

# Right at Home

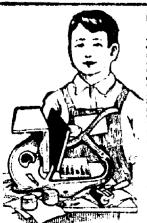

The law as a profession, to-day, offers no impossible barriers to the ambitious young man in either city or country. On the other hand, it is ever offering greater opportunities for high achievements in fame and fortune. In modern business pursuits the young man with a knowledge or commercial law, rapidly advances to the higher positions, because his mind is broader; his judgment clearer; his decision better.

The Sprague Correspondence School of Law was founded for the young man who cannot afford the time and money necessary to attend a law college. It carries to his home BY MAIL all there is to be had at a college. It demands no sacrifice of the student. It does not burden him with expense. It requires nothing but honest effort. Thousands of students of the

# Sprague Correspondence School of I

have distinguished themselves by passing the required examinations in every State, and being admitted to the bar without other preparation than the Sprague Course by Mail. The cost is small. The terms are easy. There is no time limit. Write for **FREE** educational literature, and see how great are the possibilities for your success.

### NAPOLEON BONAPARTE

A HISTORY WRIT-TEN FOR BOYS

By W. C. SPRAGUE, Editor of THE AMERICAN BOY. An interesting account of the career of the great Emperor. The story is well told and the author has selected incidents which will attract and interest boys, however without distorting historical facts. A literary advisor of one of the leading educational houses saws that the history should be put in all Public Libraries in the country, as it is undoubtedly the less thistory written for and from the boy's point of view.

The book is attractively printed and contains a number of illustration of famous paintings illustrating Napoloon's career, and makes altogether one of the most interesting and attractive juveniles for the coming season; bound in cloth with cover design in three colors.

Price, \$1.00, Postpaid.

### THREE BOYS IN THE MOUNTAINS

A BOOK OF ADVENTURE

The Publishers of THE AMERICAN BOT are celling in book form "JOE ('ODY'S" (Wm. C. Sprague, Editor THE AMERICAN BOY), story that ran in the 1901 volume of this paper. We offer it as a clean, wholesome book of adventure any boy will read with interest and profit. Handsomely bound and illustrated.

Price, 75 ets., Postpaid.

THE SPRAGUE PUBLISHING COMPANY, DETROIT, MICHIGAN.

CHAPTER IV.

A TRIUMPH FOR JO'S ENEMIES.

The little court room was already crowded when our party reached it, and Jo's appearance created a sensation. The "Muckers" and their friends, many of whom were on hand, scowled at him, and made sneering remarks concerning his country, his costume, and especially about his queue, which seemed more than anything else to excite their animosity. On the other hand, the better class of spectators were impressed by the intelligence shown in the lad's face, his air of high breeding, and by the richness of his dress, which was much handsomer than anything of the kind ever before seen in Hatton.

Mr. Hinckley was the first witness examined, and he told of the Chinese lad's coming to America and why he had done so. Then Jo himself was called to the stand, and with Rob acting as interpreter, he gave his account of the recent fracas, a simple statement that drew forth indignant murmurs from the better class of spectators. After that the witness stand was

occupied by several of the young toughs who had participated in the affair. Their accounts of what had happened were to the effect that they were only looking at the stranger who had so unexpectedly appeared running down the village street, and laughing a little at his pigtail. That he had flown into a violent rage, and had flung one of their number to the ground, where he endeavored to choke him to death. They further testified that while they were trying to save their comrade's life by dragging the enraged heathen off from him, they were suddenly set upon by Rob Hinckley, who severely beat and seriously wounded several of them with a milk can before they could escape from his furious and unprovoked attack. In support of this testimony, the boy who had been involved in Jo's fall was produced and allowed to tell his story, as were several who bore marks of Rob's effective weapon. A statement from the constable was then heard,

and it served so to strengthen the testimony just taken that when Mr. Jones finished his story and an adjournment until two o'clock was ordered, the case of our friends looked very black.

Nor did it brighten during the afternoon session; for Rob could not swear that he had seen any specific act of violence committed by any one of those who had surrounded the young Chinese on the common. Mr. Hinckley also failed to help the case, for he was forced to admit that when he reached the scene of trouble the alleged assailants of the Chinese lad were in full flight before his nephew, and that while they were rallying to an attack he did not see them commit any overt act. He also was made to describe the relative position of Jo and the boy who had shared his fall, and as his testimony on this point agreed with all that had preceded, excepting that of Jo himself. it served still further to strengthen the cause of the "Muckers."

After this the only effort made to help what evidently was a weak case was Mrs. Hinckley's description of Jo's appearance when he reached home, together with her production of the tattered blue gown he had worn. Her story seemed to produce a good effect upon the Justice until, taking the garment money to buy my freedom from any foreign prison," into his own hands for examination, he said:

"Madam, this coat or dress, or whatever it may be called, seems to be badly stained and still is damp. Can you tell me by what fluid it has been saturated?

Is it, by any chance, blood from the veins of this Joseph Lee, and caused to flow by the ill-treatment he is alleged to have suffered?"

"No," replied Mrs. Hinckley shortly, "it's milk."

This answer was greeted by a roar of laughter from the crowded court room; and when quiet had, with some difficulty, been restored, the justice announced his decision:

"The examination of witnesses in this case." he said, "will proceed no further, as the testimony already submitted is more than sufficient to warrant me in committing the principals for trial at the next session of the county court. Moreover, as the case has assumed an aspect so much more serious than I had anticipated, I am obliged to bind over Robert Hinckley and Joseph Lee in the sum of five hundred dollars each for appearance before the said court. I shall require these bonds in each case to be signed by two responsible taxpayers of this district. If such signatures cannot be procured, Robert Hinckley and Joseph Lee will be confined in the county jail until

the execution of said bonds, they are remanded to the custody of the Hatton village constable, who is hereby charged with their safe keeping."

"Whew!" ejaculated Rob under his breath. "Prisoners! Jail! In custody! That sounds worse than any scrape I ever got into before. And what a lively beginning for Jo's experience of free America!"

The decision was hailed with jubilation by the "Muckers" and their friends, who, as they streamed into the open air, gave vent to their feelings through derisive yells and taunting remarks concerning "pigtails" and "sapheads."

Jo, who until now had watched the proceedings with grave curiosity, though with but slight understanding of what was taking place, was made to realize by these sounds of rejoicing from the other side that something had gone wrong, and he glanced inquiringly towards his friend.

"Yes," said Rob, speaking in fragmentary but intelligible Chinese, "the case has gone against us so far, and you and I must go to prison unless someone will put up the money to keep us out."

"My father is a mandarin and can furnish enough exclaimed Jo with flushing cheeks.

"Yes, of course," replied Rob, "but in this case it happens that only American money will be accepted." "Then let me go to prison," said Jo proudly, "for

my father does not choose that I should incur obligations."

So determined was the Chinese lad upon this course that even when Mr. Hinckley had arranged the bond business with some of his friends, and the boys were free to depart, it was with the greatest difficulty that he could be persuaded to leave the court room. Only after Rob had repeatedly assured him that Mr. Hinckley was acting as agent for his father, who in the end would be called upon to meet all expenses connected with the trial, did Jo consent to accompany his friends to their home.

Although the case thus far seemed to have gone against our lads, it had the good result of arousing much interest in Jo and creating many friends for him among the best people of Hatton. Thus many times the amount of the bonds demanded by Justice Burtis had promptly been forthcoming the moment his decision was rendered. That evening the parsonage was crowded with those who wished to tender sympathy and friendship to the young stranger who had received so cruel a reception in the land that had promised so much and to whose honor he had so trustingly confided.

The young Chinese was made to feel almost happy. and much of homesickness vanished as Rob translated the friendly sentiments of his visitors, and he realized that, in spite of his recent experience. America did contain people of kindly disposition, who held honor and fair dealing in esteem. Thus the darkness that had so heavily overshadowed this first day in his new home was decidedly lightened before its end: and he went to bed that night possessing a wealth of new experience in which evil and good were very nearly balanced.

The following day was largely devoted to procuring

for Jo a complete outfit of American clothes and in teaching him to wear them. For a time these rendered him miserable. Never had his legs seemed so long or so conspicuous as they now appeared, divested of skirts and encased in trousers. Never before had he worn garments fitting him so closely that he doubted if they would allow him to eat enough to satisfy his hunger, and he was surprised to find that he still could draw a full breath. He was amazed at the number of pockets they contained, since never until now had he possessed even one. and he wondered what he should find to put in them. He approved of a hat that shaded his eyes, but felt most noisy and uncomfortable in the harsh leather shoes that replaced his own of cloth.

But all these troubles were insignificant when compared with the great grief that came to him that same day. It was nothing more or less than the loss of his cherished queue, which

the time for their trial shall arrive. Also, pending both Mr. Hinckley and Rob advised and almost insisted should be cut off.

> "It is the distinguishing mark of my nationality," he pleaded, "and without it people might take me for a Japanese or even for a Korean. Also it is a symbol of loyalty to my emperor; for in China every man without a queue is regarded as a rebel, and is liable to lose his head. Without it I should feel ashamed to look my friends in the face. No. I cannot give it up."

When all this was interpreted to Mr. Hinckley he replied:

"Tell him that while I realize the force of what he says, I still must urge him to make the sacrifice.

recent in China. Jo's ancestors of less than three hundred years ago did not wear them. Nor did they shave their heads, that custom being forced upon them by their Manchu or Tarter conquerors early in or horse tail, depending from their heads, and long coat sleeves shaped at the end like horses' hoofs to show that they were horsemen; and, when they conquered China, they compelled their new subjects to adopt both these features. Now, as Jo says, to discard the queue in China is a sign of rebellion against the government; but it cannot be so considered when a Chinese is in a foreign land, and subject to great inconvenience, not to say danger, if he does not conform to the customs of the country in which he resides. Here, for instance, if Jo persists in wearing his queue with an American costume it will render him very conspicuous and liable to constant ridicule, if not insult and abuse, from ignorant or vicious members of the community; while without it he will not attract unusual attention. When he is ready to return to his own land he again can allow it to shall have attained a suitable length. Many Americans residing in China have adopted the native not be interrupted for so trifling an incident as his court, in which the earliest date set for a hearing costume, including the queue, in order to render wedding, which, therefore, is allowed to proceed

themselves inconspicuous, and why should not the process be reversed by a Chinese residing in this country?"

These arguments finally so prevailed, that poor Jo, with a heavy heart and tearfilled eyes allowed the shears to despoil him of what he considered his chief and most becoming adornment. As the heavy braid of glossy hair was severed, he exclaimed:

"Now, even my own father would not know me, and my wife would no longer render me obedience!"

"Your wife!" cried Rob, "what do you mean? You can't have a wife. Why. you aren't any older than I am."

"Certainly I have a wife," replied Jo, composedly. "We were selected for each other when I was ten years of age; and as my father wanted a person to look after his house, we were married the day before I left home."

"But she must be a little girl," objected Rob.

"Oh, no. She is older than I, and quite grown up."

"Is she pretty?" persisted the other, curiously, "and are you very fond of her!"

"No, I am not fond of her at all; for you see I don't know her, and I don't

think she even is good-looking. Of course, I can't tell though, for I have seen her only once, and then her face was so hidden by the wedding paint that I have no idea how she would look without it."

"Well!" exclaimed Rob, "you Chinese certaintly are funny."

#### CHAPTER V.

#### THREATENED VIOLENCE.

The next two months passed quickly and were full of interesting happenings for our lads. Although the academy was closed and many of its students were away for the summer, there were a number of Rob's friends left in Hatton, and these promptly taking Jo's side against the "Muckers," became his friends as well. In fact, it is doubtful if anything could have advanced him so speedily in the estimation of the better class of Hattor boys than his illtreatment at the hands of their avowed enemies. It alone was sufficient to induce them to make much of him from the outset, but in a very short time they learned to like him for his own good qualities.

He always was a gentleman, polite, courteously attentive when spoken to, and invariably goodnatured. Then, too, his taper fingers were marvelously deft in making things out of paper, wood, or clay, such as dragons, looking fierce enough to eat one, puzzles at once simple and baffling, flute-like whistles, and other instruments for the production of sounds more or less musical. He also constructed innumerable kites of grotesque animal forms, and he always was willing to show his boyish friends just how these wonders were produced.

They in turn taught him the things known almost instinctively by every American boy, and especially by those who live in the country, but of which our Chinese lad had no knowledge, such as swimming, boxing, rowing, how to camp out like Indians, and above all to play the distinctively American game of baschall. To these fascinating novelties, Jo took as readily as a young duck takes to water; for with his hair cut short, instead of hanging in a braid down his back, and with a radical change of apparel, his whole character seemed to have undergone a transformation, and he now entered as heartily into the rough and tumble sports of his new associates as though "to the manner born." To be sure, he was

breaks as to excite the uproarious mirth of the other fellows, but he didn't seem to mind this a bit and always joined heartily in a laugh at his own expense.

The thing they teased him most about was his wife, the seventeenth century. The latter wore the queue, for the fact of his being married had seemed too good a joke for Rob to keep to himself. Even this, however, did not appear to annoy the young husband, for a Chinese marriage is so entirely different from one in America that there is no trace of sentiment connected with it. The most important feature of Chinese life is the worship of one's ancestors, and this worship may only properly be performed by the head of a family. Thus, to provide for the suitable worship of their own spirits, in case of untimely death, parents are anxious to have their sons married as early in life as is possible. Such marriages are purely business transactions arranged by the elders, and with which the young people have nothing to do except to be on hand at the appointed time. Even this is not essential in the case of the bridegroom, so long as the bride is delivered, as per arrangement at his father's house. He may be on a grow and can supplant it with a false braid until it journey, or undergoing a scholar's examination, or engaged in some other important business that may

> THE SHERIFF TO THE RESCUE we can."

> > without him. As he never is permitted to see his inture wife or to learn anything concerning her, during their betrothal, he cannot be expected to take a great personal interest in her, or she in him. Thus it happened that Jo was quite as willing to accept good-naturedly, teasing remarks concerning his marriage as he was those called forth by any other customs of his people that struck his new companions as ridiculous.

He had one possession that excited their sincere admiration, not to say their envy, and this was a wonderful memory. Having been trained from earliest childhood to commit to memory columns and pages of Chinese characters, and not only pages but entire volumes of the Chinese classics, our young scholar now took up the acquisition of English as a mere pastime. The alphabet was conquered in a single day. Several pages of short words, together with their meanings in another, and by the end of a week he was reading easy sentences. Rob was his first teacher and, of course, his knowledge of Chinese was of the greatest assistance to Jo in gaining the meanings of the English words that he so readily learned to recognize by sight and sound.

Thus it happened that when the time arrived for

After all, the wearing of the queue is comparatively ridiculously awkward at first, and made such funny his trial in the county court he was able to give his own version of the fracas on Hatton common in intelligible English without the aid of an interpreter.

> In spite of the fact that Mr. Hinckley had employed able counsel to defend the boys the case was decided against them and they were sentenced to pay heavy fines in addition to the costs of the trial.

> "It is an outrage and an unjust decision," exclaimed Mr. Hinckley, addressing his lawyer, "and I will never submit to it so long as there is a higher court to which the case may be taken. I desire, therefore, that you move for an appeal and continue to give it your most earnest attention."

> "Very well, sir," was the reply. "Of course I will do so, but I must warn you that there is little hope of such a suit as yours being won in any American court. It is prejudiced from the outset by the existing strong feeling against the Chinese. For them it is almost impossible to obtain justice even with the bulk of evidence in their favor; which, in the present instance even you must admit is not the case."

> In spite of what the lawyer said, Mr. Hinckley was determined to carry the contest to a higher court, and the motion for an appeal being granted, the case of State vs. Joseph Lee, et al., was carried to a superior was four months from that time.

> > In the meantime the "Muckers" of Hatton and their friends were wildly jubilant over the victory already gained. During the evening of the day on which the decision of the county court had been rendered, they gathered about a great bonfire at the lower end of the village, where they listened to incendiary speeches against the Chinese, and all who befriended them. These were received with yells of applause and ominous threats of violence.

> > While this was going on at one end of the village, a number of Mr. Hinckley's friends were discussing the situation in the parsonage at the other. All at once Rob, who had been doing something on his own responsibility, broke into the room where these gentlemen were sitting.

> > "They're coming. Uncle Will!" he cried breathlessly, "and they swear they'll run Jo out of the village. They are talking about tar and feathers, too."

> > Mr. Hinckley sprang to his feet. "My friends," he said, "if you will stand by me in this emergency, I think the evil may be averted, but if you cannot see your way to so doing. I must hasten to remove the innocent lad committed to my charge beyond the reach of danger. What do you say? Speak quick, for there is not a moment to lose!"

> > "We will stand by you," replied one and another, "and there are plenty more who will do so, too. Our village must not be disgraced by scenes of lawless violence."

> > "Then," said Mr. Hinckley, "hasten and gather the neighbors. Let each man be back here within five minutes bringing another with him. I will try to find Constable Jones and urge him-"

> > "Here I be, Parson," interrupted a voice from the doorway, "and I've telegraphed the Sheriff that there's a show for trouble. He's answered that he'll he here inside of an hour, and for us to try to keep 'em entertained till he comes."

exclaimed Mr. Hinckley, "I rather think "Good!"

Five minutes later when a noisy throng of men and boys came surging up the street the lower part of the parsonage opposite which they halted, was so brilliantly lighted that they could see a numerous company of gentlemen assembled inside. They barely had time to realize that the house thus was occupied, when suddenly every light was extinguished and it stood in silent darkness. For a moment the new comers just now so valiantly loud mouthed, waited in silence to see what would happen next. Then they began to murmur and the murmurs grew into shouts of:

"Fetch out your Chinee!"

"We'll teach him English!"

"Down with the Rateaters!" and a confusion of other cries at once derisive and threatening.

As the mob inflamed by these utterances and urged on by its self-constituted leaders, crowded about the entrance to the front yard, it was met by Constable Jones, who leaned negligently against one of the gate

"Hello!" he exclaimed, "what do you fellows want here?"

"We want to see Parson Hinckley." answered a spokesman.

(Continued on page 98.)

### Three Yankee

BY THE

Boys In Ireland

EDITOR

THE ESPLANADE, QUEENSTOWN

(Begun in November.)

Slowly and majestically the big vessel came to her anchorage off the beautiful harbor of Queenstown, and for the first time in her long voyage of more than twenty four hundred miles her engines rested.

Though it was very early in the morning, every passenger, save the fellow who had crossed the ocean many times before, and there are always such on board, was on deck gazing with that feeling new and indescribable which is felt by one who for the first time, after days and nights upon the mighty deep, looks upon the land again—and that land the land of

Professor Jack and his three boys, with several hundred other passengers, were to disembark at Queenstown, while their good ship, with the greater part of her human freight, was to continue on her journey a farther distance of some two hundred and thirty miles, to her home port-Liverpool.

"A great mistake many of these American sightseers are making in not stopping off here," said the Professor to a fellow passenger. "They are missing something that is becoming rarer and rarer in Europe every day."

"Do you mean that Ireland is becoming rarer?" asked the gentleman addressed.

"I mean this," said the Professor; "it is becoming more and more difficult for the American traveler to find in Europe something out of the ordinary-something radically different from what he has seen at home. The average American traveler lands in Liverpool and rushes at once to London, where much that he will see will appear commonplace enough. and, on first view, disappointing; while right here. at the front door of Europe, is Ireland-one of the most unique and curious corners of Europe, where everything is strange and interesting and nothing is commonplace. Going from New York to Liverpool, so far as change is concerned, is not far different from shutting your eyes in New York and opening them in another American city; but going from New York to Queenstown is shutting your eyes in one world and opening then in another and very different one."

"Why don't the guide books tell the people to see Ireland first?" asked one of the boys.

"The most faithful of them do," answered the Professor, "but every one is in such a fever to reach London that he satisfies himself with the promise that he will see Ireland on his return; then at the end of a tour of the continent, tired, travel-worn and homesick, he hurries back to London, thence to Liverpool, where he sets sail for home, all unmindful of Erin with her tender and sorrowful history, her literature of the heart, her romantic legends, her picturesque people, her unrivaled lakes, and her landscapes of unfading green-but here comes the tender to take us off-you can just see it steaming out of the harbor yonder."

"There are two of them; they look like two big tugs," exclaimed Ned, who was looking through the glass, which it was his privilege to carry. Someone at Ned's elbow explained that one of the tugs would take off the first and second cabin passengers and the other the steerage passengers and the mail.

While the tugs were approaching, the boys spent their time in feasting their eyes on the long stretch of shore that rose by gentle slopes to rounded hilltops, dotted here and there with little patches of white that shone against the greenish-brown background of the hillsides, which on close inspection proved to be whitewashed cottages.

"Not a tree in sight!" exclaimed Hal. "Hasn't Ireland any trees?"

The question was natural; it is in the mind if not on the lips of every traveler who for the first time looks upon these hilly shores that give the appearance of having been scraped bare to the bone by a giant razor in the hand of a giant barber.

Professor Jack had his explanation. "They tell us," he said, "that many years ago, when Ireland was invaded by the Danes, her people fought with such good effect from the cover of the forests that their conquerors afterwards leveled the leafy fortresses to

QUBENSTOWN HARBOR FROM THE TOWN

that the explanation is true. I may as well caution you here, boys, not to believe everything you hear from the natives about Ireland. The Irish people have the richest imaginations of any people in the world, and every hillside, stream, lake, mountain and ruin has its wonder story that, repeated from generation to generation, is now fully believed. The very air of Ireland is laden with superstition, and while it is sweet and pure, be careful not to breathe too deep; but come, we must hurry below."

"-And get our baggage," added Joe.

"Our stateroom steward will attend to that," replied the Professor; "he hasn't got his 'tip' yet, and he'll not neglect his business till he gets that. It's a good rule not to pay your stateroom steward till you see your luggage well off the boat; otherwise you may have to wait for it or get it yourself."

The boys were anxious to know what sort of a tip the Professor expected to give.

"About a sovereign-five dollars, I think. Our steward hasn't had much to do; none of us have been ill, but that will be as little as we can give and feel comfortable.

"Whew!" The boys all joined in the exclamation. "Don't be surprised; the fellow doubtless expects at least a sovereign from each one of us."

"Why, it's highway robbery," exclaimed Joe, indignantly.

CHRIST CHURCH CATHEDRAL, QUEENSTOWN

"No, hardly that; better call it legalized piracy on the high seas," answered the Professor.

"Doesn't he get his pay from the ship company?" asked Ned.

"Barely enough so that his name can go on the ship roll-perhaps a shilling for the voyage."

"Twenty five cents!" exclaimed the boys in a chorus, looking incredulous.

"That's the solemn truth; the passengers pay the wages of the stateroom steward, the bath steward. the table steward, the deck steward, and nearly every other one of the ship's crew with whom they come in contact. I believe I would rather be barber on this boat than captain, if I were in the business for money. Let me see; I will pay about fifteen dollars in tips for our little party, and then I'll not be thanked for giving for four of us what will be expected from each one separately."

"It's an imposition; I wouldn't do it," exclaimed Ned, savagely.

"O, yes, you would; at least, you would tip your table steward: he has earned his tip from you." Everyone laughed. The Professor continued: "Now. just take this little word of caution: You are away from home. You will see strange sights and meet strange people. You will run up against strange QUEENSTOWN FROM THE HARBOR

the earth and they never grew again. I will not vouch customs. The quicker you make up your mind to Europeanize yourselves the happier you will be. I know a fellow who tried to reform everybody while traveling in Europe and he came back the most used-up and unhappy individual you ever saw. Don't try to reform everybody and everything you see. Never allow yourself to get angry because some fellow doesn't do just what you would do and things are not just as you are used to them or would have them. When in Rome do as the Romans do."

> "Well, I'm not going to let a fellow hold me up and rob me in broad daylight," said Joe, shaking his head threateningly.

> They were just passing out of their stateroom, where they had gone to get their small luggage. A young fellow wearing a white linen jacket stood in the passageway and bowed respectfully to Ned, who was the last of the four to leave the room.

"Beg pardon, sir, I am Boots."

"Is that so?" answered Ned. "What's Boots?"

"I shined your boots." .

"O, did you? Well, you didn't do it very well. It must have been when I was asleep. Anyway, I don't wear boots.'

"Yes, sir, please you, sir," with another bow.

"Professor Jack! Here's a fellow who says he shined my boots. Is he a Roman?"

Professor Jack turned, laughing.

"So you want a tip? What have you done for us?" "I am Boots, sir." Another polite bow.

"Excuse me, but you haven't touched a shoe belonging to this party. I call this confounded impudence. I never laid eyes on you before. Come, boys.'

The Professor turned and strode down the passageway, the boys following. Ned chucked Hal in the ribs and repeated in a semi-whisper, "Never allow yourself to get angry. The quicker you Europeanize yourself-say, that must have been the noblest Roman of them all, eh?"

The Queenstown passengers were now aboard the two big tugs and steaming away toward an opening in the hills that led to Queenstown harbor. Our four friends stood on the deck of one of the tugs amid promiscuous piles of baggage waving their adieux to the ship and receiving the answering salutes of a thousand handkerchiefs that fluttered above her crowded deck rail. It was a moment of intense interest. The boys gazed upon the ship they were leaving, which lay like a great white leviathan in the water. as upon an old and dear friend, and when some enthusiastic American young woman at their side exclaimed rapturously to her companion. "The dear thing; isn't she just grand?" the boys wanted to say in true American style, "You bet she is!" A real feeling of affection is invariably felt by the ocean voyager toward the steamer that, staunch and true. has brought him safely through the perils of the ocean and that, whether he waked or slept, has pursued her course undismayed by wind or storm. For days it has been his little world, and particularly if he has been able to take his three meals a day, it has been a happy world and a healthful one; so when he comes to leave it, the parting is as if from a faithful friend. The ship's very portholes seem to be so many eyes looking a kindly goodby to him as he is borne away to the land, and never in after life does he quite get over a tender feeling at mention of her name.

"Good-by, Old Glory!" shouted an ardent American, waving his hat to the flag of his country that floated proudly in the morning breeze that Fourth of July from the ship's mainmast. "Good-by!" echoed a hundred hearts and voices, and then all eyes were turned to the harbor which the tugs were just entering between two frowning forts manned with big guns and flying the flag of Britain.

As they steamed up the four miles of water known as Queenstown Harbor the Professor prepared the boys' minds for their short visit to the first European city they were to set foot within.

"One hundred and fifty years ago," said he. "Queenstown, now a city of ten thousand people, was little more than a fishing hamlet. As you see, it is built on a steep hillside, on a series of terraces, from the summit of which a beautiful view can be had of creek that runs into this harbor Drake sailed his ships when the Spaniards were after him, and that here he concealed them so well that the Spaniards thought he had disappeared through the aid of magic. The spot is now known as Drake's Pool."

"Who was Drake, Professor?" asked Joe, who was very much alive when he scented a story that smelled of salt.

"There is no time to tell you much," answered the Professor. "Sir Francis Drake was a celebrated English admiral who lived in the time of Queen Elizabeth. At the age of twenty two he had made a record for good service in the navy, and while yet a young man was the first Englishman to take a ship around the world. For accomplishing this feat, which consumed two years and ten months, he was made a knight. His ship, the Golden Hind, was preserved for a century as a monument to his glory and that of his country. Charles II, presented a chair made of her timbers to the University of Oxford. Drake led several expeditions against the Spaniards, and on one occasion burnt the Spanish ships in the bay of Cadiz; afterwards he spoke of this as 'singeing the King of Spain's beard.' Drake was a vice admiral in the English navy at the time the "Invincible Armada" was fitted out and sent by Spain to annihilate her British enemy. You will remember that the stormy coasts of England and Ireland made it unnecessary for the British navy to show the Spaniards of what metal it was made. There was some little fighting, however; just enough to show that the boasted Armada was probably invincible only on paper."

"What a fine harbor this is," exclaimed Hal, as his eyes swept the circle of water that seemed to stretch for a mile in all directions.

"One of the best in the world," replied the Professor. "All the ships of all the navies of Europe could find shelter here at one time."

"What are those strange looking buildings yonder?" asked Joe, pointing to some low-lying islands just ahead.

"That one," answered the Professor, indicating the one that commanded the entrance to the harbor which they had just passed, "is Fort Westmoreland. Just ahead is Haulbowline Island, where the Government has an armory and keeps ammunition and heavy guns. Just beyond that is Rocky Island, where thousands of barrels of gunpowder are kept in big rooms quarried out of the solid rock."

Ned asked how Queenstown got its name. and the Professor told him that before 1849 the place was known as the Cove of Cork. the city of Cork lying a few miles east on the river Lee, which empties into the harbor. In 1849 Queen Victoria visited Ireland for the first time, the first Irish soil her foot touched being here. The Cove people were so proud of the fact that they changed the name of their town to Queenstown to do honor to the young queen.

"It may interest you, boys," continued the Professor, "to know that the Reverend Charles Wolfe, the Irish clergyman, who wrote the beautiful lines on the "Burial of

here, too, is his burial place,"

None of the boys could remember the poem. "I can't repeat it all," went on the Professor, "but here are a few lines:

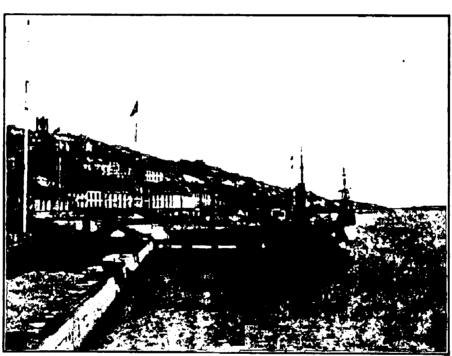

"'Not a drum was heard, not a funeral note As his corse to the rampart we hurried; Not a soldier discharged his farewell sho O'er the grave where our hero we buried.'

"Then here's the last verse: "'Slowly and sadly we laid him down From the field of his fame fresh and gory; We carved not a line, we raised not a stone, But we left him alone with his glory."

"Who was Sir John Moore, Professor?" asked Hal. "It's a good thing you have a professor of history with you or a lot of interrogation points would go begging. Keep right on asking questions; it's the way to learn. Sir John Moore was an English general who died about one hundred years ago. While he was probably the greatest English general of his time, excepting the Duke of Wellington, yet his greatest fame, strange to say, came from the masterful way in which he conducted a retreat. It is not often a man becomes famous for running away from an enemy. In 1808, he was in Spain fighting with the Spaniards and the English against Napoleon, who had crossed the Pyrenees in person to command the French forces. The French were winning victories and advancing rapidly into the country. Sir John conceived the idea of drawing off Napoleon toward his comparatively small English force and thus enabling the Spaniards to rally. His plan succeeded. Napoleon caught at the balt. Then Moore started on a retreat to the sea, drawing the French after him and fighting all the way. Finally the English reached the shore and found that the fleet on which they expected

this magnificent harbor. History relates that into a his life paid the forfeit. You ought to read Napier's description of Moore's retreat. It is the finest piece of military history in the English language. His death was made glorious by his beautiful spirit of heroic self-sacrifice and devotion to the welfare of others. He taught how a soldier ought to die."

> The tug was now rapidly nearing shore, and the three boys pushed toward the gangway, each eager the fortunate boy. Quickly he was joined by his two that looked like an exit from the dock. A shout from a man in uniform brought them to a standstill, and noting the officer's gesture they turned to a door into which now a long line of passengers was disappearing, Professor Jack among them with a merry twinkle in his eye, for he had noted the boys' discomfiture. Once inside the door, they found themselves in a big room filled with men and women struggling to get the attention of the few customs officers and get the coveted chalk mark on their luggage that indicated that it contained no whisky, tobacco, or silver plate, and could therefore enter the country free of duty. The ceremony was brief, and, as Ned said, just a bluff, as much of the luggage wasn't even opened. From the customs office they passed directly into the railway station, but not before a tall soldier in uniform, who stood at the door with notebook and pencil in hand, had taken the name of each and written down his statement as to where he came from, where he was going, and how long he intended to stay in Ireland. The boys were puzzled at this procedure and Professor Jack had to explain. "Remember," he said, "you're in Ireland. The English government thinks it must watch this little island closely for fear someone will come and carry it away. It looks like a useless and silly performance, but it's one of the ways the English government takes of making a show of guarding against dangerous characters who might come in to

THE LANDING PLACE AT QUEENSTOWN, SHOWING CUSTOMS HOUSE ON THE LEFT, THE SHIP'S TENDER ON THE RIGHT, AND THE STEEPLE OF CHRIST CHURCH IN THE DISTANCE

the pile here on the platform. You know they have train. They had not a minute to spare. no checking system over here and every fellow must that trunk. I'll go and see about the train for Cork."

Shortly the Professor returned with the information that the train for Cork would leave in about an hour, and that they could take that time in which to see Queenstown. In less time than it takes to tell it our party was on the street. Queenstown was hardly yet wide-awake, if, indeed, Queenstown, or any other town of southern Ireland, can truthfully be said ever to be wide-awake. A few doors were open, but these were for the most part doors behind which an assortment of bottles and a rude bar were largely in evidence. The few people on the streets were plainly Irish-women, their heads covered with little shawls or kerchiefs, baskets on arm if empty, or on head if full; boys, usually accompanied by donkeys dragging big carts; soldiers and sailors, the former in scarlet and the latter in blue and white, all seemingly wending their way to a wharf where a boat, with black smoke belching from its funnels, seemed to be awaiting them.

The Professor suggested that they begin their first day abroad by going to church, at the same time pointing to a large edifice high up on the brow of the steep hillside on which the town lay. The suggestion didn't meet with the heartiest support, but as the boys saw nothing else to do, they followed their leader up one of the steep, narrow streets, "just like to escape was not there to meet them. Here Sir John a crooked alley at home," as Ned said. The climb fought his last battle, and though it was a victory, was no easy trick to fellows who still had their sea

legs on them, and Professor Jack took them at a good round clip, so that when they stood at the top before the church door they were red-faced and puffing. Early as it was, a withered old hag sat begging at the entrance of the building. A ha'penny and a kind word from the Professor brought a fervent "May the copper ye gave me be a candle to light ye to glory."

The building proved to be a Catholic cathedral, and to be the first to set foot on foreign soil. Joe was like all such in Europe, oppressively dark and gloomy-especially to Americans, who are accustomed companions, and then a dash was made for the gate to cheerful, sunlit churches. Strange that the Queenstown cathedral should be gloomy, for it stands high up in the heavens courting the sun and air; but heavy stone walls and stained glass are more than a match for even an Irish sun. The interior of the church was novel and awe-inspiring. Early as it was, an attendant was lighting candles at the altars. and here and there in the semi-darkness a poorly clad figure—usually an old woman—was kneeling, or rather crouching, over her beads, looking neither to right nor to left. Professor Jack led the boys about over the cold stone floors heedless of the worshippers. pointing out the old and curious features of architecture and reading the inscriptions on the walls and floors where the dead of generations gone-pious and otherwise—were made immortal, at least, so far as the stonecutter could do it; and here many a Bridget and Dennis got more attention and renown than they. ever dared dream of in life.

"Say, it's spooky in here," whispered Joe.

"It gives me a chill," echoed Ned, "and I'm hungry, too. Let's go and get some breakfast."

Professor Jack laughed and looked at his watch. "Fifteen minutes till train time. No chance for breakfast, if, indeed, one could be had any place in Ireland at this time of day. It's time, however, that we were going to the train."

Going down hill again, the party had a good view of the harbor that spread out before them its ten square miles of water, but all interest in this was

> lost when a diminutive donkey turned a corner and came plunging down the hill, dragging, or rather pushed by a big cart three times its size, inside of which stood an Irish boy of twelve or thereabouts and two little Irish girls. The girls were hanging to the boy, and the boy was hanging to the donkey by a rope that served with poor effect as reins. It was a runaway, sure enough. Indeed, the donkey couldn't help running, for the heavy cart on the steep hillside simply made him run. The street was narrow, and our party of four was directly in the way. Everybody scampered but Ned, who, thinking he smelled turnips, stood spell-bound-or smell-bound. His companions yelled at him, but it was too late. Ned jumped, the donkey shied, over went the big cart, and out rolled the Irish boy, the two Irish girls and a peck of turnips. Ned had lost his footing and was head-overheels tangled up in the mess of turnips and Irish, while the donkey went cavorting down the hill. The Professor and the other boys laughed until they had to lean up against the wall at the side of the road for support. Ned scrambled to his feet with a

Sir John Moore." died at the age of thirty-two, and stir up the Irish people and make trouble. You will scowl on his face and a turnip in each hand, saying be surprised when you find how Ireland swarms with something that sounded like "A dirty Irish trick." soldiers and police. But the slight annoyance you. The little Irishman showed fight, but a sixpence and have just now felt is barely a suggestion of what three extra pairs of hands and feet to help him chase many a foreigner enjoys who enters the port of New the turnips that were rolling down the hill fixed the York. Now, you boys look for our trunk. It'll be in matter up. It was a wonder the party didn't miss the

> "You don't call this a train of cars! keep track of his own baggage. Hal, you'll be bag. Joe, as they moved along the station platform, the gage master. It's your business to keep an eye on Professor peering into each compartment to find seats for four.

> > "Get onto the engine!" exclaimed Ned in a stage whisper between bites of turnip. "The engineer looks like a Vermont farmer."

"More like a village alderman," suggested the

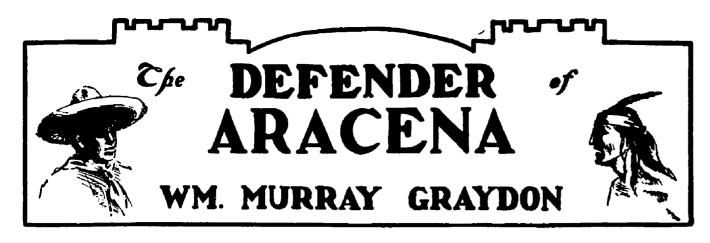

"Say, if father was here I'd get him to buy this train for me," said Ned. "It's just big enough for our back yard. Doors in the side! How funny! Just like a big double stagecoach—the kind they used to have a long time ago. What are those numbers for on the coaches-one, two, three?"

"That is to indicate the class," answered the Professor. "Our ticket calls for a second-class coach. Here's one that's empty. Hop in. Always go secondclass in Ireland, boys, and almost every other place in Europe, except down in Italy and Spain. They say nobody but fools and the nobility go first-class; the peasantry go third-class. No, thank you; I'll ride backwards. Everybody in Europe wants his back to the engine; none but Americans want the other seat."

'Why is that?" asked the boys in a chorus. "I should think everyone would want to sit facing the front."

The Professor explained: "I heard an American say it is because the average European likes to have his face to the past. He only sees things after they've got by him. A great many Europeans are living back

AVIER BRITO was a little New Mexican, who lived—not in these times, but away back in 1845, when New Mexico did not belong to the United States at all.

Spanish settlers, who long ago wrested the land from the Pueblos, and now lived on friendly terms with their one time enemies.

But, though the Pueblos had been pacified many years before, the Apaches, the Utes, and the Comanches were still deadly enemies to the new settlers, and year after year scattered villages were destroyed, shepherds murdered and their flocks driven off.

Xavier was only sixteen, tall for his age, with sleek, black hair, and a rich olive complexion. He was a brave lad, fond of all sport, and skillful with the flintlock, the riata and the spear. His father, Jose Brito, lived in the little walled town of Aracena, which sheltered only three or four dozen families, and these mostly at night, for in the daytime they went out to hunt or to plough or to tend their flocks.

For a time the inhabitants of Aracena had dwelt in peace—it was nearly two months since the last attack from their fierce neighbors, and every one was hoping that such rare good fortune would continue; when early one morning a foot-sore, wounded refugee came to the town gate and demanded admittance.

His tale was a pitiful one. He belonged to the town of Pulco, some ten miles to the westward, nearer the banks of the Gila River, and the preceding night it had been attacked by the Apaches, half the people slain, and many carried off by their cruel captors.

He alone had escaped, and now he wanted the men of Aracena to go in search of the savages and avenge the death of their neighbors.

His tale roused the hearers to wrath. The men of Aracena were brave and chivalrous people, and in haste they armed, mounted, and rode away to the westward.

Xavier begged hard to be allowed to accompany his father, but Jose Brito was inexorable. "No," he said sternly, "you must stay to take care of the old men, and the women and the children. Else there will be no defenders left at home."

This was a bit of pleasantry on Jose Brito's part, for he knew of no source whence danger could come, but Xavier took it in earnest, and when the men had ridden gayly away, he strutted up and down, saying proudly to himself: "Yes, I'll stay, I'm to defend the town."

First he brought some water for his mother, and some wood to light her oven, and then he made a visit to the big watch towers which overlooked the town walls, to make sure that the guns were loaded and everything ready for defense.

This grew monotonous, after a while, so he took his bow and arrows, and went out to the timber that bordered the plain, hoping to find something to try his skill upon.

But all he could see was a long-eared rabbit, and twanging his bow, he sent a shaft right through the little creature.

He was crawling about in the long grass, looking for his game, when, chancing to glance down the long sloping ridge, he saw a spectacle that terrified him. A party of mounted Apaches, riding swiftly over the plain less than a mile away. At first, Xavier could scarce believe his eyes, for the Indians were coming directly from the East, but a closer scrutiny proved he was right. They had made a wide circuit, after leaving Pulco, instead of retreating homeward, and now were coming to attack

The lad's paralyzing fear soon passed away, and as fast as his legs could carry him, he ran back to the town.

"The Apaches, the Apaches," he cried loudly, "they are coming, they will soon be here."

What a terrible commotion there was! Women shricking and wringing their hands, the old men seeking places where they might hide—no one giving a thought to defense. Yes, there was one. Xavier quickly closed the heavy gate.

"Help me here," he cried, "roll those stones against it, Pedro! drop the bars into their sockets, Manuel! Now then to the walls! Get ready your spears, your bows, your muskets, we may hold out until the men return. Father told me to defend the town and I'm going to do it."

Brave Xavier! His example shamed the cowards, put sudden courage into the hearts of the despairing, and all flocked to the watch towers, armed with everything they could lay their hands on. Even the women came, ready to take their husbands' places.

Soon the Apaches came dashing over the ridge and galloped up to the walls with flerce yells, greatly surprised to find the gates closed and their entry disputed.

Baffled and angered, they withdrew for a time, but it was soon plain that they had no intention of abandoning the attack, for presently they picketed their horses before the walls and swarmed up to the gates, shooting arrows, hurling spears and yelling like a troop of demons.

One of the foremost was picked off with Xavier's own flintlock, and taking courage at this, the old men and the women cast a shower of spears that did much damage among the enemy, and they again withdrew from the assault.

But Xavier knew well that the worst was yet to come, and very soon his fears were verified, for a dozen or more of the bravest Apaches advanced to the wall bearing great beams on their shoulders, taken from a ruined building just outside the town. A rough scaffold was soon constructed, and in spite of the bullets and spears that thinned out their ranks, one by one, they clambered to the top of the wall.

The besieged broke into loud wailings and lamentations, losing all hope, but Xavier was not yet at the

HE BAW A SPECTACLE THAT TERRIFIED HIM

end of his resources. The people were crowded into the two towers that stood on each side of the gate.

One of these was larger and more solidly built than the other, and here Xavier concentrated his forces in safety, just as several of the Apaches dropped from the wall into the town and tore away the fastenings of the gates.

Xavier watched them with gnashing teeth. If only he had a force sufficient to sally out and attack them.

But he could do nothing, of course, except to hurl spears and shoot arrows, and this only served the more to enrage the Apaches, as the great gates were torn open and they swarmed with piercing yells into

They soon discovered that not a victim was within reach, as they ransacked the houses, and in a short time they were swarming about the watch tower.

Here they could do little, for Xavier had hauled up the ladder which gave access to the tower by the little window far up the side, and the lower portion was of solid adobe strongly cemented.

"Don't be afraid," whispered Xavier cheerily, "but shoot, pour down your weapons on the foe," and he gave them an example by training his flintlock on a big warrior beneath him, dropping him like a log.

The Apaches replied with a cloud of arrows that wounded two of the besieged—not dangerously, however—and then the inmates of the tower replied so

vigorously that the fee dedged under cover in utter consternation.

Thus a couple of hours passed, with occasional fruitless rushes on the part of the Indians, and a stern resistance from the watchful New Mexicans.

But the spears and arrows were running low, and ammunition for the flintlocks was scarce.

Xavier realized that unless the men returned soon the tower would be taken and the inmates massacred.

Even as this entered his mind, the Apaches bounded forward with a huge beam for a battering ram, and dealt the foundations several stunning blows before they could be repulsed, while at the same moment, half a dozen of their companions gained the wall, and from this point of vantage, shot their arrows into the little windows of the tower.

But what hope was there that the men would return? They were miles away, on the bank of the Gila, perhaps searching for the cunning Apaches, and little dreaming that they had circled and gone back to commit more depredations, for Xavier had no doubt that these were the very Indians—or a part of them at least—who had devastated Pulco.

He bravely tried to repress his fears, but with each moment the outlook grew darker, and when another assault from the battering-ram loosened some of the great stones of the tower, he saw that something desperate must be done. Perhaps some one could escape from the town and go for aid. Glancing over the wall at the horses picketed on the plain, hope flashed into his heart.

He called the people around him and briefly told how great the peril was. Then he pointed to the horses. "Pedro, Manuel," he cried, "one of you must go for aid. You are fleet-footed. You can easily capture one of the horses and get away. I will remain and guard the tower till your return, and God grant that it be soon."

But they refused.

"The risk is too great," they replied, "we will surely be caught." There were none willing to go.

Xavier hesitated. He wished to go himself, but he felt as though it would be cowardly to abandon his friends.

But there was no other way, so bidding all be of good cheer and fight well, he tied one end of his riata to a projection in the tower and dropped the other over the wall.

A careful glance showed him half a dozen Apaches standing about the gate. He was nearer the horses than they by half a dozen yards.

Singling out the best looking mustang, a powerful bay that was picketed on the edge near the town, he slid rapidly down the lassoo, hand over hand, and dropped to the ground.

With every muscle strained, he sprang forward and was halfway to the goal, when a chorus of yells rose from his rear. He was discovered. This only spurred him to greater efforts, and in a few seconds, he sprang with a bound to the back of the chosen horse, severed the rists with his keen-edged knife and was off like the wind, bending low to avoid the shower of arrows and spears that whizzed by his head.

He rode straight to the westward, digging his heels into the mustang's flanks, and looking backward from time to time at the half dozen mounted Apaches who were riding furiously in pursuit.

His steed was a fine animal, and one by one, he distanced his foes until a solitary warrior remained who was mounted as superbly as himself.

who was mounted as superbly as himself.

All efforts to shake him off were vain, and for miles the distance between them remained un-

changed.

Then Xavier discovered that his own horse was giving out, and a glance showed that the Apache was steadily gaining.

He was armed with a bow and spears, too, while Xavier had only a knife. His sole hope lay in keeping ahead and he employed every possible device to drive his horse onward.

But the hoofs of the Apache's mustang rang still clearer in his ear, and suddenly an arrow whizzed by his head.

Crouching low on his steed's neck, Xavier still urged the jaded beast forward, but at that instant a second arrow struck the horse in the flank and his rider was pitched headforemost to the ground.

Xavier rose and staggered blindly toward the crest of the ridge before him, but his merciless foe was almost at his heels, and in a few seconds all would be over.

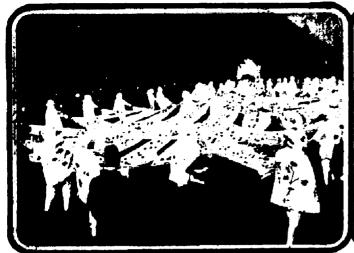

Already the savage whoop of triumph rose on the air, and the spear was poised for a fatal cast when a loud report was heard, and the Apache fell lifeless from his horse. Xavier looked up to see the men of Aracena, led by his own father, riding over the crest of the ridge.

The lad's story was quickly told, and in hot haste the men galloped toward the town, Xavier mounted behind his father.

They arrived barely in time, for the watch tower was tottering on its foundations, and the inmates had used their last spear and fired the last charge.

The Apaches fled in confusion, but the New Mexicans pursued them closely, and many were slain before they reached the bank of the Gila.

Of course Xavier's brave exploit made him a hero, and for many years afterward the tale of his defense of Aracena was a household story at New Mexican firesides.

### Philadelphia's

For three hundred and sixty four days of the year Philadelphia may be called the "Quaker City" with impunity. On the three hundred and sixty fifth, namely New Year's Day, a stranger within the gates would imagine himself in New Orleans during the wildest season of the Mardi Gras, or in Rome during Carnival week. A feature of the revel is a grand parade of mummers, in which the most gorgeous costumes imaginable dazzle the eyes of the spectators who crowd the sidewalks and occupy every available vantage spot along the route of the procession. An incentive to the mummers to turn out wearing the most startling costume that ingenuity can devise and money procure, is the number and value of cash prizes offered for the best dressed mummers and the most original costumes.

The mayor of Philadelphia, attended by the municipal officers, reviews the parade from the City Hall. For the most part the mummers are members of the various civic clubs. As the costumes worn cost a large sum, the members of the clubs are taxed all through the year for this purpose alone, and friends and sympathizers are invited to contribute to the

costume fund so that their favorite club may stand a chance of carrying off a prize.

At the head of each club marches his majesty the king. From his royal shoulders hangs a cloak that rivals in gorgeousness the most magnificent robe worn by crowned head in this or any other country. Size as well as appearance counts in the estimation of the awarders of the prizes, so that the money in the fund

PUNNY COSTUMES IN THE QUAKER CITY PROLIC

is made to furnish as big a cloak as is consistent with the richness of the material and the splendor of the embroidery. Some of the cloaks spread from curb to curb and for half a city block behind the wearer. More than a score of pages help to support the great weight of the train, striving to pull it taut, as the king staggers along, by hauling on silken ropes attached to the robe for the purpose. Sometimes, as the street narrows, there is not room enough for the pages to keep the robe stretched, and then his unfortunate majesty is forced to walk with an immense weight of dry goods on his shoulders. When the day happens to be a warm one the king occasionally faints under the weight of his clothes and has to finish the march in an undignified fashion in a wagon.

Besides the numerous kings with their immense robes, there are all kinds of mummers in the paradeclowns, sprites, demons, queens with masculine feet and very large waists, floats without number bearing allegorical figures, and all the rest of the usual accompaniments of such a revel. After the parade the city is carnival mad for a few hours; then it lapses into a state of Philadelphian lassitude until another three hundred and sixty four days have passed.

#### WHAT'S THE MATTER WITH BOY? THE AMERICAN

BY MARY WOOD ALLEN, M. D.

E'S all right," to all intents and purposes, but he fails sometimes in execution. He is kind-hearted, but thoughtless. He is too full of his own ideas and desires to give much thought to others, therefore he lacks in courtesy.

This fact has always been impressed on my mind when I have been in other lands, where the boys are not more generous or larger hearted, not more kindly in feeling than our boys, but having been taught a more continuous courtesy, are more polite under all circumstances and to all people. Perhaps the English boy does not love his mother better than does the American boy, but he always says "yes, mother." when the American boy would say "yep." It may be he does not appreciate what she does for him more, but he says, "Thank you, mother," when the American lad would say, "That's bully."

Perhaps the German boy is not more grateful when he takes his father's hand and kisses it in acepting a gift, than is the American boy who takes the gift with a shout and, with no thanks, runs off to show it to a playmate; but we feel the atmosphere of refinement in the one case and miss it in the other. It may be that the French boy is at heart just as selfish when he rises as grandma enters the room and gives her the easiest chair, as is the American boy who never sees grandma come in, and never notices whether there is any chair for her at all; but he surely has more gentlemanly manners.

The absence of courtesy in our young people has been impressed upon me more strongly than ever, as I have contrasted with it the manners of a young man from the Orient, who, having come here to enjoy the advantages of our land, has brought with him a courtesy to which we are entire strangers, and finds here a lack of refinement which greatly disturbs him. If he, by any chance, should soil the garment of another he would be profuse in apologies and efforts to repair the damage, and he cannot understand how the students in college can put their muddy shoes upon the bench on which he is sitting, and dirty his clothes and only laugh at his annoyance. He cannot comprehend why we laugh if some one falls or meets with an annoying accident. He wonders why there is so little courtesy among men. A student friend will call on him; perhaps does not take off his hat; says "hello" on entering; lights a cigar without any apology, and sits with feet on the table regardless of the beautiful Oriental spread which adorns it. "Why should he treat me with such disrespect?" he asks. "His being a friend is no excuse." And indeed it is none, but our boys seem to

think that being comrades makes all courtesy needless.

This Oriental thinks that the American people are lacking in courtesy to the aged and also to women. When he enters a room he first goes to the mistress of the house-no matter who else is present-and after greeting her pays his respects to the others in the order of their years or rank. When he leaves it is the same way, and he would feel that he lowered himself by forgetting thus to act.

One evening a lady of years and social position gave him permission to invite the young people where he boarded to come to her house to see some beautiful Oriental goods which she possessed. They came in a body with great hilarity. The greeting was, "Well, here we are!" and in they rushed pellmell, paying to the lady no attention whatever. During the evening they were as free as if in a

A SURVIVOR OF THE MAINE, WHO ALWAYS PARADES IN THIS GUISE

hotel parlor, and not one of them addressed a remark to the hostess. When they left in a body she arose to bid them good-night, but every single one of them marched out without as much as a glance in her direction. They went with much jollity, assuring the Oriental that they had had a delightful time, but were utterly regardless of any courtesy due the hostess. And yet they were not ignorant young people. They were college students, Seniors, Juniorsand two were instructors. If some one had told them they had behaved badly they no doubt would have been greatly surprised. They meant well, but were thoughtless.

Not long ago I saw a company of young people together for an evening of social enjoyment. They had on their best clothes, and presumably their best manners. When refreshments were served I noted three of the young men accept and fall to eating their ice cream before the ladies with whom they were chatting had been served. They called themselves gentlemen, no doubt, but a young Englishman who was present and refused all refreshments until every lady was served, certainly proved to some of us that they were lacking in politeness.

What is the matter with the American boy? One thing is sure, he has not been as carefully instructed at home as he should have been. For this he is not to blame, but he will have to work harder to acquire the courteous manners that has been made a habit in the very childhood of the boys of some other nationalities. Courtesy means the manners of the court, that is the customs of royalty and nobility, We claim that every American is a prince, but he makes it hard to prove that he is by his failure to manifest royal manners.

One can never be truly courteous until he rememhers others-until he learns to consider the feelings of others. One can never be discourteous who does remember others. He may not understand all the superficial rules of conventional society, he may not he able to know just which fork or spoon in the row to use next, but he will never laugh at the one who makes a little blunder. He may drink out of his saucer, but he will see that others are served before himself. He may not be able to give just the right "wiggle" to a handshake, but he will not enter a room or leave it without a word of greeting or farewell.

The thing that is the matter with the American boy is that he does not stop to think that there are other people in the world. He certainly will grow in grace with years and will come to realize that

"Kindness is wisdom. There is none in life But needs it and may learn."

In our great rush and hurry to do things we sometimes feel that we have not time to stop for the little politenesses, but Emerson is right when he says:

"Life is not so short but there is always time enough for courtesy."

# Sons of Fighting Sires BY RENE

Appointments to cadetships at West Point are governed in a great majority of instances by political influence, being often made by members of Congress in accordance with an expediency far removed from considerations of patriotism or usefulness to the country. There are, however, a few which fall each year to the President, and these are usually bestowed upon the sons of men who have earned renown in our military service.

Thus it happens that, at the present time, there are in the United States army a number of young officers whose fathers were famous generals a generation ago. Some of them are sons of men who gained celebrity as leaders on the Southern side in the Civil War, and nearly all of them have already achieved for themselves some conspicuousness in a professional way, giving testimony to the value of a fighting ancestry.

When Gen. Ulysses S. Grant was at the point of death, he wrote a letter, asking that his grandson, U. S. Grant 3d, be appointed a cadet at the Military Academy. It was addressed simply to "the President of the United States," and, when the boy had grown to suitable age, was placed by his father, Fred. D. Grant, in the hands of Mr. McKinley, at the White House. Mr. McKinley made the appointment at once, and the youth acquitted himself so creditably at "the Point" as to be graduated, last spring, second in his class.

#### The Young Men of Today

The young men of to-day are too finicky-too much given to self-analysis, too self-pampering. Their shoes and neckties cost more each year than did the entire wardrobe of their grandfathers. They feel a sense of degradation in small beginnings and plodding, and they wait for success ready made to come to them. There is not a young man in the country who would imitate Ben Franklin and march through the streets munching a loaf of bread while looking for employment. He dares not, indeed, because soclety has become also finicky, and he would be arrested as a tramp. The young man of to-day wants capital. Trusts and combines and corporations distress him. He cannot be president of a bank or judge of a court the first week he is from school, and he feels like the famous Eli Pussley, that he has "no chance."-Philadelphia Inquirer.

#### No Place to Sit Down

"It was never intended that a lazy boy should reach the top of the ladder."

"No; there's no place up there for him to sit down."

The first place in the same graduating class was taken by another son of a fighting father—Douglas MacArthur, whose father, Maj. Gen. Arthur MacArthur, was first governor of the Philippines. He is one of the handsomest and most manly young fellows in the army.

Another new graduate of West Point is Lieut. Philip H. Sheridan, Jr.,—son of one of the most famous warriors on the Union side in the Civil War, who afterwards became lieutenant-general of the forces. He is grandson, also, on his mother's side, of another old hero, General Rucker, who, at 92 years of age, still lives in Washington.

Still an undergraduate at the Military Academy is Sherman Miles (son of Gen. Nelson A. Miles), who is also a grand-nephew of General Sherman—the leader of the never-to-be-forgotten "march to the sea." He bears a striking likeness to his celebrated uncle.

One of the finest-looking young men in the army is James F. McKinley, a nephew of President McKinley, whose physiognomy strongly calls to mind that of his martyred uncle. He earned his promotion from the ranks to a first lieutenancy in the cavalry, enlisting

YOUNG SON OF BRIGADIER GENERAL LEONARD WOOD, COMMANDER OF THE AMERICAN ARMY IN THE PHILIPPINES

as a private in 1898, in an Ohio volunteer regiment. At the present time he is attached to the headquarters of the General Staff in Washington.

One of the most gallant young captains in the Artillery Corps is Joseph Wheeler, Jr., a son of the famous Confederate cavalry leader. Fitzhugh Lee, Jr., offspring of another "Rebel" commander of note, is a lieutenant of cavalry in our army; and the son of the Confederate General Longstreet, James Longstreet, Jr., holds like rank in the same arm of the service.

Another young army officer, newly graduated from West Point, is Thomas E. Selfridge, Jr., a son of Admiral Selfridge, of the navy. Admiral Schley, too, has a son in our military service—Capt. Thomas F. Schley, of the Infantry, who entered as a private in the Signal Corps, and rose from the ranks by merit.

Frederick D. Grant, the father of young U. S. Grant 3d, is a brigadier-general. A graduate of West Point, he resigned from the army, but entered the service again at the outbreak of the Spanish war. His physical likeness to his father, the hero of Appomattox, is remarkable.

It must be admitted that a study in heredity of more than common interest is afforded by these sons of fighting sires, who seem in no instance to have failed in doing credit to the traditions of bravery and soldierly efficiency handed down to them with the uniforms they wear.

#### Go to Work, Boys

We feel sorry for the young man who stands around looking for a good job to turn up, and bemoaning the fact that things are going against him. If he has a man's heart in him, is free from vicious habits, and willing to do honest work, the tide will set in his direction. But he must brace himself, and not dodge hard toil. His strength was given him to be used, and he ought to use it. Indolence and laziness are a crying shame. Let him roll up his sleeves and go in. The trades are open to him. The skilled artisan has a sure chance for a living, but to be a skilled artisan one must serve an apprenticeship. Farming pays even on a small scale if it be conducted diligently and intelligently. The boys must get to work.

—Nashville Christian Advocate.

#### A Child's Hymn of Gratitude

I thank thee, pretty cow, what gives
The pretty milk on what I lives,
Which it don't make me very plump,
For that I thank thee, pretty pump.

sights of London. To the sound of the stalks through the dormitories. in front of the school building. Then the Commandant, Colonel G. A. W. Forrest, for annually in various athletic contests. passes slowly down the lines searching diligently, but apparently with little success, for stray specks of dust on the persons or clothing of the young soldiers. mandant; and finally, in column formaus do, more or less-the whole affair is full of impressiveness.

But, after all, it is in his less stiff and ceremonious moments that the human boy is most interesting, and in order to get a fairly accurate impression of the school and its inmates we must see many areas, feared that the military training

at stamp out the individuality of the s and convert them into mere animated automata, his fears would quickly sive so much pleasure on public occabe dispelled by a day, or even a few hours, spent in the Duke of York's school. Among the 550 scholars he would find all bandsman, and a little farther on we find the usual varieties of the genus boy. and, regarded collectively, he would find them as bright and free and happy a crew as might be met in any other big school, with the same love of fun and frolic, the same pride in their school, the tion of a master tailor, in carrying out same keenness for athletics, and the same repairs and alterations to garments, affection for the "tuck shop," where the while yet another contingent are en-boys can indulge in all kinds of gaged in making flannel underclothes.

ever, are not precisely like those of most sential education of a soldier. Every old other schoolboys. Some of them, in fact, campaigner knows how much skill with are probably peculiar to his own school. the needle increases both the efficiency tage. Let us follow him on a typical day in his school life. At six o'clock he is roused from sleep by the shrill note of a bugle. or, if he is a phenomenally heavy sleeper, by the kind attentions of his neighbors in the dormitory. The first duty of the day is to make the beds and clean up and tidy the dormitory. Then a visit is paid to the lavatory where, under a spray of warm water, he performs his ablutions, finishing up with a plunge in the adjoining swimming pool. After dressing, he forms up with the rest of his companyout of doors if the weather is fine-for half an hour's drill, which may be either marching and physical exercises or artillery drill with the battery of sevenpounder guns that stands in front of the hullding. After all this, it will be believed that the summons to breakfast is a welcome one, and that at that meal delleate appetites are quite the exception.

Morning school lasts from nine to twelve, and then comes an hour's playtime for all except those who happen to belong to the squad of orderlies for the day, whose duties are to lay the tables and help prepare the dinner. Dinner is an interesting and cheerful function: provisions are good and ample, and a continuous hum of conversation accompanies the menl; the hoy corporals, who ait at the heads of the tables, are responsible for the good order of their particular mess, but there is no restraint of reasonable conversation

Dinner takes place in two dining halls, I suppose there is not another as there is no one room large enough to school in the land that can make accommodate the whole of the 550 schoiso brave a display as the Duke are. The larger dining hall is a specially York's Royal Military School at interesting room; its walls are decorated with elaborate trophles of arms brought It was on a certain Sunday morning from the Tower of London, and over the that I first saw the "Dukies," as they mantelpiece in the middle of the room call themselves, in full force. I was stands the grim figure of a mediaeval present at the weekly inspection and pa-rade, which takes place just before church time, and is in fact one of the worthy kets down from his pedestal and fifes and drums the companies march to room is further decorated with a number their respective stations on the green of pictures of a military character and with several shields that are competed

Dinner is followed, of course, by afternoon school, and then for about an hour and a half one-half of the school is at play while the other half is engaged in The inspection over, there is a little a variety of occupations of a useful but marching and counter-marching to the not strictly scholastic kind. The next accompaniment of the band. Now the day the positions will be reversed, the whole school forms a "thin red line," then workers of today will be at play and the in companies they "march past" the Com- players at work. A walk round the school at this time of the day is a rather tion with banners flying and band play- curious experience. In one room the ing, they march away to the chapel Ev- drum and fife band is practicing; an exery movement is carried out with aston- cellent band, no doubt, but hardly to be ishing precision, and to those who care appreciated at such very close quarters. for this kind of pageantry-as most of Passing on to the rooms devoted to the brass band, we watch with admiring interest a small boy's manful assault upon a French horn and another's flerce wrestlings with the trombone. A visit to the beginners' room is an awesome experience, and one we are not anxious to prolong. It seems little short of a miracle things besides the Sunday parade. If that the perpetrators of the weird noises we hear in the practising rooms develop in a year or two into the expert young bandsmen whose finished performances

The occupations of the "Dukie," how- for boys, but they are all part of the es-

and the comfort of the soldier on active expertness in these seemingly feminine accomplishments. The boy who would carry off the prize given annually by the Commander-in-Chief to the best darner in the school must display a deftness and skill that his own grandmother might envy.

After tea the majority of the boys are free to amuse themselves according to their own sweet will. In summer time they will mostly be found in the playgrounds at cricket or other outdoor games. In the winter they may pass the time in rough-and-tumble play in their playrooms or more quietly, but probably not less agreeably, in the room set apart for chess, draughts, dominoes, and similar games, or in the library, where a really excellent selection of books and periodicals is available for their use. The librarian is a Crimean veteran, who takes a lot of interest in the boys and their reading, and well looks after their interests in this department.

To this "go as you please" rule there are, however, a few exceptions. Every evening about 150 boys are hard at work in the fine gymnasium. They are taking their turn at a course of gymnastics, lasting about a month, which each boy goes through every six months or so. A few more are in the swimming pool few more are in the swimming pool learning to swim, under the direction of the scrgeant-major and with the help of some of their schoolfellows who are expert swimmers. Possibly also there may be a small and dolorous band engaged in boot-cleaning. This is the "dirty squad," composed of boys who, during the day, have fallen short of the soldierly ideal of neatness and personal cleanliness, which is as high in the Duke of York's School as in any regiment in the army. the army.

the army.

Then, too, there will be a few of the boy corporals every night on sentry duty. One will be posted at the gate to answer callers, others at various points in the building and grounds to see that the boys in their play conduct themselves reasonably and do not break any school rules. One notices here a curious comreasonably and do not break any school rules. One notices here a curious compromise between the regimental and the school idea. The boy corporal has a soldier's duties to perform; but he is a boy after all, and he is allowed to have a chum with him, to beguile with cheerful conversation the tedium of his vigil. Some may wonder what is the advantage of helps a corporal of the many work. of being a corporal, if it means work while others are at play. Well, the duties are not very heavy, and as the position is a reward for smartness and good conduct, it is naturally looked upon by the boys as an honor to be coveted: it means, too, a position of authority among their fellows comparable to that of the Sixth Form in a public school, and -not the least important consideration-

mot the least important consideration—
it means more pocket money.

That the school has in the past turned
out many boys who have served their
country with distinction and brought
honor to the school is shown by the long
list in the vestibule of old boys who obtained commissions in the have obtained commissions in the army. The list includes the names of two major-generals. In connection with the late war, three "old boys" gained Distinguished Conduct Medals and several management in dispatches.

others were mentioned in dispatches.
The present generation of boys may be trusted to give as good an account of themselves when their turn comes as any of their predecessors have done. The school is in a high state of efficiency, and many distinguished people, including the many distinguished people, including the King and Lord Roberts, have shown special interest in its welfare. Last summer, while holiday-making in Wales, four of the boys had the great privilege of being presented to the King and Queen, and receiving from her majesty a gift of a sovereign spiece. With the general public, too, the red-coated soldier lails are prime favorities. At the Lord bandsman, and a little farther on we find a roomful of boys engaged in the less thrilling but not less useful occupation of darning socks. In another room forty or fifty boys are seated tailor-wise on low tables, busily engaged, under the direction of a master tailor, in carrying out repairs and alterations to garments, while yet another contingent are engaged in making fiannel underclothes. Strange occupations these you may say, for boys, but they are all part of the essential education of a soldier. Every old campaigner knows how much skill with the needle increases both the allest of the second campaigner knows how much skill with the needle increases both the allest of the second campaigner knows how much skill with the needle increases both the allest of the second campaigner knows how much skill with the needle increases both the allest of the second campaigner knows how much skill with the needle increases both the allest of the second campaigner knows how much skill with the needle increases both the allest of the second campaigner knows how much skill with the needle increases both the allest of the second to the King and gueen, and receiving from her majesty at the King and gueen, and receiving from her majesty at the King and gueen, and receiving from her majesty at the King and gueen, and receiving from her majesty at the Lord dressed soldier. At the Lord Mayor's Show or the Military Tournament, or wherever else they may chance they are all public appearance, they are all safet of a most enthusiastic reception. As it has been determined to move the first second and third list received from the country, the boys will probably in future be less in the public appearance, they are all safet and receiving from her majesty at the Lord Mayor's Show or the Military Tournament and skix Street Railway Conductors of any chance with the Lord Mayor's Show or the Military Tournament and skix Street Railway Conductors of any chance with the Lord Mayor's Show or the Military Tournament and skix Street Railway Condu

in the practice unless he was physically the life nets, and there are overhanging unable to do so.

However, the boys need no urging. They find the exciting practice as fire fighters the most attractive of all their branches of instruction, and enter into the work with a vim. Each part of the fire drill at the Massachusetts school is under the personal supervision of some

#### On The Baby

#### Coffee Even The Babies Thrive On

The little daughter of a College President was saved by the use of Postum Food Coffee at a time when she could not take any solid food.

Baby's aunt says: "My sister and her husband (who is President of a College in Georgia) visited me last Christmas and their little baby two months old was very sick. I thought it was not properly nourished so I began feeding it on Postum which I have used in my own home for years with such grand results.

