WILLIAM C. SPRAGUE, GRIPPITH OGDEN ELLIS. Vice-President and Ass't Editor. Secretary and Treasurer J. COTNER, Ja.,

#### Our Christmas Number

Boys and their friends will be delighted with the Christmas number of THE AM-ERICAN BOY. It is too early yet for us to enumerate all of the good things it will contain. Here are a few of them: An illustrated article on skating by George D. Phillips, winner of twenty-two American championships; an interesting article, fully illustrated, entitled "What a Boy Can Do

and his mind with profit.

Perhaps the chief item of interest in that number will be the first few chapters of Kirk Munroe's new story, "For the Mikado, or a Japanese Middy in Action." Our readers will remember that about a year ago Mr. Munroe made a trip around the world, under a contract with THE AMERICAN BOY to furnish two continued stories, material for which he was to obtain on his trip; he was to receive a thousand dollars each for the two stories. One of these has appeared and our boys were delighted with "The Blue Dragon." The second will begin, as stated, in our Christmas number and, as all eyes are now turned to Japan, that interesting little country that is giving Russia so much trouble, this new story surely ought to be a popular one, and we know it will be.

A story by Clarence Hawkes, author of the country in the content of the content of the country of the country in the country that is giving Russia so much trouble, this new story surely ought to be a popular one, and we know it will be.

a popular one, and we know it will be.
A story by Clarence Hawkes, author of
"The Little Foresters," in which a boy, a
buildog, a shotgun and a wildcat are the
princinal features, will appear in our
Christmas number. Mr. Hawkes is thirtyfive years of age, a resident of Western
Massachusetts, and a fine writer on nature,
and particularly animal nature. No reader
would suspect that Mr. Hawkes is blind. would suspect that Mr. Hawkes is blind,

so well does he reproduce in words the charms of nature. He was deprived of his sight some years ago through the accidental discharge of a gun in the hands of a companion. Four years before this accident he broke his ankle and this resulted in the amputation of a limb. The author's success has been obtained in spite of these tremendous odds against him.

#### Prize Photographs

The first prize awarded in the September contest belongs to Mrs. E. E. Trumbull. Plattsburg, N. Y., for the picture reproduced on this page. The second prize is awarded to Roman B. Hammes, Sheboygan, Wis., for "An interesting game," representing two men playing cards at a table. The latter we do not reproduce.

THE YOUTH'S COMPANION :: :: BOSTON, MASS.

ple, as a matter of habit, still buy soda crackers in paper bags, which in their way are as old-fashioned as the crothes of our ancestors.

Progressive people—thinking people—have with their manner of dress, changed their methods of living. Instead of buying food in the open, they prefer that which has been protected from dust and other things neither pleasant to the palate nor wholesome for the body.

Thus they buy **Uneeda Biscuit**, the finest soda cracker the world has ever known, in an air tight, moisture proof package, which insures beyond question the freshness and goodness of the contents—the price being only 5%.

# Skree Grand Prizes

and other medals were awarded the Butterick Fashion Exhibit at the St. Louis World's Fair.

The feature of the Butterick Exhibit which won the Grand Prize at the St. Louis World's Fair was a series of eleven costumes, showing the styles in woman's dress during the past century—ten years apart. These have been charmingly drawn by Anna Burnham Westermann, and reproduced with tint in the form of an art panel, nearly three feet long. It is well worth framing to adorn the walls of Milady's boudoir, parlor or den, and will be mailed, rolled without creasing, on receipt of four cents, to cover postage, etc. Small outline drawings of these figures are shown in this advertisement—they give but a hint of the charm of the original drawings as shown on the panel itself.

THE DELINEATOR stands for the highest degree of excellence in the portrayal of fashions for the women of the civilized world. This same superiority is shown in its treatment of every department of home life.

Ile Christmas Delineator

is the best number we have ever issued—we think—and more than ever proves The Delineator to be "the best of all the magazines published for Woman."

The Love Songs from the Wagner Operas have, for the first time, been worthily put into English. Richard Le Gallienne has translated them with a charm that will make them endeared forever. The accompanying decorations in color, by J. C. Leyendecker, are superb, and well worthy of this master feature.

Other contributors to this number are: Robert Grant, F. Hopkinson Smith, Alice Brown, Elmore Elliott Peake, Mary Stewart Cutting, L. Frank Baum, the author of "The Wizard of Oz," etc., Julia Magruder, Albert Bigelow Paine, Grace Mac-Gowan Cooke, Gustav Kobbé, Lillie Hamilton French. Dr. Grace Peckham Murray, Florence Earle Coates, Aloysius Coll, Carolyn Wells, Jennie Pendicton Ewing. This issue contains superb illustrations in color

and in black and white, by J. C. Leyendecker, Martin Justice, L. D'Emo, Paul J. Meylan, S. Werner, Christine S. Bredin, Herbert Paus, Harry Stacey Benton, F. Richardson, R. Emmett Owen and Harry A. Linnell.

# Fashion Plates in Colors

The midwinter fashions are shown in profusion in full color and in black and white. Better this month than ever—as we promised they would be. Getting nearer to perfection with each issue—the styles shown this month are simply temptations—the best way to overcome them is to yield to them.

Number 2

THE snow had been falling fitfully for over two weeks, and with the aid of the wind had piled itself into large, white drifts which soon made the roads impassable. On the day before Christmas the storm developed into a blizzard. The air was alive with myriads of white flakes which the wind tossed into one's face with such force that he was unable to see a rod ahead. It was unsafe for the farmer to go even to his barn.

On this particular day, two small boys looked sadly from the window of a farm house in North Dakota. Mother had not been able to do her usual Christmas shopping on account of the storm. "We'll have our Christmas later," she said to the boys. "You can hang up your stockings on New Year's eve."

"We don't want to," grumbled Jack. "No one ever does it then."

"Don't they?" said a new voice. "That's all you know about it. When I was a lad in Canada, we never hung up our stockings on Christmas eve. We always waited till New Year's.'

"Did you, truly, grandpa?" questioned Jack. "Tell us about it."

"I lived in a village near Montreal where every one spoke French. On Christmas we went to church, which was decorated with evergreens and flowers and fairly ablaze with candles, while the altar was beautifully ornamented with heavy, red satin, overlaid with lace. At midnight the bells chimed, the organ pealed forth its richest tones, and the choir sang the 'Gloria,' while the sacristan brought in what represented a manger filled with hay upon which a small image of the Christ Child lay. Then a chorus of girls sang "L'enfant Jésus est né" (The Christ Child is born). Fifty years ago tonight I sat in that church, and heard amid all the other voices that of a little girl. It was so sweet that it went straight to my boyish heart." "Who was she?" questioned Dick.

"She was the daughter of the wealthiest man in the village, a pretty little maiden with dark, flashing eyes. Something happened that year that made me remember her."

What was it?" asked both boys in a breath. "I was the oldest boy in the family," began grandpa, meditatively. "Father died the winter I was fourteen. There were five of us, and we had a hard time to make both ends meet. To help a little, I did the chores at the large house across the way where Marie lived. Her brother Pierre generally helped me. We were classmates and the best of friends. Pierre's father was a stern, reserved man, with apparently little love for any one but his two motherless children, who were devotedly attached to each other.

"That year Father LaNuite offered a prize of thirty dollars to the one who wrote the best essay on the work of the Jesuit missionaries in America. It was to be given just before school closed for the holfdays. Pierre and I easily excelled in this line of work, so the honor was sure to come to one of us, and Pierre's father had promised him a course in the University at Montreal if he should gain the honor. When I told mother about it, she pushed back my hair from my forehead and left a kiss there as she said sadly, 'I can't do that for you Louis, but I shall always be proud to know that you succeed in whatever you undertake; win it if you can.' For her sake, I determined to try; so I spent every spare moment in Father LaNuite's library poring over his numerous books on the Jesuits. Finally I finished the first draft. It was written hurriedly, but several days remained during which I could revise and polish it.

'One afternoon I walked home with Pierre, and stopped as usual to do the chores. For some reason (I've forgotten what) I went into the house with him. His father was sitting in the library, writing. Marie was there, too, busily sewing.

"'How are you getting along with your essay,

Louis?" he asked, as I entered. "'Very well, sir. I have already written it,' I an-

swered as I showed the roll of paper in my hand. "'Good!' he replied. 'Let my boy beat you if he can. I want to know what kind of a student he is. He shall not go to college unless he deserves it. You had better hasten with your work, for it looks as if it might snow."

"So we both passed from the library into the dining-room, where I left my books; then we hurried

"'Louis,' said Pierre, 'I wish Father LaNuite had never thought of giving us that prize. I like you better than I do any fellow in St. Johns. Let's promise that we'll be just as good friends no matter which one gets it.'

"'Of course we shall,' I answered.

"'Shake hands,' he continued. Then, as both took off our mittens and let our cold, red hands touch each other, he said solemnly, 'That makes it certain sure, Louis. We'll always be friends just the same, no matter what happens.'

'The wind was rising, and the snow beginning to fall, but we had finished our work, so I hurried into the house for my books, and then ran home.

"'It's all done, mother,' I shouted, as I held up the rell of paper in triumph.

"'How glad I am' she answered. 'Come in and sit in the rocking chair near the fire while you read

"With a long drawn breath of happiness I sat near the cheerful fire and unrolled the paper. I had thirteen closely written sheets. I read the introduction in loud tones, with as important an air as if I were Father LaNuite himself.

"'That's fine!' said mother.

"THAT MAKES IT CERTAIN SURE, LOUIS"

"'The rest is just as good,' I said proudly, as I turned to the next page. Imagine my dismay to find that it, and all the rest of the roll, was nothing but blank paper.

"'Whew' ejaculated Dick. "That's because you had thirteen pages—an unlucky number.'

'You must have made a mistake, and left it at

the schoolhouse,' suggested Jack. "'That's what mother thought. She comforted me by saying that I had mixed the papers in some way, and taken the wrong ones. I tried to think so, too, but I lay awake nearly all night wondering what I would do if I did not find it in the morning. I was at school as soon as the building was open, and with trembling fingers I seized a roll of papers from my desk-they were hisnk, too."

"'By crackv! I bet Pierre took it.' said Dick, excitedly, 'and that's why he talked about being friends no matter what happened.'

At first I thought so too, but how could be? He sat in one end of the schoolroom, and I in the other. We had been together from the moment we left

school, until I picked up my books from the table to go home. It seemed very mysterious. At length we concluded that I must have thrown it away with a pile of waste paper that I had collected that evening from my desk.

I was so disheartened that I never would have undertaken to write it again, had not mother's words sounded constantly in my ears, 'I shall always be proud to have you succeed in whatever you undertake.' To please her, I began the task anew. I remembered more of it than I thought I could, and at the last moment I had it ready to hand in; but it was not nearly so good as the first copy. All the village was there to see the prize awarded. How my heart beat! I can feel it rise in my throat now as it did that day when the master arose to speak. How well I remember his words! 'After a careful and critical examination, the judges have been un able to decide between two essays, one written by Louis Burgois and the other by Pierre DuPoint. The prize of thirty dollars will therefore be divided equally between them."

'Good for you, grandpa!" shouted Dick. old Pierre couldn't beat you anyway."

"Don't talk against Pierre," said grandpa.

never had a better friend. We both were glad to have it settled as it was.

'As I said before, in Canada we spend Christmas quietly at home, and at church. We hang up our stockings on New Year's eve. Fifteen dollars is a pretty large sum of money, and many a useful gift I purchased with it for mother and the children. With happy hearts we examined our stocking next morning and wished each other 'une bonne année (a happy new year).

When I got up to fix the fire, I noticed something on the floor that looked like a piece of white paper. On picking it up, I found it to be an envelope which had been thrust beneath the door. It was addressed to me. In it was fifteen dollars. None of us could imagine where it came from, so mother said that I should lay it aside until I could find out something definite in regard to it.

"In Canada, every one unites to make New Year's a grand holiday. The men make calls, while the women remain at home to receive and entertain them. All past wrongs are supposed to be forgiven; we are to begin the year with a spirit of good will toward every one.

"On this particular New Year I was to make my first calls, so I hurried over to Pierre's to do the morning chores. I was cutting some wood in the shed, when I heard a merry, girlish voice say 'Good morning. A happy New Year, Louis.'

"I looked up. There stood Marie with a heavy

gray shawl about her shoulders.

"'Did you get the fifteen dollars?' she continued eagerly, before I could even wish her a happy New Year.

"'Yes, I got fifteen dollars among my presents,' I said. 'What do you know about it?'

"'Why! I gave it to you,' she answered.

"'You gave it to me!' I repeated, too surprised to say anything more.

'Yes, it is the rest of the prize money.'

"I was becoming more amazed at every word she "'What do you mean?' I questioned. 'The prize

money! It was divided equally between Pierre and "'I know it was,' she replied. 'That's why I gave

you the fifteen dollars. I took your essay the night you left it on the dining-room table, and put the blank paper in its stead. I left the first page so that you would not notice it, should you chance to unroll the paper.'

"Her careless unconcern angered me. 'Marie.' 1 said, roughly, 'I shall tell your father. You stole my essay and could be sent to jail for it. Do you know that?'

"'I'm not afraid of a jail,' she replied calmly. 'You needn't see father about it. I shall tell him myself. if I have done wrong. I'm not afraid.'

"She was so pretty and innocent in her defiance. Yet I was still angry and grieved. 'I thought you were my friend, Marie, and here you tried to make me fail, and disgrace me before mother and Father

LaNuite and everybody.' "As I spoke, she looked at me with a frightened perplexed expression on her face, as if she failed to comprehend my meaning. Then she put her small hand on my arm, and said gently: 'I am your friend, and like you better than anyone, but father and brother. I thought that you didn't care for anything but the money, and I gave that to you. I had to beg some of it from father, and take every penny from my bank besides. I did it for Pierre. Father would never have let him go to college, if he had not won the prize, and he wanted to go so bad."

'But I turned to go. 'I don't want your money.' I said. 'I'm no beggar. I won't take money from a girl, if I am poor. I'll go home now and get it. I wouldn't touch a penny of it, if I were starving.'

"'I'm sorry now I did it.' she replied, with tears You must forgive me, Louis, because it in her eyes.

# THE PATHWAY TO SUCCESS

EX-SENATOR T. W. PALMER'S MESSAGE TO THE BOYS OF AMERICA

-AN INTERVIEW WITH DETROIT'S GRAND OLD MAN

By HUGO ERICHSEN

S I made my way toward Walnut Lane House, ex-Senator T. W. Palmer's beautiful country residence near Detroit, through one of the city's parks that bears the Senator's name, and up the footpath that lets you into the grounds, by the back door, so to speak, my thoughts dwelt upon the remarkable career of the man I was going to interview. Thrown upon his own resources early in life, he experienced all the bitter pangs and cruel hardships of poverty. And yet, rung by rung, he had mounted the ladder of success—occasionally slipping back, as when a fire wiped out ail of his possessions and rendered him penniless; but still undaunted-until he had the honor of representing Michigan, his native state. in the United States Senate as the successor of Thos. W. Ferry, in 1883, and then at the expiration of his term in 1889 was appointed by President Harrison envoy extraordinary and minister plenipotentiary to the Court of Spain. But the pomp and splendor of the Madrid court did not appeal to his democratic simplicity, and a year later he resigned to accept the presidency of the World's Columbian Commission, which gave us that splendid world's fair at Chicago.

Walnut Lane House, the Senator's residence, with its large verandah running across its entire front, impresses one at once with a sense of comfort.

The housekeeper, coming to the door, delivered me over to the Senator, who courteously conducted me to the library, where he settled down in a large armchair, while I took my place at a high desk, prepared to fire a volley of questions. From the Senator's manner he might have been taken for a man of fifty instead of nearly seventy five. Of medium height and a portly form, he yet does not lack energy, but shows the same indomitable force of character that has always distinguished him.

He had had no intimation of the exact object of my questioning, yet the replies were given with the rapidity and precision of musket-shots.

At first our conversation drifted far away from the object of my visit. I told him I had just returned from the St. Louis exposition and gave him a gist of my impressions.

"Yes," said he, "from all that I hear and read about it, I believe you are right. It may be bigger than the Chicago fair, but it is impossible to surpass the latter in artistic excellence. At Chicago, the architects and artists worked together in harmony; at St. Louis, I understand, they did not, and the result must be apparent."

He spoke of the dedication of Palmer Park to Detroit, in 1894, and mentioned the fact that it had been occasioned by his desire to preserve the beautiful trees with which it abounds.

"I couldn't bear the thought of some one cutting down those magnificent trees for lumber or firewood," he declared, "and that was the reason I gave the land to the people of Detroit. Since then I have made some additions, so that now the park comprises about one hundred and sixty acres."

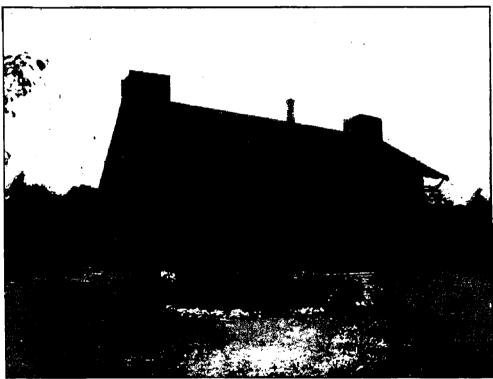

Formerly the old log cabin, which stands in the park and is open to visitors, served as the Senator's summer home, and some of the happiest days of his life were spent here. The old Spanish bell in the rear of this dwelling and the picturesque lighthouse in the miniature lake are great centers

HON. THOMAS W. PALMER OF DETROIT

World's Kale

THE LOG CABIN IN PALMER PARK, DETROIT

of attraction to the multitudes that visit Palmer Park every year.

At length the current of our conversation took the course into which I had endeavored to direct it from the first.

After reflecting for some time, the Senator answered the question whether boys had a better chance to succeed fifty years ago than at the present time, as follows: "The chances at that time were better for immediate success. Property distinctions were not as well defined as they are now, and the country was in a process of evolution. But there are plenty of opportunities for boys to-day, if they are only earnest and intense. And when a boy wins out nowadays, the rewards are much greater. With the accumulation of capital in this country, good, honest, capable men are in demand all the time."

According to the Senator, it is a positive detriment to be born with a golden spoon in one's mouth. "The greatest drawback to young men," he declared, "is to live in the shadow of an inheritance. Unless a boy is exceptionally ambitious, there is nothing like necessity to spur him on.

"I have often noticed," he continued, "that a boy who is self-denying gets the best positions. He is willing to perform disagreeable tasks and does not shirk hard work when it comes his way. I do not want to be didactic, but the importance of acquiring good habits cannot be impressed too strongly. Boys should not loll around and loaf at corners, but be earnest and direct. Everyone notices and remarks a boy who is intent upon what he is doing."

The Senator's views on the question of education are interesting and somewhat at variance with popular opinion. He holds that the promiscuous sending of boys to college is bad. "A boy should be adapted to the higher education and have a hunger for it," he remarked. "When it comes down to amassing wealth, a classical education is a positive detriment, because it takes away the appetite for accumulation.

Educated men do not regard the possession of wealth as the be-all and end-all of existence. In other words, while they may not under-estimate its possession, they do not over-estimate it. I think men who look upon the attainment of wealth as the aim of life are injured by going through college. I knew many men, when I was at college, who would have been better off, as far as worldly success is concerned, if they had never entered it. As a rule they never applied themselves to their studies, and whenever they did they were stuffed with a lot of knowledge they could never utilize—that is to say, automatically educated. Every boy is not capable of digesting the benefits of a college training. Some boys are very much like a hickory stick; you can give it a beautiful polish, but it weakens the stick.

"When I was at college, there were only three avenues open to educated men—law, medicine and the pulpit. Now all that is changed. The tendency of our times, speaking with especial reference to this country, is along the line of scientific experiment. Therefore, if a boy doesn't learn a trade—which, I think it's well for every boy to do—I would strongly advise him to take some scientific course. It would not preclude him from going at something else, later on, if he were so inclined, and would give him some positive practical knowledge. The aim of education, it seems to me should be to make a man wise, not learned. Men of good classical education, who lack common sense, often accomplish nothing. Common sense is the basis of all success.

"I believe boys should be better prepared for the duties of citizenship than they are at present. The study of Civics should most certainly form part of every school course. When I was at college, political studies were neglected, and it is a notorious fact that half the men who go to Congress have not read the Constitution before they are nominated.

"American boys cannot read too much about the great men of the past. They should read their works again and again until they become thoroughly imbued with their spirit. The perusal of biographies

would benefit lovs most, as we can always profit by the lives of others, such as the lives of Franklin, Washington, Grant and Lincoln—never forgetting Plutarch's lives.

"Another thing it would be well to introduce into the curriculum of all schools is military training." he concluded. "It teaches boys the care of their persons, exactitude and promptness. A good many boys are woefully deficient in discipline, punctuality and neatness. One hour a day in high school and college devoted to drill would do them good. It would not do to make these exercises irksome to them; they should be as interesting as possible, so that the boys would desire them."

George William Curtis in his "Prue and I" says: "When, in the evening, my children are in bed I take up the books they have been reading, for I like to know what interests them."

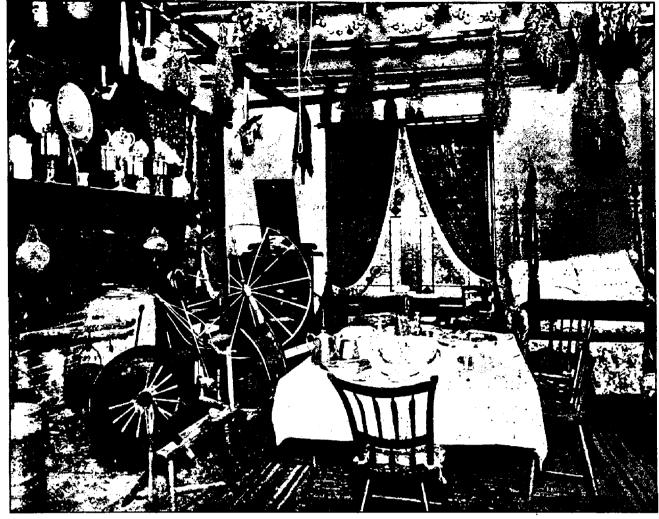

Just before his death, William Cary, the great shoemaker, missionary and noted linguist, said about his biographer: "If he gives me credit for being a plodder, he will do me justice. Anything beyond this will be too much. I can plod. To this I owe everything."—"Success."

# KERSEY

THERE was a haif frown on the round, rosy face. The fair, silky curls that usually hung so smooth and shiny were sadly tangled. Restless little fingers had been busy with them, as Kersey thought and thought how he might manage it. Every cent he earned by selling papers had to go to his mother in order to keep hunger from the door. How, then, was he to get a Christmas present for Thebah?

Poor Thebah! How pitifully she had looked at him as he stood by her chair that very morning! Then he thought of the time he had first seen her. It was late one evening when he was on his way home. He had almost stumbled over a forlorn little bundle on the steps of a poor tenement house. The bundle seemed to be crying, and Kersey stopped.

"Say, what's up? Are you hungry?"

"No, no! but I'm so afraid."

"Are you lost? 'Cause I know the streets first-rate, and can take you home."

"No, I ain't lost, but I wish I was. It's her-it's Jude."

"Who's Jude?"

"The woman what owns me." "Do you mean your mother?"

"O, no!" Here she broke into sobs again. "She died when the cold winds began to blow, and last week father sold me to Jude."

"Whew!" "And Jude says I must earn wages."

"Why, that's fun. I'm ten, and I've earned money for two years. Come, don't be a bawl-baby.'

"I ain't a bawl-baby, but I don't want to be a boy, boo-hoo!'

"My sakes! I wouldn't be a girl for pecks and pecks of money. Girls can't ever be president." "They don't want to be, and they don't want to be

dressed up like a boy, and have to hear naughty things, and be stumped to fight and-boo-hoo-'Gracious! I believe—say—you ain't, are you—

"Yes, I am, and—boo-hoo—I hate it, and I hate Jude. O dear! O dear!" What did she do that for? Come, be quiet, can't

"'Cause, newspaper folks won't hire girls. And she said I looked more like a boy than a girl, anyway.

'Tain't so, is it?" Kersey could hardly help smiling at the earnestness

of her question. "I guess you're a girl all right enough. But why don't you try something else? There are lots of places

"Oh, is that so? Can you help me? Come in and

tell Jude so, will you?" That was the beginning of their friendship, two months before. The week before Christmas Thebah had been knocked down in the street by a bicycle, and had sprained her ankle so badly that she could not walk. Before this they had planned to go around the city together Christmas eve, and look in at the churches, and the beautiful shop windows aglow with light and lovely pictures. When Kersey found that Thebah could not go, he no longer cared to. Neither expected a visit from Santa Claus. But though Kersey anticipated nothing for himself, he did want to see Thebah's look of joy and surprise when he should put some triffing trinket into her hand—a picture book or a tiny doll, perhaps. Girls were always crazy over doll babies. How Thebah had cried when Jude

of an old red handkerchief! Alas for Kersey! Christmas was here, and he had only pennies enough to buy a little popcorn and molasses. He was never sad long, so he left off tangling his hair, and with his mother's help made some very nice popcorn balls, and in the evening carried some to Thebah. She was delighted with the gift. Jude, however, was so sour and cross-though

threw into the fire her last attempt at a doll made out

#### By EVELYN M. WOOD LOVEJOY

Kersey gave her the largest ball of all—that he did not stay long. When he returned home, he found on the hook where he usually hung his cap, a handsome pair of skates.

"Hurrah for Old Santa!" he shouted. Then in an anxious tone, "Say, mother, you hain't been pinching yourself to buy me these skates, have you?"

"No, Kersey, I have not had a penny to spare, or I would gladly have bought them for you. You have earned them many times over. I don't know how I could get along without my little wage-earner.'

The boy's eyes fairly shone, but he pretended to be indifferent.

"Nonsense! It takes all I earn to feed and clothe me. But, mother, how did the skates get here?"

"Mr. Brooks, your employer, sent them, and says you are to have a whole holiday tomorrow.

"Ain't that jolly! Why, the ice on the rink is just like glass, and everybody skates free tomorrow. Hurrah for Mr. Brooks!"

The next morning Kersey was up early, and after breakfast shouldered his skates for the rink. On his way he stopped to see Thebah and tell her of his wonderful luck. He burst open the door, crying:

"Merry Christmas, Thebah! Don't you wish that lazy old ankle of yours was well?" And he swung his skates gaily above his head. He was so excited that he did not notice at first her absence from the room. In a moment he saw her chair was empty.

"Where is Thebah?" he asked, turning to Jude. "She wa'n't no good," was the gruff reply. "But where is she? Tell me quick."

"Them sprains is a long time gittin' well."

"Jude, Jude, what have you done with Thebah?"

"She was too cranky and obstreperous-like."

"Jude, you wicked woman, you have not turned her out of doors, have you?"

'You'd better not sass me, you little upstart.' "If you do not tell me quick where she is, I'll call a

policeman." "What business is it of yourn? She is in the hos-

pital, if you must know."

'Which one?'

"The Charity, of course."

Kersey was out of the house like a flash, and running with all speed back home. Surely his mother would think of some way. Just before he reached the house he met Mr. Trascott and his little son, Freddie.

'Halloo, Kersey! that's a fine pair of new skates you have. You don't wish to sell them, do you? Freddie has broken his. The shops are all closed today, and he is feeling pretty blue because he can't skate."

"I never had a pair before, sir. Besides they were a Christmas present from my employer.'

"Oh, then, I will not ask it of you. Cheer up, Freddie; the ice will be just as smooth tomorrow.

Kersey was about to offer to lend his for half a day, when he suddenly paused.

"I don't like to part with them, sir, for I think a heap of the man that gave them to me. But I may need the money. How much are they worth?

"Three dollars, I should say."

"You-you may have them, if you will let me buy them back as soon as I can."

'All right! Here's the money."

It was no easy matter to persuade his mother to let Thebah come to stay with them. He urged that she could tend the baby, and thus give her more time to sew. A kind neighbor agreed to let her sleep with her little girl. So, triumphant, he went off to the Charity with a trusty drayman, who had taken a fancy to the sturdy boy and offered to move Thebah for nothing. A policeman also went with them to arrange for the release of the little patient.

Not half so happy that night was Freddie, who had skated nearly all day and bumped his head half a dozen times, as was Kersey, when he had Thebah in his own chair at the tea table, and saw the bright light in her eyes, as she lovingly touched his hair

and exclaimed:

"Oh, Kersey, this is heaven!" Only one thing troubled him. How was he to thank Mr. Brooks for the skates after he had gone and sold them? But he was a brave little fellow, and felt that he had done right. The next morning, when he went to get his bundle of papers, he said:

"I thank you very much, Mr. Brooks, for your nice

"I suppose you had a fine time skating yesterday." "N-o-that is-I had a tiptop time-but I didn't skate."

"I hope there was nothing wrong with the skates."

"Oh, no, sir, they were beauties."

"Why do you say 'were'? You didn't lose then, did vou? "N-o, Mr. Brooks. Oh, do please forgive me.

Something happened, and-I had to sell them. But I am to buy them back just as soon as I can.'

"You are an honest lad, and I believe you. Do you know that you still have another resource?'

"A what?"

"A resource-something to fall back on. Are you very proud of those curls of yours?"

'Not now," said Kersey, blushing. "The boys call me Miss Kersey sometimes, and I wouldn't be a girl no more'n—no more'n Thebah'd be a boy.'
"Who is Thebah?"

So the story of Thebah had to be told. At its close Mr. Brooks said:

"My little girl has just had a fever, and lost all of her curls. The doctor says she must wear a wig for

TAKAHAKI OF HAKODATE.

mas too bad that "Dun Brown" should be dropped, or allowed to resign, which was the same thing, just because he had bilged an "exam" at the close of his third year. Everybody said so; that is, almost everybody, because he was such a fine fellow, in looks, in physical strength, in his disposition, which was cheerful, though he was careless almost to recklessness, and in most of the other qualities that go to the making of a popular young naval officer. At the same time Dunster Cassimir Brownleigh was a curious chap, and did many things not readily to be accounted for by outsiders.

Such a character always makes devoted friends and bitter enemies; and Dunster was no exception to this rule. There was Lawson, for instance, "Pink" Lawson, as he was called, who so admired and loved Dunster that he was perfectly willing to follow his lead in everything. On the other hand, Ethelbert Quackenbush, prize mathematician of the class, disliked the young athlete so intensely, that he would not speak to him if he could help it. At the same time he could not have given a reason for this dislike, for he would not acknowledge, even to himself, that he was bitterly jealous of his more brilliant classmate, and gladly would have sacrificed all his own scholarly honors for even a small portion of the other's social success.

Chief of Dunster's innumerable friends was his roommate and chum, Takahaki Matsu, who, as his name indicates, was a Japanese. To many persons the intimacy existing between these two was unaccountable; for not only was Takahaki an Asiatic, but he was not of noble family, nor were his people particularly wealthy; his father being merely a well-to-do merchant of Hakodate, the metropolis of that great northern island called Yezo in the geographies, but officially known in Japan as the Hok-

As Hakodate is a seaport and greatest center of the Japanese fishing industry, Takahaki had been familiar with boats ever since he had known anything at all, and during his boyhood had spent most of his spare time in sailing on Hakodate Bay or battling with the fierce winds and strong currents of Tsugari Strait outside the head. He also knew much of his native island, having, in one memorable summer, cruised entirely around it. During this cruise he had hunted bear and sea otter with the hairy Ainu, the aboriginal inhabitants of Japan, who once occupied all of its innumerable islands, but now, reduced to a feeble remnant, are only found in the far north.

In spite of being such a traveler, Takahaki never had been away from the Hokkaido, not even to the still larger island of Hondo, that begins just across Tsugari Strait and extending a thousand miles to the southward and westward, forms the mainland

of Dai Nippon, the Japanese empire. That Takahaki had not traveled was not for lack of the desire to do so, for he ardently longed to visit the famous cities of his widespread island country. He dreamed of Tokio, the capital, of Yokohama, the city of foreigners, and of sacred Nikko. He wished that he might know Kioto, Osaka and Kobe, Hiroshima and Nagasaki. He wanted to gaze on the snow-capped crown of Fuji, the best loved mountain of all Japan: and more than all did he wish that he might be allowed a glimpse of his revered Mikado. He wanted to see these things before he became twenty, after which he would not have much chance to travel, except as he might be ordered; for at that age every Japanese lad, rich or poor, noble or peasant, must enter either the army or the navy and serve for three years with the colors, after which, for five years more, he is attached to the reserves, and is liable to be called upon for active duty at any moment. Already had the young Takahaki chosen his branch of service, and his application for assignment to the navy had been on tenth year

From that time on, the boy had studied and worked with but a single object in view. Not only did he want to serve in the splendid new navy that Japan was making every effort to set afloat and equip; but he wanted, sometime, to command a ship that should strike a fierce, telling blow for his Mikado and against the hated Russians.

Of course every schoolboy in Japan knows how in 1895, or, as the Japanese say, in the twenty-seventh year of the Meiji, the Czar of Russia robbed their Mikado of the finest fruits of his great victory over China, and how, ever since that time, the same terrible Russians had been creeping closer and closer to Japan with the hope that some day they might seize and strangle her, wiping out her national life and making her but a province of the vast, brutal empire that seeks to dominate the world. This is taught in all Japanese schools, and from the very first day of his school life every Japanese boy is given a military drill that helps to fit him for the time when he shall face the Cos-

So the young Takahaki drilled and studied diligently, training both mind and body to such purpose that finally, when he was seventeen years of age, there came to him a great honor. The Mikado had decided to send abroad for study four lads who should be chosen, by rigid examination, from the schoolboys of all Japan. Accordingly word was sent out from the palace at Tokio, to every corner of the empire, and two months were allowed in which to assemble, at the capital, one thousand young scholars between fifteen and eighteen years of age. From these, four would be chosen to represent the Mikado in the leading naval schools of America, England, By KIRK MUNROE

France, and Germany; while the ninety-six ranking next highest would be admitted to the Japanese naval academy at Yetajima on the beautiful Inland Sea. According to the apportionment, but five candidates from the Hokkaido would be permitted to enter the final examinations at Tokio, and only two of these might go from Hakodate; the other chances being allotted to Saporo, Otaru, and Mororan.

When this announcement was made in Takahaki's school, and the scholars were told that every boy of the required age, who chose to do so, might participate in the preliminary examinations, there was great excitement. Those between fifteen and eighteen immediately became objects of envy to all who were younger or older; and at once, as a class set apart, they devoted themselves to a course of study that hardly permitted them to sleep or eat. Then followed two weeks of a weeding-out process that lessened the ranks of eager competitors by hundreds, by scores, by tens, and by individuals, until finally, only two, exhausted, but triumphant, boys were left. They were our young friend Takahaki Matsu and another.

For the time being these lads were the heroes of the city, and on the day of their departure for Tokio it seemed as though the entire population was afloat, in launches or sampans, to see them off. It was like starting for the front in war time, and Takahaki, filled with the spirit of Japanese heroes of all ages, registered a mental vow that in case of failure at Tokio, he never would come back alive.

On the fine steamer Mutsu Maru they crossed the broad strait separating Japan's two largest islands, and that same afternoon reached Aomori, the most northerly city of Hondo, where they were to take train for a twenty-four hour ride to Tokio.

It was a wonderful journey to those untraveled boys; that steady, breathless rush down through the heart of old Japan, past busy cities and innumerable pretty villages, within sight of lofty mountains that gave birth to swift-flowing rivers, past ancient castles, temples, and sacred groves; through endless miles of rice fields, tea gardens and orchards of stunted mulberry trees from which millions of silkworms would be fed. It filled Takahaki with exaltation to realize that all these things belonged to his beautiful, splendid, native land. Also to remember that, when he should reach Tokio, an equal extent of territory, richer, fairer, and even more populous, still

#### MESSAGES OF THE GOVERNORS TO AMERICAN BOYS

No. 4

GOVERNOR MONTAGUE, OF VIRGINIA

Commenteralty of Birginia \*\*\*\*\*\*

July 1, 1908.

The American Boy most needs education, honesty and courage,

because of all boys he must encounter the greatest opportunity, responsible-

lay beyond, caused him to wonder if, in all the world, there could be another country so grand and powerful as the one that he proudly called his own.

At Tokio, which has a population of 2,000,000 souls, and which Takahaki believed must be the largest city in the world, our young travelers were met by an official who conducted them to the great military barracks where they were to be lodged during their second series of examinations. These examinations extended over a week, and were conducted by army surgeons, professors and military officials, all of whom put the lads to every test, physical and mental, that their ingenuity could devise. Day by day Takahaki's hopes sank lower and lower; for never had he imagined that even Japan could produce lads so bright and so full of knowledge as those with whom he now found himself in competition. Nor had he imagined the severity of the ordeal he now was called upon to undergo. The examinations at Hakodate, that he had regarded as so stringent, and which he had passed with such pride, seemed mere child's play when compared with those of Tokio. Long before they were concluded he gave up all hope of passing them, and only wondered by what means he should keep his vow of never returning alive to Hakodate in case of failure. He grew thin, haggard and melancholy, as the day of announcement that was to cast nine hundred of the candidates into the depths of despair and raise four of them to heights of heavenly bliss, drew near.

Finally word was passed that the list of successful candidates was posted; and, trembling with apprehension until he hardly could walk, Takahaki went slowly forth to learn his fate. Other lads rushed past him in eager haste to know the result, but he could not hurry; the affair was of such vital importance to him that if his name appeared on the list, even at its very bottom, as number 100, a life of splendid effort, devoted to the service of his Mikado, instantly would open before him. If, on the other hand, he even were 101 on the list he might as well have no number at all, for no longer would the world hold anything worth living for. So Takahaki moved forward slowly and irresolutely, the very last of all the candidates to approach the dreaded kamban on which the list was bulletined. As he came within sight of it, he halted and stood irresolute, eagerly listening, but knowing all the while that his ears were deceiving him.

A frantic, shouting, gesticulating throng, gathered close about the bulletin board, were uttering a single name, and it was his. At first he could not believe it, but, again and again sounded the words: "Takahaki dai ichi!" (Takahaki is first). Then they saw him, and a dozen or more ran towards him, shouting as they advanced: "Takahaki 'dai ichi! Dai ichi!" Of course it was incredible and impossible. They had made a mistake, or he did not understand aright; but the mere hope was so overpowering that, when they reached him he lay on the ground in a dead faint caused by the suddenness and strength of joyful reaction.

When a little later, the lad recovered consciousness, he found himself lying on a couch of quilts in the room that he had occupied ever since reaching Tokio; but the wall in front of him had a new decoration, upon which his eyes fell the moment they opened. It was a kakemono or scroll, and on it, in a single line from top to bottom, appeared the magic "Takahaki San, dai ichi." (Mr. Takahaki is first). Never before had he seen his name with that honorable prefix. Never had he been addressed as "Sir." And "Dai ichi!" It must then be true, that he, the modest lad from faraway Hakodate, whose only ambition in life had been, and still was, to serve his Mikado in any capacity, no matter how humble, now was hailed as the foremost scholar of his years, and the most promising boy of all Japan.

Under the stimulus of this great joy it did not take the happy lad long to recover strength sufficient to sit up and receive the congratulations that already were pouring in from every side. Not only did with him for ho had striven une hasten to convey assurances of their happiness at his success, but many officials came on the same pleasant errand. One of these even brought a letter written by the Mikado himself, offering congratulations, and complimenting the awe-stricken lad upon his success.

Telegrams poured in from all parts of the Empire, but especially from the Hokkaido, and from his own people the townsfolk of Hakodate, who simply had gone wild over the honors won by their boy. They could not say their boys, for the other Hakodate lad had failed to win a place; but the glory acquired by Takahaki was sufficient to fill the far northern city with such rejoicings as, in all its history it never before had known.

#### CHAPTER II. A CHEEKY PLEB.

So it happened that Takahaki, of Japan came to America and entered the Naval Academy at Annapolis. Having passed the Tokio examinations he was required to change his schoolboy dress of kimono and geta or wooden-soled sandals, for the tight jacket, long trousers, distressingly uncomfortable leather boots and smart cap adorned with the Im perial chrysanthemum in silver, of a Japanese naval cadet. Then as number one of all the candidates. he was given his choice of the country in which to receive his naval education, and promptly chose America; while the three having the next highest rank were appointed to the three leading countries of Europe, according to their preferences. Takahaki and one other, immediately began to perfect their knowledge of the English language, the lad bound for France took up French, and the fourth boy found himself involved in a puzzled consideration of German verbs.

During the time that remained before they sailed for their several destinations, these four were quartered at the Yokosuka naval station, where they were treated with distinguished consideration. Here they made a practical study of machinery on board such ships as were in port, and at all odd moments they were sedulously drilled in the tremendous physical exercises peculiar to Japan, of Jiu-jitsu, Ken-jitsu. and Botori.

Finally, after a few weeks of this pleasant lifone of them sailed away on a North German Lloyd steamer for Hamburg; another embarked on a F. and O. for London, via Brindist; a third was transferred to the French liner Yarra, of the Messagerie Maritimes, bound for Marseilles, and the young American, as Takahaki was called, found himself on board the superb Korea, of the Pacific Mail, steaming out of Yeddo Bay, and headed towards that distant land to which, more than to any other, Japan owes her present proud position among the nations of the world.

At San Francisco, upon the completion of his five thousand mile voyage across the Pacific, our traveler was met by the Japanese consul general, who placed him on board the train for Chicago, where another consul of his own country, transferred him to a Washington sleeper. At the capital he was met by the first secretary of the Japanese legation, who personally conducted him to Annapolis. There the youthful stranger from halfway around the world, was kindly received by the superintendent of the Naval Academy, a man who had gained for himself an enviable reputation during the Spanish-American war.

Takahaki having read everything he could obtain concerning the Annapolis academy, knew all about this man and regarded him with such admiring awe that, although he knew better, he instinctively dropped to his knees on being presented, and bowed his head low in token of humblest respect. It was the homage to gods, and to human rulers of men, that as a child, he had been taught to render, and in the embarrassment of the moment it seemed to him the only thing to do. The instant the secretary and the superintendent realized what the young cadet was about, both sprang forward to raise him to his feet; the one ashamed that his countryman should exhibit this mark of Asiatic servility in democratic America, whose institutions Japan was striving to imitate, and the other decidedly embarrassed by the situation.

"My lad," he said kindly, "the very first lesson I want you to learn in this place, is that a free man should die rather than bend the knee to any mortal. save only those whom he regards as the direct representatives on earth of almighty God. It is human nature to kick the man who grovels, and to treat with respect the one who carries himself with uplifted head. Always salute a superior, and be prompt in returning the salutes of those who rank below you; but never bow down to the one, nor allow the other to degrade himself by slavish humility. Now let us find out what you know."

The boy who had ranked highest among the seventeen-year-old scholars of Japan, found no difficulty in answering the few, simple questions put to him by the superintendent, and in satisfying the latter that he was competent to hold his own among the "plebs" or members of the lowest class in the Academy. As he never would be called upon to serve in the American navy, and as his own Government already had deposited the sum of \$10,000 to cover his expenses at the academy no regular entrance examination was demanded in his case, and the few formalities attending his admission were quickly passed. Then he was introduced to Midshipman Dunster Cassimir Brownleigh, a pleb of three months' standing.

This young gentleman was the son of a wealthy mine owner in a western state, and owed his academy appointement to his father's business partner, who was a member of Congress. Both Brownleigh and his roomnate, a hot-blooded young Southerner, had chafed at the irksome regulations of the academy. and had so repeatedly defied them during their first three months of cadet life, that the latter had been allowed to resign from the service; while the former was notified that he was only permitted to remain on probation, with the prospect of dismissal at any moment. As all this had happened but a few days before Takahaki's arrival, that event found Midshipman Brownleigh a rather badly frightened young man, with a damaged reputation, and without a roommate.

When on the day of Takahaki's coming "Dun Brown" was summoned to the presence of the superintendent, he imagined that the fatal decree of banishment from the academy was about to be pronounced and he obeyed the summons with forebodings. To his amazement, the dreaded official greeted him with a smile and announced that he had decided to intrust him-Dunster Brownleigh, the black sheep of his class—with a position of responsibility.

"A young Japanese, Takahaki Matsu by name, a protege of the Mikado, just arrived in this country, has been admitted to the academy," continued the superintendent. "He will, of course, be a member of the fourth class; and as I am desirous that he begin his career under the most favorable auspices, I have assigned him to your room. Upon you, therefore, will devolve the responsibility of piloting this stranger from a strange land, amid the reefs and shoals of trouble that will beset his course. First, you will take him to the storekeeper for his outfit, then to the room he is to share with you. After that, you may devote the remainder of the day to showing him about the grounds and buildings, and introducing him to as many as possible of his classmates. Of course, while thus engaged, you will be excused from recitations and all other duties until evening study hour, by which time I trust you will

ALFRED SHRUBB, LONDON, ENGLAND The Champion Sprinter Who Put the World's Record for Two Miles at 9 Minutes, 92-5 Seconds at the Rangers' Sports in Glasgow, Scotland, Early Last Summer.

have prepared him to begin work. Now, if you will step into the next room, I will introduce you."

'Excuse me, sir," stammered Dunster, who was completely taken aback by the announcement that he had been chosen to act the part of "dry-nurse," as he mentally termed it, to a young Jap; "but does he speak any English?"

'A few words, I believe," answered the superintendent, smiling.

The next minute Dunster Brownleigh and his new roommate were, for the first time, face to face. "Happy to meet you, Mr. Takimat," said the former, extending his hand in an embarrassed fashion, to the dark complexioned, little chap, the top of

whose head barely reached to his shoulder.

"The pleasure, it is for me," replied Takahaki, courteously, and without a trace of embarrassment. at the same time saluting Dunster with a profound

A few minutes later, the secretary of legation having taken his departure, our two lads were crossing the grounds towards the storekeeper's office,

talking as they went, and "sizing" each other up. "How tall he is," thought Takahaki, "and what a fine looking fellow; I do not, however, like his uniform so well as that of my own country naval cadet."

"Do you know," remarked Dunster, "that you are the very first Jap I ever met, and-

"I beg your pardon!" interrupted Takahaki, stopping short, and drawing himself up very stiffly; "but it is that I ask of you to no more name a man of the Mikado as a 'Jan.'"

"Not call you a 'Jap,'" retorted Dunster with a puzzled air; "but you are one, aren't you? What else could I call you?'

"The men of the Mikado, in English, are 'Japanese' and one must die before he submit to be said a 'Jap.' It is to him one—oh! what can I say? It is not the compriment."

"Do you mean that it is considered an insult?" asked Dunster.

"Hei. Hei, yes, that is it! the insurt!" declared Takahaki vehemently. "It is the insurt that no man of the Mikado may endure. So I ask of you, please, if you be so kind, never more to say to me that bad word 'Jap.'"

"Of course not," replied Dunster promptly, but still puzzled by his companion's protest against a designation whose propriety he never before had heard questioned. "That is, I'll try to remember, and I promise to apologize each time that I forget and make a slip. But you mustn't take it too much to heart if some of the other fellows call you 'Jap.' Some of them may do so just to tease you, but they won't mean anything by it."

"If one time, some man say to me 'Jap' I speak to him. He excuse, I excuse. If two time. I no excuse. It is insurt, and for honor of my Mikado I must teach him some better."

"How would you do it?" asked Dunster, curiously. "Maybe perhaps I spit on him. Maybe perhaps I fight him till he make sorry. Anyway, I must teach him. He may say to me 'pig,' 'foolo,' what he like: I not care. It mean me. Takahaki; but if he say 'Jap' then he mean every Nippon man. He mean my Mikado."

"Well, from your point of view, perhaps you are right," said Dunster, "though it seems to me rather a small thing to make a fuss about, and I'm afraid you will get into lots of trouble if you insist upon trying to barry out your program."

For answer. Takahaki only smiled and began to

talk of uniforms.

During the day the young Japanese met many members of the fourth class, upon whom he produced a decidedly pleasant impression, and nearly all of whom willingly agreed to refrain from using the obnoxious title of "Jan" in their future intercourse with him. Only Ethelbert Quackenbush announced that he

considered it pretty cheeky for a slant-eyed heathen, from the other side of nowhere, to say what he should, or should not, be called, when he ought to he grateful at being received on any terms in white society.

Takahaki, who was talking with "Pink" Lawson at the moment, did not overhear this remark; but Durster Brownleigh did, and was quick to resent it.

"That'll do, Quack!" he said in a low but extremely mificant tone. "The single expression of such a significant tone. sentiment is sufficient. If I hear of your repeating it, or uttering any other derogatory of my friend from Japan. I shall take it as a personal insult, and act accordingly."

'Oh, well," sneered Quackenbush. "if you prefer that sort of company you are welcome to it for all that I care." With this he walked away, but the breach thus opened between the two who already were beginning to be regarded as representative men of their class, steadily widened from that moment.

The news that a lad from the land of the rising sun, just admitted to the Academy, had threatened to fight anyone who dared call him a "Jap," spread quickly among the cadets, and gave rise to much heated discussion in the several classes. Would he Could he fight? Of course he could and would, for the Japanese notoriously are a fighting people. Nonsense! What can a little, insignificant chap like him, always bowing and smiling. like a French dancing-master know of nghting? Japs are not notoriously a fighting people. They notoriously are polite, and devoted to the raising of flowers. Besides, they are rice-eaters! Didn't they whip China, a nation ten times their size? Bah! Another rice-eating people. Besides, Japan's so-called war with China was only a fight with the single province of Pechili. So that proved nothing. As for standing up against a white man, no little Jap living, no, nor any four of them for that matter, could do it for a minute.

Thus the discussion raged for several days; and then occurred the amazing incident that settled it forever, so far as the existing corps of cadets in the U. S. Naval Academy at Annapolis was concerned.

(To be Continuea.)

#### KERSEY

(Continued from page 37.)

a while. I'll give you ten dollars for your curls.

They are just the color of Lottie's.'

The offer almost took away Kersey's breath, but he promised to ask his mother about it. His mother was a sensible woman and knew that Kersey would be happier without his curls, so she gave her consent, only stipulating that she must have one as a keepsake. He felt much more manly after he had had his hair cropped close like the other boys. He confided this to Thebah that night, coupled with some very sage advice. He had already bought back his

"We must help mother all we can, Thebah, and not waste a penny. You see, my skates are my last resource now.'

'What is resource, Kersey?"

"Why, something to fall back on."

"That's so. Most everybody does fall back on 'em." "You little goose! That isn't it. It's something to get money with. I won't use my skates till you're well. I've rented 'em out for two weeks. You'll be well then, won't you?'

The tone was so persuasive that Thebah felt in duty

bound to get well in that time.

'Yes, I promise good and true. I never should have got well at the Charity. They were awfully good to me, too, but-I wanted you, Kersey. Oh, how I love

Happy childhood! The eyelids of both had been long closed in slumber, when the patient mother carefully wrapped up and laid away the single curl. Then she drew a small miniature from her bosom and kissed it passionately.

"Just like his father," she murmured.

#### FATHER LANUITE'S PRIZE

(Continued from page 85.)

is New Year's morn, and Father LaNuite says we must forgive everyone on this happy day.

"I was about to answer her angrily again, but she had such a pleading, wistful look in her eyes that I could not resist her appeal 'Yes, Marie,' I said at length, 'I'll forgive you, but you mustn't tell anybody about it. It would do no good now, and would only make Pierre feel sorry. It shall be your secret, and nilne."

"'Then you must keep the money,' she insisted.

"So at length I agreed, and with a happy smile she ran back into the house." During the recital of the story, grandma had been

rocking gently to and fro, apparently absorbed in her knitting. Finally she rose quietly and left the room. Soon she returned with a roll of yellow paper in her

"What's that?" asked the boys.

"'Grandfather's essay,' she answered, with a half sad smile.

"His essay that he lost! The very one! Let's see Where did you get it?"

"'It's mine. I've had it for fifty years."

Both boys looked at her with eyes opened wide with astonishment. At length Dick spoke with some hesitancy, but with much feeling-"Grandma-I-I'll bet my old tiger cat and—the five kittens that wh-en you were a-little girl, you-you yourself were Marie."

A quiet voice, courtesy and kind acts are as essential to the part in the world of a gentleman as of a gentlewoman.

# JAMES McGREGOR BILLINGS' MOOSE HUNT

AMES McGregor Billings was the jolliest boy in the whole of Maine. For one so peculiarly gifted with a sense of the fitness of things, he was most wonderfully unfortunate. He was a very tall and a very lank boy for his age, and when not helping his mother about the house, or his father somewhere else, he was buried deep in the forest about the town of Debsconeag, always accompanied by a long, muzzle-loading rifle that his grandfather nad used half a century before. From these expeditions he would often return with remarkable stories of the narrow escapes of birds and beasts that had crossed his path, but it was only now and then that he brought anything home with him. In short, Jim Billings was pointed out by all the good folks about him as a living synonym for big stories and bad luck. His hunting exploits were always topics of humorous interest in the one small store of the town, and whenever anyone suggested that he had a "new one" on "Jimmy." faces began to broaden into smiles, for it was pretty well understood that the story would be a funny one.

On this particular night, Jim and his mishaps were forgotten in Debsconeag on account of the arrival of a certain sportsman from the south, who had come up to be ready for the shooting season. Mr. Roberts was the junior member of a Boston manu-

facturing firm, and for three successive seasons had his head cooked a pot of coffee, and ate another hunted in Piscataquis county. His arrival had been announced several days before, and on this particuiar evening the entire male population of the place, numbering less than twenty souls, was congregated in front of the store. The one particular subject of discussion was the "bull moose of Pamedecook lake." For at least two seasons Mr. Roberts had hunted for this animal. Its fame had spread all over the state of Maine, and stories about it had appeared again and again in the newspapers. From all accounts it was the biggest moose ever seen in those parts, and for years had eluded all the old hunters of Debsconeag. After having failed to bag the animal during his first season in the woods, the Boston sportsman had offered a reward of two hundred dollars to the person who would bring him the big bull's magnificent antlers. A dozen hunters failed to get them during the next season.

"I'll tell you what I'll do this year," announced Mr. Roberts to those congregated about him. "I'm going to double that offer of last year. If I can't get the big bull's antlers this season, I will give four hundred dollars to the man who gets them for me."

James McGregor Billings had been sitting on the edge of the store platform with the others, drinking in the conversation of the rich man from Boston with open mouth. Just now a big, rosy cloud floated before his eyes, and before he realized it, he was at the Boston man's side.

"Mister Roberts, I'm going to git that moose for you!" he cried. "I know right where he is now!"

Long after Jimmy had climbed the stairs leading to his room in the garret of the Billings log home, the man from Boston was regaled with mirthful stories of the boy's exploits. Meanwhile the young hunter was making plans of his own. In the middle of the night he went down and awakened his parents with the information that he was going out with his gun at daylight or before, and might not be back for a couple of days. Then he packed some provisions, cleaned his rifle, and never slept a wink from then until the edge of the forest began to outline itself against the light of the sky. For three or four days snow had been falling quite steadily, and when at last Jimmy started off in the first glimmer of the dawn toward the head of Pamedecook lake he wore a pair of snowshoes.

It was still early in the morning when Jimmy entered the edge of the woods on the other the lake. Now his eyes were open and alert, and he held his rifle ready for instant use. For a mile or more his progress was still rapid, in spite of the fact that the forest was becoming denser every minute. At the end of that mile Jimmy began watching the trees. Here and there the larger ones had white scars on their trunks, where the boy had chopped out chips with his hatchet. In the course of another hour these marked trees led him to the edge of a rock-strewn ravine, and down in that ravine Jimmy looked upon the only salt-lick ever discovered in Piscataquis county, and that lick, he thought, was known only to himself.