"You would be surprised to know how that little thing improved. Sister had been feeding it on artificial food that did not agree with it. The baby continued to get stronger all the time we were feeding her on Postum and when sister left here she took Postum with her for she feels certain that with Postum to feed the baby on she is sure of good healthy nourishing food drink." Name given by Postum Co., Battle Creek. Mich,

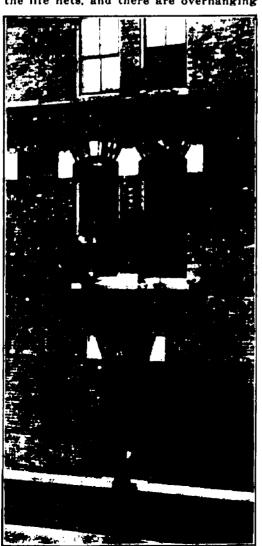

Postum is made of the purest cereals with absolutely no medication whatever and when boiled according to directions it is heavy with food value and a great nourisher and rebuilder as well as a delicious drink. It is also a specific for all of the dozens of different diseases caused by coffee. Trial proves this.

Look in each package for a copy of the famous little book, "The Road to Wellville."

over as the best fire fighters on edge of all the details of this part of the earth and battling with the flames, work. The boys are divided up into as carried on in the United States squads or fire fighting companies, with

At the beginning of each school year them know that there is in this country and preparatory to the actual practice in n public school where instruction in fire fire fighting, the boys who are just enterfighting is made part of the regular ing the school are given a series of leccourse of study. Such is the fact, how- tures in which there is explained the ever, and the Cambridge Manual Train- advantages accruing from a knowledge ing School in Massachusetts is the scene of fire fighting and a historical review of this interesting experiment, which has presented of the developmnt of fire proven so successful that it is now being fighting in the United States down to the present time, together with an explanation of the best methods employed today in battling with the flames. Then comes the actual work designed to give the boys a practical knowledge of the methods and devices employed in fire fighting by the most up-to-date professional firemen in the country. The lads familiarize themselves with the use of the life net, life belt, life harness, scaling ladders, and life line gun. They practice erecting and using ladders of various kinds; learn how to use all sorts of fire extinguishers and gain the knack of handling the different kinds of fire-hose. including coupling, the laying of lines of hose and the currying of lines of hose through buildings and up ladders.

Of course, the boys cannot practice fire fighting in the most satisfactory manner without a building which can be supposed to be threatened with destruction taken up by schools in other parts of by the flames, and to supply this need the country. At first this training in there has been built a three-story buildscientific fire fighting was introduced in ing known as a drill tower. This is forty the New England school solely for the feet in height and is equipped as any sake of the physical exercise and the ordinary building would be, with stairrecreation which it furnished, but it soon ways, window-casings, etc. Moreover, proved of such value to the boys that a there are outside shelves or platforms at rule was made to the effect that every heights ranging from eight to thirty lad attending the school must take part feet, from which the boys can jump into

USING SCALING LADDER

timbers at the top of the building with practice with the life lines and life belts.

The boy firemen use in their drills the same manual used by the regular fire departments of our principal cities. There are seven different drills, ranging all the way from the so-called "ground drill," wherein the boys work with ladders on the ground to the rope and lifeline exercises, which involve much work in midair. One of the most important pieces of apparatus of which the boy fire fighters learn the use is the 'pompier' or scaling ladder, which is composed of a long single rod of wood made into a ladder by the placing at intervals of short cross-pieces of wood and fitted at the top with a huge steel hook with teeth to prevent it slipping. A boy fireman can quickly climb up the outside of any building by simply catching the hook of his scaling ladder on a window ledge and then, when he has climbed up the ladder, lifting the latter high over his head and hooking it on the ledge of the window above. Thus he can mount story by story the outside of a building, the stairways on the inside of which are supposed to have been burned. The boys practice with these ladders until they can by the use of the pompiers crawl up the face of a building in an incredibly short space of time.

Having reached the top of a building with no visible means of descent the boy fireman's knowledge of the use of the life line comes in handy. This line is merely a stout rope, which is fastened

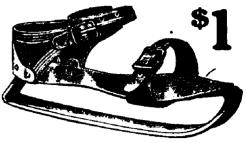

DESCENDING BY MEANS OF LIFE LINE

to any firm anchorage. By means of a snap hook attached to a belt at his waist the boy fireman may not only lower himself rapidly or slowly, but he can carry down one or more persons in safety, thus equipping himself for the task of rescuing injured or unconscious persons under corresponding conditions at a real fire. These fire laddles also use of the life line heavy carbine, which hurls a piece of metal to which is attached a stout string. thus enabling a life line to be conveyed to persons imprisoned on the top of a building, and finally they practice with the life net. The greatest task is to learn how to jump into the net from various heights in such a manner as to alight on the feet, but it also takes practice to acquire the ability to hold the life net as a a number of the lads do while a boy jumps into it. Unless the boys who are holding the net have the proper grip on its steel rim it will be jerked out of their hands.

Another line of instruction being received by the boy firemen is that involving what is known as the "Red Cross" work of the modern fire fighters. This part of the schooling enables them to learn how to bind up wounds, revive unconscious persons and otherwise render that first aid to the injured which is so often important at fires. Then, too, they are taught how to carry injured persons so that the movement will pain the unfortunate ones as little as possible, and just what to do to contribute to the comfort of sufferers while awaiting the arrival of an ambulance.

affords all the pleasures of ice skating with none of its dangers.

There is always more snow than ice; therefore, snow-skating can be more frequently enjoyed, and in localities where ice never forms

#### Wide Runner Skates

Are especially designed for snow skating. With them you need not seek remote pond or stream, or wait for ice to become safe. You can at the first fall of snow or sleet, skate on street or sidewalk or coast on the hillside. Made of special steel, handsomely finished, strong and durable. Sizes 7, 8, 9 and 10 inch. think our American friend was a little and two pence; second-class, nine pence; unjust. You see, the minute you lower third-class, six pence-that is, first-class the sash in these two doors, those in the twenty nine cents, second-class eighteen rear seat get the benefit of what blows in, whether it be soot, or cold air, or what not, and on occasions these open car windows are a nuisance. It is the rule over here that the man who sits in the rear seat next the window has the first say as to whether the window shall he up or down. Now, if I were sitting turesque little stations covered with ivy there, I should probably want the win- and climbing roses, along the side of dow one way or the other, and everybody splendid hard-bedded roads flanked by else in the compartment would like as not differ with me. I prefer to sit where I don't have that responsibility, and, at seats embowered in luxuriant foliage, any rate, be out of the draft. There is here and there, as at Monkstown, where nobody in the compartment today, so the river widens into a little lake, a there are four window seats, and as the weather is fine we can have the windows blew from off the quiet river, the green open and enjoy the morning air. It's a beautiful ride up the river Lee to Cork. bordered their way. I agree with John Forbes, who said of it. It would be difficult to overpraise the our party at once sought a hotel and sat beauty of the river from Queenstown to down to their first European breakfast. Cork, more especially when seen under the influence of a bright sun and a tables covered with snowy linen of genbrilliant sky,' and that's just what we're Then a guard came and slammed the door of their compartment shut, a succession of other slams followed all along the train, a little whistle

#### Memory Mending

What Food Alone Can Do For the Memory The influence of food upon the brain and memory is so little understood that people are inclined to marvel at it.

improperly selected food and put him heaping plate of the biggest strawberries Grape-Nuts is largely used and the in- dered if they were served singly or in crease of the mental power that follows pairs. A description of these berries and is truly remarkable.

A Canadian who was sent to Colorado for his health illustrates this point in a most convincing manner: "One year ago I came from Canada a nervous wreck, so my physician said, and reduced in weight to almost a skeleton and my memory was so poor that conversations had to be re- Ned's remembrance of that first breakpeated that had taken place only a few hours before. I was unable to rest day or night for my nervous system was shattered.

"The change of climate helped me a little but it was soon seen that this was not all that I needed. I required the proper selection of food although I did not realize it until a friend recommended Grape-Nuts to me and I gave this food a thorough trial. Then I realized what the right food could do and I began to change in my feelings and bodily condition. This kept up until now after 6 months' use of Grape-Nuts all my nervous trouble has entirely disappeared, I have gained in flesh all that I had lost and what is more wonderful to me than anything else my memory is as good as it ever was. Truly Grape-Nuts has remade me all over, mind and body, when I never expected to be well and happy again." Name given by Postum Co., Battle Creek, Mich.

MRS. OSBORN

The renowned fashion authority, Mrs. Osborn. who is admitted by all to be a leader in the creative world of New York styles, has become a regular monthly contributor to The Delineator. Her initial letter, with illustrations, occupying three pages of the January issue, will be mailed free to any one applying for it in answer to this announcement.

If you wish exact fashion information of value in a practical way; if you are interested in the care of your person, the beautifying of your home, the welfare of children; if you like needlework of any kind; if you are fond of good literature attractively illustrated, you will get The Delineator. One Dollar will bring it to you every month. Fifteen cents will buy you one copy.

> THE DELINEATOR 17 West 13th St., New York

There is a demand, far in excess of the supply, for men of special ability. It is equally true that there is a supply, far in excess of the demand, of men of average ability. He that belongs to the latter class can never hope to command a larger salary than any of his fellows. His employer is independent of his services, because his place can be filled, at an hour's notice, from the army of average men always looking for work.

On the other hand, fine positions are seeking the man of special ability that can do one thing well-better than any other fellow.

The business of the Schools is to convert average men into men of special ability.

Let us make you a specialist—lift you from low wages to a high salary.

# How to Become Strong You will also feel your biceps muscles complaining against the stretching they

PARTS-PART THREE needed it. EIGHT

VERYTHING in this world depends on motion. Motion is life w are like the stars and planets, need to be driven. It will increase its wind and tide in this respect. Their labor, steadily and ever faster and faster. whole value lies in what kind of motion they can perform.

When engineers describe engines, water power or any other form of labor-producing motion, they do so by telling how many "foot-pounds" the force can lift or move.

There is a big difference between "footpounds" and "pounds." "Pounds" are dead weight. "Foot-pounds" are moving weights.

The muscle that can lift one hundred pounds one foot is not nearly as useful as the muscle that can lift twenty five pounds eight feet.

One is doing only one hundred footpounds' worth of work, while the other muscle is doing two hundred footpounds' worth.

This is the first rule.

Now there is a second one. Time enters into the matter.

Suppose one boy has muscles that will lift ten pounds one foot in one second. Now suppose another boy has muscles that will lift only five pounds one foot, but that will do it in a quarter of a sec-

Perhaps most persons would say the first boy is twice as strong as the second boy, because he can lift twice as much. The first boy lifts ten foot-pounds in one second, but the second boy could lift twenty foot-pounds in that one second.

This tells the whole story of the com-

The perfect muscle is the one that can to take the rust out. apply its entire strength, whatever it is, in the shortest possible time.

mony with all its parts, hidden and visible, is an easy matter. It requires only common sense and attention.

If you do anything at all-lifting weights, running, jumping—and you feel that you are losing your "wind" your lungs are warning you that they are not able to work as well as your muscles. What you need to do at once is to reduce the amount of muscular work to a level where the lungs can keep up with it.

If your heart beats fast it is a sign that your muscles are over-developing at the expense of the heart. Call the muscles in. Every bit of work that you do under such circumstances is simply feeding the big, hulking muscle and starving

This is one of the most serious dangers of athletics, especially when boys are working without an experienced in-

They use their muscles and make the heart actually limp along behind. The heart is such a wonderful organ that it will work until it is killed if a person is foolish enough to let it. Unlike the muscles and the rest of your body other muscles of the body, it does not as long as the rest of the body demands it until at last the demands become too

But it cannot do this without harm. No boy would dream of trying to lift a thousand-pound weight over his head. But lots of boys and men who practice athletics try practically such tricks with their hearts.

Remember, then, that whatever work distresses heart or lungs, is bad work. Therefore, whatever exercise you do. study that it shall increase the health of those organs in exact accordance with the increase of the rest.

For producing such a fine harmony of heart, lungs and muscle, the light dumbbells furnish ideal exercises. Heavy dumb-bells are just the reverse. Use weights that you can handle and lift and twirl without feeling a strain in any part of the body from the heels to the ears, and without making you gasp or causing your heart to beat too fast. Some boys can use two or three-pound dumb-bells. Others cannot use any except the very lightest of wooden ones. Let your body be its own guide.

Whenever you put your hands on the bells, grip them as if you meant business. Make your muscles tense. That in itself is going to give you exercise and increase those pulley ropes of yours Lift one bell high over head with your parative values of slow muscles and left arm. Don't be afraid that your arm quick muscles. It explains why athletic is going to fly off. It won't. Stretch it Instructors don't want boys to practice so that the joints creak. Ten to one you with heavy dumb-bells or other weights, are rusty somewhere, and this is going

Now lean over sidewise to the right. Make that body of yours bend until it Now to make the body work in har- is limber. If you are stiff, you are wrong somewhere. Lean over and over until your outstretched right arm can bring the right-hand dumb-bell down to the ground.

Now swing over the other way. Keep it up. Don't do it fast and don't do it slowly. Do it as quickly as you can without setting lungs and heart to jump-

Now stand up straight. Brace yourself on your feet so that you are poised as on springs. Stretch both arms with the dumb-bells straight out ahead of youfar as they will go, and then a little farther Muscles are contractors. Their impulse is to shrink together. Give them a stretching. It will do them good.

Now swing both arms in unison, much as if you were working with a scythe. only keep the arms well level with the shoulders. Work as if you really were cutting wheat or grass that is hard to mow.

Now stand straight again. Let your arms hang at your sides. Without bending them in the least, force them with the dumb-bells as far behind you as they will go. Don't swing them. Force them back with all your muscles firm. Keep your arm as hard as you can make it. Press back with all your might. You will feel your shoulder muscles hurting all around your neck. They are bound, Most persons' muscles are bound up there. That is why they carry their heads so badly.

Free those bands and your head will be as easy in polse as that of an eagle.

This simple exercise is one of the finest there is. It exercises all the muscles from the abdomen up. It gives particularly useful work to the triceps or extensor muscle of your arms. That is the muscle that lies along the lower part of the arm opposite the biceps, which is a flexor muscle. The biceps bends the arm and the extensor straightens it out or extends it. Usually it gets about one-tenth of the exercise that is given to the biceps. Yet an arm with a big biceps and no extensor muscle to speak of, is one of the ugliest products of foolish "athletics."

#### Boys' Books Reviewed

Boys' Books Reviewed

ROBINWOOD SONGS FOR YOUNG PEOPLE, by F. Sherwood Robinson. Within the covers of this modest little volume the author has, to our mind, packed the best of the multitude of songs which are counted as suitable for the young folks either at school or in the home circle. There are songs of patriotism, songs of the seasons, songs for special festivals, such as Christmas, New Year and Fourth of July, and, perhaps, best of all, there are songs for the fireside. We have not space, else we would like to quote from some of the songs such as "The Hanghird's Nest," or "The Walk in May," but the mothers of the little ones will find the verses bright and pure reading, and the airs to which they have been set tuneful and inspiring. For the primary grades in school we think nothing more suitable could be used. We predict for this little work a grand success. There are 32 songs with music in 44 pages. Neatly bound. Price 50 cents. A. Flanagan Co.

music in 44 pages. Neatly bound. Price 50 cents. A. Flanagan Co.
AT THE FALL OF MONTREAL, by Edward Btratemeyer. This is the third volume of Mr. Stratemeyer's "Colonial Beries," and the reader will experience no diminution of interest in his reading. Quite a number of the characters who appeared in "Marching on Niagara" and "With Washington in the West" are again to the fore with several new ones, notably the heroic British general, Woife, and his equally brave French adversary. Montcaim. Mr. Stratemeyer takes great pains to make his work as historically accurate as possible, and the scaling of the heights of Quebec with the subsequent fight on the Plains of Abraham, the death of Woife and his brave antagonist, the with attendant scouting, skirmishing and efforts of the French to retake Quebec, and the capitulation of Montreal which put an end to the war, are most graphically and interestingly told. The adventures of Dave Morris and his cousin Hency, with the friendly Indian White Buffalo and the old trapper and hunter, Sam Barringford, will be read with delight by the boys. The illustrations are by A. B. Shute. 312 pages. Price \$100 net. Lee & Shepard.

A DAUGHTER OF THE SIOUX, by General Charles King. All the necessary adjuncts

Price \$1.00 net. Lee a oneparu.

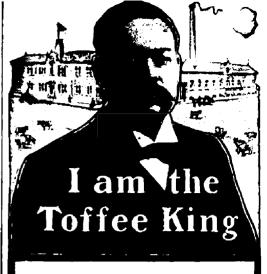

A DAUGHTER OF THE SIOUX, by General Charles King. All the necessary adjuncts which have made General King the best writer of American army life are included

in this book. Life at Fort Frayne with attendant scouting, skirmishing and fighting the wily and cruel red man are realistically depicted. The villain, or rather villains of the story are a beautiful half-breed Indian woman who desires the supremacy of the Indians and defeat of th-whites, and is utterly unscrupulous as to her methods, and a young Sloux who has been educated at Carlisle. The hero, Lieutenant Field, gets into trouble through the machinations of the villains, and there is an Indian uprising and consequently, plenty of fighting, described in General King's most vivid style. The boys, their sisters and elders will enjoy reading the book, in which the author well sustains his reputation. As to the illustrations, it is sufficient to say that they are by sustains his reputation. As to the illustrations, it is sufficient to say that they are by Frederic Remington and Edwin Willard Deming. \$06 pages. Cloth cover, with beautiful colored design. Price \$1.50. The Hobart Company.

bart Company.

LORD DOLPHIN, by Harriet A. Cheever. Stories of animal life are almost innumerable, but we think that the story of a fish, told by himself, for boys and girls, is not so common. Mrs. Cheever has written a story that will please and instruct young readers. Lord Dolphin has many strange adventures in his journeyings, mostly involuntary, from his home in the Mediterranean Sea to the Central Park Zoo in New York. His life at the zoo is far from comfortable, notwithstanding the kindness of visitors and keepe and we are glad when he makes his escape and returns to his home past the "Pillars of Hercules." There are several apt illustrations by Diantha W. Horne. 37 pages. Price 40 cents net. Dana Estes & Co.

And I want to say to all boys that their best friend is their mother and their second best friend is MACKIN-TOSH'S EXTRA CREAM TOFFEE. I address everybody, but boys in particular; tall boys, short boys, fat boys, lean boys, good boys, naughty boys, saucy boys, clever boys, dull boys, nice boys, funny boys, dandy boys, in fact every kind of boy. Why do I address boys in particular? Because they like something good to eat. Now, boys, you will be interested to know that I have brought over from England the one sweetmeat that is the real boy's friend over there. It is called

### Mackintosh's Extra **Cream Toffee**

and I have even heard of boys getting up in the night for this Toffee. It is so delicious and is pure as crystal springs. That's why it has the largest sale in the world. It is sold here, there and everywhere, and any boy can try it if he will send us 10c to cover postage, or we send a large family tin, weighing 4 lbs., for \$1.60, and pay the express charges.

Boys, you can do the plot of read

Boys, you can do us a lot of good. All you have to do is to try it, and then we know that if you insist on your confectioner handling it, that he will buy it from our New York importers. Let us hear how you like Mackintosh's Extra Cream Toffee.

She imagined how becoming this garb she was copying her paper on Egypt- ly. ology to be read at her club the next day, holding aloft a card on which was peated. inscribed in delicately shaded lettering: "Giogetti Periorano."

"The old street-piano man wrote it for ble!" me," he explained, "and here is one that hero with renewed interest. The class probable thing in the world.

Chang Lee at the new laundry wrote. was overcome with astonishment. As "Fraulein sie sind eine freund liche See?

acters with a puzzled air.

"What cat tracks! It looks as if it had come off the lid of a tea-chest. What does it mean? I can't make it out."

"Ho, ho!" laughed Theodore George. "Of course you can't. These are my visiting cards in Italian and Chinese. Then here is one in Latin, 'Georgicus Patterionius,' and this rickety one is German.

His mother examined the collection with considerable interest. "How did you get this one written in German?"

"One of the high school boys wrote it for me. How do you like this for East Indian?" and he drew from a little leather case another on which was written "Rajah Geograh Patha."

'Doesn't that sound oriental?" he cried enthusiastically. "This one I copied myself from the Greek alphabet in the back of your big dictionary. Isn't it jagged and queer? The Greek letters are awful ugly twisted things I think. I had a card written in Hebrew, too, he went on, "but I lost it. It was the gem of my whole collection. That little Jew tailor down by the school building wrote it. You know the Jews write back-handed-I mean left-handed."

"Think a minute, my son," interrupted his mother. "You don't mean that the Hebrew language is written with the left hand?"

"Of course not. I meant they write from right to left. I would call that writing backward," laughed the boy.

when you call on your foreign acquain tances." suggested his mother smiling. The Chinese minister at Washington, for instance."

"No, indeed. I'm going to paste them in my album and keep them. My name in plain American is good enough for a call on the Czar of Russia or any other potentate or whatever you call those crowned heads." And then he ran off to play, calling back to his mother, "I'm glad I'm the only boy in our grade who knows his name in seven languages."

Not many days after, our linguistic young friend went on a visit to his cousins living in a distant bustling country town. The morning after his arrival he overheard one of the girls in an adjoining room inquiring of her mother: "Shall one of us stay at home and entertain Theodore George this morning?"

"And miss your French lesson?" asked his Aunt Hetty. "Oh, no. Take him along. I don't suppose he cares about languages, but it won't hurt him to sit by and listen while you recite."

Theodore George chuckled softly. "I'll for languages," thought he. "Why, I've had two terms of French myself."

Soon the two girls and their brother other pupils waiting.

"That's Spanish sure enough. It is just like some of the funny words my brother Jimmy writes home. He is studying Spanish under a native teacher.'

"Oh, it is not at all a difficult language." responded the youth, patronizingly. He had heard his uncle say this and he thought while he was in the language business he might as well tell all he knew about it. "You know they write their interrogation point before the question instead of after it as we do."

"You are indeed quite a linguist," commented Miss Spender. "I daresay you know German, too."

"Oh, yes," he replied, in such a matter-of-course way that Marc's jaw, which had been hanging in admiring wonderment now dropped completely down. In fact, if his cousin Theodore George had asserted that he could translate Sanscrit or jabber Choctaw the entire class would The teacher now looked at our have accepted the statement as the most

"You bet he does. You bet he knows Kamschatkan and Filipino and Turkish and Hebrew and all the rest. I never saw the like in all my life," observed Mary in an undertone. "Won't mother stare when I tell her!"

Miss Spencer's face showed that she had ceased to be surprised. Nothing this remarkable youth might say could astonish her now. She was prepared for almost anything in the way of lingual accomplishments, yet when Theodore George whipped out his card-case and exhibited its contents, casually mentioning to the gaping crowd that these were his visiting cards in Italian, Chinese, East Indian, Latin and Greek which he used when he called on foreigners, she felt her head grow a little dizzy.

"Is there any other language know?" she inquired, when she had fully recovered herself.

"Yes, one more—one that beats 'em Now be it known that Theodore all. It's the best on top o' ground,"

and rattled off glibly: "Jowsky, mow- a mocking gesture with his hand to the sky, paderewiki meezez drowsky." company and skipped out of the door and "What does it mean?" they enquired, off to Aunt Hetty's, leaving the children and "Ah's" and "Did you ever?" in token "The weather is fine and the crops of their appreciation of his gift of tongues.

# Che Great American Boy Army

FOR MANLINESS IN MUSCLE, MIND AND MORALS

Every Energetic American Boy Should Be a Member of "The Order of The American Boy"

J. G. MITCHELL Capt. Gen'l Phil Sheridan Co. No. 8, Newburg, Ore.

Company Politary No. 1. Foliage of the control of t during the summer on account of the absence of so many of its members on their vacations, etc. On the evening of the last meeting a very nice little dancing party was given by the company. JEFFERSON DAVIS COMPANY, No. 3, Palmetto, Fla., has at this writing about \$2.50 in its treasury, and has a punching bag, boxing gloves, a flag, a picture of Jefferson Davis, a home-made desk, and a library of about twelve books. It has had its brary of about twelve books. It has had its charter framed FORTUNE'S FAVORITE brary of about twelve books, it has had its charter framed FORTUNE'S FAVORITE COMPANY, No. 11, Columbia, Mo., sends the following report. Number of new members taken in since date of organization, five; total membership at this time, thirteen; money collected, \$3.50; money paid out, \$3.00; balance on hand, 50 cents. This company has the use of an office room in one of the buildings of the State University where meetings are held workly. The symmatium is close by the use of an office room in one of the buildings of the State University where meetings are held workly. The gymnasium is close by and is being equipped with basketball, hoxing gloves, punching bag, fencing foils, footballs, baseball outfit, etc. The company is also establishing a good library and already has a number of hoys' books. Mr. Bayley, father of the vice-captain. Is the company's counsel, and he takes great interest in the boys and helps them in every way possible. The company will soon hold an entertainment for the purpose of raising money for the treasury.—ROBERT DALE OWEN COMPANY, No. 4, Stewartsville, Ind., is getting along nicely, having at this time seventeen members, all in good standing. The company went camping the third week in May. They had about thirty visitors in camp one day. On Friday evening, June 26, the semi-annual election of officers was held, and on one evening a festival

### The Order of The American Boy

A NATIONAL NON-SECRET SOCIETY FOR AMERICAN BOYS Under the Auspices of "The American Boy"

#### Object:--The Oultivation of Manilness in Muscle, Mind and Morals.

The object more definitely stated: To promote mutual and helpful friendships among boys; to give wider circulation to high class boy literature; to cultivate in boys physical, mental and moral courage, and develop them along social, intellectual and moral lines; to cultivate purity of language and actions; to discourage idleness, and encourage honest sport and honest work; to cherish and emulate the examples of most and good more to inculate leasure of patriotic manage. amples of great and good men; to inculcate lessons of patriotism and love of country; to prepare boys for good citizenship; to cultivate reverence for the founders of our country, and to stimulate boys to all worthy endeavor.

Boys desiring to organize Companies may obtain a Pamphlet from us containing Directions. It is sent for a 2-cent stamp.

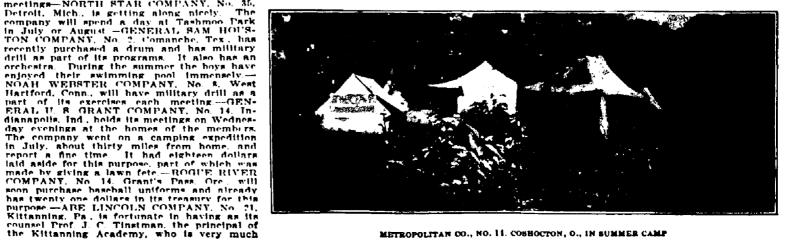

wardsville, Ill., holds its meetings every other Friday evening. Company dues five cents, payable at each meeting.—THE IRON BRIGADE COMPANY, No. 19, South Milwaukee, Wis, holds its meetings in the parlor of the First Congregational Church of that city. Monthly dues five cents. It expects to give a social soon, the proceeds of which will go toward a gymnasium—ZACHARY TAYLOR COMPANY, No. 1, Lafayette, La., holds its meetings every other Friday at the home of S. R. Blossat. Dues ten cents per month, with a fine of five cents for misbehavior during meetings—NORTH STAR COMPANY, No. 35, Detroit, Mich., is getting along nicely. The a fine of five cents for mishebavior during meetings—NORTH STAR COMPANY. No. 35, Detroit. Mich., is getting along nicely. The company will spend a day at Tashmoo Park in July or August—GENERAL, SAM HOUSTON COMPANY. No. 2. Comanche, Tex., has recently purchased a drum and has military drill as part of its programs. It also has an orchestra. During the summer the boys have enjoyed their swimming pool immensely.—NOAH WEBSTER COMPANY. No. 8. West Hartford, Conn., will have military drill as a part of its exercises each meeting.—GENERAL U. 8. GRANT COMPANY, No. 14. Indianapolis, Ind., holds its meetings on Wednesday evenings at the homes of the members. The company went on a camping expedition in July, about thirty miles from home, and report a fine time. It had eighteen dollars laid aside for this purpose, part of which was made by giving a lawn fete.—ROGUE RIVER COMPANY, No. 14. Grant's Pass. Ore. will soon purchase baseball uniforms and already has twenty one dollars in its treasury for this purpose.—ARE LINCOLN COMPANY, No. 21, Kittanning, Pa., is fortunate in having as its counsel Prof. I. C. Tinstman the principal of

holds its meetings on the second and fourth Fridays of each month. Dues ten cents per month. This company held its Tree Planting exercises on May 22. First on the program was a recitation, by Chesleigh Healey, "The Brave Old Onk," followed by a recitation. "The Heart of An Oak," by Chester Storey. Each member then recited some little poem and the program closed by singing "America." On May 29 the company held a fair, which was a great mecompany held a fair, which was a great suc-

company works well and the members are enthusiastic and yet its numbers do not go up to the limit the officers can handle, there will generally be found to be something wrong, and very often it is the evil referred to. Every O. A. B. hoy should feel that he had a distinct and should feel that he has a distinct duty to perform in encouraging boys outside that Company to become members and enlist in the good work.

METROPOLITAN CO., NO. 11. COSHOCTON, O., IN SUMMER CAMP

### A Season on The British Cinder-path

By J. S. WESTNEY, Ex-Captain of University of Pennsylvania Track Team

The average American has no idea of Murray, the Irish Champion and record Boundary Commission.

J. S. WESTNEY

The Championships came off too soon after my arrival to permit my competing in them, but on July 11th I ran at Widtown between Liverpool and Manchester. There I competed in the scratch "100," being defeated by little Arthur Harfairly attribute that reverse to my sea legs as the following Friday I again met Hargreaves, together with George Brewill, the Midlands runner who had won the English 220 Championship the handicap runner. We raced at Manchester, on the grounds of Sir Humphrey De Trafford, and I managed to win both clock with a couple of bronze figures each two feet high, and in the hundred of the prizes every time.

was a heavy oak cathedral clock, and as I was furthermore encumbered with a suit case, I had to hire a cab to get the feel pretty sure that the ability to bear stuff all home.

Arriving at my lodgings in Manchester. which town I made my base of operations, as it is near the center of all three kingdoms, I snatched a hasty supper, stuffed some clean clothes into my suit case, and was off on the midnight train to race at Ayr, Scotland, two hundred and fifty miles away, the next afternoon, and the following Monday. By seven A. M. I reached Ayr, was met by the sports secretary, and conducted to a hotel. I dropped into bed like a log for there are few "sleepers" in Great Britain, so I had been awake most of the night. About noon I was awakened by our wonderful little champion, Arthur Duffy, with whom I lunched and we drove to the games together in a cab.

Both Duffy and myself were away out of shape, and were shut out in the trial heats of the hundred handleap, as there was no scratch race on. We determined to rest up well for the Monday, so on Sunday did little besides taking a short walk along the seashore in the morning, and a twenty mile drive through beautiful Ayrshire, and past the home of the Scotch poet, Robert Burns, in the afternoon. About twenty five of us went on that drive, the pick and cream of the athletes from all three kingdoms. On Monday the prime tidbit of the program was the International 100 Yards Invitation Handicap, with Duffy on scratch. Wadsley, the English 100 yards champion before Duffy wrested the title away, and myself, were given two and a half yards start, Dennis Photo by Mrs

the tremendous popularity of outdoor holder, three yards, and Stark, the Scotch sports in Great Britain. Men from every Champion, five yards. Wadsley it will be walk of life there meet on a common remembered is the man who defeated footing in trials of skill, strength, and Maxey Long, the world's quarter mile speed. Hale and hearty John Bulls, at record holder, in their immortal match last acknowledging themselves too old to race at Huddersfield in 493-5 seconds. actively participate in the more stren- When the invitation hundred was called uous sports, officiate at the meets or act a great buzz of speculation could be as Handicapping or Executive Com- heard from the 15,000 people encircling mittees, or at least attend regularly as the track. At the pistol crack American interested and enthusiastic spectators, starting methods told for a good yard. Thus our invitations to the banquet held At forty yards Duffy had passed all but in London after the English Champion- myself, at seventy yards he was slightly ships last year were signed by Lord Al- in the lead. From there on by a desperate verstone, the distinguished English jurist spurt I regained the lead, and won by who was a member of the recent Alaskan half a yard, time 94-5 seconds on a soggy grass track. In the open handicap 100 there were a hundred competitors, necessitating twenty heats of five men each, five semi-finals of four men each, and the final. Duffy, Wadsley, and Murray were shut out in the trial heats, but I managed to win mine in 94-5 off 21/2 yards, won my semi-final in 101-5 easily. but was too groggy to win out in the final, being defeated a foot by a man with ten yards handicap, in 9 4-5.

After separating that day Duffy and I did not meet again until the "Rangers" great sports on August 1st at Glasgow. There the little Champion had it in for the lot of us, and scampered away from us in his peerless style, incidentally establishing the Scotch record at 9 4-5 seconds for the hundred.

On August 3rd Duffy ran at Pontypridd, Wales, winning both scratch and handicap hundred; I ran at Barrow-in-Furness on the West coast of England, landing a ten guinea watch in the scratch hundred, and a solid silver smoking service in the 220 handicap. On August 4th, by traveling 300 miles over night I met Duffy at Abergavenney, Wales, being conceded two yards in the 120, but both of us were defeated by H. W. Morton, a rather fast Londoner who had five yards start. Both Duffy and myself were weakening from the long strain of continued racing. On August 5th I ran at Abertillery, Wales, but was again defeated by Morton who was on the five yard mark. While returning from Abertillery to Abergavenney in a great wagon called a brake that evening we were upset while descending the "Black Hill," the most dangerous drive in Wales, our vehicle was demolished, and we had five miles to walk down the mountain to the nearest Railway station. Ou August 6th I was to have run at Stone, in England, but was prevented by the accident. Duffy ran there, however, winning the scratch hundred from Dennis Murray, the Irish champion.

On August 8th and 10th we raced at nes, the great chemical manufacturing Glasgow again, but all our snap and ginger had been used up by the steady grind, and excepting that I won a trial heat of the 220 from the back mark. greaves just at the tape. I think I may neither Duffy nor myself accomplished anything. Business called me home shortly after that, but Duffy remained over long enough to get rested up again. and won some fine races in his own grand style before returning to the land whose week before, and W. Hiles, a noted flag he had worn on his breast during the long summer of keen cinder-path competitions.

To those of the "American Boy's" great trial and final heats. Just previous to the army of boys who would succeed in out-100 on that occasion I had won the open door sports I would say SPECIALIZE, high jump at five feet seven inches (the SPECIALIZE, SPECIALIZE, Do one English are no jumpers), and as my prize thing, do it well. Better to run one disin the jump was a tremendous marble tance and win than to try three or four different events and land just outside

defeat without a murmur, to fight it out when your knees are wohbling like a string hanging in the wind, is an asset that will go a long way toward landing you "within the prizes."

THE AMERICAN BOY offers twelve prizes of Two Dollars each for the best Amateur Photograph received during the twelve months in the year, one prize for each month, also a second prize each month, of one dollar, for the next best photograph, the competition to be based upon the originality of the subject and the perfection of the photograph. The contest is open to subscribera only. Photographs will be returned if stamps are sent for the purpose. All photographs entered in the contest and not prize winners will be subject to our use thless otherwise directed by the sender, and fifty cents will be paid for each photograph that may be used, the prize pnotographs in any event to be our own, without further payment than the payment of the prizes. Write on the back of the photograph its title, with a description of the picture, and the full name and address of the contestant, who in every case must be the artist who took the picture.

#### The Letter-Box

G. W. Hodgkins, of Washington, D. C., is a boy after our own heart. He knows that his photographic efforts are still imthat his photographic efforts are still imperfect and sends us a film with request for criticism. It is only by recognizing our faults that we can hope to attain success. The film sent to us has been underdeveloped and there is no way of remedying that defect. The film is transparent enough for printing, but there is nothing on it to print. The only thing that can be done is to try again.—H. J. Kleppinger, Beatrice, Neb.: (1) The best

"BAD NEWS" First Prize Photo-Nick Bruehl, Sherwood, Wis.

way to render homemade wooden trays watertight is to line them with olicioth, tacked around the upper edge. Glue or cement may be used for attaching the olicioth to the tray. (2) Burke & James, 118-132 Jackson Boulevard, and G. Gennert, 64 Wabash avenue, Chicago, both are reliable so far as we know.—Arthur S. Bedell, Brooklyn, N. Y.: The color of the print makes little difference, so far as reproduction is concerned, if the photograph is a good one and details are not lacking. way to render homemade wooden trays

#### Gaslight Papers

#### Dispenses With Dark-Rooms

Dr. Hezekiel, of Berlin, Germany, has patented an invention, which, he says, will dispense with the services of the dark-room for developing in photography. All you have to do is to place your plate in his reddish colored solution for two minutes, after which the film is impervious to light. You can then develop in broad daylight.

#### Metol "Stand Developer"

Distilled water..... 8 oz. Metol ... ... I gr.
Sulphite of soda ... 10 gr.
Carbonate of soda ... 10 gr.
Keeps well, and is always ready. The shortest snap-shot exposures, as well as ordinary exposures, develop side by side in from two to three hours. No attention is required.—Exchange.

#### White Ink

White ink, useful in a great many ways such as for titling negatives and lantern slides, for writing addresses on the dark shades of cover paper can now be made by combining sulphate of barium with a thin solution of gum arable and mixing to a consistency of cream. It may be applied with a pen or a fine pointed brush,—Camera News.

lecture, that it had taken him less than half an hour to secure the negative, with the co-operation of a few of his friends who enjoyed the fun even more than himself. Hats that were a little en passe were of course, selected for the part. Lightly poised on the head, it required only a few rehearsals and close attention to a quick shutter to secure the concerted action of several of them. The wind did the rest A few plates were spoiled, but not as many as one would suppose. The realistic portrayal of the discomfiture of the wearers always made the slide an entering wedge for a flow of good nature that helped out the request that the slide carried, and put the audience in a good humor from the start."

#### Dad Was Changed

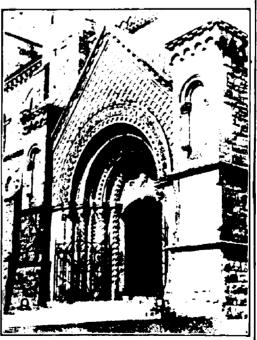

Dad Was Changed

An old man came into the studio one day and in a pitiful tone said, "I want to get a picture of my father." "Well, bring him around and I will make it," said I. "But he is dead." "Well, did he ever have any picture made?" "No, he never did." said he. "When did he die?" The old man cogitated. "Well," said he, "I am fifty four years old, and he died when I was fourteen, and I have always wanted a picture of him." After some questioning I got him to describe his father, and then told him to come back in a week and I would have a picture for him. I found a negative of an old man and made a print of it, and when my customer came back I handed it to him. He studied it a long time, and two tears rolled down his cheek. Then he looked up and said, "Sir, I am ever so much obliged to you. Yes, it looks just like him, but, my! how he has changed!" "Exchange.

#### Current Comments

Current Comments

G. S. Scott, of Batavia, N. Y., sends us a winter scene, taken by his father in the Klondike, in which the snow looks more like Georgia cotton than the real article. You ought to see the winter landscape that Jack Donovan, of Whatcom, Wash., sent us. Glade! It's a beauty and we are sorry lack of space precludes us from reproducing it. "Early Autumn." by Russell Cooke, of Warren. Ohio, is a good print of a pretty scene; it was turned out in a mechanical fashion, with a kodak and a developing machine. A picture of two brook trout, caught in the White Mountains, would be more interesting to H. C. Wyman, of Manchester, N. H., the lucky fisherman, than the rest of the world, but the print is commendable from a photographic standpoint. The same remarks apply to "In the Good Old Apple Butter Time," by Simon A. Metzger, of New Philadelphia, Ohio. R. D. Von Nieda's "Babe in the China Closet" is too clearly a portrait of the idol of the family and not enough of a picture to deserve special consideration. Photos that present too much contrast are: "Ye Olde Mill," by Cyril Richards, of Trenton. N. J.; "In Bed with the Grip," by Warren Newton, of Marshalltown, Ia.; and two bromide prints by Warren Van Every, of Eden Vale, Cal. Alex. Sprunt, of Wilmington, N. C., sends us an excellent copy of a painting of Pocahontas. A view of the Buffalo River, so-called, ny Charles F. Neely, of Detroit, is praiseworthy. Robert Shulhof's photograph of a toboggan side at Montreal is interesting, but too gray in tone. There is not enough detail and too much contrast in "A Lobster Fisherman," by Rowland Willett, of Bradford, Mass. Two photographs submitted by Osbourn E. Kirby, of Paola, Ks., were poorly printed and toned. Exposure of velox was evidently undertimed in Paul M. Filmer's photograph of his room at Colby Academy; negative appears to be a good one. Huntington, Ind., possesses a new amateur photograph in Walter M. Lauffer; his photos of a stone quarry and football game are com-Huntington, Ind., possesses a new amateur photographr in Walter M. Lauffer; his photos of a stone quarry and football game are commendable for first efforts. Poor judgment in trimming excluded three prints from the contrimming excluded three prints from the con-test this month; in every one of these the fect of the persons photographed had been amputated. Curlously enough they emanated from three different photographers. "At the Spinning-wheel," by Nick Bruchl, of Sher-wood, Wis., is an excellent photograph; a lit-tle more detail, however, in the lower part of the print would have been desirable. Lack

MARTIN TAYLOR

STANLEY TAYLOR

#### BOYS TWOWHO LOOKED AHEAD By LOVEDAY A. NELSON.

HETHER at work or in school, every boy has some spare time. The way The boy who lets reckless chance rule ing, punctuation, and other language these moments will find he has lost time he could ill afford to spare.

On the other hand, the youth who entertains himself or seeks pleasant occupation toward some purpose, finds before long that he has not only filled his time, but has made some practical gain. If you are not ready to accept these statements, look around among the young men of your neighborhood. Examine the hoybood of those who seem to be moving directly toward a worthy career as compared with those who bid fair in twenty years from now to be just where they are today or worse.

A well thought out way of using odd moments, is a most valuable investment for a young man. Let him have a camera, a set of tools, a garden plot-some side avocation in which to grow while he finds in it entertainment.

As an illustration of these points, notice the progress of two young men of Bloomington, Illinois. Their father, a practicing physician, has been profeselectricity. Martin became attracted to this field, and grew step by step to an understanding of it. Practical experience, reading and conversation made himfamiliar with it and increased his interest. When he reached the age to go to work. Martin had something practical in hand. In his case, the selection of a life work and the finding of a place in the busy rush was no problem. After preliminary experience, he secured a paying position in Chicago where he remained about eighteen months. He then found a larger field in Baltimore and filled it satisfactorily for two years. Although he was now not quite twenty two, he met another advancement; this was last March when he was made chief inspector for telephone work for the city of Wash-Ington, D. C., and its suburbs. Since then he has made another step up and become foreman of equipment for our national capital. In this position, it is his duty to make requisition for all material used in this great city covering practically sixty square miles, to supervise the factory hands of all ages, and to superintend the installation of new apparatus. This youth who was twenty two in May (1903) has the work of fifty men to plan and direct. He has had the great pleasure of fitting the immense government printing office, covering thirteen acres of floor space, with a special system, including the most elaborate and modern switch board devices.

Do you think that Uncle Sam has many young men of his age who are prepared to fill such responsible positions upon call? One thing certain, he has not enough of them.

Martin has a brother Stanley who is about five years younger than himself. When but a boy Stanley began to Interest himself in printing. Through patient use of his odd moments he formed a practical acquaintance with printing. printing appliances and material. From his amateur press at home he has turned out much creditable and acceptable work, such as club programs, circulars, and invitations.

Tast year at the close of the afternoon high school session every day the young printer now able to make a hand at a first-class local establishment, would promptly report at his father's office to see if there were errands for him to do; and if not, would turn his steps at once toward the printing office where he would work until the closing hour, and

In Bloomington an effort has been made boy has some spare time. The way to introduce manual training into the in which this leisure time is filled public schools. For the purpose of givhas much to do with his future. ing the pupils actual practice in spellforms, as well as to provide hand training, it was decided to place a printing press in the largest building. Superintendent Stableton learned, as people will ind out things worthy of attention, that there was a boy in the high school who was fond of printing and "well up" in that field. He called Stanley into his office. He found that the young man was forcat."X." Address Chas. R. Soostrom, Pres. Auslin, Minn. find out things worthy of attention, that conversant with the different presses of different makes, their points and merits. and had on hand a number of catalogues which would be helpful. At the request of Superintendent Stableton these were brought, and under the general oversight of the superintendent, young Stanley. who, at every step was demonstrating his intelligence and reliability, conducted the correspondence which resulted in the purchase of a four hundred dollar printing press.

Now arose the problem of finding an instructor. After a consultation between Mr. Stableton and the boy's father the plant was put into the entire charge sionally and commercially interested in of Stanley. During the next three months he instructed twenty boys, taking three at a time. For every hour spent in this school printing office, he was allowed proper school credits in manual training. Here again he showed himself competent and trusty. He did the work to the satisfaction of his superiors and handled the boys with a tact worthy of an older head.

All was moving well until the arrival of a letter in the spring. This came from his brother Martin in Washington City. The latter had been instructed to secure an accountant and private secretary to assist him in his increasing duties. Upon Martin's recommendation of his younger brother, he was directed to send for him to fill the place. Of course the lad was eager to go. After due consideration, his parents and teachers decided that in view of the oppor-tunities for development, the movement would be best.

would be lest.

Involving, as it does, great care and attention and the handling of large sums of money, the position reached by the young man is a responsible one. The pay roll for one month amounts to over \$5,000, and for the year will exceed \$60,000. Yet seventeen-year-old Stanley is trusted with it and is learning the lessons which prompt, thoroughgoing, accurate business methods teach, and for which he would not have been ready except for the way in which he had used his spare moments.

With the prospects of the broadening influence, the culture to be gathered in such a field, and the consciousness of doing things. Stanley is delighted. One of the great things in store for him is the opportunity of familiarizing himself with the workings of the government printing office, which, a model of its kind, is the largest printing establishment in the world.

Stanley's father plans to have Stanley return in January to his high school work, and graduate in June '04. Then if the young man's tastes and inclinations continue to lead along former lines, his father hopes to be able to give him a technical education which will fit him thoroughly for the business of printing and publishing.

The lesson in all this is that it pays to Involving, as it does

and publishing.

The lesson in all this is that it pays to be thorough and earnest, to do the things which are worth while, and not waste

"Suddenly there came the report of a "It was one day last fall," he began, gun from behind. The wolves scattered

do so quickly, I mounted Mack, my riding horse. The cattle were not at the gate as I expected, but I let down the bars and rode down toward the farther end of the enclosure.

'Now the lower end of the pasture is covered over with a woods, but I never dreamed of seeing wolves there. Three years ago there was a pack of them seen in this place, but they did not stay long.

"Suddenly, without a word of warning, the cattle rushed by me in a frightened way, bellowing and shaking their horns. Two other animals then came out into the clearing. At first I thought they were dogs. Pretty soon others began to appear and then I knew they were wolves. I wasn't really scared, but a strange feeling came over me as I saw them approaching.

"Mack pricked up his ears and sniffed the air. I turned about and started toward home, but scarcely had I done so when the whole pack, some sixteen in number, was at my heels. The horse turned about and immediately showed fight. I tried to get him to turn toward home, but it was useless. I had lost all control of him.

"As the wolves came toward me Mack made a dash for the pack. They retreated a short distance, but were upon us again. Then began the real fight between horse and wolves. The pony kicked with his hind legs, striking the animals nearest him. One of them came very close and made a snap at my leg. Mack turned his head and caught the balanced fellow will accomplish the feat. wolf's back with his teeth. The beast Suppose you try it.

something must be the trouble when I did not return soon after, he started out to see what it was. When he came to the edge of the pasture he heard the commotion and realizing what was up he hurried back to the house and got his rifle, with the result of which I have told

"You may be sure that Mack got a double share of oats that night for his supper, for I firmly believe that he saved my life.'

#### A Simple Feat

BY PRANK H. SWEET

An indoor feat that always gives considerable amusement is threading a needle on a four quart measure. The measure must be perfectly smooth, without handles or rim. The contestant seats himself upon the curved side of this and raises the heel of one foot to the toe of the other, and in that position attempts to put a thread through the eye of an ordinary needle. So long as he keeps one hand upon the floor he is all right, but just let him lift that hand, even with the end of the thread twisted smooth and stiff and the eye of the needle made ready to receive it, and he is almost sure to topple over without succeeding. It looks simple enough to the spectator, but the proof is in trying it himself. I have seen more sore clhows and even bumped heads than threaded needles, though now and then some well-

#### The Late M. Paul Du Chaillu

There are few boys who have not read ome of the writings of M. Paul du some of the writings of M. Paul du Chaillu, the African explorer who is said to have discovered the gorilla. At the age of seventeen young Du Chaillu came to the United States from the west coast of the United States from the west coast of Africa and while here contributed to a New York paper a series of letters on the Gaboon country. Three years later he sailed again for West Africa, where he spent four years alone, traversing eight thousand miles on foot through the equatorial region. After this journey he went to England, where his stories about the convibule and the convilue went went to England, where his stories about the cannibals and the gorillas were scarcely believed. Indeed, it was not until a live gorilla was brought to Berlin in 1876 that Paul du Chaillu was thought to be more than a romancer. His death removes from the world a very interesting character and one that has contributed much to science and even more to the entertainment of the reading world—and that includes many thousands of and that includes many thousands of

## Boy Money Makers and Money Savers WANTED-BOYS

### A CHURCH PRINTING OFFICE RUN BY BOYS

By W. FRANK McCLURE.

Some time ago a successful plan was inaugurated in Emmanuel church, Cleveland, O., whereby the church was not only furnished with a printing office, but ambitious young members of the Boys' Club of the church were taught the printing trade. In this church printing office, all the programs of the Sunday services, as well as the invitations to meetings and the bills and tickets for entertainments were printed.

The printing department of the church was in charge of five high school boys who agreed to spend their evenings after school and their Saturdays in learning how to set type and run the press. An experienced printer spent one month with them giving them instructions. Since only furnished with a printing office, but

experienced printer spent one month with them giving them instructions. Since that time the boys, who at first knew practically nothing about the printing business, have become so proficient that two of them have obtained positions in big printing establishments.

The printing office of Emmanuel church, as shown in the accompanying illustration, was arranged in an upper room of the parish house. At first only fifty doilars' worth of material was purchased, but this was more than doubled within a comparatively short time. From the start

comparatively short time. From the start it was the plan to charge the expenses of the office to the boys and to credit

them with the commercial price of the work which they turned out. A part of the proceeds were then set aside for the purchase of new equipment while the re-mainder went toward the erection of the new church edifice in which the boys, as well as all the members of the church, were interested.

Sixteen founts of type and a hand press were found adequate until such time as the proceeds from the work of the young workmen warranted a further expenditure. The press, operated by a hand lever, turned out five hundred sheets per

The aim of the printers of the Boys' club was to do the finest work. Their friends and members of the church saved for the boys samples of all good work, and the young printers were not satisfied until they could produce something equally good. Their success in this line soon brought them calls for work from parties outside the church, but it was decided that the church office should not be brought into competition with city printing establishments to this extent. Also a rush of work from outside sources in addition to that done regularly for the church, would have perhaps prevented the boys from putting forth their best efforts and the attainment of the highest proficiency in the work.

to print cards. All the money he carns in various ways he puts in the bank—DAVIS W. CAMFBELL, Columbia, Ala, says he and his brother rented a pasture last summer and pastured all the cows in town, driving them to and from pasture themselves. They cleared in this way about \$100. On Saturdays they haul wood and make at this \$100 a day. Davis says he buys all of his own clothes. He says he does not have to work but that he enjoys it.

#### Lacked Courage

Recently a gentleman went to New York from the oil fields of Texas. He was in search of an expert chemist. It seemed that the oil in that southwestern

seemed that the oll in that southwestern region held a sulphur in union with certain other chemicals, so as to involve a new problem.

The capitalist went to the different colleges; he found a chemist that had the ability, and offered him some \$15,000 to solve the problem, and indicated the probable line of successful experiment. But the chemist had a position of \$5,000 a year. He was timid, cautious, and unwilling to cut away from his base of supplies. He preferred a sure thing, with ease and sleep, to an adventurous quest to an adventurous quest

ease and sleep, to an adventurous quest with its possible rewards.

But there was another man beside him, with a little less ability and more courage. He quickly east off the hawser and put forth into the great deep. In a few weeks he earned his \$15,000, was promoted to a great position, and is now surrounded by the equipment and assistants that enable him to do original research. Already he has name and place and fortune.

Now the other man sits mourning over his loss of the opportunity he threw away. He looks with covetous eyes toward the success that his friend has

#### Will Master The Business

Franklin Farrel, Jr., son of a millionaire tool manufacturer of Ansonia, Conn., and a University graduate, has gone to work in his father's foundry at four dollars a week. He states his purpose to be the learning of the trade from the ground up. He says that the men who make the inventions and make it possible for America to beat the world in manufacturing are the practical mechanics. He wants to learn how to take orders, and says, "A man cannot know how to give orders until he knows how to take them."

#### Ned McLean

The young man in the accompanying picture is Ned McLean, who is fortunate enough to have for his uncle that favorite hero of the present day American boy—Admiral Dewey. Young McLean is the son of John R. McLean, a millionaire business man and politician, who has homes in Cincinnati. Ohio and Washington, D. C. and who is the proprietor of that prominent newspaper, the Cincinnati Enquirer. Ned McLean, who, although he quirer. Ned McLean, who, although he is not yet of age, is six feet, two inches

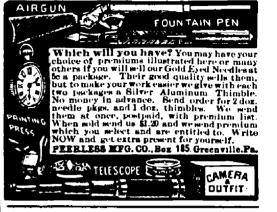

in height, is an all-around athlete, and, better still, in his fondness for sports he has had a kindly thought for others not so happilly placed as himself. Not many months nas had a kindly thought for others hot so happily placed as himself. Not many months ago he gained his father's consent to make use of a great tract of land owned by Mr. McLean just outside the city of Washington, and here Ned has fitted up a public sporting ground for the use of all boys, rich or poor. There are hurdles for the lads who ride horseback, and tennis courts and basebali

### The Drawing-Room Magician

(Begun in December, 1903, Number.) CHAPTER II.

EFORE proceeding further, it will doubtless be as well to give a little advice to the intending conjurer. From the very outset he must bear faced by an audience which, from the nature of the entertainment, will be inconfident. Of all qualities necessary to the successful conjurer the latter is perhaps the most valuable.

Experience will teach the young magician that for every trick he must have suitable "patter" or "talk." and, as far as space will permit, the description of tricks in these articles will include or

suggest "patter" which the entertainer will find useful, though I should advise him to cultivate the gift of talking to his audience as much and as quickly as

Fig. 12.

There is an old maxim which has been handed down from generation to generation of the conjuring fraternity, and that is, "Never perform the same trick twice to the same audience." The necessity for this injunction will be seen when it is realized that the whole success of an illusion frequently depends upon an apparently insignificant decep-tion being practiced, and a repetition of the same might easily lead to detection.

It has ever been found a useful expedient to keep your audience in the dark as to what you are going to do, for if they know you are going to accomplish a certain feat their faculties are naturally directed on the part of the trick where, for safety's sake, they should not be; on the other hand, not being aware of what you intend doing, the actual performing of the trick comes in the nature of a surprise.

The young conjurer who is to make a success out of his art is he who is naturally quick and observant. Independently of his own "business," he should, wonders are performed. A wand, which ment, take note of his surroundings, especially guarding against the fatal error has been made before now, and the mor- presence of something else. tification of the entertainer can be realized when he finds that many of the secrets of his "show" are being given away by the tell-tale glass.

There is, too, quite an art in the arrangement of seats for a conjuring entertainment: Keep your people as much as possible in front of you, being very

careful not to allow stragglers at the sides, as even to the most accomplished magician they may sometimes prove troublesome. Now, some of my readers may wonder why I lay such stress on keeping secret all actions which take place "behind"-i. e., not in the sight of the onlookers. The necessity for this becomes clearer when we come to consider the clothes a conjurer should wear. and the use he may get out of them.

#### Dress and Its Uses.

As it is always my principle in such articles as these to explain how such and such an art may be accomplished with but the barest outlay of capital. I do not enjoin upon the student the absolute necessity of possessing a dress-suit. Certainly the possession of this valuable addition to the conjurer's outfit has many advantages; it looks smarter and more professional, gives him exceptional opportunities of producing and concealing articles, and is capable of being made with quite an extraordinary number of pockets in which may be stored all manner of things, but the young entertainer, by the exercise of a little ingenuity, and by the enlisting of a sister's needle on his behalf, can provide himself with an outfit which will fulfil almost all the purposes of the dress suit.

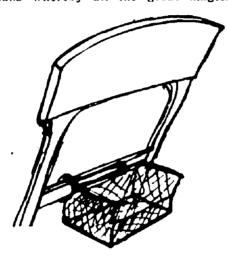

In the first place I should recommend the attachment of two fairly large pockets to the back of the trousers; just sufficiently high to be easily reached by either hand, yet not so low as to be uncovered by the coat.

A couple of small pockets made on each side of the trousers, just where the tip of the fingers-when the hand is hanging loosely-touch them, and of a size capable of holding a silver dollar, will be a decided advantage, as they form excellent in mind that he will almost always be receptacles for such articles as coins. rings, etc.; but should the making of these prove too much of a difficulty, then for the latter articles a hook on each very first he must be self-possessed and as a ring can easily be detached from one or hung on the other. In many tricks these hooks are particularly useful, as, for instance, in the case where the performer, having shown both hands perfectly empty, and, with sleeves turned up, produces a handkerchief; for, turning sideways, he raises the hand nearer his audience, and in the act of raising the other takes a small handkerchief off the hook at his leg.

Another "fake" which is quite possible with ordinary clothes is to have a waistcoat made with an elastic band round the bottom, inside. The use of this is obvious, for the performer can conceal up his waistcoat sundry packages, knowing they will be kept from falling by the elastic band. This ingenious device is used for a very large number of tricks, consequently I heartily recommend it.

#### Simple but Useful Appliances.

Of these, the most essential, though not necessarily having any speciality about it, is the "magic wand." Without it, the conjurer would be like a ventriloquist without his figures, or a clairvoyant without a medium; it is, in fact, the means whereby all the great magical

before giving a drawing-room entertain- should be about ten or twelve inches of overlooking the presence of a mirror lation of coins, as its presence in the behind him. Such a mistake as this hand of the performer often conceals the

hox with one side knocked out, or, more

need only consist of an old watch case, most mystifying and effective trick. even if it lacks works and dial. The

value of it is when the necessity arises for the performer to get into his possession a borrowed watch wrapped up in paper, or in a handkerchief; in either case he would have concealed up his waistcoat a package similar in appearance, but containing the substitute watch. The change can be effected without any trouble as the performer goes back to his place after having wrapped up the borrowed article.

#### Various Coin Tricks.

By means of the "passes" explained in our December number, it is possible to make up almost any number of coin tricks; in this article I shall only explain one or two of the better known and most effective kind. The first I shall call

#### The Traveling Coins.

FIG. 14.

The entertainer has three cups. He borrows a quarter from a member of his audience, and, in order that there may be no deception, he invites some one to mark the coin in any possible manner. He calls his cups "a," "b" and "c," naming the cups perfectly empty, he places them on the table upside down. He now takes ply himself with a servante—i. e., a receptacle capable of being fixed to the back of a chair or table, and from which articles may be obtained by the performer, and introduced into the hat or boxes as the case may be. One can easily be made with some netting and thick wire, the shape being that of an oblong from one of his pockets. Lifting the conduction of the manufacture of his own, which he readily obtains unobserved from one of his pockets. Lifting the count and there has the case may be conducted and thick wire, the shape being that of an oblong from one of his pockets. Lifting the count in any possible manner. He calls his cups "a," "b" and "c," naming the calls his cups "a," "b" and "c," namin

wire, the shape being that of an oblong from one of his pockets. Lifting the hox with one side knocked out, or, more cups to show there is absolutely nothing box with one side knocked out, or, more rimple still, a rectangular framework of thick wire, covered loosely with netting so as to form a receptacle which can easily be fixed to the chair or table. Various other ways will suggest themselves of making this extremely useful piece of apparatus. (Figs. 12, 13 and 14.)

A very necessary thing for every conjurer to possess is a "substitute" watch, which should be of an ordinary size and need only consist of an old watch case,

(To be continued.)

### HE'S A LIGHTNING CALCULATOR

He Handles Figures With Marvelous Ease and Rapidity.

Not a Calculating Prodigy, but Has Acquired His Faculty for Figures Through a New System Which Any One Can Master.

Mr. Clarence E. Baker, with the banking firm of Bartlett. Frazier & Co., No. 7 New Street. New York City, is a young business

culators a great many thinks they have never known about handling figures. He adds, subtracts, divides, and multiplies any problem almost instantly. He can multiply 3214 and 4231, or any similar problem, without writing any partial product; he simply writes the answers. He adds with marvelous speed and accuracy, and it is seldom that in making an extension on a bill he requires paper and pencil. He usually writes the product in its proper column without any apparent effort.

Mr. Baker says that he never seemed to possess any particular bent for figures until he began a systematic study of short cuts in figures under a new system. He attributes all of his success to that system, and expresses the opinion that any one can master it as he has done. In a recent communication he said. "Two of my promotions I owe directly to my ability to figure fast and accurately, which in turn is due directly to the excellent training I received from your course in rapid calculation. It is beyond me to adequately express my apprectation of the benefits to be derived and which I myself received from this course."

If you are interested in the subject of calculation; if you want to handle figures quickly, accurately, and easily, send for the free book entitled "Rapid Calculation." It tells about a course of study that has astonished mathematicians and has revolutionized old processes of calculating. The system is entirely new, but it has been adapted perfectly to the needs of own home without loss of time. The free book explains a number of problems and offers suggestions for testing speed, figures that will be of use to any one.

A postal card sent to-day will bring the free book to your very door.

# Real Pirate By GEORGE ing port-fire, ready to clap it upon the H. COOMER "Now,' said the captain presently, 'let

A T THE time I commenced following (A) the sea," said old Capt. Gifford, in relating a thrilling experience of his early life, "there were pirates all about the West Indies, and the dread of them was always uppermost in a sailor's thoughts. We didn't mind the yellow fever. When a man died with that, he died-it was a visitation of Providence, and his fate was to be thought upon calmly and sorrowfully; there was no horror in the reflection. But to be murdered upon the high seas-that was a thing which made one sick to think of.

"Resistance on the part of a ship's crew, if unsuccessful, was certain death -and often, too, in the most cruel form; for the revengeful, drunken pirates, with their worst passions aroused by the conflict, would in such a case take delight in torturing their victims. And even where no opposition had been attempted, the plea that 'dead men tell no tales' was generally sufficient to insure the massacre of all on board.

"So you see it was about as long as it was broad. There was very little enconragement to surrender. It was simply a question as to whether one would die fighting like a lion, or be butchered on the deck like a sheep.

these were not frequent enough to inspire much hope in the event of capture, yellow-fever season, had arrived and Slaughter was the rule, and if not committed in every instance, the fortunate the city. ones might thank their stars.

My to die out and leave us becalmed there, a pivot, However, we ran the gauntlet in safety. my hat! But she simply repassed us on and continued our course towards Cape Agenora around so that both the six-St. Antonio, the westernmost point of Cuba.

"During the following night, the chief mate and the remaining seaman were "'O, that's easy enough,' he replied. 'We both stricken with the fever, leaving were outward bound, with a cargo of only the captain and us two boys, to-New England produce, and the pirates gether with our passenger, Mr. Howard, knew that we were not likely to have to handle the brig, with six dreadfully

> "This was a sad state of things: but the breeze was bright and fair, and we hoped to double Cape St. Antonio the next day,

> "On that day, however, it fell entirely so that the vessel lay idle, heading by turns all around the compass.

"We had by this time nearly come up with the Cape, and it was a had place to molasses was purchased at an unusually meet with a calm, for this headland was low figure; so that, after loading for a notorious piratical rendezvous, almost home. Capt. Allen found that he had, as much so as the Isle of Pines. However, if we must lie helpless, the fog would be in our favor, the captain said.

"In the meantime Mrs. Howard showed herself an extraordinary woman. She was only twenty four years old-a mere and it delighted us still more to learn girl, as it were, and a very beautiful one -but she seemed as if she knew just what to do and how to do it. She cooked for us who were well, and, in spite of her husband's remonstrances, braved all the danger of attending upon the sick, like

"After lasting for about twenty four hours the fog disappeared and a light breeze sprang up. A current had taken us along for some miles, and we were directly off Cape St. Antonio.

"At first no water-craft of any descripin other cases a single survivor of some the Cuban ports, and these secret agents, tion was to be seen, but presently we were startled at perceiving a small slooprelate the tale of the capture and death ily determine what vessels were likely rigged vessel putting out from the land

"Looking through his glass the captain age of lifteen making my first voyage in close off the port, and so he had given out saw that, in addition to her sails, she had that we should probably remain three or out a number of long sweeps or oars, and Allen, bound to Trinidad de Cuba. In all four days longer. It may have been this this at once told us that there was no which saved us from being moiested at possibility of escaping from her with the faint breeze which we had.

"The Agenora carried two six-pounders with only four of us to handle them, they

"In a short time we were able to count the sweeps which the sloop had out. "On the second day we passed that They were fourteen in number—seven on

> "As they got nearer we brought the then Capt. Allen sighted one of the guns, which I never desired to repeat."

it go!

"Instantly there was a deafening bang! and the recoil of the gun fairly shook the brig. How we watched for the result! Skip, skip, skip, went the shot from wave to wave, close to the sloop, yet without touching her.

"Almost before we could speak or think, a sheet of smoke burst from the pirate vessel, and 'pat, pat, pat,' right on board of us, came a charge of grapeshot and a twelve-pound ball—as we found afterwards it must have been, from the hole it made in our bulwarks.

There was no time to lose, and our second cannon was fired as quickly as possible; but its contents missed the pirate, though they struck near enough to throw a shower of spray upon her deck

"Again the miscreants fired in return. and redoubled their labor at the sweeps. The breeze was at last wholly gone, so that they had to depend entirely upon their streugth of muscle, but of this they had enough and to spare.

"Argo and myself now opened fire with the muskets—'bang, bang, bang!' but I don't think we hit a single one of the villains. We saw them loading their big gun for a third shot, and it seemed as if at such short range, they must tear us all to pieces. But Capt. Allen and Mr. Howard were also loading-cramming one of the six-pounders to the muzzle with grape and cannon balls.

"The pirates were just ready to fire as the captain ranged along his gun.

"'Quick, Mr. Howard,' he cried, 'touch her off!

"The report rang through our ears and we could have shouted as we saw the effect. The sloop's long gun was tumbled over, and the men who managed it strewn mangled upon the deck. A number of the heavy sweeps dropped from the hands that held them, or were sent whirling into the air. I think this one discharge must have killed more than a dozen men.

"For a few moments the victory appeared to be won; but just then the Agenora swung around in such a manner that neither of the cannon could be made to bear upon the enemy. The pirates saw our dilemma, and a few powerful strokes of their sweeps brought them right under our bow.

"We ran forward to prevent them from boarding, but they swarmed over the bowsprit and head rail cutlass in hand, till it was plain that two men and two boys were to be no match for such a number of desperate villains.

"In spite of all we could do, they were in a fair way to make short work with us, when on a sudden the scene was changed.

"Mrs. Howard had anticipated such an emergency from the very first, and now with a ladle in one hand and a kettle of boiling hot tar in the other, she ran to our relief.

"The tar in such a shape could be dipped up as easily as water, and in a quarter of a minute all the headmost pirates had got it full in their faces. Filling their eyes and mouths, or running down their half-naked breasts, it must have put them in great agony. They went tumbling back upon those behind them, and as we quickly followed up our advantage, the deck was almost instantly cleared.

"In a few minutes the sloop was making all possible speed away from us, but she had out only six sweeps instead of the fourteen with which she had commenced the chase.

"All of us except Mrs. Howard had been and making directly towards us. That more or less wounded, so that we did not she must be a pirate was beyond all ques- attempt to molest the pirates as they retreated: while on their part, as the cannon we had knocked over for them was their only one, they could not fire upon us. I think they must have had nearly twenty men killed or disabled, to say nothing of those who were scalded by the bot tar.

"I shall never forget how carefully Mrs. Howard bound up the ugly cuts in our just like one's own mother-and yet she was such a young woman!

"We got a breeze soon after the fight was over, and were thankful for it, too, years, besides having made one voyage of the land when another was attacked in less there was but one thing to do, and as we did not know how many more pirates there might be in the neighborhood. It took us around Cape St. Antonio, and two days later we arrived at Key West, where we were put into quarantine.

> "Of our yellow fever patients two died fust as we dropped anchor, but the remaining four soon after began to imman, Argo and myself; but Capt. Allen pounders, while we boys attended to the prove, and finally recovered. We lay in quarantine for a number of weeks, and then, with the vessel thoroughly fumigated, were permitted to sail for home.