Half a dozen distinct trails led up and down the ravine, and breathless with excitement Jimmy hurried down to examine them, hoping that he would flud that of the old bull moose among them. But he was doomed to disappointment. The big tracks of a stag and the smaller ones of a doe circled up in the timber and on the other side of the ravine. In places the snow was pattered thick with the delicate prints of fox feet, and a lone wolf must have sauntered along that way early in the morning. It was evident that the moose had not been there for at least thirty-six hours, for the ravine was so protected by the overhanging trees that the old tracks would not have become completely smothered under the snow in that time.

Going a distance back over the old trail, Jimmy selected a bare spot under a thick growth of scrub pine, and began cutting armfuls of branches with his hatchet. In a short time he had made himself a shelter, in which he placed what provisions he had brought with him, and the coffee pot and frying pan that always accompanied him in his rambles in the woods. Then he built a rousing fire of pine cones and dry wood, and when the sun was directly over

By I. OLIVIER CURWOOD

HIT THE ANIMAL FAIRLY ON THE SIDE OF ITS "HUMPBACKED NOSE"

meal of rabbit and bread. Then once more he started out on his search for the trail of the bull mioose.

Jimmy planned the method of his hunt as he struck out straight into the woods north of the lick. He would use that lick as the center of a series of circles he would make around it, and if the moose was anywhere in the neighborhood he would find the trail in the course of that afternoon and the next day. Half a mile beyond the ravine the boy began his first circuit, watching closely on each side of him for hoof-prints in the snow. For several hours he slowly continued his scrutinizing search, until again in the neighborhood of his camp. Tired and hungry he now watched for an opportunity of replenishing the slim larder in the brush wigwam. Several times that afternoon he could have shot big white wood-hares, but refrained from doing so through fear of frightening the moose if it was near him. He was confident, however, that the animal was on the other side of the ravinc, and now set out on the trail of one of the big rabbits, feeling that a shot would do no harm. A short distance farther on he discovered his quarry snuggled under the edge of a log, and resting his gun upon the stump of a broken bush, Jimmy sent a bullet fairly through the animal's head.

Hardly had the boy lowered his gun when there came a terrific crashing from a brush thicket not more than thirty yards away, and the boy's heart seemed to stop still as he stood there, for the time too startled to move. Nothing could make that commotion but a bear, and a mad one, too, thought Jimmy. A second thought added a chilling fear to this. His gun was empty! And even in his fright and excitement he knew that the great animal was coming in his direction. A little way back the boy remembered having passed a huge oak that grew at the side of a mass of rocks. If he could reach those rocks he might climb up one of the great

boulders, and there hide himself while he loaded his rifle. In an instant he had acted upon the idea, and began running back as fast as he could travel on his snowshoes. He had ant gone half the distance when the noise of the animal behind as it tore'out of the bushes caused him to throw a look over his shoulder. There, not half a stone's throw away, instead of a bear, stood the huge bull moose of Pamedecook lake!

James McGregor Billings stopped within five paces. He turned squarely about, dropped the butt of his gun into the snow. and stared at the animal he had come to hunt. As he looked, he mentally reckoned that he could have killed the animal with his father's old horse pistol, if he only had it with him. Then the humor of the thing began to dawn upon Jimmy. That was the peculiar thing about Janes Mc-Gregor Billings-his readiness to laugh at his own bad luck, and just now he was more willing to laugh than usual, because he was glad it was not a bear. A grin spread over his face, and this developed into a laugh, and as he laughed the moose gave a snort and set off at a rapid pace for the denser part of the forest beyond.

"By Jing, I can almost do it with a snowball!" cried Jimmy. He caught up a piece of hard snow, and hurled it through the air in the direction of the fleeing To the boy's surprise the chunk hit the

animal fairly on the side of its "humpbacked nose." In its shrewd mind the old moose quickly reasoned from where the hurt had come, and before Jimmy had fully realized the significance of his throw, the animal was tearing up the snow and leaves in its effort to turn about upon its assailant. The youthful hunter was not slow in finding the use of his feet again, and started once more for the big pile of rock. In that moment all the humor went out of Jimmy's life, for the time being, at least. If he feared a black bear, he doubly feared an angry bull

moose, and as he heard the animal begin the pursuit behind him, he redoubled his energies to reach the big oak and the boulders beside it. He had a good start, and as he reached the first rocks he kicked off his snowshoes, and dropped his gun.

The old bull was not a dozen feet behind when Jimmy leaped upon the first low boulder, and from there began climbing up the smooth side of the huge mass of stone. The stone was covered with snow, and at each step of his flight the boy dug his toes and his hands deep into the thick crust. At last he paused, half way up, and seating himself comfortably, looked down upon the angry animal that was tearing the snow from the lower part of the rock with its antlers and worefeet. Meanwhile Jimmy planned how he might get hold of his gun. He had just about made up his mind to climb to the top of the rock, and try to steal down the other side, when he made the thrilling discovery that the crust on which he was seated, and all the snow under it, was slowly moving. Inch by inch it was traveling down toward the moose, and he was traveling with

The boy could see that in the course of a very short time the mass of snow that had just begun to move would be turned into a veritable avalanche, and he would be hurled down under the feet of the old bull. There was only one wav of escape, and

m mogregor billings was pitched eigh into the air

that was to climb to the top of the rock. Turning about as carefully as though he were creeping on eggs, Jimmy began this ascent. But his movement gave the descending snow an added impetus, and in a flash the avalanche pitched down upon the moose. and Jimmy went with it. Fortunately, the boy landed on his feet. Darting around the edge of the rock, he ran as he never ran before in his life, but the speed of the big moose that followed in pursuit was appalling. He could hear the clattering hoofs nearer and nearer at his back. When it seemed that the moose must surely be almost within reach of him, the boy dodged around the other edge of the huge boulder, but not quicker than the animal behind. He had not taken a dozen more leaps when the shock came, and with a yell that echoed all through those woods James McGregor Billings was

pitched high into the air, and fell in a limp and apparently lifeless heap twenty feet beyond.

How long he lay there, unconscious in the snow, Jimmy could never say. But when he first began to "wake up," there seemed to be an oppressive weight on his back, and it seemed many minutes before he could throw this weight off. Then he pulled himself together, sat up, and caw to his astonishment that the objects he had shoved aside were the great antiers of the bull moose of Pamedecook lake!

In a flash the true situation began to dawn in the boy's dazed mind. The moose had charged him, and in doing so it had shed its antlers. He knew that occasionally bull moose "dropped their horns" in this way, and the surprise at losing its headpiece had so startled the animal that it had ambled off into the forest again, without pausing to make

mincement of the youngster who had occasioned it so much trouble.

The next afternoon Jimmy came limping up to the little store in Debsconeag, dragging along a big bunble covered with fir branches on a sled improvised out of stripped saplings, and when the boy exposed his treasure, the fame of James McGregor Billings was made, and his provess vindicated forever.

Just a week after that, a small express package came to the settlement, addressed to "Mr. Henry J. Roberts," etc., and in less than an hour after that. Jimmy was counting over the biggest roll of bills it had ever been his fortune to look upon.

And the big bull mose of Pamedecook lake still cludes the old hunters of Debsconeag, and there is at least one person who says it shall never come to harm at his hands, and that person is James McGregor Billings.

# TRUE HEROISM --- A TALK WITH BOYS

INTRODUCTORY:—Our boy readers will be glad to see the space which is usually occupied by "Just Between Ourselves," filled this month with the words of G. A. Henty, who perhaps of all writers of boys' stories is the best and widest known. Where is the boy who has not read one or more of Henty's books? In giving up my space this month to the last words of Mr. Henty directed to boys, I feel that I am doing them a real Christmas service. What he here says should have the earnest consideration of every boy.—The Editor.

HERE is hardly a boy who does not in his heart of hearts wish that he could be a hero, and not a few girls have sighed at the thought that they possess even less chance than their brothers of proving that they, too, were opportunity given, could show themselves capable of doing great deeds. It may be admitted at once that to only a small proportion of boys, and to a very small proportion indeed of girls, is it given to gain fame in the world. But there are vast numbers of both, and perhaps more girls than boys, who possess the true spirit of heroism Remember Longfellow's noble words:

Lives of great men all remind us We can make our lives sublime, And, departing, leave behind us Footprints on the sands of time.

Believe that this is so, boys; remember that each of you has it in his power to inchence others for good or for evil, to leave a track behind you that will act as a guide to others to firm ground, or to a quagmire in which they may be overwhelmed. There are others younger than yourselves, even if you are boys at school, who may be influenced by you for good or for evil. This is a great trust that has been placed in your hands, and your own future as well as theirs will assuredly be influenced by the course you may take now.

True heroism consists in doing what is right, come what may. In war, this may mean giving your life for another; in peace, it often means sacrificing money, honor, position, for what is honest and right. The first qualification towards heroism is absolute truthfulness. Come what may, be the consequences light or serious, a true hero boy or girl will never tell a lie. Lying is the mother of cunning, of meanness, and most other vices. Every boy and girl should feel in his or her own heart that a lie is the most contemptible, the most cowardly sin that they can commit; and of all forms of lying, the worst is the cowardly one of lying to escape punishment. If a boy does wrong-and the best of us may get into mischief or do wrong at times—it may be that the whole course of life will be influenced by the answer he gives when questioned concerning it.

The coward will lie to screen himself; but the boy who has a shadow of heroic feeling about him will boldly confess to his share in the affair and take his punishment. Then he can look the world in the face again; he has paid the penalty, he has no need to be ashamed of himself, while those who have lied are regarded with contempt by their fellows, and suffer a lasting feeling of shame and fear on their own part that the truth may come to light some time or other. I consider, of all virtues, absolute truthfulness stands first and forms the foundation of heroism.

ruthfulness comes unselfishness noble unselfishness in the soldier who will rush out from shelter and risk death in carrying in a wounded comrade. So equally, though in a less striking degree, is the unselfishness of the boy who will set aside his own pleasure for the sake of others. Everyone admires the girl who is content to stay at home to take the burden off the shoulders of a weakly mother, by aiding her willingly and cheerfully in her housework and by relieving her of the care of the little ones. And we admire equally the unselfishness of the boys who, instead of thinking of nothing but his games and amusements when he is once free from school, will occasionally devote a half holiday to the amusement of the little ones, who will repay him a hundredfold for the pleasure that he has given up, by their affection and love for him.

Truthfulness and unselfishness go far to make up true heroes among boys and girls. As they grow up there are fresh opportunities of showing heroism. Comparatively few are able to choose the exact position in life that they fancy they would prefer. It is heroism to accept the life that falls to them, cheerfully and contentedly making up their minds to do their very hest in that position to which it has pleased God to call them, striving earnestly and always to do their best to give satisfaction to their employers and to use their leisure hours sensibly and rationally.

Undoubtedly there are as many real heroes among girls as among boys. Throughout life girls and women have to bear many burdens. How many true heroines are to be found among women! Patient, brave women, who hide their troubles from the world, make the best of things, and carry a cheerful face even when their hearts are breaking. These are the true heroines of life. They work and suffer

THE LATEST CONTRIBUTION FROM is to be a true Christian, one must be a true Christian hero. True heroism is inseparable from true Christianity and as a step towards the former I

THE LATE G. A. HENTY
One of the Widest Known of All Writers for Boys.

in obscurity; no one honors them for their patience; their little deeds of kindness and self-sacrifice are done quietly, and no one supposes that they are heroines.

In sick rooms at home, in hospitals, in out-of-theway slums, women are doing heroic work, and you, boys, should honor them for it. No comparison can be made between these heroines of private life and the men who perform heroic deeds in battle. One is done in the heat of the moment; it is laudable and praiseworthy, but it is to a certain entent the outcome of the virtue of a race. Soldiers have in them the blood of a hundred fighting ancestors. They have in them also the remnants of a time when all men fought for their lives, when their position was little beyond that of the beasts of the field. I do not deny that it is heroism; I am proud of their deeds, but yet I feel that the truest heroes lie among those who do and suffer quietly, without hope of praise, without a thought that the work they are doing is noble, without a thought of the opinion of others-this is the highest and noblest class of heroism.

It is in boyhood and girlhood that true heroism must be felt if it is ever to be attained in riper years. Boys are apt to make heroes of those who are strongest and most skillful in games, and to despise those who are unable from ill-health or constitutional weakness to bear their full share in any sports. They do not reflect that the skill and prowess of their champions are largely the result of good health and physique, and that the shrinking, delicate boy may be as true a hero as the captain of their football team.

Above all, perhaps, they admire the boy who won't peach I think that this kind of bravery is often carried to excess. I consider that schoolmasters who insist that a hoy who has bravely owned up to his own share in a piece of mischief should tell the names of his comrades are very much to blame. The boy has shown his readiness to take full share in the punishment; he should not be asked for more, still less should he he punished for refusing to peach on his more cowardly associates. But certainly he ought not to bear the punishment due to them; and when the fault that has been committed is a disgraceful one, and the boy is asked if he knows who has committed it. I think that refusing to answer is not an act of heroism, and that he is more than justified in giving the name of the boy who has brought disgrace on the school. I know very well how strict is the code of honor among boys on such matters, but I think that when carried to an excess it is a mistaken one. Boys have the honor of their school at heart as much as their masters have, and it would he far more creditable to them to denounce a boy who has smirched that honor than to shield him.

To sum up, then, true heroism is largely based upon two qualities—truthfulness and unselfishness, a readiness to put one's own pleasure aside for that of others, to be courteous to all, kind to those younger than yourself, helpful to your parents, even if that helpfulness demands some slight sacrifice of your own pleasure. You must remember that these two qualities are true signs of Christian heroism. If one

tian hero. True heroism is inseparable from true Christianity, and as a step towards, the former I would urge most strongly and appealingly the practice of the latter.

#### THE BASHFUL BOY SPEAKS

By WILLIAM H. HAMBY

It hurts to be bashful, and I used to be in pain most of the time. As a boy I often turned out of the road into the bushes to keep from meeting a neighbor. I stayed away from home when we had company, and I never went anywhere to visit unless I was driven or dragged.

I remember once my father and mother were invited to a country dinner, and they took me, in spite of my bitter protest. There were two ministers, and some people from town, and the company seemed awfully solemn to me. It was a long table and piled high with everything the good country woman could think to cook.

I would not for the world ask for anything, nor did I dare refuse anything offered. I was seated near the center of the table and everything that was passed either way came by me. I took something of every dish that went by. Directly I had meat and molasses, rice and chicken dumplings, cabbage and gravey, fried onions and beans all piled together on my plate.

I could not eat, but was afraid to quit lest I attract attention. I sat nibbling away in mortal fear lest I drop something or turn over something or do something to cause people to look at me.

While in this agony of bashfulness the impression came to me to say George Washington. I frequently had these impulses to do or say things, and I felt that I just had to do it. The more foolish they were the more compelled I felt to do them.

I never had the slightest idea why I had to say George Washington, but say it I must. I tried and tried to get out of it. I squirmed in my chair, I even thought of running away but could not escape. I had to say George Washington.

I knew the people would stare and think me crazy, and as a compromise I decided to clear my throat and say George Washington at the same time.

With a desperate effort I cleared my throat in such a way that every guest stopped short and looked at me and in the deadly silence, knowing I had not spoken, I shrieked out:

"George Washington, look at me if you want to."

#### AMERICAN BOY DAY

AS SEEN THROUGH THE EYES OF JOE CHAPPLE, EDITOR OF THE NATIONAL MAGAZINE—HIS COMMENT IN HIS SEPTEMBER NUMBER

American Boy Day was July 5—"the day after" the natal holiday. What a thrilling scene the throng of boys gathered in Festival Hall presented on that occasion! It was a great achievement for William C. Sprague, the editor of The American Boy, a man of energetic and progressive ideas. The saluting of the flag, the splendid orations and declamations by the boys from piping eleven to stentorian sixteen, the music by the Indian Boy band, the address by the Japanese boy, and the opening speech by little Jack Skinner, aged 11, were all of deep interest. The spirit of the occasion was one of wholesome inspiration, and the flag exercises, during which the audience arose and took the following pledge, was most impressive:

"I pledge allegiance to my flag, whose stars and stripes stand for bravery, purity, truth, and union. I pledge my life, my heart, and my sacred honor to love and protect it. I pledge allegiance to my country, one nation, indivisible, with liberty and justice for all."

One of the most interesting numbers of the program to me was the singing of the Indian girls, the voices sweet and true as nightingales, well cultivated as the singers of fair Italia. They sang Sullivan's "Lost Chord," arranged as a quartette, in a manner which touched on the very heart strings. These girls. the grand-daughters or direct descendants of the red men of the great forests and prairies-the original owners of the land in the Louisiana Purchase, whose great art was the chase and warfare, here sang in a fashion which might have graced the court of the fastidious Isabella. Truly time doth work marvels. and the date of Napoleon's sale of their forefathers' lands, they here celebrated in song, arrayed in white dresses, and all the grace and beauty of Caucasian civilization.—The National Magazine.

AGENTS

We want men and women, and boys and girls too, to canyess for subscriptions to "The American Boy" on a very liboral cash commission basis. Just now is the time. Address Subscription Agents

# ASKET

By GEORGE T. HEPBRON, Secretary Amateur Athletic Union Basket Ball Committee, Secretary International Committee, Y. M. C. A.

by James Naismith while an instruc-tor at the International Training School for Y. M. C. A. executive officers, situated at Springfield, Mass.

#### VALUE OF GROUP GAMES.

Sport is a great revealer of character. Especially is this true of sports having the group characteristics, such as basket ball football, lacrosse, etc.

GEORGE T. HEPBRON

The coach is responsible, not only for the physical training of the boys, but the ethical training as well. The coach who neglects the latter should be given a ticket-of-leave, and that quickly. If the boys do not learn self-control, honesty, fairness, polse in victory or defeat, deference to the decisions, and self-sacrifice, something is wrong with the system of coaching, and either a change in coaches should be made or the game given up entirely.

is wrong with the system of coaching, and either a change in coaches should be made or the game given up entirely.

President Roosevelt says: "The whole test of the worth of any sport should be the demand that sport makes on those qualities of mind and body which in their sum we call manliness." This game stands the test. No amount of physical benefit would warrant the adoption of the game if the ethical results are wanting.

I recall the effect of the game on two players, both having quick tempers, which cropped out under the least provocation. One of them we will call John. He applied for a place on the team, and even his best friends advised against his acceptance on account of his uncontrollable temper. The condition was frankly laid before him, and he said: "So that is the reason I was refused. Well, you let me play in several trial games and I will show those fellows I am man enough to control myself." At the suggestion of the coach he entered into an agreement with several of his friends to call out his name when they saw he was about to "lose his head," which by the way, was easy to detect, a peculiar expression on his face just before getting mad. He played in several games and all went fairly well. Then a champonship game was on and a question arose as to whether he should play. It was finally agreed to try him in the first half, and if he "lost his head" he was to be taken out. His opponent in the game knew his failing and tried his best to get him rattled, but at the end of the first half had not succeeded, and he was showered with congratulations.

and tried his best to get him rattied, but at the end of the first half had not succeeded, and he was showered with congratulations.

His friends insisted that he should play in the second half. He did, under the same agreement. His opponent, knowing him to be a strong player, continue to harass him, a very unsportsmanlike trick, to say the least; but he was equal to the occasion, and his prompters cautioned him less than in the first half. Finally the timer's whistle blew, the game was over, his team won, but a vastly greater victory was his. He had come out victorious over self. Those who were on the indechered themselves hoarse; his frends nearly separated him from his ciothing as nearly separated him from his clothing as they bore him off the floor triumphantly on when the facts were made known to his opponent he also congratulated him. His place on the team was assured after this game, and he never betrayed the confidence placed in him. He now hald dence placed in him. He now holds a position of trust.

The other player, who began with the one

THE game of basket ball was invented duce good character, but offers the opportunity for the development of those traits which go to make the kind of men parents are proud of, employers trust and nations honor. THE TEAM.

Several years ago, in one of the basket ball championships, a club entered a team of players who had not played together long enough to develop team work, but were stars selected from five different organizations. They went into the championship sure of success, but when the tournament was over they were in the fourth place. The question arose why such an aggregation of stars did not carry off the honors. The answer is plain—lack of team work. Every player was a unit, instead of the whole team being a unit Each player, instead of sacrificing self for the good of the feam, played an individual game. This team did not develop into champion timber until they played together three years and developed their team work to the exclusion of individual grand stand play. play

play.

Teams of inferior individual players had beaten them often because of superb team work. The individual player must know the rules thoroughly, exercise prompt judgment, never get "rattled." know his place in the team and fill it at all times, be accurate at passing and throwing, must practice often, so as to acquire endurance, and, above all, exhibit that rare quality, self-control, without which no one can hope to develop into a first-class player.

#### THE VARIOUS POSITIONS.

In general the foregoing qualifications are necessary for each position on the team. In particular the most successful players are noted for the following, in the posttions indicated:

are noted for the following, in the posttions indicated:

The centre should be a tall player, who
can jump well and is agile enough to stoop
well when the play demands it. He is a
sort of a general, playing between the two
goals and assisting to pass the ball from
the opponents' end of the field to his own
forwards, so they may throw for goal.

The forward gets the most glory, as he
throws the greatest number of goals and
receives the most applause when successful
in caging the ball. He must work in harmony with the other players and have the
knack of getting into an uncovered position, so that the other players may pass
the ball to him. Accuracy is the chief
qualification of this position, as the game
is won on goals thrown, and not on simple attempts.

The guard has the most unsatisfactory

ple attempts.

The guard has the most unsatisfactory position, from a personal standpoint, on the team, yet one of the most important from the standpoint of the game. He it is who prevents the opnonents' forwards from making goals, and the prevention of scoring is as necessary to the successful outcome of the game as making goals by his brother guards. He must be quick, accurate and cool to a marked degree, and as he is the one most liable to make fouls, must know the rules thoroughly. The value of an efficient guard is never underestimated by his team.

#### THE OFFICIALS.

advance the game on right lines than to produce each season two or three competent officials from each school. The officials, as the rules state, must be produce each season two or three compecompetent, honest and impartial, and not tent officials from each school.

members of either organization represented in the game. Most of the abuses play or allowed to deteriorate until they

present in the game are due to poor officials. They can make or break the best game ever begun. All organizations accept the responsibility for training the team, but few for training officials. Every school should begin at once the training of at least a half dozen officials for games between other schools, and then the dishonest and incompetent ones would be described above, had to be dropped because honest and incompetent ones would be of his mean playing, and last year I saw kept out of the public eye, for the good him play in a game where the same tricks of both the game and players. Poor ofwere in evidence. Both illustrations could be ficials are often used because good ones multiplied. The game itself will not pro-

want only the kind played in some cities not many miles from New York. Clean games develop a desire for the right kind

of sport in the spectators. Good plays should be recognized, whether by the home team or visitors. Hissing should be reduced to a minimum; audible should be reduced to a minimum; addition uncomplimentary comments about the decisions of officials should not be tolerated for an instant. Usually they are indulged in by the spectators who know least about the rules and would not know a correct decision if they saw it.

Yelling or hissing when the visitors' team has a free throw for goal is not only unfair, but abominable, and the alternative of going out peaceably or being put out forcibly ought to be presented to persons behaving in this way, and acted upon at once. I remember attending a game where a young man, after a decision by the referee, hallooed "Rotten." The man in charge of the gymnasium where the game was played immediately blew a whistle and was played immediately blew a whistle and announced publicly that such actions would not be tolerated, that the young man could get his money back if he was not satisfied with the game, and that if such conduct occurred again the perpetrator would be assisted to the street without getting his entrance money. Nothing of like nature

entrance money. Nothing of like nature occurred during the remainder of the game. The game is a vigorous one, played by vigorous individuals, and often witnessed by vigorous spectators, and at times needs vigorous action by those in authority to keep down the unruly spirits who are ignorant of the rules and nurposes of the game. The object of the game is to assist in the development of clean, wholesome character. If it cannot be conducted in this spirit it ought not to be conducted at all.

# BOYS WHO ARE DOING THINGS

#### A Newsboy Artist

Nathan Levine, a thirteen-year-old news-boy who lives with his widowed mother and a young sister at No. 25 East 3rd

MATHAN LEVINE

street, New York, is astonishing the art world with his clever work with pen and

Critics who have seen the young genius at work predict a bright future for him; and are of the opinion that he will gain his fame and fortune before many years have passed.
Three years ago the boy came to Amer-

ica with his mother and sister from Bealestock, Russia. He couldn't speak a word of English but he was an ambitious word of English but he was an ambitious youth, and soon learned to speak it as fluently as a native born. In school he soon became famous among his classmates for drawing funny pictures; and in both drawing and painting competitions he carried off the principal prizes. Some of his drawings are now on view in the school room. school room.

school room.
"I love to draw and paint," said the little chap enthusiastically, as he was putting the finishing touches on the cowboy sketch reproduced here, "and it is the aim of my life to accumulate enough money to go through some good art school. I am going to follow it up. I have never had any lessons in drawing, but I am going to have"

Nathan is an ambitious youngster and when not selling newspapers devotes his spare moments at his hobby, painting and drawing. He is certainly a marvel, and may prove to be another Raphael or Mich-

may prove to be another Raphael or Michael Angelo.

Nathan is a great admirer of THE AMERICAN BOY, and probably sells more of these than any other newsboy in the United States. "Because." as he says. "It is one of the cleanest and best papers for American boys to read.

BOWARD STANLIN SHITE

with representatives of five western institutions. The general subject for discussion was "The Improvement of City Government in the United States." The general subject was subdivided into special themes, one of which was assigned to each speaker on the morning of the day of the contest. This left scant time to prepare orations on the subdivisions but the speakers were supposed to be well informed on all the points involved. The prize winner is a student in Miami University at Oxford, O. He spoke on "The Adaptability of German Municipal Methods to American Cities." Mr. Smith is twenty-one years old.

#### A Boy Who Designs Women's Hats

Matthew Beautefishe, a nine-year-old Baltimore boy, is learning to be a milliner. It is said that within seven weeks after entering a Baltimore school of millinery he became as proficient as the oldest student in the school. He displays unusual taste and is remarkably skillful in carrying out his ideas. On completion of his course he will engage in business with his mother in Wisconsin.

#### Gave His Life to Save Kitten

Frank Hamilton, a twelve-year-old boy, sacrificed his life to save a kitten from peril at the top of an electric light pole at Philadelphia.

Philadelphia.

Hamilton had always been a favorite because of his kindness toward animals. He was always nursing a lame dog or an invalid animal of some kind.

On this occasion a venturesome kitten climbed up an electric pole, but was afraid to come down again. Darkness was approaching and the timid 25 mml began to cry. The boy could not bear to see it in distress, so he climbed the 50-foot pole with some difficulty. He was in the act of reaching out to seize the kitten when his hand came in contact with a live electric light wire. In an instant he colled up and was hurled head first to the ground.

A man on an adjoining place, who saw him fall, ran to his assistance, but found him unconscious. Two physicians were summoned at once, but he died in a few minutes.

#### "I Serve"

The Congregational church of Lancashire, England, has organized a boys' life guard

Contest

Howard Stanley Smith, of Dayton, Ohio, won the Inter-University Oratorical contest at the St. Louis Exposition, competing to the Oratorical contest at the St. Louis Exposition, competing suffocating gases and smoke, he sprang into the open magazine and closed the door behind him, thus preventing a still more fearful explosion. The magazine was at once flooded, and Monsson was nearly drowned. President Roosevelt was so deeply impressed with Monsson's gallant action that he sent a special photographer to him to take his portrait to hang in the White House, while Congress voted him a medal and the Navy Department promoted him without delay. Monsson is a native of Norway cast in the stern mould of the old sea-kings, but he is more patriotic toward his adopted country than the most patriotic native American. He entered the navy fifteen years ago as an apprentice, was with Admiral Dewey at Manila Bay. patriotic native American. He entered the navy fifteen years ago as an apprentice, was with Admiral Dewey at Manila Bay. and is one of those quiet, unassuming "men behind the guns," who are strangers to fear and stand ready at all times to give their lives to the service.—Leslie's Weekly.