"Upon our arrival there, the good old Agenora became an object of much curiosity, while as to Mrs. Howard, she was visited by a host of friends, anxious to hear the story of our peril from her own

"I am sometimes asked if in all my seafaring life it was ever my fortune to meet with a real pirate-one whom I know to be such. To that question I think myself justified in saying 'yes'pounders would bear upon them, and and further, that it was an experience

#### PRIZE OFFER

A prize of a book of selections, listed at \$1.25, will be given to the one sending iton:" Symposium on Canadian Annexathe best selection suitable for a prize speaking contest, taken from a recent oration. Selections, with name and address of sender must be received not later than January 20th. A similar prize I. Canadian interests demand it. will be awarded during each of the months of February and March. Freshness, unity, virility, interest, action, style, will be important points in favor of a selection.

#### DEBATE

The progress of events brings forward II. new questions for debate, or gives freshness to an old subject, or it may relegate a subject to the waste basket. When the copy for the December AMERICAN BOY was prepared it seemed that the Nicaragua Canal route would be a good subject. But before the December number was issued the United States had agreed upon a treaty with a new-horn Republic III. 1. The people already intermingle. for a canal at the Isthmus of Panama. Fortunately the article was prepared more to show how to develop a subject than to present the outlines of a debate.

#### The Subject

It is not likely that the question outlined below will be settled as hurriedly as that of the Panama Canal in its final stages, but many people think that there are new phases enough to call for a restatement of the subject. The recent boundary settlement called forth some I. Canada does not believe it is her desdiscussion. Congress has just considered both the admission of Cuba as a state and the annexation of Canada. So I present, with references to books and magazines, and outlines, the question

American Boy Lyceum.

III. England would object to our union with Canada.

1. Constitutionally. (a) She always wants more.

2. She would lose vast capital.

3. She must be reckoned with now as in the past in determining the "destiny" of nations.

#### NOTES

#### Cup For Best Williston Debater

has taken final action on the matter of offering a prize to Williston Seminary, I Easthampton, Mass. It was voted to offer a cup, on which the name of the best individual debater who speaks in best individual debater who speaks in the annual joint debate between Adelphi and Gamma Sigma shall be engraved. As the drum sounds closer by. And wildly I rush to the open air To see the troops come nigh. each year by his society, and the cup shall be held for that year by the society to whom the winning speaker belongs. The following subjects have been de-bated during the fall: "Resolved, That the Democratic party deserves the support of intelligent citizens;" "That football practice is more injurious than otherwise;" "That the course pursued by the United States in dealing with the 2. Political: (a) England's interest revolutionary government in Panama is justifiable;" "That the best interests of the people of the United States demand that the national government own and operate the coal mines."

#### More Questions For Debate

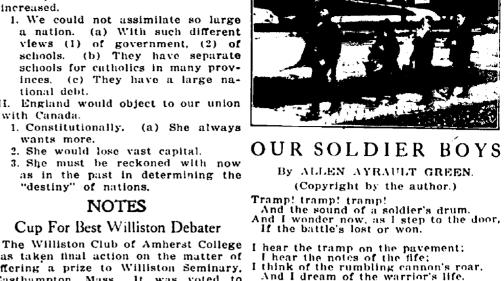

The following questions have demanded the attention of school and college clubs during the fall: "Resolved, That the policy of excluding Chinese laborers from the United States should be maintained and enforced;" "That the history of trade unionism in the past twenty years shows a general tendency detrimental to the best interests of the country;" "That trade unions should be incorporated;" "That it is for the best interest of society that woman should have the right of suffrage.'

#### Qualifications of the Orator

(Extract from a paper on the above title by Thomas C. Trueblood, of the University of Michigan.)

Again earnestness is essential to success. The man who would arouse an audience must have himself aroused. If a man does not believe what he says, how can be expect others to? A man devoid of feeling is no better than a book. Emotion properly controlled awakens interest and unifies speaker and hearer. A cold and stolid man cannot do this. Enthusiasm with most audiences counts more than any other quality. Earnest, tender, magnetic dispositions win their way from the start. This quality more than any other is native. It is the chief power of the so-called natural orator. To cultivate this trait one must be moved by generous impulses, appreciate joy and sorrow, forget self in interest in others' welfare, and put himself in such condition that sympathy will flow. This begets in men fervor and tenderness, so rare and fascinating in the orator. But this element must not be excessive; must not degenerate into gush. Earnestness unsuited to the subject and the occasion repels, and creates the suspicion of insincerity.

Eurnestness is not an element of one's nature to be acquired in a short time or

I strain my eyes for the fighters bold

As I make my way to the brick-payed

street
I hear the loud command: "Halt!-play your fife, now beat your drum,

For this is the soldier's land."

But the voice doesn't sound like a cap-

tain's bold. The drumsticks bang on the drum. The fife doesn't seem to play any tune,

It can't be the soldier's come.

And then as my eyes turn down the

strect.
I laugh at the sight I see.
For the soldier boys I expect to cheer
Are the Children who live near me. 'Tis General Arthur who carries the

sword.
And Arthur's sister the drum.
While Whit blows the shrill notes out
from the fife.

And Lawrence carries the gun. "Hurrah for the soldier boys," I cry,
"Beat loud on the drum, blow the fife;
Cheer boys every time a victory's won;
Prepare for the battles of life."

In your little sham battles you always

succeed.
'Tis victory ever you see,
So shout out your orders, charge with
your steed.
Know nothing but victory."

"Then when the summoning bugle calls
You're ready at once with your gun;
Port arms!—dismissed!—receive your re-

Your word is pronounced, 'Well done!' "

to be put on for the occasion. Lyman Beecher was once walking home from church with his son, Henry, when he said, "My son, I think I never got on so poorly in a sermon before." "Why, father. I never heard you preach so loud." "That's just it, I always hallon when I haven't anything to say." The man in real earnest is less likely to fall into an artificial style. He carries something of the same energy and distinctness into his speaking that characterizes the style of the man on the street. There must be harmony in mind, heart and expression if the orator would play upon the stops of the human soul. "The essential of the human soul. "The essential thing," said Emerson, "is heat, and heat comes of sincerity."

The last of the qualifications that I will mention is manliness. The specker cannot command others until he can command himself. "He that ruleth his spirit is greater than he that taketh a To the orator and the general city." more than to any other men this is essential. That presence of mind which enables one to control his faculties, to stand in full possession of himself in the presence of a hostile assembly creates in the audience profound respect, and one cannot convince any move to action without gaining the respect and conciliating the kindness of an audience. The constituent elements of monliness are courage, modesty and herevolence, "A timid speaker is as bad as a timid The man who is a slave to surgeon." men's opinions would better do something else. He would better raise corn or lay brick. Hard knocks develop manliness of character, the soul of success. But this quality is not compatible with modesty and self-distrust. Nothing so offends as arrogance. People will not submit to being driven to conclusions. If attempts of this kind are made auditors cease to be friends and turn critics. Manliness and benevolence disarm critics and they become sympathetic, helpful

#### Boy Sketch Artists

Some excellent pen and ink and pencil sketch-eshave recently been received from the follow-ing boys: Maurice C. Latimer, Cannell m. Ind : Arthur Lataurelle, Chicago, Ill.; Charles Hoffer, New Albany, Ind.; Carl O. Johnson, Kimberly, Minn.; Hugh W. Sparks, Forest Grove, Ore.; Edwin Miller, Valencia, Kans.; Grove, Ore.; Edwin Miller, Valencia, Kolles, Russell Bruce, Brooklyn, N. Y., George F. "LEAD, KINDLY LIGHT"

### Burial at Sea

The accompanying pictures of a burial at sea will interest our readers, few of whom have ever witnessed a scene so full of sad interest. The one here photographed took place on board the flagship "New York" during her passage from the Asiatic station to San Francisco in 1902. The upper picture shows the ship's officers and crew, with its band, gathered to pay the last tribute to a comrade who had died thousands of miles from land. The lower picture shows the coffin about to be lowered into its watery grave.

TER LAST VOYAGE

again.

Edward Johnston, Valparaiso, Ind., wins the prize for best list of answers to November Tangles.

Ragnar Lunell, 11 Tradgards street, Kalmar, Sweden, wins the prize for the best original puzzles.

Honorable mention is accorded the following for excellence of original contributions or answers or both.

Charles Stewart, Morton I. Mitchell, T. Lynn

Charles Stewart, Morton L. Mitchell, T. Lynn Chase, Merlin Sisson, Jerome A. Bulte, Percy B. Avery, Henry Miller, Edward L. Fernald, Litta Voelchut, J. Ogden Steer, Will Buckeridge, M. O. Gray, Oliver C. Moles, Hudson T. Sutman, Nels W. Kindgren, Clement Barnes, George C. Nespital, Harold R. Norris, Willey Brown, Joseph Stagg, Max B. Robinson, Philip Stone Donnell, Robert Kieth Gordon, Scyburt G. Miles, Ralph A. Clark, Chester Hanson Pierce, Jo Mullins, Ward Sachs, George Harrison Stanbery, Leonard Steburg, Sarah Gilles, Grace Haren, W. H. Wilkes, George L. Mylchreest, Robert Henry Wood, Jesse Cohenothers must not become discouraged; try again.

A cash prize of two dollars will be given for the best original ideas for illustrated puzzles of any kind, received

by January 20.

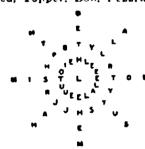

A prize of a new book will be given for the best list of answers to January Tangles, received by January 20.

#### Answers to December Tangles

Present big edition will seen be exhausted. Sent postpaid for 10 cents. Smith & Slayton, 71 Hampshire St., Buffalo, N.Y.

#### The Kicking Donkey

The homemade kicking donkey is a delightful and amiable animal. A pleasant feature of the beast is that he is easy enough to make so as not to become a bore before he is completed, and still he cannot be made so easily that the young manufacturer will not have reason to feel proud of his achievement.

Here are the parts that must be made separately: The head and neck; the forelegs and forequarters or shoulders and the hinder part of the body.

A cigar box will furnish ideal material. The shoulders and forelegs must then be fastened to a little platform support consisting of a piece of the same wood

as that out of which the donkey was cut. This piece is eight inches long and about one-half inch wide. The forefeet of the donkey are firmly fixed into it by little pegs that are driven into this narrow strip of wood just mentioned. They must be driven near one end of the platform so that the hind hoofs of the donkey rest upon the support near the other end.

The various sections of the donkey then are fastened together by knotting strings through holes, which must be pierced carefully with a fine awl in the proper places.

The stand to which the completed thing is to be attached consists of two flat pieces of wood six inches long, two inches wide and three-fourths of an inch thick, and one block of wood one inch thick, three inches long and two inches

This block is sandwiched lengthwise between the two long pieces of wood so that they extend three inches beyond the block.

Near the end farthest from the block a hole is bored in one of the pieces in order to receive a peg which is to be fitted into it.

The whole affair now takes the form of a sort of a fork, so that the upper and the lower ends may be passed over the edge of a mantelpiece or any similar projection. Thus the stand can be held firmly in place by merely giving a few twists to the peg.

Now, extending six inches at right angles from the end of the stand, across which it is placed, and farthest from the peg hole, you must fasten the long, narrow support for the donkey.

Two small disks about one-fourth of an inch thick must be made now.

One is glued to the hindquarters just behind where the twine is passed to join this section to the next. The other disk is in two parts, and yet both are fast. Above the box fasten one of your miris glued just in front of the joint in ened together without a break in the the neck of the animal.

All that remains now to make the toy work is to arrange the bob.

This is supported by two strings, the the chain. cured to the disk. You will see now that the dotted lines with a pair of scissors.

the purpose of the disks is to prevent the strings from rubbing along the edge of the strip of wood supporting the donkey as the bob swings.

will answer very well for a bob.

As it swings to and fro, the donkey moves. Down goes his head, up go his heels, up comes his head and down go his heels, alternately, so long as the bob oscillates.

#### Whittle them out of thin, tough wood. To Makea Linked Paper Chain Out of Playing Cards

At first thought it would seem quite impossible to make a linked chain out of trouble. an ordinary playing card without the aid of mucilage. You will naturally ask yourself how one endless link can be made to go into another without cutting each and pasting again.

Yet the trick is simple enough.

Every playing card consists of two sheets of paper pasted together. By using a keen penknife it is possible to slit these two layers apart. The slitting must not extend far. Before you begin it look carefully at the picture of the card in the illustration. You will see that at the long edges marked "A" and "B" the card is slit and opened up. These slits should extend exactly one quarter of an inch into the card. Then the opened-out edges are folded back, as shown in the picture.

After this is done bend the card along the line marked "C-D" until it is folded over as shown in the diagram alongside of the picture of the card itself

In this diagram you will notice a number of parallel lines. These represent slits. They are made with sharp scissors and must not extend farther than to the edges where the slit parts of the card fold over.

Having made these incisions straighten the card out and lay it flat on the table.

Then slip the knife blade between the slits, going over and under them alternately. When the knife is fully in place, move it very carefully up to the point the use you make of them. where the strips adhere to the card. Force the slitted parts away from each other and separate the adhering portions carefully.

Then reverse the knife and cut the alternate strips away from the other edge. Now this must be done with great skill, those that you want to loosen away from either side.

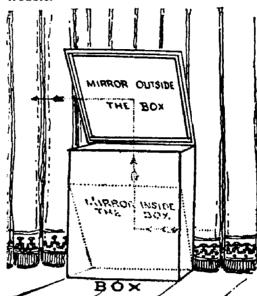

the other side of the card. The card now that must be left open.

#### A Homemade Biograph

The lights are all turned out. The spectators sit in utter darkness. Suddenly a

Upon this are seen moving pictures far clearer and more distinct than in any ordinary biograph. The pictures are perfectly steady, having none of the dis- that they seem to fall behind, as well as tressing flickering and vibration which on each side of the box, for if the specis so unpleasant a peculiarity of ordinary moving pictures.

the life. It is a most interesting and enjoyable exhibition, and the best of it is that instead of needing hundreds of dollars to prepare, it costs little or nothing except a small amount of time and

There really is nothing more required than two looking glasses, a box and a curtain.

Hang the curtain so as to divide the room into two parts, and get any kind of an old wooden box, large enough to hold one of the two mirrors.

You may safely borrow the mirrors, for they need not be injured in the least by

In case you cannot get mirrors, plain glass smoked or painted black on one side, or even with one side merely covered with black cloth will answer as

Knock out one side of the box, remove the cover if it has one, and place the box for you must not cut any strips except with the open side toward the curtain and the closed side toward the spectators.

It will be better to make your box pre-When it is done you will have a card sentable by covering three sides of it with a number of strips hanging to one with some kind of fabric; paper muslin edge and an equal number hanging to will do. But by no means cover the top;

chain.

It is a simple matter to divide the joints into separate links, thus forming the top of the curtain, or by means of

ends of which are carried up and se- All that is necessary is to cut along of the box and extending perpendicularly

rors so that you can incline it to any angle you desire. This can be done by carrying cords from the four corners to cleats nailed to each of the opposite sides above it.

Put the other mirror inside the box, allowing the upper edge of the glass to rest against the closed side of the box and its face to front the open side of the box.

Incline the mirror in the box, and also incline the mirror above it, which must face in the opposite direction, in such a manner that any images cast upon the lower mirror will be again reflected to the upper mirror.

Drape your curtains so that the part of the room that extends behind the box is shut off and concealed from any person in any portion of the apartment.

Arrange the folds on each side of the box, so that the curtain does not interpose between the open side of the box and the hidden part of the room occupied by the performers.

Let the room behind the curtain be as brilliantly lighted as possible.

Whatever the performers in the brilllantly lighted hidden part of the room do, will be instantly reflected, of course, by the mirror in the box, and that reflection will be reflected again by the mirror hanging overhead.

Ascertain how far away from the box you have to station a group of performers, in order to bring them into the field of vision, namely, the space bounded by other things. Contains over 200 illustrations, IOc.

it will not do at all to have them so near the mirrors that only portions of them can be seen.

It is astonishing, in fact, how rapidly The bob itself may be made of any cloth is pulled away and a square of light an image cast upon a reflecting surface heavy object. A small bottle full of shot appears.

diminishes in size as the object from diminishes in size as the object from which it is reflected becomes more distant.

> Be careful to arrange your curtains so tators suspect that the other side of the box (that opposite to the one presented In addition, every picture is colored to to view) is open, they will detect the trick.

As many comic little incidents can be shown as the exhibitors can invert; if at any loss for ideas in this respect an inexhaustible supply of suggestions can be obtained from the comic supplements in our daily newspapers.

Let the face of the mirror presented to the audience be covered with a cloth between acts.

Let all the lights in the part of the room occupied by the audience be turned out while the pictures are being exhibited.

An additional feature of interest in these homemade biographs is that the actors may, if they choose to do so, introduce speaking parts, which, of course, is impossible in ordinary biographs. Indeed, there is nothing to prevent an entire little play from being acted, in which the diminutive images on the mirror are the apparent performers.

mud! My smiling prospects doomed and my chances of victory gone!

Hailing my attendant chum, who was howling himself hoarse for my encouragement, I was soon off the course; once more in my overcoat and cap, hurriedly making for home!

My first steeple chase was over; and athough I was not the proud and happy winner, I gained something still more valuable than glory and a silver cup: I learned a useful lesson-never again to deck myself in "borrowed plumes."

#### Books Worth While

WARD MACAULEY

No matter what sort of employment a man undertakes, it is unquestionably true that a ready command of a large amount of what we call general information, aids him in doing better work, and makes it possible for him to earn more money. Boys should remember this, and bear in mind that it is much easier to lay in this information now than if it is postponed, and our reading limited to stories that interest but do not teach. I do not say "read no stories." I am quite convinced that if one reads a fair proportion of each, he will both like his stories better, and be keenerminded when he comes to read a biography. Of course, we cannot expect boys who are at school nearly all day to spend evening after evening on the classics. But, if for instance, we can hardly wait to get at "Robinson Crusoe" and sit entranced by the account of his ingenuity in providing for himself, why can we not, with as much interest, pore over the adventures of Marco Polo on his great overland trip to China?

Some able writers have believed that these true stories can be made just as interesting as the imaginative ones, and they have set to work to write such books. Consequently, the American boy has at his command, as never before, the best reading along historical and other educacirculating library, he should certainly benefit by these, and at Christmas and birthday seasons, it might be well to remind kind relatives and others that we prefer having at least some of this sort of read-

Appleton and Company publish a series of books of this kind, which are written so well that even quite young children can read them, and yet are good reading for grown-up people. They call

> We were off! In a moment, all sense of prison in the latter city. Here, he dictated wild exhilaration, as we tore away in our who was skillful as a writer.

Away again to the next hedge-hard at In the afternoon. In a dreamy, dazed it! But no!—I took off too soon and interesting things we read in this book, condition I struggled through the lessons landed in the center! No matter— are: the conquest of China by the Tartars, of the morning, and dinner was disposed through the shorns I tore-no heed of and how they governed the country, and scratches and gashes now. Along I sped, how they learned comparatively civilized well ahead. Full of go, I made for the river once more. This time it was hopeand jersey for the coming fray! If it had less to attempt to clear a good twenty the life and teachings of Confucius; foot breadth of water; so into the water ancient messenger relay systems, and I plunged. As I dragged my feet out one well to mention I was decidedly a fat by one from the oozy mud. I was joined hoy!-also a boy of an economical turn by the others, who came splashing in of mind, for even at this terrible moment after me on all sides; but I was first out of cold and gnawing anguish, I looked and away! Oh! the joy of it! The gloriabout me to "borrow" some other fellow's ous sense of lightness and freedom flannels and shoes. My own were much imparted by the cold immersion, as I lesson in political economy. too good to undergo the severe treatment forged ahead! But, alas! Crack! went. Appleton's Home Reading Series includes to be expected from water, mud, and my "horrowed" flannels. They had re- a number of other books that I think the thorns! I eventually found what I de- dised to bear the strain! Horrors still average American boy would like. I hope aired, and "borrowed," The shoes pinched worse to follow, for now I discovered to tell you about them some time. Meanmy feet, and the flannels—well, as I have one of my "borrowed" shoes had remained while, you can easily get a list of them already stated. I was a fat boy, and the behind at the last water-jump, in the if you care to.

And now the moment to face the starter it "The Home Reading Series." The latest

been in more countries, and traveled greater With nails driven dee, into the palms distances, than any man we know of that

> Edward Atherton took this book, selected stand nowadays, and wrote about the other parts of Marco's trip in his own words.

This is the book which we have in Appleton's Home Reading Series. Among the ways from the people they conquered; the building of the great Chinese wall; a great many other things. One especially fine chapter is devoted to comparing the civilization of that day, to ours, and explaining why it would not do for this country to allow the Chinese to come here. This chapter is an excellent elementary

### The Blue Dragon

(Continued from page 72,)

"Well, you'll have to call again tomorrow or some other day for he's busy now, and can't see you."

"Oh he carn't! carn't he? I rather guess he'll see us before we git ready to leave. Come on, fellows."

"Stand back!" shouted the constable as the crowd surged towards the gate. "I have instructions from the owner of these premises not to admit anyone to them this night. As this is private property, and I'm bound to protect the owner in his rights, the first man attempting to enter will be arrested for trespass."

This announcement was greeted with howls of derision and it seemed as though Constable Jones was about to have on his hands the job of arresting the entire mob, when another halt was called by the voice of Mr. Hinckley who came from the house to the front gate as though to investigate the cause of trouble.

"What is going on here, Constable Jones? Who are these people, and what do they want?" he asked loud enough for all to hear.

"Want to see you, Parson, so they say."

"Well, my friends, what is it? I am too busy for an extended conversation; but if you can tell me in a few words what you desire I am ready to listen."

"Yes, we can," answered one of the leaders gruffly. "We want the murdering, heathen Chinee that you're keeping in your house agin the law. We're agoin to have him, too, an run him out of town."

"Against the law," repeated Mr. Hinckley, "what do you mean? I am not harboring any person against the law, that I know of."

"Yes, you be, fer the law says all Chinese must be excluded, and we're going to enforce it, by excluding the one you've brought to Hatton in spite of the law." For ten minutes Mr. Hinckley held the crowd at

bay by his arguments, and his exhortation not to disgrace themselves, their state, and their country, by committing an act of lawless violence; but finally they would listen to him no longer and again a rush was made for the gate.

This time it was checked by a new voice, the stern tones of which were well known to all of them, for it belonged to the owner of the great factory in which so many of them e 'ned their daily bread.

"Hold on, men!" he cried, "and listen to me. I don't think I need tell you who I am, or that I will do as I say; for you all know me, and you know that I never yet broke a promise. For many years you and I have lived in this village of Hatton. In all that time we have carried on business together in orderly fashion to my satisfaction, and I hope to yours. We

have had differences but always have managed to settle them without calling in outside aid. Now, however, you are threatening me as well as this entire community with something to which I cannot and will not submit. You are threatening this village with mob rule, a condition under which no community can exist and no business can be conducted. Therefore, I give you my solemn word that if a single act of lawless violence against life or property is committed this night by a man or woman, boy or girl employed in the Hatton shops, those same shops shall be closed tomorrow, never to be opened."

"That's all bluff!" cried a voice from the crowd as the speaker uttered this threat.

"What do we care fer him or fer his talk?" demanded one who had constituted himself a leader. "There's plenty of us here as don't work in his shops to see this business through. So come on, lads, and don't fool away more time talking. Hurray for American rights and down with all Chinee scabs!"

At this the mob uttered a howl, and leaped forward not only putting to flight the little group holding the parsonage gate, but tearing down the fence, and swarming up to the very door of the house.

#### CHAPTER VI.

THE SHERIFF TAKES PROMPT MEASURES.

Sheriff Hardy of Hat County was a fearlessly resolute man, possessed of great bodily strength, and of a coolness in times of excitement that admirably fitted him for his difficult position; and he had constant need to exercise all these qualities, for his was a manufacturing county having a large population of recently Americanized foreigners, who held in scant respect laws not enforced by a military power always in evidence.

On the evening of the trouble in Hatton, Constable Jones' message found the Sheriff quietly smoking a eigar on the porch of his house at the county seat, some miles from the place where his presence was so urgently required. Two minutes later he was on horseback and galloping towards the scene of trouble.

he entered it by a back door, and at once swore in as special deputies the gentlemen whom he found there assembled and undecided, not having authority, as to how they should act in the present emergency. Then Sheriff Hardy stepped to the front of the porch, took a survey of the situation, and for a minute listened to the significant interchange of remarks between the owner of the factory and the leaders of the mob.

He was there when the crowd tore down the fence and made their rush towards the house. Until this moment they had not suspected his presence, but now at sound of his sharp "Halt!" their advance was checked as effectually as though it had encountered a twenty foot stone wall.

"Stand where you are!" he commanded. "Any man who advances so much as a single step farther will be arrested. I am not going to ask you what you are doing here, nor the meaning of this cowardly demonstration against the peace. I already have heard enough to fully understand the situation. You are proposing to injure and otherwise abuse a person who is legally an inmate of this house."

"He's a heathen Chinee," muttered some one in the

"I don't care if he's a blue monkey," replied the Sheriff, "so long as he is here with the sanction of the law, he is entitled to legal protection, and he is going to have it too, just so long as I am Sheriff of Hat County. Some of you Dagoes seem to think there isn't any law in this country, but I'll teach you that there is plenty of law with ample provision for enforcing it. Now I've wasted all the time I mean to on you, and school is dismissed. So, 'bout face and clear out of here. You want to be spry, too, for in just one minute I am going to march down that street with a posse of armed deputies sworn to obey orders, and ordered to arrest any anarchist who attempts to obstruct their passage. I may add that they can

STAND WHERE YOU ARE," HE COMMANDED

shoot, too; and, if necessary, will shoot. That's all." As the mob, breaking into angry murmurs, still hesitated to move, Sheriff Hardy called out, so that all might hear:

"Posse, attention! Fall in! Come on!"

Then as the tramp of many feet sounded on the porch, he leaped from it and his impatient followers sprang after him. The next minute they were charging down the main street behind a panic stricken mob in full flight, and Hatton's short-lived reign of terror was ended.

After this, Mr. Hinckley, acting upon the Sheriff's advice, which coincided with his own inclination, did not seek to secure Jo's safety by sending him away from Hatton, but left him there in attendance at the Academy, where the other fellows, under Rob's leadership, acted as a bodyguard for his protection.

"It is too bad that I make so much bobbly." said the Chinese lad to his friend one day. "Mebbe better if I go my own country.

"Oh, rot!" replied Rob, who at times found difficulty in expressing his feelings other than by the use of slang. "It would just be pie for the 'Muckers' to have you cut away, and they would claim game on the strength of it. As for you making trouble, I call it fun, and so do the other fellows. Why, I've never known so much life in the Academy as has been put into it by your coming. Same time you can't say you are not getting good by being here, for I never heard of anybody learning as fast as you do. I'm not the only one that's on to it, either; for I heard old Puffexcuse me, I mean Professor Puffer-say the same thing only yesterday. Besides, you couldn't go away till after our trial anyhow; for we are under bonds to appear, and it would simply mean ruin to Uncle Will if you didn't show up.

"That tlial," answered Jo, who had not yet fully conquered the difficulty encountered by all Chinese who come into contact with the letter "R." for me much bitterness and plenty flaid. In my

country we say better it is to die than go in law suit."
"Oh, pshaw!" answered Rob, "it isn't that way in America. Everybody here seems to get mixed up in some sort of a law suit sooner or later, and not worry much about it either. As for ours, it'll come out all right. You see if it don't. I'm not forgetting.

When in the early winter the eventful day set for the trial of the now famous case of State vs. Joseph Lee, et al., arrived, it seemed as though half Hatton was determined to be on hand. Court was held in the city of S-, distant only an hour's ride by train,

Reaching the Hatton parsonage within half an hour, so that Hatton spectators were able to go and return

the same day.

Owing to the dragging length of the preceding case on the calendar, that of our lads was not called on the first day of their appearance, and they were forced to spend the night in a hotel guarded by a deputy. In this same hotel stayed the father of the young tough who had been incidentally thrown to the ground with Jo during the long ago fracas that began all their trouble. When our lads, accompanied by their guard, went down to supper, this man, together with another, sat where he could see them, and pointing to Jo, he said viciously, but in a low tone:

"That's him, and we'll make it worth your while to

"That well dressed young fellow?" questioned the other in a tone of surprise. "He don't look any more like a Chinee than he does like a Dago, and if you hadn't told me, I wouldn't have suspected it."

"No, they've trimmed him up to look almost civilized; but I wisht you'd seen him when the fuss took place. He sure was a savage appearing heathen then.'

"Um," remarked the other meditatively, "changed his description, have they? Well, if you can make it worth while, I'll see what can be done."

To the dismay of our lads and their friends, the trial, which occupied the whole of the following day, was, in spite of the efforts of their lawyer, but a repetition of the first one. Much additional testimony was presented by the State; but nothing new had been forthcoming in their behalf. So late in the day was the case closed that the judge withheld his decision until the next morning; but no one had a doubt as to its nature, and the "Muckers" of Hatton

much noise. Full accounts of the trial appeared in the morning papers, and our friends read these with heavy hearts.

held another jubilation that night with bonfires and

Looks as though we stood a good chance of going to prison," remarked Rob, gloomily. "It'll either be that or a whopping big fine that I'm afraid Uncle Will can't raise. Maybe it'll be both."

"If my father were only here," said Jo, "he would make things all right, quick enough, by giving that Mandarin Judge much money.

"Oh, would he?" replied Rob; "that's all you know about American judges. Such a scheme might work

> in China, but if your father should try it on here, he would be pretty apt to land himself in prison alongside of his son, and that son's accomplice, as the papers now call me. We Americans are a pretty tough lot, I'll admit, and our laws don't seem to have much to do with justice; but I don't believe we've yet come to the point of bribing our judges, that is, not to any great extent."

> "But, Rob, my friend! It is for you that my heart is aching. For me it makes no difference. When I am again free I will go back to my own country as a hero whose bad treatment here will only make my people hate foreigners more than ever. But for you it will mean shame and much sorrow, all caused by me."

"Now, don't you fret a little bit about that, old man," replied Rob, stoutly, "There is no danger of me being disgraced by going to prison in a good cause, in the eyes of anyone whose opinion is worth anything. I tell you honestly that, so long as you are in this

scrape, I'm glad to be in it with you; for it will show that if Americans are sometimes unjust, it is not only to foreigners, but to their own people as well!"

So greatly was interest in the case stimulated by the published reports that on the second morning of the trial the court room was crowded with spectators. Most of them were hostile in sentiment to our lads, and were anxious to hear sentence pronounced, not only upon the Chinese who had dared to insult an American, but upon the white lad who had proved a traitor to his own people by assisting in the outrage. Another attraction in the court room that morning was a Chinese gentleman, richly clad in his national costume, who entered with the judge and was accorded the honor of a seat on the He was Secretary to the Chinese legation at Washington, hurriedly sent on by his chief to inquire into this case and do everything possible for the relief of his young countryman. Even after entering the court room he continued to speak to the judge; but the face of the latter remained sternly impassive, as though, having made up his mind, nothing could change it.

When our lads were led to their seats, they could nowhere see the lawyer who was defending them, and they wondered at his absence; but he appeared and took his place with other members of the bar just as court was opening. He had no opportunity for communicating with them at that moment, but he beamed upon them with a smiling countenance for which they could not account.

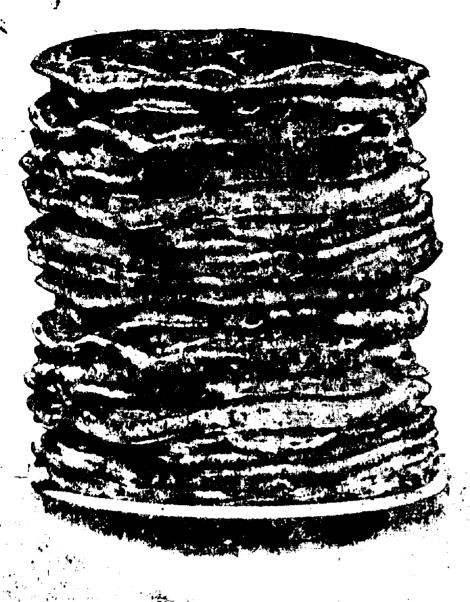

'Looks like a man grinning at his own funeral." whispered Rob to his friend, who wondered how such a thing might be possible.

In another moment, however, his attention was drawn from this puzzle by the opening of court and by seeing their counsel rise to his feet.

Your Honor," said this gentleman, addressing the judge, "I beg leave to petition that the case of the State vs. Joseph Lee, et al., concluded in this court yesterday, be re-opened for the admission of new and important testimony in behalf of the defense. Only this morning has a witness been discovered, whose story will. I believe, completely reverse all previous impressions gained during this momentous trial. In view of that fact, we earnestly pray that you will permit us to place this person on the stand."

After listening to a demur from the District Attorney, the court granted this petition, and re-opened the case; whereupon the counsel for defense summoned to the witness stand, Miss Annabel Lorimer.

(To be continued.)

# The American Boy's Favorite Breakfast

Boys, ask your mother to get Karo Corn Syrup for your griddle cakes. Tell her that it beats honey or maple syrup and it doesn't cost as much. She can't make the cakes too big or too many when you get Karo Corn Syrup.

Karo Corn Syrup is a pure, clear golden syrup made from the golden grain of the corn. Karo has a new delicious flavor that strikes the boys just right—they can't get enough of it. And you can eat all the Karo Corn Syrup you want and it wou't hurt you-it will do you good.

is good for lots of things besides griddle cakes. It's fine spread on bread, it makes dandy candy and if your mother will try it in place of molasses in baking it will be good-bye to the molasses jug. Here are some kinds of candy good to make with Karo Corn Syrup-you can make any of them yourself.

#### KARO CANDY RECEIPTS.

#### Karo Caramels.

Melt one tablespoon of butter in a grante saucepan and add one-third of a cup of granulated sugar, two-thirds of a cup of Karo Corn Serup, two squares of chocolate cut into bits, and three tablespoons of cream. Boil until it will harden in cold water, remove from the fire and add a little salt and a few drops of vanilla. Beat until partly cooled, pour into a small tin and mark into squares as it hardens.

Karo Caramels.

Karo Fudge.

Put two cups of granulated sugar, one-third a cup of Karo Corn Syrup, one-tourns a sugar and the sup of milk, one squares or ounce of chocomet, and two tablespoons of butter and cook to the mixture is tested in cold water. Beat in a tenspoon of vanilia extract or half a cup of candid cherries, cut in the chocomet is melted, then cook, stirring occasionally until the chocomet is melted, then cook, stirring occasionally until the mixture, when tested, forms a soft ball in cold water; it will take dive minutes cooking after boiling the gins; add a tenspoon of vanilia extract and beat until the mixture begins to granulate, then turn into a buttered pun. When nearly cold cut in cubes.

Karo Candy

Put one cup of Karo Candy

ball may be formed, when the mixture is tried in cold water; add one tempoon of vanills and turn into a buttered dish. When nearly cold pull over a hook and cut the strips into inch lengths.

begins; aid a tenspoon of vanilla extract and beat intil the mixture begins to granulate, then turn into a buttered pure.

When nearly cold cut in cubes.

Karo Candy.

Put one cup of Karo Corn Syrup, half a cup of granulated sugar, half a cup of milk and one square or onney of chocolate over the fire, and stir until the chocolate is melted and the boiling point is reached; let holt three or four minutes, then add two tablesprons of butter and cook until a soft.

If you'll send us your mother's name and address we'll send her free a book of new and original re-FREE If you'll send us your mother's name and address we it said them. #### THE COUPON AT THE BOTTOM OF THIS PAGE IS WORTH SEVENTY-FIVE CENTS TO YOU

When it was announced that a new periodical, "The Twentieth Century Home," was to be issued, no one was so optimistic a to hope that it had an entirely new, original and distinct field. Yet the publishers, in designing it, believed that they did have such a field. Briefly expressed, this is the attempt to present for the first time in any publication, the whole world of hving and household work from a standpoint that will be strictly accurate and scientific in every respect. The exact truth in everything applied to life—that is what the publishers of "The Twentieth Century Home" are niming to give, and to accomplish this, they have secured the services of the ablest think, is in every branch of household work and of methods of living.

Not tradition, not old nurses toties not imaginary goes, but flow to do negording to the best lights of modern science - that is what "The I wentieth Century home" walarm to teach. SINGLE COPIES 10 CENTS, ANNUAL SUBSCRIPTION \$1.00. Semple Copy Sent Free.

CHAPTER VII.

### THE SENTENCE OF THE COURT.

As the court crier amid a breathless hush of expectation loudly called the name "Annabel Lorimer," a young girl, flushed with embarrassment, but with brave gray eyes, rose from a seat in the front row of spectators and was escorted to the witness stand by a gentleman who, evidently, was her father, and who remained near her during the examination that followed. After she had sworn to tell the truth, the whole truth, and nothing but the truth, had given her name, her place of residence, as that very city, and had blushingly admitted that, although fifteen years of age, she was unmarried, she was asked to tell what she knew of the case now on trial.

"We were going to Canada for the summer," she began, "so as to learn how to travel and get ready for the great journey around the world, that papa and I are going to take this winter. So I went to Hatton to say good-bye to my Aunt Marjorie, who lives in a big white house just across from the common. I could only stay one night and had to leave on the very earliest morning train. So I was up pretty early and dressing to go down stairs, when

such shouting and laughing came from the street that I looked-out of the window. There were a lot of boys, all running, and one of them was a Chinese. I never saw one before, but I knew he was Chinese from his pigtail and by his funny shoes that were just like the pictures."

"Can you tell how he was dressed?" asked

Jo's lawyer.

"Yes, he had on a long blue frock without

"Like this?" suggested the lawyer, at the same time holding up the very gown Jo had worn on that eventful morning.

"Yes, just the same, only at first it wasn't torn."

"Thank you. Now you may proceed with your story."

"Well, while I was looking I saw that the other boys were teasing the Chinese boy, which seemed to me dreadfully mean when he was all alone in a strange place, especially when he stood still and began to look had been playing on the common came run-

boy and began to abuse him."

"What do you mean by abusing him? What did they do to him?"

"Why, they hit him and pushed him from one side to the other, and pulled at his pigtail, and ran round and round with it so as to make him dizzy, and knocked off his cap, and did everything horrid they could think of."

"What kind of boys were they?"

"Just the very worst kind, that tie firecrackers to poor dogs' tails and kill pussy cats with stones andswear."

This last word the witness uttered with some hesitation, and in a low tone.

"Would you know any of these boys again if you should see them?"

"Yes, I'd know the two I see sitting over there," replied Annabel, at the same time pointing to a group of the Hatton "Muckers" who had been retained in court as witnesses.

"How can you identify them?"

"Because the little one has such very red hair and so many freckles, and the other is so big and uglylooking. Besides he is the one who knocked the Chinese boy down."

"How did he do that?"

"He butted him in the back with his head, while the little speckled one was pulling at his pigtail in front, and they all went down together."

"Now let me know, Miss Lorimer, what the Chinese boy did all this time. Was he very flerce, and did he strike at his assailants as if he were trying to kill them?"

"Oh, no, indeed, I'm sure he didn't, because I hoped all the time he would. He only seemed horribly frightened and kept trying to get away, only they wouldn't let him."

"Did you see any of the other boys throw anything at him?"

"Yes-mud, lots of it, and stones, and they tore his clothes until he was a sight.'

"Please tell the court what happened after the Chinese boy had been knocked down."

"I object to that expression," interposed the attorney, who was conducting the case for the State. "The witness has expressly stated that the fall in question was caused by a push and not by a blow. She also testified that three individuals went to the ground at the same time, and we already know,

frightened. Then some more big boys who Bowed profoundly . . ALL THE WHILE CLASPING AND SHAKING THEIR OWN HANDS

ning over, and then all crowded around the Chinese from recorded testimony in this case, that the greatest sufferer from the effects of this fall was not the Chinaman, but the boy smallest and weakest of those, whom my learned friend is pleased to stigmatize as 'assailants,' although it has been repeatedly and conclusively proved during this trial that they were the assailed. Therefore, I object to the expression 'knocked down.' "

"Objection admitted," growled the Judge.

"Very well," said Jo's lawyer, "since the expression 'knocked down' is objectionable, it is withdrawn, and you may tell us, Miss Lorimer, what happened after my young client was hurled to the ground."

"Your honor, I object," broke in the District Attorney.

"Objection overruled," said the Judge sharply, "and I insist that the testimony of this young lady must not be interrupted by squabbles over technicalities."

"After my young client was hurled to the ground," continued Jo's lawyer, triumphantly, "with the biggest and ugliest-looking of his assailants on top of him, tell us, Miss Lorimer, what happened next?"

"The big boy scrambled to his feet, and just then Rob Hinckley came along with a milk can and drove them all away, and the milk flew all over everybody. Then Mr. Hinckley and Constable Jones came, but after that I didn't see any more, because the breakfast. State vs. Joseph Lee et al. has completely altered the

bell rang, and I was so late that I had to get dressed as quick as I could."

"That is all, your honor, and the other side is welcome to our witness," said Jo's lawyer.

"Why did you not come forward sooner to testify in this case, Miss Lorimer, since you seem so greatly interested in it?" queried the District Attorney.

"Because I didn't know anything about it until this morning. Then papa read about it in the paper, and said he had no doubt that if the truth were known it would turn out that the Chinese boy had been wantonly abused by a lot of cowardly young ruffians, just because he was weak and helpless, which was getting more and more to be the American way of doing things. I didn't like to hear him say that, and told him I believed I had seen the very trouble the morning I was in Hatton; only I had forgotten all about it because so reany other things began to happen that same day and have been happening ever since. I said if those were the same boys they were not real true Americans at all, but just a lot of mean imitations, and if the law only knew what I did they would punish them instead of Rob Hinckley and the Chinese boy who had been abused. He asked what I meant, and I told him all I could remember. Then he telephoned to that gentleman"-pointing to Jo's lawyer-"who came to the house and asked me questions. Then we drove here in a carriage, because it was late. So if you punish anybody, I hope it will be those wicked imitation American boys, because one time that big ugly-looking one set his dog at my tortoise-shell kitty, when we were visiting Aunt Marjorie, and then threw stones at her when she ran up a tree, and would have killed her if Rob Hinckley hadn't made him stop."

"So you already were prejudiced against the boy whom you describe as ugly-looking, before you saw him in collision with this Chinaman."

> "I don't know what you mean," replied Annabel, "but of course I hated him, and knew just what he would do when he found a Chinese boy, or anyone else he could abuse without a chance of being hurt himself. He did it, too, and now I hope he'll be shut up in prison for ever and ever."

> "Your honor," said the District Attorney with a well satisfied smile, "I think the animus of this witness is sufficiently shown by that statement while I shall also pass. without attempt at refutation, her silly naming of those naturalized citizens, who. with their brain and muscle, their unremitting industry and their sturdy independence. constitute the strongest bulwark of our glorious Republic, for she is but a child speaking from the ignorance of childhood. Thus we are well content to rest our case upon the evidence with a certain confidence that the court in its wisdom will give us a verdict in accordance with the facts."

> With this the attorney sat down. The girl witness, wondering whether she had most helped or harmed the cause she had es-

poused, was allowed to take her seat, and Jo's lawyer rose to address the court.

"Your honor," he said, "I need not suggest to one so well versed in proverbial philosophy that truth, sometimes unpalatable, but always bluntly outspoken. is a universally admitted characteristic of childhood. Into the dark mazes of numberless famous law cases, as in the one we now are concluding, has the revealing light of truth been thrown by the untutored testimony of children. I could not wish a stronger witness to the justice of our cause than the fearless little lady who has just now given her evidence in our behalf. Upon it, therefore, we confidently rest our cause, with a well grounded conviction that it is sufficient to assure a verdict in our favor."

As the lawyer sat down, our lads realized that the critical moment in which their fate was to be decided had arrived; and they waited the words of the Judge with mingled hope and anxiety. For a moment an impressive silence reigned in the court room and all eyes were turned upon the Judge as he glanced over his penciled notes. Finally he looked up, removed his spectacles, and fixing a kindly gaze upon the two young men, said:

"It is hardly necessary to state that the unimpeachable testimony of the last witness in the case of point of view from which it must be regarded, and causes the decision of the court to be quite different from what it would have been yesterday. I now find the defendant, Joseph Lee, to have been a victim instead of an aggressor, and to have suffered shameful persecution at the hands of a mob of young ruffians who have been happily termed 'imitation Americans.' This term is most soothing to the pride of all real Americans, who are unwilling to believe that any of the true stock would dishonor the name by assaulting the helpless and innocent. This being the situation, the decision of the court in the case of Joseph Lee is that he be honorably acquitted of the charges brought against him."

This decision was received with looks of scowling consternation by the "Muckers" present, and with murmurs of applause from the better class of spectators. This quickly was silenced by the court offi-

cers, and the Judge continued:

"The case of Robert Hinckley, however, proves more serious; since it is evident that he did make an assault with a weapon and without the excuse of self-defense, upon the hodies of certain persons named in the indictment, who are entitled to legal redress for the same. Of this offense, the court finds Robert Hinckley guilty and sentences him"—at this point poor Rob turned very pale, while his heart sank like lead-"to pay a fine," continued the Judge, "of one cent to each and every one of the aggrieved parties whose names appear in the indictment. At the same time the court wishes to express its thanks to Mr. Robert Hinckley for the fine manner in which, forgetful of his own danger, he hastened to defend a helpless foreigner from persecution by a set of unmitigated young scoundrels. Officer, call the next case on the calendar.'

"Oh!" gasped Rob as the friends of our lads gathered about them with congratulations at this happy ending of their troubles. "Does he really mean it?"

"Yes," replied the lawyer who had defended him, "he really means it; and if you haven't two cents in your pocket, I'll pay the fine myself."

### CHAPTER VIII.

### JO'S ENEMIES PREPARE A TRAP.

After the happy conclusion of the lawsuit that had for so long disturbed their peace of mind, our lads left the court room in company with a group of congratulatory friends. As they went out, Rob exclaimed triumphantly, "I told you not to fret, Jo, and that everything would turn out all right."

"Yes, but it is through the goodness of Miss Lolimer."

"Who?" inquired Rob with a puzzled expression. "Oh! you mean Annabel. Yes, isn't she fine? I say, Annabel, I don't know how we ever can thank you enough for getting us out of that scrape. It was one of the most plucky things I ever knew a girl to do."

"It wasn't half so plucky as the way you saved my tortoise-shell kitty that time. Besides, I was so sorry for your friend, though I didn't know he was your friend then."

"That's so, I forgot. Let me introduce him, Annabel-I mean Miss Lorimer; this is my friend Joseph Lee from China, only all the fellows call him 'Chi-

"I'm ever so glad to know you, Mr. Lee," said the girl, at the same time making a prim little bow that was half curtsey; "I never met a Chinese boy before, and I think they are awfully interesting. I mean." she added quickly, with a deep blush, "that we are going to China sometime, papa and I, and we want so much to know about the queer people out there. Not, of course, that you seem queer, because you are dressed in civilized-oh, dear! what a stupid I am. But won't both of you come to our house for luncheon? Papa said I might ask you, and he is going to invite Mr. Hinckley and that Chinese gentleman who sat with the Judge. Wasn't he perfectly splendid? Of course I mean the Judge, though the other is lovely, too, in his beautiful clothes.

Mr. Wang, who, being a graduate of Yale, was quite accustomed to American ways, gravely shook hands with Annabel, as he also did with Rob; but his exchange of greetings with his own young countryman was quite different. Instead of shaking each other's hand and saying, "How do you do, Mr. Wang," you, Mr. Lee as is the American custom, they bowed profoundly to each other several times, all the while clasping and shaking their own hands, and uttering flowery compliments in Chinese.

"How funny to shake one's own hand," laughed Annabel as she watched with delight their novel interchange of courtesies.

"It does not seem funny in our own country, Miss Lorimer," said Mr. Wang. "There all gentlemen, and ladies as well, wear their finger nails so long that there would be danger of cutting or at least scratching each other's hands, if they should exchange the courteous salute in the American way. So we shake our own hands to avoid injuring those of our friends.

"But why do you wear your finger nails so long?" asked Annabel. "I should think it would be very uncomfortable and that they would get broken."

"It is an uncomfortable fashion, and a very silly one," replied Mr. Wang. "The long nails are so apt to get broken, as you suggest, that they often are protected by silver sheaths. The reason they are allowed to grow so long is to show that their wearers are not obliged to labor with their hands. Chinese ladies for the same reason, or rather to show that they are not obliged to walk, but can afford to be carried about by servants, compress their feet until they are hopelessly and very nearly helplessly crippled for life.

"How dreadful!" exclaimed Annabel.

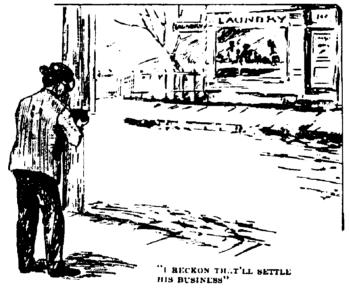

"Yes. Is it not? But is it any more dreadful than certain things done at fashion's decree in your own country? For instance, in Washington, I see ladies dancing, or shivering through long dinners, in lowne ked and sleeveless gowns, which, at the same time, are so tightely compressed at the waist as to cause present torture and future misery. I see fashionable men dressed in exact imitation of their own servants,

and only to be distinguished from them by a round bit of glass, worn with much effort and with absurd distortions of the face, in front of the right eye. Not at all to aid the sight, mind you, but simply because it is fashionable. Yes, both our nations are guilty of following many absurd fashions, and each laughs at the other on account of them; but to my mind the most foolish habit of all is for us to call each other 'barbarians' because our fashions in silliness happen

In all this Annabel was so interested that the lunch time conversation was wholly turned upon Chinese topics, with the result that Mr. Wang proved himself not only to be highly educated, widely traveled, and liberal minded, but one of the most entertaining conversationalists any of them had ever met. So impressed were his hearers by what this versatile Chinese gentleman told them that, when the luncheon was ended. Annabel regarded herself as one of the most fortunate girls in the world, because of her prospect of going to China; Mr. Lorimer was thinking of the same country as probably the most interesting place they should visit during their travels; Mr. Hinckley found his views on the Chinese question greatly changed; Rob longed to get back to the land of his birth, and Jo was very homesick.

For these reasons the Lorimers were pleased to learn that Mr. Wang proposed to remain in their city a day or two longer; while Mr. Hinckley was anxious to reach home and his own library, where he might quietly review his newly received impressions. Rob was equally desirous of returning to Hatton and the lessons that must be learned before he could hope to revisit China; while Jo was made happy by an invitation from Mr. Wang to remain with him during his stay in S- and greet the other young Chinese then being educated in that vicinity, whom the secretary had invited to dine with him that very night.

Mr. Hinckley was more than willing that Jo should accept the invitation and remain away from Hatton for a few days, on account of the bitterness of feeling against him that the decision of the court was certain to have strengthened. So Jo remained behind when the Hinckleys took their departure, and that evening passed in company with Mr. Wang and a dozen companions of his own nationality was the very happiest he ever had known. They dined in a room by themselves, were served by Chinese waiters produced from a near-by laundry, ate their rice with chop sticks. drank amber-colored tea without sugar or cream, and

did not speak one word of anything but Chinese during the entire evening.

The one drawback to their complete happiness was that during the dinner Mr. Wang received a telegram concerning some business that demanded his presence in Boston the following morning. He therefore was obliged to leave S- on a late train that same night, much to his own regret as well as that of his guests. His final instructions to Jo were to entertain his young friends at breakfast the following morning before seeing them off on a train for their respective places of study, and then to remain in S- until his return, which probably would be within two days.

'his program was faithfully carried out by our lad to the point by escorting his friends to the railway station and seeing them off. One reason for his peculiar enjoyment of their company was that, owing to Rob's constant companionship, his own advance in learning English as well as in acquiring general knowledge had been so much more rapid than theirs that his young companions acknowledged his superiority in these respects, with openly expressed wonder and admiration. Then, too, his experience in American law courts that had resulted so triumphantly caused him to rank among them as a sort of hero to be regarded with great respect.

All this was so flattering and so pleasant to Jo that after their departure, when for the first time he found himself without companions in a city of strangers, his extreme loneliness caused him to seek out the Chinese laundry near the hotel. There he would find other fellow-countrymen, who, if not of his own rank, at least could talk to him in his native tongue. He fancied that by them the recent flattery which so had pleased him would be continued. Nor was he mistaken, for when he reached the laundry its inmates received him with profound kotows, indicating deep respect, and quickly provided him with tea and sweetmeats.

As Jo had been curious concerning the lives and occupations in America of these people, who, though belonging to the coolie or lowest class of Chinese, still were his countrymen, he spent more than an hour in the laundry asking questions and acquiring much information such as no foreigner could have gained in a lifetime. So interested did he become that, in order to realize more fully the nature of the work they were doing, he took from one of them the flatiron he was using, and for a few minutes operated it himself.

The young student was so intent upon this novel form of investigation as not to realize that he was performing actual laundry work directly before an open window, through which he was plainly visible to outsiders. Nor did he notice that a man lounging on the opposite side of the street was keeping keen watch of his performance. Even if Jo had noticed this man, he would have paid no attention to him. Nor would he have known that all his movements of that day had closely been followed by that same individual. But this was the case, and when Jo appeared at the open window of the Chinese laundry, evidently engaged in ironing a garment, the man smiled grimly. At the same time he produced a pocket camera having a telescopic lens, which for a moment was leveled directly at the unsuspecting lad.

"I reckon that'll settle his business," muttered the man to himself; "who would have thought of his playing into our hands by doing such a fool thing?"

A little later Jo, while sitting in the reading room of his hotel, was handed a telegram, the very first he had ever received. After carefully reading the superscription, to make sure that it really was addressed to him, he tore the brown envelope, nervously unfolded the yellow enclosure, and read as follows:

"Brevoort House, New York City. "Have important need of you here. Take first train. Wire time of your arrival. I will meet you at station.

> Signed: Wang Shih Tung. Secretary, etc."

"Is there any answer, sir?" asked the boy who had delivered this despatch and who stood waiting while Jo read it; "here are blanks if you want them."

"Yes," replied our lad, speaking slowly, but thinking at top speed, "I want to send two of these same things. Can you take them and see that they go light away quick?"

"Yes, sir," replied the boy, "that's my business." "Can you tell me how soon I can get a train for New York?"

"In ten minutes if you hurry," answered the boy promptly.

"When will it get me to New York?"

"Ten thirty, tonight." "You are sure?"

"Sure, sir, as if I was a railroad time-table."

Relieved at so easily having obtained the information he wanted, and, excited at thus being summoned by so high a dignitary as Mr. Wang, Jo wrote two despatches on blanks provided by the waiting boy. and gave them to him for delivery at the nearest telegraph office. One was to Mr. Wang, announcing the proposed hour of his reaching New York, and the other telling of his intended trip to that city, was addressed to Mr. Hinckley. For each of these he paid the boy twenty five cents, and then, having no time to lose, he hurried to the railway station. There he hardly had secured a ticket for New York when an express train thundered up to the platform. Two minutes later it was rolling swiftly away, carrying as passengers Chinese Jo and the man who had so closely followed his movements all that day.

### CHAPTER IX.

### JO FINDS THAT HE IS SOMEONE ELSE.

When, late at night, Chinese Jo reached New York and alighted from his train in the Grand Central Station, he was bewildered and almost frightened by his surroundings. He found himself in a vast edifice occupied by many long trains of cars, some standing still either receiving or discharging passengers, and others in motion, drawn or pushed by hoarsely puffing locomotives. Between every two trains was a narrow platform extending the whole length of the great station, and most of these were crowded with outgoing or incoming passengers, all in a hurry, and each too intent upon his own affairs to pay attention to those of his neighbors. Among them moved red-capped porters and blue-clad railway officials, too mindful of their own importance to condescend to answer the low-voiced questions of an insignificant

As Jo drifted with the tide of one of these human streams, his eyes searched anxiously every face within his range of vision with the hope of discovering Mr. But no such good fortune was in store for him, and finally he reached the street without having found his friend. He had asked several of the uniformed officials if they had seen a Chinese gentleman anywhere about the station, but some of them only had laughed without answering, while others paid no attention to him. Outside the station, however, and standing irresolute on the sidewalk, Jo was beset by plenty of persons anxious to serve him. Drivers of carriages, cabs and baggage wagons shouted at him and solicited his patronage. Agents of express companies wanted to take charge of his luggage, ragged urchins struggled for possession of his hand bag; while hotel runners besieged him with cards of their respective houses.

"But I only want to go to the Blevoort Hotel," he finally managed to explain, "and not anywhere else."

Take you to the Brevoort for five dollars," shouted a hack driver, waving a whip in the lad's face and at the same time reaching for his hand bag.

"I am going to the Brevoort House, and will show you the way if you like," said someone close behind Jo as he was attempting to explain that he had not five dollars to expend on carriage hire.

Turning, our lad saw a man, evidently from the bag that he carried a traveler like himself, and, greatly relieved to find that someone was willing to aid him in this time of trouble, he gratefully accepted the stranger's offer of guidance.

"All right, come along," said the man. "No, we don't want no hack. Street cars are good enough for us."

With this he waved aside the clamorous throng of drivers and led the way to a car bound down town. As they rode, the stranger, while admitting that he was not a resident of New York, so impressed our lad

(Continued on Page 107.)

# Three Yankee

BY THE

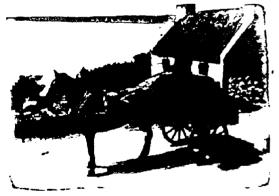

(Begun in November.)

After eating heartily of the good things set before them, they prepared for their trip to Blarney Castle. Four ways of going suggested themselves: By steam cars, by bicycle, by jaunting car, and by shank's mare. "O, let's go by car! An Irish jaunting car! That's the thing. I'm just crazy to try one!" Everybody voted for the jaunting car, so the porter at the door called a "jarvey," by which name the Irish jaunting car driver is known, and up came a big, raw-boned horse hitched to a queer looking twowheeled vehicle on which the jarvey sat with the "begorry" air of a true Irishman. The boys needed no orders, but scrambled to their places, the Professor and Ned facing one way and Joe and Hal the other, the jarvey sitting in a seat called the "dickey," over the horse's tail.

The jaunting car, which is the characteristic vehicle of Ireland, ordinarily holds four passengers besides the driver. It is a slender, two-wheeled affair balances nicely when full, and rides easily. A jarvey usually drives with break-neck impetuosity, every turn being full of startling possibilities.

With a crack of the whip they were off, the boys hanging on for dear life and holding their breath, as, with a skill wonderful to contemplate, Pat went lickety-cut in and out, missing every obstacle by a sixteenth of an inch, and much of the time seemingly riding on one wheel with the other in the air. Soon they reached the narrow, crooked, somewhat squalid streets of the suburbs, where children, chickens, goats, pigs, donkeys and beggars scattered to make way for the load of American boys. The long whip in the driver's hand cracked merrily and the passengers, now accustomed to their seats, laughed and joked and hallooed to the passers-by, who stared at them with open-eyed interest. It was Joe who said, "This is traveling edgewise, isn't it?" and it was the Professor who, twisting his neck to get a view of that part of the company who were facing the other way, made the remark, "This is where you get a one-sided view of everything, sure." The jarvey needed no encouragement to be sociable. He was a true Irishman, and that meant genial good-nature. Born and raised in County Cork, he knew every man and woman he met and to each he shouted a jolly greeting in passing. To a group of dirty boys in the road he cried, "Git out o' there, bad cess to you!" Then turning to the passengers he said, "The road is rotten wid thim bhoys"; and when passing a brother jarvey who gave him back as good as he sent, he said, "He has a lip on him as long as today and tomorry."

By jaunting car it is five miles to Blarney along the north bank of the Lee. It seemed to the boys no more than a mile, and the most interesting one they had ever known, for in it they got their first sight and taste of real Irish rural scenery and life-

AN IRISH JAUNTING CAR

even to the little thatched, whitewashed cottages on the roadside, with the chickens and pigs in the parlor. As they neared Blarney Castle and saw the top of its tower over the trees the Professor began his little lecture:

"Cormae McCarthy (and McCarthy is a great name in the south of Ireland) built the massive tower which forms the main part of the Castle, back in the fifteenth century. The Castle is famous for the Blarney Stone. I'll tell you about that when we see it. The tower is a hundred and twenty feet high and the stone is within a few feet of the top. Pull up, jarvey; we'll walk from here. I want the boys to walk through these grounds. You go up to the inn and wait for us, and here's something for the waiting."

"May the hivens be yer bed," said Pat, feelingly. "Here, boys," said the Professor, waving his hand before him, are the groves of Blarney.

> "''Tis there the daisy And the sweet carnation, The blooming pink And the rose so fair; Likewise the lily And the daffadowndilly. All flowers that scent The sweet open air.'

The boys listened respectfully, then one of them said, "You know a heap of poetry, Professor."

"Once to hear the poetry of Ireland," replied the Professor, reverently, "is never to forget it. There is new Castle and didn't kiss the stone.

KISSING THE BLARNEY STONE

so much heart in it. Just read 'Tom Moore,' the Irish poet who wrote 'The Last Rose of Summer,' 'Oft in the Stilly Night,' 'Those Evening Bells,' 'Love's Young Dream,' 'The Harp That Once Through Tara's Halls,' and that longer poem, 'Lalla Rookh,' and then that grand old hymn, 'Come Ye Disconsolate.' Doesn't that stanza I have just repeated describe this beautiful spot? See that clear sparkling brook emerging from under those low-hanging trees. Was ever stream so pure and musical?" They were crossing a rustic bridge over which a sylvan path led up to the

"It's a sort of a park, isn't it?" exclaimed Joe. "See, there are swings and rustic seats."

"It's a private estate," exclaimed the Prifessor. "belonging to Sir George Colthurst; one of his residences is just beyond the Castle."

"It's a beauty spot, sure," exclaimed Hal.

"It is more than that," returned Professor Jack. earnestly. "It breathes the very soul of romance. You here stand on some of the most sacred soil of Ireland—the home of the greatest of her ancient lords. What a tale these grand old walls, now crumbling into ruin, could tell if they could speak out of their nearly five hundred years of history."

They were just entering the portal of the Castle. and on the very threshold an Irish lady of uncertain age offered to show them around.

"Good mirnin', gintlemin. It's a foine day to see ould Blarney Castle. And you'll be wantin' to kiss the Blarney Stone first. Yis, that's the way. Whin ye come'down I'll till you all about it."

Leaving the woman at the bottom of the great stone stairway, they climbed round and round up through dark, dungeon-like nooks, the boys' voices, when they dared speak, being strangely subdued and their manner quite unlike that of live American boys. After a hundred and twenty foot climb, stopping here and there to peer into dark recesses and out through holes in the wall, they reached the top of the great donjon tower and looked from its dizzy height over the splendid stretch of green meadow and woodland which formed the lordly estate of the Master of Blarney. The Professor led them along the top of the broad walls to the Mecca of so many thousands of visitors every year-the celebrated Blarney Stone, where it lay held in place in the wall by two stout iron bars clasping the top of the parapet. Once the

stone had fallen from its place, but with immense difficulty it was brought again and fixed in the cornice and bound with these iron bands. "Once," said the Professor, those who believed that to kiss the Blarney Stone was to speak sweetly and persuasively ever after. were accustomed to hang head downward outside the parapet in order to reach it; but now, as you see, iron spikes are so driven that such risks may not be taken. You can lie flat on the wall inside the parapet, as you see, and reaching across the gap between the wall and the flying buttress, you can lower yourself to a position where you can get the coveted kiss. Who will be the first?"

The boys looked at one another with serious faces.

"Not going to do it? You will feel cheap when you go home and tell the folks that you went to Blar-

# Boys in Ireland

EDITOR

"You go first, Professor," said the boys in a chorus. "All right, here goes."

"Wait, Professor, till we get hold of your legs."

"Never mind my legs; you hold on to yourselves. The first thing you know you'll fall off the wall." The Professor then got down on all-fours, projected himself forward till he caught the iron bars across the gap, then bent himself down till he had planted a smacking kiss fairly on the face of the rock. "Now I'm a true Irishman," he exclaimed, as he rose to his feet. Then turning to the boys he asked, "Who will be the next?"

"I'm for it," said Hal, with an attempt at bravery, and with two boys and one man holding to his feet he managed to swing across the opening and lower himself to the coveted position. But neither ridicule nor entreaty could persuade Ned and Joe to risk their necks to kiss "an old stone"; and they didn't.

"Now I'll tell you the history of the stone," said the Professor; "then we'll go down and see what the old lady has to say. The Irish, particularly in this section of Ireland, have always had such glib tongues it was thought they didn't come by it naturally, but in some mysterious way; so they tell that Cormac McCarthy the Strong, who was one of the descendants of the ancient kings of Ireland, and, as I told you. built this castle over four hundred and fifty years ago, one day saved a woman from drowning, whereupon she offered him a golden tongue which would enable him to influence and persuade anybody to his heart's content if he would but mount the wall of the Castle and kiss a certain stone located some five feet below the top. This he did, thereby becoming as strong in his powers of persuasion as in his muscles and back of iron. Now do you see yonder little lake?" pointing to a little sheet of water that glistened among the trees. "I venture the old Irish woman below has a wonder story about it. We'll go and see."

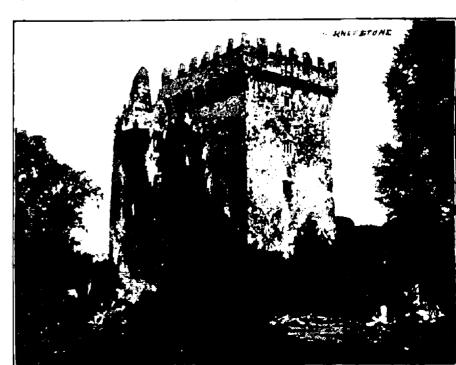

"An' did yez kiss the Blarney stone?" asked the old Irishwoman on their return. The Professor assured her that the trip to the top had not been entirely profitless. "But, oi'm thinkin' thim bhoys'll not nade to be kissin' any Blarney stone. It's foine lads they are, sure. Have yez seen the banquet hall? Oi'm sure ye'll want to see where the great lords and leddies had their grand feasts,"

Proudly, as if she were not a mere dependant of Sir George Colthurst, master of Blarney, and were herself a McCarthy and the mistress of all this ancient grandeur, she led the way into deserted halls and, with a glibness of tongue born of years of practice and close association with the magic stone, peopled their barrenness and gloom with all their pristine life and glory. Then following them to the portal, she got her tip and bade them good-bye, after relating the story of Blarney lake, that a quarter of a mile away shone through the trees like a silver platter in a frame of green velvet. The story ran

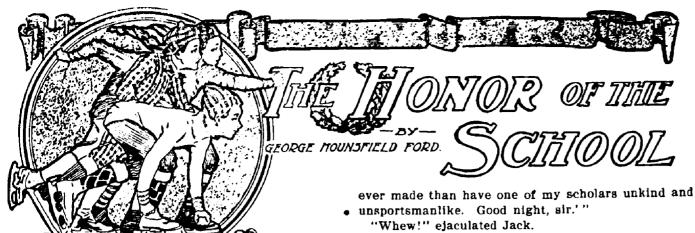

In the time of the Revolution the Earl of Clancarthy forfeited the estates of Blarney. giving up possession, however, he sank all the family plate in this little lake. The secret of its hiding place was communicated to three of the McCarthys. On the death of any one of the three that one was to communicate the secret to another one of the family, and so through all time till a McCarthy should become again Lord of Blarney, when the secret was to be made public. "And the tale is thrue!" the woman ended with a flourish.

A moment later three Yankee boys were racing over the green lawn to the entrance of the grounds, where Ned marked in his memory the location of a little place where "bully sandwiches" could be had for tuppence, and a glass of rich milk from Blarney cows for a penny.

(To be continued.)

BLARNEY CASTLE, SHOWING THE LOCATION OF THE STONE AND THE IRON BODS WHICH HOLD IT IN PLACE

OMETHING was certainly wrong, for Chester Dale was painfully subdued as he sat at dinner.

"I think it will turn warmer tonight. and it's a good thing, too," said Mr. Dale. "A day or two like this will break up the ice nicely,

and the boats can run." "Oh, father," protested Jack, "you surely cannot wish the ice to break up before the race!"

"The race? Ah, to be sure; I had forgotten that. When is it to come off?"

"Tomorrow," replied the lad, "and Chester's going to win it, too," he added, looking proudly at his sturdy brother.

"In that case we'll have to see that the clerk of the weather keeps the cold stop on for another day," said Mr. Dale, laughing.

"Well, kid," said Chester kindly, as several hours later he caught the eyes of his brother fastened on him. "What's troubling you?"

"What's wrong about the race, Chet?" asked Jack slowly. "Ain't you going to win?"

"What makes you think there is anything wrong, kid?"

"Because you were so gloomy this evening. Tell me, Chet."

"Well, the race has gone to pot, as far as I'm concerned. I don't expect to enter."

"Don't expect to enter? What do you mean?"

"Just what I say."

"But this morning you were red-hot about it, and I-I-I've been blowing about you all day. What is the matter, Chet? Please tell me."

"Confound you, kid, don't pester me

"Well, I've got to know, and you have got to tell if you want me to stop pestering."