#### Is Gambling on the Increase Among Boys?

New York teachers are worrying over the fact that gambling seems to be on the increase among boys. In many localities all the money that the boys get hold of goes into games of chance such as craps, pitching pennies, etc.

#### 125 Pounds of Commendation

Richard G. Weed, Ortonville, Minn., age eleven, weight 125 pounds, writes to tell THE AMERICAN BOY that he can be

counted upon as its friend. Richard lives in a hotel near Big Stone Lake, Minn. In this lake he has great fun fishing, boating, swimming and hunting frogs. The fishermen use the frogs for balt, paying the boys ten cents a dozen for catching them.

#### President Roosevelt's Talk To Boys

President Roosevelt's Talk To Boys

Recently in addressing the students at Groton School, Groton, Mass., the President gave what he called a "homely heart-to-heart talk with the boys." in his remarks, the President said that if a boy had not pluck, common sense and decency, he was a pretty bad sort, and a man without these qualities was even worse. He admonished them that they must not in any degree become "prigs." and urged them to be strong, to be decent, and to be resourceful. "Boys and men." he said, "possessing such qualities will not be snobs. There are in our civic and social life worse creatures than snobs, but no creature is more contemptible." The President referred to the advantages of training in public schools, which training he believed to be most beneficial, because of the democracy of the institutions. The President alluded to the athletics of modern school life, saying that he believed in athletics and sports and in the spirit which is back of them.

At the conclusion of the President's address Dr. Peabody announced that President Roosevelt would present the prizes. The boys who had won honors during the year were called to the platform.

who had won hours during the year were called to the platform, and President Roosevelt shook hands with each one and passed him the prize, in most cases a book.

Several years ago W. Bourke Cockran found himself in need of a new office-boy. The lawyer's secretary was left to make a selection from the horde of applicants. His choice was a bright young lad of fourteen or fifteen, who was sent in to have an interview with Cockran.

After a number of questions, which the boy answered successfully, the lawyer inquired:

"Are you well acquaints."

quireu:

"Are you well acquainted with your
mother tongue?"

"Yes, sir," the lad replied, "'cause my
mudder jaws me most every night."

#### Schoolboys In Germany

"Germany is, before everything, a military nation," says Mr. George Andrew, a Scottish school inspector, in a report on the educational system of Berlin and Charlottenburg. "In the boys' schools the infants are taught by men and not by women.
"One remembers one's feelings of surprise on finding a class of sixty infants presided over by a man of excellent physical development. The Prussian idea seems to be that the sooner the boy comes under masculine discipline the more adaptable

masculine discipline the more adaptable he will become to the military practice later on.

later on.

"Smartness is carried almost to an extreme. When a pup.l is called to the blackboard he must run there and back. The habit of the symnasium is carried into the classroom. There is no 'play.' Instead the pupils wander in a tortuous column four abreast under the superintendence of the teacher.'

Neither is there a chance of "playing

ruant" in Charlottenburg. The truant can be called for by a policeman, wakened from sleen and escorted to school.

One German town ordered gargling exercises to be practiced in the schools, the reason being that while in throat troubles gargling was often ordered the children could not do it and the parents could not believed. could not to it and the parents could not bein-London Muli.

### UNCLE SAM'S

them and see that everything conducive to their comfort was arranged for. The government being responsible for them they will not be allowed to leave the quarters as signed to them without the consent of the bureau. Neither may they drop one course of study and take up another as the whim may strike them. They have been given the opportunity to select which course they aspire to take, and having made the selection they must follow out that course to graduation. graduation

graduation.

The four boys, according to the teachers, are of various grades of intelligence. At least one is fully the equal, if not the superior, in mental force, of the average American boy student at the school. The others are well able to hold their own in the classes. They are not at all shy, but move among their fellow students with a modest air that is entirely devoid of self-consciousness. They have necessarily attracted a great deal of attention and can scarcely walk through the corridors of the School of Industrial Art, where nearly twelve hundred students are enrolled, without causing heads to turn and whispered out causing heads to turn and whispered explanations to be made. It troubles the four black-haired boys not at all. They be-have like Chesterfields at all times, and are

Abon the Philippines to Philadelphia net a bit suggestive of the 'rew caught of the process of the county such as the process of the county and the process of the county and the process of the process of the county and the process of the process

at Noblesville, Ind., the public schools are doing something to teach the boys farming. John F. Haines, Superintendent of the county schools, offered every boy who would grow a patch of corn enough seed to plant four hundred hills and told them that there would be five prizes, coming from the township trustees. Each contestant was to bring in twelve ears of corn and two competent judges were to score the entries. Ninety-three boys entered the contest, representing every section of the contest, representing every section of the county, and it is fair to say that all the boys for miles around are taking a great interest in the best method of growing

W. B. Otwell, President of the Farmers' Institute of Macoopen county, Ill., be-lieved that the farm boys of his county could produce the finest corn in the world. He persuaded the County Institute to offer a prize for the best ten ears of corn grown

ingularly successful in improving the moral and physical condition of the chilfren of the neighborhood. Mrs. Parsons says, "The closer we live to nature the nearer we are to God, and the precocious child of the city needs the softening, simbilifying influence of closer contact with the earth."

Speaking of young farmers we recall that the Noblesville, Ind., the public schools are dioing something to teach the boys farming points for miles around. The boat in the public schools are dioing something to teach the boys farming points for miles around. The boat in the public schools are dioing something to teach the boys farming to the public schools are dioing something to teach the boys farming to the child of the city needs the softening similar to the child of the city needs the softening similar to the child of the city needs the softening similar to the child of the city needs the softening similar to the control of the boys of Madison, N. J. enviced sixteen-year-old William Webb Davis, Jr., when he built for himself a little steamboat, in which—often accompanied by his sweetheart—he rode about on the procession of the boat in the boys of Madison, N. J. enviced the procession of the boat in 
chanical achievements. He also had an automobile which he built all by himself. Here is his description of the boat:

"First I made the boat 12 feet long and 3 feet 6 inches beam. The sides are cypress and the bottom is white pine. The bow and stern have water-tight compartments. The paddle-wheels do not come below the bottom of the boat because the Passaic river is very shallow in places. The paddle-wheels and paddle-boxes are removable, thus making it easy for transportation. The boiler is made of 8-inch wrought-iron pipe. I had a piece two feet long, with a cap on each end, and then drilled holes for the piping. The boiler jacket is made from sheet iron covered with asbestos, which also makes the firebox. The motive power is an upright engine of about our horse power connected to the paddle shaft by a bleycle chain. I made a small check pump with two half-inch checks and a piece of half-inch brass pipe for the cylinder. The pump not only forces water into the boiler against steam pressure, but also acts as a bilge pump, I am now using wood

WILLIAM WEED DAVIS, JR., AND HIS HOME-MADE STRAMBOAT

for fuel, although I made gasoline burners and used them for a while. The boiler is equipped with steam gauge, safety valve, and whistle. The exhaust steam from the engine goes up the stack to make a forced draft. At the end of the boiler is a water glass showing the amount of water in the boiler. The boat may be steered by a person in the bow by means of a lever connected to the rudder with ropes."

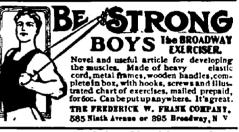

And now comes the sad part of our story. When we learned of young Davis' steamboat we wrote him for particulars regarding it and received a reply from his mother to the effect that in July last "Webb" died after an illness of two days. He was an only son

## BOYS AS MONEY MAKERS

#### James Neff

When but eleven years of age, James Neff was appointed night telegraph operator at Brooklyn, Wis. He is, therefore, one of the youngest salaried operators in America. His ability in both sending and receiving is remarkable for one so young, and the company has had no reason to regret giving him an important position. However, James does not intend to neglect his education.

JAMES NEPP

#### New York Choir-Boy Schools

There are two schools for choir-boys in New York City, one in the cathedral church of St. John the Divine and the other in Grace Church. The young choristers are taught not only music, but all primary branches after the manner of the English system. There are twenty-four boys in the Grace Church choir, eight of of whom are day pupils. These are furnished with a hot lunch in the middle of the day. The sixteen reside in the school, each having his own room. The boys are kept from six to eight years, and there are three hundred names on the waiting list. They have an indoor playroom and gymnasium. Military drill is enjoyed and frequent excursions into the country. The choir of the Cathedral of St. John consists of twenty-four boys. They are governed by a system semi-military in its nature. The members of this school live at their homes with their parents. They are supposed to be at the school at nine o'clock in the morning. A hot lunch is served at noon. The director of this choir is Frank H. Potter, a brother of Bishop Potter. There are two schools for choir-boys in

#### Be Prompt

Everything is gained by being prompt and a little ahead of time with your clubs and single subscriptions. You avoid the hurry of the holidays, when the mails and express lines are crowded and jammed with packages, and when we are so crowded with letters that the whole force of the establishment could not attend to them all at once. At such times, too, occur all the incidental delays and vexations which attend a crowded season, and put the patience of our subscribers to the test as well as our own.

#### Give Him His Own Purse

Give the boy a chance to carry his own purse. I know of but few things that will take the "spirit" out of any one, young or old, sooner than to have to play the beggar, every time a nickel is wanted for any purpose. Spare him that degradation, and teach him the gentle art of accounts, and the value of money as a servant, its damage as a master age as a master.

#### An Ohio Opinion

"You are doing a great deal for our American youth." DAVID DWIGHT BIGGER, President Gibson Memorial Assn. Tiffin, Ohio.

The twenty-seven Englishmen who came to this country last spring to investigate our educational methods, report that the American boy upon leaving school is infinitely better fitted for his struggles in life than is the English boy.

Mother-"Now, George, you must divide the cake honorably with your brother Charlie."

Charlie."

George—"What is 'honorably,' mother?"

"It means that you must give him the largest piece."

George—"Then, mother, I should rather

Charlie would cut it."

William Thurmond Reviere a ten year old subscriber of THE AMERICAN BOY, living a. Mobile, Ala, made the highest average grade (% 3-5 per cent) for the year 1903-4 in the Mobile Military Institution.

Ona J. Myers, Fredericktown, Mo., would like to have anyone who has November and December, '99 and January and April. 1900, number of THE AMERICAN BOY correspond with him.

Charles Kingsley said of his father "that ly, he possessed every faculty but the faculty of using his faculties." His education had been one-sided. Boys want not only to learn things but they want to do things.

An observer of human nature reports that he has seen some people possessing the peculiarity of three hands—a right hand, a left hand, and a little behind-

#### To Country Boys Going to The City

The City

The Reverend N. D. Hillis, pastor of Plymouth Church, Prooflyn, in a sermon printed in the New York World has the following to say of boys who are leaving the country to seek fame in great cities:

Lany a boy who comes up to town strong, clean and sweet, with a life from which his fr.ends could not hope too much, must when a year has passed be likened to some St. Pierre after the flery flood has swept by, leaving only blackened towers in its track. Young man, believe in yourself, and remember that you carry treasures undeveloped rich enough to build a store, to found a factory, to organize a commercial institution, to enrich a city. Remember that every moment is precious, that every evening is a vast opportunity, that a single Sunday avails to form a new friendship with some of the good and great, that every week avails for reading a new book—and let these be of the wisest. Every week linger over one great page, see one noble and exalting play, hear one wise sermon, commit to memory one great poem, master one new secret in your business, make the week bright with one helpful deed to some younger stranger, and you will find that the gate of the city holds not misery and failure but happiness and success.

In explaining his success in the great city a wise man once summed his career up in

younger stranger, and you will find that the gate of the city holds not misery and failure but happiness and success.

In explaining his success in the great city a wise man once summed his career up in one word. "I had a friend." To be loved and to love are great safeguards. The most terrible thing in the world is the thought that we are unloved and uncared for. That is the terrible punishment that overwhelms the criminal, "No man cares for my soul." Contrariwise, the outstanding man, the great writer, or mayor, or banker, or jurist, are in the centre of observation. A multitude of eyes are focalized upon them. A multitude of hearts love them. This is a moral tonic, a brace and a safeguard. For there never was a man who did not do better work because of public scrutiny. In these October days when you move through the streets you are in danger of feeling that you are unobserved. In your country home you were the centre of observation, and there you dwelt, as it were, in a glass house. Your habits, your friendships, your daily events and duties were all exposed to the scrutiny of your fellows, as the movements of the bees in a glass beehive. In the village, if you had been guilty of a lapse from prudence, you would be beholden of all men, just as the actor who comes upon the stage is the centre of many opera glasses. And in your loneliness and homesichess and heart hunger you may be tempted to do things that would have been impossible at home, among friends, with the eyes of all fixed upon you. Do not think, therefore, that because you are in the city no man careth for your soul. Let him that wanteth friends show himself friendly. Go to some church, find out some club or society, and there you will discover that there are faces that will beam friendly welcome, hands stretched forth with cordial pressure, and homes that will offer you a haven of rest in the time of your temptation.

One of your perils will be the false estimate placed upon wealth, houses, equipages and exterior show. Money is not every-

One of your perils will be the false estimate placed upon wealth, houses, equipages and exterior show. Money is not everything. Only a few can be rich. Happiness is in the quality of work we do. If your talent is humble you will find your happiness in doing humble work and modest. Are you discontented and miserable? I will engage to make you perfectly happy, and within one week. Find out your strongest gift and then do the work that God hath appointed you in Christ's way. The safety of the state is in this: to organize the forces of the rich and strong for the service of the poor and ignorant. The beginning of all things, therefore, is the emphasis of manhood or the growth of your own womanhood. Therefore guard your ideals and your deeper convictions against all the fiery flames of passion that threaten you. Watch the hedge! Keep the moral fences in good repair, even as the man in Holland guards the dike against the perils of the sea. If the lights burn low feed the flame afresh. If you have closed the Bible, oft wet by your mother's tears and worn by the repeated readings of your revered father, then open the book again. Be on your guard, and, drilling your body to health and enriching your intellect with books, drill your conscience also and cultivate your will. Beholding the drunkard, the tramp, with faces seared with sensuality, scarred with debauchery, disfigured with passion and sin, learn from these piteous tragedies nature's warnings against every form of transgression. One of your perils will be the false estious tragedies nature's warnings against

LUNCH ROOM FOR BOY WORKERS IN AN BASTERN DRY GOODS STORE

At a Sunday school examination the teacher asked a boy whether he could forgive those who wronged him. "Could you," said the teacher. "forgive a boy, example, who has insulted or struck

"Y-e-e-s, sir," replied the lad very slowthan I am.'

In the United States alone \$54,750,000 per year is paid by the people for soda water. The number of drinks sold over the soda water counter in the year just past is estimated at 910,000,000. These figures do not include pop, ginger ale, root beer, etc., but only sales made at the sods foun-

II, with the Halloween program we sent. It intends obtaining one of our libraries for reading during the winter. It meets every week and has made the town proud to have such an organization in its midst. \$3.00 in the treasury and it has made additions to the bylaws. All of the members are in favor of a permanent American Boy day:—WILD ROSE STATE COMPANY,

Mila Labe Co. 80. 45, URAWA, 14

No. 53. Lisbon, Ia.; used our suggested program for a Halloween party. It has adopted the proposed constitution and bylaws with a few minor changes. Meetings each Monday evening. Dues 10 cents a month. Fines imposed on delinquents and for offenses. Has \$2.66 on hand. The officers are: Merrill Ringer. Capt.; James Thompson, V. C.; Forest Pfautz. C. MOUNTAIN BOYS COMPANY, No. 3. Waynesville, N. C., meets each Friday evening in a room at Dr. Ways' home. Its officers are: Charles O. Turbyfill, Capt.; Troy Wyche, Bec'y; Jack Way, Treas.; Will Edwards, V. C. The company is mostly interested at present in football. Will send us a picture soon.—WiltTe MOUNTAIN COMPANY, No. 6, has just votel in a new member and intends getting an O. A. B. pennant. Will send us a picture.—TUNAIS COMPANY, No. 10, Unionville, Conn., has the following officer: R. E. Taft, Capt.; Lieuts. Hart and Chamberlin. The company meets at the captain's home once a month. Dues 10 cents a month with a fine of 3 cents for absence from meetings. This company has rented a gymnaslum.—NIGHT HAWK COMPANY, No. 61, Welshfield, Ohio, sends its report for the 6 months ending August 9. It has 8 members an 1 \$3.30 in the treasury. It has held 15 meetings and 2 banquets as well as several popcorn and filinch parties. Literary meetings have also been held.—DANIEL BOONE COMPANY, No. 4, Ludlow, Ky., has elected the following officers: Edmund Teed, Capt.; Robert Ehrlich, Lieut.; F. Reed, Sec'y and Treas.—GEORGE A. CUSTER COMPANY, No. 49, Zanesville, Ohio, has now got a club room and are taking in new members. The members at present number 12. It has \$5.71 in the treasury and is getting along nicely.—ONONDAGA MILITARY COMPANY, No. 49, Zanesville, Ohio, has now got a club room and are taking in new members. The members at present number 12. It has \$5.71 in the treasury and is getting along nicely.—ONONDAGA MILITARY COMPANY, No. 45, Sanesville, Ohio, has now got a club room and are taking in new members of dumb bells. Its officers are: Daniel Tudor, Capt.; Clyde Schryner,

worthy endeavor.

\$2.55. It has also a fine football team and \$5.00 in the treasury. The captain was one of the boys who was at St. Louis on American Boy Day.—TIMOTHY MURPHY COMPANY, No. 1, COBLESKILL, N. Y., held its first meeting of this school year on Sept. 15 at the home of Abram Kirker. From the Students' Arena, the Cobleskill High School paper, we note that it had a program consisting of a debate, humorous reading, speeches, etc. A debate was also held on the avening of Oct. 7th on the question: Resolved, that the white man was justified in driving the Indians from this country. The company officers are: Adelbert Hard, Capt.; Lamuel Dellenback, V. C.; Chester Barner, Sec'y; Lester Benedict, Treas; Charles Hess, Lib'n. The Arena is to be the organ of the company and will publish its monthly reports.—WHITE LILY COMPANY, No. 27. South Milwaukee, Wis., has elected the following officers: Sidney Hirshberg, Capt.; John Stuessi, V. C.; Howard Shoebring, Sec'y; Clarence Zieghan, Treas.; Willle Boyle, Lib'n.—COMPANY H, No. 50. Lamoni, Ia., has 16 members and a new secretary. The bareball team of the company had a successful season, winning 5 out of 6 games played.—WINDSOR PARK COMPANY, No. 38, Chicago, Ill., has elected officers as follows: Frank Royer, Capt.; Louis E, Van Reeth, Sec'y; Stanicy R, Easthope, Treas. This company is interested in electricity and sports of all kinds.—WILD WEST COMPANY, No. 16. Portland, Ore., has 6 members, and the captain is trying hard for more. George M. Schaefer is Capt.; Jack Hyrne, Bec'y; Waldemar Spliid, Treas.; Edward Fransen, Lib'n. It held a fine Halloween party at the captain's home. It has \$5.50 in the treasury and meets every alternate Thursday. We hope this company will try to get many new members and also try to form new companies, as American Boy Day will probably form one of the attractions of the Lewis and Clark exposition at Portland next year.—SALEM'S BEST COMPANY. No. 16, Benedict, Neb., has officers as follows: Goorge Harrington, Capt.; Clifford Sparling, V. C. and Sec'y; Bert Bet

#### HONORS FOR GROVER C. AKER

American Boy Day at the St. Louis Exposition. On the day that Grover returned to his home in Blair, Nebr., he was met at the depot by a large crowd of his friends who escorted him through the streets, the high school class to which he belonged giving the Blair High School yell and the citizens along the line of march joining in the demonstration by waving their hats and cheering. On the following Friday Grover repeated his oration, "The Coming Men." in Germania Hall at Blair by invitation of the citizens. The Blair Concert Band played for the occasion. The meeting was presided over by Superintendent H. H. Hahn of the public schools, who congratulated the hove and girls of Blair upon the fact that the people of Blair were so ready in show their appreciation of an honest effort on the part of any of their number. He said that the large audience which cause to

# SKATING

Winner of Twenty-two American Championships for Speed and Figure Skating

GEO. D. PHILLIPS

needed to improve his record. In order to compete in races it is necessary to use the proper skate, which is the long blade with a flat runner, about seventeen inches long, and on which the skater can ride.

It has been demonstrated, after a trial of two years, that the short skate cannot compete with the longer one.

Previous to 1883 all the championships held by me were won on short skates. In that year I was defeated by a man on long skates by half a mile in ten miles after I had broken my own record by a minute and a half. That was enough; the next year I used the long skate.

I found by comparison that the power was lost in the length of the stroke and the width of the path necessary when wearing a short skate. For example, with the long skate it is possible to make a stroke twenty feet in length in a path eighteen inches wide, whereas with the shorter blade it is only possible to get a seven-foot stroke while the width of the ice necessary to get the length of stroke was two feet each way, or a path four feet in width.

Having obtained the right kind of a skate the shoes are the next consideration. Don't

in width.

Having obtained the right kind of a skate the shoes are the next consideration. Don't get them too high, they bind the muscles of the calf and prevent their free play. When putting on shoes don't lace too tight, especially round the top of ankle, as by doing so you will prevent circulation and get your feet cold and numb, and quite unfit to cope with a pair of warm feet on an opponent.

When skating always keen warmly

opponent.

When skating always keep warmly dressed, especially when racing, as you are forcing your body against a freezing atmosphere, which will penetrate thin clothing.

PROPER POSITION OF FEET JUST BEFORE THROWING THE RIGHT FOOT FORWARD

attained a perfect balance, which is absolutely essential.

An interesting contest on ice is one between a runner in short-spiked shoes and a skater. Up to 100 yards the runner has the advantage, but past this distance the skater can generally leave his opponent behind.

Such a race will bring the followers of two separate events into direct competition. In these days of artificial and outdoor rinks, there is no reason why every boy should not be a first-class skater, and rec-ords be gradually lowered.

# An Elephant Hunt That Failed By CAPT. R. L. SPICER

OME years ago, on the expedition in search of big game in the northwest part of British South Africa. I was witness to a display of intelligence on the part of elephants which has caused me to hold that animal in high esteem for his "knowingness" ever since.

I arrived with my outfit at a native village in the country of the Bayeye just as the natives were preparing for a great elephant slaughter. They agreed to take me along on their expedition provided I would promise not to use my rifle. They did not wish to scare away many elephants for the sake of bagging one, because, as they assured me, it was their intention to capture a whole herd by their own peculiar arts.

We went some three miles away to the banks of the Zuga river, where there was a broad elephant trail leading down from the forest to the water.

All day the Bayeye worked at their ele-

All day the Bayeye worked at their elephant traps, digging great pits across the trail. There were three of these pits, and after they had been dug they were covered with a light roof of poles and twigs, and over this roof the sod originally taken up was placed with great care and then sprinkled with grass and leaves, so that only a close examination would show that the surface of the trail had been disturbed. It was a bright moonlight night as we took our stations, hidden in the bush on the leeward side of the trail, so that the elephants would not smell us out and take the alarm.

the alarm.

the alarm.

Finally there was the sound of heavy tramping in the forest, and down the trail came the herd for which we were waiting. It was led by a great bull elephant, who marched ahead, his giant tusks gleaming in the moonlight, his big body swaying as he went along, and his trunk always busy, now sweeping the ground and now held aloft and turned in different directions as if seeking for the scent of hostile wild animals or of that tame animal, man, their animals or of that tame animal, man, their greatest enemy.

The leader reached the edge of the first pit. Just as we expected to see him tum-

By GEORGE
D. PHILLIPS

ble in, he stopped suddenly and, raising his trunk, sent forth a terrific trumpet as a warning.

The whole herd stopped immediately and huddled together in great apparent alarm and confusion.

The old tusker, reaching out one foot, carefully tried the covering of the pit and found his suspicions were correct. Then, in the process of the best is trunk working rapidly and any of the sods and wattings until he had entirely soldy pace, trying a sprint when you feel strong.

ble in, he stopped suddenly and, raising his trunk werning.

SNOW SKATING

\*\*FYOU OOULD SKATE\*

without having to go a long distance to find ice covered pond or stream—in a word it you could alate right at continuous continuous continuous continuous content of the pit of its covering.

Leading his followers around the edge of the exposed trap, he proceeded to uncover would be derived from properly designed shates.

Leading his followers around the edge of the exposed trap, he proceeded to uncover the two other pits as he had done the first, and so got the entire herd without accident to the water.

In order to get around the pits, the herd had to make a new trail on one side of them, and this they did with a tremendous display of force—trampling down, twisting out by the roots, and otherwise destroying trees of considerable size.

Once on the river bank the elephants waded in until the water was up to their bodies. After drinking they began a regular frolic, squirting water with their trunks over themselves and their companions, evidently in high glee like a lot of

trunks over themselves and their companions, evidently in high glee like a lot of boys in swimming.

The natives were disappointed and disgusted at the outcome of their hunt, but being armed only with spears they did not dare to attack the big beasts in the open.

They began to lay another plan immediately for the capture of the old tusker. As for me, I was so impressed with the intelligence shown by the leader of the herd, and it seemed like murder to break in on their sport in the water with my rifle fire, that I did not shoot.

For an elephant trap to be discovered as

For an elephant trap to be discovered as this one had been was, the Bayeye told me, comparatively rare, and it was only done by the oldest, most experienced and most sagacious herd leaders.

PROPER POSITION OF PEET-WEIGHT OF BODY RESTING ON LEFT LEG

#### Electrical Fishing

Whittle a little rod, anywhere from ten to twenty inches long, paring it down so that it tapers gradually from the thickness of a leadpencil at the butt to a graceful point.

ful point.

Attach a bit of sewing silk a few inches long. To the end of this tie a tiny hook.

Now heat some scaling wax over the fiame of a candle, fashion it into the shape of a worm and work it over the hook so as to cover it just as a fisherman would cover a hook.

All you need now is the fish, and you will be ready to catch a mess. The fish can be produced in a moment by snipping a piece of thin paper into shape with sharp scissors. Tissue paper is best, and if you can get colored paper of different colors, so much the better. Cut out fish about an inch long, and scatter them over the table which represents your fish pond.

about an inch long, and scatter them over the table which represents your fish pond. Now, with a silk or woolen rng, rub the sealing wax balt briskly. Then lower it toward any fish you wish to catch, and it will bob up and hang on to the hook. You know why, don't you? The friction has produced electricity in the sealing wax.

#### "American Boy Day" 10 Cents

We are publishing in pamphlet form the entire proceedings in Festival Hall, the Pennsylvania Building and the Michigan Building, on the occasion of American Boy Day, July 5th, at the St. Louis Exposition. The pamphlet contains halftone pictures not only of the participants, but also of the great crowd of American boys and their friends that assembled on the steps of Festival Hall immediately after the exercises. It gives the speeches of all of the boys in full, as well as prize poems, letters from eminent authors of boys' books and messages from the Governors of states, with portraits of some of the Governors. It is a unique production and every boy ought to have it in his library. The price is only ten cents. Address The Sprague Publishing Company, Detroit, Mich.

pond or stream—in a word if you could shate right at home

ON SHOW

covered walk, or street, or field, or coast down hill or by "catching on"

Wouldn't you now! You would akate oftener; very much oftener, in fact. The reason you don't do it now, is, because your common akates are not adapted for use on smow, and this defect destroys the pleasure that would be derived from properly designed akates.

YOU OAN DO IT

and a lot more, by using Wide Runner Skates. They enable you to skate on snowy street or walk, as well as you can skate on ice with ordinary skates. Besides, they are perfect for coasting, and this exhibitanting sport is the most alluring one ever offered American young people.

Our many customers are all enthusiasts. Here are a few excerpts from the great number of testimonials received from Boys and Girls and Parents: Parents:

Parents:

"They are just the thing for skasing on either snow or ice."

"I can conscientiously say I got more than my momey's worth."

"My brother says he likes the Wide Runner Skates better than the old style and I agree with him.

"The Wide Runner Skates delighted my 18-year-old son extremely and he has had more fun with them than he ever had with either the roller or ice skates."

"I find they are just the thing to keep my boy off the river. He wore them more than his ice skates, and said he got more fun out of them as he could skate any place."

"Just what a boy or girl wants for quarting."

"Your snow skates Lil the bill entirely."

"They work fine, e-m on snow not more than an inch deep."

"We have received three pairs of your Wide Runner Skates, and were more than pleased with them. The pleasure derived from them by the little girls receiving them was almost unlimited "I found the Wide Runner Skates you sent me were just what I wanted."

"They were used on city streets and ice."

#### are fast becoming popular for THE BROWNIE SPRING SKATES

fancy and pleasure skating. The BROWNIE has merit over all other skates in its new Lock Lever Clamp and Spring. The spring prevents soreness and lame ankles; makes skating a greater pleasure; produces longer stroke, therefore faster and with less effort than one gets from the common or rigid skate. Also made in Hockey and side lever fastenings, ladies or gents, in nickeled, polished and satin finishes. If your dealer will not supply you, send direct to

BROWN SPRING ICE SKATE COMPANY, Webster City, Iowa.

nd I want to tell you, he's a good one."
"But not as good as you," answered Browning stoutly. "Why, I think—I think that I could beat him."

"Then why don't you try?" Davis de-

manded.

But Browning shook his head.

"No," he said, "I want you to beat him, if only to stop his talk."

Davis cut a figure eight and circled round his companion. He was smiling.

"Oh, let him talk." he said, "what difference does it make? It doesn't cost us anything, and besides, it adds to his happiness."

ness."
"But," persisted Browning, "he says he can draw circles all around you, and—"
"Well, perhaps he can."
"—and that if he raced you and lost, it would be owing to the fact that the race was not fair."

Davis dug the heel of his skate into the ice and stopped short.
"So Hamilton said that, eh?" he demanded.

manded.
"Yes," answered Browning.
"Who heard him say it?"

"I did.

"I did."
Davis nodded once or twice and stared off across the lake. The smile was gone from his face.
"I'd like to see him," he said at last.
"Here he is, now," cried Browning.
Coming down the road leading from the Ridgefield School, the center of a crowd of boys, was a tall, well-knit lad of seventeen. His hands were thrust deep down into his pockets, his cap was pulled far down over his eyes, his walk was slouching, and in the swaying of his shoulders there was a certain something that marked him out as a bully and a boaster. He was talking carelessly to the admirers grouped about him, but his gaze was on the lake, and as he saw Browning and Davis suddenly strike out and skate toward him, a

and as he saw Browning and Davis suddenly strike out and skate toward him, a hard, clittering light came into his eyes. But still he kept on talking.

"I can beat him," he said, "and do it easily; I can—"

Here he comes," whispered the awed voice of a small boy.

"Where?" asked the boaster indifferently, and the crowd suddenly paused. Then some of them went on till they reached the lake. There Browning and Davis were waiting on the ice.

Davis' face was flushed, and his breath was coming and going in little gasps. It might have been the exercise, or it might

have been anger.
"Where's Hamilton?" he demanded.
Nobody answered. Then the tall, well-knit boy pushed through the crowd and strutted out on the ice.
"Here I am," he said. "What do you want?"

"Yes."

"And that if I win, it will be because the race was not conducted honestly?"

Hamilton shifted uneasily.

"Who told you that?" he demanded.

"I did," answered Browning.

The smaller boys were thrilling with excitement, and the older ones, with an appearance of calmness, were strapping on their skates. Andrew Hamilton stared insolently.

their skates. Andrew Hamilton stared insolently.

"Well," he said, "what of it?"

"Nothing," answered Davis; "I only wanted to know. Three weeks from now the school will hold a carnival on this lake, and if you care to meet me, we can settle the question of supremacy. Professor Hendricks and Doctor Nelson will referee the contest. I do not think there will be any dishonesty in their decisions."

Hamilton smiled serenely.

"What distance?" he asked.

Davis hesitated. It was Browning who spoke.

Davis hesitated. It was Browning who spoke.

"How about a mile?" he asked.

The boaster nodded.

"Very well," he said, "it's immaterial to me. I can win at any distance. Do you care to bet?"

"To what?"

"Bet, Do you care to put up any money on the result?"

Browning shock his beed.

Browning shook his head. His face was

grave.
"My friend," he said, "you are a fresh-"My friend," he said, "you are a freshman here, and perhaps you do not yet understand our ways. But if you care to continue as a student at the Ridgefield School, never let the doctor or the professor hear you mention bet. Gambling is not tolerated here, and it will mean your expuision. Come, Dick." he called, and turning abruptly, he skated out on the ice. Hamilton stared after them until they were out of hearing, sneering and laughing. "Well," he said, "of all the milk-sops, they are the worst, I—I don't think I'll skate to-day. I'm going back."

Dangling his akates by a strap, he slouch-

ed off, and in silence the crowd watched him go. He was, as Browning had said, a newcomer. He had plenty of money, and a flashy, loud way of talking that had drawn the younger, and some of the older boys around him. He had tried to make the eleven in the fall, but he was headstrong, and inclined to disobey orders, and the doctor had quietly dropped him from the list of candidates. He had come to the school boasting of his ability as a guard or tackle; he was forced to sit idly in the grand stand and watch smaller boys win the honors of the games.

Those were sore moments for him, but he managed to conceal his anger. Davis had

Those were sore moments for him, but he managed to conceal his anger. Davis had beaten him for a place on the eleven, an it was against Dicky that his spite was mostly turned. And when he found that Davis was the acknowledged champion of the lake, a song of gladness broke out it his heart. He, too, could skate; he would challenge this young cock-of-the-walk to a race, and then make him the laughlur.

challenge this young cock-of-the-walk to a race, and then make him the laughing stock of the school.

He began training with a vim that was and worthy of a nobler cause. Each afternoon he was out on the ice, speeding across the lake, and breathing in the cold, pure air. The doctor, thoroughly disinterested, offered him suggestions that might have improved his speed, but with a toss of his head, Hamilton cast them aside. He was a skater, and, he loudly proclaimed, nobody could learn him anything.

"Teach would have been a better word," said the doctor mildly, and there the matter ended.

said the doctor mildly, and there the matter ended.

The day of the carnival broke clear and cold. Early in the morning, farmers and their families began to drive in from the surrounding country, and by noon, the little village of Ridgefield was filled to overflowing with a happy, joyous crowd. All interest centered in the race, and when the two boys, with the doctor and the professor appeared upon the scene, the spectators drew up on both sides of the course in two long, straight lines.

For awhile the boys skated slowly around

long, straight lines.
For awhile the boys skated slowly around the lake, limbering up their muscles, and then the doctor called them to the mark.
"Are you ready?" he asked.
They were to go straight across the lake a half mile, and return. Drawing a long breath they strained down over the mark.
"Ready," they answered together.
"Then go."
Like a shot Hamilton took the lead and

have been anger.

"Where's Hamilton?" he demanded.
Nobody answered. Then the tall, well-knit boy pushed through the crowd and strutted out on the ice.

"Here I am," he said. "What do you want?"

For a moment they stared at each other in silence. Then Davis skated a little nearer.

"I understand you claim you are superior on the ice," he said.

"Yes," answered Hamilton; "I claim it and I can prove it."

"And that you are willing to skate against me at any time?"

"And that you are willing to skate with a smile on his lips, Hamilton looked in slips, Hamilton looked in the rowd began to cheer. He intended to the the crowd began to cheer. He intended to skate Davis off his feet at the very outset, and bending forward, he drove his skates over the ice in short, sharp strokes. Faster and bending forward, he drove his skates.

"There Davis, Doctor Nelson and the professor found him. Davis stretched out his skate of his feet at the very outset, and bending forward, he drove his skates. "No hard feeling, is there, Hamilton?" he waster he went, and louder and louder prove the ice in short, sharp strokes. Faster and bending forward, he drove his skates. The boaster stared. He had expected to the met with ridicule, and as he looked into skeeping chord in his nature was stirred to find the crowd began to cheer. He intended to skate Davis off his feet at the very outset, and bending forward, he drove his skates. The boaster stared. He had expected to the met with ridicule, and as he looked into the chering. The sound sent a glow of pride to his heart. His boasting, brag-ging vanity was touched, and the nerves of his body thrilled with the excitement of the moment. Bending still lower, he superior on the ice," he said.

"You won honestly. I was will be because the with ridicule, and as he looked in the crowd began to come and louder and loude

Davis!"

The blood boiled in his veins. With a desperate effort he increased his speed rounded the half-mile mark, and started for home. He was skating his hardest and still the grim, silent figure behind held on. The wind stung his face, and for a moment he closed his eyes. When he opened them again Davis was skating at his side. Hamilton groaned.

"I—I'll win yet," he gasped.

"Certainly," breathed Davis. "Just keep on trying."

"I—I'll win yet," he gasped.
"Certainly," breathed Davis. "Just keep on trying."
Together they breasted the wind and struggled for home. But Hamilton was learning. Suddenly slowing up, he fell behind; then, changing his stride, he shot forward again in long, regular strokes. Davis was far ahead. Putting forth all his strength, little by little he crept up, until they were again skating side by side.

It was a gallant effort, and the crowd broke into a cheer. Someone was calling him by name, and digging his nails into the flesh of his hands, he tried to respond. But grimly, steadily, Davis held on. And then of a sudden, the fear of defeat swept through him, and a cold sweat broke out on his brow. Suppose—
Again, and once again, Hamilton ground his teeth and spurted forward, and as many times, Davis fell behind and then caught up again. It was nip and tuck, nip and tuck, and the crowd was in a delirium of excitement. Hamilton's legs were stiff and ssore, and he could hardly drive his skates over the ice. Davis was wobbling on his feet.

The finish line swept into view. Forward

The finish line swept into view. Forward went the two racers, battling with all their strength. The crowd was still cheering wildly, and discouraged, sick at heart. Hamilton listened. Had he no friends there? Was everybody against him? Was it all for Davis? And then, even as the question formed in his mind, the sound changed into a series of measured cries. "Davis! Davis! Come on—Hamilton! Davis! Hamilton!"

Why—why that was for him. A smile settled on his lips, and drawing in a rapturous breath, he threw himself for the line in one last effort.

last effort.

But his strength was gone. Nearer and

But his strength was gone. Nearer and nearer came the defeating grind of Davis' skates, and as a blinding shower of tears shot into his eyes, a figure flashed past him and fell into the professor's arms.

Hamilton was beaten. He had boasted of his conquering skill, and now, in reply, he expected nothing but jeers and laughter. Bending his head, he skated slowly through the crowd till he reached the lake shore, and then, dropping down on a bowlder, he began to unstran his skates.

There Davis, Doctor Nelson and the professor found him. Davis stretched out his hand.

"No hard feeling, is there, Hamilton?" he

asked.

The boaster stared. He had expected to be met with ridicule, and as he looked into the kindly faces of those about him, a sleeping chord in his nature was stirred to life. Again his eyes filled with tears.

"None," he answered, taking the hand held out to him.

"And I won honestly, didn't 1?"
Hamilton's face flushed.
"I beg your pardon," he said, "I made mistake. You won honestly. I was

# Uncle Sam's Santa Claus

Copyright, 1:01, by Waldon Fawcett.

DEAD LETTER OFFICE, WASHINGTON, D. C., WHERE THE SANTA CLAUS LETTERS GO

in his life written a letter to Santa Claus, or has watched a younger brother send off such a communication at Christmas time may have wondered what became of the odd message. It must have gone somewhere, of course, for it was dropped into the postoffice or a street letter box and was never returned to the writer. Yet no word came to tell of its being received by the person to whom it was addressed or by anybody else, and so the doubt could never be cleared up as to just what end the Christmas letter finally did come to. Many a lad has wondered about this in after years when he had come to doubt whether there really was any such thing as a Santa Claus.

Yet the handling of just such letters as these is one of the big tasks which have to be performed by the postoffice people during what is to them the busiest season of the vear, namely at Christmas time. It will doubtless surprise the boy who may think that no person but he and some of his playmates ever wrote to Santa Claus

ANY a boy who has at some time divisions of the Dead Letter Office to in his life written a letter to Santa which is referred all the letters which find Claus, or has watched a younger brother send off such a communiate Christmas time may have wonwhat became of the odd mesure or it was dropped into the postor a street letter box and was returned to the writer. Yet no came to tell of its being reduced by the person to whom it was ador by anybody else, and so the could never be cleared up as to just the postorial of the letters written or so badly mixed up that the postmasters and letter carriers cannot make out for whom they are intended. Along in December of each work aside for a time and devote her whole attention to receiving, opening and claus and addressed many of them to could never be cleared up as to just the map. the map.

The United States Government makes it return to the writer

the map.

The United States Government makes it a rule to endeavor to return to the writer any letter which cannot be delivered to the person to whom it is addressed but it is impossible for Mrs. Collins to send back many of these Santa Claus letters for the reason that most of the young folks who write them fail to put their address either on the envelope or in the letter. Some of the young people who write to Santa Claus enclose sums of money to indicate how for thankful they are for the presents they received the year before and extra effort is always made to return this money, but often the government is forced to keep it because it cannot find out who sent it. Sometimes Santa Claus mail includes letters from boys who tell of fathers out of work and other misfortunes which bode ill for a merry Christmas in their homes. When Mrs. Collins receives such a letter she feels the keenest regret that she cannot get the letter to Santa Claus and very often she seeks to find a volunteer Santa Claus,—some kind-hearted boy or man who is willing to do without something in order to send the longed-for Christmas presents to the young people who might otherwise be forgotten in the distribution of presents.

#### Distributing Christmas Presents In The Navy

On every one of the great warships in the United States Navy Christmas is celebrated in lively manner. The big event of the day is the distribution of the Christmas presents or rather the Christmas boxes from relatives and friends at home. Very often Christmas presents or rather the Christmas boxes from relatives and friends at home. Very often Christmas presents or rather the Christmas boxes from relatives and friends at home. Very often Christmas of miles from home, and perhaps even thousands of miles away from people who speak our language, but this is not allowed to interfere with a rousing celebration of Christmas just as it would be celebrated were the sailor lads back home in the land of the Stars and Stripes.

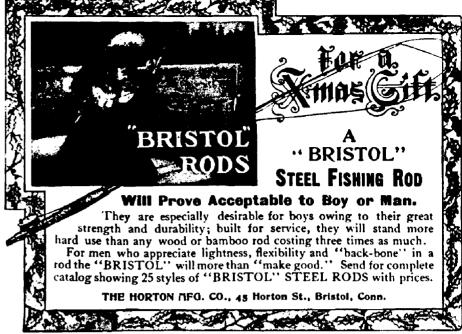

When a ship is stationed in some remote quarter of the globe quite a little time is of course, required for Christmas.

Now the United States power of the went of the day is the distribution of the Christmas boxes from relatives and friends at home. Very often Christmas powers have prevent in a country of the world have been people who speak our language, but this is not allowed to interfere with a rousing celebration of Christmas just as it would be celebrated were the sailor lads back home in the land of the Stars and Stripes.

When a ship is stationed in some remote quarter of the globe quite a little time is of course, required for Christmas presents a fit to a lad serving before the mast pack and mail their presents a full month or more before Christmas. Sometimes warships are in such out of the way places that mail can reach them only occasionally and then it may be necessary, if the presents are to be on hand for Christmas for nearly a score of years past, during which time she has handled pretty nearly half a million letters from young folks in the posterior of the proposed of the Postoffice Department,—the headquarters of the American postal exhibits the month of December carried more than 3,000 christmas boxes for the dender of our flag on the other side of the world.

# AMONG/THE BIRDS A SERIES BY CRAIG S.THOMS No.2-THE KINGBIRD.

NE cannot ride far along the public highways of the middle west, where wire fences abound, without seeing perched upon the wire a bird of slate-black mantle, white under parts, and with a band of white tipping the end of its tail. The size is about two-thirds that of the robin. It makes occasional lunges or short flights into the air, and upon returning, utters numerous quick, sharp notes in rapid succession. Such notes are also uttered by a perching bird when another passes on the wing. Two may often be seen in the air flying bill to bill, and gradually descending together with much twittering. It is the Kingbird or Bee Martin, and the notes are and very rapidly. NE cannot ride far along the public and very rapidly.

and very rapidly.

In all the eastern and middle states this is one of our most familiar birds, but it is especially abundant in the middle west.

The Kingbird stands as the type of a large family that is peculiar to America, just as the Robin stands as the type of the large family of Thrushes. They are called American Flycatchers, so named from the fact that they live on winged in sects, and catch them as they fly. In their short, quick lunges they are darting out upon some passing fly. The careful listener may hear their broad mandibles close upon their victim with a distinct snap, after which they usually return again to the perch. On account of this habit they are always seen in open places, where their quick eyes command a view in all directions. The wire fences which skirt the roads are ideal for their purpose, as numerous files are the unwelome attendants of overy passing team. What horseman has not noticed the Barn Swallows darting back and forth along the sides of his team, and wondered why they came so

Chicadee.

Chicadee.
The wildest, weirdest and most harshvoiced of this harsh-voiced family that has
come under my observation, is the Greatcrested Flycatcher. It is a bird of the treetop, frequenting the largest trees, in the
hollow branches of which it builds its nest.
Its notes when once heard are seldom forgotten. They give you the impression
either that something is wrong, or else
very amusing. You are in doubt whether
the notes are those of anxiety or irony,
whether a real battle is on, or a sort of
horse-play. Great-crest is about the sizof the Kingbird, but the colors are mostly
olivaceous, brown and ash. The crest is
not only quite long, but very frequently
raised, for of all the Flycatchers this one
is the most quarrelsome. It has the peculiar habit of placing a cast-off snake skin
among the materials of its nest. As most
small animals and birds are afraid of
snakes, this is doubtless for the purpose of
frightening away enemies.

frightening away enemies.

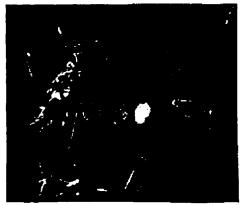

A better known member of this family.

bird, its upper parts are until I was well out of the way. Upon any ashy-olive; and instead of the pure white, its under parts are clear student its under parts are clear student. The white bar across the white bar across the side. The Arkansas Flycatcher is found only in the western United States, ranging only in the somewhat milder in disposition than its darker cousin.

Perhaps the best beloved of this family is the Phoebe, a dull, olive-brown bird that would attract little notice from any but bird-lovers. It comes very early in the spring and lingers until late in the fall. It is the bird which boys know as making its nest under bridges or on some rocky ledge beside the water. It also builds in barns, sheds and outhouses, for Phoebe has become semi-domesticated like the Swalbows and Wrens. It is named from its note, Pe-wit phoebe, which must not be confounded with the note of the Black-capped Chicadee.

The wildest, weirdest and most harsh-

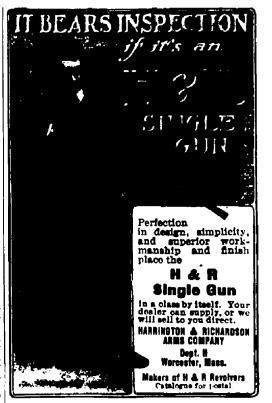

TINGBIRD'S MRSZ

various sorts, wool and even rags being used when attainable. It is placed in a crotch or saddled upon a bough. The eggs are 4-6, of a beautiful rosy-white, with lilac shades, and with brown spots or blotches.

The young are practically the same in color as their parents, though the sides of their tails are sometimes margined with white. At one of the lakes in northern South Dakota, a pair of these interesting birds spent most of the hours of each day during the first two weeks of August feeding their young. The young had left the nest and were almost as large as their parents. Their favorite perch was a dead branch that projected out over the water just in front of our cottage. Other perches they had at several places along the shore. As the young flew from one of these to the other, their spread tails were seen to be slightly notched in the center instead of square like those of their parents, and rimmed all around with a broad band of white, the tail thus presenting the appearance of a beautiful heart-shaped fan. Close examination revealed that the tails of the The young are practically the same in white, the tail thus presenting the appearance of a beautiful heart-shaped fan. Close examination revealed that the tails of the parents were also margined with a rather obscure band of white. This I have never noticed in any of the birds farther south. It was very interesting to watch the feeding process. The old birds would dash out over the water, gobble up a fly, and return to the young. Sometimes they would alight a little way from the young, when the latter would hasten to them with open mouth. At other times the insect would be passed to the young while the old bird hovered on the wing. Again, the old bird would alight on a distant perch, requiring the young to come to her. When two or more young perched on the same branch, they were not fed in regular turn. One that perched alone was fed four times, when it was joined by a second, which was fed three times, then each was fed twice.

If you pass your finger quickly in front of the young birds, even before they leave the nest, their heads move as though to take an insect, and their bills come together with a loud click, as do those of the old birds.

The Kingbird is often accused of eating

HE history of Major General Greene, is one of the many instances where self-culture has been the key to success to many boys whose means were limited, and of reward for diligent mental effort. From the lowest round of the ladder, unaided by others, he reached the pinnacle of Fame and, while on its dizzy height, which so often turns men's brains, he retained his strength of character, his innate humility, which Ruskin says, is the first test of a truly great man.

which Ruskin says, is the first test of a truly great man.

Nathaniel Greene was born in Warwick, Rhode Island, on the 27th of May, 1742, and was the son of Nathaniel Greene, a Quaker preacher, and his second wife, Mary Mott. His father owned a forge and a farm on which his son was taught to work. They were of illustrious ancestry, descended from Sir Henry de Greene, lord chief justice of England, in 1353. This, however, was a matter of small import to the sturdy young Vulcan who, as he vigorously struck the red-hot iron on the anvil, was doubtless more intent on hammering out his own destiny than relying on the by-gone deeds of his forer athers.

He was above medium height and of fine

more intent on nammering out his own destiny than relying on the by-gone deeds of his forefathers.

He was above medium height and of fine physique; his complexion ruddy, and mirth and intelligence beamed in his brilliant blue eyes; his frank countenance revealed a kind, genial nature which, however, could be sternly aroused under just provocation. He was fond of athletic sports, wrestling, running, leaping and other muscular exercises which the boys of today practice, and which prepared him for the hardships of a soldier's life. Full of fun and frolic, wherever there was merry-making, there young Greene could be found—and none enjoyed "tripping on the light fantastic toe," more heartly than he, but this sometimes got him into trouble. Worldly amusements were contrary to the principles of the Quaker preacher, consequently, he tried to check the ungodly behavior of his son, but neither remonstrance nor the whip had any effect. Nathaniel's lively disposition could not resist the temptation, and it was a hard matter for him to conform to the rigid discipline of his sect. Often when his father was wrapped in peaceful slumber, he would quietly let himself down from a window and hasten to some festive scene. On one occasion, a ball was given in the neighborhood which he attended, and all "went merry as a marriage bell," as the hours flew by on golden wings. It was just before dawn when he returned home and, by the light of the twinkling stars, he saw a figure, horsewhip in hand, walking slowly back and forth near the window through which he had left the house. Retreat was useless, for he knew that, sooner or later, the punishment would come, and as he was always as a series of the second of the second of the sustents of the punishment would come, and as he was always as a series of the second of the second of the second of the sustents of the punishment would come, and as he was always as a series of the second of the se which he had left the house. Retreat was useless, for he knew that, sooner or later, the punishment would come, and as he was always equal to every emergency, he thought of a plan whereby he could lessen the impending pain—some shingles were quickly slipped under his coat behind. If sound made known the trick, his father betrayed no knowledge of it, while to the culprit's satisfaction, the shingles answered his purpose.

culprit's satisfaction, the shingles answered his purpose.

There was, however, a greater attraction than love of dancing that drew young Greene to scenes of pleasure—it was the sweet smiles of a winsome maiden, whose love became the light of his life. Catherine Littlefield was born in New Shoreham, Rhode Island, and when very young went to live with her aunt in Warwick, where she met her future husband. She was of middle stature, light and graceful; her eyes gray, and her complexion fair. She was very lively and noted throughout the country as "a joyous, frolicsome creature;" and it was not surprising that gay young Greene fell deeply in love with her. They rode together, danced together, and after a happy courtship, were married July 20th, 1774.

rode together, danced together, and after a happy courtship, were married July 20th, 1774.

His youth was not wholly spent in frivolity for there was a serious side to his character. It was his father's intention that he should follow the occupation he pursued, and considered the elements of a common English education sufficient for that purpose; but Nathaniel had higher aspirations—he looked beyond the anvil and the plough. Alone, he mastered the difficult problems of Euclid, and acquired a knowledge of history, law, moral and political science. Every spare moment of the day, and many hours of the night were given to study. All the money he could raise, sometimes by making toys and trinkets, was spent for books and in the course of a few years he had a library of two hundred and fifty select volumes.

The beginning of his public career was in 1770, when he was elected a member of the Legislature of Rhode Island. The oppression of Great Britain had aroused the indignation of the American colonies and, in 1765, in the House of Burgesses of Virginia, Patrick Henry had boldly denounced the Stamp Act as a tyrannical law which they were not bound to obey. This sentiment quickly pervaded all the colonies, producing a determined spirit of revolt. Speeches, burning with eloquent seal were made; the press vindicated the right of the colonies to act; committees were appointed, and legislatures adopted resolutions condemning the Stamp Act, which imposed on the people taxation without representation.

Greene detested all forms of tyranny and quickly decided to draw his sword in defence of his country's libraty. This was a

people taxation without representation.

Greene detested all forms of tyranny and quickly decided to draw his sword in defense of his country's liberty. This was a violation of the creed of the Quakers, and when persuasion, even threats, failed to dissuade him from his resolution, he was excommunicated from the Society of Friends. Very different was the spirit of his patriotic young wife—she gave him every encouragement to serve his country.

After the battle of Lexington, Rhode Island raised a force of sixteen hundred men and placed them under the command of General Greene, who immediately conducted them to headquarters at Cambridge, near Hoston. In June, 1775, Washington had been unanimously elected commanderin-chief of the Continental army and on had been unanimously elected commander-in-chief of the Continental army and, on the 2d of July, he was received at Cambridge with great demonstrations of joy. General Greene welcomed him in a personal address, expressing in a most happy manner, his gratification at being associated with, and serving under such a leader. This was the beginning of a warm friendship hetween these two great officers which ended only with the death of Greene. Both possessed ardent temperaments, strong faith in the righteousness of their cause, and under the most trying circumstances and under the most trying circumstances displayed such noble heroism, their example gave hope and courage to the soldiers. It is the opinion of many that Greene, next to Washington, was the ablest commander in the American army.

They were together during the memorable retreat through the Jerseys, and in the successful movement against Trenton. December 26th, 1778, Greene commanded the division which Washington accompanied in person. At the battle of Princeton these illustrious officers were also together, and to their prudence and skill is due to a great extent the glory of victory. In these brilliant actions, General Greene's bravery was so conspicuous, he was complimented with the applause of his chief. Brighter lustre was added to his fame at the battle of Brandywine, where his quick interposition saved a portion of the army from complete annihilation. The behavior of his troops in withstanding the surrounding panic, and holding the British in check until darkness obscured the scene, was considered worthy the veternn armies of Europe.

While they were in winter quarters at Valley Forge, where the army suffered great distress from cold and want of provisions, General Greene's hardships were shared by his devoted wife, whose sunny presence enlivened the soldiers as well as himself. Once he wrote from Middlebrook: "We had a little dance at my quarters. His Excellency, (General Washington) and Mrs. Greene danced three hours without once sitting down. Upon the whole, we had a pretty little frisk." It is not an easy matter to associate the dignified commanderin-chief with such scenes, but he enjoyed the graceful minuet, and sprightly Mrs. Greene evidently still took delight in the merry dance.

At a time when the quarter-master's department was in an alarming condition. General Washington declared a reform could only be effected by the appointment of a quarter-master-general of skill and resources, whose high moral qualities would place him above suspicion and slander. Congress gave him the selection of such an officer in whose ability, fortitude, and integrity, from a long and intimate experience of them, he had the utmost confidence."