"All right. Now, who is this race between?"

"Why, the schools, of course."

"What schools?"

"All the schools in the village. The

Grammar School, the Academy, Dr. Carter's and ours. That's all."

"How about the Institute?"

"What, the Dummies?"

"Exactly."

"That's no school."

"They have some kind of a school there."

"But it's not in the village."

"They claim that it's just within the limits."

"But they're not in the race."

"Aren't they? That's just what the row's about. The Committee of Masters let them enter today. It's a perfect outrage!"

"Why didn't you kick, Chet?" asked Jack after a minute of silence.

"Kick," retorted Chester. "I kleked hard enough; went up to see Mr. Nelson about it, and what do you suppose he said?"

"Give it up."

"Tm surprised, Chester, that any boy in my school, especially you, should object to doing anything that will give pleasure to the young men from the Institute, whose infirmities debar them from much that you enjoy.' That was a pleasant dose, wasn't it?"

"But it isn't a fair match, anyway. Their being deaf and dumb don't affect their legs; and look at the size of some of them!" protested Jack.

"That's just what I told Mr. Nelson, but he said that because some of their students were older and bigger than the rest of us, it was no proof that they could skate, and for the honor of our school he hoped to hear of no further protest."

"And that settled it," growled Jack.

"Not till I told him that I had been working hard to win the hanner for the 'honor of the school,' but that if he felt that way about it I should close my mouth on the subject, but I should not compete."

"That was a squelcher for him, Chet. Bully for

"Squelcher! Squelch Mr. Nelson? I guess not."

"Did he get mad, Chet?" queried Jack.

"Not a bit. He just stood up and looked at me for a minute, and then he said: 'For the honor of this school, sir, I'd rather lose all the banners that were

"I don't care. I believe I'm right, anyway."

While talking, the boys had been preparing for bed, and now turning out the light, both lay quietly for a time.

"Chet," called out Jack across the room, after a time, "are you asleep?"

"No. What is it?"

"I was thinking it must be an awful game, not to be able to hear or talk."

"Tough proposition, I should say, kid. Don't know what would become of you if you were dumb."

"I'm not joking, Chet, but I've been thinking about it and I don't know but I agree with Mr. Nelson. Anyway, I don't believe they can skate."

"Can't skate, eh? I wish you had seen their two entries today. One of them is seventeen feet tall and his legs start out from between his shoulder blades. The other is about a head taller than I, but both of them can skate rings around me," growled Chester.

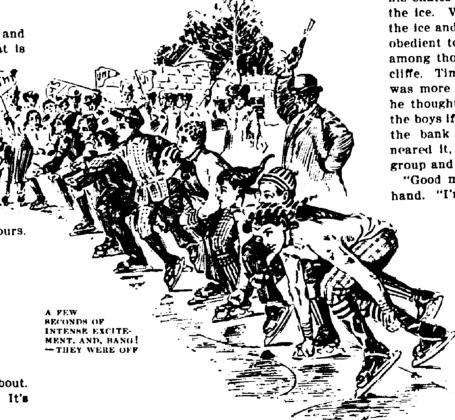

"Now, Chet, if they hadn't been able to skate so well, would you have made that protest?" asked Jack. "Don't know that I should," answered his brother,

"but the point is that they had no right to spring it on us the day before the race."

"Perhaps they only got onto the deaf and dumb alphabet then," suggested Jack with a chuckle.

"You're too funny, kid. Go to sleep. Good night." "Hold on, Chet; I want to ask you something else. Can you beat Bill Ratcliffe?"

The darkness fortunately hid the grin which graced

the lad's face as he put this question.

"Beat him! I can beat him any day at any distance, and you know it," responded Chester.

"I thought you could, but he don't."

"He knows I can," retorted his brother. "But he says you can't," persisted Jack.

"Well, I'll show him that I can," retorted Chester.

"Tomorrow?" asked Jack.

"No, not tomorrow. I'm not going in, I told you." "That's too bad, Chet. They'll be awful disappointed," said Jack gloomily, after a short silence.

"Who will be?" demanded Chester. "Why, the girls," answered his brother. "They take a lot of interest, you know."

"Humph! The girls! They don't count in a race." "Well, it's too bad that they didn't know how you felt about it, Chet," responded Jack. "They might have saved themselves a lot of trouble."

"See here, kid, what do you mean?" demanded Chester, his interest at last aroused.

"Nothing much, if you don't care," answered Jack despondently.

"But I do care to know!"

"Well, you see, it was this way. Yesterday Bill Ratcliffe was blowing to a lot of the girls how good he was, and how he was going to win the race, and they all believed him, and Bill was puffing out his chest in great style, when up came Lucy Nelson and said, innocently, 'Do you mean to say that you are going to win the race, Willie?"

"Called him Willie, did she?" asked Chester with

"Yes, just that way; and Bill was raging. Hasn't been called 'Willie' in years and he hates it, so he puffed up some more and said he 'did mean it.' Then Lucy asked, just as innocent as before, 'Why, is Chester Dale sick?"

"Bully for her!" shouted Chester excitedly. "Go on. What did Bill say?"

"He said that you didn't figure, and that he held you safe anyway and could beat any 'Dummy' in Wingfield, and so on. The girls sided in with Bill. Lucy afterwards came down to the house, and she and sister Mary have been working their hands off all day making school colors to carry tomorrow, and they are going to 'root' for you. It's too bad that they won't have a chance to use it."

"I've half a mind to show Bill Ratcliffe---" began Chester, "but-I'm glad you told me, kid, anyway. Good night." And silence reigned.

The time set for the race was three o'clock. Distance, three miles; quite enough to test both the speed and endurance of the contestants. The course was laid out on the canal which passed through the village, starting at the lock and finishing in Amawa Lake a short distance from the canal's mouth.

Jack had brought home Chester's skates, the grinding of which he had superintended with great importance, but had wisely refrained from asking the question he was so anxious to have answered. It was only as the hour approached when they must leave for the scene of action that he ventured to ask:

"Shall I tell Lucy not to bring the flag, Chet?"

"Yes-no-I don't know," answered his brother, vaguely. "See here, Jack, I'm not supposed to know about this flag, am 1?"

"No, it's a surprise, Chet," answered his brother.

"Very well, then, don't say anything to them, but don't fly it unless I'm in. I propose to race Ratcliffe anyway-save it for that," and he hurried off.

Competitors, with the exception of Ratcliffe, had arrived. Some were adjusting their skates; others were already on the ice, practicing starts, and skating slowly about to warm up. Chester sat down on the bank, and taking off his shoes, put on those to which his skates were firmly screwed. Then he stepped on the ice. What a thrill seized him, as the blade met the ice and the sharp steel bit into the glassy surface. obedient to his changing pressure! He circled about among those on the ice, keeping an eye out for Ratcliffe. Time passed rapidly, and no Ratcliffe. Chester was more than disgusted. "Backed out, I presume." he thought, "the 'blowhard'! Guess I'll ask some of the boys if they have seen him," and he skated toward the bank where a group of people stood. As he neared it, to Chester's dismay, Mr. Nelson left the group and walked forward to meet him.

"Good morning, Chester," he said, holding out his hand. "I'm more than glad to see you here. I knew, my dear boy, that as soon as you had a

chance to think it over you would do the manly thing."

"But, Mr. Nelson," Chester began, but the latter cut him short.

"There, there, my boy, it's all right. No apologies necessary," he said. "Come now, I want you to meet these young men and welcome them." And before Chester knew it, Mr. Nelson had led him a few steps to where were standing two mutes.

Mr. Nelson touched one of them on the arm to attract his attention, and with a gesture presented Chester to each and then retired, whispering as he passed, "Be perfectly natural and they'll under-

It was an awkward position for Chester, and he wished he was in any other society, but, unwilling to be discourteous and with Mr. Nelson's words in his ear, he ventured the remark, "It's a fine afternoon for the race," accompanying it with a wave of his hand to the clear, blue sky overhead, and pointing down the course. To his surprise his companions seemed to comprehend and nodded and smiled in complete assent.

A moment later he was saved from further embarrassment by a call from one of the judges inviting the competitors to draw lots for positions. He indicated the fact to the two youths, and together they skated on to where the judges stood.

At this moment Ratcliffe arrived and joined the

"I can't get at him now," thought Chester. "What shall I do? I didn't come here to race with these fellows, but to challenge Ratcliffe." Then his thoughts were cut short, for the hat which contained the numbers was handed him with a request to draw, and before he knew it he held a slip bearing the number four in his hand. Just then he felt a tug at his coat and turned to face Jack, who, with a face wreathed in smiles, saluted him with: "Bully for you, Chet; I'm so glad you're going in, and I know you'll win. Good luck. I'm off to the finish," and away he sped.

The preliminaries took a few moments, but at length the ten competitors were stretched across the

few seconds of intense excitement as they waited for abreast of him, slowly but surely passing him. the shot, and, Bang!—they were off.

A few short running strokes to get off speedily, and the boys settled down to their work; then with long, sweeping strokes the line soon broke up and became a procession. Ratcliffe had dashed off in the lead, followed closely by the taller of the "Institute" boys. Chester was in sixth place, going easily and in good control of himself. "Ratcliffe can have his fun now, I'll have mine later," he thought.

The pace set by the leaders was a fast one, and soon began to tell. One by one the less able contestants began to drop back, spurt up, and again drop back, so that at the end of the first mile, while the leaders still held their places. Chester was third. Now he began to put on more speed and gradually close the gap. As Ratcliffe heard the ring of Chester's skates. he, too, increased his pace. Chester, watching closely, soon noticed the effect of this effort on the second skater. A short stroke once in awhile, and a tendency to wobble on his long legs, told the story. "He's done already," muttered Chester, and it was true, for before the half was reached he swerved, recovered himself, put in a few desperate strokes to make up the lost ground, and finally straightened up and stopped, completely blown. Now there was no one ahead but Ratcliffe. His heart bounded with exultation. Leaning still farther forward, his hands clasped behind, he began to force the pace. Inch by inch, in spite of his efforts. Ratcliffe lost ground. Chester was now close up behind him. He must not let him pass. He summoned all his reserve strength, and, fighting desperately, was able to draw a few yards ahead; but, relentless as fate, came those sharp

ice and waiting for the pistol shot which was to start runners behind, closing the gap. Another effort and them. A few brief instructions from the starter, a another, each feebler than the last, and Chester was

> With two miles past, Chester was now in the lead, with the race, as he believed, well won. He already was picturing the scene at the finish—the cheers, the flag waving in his honor, the procession to the school bearing the banner he had won to grace its walls. How he would gloat over Ratcliffe and his support-

ers! But, hark! There was work still to do; his ears told him that some one was coming on behind him at a terrific pace. Who could it be? Momentarily glancing over his shoulder, he beheld, coming on steadily with magnificent stride, scarce twenty yards away, the second of the Institute entries. Panic seized the boy. He struck out wildly for a spurt, but in a moment realized that his only hope was in pre-

serving his strength for a final dash when his pursuer should press him harder. For a time he felt he was holding his own, but no, that ring, ring, ring, ring of steel drew nearer. It was still a half mile to the finish, and his opponent gaining with every stroke. They swept round the bend, not five yards apart. He heard the shouts of the spectators and cast a quick glance ahead; in that instant Jack jumped from the bank and ran out upon the ice. "Young fool," Chester muttered, "he'll be in the way." Together the two skaters whirled on, both straining every muscle in their last effort. The cries from the bank redoubled in volume. They were cries of warning, but Chester scarcely heard them. Then close beside him Jack's voice rang in his ears. "Look out, Chet, the ice-the ice is moving-look out ahead!"

The finish flags stood a quarter of a mile out on the lake, and between them and the shore a dark waving line appeared, growing gradually wider, and scarce a hundred yards ahead. Chester saw it, but his opponent, now slightly in the lead and pushing on as hard as ever, did not. "Why don't he stop? Does he not see. Can he not hear? Hear!" In an instant, calling up every last atom of his strength, Chester dashed madly forward. It was a small gap between the mute and danger, perhaps death. With a bound Chester sprang at the form of the deaf and dumb boy and clasped him about the knees. Falling, they together slid to the very brink of the ice.

In another moment they were amid the crowds, and Chester clasped in the arms of the mute, who, unable to express his gratitude, gave him a resounding kiss upon the cheek.

In his speech to the school the next day, Mr. Nelson said. "Chester Dale's brave and skillful act has won for himself and his school the greatest honor it has ever received in all its history."

### The Blue Dragon

(Continued from page 104)

with his knowledge of the great city, and of the manifold pitfalls that is held for the unwary, that he inwardly congratulated himself upon having met so willing a guide, who at the same time was so competent to direct his steps.

The car took them within one block of their destination, and when Jo read the name "Brevoort" over the doorway of the hotel, he believed his troubles to be ended; for surely here he would find his friend, or at least learn of his whereabouts.

"Is there a gentleman by the name of Wang stopping here?" he inquired of a specially attired clerk at the desk.

"Not if we know it," was the reply, accompanied by a supercilious stare.

"But I received a telegram only a few hours ago, telling me to meet him here."

"Can't help that. If he is here, it's without my knowledge, and you'll have to find him as best you can."

"Then I will take a room for the night, and wait till he comes," said poor Jo desperately. "This is the only address he gave me, and so he is sure to look for me here sooner or later."

"Haven't a vacant room in the house," answered the clerk shortly, "and if you think this hotel is a Chinese joint, you're mightily mistaken."

"Let's get out of here," said Jo's friendly guide. "That's outrageous, and if this place isn't good enough for you it isn't good enough for me, either."

Here, unobserved by our lad, the speaker winked at the clerk, who winked back understandingly. "Come with me," added the man; "I'll show you a decent place where we can spend the night, tomorrow I'll help you hunt up your friend."

As Jo knew not what else to do he for a second time gratefully accepted the offer of this stranger and followed him out through the inhospitable doorway he had so hopefully entered a few minutes before. Again boarding a street car, they were carried far down town, and finally reached a small hotel in which they secured a room containing two beds.

There they spent the remainder of the night and had breakfast the next morning. By this time Jo had determined to make one more effort to find Mr. Wang at the Brevoort House, and if it failed, to return at once to Hatton. He still had money with him to pay his fare, but not enough to keep him much longer at a New York hotel. During breakfast, which he and his newly-found acquaintance ate together, he confided his plan to the latter, who gave it his hearty approval.

"Best thing you can do," he said. "New York is not the place for a stranger, more especially a foreigner who is not used to American ways. There's only one thing, though, while we're down town, we might as well visit the office of the Police Commissioners and find out what they know about your friend. They keep track of all foreigners arriving in the big city, and are sure to have full information concerning anyone so distinguished as your friend Mr. Wang. It's only about a couple of blocks away. and you can leave your bag here to pick up as you come back.'

Jo agreed to this proposal, and, filled with a new hope, willingly accompanied his friendly guide. They

walked much farther than two blocks; but our lad was so fascinated by the novel sights about him that he took no note of the distance traversed. Finally they entered a massive stone building in which an elevator lifted them several stories above the street level. Jo caught a glimpse of the word "Commissioner" printed in letters of gold on a doorway, as he was ushered into an ante-room, the entrance to which was guarded by an officer.

His acquaintance seemed to know this man, for he nodded to him as they passed in. Then he said to Jo:
"You sit here and wait a few minutes while I go

and see if the Commissioner can give us a hearing." With this he turned away and disappeared through a second doorway at the other end of the room.

So Jo waited and waited with the unquestioning patience of his race until more than an bour had passed, while many persons went in and out without paying him the slightest attention. At length he

"DO YOU HEAR ME, CHINK? WELL, THEN, GET A MOVE ON"

began to grow uneasy, and, walking over to the officer who guarded the door, he asked:

"Is the Commissioner very busy this morning?" "Rather," was the laconic answer.

"Then perhaps I had better not wait any longer." "Oh! I guess you had," was the reply, accompanied

by a curious scrutiny of the young Chinese. "But it may be that he won't have time to attend

to my affair." "He'll attend to you fast enough when the time comes. Never you fear."

Reassured, but at the same time somewhat perplexed by these answers. Jo returned to his seat and waited another hour. Then, determined to remain no longer, he walked to the door with the intention of going back to the hotel and carrying out his original

plan. "What do you want now?" inquired the officer on guard.

"I am not going to wait any longer," replied Jo. "Oh, you're not going to wait any longer, aren't you? Reckon we'll see about that, too. Just you stroll back to where the deputy marshal left you, and stay there till you're ordered to move, or I'll make things lively for you. Do you hear me, Chink? Well, then, get a move on."

Bewildered and frightened by the officer's flerce aspect, Jo did as he was bidden and again resumed his seat. He had hardly taken it when the door

through which his acquaintance had disappeared was flung open and another officer called out "Joseph Lee!" a summons that our lad obeyed with alacrity.

He was ushered into a comfortably furnished room containing a number of men, and was conducted to the presence of one who sat behind a desk. Near at hand stood his acquaintance of the night before.

"Is this your man, Deputy?" asked the person behind the desk.

"Yes, sir, he is." replied Jo's acquaintance, who was a deputy United States Marshal, engaged in searching out illegal Chinese residents of the Eastern District. "What is your name?" asked the man behind the

desk, now turning to Jo. "Joseph Lee," was the reply.

"Native of China?" "Yes, sir."

"How long have you been in this country?"

"About eight months."

"Where?" "Hatton."

"What have you been doing there?"

"Studying."

"Never lived in S-

"No, sir, but-

"Never mind your 'buts.' Haven't you been employed in Charley Wing's laundry in S-"Certainly not. I am a student, and-

"This isn't your picture?" said the United States Commissioner, at the same time holding out an enlarged photograph of a scene in a Chinese laundry. Jo took it, and to his amazement recognized himself prominently in the foreground and engaged in ironing, as though that were his trade.

Yes, sir," he answered, "this seems to be a picture of me; but-

"That will do," interrupted the Commissioner sharply. "Now let me see your certificate."

Jo had a certificate of identity to which was attached a photograph of himself as he had looked when about to leave Hong Kong. This certificate had been furnished by an American Consul General hina and as he had been warned always to k it about his person, he now was able promptly to produce it.

"Um, um," muttered the Commissioner as he glanced over the paper. Then aloud he added: "This appears to be a certificate of identity issued to one Li Tsin Su, student, unable to speak English, and so forth. You speak English fluently, declare your name to be Joseph Lee, and admit the correctness of this picture of yourself at work in a Chinese laundry. A photograph, by the way, that does not in the least way resemble the one attached to this certificate. Thus your case seems to prove itself beyond need of further investigation, for you don't appear to be anywhere near as sharp in matters of deception as most of your tricky countrymen. I rather think you won't find America a congenial sphere for your future studies. Marshal, remove the prisoner and retain him in custody until such time as the next personally conducted excursion is ready to start.'

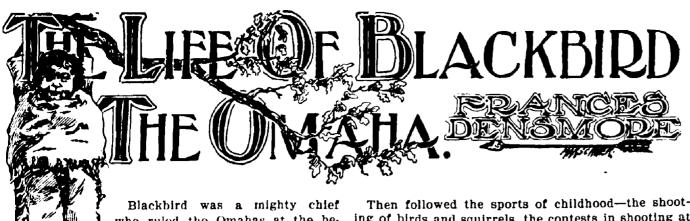

"This is an outrage!" protested poor Jo, struggling furiously in the vise-like grip of the man who had taken him in charge, "and I shall appeal-

"Shut up!" growled the officer, "and come along quiet or you'll only make a bad matter worse."

With this he hustled his indignant but helpless prisoner from the room at so breathless a pace that he could utter no further word of protest.

A half hour later saw our unfortunate lad stripped of everything found in his pockets and lodged in one of the city prisons in company with several of his countrymen, all of the coolie class, who were awaiting orders from Washington for their deportation to China in accordance with the provisions of the Chinese Exclusion Act of the United States.

(To be continued.)

who ruled the Omahas at the begining of the last century. Lewis and Clark visited his grave and wrote of him in their journal, and Catlin, the historian of the Indians, collected some of the traditions

concerning him. A century ago the Omahas were a military people, feared even by the Sloux, Kansas and faraway Crows. Almost every year Blackbird went on the warpath and the water of the "river which cries" was red with the mingled blood of Omahas and Otoes, for that river was the boundary between their countries. Terrible in battle, Blackbird possessed a mysterious power over those who at any times opposed his imperious will; stricken by sudden illness, they died in agony, and Blackbird, the haughty chief, went his way. He sang no "medicine song" and uttered no word; he simply frowned upon a man, and in a few hours he expired.

Yet Blackbird was once a little brown baby, swinging in his cradle from the low branch of a tree in summer, or nestled warmly among the furs beside the winter fire. Perhaps Mars, the star of his destiny, looked down on him then. The first songs he heard were songs of war, telling of the glorious deeds of Omaha braves. His mother sang these songs to him before his baby ears could know their meaning; she sang of the mighty warriors whom the tribe had honored for generations, hoping that her baby would imbibe their spirit and feel the thrill of the warpath and battle. Mingled with the sighing of the wind in the tepee poles he heard the song of Ta-hae-zhin-ga, who lived and fought a hundred years before, and of Han-dan-ma-thin, who defeated the Pawnees with fearful slaughter.

The name of Blackbird was his by right of inheritance, because he was an oldest son in the Wae-tingae or "small bird" gens, his brothers would be named Red Feathers, Dried Wing and Gray Hawk in the order of their arrival. The boys of each gens (there were ten in the village) had their hair cut in a style which suggested the name of their gens, and the first great event of Blackbird's life was going to have his hair cut for the first time. The old man who did the haircutting had a huge bag which contained a lock of hair belonging to almost every man in the village, cut when he, too, was a little boy. The tepee was dark, and Blackbird held his mother's hand very tightly until he remembered that a boy who was to become a warrior must not be afraid to have his hair cut. Then he stepped bravely up to the old man, who cut all the hair from the top of his head except a little lock on his forehead to represent the bird's head, and a longer one on the back of his neck for its tail, and two large patches of rather long hair on each ear for the bird's wings. His playmates would have it firmly impressed upon their minds that he belonged to the "small bird" family. Near him lived the turtle gens, whose little boys all had six stiff locks of hair sticking out around their heads like the legs of a turtle; while the buffalo boys had a bristling ridge of hair from neck to forehead. This was the beginning of Blackbird's education, for he soon learned to which gens every boy in the village belongedknowledge which would be indispensable to him.

The father of Blackbird was a chief, and attended with great care to the education of his son in all that pertained to Indian life. The boy must learn to be alert and never be taken by surprise, so his father crept softly to his side when he was asleep and gave a terrific yell. At first little Blackbird only sat up and rubbed his eyes, but he soon learned to be on his feet in an instant, grasping the bow and arrow that lay beside him. Every evening his father questioned him about what he had seen during the daythe footprints on the ground, were they made by men or women, and was there any peculiarity in the moccasins worn? What was the shape of the trees beside the watering place, and where had Blackbird seen others with the same branching? On which side of a tree is the bark lightest? Has the wind blown steadily during the day, and, if not, what has been the time and direction of its changing? These and similar questions were intended to train the boy's power of observation and make all his senses keen and acute. He was also taught the customary forms of Indian etiquette-never to pass between an older person and the fire, nor to address anyone by name; his grammar was carefully corrected, and, of course, In was not allowed to use anything corresponding to stang, for that is quite unknown among well-bred Indian boys.

Then followed the sports of childhood—the shooting of birds and squirrels, the contests in shooting at a mark, and the greater game of war. Omaha families always camp in the same order around the tribal circle, so that one has the same neighbors whether the village is at home or moving about on a buffalo hunt. The boys on one side of the circle naturally combined against the boys on the other side, there was a "dead line" between them, and it was understood that the crossing of that line meant a battle. Blackbird, Jack Rabbit and Big Turtle led their side against Iron Eyes, Big Buffalo and Yellow Horn of the Elks, while the little girls squealed with terror and hid their dolls and dishes in the play-tepees.

When Blackbird was about twelve years old a change came into his life. Every Omaha boy at about that age must go out and watch for the vision which is to shape his career. Alone on the prairie he fasts and waits for the message from Wakanda—the mysterious Spirit which is his God. The first night of his vigil is a severe ordeal for the boy. Through the dark hours he hears the ghosts whistle and cry, but

he knows that they are poor uneasy souls who during their lifetime failed to perform the obligations of their religious society. Growing faint for lack of food, he waits through the second day, and perhaps the third or fourth, singing softly this little prayer, "Wakanda, here poor and needy I stand." This prayer is used by the Omahas in all the deep experiences of life. The animals are regarded as the messengers of Wakanda, and if the boy is persistent in his vigil an animal appears to him and tells him how to prepare the mysterious "medicine" which is to be put in a bag and worn around his neck as a protection against danger.

To Blackbird there came a wolf—the messenger of war. During his long life Blackbird never told what the wolf said to him, nor the story of his vision, but from his future actions it was known that he had seen a wolf. When he returned to the village, weak and weary, no one welcomed him nor mentioned his absence. The life of an Indian camp permits very little privacy, but around those who wish to be alone a shelter of silence is placed; the greatest respect being shown to the desire of any individual to be undisturbed. In the course of time Blackbird confided the fact of his vision to an old man of the tribe who had seen a wolf-vision in his youth, and who became the boy's adviser.

The next period of his life was marked by the making of his "medicine." He killed a wolf, and some part of the animal, tooth, claw or bone, entered into the composition of his mysterious amulet. together with the other ingredients prescribed to him in his vision.

When this was accomplished he yearned to join a war party. He rode the wildest horses on the prairie and learned to shoot as he rode; he fasted frequently and bathed in the half frozen river, toughening himself until his muscles were like steel and his physical endurance so great that he could run forty miles without stopping. At last his opportunity came when

a party went from his village to fight the Sioux. As

they left the camp circle they sang a song commemorating a victory over the Pawnees, when a war party divided and approached the Pawnee village swinging their arms in imitation of the white fur traders. The strategy was successful and half the Pawnee village perished. The words of the song mean "Sister trotting follows me"—"sister" refers to the women who at the time followed the war party and shared the spoils.

When Blackbird's party had been away from the village four nights the time arrived when those who wished to take new names could do so. The ceremony was simple. Blackbird informed the leader that he wished to take another name, and the leader made his desire known to all the party. Then he addressed the Deity in the sky and the one under ground, saying, "Thou Deities on either side, hear ye that this man has taken another name." The leader then conducted him around in a circle, following the sun, and said, "What name will you have, O warrior?"
And Blackbird replied, "O war chief, I wish to have
the name 'Cries for the Warpath Halloo.' "The leader then said, "The warrior is indeed speaking of having a very precious name," and the crier announced it to the various Deities as follows: "O earth, sky and water, he is speaking of having his name 'Cries for the Warpath Halloo;' ye big headlands, I tell you he is indeed speaking of having his name 'Cries for the Warpath Halloo';" and so the crier addressed in turn the clumps of buffalo grass, the big trees and the birds.

This was the second name of Blackbird. Later he earned another by his bravery, but he was always called Blackbird, for that simple name was sufficient to call up all his deeds of valor. Scalps of the Sioux hung in his lodge, scalps of the Otoes were on his war lance, and he had a buckskin coat adorned with scalps of many sizes, taken when he led his brave warriors against the Sacs and Foxes. Such was the life of an Indian war chief, and yet tradition gives a nobleness to the character of the man. According to Catlin, he exposed his own life and shed his own blood in rescuing captives from frightful torture, and finally abolished this terrible custom in his tribe. When the traders came they were entertained by Blackbird in his own tepee with true Indian hospitality. Blackbird and Big Elk's father went to St. Louis in the days of the French and made a treaty with the white men; it is said that Blackbird's portrait was then painted and hangs in the Louvre at Paris. This shows us Blackbird as a man and a statesman, and seems to contradict the story of his swift vengeance on those who displeased him.

But what of Red Breast, who defeated him when they were gambling, and who died mysteriously within two or three hours? He was only one of many who perished thus. An Indian chief must be feared; he must hold his position, not only by keeping up his war record, but also by the power of personality. To Blackbird, the ambitious leader, came the knowledge that the white men possessed "great medicine," in the shape of a white powder called arsenic. The thunder dreamers of the tribe, their faces painted with spots of blue, the thunder color, invoked in song the mysterious spirit of the storm, calling down the lightning to destroy an enemy; the white man's magic was different from that of his own people, but why should he not use it for his advantage?

In the year 1800 there came to the lodge of the Omahas an enemy against whom neither the boldness nor the treachery of Blackbird could avail. That insidious enemy was the smallpox, dreaded scourge of the Indian race. Before the power of that enemy, Blackbird, the Omaha, fell, and with him perished half his village. In a frenzy the Omahas burned their village and fled from the dreadful spot. The only calmness in that panic-stricken village was on the dead face of Blackbird, and his followers obeyed him although his voice was hushed forever. Before his death he commanded his warriors to bury him on the summit of the highest bluff, seated upright on his favorite war horse, that he might still watch the hattles of his people and see the white traders come and go. Catlin describes the manner of his burial as it was related to him about fifty years later by the Indians. The body of Blackbird was taken to the top of a bluff about three hundred feet high, overlooking the Missouri river. In his hand was his bow, and his shield and quiver were slung with his pipe and the medicine bag which still carried the secret of that vigil and vision of his boyhood. His tobacco pouch was replenished to last him during his journey to the land of his fathers; he carried his flint and steel and his tinder to light his pipe by the way, together with a plentiful supply of dried meat. The scalps which he had taken were hung about him, and on his head waved a beautiful war bonnet of eagle's feathers. Thus fully equipped, he was lifted to his place on the back of his favorite horse, a noble white animal. Around him were gathered the remnant of his people. and, when the funeral rites had been performed by the medicine men, every warrior of his band painted the palm and fingers of his right hand with vermilion and placed its scarlet impress on the white sides of the war horse. Then slowly and solemnly they began placing squares of turf around the feet of the horse. Higher the bank grew until they reached the horse's body and covered its neck and tossing head, while to the last the eagle feathers waved on the war bonnet and the unseeing eyes looked far out across the beautiful valley. Eight feet in height was the mound that covered Blackbird on his war horse.

When Lewis and Clark reached the Omaha country in 1804 they were told the story of the mighty chief, but there remained no trace of his village. Where it had stood the grasses nodded their plumed heads, and only the wildflowers kept the season's festivals. From the summit of the bluff the explorers looked far and wide over the land of their inheritance, and above the grave of Blackbird, the Omaha, they raised

More than a hundred years have passed; yet who can say that the spirit of the warrior chief does not linger on that majestic height, watching the last battlefield of his people and seeing the white traders come and go?

Cambridge.

My Dear Imelda—You have always desired a fox terrier. I have the very one for you. He has a pedigree, which I will forward by the next mail, and which you need not be ashamed to show to the neighbors. You may not be quite as willing to divulge the family history. His father is still a prize winner, but his mother has fallen from her high estate and is now on the stage. He is called Holly, because he was born in Christmas week, but, as he does not answer yet to his name, you may change it to please yourself. Your devoted brother,

JACK.

In due time Holly arrived. As he showed pugilistic tendencies from the beginning, we re-christened him Spike Hennessey. We did not realize the misnomer until Jack came home for his vacation.

"Why Spike Hennessey?" he asked.

"Because he is a fighter," we answered.

"My dear sisters, your innocence is touching. Spike Hennessey happens to be a burglar, a safe breaker. Spike Sullivan is the pugilist."

But Hennessey knew his name by this time and he would answer to no other.

Spike Hennessey, or Hennessey for short, was in our possession but a short time when an epidemic of rabies broke out in our city, and the edict went forth that all dogs must be muzzled. Hennessey did not take kindly to his muzzle, and it was pitiful to see him try to tear it off. Instead of subduing him, it made him flercer, especially to stray cats and dogs.

But, in spite of all his failings, we did not doubt that our pet was the object of the admiration and envy of the neighborhood until, one morning, my husband found the following letter in his mail:

Richard Freeman, Counsellor at Law. Lynn, Mass.

October 6th, 1900.

Thomas C. Prentiss, M. D.,

142 North St., Lynn, Mass.:

Dear Sir-During the last six months, I have often been requested by certain of your neighbors to enter a complaint to the proper authorities against you for permitting your dog to go unmuzzled, as he was long permitted to do, and also to call your attention directly and personally to the fact that your dog was vicious, dangerous and ought not to be allowed at large. I was reluctant to do anything of the kindit is not a pleasant thing to complain to a neighbor of any member of his family-not even his dog.

Mrs. Clark was attacked by your dog in front of her own house, on her own side of the street. He has repeatedly attacked, without provocation, the small and inoffensive dog owned by Mr. and Mrs. David B. Gray. They have, I understand, complained directly to you, to your wife, on the subject thereof.

"It makes a difference whose ox is gored," but even when I was informed that your dog had often, on my premises, attacked my boy's little, timid, weak, Yorkshire terrier—a non-combatant—I still preferred not to annoy you with complaints.

On Monday last, in presence of many witnessesneighbors-he made another unprovoked attack on my boy's dog, and, although wearing a headdress supposed to be a muzzle, he was easily able to, and did bite, tear and inflict serious injuries upon said dog, from which he suffered, still suffers and bears the scars.

I have always despised the man who secretly, wantonly or maliciously destroys 'lis neighbor's dog, or is quick to complain of trifling trespasses, but I am justified in asking you to oblige all your neighbors by suppressing, keeping close at home, or sending far away, a dog which is fast earning a very bad name, ind causing them much anxiety.

Regretting the necessity of addressing you on this subject, and believing that you will read in the same spirit of reasonableness in which I write, I am,

> Yours truly. RICHARD FREEMAN.

We were thunderstruck. Our beloved Hennessey "vicious."

"The letter must be answered," my husband said. "What shall I say?"

"Say! Say it is a mistake, Tom. He has mistaken the dog," I answered.

"I am not so sure about that," remarked brother Jack, coolly; "If you can trust your ears, those barks we heard a short time ago, apparently about at Free-

man's door, were strangely like Hennessey's dulcet tones. Besides," he added, with a sidelong glance at Spike, "he looks exhausted."

"I will tell you what to do," said Irene, ignoring Jack's speech, "let us each write a letter. Tom will read them aloud, and we will choose the most suitable one."

For ten minutes nothing was heard but the scratching of pens. Then, very gravely, we handed our letters to Tom. He picked up the nearest one and read:

### Mr. Richard Freeman:

Dear Sir—The morning mail brought us a letter from you. It is needless to say its contents surprised us exceedingly. Your letter, however, contains a few mistakes I would like to correct.

I will waive the neighborhood opinion of our dog. you may be wrong and you may be right; I fear the opinions of our neighbors have very little weight with us. Our dog did not attack Mrs. Clark. I observed the whole scene from my window. He was running after a cat when he met Mrs. Clark. It was a shock to the dog as well as to Mrs. Clark. It is well known that Mrs. Clark has no love for animals, her children are allowed no pets, and it is a noticeable fact that her little boy not only longs for a dog. but comes to play on our premises with "our vicious

"Straight in the eye," observes Bob, the small boy of the family.

"Proceed," said Tom, looking over his glasses at Bob.

As to your "little, weak, Yorkshire terrier," we, who love dogs, have always admired him, he was such a plucky little fellow. I rescued him from a larger dog, one day last week, for the sake of his rosy-cheeked little master.

Another day, as your wife may remember, she helped to separate our dogs. Your dog wore an old license tag and was unmuzzled. He snapped at my arm and made an imprint with his teeth. I thought the little fellow did it from fright, so let the matter

I presume your dog has a muzzle, in accordance with the ordinance; I have never seen it.

One word more, neither my husband nor myself ever spoke to, in fact we do not know Mrs. David B. Yours truly.

"Why, Imelda, I am surprised," said Tom. "'Two wrongs never make a right,' you know."

"Poor Mrs. Gray," interrupted Jack; "it sounds as if you were paying up some old grudge. But, then, you can't help it; you own the dog. I presume it is a case of 'Love me, love my dog.'

"Listen to this second letter," said Tom.

### Mr. Richard Freeman:

Dear Sir-I am in receipt of your note of October 6th, and I am much surprised at its contents. I do not admit the allegations mentioned, but will investigate the matter and advise you of the result at an early date.

"Jack. Jack, the embryo lawyer," shouted Irene. Jack blushed. "It is well to be careful in such matters. Mr. Freeman is a clever lawyer."

"I deny the allegations and defy the allegator," said Bob, striking an attitude.

"My dear brothers and sisters, be quiet while I read the third letter," commanded Tom.

### My Dear Mr. Freeman:

Our dog is a beauty and fine and smart. He can jump higher than any dog in the neighborhood. He can catch sugar thrown to him at a distance of fifteen feet. He can kill a cat in a few minutes, and I think he could kill your terrier in about five minutes, if he really tried. He was only playing with him the other day. I don't think he would touch your wife or boy unless they teased him.

Hennessey is a better dog than your Fido, and if one or the other has to go away, I think it should be your terrier.

We are sorry, of course, that the terrier was hurt, but you had better keep him in the back yard. If it was not for the law, he would not need a muzzle. He can't hurt anything.

I hope you will accept this apology, and perhaps it would be better to keep your dog in the house, a fence is no use, and then our dog won't worry him.

"Why, Bobby, your literary style is remarkable." said Irene.

"Never mind, your defense was noble and your apology most abject," said Jack, patting him on the head.

"Now for Irene's," said Tom. He picked up the last piece of folded paper and opened it. It was

"Really," said Irene, "words could not express my feelings.'

"But, my dear children," said Tom, becoming paternal and grave, "these letters won't do; they are too one-sided. I think, after all, I will send my own. I have not said just the right thing, but I think it will answer."

"I knew you would," said Irene; "that is the reason I did not write one."

"Sphinx," ejaculated Jack; then, turning to Tom, "Read on, oh, brother-in-law."

### Mr. Richard Freeman:

My Dear Sir-Replying to your note of the 6th, I think I understand your position in the matter, and am exceedingly sorry to have caused you the trouble. But, I do think there is something to be said on my side. I can hardly consider your dog a non-combatant, for, while he is a little fellow, he can be belligerent. He has snapped at me while passing your house, he has actually bitten my wife, and within two weeks my wife has rescued him from an affray, not with my dog, wherein he was being beaten, and carried him home in her arms.

I may say the same of Mrs. Gray's dog, for the only communication we have had from that family was an inquiry of our housemaid regarding the extent of wounds inflicted by her dog, in an affray with mine, on my premises, while my dog had the disadvantage of a chain and muzzle.

Regarding the muzzle, I have obeyed the ordinance more faithfully than any of our neighbors.

However, I greatly deplore the whole difficulty and feel that any dissension of this character is a nuisance to all concerned. I think that I can prevent further trouble by having a special muzzle made, a matter I have been considering for some time.

Very truly yours.

THOMAS C. PRENTISS.

### Tom's letter was despatched.

Our old, calm assurance of Spike Hennessey did not return to us. I may have been super-sensitive, but I feel sure I heard a remark from a veranda as to my being the owner of "that horrid dog." I must confess we waited a little uneasily for any further communication from Mr. Freeman. At last it came, and we held our breath while Tom read:

October 13th, 1900.

Thomas C. Prentiss, M. D.,

Lynn, Mass.:

My Dear Sir-I thank you for your courteous and instructive favor of the 8th inst.

You carried the war into Africa, and well illustrated the truth of the saying that "One story is good until another is told." Of course, you had the advantage of "the last say," and you improved it so well that I shall not attempt to return the charge. I am grateful to Mrs. Prentiss for her rescue of Fido and regret and apologize for the attack committed by him. the bite taken-but it was such a little one-there have been better excuses, but this is the best that can be offered under some circumstances.

Our excuses are often as hard-ridden and overburdened.

I will do anything to make amends, but may remark in passing that Fido was well punished, for his head was almost chewed off and his backbone bitten in two by your canine—I said "almost."
Your dog visited my house again yesterday morning

wearing a wire muzzle which, Mrs. Freeman informs me, seems to be more of a protection than his former headdress. They hustled Fido into safe retreat in the house, as your dog was flerce to get at him. I believe that you intend to have your dog wear an adequate muzzle and am grateful therefor-it won't hurt him and may do him good.

I appreciate the spirit of your response to my letter and hope for the pleasure of meeting you personally at some future time, when Peace shall reign. I am, Yours very truly, dear sir,

RICHARD FREEMAN.

Not long after the receipt of Mr. Freeman's letter the baby's nurse came to us with the request that Hennessey be no longer permitted to accompany them on the morning walks. "Why, ma'am," said she, "he loses us and then he comes tearing along and pushing his head under the sunshades of every baby carriage. nearly scaring the babies into fits. When he finds us, he walks along quiet enough, but in a few minutes he is off again. The other nurses won't associate Their ladies blame them for the with me, ma'am. babies' frights."

So, in spite of the pacific character of Mr. Freeman's note, and as I have been, frequently, the recipient of verbal and written communications regarding the depredations of my dog, I laid before the House, in Council assembled, the proposition of the retirement into rural life of Spike Hennessey. The proposition met with some opposition, especially from Bob, but as the constant worry was telling on my nerves, we decided upon rustication-but with eclat. Therefore, seated upon the front seat of the carriage, with an immense bow of red, white and blue ribbon, head erect, ears cocked, tail deflant, Spike Hennessey rode out of my life.

time has been other and more have not inclined him hang separately." to the study of inter-

within a comparatively recent period the other, if not with animosity, at least with a feeling of antipathy or jealousy not unmixed with dislike. This feeling, now happily a matter of the past, was not, it must be confessed, unnatural. The swell of the sea of sentiment, due to the far-off storm of warlike breakers tumsky, kept alive on both sides of the At- took formal command of the army. lantic those feelings of bitterness which, a century before, had arrayed the two fraternal blood. The War of the American Revolution ended, it is true, in a treaty by which King George III. acknowledged the independence of the colonies, but it found the Transatlantic peoples in no condition at first to rightly understand the benefits, or to rightly profit from the opportunities of freedom. The slight bond, always chafed at, and not infrequently contemptuously ignored. of the authority of the Continental Congress, was rudely and selfishly thrust aside, when the links of a common cause and common perti-fell apart. The thirteen colories, though they now called themselves "United States," were really far from being united, and the Union,

years. When it became apparent that the War of the Revolution was to end in the success of the colonists, not a few turned of new conditions. So long had the on the whole, in spite of many acts of petty tyranny, wise and equitable rule of the mother country, that the newly emancipated children hardly knew what course to take or how to set about governing themselves. Self-government was then indeed a new theory in the world, and among the best of America's thinkers not a few believed that in all history nothing better offered for a pattern than the grand old structure, built up by ages of experiment, cautious, crafty or cruel, which had evolved the common law of the strong stanch loyalty to the throne.

and front of the great American re- war and the excitement of public affairs, to what was called "The divine right of bellion, came to George Washington to he had settled down to the congenial vo- the king." assume the crown of America, and so perpetuate in his person and the heirs of his body all those admirable elements of strength and union. In an ensuing paper some account will be given of this offer and the manner of meeting (and declining) it by the great man whose life, in its more interesting phases, during the eight years of the war, will be the subject of these papers.

That Washington was thought of for king at all, that to make him king was seriously proposed, and especially that none other was for a moment considered, of itself singles him out for an exalted position such as his contemporaries cheerfully, and posterity has unanimously, accorded him.

Even for long after actual hostilities had begun, the Americans had hardly a thought of breaking the tie that bound them to Great Britain. It was, in fact, a step not declarative of public opinion, but rather of the maker and former of it. when, in the state house at Philadelphia. on the Fourth of July, 1776, the Continental Congress proclaimed that "The colonies are and of right ought to be free and independent states." Previous to that momentous date, they had been insubordinate rather than independent, rebellious rather than revolutionary.

The most eminent men of the new nation recognized the deplorable weak-

occupied with their fortunes and sacred honor, but their very lives. As the venerable Benjamin practical mat- Franklin said in Congress: "We must or whose tastes now all hang together or-we shall all

Outbreaks of discontent, beginning with national politics, it is the "Lexington Alarm," when the emsomewhat difficult to battled farmers first met disciplined get at a glance an troops, had culminated in the affair of accurate idea of the Bunker Hill. After this Gage and Clincauses which led to ton and Burgoyne remained shut up in the separation of the thirteen Amer- the town of Boston. The revolted coloican colonies from Great Britain. Till nists invested the place, and the country looked about for a leader. He was found mass of the people of the two great in the young Virginian. Washington's Anglo-Saxon empires regarded each metal as a soldier had been already tried. In the old "French and Indian" war had been proved not only his valor, but his sagacity. Leaving his home at Mount Vernon, on the Potomac, Washington journeyed to Philadelphia and from there to the camp at Cambridge, opposite Boston. He rode all this long distance on bling on a placid beach under the calmest horseback, and on the third of July, 1775,

In establishing the office of comder-in-chief of the Republican forces, peoples against each other and drenched congress had fixed his compensation at the shores of the western continent in five hundred dollars per month. In accepting the command, Washington de-

clined the salary. He served the entire auxious thoughts towards the adjustment eight years during which the war continued without pay, keeping, however, Americans dwelt under the capable and, an exact account of all his disbursements on public service, and being reimbursed for these when peace was re-established. Honorable as this appears, the self-sacrifice was not as great as it would have been had Washington been a poor man. He was, in fact, one of the wealthlest men of those times in America. In addition to the large share which he had received of his father's estate, a very considerable addition to this came from the ample dowry brought him by his marriage to the wealthy Mrs. Custis. His estate on the Potomac was princely in the several colonies. Some of these were extent, and the revenues, chiefly from proprietary, others directly royal prov-England, the central authority of the the cultivation of tobacco, abundant, inces, and others again so fortunate as The mansion at Mount Vernon was a to have gotten liberal charters; these magnificent colonial country seat. cation of a large landed proprietor. Then came the stirring appeal to force and to resistance—the prophecy of the eloquent Patrick Henry, delivered but a few years previously before the House of Burgesses of Virginia, had been fulfilled, and from the north had been swept by the gale the clash of resounding arms. With impassioned utterances Henry had declared that there had been a Brutus for Caesar, and that King George might profit by that example. The entire country looked to Washington as its leader. He did not hesitate, but at once, at the call of the hour, took up the burden of a duty which he felt had been laid upon him by the very hand of Providence. At this period, as I have said, few, very few indeed, looked forward to a separation from the British empire. The movement thus far had been rather an armed petition for a redress of grievances than a deliberate rebellion against legitimate authority. Nowhere throughout the broad domain where the drum roll of England beat, following the sun around the world, was loyalty to the crown more deeply implanted than in the American colonies, and of all the thirteen in none was this loyalty deeper than in the colony of Virginia. The revolt of the commonwealth of Cromwell had served to people the shores of the new world with a race of hardy exiles, every one, in all that constituted true citizenship, citizens of the mother island, and in all that constituted true fealty, loyal and devoted subjects of the British king. The people of America were Britons save only in their remote domicile. They asked equality with their brothers at home, and they received at the hands of an infatuated majority in parliament and at the hands of the king and his ministers, a stinging rebuke for their presumption. The taxation to which they were subjected was in itself a trifling matter; the stamp act and the tax upon tea, both were insufficient to add materially to British revenues, but quite enough to exasperate sturdy Englishmen. A large number of these, whose fathers had fled across the stormy seas because of the infatuation that had impelled King Charles I. to govern by his ; rogative alone, now stood firm against further encroachments. Cromwell finally stood forth as the incarnate expression of a revolt against the tyranny of "ship money" for which Hampden suffered and Eliot died. Now Washington appeared representing a deeper and more forceful appeal for justice, and guided by that profound sentiment which has ever actuated the conduct of British manhood, "Revolution

to tyrants is obedience to God." It was not alone in America that true patriotism was found at this period; Chatham and Fox and their coadjutors among the slender minority in parliament vainly, but strenuously, protested. Their appeals and the tidings of the universal uprising across the Atlantic, at last had their effect; the obnoxious taxes laid upon American trade and enterprise were repealed. Unfortunately the appeal came too late, especially that with a blind perversity we can now hardly comprehend, parliament, in the same breath by which it revoked the act of extortion. saw fit to proclaim extortion justifiable. and to declare its right to tax the provinces. The advisers of the king carried out to the letter the folly so ably told in "Aesop's Fable;" they held tenaciously to the shadow of authority and thereby ultimately lost the substance of their most loyal possessions.

It must not be forgotten how various were the interests, and how opposed in many essentials of public policy were

CHRIST CHURCH, CAMBRIDGE, MASS

Washington was a born and bred arisealogy having been traced to the gen- religious worship. eration immediately following the Con-

numbered among the Cavaliers who stood bravely by the reckless and unfortunate Charles I., and it was because of their attachment to royalty that the direct anof George - John cestor Washington - finding Roundheads of Cromwell uncongenial associates, expatriated himself and settled, with his brother Andrew, in Westmoreland county, Virginia.

Such were the antecedents of the man who was now called to the leadership of the revolted colonies. It is a tribute to his true nobility. and furnishes most abundant evidence of the esteem in which he was held by the entire country that the call to leadership was so unanimous. When he arrived at Cambridge, his first act was to assume command of the motley array which encompassed Boston. In numbers these sons of the soil constituted a somewhat formidable army; but in no other essential were they anything but an armed mob, poorly armed, ill equipped, munitioned and provisioned, a mere horde of ardent men burning with a passion for freedom, but undisciplined, fractious, always needy and often insubordi-

nate.

land were the sons of men who had fled to those then savage shores to escape the vengeance of the Royalists. With bitter, if natural, rancor, Charles II, at the restoration sought out for proscription or a worse fate all those who had followed the fortunes of the Long Parliament, and especially those who, however remotely, had been concerned in bringing his father to the block. The blow of the axe severing the head of Charles I. struck, as Carlyle tells us, "A chill to the heart of universal flunkeydom." From the sycophancy of the courtier, the embattled farmers engaged in Boston leaguer were as far removed as it is possible to conceive men being. Indeed, their habits of thought were so far removed from subserviency that they spurned as unbefitting to freemen the tocrat. > character that he easily overcame the prejudice against his creed, is not by any means the least difficult of the tasks he succeeded in accomplishing. This bigotry among the populace contrasted unfavorably with the liberality exhibited at the first meeting of the Continental Congress at Philadelphia. It was moved (by Mr. Cushing) that the meeting be opened with prayer; but the motion being opposed by Mr. Jay, of New York, and Mr. Rutledge, of South Carolina, John Adams, who afterwards nominated Washington to be general-in-chief, rose in favor of the motion. He was known to be a stanch Presbyterian, and when, in a few admirable words, he suggested the Rev. Mr. Duche, an Episcopalian, none present cared to further oppose the motion.

> After Bunker Hill there was no pitched battle, nor even an extensive skirmish anywhere in that neighborhood; but in other parts of the country there were frequent and bloody, if trivial, encounters. The martinet had not the Continental Congress, which, though yet appeared among the troops; they an innovation as to the rubric, was were lax in their notions of what con- clearly preferable as to the logic of the facts.

The "Craigie" mansion, so called, in which Washington established himself, was one of seven similar spacious dwellings, which, previous to the breaking out of hostilities, had been inhabited by as many wealthy and refined families. Here was an elegant and interesting coterie, holding itself much aloof from their surroundings and consorting on familiar terms with few outside their own narrow circle. The war broke up completely this delightful, if limited. association. The owners of all these dwellings were devoted adherents of the king; as a matter of course they were compelled to fly, and their estates were confiscated. It was thus that the 'Craigle" house became public property.

The mansion still stands, a fine example of the best colonial architecture. It is almost unique for the number of eminent men who have since the days of the Revolution owned and occupied it. Here Jared Sparks, one of the biographers of Washington, dwelt. For several years it was occupied by Edward Everett, and low made his home.

Besides all the other prejudices Washington had to meet and overcome was tarian to the last degree. Washington one that taxed his energy and discretion was a Church of Emgland man; not a com- to the utmost. The idea of the separate municant, but a devout believer and sovereignty of the several colonies

(which, under the new name of "state rights," was the chief cause of the Civil War seventy years afterwards) gave him great anxiety. The enlisted men of one colony were quite averse to serving under officers commissioned by another. There was much straggling, and discipline could be maintained only by the constant use of the lash, an expedient that happily has been superseded by consequences less degrading, but was then thought essential. The experience of the long encampment of the winter of 1775-76 was beneficial, proving, as it did, the absolute necessity of a force of national troops, and resulting in the enlistment under direct authority of the Continental Congress of a body of regulars independent of the state militia and of the volunteers, or so called "minute men."

In March, 1776, the British, under Lord Howe, evacuated Boston and set sail for New York. It was to this city that the American army was immediately transferred.

With the evacuation of Boston, the first period of the American Revolution came to a close. It was distinguished by but one battle-that of Bunker Hill, at which Washington was not present. The results of the period of comparative inaction which followed were chiefly in crystalizing the sentiment of the country and in organizing the raw and undisciplined volunteers into some semblance of an effective force. This was mainly the work of Washington during the months of his first "war nome" at Andrew Craigie's house at Cambridge. New Year's day, 1776, was signalized by the enrollment of the first of the continental forces, and for the first spreading to the wind of a flag with thirteen stripes, white and red.

# A CRACK MILITARY COMPANY SKATING ON SNO

CAPTAIN JOHN W. VON NIEDA

The Mountain Springs Rifles of Ephrata, Pennsylvania, organized in 1887 with its present Second Lieutenant, William II. Richwine as its commander. The company then comprised only eleven members, being mere schoolboys. Today It is a flourishing military organization, noon. Supper, 5 p. m. Dress parade and to seventy five. The original members, years old, now the Second Lieutenant; and spoon. color bearer, Oscar L. Von Nieda, sixteen; drummer boy, Harry J. Von Nieda, eleven years, now the principal musician; First Sergeant, Walter V. Whitmyer, fifteen years; privates: David High, twelve trolley riding, etc. years; Harry Good, twelve years; John Captain; Harvey Sweigart, thirteen years; Lewis High, twelve years; William Steinmetz, thirteen years; Second Sergeant, a first prize in a running race, and an-Daniel S. Breneiser, fourteen years. Little John Von Nieda was quite a genius and set to work to make eight wooden guns with which they drilled. Their dues at that time were three cents a week, and in six months the boys had enough money to buy caps and a flag. The captain's sword was a present from the widow of an old soldler. The drum used by Harry belonged to his father and was used in the Civil War. At this time eight more privates were added to the company and eight more guns were made by the young genius. After a lapse of several years real guns were purchased of Remington make, forty five caliber, to buy which the boys raised two hundred and eighty eight dollars by holding war dramas, fairs, and festivals. It was just a short time after the purchase of the guns that they had over three hun- other a second prize in a broad jump increased that he now employs a secredred dollars with which to buy Zouavo contest. suits, and it was a pretty sight to see jackets, red trousers and white leggins, commander. ### The Boy's Voice—How to Preserve and Train It By BARNARD BAYLIS

OYS, look after your voices! This voices! You begin to see there is some for it.

Without this advantage, many occupaeven be danger of failure as well.

dreds of people who might have got on had taken some trouble about their voices when young. The worst of it is-many boys ruin their voices quite early, through want of a little knowledge and a little care.

"Bother my voice, it will take care of men, or commercial travelers. All these itself well enough." It is very doubtful are honorable occupations, if not always if anything in this world takes care of itself, where care can be taken of it. But plenty of things go wrong for want of care! If we don't take care of our bodies-nay, our whole being-we shall not keep right, and then we can't fill the niche that would otherwise have been possible, and which the Creator surely intended us to fill.

### Quit Coffee.

Said the Great German Specialist.

It disappoints some people to be told that coffee causes the disease. But it is best to look squarely at facts and set the face towards health for that's more fun than anything else anyhow. A Cincinnati man consulted a Berlin physician on nervous diseases and says:

"Four years ago I was an habitual coffee drinker, having used it for twenty five years and being naturally of a nervous temperament, I became almost a fixed and expanded, shoulders well back, nervous wreck, greatly suffering from in- and the spine drawn firmly inwards low somnia, almost constantly constipated down. and weighing only 128 pounds.

cine all the time, but had no relief, much breath, especially v About three years and a half ago I went tax is put on it. Remember, more breath abroad and while in Berlin heard frequently of a great physician, Prof. Mendel, an authority on nervous trouble, so I resolved to consult him.

"Prof. Mendel surprised me very much by asking at once if I was a coffee drinker and on my telling him I used it two or three times a day he said. 'It is poison.' After carefully examining me he told me there was nothing the matter with me whatever but what could be entirely cured in 30 days by letting coffee and other stimulants alone and dieting.

"I had a hard time following his advice. I did not know what to do until I came home and told my wife, who got some Postum. We tried it but at first did not like it; then we went over the directions on the package together and found we had not boiled it long enough. That was the beginning of the end of my trouble, for the Postum was delicious after that and I drank it regularly and it helped from the start.

"In a very short time I began to feel much better and in the last three years I haven't been absent from business one hour on account of ill health, for my health is fine now. I have a good appetite, sleep well and weigh 175 pounds." Name given by Postum Co., Battle Creek, Mich.

Any nervous person who drinks coffee will feel better from ten days' use of Postum in place of coffee. Trial easily proves this. There's a reason.

Look in each package for a copy of the famous little book, "The Road to Wellville."

may seem rather out-of-the-way, sense in the advice, though it is likely unusual advice, but, for all that, it many a boy will say, "I have so many is easy to find very good reasons studies to attend to that there is not time or it.

enough left free as it is." But think a
Quite likely many of you will, in one minute! Perhaps your studies are fitting way or another, have to depend on your you for a career for which your voice will throats for your success in life. It is be specially required, and it may make useful to have a good voice and a strong all the difference by and by to make a throat, whatever you may be or do. little time to think about it now. After all, it is really thought rather than time tions become very tiring! There may that is wanted. You may become a lawyer, or a clergyman, or a lecturer on All this need not be. There are hun- some scientific or popular subject. Then there are a great many who will be much better in the world if only they schoolmasters, and a schoolmaster's life is, perhaps, the most trying of all with the voice out of sorts.

Besides all these professions, it is eacy to name other walks in life where the same thing holds good. It is possible Now, having read so far, don't say, you may become auctioneers, or salespleasant, but sometimes they become very trying to those with weak throats. The writer has known commercial trayclers to talk all their voice away by the end of the day, though some of their worried customers might be inclined to say, "And a good thing if they lost it

However, this article is written to let So listen again! Boys, look after your you know that our voices need never give way from talking or singing, if used properly, and to feel quite safe on this score would be a blessing to many a business or professional man. But it is quite time to begin to think about it now, in order to be certain of this later on.

Here is the first thing to "look after" don't shout, and bawl, and yell in such a manner as to lose a lot of breath in doing this. Breath escaping too freely does much harm to the vocal action, and anything that causes this, if repeatedly indulged in, may injure the voice for life. If you must shout, and bawl, and yell, prepare for it by holding the chest muscle

This position of the body much assists "I consulted physicians and took medl- the throat to resist the escape of too vhen any passing than Nature intended is the beginning of nearly all the trouble regarding hoarseness and loss of voice from which so many suffer. It is a very good thing, then, whenever you are walking, to fix up firmly and be half an inch taller, also to adopt this position even when sitting, whenever you can think of it. It will soon become a habit, and then the trouble of it is over.

Another thing, that helps along with

# BOYS, A SVIT FREE

Any bright boy may earn an excellent quality knee pants suit in a single evening. We will give it to him free, through the nearest local dealer who sells "Tailors Triumph Boys Clothing."

We are going to mail something for these dealers, to boys you know. Therefore, the boy who sends us the biggest accurate list of names and addresses of nice boys, gets the suit he chooses. It will be easy. Here are the conditions.—

Bend coupon with list.
Write plainly in ink or typewriter on paper 8x10 in.
Put State and County at the head of each sheet.

Arrange the Boys' names in full, siphabetically, with street and address for each name.

Hend at least 100 names of boys between 5 and 17 yrs. old.
The five boys in the State sending the largest lists from their respective counties will each receive a suit from us through the nearest dealer.

Bend your list promptly. Address.

# **BOY AGENTS WANTED**

For Paying Saturday Work

Over 8000 hustling boys and girls are making from \$1.00 to \$50.00 a month each by a few hours work every week, on Saturday without interfering with their school duties. They act as local selling agents for PENNSYLVANIA GRIT, "America's Greatest Family Newspaper." We want agents in every town and city not already supplied, and furnish the

FULL OUTFIT FREE!

We send sample copies; advertising matter; a four line rubber stamp with agent's name, address and business card; self inking pad; memorandum and account book; ordering cards; instruction book, etc.; and a handsome canvass newsbag! Not a cent of money needed to start! We furnish everything! PENNSYLVANIA GRIT sells "like hot cakes," at 5c. a copy, and has nearly a million readers. Big Cash Prizes are given every month to the agents doing the best work, fin addition to the liberal commissions. There can be No Risk! as unsold conies need not be paid for. Write to-day, and secure an agency before copies need not be paid for. Write to-day, and secure an agency before someone gets shead of you. Address (postal will do)

Grit Publishing Co., Dept. 3, Williamsport, Pa.

this, is to cultivate the habit of speaking gently. But when you sing, fix up firmly, and don't be afraid of plenty of sound. Of course, often there are times when the

or course, often there are times when the voice should be softly used in singing, but when there is no reason for this, always sing out well, though, it need hardly be added, never "bawl or yell."

Bear in mind that, whether in speaking or singing, to force the voice with relaxed muscles, round shoulders, and a stooping figure (and often you cannot help it) certainly leads to mischief, and no doubt spoils many voices for life.

On the other hand, it is possible by the

On the other hand, it is possible by the exercise of a little care to improve its tone and quality year by year. A clear, resonant voice may in the long run prove as great an advantage to a boy as a pretty face to a girl—yes, perhaps a great deal more. It has been said that the late Sir John Mönckton owed his position as Town Clerk of the City of London, England, to his voice. No doubt it was a great halp to him from first to less an great help to him from first to last, and, as so much can be done to build up our vocal power, this fact proves the wisdom of the advice—Boys, look after your vocal.

To any one sending us a list of 5 different words made from the letters in

# Williams' **Shaving Soap**

with a 2-cent stamp to cover cost of mailing, we will forward, post-paid, a most useful and ingenious pocket novelty called the *Triplet*, a key-ring, letter-opener, paper-cutter and screw-driver combined, and an article that every man and boy will hind many uses for every day.

### What is Said of the Triplet.

"I would not take a dollar for the Triplet. It saved me a very serious accident two days ago."— ROLLIN W. MULFORD, Lebanon, O.

"The Triplet has become like my pocket-knife, or watch or pencil — a necessity, and I would not care to be without it."—JAMES F. McCARRIAR, Baltimore, Md.

The J. B. Williams Co., Dept. 2, Glastenbury, Conn.

### TEACHING BOYS AND GIRLS TO USE BOTH RIGHT AND LEFT HANDS

Copyright by Pierce & Jones

FIRST LESSON IN USE OF BOTH HANDS AT ONCE

with equal dexterity, instead of being drawing in half the time it would take handlest. either right-handed or left-handed? The question seems scarcely to admit of any as well. answer but one. And yet we have been a right or left-handed race since the beginning of time. This is to be changed. In Philadelphia they are teaching the scholars to use either hand with equal facility. J. Liberty Tadd, principal of the Schools of Industrial Art in the Quaker City, recently lectured in Europe, by special invitation, on the advantages of teaching children to use both hands in work that admitted of such a thing. The visitor to the schools presided over by Mr. Tadd sees some astonishing feats.

board, pick up a piece of chalk in each hand and draw the most intricate designs with the quickness of long praces tice, going down the left side of the de- of date and the race will be ambidexsign with the left hand and the right

to do it with one hand, and doing it just

Mr. Tadd does not say that his primary object in teaching his pupils to use both hands is to make them ambidextrous, although that is the natural outcome of the constant practice in the use of the left hand. Mr. Tadd's argument in favor of the teaching of all scholars in our public schools to use either hand is that the present system tends to injure the eyesight and distort the spine. The normal focus of the eye, he explains, is sixteen inches. To write the boy or girl sits with one eye nearer the paper than the other, and the eye that is not in focus is striving to work with its fellow to the natural injury of the optic. One would never think of reading a newspaper held at the same angle as the paper on which we are taught to write at school. By changing the position, writing or drawing first with the right hand and then with the left, Mr. Tadd believes that any strain on the eyes is neutralized. Also by the same argument he shows that the spine, which is distorted when writing continually in one position, is straightened up when the position is reversed for the left-handed practice in writing.

Dr. Oscar H. Allis, a prominent practitioner of Philadelphia, earnestly endorses the idea of teaching children to write with either hand. "If I were able to compel all school teachers to do as I advise," said Dr. Allis, recently, before an assemblage of medical men, "I would have Monday a right-handed day in the writing classes. Tuesday a left-handed ever hand the pupil wished."

Why should we not use both our hands side with the other hand, completing the trous, using whichever hand comes

### Boys Find Rich Mineral

Frank and Fred Coffman, Empire, Colo., age thirteen and fifteen, respectively, and sons of a miner, have been spending much of their time digging in the hills, as their father does, in the hope of finding silver. A short time ago they were playing in a small tunnel which they had dug and came upon a

substance which they failed to recognize. On taking it home and showing it to their father they found that they had struck "pay day, Wednesday a right-handed, and so dirt." At once the father uncovered twelve on alternately, with one day for which- inches of ore, practically solid, which runs higher than thirty dollars a ton in silver and If the idea gains in popularity, as it lead, with a fair per cent in gold.

### Quakers Try To Solve The "Doukhobor Problem"

DOURHOBOR WOMEN DOING THE WORK OF PLOW-HORSES

brought to the United States with a view later to the police of the Dominion of plans, Mr. Elkinton said: Canada. Mr. Elkinton has the practical sympathy of the Society of Friends in his experiment, and enough money has been subscribed to insure the thorough trial of the plan to solve the Doukhobor

As has been chronicled by the newspapers for a long time past, the Doukhobors are in the habit of leaving their settlement in the northwest part of the Dominion and marching en masse in search of a mysterious Messiah who seems as elusive as the river sought by the patriarch of Kipling's "Kim." All efforts to drive them back to their homes have resulted in trouble and occasional bloodshed. Their fanaticism is of the kind that will listen to no reason. In their own settlement they have allowed the horses to graze idly on the hills while they have yoked the women to the ploughs, believing it wicked to work animals that have no voice in their To bring them out of such destiny. fanatical darkness as this, the Quakers. who, chiefly through Joseph Elkinton, have made careful inquiries into the life of the Doukhobors, purpose to select the most intelligent of the colony and bring them to this country, with the hope that a school education for the children and a thorough training of the men and women in the ways of civilized, sensible people, will elevate a few who can be sent back to tell the others that a higher order of things may be looked for than

that obtaining in the Canadlan territory. The two Doukhobor boys seen in the accompanying photograph are now attending the public school at Media. They are bright little fellows. Their English is imperfect, but their intelligence is of a high order. In time, when they learn the language thoroughly, they will, without doubt, rise to a high grade in the school. The two women, mother and daughter, were photographed on the porch of the Elkinton home at Media. They are to stay there for the present, learning to do housework in the manner of the American housewife. They do not speak a word of English, and for the present it will be necessary for Mrs. Elkinton, a Quaker lady, who is as enthusiastic as her husband over the experiment to uplift the Doukhobors, to converse with them in the sign language. They are splendid speci-

As soon as suitable made them such a troublesome problem arrangements have been made, others first to the Russian government and will be brought on. Speaking of his

DOUKHOBOR MOTHER AND DAUGHTER

with the co-operation of some members rats and rabbits this winter.-JOE BANNER. of the Society of Friends. Matters have not been going well with the Douk-hobors. Educational advancement is slow because of the skepticism about any effort having the semblance of support of the Dominion government. This is due to the persecution in Russia from which they fied. It would be a mistake to break up the colonies because of the dangers of marches and other acts resulting from their superstitions and fanaticisms. They must be prepared for education. Hence this plan of distributing promising Doukhobors on farms, where they will receive practical training and the children be enabled to attend schools in the vicinity. I have impressed upon them the idea I have in mind of sending them back to demonstrate to the skeptical Doukhobors the benefits of Christian and civilizing influences.'

### A Chip of The Old Block

### Prize Offer For Companies

To the company having the largest increase in its membership during this month (February 1st to February 29th inclusive), we will give four fine books for hoys; to the next largest, two books. Reports must all be in by March 10th.

northern woods of Canada far down into the south, commonly known as the muskrat; and with the beginning of the breaking up of the ice this spring thousands of boys will prepare to take as many as floods, and after they have left their they can of the glossy brown pelts which houses they burrow their new homes are now in such great demand by furriers all over the country.

To those boys who love outdoor sport. hunting and trapping, there is offered no money, or running up a small bank account, than by hunting these animals. Especially is this true of those who live in the country or in small cities, for the waters in such neighborhoods are always fairly alive with muskrats. Even in larger cities, where the populations run up into hundreds of thousands, muskrat hunting can be carried on with success by those boys who live in the suburbs, or near a stream running through the city. It may interest young rat hunters to know that the author himself, who lived in a city of fifteen thousand inhabitants, caught nearly one thousand

muskrats in the spring of his last year in high school, and that the three hunthem helped to pass him through his first exception that here it is necessary to declare that the pelt is almost worthdred dollars revenue which came for year at college; and muskrats are as use bait. In my experience I have found less ("so many holes in it, you see"), but numerous today as they were then, which bits of parsnip and apple very good, that they will take chances, and give you was not a long time ago.

begin their preparations before the first spring thaw comes. And to trap successfully, unless a boy is somewhat of stuck on the end of a a naturalist, he should learn a few things long stick which is set before he makes his first attempt, for into the ground at such just as spring pelts are worth two or an angle that the base three times as much as those taken in the fall, so is rat catching as much more difficult in the spring as in the autumn. Then the water in rivers, creeks and it. If the stick is set ponds is higher, and in many instances too straight the muskthe broken ice conceals the rat holes. The water is freezing to the touch, and wet feet occasion discomfort that would not be noticed in a warmer season.