General Greene, who at first declined, but after a consultation with his chief, decided to accept, on

After the failure to capture Fort Ninety-

commanders reached there, the fort which was besieged by Marion and Lee, surrendered.

After the failure to capture Fort Ninetysix which had been reinforced by troops from Charleston, General Greene was advised to retreat again into Virginia, but nobly replied: "I will recover the country or die in the attempt!" A few months later, the famous battle of Eutum Springs took place, in which both sides lost heavily, but it was an American victory, as the British destroyed their stores and retreated the following day, leaving seventy of their wounded in the hands of their enemies. Congress honored General Greene on this occasion with a British standard, and a gold medal "for his wise, decisive, and magnanimous conduct, in the action at Eutaw Springs, in which, with a force inferior to that of the enemy, he obtained a most signal victory."

After this event, Marion was sent to operate between Santee and Charleston. Sumpter toward Orangeburg to intimidate the Tories, while Greene with eight hundred men advanced against Dorchester, from which the British quickly retreated to Charleston, when they heard of his approach. Charleston was soon invested, but the condition of the enemy became so straightened, they were eventually compelled to evacuate. The American commander entered the city in triumph and, as welcome shouts and grateful acclamations of—"God bless you! God bless you!" greeted him from the multitude that thronge it the streets, it deeply touched his heart an items flowed from his eyes. He had recovered the country and without dying in the attempt—while the British general marched back to Virginia to meet his doom on the fatal battle field of Yorktown.

It was in the southern department, where his judgment was untrammeled by others, that the great splendor of Greene's geniushone out. He began the campaign without an army, provisions or military stores, but the result sequel told the result. Even his adversary, Tarleton, who had cause to know him well, pronounced him on a public occasion, after a hard fought batt

when the war was over Georgia gave him a fine plantation a few miles from Savannah, called Mulberry Grove, which he made his home, after settling up his affairs in Rhode Island. Here, in the bosom of his family, after years of toil and hardships, he enjoyed the greatest of all blessings—peace. This happiness, unfortunately, was of short duration, for while walking with a friend over his grounds, he received a sunstroke which, in a few days, ended in death. At the age of forty-four years, on the 18th of June, 1786, the noble spirit of Nathaniel Greene, passed away. By request, his body was carried to Savannah for interment and, amidst universal sorrow, he was laid to rest with military honors. The North gave him birth, the South hold-his ashes, but to the whole country belongs. his ashes, but to the whole country belong.

ADVERTISE IN THE AMERICAN BOY

# PRANKS OF JIMMY LANE EARN YOUR

was due to the pranks he played on pupils and teachers.

One day a circus came to town, and, as is always the case, it was the greatest show on earth, the most colossal aggregation of the world's wonders in the matter of star performers and animals from every clime. The boarding-house was crowded, and Jimmy was kept so busy that he only had time to look at the procession as it passed, but he did not worry for his mother had promised that he might attend the show that night. So he hurried up his chores, and boiting his supper was off for the city of tents, with its music, brilliant lights, and immense side-show pictures in many colors. A playmate had told Jimmy in the afternoon of how the clown had offered ten dollars to any one who could ride a little mule once around the ring, and as he prided himself on his horsemanship he meant to have that ten dollars. But the boy had also told him of how the mule would lie down upon finding he couldn't throw his rider, and that was what troubled

JIMMY FELL DESPERATELY IN LOVE WITH A LITTLE BROWN MONKEY

Jimmy. Then he thought the matter over, and an idea coming to his busy little brain he decided that he would run the risk of getting his neck broken for that ten dollars. In looking at the animals in the menagerie. Jimmy fell desperately in love with a little brown monkey, and he felt that he would rather have it for a pet than all else on earth

When the clown made the proposition for some one to ride the mule, Jimmy, who never smoked, lighted a cigar, and stepping to the ring-side said, earnestly:
"Mister, if you will make it that little

brown monkey instead of ten dollars I will

"All right, my little man," agreed the clown, with a foolish chuckle, "any monkey you want."

Not being used to smoking, the boy was Not being used to smoking the boy was fearful that the cigar would make him sick, and while he kept it in his mouth he only gave a "puff" or two to keep it going. Then the clown gave him a lift, and Jimmy tightened his arms around the little animal's neck, and bent his toes like iron under its forelegs just as the mule threw his heels into the air. But Jimmy stuck to him, and the mule bushed and nearly stood on him into the air. But Jimmy stuck to him, and the mule bucked and nearly stood on his head, then finding that he could not unseat his rider started to lie down. But he never got as far as his knees, for Jimmy almost as quick as a streak of lightning thrust the cigar under his coat to a bunch of fire-crackers, tied loose to his suspenders, and the air was filled with the sound of a

Fourth of July celebration, about which time the lad stuck the red-hot end of the cigar to the mule's side and gave a yell like a Comanche Indian. The mule under the excitement of the noise of the popping crackers, the yelling, and the pain from the cigar, which Jimmy pushed against his side again for a second, forgot the balance of his part of the programme, and made a break for the dressing-room door; but his rider turned him, and away they flew around the ring, smoke coming in volumes from under the boy's coat and people yelling like mad. Not once but three times did the trick mule and his rider make the circle, and then went bolting into the dressing-room to the fear and consternation of a number of actors and actresses, who scampered out of the way in every direction. Jimmy's coat was blazing as he sli from the mule's back, and his shirt was burning, but he hastily tore off his coat, and slapped the fire out of his shirt with his hands, then leaving his burning coat on the ground he ran to the ringside crying victoriously and happily:

"Give me my monkey! Give me my monkey!"

The circus performer, who was to act

key!"
The circus performer, who was to act the countryman and ride the mule, went laughingly to the dressing-room and took off a dozen or more old coats and other clothing, and gave his fellow actors an amusing account of the affair, and all hur-

amusing account of the affair, and all nurried to the dressing-room entrance to see the rest of it.

"Hadn't you rather have the ten dollars?" asked the clown.

"No, siree, Bob!" answered Jimmy. "I want the monkey."

"Well, say fifteen," put in the ringmaster.

tle boy here."
"Why, I have no objections to that," answered the stranger. "I have

i might nurt myself with it or shoot some-body clse."

"All right, my boy," replied the lodger, a little uneasily. "I hope, though, you won't have one to-night."

"Not much danger, I reckon, but it's always best to be on the safe side, mother says."

Deal gently with her, Time; these many years of life have brought more and sleep on a chair in the office!"

says."

Jimmy then walked over to the wash-Jimmy then walked over to the washstand, and while the lodger wasn't looking, broke off a small piece of soap. Then the Bulght was lowered and they tumbled into bed. When the stranger's breathing grew heavy, and Jimmy knew that he wasn't far from slumber land, he began to grit his teeth. He kept his eyes closed, but he knew that his bed-fellow had raised himself on his elbow and was looking at him. Then Jimmy remained quiet and the man lay down again. The owner of the monkey

LIBERTY **WATCH** 

This is the genuine Liberty Watch, guaranteed to keep good time for one year. With proper care it will run for 10 years. We give one FREE to every boy or girl who sells twenty-five fascinating Port Arthur puzzles. You don't have to wait for the watch; we ship it with the puzzles.

# WATCH= FALL OF **PORT ARTHUR**

The Port Arthur puzzle is the cleverest game ever invented. It never grows old and interests everyone who sees it. Sell twenty-five puzzles, make 50c cash profit and receive a watch FREE. You get the watch at once and do not have to wait until the puzzles are sold.

#### FREE WATCH AND FIFTY CENTS IN CASH

By selling twenty-five Port Arthur puzzles at 10 cents each you receive \$2.50. For only \$2.00 we send you twenty-five puzzles and the Liberty watch. Send us the \$2.00 today and receive at once the watch and the puzzles. Hundreds of boys and girls are thus earning watches and cash prizes. Sample puzzle mailed for 10 cents.

IT PAYS TO WORK FOR US

LIBERTY MANUFACTURING CO.,

Liberty Street, Springfield, Mass.

then put a small piece of soap in his mouth, and in a minute or two he had a mouthful of lather. He began to make an unearthly noise, and when the man raised himself on his elbow again and looked at Jimmy, the little rascal rolled his eyes upward and sent a lot of lather halfway to the celling. The lodger sprang from bed, and without taking time to even slip into his trousers, descended the stairs three steps at a jump, and burst into the sitting-room with, "Madam, for goodness sake, get a doctor, quick! Your son's got one of the hardest its I ever saw a person have! He is foaming at the mouth like a mad dog! Hurry! hurry! for mercy's sake, hurry, or he will be dead inside of thirty minutes!" "He never had a fit in his life," smilled Mrs. Lane. "It is one of his practical jokes, and I am very sorry that he has disturbed you, and I shall see that he is punished for it. I will go up and see the little rascal right now."

"HADN'T YOU RATHER HAVE THE TEN DOLLARS?"

"Why, I have no objections to that," answered the stranger. "I have been to several places and they were all crowded."

"Very well, then, I can take care of you," said Mrs. Lane, as she hurried up stairs to tidy up the room a bit.

Jimmy looked the newcomer over closely, and decided that he didn't like nim.

When they were alone together in Jimmy's room, the latter said, seriously:

"Mister, I thought I had better tell you that I have fits sometimes. I might not have another in a month or two, and again I might have one to-night. If I do, don't he uneasy, but don't let me jump out of that window, nor get to that bureau drawer, for there's a pistol in there and I might hurt myself with it or shoot somebody else."

"All right, my boy," replied the lodger,

"I have fits bareful you as a punishment."

"All right, ma."

"Look here, Jimmy Lane," exclaimed his mother, in apparent indignation. "You'll stop playing your miserable jokes. This is twice you have had people flying down stairs on account of your fits. I shall punish you for it in the morning; and I'll tell you right now, sir, if you ever play another such joke I will certainly take that monkey from you as a punishment."

"All right, ma."

"You can go to bed, sir without fear of behind her, and donned his trousers.

"No, thank you," he answered, "but if you don't care, I will just put on the rest of my clothes and sleep on a chair in the office!"

years
Of life have brought more smiles with them

than tears;
Lay not thy hand too harshly on her now,
But trace decline so slowly on her brow
That like a sunset of the Northern clime
Where twilight lingers in the summer time And fades at last into the silent night, Ere one may note the passing of the light,

So may she pass—since 'tis the common lot one who, resting, sleeps and knows it

not.

#### THE NEW CARD GAME.

COYOTES.

In the southwestern portion of the United States coyotes still run wild in packs and are considered dangerous when traveling in large numbers. However, when captured young they can be tamed. The Indians of the Southwest are fond of them as pets and it is not unusual for one Indian to own several coyotes. The coyote is smaller than a woll, has a bushy tail, lives when wild in a burrow, and his bark is not unlike that of a dog.

#### BOYS OF NAPLES

A Series by Minnie J. Reynolds No. V-THE WATER SELLER

and lay it on top of two glasses. These will furnish the "insulation."

Warm the paper disk thoroughly on the stove till it is as dry as it can possibly be. Then lay it on the table and irrush it violently with a common clothesbrush. If you spread a piece of silk or a rubber sheet under it, so much the better, though it is not necessary.

The friction has made the paper electric. Lift it from the table, lay it on the tea tray and approach a corner of it with the knuckle of your finger or with a sharp make ten or even twenty-five cents a day. This is a good job, equal, through the difference in prices, to a dollar a day over here. So it is not stange that this is the only boy in the lot who has a smiling face.

Congratulations From South America

Angel Pradines, of Paysandu, Uruguay Republic, South America, writes:

"Dear Mr. Sprague:—Lama humble reader"

There is an excellent sulphur spring in Naples, will furnish the "insulation."

Warm the paper disk thoroughly on the will furnish the "insulation."

Warm the paper disk thoroughly on the stove till it is as dry as it can possibly be. Then lay it on the table and irush it is not necessary.

The friction has made the paper electric. Lift it from the table, lay it on the tea tray and approach a corner of it with the knuckle of your finger or with a sharp metal point. A spark will leap out from it immediately.

Now you have an electric battery in a most simple form. By rubbing the paper as often as it loses its electricity, it is possible to get enough sparks to lond a Leyden jar can be made by filling a tumbler half full with shot and sticking an iron or silver spoon into it. By letting the sparks from the tea tray leap continually to the spoon, the tumbler-jar finally will accumulate so There is an excellent sulphur spring in Naples, and boys sell earthen jars of its water from house to house, for a penny apiece, or two for a cent to regular customers. Such a boy, working for a padrone, or "boss," will get five cents a day. But when he understands the business and has saved enough to buy some jars of his own, he can go into business for himself, and make ten or even twenty-five cents a day. This is a good job, equal, through the difference in prices, to a dollar a day over here. So it is not a tange that this is the only boy in the lot who has a smiling face.

Republic, South America, writes:

"Dear Mr. Sprague:—I am a humble reader of the well beloved AMERICAN BOY and i wish to congratulate you most heartily in the name of the boys of this Republic for the great success you obtained on American Boy Day. How fortunate the boys of America are!"

it. By letting the sparks from the teatray leap continually to the spoon, the tumbler-jar finally will accumulate so much electricity that it will be extremely uncomfortable to get a shock from it.

HOW TO TIE KNOTS

This handsome young orang-outang arrived in the United States only a few months ago, having been brought here for Mr. Bostock the animal man. She is supposed to be five years old, is two feet high, and eats bread, milk, and tropical fruits. When full grown she will be the size of a human being. In Malay the name "orang" means a rational being and the name "outang" means wild.

#### A Baby Auto For Infants

An automobile only 4½ feet long and 1½ feet wide was a prize winner at a recent contest in England. The engines develop

2½ horsepower, and the machine will travel 15 miles an hour. The 5-year-old operator with his little sister is seen in the cut.

#### A Quickly Made Electrical Machine

Cut a stiff piece of paper into an oval or a circle of nearly the size of a common tea tray. Fasten to it two upright handles, one at each end, both made of paper, and attached by means of sealing wax.

Now, take any common tin tea tray that you may be able to borrow in the house and lay it on top of two glasses. These will furnish the "insulation."

Warm the paper disk thoroughly on the

No. 5—The Round Turn and Two Hitches

To make this knot you put the rope's end round the timber twice, then round the rope and through the last bight, then round again and through that bight.

WAS the last of March by the calendar, but one would have said from the dreariness of the landscape and the boisterousness of the wind that it was

boisterousness of the wind that it was midwinter.

The week before spring had promised us arbutus in its warm breath, but with one of those sudden caprices of nature that has made New England weather famous, old Boreas had swept out of the icy north, and the timid legions of Springtime had gone helter-skelter back to Virginia, where they had pitched camp, and decided to stay for another week before resuming the march northward.

Si Perkins, Nipper and the old shotgun

Si Perkins, Nipper and the old shotgun were on their way to the woods this cheerless afternoon and their destination was the laurel swamp. At least, that was the destination of the boy and dog, the old gun went anywhere it was carried.

Si was fifteen years old, Nipper was two, and the gun was probably fifty. But it was a gun and that was enough for Si. Nipper was a full-blooded white buildog, with a drooping lower lip and bloodshot eyes. He looked the very incarnation of moroseness, though really with his friends he was a very good-natured fellow, but his friends were few and far between.

Not that he was disliked, for many sought his friendship who were found wanting. The truth was that Nipper was exclusive. An aristocrat among dogs and not easily approached.

not easily approached.

not easily approached.

He had two passions. One was fighting, and the other was hunting rabbits. This latter achievement was considered quite remarkable by all who knew Nipper, as there is not one buildog in fifty that has nose enough to follow a track, and even that fiftieth one probably would not have the desire.

But Nipper had both the desire and the

He did not bark regularly, like a hound-but gave a queer little squeak every rod or two, half a whine and half a yelp. But there was no hound in the neighborhood that could bring the rabbits around as Nipper could, and no one knew quite how he did it.

As soon as the woods were in sight, Nipper struck into the swamp, while his master went around on higher ground, where it was letter walking, intending to penetrate the swamp farther on in the woods, but fate had not decreed that he should hunt rabbits that afternoon.

Si was trudging along with the heavy old gun slung in the hollow of his arm, occasionally stopping to listen for Nipper's peculiar whine, when he was brought up short in his tracks by a savage snarl in the bushes just ahead of him.

Filled with astonishment, and also a bit fearful, he swung the old shotgun to his shoulder, and took two or three steps in the direction from which the snarl had come. It had sounded like a cat, and he did not think it could be anything larger.

A little scrub spruce stood between him and the growling stranger, and he steened one side of it and so the heter citizene of As soon as the woods were in sight. Nin-

A little scrub spruce stood between him and the growling stranger, and he stenned one side of it and got a better glimpse of an old log, one end of which had been hidden. There on the farther end of the log he saw an object that made the gun very unsteady in his hands and also made him long fervently for Nipper. That worthy canine was not afraid of the devil himself.

Crouched on the farther end of the log, about twenty feet from him, Si saw a catlike creature, a little larger than Nipper. There was a snarling visage bristling with whiskers, and dotted with two glaring, yellowish green eyes, while two powerful paws held a partridge which the cat was eating. Instinctively the old gun went up, but Si did not know whether it was loaded with bird shot, or something larger. It would be dangerous to trifle with such a customer as this. In the second or two that he thus hesitated the cat decided for both of them for, crouching low upon the log, he suddenly hurled himself like a stone from a catapult, directly at the boy's head. His back was slightly arched, and his legs were stiff under him, and not drawn up as a domestic tat's would have been. Si noticed this lowed its supper.

town. The cat measured thirty-five inches from tip to tip, of which six were tail. Its weight was thirty-two pounds, and its strong white claws when bared, were something to admire, and not to wish for a close acquaint-

The wild cat was yellowish gray, almost The wild cat was yellowish gray, almost tawny, with long, dark stripes down the back and fainter ones on the sides and limbs. Its tail was ringed with black, and had a black tip. Its coat underside near the skin, was soft and thick, but outside this was longer and coarser hair, tipped with black. The following day Si took the big cat to the county seat and got five dollars bounty on its scalp and was also offered five more for the pelt, but he would fered five more for the pelt, but he would not part with that trophy as it was part of the story

of the story.

Late in the afternoon he went to the old log again and this time he kept Nipper at his heel. The dog sniffed excitedly about the log, and soon discovered an opening at one end, which the boy had overlooked. With his usual fearlessness he plunged into the cavity, whining and yelping. A moment later Si heard a piteous catlike cry from the interior of the log and the sound of Nipper's jaws crunching something.

"Nipper, Nipper, come out here," called

"Nipper, Nipper, come out here," called the boy, but Nipper was quite well suited where he was, and continued his fun in-

Finally by dint of coaxing and threats, Nipper appeared, bringing a chunky bob-tailed kitten in his jaws. This he laid down at his master's feet, as much as to say,

kitten.

Luckily for the little stranger there was a family of kittens at the house that had made its appearance a couple of weeks before. So after it was dark Si put the wild kitten in with the rest, feeling sure that if he could get the old cat to suckle it, she would own it after that.

At first she was inclined to cuff and spit at the intruder, but seeing how ravenous it was, her maternal instinct got the better of her, and the little bob cat was al-

was slightly arched, and his legs were stiff under him, and not drawn up as a domestic cat's would have been. Si noticed this much, but did not wait to take further notes. For a second the sight gleamed between the eyes in the whisker-fringed face, and then he pulled the trigger.

The gun had been loaded for some time, and the recoil was terrific, and as Si was a little off his guard, the old gun sat him down in the snow in a manner that hewildered him for a moment. But when he arose and took a hurried inventory of himself and his surroundings, a heast, the size of which made his nerves tingle, was lying dead at his feet.

He poked the animal with the muzzle of his gun, standing ready to use it as a club; but it was quite dead.

At the sound of the gun Nipper came running to his young master and sniffed the

The head was also more blocky and brutal than that of the domestic cat, giving it a more ferocious and determined look.

The kitten early showed signs of its wild nature, and soon gained the name of "the Scrapper." When it was three months old it had driven all the rest of the kittens from the box in which they were kent and "the Scrapper." When it was three months old it had driven all the rest of the kittens from the box in which they were kept, and even its foster mother was half afraid of it. It would sit upon its stub of a tail, with its back against one corner of the box, thus protected from behind, and glare around with its wild, yellowish eyes, daring any who cared to do battle with it. Nipper early took a dislike to the bob cat, and it was only by the greatest care that Si prevented his killing the little fury. He always looked at it suilenly out of one corner of his eye, when he passed and if no one was near, the cat had to take refuge on a beam overhead in the shed.

Thus it grew during the first summer, half domestic, but still retaining many of its wild characteristics, to be twice the size of the domestic cats, weighing in the autumn about twenty pounds.

It did not like to be handled, but would sit upon one's knee, if you kept your hands off it, but any handling it quickly resented It did not purr like the domestic cat, but had a queer staccato note, like a very gruff purr, broken up into quarter notes, with a quarter rest between each.

The gait of this wild cat was also peculiar.

It did not jump fust like rabbit, or trot

The gait of this wild cat was also peculiar.

It did not jump just like r rabbit, or trot like a domestic cat, but would give a series of hump-backed, stiff-legged springs, bringing down all four of its paws in nearly the same spot. Its broad pads left a large track for so small an animal. It had no medium gait, and either jumped or walked. Even during the first winter it showed evidences of returning to its wild state, for it went to the woods several times and once was gone for nearly a week. But one wild night when the wind fairly shrieked, and the storm beat furiously against the window the family heard a strange, wild crylike a piteous cat call, only more guttural, and there was "the Scrapper" at the window, come back for a dish of milk, and a chance to doze by the fireside.

With the very first suggestion of spring he took to the woods, and was never seen about the premises after that except during extreme weather in the winter.

He was often seen in the woods near the house and was shot at several times by boys in the neighborhood, and although Si had several chances to shoot him, he always remembered the bit of a bob-tailed kitten, and never could quite press the trigger, although he knew there was a five dollar bounty awaiting him at the county treasurer's office.

But the second summer something did happen that made Si change his mind about the cat.

It was about the first of October, and Si

the cat.

It was about the first of October, and Si It was about the first of October, and Si and Nipper had had several famous coon hunts. Coons seemed to be very plentiful that fall, and they had taken two the first night and one the second. This made them all excitement and everything that treed, was a coon for the time being.

So one night when Nipper treed something in the orchard behind the house, and summoned his master from sleep, with his queer whining yelp. Si's only thought was of coons.

He dressed hurriedly and taking a lan-

He dressed hurriedly and taking a lantern went to Nipper's assistance.
He found him yelping at the foot of an old sweet apple tree. Si at once put on his climbers and started up the tree to shake the coon down. But as he started to shin up the trunk, Nipper caught him by the trowsers leg and tried to pull him back, at the same time whining, and acting as though he did not want him to go. This was very queer in Nipper for he usually urged his master on with impatient yelps. yelps.

"What's the matter with you, Nipper?" asked the boy. "Let go my pants. Let go, I say," but Nipper still held on and got a box on his head for his pains, and Si went up the tree without further hin-

At first he could see nothing of the coon, but finally located nin: a few feet above.

At the first quiver of the tree as he started to shake, the coon landed upon Sis back, with a snar! that made the boy's hair stand up, and began ripping open his coat with his claws, that tore through the strong garment as though it had been made of paper.

strong garment as though it had been made of paper.

Si never knew how he got down from the tree. He had a faint remembrance of catching at a limb or two, and sliding down the trunk like a streak, with the ripping, spitting snarling fury still on his back.

The moment his feet struck the ground with great presence of mind he threw himself on his stomach, and cried. "Take him. Nipper, take him, quick."

Nipper never needed a second invitation of that kind, and Si's words were hardly out of his mouth, when he heard the dog's jaws click. He had missed, but struck again. This time he caught the furious stranger in the shoulder, but the muscle turned under his teeth and he got only a mouth full of fur.

Then there was a short scuffle during

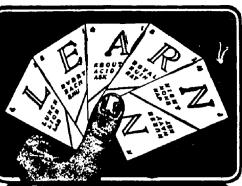

mouth full of fur.

Then there was a short scuffle during which Nipner's jaws clicked several times, but his antagonist seemed to be quicker than he and cluded him.

Then the strange acting coon sprang upon

the wall near by and fied to the woods, with Ninner in hot nursuit.

SI picked himself up and but his hand. upon his back, which smarted strangely. His coat, vest and shirt were all ripped open and dripping wet.

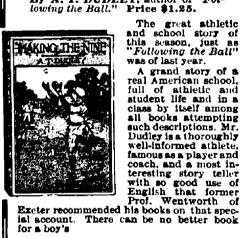

#### THE IDEAL GAME

SPELWEL is an exciting and fascinating game that furnishes innocent fun for everyone, tests your ingenuity and improves your spelling. Any number may play—the more, the merrier. Each player is always learning something. In fact, the educational feature of SPELWEL places it on a plane above all other games. Ask your dealer, or the set of 112 cards, postpaid, 50 cents. Circular free.

dripped freely.

If Nipper had been a few seconds later his back would have been ripped to shreds. After a few minutes Nipper came back from his pursuit, bristling and greatly excited. When Si held the lantern down to see if he had received any wounds, he saw that his muzzle was covered with cat hairs. "Its that blamed 'Scrapper,' " groaned Si. "The next time I get a squint at him, if he don't get a charge of shot then I'm a booby."

anu got a good idea of what the cat would do if cornered in a fight.

It seemed to anger him to the verge of madness to have the dog following him. He would sit upon his stump of a tail and beat the air with his forepaws, and howl and snarl like the feline fury that he was. Such howls of rage as he gave made Si's skin creep and he wondered what would happen to Nipner if the infuriated cat should once turn upon him. But Nipper would have been glad to have seen him coming. None of this cat hunting was successful, though, and the winter came and went.

One day late in March the dog went into the woods to run rabbits on his own account, his master being busy in the sugar camp. The dog hoped the boy would hear him running and get his gun and come out. He had often enticed him to the woods in this way.

The dog trotted along in his sober management will he received the stall her winter the management in the seached the all less with the seached the all less

in this way.

The dog trotted along in his sober manner, until he reached the old log where he and Si had found the kittens. There seemed to be a strange fascination about this log for him. Somehow his fate seemed to be strangely mixed up with this fallen tree.

He snifted at the hole that Si had chopped in its side, to find the kittens he had killed, but there was nothing interesting there.

Then he heard a curious movement in a tree near by and looked up. There upon a limb of a beech, about ten feet from the ground was his enemy. With his back hunched and his countenance glaring, as only an infuriated cat can glare.

The cat was fully as heavy as the dog and his muscles were like steel. Nipper

and at once recognized in the moisture the taste of blood.

He ran into the house and called his mother to dress his wounds. His back was a sorry looking sight. There were scratches on it six inches long, from which the blood dripped freely.

If Nipper had been a few seconds later his back would have been ripped to shreds.

up at his enemy, returning the cat's look of hatred with interest. There was a spit and a snarl from the tree. Nipper answered it a snarl from the tree. Nipper answered it with a deep growl, at the same time partly rearing upon his hind legs and whining in his eagerness to get at his enemy. Then the cat sprang, and Nipper settled upon his haunches to receive him.

Nipper was bowled over, like a ninepin, but he got the grip he wanted the first time he struck.

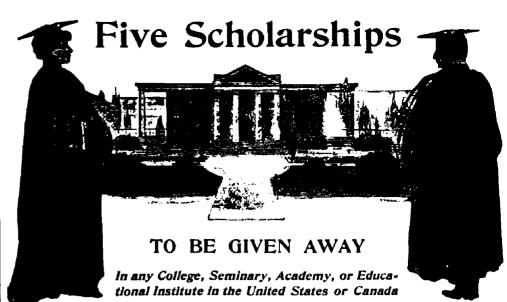

Nipper was bowled over, like a ninepin, but he got the grip he wanted the first time he struck.

His jaws closed fairly upon the cat's throat. He shut his eyes and a heavenly smile overspread his homely dog countenance. This was the fight for which he had been born. It had been bred in the blood for generations. His sires had held on to the finish and he would do it now. The great cat's forepaws fiew like lightning across his back, while his hind ones tore away at his belly. Nipper knew that his fine white satin coat was hanging in shreds upon his back, and that his vitals would soon be dangling upon the ground. But he only closed his jaws the tighter, and the smile upon his countenance even grew more benign.