By the time the first fairly warm days come, when the snow and ice begin to but will be able to supthaw, the trapper should be prepared, port himself against it In the middle west these days usually come with the "January thaw," which his legs. ordinarily puts in an appearance sometime in February, and good trapping of the successful trapcontinues until May. From half a dozen per is to properly kill to a dozen traps are sufficient for a and skin his game. A schoolboy to attend to unless he is in rat in a trap should partnership with a chum, in which case never be shot or killed the sport is more agreeable and more with a sharp instrutraps can be attended to. These traps ment, as those methods need not be expensive ones, and they will damage the pelt. A must not be too strong. Ordinarily a good rap or two over the steel rat trap that costs more than fif- head with a blunt stick teen cents has too powerful a spring. closing with such force that the jaws It must not be supbreak the rat's leg, in which event the posed that when one animal usually tears himself free, leav- rat is caught the location of the trap half price. In reality the pelt is worth ty years old he has won one gold medal and ing the severed leg behind.

to work in order to discover the feeding under a covering of mud, leaves and is "matured," becomes a part of the grounds or other places which the musk- sticks. From under one willow the hardened skin, completely concealing the rats frequent. To one who has had experience in trapping these are easily single season. distinguishable, but by amateurs they are often passed unnoticed. Following closely along the edge of the water one hang the animal by its hind legs from students are young women.

ERHAPS there is no animal better must examine every little spot of snow known to the boy inhabitants of or soft ground for tracks of the animals. North America than that clever These tracks are much like those of a little aquatic denizen of every cat, only smaller; and where they are lake, creek and pond from the great found it is a pretty good rule to set a his only chance lies in concealing himbaited trap, especially if the hole cannot self in the neighborhood of a feeding be located. But efforts should first be ground, and there quietly await develmade to find the hole. In the early spring rats are always prepared for quite high up under the bank. A hole that is used by rats can be easily recognized by the worn path leading from it, and who delight in the excitement of and where one such home is found others are pretty certain to be in the neighborbetter opportunity of earning spending hood, for, though it may not be easily is the rat. There must be no quick located, a feeding ground is near. This movement in raising the gun, no sudden feeding ground may still be under the shifting of a foot or an arm, or a heavy water and ice, or it may be in plain splash will tell the hunter that his sight, and usually it is nothing more nor less than a good growth of bullrushes, on the roots of which the musk-

but have little confi-Those who contemplate trapping should dence in potato and cabbage, which some use. This bait should be from the trap, and the bait end directly above rat will not be comnelled to perch himself on his hind feet to reach for the balt, and thus get into the trap, and without danger to

Of course the next step will settle his ratship.

should be changed. Muskrats live in practically as much as if the holes were A few days before trapping begins the large families, and ordinarily where one not in it. Tiny pieces of fat stripped hunter should carefully examine the is taken other successes will follow if all from the animal are sometimes placed creek or pond along which he intends evidences of the struggle are obliterated over the holes, and this, after the pelt author took seventeen muskrats in a alleged defects.

a limb, or a board nailed to the side of a building, and then with a sharp knife to cut around each of these legs just above the feet. From this the knife should be carefully drawn through the pelt down the inside of the leg across to the opposite leg, and up to the other circular cut. After this the hide can be gradually worked down over the head, where the knife must again be skillfully employed to detach the skin from the skull. When the pelt is off it should immediately be stretched over a board or a shingle brought to a rounded point at the end, and then hung up in a cool, dry place to mature. In about a week it is ready for sale.

If a trapper is fortunate enough to possess a gun as well as traps his success should easily be doubled. Nights when the moon is high and clear are the times to shoot muskrats. If the hunter walks up and down a creek or pond, no matter how quietly, he will get nothing; opments. From early evening until midnight the rats play and feed. They may be heard jumping and splashing in the water a few rods away, but unless the moon is very bright they cannot be seen at any great distance. Then suddenly, a silvery white streak is seen shooting across the stream. It moves very swiftly, and at the very head of it quarry has gone under water and is scurrying homeward in safety. The boy should be in a position to fire without shifting his position. In fact his eyes should be constantly glued to a certain himself with his trapping ground he is stretch of water, and whenever a streak ready to begin work. Traps should first appears there he should blaze away at be set at the holes, and it is a great the head of it. If the shot is a true one mistake not only of young trappers but the body of the rat, which, with the of older ones as well to just place the heavy fur of spring will be almost as trap in the muskrat's path, fasten the large as a small cat, may be seen float-

Now a word about marketing muskrat pelts, and especially those taken from among the shrewdest little animals in rats which have been shot. In shooting, existence. They never plunge blindly trapping, and disposing of about five out of their holes. First they come up thousand rats I have found that the mavery cautiously, and stick their heads jority of those merchants who buy pelts have no scruples against taking the long end of a bargain. This comes pretty there is anything suspicious in the path near to saying that many of them are of one of these animals he is sure to dishonest, but not quite. The pelt of a notice it, and he either jumps over the fair sized rat captured in the early spring should be worth at least twenty So it is necessary to use some skill in five cents, and some of them are worth setting the trap. The end of the chain thirty five. But the man who buys them should be fastened to a log, or a stick of you near your home will offer you driven in the ground out of sight of the about twelve or tifteen cents, and will hole. Then a shallow hole a little larger probably say that he is giving you more than the open trap must be scooped out than they are worth at that. As a matat the mouth of the muskrat's home, and ter of fact he will make a big profit, a the trap set in it, after which the chain, profit which the trapper himself is entrap, and even the chain stick should be titled to. So the best plan is to write to concealed under a thin covering of mud, a well-known furrier in some large city. snow, or old vegetation. That night the tell him what you have, and send him a boy who has set the trap may go to bed number of pelts as samples. He will with a pretty sure conviction that he then offer you a price, providing all of will have a rat the next morning. The your pelts are as good as those subsame method of setting the traps should mitted. Especially do home dealers take be followed near feeding grounds and advantage of those who have shot rats. in the runways of the animals, with the They point out the tiny shot holes and

# Stamps, Coins and Curios OLD AND NEW COINS AND BILLS

CEYLON—The 12c is being printed in onvegreen and carmine.

LABUAN—The new values of the current set have been issued as follows: 1c violet and black; 3c brown and black.

SWEDEN—The new 5 krona stamp has appeared. It is a large upright rectangle, with view of the Gen. P. O. Stockholm.

U. 8.—The 1c, 2c and 5c stamp of the 1902 insuce have been over printed for use in the Philippines.

I'hilippines.
INDIA—The 4 annas and 8 annas King's

INDIA—The 4 annas and 8 annas King's head have been issued.
BOSNIA—The 46 heller stamp has appeared printed in orange with black numerals.
BRITISH E. AFRICA—The 1 anna stamp is now issued in bright rose.
SEYCHELLES—The 45c brown and carmine has been surcharged "3 cents" in black.
MALTA—The 2½c King's Head has been issued. It is bicolored and a very pretty stamp.

stamp.
U. S.—The new design of the 2c stamp contains the portrait of Washington, of the Stu-art type. The frame or background of the design is a shield. The upper third of the design comprises the blue field, with stars in design comprises the blue field, with stars in white. Instead of 13 stars, there are only 4 fully visible, although three points of as many stars may be seen peeping out from behind the letters "United States of America." INDIA—The 6 anna King's Head type has appeared, the color being pistre yellow. SURINAM—A new 5c stamp of the figure type has appeared.

CURACAO—The 12½c figure type has appeared.

CTRACAO—The 12½c ngure type has appeared.

AFGHANISTAN—The Amir having determined that the postage stamps manufactured during the reign of his father should be used up, no new ones have as yet been issued. The entire stock has been exhausted, and pending the acceptance of a new design, sealing wax, impressed with the official stamp is being used.

BULGARIA-The 15 st. has been surcharged

CHINA—The current 5c orange stamp has been changed to yellow.

### Stamp Notes

The first stamps of Peru were borrowed from the Pacific Steam Navigation Co. and were used about 3 months.

The genuine Hamburg stamps cancellation consists of a series of parallel bars stretched wide apart. The reprints are found with false cancellations.

The \$60.00 newspaper stamp is the highest stamp in face value that has ever been issued. Counterfelts and double strikes of the 1903 Hayti surcharged are out.

THE AMERICAN BOY offers twelve prizes of Two Dollars each for the best Amateur Photograph received during the twelve months in the jest, one prize for each month, also a second prize each month, of one dollar, for the next best photograph, the competition to be based upon the originality of the subject and the perfection of the photograph. The contest is open to subscribers only. Photographs will be returned if stamps are sent for the purpose. All photographs entered in the contest and not prize winners will be subject to our use unless otherwise directed by the sender, and fifty cents will be paid for each photograph that may be used, the prize photographs in any sent to be our own, without further payment than the payment of the prizes. Write on the back of the photograph its title, with a description of the picture, and the full name and address of the contestant, who in every case must be the artist who took the picture.

### Answers to Correspondents

derson, Red Wing, Minn.—To judge by the print, the upper part of your plate is "fogged." Hugh Askey, Red Oak, Ia.—Your photos are poorly printed and toned. Cordery Batten, Abingdon, Iii.—"At Rest" is a good photograph of a difficult subject. Better try some Jerseys next time; black cows against a dark background are not sufficiently defined. E. Newsom, Fayetteville, Ark.—Buckskin Charlie should have been on a plane; his feet, being nearer the camera, are nearly as large as his head. Raymond Alt, Rochester, N. Y.—Your photos are printed and toned too deeply. P. Keith Johnston, East Cleveland, O.—"Almost a Load" would have been very good, if your horse had been taken on a plane; the forepart is larger than the hindpart. Loring Milton, Cincinnati, O.—Your "Old Homestead" is interesting, but should have been taken with a wide angle lens; the house slants toward the center and is wider below than above.

### Current Comments

Current Comments

Some good landscape views were submitted to us this month by Litta Voelchert, of Appleton, Wis., E. L. Parris, Jr., of New York City, and Charles E. Dunbar, of Cornwall Bridge, Conn. "In the Woods." by F. S. Morrison, of St. Johns, N. B., is too large a subject for the size of his camera; it would require an \$x10 camera to do it justice. Two interesting pictures of circus processions are sent us by Litta Voelchert, and Ernst Armstrong, of South Auburn, Nebr., but both show defects. The photograph of the former is poorly printed and mounted, and that of the latter shows halation in three places.—Geo. E. Hall, Peoria, Ill.: Your photograph of the 'Illinois River at Pekin, Ill., was taken out of the toning-bath too soon. The picture of the "Wire Spooler" is very good, and we are sorry a lack of space precludes us from reproducing it. "The Wreck of the Rover," by Stuart Boyer, of Baitimore, Md., showing the greedy waves lapping over a submerged sailing-yacht, is decidedly above the average.—E. H. Logan, Flemingsburg, Ky.: Your bromides show too much contrast; the whites are chalky and almost without detail. The P. O. P. prints are better, particularly "An Outing."—John W. Guibord, of Plattsburgh, N. Y., and Edwin R. Stucky, of Louisville, Ky., have submitted portrait snap-shots that are unquestionably meritorious.—Wm. J. Juengst, of Buffalo, N. Y., would have scored with his "Happy New

FIRST PRIZE-ERNEST BACKUS, 588 RACINE AVE., CHICAGO, ILL

developer, when the required density can be obtained: the plate should then be refixed and washed—M. B. Crafts, Chicago: We do not know who makes the intensifier you mention. The editor has found Agfa of service,—I-loyd G. Kerr, Corsicana, Tex: "Sensite!" will answer your purpose; directions with each bottle.

Our Portfolio

Gayle Burlingame, of Altoona, Pa., submitted a kood picture of "A Rainy Day." Axel Anderson's "Fall Sport" is a credit to him; he lives at Red Wing, Minn. "Nature's Autumn Dress" is a delicate bit of landscape work; unfortunately the artist failed to attach his name. "A Street Keene," by Robt. E. Roehm, of Cincinnati, O., is good but commonplace. Ed. Gravenstreter, Cleveland, O.; Your print is good from a photographic standpoint, but rather meaningless. Without an explanation nobody would understand it.—Harry W. Crane. Bix Rapids, Mich. Your plotograph is "cuted bux appears to the print of Lincoln Park. He refers to the sharper.—Seth N. Start, of Otho, Ia., sends us a good picture of an old log cabin. A typical Mississippi towboat is the subject of Loring Carpenter's contribution from North Climsted, Ohlo, Chas. S. Ansley, of Oxford, Ga., deserves commendation for his interesting photograph of a "Rhododendron Walk," A good photograph of a "Rhododendron Walk

### Some Suggestions

Some Suggestions

Harold C. Blake, Dorchester, Mass.—Negatives appear to be all right. Most prints, however, were overexposed. In using gaslight papers, length of exposure must be carefully determined by experiment, before final prints are made. R. J. Austen, Toronto, Ont.—Your "Looking for Crows" was ruined in the toning-bath. F. Heineman, Appleton, Wis.—"On the Fox River appears to be slightly underdeveloped. M. A. Yauch, Rochester, N. Y.—If you had not amputated the legs of your little letter-carrier, your photograph would have hive a success. Stanley Bronson, Portsmouth, Va.—You are also guilty of amputation. Bert Carmichael, Des Moines, Ia.—Good negative but poor print. Luther Adams, Titusville, Pa.—Your print shows lack of contrast. Probably due to printing process; try a slow bromide paper. Fred. C. Schmeiz, Rodney, Ont.—The preceding remark also applies to your winter landscape. Lee Hoffman, Elisworth, Kas.—Too big s subject for so small a plate, Nick Bruehl, Sherwood, Wis.—"Lost in the Woods" is a failure, because girls are evidently not crying but laughing. Axel E. Anders appears to be slightly underdeveloped. M. A. Yauch, Rochester, N. Y.—If you had not amputated the legs of your little in the "English Mechanic" by W. Ar. Hubber, of Detroit, Mich. It consists of a mixture of three parts of a 13 per cent. solution of shellac in alcohol in the cold with five parts of the same strength of solution of horax in distilled water. The solution of horax in distilled water. The solution of horax in distilled water. The solution of horax in distilled water and the method of making which is told in the "English Mechanic" by W. Ar. Hubber, of Detroit, Mich. ### To Color Photographs

Prints may be considerably improved, especially portraits, by a judicious application of color; even in the case of prints from flat and under-exposed negatives a little color will, like charity. "hide a multitude of sins." No knowledge of printing or drawing is requisite, only a steady hand; and although it is really a process of smudging, the effect, when viewed in the natural way as a finished print, leaves no trace of the

really a process of smudging, the effect, when viewed in the natural way as a finished print, leaves no trace of the "prentice hand."

The materials required are—two brushes, one fine and one coarser, for using the color as a wash; a few penny packets of aniline dyes—water-colors will not do in this process, as they will not stain the film as the aniline series do. The range of colors is rather limited, but as the object is rather to tint than to color, a smaller range will do. Magenta, pinks, and similar shades are but a question of dilution. Violet, blue, are the principal, then green, brown; the last two are not good colors, and require mixing with other colors, or the result will be unnatural. For medium you will require acetic acid and methylated spirit. Mix a small quantity of each with a crystal or two of the desired color. An inverted plate makes a good palette. Let it be one shade deeper than you wish the finished tone to be when dry. Take a portrait for instance. First, alum all prints, not only to harden film, but it will tend to eliminate the hypo. Squeegee the print on to glass in the usual manner, on to a negative glass, and while only partially dry give the face a wash of color. Do not attempt to pick out the high lights, but give the face a bold stroke with a comparatively moist brush. To avoid patchiness, preserve the outline as far as possible, then do the hands. The cuffs, collar, and frilling may be put in a harmonious color, or left alone; if a light dress or blouse, say mauve (violet and magenta), or pale blue, and pick out the decorations (if pronounced) with another soft color. When you have made your brown to taste, touch up the hair; leave the furniture alone. Flowers may have the slightest possible tints. The idea is to brighten up only those paris that strike the eye. When dry, if too deep, sunning will take it down, or moisten with methylated spirit, and soak up on blotting paper. Practice on a few old prints first. When stripped off the glass the color will be very soft. Mount in t finished print, leaves no trace of the "prentice hand."

The materials required are—two

### Edinol and Pyro

The editor experimented extensively with editor experimented considers it a very satisfactory developer. But, when expense is considered, the following pyrogallic acid developer, originally proposed by the late Jex Bardwell in the now defunct "Photographic Mosaics," is preferable.

SECOND PRIZE-R. D. VON NIEDA, EPHRATA, PA.

### A Pencil Book For a Postal

All lead Pencils have their uses-else they wouldn't have been made. The thing is to get them to the right users. That's why Dixon's Index was made. That's why you better write for it. You can't think of a lead pencil question it does not answer.

### Bud, The Globe Trotter

This buildog has the honor of being the first to cross the American continent in an automobile. His name is Bud and he was one of the companions of Dr. H. Nelson Jackson in his recent journey from California to New York in a motor car. After traveling a few days the glare of the sun and dust on the road affected Bud's eyes so that it was necessary to have him fitted with a pair of automobile goggles. The picture shows him as he was equipped during his journey.

### Boys Who Are Doing Things

At Clifton, Ky., Howard White, a twelve-year-old boy, recently rescued three drowning persons from the Kentucky river. The boy has received great praise for his bravery. Those saved were the boy's mother, two-year-old sister, and his grandmother. They had fallen into twenty feet of water.

Earl Gulick, whose photograph appeared on the front cover of the April, 1900, number of THE AMERICAN BOY as a famous boy choir singer with dreamy eyes and a voice like a bird, and who delighted President McKinley with his singing "Angels Ever Bright and Fair," has developed into a muscular lad with all kinds of athletic ambitions. A short time ago his voice failed and then he went into athletics, becoming the champion boxer in his class at Trinity School, New York. Now, at the age of sixteen, he is the center rush of the school football eleven. He says he would rather play football than sing any day. In the summer of 1902 he became a hero, plunging into the surf at Fort Hamilton and saving a man from drowning. He received for this a medal from the United States Volunteer Life Saving Corps, the presentation speech being 192de by Andrew Carnegle.

Pat Gunn is said by the New York

presentation speech being made by Andrew Carnegie.

Pat Gunn is said by the New York Tribune to be the youngest blacksmith in the world. This may or may not be true. At any rate, he is young enough to warrant our giving him a place in this column. He has a little shop fitted up with a forge, small anvil and tools. Here he makes shoes for his pony.

Gerardo Carbonara, age fifteen, son of a Brooklyn (N. Y.) tallor, is winning honors in Naples, Italy, as a violinist and composer. While studying in New York he won a scholarship at the Naples Conservatory.

Hubert Howe, Denver, Colo., age fifteen, will see his name and picture in all the great newspapers of the country if he looks. He is said to be the youngest practical astronomer in the world, recently astonishing the veterans of the science by announcing the discovery of a new group of sun spots. Young Howe's father is Professor of Astronomy in Denver University. On October 26, while taking regular observations, the boy found a new sun spot group just creeping around the eastern edge of the sun. He is not only an astronomer, but a zoolo-Hubert Howe, Denver, Colo., age fifteen, is not only an astronomer, but a zoolo-gist, his favorite study being animals. He is going to devote his life to original

research.
Chester Marshall Schofield, Green Hill,
Pa., age eleven, has for several months

Pa., age eleven, has for several months held the position of organist in the Presbyterian Church at Berwyn. When seven years old he was organist of the Howellville Sunday school. Since that time he has played in many concerts. His friends expect him to rank with the great musicians when he grows up.

Arthur and Leonard Heacock will enter an Oregon school and pay their way with money that they earned in the Klondike. For three years they have been working near Dawson N. W. T., and have succeeded in saving two thousand dollars. The older lad is sixteen years of age, the younger fourteen. They are sons of Mr. and Mrs. E. C. Heacock, of Grand Forks, N. D. Before going to Dawson the boys earned seven hundred dollars in Skagway.

stanley M. Cox, Brooklyn, N. Y., age twelve, has received a bronze medal from the Humane Society of Massa-chusetts for bravery in saving the life of another boy at East Gloucester, Mass.

of another boy at East Gloucester, Mass., August 11.
Donald Nadeau, at the age of ten, was living at Federman, Mich., assisting his father, who was a train dispatcher at that point. The boy is now operator for the Shore Line in its office in the Majestic building. Detroit. He is now twelve years of age and earns a salary that a man might be proud of.

### From a Boy of '61

WASHINGTON, D. C., Dec. 7, 1903.

SCHOOL the country. To introduce our Magazine to those Statement of the same till, we will send our book for LIFE remaining I issue for the country. To introduce our Magazine to those LIFE remaining I issue for the country. To introduce our Magazine to those LIFE remaining I issue for the country. To introduce our Magazine to those LIFE remaining I issue for the country. To introduce our Magazine to those LIFE remaining I issue for the country. To introduce our Magazine to those LIFE remaining I issue for the country. To introduce our Magazine to those LIFE remaining I issue for the country. To introduce our Magazine to those LIFE remaining I issue for the country to the country to the country. The country is many of whom I is an an American Boys, many of whom I meet now, Old? Only 61, and that is meet now, Old? Only 61, and that is young when you remember General Joshua, who made the sun stand still so the could have daylight enough to lick the other fellows. Age does not count; it is AMERICAN ROYS who count. And one of them, my youngest, was so much of them.

an American Boy that he gave his life for the flag at Santiago, Cuba.

Why did you not print your American Boy when I was a lad, I never had such a nice paper then, but was glad to get hold of "any old thing."

I am interested in your article, page 56, December issue, "What is your highest aim?" It is a good question. I taught school "before the war." One day I heard the boys ask each other what they were going to be when grown-up. They had diversified ideas. All had high ambitions save one—a dirty, half clad, degenerate who replied to the question. "I am going to be a thief just like my father." I had just been a witness on his father's trial, resulting in his imprisonment. I mentioned this incident to others, and during the last year have been told that in spite of every effort to save that boy, he died a common thief in prison. May "our boys" aim high and attain their wishes.

Yours for America.

H. A. DOBSON, M. D.

### Distinguished Students of Yale

William Pickens, a negro boy of Little Rock, Ark., who worked his way to Yale by shoveling dirt on a railroad and serving as helper in a Chicago machine shop, took the Ten Eyck prize in oratory at the last annual junior exhibition.

George Williamson Crawford, a negro boy of Birmingham, Ala., who has worked his way through the Yale law school, at the last annual commencement for the third time captured the Townsend prize of one hundred dollars for the delivery of an oration.

Frederick Erastus Pierce, a farmer's boy who went to Yale with thirty dollars in a handkerchief, having prepared himself at odd hours on the farm for college, has taken numerous prizes, including the Cook prize in poetry, open to all the university.

Eshelby Lunken, twelve years old, is the proud owner of an automobile, it hav-ing been given him on the eighteenth of March last, his twelfth birthday, by his father. A Denver paper speaks of him as the youngest automobilist in the world, but we have come to suspect ex-travagant statements of this sort regard-ing boys. At any rate, our readers will ing boys. At any rate, our readers will

ESHELBY F. LUNKEN, DENVER, COL

agree with us that he is quite a young agree with us that he is quite a young boy to manage an automobile on the streets of a city. There are many witnesses to the fact, however, that young Lunken is an expert chauffeur. He has made trips to Colorado Springs, Greeley, and other Colorado cities. He travels at a reckless but a merry clip and holds his head when the pinch comes.

### The Princeton Juniors

A few weeks ago Mrs. Hervey, wife of Professor Walter Hervey, ex-President of the Teachers' College of New York and now of the Board of Examiners of that city, met on the street car a company of bright, enthusiastic American boys bound for Courtiand Park for a game of football. Mrs. Hervey entered into conversation with them and, finding that they were renders of THE AMERICAN BOY, told them that she was personally acquainted with

the editor. This delighted them very much She was so pleased with their manner and their enthusiasm that she suggested that they write the editor about their club. In due time a letter was received from the mother of one of the boys, with a photograph of five of them in a group, and this we are enabled to show our readers. They are the Princeton Juniors of New York, attending School No. 89, and all under eleven years of age. Their names are Ernest G. Friez, Charles Gilligan, N. De Luna, Willie Gilmarton and F. Beaty.

Your employer will not advance you if you write poorly. You don't know why, but you are held down to an inferior position. Palmer method of penmanship teaches absolute legibility, neatness and speed. Used in hundreds of schools throughout the U.S. We also teach you at your home. Palmer's Penmanship Budget (price, \$1) and complete 6 months' course of individual weekly instruction now \$5. After first two months you may be worth every week \$5 more than now. Catalogue free.

### Uncle Sam's Young Men at King Menelik's Court By WALDON FAWCETT

CONSUL SKINNER'S GUARD OF U. S. MARINES

HE United States government has tall who but recently graduated from just paid a great compliment to Vol. 2.1 a task not only difficult but necessitating been a most exciting and adventurous tact and ability in its performance. Rob- one, involving an absence of weeks from ert P. Skinner who, although he is today the civilized world. little more than a boy, has been serving for the past six years as the consul or Africa and of course has no seaports of agent of Uncle Sam at the important port its own, so that travelers journeying to of Marseilles, France, was the young man it must disembark at Djibouti in the sclected and the undertaking assigned French colony of Somaliland on the East him was the invasion of the heart of Coast of Africa. Even to this port ships Africa and the establishment on behalf sail only at irregular intervals and thus of Uncle Sam of friendly relations with in order that Consul Skinner and his the least-known monarch in the world- party might be started on their pilgrim-King Menelik of Abyssinia.

King Menelik, or the Emperor of Ethiopla as he is sometimes called, rules over Machias—to convey them to this out-ofthe only great independent nation on the-way corner of the earth and to wait

CONBUL ROBERT P. SKINNER

ing a representative to live at its capital in return for a similar action on the part of the other power in sending an envoy to act for his government at Washington. And yet it was very necessary that Uncle Sam should strike up an acquaintanceship with this government on the shores of the Red Sea, for as it happens all the clothing worn by the Abyssinians is made of cotton cloth manufactured in the United States and the valuable trade in these goods, amounting to a million dollars every year, jealous European nations have lately been trying to get away from us.

Then, too, the officials of the St. Louis exposition were very anxious that this mighty monarch who has never been outside his own domain, should visit the big show on the banks of the Mississippl. Menelik has never seen a boat or a railroad train or a wheeled vehicle, much less a balloon, and the officials felt sure that if they could induce this mysterious ruler of ten million people to visit the next world's fair, not only would he prove an object of great interest to all the other visitors but the trip would be for him a journey into a veritable wonderland.

With two objects to be served, therefore, the officials at Washington picked out young Mr. Skinner as the best man to send into the Dark Continent to strike a Yankee bargain with the potentate of the land of the Blue Nile. Mr. Skinner, in turn, invited to accompany him as companion and secretary, H. W. Wales, a young man powerfully built and six feet

just paid a great compliment to Yale College where he made a record as the young men of the country by an athlete as well as a student. The trip selecting one of their number for taken by these two young Americans has

Abyssinia is located in the interior of age without delay the United States government detailed a warship—the gunboat the globe with which the United States for them at Dilbouti until their return from the trip into the interior. As the route from the coast to King Menelik's capital is through territory inhabited by semi-barbarous tribes and infested with wild beasts the Navy Department ordered a detachment of U.S. Marines, fully armed, to accompany Consul Skinner and his companion as a bodyguard.

From Djibouti to Addis-Abeda, as the capital of Abyssinia is called, is not only a hazardous but a very wearlsome journey. The first stage of the trip, amounting to three hundred miles, is comparatively easy for it is over the new French railway, and incidentally it may be noted that the United States government had to secure permission from the French government for our armed soldiers to traverse this territory belonging to our sister republic. From Harrar, where ends the railroad, to King Menelik's home city is the difficult portion of the journey. This section of the trip is likewise three hundred miles in length and must be made on mule back. Moreover such is the character of the road that it is impossible to travel on an average more than ten miles a day, and when camp is pitched at night it must be carefully guarded lest wild beasts or other unwelcome visitors pay an unexpected call.

King Menelik's palace where he remanage to make their way to his remote corner of the earth, is a flimsy structure or the starter's stand at an American grounds. race track. The Emperor wears on important occasions a long black silk cloak. He is a very energetic man for he begovernment has never had a treaty or gins his working day at three o'clock in the morning and his hour for receiving visitors is eight o'clock in the morning. Every time one of the governments of the world sends a representative to Abyssinia seeking the good will of the people and their profitable trade the envoy or commissioner bears presents for King Menelik just as, in the early times, European explorers and colonists brought presents to the chief of the American Indian tribes. Each nation tries to outdo the others in sending to Menelik something new and unheard of which will be sure to interest him. The British government, for instance, especially de-

ELGIN NATIONAL WATCH CO., ELGIN, ILL.

lighted him by hurrying to his palace one of the first phonographs ever manufactured.

Consul Skinner took many presents to Uncle Sam's new friend. For one thing the officials of the St. Louis exposition sent a great silver plate, three feet long. on which was engraved an invitation for this King of Kings, as he styles himself, to visit the United States. From President Roosevelt came a gift of great interest to Menelik in the form of a number of especially fine firearms. American manufacturers produce the finest guns and revolvers in the world and it is not too much to expect that this African monarch will be so pleased with those sent him that he will decide to equip his army with Yankee weapons. Menelik, by the way, has a wonderful army. It numbers 100,000 men, each soldier barefooted, bareheaded and scantily clad, but armed with a modern rifle and cartridge belt. These colored soldiers are as good marksmen as the Boers and their fighting ability was proven on that terrible day in 1896 when they inflicted upon 18,000 of Italy's best soldiers the most tragic defeat ever suffered by a great European power at the hands of black

### Good Hunting Rules

1. Always keep the gun pointed from yourself and other persons.

2. Carry a gun with the end pointed either upward toward the sky or downward, toward the ground. Never sweep the horizon with it. If accidentally discharged while in the former position no harm is likely to result, but if discharged while held horizontally it may result seriously.

3. In getting over logs or fences always see that the gun is first put over and in a solid position where it will not fall. Then go to another place to climb over. and pick up the weapon with the end pointing where it should be.

4. Never pull or draw a gun toward yourself by the muzzle, especially in wagons, boats, over fences, logs, etc.

5. Do not load the gun until after ceives all distinguished foreigners who leaving the house, and draw the loads (or remove the caps, if a muzzle loader, and watch that no percussion is left on which very much resembles a boat house the tube) as soon as leaving the hunting

> 6. Never keep a loaded gun around the house or tent, and do not leave a loaded weapon where it may be knocked down by dogs or children.

> 7. Do not carry the gun cocked cepting when alert for the game to rise.

> 8. Do not shoot into moving bushes or in the direction of a noise without being sure the desired game is there and seeing it for a certainty. The movement or noise may be caused by some person or by domesticated stock.

> 9. Watch the muzzle of the gun that no mud, snow, or other material fill it; and do not load as heavily with white or nitro powder as with black powder. This may prevent accidents from bursting.

> 10. Do not start a fire in the woods without first providing against its spreading, and do not leave it burning under any circumstances.

> 11. Do not wound same and leave it to suffer and die of its injuries. Better to spend an hour searching for a winged bird than to let it remain and suffer for a day or two before relieved by a merciful death.

12. Do not shoot protected birds or animals. There is a reason for protecting Find what it is and you will agree that the law is generally correct in giving them a protective season.

13. If you are going for fun only it is all right to take inexperienced friends, a well-filled lunch basket, literature and a target, and go to the nearest grove

a target, and go to the nearest grove.

14. If going for game go alone or with experienced hunters only, carry only what is essential. Hunt with the back to the sun, slowly and quietly, and in such places and at such times of day as experience has taught that the particular kind of game sought is to be found.

15. Do not hunt for "anything." This generally results in nothing. Different kinds of game are to be found in different limit or to kill all that may be found just because it may be there.

# Boy Money Makers and Money Savers WANTED-BOYS

### Albert Grehl

Albert Grehl, of South McDowell street, Col-Albert Grehl, of South McDowell street, Columbus. O., has proven that it is possible for a boy of thirteen years of age to rise to an emergency. Although interested in going to school and securing an education, he was suddenly brought face to face with the burdens of a breadwinner. In a big explosion in the city of Columbus his sister was killed and his father was injured so that he had to be taken to the hospital. At the same time his mother lay seriously ill. There were three sisters—all younger than Albert. The rent was to pay, also the doctor's bills. Albert after surveying

ALBERT GREHL

the situation dried his tears and declared that the situation dried his tears and declared that as he was the only well man in the family he must keep things going until his father got well, and he did. He went out to sell table glassware on commission and was successful at it. Philanthropic people hearing of his efforts took pleasure in assisting him. An unknown business man one day sent him ten dollars. The lad tided over the situation nicely until his father got out of the hospital; now Albert is pursuing his studies again.

### A Newsboy After Twenty-one Years Builds an \$80,000 House

Twenty one years ago Oliver Wren was a newshoy crying "l'apers" on the streets of Brooklyn, N. Y. With the money he earned from the sale of the papers he paid his way through a shorthand school and became an expert stenographer. His first work as stenographer was done for a law firm. His next was in the office of Sheriff Grant at New York. Later he became confidential secretary to a firm of bankers in London, and afterwards held a like position in Amsterdam. While in London young Wren won first prize for speed and accuracy in a typewriting tournament. After remaining abroad several years he returned to the United States and was employed by Carnegie, Phipps and Company. When Charles M. Schwab became president of the United States Steel Corporation he made Mr. Wren his confidential secretary, and during Mr. Schwab's long trip abroad in search of health the young man transacted his employer's business as though the latter were present. He is now, after twenty one years from the time he quit selling newspapers on the streets, building an \$80,000 home in a magnificent park of seven and one-half acres at Montclair, N. J.

### Boys In Foreign Lands

Boys In Foreign Lands

FRANK SJOSTROM, Rosenhill, Hernosand, Sweden, age fourteen, writes us an interesting letter from his far away home. Hernosand is a small Swedish town on the coast of the Guif of Bothnia. He says that on the night of the twenty fifth of June it was so light that one could see to read outdoors at midnight, but then, to make up for it, he says, in winter it is dark till about nine o'clock in the morning and gets dark again at two o'clock. Frank says that, although now living in Sweden, he has not ceased to be an American boy, and he always wears a button of the American "Flag of the Free."—A. W. OOSTERBERG, Cape Town, South Africa, is working in a hardware store, learning the trade. He is interested in photography and stamp collecting, and is also something of an electrician. He would like to correspond with boys who are interested in electric motor cars, dynamo motors, and would also like to know how to make a storage battery for motor cars.—ACHILLE PETIT, St. Thomas, B. W. I., writes of the pleasure that he gets out of THE AMERICAN BOY. He was born at Monte Cristy, Santo Domingo, where his father is consular agent for the United States. He is spending some time now with his relatives at St. Thomas, He says St. Thomas has an area of about thirty nine square miles. To the west is the American Island of Porto Rico, and to the south the Danish one of St. Croix. St. Thomas boasts of but one town, Charlotte Analia, which he says is very pretty as seen from neighboring heights, the roofs of the houses being painted red and these being surrounded by green palms and the harbor near by. The town is well drained and clean. It has a floating dock where large ships can be repaired. It is largely used as a coaling station by seagoing steamers, and during the winter season many warships and pleasure yachts are in the harbor. There are two old castles on the island called "Blue Heard" and "Black Beard." Some think they were built by pirates, but the fact is they were built by pirates, but the fact is they

# The Drawing-Room Magician

(Begun in December, 1903, Number.) CHAPTER III.

N THIS chapter I propose to outline a series of simple but effective tricks in which coins play a prominent part. You will observe that, throughout, the cost of apparatus-if the right methods are adopted-will be in reality very trifling; thus the young ter. magician should be able to equip himself with quite a respectable "show" for a formed in the following manner. At the dollar or less. The next trick I shall describe, then, I call,

### THE INFLAMMABLE COIN.

In effect this is somewhat as follows: The performer takes a sheet of fairly stiff paper about four inches square. This is held up to the light to show the absence of any preparation, and a marked quarter or penny is wrapped up in the paper. In order to prove there is no possibility of its being abstracted the folds of the paper are sealed with sealing

On the table is an ordinary wax candle. The entertainer then addresses his audlence thus:

"Ladies and Gentlemen-In this piece of paper, as you are aware, I have a marked coin borrowed from a member of my audience, and so that the trick may be more effective, I have taken the trouble of sealing the package. I shall now endeavor to show you that by the concentration of will power upon the shown in the diagram (Fig. 16). This is flame of a candle I am able to produce secreted up the waistcoat, kept from heat of so great an intensity that the falling by the elastic band. (See Chapter coin, on being placed in the flame of the 2.) candle, will be immediately burned up, the component parts of the metal having hand. You make the "pass" (No. 3), the passed into the wax, which you will no- coin apparently being transferred to the tice has a peculiar effect upon them. See right, which is closed, while really it here! I take the sealed packet and hold remains "palmed" in the left. At the it steadily in the flame; you observe both moment you show it has disappeared, the the coin and the paper have burned left hand goes up the waistcoat to fetch quickly away, leaving nothing behind down the troublesome quarter (as well but a white ash. This I roll up into a as the tied-up pile). This latter takes small piece of sneezing paper-I beg your pardon. I mean tissue paper-transferring it to my left hand. If you will ing quarter, then, bending down and now watch me closely you will see that the small ball disappears entirely from left, you make a motion as if trying to my hand, and the result of the trick rests now in the burning candle!"

The performer takes the candle in his hand, and with his knife cuts rapidly

away at the wax. Inside is found the identical marked coin. If performed neatly, this trick is a very good one and will give rise to much speculation as to the manner of its accomplishment. The mode of procedure is, however, quite shall place the coin in the possession of simple.

You cut out your square of unprepared paper, placing in the middle the marked and assist me? then you will be able to coin. Now fold over two sides of the paper on to a quarter, and, as if for the edges, hold coin and paper vertical in the right hand, allowing, however, the coin to slip down on to the palm. It is, of purpose of folding up the other two course, still in the paper, but instead of the handkerchief, horizontally, between called the "enchanted handkerchief," on now at the bottom. center is its edge resting on the hand. (See Fig. 15.)

Next fold down about an inch of the piece of the bottom. You will now have a square of paper, in the outside fold of which is the coin. This will slip out quite easily on transferring the package from the right to the left hand and inverting it. Thus you obtain possession of the quarter, that to all intents and purposes is still in the folded paper, the scaling of which is, of course, only a "blind." With the "palmed" coin in the hand the performer takes up the candle to light it; at the same time he slips the coin into a vertical groove previously cut in the back of the candle. The sealed package is now burnt, while the ashes are rolled up into a ball of paper, which, on apparently being placed in the left hand, is really palmed in the right, thence to be disposed of either by a back pocket or dropped on the "servante" behind the chair or table, while, with the left hand, the performer makes the action of throwing the ball into the candle, which, on being cut open, reveals the marked coin inside. With the quarterwhich you have passed round to prove it is the original coin-back in your possession, you might well go on with a really mystifying trick, that I shall call

### AN EASY WAY TO MAKE MONEY.

First showing your hands perfectly empty (and with the permission of your audience having your sleeves turned up), take the coin in your left hand, saying you will show them how you can make

it travel. You transfer the coin to the right, when lo! it disappears, and is found up your waistcoat. By a little gentle rubbing, you find that the coin changes quickly into two, thence into three, four, and so on, eventually multiplying into a dozen or twenty. Out of such a trick as this you can make endless fun by a judicious selection of "pat-

This seemingly impossible feat is perconclusion of the previous trick, while the quarter is being handed round for identification, you pick up from your 'servante" a pile of quarters placed one on top of the other to the number of a dozen or twenty, the whole being kept together by a piece of thread, tied as

The borrowed quarter is now in the left up but little space, so will not be noticed in the left hand. Next exhibit the missbringing your right hand towards the force two quarters out of one, this action being but a pretext for breaking the thread. You next produce the coins one by one, until your astonished audience sees you have multiplied the quarters in a truly marvelous manner.

While on the subject of coin tricks, I yet very necessary pieces of apparatus with which the young conjurer should supply himself. The use of the first of these is quite clear in the following trick.

### THE FLYING COIN.

straightened circumstances, he finds himself under the painful necessity of borrowing a penny, in order to be able to perform his trick. Accordingly, one suitably marked is handed up. He then

"Ladies and Gentlemen-In order that you may satisfy yourselves there is absolutely no deception about this feat, I a juvenile member from among you. Here! my lad, will you kindly come here tell them how the trick is really done. Here we have the marked coin, over which I shall throw my handkerchief.

his fingers and thumb.) Performer con- account of its power of disappear

"At the word of command the coin will leave the boy's hand and travel to any top, and over this fold the remaining part of the room. I will just take hold of the handkerchief thus! Now grip the coin tightly, my lad. You are sure you have it? Very well. Heigh, presto! Fly! The coin has gone. The handkerchief, as you observe, is perfectly empty, the penny being here, as you see, under the collar of this gentleman's coat. Is this your coin, sir?'

TRUE COURTESY

### Boys who make money after School Hours N A DAINTY little booklet, which we will send to any boy free, twenty-five . out of more than three thousand bright boys tell in their own way just how they have made a success of SELLING The Saturday Evening Post Pictures of the boys—letters telling how they built up a paying business outside of school hours-interesting stories of real business tact. Some of these boys are making \$10.00 to \$15.00 a week. You can do the same. No money required to start. We will furnish ten SATURD copies the first week free of charge, to be sold at five cents a copy. You can then send us the EVENIN wholesale price for as many as you find you can sell the next week. Post \$225 IN EXTRA CASH PRIZES will be distributed NEXT MONTH among Boys who sell Five or More Copies Weekly. If you will try it we will send the copies and everything necessary. THE CURTIS PUBLISHING COMPANY

The gentleman nods his assent, and a really perplexing trick has been accomplished. The whole secret lies—as the sharp reader may already have guessedin the performer's handkerchief. This is an ordinary one except that one corner has been unstitched, and a coin, the same may as well mention one or two simple, size as a quarter or a ponny, sewn in. As the performer takes the marked penny and covers it with the handkerchief, he drops the borrowed coin into his right hand, and gives the coin in the handkerchief to the boy to hold. The rest is simplicity itself. A sudden jerk The conjurer announces that, owing to of the corner of the linen takes handkerchief and the coin from the boy's hand; then, as the weighted end drops, the performer takes it in his left, shaking the fabric to prove it is perfectly empty. Meanwhile, in his right hand, is the marked coin, still "palmed." Walking up to a member of the audience, the conjurer apparently produces it from some part of the onlooker's clothing, much to the wonderment of the others.

\$60 ARCH STREET, PHILADELPHIA, PA.

This handkerchief with the coin in the corner will frequently come in useful whenever the performer has occasion to want a borrowed coin in his possession, whilst all the time it is-so the audience believe-held under the handkerchief.

Another very useful thing, which can be made quite easily, and at a cost of (The boy holds the coin, covered with about six or eight cents, is what is often various small articles from a button up to a pack of cards. As in the previous experiment, the borrowed article-say, for instance, a playing card-is covered by the handkerchief. The latter is pulled quickly away, and the card has vanished. This piece of apparatus is made in the following way.

Procure two fairly large sized gentlemen's handkerchiefs, both exactly alike, In the middle of one of these cut a slit about four inches long, which get your sister to hem round the edges to prevent the rent becoming larger. Now ask her to lay one handkerchief upon the other and sew together the edges. If the work be done neatly the whole will appear to be nothing more than is usually used, especially as, when you draw it from your pocket, you shake it out, with the unprepared side towards those who are watching you. Next, taking the card in the left hand, you cover it with the handkerchief, at the same time slipping it into the pocket-like arrangement between the two, with the result that when you jerk the whole from the holder's hand the effect is that the card has disappeared.

By a judicious use of these few "fakes." together with a combination of the various "passes," an endless number of mystifying coin tricks can be arranged, the great advantage in this kind of entertainment lying in the fact that all the necessary apparatus is capable of being crammed in the pockets, which will thus contain sufficient for a really presentable "show."

(To be continued.)

ered in the Cheyenne River valley added work of us if they once tasted our blood. not a little to the excitement. People into the country from the four corners of the earth

At that time I was connected with the Fargo (D. T.) Daily Republican. I was excitement one morning, by the managing editor, and in carrying out the order. I had an experience that I shall never forget.

The Cheyenne River valley is a deep cut in the rolling prairie, varying in width from one to three miles. Fifteen miles River rose to a height of a hundred feet. The surrounding country was almost wholly unsettled. Occasionally the traveler would happen upon the "shack" or turf house of some settler. These places of abode were many miles apart, and the journey to the "diggin's," over the muddy bluffs overlooking the valley, was anything but pleasant.

At Lisbon, a small town at the lower end of the valley, I found an Irishman by the name of O'Neil, who agreed to take me to the "diggin's" and return with me to Lisbon the same day in time for me to telegraph my report to the Republican and the Herald for publication the next morning. O'Neil had a pair of strong-limbed horses and a roomy, twoseated farm wagon, and before the sun had risen the next morning we were on our way.

The trail was exceedingly rough and it was four hours before we reached the camp of the prospectors, and I climbed out of the wagon as ravenous as a wolf and as stiff and sore as a rheumatic

The "diggin's" were in the bottom of a narrow ravine or gulch extending into the bluffs a quarter of a mile. On each side, the jagged walls ran steeply up a hundred feet or more, and they were scarred and torn by pick and shovel.

I spent several hours in the camp and it was late in the afternoon when we started on our return to Lisbon. As the sturdy horses dragged us up the steep trail from the gulch to the prairie above, the shadows began to thicken and before we had gone a mile it was so dark that I could hardly see the horses from where I sat on the rear seat; and to render the prospect more dubious, a heavy fog drifted over us and shut us in so that we could hardly see beyond the dashboard.

For an hour the horses plodded slowly along. O'Neil, sitting on the seat ahead of me, drew his head down as far as possible into the collar of his great fur coat, until he looked. In the dark, like a huge

ing out a jantern, lighted it. "Of tink down from the wagon to investigate.

He was right in his surmise The one of the wheels had sunk into the yielding mud nearly to the hub.

We soon lifted the wagon out and hegan searching for the trail. We wandered over the prairie in every direction for more than an hour, but could find no trace of the beaten path. We were obliged at last to face the fact that we were lost, and this was a serious matter, for to go ahead aimlessly in such fearful horses were liable to wander into a we might all go under and our fate never walk ahead with the lantern, and let medrive the horses in his wake.

Our progress was slow and monotonous. but it was the only safe way to get ahead. We had traveled in this fashion upwards of half an hour, when my ears caught a sound like the sharp, quick yelp of a dog, that came swinging through the fog and gloom from away to the rear of us. I noticed that the lantern, a few rods ahead of the horses, hung motionless for an instant, then that peculiar sound broke the stillness again.

O'Nell ran back to the wagon, and turning his frightened face up to me, hoarsely whispered, "Thim's wulves!"

This information sent the blood flying through my veins, and grasping O'Neit into the wagon, and thrusting the lines his hound.

PIN the fall of 1884, there was a great into his hands, bade him drive for dear estate "boom" in the northern part life. I was well enough acquainted with of the territory of Dakota, and the the gray wolf of the Dakota prairie to report that gold had been discov- know that the pack would make short

Once more the yelp at the rear of us to the number of many thousands rushed shook the gloom with startling distinctness, and O'Neil brought the whip down on the backs of the horses with such force that they sprang forward as if shot from a gun. It was a wild race. The terdetailed to visit the scene of the gold rifled horses tore over the ground like mad, and the excited driver urged them to greater exertions with whip and voice. We must have covered ten miles at this pace. The horses were evidently weakening, while the howling and yelping of the wolves had grown nearer. They were rapidly gaining upon us, and as 1 up the valley were the "diggin's," at a peered back into the gloom, it seemed point where the banks of the Cheyenne as if I could see their shining eyes and the glitter of their white teeth. The situation was becoming serious inded. Hope of escape had about died out within me. when there was a crash, and O'Neil and I went flying through the air and landed in a confused heap in the midst of a hay-stack. The wagon was overturned by

of

His

It is a curious custom. No one can even guess when or how it began. Old men

erated horses galloped away into the isting in their own young days. It has you so far forget yourself as to question been for generations the carnival night a boy you will have your answer prompt We scrambled out of the pile of hay and of Portland's year-the time of loudest and unhesitating. He found them. Boys crackers left out, but with the fires left up and keep the key in your pocket. It looked as if we were to be devoured in, and multiplied and increased beyond is apt to know.

> In former times it was the custom to save up the discarded tar buckets and empty pitch barrels used in the shipyards, to burn on this night. With their pitchy contents they made a furious and long continuing blaze. It is from this custom that the celebration takes its name. But there are no shipyards now, and consequently no tar buckets; so the everything that will burn. Nevertheless the name clings,

In those same early times the city was divided into various localities, with more or less classic names, such as Joppa, Clay Corner, Hogtown, Sandy Hollow, Nigger Hill, Gorham's Corner, Christian Shore, and Libbytown. Each section had its clan or "gang" of boys, between which and all other "gangs" there was constant rivalry and feud. On the night of Washington's Birthday a gang would mount its tar bucket or barrel on a sled, and have gray hair or no bair at all to speak start out for war. The approved uniform for the occasion was simple, if not ele- vers' offices, or on professional visits in gant; the most ragged clothing obtain- sick rooms, or directing great financial able-a tall hat, a piece of rope tied enterprises from their counting rooms. around the waist, and a stout stick with

later than February 20th. A similar prize will be awarded during the month of March. Freshness, unity, virility, interest, action, style, will be important points

Requisites to Successful Debating

A debater must be positive in his

A debater must be positive in his statements, but avoid exaggeration. Do not overstate the question in the beginning and do not over-argue it afterwards. It is said of Abraham Lincoln that he studied Euclid in order to learn when a thing is proved, and there have been few more successful debaters than he. As by instinct, the disputants should not only grayn the subject as a whole

discussion whose several parts are out

atoms, established the case, and won the verdict.

A Perennial Subject

Some phases of the labor question are

likely to become as perennial as the old tariff question has been for the last one

hundred years or more. At any rate, new phases are constantly developing, and out of it all there is chance for discrim-

ination as to the amount of good from trade upions in the elevation and advance-

ment of the condition of the laborer, and of evil in the enmity and strife between labor and capital. Instead of giving an outline. I will state a few of the principles involved in this question of trade

in favor of a selection.

American Boy Lyceum.

terest of the laborer. This phase of the subject must be studied in connection with the natural law of wages, of supply and demand, of competition.

Question: "Resolved, That trade unlons promote the best interests of workingmen."

### A Debating League

A group of eight schools in Philadelphia and vicinity have a debating league. They are the Wm. Penn Charter School, Haverford Grammar School, Germantown Academy, Delancey School, Brown College Preparatory School, Swathmore Preparatory School, George School. Dr. Lee, of Johns Hopkins University, in his "Principles of Public Speaking," has stated so clearly some things that it is well to keep constantly in mind that I will give them to you in his own words Preparatory School, Swatnmore Preparatory School, George School. There are four preliminary debates, two semi-final, and late in the school year the two teams which have each won two debates have the final. This is a valuable way to increase interest in debating and ought to be adopted by other communities. communities.

### Abraham Lincoln

First prize essay under terms of contest announced last month. Winner, Charles Man-chester, Eau Claire, Wisconsin.

he. As by instinct, the disputants should not only grasp the subject as a whole, but know exactly what and how much proof is required to establish it. In order to create a strong impression, youthful debaters are apt to exaggerate the opening statement, and to place undue importance upon subsidiary propositions. It is a bad fault, and invariably leads to a disjointed argument, and to a discussion whose several parts are out Abraham Lincoln, one of God's noblemen, was born on the twelfth of February, 1809. He was born of poor parents in a humble home in what is now Larue County, Kentucky. Later the family moved to Indiana and thence to Illinois.

His youth was spent in toil, which helped to mold his future character. His

discussion whose several parts are out of proportion.

While questions are established by a few points, it is not always easy in preparing for debate to determine what these should be. All minds are not constituted allke, and what may seem a contincing reason to one may not appear so to another. There is need of a discriminating judgment, therefore, in selecting the arguments to be advanced. The disputant himself may fall into error along this line and weaken his cause by a bad choice. Yet it is better to have a few points adequately stated and proved than too many left in a nebulous condition. points adequately stated and proved than
too many left in a nebulous condition.
A few propositions clearly set forth and
enforced by facts will create a more
abiding impression than can a multitude
of insufficiently supported arguments.
An anecdote is related by Mr. E.
Parker, in "The Golden Age of American
Oratery." Universating the truth of which

helped to mold his future character. His father was not very energetic, but he had a sood mother. She died when Abraham was nine years old. What he owed to her can best be expressed in his own words: "All that I am, all that I hope to be, I owe to my angel mother."

The books that he read were typical of the future man—the Bible, Acsop's Fables and Pilgrim's Progress. He was far in advance of his companions in the athletic accomplishments of his day.

He served in the legislature of his own state, and also the United States. As a lawyer, Lincoln was always upright and honest. In 1858 he had the great contest with Douglas, in which Douglas was elected Senator, though Lincoln was generally conceded to have had the best of the debate. the debate.

An anecdote is related by Mr. E. Parker, in "The Golden Age of American Oratory," illustrating the truth of which we speak. Webster and Choate were once opposing counsel in a sult involving damages for the manufacture of imperfect carwheels. Mr. Choate spoke to the jury for two hours, endeavoring to show that the manufactured wheel and its model bore no resemblance to one another. He sought to establish his contention by intricate reasoning and a long once opposing counsel in a suit involving damages for the manufacture of imperfect carwheels. Mr. Choate spoke to the jury for two hours, endeavoring to show that the manufactured wheel and its model bore no resemblance to one another. He sought to establish his contention by intricate reasoning and a long discourse upon the fixation of points. It was a labored, exhaustive and convincing argument. But Mr. Webster, in his reply, stood for amoment with his great eyes a vision of what the coming struggle would cost our country. How Lincoln guided the country through the valley of the shadow, can best be expressed by Walt Whitman's poem, "Oh! Captain, My argument. But Mr. Webster, in his reply, stood for a moment with his great eyes wide open, gazing intently upon the two wheels lying before him. Then turning to the jury, he said: "Gentlemen of the jury, there they are—look at 'em." This one point, made as only Webster could make it, shivered Choate's argument to Captain

Lincoln felt the loss of every soldler who died for "God's country" as keenly as if it had been his own son. The one bright ray of light in Lincoln's life during the war was his mischievous son, "Tad," who died soon after the war be-

After the war Lincoln's spirit was not After the war Lincoln's spirit was not one of glorification over victory, but of sorrow for the desolated homes in the north and south, and sympathy for the men who had given their all for the sake of the Lost Cause.

But the brightest star that ever shone

on the horizon of American history was doomed to set on the night of the four-teenth of April, 1865, when Lincoln was shot by John Wilkes Booth in Ford's theater.

theater.

The great soul of Abraham Lincoln, the man who had guided our country safely through those four long, dark years of civil war, who had stricken the chains of slavery from four million human beings, passed into eternity.

Would that every "American boy" might go through life as Lincoln did, "With malice toward none, with charity for all, with courage in the right as God. ciples involved in this question of trade unions and give references to valuable articles upon the subject in recent magazines. It is acknowledged that the condition of the laborer has advanced wonderfully since the establishment of trade unions. Has it been on account of the unions or in spite of them? Read Walker's "Political Economy," or any good manual on this subject for the history of trade unions and the condition of labor before their establishment. The unions try to regulate wages in the in-

# How to Become Strong

IN EIGHT P A R T S - P A R TFOUR

get a good body.

thing that can be acquired.

Look around you and see how many per-

THE WRONG WAY

"work," even when they talk. Some people can't even laugh heartily, because they haven't "gumption" enough to do anything heartily.

It's the same old thing that you see in you do, do it with all your might.

Make your body do any exercise correctly and "with all your might" twelve practice, of course, he must be supported times and you will gain more than if it by the seat, because otherwise his merely plodded through the same exer- muscles would be taxed too much in supcise one hundred times.

biceps exercise with it in a nice, easy, lazy manner in front of a mirror. Then set your teeth and brace every muscle Now do the exercise and see how differently your muscles are showing all over your chest, stomach and arms.

exercise in the world will give you fine their thwarts when pulling at their oars muscles. Without it you can work stead- and do not sink back on the seat till the ily for years and get it only slowly.

It is the motion of raising and lowering in somewhat the same way. the upper arm swiftly with the elbows held tightly to the sides. If you wish to don't squat. You haven't gone into the

NY boy, no matter how weak and see what can be done with this and what puny he is, can become strong and cannot be done, look at the photographs showing the same boy doing the same Strength is not a gift. It is some- motion in the wrong way and then in the right way.

When he posed for the photograph young and old, dawdle. They showing the wrong way, he was indawdlo when they walk, when they structed to do the exercise in the easiest way possible, and not to exert himself in the least. Then he was told to do it by bracing all his muscles. The photograph shows the enormous difference. It is hard to believe that the same boy could have posed for both photographs. Thus it is easy to see that the boy who exercises indolently could not possibly get the benefit from one hundred motions that can be obtained in even half a dozen done the right way.

To realize how important a part the "bracing" of the muscles plays in their development, stand in front of a mirror again with your elbow held firmly to your sides and your upper arm extended at a right angle. Now, without moving the arm at all, simply clench your fists as tightly as you possibly can. Clench them as if you were trying to force your finger tips through the palm of your hand. Alternately loosen and tighten the first and observe how your biceps and triceps muscles and the muscles of the lower arm expand.

After this experiment you will not need to be told that you could make your muscles grow merely by "bracing" them. This habit of "getting a brace on" your muscles shows nowhere to such advantage as in rowing. The person who rows with all his muscles working properly makes a fine spectacle. The person who merely "pulls" the boat, crouching in it and tugging at the oars, looks like a rag alongside of the finished oarsman.

In the first place learn that the thwart of the boat-the seat, whether it is a the maxims in your copy books and in sliding seat or a stationary one—is there the proverbs in your readers: Whatever merely to let the body rest on it. Theoas well without a seat as with it. In porting his body. But for the direct act Lift a one-pound dumbbell and do the of rowing, the seat is not to be considered.

When the upper body is well pulled back and the legs are extended in front of your body as if somebody had hold and firmly placed against the "stretchof you and were trying to throw you, ers"—the sticks that furnish a brace for the feet-the weight of the body on the oars is practically sufficient to keep the oarsman in position. In fact, in some With "gumption," the simplest forms of countries the native oarsmen rise from blade leaves the water and they begin Take, for instance, the most simple to recover the oar. You must never let their dive underneath the keel, with the reweight get away with you. At any mo- sult of upsetting the boat. ment you must be ready to lift them clean out of the water. This is vital. It man who dips his oan too deep often sucmay be necessary for any one of a hundred reasons. Many boats are capsized ping the our short off. No one who has every year because the oarsmen did not not experienced it can imagine how imhave enough command over their oars to mense a pressure the water can exert on jerk them out of the way of other boats an oar blade that is shoved in too far. or of obstacles that caught them and dragged the boat over with them.

and square in the water, just deep enough for the whole blade to be covered and no more, brace your shoulder muscles and gather them in. Instantly, his back into the bottom of the boat. but without a jerk, you must pull with all your might. Pull with your upper arm and shoulders and back and loin and abdomen. Your thighs and calves dent. must swell with the pull. Even your toes have to help.

as the first part was. It is their duty, of the hands throwing them in such a into your sides and sweep back beyond it shall "bite" the water until the very last possible moment.

Many oarsmen practically cease rowing before they come to the real recovery. like the dropping of a piece of velvet. As soon as the labor begins to fall on

boat to take a loaf. The stern sheets the arm muscles, their bodies straighten are the place for lounging. Sit up out and the oar begins to leave the straight. Make the small of your back water. They lose fully one-fifth of the stiff. It has to hold your upper body. stroke and, consequently, must row six Clench your hands around the oars so strokes to another man's five to remain

If you never have rowed at all, the

Learn first to sit in the boat. Observe swing back and forth slowly and steadily as if you had oars in your hands.

Then take the oars and learn to lift both of them into the rowlocks with one motion. You will find that they seem extremely clumsy and hard to handle; and at first you will feel as if you never could get them out without using both hands to each oar. Indeed, many persons always put their oars into the rowlocks that way, even after they imagine that they have learned how to row. But it is utterly wrong. Let the boat remain moored to the float and practice at "shipping" your oars until you can put your hands to them, lift the blades and drop them both into the locks at the same moment. And when they are thus "shipped your hands must be gripping the oars so that you could, if necessary, row off instantly. Before the oar is in the water, you must be ready in position. There must be no shifting into position

This is a most important matter. If you were caught at anchor, for instance, in a sudden squall and your boat began to drag toward a reef, you might have to haul in anchor or cut the cable and then get back to your thwart, ship your oars and row almost with one motion.

After you have learned to ship your oars, learn to dip them into the water. Do not try, at first, to make a stroke, but just let them extend at right angles from the boat and practice the art of dipping them just deep enough. Remember that, But if they go in too deep, they will sink in

When rowing in heavy seas, the clumsy ceeds in capsizing his craft or in snap-

Equal care must be taken not to put the oar into the water in such a way As soon as the oar is dipped straight that it will emerge too soon. In such cases it will "snap" out suddenly when the rower is pulling his hardest, and the result is that he falls head over heels on That is called "catching a crab," and it isn't so funny as most persons think it is. It has caused many a drowning acci-

When the art of dipping the oars properly has been learned, practice the art of As the oar comes home your biceps and unshipping the oar. Bear down in the triceps will have more and more work to inboard end of each oar till the blades do. It is their duty then to make the are clear from the water. Then spring last part of the stroke just as powerful them out by a sudden downward motion too, to make the recovery pretty instead way that the oars will lie at right angles of clumsy. Your elbows should close across the gunwale just behind the rowlocks. The next motion will pull them your body, while the arm, held at right inside of the boat and lay them where angles, sweeps the our in firmly so that they belong. In neither of these motions must the oars be permitted to fall heavily. A good oarsman can ship and unship his oars so softly that they fall into place

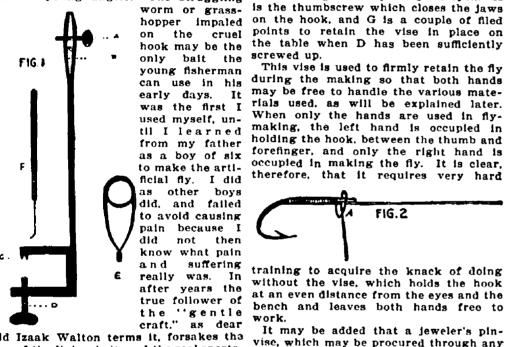

(To be continued.)

**HOW TO MAKE FLY** AND BASS FISHING

matter how young he may be, is NY boy who has a love of fishing, no and tie his line to a pole cut from the banks of the pond or stream; and if he catch fish "then is no man merrier than he is in his spirit," as the dear old lady-angler, Dame Berners, more than five hundred years ago said, in the first book ever written on angling in the English language.

But it is not all of fishing to fish-which means that when you have baited your hook with the wriggling and suffering worm, or grasshopper, and cast the bait in the stream, and even hooked and brought to bank a speckled trout, you have not done all, nor felt all the joy and pleasure there is in fishing. The mere capture of the fish is partly due to that odd thing termed luck—and nobody knows what that is, though many think making, no tools were allowed or thought they do-and partly to the skill with necessary. The fingers only were used, which one fishes. It is not possible to and to this day I seldom use anything tell all the number and kind of qualities else, though the modern fly-tier finds which go to the making of the boy who usually catches more than his friends do. readers will also be much aided in their It is a very sure thing, however, that he who does this as a boy will do it as a man, and will apply the same spirit to trate. the more useful and important affairs of ilfe.

As in every pursuit, a complete knowledge of the best tools and how they are made and used is a most necessary thing for the young angler. The struggling

old Izaak Walton terms it, forsakes tha use of the living bait, and the real sportsman would disdain to fish with live bait for trout or any other fish that will rise to the artificial fly or minnow.

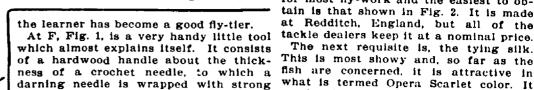

Angling with the fly is the most refined of the arts of fishing, and the sooner the young angler learns to make his own fly tackle the better he will be pleased with results of his fish-basket, and the more his conscience will be relieved from the regret of giving pain unnecessarily.

It is the object of the writer to explain, plainly, precisely and practically, in as few words as possible, the way to do this, so that any boy of ordinary ingenuity and power of application may teach himself the rules and methods of fly-making, and by adding practice! practice! practice! he cannot fall to learn an art which is the most interesting and useful of all pastimes with which I am acquainted.

USEFUL TOOLS FOR FLY-MAKING.

TACKLE FOR TROUT

Making," "The Boys' Own Guide to Fishing," etc., etc.

later in the article). The darning needle is to be bent by enough to draw the temper and not to render it very soft. When it cools it can be bent as shown, without breaking.

thread (waxed with the wax I shall give

The use of this little hook is to draw the waxed silk through the loop which ties and finishes all fly-work (Fig. 2 A). The tips of the fingers are usually too clumsy to easily do this, but the curved point does it to a nicety.

A pair of embroidery scissors, small and of fine points to the blades, are needful in all the processes of tackle-making. Be careful, however, not to use them in cutting hard gut. For this purpose use larger shears.

### MATERIALS FOR FLY-MAKING.

kinds, for fresh water fishing are snelled

points to retain the vise in place on the silk glands of the silkworm, from whose thread the silk of clothing is made. The worm is fed and allowed to grow till it can eat no more, and then thrown into vinegar and water, which kills it and hardens the skin and intestines. The gut or intestine is then taken from the worm and drawn longer and longer between each hand of the drawer, till it reaches from ten to twenty inches or even more, when it is twisted at each end and around two pins and allowed to ficial fly. I did therefore, that it requires very hard dry for twenty four hours. It is then boiled in soap and water and the yellow skin which is on it is then easily removed. The strand of gut is then like glass in its clear appearance and should be round and very strong if it be of the best quality. It comes from Murcia in Spain.

I have taken the time to explain what the snell on a fly-hook is because it is an essential part of the ordinary fly. Fig. 2 shows how it should be attached and how one is to tie the half hitch which secures the whipping or waxed thread.

The end of the snell the farthest from the hook must have a loop, and in Fig. 3 is shown a very simple but sure loop. It is used by those who climb the Alp Mountains in Switzerland, and has saved many a reckless climber because it does not slip. A is, of course, the long end of the snell, B and C are two simple round knots tied on the short end, and the long end is slipped through these and B and

while the hands remain free to pick up C are pulled tight together till they form one knot of the two. This is the best

knot I know of for loops.
Fig. 4 is the bowline knot, which when and feather, and are useful at odd times, pulled tight is a very secure and pretty As they can be made by any boy who is little oval-looped knot. A great many of handy at wire work. I give this diagram, the fly-tiers who come from England tie Forty years ago, when I learned fly- for the worth it really possesses when this knot, and it has the good quality that

it never closes too tight on that which it is attached to.

The next article of great importance is, By J. Harrington Keene, Author of "Fly-Fishing and Fly- of course, the hook. The makers of hooks are many, but the shape I prefer for most fly-work and the easiest to obtain is that shown in Fig. 2. It is made at Redditch, England, but all of the

The next requisite is, the tying silk. This is most showy and, so far as the fish are concerned, it is attractive in what is termed Opera Scarlet color. It can be obtained at almost any dry goods store, and costs 10c per spool.

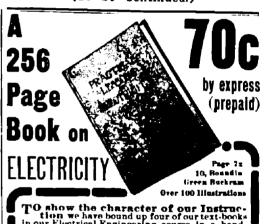

A white or colorless wax, which of being heated in the gas jet of flame just course does not darken the brilliant color of the tying silk, can be easily made as follows:

> Best white resin, 2 ounces; beeswax 1/4 ounce. Simmer these together in a tin pan till melted and stir together for ten minutes. Add beef tallow or suet 1/4 ounce, and simmer and stir for fifteen minutes more, and then pour the liquid mixture into a basin of cold water and, taking care not to burn yourself, pull the plastic mass as if you were making candy, wetting your hands occasionally so that it does not stick, until it cools. Keep on pulling until it becomes very white. The more it is pulled, the whiter it becomes.

When a fly is finished it is usual to All fly-hooks, and indeed hooks of all touch the finish or head with a colorless varnish, which dries quickly and will or attached to a length of silkworm gut. not be hurt by the water when in use. This clear, glass-like thread is not "cat The best varnish is that made with gut" as some suppose, but is made from bleached or whitened shellac, to which is added alcohol till the shellac is dissolved to a liquid of cream-like consistency. It should be applied by means of a small camel's hair brush.