He could hear a strange gurgling and rattling in the cat's throat that filled him with joy, and made his blood dance. He did not feel the pain of the terrible laceration he was receiving. He only knew that his teeth were sinking deeper and deeper in the cat's throat, and that the gurgling had nearly ceased.

Would he let go? Never. Men had burned him with hot irons, and clubbed him with sled stakes to break his hold upon their dogs, and only one thing had ever caused him to break his grip, and this was a pinch of yellow snuff blown into his nostrils. This would not happen today, and even when his body had grown cold his jaws would grip the cat's throat like a vice. Si found them there two days later, when he went to look for Nipper. The snow was crimsoned for yards around, and there were evidences of a desperate struggle, but the bulldog's jaws were still frozen to the cat's throat, and they were both dead.

"Poor old Nipper." sobbed the boy as he pried open the dog's jaws, and stroked his satin head, "you were game to the very end."

On or before the first day of September, 1905, we are going to award Five Scholarships to the five young persons who send us the best essay of not more than 700 words on the "Discovery of America." The winners can make the choice of the educational institute which they prefer, whether it be a regular college, a scientific institute, a school of dramatic art, oratory or music, a theological seminary, a commercial school, a school of art, law, medicine, dentistry, or household economics. Every expense for the full course will be paid, tuition, text-books, board, clothing, transportation, etc., or if the winners prefer, we will give each of them \$1,000 in cash every year for four years. There are many, no doubt, who are not fitted at present to enter college, if so, \$1,000 in cash every year for four years will help fit them and they can save enough in the interim to later on pay their entire expenses.

This competition is open only to those who secure twenty subscriptions for our high-class woman's magazine, "Modern Women," at the regular subscription price of 50 cents a year, and, as pay for securing these subscriptions, we will allow the unheard of commission, in this competition only, of 50 per cent. That is, each competitor is to secure twenty subscriptions, at 50 cents each, and keep 25 cents out of each subscription.

In this announcement we state that the competition will close September 1st, 1995. We reserve the right, however, to close the competition at any time before that date, by giving each competitor, at the time, forty days' notice in writing of our intentions. Remember, it is to the interest of everyone who is interested in this offer, to start to work at once, otherwise they may be too late.

Don't put off entering this competion until tomorrow, but do it now while you are reading this announcement. Make up your mind that you are going to win one of these prizes, put your whole heart and soul into the work, and await the outcome. I don't think you will be disappointed. If you intend to compete,

HE SCREAMED IN HOPE THAT THE MEN

There was no more hesitation, and soon There was no more hesitation, and soon the boys were rowing the boat in a wabbiling course toward the end of the island, where a black spar buoy was leaning toward the open sea in the rush of the outgoing tide. The sun was beginning to drop behind the western horizon before the boys realized they had gone far toward the lighthouse and a long way from home. "Just see, George!" exclaimed his companion. "See how fast you are rowing. Even Captain Ben can't row so fast."

When George looked up he saw that they had already passed the black buoy and were in the channel. The tide was hurrying them out to sea.

them out to sea.

Perhaps if George had not been so frightened everything might have been all right,
but when he saw their predicament he pulled blindly with all his strength on one oar.

The blade turned in his hand and slipped

The blade turned in his hand and slipped suddenly out of the water into the air.

George lost his balance and fell into the bottom of the boat—the oars were wrenched from his hands and were soon floating away far out of reach.

"How are we going to get back?" asked Edward, trying to speak in a firm, brave voice.

"Perhaps a fishing hoat will come in and take us home." George suggested, cheer-fully. But no fishing vessel came, and darkness had completely shut them in when tide had hurrled them as far as the lighthouse

George thought of the coming danger, when the tide had taken them out where the waves were higher and the little rowheat would probably fill with water and go down. It seemed to him that nothing would prevent them from being swamped. He screamed with all his might, in hope that the men in the lighthouse would hear him,

to guide them.
"I think we were very lucky," said Edward, when they arrived in sight of their cottage. And George fully agreed with him.

#### The Game of Duplicate Letters

Here is a game that can be started at a moment's notice anywhere, and that will make fun for many a quarter of an hour that otherwise would lag.

that otherwise would lag.
One girl propounds a question, such as:
It I were a lamp-post, what would you do with me?"
The girl whose turn is next must answer with a sentence that shall have at least three words in it that begin with the same letter as the noun "lamp-post." For instance, she might reply:
"I would leap loyally to light you."
The next girl may ask:
"Will you lend me a dollar?"
The reply may be:

The reply may be:
"I dare say I would donate it, if I were to to dolefully poor."
The answers that are made on the spur that are often as ludicrous that

of the moment are often so ludicrous that they would make an owl laugh.

#### The Vanishing Coin

This is a clever trick, and may be done with good effect in the following manner: Previously stick a small piece of white wax on the nail of your middle finger, lay a ten cent piece on the palm of your hand, state to the company that you will make it vanish at the word of command—at the same time observing that many persons perform the feat by letting the coin fall into their sleeve; but to convince them that you have no recourse to any such deception, turn up your cuffs. Then close your hand, and by bringing the waxed nail in contact with the coin, it will firmly adhere to it. Then blow upon your hand, and cry, "Begone!" and suddenly opening it and extending your palm, you show that the coin has vanished.

# MY FOUR YEARS AT WEST POINT

A GRADUATE

WEST POINT SHELTER TENT DRILL

#### (BEGUN IN SEPTEMBER)

#### CHAPTER VI-Continued.

EANWITTLE, I observed quite a number of cadets in the street, sweeping in front of their respective tents. I was just beginning to think it odd that the spasm of tidiness should be so general, when a head appeared at the door of our tent. Immediately after, a voice thundered: "Who is orderly in there?"

We jumped to attention, and, as soon as

We jumped to attention, and, as soon as Silkins had swallowed the lump in his throat, he answered in a meek voice: "I

am. sir."
"Well, get a broom and step out lively of your tent. What are you good for?"
"I don't know, sir."
"Neither do I. Now get to work, and sweep everything up into a pile in the middle of the street."

dle of the street.

LIEUTENANT'S TENT

By this time. Silkins was hard at it with his broom. Although we saw no possible way of helping him, since we had no brooms, we "stepped out" also, posed brooms, we "stepped out" also, possed as very awkward ornaments, and continually got in Silkins's way. It was not long before the captain observed us, and we

went down to the ice-cooler for a drink of water. Fletcher and I sat on our locker contemplating the heap of rubbish in the street. What a fine pile it was, and how it would please the captain!

Our meditations were rudely interrupted by Smith, the captain, who wanted to know where the orderly was. I volunteered that he had gone after a drink of water. This information evidently made the officer aperry but he merely scowled. water. This information evidently made the officer angry, but he merely scowled, and, leaning against the neighboring tent-pole, waited for Silkins. In the course of a minute, the latter came trudging back with a dipper-full of ice-water for his thirsty classmates. As he neared the tent, Smith jumped out at him and gave him such a fright that Silkins dropped the dipper to

the ground. Our unfortunate tentmate received a fearful raking over the coals, for leaving his post of duty before the police detail had been turned in. The captain scolded him because one of his shoulders was always higher than the other. He emphasized each one of his remarks hy a vigorous

always higher than the other. He emphasized each one of his remarks by a vigorous tug at the part to be braced. Poor Silkin: looked so uncomfortable that we could not help pitying him. I was sure he received the severest jumping of his life. Smith next showed his victim how untidily he had swept up. There were two large pins (familiarly known as laundry spikes) and a tooth-pick lying in front of the tent. Smith nointed out these, with a sneer, and denounced Silkins because he had swept all the gravel into the nile had swept all the gravel into the pile. Gravel was scarce, and he did not propose to have a hole in the ground right in front of our tent. So our roommate had to analyze the cone of dirt, distribute the

gravel evenly over the ground, and, at the same time, gather the pins and the toothpick into a new pile.

This was our first experience with a police call. We quickly learned to turn out promptly at the first call and to maneuver our brooms until the command, "Turn in, police detail," was given. There was one police call in the morning five minutes after reveille, while the other was at 4 in the afternoon. Three or four men from my class and one from the third were detailed each day. Their duties were to sweep in front of vacant tents and to put them in order.

we had not as yet joined the battalion.
All our formations and drills were separate.
We ate at the same table, however, with

We ate at the same table, however, with the corps. Immediately after our arrival in camp, the cadet officers of the first class chose the men they wanted at their tables. I could see that our advent at the table with the cadets was highly pleasing to the yearlings, who up to this time were obliged to pour water for the whole table.

I was assigned to the table of the ranking licutenant, who, by the way, was the cadet officer in charge of us. Neither of my tentmates sat at the same table. In all, there were four plebs at my table, one of whom sat at the foot and dealt out the soup and coffee. The other three "ran a detail" in pouring ice-water, which was no small task, especially during the hot July weather. Their work was regulated like the orderly business, as the water-pourer went off duty after Sunday morning inspection.

after Sunday morning inspection.

About this time we began to receive our cadet uniforms. Each consisted of one dress-coat and eight pairs of white trousers. dress-coat and eight pairs of white trousers. A considerable number, particularly those of the first and second drill squads, had already obtained their uniforms. We expected to furnish a detail from our class for guard on the succeeding day (the Fourth of July), and these fortunate men were extremely busy. They had been furnished with cards on which were printed the sentincls' orders, with the rule for challenging and advancing different parties that might cross a sentincl's post. The men so detailed spent every spare moment in pol-

might cross a sentinel's post. The men so detailed spent every spare moment in polishing up their guns and accourtements. It puzzled me at first to note how anxious some of the cadets were to have us go on guard. I noticed it particularly at the table. Several times I heard the question asked of the cadet officer over me, "When are you going to put those plebs of yours on guard?" I learned that as soon as we began walking guard the first-class prion guard?" I learned that as soon as we began walking guard, the first-class privates would be excused from sentinel's duty, and two of their number would be detailed each day as officers of the guard. At that time, two cadet officers were detailed and the privates walked guard, which, after the novelty has worn off, becomes exceedingly tiresome.

romes exceedingly tiresome.

I had not received my uniform as yet.

Nearly every day, some one had been turned out to go over and try on his uniform

companies. At the first drum, we rushed from our tents to the parade ground, where we stood around in small groups until the second drum beat, when we all fell in. The drillmasters fell in on the general parade ground in front of camp, with much more dignity, as a matter of course. The squads were now rapidly consolidating, and the number of drill-masters correspondingly lessened.

As soon as the roll had been called, we

As soon as the roll had been called, we were divided into squads and marched across sentinel's post number five, the squad master saluting. The drill takes place near the shady grove in front of the chapel. In our maneuvers, I could catch an occasional glimpse of the Hudson dreamly flowing through the mountains on its long journey to the sea. Now and then I observed a cadet with a lovely young lady sauntering toward Flirtation Walk to bask for the summer's afternoon in the smiles of the fair city coquette by his side. But what right has a pleb to be sentimental? The sun is an hour lower in the heavens, and the shadows are beginning to creep up the As soon as the roll had been called, we

sun is an hour lower in the heavens, and the shadows are beginning to creep up the side of Cro' Nest. The drill is over, I am tired, warm and dusty, and I have half an hour before parade.

On hop-nights (Mondays, Wednesdays, and Fridays) parade was at 6 p. m. On other nights of the week it was at 6:30. There was late parade the first day we were in camp. We were formed in the usual in camp. We were formed in the usual manner and at the usual place, at parade time, and marched out on the plain near camp. Instead of drilling as squads at this camp. Instead of drilling as squads at this formation, we were maneuvered in two squads and exercised in the school of the company. During the whole time of our drill, the parade of the battalion was in progress. I could hear the band playing and the commands of the Adjutant and those of the Officer in charge putting the corps through the manual of arms.

We were marched back to camp across sentinel's post number five, and drawn up

We were marched back to camp across sentinel's post number five, and drawn up in rear of the battalion, to hear the orders for the morrow. There was no doubt about this Adjutant being a good one, but from my position I could understand but little of what he said. As the next day was to be the Fourth of July, certain privileges were to be granted to the members of the corps, and there was to be no drill except the usual parade and guard duty. In addition, exercises were to be held in front of the library to commemorate our nation's anniversary. During the reading of these orders, we were at a "parade rest," the same as the battalion.

orders, we were at a "parade rest," the same as the battalion.

After parade, and the marching of the battalion to the rear of the company officer's tents, to hear the reading of the delinquencies, we were drawn up in rear of the right flank also to listen. Our delinquencies were not read by the Additional Councils. quencies were not read by the Adjutant, as we had not as yet joined the battalion. I suppose the object of our attending this "celebration" was to give us an idea of the things that could be but shouldn't be

ally got in Silkins's way. It was not long before the captain observed us, and we "stepped out" into the tent a trifle livelier than usual.

Silkins having swept everything visible, including the gravel, into a large pile, put his broom against the flap of the tent, and went down to the ice-cooler for a drink of water. Fletcher and I sat on our locker contemplating the heap of rubbish in the street. What a fine pile it was, and how it would please the captain!

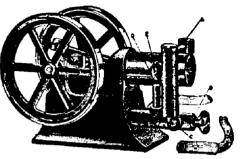

Our meditations were rudely interrupted by Smith, the captain, who wanted to know where the orderly was. I voluntered that he had group after a drink of the captain observed us, and try on his uniform or his uniform or bring his clothing to barracks. I was in the third squad, a higher one than those or bring his clothing to barracks. I was in the third squad, a higher one than those or bring his clothing to barracks. I was in the third squad, a higher one than those or bring his clothing to barracks. I was in the third squad, a higher one than those or bring his clothing to barracks. I was in the third squad, a higher one than those or bring his clothing to barracks. I was in the third squad, a higher one than those or bring his clothing to barracks. I was in the third squad, a higher one than those or bring his clothing to barracks. I was in the third squad, a higher one than those or bring his clothing to barracks. I was in the third squad, a higher one than those or bring his clothing to barracks. I was in the third squad, a higher one than those or bring his clothing to barracks. I was in the third squad, a higher one than those or bring his clothing to barracks. I was in the third squad, a higher one than those or bring his clothing to barracks. I was in the third squad, a higher one than those of the tent at the third squad a higher one than those of the tent have been a new expectation, the third squad a new expectation.

Our 4:30 drill passed off with the usual since the third squad and passed off with the usual state of our trimmings and put awa

We plebs were left to ourselves, and taking a root of the properties in "running it" down to the Falls. sion of the captain's periods, and then dashed back.

As we had not fallen in yet, I rushed up to him and asked what had happened.

"Nothing," he replied, "but some idiot knocked one of our towels down on the eloquence.

"I am sorry," I said; "perhaps it was the name wind."

Just then I happened to remember that as we hurried out of our tent in mortal fear of getting a "late," I brushed the little cord Silkins had put up for our towels. I had no time to investigate then, as I was not orderly, and I dreaded being late. Besides, several cadets shouted "scat" "You are too abstruse, sir," he continued, "let us drop the intricate subject of politics. I want you to prove to all the gentlemen present that the vibrations of hind me save a bulky fellow from Georgia, whom I passed by a fierce burst of sprinting.

Silkins was indignant, so I thought it best not to tell him just then about the little affair.

We were all formed in one body, and the ranking corporal, who called the roll, di-Just then I happened to remember that

Silkins was indignant, so I thought it best not to tell him just then about the little affair.

We were all formed in one body, and the ranking corporal, who called the roll, divided us into platoons. As there were not enough corporals to act as guides and file closers too, a couple of our men were made guides. These fortunate ones marched one guides. These fortunate ones marched one will be a supported by the couple of our men were made guides. These fortunate ones marched one guides. These fortunate ones marched one will be a supported by the couple of our men were made guides. These fortunate ones marched one guides. The guides are guides and file to guides and file guides. The guides are guides and file guides are guides and file guides. The guides are guides are guides and file guides are guides and file guides. The guides are guides are guides are guides are guides are guides are guides. The guides are guides. The guides are guides. The guides are guides on the lanks of ether patoon, and had the privilege of carrying their hands naturally. In other respects, they braced harder than the rest of us, and seemed to escape most of the loud personal remarks. They felt their own importance, and how we envied

#### VIII.

#### REDUCTIO AD ABSURDUM.

There is very little jealousy at West Point except among plebs, where it is often quite apparent. Whenever one is "jumped," he receives scant sympathy from his mates, who, in accordance with a law of human nature, find it not difficult to bear affliction when it is visited upon some one other

when it is visited upon some one other than themselves.

We were plebs in those days, and selfish and jealous ones, too. We were not impressed by our two guides. "They were very ordinary men, and 'gross' as well as slouchy." We all knew how they came to obtain their honors. The father of one was a prominent army officer, and the sister of the other was a "spoon" of the ranking cadet officer over us. We were sure we understood it all. That was the way we reasoned it out. Poor fellows! They were both found in "pleb" January! The sister afterwards married a wealthy New York broker to whom she was engaged at the time, and the ranking lieutenant married the sister of one of my roommates.

tenant married the sister of one of the roommates.

As soon as the corps were fairly under way, we wheeled by platoons and joined the foot of the procession. We kept at a respectful distance from the last platoon of the battalion. The corps marched in single rank and we in double. It was an aggravating sight to see those cadets in front of us marching at their ease and their file closers studiously refraining from personalities.

personalities. An unusually large number of visitors had been over to camp to witness parade, and many were congregated near the Academic building as we marched by. As a matter of course, we were the center of attraction. There stood the veteran "cadet girl" of several summers pointing out the girl" of several summers pointing out the plebs to some less experienced companions. While none of their remarks was audible, we were sure that more than one exclaimed, "There go the plebs!" Yes, the plebs were "going," tip-tapping along, stepping on one another's heels, perspiring shoulder-blades almost touching, and fired by grim resolution to do or die. Personal remarks such as "Get 'em back." "Depress your toes properly," "O! stand up!" "Stop that slouching," were continually in our ears. Only one thing was lacking to complete our misery: that was the presence of the small boy, whistling the latest popular air, using his index finger as a pointer, and continually darting between platoons.—but, thank fortune, he has not invaded -but, thank fortune, he has not invaded West Point as yet.

Finally we finished running the gauntlet and approached the mess-hall. The orderly and approached the mess-hall. The orderly drummers drew up on the opposite side of the road from the mess-hall, to allow the battalion to march in. They looked at us with inquiring eyes, and, although very respectful to old cadets, seemed to have forgotten our social position. But have plebs really any social position? Doubtful, In the server they have but in exchange. one sense they have, but in another they

have not. We marched into the mess-hall, and, after the battalion had been seated, imitated them at the command, "New cadets, take seats." All of the old cadets were in excellent humor in view of the holiday and the big hop on the morrow. I must except, the big hop on the morrow. I must except, however, the few yearlings detailed for guard, and the two first-class officers detailed for officers of the guard. One of the latter and a yearling private were at our table, and their faces showed they were in anything but a happy anticipatory mood, especially as they had to stand the good-natured chaffing of their classmates.

Finally the conversation drifted to other mor I ventured into the more in which we were nearly evenly unvious of the national administration in that direction, forgetting, meanwhile, to replenish the milk glass, sent to the front by "Chub." The latter, looking toward me to learn the cause of the delay, overheard my burst of eloquence.

"You, man!" he called, "what is your name?"

You, man!" he called, "what is your name?"

Since no one from our tent was going on guard, we were "at home" all the evening. As soon as night closed in, our callers began to come,—tall first-classmen, short first-classmen, tall yearlings, short yearlings, privates, and licutenants. The

versal, it would never get anywhere; but member a short, red-haired, freckled year-light does get everywhere; therefore, the ling who asked me where he stood. To all vibrations must be longitudinal, as no other appearances the man seemed to be stupidity

INSPECTION OF A COMPANY IN CAMP

heartily and I received several complicided that this man's number was the ments. The commandant of the table (who same as the number in his class, but I had was a cadet lieutenant of the company and the tact to put him about halfway down sat at the head) told me that while I differed from Fresnel and Helmholtz, my that he stood among the first five! At the argument was as sound as theirs, because I same time we had another visitor, who did not prove my view by mathematical would have struck the most casual observer work, which was too intricate for any one as exceptionally intellectual. Bright, to study out and therefore, was assumed snarkling eyes, full of expression, high foreto study out, and, therefore, was assumed sparkling eyes, full of expression, high fore-

an excellent application of the "reductio ad it, too.

absurdum."
"Chub's" story was forgotten and saved for another occasion. One of the first-classfor another occasion. One of the first-class-men suggested as a subject for debate, "Which is the more useful, the fly or the mosquito?" There were four of us plebs, and we were evenly divided. One of the two yearlings was appointed judge. We were just starting, when "Chub" said that the yearling was a Jerseyman, and conse-quently his judgment was biased. So the other yearling was appointed.

other yearling was appointed.
We began again, and were in the very heat of the argument, when the first captain arose from his table to make his inspection of the mess-hall. Shortly after the captain gave his commands at regular intervals of "B Company, rise," "C company, rise," "A company, rise," "D company, rise," and we were left to ourselves and the cadet officers over us. and the cadet officers over us.

and the cadet omcers over us.

As soon as the battalion was marched off
to the ringing command of the first captain, "Continue the march, platoons right
wheel," we were "driven" out of the messand back to camp in the same order as before. There were not so many in-terested spectators, however, and we were jumped in a little more lively style than usual. I suppose the purpose was to keep us well braced for the ensuing holiday. Upon breaking ranks in camp, all hurried to their tents. The men who were to go on guard in the morning settled down to

polishing their guns and accourrements.

They were almost free from molestation, first because the "esprit de corps" demanded that even plebs should look their best

# THE AMERICAN BOY offers twelve prizes of Two Dollars each for the best Amateur Photograph received during the twelve mouths in the year, one prize for each month, also a second prize each month, of one dollar, for the next best photograph, the competition to be based upon the originality of the subject and the perfection of the photograph. The contest is open to subscribers only. Photographs will be returned if stampe are sent for the purpose. All photographs entered in the contest and not prize winners will be subject to our use unless otherwise directed by the sender, and fifty cents will be paid for each photograph that may be used, the prize photographs in any event to be our own, without further payment than the payment of the prizes. Write on the back of the photograph its title, with a description of the picture, and the full name and address of the contestant, who in every case must be the artist who took the picture.

#### Honorable Mention

The following are entitled to the above distinction in this month's contest: Parvin Blalock, John L. Hopper, Charles S. Smith, L. H. Kerber, Jr., P. H. Boesche, Geo. Vasen, C. Manley, C. W. Brinson, P. Hawkins, F. S. Lewis, Perry N. Trask, P. Evans, E. Corbin, Duncan Chalmers, Harry Titus, D. I. Fulton and Ervin Herbert.

#### Our Prize Pictures

In this month's contest the first prize is awarded to Earl Tostevin, of Racine, Wis., who sends us some of the best night photographs it has ever been our privilege to inspect. They were taken on films with a Weno-Hawkeye No. 3, the exposure varying from 12 to 18 minutes. We would like to reproduce all of them, but being obliged to confine ourselves to one, on account of tack of space, have selected the view of Festival Hall and the Cascades. Paul B. Camp. the photographer of "Buildog Tenacity," is the recipient of the second prize. As the picture tells its own story, comment is superfluous.

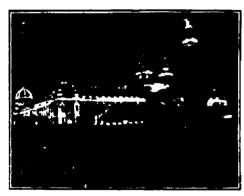

#### As Regards Criticism

As Regards Criticism

It having occurred to us that some of our readers may be sensitive with reference to comments on the defects of photographs submitted in competition, we believe it might be well to state that whenever we are requested not to criticise prints, the wishes of our friends in that respect are scrupulously respected. We assume that every amateur welcomes friendly hints that may enable him to improve the character of his work, but we do not want any of our readers to refrain from participation in the contests on account of a possible fear of adverse comment.

THE EDITOR.

#### Landscape Work

TRANSPORTATION BUILDING AND MEMORIAL MONU-MENT, ST. LOUIS EXPOSITION. NIGHT VIEW FIRST PRIZE, BY EARL TOSTSVIE, RACISE, WIS.

Publishing Co.) treats very fully of landscape photography. The introduction is from the pen of John A. Hodges. Eustace Calland writes on "Cloud and Sky in Landscape," J. H. Wilson gives directions for making a view meter, A. Horsley Hinton alludes to some of the technical considerations of landscape photography, and there are numerous practical hints from various other contributors. Altogether the number is one of the best that has been published in this interesting series.

#### The Letter-Box

M. S. Evans.—You will find the following formula better adapted to the development of films: pyrogalic acid. % ounce; nitrous or sulphurous acid. 20 minims; water. 22 ounces. This constitutes solution No. 1. Solution No. 2 is composed of: sulphite of soda (crystals). 6 ounces; carbonate of soda (crystals). 4 ounces; water, 32 ounces. To develop, take No. 1, one ounce: No. 2, one ounce; water, two ounces. Z. Hook.—The conditions for our prize contests are given on the photographic page of the October and November ivenes. I. M. Boyd.—Sorry I can't tell you what's wrong with your film. Would advise you to inquire of the Eastman Kodak Co., Rochester, N. Y. C. F. Wilson—Add 6 ounces of sulphite of soda (crystals) to the other ingredients. R. Boorde.—Photographs may be mounted or unmounted, on any subject, and submitted in any quantity.

Current Comments

Guy Cordon, Roseburg, Ore.-On the whole, your photographs are very good. Owing to the faded condition of the gelatine paper prints, we wonder, however, whether you are in the habit of using the combined bath. If you do, you ought to print a little more deeply, for allowance ought to print a little more deeply, for allowance must be made for the bleaching effect of the combination. Your bromide paper prints are best of all. Edith M. Clark, Ruthven, Ia.—There is not enough detail in your photographs, which is probably due to a lack of density. Frederick Blicke, Bucyrus, O.—Blue prints are excluded from our contests. John Guilord, Plattshurgh. N. Y.—"The Reader" is posel wrongly; didn't the young lady object to the size of her feet? If you had posed her sideways, so that body and feet would have been on one plane, the result would have been more acceptable. B. Taylor, Junction, Tex.—Your photograph is poorly printed and poorly mounted. But Rome wasn't built in a day; try again.

"BULLDOG TENACITY" SHOOME PRIES, BY PAUL B. CARP, JAMESTOWN, N. Y.

#### Photographing Animals

Animais are generally very timid subjects, and one is never sure of their keeping still when being photographed. This being the case, a After a consideration of the pictorial work of shutter exposure is necessary. The shutter Reginald Craigle, the October issue of "The should be adapted though to various speeds, and Practical Photographer" (Boston: Photo-Era also to work silently, at least till after exposure. anound be adapted though to various speeds, and also to work silently, at least till after exposure, because the least click in releasing it is apt to make the animal move just at the wrong time. The shutter should also have a pneumatic release, so that one's whole attention can be given to the subject.

Animals can be taken well out of doors in height light. And if a small animal is being

Animals can be taken well out of doors in bright light. And if a small animal is being taken, such as a cat, it sheald be raised up a that the camera does not require to be tilted to much. To get good results there should be plenty of contrast between the animal and the background. As to backgrounds, an ordinary blanket serves well for a very light one, and a brown paper or cedar felt, for dark ones. Haveverything ready before placing your subject; put something in the position it will occupy, and focus; then place your animal in position, and, having your shutter set at about 1-10 of a accond watch your opportunity, press the ball, and, if you are a careful worker, you may be pretty certain of a good result.—N. Elliott.

#### The Reviewer

The Reviewer

"Chicago in Mourning," an elegiac poem by Frank hionewell in The Reflector. It treats of the late Iroquois disaster and it is in gene, a. me. iturious. Permeated with a sympathetic spart and voicing heartfelt sprow at the calumity it is the young poet's best effort. In expression, too, it is good and shows felicity of diction. The only fault is one common to amuteur writers—the tendency to drag in a moral. Young authors should remember and abide by Lowell's ruling—

"Put all your beauty in your rhymes, Your morals in your living."