The above are the tools that are required in practical fly-tying, and their cost, in all, is quite small, especially if the learner be ingenious and can help himself.

### United States Marines Farming on Land Allotted Them by the Government

Paternal Uncle Sam, ever watchful of the interests of his large family, has observed with concern that the mess tables of the rank and file of the army are not supplied with fresh vegetables in as large quantities as the health and appetites of the soldiers demand. A happy idea occurred to the kindly gentleman. Why not allot vacant land to the soldiers and let them raise as much "truck" as the tables in the barrack dining room will hold? All army posts and marine barracks are situated in places where vacant land is at a discount and there has been no trouble in putting the idea into execution on the score of lack of space. At League Island Navy Yard, where a large force of marines is always in barracks, the farming idea has been taken up with enthusiasm. The accompanying photograph shows a scene on the ground where the vegetables are cultivated by the men themselves. At the sound of the bugle the soldier-farmers fall to work, clearing ground, weeding, sowing or spading, in the interests of the barrack room table. When the detail has worked its allotted time, the bugle is blown again and the men march back to barracks, another company of soldier agriculturists taking their places. It is fun to the men, as the photograph shows, and the result as seen on the tables at the mess is entirely satisfactory.

WAS in the fall of eighty four time that the following event took place.

We had been having good success with the beaver and otter, when one day in making the rounds of our traps, we were much dismayed to find three of them entirely torn from their fastenings, but still containing the mangled remains of three beaver, whose pelts were, of course, entirely ruined.

Eb swore long and loud. Then turning to me he said: "We might as well pack them.

So I proposed to Eb that as this was our first ill luck, perhaps we had better move our remaining traps farther up the river and reset those that had been torn up, with the hope of eatching whatever it was that had annoyed us. Finally Eb. consented to this, and for four days our that the eagle could not escape, we detraps were untouched. But on the fifth cided to take it alive, and I hastened to day, as I made my rounds, I found four camp for the big bag in which we more traps pulled up and four fine beaver stored our pelts. Then Eb and I cut pelts again rained, which meant a loss of twenty dollars to us.

That night Eb and I held a council of war, and it was decided that one of us must go to Seattle and bring back bird's struggles gradually became arsenic to poison the varmint that was spoiling our eatch.

The next day Eb started for town, and during his absence I staid in camp, for the sheep ranges, for, guard the sheep would have been free. as they would, the herders were losing whole thing was that the sheep were camp carrying the bird between us, not eaten, but were torn and mangled as if for the sake of killing.

"It cannot be wolves," said Eb, "for every night the dead bodies of the sheep are found in the corral, and the sheep men talk of offering a big reward to anyone who will kill the varmint."

"And if they do," I broke in, "we will whatever is killing those sheep is killing our beaver. So now, let's go to bed and try our luck in the morning.'

The next day we set all our traps with poisoned bait, hoping that we might kill our enemy, but it was no use; just as long as we kept the poisoned bait in the traps, they were not disturbed.

So on the third day we removed it, but found on our next trip that two of the traps had entirely disappeared, while hunt as we would, we could find no track in any direction.

"So you see," said Eb, as we discussed the mystery, "it ain't anything that lives on land, so it must be something that comes from the water, but what it is, I

After talking it over, we decided to make a trip to town, get more provisions, and then strike for the Mary River up in

The next day Eb started with the pack horses, for it was our intention to load snow-laden air which followed him into up enough food and ammunition to last the warm kitchen. through the winter. When he returned I could see by his looks that he was stiffened fingers above the hot stove, and much excited, and without waiting to wiping the icicles from the ends of his unload the horses, he cried, "Frank, we long moustache; "it's been about the are going to stay right here and make more money than all the beaver in Mary more fowl along. They're sellin' like hot River would give us. The sheep men cakes at thirteen cents, and not half have offered two thousand dollars to enough on the market at that." He anybody that will kill that varmint, and spiffed approvingly the appetizing odors I think we've found out what it is.

"When I came by the Big Frank sheep ranch, I met old Mexican Joe, and he told me that three nights ago, he had up quickly. counted and corralled his sheep for the night, and, having smoked his elgarette, he said quietly, "and it's just the day for he rolled himself in his blanket and lay a hunting-trip. I'm glad I've got my down by the corral gate. Sometime in gun in good shape." And he began gaththe night he was awakened by a great ering together the scattered tools on the noise, and looking up he saw two im- table. mense birds circling over the corral. At first, he thought they meant to attack full of ice. Better walt, hadn't you?" him, but instead they dropped into the corral and the sheep commenced bleat- heavy boots and replacing them with a the decoy ducks floating near the oppoing most piteously. He jumped up, let in the dogs and ran to the house for laughed. help. When the men got there the birds dogs were dead.

"So now the sheep men have offered this reward and we'll unpack and decide how about what you said the other day.'

For I have forgotten to mention that that old Eb Stebbins and I went several days before I had seen two trapping on the Little Sweetwater gigantic birds hovering over our traps. in Idaho; and it was during that and had even suggested to Eb that perhaps they were the cause of our trouble. but he had laughed so that I let the matter drop.

But now since the question seemed settled, we talked of nothing but how to catch the eagles—as we knew they must be. The next morning we set one baited trap and a number of others all around it, in the hope that the eagles in walking around the object of their attention would step in one of the other traps. up and break camp at once, for this is Nothing of the kind happened, however, the work of wolverines, and the man and at last Eb became so discouraged don't live who is smart enough to catch that I promised to break camp and set out for Mary River unless we had a de-Now I didn't want to break camp, for elded turn of luck. But that very afterwe had been to considerable expense to noon, as we started to visit the traps, we get into that part of the country, and saw at once that we had caught somewere now nicely located for the winter, thing. And to our joy, when we had come nearer, we discovered one of the largest eagles that I ever saw.

At sight of us it began to struggle so flercely that we feared it might break loose, but we had anchored the traps too securely for that. When we were sure down two forked poles about ten feet long, and with them we took turns in pushing the eagle's head under water. After doing this a number of times the fainter, until we knew that he was alslipped the bag over his head and drew turned upon me again. It carefully over the wings. We carried them pulled up and the pelts spoiled. On not arrived any too soon, for the jaws the fifth evening Eb arrived with the of the trap had almost cut through the supplies, and in telling the gossip he eagle's leg. In fact, there were only had heard in town he said that there two sinews that were not severed; a few was a good deal of excitement over on more struggles and the mighty bird

While the singular part of the lars," as Eb called it, we started for

A sharp cry from Eb caused me to turn my head, and there I saw him defending himself from the mate of the captured received a blow from the bird's wings that knocked me almost senseless, and

mentor. But every time he raised his directions; but when the excitement head the bird would renew the attack, abated, a large number of fine fowl were the water and was almost within strik- sprang into his boat and rowed over to most drowned. Then creeping up, I ing distance when the eagle left Eb and them, gathering them into his stout

Quick as a flash, Eb threw himself it was no use to set traps just to have it to shore and then saw that we had upon its back and while he held it I struck it a blow upon the head that warned him that it was too late to wait stunned it. The rest was easy, for we was dead.

> When we could wade ashore, we threw ourselves down to rest before taking Highly elated at our "Thousand Dol- account of our bruises. Eb's clothes were almost torn from his body, and we were both scratched and pounded all

But that didn't stop us from starting for town the next day, where we proudly eagle. Running to my partner's aid, I displayed the two eagles and received the two thousand dollars.

And so what at first had threatened when I could struggle to my feet, Eb and us with disaster turned out a big investthe eagle were in the water. The river ment for us, and enabled us to carry out

Grabbing a club, I, too, rushed into floating helpless on the water. Aleck gamebag, and making a quick mental calculation of the results of his afternoon's work; for the position of the sun for another shot. He turned the boat, held it under water till we were sure it hoisted sail, and started homeward. The wind was still blowing down stream and always dangerous, was now doubly so,

because of its masses of floating ice. The sail flapped and filled; a sudden gust almost overturned the boat, and, as Aleck was righting it with a quick jerk, a huge jagged cake of ice, caught in an unseen eddy whirled about and crashed against the boat. There was a horrible grinding, tearing sound at the side of the "Valkyrie," and a stream of icy water began to pour in over the boy's

Here was a situation to try the mettle of any boy; the sail must be sharply

of any boy; the sail must be sharply looked after—the boat must not drift down stream, whither the wind was fiercely urging it; other ice cakes must be avoided, and somebody must keep the boat bailed out. How inefficient seemed a single pair of eyes and hands.

Aleck caught up the bait pail from the locker, and bailed with all his might, his eager mind on the alert. His glance fell upon the gamebag, and, tearing it open, he seized one of the largest of the ducks and thrust it head foremost into the leak, cramming it with all his strength against the opposing force of the water. The thick plumage and soft flesh conformed readily to the shape of the jagged rent, and filled it solidly and firmly for

he wind, and the boat sped outward.

All along the river great ice floes were plainly seen, and between him and the shore lary a field of floating ice, a little out of the swift current. But down below, close to the shore, and separated from it by only the length of a wooden bridge, was a small island on which a

"If I can only reach that," thought Aleck, struggling with all his might to reach the shallower water nearer the shore. The sail, flapping and wet, tugged flercely at his restraining hand; but in the end obeyed his guiding, and carried the boat sufely out of the current and into the quieter water. Here when he found at last that he could touch bottom with an oar. Aleck hauled down the sail with all possible speed, and worked vigorously grasping the oar with both hands and pushing the hoat through the floating ice. If the duck's body would only hold out another five minutes. He was nearing the island and saw the old reach the shallower water nearer the was nearing the island and saw the old janitor at the water's edge, waving frantically and holding a coil of rope in his hands. A little nearer—nearer—and his hands. A little nearer—nearer—and at last, with a shout of thankful joy. Aleck caught the rope and made it fast. and with the aid of the janitor, was safe

The ragged, bleeding object dangling from the side of the boat made the old man's eyes open wide. He bent over and examined it, then gasped with astonishment.

"Stopping up a leak on this river with dead duck!" he exclaimed, "why. a dead duck!" he exclaimed, "why, there's not another man or boy on this continent that would come out of a scrape like that alive. My boy, I'm proud

to know you!"
"I tell you." said Farmer Wilson imtook careful and deliberate aim and fired, the shot scattering among the whole moving mass of ducks.

There followed a wild squawking and the state of the shot scattering among the ture to an interested group in the post-office next day, "it took nerve—yes, sir! But that boy's got it. And he's made a And he's made a cheerly to his father, who was helping fluttering; a diving and swimming in all so."

go in for it, for it's my opinion that was only waist high, and Eb would certain plans which led to further ad-"duck under" hoping to escape his tor- ventures. him with the decoys and ammunition box.

"And thirteen cents for chickens means something for wild duck, you know." He something for wild duck, you know." He waved his hand gally as the sail caught waved his hand gally as the sail caught already carried him some distance down the snow from the wind, and the boat sped outward. his heavy cowhide boots and swirling and grinding against one anslammed the out- other, cracking, splitting apart with a door briskly side

"Whew!" he exclaimed, spreading his worst trip yet. But I wish I'd 'a' had of "b'iled dinner" simmering in the big iron pot, while his son Aleck, cleaning his shotgun at the kitchen table, looked

"I suppose wild duck would sell then."

"Pretty sharp; and the river's chock Farmer Wilson said, drawing off his pair of carpet slippers. But Aleck only

"I guess I know the river and the old were gone, but three sheep and the two hoat by this time, father." he said. "And you know I'm never afraid of ice."

An hour later, though the sky was gray and overcast. Aleck hoisted sail. to earn it. And I guess you were right bring back a good boat load," he said

soft "swish," and driving swiftly before against the gust of the wind toward the treacherous rapids a mile below. Watching with practiced red-roofed clubhouse stood. eye and guiding the boat skillfully, Aleck avoided the largest of these, and at last, after a long and hazardous trip, succeeded in rounding in safety the bend of Grass Island. Between it and one farther out was a sight which filled the hov's eyes with delighted anticipation. The water over there was literally plack with

Quickly dropping sail, Aleck noiselessly adjusted his cars, and as silently as possible rowed toward the nearest bank. The water just there was lower than usual and landing difficult; but, in his rubber boots, he slipped into the water and dragged the boat ashore. Taking his shotgun, Aleck then concealed himself in the tall weeds lining the shore of the island, placed his decoys, gave a low, peculiar whistle, and waited.

Instantly the ducks craned their necks and huddled together, waiting, almost motionless, until they caught sight of site bank. They began moving slowly toward them. Nearer and nearer they came-nearer and nearer; till at last they floated within easy range. Aleck fired, the shot scattering among the "I'll whole moving mass of ducks.

tain. But even in a large garden, exhausted.
borders should not be over four feet. The more the garden is cultivated, the
wide, unless it is proposed to display better the soil will become and the more

N GARDEN-MAKING the one thing any other. In my experience, this is that chiefly bothers the novice is not only how to proceed, after a commencement has been made, but him that gardening is largely a matter of luck, which, of course, is wrong. What people call good luck in many of the concerns of life is merely a genius for taking pains. Horse sense and elbowgrease, in other words good judgment and hard work, count as much in gardening as in any other human pursuit. One mistake that beginners in gardening commonly make is to attempt more than they can execute, either by endeavoring to cultivate too large a piece of ground or by planting too much in a limited space. Of the two, I believe the latter the weeds get the upper hand, as they certainly will if a continual warfare against them is not carried on.

The first thing to be decided upon then is how much of the space at hand is to be devoted to floriculture, the next whether the soil is suitable for the purpose or should be modified. In a small garden, borders are not only distinctly indicated, but more elaborate gardening may be indulged in around some central point, such as a garden house or fountain. But even in a large garden, borders should not be over four feet wide unless it is proposed to dispays.

The more the garden is cultivated to the wide unless it is proposed to dispays.

The first thing to be decided upon then is how much of the space at hand is to be devoted to floriculture, the next whether the soil is suitable for the purpose or should be modified. In a small garden, borders are manifestly out of place and one or two flower beds will take up all available room; in a large one, borders are not only distinctly indicated, but more elaborate gardening will be come central point, such as a garden house or fountain. But even in a large garden, borders should not be over four feet wide unless it is proposed to dispays.

The first thing to be decided upon then is how the moisture the top of the ground and then was arrested by the obstruction. It is im erwise it would shed the rain and our reservoir in the earth finally become exhausted.

ASTERS

annuals and hardy perennials against a background of trees and shrubs.

The shape and size of flower beds, of course, depend largely upon circumstances and must be adapted to the existing surroundings. When devoted to annuals, a bed should not be so wide that the center of it cannot be conveniently reached from the edge, for a great deal of the weeding will have to be done by hand. In the case of perennials, or hardy plants, the width of the beds is not so important, for much of the weeding may be done by means of hoe and rake, enough space being generally left between each plant to admit of closer cultivation. cultivation.

When plants are being raised merely for cut flowers, it is a good plan to grow them in straight rows, so that the ground between the latter may be tilled by

them in straight rows, so that the ground between the latter may be tilled by means of a wheel hoe, which will induce vigorous plant growth and large blooms. In planning a garden, the location and soil must be taken into consideration. It is a well established fact that no two gardens are exactly alike and that each has different requirements. Few plants will thrive in a clay soil that gets as hard as a stone when baked by the summer sun. In order to render this soil right for gardening, it should be thoroughly dug over, mixed with some good loam from woods or field and treated to a liberal top-dressing of horse manure, that is finally spaded in. I manure, that is finally spaded in. I specify horse manure because this is more easily obtained in the cities; good, well-rotted cow manure is, of course, preferable. In my opinion a soil that has a foot or two of good earth at the has a foot or two or good earth attor and a clay bottom, so to speak, surpasses any other for floriculture; even the aristocrats of the garden world—the roses and lilies—do not disdain it. The clay bottom conserves moisture, which feeds the eager rootlets that go down

Of course, a sandy piece of ground demands different treatment and may have to be mixed with clay or some other heavy soil to render it suitable for rais-ing flowers, although some plants seem to thrive better in a sandy soil than in

annuals and hardy perennials against bountiful the returns. As I said before

sidered rather insignificant preliminaries, but these are really essential. Without a proper preparation of the ground, the outcome of our gardening operations would be very unsatisfactory, if not wholly fruitless. On the other hand, if the soil is mellow and cultivation is not neglected, the results will be

beyond our most sanguine expectations.

The selection of seeds and plants for The selection of seeds and plants for the garden that is to be presents some difficulties, for the catalogues are so alluring that when one is enthusiastic one feels like ordering the whole outfit, instead of making the restricted choice that is imposed upon most people by the size of their pocketbooks. When the beginner is confined to one or two gar-den heds, it would be folly to undertake the cultivation of many different kinds of flowers. In such a case it would be of flowers. In such a case it would be far better to devote each bed to a single no mistaken manner upon the memories species, such as the aster, for instance, of his friends who are now living. A and to obtain a great variety, which will large tree which had fallen across one enable one to get thoroughly acquainted with it. A multitude of flowers at one time, for home decoration and distribution among friends, will also, I believe, commend itself to most of my readers, in preference to a few blossoms at rare intervals.

In order to mature some of the plants In order to mature some of the plants it is advisable to start the seed in cigar boxes at the end of February or beginning of March. They will germinate readily in a sandy soil, which should be kept moist but not wet. At first it is a good plan to cover the box with a pane of glass, thus practically converting it into a small greenbourg and to expely if of glass, thus practically converting it into a small greenhouse and to apply, if possible, a gentle bottom heat by putting it on a range shelf or upon a brick resting upon a stove. The plants that are particularly adapted to this method of culture are the pansy, salvia, and the aster. There is no necessity of treating the aster and pansy in this manner, however, unless one wants early blooms. The salvia, on the other hand, will not blosselve. salvia, on the other hand, will not blossom at all unless started early. And who, having once enjoyed its vivid red, that is second only to the scarlet of the Oriental poppy, would care to be without

Oriental poppy, would care to be without it!

Of the annuals, I would particularly recommend the following as being easy to grow and least subject to the attacks of insects and fungi, wherefore they will prove most satisfactory in the hands of the beginner: Petunia, scabiosa, calliopsis, morning glory, sweet pea, and the nasturtium. Some of these, particularly the calliopsis, have the habit of sowing themselves. When my garden in one of the suburbs of Detroit was still surrounded by meadows. I would occasionally find that the seed of the calliopsis had been carried by the wind over the fence into the adjoining fields, where it had proceeded to make itself at home by throwing down the gauntlet to the weeds. In such an unequal contest, the weeds, it is scarcely necessary to say, invariably remained victorious, though the plucky little flower flourished for a plucky little flower flourished for season.

I will not give any cultural directions for the above named annuals, as these are almost always to be found on the packets in which they are sold, and given packets in which they are sold, and given in many catalogues, with the possible exception of the sweet pea. The ideal way of growing this beautiful flower is on either side of a so-called poultry wire tightly stretched between two poles. A trench, six inches deep, is made on either side of the wire, and when the seeds have been planted they are covered with one inch of soil. As the young plants extend in helght, they are gradually covered with earth until the latter is level with the surface. The plants are then copiously watered and, as they make a rapid growth, find support on the improvised trellis.

Among other annuals that might be

Among other annuals that might be mentioned as suitable for a novice in gardening are the mignonette, datura, balsam, candytuft, ageratum, sweet alvssum, and California poppy.

The various sunflowers are also easily grown and come into bloom in late sum-

grown and come into bloom in late sum-mer and early fall when the pageant of the flowers soon comes to an end and the mailed fist of the winter king strikes down the rear guard of Flora's retinue. As most of the varieties are rather tall, they should be relegated to the rear of the garden, where they may be inter-spersed with castor beans.

Japanese Hops, which grows very rapidly from seed, is exceedingly useful to cover fences and unsightly outbuildings. And among the perennial climbers I would name Jackman's clematis, which flaunts its royal purple upon the sum-mer breeze, and the so-called clematis paniculata, which delights us with its paniculata, which delights us with its small star-shaped blossoms in the early

Generally speaking, it does not pay the amateur gardener to raise hardy peren-nials from seed, and it will be far better to obtain these from the nurserymen. But as some of my readers may desire to experiment in this direction. I will mention a few that are particularly commendable: Platycodon, corresposs, hibiscus and the hardy carnation.

The gladiolus is essentially a summer

flower and has been greatly improved of late years. During the past summer I grew Groff's hybrids for the first time and found them to be vastly superior to

the common gladioli.

I am glad to note that many people are taking up the dahlia again, for, with all its stiffness, it is really a flower of merit. In order to avoid lateness of bloom, the roots should be started in April, or at least three weeks in advance of planting time. Before being planted in their temporary quarters, the roots should be divided with a knife, so that a piece of the old stem, with a bud, will be attached to each tuber.

### Lieutenant General Adna R. Chaffee

BY W. FRANK McCLURE.

rather insignificant prelimi- President McKinley chose General Chaffee as the successor to General Chaffee as the successor to General McArthur in the Philippines at the beginning of that most important period opened by the inauguration of civil government in the islands. General Chaffee had previously demonstrated his bravery and ability as the hero of El Caney, and as commander of the American troops in China.

General Chaffee was born on a farm at

General Chaffee was born on a farm at Orwell, Ohio, and pursued his labors in the cornfields and at the plow handle until the opportunity came to him to enter the army. While attending the district school of his native township he gathered about him the boys of the several classes and organized a military body in classes and organized a military body in accordance with his own youthful ideas. Even at this early age his generalship was so apparent as to impress itself in

fill the requirements of a fort, and here before he was quite twelve years old, the present Lieutenant General established his first headquarters.

General Chaffee's parents are well re-membered for their uprightness and inmembered for their uprightness and industry. Having a large family they were often obliged to struggle to make ends meet. The father worked at both farming and cabinetmaking, and the mother toiled diligently at her spinning wheel, or at making homespun clothes for the members of her family. There were twelve children in all, ten boys and two girls. Adna, when scarce out of his teens enlisted in the Sixth United States cavalry at the call for volunteers in 1861.

When General Chaffee assumed his present position as highest in rank in the United States regular army under the President, the residents of Orwell, his birthplace, glanced across the fields

his birthplace, glanced across the fields at the old Chaffee home, and thought of the days when Adna was daily seen hoeing rows of corn with a determination that bespoke success in whatever he might undertake in after life.

### An Impressive Life

BY W. FRANK McCLURE.

When General Adna R. Chaffee. who on Jan. 9 became Lieutenant General of the United States army, as a lad entered the military service, he is said to have made this declaration to his brother: "I intend that no soldier shall excel me in the discharge of any duty that falls to my hands." Today this man holds the distinction of being the only American soldier promoted from the rank of a private to the station he now occupies. The late Massachusetts house of representatives

### This Book Is Free

It Teaches You How to Handle Figures with Lightning Rapidity.

One Thousand Copies Will Be Given Away to Those Who Apply First.

HIS BOOK tells about marvelous methods of shortening calculations; methods that simplify the most difficult business problems and sometimes make it possible to do the work of an hour in the space of a minute. It is from the pen of a man who has devoted his life to the subject of rapid and accurate calculations. He is known throughout the United States as the foremost calculator of the day. The book contains many problems solved by rapid processes, with full explanations so that you can do the work yourself when you have read the explanation. Every man should calculate quickly and with ease. Every business man must calculate, and often a certain calculation must be made mentally and instantly if you would take care of your own interests. By our improved methods you see results without effort. You

multiply, add, subtract and divide fractions or whole numbers with marvelous ease. The methods introduced by this book will revolutionize figuring and arithmetic for you. You can learn at The life of Ex-Governor John Lewis Bates, of Massachusetts, is one boys will do well to emulate. Governor Bates was born in Massachusetts September 18, 1859, and is still, therefore, a young man. His father was a minister of the gospel. His education was obtained in the public schools, the Boston Latin School and Boston University. From the law department of the last named he was graduated in 1885. Between the years 1882-3 he taught school in Jamestown. New York. He was a member of the Boston common council during 1891-2 and of the A postal card will bring it to your very door. Unless you know all about figures that you want to know, unless you are accurate in every calculation, you cannot afford to be without this information. It costs you nothing to write; it may cost you a good position or a valuable promotion to neglect this opportunity. Address Commercial Correspondence Schools, 145D School Bldgs., Rochester, N. Y.

21. PROGRESSIVE FORMATIONS.

Each word contains four letters. The last two letters of each word form the first two letters of the following word. The first and last words are the same.

1. A large cord. 2. A fruit. 3. A native of Arabia. 4. Capable. 5. A Shakespearean character. 6. An open surface. 7. Comfort. 8. A marine animal. 9. A helper. 10. A musical instrument. 11. To cut grain. 12. The tip top. 13. Departure. 14. A single entry. 15. A Turkish dignitary. 16. The rainbow goddess. 17. A small island. 18. A feminine name. 19. Appellation. 20. Intermediate. 21. A queen's name. 22. A Roman emperor. 23. A large cord—D. F. Butler. Each word contains four letters. The

TRIPLE ACROSTIC.

Each defined word contains seven let-ters. The word formed by the initials is a raised edge; by the centrals, something a man uses when shaving; the finals, a

forerunner.

1. Silly. 2. One receiving a legacy. 3.
Not professional. 4. An inflammable liquid. 5. Common. 6. A precious stone. -Frank C. McMillan.

24. REVERSIBLE KITE,

I to 2, to utter reproaches. 2 to 1, one who tells untruths. 1 to 3, an apartment in a house. 3 to 1, a native of the north coast of Africa. 1 to 4, an obsolete word meaning seasons.

to 4, an obsolete word meaning sea-weed. 4 to 1, a row. 1 to 5, the common name of aquatic plants. 5 to 1, a wild animal. 2 to 4, to rob. 4 to 2, an instrument of manual labor. 2 to 5, to praise. 5 to 2, twofold. 3 to 4, a place of sale. 4 to 3, a car used in mines. 3 to 5, disposition. 5 to 3, judicial sentence. — Eugene Marius Stewart.

25. SEASONABLE SYNCOPATIONS.

The words are of uniform length. Remove the central letter and the remain-der is the second word. The syncopated letters form the name of the patron saint

of February.

1. Syncopate a substance obtained from the pine, and leave a strap of a bridle.

2. Perceived by the ear; a drove.

3. To raise; a vast number.

4. To rove; fury talse; a vast number. 4. To rove; fury. 5. A simple, fixed, opaque, fusible substance; ground corn. 5. To carouse; to stagger. 7. Smallest; for fear that. 8. Pertaining to the sun; to mount on the wing. 9. A vision of the fancy; a glass of spirits. 10. To cleanse with water; to get up. 11. A part of a flower; a loud sound. 12. To balance; to puzzle. 13. A period of time, a winged insect. 14. To use easily; uncultivated. use easily; uncultivated

-Russell G. Davidson.

### 26. A PENNY FOR THOUGHTS.

On a copper cent find the following articles. Obverse: Certain flowers; an animal; that for which our forefathers fought; part of a corn stalk; a fruit; a mode of voting; a place of worship; a king's emblem; part of a hill; a peacock's pride; a venomous serpent; what a brave soldier presents to the enemy; a concealed word denoting renown; a word that, by transposing its third and fourth letters, will reverse its meaning; a part of the Indian's head, which, when transposed, will give a measure of length. length.

length.

Reverse: An article of defence; a weapon; a messenger; the result of a lashing; ten manufactories; a letter that makes you think of China; what a hunting dog follows; an ancient reward.

-The Gopher. REVERSIBLE BLANKS

Fill the second blank in each sentence with the word for the first blank re-versed.

1. When you go into my rabbit pen, do not on my 2. This connects different of the machinery. 3. These rude peasants often at one another and call each other 4. Rewell dressed but never well dressed, but never — of your costly —. 5. Many Englishmen of — - college.

### We American Boy

Contright, 1904, by The Sprague Publishing Company

### THE LEADING BOYS' PAPER OF AMERICA

Entered at the Detroit, Mich., Postoffice as Second-class Matter

WILLIAM C. SPRAGUE, Editor GRIFFITH OGDEN ELLIS, Ass't Editor

### The New King of the World

"I would rather have a boy of mine grow up able to build a great bridge like the Brooklyn bridge than to receive the highest honor that the people could bestow upon him."

Twenty, or even ten, years ago Grover Cleveland could hardly have said that. It is an utterance of the spirit of the present times. It would not have fitted so well any other period in modern history.

Ten years ago Grover Cleveland beidency then was to him the highest aim of American citizenship.

He has not necessarily changed. It is conditions that have changed. Before the boys of the Armour Institute the other day he said some things that appeal as palpably true today, though they have not been strikingly true before.

The intense industrial spirit of the present decade is opening our minds to some mighty important things we had overlooked before. It is giving us a new vision of world life.

We are learning that commercialism legislates and that great business enterprises direct the destinies of mankind far more irresistibly than do political principles or the dreams of philanthropic doctrinaires.

It is a practical age, in which a man is judged according to what he does, not One favorite amusement of the evening is what he knows or says.

continent to continent with cables, mak- the horn is often fastened about the neck ing the many practical applications of by a string or ribbon; and the places electrical science, taking the ores from where the fight has been hottest is easily the mountains and turning them into told next morning by the fragments of comforts of human life, and using the these ineffectual ribbons that strew the products of the rich valleys to wipe pavement. famine from the earth—these are greater men than the kings who sit on gilded thrones administering the petty internal affairs of nations.

They are world rulers who are bringing all mankind together in peace and plenty. The world is beginning to recognize them as its real masters.

The spirit shows itself nowhere more strongly than in the decided tendency toward the scientific in education. Young men are realizing the opportunities that lie open. The colleges are changing their curriculum in compliance with the demand.

It was not so a generation ago. The youth in search of a mechanical education was then forced to go to the shops for the practical experience which he now gets along with the more valuable theory in the scientific school or through the correspondence school giving the same instruction.

That a man who twice enjoyed the highest power and prominence that the American people can give should pay such a tribute to constructive labor marks the wonderful change which a very few years of industrial and mechanleaf progress have made in the relative rank of the world's workers.

### AN EGG TESTER FREE

WHY put infertile eggs under the hen or in the incubator, or once any but the freshest eggs? The egg-tester shown herewith turns the X-ray, as it were, on an egg, and permits one to see instantly whether an egg is fresh or stale. It can be used in the day time as well as at night. It will not get out of order, and will last a life-time. With it goes full directions for sesting eggs for both table use and hatching. Readers of Tag ansarara Bor can get one of these valuable and interesting stricles Freed. together with an incubator and broader catalogue, containing among other valuables and interesting information a selected taining among other valuable and interesting information a colored plate, showing by eighteen views the development of the chick in the shell, by mentioning this magazine and sending to Geo. ### "Tarbucket Night"

(Continued from page 124)

But the spell of Tarbucket Night is on them now, and things of larger importance are forgotten in the anxiety to make a refractory box keep its place in the pile, or to arrange the lighter stuff for quickest kindling.

When it begins to get dark, some impatient youngster finds it impossible to wait any longer, and proceeds to "touch 'er off." The pile leaps into flame. It is a signal. Another follows, and another, here, there and everywhere, until it seems as though the whole city was ablaze. Viewed from a distance it looks like, a vast conflagration. Nervous people go about in fear lest the appearance may become reality. A very careful watch is kept by the authorities. At every engine house the entire force, call-men and all, is on duty, ready for business at a moment's notice. Possibly it is because of such vigilance, and because, too, of the lieved that the field of statesmanship fact that beneath the apparent recklessoffered the highest possible opportun- ness of the participants in the sport there ities for usefulness and honor. The pres- is really a genuine carefulness, that Portland has never known in all its history a disastrous fire on Tarbucket

After the fires die down the fun of the evening takes another form. Congress street, the principal thoroughfare, is crowded for about a half mile of its length. Up and down on both sides of the way, march the people shouting, and chaffing each other, and blowing horns and whistles, and ringing bells, and rattling huge watchmen's rattles, and making pandemonium generally. It is carnival time, and carnival manners prevail. "Everything goes." The roughest usage must not be resented. Everybody must be good natured, no matter what hap-pens. Congress street on Tarbucket Night is no place for any one with a hairtrigger temper, or a disordered spleen. to snatch your neighbor's horn from his The men who are building the world's lips, while keeping your own blowing railways, spanning the rivers, linking continuously. To prevent this robbery.

> Gradually as the night wears on, the crowds thin out, until only a few of the most enthusiastic revelers are left. Then these, too, retire, from the scene, and young Portland, very tired as to the legs, and very hoarse as to the throat, goes to bed, perhaps to dream of next Tarbucket Night, one year away.

Do you know Joe Chapple—the boy who came out of the West almost penniless and has built up a National magazine?

Do you know Joe Chapple—the man who gained his knowledge of human nature on the bumpers of freight trains; trading an old gray horse for his first printing press; a printer's devil at 12, an editor at 16,-through all phases of social life up to an invited guest on presidential trains, and as special representative at the Coronation in Westminster Abbey?

Presidents, Members of the Cabinet, Supreme Court Judges, Diplomats, United States Senators, Congressmen and Governors know Joe Chapple. They speak of his work-and they write for his magazine when no other publication on earth can entice them.

It isn't because Chapple is brilliant that he has won this national reputation for himself and his magazine — it's his quaint originality, his home-like, wholesome good-nature that permeates all he writes. There's nothing published today like The National Magazine - because there is no one just like Joe Chapple.

Maybe you don't know Joe Chapple. His publishers offer an easy way to get acquainted.

### Send 12 Two-Cent Stamps and for three months you can enjoy his company

You can go with him to the National Capital, into the committee moons of Congress, up to the White House, into the personni life of the great men and women who have honored Joe Chapple with their friendship. You can go with him over the length and breadth of the entire country, for Joe Chapple's address is the United States of America.

Its will give you a glimpse of Nathonal life in all its phases such as you would look for in "a letter to the folks at home," revealing in vivid snap shots and pen pictures of current events the human side of Nathonal life.

The National lio't quite ALI. Jue Chapple. It's just one side of its attractiveness. There are menly 200 pages in The National—finely printed—100 engravings, short stories, poems, and in addition articles by distinguished members of look homes of Congress concerning which they are best fitted to seem the authoritative word. Senators Allison, Hamis, Looke, Gilson, Hansbrough, Tillman and others have contributed to past mumbers of The National Magazine.

Senator Hamis's articles list year on "McKiuley as I Knew Him" was one of the most notable contributions to periodical literators.

Hot is the year to come there will be greater achievements in The National than it has ever accomplished.

Look at this list. Think of every monthly magazine in the country and do you know of any that can offer a greater list of contributors?

Senators Hamis, Bailey, Allison, Specier, Clapp, Hausbrough, Fairbanks, Proctor, Clark, Prye, Dulliver, Cockrell, and scores of other men eminent in public affairs.

And there are plenty of bright stories dealing with the people move on earth—American types that you can recognize—"your sisters, your brothers, your nucles, your consins and your annia;" inferioring clearly and hapolly the loves and the ambitions, the deeds and the adventures of the Great Common People—as Lincoln loved to call us.

# The "Jack Harkaway

Series of Books For Boys

Ask your father if he ever read this remarkable series of books. No more fascinating stories of adventure were ever written. Read the following:

The "Jack Harkaway" stories were published in Frank Leslie's Boys and Girls' Weekly about thirty five years ago. There was a long series of them, beginning with "Jack Harkaway's School Days" and running through this remarkable person's adventures, even to those of his son. when by no stretch of chronology could the first Jack be considered a boy. The stories originally appeared in The Boys of England, published in London. Frank Leslie brought Bracebridge Hemyng over here, and had a big delegation of schoolboys on the wharf to welcome him, of which I JAMES BAGLEY.

Sporting Editor of the Morning Telegraph.

One of the most engaging features of the stories was the illustrations No matter where "Jack" happened to be, whether in shipwreck or the wilds of Borneo, he always appeared in the spick and span uniform of an English middy, with duck trousers and an immaculate "Piccadilly" collar.

J. W. E.

"No more readable books for the young have ever been printed than these fifteen volumes."-Book and Newsdealer.

The books are handsomely bound in Linen Cloth, back and side stamped in ink and printed on excellent paper.

The series is as follows:

- Jack Harkaway's School Days. Jack Harkaway After School Days.
- Jack Harkaway Afloat and Ashore.
- Jack Harkaway at Oxford. Part L
- Jack Harkaway at Oxford. Part 2.
- Jack Harkaway Among the
- Brigands. Part 1.
- 7. Jack Harkaway Among the Brigands. Part 2.
- .fack Harkaway's Adventures Around the World.
- 9. Jack Harkaway in America and Cuba.
- 10. Jack Harkaway's Adventures
- in China. 11. Jack Harkaway's Adventures
- in Greece. Part 1.
- 12. Jack Harkaway's Adventures in Greece. Part 2,
- 13. Jack Harkaway's Adventures
- in Australia.
- 14. Jack Harkaway and His Boy Tinker, Part 1.
- 15. Jack Harkaway and His Boy

Tinker. Part 2.

If you are a subscriber to The American Boy we will send any one of the above books, postpaid, for every new \$1.00 yearly subscription you send us. On receipt of \$1.35 we will renew your own subscription and send any book you select, postpaid. The price of the books is 75c each, and will be sent, postpaid, on receipt of price.

Victor Stiefel, of Pittsburk, Pa. is an ardent lover of THE AMERICAN BOY, and he is the kind of a boy that the publisher are proud to number among their friends Victor has a large collection of Indian arrow

heads and is anxious to correspond with he who own Indian relies. In the Carnegie prizessay contest, held recently in Pittsburg, Victor won second prize, \$10.00. The contestants were members of the highest room in each of the ward schools. The subject of Victor's essay was "Bird life."

### Why Your American Boy Has Been Late

Late

Many things have conspired to make the last few issues of THE AMERICAN BOY late in being delivered to its subscribers. Installing a new mammoth press and getting it to running smoothly has been one cause. Our paper mill has had all sorts of trouble in getting raw material because of the snow storms and cold weather, and has had as high as twenty five cars of pulp on the road stone time and no telling when they would be delivered. Outgoing mails have been slow, too. We want our subscribers to know that we are doing everything we possibly can to deliver THE AMERICAN BOY promptly, and in another month all will be running smoothly. will be running smoothly.

AS SECON D-CLASS MATTER

Volume 5

DETROIT, MICH., MARCH, 1904

Published Monthly by The Sprague Publishing Company

Number 5

Right glad was Norman Aplick when he gained his father's consent to accompany him on the first voyage of the White Wings. He had just finished his course at the High School with a very creditable record, and was eager to see something of the world, and especially of the foreign parts to which his father had been voyaging ever since he could remember.

The opportunity afforded by this voyage was a particularly good one, as it practically meant a trip around the world. The White Wings, a beautiful new barque of eight hundred tons burthen, was to sail from Boston to Rio Janeiro with a general cargo, thence to Liverpool laden with coffee and sugar, from Liverpool to Japan with whatever might offer, and from Japan back to Boston with tea.

The White Wings was a triumph of marine architecture, and Messrs. Anchor & Company, her owners, felt very proud of her.

"We give her to you, Captain Aplick," said the senior member of the firm impressively, "because we consider you our best captain, and we hope that you will get along well together. You certainly have our best wishes for many prosperous voyages in her."

Captain Aplick thanked the firm in a few sincere sentences. He was not a man of many words, but he was as loyal as he was skillful, and he deeply appreciated the confidence his employers reposed in him, and was determined they should never regret it.

Norman thought everything about the White Wings just perfect, and was especially delighted with his quarters, a snug stateroom opening into the main cabin, and adjoining his father's more spacious apartments.

With a merry heart he arranged his clothes, his books, and his other belongings, and when it was all done surveyed the result with no small satisfaction.

"There now!" he exclaimed, complacently; "that's where I'm going to bunk for the next year, except. of course, when I'm on shore seeing the sights."

It was midsummer when the White Wings spread her snowy canvas and bowled gaily southward before a favoring wind. Norman, who had never been out of sight of land before, fairly bubbled over with joy as the shore line finally sank below the horizon and the barque became the center of a vast circle of sea and sky.

"Hurrah for a life on the ocean wave!" he shouted, swinging his cap over his head. "I don't want to set my foot on shore again for a month."

A little later, however, when a change in the weather brought lowering clouds, and tumbling gray seas which gave him his first experience of seasickness, he rather changed his tune, and came to think that a small bit of terra firma on which he might find rest for a while would not be at all amiss. But this lasted for only a couple of days, and then, having quite recovered his sea-legs, Norman was himself again, and as merry as ever.

The voyage proceeded prosperously, and the White Wings was within three hundred miles of Rio Janeiro, when the lookout sighted a dark object on the port bow, which Captain Aplick at first took to be a whale basking on the surface, but which on closer inspection showed up as a ship's boat full of men.

"Ah, some good ship's foundered, and that's her crew. We must pick them up," said the kind-hearted captain, giving orders that the barque should be steered straight for the boat.

They soon had the White Wings alongside, and found a longboat containing twelve men, and well supplied with water and provisions.

J. 177. COOR OF ONE OF OR

Their story was that they had formed part of the crew of a British ship which had been burned three days before, the rest of the men having got away in the other boat, and a squall having separated the two.

Captain Aplick was not altogether satisfied with this explanation.

"I'm free to say I don't quite like the looks of these chaps, Mr. Halyard," he said to his first mate as they were having dinner in the cabin, "and their story doesn't hang just right."

The mate shook his head dubiously as he replied:

"Nor do I, sir. They seem a rum lot. There's only one Englishman amongst them, and the rest are Dagoes, Frenchies and Lascars, ready for any devilment."

"We must keep a sharp eye on them, then, Mr. Halyard, and see that they're not up to any mischief," returned Captain Aplick.

"Aye, aye, sir," responded the mate, as fine a seaman as ever trod the deck, and devoted to his

Norman heard this conversation, but made no comment. He had on his own account formed an equally unfavorable opinion of the seeming castaways, and made up his mind that he would watch them closely.

"What shall be done with their boat, sir?" inquired the mate presently. "It seems too good to cast adrift, and it's over big and heavy to hoist aboard."

"Oh, we'll just tow it astern," answered Captain Aplick, little imagining of what vital significance this decision would prove. "We may find it necessary to bundle these fellows all back into it before we reach Rio," and he smiled in a grim way at the idea.

Baffling winds delayed their making port, and they were still some sixty miles off Rio when the trouble

It was a little before midnight, and the barque was sailing closehauled at a slow rate. Captain Aplick and the first mate had gone below, and the second

deck. I'm sure they've thrown somebody overboard." The men gave each other a significant look, and then rushed to the cabin door.

. But the moment they opened it two pistols cracked, and they both fell upon the deck, where already a fierce struggle was raging between the men of the longboat and the crew of the barque.

Having awaited their opportunity, the scoundrels had seized the most favorable time for effecting their foul purpose, and had fallen upon the unsuspecting sailors with knife and pistol.

Norman, following his father to the door, shrank back horror-stricken at the spectacle, and the pirates were too anxious to complete their victory over the crew to concern themselves about him for the present.

At first he felt paralyzed and powerless. Believing his father and Mr. Halyard to have been killed, and the murderous wretches to be masters of the vessel. he gave himself up for lost.

Then came a reaction from this numbing terror, and with it a thought that inspired a wild thrill of hope. The men were all in the waist of the ship, struggling, swearing, shouting. While the confusion reigned there was something he might do.

The longboat still towed astern. If he could get into her and cast off the painter, he might slip away unnoticed, and perchance be picked up by another vessel before he died of hunger and thirst.

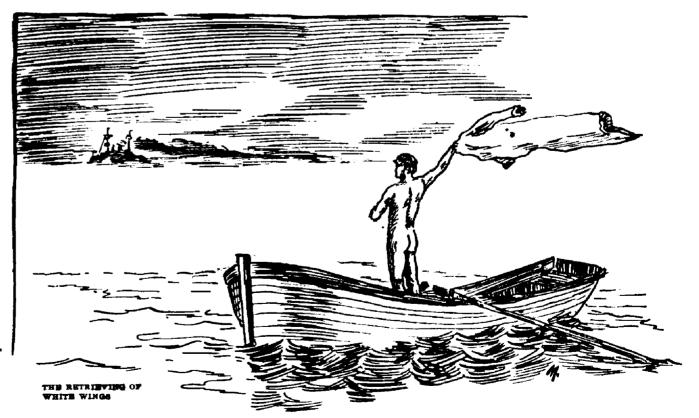

Without pausing even to snatch his clothes, he darted to the stern companion way and peered cautiously out. There was no one near. The wheel stood deserted, the wheelsman having rushed to the assistance of his shipmates.

With frantic haste Norman hauled the heavy boat close up to the stern, and then, having dropped in, severed the painter with his claspknife.

The boat quickly fell away, and in a few minutes the White Wings, with her awful burden of murder and piracy, had vanished into the darkness of the night, while poor Norman, utterly overcome, sank down in the stern sheets of the boat, his whole frame shaken with the sobs in which his grief found vent.

Daydawn found him eagerly scanning the horizon for sign of sail or smoke, and when, a couple of hours later, a dark smear showed on the south against the greenish-blue where sea and sky met, his excitement became intense.

Larger and darker in the south grew the smoke wreath. The steamer seemed to be steering straight towards him, and in his frantic eagerness to be seen he stood upon the thwart, and waved his nightshirt as a signal of distress long before it could possibly have been visible from the oncoming steamer.

mate had the watch. Everything seemed to be going all right, when suddenly the noise of a scuffle, followed by a sharp cry for help, came from the waist of the vessel, and the next instant the sinister sound of a splash alongside told that some heavy body had been thrown overboard.

Norman, lying awake in his berth with the porthole open to get the air, heard it at once, and sprang out into the cabin, where Captain Aplick and the first mate were engaged in earnest talk.

"Oh, father," he cried, "there's something wrong on

Then, realizing that by so doing he left himself unclothed, he hurriedly got into it again.

Yet he kept his position on the thwart, for he said to himself:

"They can't help seeing me soon, and they'll be sure to want to know what's the matter."

In this he reasoned rightly. The keen-eyed lookout on the steamer sighted the strange dark object with the white spot as soon as it came within range of his glass, and, having reported it. the vessel's course was immediately pointed in that direction.

As the steamer drew near, Norman was glad to see that it was a man-of-war.

"When I tell them what has happened, they'll chase after White Wings and catch the villains that killed my father," he said to himself.

It proved to be the United States cruiser Utah, one of the fleetest ships in the American navy, on her way from Buenos Ayres to Baltimore, and, surcharged though he was with other feelings, Norman did not fail to appreciate the splendid style in which she steamed up, came to a stop, lowered a boat, got him on board, and was off again without a minute being wasted.

Having been provided with some clothes, he was conducted to the captain to tell his story, which he did in a manly, clear and concise fashion that won the hearts of his hearers while it stirred them to intense indignation and wrath.

He had made no mistake when he counted upon the pursuit of White Wings being undertaken. Captain Crowninshield at once gave orders for the speed to be increased, and for lookouts to be stationed on each mast to sweep the sea with their glasses in every direction.

Now, as it chanced, the wind had completely fallen, and a glassy calm prevailed, so that the barque was not able to get very far away from the place where Norman left her.

Hence it was still early in the forenoon when one of the lookouts reported a sail on the starboard bow.

The Utah at once turned her prow in that direction, and not many minutes passed ere Norman exultantly shouted:

"It's White Wings. I know her."

As the war-ship drew near it could be seen that there was great confusion on board the barque. Some of the men worked at the idly flapping sails in a frantic fashion, while the others gathered on the poop and talked excitedly together.

Ranging up within easy hail, Captain Crowninshield called out:

"I'm sending a boat to you. If you offer any resistance I'll blow you to pieces."

The wretches made some reply, highly flavored with oaths, but evidently had no thought of showing fight.

The boat was lowered and filled with armed men. "May I go, too, sir?" asked Norman, pleadingly, for there had somehow sprung up in his heart the hope that possibly his father might not have been killed or thrown overboard.

"Certainly, if you wish to," was the prompt reply.

In sullen silence and with hang-dog countenances the men of the longboat saw the "boys in blue" spring on board. At the muzzle of the revolver they were rounded up in the waist, and then the search of the ship began.

Norman, scarce able to breathe because of the excitement that possessed him, darted into the cabin. The door of his father's stateroom was open, and in the berth lay his motionless form.

Did he still live?—or—was that the stillness of death?

Hardly conscious of what he was doing, Norman placed his hand upon the bronzed cheek.

It was warm and soft, not chill and firm, and at the touch Captain Aplick moved slightly and groaned.
"Thank God! thank God!" cried the how bending

"Thank God! thank God!" cried the boy, bending over to press his lips to his father's forehead, and then, darting out of the cabin, he shouted:

"The doctor; the doctor; get the doctor quick! Father's not dead!"

The men who had been left in the boat understood at once.

"Cast off," the coxswain roared, and then, as the painter fell, "Ship oars, and give way like fury."

The ashen blades churned the water into foam, and in an astonishingly short time the boat had been to the Utah, and was back again with the surgeon.

Quickly and deftly he examined the wounded man, while Norman's heart seemed to stop beating as he awaited the result.

"Your father will live," came the quiet words that meant so much. "He has been seriously wounded and has lost much blood, but he will pull through with care."

Carried away by joy, Norman rushed on deck, calling out at the top of his voice:

"Father will live! The doctor says so. Hurrah! Hurrah!"

The sailors crowded about him to rejoice with him. It was found that, dreadful as the work of the pirates had been, they had refrained from making a clean sweep of the crew of the White Wings.

All of the men who were in their bunks at the time had been spared, being kept prisoners in the foc'sle, the pirates having intended to turn them adrift in he boats when they had everything in their own hands. For the same reason they had not done Captain Aplick to death.

But the first and second mates, and all the men of the latter's watch were missing, so that the villains' murder account was heavy enough.

They were all heavily ironed and taken on board the Utah, which then convoyed the barque into Rio. That they in due time received the punishment for their crime which it merited may be taken for granted.

Captain Aplick went into the hospital at Rio, and in due time completely regained his health and strength

Keenly as he felt the tragic loss of his men, he did not allow 'his to break his voyage around the globe, which he completed without further mishap, and to the substantial profit of his employers.

The knowledge of the world and of the ways of business Norman gained proved a decided advantage to him when he took a position with a big shipping firm in which he eventually obtained a partnership.

# Three Yankee

BY THE

(Begun in November.)

"Now, let's back to the Rebel City," said Professor Jack, when they had finished eating the homely but palatable luncheon set before them.

"Why do you say the Rebel City, Professor?" asked one of the boys.

"I am calling Cork by the name she has been known by for centuries. There is no part of Ireland that has proved so unruly as the city of Cork. Here Irish independence seems to have grown in natural soil. In 1492, when Columbus was discovering America, Cork was encouraging Perkin Warbeck in his rebellion against the English crown. You can believe that being a Catholic city she stood out against Cromwell and his 'Roundheads,' and flercely did that iron hearted ruler wreak his vengeance upon her when she lost in the conflict. You will hear Cromwell's name repeated with awe and fear everywhere in Ireland. Wherever there is a ruined church, or castle, or bridge, they will tell you that it happened in the time of Cromwell. You would think that every misfortune that ever befell Ireland came through this dread soldier. On the continent they tell you about Napoleon; in Ireland they tell you about Cromwell, and a familiar expletive in the country is 'The curse of Cromwell on ve.'

"Let us dismiss the jarvey and take the tram back to the city. We will gain time by it, and, as the day is not far gone, we may yet see much of Cork before dark."

The jarvey made no protest, particularly as Professor Jack paid him for the return trip and gave him a liberal tip in addition. He probably spent the tip in the tavern where he had been awaiting the return of his passengers, and drove home later in the day

lickety split, after the fashion of the Irish driver on his native heath.

The tram landed them at the foot of Father Mathew's statue on St. Patrick street, and this of course became the first object of interest. The guide book did not need to be brought into requisition here, for Professor Jack was familiar with the oft-repeated story of the good father, who for over half a century has been known as "The apostle of temperance."

"What did he do that was so wonderful?" asked Ned.

"Now, it may not seem so wonderful to you boys, but if you knew the state of Ireland at the time when Father Mathew began to preach temperance, and then could understand what he accomplished, you would say that he deserved a statue more than do four out of five who get them. There was a time, not over a hundred years ago, when drunkenness was a virtue here. A fellow who did not get drunk was despised. If you went to be a man's guest and eat with him and you did not get drunk you offended him. Why, they even made glasses round at the bottom so that they could not stand. The contents had to be drunk up or spilled upon the table. If a guest could mount his horse alone, on bidding good-bye to his host, he had to drink a quart glass more, and it was good stout whiskey too. It was Father Mathew who in 1838, when he was forty eight years of age, made up

# Boys in Ireland

EDITOR

his mind that Ireland was disgracing herself, so he started in to do what was better for Ireland than what St. Patrick is said to have done. He made an attempt to drive drunkenness out of Ireland, just as St. Patrick had driven the snakes out, several centuries before, as the Irish will tell you."

"How did he go about it?" asked one of the boys, as the four stood gazing at the noble figure of the old monk before them.

"He first began to talk temperance," said the Professor, "and as he was an eloquent man, and what was even better than that, was a good man, charitable, benevolent, gentle and simple, everybody listened to him. Having this kind of a character and an Irish tongue, which is another name for an eloquent tongue, he soon stirred up the whole island, and in less than nine months enrolled in his total abstinence societies one hundred and fifty thousand names. I tell you those were exciting days in Ireland. Why, at Nenagh, twenty thousand persons took the pledge in one day; at Galway one hundred thousand in two days, and at Dublin seventy thousand in five days. Six years after he began his work he went to England and preached temperance at Liverpool, Manchester and London. So interested did he become that he sacrificed all his property and involved himself so much in debt to carry on his work, that on one occasion he was arrested by a creditor and thrown into jail. Queen Victoria granted him a pension in 1847 of fifteen hundred dollars a year, and two years afterwards he visited the United States, remaining there two years."

"I should not think, from the number of saioons we saw in Queenstown, that he got along so well

ST. FINNBARS, CORK

driving out whiskey as St. Patrick did with the snakes." suggested Joe.

"Oh, there's not any truth in that snake story, is there, Professor?" said Hal, with some disgust.

"Well, you had better not express any doubts of it over here. Ask the first Irishman you meet and see what he will tell you," said the Professor.

Hal had no opportunity just then, but a few days afterwards, on riding with the driver on a jaunting car trip among the Lakes of Killarney, he asked the question of Paddy and found that the native Irishman believes as much in St. Patrick and the snake story as children of from three to five in America believe in St. Nicholas.

"What do they say he drove the snakes out for?" asked Ned.

"Well, as we are standing on St. Patrick street, it is well that we know something about St. Patrick. Now, St. Patrick was not an Irishman and he did not begin life under very pleasant circumstances. When he was sixteen years old, and living in France, some pirates stole him off his father's farm and carried him captive to Ireland; there they sold him to a petty chief, whom he served for six years. Escaping to France, he became a monk and in the year 432 returned to Ireland as a missionary, appointed by the Pope. He was a very successful missionary and converted king and peasant. On account of him the island became famous all over the world as "The Island of the Saints," and students flocked to its universities from every country. St. Patrick had been driven from other countries and, on account of the kind reception that was given to him in Ireland, he determined to do Ireland a favor. So, according to the story, he collected all the serpents in Ireland on Croagh Patrick and drove them into the sea. Those faithful to his memory even to this day make yearly pilgrimages to Croagh Patrick."

Having paid their respects to Father Mathew, the party, headed by the Professor, walked down St. Patrick street to St. Patrick's bridge, one of the many bridges that span the river Lee that runs through the city, dividing it into two parts. Here Cork was seen by them at its best. This is the river to which Spenser, who once visited Sir Walter Raleigh on his estates near Cork, referred when he wrote, "The spreading Lee that like an island fayre encloseth Corke with its dividing floode."

On both sides of the stream stretch four miles of solid masonry that form quays at which vessels, drawing twenty feet of water, can land. From St. Patrick's bridge may be seen St. Finnbar's, a church built upon the site of a still more ancient one of the same name, erected in memory of St. Finnbar, who in the seventh century is said to have founded the city.

The Professor reminded the boys that they were standing on very ancient ground. Accustomed as they were in their own land to look upon as ancient, and therefore honorable, structures an hundred years old, relics of many centuries produced a sensation of awe in their breasts seldom felt by boys, and when they learned that Cork had once been a Danish town before the coming of William the Conqueror from Normandy, and afterwards a Norman town, and that it was a city when Henry the Second, in 1172, invaded Ireland and the MacCarthys, lords of the soll, did him homage, and that in 1649 Cork had surrendered to Cromwell, who ordered the bells of the churches melted for cannon, they felt truly that they were treading upon hallowed soil.

Standing there on the bridge, Professor Jack took occasion to give the boys a little information regarding this part of Ireland. "Here, boys, you are right in the midst of Catholic Ireland, and, by the way, seven-eighths of Ireland is Catholic, and one-eighth, or the north part, of which Belfast is the capital, is Protestant. You will notice there are no great chimneys belching forth smoke from furnaces, no sounds of industry, no evidences of progress in the way of manufacturing. When you reach Belfast you will be reminded of our American cities. There you hear the hum of industry, with the atmosphere full of smoke and dust from hundreds of factories; here the chimneys are church spires. Of the one hundred thousand people in Cork, one in ten is Protestant, the rest are Catholic."

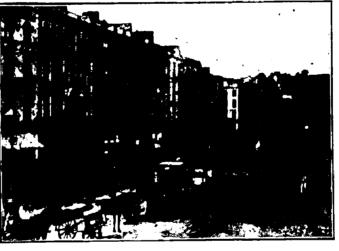

As they stood upon the bridge the tones of bells

rang out from a queer looking steeple, which rose from among its squatty surroundings at a point across the river.

"You have heard of The Shandon Bells, have you not, boys?" asked the Professor; but none of them had. "You are not very familiar, then, with the celebrated poem of old Father Prout. Well, your fathers and mothers are. At any rate, let me repeat it for you, but first of all let me tell you that Father Prout, or Francis O'Mahony, which was his real name, lies buried over there near that church. He was an Irish priest at first but gave that up to become an author. There are some very beautiful things said about him in the history of the literature of Ireland. He was educated in France. He liked to withdraw himself from the populace and live alone like a friar. He was gallant and courteous. Once three women traveling through the county of Cork stopped to go to church in the chapel of Father Prout. The good father was speaking to his congregation when they entered and seeing that no one noticed that the women were standing, he cried out, "Boys, why don't you give three chairs for the ladies." "Three cheers for the ladies," re-echoed at once the parish clerk, which was a very natural mistake, and three lusty shouts shook the very cobwebs on the rafters of the chapel. Father Prout was a great fisherman and the room in which he lived looked like a fisherman's hut, festooned with huge nets and hung about with a salmon spear, sundry rods and fishing tackle, and over his mantelpiece were hung pictures of the Miraculous Draught of Fishes and St. Anthony Preaching to the Fishes.

"Now, let me repeat his famous poem, The Shandon Bells; it will pay you to learn it:

> With deep affection And recollection I often think of Those Shandon bells, Whose sounds so wild would In days of childhood, Fling round my cradle Their magic spells. On this I ponder Where'er I wander And thus grow fonder Sweet Cork, of thee; With thy bells of Shandon, That sound so grand on The pleasant waters Of the river Lee.

ST. PATRICE STREET, CORK

I've heard bells chiming
Full many a clime in,
Tolling sublime in
Cathedral shrine,
While at a glib rate
Brass tongues would vibrate—
But all their music
Spoke naught like thine;
For memory dwelling
Of the belfry knelling
Its bold notes free,
Make the bells of Shandon
Sound far more grand on
The pleasant waters
Of the river Lee.

I've heard bells tolling Old "Adrian's Mole" in, Their thunder rolling From the Vatican, And cymbals glorious Swinging uproarious In the gorgeous turrets Of the Notre Dame, But thy sounds are sweeter Than the Dome of Peter Flings o'er the Tiber, Pealing solemnly: Oh! the bells of Shandon Sound far more grand on The pleasant waters Of the river Lee.

There's a bell in Moscow,
While on tower and kiosk o,
In Saint Sophia
The Turkman gets,
And loud in air
Calls men to prayer
From the tapering summits
Of the tall minarets.
Such empty phantom
I freely grant them,
But there's an anthem

QUEEN'S COLLEGE, CORK

More dear to me—
'Tis the bells of Shandon
That sound so grand on
The pleasant waters
Of the river Lee.

The boys listened with respectful attention but they did not seem to see anything very wonderful in the poem, nor in the sound of the bells themselves, which seemed quite ordinary indeed, so that when the Professor suggested that they go and see the old church it was with some degree of reluctance, for the boys were growing tired.

"The St. Anne de Shandon Church is worth seeing," said the Professor, "aside from the fact that it was built nearly two hundred years ago." The boys, however, could not agree with the Professor, after they had crossed the bridge and climbed the hill to get a near view of it, for the only extraordinary part of it was its curious steeple, three sides of which were of limestone while the fourth was of a red stone said to have been taken from a Franciscan abbey where James the Second of England had once heard mass.

Late in the evening, going back to the hotel, the boys got to talking of what they wanted to eat for dinner. Ned said that his mouth watered for Irish potatoes and he thought they ought to be particularly good in Ireland.

"Why so good here?" asked the professor. "The Irish potato is not Irish at all. Sir Walter Raleigh brought it from Virginia and the Carolinas into Ireland something over three hundred years ago. Sir Walter was the first in Ireland to raise them, and that was on his estate near Cork."

"I guess it caught on pretty quick here," suggested one of the boys.

"Too quick for the good of the country," said the professor, "for the Irish got to a point where they did not raise anything else, with the result that when the potato crop failed there was famine in Ireland, as in 1846, when multitudes of people died. You can judge of how great the famine was at that time when the English parliament voted fifty millions of dollars to buy food, and several countries of Europe, as well as our own country, forwarded provisions in immense quantities."

At dinner that evening the boys learned for the first time how popular mutton and fish are in Ireland, for at the hotel they had roast mutton, hot and cold, stewed lamb, mutton cutlets, lamb chops and Irish stew, while of salmon they could have it boiled or broiled, cold or in steaks, croquettes, cutlets or stew, but it was all cooked to "The queen's taste," as Joe said, and hungrier boys never sat down to an Irish dinner. After they were through and had spent the evening writing home to their parents, they agreed that after all Cork was a quite important town.

"Oh, I have not told you one half that is interesting about this old city," said the Professor. "If you fellows could keep your eyes propped open a little longer, I could tell you much more, for instance: William Penn, the founder of Pennsylvania, was a convert to Quakerism in this old Catholic city of Cork. It was here that he heard the eloquent preaching of Thomas Loe, who was a great divine in his day. We ought really to take a run out to Rostellan Castle, or better still, go by steamer, or go up to Cloyne, where there is an old cathedral and a noted 'round tower.' You don't know what that is, do you? Well, wait till we see one and then I will explain it to you. Then we might go to Youghal, where Sir Walter Raleigh lived. It is only a short distance from here. It would be fine to enter the old residence where Raleigh entertained Spenser when the poet was writing his 'Faerie Queen.' That is also the place where the first potato was planted. There are a dozen places about here that we could make in another day, but we are due at the Lakes of Killarney tomorrow. It is too bad that we have not seen Queen's College here, nor visited the new cathedral of St. Finnbar and the lovely Victoria Park that we saw on the way to Blarney Castle, but you will soon learn, traveling over here, that you cannot see everything and it is a question of picking out the most important and giving to them enough of time so that you will not forget them. Now, let's to bed, for tomorrow it's the Lakes of Killarney and a busy day."

(To be Continued.)

# Just Between Gurselves

If any editor needs an inspired pen it is the one who writes for boys and to them. Appreciating this, I have been slow to do what for a long time I have wanted to do, that is devote a page each month to a talk directly with the boys who read this paper Circumstances now seem to compel it, for so many and varied are the letters that pour in upon me from boys all over the world that, being unable to answer each letter as I would like to do, I am driven to answer in a general way by an open letter which all may read. Of course I shall continue to use the personal letter where the inquirer calls for an individual

First, I want to thank you, boys, for your loyalty to THE AMERICAN BOY, without which such a magazine as ours would be impossible. My associates and myself aimed at the beginning, and that aim has been kept in view all along, to make a paper that should be truly American and truly boy-ALL boy. We believed the boys of America were worthy of a high toned magazine conducted in their interests and that the man or company who manifested their faith in the American boy by providing him with such a magazine would meet with the boy's support. The boys of Great Britain, we said to ourselves, liberally support several high class boys' papers. Are the boys of America less appreciative, less capable of knowing a good thing when they see it, less earnest, less thoughtful, less intelligent, less moral than their cousins across the sea? Some one said to us at starting, "The boys of America have nothing offered them that is designed especially for them and is worthy of them, so they are driven to either the reading of the literature of grown-ups or to the cheap, nasty trash that abounds on every hand. They are not educated up to high class boy literature, and a process of education costing a large outlay of money and a long stretch of time can alone make a demand."

"If that is the case," we said, "all the more need that some one try, and we will be the some one. We'll put this theory to the test. We'll sound the American boy and see where he stands." We did try, and you boys know the result. Before the fourth year began our presses were turning out one hundred and ten thousand copies a month, every copy of which was needed to supply the demand.

Therefore we feel grateful to you, boys, for spoiling the theory that American boys can not appreciate high toned boy literature. I tell you that the trouble with most of us grown-up people is that we don't take boys for what they are worth. I think that is demonstrated by the way in which writers compose stories for boys. Let me tell you something strange. During the first year of THE AMERICAN BOY nearly every one of several hundred persons who sent in articles to be published in THE AMERICAN BOY wrote as if either they were writing for infants or for bespectacled gray heads. The trouble I have had as an editor is not in getting boys to read the right things, but in getting people to write the right things. That illustrates what I mean when I say that people do not generally take boys at what they are; they fail to understand them.

But I didn't intend to whip grown-ups over your shoulders. I just wanted to show you boys that you are not half so bad as you are painted and that when we men and women come to understand you and treat you accordingly, you will do the rest.

I had delightful talks last summer in London with the leading editors of English boys' papers and, strange to relate, I found them almost invariably old men. The editor of the best one of these publications is a fine old fellow with a cool, gray head and a warm, red heart. He has been editing a boys' paper for, oh, ever so many years, and it's an "all boy" paper, too. I discovered that Englishmen remain hovs longer than Americans do. Generally speaking, every man on the island of Great Britain, no matter how old he is, loves sport; and out on the golf links. the tennis court, the cricket grounds you see mensolid, substantial business men, professional men. statesmen, titled men, as crazy in their enthusiasm as a bunch of schoolboys at a close-fought football game. Coming home I saw something on shipboard that illustrates the difference between the Englishman and the American in this respect. We were having a series of athletic contests on deck-foot racing, obstacle racing, quoits, a tug-of-war and a cricket match. Two gentlemen were chosen as umpires,-one was a Mr. Harriman, a great American railroad king, and the other an English member of parliament whose name has escaped me. Now, it was as good as a circus to watch those two men. Harriman knew as much about games as a fish does about the multiplication table, but the English M. P. knew all about them. Harriman looked bored to

death; the English M. P. was as excited as a small boy at a dog fight. More than that, most of the Americans stood about the deck looking sort of dazed and uneasy like, but the Englishmen could hardly be restrained from breaking into the games all in a bunch; moreover the English fellows won the cricket match, the tug-of-war, and nearly everything else in sight. Now, we do build boats that in our waters the English can't beat, and we do send across the ocean occasionally a team of athletes that astonishes the natives over there, but if you want a country where boys keep on being boys in heart and nature a long, long time, go over to our mother country. Well, boys, when American men and women quit trying to corner the money market they are going to play more, and then we may expect boy literature written by men who know what boys want; but until then it is going to be hard to get writers who can not only write, but can write "all boy." One of the things I find it hard to do is to get busy, brainy Americans to think it worth while to write for "just boys." But we shall see. This country has been so busy for a hundred years, or more, racing for first place among the nations of the earth, it has overlooked some small but important things that when it grows older it will remember; and when it does, boys will count for more than they do now.

I don't want to stir up trouble for your fathers and mothers and school teachers (Sunday school and day school), but I want you to give them to understand that "just any old thing" will not do for a boy's reading, and that you demand the best that can be furnished in that line. I want you to make war on the sort of books and papers on which for so long you have been fed—sensational, blood and thunder detective stories on the one hand, and namby pamby, little Willie stories on the other. Boys want, or should be educated to want, stories of flesh-and-blood boys depicting life just as it comes and not as some wild cowboy writer imagines it, or some dyspeptic thinks it ought to be. A boy's story ought to have meat in it—meat that

# Earl Shaw, Son of The Secretary of The Treasury

Earl Shaw, the manly young son of Hon. Leslie M. Shaw, the Secretary of the Treasury, is a lively, energetic, thoroughgoing American boy. Much of his boyhood was spent in the State of Iowa, where the Shaw family resided before they removed to Washington. Of late years Earl has been attending

the famous Culver Military Academy in Indiana, and he has gone in for all sorts of sport with the result that he has built up a fine physique. During the past summer he had an opportunity to shift for himself, as it were, for a time when his mother and sisters spent several months in Europe. Although Secretary Shaw is a man of some means, he is not what is accounted in these days a very wealthy man. Moreover he believes in hard work. These ideas he has instilled in his son and Earl bids fair to prove as much of a hustler in accomplishing something that is worth while as though he had to make his own way in the world without any assistance whatever.