Nothing but the abused word "cute" will exactly describe the first issue of The Projectile It is a miniature production consisting of eight 3x5 inch pages, printed neatly by the editor. Arthur Matthews of Brooklyn. For a small paper there is a gical variety of contents, well up to the average. A book review by B. J. Goldstein shows the right method in appreciating the dominant qualities of the book reviewed. "Human Nature" a poem by Edw. Gettsche makes an appeal to the sunny and hopeful side of life. The construction is careful and some of the phrases are peelle. Some brief and bivezy "Editorial Blots" complete the issue. Revision would have improved these in several places.

The Royal Piker, subtitled. "A novel publication published by the joiliest crowd that ever struck the Pike" is the annual souvenir of the Royal Pikers, an organization effected at the Amateur Journalism day of the World's Pair, which was held just prior to American Boy Day. A number of amateurs who were "doing" the Pike formed a little social circle and this paper is the result. With its 32 pages, finely printed on heavy tinted paper in harmoniously colored ink, in a red-felt cover, illustrated with pictures of all the Pikers and filled with apposite prose and verse it is an ambit ous and artistle production.

Two essays in Eureka—"Burns" by Roscoe W. Greens and "Liveries" by Guy Hamilton, are necessarily brief but they need not be encyclopedic. The ensay is primarily a vehicle for explanation and

#### The Bulletin Board

The greatest journey ever taken in the interests of amateur journalism was that recently completed by Edward Martin Lind, the present N. A. P. A. President. Mr. Lind made a complete swing around the circle, his trans-continental tour starting at his San Francisco home and finishing at the Atlantic seaboard, the entire rip and return taking more than a month. The purpose of the tour was to get into closer touch with amateur centres and to rouse enthusiasm all along the line—both of which objects were admirably accomplished. Large gatherings of amateurs marked the receptions tendered to Mr Lind in Chicago, New York, Boston, Philadelphia, St. Louis, Kansas City and other places, and a number of individual amateurs were also visited.

phia, St. Louis, Ransas City and other places, and a number of individual amateurs were also visited.

It is such a noteworthy feat for an amateur press, or indeed any sort of a voluntary literary society to survive more than a year that when one has a sixth anniversary a betthday party is needed to do justice to the event. The Philadelphia Amateur Journalists' Club celebrated its sixth anniversary on October 23th, by a banque at the Devon, which was attended by those formerly active as well as those now interested in the club's work. W. R. Murphy was teastmaster and addresses were made by T. G. Meyer, Mabel E. Occhs'c, L. Whish of Bultimore, J. R. Spinkan, Harold C. Whiteside. All the speakers dwelt on the practical benefit the had received in the Club and recalled many pleasant memories.

had received in the Ciub and recalled many pleasant memories.

Amateurs are nothing if not original. The latest evidence of this seems to be an instance of something new under the sun. It is nothing less than a long distance debate letween the Chicago and the St. Louis clubs. The phonograph will serve as the medium of debate and the records of each side's argumen s will be reproduced on the phonograph of the other at a club meeting as a literary exercise. Another form of long distance debate is that carried on by correspondence. This year the Baltimo e and Philadelphia clubs conducted such a debate very successfully.

A novelty at least for recent years is a pustal card amateur journal. It is also a novelty in the fact that it appears regularly every week. John L. Peltret, president of the Interstate, is the printer of "Forward" as the paper is named, and contributes a sensible and helpful though concise and clear-cut editorial to each issue. If addressed at 77 Berkeley Street, Boston, he will mail a copy to any of our readers.

Harold C. Whiteside, a well known Philadelphia amateur, recently passed with high grades bith the mental and physical examinations for the Naval Academy at Annapolis. He was only an alternate and as his principal passed he did not get the appointment. He will probably receive an appointment next year.

ST. LOUIS AMATRUE JOURNALISTS' CLUB

How many readers of THE AMERICAN BOY have ever played the game shown in the accompanying illustrations? In England the boys are quite familiar with the game. It is played at two colleges in the United States—the University of West Virginia and at Harvard. The illustrations were not taken at either of these colleges but in the Jewish quarter of the city of Cleveland. O., where it is played on one of the playgrounds maintained by a Jewish benevolent society.

As yet the game has been played out of doors only, but in the cold weather of the gymnashum. The ball which you see in the picture weighs 125 pounds. Hence it is as heavy or heavier than the average hoy who plays with it. The diameter of the ball is three feet. The way the Cleveland boys play the game is to locate two goals and then line up with, usually, six men on a side. The captains remain near the ball. At a given signal each team rushes at the ball and each side works with a will to nush it to its goal. It is a good test of endurance where the teams are well matched. Where there is any weakness in the one line-up the other side is quick to often are warned as 2500 and the large crowds often are many as 2500 and the large crowds often are many as 2500 and the large crowds often are many as 2500 and the large crowds often are many as 2500 and the large crowds often are many as 2500 and the large crowds often are many as 2500 and the large crowds often are many as 2500 and the large crowds often are many as 2500 and the large crowds often are many as 2500 and the large crowds often are many as 2500 and the large crowds often are many as 2500 and the large crowds often are many as 2500 and the large crowds often are many as 2500 and the large crowds often are many as 2500 and the large crowds often are many as 2500 and the large crowds often are many as 2500 and the large crowds often are many as 2500 and the large crowds often are many as 2500 and the large crowds often are many as 2500 and the large crowds often are shown in the land in the world to two

At the Jewish playgrounds in Cleveland large crowds, often as many as 2,500, witness the games.

The farmer has reported since that the lad is a hustler and is always at work. He is happy, his employer is satisfied, and the black dog is the happiest of all.

BOYS IN THE JEWISH QUARTER OF CLEVELAND PLAYING PUSHBALL

#### The Boy Who Stuck to His A Profitable Sunday School Class Social For Boys Dog

With \$1.20 in his pocket and a black dog as his companion, a fourteen-year-old boy was found wandering about the streets of Willimantic, Conn., lately, seeking a home and a living. Though his supply of earthly goods was limited, the lad had grit, and he has found the home. His name is Frank Dillman, and this was the story he told:

He was born in New York city, and when three years old his father died. His mother moved to Moodus, Conn., where she hired a small farm and mortgaged her stock, tools and furniture to start with. The boy helped on the farm, As the result of hard work and some privation, they accumulated chough money to pay the mortgage on her six cows and furming tools, leaving another on the horses and the furniture.

A few weeks ago the woman died. After the funeral Frank was told that a man hard heap appointed to gettle his mother's

A few weeks ago the woman died. After the funeral Frank was told that a man had been appointed to settle his mother's affairs. A few days ago he received \$2.50 and was told to take his dog and make his own way in the world.

A town official of East Haddam offered him the choice of going to the county home or being bound apprentice to a man who, although called "Doctor," did no doctoring. The boy declined both offers, for good reasons, he says, and started from one farm to another looking for work. The only condition he set on being taken to work was that his dog must be allowed to live with him. The dog was old, and a mongrel at

I want to tell you of a class social held recently by my class, consisting of sixteen active, restless boys, of ages varying from nine to seventeen. The class met at my home at six o'clock Saturday afternoon, and, after such games and contests as anti-over, peanut in a tea-poon race, backwards race, sack race, and three-legged race, we had refreshments-nothing elaborate, just a light lunch-and then came our quarterly examination on the graded supplemental work of the school. (Our Sunday-school, though only a small country one, is graded, with a regular course of supplemental work on which promotions are based. Each class is exammotions are based. Each class is examined quarterly by its teacher, but promotions are made only once a year.) With one or two exceptions, the boys did splen-

one or two exceptions, the boys did splendidly on this.

Then we had blindfold drawing contests, putting the tail on the donkey, drawing a man's face, etc., and a "spelling down contest, to see who could name the most Bible characters. The class stood while a saked each boy in turn to name some person mentioned in the Bible, and when one of them failed, he sat down. The one standing the longest was counted the winner. Then we had blowing out the candle

told to find the candle and blow it out, but be careful not to burn his nose in doing it. After this, each boy in turn was blindfolded, and allowed to feel of the hands of the others, and see how many he could recognize. Riddles, conundrums, and stories followed, after which we all sat down and tried to look solemn, without smiling, for five minutes. This proved a much more difficult task than some of them anticipated, and all but two or three of them yielded, and burst out in a hearty laugh at the sober, owl-like expression of the others. We closed with the Lord's prayer, repeated in concert, and the boys all voted it the best class social ever held.

A boy can often be reached through his social instincts and love of fun when he cannot be touched otherwise, and it seems to me that the class social is one of the teacher's most effective weapons, especially for the teacher of boys. We hold one at the end of every quarter, with a different program each time, and the boys all look forward to it for weeks in advance. I always prepare the program for the social at least a month ahead, and hang it up in our class room.—Lean C. Palmer. Shady Grove Sunday School, Burnsville, Ala., in Sunday School Times.

#### Has Killed Many Alligators

one or two exceptions, the boys did splendidly on this.

Then we had blindfold drawing contests putting the tail on the donkey, drawing a man's face, etc., and a "speiling down contest, to see who could name the most Bible characters. The class stood while tasked each boy in turn to name some person mentioned in the Bible, and when one of them failed, he sat down. The one standing the longest was counted the winner. Then we had blowing out the candle blindfold. In this, one boy held a lighted candle, while another one was blindfolded. turned around three or four times, and

of the freshman-sophomore class rush at the University of Pennsylvania.

#### CLEVER WORK WITH THE POCKET KNIFE JOHN L. DOUGHENY

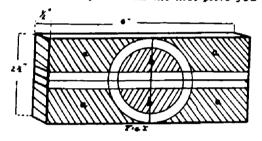

No. 5--Two Keys on a Ring

people consider whittling a fruitless and silly occupation.
Where a boy for want of something better to do idly slices up a piece of wood, this opinion is just; but where he makes up his mind to accom-

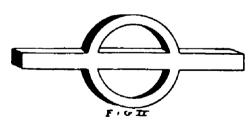

plish a certain end, and works carefully with that end always in view it is a different thing. In the latter case he begins to use his brains at the outset, in the selection of material and tools; every cut of the knife is the execution of a preconceived idea and brings the article he is making one per nearer to a carefully planned completion. Thus besides the very important fact that he is training his hands to skilled usefulness, he is also receiving valuable mental exercise. If he is mechanically inclined the training will be doubly useful. The kind of whittling we advocate is that which requires concentrated attention until the article is finished and which produces in the end a clever and ornamental "design."

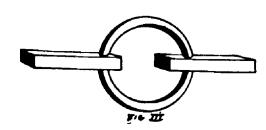

Boys who can originate and execute are plish a certain end, and works carefully Boys who can originate and execute are rare, therefore we furnish the plan. If you study the instructions you cannot fail. Perseverance is necessary; if through awkwardness you break the first piece you

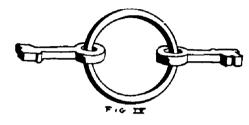

work on, try it again. The subject this month is somewhat intricate. When you exhibit the finished article many people will wonder how it was ever possible to make it. The drawings clearly illustrate how simple and easy it is after all. The best material to use is clear white pine. A discarded flour-barrel head is admirable for the purpose, as it is fine-grained, pulpy, and cuts easily. The tools you need are a compass, rule, and pocket-knife in these directions we will suppose the wood to be one inch thick. The piece to begin with is two and a half inches wide and six inches long. Find its true center in the following manner: measure one and one-quarter inches from one side (across the grain) to the center of width. Then measure from the same corner 3 inches (with the grain) to the center of length. Extend each point into a long straight line, and the center will be where the lines cross. Draw two concentric cir-

cles, that is circles having the same center, ithe first two inches in diameter, the second I two and one-half inches. Mark a point one quarter of an inch above the central point and one a quarter of an inch below it. Extend these points into parallel lines (running with the grain) from end to end, and having a space of one-half inch between The piece properly marked is shown in Fig. 1. Begin by cutting away the parts marked "a." You can readily see that a small saw would be handy for this. Cut out the two segments or half circles marked "b" "b" in Fig. 1. This is done with the knife; dig out carefully lest you break the wood where the grain is short. The job at this stage is shown in Fig. 2. The next operation and one which calls for more skill than you have yet been required to display, is to thin out the ring marked "a" "a" in Fig. 2. Don't confuse the terms "width" and "thickness." When you lay the piece down flat and measure from the ground to the face, you will have found its height or thickness. That distance is now one-half an inch. We wish to reduce it to one

quarter of an inch and do so by cutting one-eighth of an inch off each flat side of the ring. Leave the long straight piece in the center as thick as the original board (one-half inch). Whittle off the square edges of the ring thus making its body cylindrical like a pencil, or to make it clearer, like a rubber ring that the baby sucks on. Also cut a piece one-quarter of an inch long out of the center thus separating the long piece into two parts, each of which is to be a key. Fig. 3 shows this done. Now loosen the parts marked "a" "a" by digging out all around where the ring appears to pass through them. Once you get them to move freely the most difficult part of the work is done. Cut the two into the rudimentary form of keys as shown in Fig. 4. Have the keys you wish to imitate at hand so you can refer to them constantly as you work. If you take pains you can make an exact copy. When you have done all you can with the knife smooth off with sandpaper. It is well to do a good deal of the finishing work with sandpaper. If you wait too long before beginning to use it you are liable to leave hollow and uneven parts in the finished article. The paper will reduce it in an astonishingly short time, and right here we give you timely warning not to try to make the keys or ring too slender and frail. Some people would prefer to have the whole thing stained or varnished. We advise you to let the whole soak in oil, for say two or three hours. The complete, finished design is shown in Fig. 5. With patlence, a sharp knife, and good lick you should be able to make one just like it in two hours. like it in two hours.

Three standing jumps. 38 feet. J. Chandler.
Running hop, step and jump. 48 feet. 7
Inches, P. Leahy.
Our readers will note here the names of several of the champion athletes who have contributed interesting articles recently to THE AMERICAN BOY.

Perhaps boys will be interested in knowing what girls can do in the line of athletics. Kathryn Ryan, a Harlem school girl, ran 50 yards in 6 2-5 seconds at Madison Square Garden, New York in January, but in May this record was beaten by Fanny James, a Vassar girl, who made 50 yards in 6 1-5 seconds. Miss James also broke the record for 100 yards at 13 seconds. Alice M. Belding, another Vassar girl, threw a baseball 195 feet 3 inches, the best record ever made by a woman so far as known. Anna Breen and Margaret Joyce at Boston in May both cleared 4 feet 4 inches in a high jump contest. inches in a high jump contest.

#### The Cost of Firing Cannon

Modern naval warfare is one of the most costly things that can be imagined, and a combat between two fleets means the ex-penditure of vast sums of money. Some idea of the high cost can be arrived at by idea of the high cost can be arrived at by taking a Japanese warship like the Kasuga or Nysshin, and calculating the number of shots she would discharge, say, at Port Arthur. The first named ship carries four cannon which cost \$30,000 each. One of these guns can fire two shots per minute, and every shot costs \$400; thus in five minutes these four cannon can discharge forty bombs at a cost of \$16,000. The smaller cannon cost each \$18,000, and every shot they fire means an expenditure of \$70. They are very rapid, and it is estimated that in five minutes the twelve cannon could discharge shot to the value of nearly \$35,000.—
Leslie's Weekly.

It's as natural tor a boy to want a gun as for a girl to want a don. His atdent wish for a STEVENS should be gratified this coming Christmas-if a boy wishes our famous make, he is a discriminating chooser—don't disappoint him! Be sure that his firearm is branded with the name "STEVENS." Our line

#### Boys' Books Reviewed

HIDALGO AND HOME LIFE AT WEST LAWN, by R. A. McCracken. Hidalgo is a very intelligent family horse, and is the pivot round which the story runs. The book consists of a series of letters supposed to be written by a little boy to his cousin describing his life at home, the many trips taken by the family with Hidalgo and the many things the writer has observed on these trips. There are iessons of thoughtfulness to each other and kindness to animals which little folks can learn, while at the same time they can obtain in a pleasing way practical information in groupply and aritimetic. There are many happy and aprillustrations scattered throughout the little volume. 222 pages. Price, \$1.00. M. A. Dunohue & Co.

A. Donone C.C.

STUDENT'S HISTORY OF ENGLISH LITERATURE, by William Edward Simonds, Ph.
D. (Strassburg). Professor of English Litcrature in Knox College. In the very limited
space at our command, we can only hint to
our readers of the excellencies of this book. The space at our command, we can only hint to our readers of the excellencies of this book. The author has planned his book most admirably in that it may be used as a most useful text book by teacher and scholar in the class room, and at the same time be found a most helpful and efficient aid to the young man cager to know something of literature. "the greatest of all sources of refined pleasure," but unable to satisfy his craving through orthodox channels. Some of the other important points to be noted for assisting the reader are: The separation of his subject into periods and centuries, giving special attention to the prominent changes and development in each; giving special attention to essential facts and dates as being an imperative requisite to the acquiring of a knowledge of literature. The book is divided into six chapters, the headings being: The Anglo-Saxon Period; The Anglo-Norman Period; The Fifteenth and Sixteenth Centuries; The Seventeenth Century, Each chapter presents to the reader names and blokraphical notices with extracts in prose and verse illustrative of the particular period. At the close of each chapter, there are suggestions for study which will commend themselves to teacher and student alike. A copious index at the end of the book enhances its usefulness. For clearness and simplicity of arrangement as well as the excellence of criticism and illustration, the volume before us stands in the van of the text-books on English literature. There are included a number of illustrations which will prove interesting to the student. 483 pages. Houghton, Miffin & Co.

Co.
WHY MY PHOTOGRAPHS ARE BAD, by Charles M. Taylor. Jr. We predict a large sale of this little book among, not only the amateur "picture-taking" fraternity, but among those who consider themselves as masters of the camera. The beginner in photography will, however, welcome the warnings and instructions here given with keen satisfaction. The author has been "up against it" himself, and he gives his readers the benefit of practical experience. The book treats of such things as: Placing a Picture: The Use such things as: Placing a Picture; The Use such things as: Placing a Picture: The Use of a Head Rest; Foreshortening; Pictures Out of Focus; Taking Two Pictures on One Plate; Too Much Foreground; Too Much Sky; Over-Exposed Plates; Under-Exposed Plates; Instantaneous Exposures, with a number of "Dont's" which the beginner will be thankful "Don'ts" which the beginner will be thankful for. There are a number of illustrations given, showing errors, and others of correct photography. A most useful handbook of 175 pages, paper bound, Price, 50 cents net. George W. Jacobs & Co.

ROYALISTS AND ROUNDHEADS, by O. V. Catto Alberts the stem relates to a part of

Caine. Although this story relates to a par English history, the years immediately ceding the Restoration of Charles II, to coding the Restoration of Charles II. to the English throne, the hero of it is an American boy, Johnny Erle, heir to a great estate in Virginia, whose father having died, he had come to England to be educated, living with his uncle Canon Erle. Johnny, on account of his relations in England, who were staunch royalists, and his own leanings, also became

royalists, and his own teanings, also became a king's man to whom everything pertaining to Cromwell and his Roundheads was an abomination. After the battle of Worcester, so disastrous to the fortunes of the cavallers, King Charles was forced to the conclusion that the time was not yet ripe to enable him to regain the throne of his father, and with a few followers unleavered to excess from England and the throne of his father, and with a few fol-lowers endeavored to escape from England and take refuge in France. It is of those days when the king with the soldiers of Cromwell hot upon his trail was trying to reach the English coast that this story records. Johnny Trie in general appearance is startlingly like the king. He dresses up in the king's clothes, imitates his voice and manner and undertakes. the king. He dresses up in the king's clothes, imitates his voice and manner and undertakes to lead the Roundhead soldiers away from the pursuit. His many exciting adventures and startling encounters with the Roundheads while starting encounters with the Roundheads while thus adding the king to escape, will cause the young reader alternate thrills of anxiety and delight. The incidents in the main together with the most of the characters are historically correct. The American reader will get here a fair idea of the condition of the two great rival factions in England during the middle of the seventeenth century. The book is handsomely bound and nicely illustrated. 867 pages. Price, \$1.00 net. George W. Jaco.s & Co.

& Co.

BILLY WHISKERS, JR., by Frances Treg. Montgomery. The Whiskers family stand pre-eminent in their efforts to give entertainment to the boys and girls. In this volume Billy Whiskers, Jr., like a great many young humans, thinks his home is too humdrum for him and so he runs away, and taking the oft quoted advice of Horace Greeley, goes west in search of excitement and adventure. It would be unfair to the author to tell just thow Billy, Jr., got along, suffice it to say that he had adventures and excitement in plenty, mingling with Indians, cowboys, train wrecks, Chinamen, wolves, Mexican bullfights, volcanoes and other things sufficient to keep the young reader in a continuous thrill of delight. The pictures throughout the book are fine and the little volume is gotten up in first class style. 140 pages. Price. \$1.00. The Saalfield Publishing Co.

\$1.00. The Saalfield Publishing Co.

A PICNIC ON A PYRAMID, by Marian V. Loud. This is a book which will delight more especially the little girls. Elizabeth Ann, Molly and Barbara, are three little girls who apparently are on most friendly terms with a kind fairy who takes them on a splendid excursion in her magic automobile, to Egypt and the pyramids, Madeira and the West Indies, and spend a Sunday in Constantinople. As a means of imparting instruction in a pleasing form this dainty volume can hardly he surpassed. The little pictures add to the reader's enjoyment. Large type, stout glazed paper, 114 pages. Price. \$1.50. The Saalfield Publishing Co.

pictures add to the reader's enjoyment. Larke type, stout glazed paper. 114 pages. Price. \$1.50. The Saalfield Publishing Co.

BABY'S FRIENDS. One of the greatest drawbacks to placing picture books in the hands of young children has hitherto been the fear of torn pages and mutilated covers. This little book is printed on soft cloth and the pictures are in the brightest of colors, which cannot fail to interest and delight the little ones. The book is practically indestructible and the colors are fast, so that the child may try to chew up the leaves without danger to itself or the pages. The little verses accompanying the pictures are so catchy that very few repetitions will enable the child to memorize them. The size of the book is 8x9 inches and contains 15 pages. Price, 50 cents. The Saalfield Publishing Co.

ISMS, FADS AND FAKES, by Rev. Jasper Newton Field. This little work is well worthy the consideration of thinking men and women. Isms of all kinds are springing up like mushrooms and it is bewilderlink to the ordinary layman to know just wherein one differs from the other. The book is made up of discourses on 16 subjects which the author delivered before his congregation. These subjects are: "Mormonism," "Spiritualism," "Dowieism," "Eddyism" or "Christian Science," "Mamonism," "Agnosticism," "Materialism," "Socialistic Secularism," "Anarchism," "Buddhism," Muhamnedanism," "Persimism," "Optimism," "Universalism," "Indifferentism" and "Conservatism." The author exhibits no bitterness in his enquiry, but treats his subjects in a fair and even kindly spirit, seeking only to get at the truth, and to this end much study and research has been made into the history of each ism. Clearness and simplicity of style and diction are shown throughout the book. 227 pages. V. Ernest Field, Indianapolis, Ind.

LARRY THE WANDERER, by Edward Stratemeyer. Mr. Stratemeyer has in this book departed somewhat from his famous stories.

apolis, Ind.

LARRY THE WANDERER, by Edward Stratemeyer. Mr. Stratemeyer has in this book departed somewhat from his famous stories having history and geography for a setting and given his readers a pleasant, readinble story of a boy who knows nothing of his parents, but has for years been dependent upon himself. Notwithstanding some roughness and a rather quick temper Larry is a likable, grateful, true-hearted boy. Through the kindness of an artist he obtains a boat and supports himself by fishing. In various ways, many of them exciting, he comes in contact with persons who are part of his past life, and the gradual clearing up of the mystery of his birth and parentage will hold the young reader's breathless interest to the end. It is a book in every way unexceptionable, teaching lessons that all lustrator. 263 pages. Price, \$1.00. Lee & Shepard.

lintrator. 263 pages. Price, \$1.00. Lee & Shepard.

CHATTERBOX FOR 1904. This latest volume of what has been the favorite among the little ones for a great many years, can claim to be equal with the best of its prefecesso s. With full page colored plates and countless smaller pictures to delight the eye, there is within its covers, short stories, sketches, poems, anecdotes, information on travel, exploring, history. The book will be a continual source of enjoyment and instruction not only to the youngsters but to the oldsters as well. 412 pages, board covers, \$1.25. Rouni in cloth, full gilt. \$1.75. Dana Estes & Co DEFENDING THE ISLAND, a story of Bar. Harbor in 1758, by James Otis, one of the "Stories of American History Series." The courage, endurance and herolam so characteristic of the early settlers on the wild New England shore are well illustrated in the volume before us. The time of the story is the year 1758. The fathers of two families living on Mount Desert sail away to obtain their winter's supply of fish. In their absence their home is attacked by Indians and French, the latter being at that time at war with England. The defenders consist of

sence their home is attacked by Indians and French, the latter being at that time at war with England. The defenders consist of the children of the settlers, the eldest of whom is just fifteen, but the boys and girls of those days were accustomed to be self-reliant and ready to meet dangers without flinching; they were also taught from childhood the use of weapons of all kinds. Behind the stockade these children were shle not only to keep their enemies at bay, but to inflict considerable damage upon them before help came in an unexpected fashion Every American boy loves courage and pluck and he will here find plenty. The story is strictly within the bounds of historical truth. and he will here find plenty. The story is strictly within the hounds of historical truth, and is one which no parent will object to see in the hands of his boy. There are a number of excellent illustrations, 124 pages Price, 75 cents. Dana Estes & Co.

CHRISTMAS DREAMS.

74. CHRISTMAS DREAMS.

This numerical rebus is to be solved by writing down in order all the numbers from 1 to 90 inclusive; then interpret each of the twenty-three pictures, here shown, by a word of four letters, and place-cach letter of these words in the numerical position indicated by the key numbers above each picture. Thus, if you think the first picture is kING, write K at 39, I at 4, etc. When in this manner the entire ninety letters are placed in correct order they will be found to spell one personage and thirteen articles which fill American boys' dreams, asleep or awake, at the glad Christmas time.

-Joseph Phillip Smith.

CHRISTMAS GREETING. My whole is a Christmas greeting to American boys, and contains 55 letters, divided into four-teen words,

teen words,
43-38-8-39-17-25 is an African fly, whose bite is
fatal to horses, cattle and dogs, 11-30-4-1 is one
of an ahrient race whose descendants now inhabit Ireland and Wales, 18-12-10-18-19-34-5344-47-51 is made of meal or flour, 14-16-32-15-22 is
a celebrated English poet, author of The Glaour,
25-6-36-31-37-42-46-24 is a name borne by two Presidents, 7-54-52-2 is a county in the province of
Connaught, Ireland, 40-21-5-23-23-45 is any dankerous disease, 9-3-27-50-48-33 is infrequency, 5541-29-26-49 is Samuel's birthplace. —Old Poser.

CHRISTMAS HISTORY.

1. What famous English mathematician and natural philosopher was born on Christmas day,

1642? 2. What conquering duke was crowned King of England on Christmas day, 1066? 3. What southern seaport was presented to President Lincoln by Gen. Sherman as a Christmas present in 1864? 4. What great Frankish king, who first made Paris a capital city, was baptized in the Christian faith on Christmas day, 496? 5. What noted king of the Franks was crowned Emperor of Rome at St. Peter's on Christmas day, 800? 6. What famous general of the American Revolution crossed a river filled with ice, during a snowstorm, and surprised and captured a city from the British and Hessians on Christmas night, 1776? 7. How many years Before Christ was Christ born? —J. W. Rhodes, Jr.

4. - - \* † - Christmas.
5. - - - \* † 1. Burns with boiling liquid. 2.
An edible fish. 3. A tropical fruit. 4. Opening scene of Act V., Romeo and Juliet. 5. A state of the U. S.

— Leonard Steburg.

SANTA'S GREETING.

Arrange the nine pieces into a square that will read, in order, a Yule-tide message from Santa Claus himself direct to the Tanglers.