Earl has just become a war correspondent for an Eastern magazine and has started for Japan to report conditions in the far East.

makes muscle, blood, nerve, bone, and brain. If boys are the material of which men are made, then boys want such mental and moral food as when assimilated makes fine manly character. Stories ought to be chock full of life, and life means history, travel, achievement, with just such a sprinkle of fun and pathos as enters into every boy's life. When we come to realize that books, magazines and newspapers may make real, genuine boys that develop into real, genuine men, or may make artificial, manikin boys that make artificial, manikin men, then boy literature will be made more natural and far healthier.

I have often thought what might not our great army of readers be able to accomplish if they should once set out to do great things. You know what one boy-one stubborn boy can do, when he tries. A team of oxen isn't to be compared with him. If just one stubborn boy is stubborn to do the right thing something splendid is going to happen. If one stubborn boy is stubborn to do the wrong thing something awful is just as sure to result. I wish every one of our one hundred and ten thousand boys were stubborn to do the right thing in this matter of reading. But why do I say one hundred and ten thousand? Because that many of our papers go to that many boys every month. Don't you suppose, however, that more than that many boys read those papers. I know one family where four boys read one copy. There are thousands of families where two boys read it, and there are scores of clubs, libraries. public reading rooms where ten, twenty, perhaps fifty boys read one copy. Isn't it fair to say that two and one half times one hundred and ten thousand, or over one quarter of a million boys, are reading these words of mine? I tremble! More than all the inhabitants (men women and children) of Minneapolis, or Louisville, or of the States of Delaware or Montana.

I wish every one of this quarter of a million of boys were stubborn in this matter of reading, to read only the best boy literature, then when they become men we could trust them to read the right things. It was said of one of our armies in the Civil War that it never knew when it was whipped. It was stubborn to conquer. It is sometimes a good thing to be stubborn. Don't despise the trait if you have it, boys. It's a grand quality of mind and heart; but grand only when rightly directed. Your parents and teachers who call you stubborn only do so when you are stubborn to do wrong. Be stubborn to do right and your stubbornness will be the greatest, grandest thing you possess. I would rather have my boy stubborn than weak and easily influenced, for then I know if I get him started right all earth and hell can't lead him astray, for there is nothing quite so powerful as a well seasoned, well disciplined will. Boys, be stubborn! Make up your mind what is right—be sure of it-then like General Grant "fight it out on that line if it takes all summer." But one caution-remember in making up your mind preparatory to being stubborn, that some parents know better what is right than some boys do. Write me, boys, what you want me to talk about on this page. I shall listen to suggestions only from you. This is just between ourselves.

Yours faithfully,

M-6 Sprague

### Wanted-Skilled Men

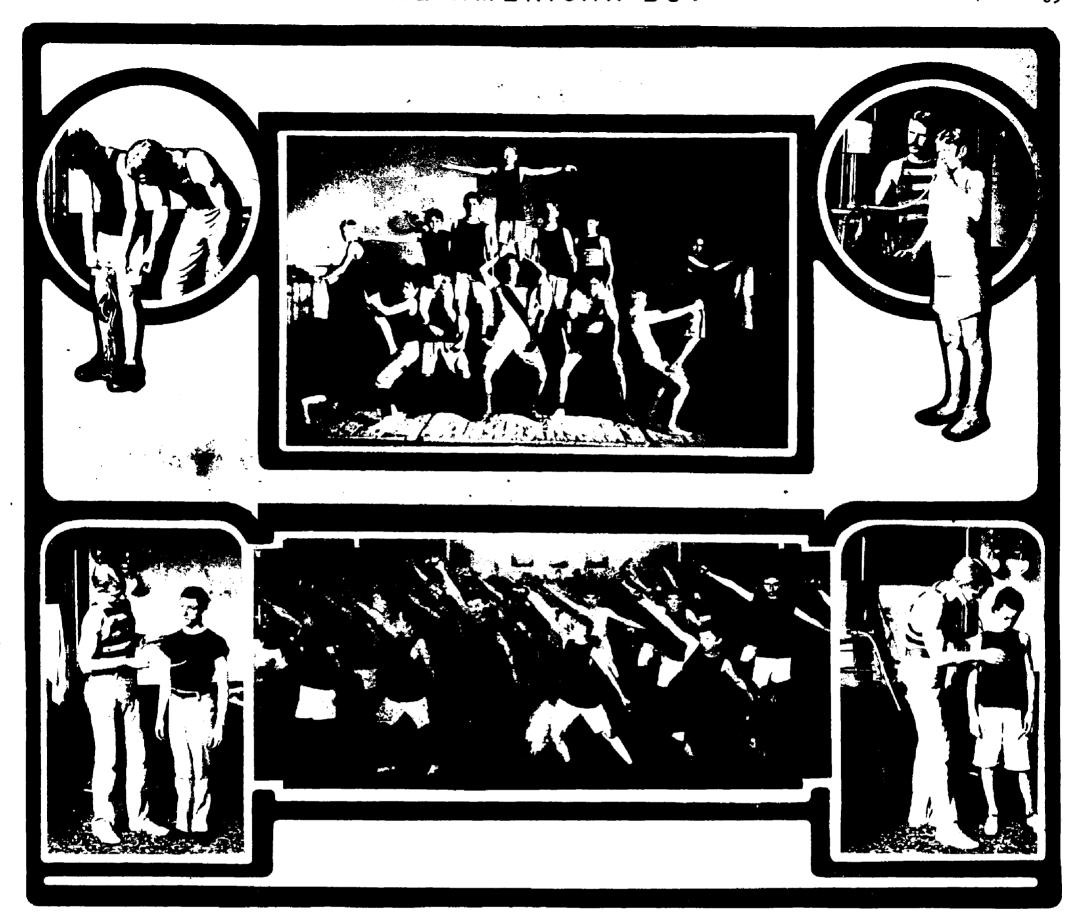

On the Eric Railroad, according to the word of the company's president, places seek the men.

The men whom the Erie wants must be skilled and competent mechanics. Such workers can get steady employment and full wages, according to President Underwood, who also says: "It is easy enough to get low-grade men—those who are qualified to do nothing but the plainest manual labor."

There should be in this a useful and timely message to parents whose boys are growing up and to those boys themselves. Every day the world has a larger call for men who can do its work with skill and competence in diverse lines. Every day it is a more uncertain world for the boys who grow up shiftlessly, "taking chances" on what they shall do. There is safety and refuge in a good trade well learned. The boy is a gainer who with fine purpose picks up the tool-bag where he lays down his school-books. Even if he becomes a lawyer or a doctor or a preacher later, he will not be a worse one because he has in him, for any emergency, the cleverness, strength and resourcefulness of the trained mechanic.—New York World.

### Some Requirements For Success

1. Be honest. Riches acquired by dishonesty are a curse. 2. Work. So-called "genius" is just capacity for hard work. 3. Find the business or trade for which you are fitted and stick to it. 4. Be independent. 5. Be conscientious and thorough. 6. Begin at the bottom, it is the right and sure way to rise. 7. Trust in God and work hard. 8. Be punctual in keeping appointments. 9. Be courteous and polite; they bring gratifying results. 10. Be generous. Meanness fosters enmity and suspicions.

# Making Healthy Boys in a Philadelphia High School

evident to the educators of youth that physical culture and mental culture should go hand in hand. A healthy body usually means a healthy mind, and bright intellects are made brighter when heart, lungs and liver are doing their duty well. While, however, it has been the object of every teacher to direct the training of a boy's mind, the training of the body has been left almost entirely to the boy himself. It has been assumed that the toy knows best how to develop his muscles and that boyish games provide all the exercise necessary for building up the juvenile physique. Why it should not be as necessary to have the body trained by intelligent rules as the mind has never been quite clear to scholastic critics. The Central High School of Philadelphia, viewing this matter in a serious light, has established a department of physical training for the boys which should serve as a model of all educational institutions whose directors would like to add systematic physical exercise to the list of instructions given to the boys.

N a hazy sort of way it has always been

The department, which has been placed in charge of Professor M. C. O'Brien, formerly physical instructor of the Y. M. C. A. in San Francisco, and a graduate of the Central High School of Philadelphia, is regarded by the faculty as of as much importance in the general scheme of education as any in the school. Attendance in the gymnasium is not voluntary but compulsory. The classes are considered as part of the day's work. Not a boy is allowed to absent himself without reason, unless he has been examined by the physical director and declared unfit for training. This examination is one of the most important features of the department's work. Every boy on entering the school is taken in hand by the physical director and an exhaustive search made into his family history, after which he is subjected to a careful examination.

On a card which is kept by the director, the age and weight of the boy upon entering the school is recorded; a note is made on the card of his height, sitting and standing, girths of head, neck, chest con-

tracted and inflated, waist, hips, right and left forearms, right and left upper arms extended and flexed, thigh, calf right and left; breadth of head, shoulders, chest, waist and hips; depth of chest and abdomen; strengths of forearms, back, legs, pull-up and dip; capacity of the lungs; heart rate; past health, diseases in family, digestion, temperament, previous exercise, vision and rate of heart before and after exercise.

With this card before him, the physical director studies the case of each boy and prescribes just the kind of exercise that will benefit and not harm him. If a boy has a tendency to weakness of the heart he is warned against overtaxing the organ by joining the running squad; if he has some physical deformity, such as spinal curvature, he is not barred from the gymnasium, but is given some light form of exercise that will tend to at least prevent any aggravation of the trouble if it cannot cure it. If a boy has weak lungs he is given gentle exercises that will tend to strengthen his breathing power and enlarge his chest measurement. In a word each boy is given the exercise that will help to develop his physique to the utmost, and what is more important he is compelled to go through the prescribed exercise to the satisfaction of the physical director just as the boys are made to solve the problems of Euclid or grapple with the mysteries of algebra. Frequent examinations are made, and comparisons with the data on the cards show whether or not the exercises prescribed are doing good or the reverse. Each boy carries with him a chart, on which the director marks the progress made in the gymnastic classes, so that the student can see at a glance whether he is advancing or retrograding. Some boys are actually found to be totally unfitted for physical training on account of their inability to learn the simplest kind of exercise. This kind of boy, though, according to the physical director, is a rare problem.

"Out of seven hundred boys in the freshman class," said the physical director, in the course of a talk on the new department of the High School, "fully fifty were found to have some physical defect that made it very difficult to prescribe any form of

exercise. Some for instance were minus an arm or leg, one had tuberculosis in such a form that it was deemed best not to prescribe for him, others had very defective eyesight and were told not to join the classes until an oculist had treated them. About three or four boys in each class are found to have defective eyesight. The discovery of these defects is one of the most potent arguments in favor of the new department. In many cases the teachers are blaming the boy for being naturally dull when he is struggling to keep his place in the class while being unable either to see or hear properly. I test every boy's eyesight and if anything is wrong tell him to consult an oculist. A little chap who comes to me with a weak heart, and who would continue to weaken it by taking part in any kind of game that offers itself, were he not told of the danger, is instructed in the kind of exercise that will strengthen his heart and warned against those that would weaken it; he is told not to run upstairs too rapidly, not to exercise when he is out of breath, and not to take part in any of the more violent exercises. In this way he stands a chance of outgrowing his trouble in time, instead of, as would be the case had he not come to High School, continually aggravating it until manhood found him with a permanently weakened organ. The physical instruction undoubtedly will have a marked effect on the general intellectual tone of the school. The systematic and carefully prescribed exercise that each boy gets must stimulate his brain power. Dull boys whose mental apparatus is clogged by reason of physical weakness will brighten up when we have succeeded in getting their bodies in perfect training.

"We do not aim to make strong boys of a few picked students. We are not trying to build up muscle and present a few highly trained youths for the plaudits of a crowd on visitation days. Our main object is to make the boys healthy and well by means of sensible exercises. You see a little hunchback in the class? He was a sickly little fellow until recently. Now he is becoming strong and robust. Careful exercise of the right sort did it."

### CHAPTER X.

### WHAT HAPPENED ON THE WAY TO CHINA.

Of course the telegram purporting to come from the Chinese Secretary of Legation, by which Jo had been lured to New York, was a forgery; nor had either of those entrusted by him to the bogus messenger boy who delivered it ever been forwarded to its address. Thus Jo's Hatton friends had no idea that he had left -, but supposed him to be in company with Mr. Wang. They were satisfied that this should be so for a time, and Rob was especially glad, for whenever he met any of the "Muckers" they were sure to call out:

"Say, 'Saphead,' where's yer Chinee? Don't you dare let him out, for fear he'll get hurted? Yer scared to be seen on the street with him, that's what's the matter! Yer needn't be, though, fer we wouldn't tech him with a ten foot pole! Specially if you'd muzzle him and lead him by a chain same as they do all the other big monkeys. Bet yer don't know where he is! Bet he's got woozy and runned away. He'd better stay away, too, or we'll fix him good!"

So for about a week Rob was not sorry to have his friend in a place that promised a greater safety than Hatton. At the end of that time, however, the Hinckley family began to wonder why they did not hear from their young guest, and Rob wrote him a letter that he sent to the hotel in S--. It was promptly returned with a note from the proprietor, stating that the Chinese lad only had stayed in his house one day and then had disappeared, but that a telegram for him lay unclaimed in the office.

Mr. Hinckley at once sent for this telegram, which proved to be from Mr. Wang, dated at Boston, stating that he should be unable to revisit S--- and advising J's immediate return to Hatton. It was a week old. Upon this, Mr. Hinckley telegraphed to Washington, only to receive word that Mr. Wang was traveling in the south and would not be back for a month. Inquiries for the missing lad now were set on foot in every direction, but no clue to his whereabouts could be found, nor was it for long months after his disappearance that its mystery was cleared away.

In the meantime, much as our Hatton friends were troubled by their young guest's unexplained vanishing, their attention was largely diverted from it by news from China that Dr. Hinckley was seriously ill. The first intimution of this came in a letter that told of his failing health and of his plan to seek its restoration through a visit to America.

"Won't it be fine," exclaimed Rob, "to have them here? Father will be sure to get well as soon as he sights the Connecticut valley. Its air always has made a man of him."

For a whole day he revelled in this happy anticipation. Then came the fateful cablegram that, in a moment, swept away his light-heartedness and changed the whole current of his life. It was from his mother and was in the private code that his parents had prepared before leaving him in Hatton. In all the years since then he had been obliged to refer to this code but twice; for people living on small salaries cannot often afford to send messages costing several dollars per word, with both address and signature to be paid for at full rates. The present message that had been flashed from far-away China across Asia, under the Indian Ocean, the Red Sea and the Mediterranean, across Europe and under the Atlantic, read as follows:

### "Syntax, Boston, Fable, garnet, hazel."

The word "Syntax" had from the first been registered in the Western Union office at Boston to save the expense of cabling the name of the state in which Hatton was located, and it meant "Rev. Wm. Hinckley, Hatton," to which address the dispatch had been forwarded at an extra charge of twenty five cents.

"Bring the code book quick, Rob!" exclaimed Mr. Hinckley as this message dropped like a bomb shell into the quiet circle gathered in the pleasant parsonage parlor that evening. Rob had been studying his lessons for the next day, his uncle was reading, and Mrs. Hinckley happened to be writing to China.

In a few seconds the boy had dashed up stairs, and was back with the alphabetically arranged code book. "Fahle," said his uncle, and Rob, turning to the Fs, ran his finger hastily down the long column.

"Oh!" he gasped, "'Fable' means 'Mason too ill to

travel."

"Garnet," continued Mr. Hinckley, huskily.

"'Garnet' means 'Wants to see Rob before he dies.' Do you believe it can be as bad as that, Uncle Will?" and a choking sob rose in the boy's throat.

"First find the meaning of 'Hazel' and then we will talk about it," replied Mr. Hinckley.

"'Hazel,' " replied Rob in another moment, "means 'Send Rob to us at once.' "

"Oh. Rob! my dear, dear boy!" cried Mrs. Hinckley, "It is terrible for you, and it is going to be dreadfully hard to give you up, for you have become as our own

"But we must give him up, and that at once," said her husband, sorrowfully, "since the meaning of this despatch cannot for a moment be misunderstood. Mason's illness must have taken a sudden turn for the worse that his life is endangered. They evidently hope, though, to prolong it for some weeks at least, or Fanny would not send for Rob. She knows that he cannot under the most favorable conditions reach her in less than a month."

"But in case of the worst she would want Rob with her," suggested Mrs. Hinckley.

"In that case she would come to him, for with Mason dead there would be nothing to keep her in China."

"That's so," said Rob, hopefully, "I hadn't thought of that. When do you think I can start, Uncle Will? I suppose we'll have to telegraph all the different companies to find out which of them sends out the first steamer."

"That would be expensive and take time," replied Mr. Hinckley. "I believe we can do better. The Postoffice Department keeps track of the sailing dates

HE RAN MADLY AFTER THE DISAPPEARING CARS

of all steamers that carry mail, in order that letters may be despatched as often and as quickly as possible. So, though our postoffice must be closed by this hour, I will go to Postmaster Garrett's house and see if he hasn't a printed slip giving the sailing dates of Pacific steamers for the next few weeks. While I am gone, you and your aunt can be getting your things together ready for packing."

With this Mr. Hinckley was about to leave the house when his wife cried:

"Why, William, those postoffice notices always are published in the Boston papers, and there is yesterday's lying on the table."

"So it is!" exclaimed Mr. Hinckley, picking up the paper as he spoke. "How stupid I am! Yes, here it is—the very thing we want: 'China and Japan via Tacoma, mails close 5 P. M. on the 6th, Steamship Oriental.' That is tomorrow, and it means that mails will be taken on the evening express which reaches Albany about midnight. There it meets and makes part of the New York night express for Chicago. From Chicago they will go to St. Paul, and from there by way of the Northern Pacific Coast Limited to Tacoma, reaching there on the 10th, which undoubtedly is the Oriental's sailing date. At any rate, Rob, so long as you go with the mail you are bound to be traveling the quickest possible way. To catch the Boston express you must go to Albany by the noon train tomorrow. I shall go with you that far, and we will make all your ticket arrangements there."

Thus, within fifteen minutes from the time that fateful cablegram found Rob Hinckley quietly study-

ing lessons for the morrow, and expecting to do little else for many months more, school had become a thing of the seemingly remote past, and he was a traveler bound on a journey that would take him halfway around the world. Moreover, the earlier details of this journey were already planned, and he was to set forth within a few hours. It is no wonder that he got but little sleep that night, nor that he was up at daylight packing his trunk and sorting out certain cherished possessions that he meant to distribute as keepsakes among his boy friends.

He went to school at the usual hour, but only to announce his departure to the masters, say good-bye. and collect his books. The Head Master requested him to wait a few minutes and accompany him to the great hall where the entire school assembled for morning prayer. There, to Rob's embarrassment, he was conducted to a seat of honor on the platform, from which the master gave notice of his proposed departure, stated the sad cause, said some very flattering things about Rob himself, and then asked the school to join him in an earnest prayer for their young friend's safety during the long journey he was about to undertake, and that at its end he not only night find his dear father alive, but restored to health.

At the conclusion of this prayer tears stood in Rob's eyes and in those of many of his young friends as well. He wanted, before leaving, to say good-bye to the whole body of his schoolmates, as he did not expect to see any of them again; but he did not exactly know how to do so, and was immensely relieved when the Head Master further said:

"Robert is to leave Hatton by the noon train today, and in order that his friends here gathered may have the opportunity, which I am sure they desire, of bidding him farewell and seeing him off, all classes will be dismissed at eleven o'clock."

As a result of this thoughtful provision, for nearly an hour preceding the departure of the Albany train the little Hatton railway station presented one of the liveliest scenes in its history, and Rob was greatly affected by the innumerable evidences of esteem showered upon him by his schoolmates. When finally the train pulled out, with our lad waving his hat from the rear platform of its last car, it was to an accompaniment of a hurricane of cheers and farewell shouts.

"Who is the most popular fellow in Hatton?" cried the leader of the Academy rooters.

"R-O-B, Rob! H-I-N-C-K-L-E-Y, Hinckley! Rob Hinckley! Hi-ho! Hi-ho! Good-bye!" was the answer shouted forth in tremendous chorus by every boy and girl present; and this was our young traveler's final farewell from the place that seemed his home more than any other in the world.

For three days after leaving Albany, Rob journeyed swiftly and without untoward incident, past Buffalo and Chicago, up into the great northwest to St. Paul. amid the vast wheat fields of Minnesota and the Red River Valley, over the limitless prairies of North Dakota, through the "Bad Lands" bordering the Little Missouri, and into the incredibly rich copper regions of Montana. Then came the eventful day on which he lost his train, and with it all hope of catching the only steamer advertised to leave the "Coast" for a week. It happened at Helena, where the train was to remain for fifteen minutes; and Rob, tired with being so long shut up in a car, decided to take a brisk walk into the town. He wanted to see something of the place, and needed the exercise.

So he set forth, walked as far as he dared, allowed too narrow a margin of time for his return, missed his way, and finally regained the station, only to sec his train pulling out from its farther end. For a second he could not believe his eyes. Then he ran madly after the disappearing cars, screaming for them to stop. Even in the blindness of his excitement, a moment of this effort convinced him of its folly, and he halted on the edge of the platform, while two great scalding tears, that he had no heart to repress, coursed slowly down his cheeks.

### CHAPTER XI.

### ACCEPT A KINDNESS AND PASS IT ALONG.

"Is it as bad as all that, my boy?" asked a kindly voice at Rob's elbow; and the lad, turning quickly, looked into the sympathetic face of a United States Army officer, whose khaki uniform was faced with red. Captain John Astley, commanding Battery Z of Field Artillery, returning from leave of absence in the East, had been placed in temporary charge of a body of recruits ordered to Vancouver Barracks, near Portland, Oregon, which was his station. He had stopped at Helena en route, to pick up a few more newly enlisted men; and, being at the railway station that morning, was attracted by Rob's running and shouting after his rapidly vanishing train. Captain Astley was tender-hearted, as are all brave men, and, noting our young traveler's genuine distress, he impulsively stepped forward to inquire into its cause. As he saw tears on the lad's cheeks, he knew that it must be serious; for Rob did not look like a fellow from whose eyes tears could easily be extracted.

"Yes, sir," replied Rob, who, longing for sympathy

in this moment of distress, was moved by the kindly face of the stranger to unburden his heart of its load of trouble. "It is about as bad as it can be; for my father is dying in China, and my only chance of seeing him alive lay in catching the Oriental, which sails from Tacoma tomorrow evening. Now I have lost her, and there won't be another steamer of that line for nearly a month. Besides, my baggage is on the train just gone, and my pocketbook with my tickets and all my money has gone with it, locked in my suit case.

"That does seem a rather serious situation," said Captain Astley gravely, "but perhaps it won't prove irremediable after all. I've noticed that things looking the darkest at first view often brighten upon closer inspection. Suppose we sit down for a minute and see what light can be thrown into this darkness."

When Rob had accepted this friendly invitation, and the two had seated themselves on a near-by baggage truck, the elder man continued:

"To begin with, let us know each other. I am John Astley, Captain of Artillery, U. S. A., and stationed at Vancouver Barracks, to which place I must proceed by tomorrow morning's train. I wanted to go on today, but unexpectedly was detained at the last moment, and came to the station to hold over my luggage, which already was checked. I must confess that I was much annoyed at this detention, but if it affords me an opportunity of helping you out of your trouble, I shall not regret it."

"Thank you, sir," replied the lad; "my name is Rob Hinckley. I am the son of a medical missionary stationed at Wu Hsing, on the Si Kiang in China, where I was born; but I have lived for the past thirteen years and gone to school in New England. I have passed my preliminaries for Yale, and should have entered next fall if the news of my father's serious illness and his great desire to see me before he died had not altered all my plans. Now, by my own carelessness in walking too far while the train waited here. I not only have lost it, but probably have lost my only chance of ever seeing him again.'

"Isn't there a steamer of some other line—the Empress from Vancouver, the Yusen Kaisha from Seattle, or the Pacific Mail from San Francisco—that you can take within a few days," suggested Captain Astley.

"There is one from San Francisco in about a week, but you see my fare is paid through to Nagasaki by the Tacoma line, and I'm afraid I haven't money enough to buy another ticket. Besides, I should have fare from Tacoma to San Francisco to pay, and hotel bills. Then, too, my pocketbook, with money, tickets and everything, has gone off on that train. I thought I'd be extra careful, and so locked it up in my suit case before starting out to walk."

"I hope you still have the key," said Captain Astley seriously, but with a twinkle in his gray eyes.

"Yes, sir, I've got that. I don't see, though, how it is going to do me much good, seeing that I haven't money enough to take me even to Tacoma. There's another thing I've just thought of: My trunk is checked through to Nagasaki by the Oriental; and as my suit case has the same name on it, probably someone will be kind enough to put it on board the steamer, so there isn't much chance that I ever shall see it again."

"Oh, I guess there is, provided the telegraph still is in order, and I know it was working a few minutes ago."

"I haven't money enough to pay for a telegram." objected Rob.

"So it is doubly fortunate that I happen to have a few pennies left over from my last month's pay," laughed the captain.

"But I am a stranger to you, sir, and you don't know that I am honest enough to repay you even if I ever get the money back," objected Rob, flushing with the embarrassment that money troubles always cause those not used to them.

"Haven't you just told me all about yourself?" suggested the Captain gravely, "and can't I read 'honesty' written on every feature of your face? Besides, one must always be willing to risk something in an investment from which he hopes to gain rich returns in the form of self-satisfaction. So it's all right, every way you look at it, and I think we'll buy the use of a west-bound wire for the next half hour

Thus saying, Captain Astley led the way to the telegraph office, into which Rob doubtfully followed him. There the former first persuaded the station agent to wire the conductor of the train that had brought our traveler thus far an inquiry concerning him and his ticket. Then he wired the Pullman conductor to look after Rob's suit case and deliver it to the station agent at Tacoma, to be kept by him until called for by Captain Astley.

"I put it that way," explained the latter, "because the Tacoma agent knows me, while he don't know Robert Hinckley; and as we are going on together tomorrow, it won't make any difference which of us receives the bag."

A third despatch was sent to the Tacoma agent of the Steamship Company, notifying him that unforeseen circumstances prevented Mr. Robert Hinckley

from sailing on the Oriental, requesting him to hold over a trunk marked Hinckley and bearing Nagasaki check 967, and asking him to meet the following day's Coast Limited at the Tacoma station, with money to refund the price of the forfeited ticket.

"I don't know whether or not he will do that," said Captain Astley; "but perhaps he will, seeing that he is pretty well acquainted with me. At any rate, it is worth trying for. You may send the replies to these messages up to the X- Hotel," he added, turning to the operator.

"But I am not staying at the X---- Hotel," objected Rob, remembering how very imposing and expensive that establishment had looked when he passed it a half hour before. "I can't afford it."

"Not as my guest?" asked the army man.

"I don't see how you can think of doing so much for me," blurted out Rob. "I never heard of anyone being so kind to a perfect stranger."

"My dear lad, I once was a boy myself and continually getting into scrapes from which kind people, as often as not entire strangers, helped me out. So, you see, I now am only repaying a small portion of the debt I owe to those who were good to me. Besides I am fond of boys, especially of boys who conduct themselves as gentlemen, and am delighted at the prospect of having one as a traveling companion, even for a short time. So don't you fret any more over the incurring of obligations, also never hesitate to accept whatever good thing is offered you in this life. for the bad you'll have to accept, whether or no."

"All right, sir," replied Rob, smiling happily, as he now could well afford to do. "I will gratefully accept all the kindness you offer, and pass it along to some other fellow, whenever I find one in a trouble out of which I can help him."

"Good!" laughed the captain, "and now that we understand each other, let's go up to the hotel for breakfast.

Owing to the efforts of this Heaven-sent friend, Rob's troubles, that had seemed so overwhelming, melted away like frost before the warm breath of a cloudless sun. While they were at breakfast a message was received from the train conductor that Robert Hinckley, accidentally left behind at Helena, had paid full first-class fare through to Tacoma, and on the strength of this the Helena agent provided our lad with another ticket to that point. The Pullman man wired from Spokane that Rob's baggage was in his keeping and would be handed over at Tacoma according to instructions. They did not hear from the steamship agent; but on the following day, when our travelers reached Tacoma, after crossing the Coast Range by aid of the superb Stampede Tunnel, and having been whirled down the western slope through the magnificent fir forests of Washington, they found that gentleman awaiting them at the station. Here also they found Rob's trunk and his suit case.

The steamship agent explained that, while he would exchange an unused ticket for one good by the next ship of the same line, he was not allowed to refund money already paid for passage. "However," he added, turning to Rob with a smile at the latter's clouding face, "owing to the fact that I was notified in time, I was able to sell your room to a gentleman who, finding all first-class accommodation engaged, had taken second-class passage rather than wait for another steamer. He of course was glad to pay the difference in price, and so I am able to refund half the cost of your ticket, if you feel that you cannot wait for our next ship."

Rob hesitated while he made a rapid mental calculation.

me to Vancouver Barracks. There at least we can for self-improvement. save you a hotel bill while you are waiting for another steamer."

So our lad accepted the money, surrendered his steamship ticket, puchased another to Portland, Oregon, re-checked his trunk to the same point, and, a few minutes later, found himself, still in company with his army friend, speeding to the southward on the same train that had brought them to the coast.

His first act, after they were again under way, was to refund the money expended on his behalf for telegrams and hotel expenses in Helena. Much to his relief. Captain Astley accepted this without demur, it being one of that officer's pet theories that no gentleman will place another under a pecuniary obligation against his wish, even to the extent of a five cent car fare.

In the meanwhile, the latter had learned all that was worth knowing of Rob's history, of course including his recent experience in connection with Chinese Jo. When he discovered that his young companion could talk Chinese he said:

"I wish we were to be together long enough for you to teach me, as I believe the time is not far distant when a knowledge of that language will prove a most valuable addition to an army officer's mental equipment."

Finally they reached Portland, where, before the train had stopped, an orderly was in the car saluting and handing his captain an official envelope.

"By Jove!" exclaimed the latter, as he tore it open

and glanced rapidly over its contents, "here's a hot shot from a masked battery, and perhaps it may mean that you and I can-but never mind now, we'll talk it over in quarters this evening. Orderly, get these traps out, look after Mr. Hinckley's trunk, and see that it is sent over to the barracks with the rest of the luggage. You wait in the ambulance, Rob, while I get the men started, and I'll rejoin you within a few minutes. Great Scott! but this surely is great

(To be continued.)

### A Big Room For Boys By J. L. HARBOUR

You know that boys when they go to college find a great deal of pleasure in furnishing the room or rooms they are to occupy in the college dormitory for three or four years. They take it kindly if their girl friends make an almost endless number of pillows and cushions for lounges and chairs, and they "fix up" their rooms just as much as possible. Sometimes they are inclined to be a little boastful regarding their rooms. I have heard quite recently of a boy of this kind, and of the way in which he was "taken down" by another boy who had his own peculiar ideas regarding rooms in general.

"Do you know that I have the very largest room in our dormitory?" said the boy, who was inclined to be boastful. He knew that his friend, the son of a poor man, had perhaps the smallest room in the dormitory—a little, "tucked-up" room it was, away up under the roof; therefore he was a good deal surprised to have his friend say:

"Oh, I don't know about that. I have an enormous room of my own. The fact is, I think I have about as large a room as any boy in this or any of the other dormitories."

"How can that be?" said the other boy. "You have one of the little rooms up under the roof, haven't

"Oh, yes; I sleep and do most of my studying there, but I live most of the time in a much larger room." "Where is it?"

"I don't know that I can show it to you very well. I call it my 'room for self-improvement,' and it is the biggest room I know of on the whole college campus. It takes a lot of furniture for it. I really don't expect to get it anywhere near fully furnished in all the four years I am to be here. Mighty big room that."

His companion had to admit that this was true. This room for self-improvement is a room that any boy can occupy without going to college. And it does not require rugs nor cushions nor draperies nor easy chairs for its furnishings. Abraham Lincoln furnished a room of this kind by reading good books. and in our day of free libraries the best of books are accessible to most boys without money and without price. No matter how big your own room for selfimprovement may be, you can furnish it if you will. Every good book you read adds to the permanent furnishings of a room of this kind. A well-known writer has said with certain truth: "A few books well read would be an education. Let a boy read the Bible, Josephus, Plutarch's Lives, Rawlinson's, Hallam's, Macaulay's, Bancroft's histories; Shakespeare, Tennyson and Longfellow, and he would have a basis of knowledge of such substantial worth and moral and literary standard as to cause his intelligence to be respected everywhere and to become a power." All these books could be purchased for twenty five dollars, and most of them are to be had for the asking at the public libraries. If well read they would put "Take it," advised Captain Astley, "and come with a lot of the best of furniture into your own big room

### He Felt Faint

In a letter he wrote from Leipzig, when he was a schoolboy of thirteen, Max Muller said, "I get up at five, or even earlier, and work till seven, go to school, play the violoncello at eleven, the piano at twelve, then dinner, then school again, then coffee and gymnastic exercises, then work again till I can get fresh air in the garden, which is impossible in this heat during the day. I eat only a roll from five in the morning till one o'clock, and drink no coffee early. and I often feel rather faint."

### For American Parents to Consider

The late "Max O'Rell," who has left his library to St. Paul's school, where he was once a master, was a firm believer in English methods of education. He found that boys from other countries, entering an English public school, soon lost their own nationality. and became Anglicised. French parents used to complain to him that their boys ceased to be French and became English.-From an English paper.

### A Great Artist's Advice

Phil May once gave some useful advice to young artists. He advised them never to draw anything without a model, and to get their brothers and sisters to sit for them. They must also strive to be different from the run of other artists, and strike out some original line for themselves.

him, and congratulate him any way you strength of a year's training. like. But just now he belongs to the two hundred pounds of bone and muscle. found he had gained a few yards. The

"Now, fellows," he said, turning to knowledge quickened his speed. those in the room, "we'll only have a few say; a speech would be out of place. You all know 'Baby' Elton, and you all know he won that 'two mile' five minutes ago 'varsity colors ever ran before. I don't beats over the boards. know what you fellows think about it, but I want Baby Elton to be captain of nominate him right now. Is there a second?"

A dozen voices instantly shouted incoherent seconds to the nomination.

"Gently," begged Pendon, bracing himself against the door as some one tried It from the outside; "I pray you, speak gently. We'll put it to a vote at once. All in favor-"

It was useless to submit the other side of the question, for the vote was unanimous.

Baby Elton slipped from the rubbingdown table to the floor and stood up before them all. The room was perfectly still.

"I thank you," he said, simply, "for the honor. But I am afraid I cannot accept the captaincy. You see, fellows, my mother thinks the training takes too much time from my studies. She believes a little regular exercise in the gymnasium each day would prove as beneficial as the afternoons on the track. So I do not expect to be out for the team next year.

Pendon savagely kicked the door with pattering steps of the horse. the heel of his shoe. "I don't care what you expect, Baby," ne said, stubbornly; "you are going to be captain of the track team next season."

And thus, for a time, the matter rested. Elton's mother, though not approving of the time her son gave to athletics, was nevertheless proud of her boy, and had come down to the college town to see the dual meet. The next afternoon him, as if he were a student worth knowing.

drive around the lake. Before they were under his feet like a great cable. Trees fairly started, his mother dropped a came rushing to meet him, and then handkerchief, and Baby sprang out after swept behind in the mad swirl. But alit. It lay in the road, perhaps twenty feet to the rear of them, and the boy raced back to it from the pure joy of running.

Whether the quick taps of his feet on road, with the lines dragging.

For one brief second Elton stared after the flying horse, stupefied. Almost be- horse,

For a moment he "I know what a forgot where he was, and imagined the approbation of the coach as each foot hit the boards with the regularity of the tick! tock! tick! tock! of a clock. The next instant the dust of the road beyond the bridge smothered the footfalls.

drive ran close to the lake, in a perfectly waiting for the end.

He threw back his head a triffe, and Presently Elton turned toward the leaned forward. The white road ran ways, just out of reach, the carriage fled before him.

On one side was the blur of blue where the lake should have been. He could hear voices far out and he recognized of the track team. the road or the waving of a bush startled that of the coach of the crews as it could say, but with a sudden neigh of It reminded him of his own coach, back year. fright, the animal sprang forward. In on the cinder track of the athletic field, he could still equal the

Nearer and nearer he came to the carriage. The horse was tiring now. By the time Elton had reached the middle of the stretch, he had halved the distance between them. He must close up now or never, for the sharp turn of the road a half mile away meant inevitable wreck.

His wind was still good; he had his training for the 'varsity race to thank for this fact. But his legs were aching and the road was beginning to tilt up ahead of him. His shoes and comparatively heavy clothing bothered him. The dust settled in his eyes, and absorbed the still he had his reserve strength, and he

The road fairly rushed from beneath The carriage whirled out of sight his feet as he sprinted. He saw a stone far ahead and swerved in the nick of

> He was drawing close to the carriage now. He began to calculate how he should stop the horse. If he tried to stoop for the trailing lines, he knew he would plunge forward on his face. He must grasp them where they passed over

He reached the back of the carriage. A great temptation assailed his heart to On and on the boy ran. His wind was put out his hand and steady himself. But He pressed forward till he was even were the horse on the bridge. Then it with the dashboard. The horse heard were from his own feet, as they thumped put forth the last ounce of pluck and endurance in his lithe body, and a second later held the lines in his hand.

It was no small task, even then, to stop cruel jars that blinded him. But the steady, hard pull on the reins presently brought the tired horse to a standstill

Later in the afternoon, when Elton and hard road beyond. He found that he his mother reached the house, they found could hear the hoof-beats all the time. Pendon waiting to see them. Without

"Mrs. Elton, we want Baby-" he forgot it was only a nickname-"we want He was turning the curve now. The Baby to be captain of the track team lake breeze blew the hoof-beats back to next year. No one else will do at all. him with great distinctness, and his legs. You are his mother, but I dare say you do not know just what a good fellow controllable desire to keep time to the he is, nor what a capital runner, nor-" And he waved his arm expansively as

> "I know what a good runner he is." smiled Mrs. Elton.

"Oh, but you don't," declared Pendon, with a burst of enthusiasm. "I beg your pardon, but, though he ran a wonderful race yesterday, it was not as fast as he bridge smothered the footfalls.

some of his trials. If you could only see For nearly a mile from this point the him run sometimes!" Here Pendon's eyes grew bright with memories. "Now, when he took her driving she noticed straight stretch. Fifty yards ahead Mrs. Elton, we want Baby; the university when he took her driving she hatted with a little glow of pleasure the air of Elton could see the carriage, joiling and wants him. We elected him captain of deference with which he was greeted, swaying from side to side, with his the track team yesterday, but he said Even the professors smiled cordially at mother sitting in the middle of the seat, you did not care to have him run next year. Won't you tell him he may? Frankly, Mrs. Elton, you don't know what a lot of good a course of training in running does for a fellow; you can't."

Mrs. Elton smiled. "But I do." she protested, "and I think it is no more than right that my son should go into racing another year. I willingly give my consent.

Two blocks away Pendon saw the coach

"I say," he roared, using his hands as the horse, neither he nor his mother thundered directions from a megaphone, a megaphone, "Baby's going to run next

At the sound people in the street looked another instant it was galloping up the and the conception put new energy into up in amazement. Everybody seemed his tired legs. He ran with added speed, waiting for further developments, but Pendon only went in to dinner.

# REVERSIBLE nene Collars and Cuffs

### Save Money and Trouble

Perfect in fit, never ragged or uncomfortable. Very convenient, stylish, economical. Made of fine cloth and exactly resemble linen goods.

### No Laundry Work

When soiled, discard. We send by mall proposed ten collars or five pairs of cutts for 30c. Sample collar or pair of cuffs for 6c. in U.S. stamps. Name size and style.

### As a Sailor Lad

among other things arguing, pleading and almost quarreling to get for Admiral Dewey the ammunition that made possible the victory of Manila Bay.

To go back farther in the Roosevelt sailor record it may be noted that in 1811 the great grandfather of Archie Roosevelt built at Pittsburg the first steamer that ever navigated the Ohio and Mississippi rivers. Two of the lad's great-uncles were in the confederate navy during the Civil War. One, a former officer in the United States navy, was a captain in the confederate service and conducted the pioneer blockade-running expedition wherein a swift steamer slipped past the Union war vessels in the night and carried arms and ammunition to the confederate army. Later this same officer created the system of daring confederate privateers that preyed on the commerce of the north. The second ancestor was a midshipman who fired the last gun from the confederate warship Alabama before she went down in her great fight with the federal warship Kearsarge, off the coast of France. Archie Roosevelt, it may be added, has a fine opportunity to "play sailor" whenever the family goes for a cruise on the President's yacht, the Dolphin, and he is fast friends with most of the Jackies on

ARCRIE ROOSEVELT IN HIS NEW SAILOR BUIT

war of 1812, and all boys know how, as prior to the Spanish-American war, he assistant secretary of the navy just made preparations for that conflict, board.

serious Americans. The afhad not been inglorious, and the defenses of Bunker Hill had been noised abroad in a manner to fire the provincial heart. It is true that in neither of these engagements were the Revolutionists successful, but the moral effect was great.

Israel Putnam, a host in himself and destined to prove one of Washington's most able officers, had left his plough in the furrow and the oxen unyoked, seized rifle and powder horn and ridden fast and far to join the gathering farmers. He was but a type of many animated by like motives.

It is one thing to be enthusiastic, but quite another and more important to be constant-to develop the constant enthuslasm of patience. Putnam was the sort of man whose ardor was not short lived. There were others like him, but many more destitute of such an abiding resolution. These latter came to the American encampment full of what they esteemed to be patriotism, there to strut about as upon training day, for a while full of martial aspirations, and then, in the face of hard fare and long drills. discouragement and privations, to grow weary and apathetic, and finally to seize the first chance that offered to sneak out of the lines and betake themselves back home again.

With such material for an army, it is not to be wondered at that Washington complained most bitterly to Congress of the utter inadequacy of the militia. and used all the great influence he had towards providing a force of regulars.

The result of the evacuation of Boston was to revive the spirits of the Colonists, somewhat dulled by long inaction, and to stimulate enlistments. Yet even with this stimulus, and all the hopes of liberty for the country dependent upon the valor of the citizens, the number of continental troops that set out for the defence of New York was fearfully inadequate to oppose the larger and better city. disciplined army of Lord Howe.

New York was then a comparatively small town, but its situation as a seaport, at the mouth of the Hudson, gave occupy and possess it now became the paramount object of both sides in the

Washington arrived in the city in March, and made his headquarters in a substantial building long since demolished, the site of which is now known as 180 Pearl street. Pearl (then called Queen street) was the principal thor-

### Timely Calling

### How the Pastor Saved a Life.

A man near Fort Gay, W. Va., made an entire failure in getting strength from the kind of food he ate, and not knowing on losing health until the doctors gave him up to die.

It was supposed to be consumption because he was wasting away steadily and tempted; but while in some respects his slowly dying. His minister called from time to time and one day brought along a package of Grape-Nuts, thinking from what he knew of the famous food that perhaps it might help him. The sick man took it at once and from that day began to get well. In writing he says:

"I walked to town to-day, three miles. Have gained over 40 pounds in about two months, and my neighbors don't know what to say. I frequently am told it was as if I am raised from the dead. Everybody here knows of my case; you can tell people to write to the Postmaster or Rev. I. D. Bryan. I will make a sworn statement that Grape-Nuts saved my life." Name given by Postum Co., Battle Creek, Mich.

This is another illustration that where all other food fails one can be brought back to health and strength on Grape-Nuts. "There's a reason."

Look in each package for the famous little book, "The Road to Wellville."

Revolution no istence except as a small hamlet of a disas- few scattered houses clustered at the ter had befallen the foot of a steep hill, where at present Fulton street ends. General Lee, and fair at Lexington afterwards General Putnam, had done something in the way of fortifying the approaches to the city, but the number of troops, even after Washington's arrival with the Continentals, was entirely inadequate for defense.

The rejoicing consequent upon the announcement of the Declaration of Independence soon gave way to feelings of despondency. An expedition to Canada from which great things had been expected proved wholly futile, and now, with forces far too few for such an emergency, Washington was called upon

WASHINGTON'S HEADQUARTERS, PEARL ST., N. Y. CITY

to confront the veterans of Howe, who had landed near the mouth of the river, and were preparing to move against the Rightly thinking, as the event proved, that "the line of least resistance" would be from the south. Howe landed upon Long Island, and began his march in several detached bodies towards what it a most commanding position. To hold, is now Brooklyn Heights. > Something like this Washington atplan of battle was not ill advised, in execution it was deplorable, chiefly that instead of keeping the main body together, it was sadly scattered, and the effect of numbers frittered away. He had the assistance of some of the best military talent in the army. Greene, of Rhode Island, had been taken ill and Sullivan was in command of one wing, and William Alexander (claimant for the earldom of Stirling) of another. What would have been the result had the Americans remained behind their intrenchments it is, of course, impossible to say; as it was the battle was from the beginning doomed to be a lost one. as a general of even respectable ability. Washington had less than six thousand effective troops with which to repel the attack of upwards of seventeen thousand. A large portion of the forces of Howe consisted of the German allies, ignorant men, imbued with the false notion that all Americans were savages.

quarter, they gave none, and in consequence the number of the killed was enormous for those engaged. Howe's management of the operation was excellent, considering the division of his forces, especially the movement to the left flank of the Americans, by which they were thrown into great confusion. So large was Howe's army in comparison to that of Washington that this flanking operation was repeated on the American right with such success that had it not been for the stubborn valor of the Maryland Continentals (only four hundred strong) the entire right wing of Washington's army must have perished or been captured. The delay secured by these brave southerners enabled the main body to retreat behind their earthworks, where they stood their ground till nightfall.

One of the most interesting excursions to be made out of New York is to take the trolley tramway on Flatbush avenue in Brooklyn for its entire length. The ancient village of Flatbush, only lately surrounded by the encroachments of the modern colossus, maintains even yet its distinctive characteristics as a suburban village. Many of the old houses still remain from whose windows the scared inhabitants (such as had not fled) looked upon the marching armies, or listened to the volley firing from the adjacent hills. The heights in this neighborhood, where it had been resolved to make a stand, are still preserved to a great extent in almost the exact condition they were in upon that day in August, 1776, when the battle was fought. The encroaching city, leveling hills and filling hollows, has spared the heights of Prospect Park and the slopes of Greenwood cemetery as mute memorials of the battle. Brooklyn has grown so rapidly that it has fairly encompassed Flatbush; yet it is worth a visit, if only to note the quaint old houses, some of stone, others with both roof and sides of cedar shingle, modernized more or less, and some, perhaps, with sanitary plumbing and all "modern conveniences" to contrast with the rough hewn beams, and odd gambrels and dormers of older times.

Before proceeding further one matter of interest, if a trivial one, deserves to be noted. The gallant conduct of the Maryland contingent has been spoken of. These troops (as the prevalent expression was in those days) were called "Macaronis"—they were, in fact, the scions of colonial aristocracy, the "young bloods" of the period; their uniforms of gold and buff, was in striking contrast to the homespun of the northern men, and their gay manners equally contrasted with the sober demeanor of the sedate New Englanders. More than once history has furnished examples of how the young and gay can fight. Alcibiades and the gants glacee of the Fronde could have done no better than Smallwood's gallant battallon. They probably saved the American army, and afterwards no compliment was better appreclated among the Continentals than the term "Macaroni." The stirring music of "Yankee Doodle" is set to some words ludicrous to those who cannot connect their meaning with this act of heroism:

"Yankee Doodle, Doodle Do. Yankee Doodle Dandy; Stuck a feather in his hat And called him 'Macaroni.'"

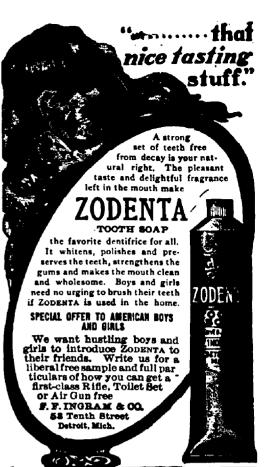

The night after the battle (August desperate efforts to provide for the defense of the redoubts to which they had retreated, and to reorganize, as best they American batteries along the shore. This-feasible enough-once effected,

all his lieutenants, a retreat was decided adelphia. upon. The night of the 29th fell dark opposite shore.

consolation that the defeat might have been a route and the disaster destruction. The high officers and those who held their honor dearer than life never once wavered in their attachment to the cause, nor doubted that in the end victory must come to their arms. But, as happens in every relation of life, business, social or family relations, when loss and discomfiture come they who should sustain most stanchly forsake most quickly falling fortunes. At this unhappy juncture the defection among the troops was startling, and for a time threatened to almost disintegrate the army. The Continentals, who had enlisted for the war, seemed alone to stand firm, and certainly justified here the reliance placed upon them by their commander. But among the militia, especially those from the east, there was murmuring and even mutiny, and not only individuals and squads, but whole companies deliberately withdrew, and, it may almost be said, marched to the rear to the sound of the enemy's cannon. What was worse they took with them their arms and ammunition. Washington could perhaps have better spared than retained such lip-serving soldiers; but the guns and ball and powder; it was hard indeed, inadequately supplied as the army was, that these should be compelled to turn traitor.

The army never really reoccupied the city after the defeat at the battle of Long Island. They took position on the heights at the upper end of Manhattan, and to this line soon after the garrison of Fort George, opposite the Bowling Green, and of the various batteries, withdrew. During the weeks of doubt and uncertainty that followed. Washington changed his headquarters frequently.

The question of what should be done in the way of further action now became pressing. It was not only a military question, but, on account of the peculiar attitude of the greater part of the inhabitants of New York, even more a political one. All were agreed that the city itself, by reason of the presence in the harbor of the British warships, had become untenable. The British army would inevitably occupy it. Should the city be left for their occupancy, or should it be destroyed, so that from these shelters might come no aid and comfort especially during the inclement winter, now not remote. Upon this matter the opinions of the chief officers were divided. As a mere military measure to destroy New York was unquestionably in strict consonance with all true precepts of the art of war. Another motive actuating to such a course was found in the fact that a very large preponderance

About the middle of September Washington withdrew his army entirely from a committee of the congress appointed the positions they had previously occufavored the enterprise, hazardous at turned to their allegiance after the fate- for the purpose, which was exceedingly pied, and established his lines along the rocky ridges at the extreme northern end of Manhattan Island. His own headquarters were fixed at the residence of They landed upon Manhattan Island, port, and most of the change of heart was citizens only, totally ignoring (as was, of Robert Morris, a native of New York, and and companion of Washington in his youth, and had married the lady (Miss Mary Philipse) to whom, so well verified tradition states, Washington had offered himself. The Philipse family was very wealthy, their manor house at Yonkers on the Hudson being one of the finest mansions of its day. It still stands in good preservation, and is occupied by the city of Yonkers as its town hall. The Morris mansion also remains, a fine specimen of the colonial period of architecture. It was occupied after the war by the notorious Aaron Burr, to whom it came by his marriage to Madame Jumel, its owner.

For about two months after this change the two armies faced each other, the British lines extending entirely across the island, their flanks amply protected by the guns of the fleet. There were several severe skirmishes, and Washington removed his quarters twice; to Valentine's Hill across the Spuyten Tuyfel, and afterwards to White Plains, where a battle took place October 28th, a spirited, but indecisive affair.

In order to defend the Hudson and prevent the British ships from ascending the river, certain obstructions were placed in the channel and two quite considerable forts erected, one at either end. That upon New York Island was called Fort Washington; the other, opposite in New Jersey, Fort Lee. When it was decided to abandon New York city all reason for remaining upon the island was at an end. Besides, it was rumored that Lord Howe was proposing to sail for Philadelphia. The defense of that city as the capital of the young nation became, of course, of the utmost importance. Washington withdrew the main portion of the army to the opposite bank of the river in New Jersey, there to await the movements of the British. His best judgment was to abandon Fort Washington, whose garrison was much needed to fill the depleted ranks. In this course, however, he was overruled by the opinions of most of his generals, while the congress, finding this movement was contemplated, immediately directed that it should not be carried out. The result proved most unfortunate, as the British invested Fort Washington, and to such good purpose that the commander-a gallant officer by the name of Magawwas obliged to capitulate. This ended the occupancy by the Nationalists of New York Island, an occupancy not resumed by them till after the treaty of peace at the conclusion of the war. With the period of the War of the Revolution came to an end, a period inglorious and full of defeats, desertions and defections, brightened by only one signal military event of favorable importance—the brilliant and successful retreat from Long Island.

(To be continued.)

Washington's Headquarters, Morris House, M. Y.

- 1. I was always a proud-spirited boy, and, being ordered one day by the captain to clean his boots, I resolved to leave the ship.
- 2. Which I did by jumping into the sea, while the look-out was meditating, one sultry afternoon.
- 3. On reaching a small desert island, I found a dead swordfish on the shore, and, being unarmed, cut off his tusk as a weapon.
- 4. While looking for shellfish for food, my foot caught in an iron ring sticking out of the
- 5. I discovered it was fixed to the lid of a great chest, which, with some difficulty, I un-'Twas filled with doubloons! earthed.
- 6. Anticipating I should be rescued, I made bags for the treasure of the inner bark of the calico-tree, putting on top of each bag a few shells as a blind.
- 7. I had hardly done so, when a marooned pirate appeared. "Ah," he cried, "the chest I have been looking for—empty!" "Yes, isn't it a pity?" said I, innocently.
- 8. "But those bags!" he shouted; "what do they contain?" "Bhclis," said I; "have some?" "Foiled again!" he yelled. "Wretch, you "Foiled again!" he yelled. smile at my misfortune! Come on!'
- 9. And we fought, till his cutlass snapped. "Quarters!" he cried. "On one condition," I replied; "that you at once leave this island."
- 10. "How?" "In you chest." "Agreed!" So rigging the lid as a sail, and waving his piratical handkerchief, he sailed away.
  - 11. I was eventually rescued with my collection of shells (ahem!) and am now the youngest millionaire in the country. Of course, I still take THE AMERICAN BOY.

### Russian Wolf Hounds

land of the Stars and Stripes traveled puts an end to the wolf's fighting.

many thousands of miles to secure these dogs-especially fine specimens of their breed-and he has had the satisfaction poor coats, large ears and short tails. of bringing to his native land dogs that are much more interesting than the \$10,000 St. Bernards owned by the Gould family or the \$8,000 Scotch collie importgan, the American millionaire.

wealthy, as, indeed, he needed to be to indulge in a quest half around the world, and he has unquestionably performed a genuine good service for all American lovers of fine dogs in enabling them to see ideal specimens of the least known dogs in the world. To be sure the Russian hounds, or Borzoi, as the dogs are called, have long ben known in America. and there are in this country kennels where they are raised and quite a few men and boys who have such animals as canine friends.

Young Mr. Thomas was convinced, however, that the Russian wolf hounds to be found in America, or for that matter in England, were not thoroughbreds of the ancient type, and, by the way, this breed is the oldest known breed of dogs. So he decided to go to the home of these unique animals in an effort to find some perfect specimens. The American dog fancier went first to the large cities of Russia, but nowhere did he find wolf hounds such as he was looking for; then he visited the imperial kennels of the Czar near St. Petersburg, but even here he saw only two dogs out of a colony of eighty that fulfilled his ideal of what a perfect dog of this class should be. Finally, he plunged into the wilds of Russia, journeying to the hunting country remote from the cities, and here his long it into their heads that they would like blow, there was nothing of a really search was rewarded, for he found the to join in the national sport. perfect dogs. Three of them he brought. Shortly after the crowd left the ring a back, one of the canines being the half dozen young boys of ages ranging Mexican Herald. famous Atamanka, the best all-white from twelve to fifteen years got down into dog in Russia.

little has ben known of these dogs out- slyly let one of them into the ring. laws very few Russian wolf hounds have the cape. in recent years been taken out of Russia.

wolf hounds in America, and he will give which he had gained by watching the over his famous Valley Farm kennels in matadors in the ring, he let the bull New England to breeding the wonderful charge the cape. But his arms were too animals. It is his especial desire to see short and the bull struck him a hard these dogs used for hunting purposes in blow, knocking the little fellow fully this country as they are in Russia. This fifty feet and tearing his shoulder with would afford picturesque sport, for these his horn. The angry bull then turned dogs have no peer in tracking hares, foxes his attention to the red cape,

When a dog overtakes a wolf the he has brought into this country are canine usually holds the ferocious animal Russian wolf hounds, the rarest and in until a hunter rides to the scene and, many respects the finest hunting dogs in throwing himself from his, pony, with the world. The young man from the one thrust of his long Caucasian dagger

> Reports have been circulated to the effect that Russian wolf hounds are ferocious animals under the best circumstances, but these statements do not seem to be borne out by the facts, inasmuch as Mr. Thomas reports that he found dogs employed in the most active hunting in Russia to be perfectly kind at all times, even to strangers. The thoroughbred Russian wolf hounds range in color from white to dark tan-never black. They have fine long heads in straight lines, big bones and muscles, great depth of chest and thickness of loin, and a general appearance of strength, while the coat of the so-called Russian wolf hounds which have been seen in this country and in England of late years are not full-blooded animals, but crosses with the shortcoated Polish hounds, English greyhounds or long-eared Crimean dogs. This

When the other boys saw the bull hair is of extraordinary length. Most of charging them they fled for the fence and climbed to safety, where they watched the bull tearing the cape. Finally it occurred to one of the older boys that by all charging for the bull he might possibly be scared away from the prostrate body of the injured lad. So with promiscuous crossing has resulted in clubs and boards they drove the bull from many instances in producing dogs with the ring. They gave their attention to the bull none too quickly, for he had tired of pawing and stamping the cape and was making for the boy.

# HOW TO MAKE FLY AND BASS FISHING

(Begun in February.)

The wings and legs of the artificial fly are generally formed of feathers. I will explain what birds these feathers are from and what they are.

The feathers from the neck and from the sides near the tail of the common chicken-rooster are mostly used to imitate the legs of the real fly. These feathers are termed hackles and are, of course, of various colors, such as mottled gray from the Plymouth Rock, brown from the Game or Brown Leghorn, white from the White Plymouth Rock and black from the Black Spanish fowl. Even the hens of these breeds have useful feathers from the neck and back and these may be collected for small flies.

Fig. 5 shows one of these hackle feathers with the fluff stripped from the midrib or quill and the fibres stroked back from the tip to base (see a b) so as to

spread them apart from each other that when they are wound on the hook they may not tangle one with the other, but stand out straight, as shown also in Fig. 6.

follows: Take the tip A between the left tinsel is a narrow band of either metal forefinger and thumb and draw the right forefinger and thumb over the fibres and down the center stem ending at B. Do this till the hackle looks like the diagram. Of course you must tear off the fluffy strands at B, which are on all hackles. If you do this carefully your hackle will look like the Fig. 5, and for all neat flies it should do so.

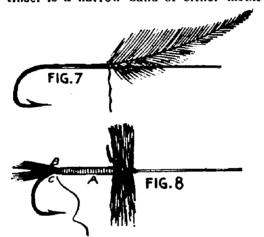

The feathers used for the wings of the flies are chiefly taken from the wings of birds, such as the wild ducks, crow, turkey, white goose and, indeed, any bird that gives a feather of the right color. Fig. 6 shows the feather from the right wing of one of the duck family and at A the dotted space shows where a piece of the feather has been cut out for a right wing of a fly which will be later described. Of course there are two wings

to every fly and the left wing is taken from the left wing feather of the bird. The diagram Fig. 7 is simply shown to let the reader know the kind of feather he needs for the wings of flies-when they are winged as he will see later.

The bodies of flies are made from fibres of feathers, embroidery silk of various colors as the fly may call for, chenille, worsted yarn, and almost any kind of durable material, such as mohair, squir-rel fur, and the fur of the rabbits' ears, spun on the waxed thread and wound on the shank of the fly. How to do this will be told later.

Most of the bodies of files are ribbed with silver or gold tinsel to give a ring-The way to produce this effect is as ed appearance like the natural fly. This

and can be obtained at some of the stores where gold and silver lace is sold. It adds to the beauty of the fly.

TACKLE FOR TROUT

When it is hard to get these silks and yarns in the exact shades required, one can dye them by means of the Diamond Dyes to be bought at all the drug stores. Follow the directions on each packet and one cannot go wrong.

HOW TO TIE TACKLE.

We have now arrived at the way to use the tools and materials already described. Although the hackle should be opened out as shown in Fig. 5, if the learner should find it difficult to do as I direct, he can first make a good and simple fly termed the "Pennell"-hackle (so named after Mr. Pennell, a noted angler). This is done as follows: Wax your silk thread and place the hook in the vise with the bend to the left. Then take a snell of gut and wind a few turns of the tying silk around it and the shank of the hook and place a hackle on the shank with the gut as shown in Fig. 7. Take several

turns around the hook shank, hackle and gut and tie it with the slip knot shown in Fig. 2 of my first article. Draw it tight and it will look like Fig. 8. Now take the tip of the feather between the finger and thumb of the right hand and wind it round the shank of the hook four turns as shown in Fig. 7 and pass the tying silk around the four turns which stand out as shown, folding the rest of the hackle down along the shank of the hook toward the bend and running the tying silk in even rolls as shown at A, and fastening off with the knot or half hitch shown in Fig. 2 (first article) at the point about opposite the barb of the hook. Snip off the silk thread at C and you have a Pennell trout fly which may be either brown, black, gray or white according to the color of the hackle feather you use.

This fly is the simplest of all flies and usually one of the most successful where there are trout or bass. For the former the size of the hook should be No. 8, and for the latter fish No. 4 or 5.

(To be Continued.)

# Mighty Battle of the Deep

One of the rarest as well as one of the ent that a third combatant was in the ster Fox, of Philadelphia, who have just to a length of twelve to fifteen feet, with returned from the Klondike. Last year there were floods there. this year they are having a drought. He says all the wild animals have run away on account of it. The jute crops were washed away by the waters last year. and, although it is past the harvest time, it is not sown yet this year owing to want of rain. All the tanks, wells and streams are dried up, as is also the vegetation. This time our little friend remembers us with a sample of cotton from the shrub.

### Why He Lasts So Long

Every boy has heard of Cy Young, the great baseball pitcher, who is so expert that he is practically able to fix his own malary. He has been pitching ball for fourteen years. While other baseball pitchers have come and gone. Cy keeps on growing swifter every year. The reason lies in the fact that he has a clear brain, strong muscle, does not drink, and is never guilty of rowdyism. Instead of going into the saloon business in winter, as so many baseball men do, he spends his winters on a farm so that when spring comes he does not have to spend weeks in hard practice to get his muscles

# Che Great American Boy Army

FOR MANLINESS IN MUSCLE, MIND AND MORALS

Every Energetic American Boy Should Be a Member of "The Order of The American Boy"

Letter From Headquarters of The Order of The American Boy, Read Before Each Company at Its February

Detroit, February 1st, 1904. My Dear Captain and Brothers of the Order:

Perhaps it is a little late, nevertheless I do most heartily wish you a very happy and prosperous New Year. I am, in the beginning of this letter, going to indulge in a little retrospective view of the Order to which I am sure you are proud to belong

in a little retrospective view of the Order to which I am sure you are proud to belong.

On March 1st, 1901. I mailed to the captains of Companies my first letter from headquarters, and in it I said that the number of Companies of the Order at that writing was about sixty; that its growth was so promising as to encourage me to believe that "It will be the largest and best organization of boys the world has ever seen." Now, how near has that prophecy come to fulfillment. At this writing there are 562 Companies with an adgregate membership of 7,500, and in addition the individual members of the Order number 3,700. From Maine to California, from the Great Lakes to the Gulf, the boys who wear the badge of our great Order can be found. Our cousins in Canada are proud to own allegiance to a Society which aims solely at the formation and cultivation of true manhood. My heart thrills with very natural pride that I have been granted the privilege of being instrumental in bringing together this noble army of true American boyhood, all actuated by the splendid desire of making their lives count for what is good and true, and I am looking forward with the utmost assurance to the day not far distant when in every city, town and village in our grand country there shall be Companies and individual members of the Order of The American Boy striving for the general uplift of the community. Is this too rosy a picture? I don't think so.

You believe in the Order, in its objects, in what it has done and what it is doing

a letter will be mailed to you each As a letter will be mailed to you each month with your program. I cannot say more at this time, but let me just express the hope that you have a Company in which the true spirit of fraternity reigns, and that you, my young brothers, are loyal, devoted members of our grand

Order and striving for its success.
Yours for M. M. M. M.
WM. C. SPRAGUE. President-General.

### Company Letter and Program

Captains of Companies of the Order of The American Roy will receive Letter and Program for March on or about March 5th. Secretaries of Companies will please notify us of any change in Captain's name or address, in order that Company communications may be delivered without delay.

Michigan still takes the lead in the number of Companies of The Order of The American Boy organized, there being at this writing fifty siz.

### The Order of The American Boy

A NATIONAL NON-SECRET SOCIETY FOR AMERICAN BOYS Under the Auspices of "The American Boy"

### Object:--The Outtivation of Manliness in Muscle, Mind and Morals.

The object more definitely stated: To promote mutual and helpful friendships among boys; to give wider circulation to high class boy literature; to cultivate in boys physical, mental and moral courage, and develop them along social, intellectual and moral lines; to cultivate purity of language and actions; to discourage idleness, and encourage honest sport and honest work; to cherish and emulate the examples of great and good men; to inculcate lessons of patriotism and love of country; to prepare boys for good citizenship; to cultivate reverence for the founders of our country, and to stimulate boys to all

Boys desiring to organize Companies may obtain a Pamphlet from us containing Directions. It is sent for a 2-cent stamp.

the captain and celebrated Hallowe'en. This meeting was a very jolly affair. A fine musical program was rendered. A number of guests were present at this meeting. This company has a fine library and will construct a book-case after the plans given in a previous number of THE AMERICAN BOY. It has at this writing about \$8 in its treasury.—CONGRESSMAN HENRY COMPANY, No. 9, Poquonock, Conn., holds its meetings every second Friday evening, at the home of Private Frank W. Carpenter, where a club room has been fitted up. It has adopted the proposed Constitution and By-Laws, with a few minor changes, and has its charter framed. Dues five cents, payable at each meeting. The captain presented the company with a silk flar.—WINFIELD SCOTT SCHEY COMPANY, No. 50. Marine City, Mich. has a library of twelve books and a set of boxing gloves. Dues five cents per month. It has ribbons. Company colors are plnk and white.—FORTUNE'S FAVORITE COMPANY, No. 11, Columbia, Mo., went on a camping expedition ate in the summer.—GENEIKAL ULYSSES G. GILANT COMIANY, No. 14, Indianapolis, Ind. Ant Company centre and cleaved \$9.55, which, added to the amount aiready in the treasury, made a total of \$18.10. In July the company camped for a week on Rush Island. In Blue River, about half a mile from Edinhurg, Ind. There were seven boys and two men in the party and all had a good time, the company camped for a week on Rush Island. In Brue River, about half a mile from Edinhurg, Ind. There were seven boys and two men in the party and all had a good time, the company camped for a week on Rush Island. In Brue River, about half a mile from Edinhurg, Ind. There were seven boys and two men in the party and all line and a good time, the company camped for a colon and a set of boxing in the treasury. It seems to the boys of the town. STATE COMPANY, No. 24, Henry, Ill., recently, and a punching bag, b ings are held every two weeks. It has made a ruis that no boys under fourteen shall be ond to playing games. The company had on a camping expedition last spring and had the sellable to membership. This company had a most interesting and had stream this fall—BUFFALO BILL COMPANY.

No 29. Fairfield, Ia. has a baseball team. It has purchased two bats a slove and a mask, in it club room and now has one of the and is trying to get money enough together to purchase uniforms—THE COYOTES COMto purchase uniforms—THE COYOTES COM

June and many interesting trips taken.—SALEM'S BEST COMPANY, No. 12, Dakota, Neb., has had its charter framed. Meetings are held on Tuesday evenings.—JEFFER-SON DAVIS COMPANY, No. 3, Palmetto, Fla., meets twice a month at the homes of the members. It has at this writing \$10 in its treasury.—WILLIAM J. SAMFORD COMPANY, No. 3, sends the following report: Number of members at start, six; joined since, fourteen; expelled, three; resigned, five; present number, twelve. Expenditures: For books, \$13.75; pennant, 50 cents; miscellaneous, 50 cents; amount in treasury, \$4.00. Each member contributes five cents per month, in addition to his regular dues, towards the support of the library.—WILLIAM C. SPRAGUE COMPANY, No. 28, Oskalioosa, Ia., resumed its meetings in September. It has a football team. One Sunday evening recently Rev. Dr. Duboc addressed this company and the John F. Lacy Companies met and marched in a body to the church, where seats had been reserved for them. They carried their pennant and wore their badges. Rev. Duboc spoke in the highest terms of the Order, its purpose, etc., and his sermon was thoroughly enjoyed and appreclated.—SUNFLOWER COMPANY, No. 10. Blue Rapids, Kas., holds its meetings in a large garret which has been decorated with flags, etc. In August the company went campling up in the hills and reports a good time, but the captain says they could not stay long on account of the rains. It will purchase a tennis set.—BIG FIVE COMPANY, No. 4, Canton, S. D., holds its meetings at the home of Private Irving Thorson. It has a gymnasium fitted up with a pool table, punching bag, a Whitely exerciser and a pair of boxing gloves, and expects soon to add more sporting goods. In June the company went camping for a week and reports a fine time. Meetings are held weekly, with dues at five cents per week. It will have a good interested in curio collecting and correspondence. It has a nice club room lighted with football and track team this winter and next spring.—MOSES CLEVELAND COMPANY, No. 10, South Milwa

### New Companies Organized

New Companies Organized

The Texas Cowboy Company, No. 20, Division of Texas, Jacksboro, Texas; Senator James McMillan Company, No. 55, Division of Michigan, Detroit, Michigan; Knickerbocker Company, No. 33, Division of New York, New York; Lone Tree Company, No. 22, Division of Indiana, Greensburg, Indiana; Bamuel W. Smith Company, No. 56, Division of Michigan, Bouth Lyöns, Michigan; General Lafayette Company, No. 3, Division of District of Columbia, Washington, D. C.; Western Reserve Company, No. 47, Division of Ohio, Medina, Ohio; G. A. Henty Company, No. 34, Division of New York, North Coshocton, New York; The Hillsboro Athletic Club, No. 21, Division of Texas, Hillsboro, Texas; Henry W. Grady Company, No. 22, Division of Texas, Springtown, Texas; The George Bancroft Company, No. 21, Division of Massachusetts, Worcester, Mass.

Captains of Companies of The Order of The American Boy in writing us reports of Company meetings, and, in fact, any correspondence, should remember the good business rule to not use the same sheet of paper for writing on several distinct subjects. For instance, don't write about the renewal of your subscription on the same page with a report of your Company meeting, and don't ask some question of the Editor on the same page with something intended for the Business Department. In writing regarding any meetings, be sure to give the Company's name, number and State, thus doing away with confusion and delay at headquarters.

B. DeWitt Fillmore, of Sunflower Company, No. 10, Blue Rapids, Kas., suggests that all members of THE ORDER OF THE AMERICAN BOY who attend the St. Louis Exposition in 1904 wear their badges so that they may become acquainted with one another.

"I've got to be a trooper." The father looked at the motherless boy before him, with his but neither Ted nor Bob ever shirked

"What does it stand for, Ted?" "Brave as a lion, true as steel, and hit the bull's eye every time. Teddy does leap, he felt the reins tighten and his that." The boy spoke the pet name head was pulled to one side. Could his which Americans have come to love master be mad to do such a thing? One with a proud tone of possession.

son?

"Yes. Dad."

"Bless you, boy! That means West Point, eh. Ted?

"That's it, Dad."

"If you can get there!"

"I'll get there. Thank you, Dad." "What's your first step on the ladder,

"Bob and I'll take a suburban route for the Herald."

"A newsboy in stirrups, eh?"

"And then I'll put in extra work at the gym. Professor Pinter says Bob and I take the grand jump now better than the rest of the fellows. I want to be ready, when I get to West Point, to take the six rail gate as well as General Grant did."

The man shook the outstretched hand heartily and looked into the eager face with a smile that was a stifled sigh. "God bless you. Ted." he said.

"See that little chap!" exclaimed the foreman of a gang of teamsters some months later, as Ted flashed past them on Bob, with his holsters full of papers, on the way to his field of action. "He's as full of grit as the little beast that's under him.

"You bet he is!" answered the man "There's nothing Teddy can't heartily. "An' there ain't no storm kin stop him, nuther." "He's a rum one, Teddy So each, in his own way, gave his commendation.

For Ted's purpose had become noised abroad, and Teddy the Trooper, on his handsome bay, was fast coming to be the pet of the town. His endurance seemed endless. Up early in the morning, he was off for a sprint with Bob over rough fields and broken country, for, as he told his father gravely, "Troopers always have that sort of thing, you know;" then school, and the gym, and his afternoon round with the papers.

The boys adored him, and imitated him as nearly as they could, until by and bye it was Captain Ted at the head of Company D, who galloped through of Springfield on his way to putting them through their exercises on the common.

He slept with a revolutionary musket beside his bed, and the sword of one of his brave ancestors suspended horizontally by a chain over his pillow.

"The sword of Damocles!" cried his father when he saw it, with a queer choke in his voice. "Why, Ted, whatever do you keep that thing there for?"

"Well, you see, Dad, it's lots easier to go over your sword exercise in your mind when you have a good grip of the hilt; and nights when I'm not too sleepy, I can practice making thrusts in the dark. A trooper might have to do that, you know, and it's well to be prepared for emergencies."

Only one boy hated Ted. Sickly. sullen, the son of a widow, who had no means to buy him a pony, even if he had been strong enough to go through the manoeuvres of Teddy's father would have swept everything that and curses from the street and Ted Rough Riders, Joe Wilder looked on at reminded him of the old days out of his all the good times the other fellows were having until his spirit grew hot within him, and Ted's popularity was as gall and wormwood to his soul.

On the outskirts of Springfield, Major Lee, a wealthy Southern gentleman, had made his home. Long avenues led from the main road to the house, with low iron gates, swung from tall stone gate posts, on which electric lamps were hung. These gates were Ted's delight, for his happy toil. Bob used to stretch and, after shooting his papers deftly his handsome head in through the window into the front porch, he would sweep and whinny mournfully, and then Ted jury. My father's a judge, so you'd betdown the avenue and take the long jump and then gallop on along the wide could talk to each other. main road. It made him feel as if he

with delight of the blazing logs in the wide fireplace in the library, where he making his 'thrusts in the dark.' and his father spent such jolly evenings, for they were the closest friends. It was a poor time for the long jump, clear gray eyes, full brow and firm chin. anything, and each nerved himself for the effort.

Just as Bob was about to make the "Are you going to be a second Teddy, then he staggered backwards, and, with of the other fellows?" a sickening thud, fell over on his side, and Ted was underneath!

After the first shock was over he raised a white, set face.

did you? But it was barbed wire, Bob. work. Ted thought Stevenson was I couldn't have let you go into that, you "great." know." Just then a gleam of steel caught his eye and, with a superhuman effort, only sailors know how to make. A

and his father, listening at the door to

And his father would creep away with a smothered groan. "Poor Ted! He is

One day he sent for Joe Wilder. The boy came slowly, unwillingly, but he did not dare to stay away. What passed between the two boys no one ever knew, but when he left the house Joe's knife was in his pocket again and Ted had conquered his enemy.

"Dad," Ted said the next morning. "I want Joe Wilder to ride Bob."

"Joe Wilder, Ted! You never had much instant he struggled against the bit, to do with him. Why don't you get some

"The other chaps have fathers," said Ted slowly. And so Joe Wilder came.

Ted had made up his mind. He would try to love this unloved boy. Stevenson "Oh, Bob, dear Bob; you didn't see it, said loving was the highest kind of

The other boys murmured at first. They could not bear to see anyone on Teddy's he stretched out his arm and grasped it. horse, and Joe was not a favorite with It was Joe Wilder's knife! Only the any of them, but, to their chagrin, Teddy any of them, but, to their chagrin, Teddy week before Joe had boasted at school seemed to have taken a mighty fancy to that it was the only one of its kind, for him, and the widow's son spent some his sailor uncle had carved the bone time by his bedside every day. That sethandle with the curious figures which tled the matter. stood upon a table near him and called up Joe Wilder. His father had had one office with a will. put into the widow's cottage. All the

other boys had telephones of their own. When Joe came there was a long consultation and the result of it was that ter having appointed a committee of Ted called a special meeting of Rough three to confer with Judge Warrington, on they came, a sea of horses. It almost Riders that evening at 7:30. "Mind you, who was unanimously elected legal adsected as if they knew it was a special be on time, Joe," he said. "You've sworn viser of the society. to stand by me, you see."

Joe grinned. It was marvelous what a

change had been wrought in him. He was no longer the sullen, ungainly boy. The new interest seemed to fill his life, and to do Ted's bidding gave him the keenest pleasure.

"All right, Captain," he said, briefly. He was not a member of the Rough Riders Club, and Ted's new thought embodied a deep laid scheme to have Joe hold an official position among the boys.

He had looked askance when Ted had told him of his plan. It didn't look as if they could make it work, he said; but Ted had a way of enthusing people, and before he had finished, Joe was pledged to carry it through with all his might and main.

When Ted's father hurried home from court, he found his son greatly excited, and Ted could not wait till dinner was over to tell him all about it. Judge Warrington was a wise father, and as quick to seize upon the ultimate good for his son as he was to detect the most salient features in the masses of evidence that he sifted every day.

"It is a grand scheme!" he said, heartly. "If you can manage this, Ted, you'll be a hero."

The boy's eyes glowed. "Thank you, Dad," he said. simply.

There was a full meeting of the club, for the curlosity of the boys was excited.

Briefly Ted outlined his dan. "It's just this, you know, fellows," he said.

All the morning in the different stables Will Foster was made vice; the public already shone like satin, while teams were decorated with flowers and bunting and harnesses were thoroughly cleaned and oiled. The anniversary of the S. P. G. F. B. M. H. was always a long remembered day.

Ted's face was flushed as the boys came to carry him out to the platform from which he and the judges would watch the procession. His wheel chair was always placed at the right hand corner, so that Bob could stand beside him and The mayor was in his place and some strangers who were guests of honor sat beside him. Ted's father sat on his boy's left side and his faithful charter members were ranged behind.

There was a sound of music and then who was unanimously elected legal ad- seemed as if they knew it was a special occasion, they stepped so confidently and

their heads were held up high. Their masters drove them, and a keen horseman on the platform noticed how well they handled their lines.

"I say, Captain, look at those percherons of Hubbard's," whispered Will Foster, "they put their

feet down as if they owned the earth, don't they? And see Sam Wilson's 'Dandy.' How he shines! I tell you. Sam's done himself proud today. And, oh, Christopher! look at old Barney's donkey! Isn't that a huge joke!" and Will doubled over with glee.

On and on swept the procession, and as they passed the platform the drivers' eyes turned to their President, and each man felt repaid for his trouble with Ted's bright smile and bow.
"The little chap," as they
fondly called him. Many a man had joined the society "just to please that boy."

The cheering of the crowd became louder, as the horses which had won honorable mention the year before came into view. Proudly they stepped along, their medals suspended from their necks by crimson ribbons; and then the cheering grew deafening as the winner of the first prize brought up the rear. A splendid black, bls coat glistening in the sun, while on his shining forehead hung a golden star.

Before the mayor rose to present the prizes for the present year, the gentleman at his right stepped to the edge of the platform.

"It's the Governor, Ted!" cried Joe Wilder excitedly. "Phew! but the society's in luck today!"

"We've got to do something to keep. Five years had passed since the special. "My friends," began the governor, "I drivers from licking their horses the way meeting of the Rough Rider Club, and it cannot tell you how delighted I am with they do. THE AMERICAN BOY offers twelve prizes of Two Dollars each for the best Amateur Photograph received during the twelve months in the year, one prize for each month, also a second prize each month, of one dollar, for the next best photograph, the competition to be based upon the originality of the subject and the perfection of the photograph. The centest is open to subscribers only. Photographs will be returned if stamps are sent for the purpose. All photographs entered in the contest and not prize winners will be subject to our use thiese otherwise directed by the sender, and fifty cents will be paid for each photograph that may be used, the prize pnotographs in any event to be our own, without further payment than the payment of the prizes. Write on the back of the photograph its title, with a description of the ploture, and the fall name and address of the contestant, who in every case must be the artist who took the picture.

### Underdevelopment

Most amateurs do not know when to stop development. The required density can be most easily ascertained, of course, by transmitted light. Where this cannot be done satisfactorily, however, it is advisable to continue developing until the image shows plainly on the glass side of the plate.

### Extemporising in Photography

It is a difficult thing to add bromide solution, drop by drop, to the developer. Why not use a pipette or filler such as is furnished with a fountain pen? Secure a bromide bottle deep enough so that the tube will not touch the bottom, and with a sufficiently large bottom so that it will not easily fall over. If the neck is too large to be filled by the rubber tip, slip the tube through a proper-sized cork. The arrangement is quite convenient, but it probably could not be bought complete anywhere. The idea is not new, but this application is new to the writer.

it out and tack a stick across the top. Dust a white powder, such as flour, over the parts desired white, and use lampblack similarly for the dark spots. Rub it into the cloth sufficiently to keep it from falling off. Buspend by a string from the middle of the stick. During the exposure give the background a slight motion, which will make wrinkles and seam disappear, and give a soft, blurred effect, such as is obtained by throwing the background considerably out of focus. The results are marvelous, especially if the motion be somewhat circular.—International Annual.

### The Letter Box

The Letter Box

Jesse R. Oakman, Germantown, Pa.: The black spots on your negatives, of which you complain, are mostly caused by specks of dust settling upon the plate, either when the plate-holder is filled or during development. They are best avoided by care and cleanliness. Black spots are often produced on collodion films by the use of a strong iron developer, particularly when the film is allowed to remain in the developer too long.—Ray Beardsley, Point View, Kas.: We cannot afford to waste space by giving a detailed description of the process of making albumen paper, but must refer you to Wilson "Cyclopedic Photography" (New York, 1894) for that information.—Amo F. Eckert, Milwaukee, Wis.: If your question has not been answered since the date you name, kindly repeat it; your letter may have been lost in the mails. All letters that reach the editor receive due attention.—Harold L. Rausch, Urbana, Ind.: Yes, lantern slides can be made from films; if of the same size as the slide, they may be printed by contact; larger prints have to be reduced in size.—Fred. M. King, Elmwood, W. Va.: The camera you name is not among the standard cameras and, therefore, unknown to the editor. It may be a good camera, however; everything depends upon the lens.

Snotting Medium

### Spotting Medium

The "Photographische Chronik" mentions that an excellent spotting medium may be prepared by scraping away the dense portions of old negatives. When sufficient quantity has been secured, place it in a small bottle, add a little water, a few drops of acetic acid, and dissolve by means of heat. A thickish paste is thus obtained, which is easily used with the brush. The paste may also be prepared from the cuiting of toned prints.

### Current Comments

Current Comments

Peter C. Whyte, Carbondale, Pa.: Photo. would have been a success, if boy had been in focus.—Geo. With, Brooklyn, N. Y.: Brownide paper of your print was not properly developed. The whites are "muddy."—J. Arthur Richardson, Baltimore, Md.: Contrast in your photograph is too great. Print was probably overspased.—Litta Voelehert, Appleton, Wis.: Print evidently remained too long in toning bath. I believe bromide paper would be better adapted to the subject. Try it.—Ely E. Palmer, Providence, R. i.: Your prints lack contrast. If you will look at the snow in the woodland scene, you will find that it is not white.—Kidwell Grannis, Flemingsburg, Ky.: Your "Bis" is promising, but poorly mounted.—Revelon Rockwell, Roaring Branch, Pa.: Your photograph shows lack of detail and is too big a subject for so small a camera.—Peter C. Whyte, Carbondale, Pa.: Boys in "Winter Sport" are a trifle out of focus and should have been in center of plate; otherwise photo is meritorious.—C. Douglass window for a long or even a short time and the photo is meritorious.—C. Douglas otherwise photo is meritorious.—C. Douglas Brown, Cleveland, O.: Print shows lack of detail and too much contrast.—Geo. Kinnier, Germantown, Pa.: "A Bummer Byway" is the only one of your three photos that is toned correctly.—Frank H. ### Blue Prints

Blue prints may be given the black tone by plunging them into a solution of 4 parts of potash in 100 parts of water; then, when the blue color has entirely disappeared under the action of the potash, and a yellowish color has taken its place, they are immersed in a solution of 4 parts of tannin in 100 parts of water; then, washing them again, we obtain prints whose tone may be assimilated to that of pale writing ink.

# Boys' Books Reviewed

THE MAGIC FOREST, by Stewart Edward White. We have at various times when reading "The Claim Jumpers," "The Blased Trail" or "Conjuror's House," which are intended more especially for grown ups, been enchanted with the breuty and animation of Mr. White's description of life in the big woods and this has been emphasized during the reading of this delightfully enchanting little story. We should like to tell all the boys and girls about it, but space forbids; suffice it to say that little Jimmy Ferris, all unknown to himself, is a somnambulist, and in this condition walks off the train on which he and his parents were going to California, dreaming that he is going to find the North Pole. Some Indians find him and take Jimmy in charge, and knowing nothing of who he is, carry him away up to their Canadian headquarters. Jimmy spent some months with his Indian friends, learning their language, and all about hunting. fishing and camping. He learned also the games that Indian children play and made games that Indian children play and made many friends. Traveling in canoes, he was taught many things about the forest and its inhabitants. This is the veriest sketch, and we must just recommend it to our readers as the nicest kind of present in the way of a book that a boy could have. The illustrations consist of full-page plates and many drawings. In its make-up it can hardly be surpassed. 148 pages. Price \$1.50. The Macmillan Co. Macmillan Co.

THE BOY: HOW TO HELP HIM SUCCEED Nathaniel C. Fowler, Jr. The space at command is prohibitive of more than our command is prohibitive or more than the barest mention of this book, much as we would wish to quote some of Mr. Fowler's sensible, practical, snappy epigrams with which it abounds. We can only say that it is a book for every person who has anything to do with boys. Parents, educators, practical husiness men and others will find ample material to work upon to help in trying to solve that greatest of riddless the trying to solve that greatest of riddles, the boy. Its value is far beyond the price asked for it. 220 pages. Oakwood Publishing Co.

for it. 320 pages. Oakwood Publishing Co.
LITTLE DICK'S CHRISTMAS, by Etheldred
B. Barry. The motto of this little story
might well be "A little child shall lead
them." Little Dick sacrifices his wish for
Christmas gifts that poorer children should
be warmly clothed. He areo brings together
his grandfather and his parents who have
long been estranged from each other, and is
the means of ending a strike which had
brought much poverty to the village and is
the cause of a general Christmas rejoicing,
girl. It is nicely illustrated by the author.
66 pages. Price 60 cents net. Dana, Estes
& Co.
THE STORY OF LITTUE DANY.

THE STORY OF LITTLE DAVID, from The David Copperfield of Charles Dickens, edited

by Frederic Lawrence Knowles. Mr. Knowles has succeeded in producing a very pleasing story for the young folks. Many people think that "David Copperfield" was Dickens' masterpiece, and the story of Master Davy among the best of his children characters. Here we have the early years of Davy given in connected form and we think our young readers will find it most enjoyable, and older folks will be pleased to renew their acquaintance with Peggoty, Traddles, Little Emily and Betsy Trotwood. There are pleasing illustrations by Etheldred B. Barry and others. 176 pages. Price 75 cents. Dana, Estes & Co. by Frederic Lawrence Knowles. Mr. Knowles Estes & Co

THE BOYS ILIAD, by Waiter Copiand Perry.
Tales of courage and daring ever appeal to
healthy, manly boys, no matter how old the
tales may be. Mr. Perry has given us in this
book an animated and pleasing account of

THE AUXILIARY CRUISER DIXIE, WHICH LEFT LEAGUE ISLAND HAVY YARD RECENTLY WITH SUPPLIES AND A CONTINGENT OF MARINES FOR PANAMA

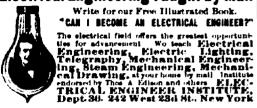

the origin of the siege of Troy and has written of the struggles of the Greeks and Trojans in a manner calculated to please any hoy. Agamemnon, Achilies, Hector, Priam. Menelaus, Patroklus, Nestor and other heroes of Homer's immortal epic are placed before the young reader in a manner not only interesting, but full of sound instruction. Jacomb Hood adds to the charm of the book by his beautiful illustrations, while the letterpress and general make up leave nothing to be desired. 385 pages, with full index of names. Cloth and full gilt. Price \$1.25. The Macmillan Co.

RUE BLUE, a Story of Luck and Pluck, by Edward S. Ellis. This story illustrates the Edward S. Ellis. This story illustrates the lesson that pluck and perseverance achieve success, while the believer in luck has little to show for his confidence. The account of the robbery and the detective work of Willis Hardy, the hero of the story, is interestingly told. There are a number of apt illustrations by J. W. Kennedy. 360 pages. Price \$1.00 net. Dana Estes & Co.

THE GIRL ROUGH RIDERS, by Colonel Prentiss Ingraham. We think there are girls who would gladly have given the best rib-bons in their caps to have joined in the "Summer Outing" described in this volume; "Summer Outing" described in this volume; and the boys, well, their dearest treasures would have been willingly sacrificed to go with that outfit. This story of a trip through the Grand Canon of Colorado, and along the Old Mormon Trail through Arizona and Utah, by Captain Fenton, his "Six Fair Routf", and approved a coldision and compared to soldisme and compared to the control of soldisme and compared to the control of the control and Utah, by Captain Fenton, his "Six Fair Scouts" and an escort of soldiers and cowboys, tells of the pleasures of camping, fishing and hunting big game with all the attendant danger and adventure in a country unsurpassed for scenery in the world. The author writes from his own experience, and his description of the "Wonderland of Mystery and Silence" is given with such vividness as to thrill and awe the reader. The narrow escapes from bears, mountain lions and dangerous precipices, and the delights of "roughing it" are calculated to set almost any boy's blood tingling. The pictures of General Miles and Buffalo Bill, with other illustrations by L. J. Bridgman add to the attractiveness of a most readable book. 310 pages. Price \$1.00 net. Dana Estes & Co. BILLY WHISKERS' KIDS, by Frances Trego

BILLY WHISKERS' KIDS, by Frances Trego Montgomery. A sequel to "Billy Whiskers," Mrs. Montgomery's first goat story so pleased its young readers that another was in de-mand. This is the story of the adventures of Day and Night, twin kids of Billy Whisof Day and Night, twin kids of Billy Whis-kers. The kids journey in many lands and have most thrilling experiences, but through them all show themselves to be the most cunning, tricky members of the goat tribe. The little ones will be delighted with the story and the many exceedingly funny pic-tures in the book. The bright, comical pic-ture on the cover page will prove a great attraction. Bound in boards, 4to size. 140 pages. Price \$1.00. The Saalfield Publish-ing Co.

A pleasant little incident took place a little over two years ago at the White House in Washington, which shows the kindly spirit that pervaded the heart of the martyred President, William McKinder and particularly his biddens to be a little was the same particularly his biddens to be a little was the same particularly his biddens to be a little was the same particularly his biddens to be a little was the same particularly his biddens to be a little was the same particularly his biddens to be a little was the same particularly his biddens to be a little was the same particularly his biddens to be a little was the same particularly his biddens to be a little was the same particularly his biddens to be a little was the same particularly his biddens to be a little was the was the same particularly was the same parti ley, and particularly his interest in chil-

The young son of Mr. Blinn Yates, of Buffalo, was paying a visit to Washington with his father and mother. Through the courtesy of Senator Burrows, the boy and his parents met the President in the president in the president and the president in the president and the president in the president and the president in the president process of the Whitese President in the president process of the Whitese President Pres the courtesy of Senator Burrows, the boy and his parents met the President in the private reception room of the White House. It was the day following the dedication of the Logan monument, and Senators Cullom and Mason, of Illinois, were in the reception room with a party of ladies and gentlemen—relatives of General and Mrs. Logan. There were also present Senator McMillan, and possibly fifteen or twenty others. Senator Burrows, with Mr. and Mrs. Yates and their son, had but a few moments to wait when President McKinley entered the room. After speaking with the Logan party he approached Senator Burrows and his party of three. After shaking hands with the adults of the party he took the boy by the hand, and, in an earnest and thoughtful way, said: "My boy, you have just as good a chance as anyone; honesty, energy and industry make a good boy. A good boy makes a good man, and to a good man all things are possible."

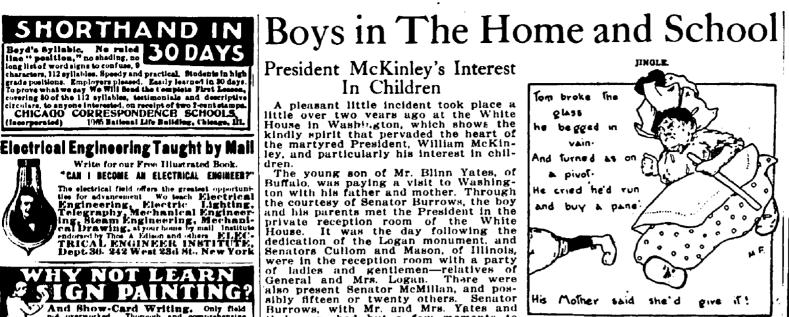

Then the President passed on to another group in which was a little girl. To her he gave a carnation, thus making another child happy. After the President had left, Senator Burrows turned to the boy and said, laughing: "Well, my son, you will be President now sure."

The incident will long live in the memory of that boy.

peared "The North Bethlehem News," con-quining locals, several columns of editorials and a page of advertising. The young editor and publisher can only work at night, as during the day he is employed in the Times office.

### A Great Organization

A Great Organization

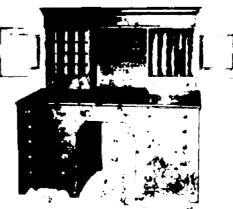

The Railroad Department of the Young Men's Christian Association reports for the year 1903 the largest growth in its history. Seventeen buildings have been built and equipped, twelve thousand new members added and ten new associations organized. There is a gain of forty seven in employed officers and an increase of \$296,050 in valuation of buildings. The current receipts for the year were \$1,617,485, of which amount the railway companies gave forty per cent. Seven new libraries, containing over thirteen thousand volumes, have been installed, the value of these volumes being \$12,250. The membership at the close of the year was 62,348, of whom 1,851 were in educational classes, and 2,883 in Bible classes. The valuation of buildings was \$1,821,000.

### Some Tests of Educated Men

President Alderman of Tulare Univer-President Alderman of Tulare University gives the following as some of the tests of educated men: First, ability to behave himself properly; second, ability to use language with force and precision; third, open mindedness to ideas; fourth, ability to get what he wants out of books; fifth, ability to observe closely, imagine vividly and reason accurately; and sixth, ability to do some sort of work well and cheerfully.

### Desk Used by General Grant When a Young Man

When General Grant was a young man he had desk room in the office of Charles Avery, an insurance agent in St. Louis, Grant was then working at the real estate business. This was at the time of the Crimean war, the events of which deeply interested the future chief of the American armies. At the desk shown in the accompanying photograph it is said that Grant kept track of the maneuvers of the French. English and Russian the French. English and Russian

armies by means of maps of his own

make.
When Grant's friends came to see him when Grant's friends came to see him at his office; he delighted in a spreading out his charts; upon the surface of his desk and telling how the different generals could have moved differently than they had done, which, in his estimation, would have been to their advantage. His friends little knew of his military ability of that time and poid little attention. at that time and paid little attention to his words.

The desk shown in the photograph is

now stored away in the garret of the Cuyahoga building in Cleveland, to which city it was taken from St. Louis some thirty years ago.

# OLLEGE **Preparatory Courses**

An exceptional opportunity is fiered to those wishing to pre-are for college entrance exami-ation. The full course covers pare for college entrance exami-nation. The full loourse covers the entrance requirements of such a college as the Armour In-stitute of Technology, and stu-dents satisfactorily completing this course are admitted to the college of engineering of that in-stitution without further exami-nation in the subjects taken.

### **Special Courses**

For those whose preparation is partially deficient special short courses have been pre-pared in English History, Mathematics, German and Mechanical Drawing.

Parents wishing to keep their children at home as long as possible before sending them to college will find these courses of great value. There is no breaking of home ties, and the student not only has many of the advantages of a private tutor but also the sympathy and encouragement of his parents.

# What Inventors Are Doing For Boys

AN ICE VEHICLE.

Boys who ride bicycles will be interested in the invention of a sled which has a saddle sition on the ice is one of which most boys and pedals and is intended to be propelled over the ice by a movement of the feet similar to that used in driving a bicycle.

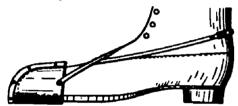

The occupant sits in the saddle with his feet on the pedals, which he alternately pushes forward and downward against the ice; the forward and downward movement of one

pedal serving to pull the other backward. The sharp backwardly inclined teeth on the bottom of the pedals bite into the ice and, as they move backward, advance the sled over the ice at a speed proportionate to the energy exercised by the rider. The sled is guided to the right or left by increasing the pressure upon the pedal on the side to which the sled is to be turned.

### A COASTING SHOE ATTACHMENT.

The practice of steering small sleds, in coasting, by pressing the toes of the shoes into the snow at either side of the sled meets the approval of coasters generally and perhaps also of those who make their living mending shoes. To protect the shoes and at the same

time increase the control of the wearer over his sled, a metallic shoe tip has been invented which, strapped to the foot, protects the toe of the shoe and being provided with an outstanding rib or wing which cuts into the snow, forms a positive means for steering. The use of this device in coasting on ice or ice slides is particularly suggested.

### A WEEDLESS FISHHOOK.

The fishhook illustrated was invented to relieve those who are fond of fishing of the annoyance of losing their hooks by having them become anchored on some object under water, or of having to repeatedly haul in trolling lines to remove grass or weeds from the hooks.

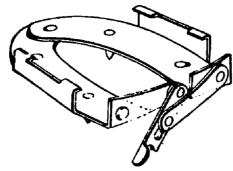

The guard-arm which protects the point of ily yield when a fish strikes at or bites the bait, so as to expose the barbed point of the hook, yet sufficiently strong to allow the hook to be drawn through lily pads, reeds, rushes or the limbs of sunken trees without being

ters in reference to patented articles should be addressed, in care of The American Boy:::

### ICE CREEPERS.

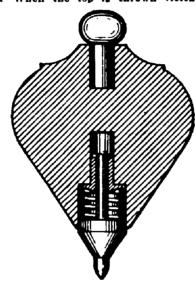

The difficulty of maintaining an upright pocan speak from some well remembered experience. The creepers shown are designed to overcome this difficulty by providing the heels

of shoes with a removable frame carrying s number of sharp pins or calks which sink into the ice and prevent their wearer slipping. By a movement of a thumb lever the creepers may be readily detached from the shoes.

### A BOUNDING TOP.

This top is like the ones boys ordinarily use, except that the lower part is bored out and a spiral spring placed in the hole. Against this spring is fitted a movable plug or plunger upon the lower end or point of which the top spins. When the top is thrown violently to

the ground the enclosed spring will cause it to rebound high into the air, the spinning action maintaining the equilibrium of the top while in the air. This rebounding will continue until the spinning action is nearly spent.

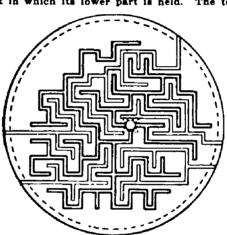

### A SELF-WINDING TOP SPINNER.

This device for spinning tops consists of a spool mounted inside of a casing. Inside of the spool is a spindle in the form of a tube, which extends through each end of the casing. The ends of the tube are of a size to fit over and hold a top of ordinary form. To the spool is attached two spinning cords. To use the hook is a spring, delicate enough to read- the spinner one cord is wound around the spool, and the upper end of the top is inserted into one end of the spindle. An outward pull of the wound cord will impart a spinning motion to the spool resulting in the top being thrown in a spinning condition from the spool spindle. At the same time the second cord is pass, allowing the button to be removed.

wound upon the spool, leaving the spinner ready to be used again without the necessity of winding the cord upon the spool.

### A LABYRINTH PUZZLE.

The object of the puzzle illustrated is to get the peculiarly shaped button out of the box in which its lower part is held. The top

cover of the box has six sets of angularly arranged slots. The button is free to slide in these slots but is kept in place by an enlargement on the top and a cross, made up of four arms of equal length, at the bottom. The button will not slide to the end of any of the slots, which terminate at the edge of the box. and there is but one place in the cover through which the four arms of the cross will

# Boy Artisans and Mechanics R. G. NOLAND, Chicago, Ill., is just working out a new idea in a penny-in-the-slot automatic peanut vending machine. He would like to see something in the paper on the construction of a one to four horse power motor or gasoline engine.—EVERETT M. Norfolk, Neb., is interested in electricity and HILER, Columbia City, Ind., is interested in the stam engines and would like to see more are mould like to know where he is taken or show things or anything in the mechanical line. He has been experimenting all summer; has a telegraph line,

six sixteen candle power lights.-W. LEROY punt or scow about fifteen feet long.-AR-WILLIS, Huntington, Ind., would like to see an article in the paper on how to make small box kites.-RUSSELL H. KURTZ, Carey, O., age thirteen, is very much interested in electricity. He says several of the boys of his town have put up a telegraph line and are learning rapidly. He would like to correspond with other hove on the subject of electricity. -DONALD BANCROFT, Hot Springs, Ark., would like to know the best way to build a dam without using stones, and also how to make a small four-wheeled wagon.—ARTHUR ROBINETT, Franklin, Neb., would like to know how to make a leather cover for a ball. -ARTHUR UHL, Detroit, Mich., sends a plan for a kite which he has named the American shield kits. He says he made one of the Santos Dumont No. 10 kites described on page 272 of our July number and that it worked fine .-HOWARD PATTERSON, Mound, Ill., would like directions for making a gasoline engine of about one half or two thirds horse power. He says he has all the material excepting the power to make an automobile, and thinks he can find the material to make a gasoline engine. He promises to send us a description of a windmill which he made, as he thinks other boys will be interested .- MELVIN CAR-LISLE, Meridian, Miss., would like to know where he can get a book on how to make storwhere he can get a book on how to make storage batteries.—FRED RUHE, Oakland, Neb., would like information as to how to make a gas engine of about one half horse power.—KENNEY TEBOW, Ravenwood, Mo., would like to see an illustration in THE AMERICAN BOY. See like to see an illustration in THE AMERICAN BOY showing how to make a "speeder."

—JOHN M. COONS, Manhattan, Kas., would

engines and would like to know where he ticles on these things or anything in the way can get a book telling how to make of machinery, in THE AMERICAN BOY .from one to five horse power engines and also HARRY COUSINO, 89 Sherby Street, Detroit, dynamos of sufficient power to light five or Mich., would like plans and dimensions for a

Lynchburg, Va., is very much interested in electricity, and, in fact, almost anything in the mechanical line. He has been experimenting all summer; has a telegraph line, switchboard, burgiar alarm attachment to woodhouse, and is able to take about twenty words a minute. He says he does not intend to be an operator but expects to study electrical engineéring. He would like to correspond with boys interested in his line.—PAUL LA ROSE, Zion City, Ill., would like directions for making a one half horse power steam engine.—FRANK JOHNSON, Manchester P. O., Swineford's Springs, Va., would like directions for making a birch bark or canvas cance.—FILLMORE DUNCAN, Vacaville, Cal., is making a coaster that has two seats and is run by a sprocket and chain. He says he has it fixed so that the fellow in front guides the coaster and the fellow in the back runs it by turning the sprocket and chain. He would like to correspond with boys who are interested in making automobiles, and would also like some information on how to make motors.—EDWIN NIMITZ, San Angelo, Tex., would like to see more articles on the subject of electricity.—A. R. SHARPLES, West Chester, Pa., is very much interested in electricity and is making a study of it. He says he often puts in electric bells for people, charging \$1.50 for his services and clearing fifty cents. He expects to be an electrical engineer.—JOHN HARSHAW, West Pittston, Pa., age fourteen, has just completed a racing model of the "Reliance." five feet, six inches long, with a mast and topmast nine feet high. He says he likes carpentry, boat building and printing, and likes to "fuss" with machinery. John expects to go to the St. Louis Exposition and is saving his money for this purpose.—CLARENCE WRIGHT, Ogden, Utah, would like a suggestion as to how to make a cheap squirrel cage.—JETHRO DAVIS, Evergreen, Ala., would like a suggestion for a rabbit trap. He sends us a sample of his printing which is very good.—HANB POEHLMAN, Grove City, Pa. age fourteen, sends plans for a canvas cance which are

# How to Become Strong

EIGHT PARTS-PART

TO HE value of a muscle consists only in a minimum of time, and that is the in its power to move. It must be final object of every form of athletics. Strength is motion. Every machine stretched as much as possible. ever made by man is valuable only for Magnificent stretching exercises are jects which it is set to handle.

muscles straining as if you were holding possible. a weight. You will observe that, no of the whole limb?

Do you know what is happening?

a rapid succession of shocks to each nasium floor. sinew and muscle, faster than any manand expand so fast that they vibrate. So, even when a man is doing the very thing that he thinks is overcoming mo-

The best exercises to do without the aid matter how steady your nerves are, of apparatus are the "tumbling" exerthere is a constant tremor and trembling cises, which cannot be done better than on grass or earth. When you go in for them, you must expect a few falls at The nerves that telegraph the order to first, and if you fall on grass it won't the muscles to do the work are sending hurt half as much as it would on a gym-

Walking on the hands, which generally made telegraph instrument could click. Is considered more a trick than an exer-These shocks make the muscles contract cise, is one of the finest "limberers" that there is. You will find it hard to get yourself upside down, and you will be tempted to let some other boy help you tion, he is only doing it by the means of by lifting your heels till you are perpendicular.

But don't let him do it. In most forms santly when they are held tense is that of athletics, such help does more harm the muscle is naturally a contractor, than good, because often it enables a boy Like a powerful rubber band, each to do a thing without really having muscle strives to pull together every caught the knack of it. For instance, time it is stretched out. The nerves keep many a boy lets others support him in ordering: "Stretch out! Stretch out!" the water while he tries to swim. The and the muscle obeys, thus vibrating all result usually is that he wastes his time and has to learn all over again in the end Now the "stronger" a muscle becomes, before he can swim alone. This is bewhich means the bigger and thicker it cause, when supported by other boys or

You will not be perfect, however, until you get so that you can remain perfectly still in one spot for some time. Practice is the only thing that will enable you to achieve it. This is fine work for the whole body.

"The bridge" is a second and excellent form of "limbering up." It is simply raising yourself on hands and feet so that your chest and abdomen are high in the air. Almost every muscle and sinew in the body is stretched by this form of exercise, which is one that practically every boy can do if he will only try.

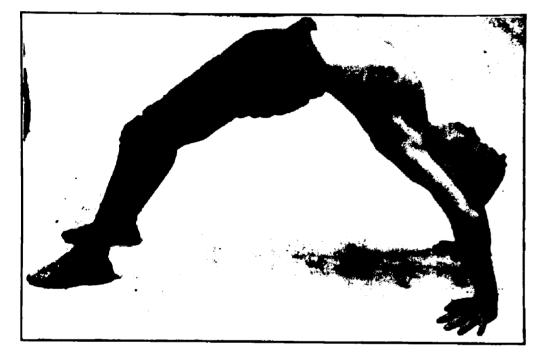

The chest is expanded immensely by it, and the abdomen and loin muscles are set to working so hard that you can feel them quiver. Thus you can make lungs and other vital organs "get a move on." And they need such moving even in the most healthy body. Indeed, a body is healthy only so long as they are kept going properly.

You should do this exercise every morning and evening, day in and day out, until it is as much a habit as it is for you to stretch yourself when you wake up. In fact, the impulse to stretch when waking up is only nature's signal to you to "Ilmber up."

The hardest, but also the best, form of this limbering up work, is also a form of work that will give you big muscles, because at the same time that it stretches some muscles enormously, it makes others labor to lift a heavy weight under trying circumstances.

Squat so that you are almost, but not quite, sitting on the ground. Rest firmly on the soles of both feet. Now hold both arms straight out before you, to balance you. Then raise one foot gently and slowly and extend the leg straight in front of you. It looks easy, but it is very hard to do unless your muscles are in a condition where they can do difficult work and at the same time act beautifully with each other. If you can do it neatly, without quivering like jelly, you have a good set of inter-working mus-

To many boys this is one of the most difficult and discouraging things in mo-You will find that if you control all tion-exercises. But its value, both for fore the game is called. Savage races all lay stress on being limber. They have been taught by years of experience that quickness and activity are the best forces of muscular strength. Indeed, in an open-air life they are vital.

The ancient Aztecs and Toltecs and the still more ancient Maya Indians of Central America used to play a wonderful game of ball, which shows to what a pitch they had developed agility. ball was put and kept in play without being touched by the hands once during the game. It was struck at by the hips and shoulders of the players, and it was a disgrace for any one of them to touch it otherwise. So perfect did these ball players become that some of them could strike the hall with their hips and shoot it through a stone ring that was fastened high above the field. This ring was just large enough to permit the ball to pass through it. You can imagine what dexterity was required to perform this wonderful feat; yet the old Indian legends tell of many men who did it.

The Filipinos also have a game in which the ball is never touched by the hand. It is kept in play altogether by being struck with the side of the leg.

Now, what is this agility that is brought into play by such games? It is nothing more or less than QUICK STRENGTH. The muscles have been trained to do their maximum of work

only right way to learn to swim is to Therefore, the stronger a boy or a man learn how to float in the water before

Thus, in standing on the hands, the muscles if he expects them to do the full first important thing is not to stand with the head down, but to get such command over the body that you can get your feet into the air and still retain your balance;

who have not collected stamps are doubtless aware of the ingenious plan advertisement stating that there was whereby our Post Office Department arranges, for the modest sum of ten cents, game, one who did not know the differto deliver a letter just as soon as it is ence between third base and a foul ball, received at any post office in the country instead of compelling the recipient knew nothing about center rushes, goals, to wait for his letter until the next etc., one who never attended a circus and trip of the regular carrier or until he had no desire to do so. A liberal salary called at the post office for his mail was promised to the boy who possessed which might, under some circumstances these qualifications. The Farmers' Tribcause quite a delay.

Nevertheless it is possible that many says: of our readers never gave a thought but at this office a boy of that kind is to the great organization which enables the government to make good its promise on the special delivery stamp no matter where the letter goes or at what time of day or night it arrives. As has been said there are at present about 10,000 messenger boys on Uncle Sam's payroll and the number is increasing rapidly because more and more special delivery letters are being sent every day and the messenger delivery service is constantly being extended.

The number of special messenger boys connected with a post office varies in accordance with the size of the city or there are hundreds of these young cour-

can make run-

Uncle Sam's Messenger Boys of course there are dull days when few special delivery letters arrive and when Few people realize that one of the a lad cannot make more than moderate largest forces of employes in the service wages no matter how hard he works, of the United States government is made but it is evident that for the most part up solely of boys ranging from fourteen in this, as in every other class of work to nineteen years of age. Almost any boy who can give ordi-Of course, every boy who has ever col- nary references or evidence of his honlected stamps is familiar with the oblong esty and good character can obtain employment as a special post office messenger. The boys are hired in each town an inscription to the effect that the or city by the local postmaster or post office officials and there are few qualiits immediate delivery at any postoffice fications that any boy cannot fill. A boy to obtain a position in the messenger service must own a bicycle or at least have the use of one. However, wheels do not cost as much as they once did and a second-hand bicycle if in fair condition will answer as well as a new wheel.

None of the boys need work more than eight hours a day, but inasmuch as some of the boys must be on duty practically all the time, day or night, the lads work in "shifts," one division relieving another as do sentries in the army. Thus two boys who are on duty during different periods of the twenty four hours may sometimes share the use of a single bicycle. The government also requires that each messenger shall purchase a blue uniform of the kind worn by these messengers in all parts of the country; but Uncle Sam by buying these uniforms wholesale gets them very cheap and in turn supplies them to the boys at cost. Thus a uniform with cap complete seldom costs over \$10 or \$12 or little if any more than an ordinary suit of clothes for a boy of this age. For use in rainy weather the special messenger provides himself with a "poncho" or sort of rub-ber cloak or cape such as is used by the American soldiers.

### Was The Ad. a Joke?

A Pennsylvania newspaper contained an wanted a boy who never saw a baseball one who never saw a football game and une, commenting on the advertisement, "You may want such a boy, not needed, for he would not be worth the powder needed to blow him up. We would not give him his sait for his services. What the world wants is wideawake, live American boys who will get to the baseball game and the circus when they are boys and who will go to the front of the profession when they get to

### THE AMERICAN BOY

CORRESPONDENT to the New York Herald sends to that paper a story of a fierce encounter bethe story being related by John W. Williamson, of Genoa, Neb., who was asin 1872, two years before the removal of the Pawnees to their new reservation in Pawnees. Oklahoma. The story as related in the Herald is as follows:

the reservation at Genoa asked permission to take an old time buffalo hunt. braska, and this territory was rapidly filling with settlers.

The old time spirit of savagery always seemed to return to the Indians during the exciting adventures of the chase, and the settlers were never safe from depredations during such a hunt. Accordingly, in granting permission to the Indians to go on the hunt, the government agent, William Borgess, commissioned the capacity of trail agent.

The trail agent was expected to restrain the Indians from any lawlessness, but his authority was only advisory, as the various chiefs who accompanied the expedition selected one of the company as supreme commander from time to time. The authority of this chief became absolute during the time for which he toward our line when Sun Chief asked was chosen, and every movement was directed by him.

The start was made from the reservathe only white man in the expedition save one, a Mr. Lester Platte, nephew of Mrs. Alvira G. Platte, who lived among the Pawnees, for many years as a missionary. Mr. Platte had just arrived from the East, and, wishing to see some real western life, asked permission to accompany the expedition.

expedition, including squaws and pa-

The first buffalo seen on this hunt was a lone bull north of Arapahoe, on a small attention was paid. stream called Spring Creek. He was killed and then there was a great feast.

The first surround was made eight or ten miles south of Arapahoe, and they lives to the Pawnee position. succeeded in killing all of the herd, to the number of one hundred and fifty or herd from the south, but on seeing the horses were in the canyon below Indians they took to their horses and fled, doubtless thinking that the Indians were hostile

Several times in the course of the jourfor the purpose of saving for the whites.

On the evening of August 3 some white men came into the camp and told Mr. Williamson that Sloux Indians had been watching the Pawnee band for several days, and had run their buffalo herd into the region as a decoy.

In the midst of the attack on the buffalo the Sioux intended to attack the Pawnees. After so many attempts to deceive them the Indians were not willing to believe the story, and determined to make the surround of the buffalo early in the next morning as planned.

Mr. Williamson, however, concluded from the manner of the hunters that they were telling the truth, and tried by every means in his power to have the Indians the game and pelts they could carry and many were killed in this way. home, and there was no good reason for slaughtering another herd, but the In- river, into which we plunged, and soon dians could not resist the pleasure of another chase.

Sky Chief was the leader in supreme command in this chase. He insisted that the white men were lying, and when advised by Mr. Williamson to abandon the chase grew angry and said:

Buck Skin, you are afraid. Many Sloux have I killed, and many more will bite the dust if I meet them. No, we will make the chase. You shall stay with the

women if the Sioux come." All arguments having proved unavailing. Mr. Williamson started with the Republican and Frenchman forks. Three as saddles for the squaws

or four miles from camp stray buffalo were seen coming southeast, as if they were being chased, but no signs of Sioux

The straggling buffalo were cut out and a few killed. Sky Chief and another Indian took after a bunch which went east, while the rest of the band were strung out over more than half a mile. As the struggling buffalo were chased into the rolling country, the Pawnee

forces became badly scattered. "Presently," says Mr. Williamson. relating the story. "I saw signs of excitement among the Pawnees up in front, and a young buck came riding toward tween the Pawnees and the Sloux, me. When he came up to where I was which took place in the summer of 1873, he cried out that the Sloux were coming. I rode forward and soon saw a band of Sloux on a rise of ground about a mile sistant farmer for the Pawnees at Genoa, and a half northwest of us. holding a council and making the war signs to the

"Terre-e-cocks, a Skeedee chief, was near me and I asked him what we would In the summer of 1873 the Indians in better do. 'What do you say?' he asked. I suggested that we fall back to a clump of cottonwoods about two miles down the They had given up their right to all the canyon. The Skeedee chief agreed to vast buffalo plains of Kansas and Ne- this, but the Kit-ke-Hawki-i chiefs wanted to fight, and Sky Chief was a Kit-ke-Hawki-i.

"In his absence the chiefs of his band tried to assume authority and things were thrown into confusion. A Kit-ke-Hawki-i chief said there was only a small band and that we could whip them if they came. When we got on higher ground, however, we saw that the hills were, fairly black with Sloux, of whom Mr. Williamson to accompany them in there were probably a thousand. Things looked discouraging.

> They were not prepared to meet such formidable foe, and some began to weaken. At this point Sun Chief, who was head chief of the whole band of Pawnees, took command, and the discord which had existed was overcome.

"The Sloux were moving rapidly me to ride out toward them with a white flag, in hopes that the Sloux had a trail agent with them and that he would hold tion on July 2, 1873. Mr. Williamson was them back when he saw a white man with the Pawnees.

"It was a pretty hard thing for one man to ride out and face a band of one thousand Sloux ready for battle, and I did not like to do it. However, I told the interpreter, who was in citizens' clothes, that if he would go with me we would go to meet the advancing There were six hundred Pawnees in the Sloux. We rode to within eighty rods of them and I waved a white handkerchief as a signal to the trail agent, if there should happen to be one, but no

"Now the enemy ceased riding in circles, and, lying flat on their ponies, made a dash. We wheeled and raced for our opened the battle. The Pawnee braves had gathered on the hills at the brow so. Some white men were stalking this of the canyon, while the squaws and pack

"The squaws were chanting a mournful song and danced a slow measure in long lines or half circles, to instill bravery into their warriors. The outney white hunters had come in to the numbered Pawnees could not stand long Indian camp with some story calculated against the attack of the Sioux. The to turn the Indians back, told doubtless fight immediately became very close, hand. gained a position where they could shoot down into the canyon on the defenseless squaws and children.

"The Pawnee warriors were gradually driven from their position on the hills down into the canyon, which was rapidly being surrounded by the Sloux. I saw that it was a hopeless case for the Pawnees and sent word to the chiefs to make a break down the canyon before the Sloux should get behind us..

"Before the word had had time to reach them, as if by a preconcerted plan, the thongs which bound the packs were loosened or cut and the whole band of Pawnees fled at full speed. The Sloux pursued along the sides of the canyon, shootabandon the chase. They already had all ing down on the struggling fugitives,

> "They followed us until we reached the reached the south bank, but many of the Pawnees were killed while crossing. We then started down stream along the side of the river, and in less than three miles met several hundred soldiers marching up stream on the other side.

> The soldiers offered to go with the Indians to the scene of the battle and rescue the meat and their packs, but the Indians would not have it. They said they would not take it if it would be brought to them."

In all about one hundred and fifty hunters. They located the herd about six Pawnees were killed and those who miles west of where Culbertson now escaped lort everything they had except stands, and almost half way between the a few packs of blankets, which served

# A Modest Hero By SCOTT TRUXTON

Thomas imagine that the quiet as he was in the habit of doing daily. self possessed man of forty five is mind some thirty two Americans owe their lives.

When, in 1872, the unfortunate Virginius was captured on the Cuban coast and her crew thrown into the Spanish Morro, charged with aiding the revolutionists, Henry Best, a boy of thirteen, was working in the cable office of Santiago.

Bright and attentive, he had already picked up a fair knowledge of telegraphy, and could, and often did, send unimportant messages, under the supervision of the regular operator.

General Barriel, the Military Governor of Cuba, had long been known for his cruelty to all found in arms against the sovereignty of Spain, and no sooner was he informed of the capture of the Virginius crew, than he determined, by their wholesale execution, to strike terror to the hearts of Cuba's friends.

and the officers and men summoned before the drum head tribunal were denied all counsel, and after the mockery of a trial, condemned to be shot.

Fearing that news of the intended outrage would reach the civilized world and foreign powers seek to interfere, the Governor ordered a company of soldiers to take possession of the cable office, situated in his palace, and allow no messages to go out under penalty of death.

His orders were promptly obeyed, and Best and the other occupants of the office, without any warning, found themselves thrown into the street, and their places filled with Spanish soldiers.

While the operator hurried off to ascertain the cause of their removal. Best, who spoke Spanish fluently, gossiped with the soldiers of the guard, and soon heard of the coming execution.

Fired with indignation, the boy at once determined to make an effort to save the doomed men, and hastened after the operator to secure his assistance in the scheme. The man, however, was a coward, and fearing for his own life, threatened to give the boy up to the authorities unless he promised to forego his plans.

Realizing the necessity of deceiving his companion, the lad gave a reluctant promise, and, as soon as he could leave without exciting suspicion, set off to attempt the seemingly impossible by himself.

The execution of thirty two of the doomed men was to take place at sunrise on the second morning, and the boy knew that if anything was to be done to save them, it must be attempted at once, and to attempt and fail, meant discovery and his own death, for the blood-thirsty Governor would brook no interference with his plans.

However. Best never wavered in his determination, but took his way slowly toward the palace, where he mingled with the soldiers, joining in their talk and apparently enjoying his unexpected holiday.

Time drifted slowly on, and as the clock struck four and he knew the Jamaica office would be holding the wire for the customary husiness of the day, Best slowly rose to his feet, and securing a hucket of water and a broom, entered the telegraph office and requested the secret thing in American here. clock struck four and he knew the Ja-

EW people that see Henry Best at sergeant in charge to permit him to his desk in the cable office of Saint wash the floor and along.

Placing his pail on the floor beside the the hero of the ill fated Virginius affair, operator's table, he began carefully or that to his bravery and presence of cleaning the table top and instruments, covertly watching the guard as he did so. No one paid him the slightest attention, and with trembling hand he loosed the sending key, and, not knowing how soon an arresting hand might descend upon his shoulders, spelled off upon the wire, "Help! Massacre! British! Americans! Tomorrow.'

But fortune always favors the brave and none of the men who surrounded the trembling boy had the least idea that help was being called for beneath their very noses, or that the lad was doing more than clean the noisy instruments that crowded the table.

Not daring to repeat his message, or answer the wild calls of "Santiago! Santiago!" that came from the instrument. the boy left the table and busied himself in cleaning the floor of the office.

Would they heed his unsigned message? He could not tell; and his heart sank within him as he feared they would not. A court martial was hastily convened, He had done his best, however, and now events must take their course.

Best passed the night and the ensuing day in a fever of unrest, and as the sun sank that ushered in the last night on earth for the devoted men, and no help had come, he almost broke down. All night he tossed upon a bed that seemed of fire, and long before sunrise he was dressed and out, mingling with the dressed and out, mingling with the crowds that stood in silent dread, waiting the sound that told of sudden death to men that stood with bandaged eyes before a convent wall.

Hark! A sharp rattling volley—and—silence! All was over, and the boy, burst-ing into tears dashed off to his room and locked the door behind him. His efforts had been in vain.

had been in vain.

The sun rose higher and higher until the shadows had shortened to noon, and the boy still sat, his face buried in his hands, when the crashing boom of a great gun broke over the city, and the streets were filled with the sounds of hurrying foosteps.

Snutching his hat the led rushed described in the hat the led rushed described.

Snatching his hat, the lad rushed downstairs into the street and followed the crowd that streamed toward the Marina. Thank God! His message had been heeded!

Ever prompt to hear the call of her oppressed or danger threatened citizens, the British Governor at Jamaica had taken no chances, nor waited for the taken no chances, nor waited for the confirmation of the message, but calling Sir Lambton Lorraine, commanding H. M. S. "Niobe," ordered him at once to Santiago, instructing him to stop the executions no mater at what cost, and there in the harbor, her decks cleared for action, the little vessel lay, the British ensign flying at her peak, and her guns, loaded and run out, threatening the city. The news soon spread and within an hour the crowd knew that Sir Lambton had notified the Governor that unless all further executions stopped and the men

further executions stopped and the men were turned over to him within ten hours, the "Niobe" would bombard city, and the Governor, terrified by moral force of the British nation recre

sented by the tiny ship that lay bene the Morro's guns, gave up the men to England's care

A few days later the "Niobe" steamed out of Santiago harbor bearing the rescued men to New York, where, to the accompaniment of bands and cheers, the gallant officer was presented with golden brick bearing the inscription "You Are a Brick."

But Best, the real hero to whom thirty two Americans owed their lives, went quietly back to his duties, saying a word to anyone. The story leaked out the telegraph office and requested the name a sacred thing in American home

# Highest

In our December number we asked the vice." "To be an electrician." boys to write us telling what their high- an engineer on a railroad." "To be a est aim in life is. We made the request that scholar and a benefactor to mankind." the writers use postal cards. Three out "To be a physician." "To be a machinof every four failed to do so. It might be ist." "To be president or manager of a of every four failed to do so. It might be ist." "To be president or manager of a well for those three to select as one of railroad." "To be a man that can be their aims-follow instructions. The letters from the boys in answer to this question are interesting, and most of them highly creditable to their writers. Here are some of the answers: "First, to be an honorable, God-fearing young man; second, to be a public speaker of some ability; third, to be a successful banker." "To become Chief Justice of the Supreme Court of the United States." "To become an expert in steam engi-"To become a civil engineer neering." and a true, broadminded citizen." be a high toned, christian gentleman and that later on in life he gave that up and a help to my country." or one of the chief men of a large manufacturing business, and, to accomplish this, to learn the trade of mechanical engineering." "To be a draughtsman or artist." "To become an electrical engineer." "To become a cadet in the naval academy." "To get a good education." "To be honest and true and try to do as near right as I can." "To go to West "To be an honest, christian man Point." and to be a successful inventor and electrician." "To be a civil engineer." To do right and work up a fair and Perhaps they were afraid we would pubprofitable business." United States Naval Academy at Annapo- hear from more boys telling us what "To go into the government ser- their object in life is.

trusted and to enter one of the professions." "To be a marine or stationary engineer." "To be a successful illus-"To become an electrical engitrator." "To become an electrical engineer." A Tennessee boy writes, that he would like to become a land doctor. He thinks no one could be a greater benefactor to his race than one who teaches ordinary people to care for our mother earth. Several boys say their highest aim is to be christian gentlemen. One boy says he wanted to be a great artist "To like Angelo, since his earliest years, but "To be president then decided to become an engineer, then a mail clerk, then a-telegraph operator and finally now he has decided to "lay brick." Another boy says he has adopted the following rules: "Avoid the desire for riches; envy no one; laugh at obstacles and failures; be honest; be able to see your faults and mend them; keep your mouth shut." The small number of answers received indicate that a great many boys have no object in life, or, if they have, they do not want to tell us. "To enter the lish their names. We shall be glad to

The editor will be glad to make this department a means of communication between those interested in debating and in declamation. Reports of Debating Society meetings, school and college debates, prise-speaking contests and pictures of clubs or members, are desired. Personal answers cannot be given, but the editor will answer questions and meet your needs so far as space and the general plan of this department will allow.

Address all communications Editor of Lyceum, care THE AMERICAN BOY, Detroit, Mich.

### Prize Offer

A prize of a book of selections, listed the best selection suitable for a prize speaking contest, taken from a recent oration. Selections, with name and address of sender must be received not later than March 20th. Freshness, unity, virility, interest, action, style, will be important points in favor of a selection.

A copy of Cushing's Manual will be given for the best outline upon either side of any live question, and also a copy of the same book for the best statement of a question for debate upon a topic now in the public mind.

The award of the prize for the best selection submitted in January has been made to Litta Voelchert, Appleton, Wis., for a selection entitled "American Patriotism," from one of William Mc-Kinley's orations.

### On Reading

The newspaper reports of the doings of congress refer to some brilliant tilts between members in the course of the debates upon the Panama Canal, the civil service, and other questions which claim the attention of our congressmen. He is apt to come off first best in such a contest who has the clearest thought, backed by the most thorough course of reading.

### Civil Service Reform

A good question for debate can always about every year some effort is made to check the advancement of this move-

### A Young Orator

Robert B. Smith, Denver, Colorado, age nine, is destined to make his mark as an orator, if his ability in this line grows with his years. On Christmas night he won distinc-

tion by delivering an address in a church, in which he showed rare power of expression. As a result of his hit that night he has received numerous requests to appear at entertainments, and some of these he has accepted, thereby adding to his fame as a young orator.

ment. This year it was an attempt to defeat the appropriation for the civil service commission, and in the course of the debate in congress the civil service was referred to as a "humbug." There must be some among the one hundred and ten thousand subscribers of THE AMERICAN BOY who are looking forward to entering the civil service, and who would like to study up on this ques-

Lyceum.

### The Ouestion Noted

tion.

"Resolved. That the Civil Service Act should be extended to all departments of government service."

### References on Affirmative

"Atlantic Mo." for April and May, 1890, and Feb., 1895; "Forum," Oct., 1892; Geo. Wm. Curtis's "Orations and Addresses;" at \$1.25, will be given to the one sending H. C. Lodge's "Historical and Political Essays;" Reports of the U. S. Civil Service Commission.

### Notes

In the senate of the United States in 1831, Senator Marcy, New York, used the phrase, "To the victors belong the spoils," which John Fiske calls "One of the most shameful remarks recorded in history." The "spoils system" held sway for a half century, from 1831. It is a source of corruption.

### References on Negative

"No. Am. Rev.," April, 1881; "House Reports," 1885-6, No. 1001; "Senate Reports," 1887-8, No. 2373, pp. 46-7.

### Notes

A permanent office-holding class is in keeping with the English government, from which it was borrowed, and is not according to the genius of the United States. Subordinate officers should be in sympathy with their superiors.

### What Others Are Doing

The debating league among the Minnesota schools is flourishing this season. About fifty schools are participating in the contest for the cup which is now held by Fergus Falls.

The Literary Societies of the Mount Hermon School, Northfield, Mass., are is not so perennial as the tariff, but holding a series of debates for a cup. The Pierian won the first from the Good Government Club on the question, "Resolved. That it would not be advisable for the States to establish an educational qualification for suffrage."

The annual Amherst-Bowdoin debate will be upon the question of "Federal regulation of trusts."

The annual debate between Hebron Academy and Coburn Classical Institute, of Waterville, Maine, will be held this year at Hebron, with the question, "Resolved. That the policy of colonial expansion is desirable for the United States.'

R. K. Culbertson, of Alliance, Ohio, reports successful meetings of the "Young Men's Lyceum." They have debated such questions as these: "Resolved. That it would be to the advantage of the United States to build and maintain a large navy;" "That the government of England is superior in form and operation to our own;" "That the salary of the cabinet officers should be around you.

president of the Yarmouth, Maine, H. S. Debating Society.

The "Franklin Debater" is published by the Benjamin Franklin Debating Club, of Lowell, Mass., and shows that this society is in a live condition.

### The Oration

An important part of the club meeting is a good oration. One who is afraid to debate can learn an oration and get familiar to the sound of his own voice in the club meeting. It will be easier for him to debate next time he is asked.

Here is a characteristic selection from one who began in the debating club, where you are now, who was, I think, the first president of the Lyceum League of America.

### CLEAN POLITICS

By Theodore Roosevelt.

of Commerce, Syracuse, N. Y., 1899.)

THE PRESIDENT PRIZE PUZZLE

THREE FAMOUS PRESIDENTS OF THE UNITED STATES, who always used and who could be satisfied with no other than

# Williams' Shaving Soap

It falls to the lot of but few men to be President of the United States, but every man can enjoy Williams' Shaving Soap, and no man who values comfort, luxury and safety will be satisfied with any other.

### OUR OFFER

To any one sending us the correct name of any one of these Presidents, with a 2-cent stamp to cover cost of mailing, we will forward, post-paid, a most useful and ingenious pocket tool, called the Triplet, a key-ring, letter-opener, paper-cutter and screw-driver combined, and an article that every man and boy will find many uses for every day. Address

THE J. B. WILLIAMS CO., Dept. ?, Glastonbury, Conn.

FREE. Trial Tablet Williams' Shaving Scap for a 2c. stamp to pay postage.

Write for Free Booklet, " How to Shave."

### What is Said About the Triplet:

"Received the Triplet some time ago, and would not be without it. Just like Williams' Shaving Soap—the best thing out."

"I would not take a dollar for the Triplet. It saved me a very serious accident two days ago.'

"About two months ago you sent me a Triplet. I have used it constantly until a few days ago, when I lost it. I feel as if I had lost my best friend."

"Enclosed find stamps for Triplets. It is the nicest and handlest pocket tool I ever saw. I want to give some to my friends." "The Triplet has become like my pocket-knife, or watch or pencil—a necessity, and I would not care to be without it."

have the bulk of the community internave the bulk of the community interested in a common sense way in getting them. If you get together and ask for reform as if it was a concrete substance like cake, you are not going to get it. If you think you have performed your duty by coming together once in a public hall about three weeks before election and advecting remething that were known. duty by coming together once in a public hall about three weeks before election and advocating something that you know perfectly well it is impossible to get, you are going to be fooled. You have got to work and you have got to work practically; and you have got to remember that to be practical does not mean to be foul, at least that is my idea. A man must strive continually to make things a little better; put things on a little higher plane. But he has got to remember the instruments with which he works; he has got to remember the men with whom he serves.

In the first place, he cannot do anything if he doesn't work as an American. You meet a certain number of good people who will tell you continually how much better things are done abroad than here. Well, I doubt if they are right, but I don't care if they are. You have got to deal with what we have got here, and you cannot do anything if you do not work as an American. You have got to work in sympathy with the people around you.

In the next place you have got to feel

salary of the cabinet officers should be increased;" "That Japan is just in her demands of Russia;" "That a public library is a greater benefit than a small college;" "That the members of the President's cabinet should have sears in congress."

The Adelphian debating team of Foxcroft, Maine, has chosen the following officers: Claude Boyle, president; Edna True, secretary; Blanche Jewett, treasurer. Ralph Shorey is a member of the executive committee.

Walter J. Graham is the newly-elected president of the Yarmouth, Maine, H. S. ideal.

I ask you, then, to strive for clean politics, not by professing your devotion to the cause on one night or another night of the year, but by taking more active, steady interest in bettering our politics. I ask you to strive for them, not by requiring to recognize conditions as they fusing to recognize conditions as they are, but by recognizing them and then trying to make them better; not to delude yourself into the belief that you need not strive to better matters. Remember that if you do not strive to make things a little higher you had better get out of politics. If you are only content to keep step with the mass of your people round about, why then you

take her proper place among the nations of the earth, you must make up your minds to the fact that you can see it (From an address before the Chamber only when each American remains true called drakes. Drakes don't have to set to the steadfast idea of honesty, of nor hatch, but just loaf, go in swimming courage, of manliness in civic no less and eat. If I was going to be a duck, I'd rather be a drake every time.

# Heal' Rifles

give satisfaction in both game and target shooting.

Heal "No. 10" Sporting Rifle—shown at left, is 844 inches long, light weight, barrel of best blued steel, stock of black walnut, simply constructed, beautifully finished. has adjustable peep sight, positive and rapid shell ejector, takes down in two pieces instantly. Shoots shells 3.00.22 calibre, long or short. Price 3.00

Heal "Blu-Barl" Air

Rifle—shown at right, is 84 inches long, weighs about 2½ lbs. has a seamless steel barrel, tapered and finished blue-black, giving it the appearance, style and beauty of the highest grade sporting rifle. Walnut finished stock, nicely adjusted peep sight, lever action. No soldered joints, no cheap tin finish, few pieces and nothing to get \$1.25

Ribbed paper consists of rough lines appear-ing on both back and front Slik paper is composed of small colored fibres pressed into the stamp, and can be

Blik paper is composed of small colored fibres pressed into the stamp, and can be seen on the back.

Laid paper is of a light and dark shade alternately. The shades appear in liner.

Wove paper is smooth, and when held up to the light will be even in shade.

Every person who is spending any amount of money on stamps should exercise prudence in buying that will guarantee a fair return of the amount, if a day of liquidation should come. In fact, careful buying is one of the essentials to complete enjoyment of philately, but the collector is ill-rewarded who relaxes his attention from the artistic side of stamps to attend to the monetary aspect.

It is stated that, up to very lately, the stamps of Hong Kong enjoyed the distinction of having been the same in design for a longer period than the stamps of any other country in the world. Hong Kong stamps were first issued in 1859; and while every other country has materially altered the

were first issued in 1859; and while every other country has materially altered the design has never been altered until the last few weeks, by the appearance of a new set bearing for approval sheets at 50 per cent commission.

### The Numismatic Sphinx

The Numismatic Sphinx

Merton Read: The 1894 dollar is worth just face value and no more to any person, all stories to the contrary notwithstanding.—H. J. Krause asks "What do the letters O. 8. and CC mean, and what are they put on some of the coins for? The letters O. 8. and CC indicate at which of the mints they were issued, whether at New Orleans, Ban Francisco, or Carson City. Those without any mint leters were issued at thiladelphia. The small M on the dollar is the initial of Morgan the designer. He also asks the origin of the dollar mark \$1. In regard to this there has been numerous theories advanced (1) That it is the modification of the figure \$8. the dollar originally a piece of an eight and designated by an \$8. (2) That it is a combination of H. \$8. the mark of the Roman mint. (3) That it was taken from the Spanish dollar. On the reverse of this piece is a representation of the Pillar of Hercules, and around each pillar a scroll with the inscription "Plus Ura." This device in the course of time degenerating into the dollar sign. (4) That it is a combination of the letters U. \$8. the initials of the United States. (5) That it is a combination of the letters U. \$8. the initials of the United States. (5) That it is a combination of the P and \$8 from the Spanish pesodure, which means "hard dollar." In Spanish accounts peso is controlled by writing the 8 over the P. and placing it over the sum. Dr. Marcus Baker of Washington has been investigating this matter and his results are interesting and give us a more reasonable explanation of this sign and its origin. The earliest record of the sign being used is in an old book entitled "A Compendium of Federal Arithmetic" which was published at Lansingburg. N. Y. in 1797. The author, Hev. Chauncey Lee, in this book sets forth a system of what he calls "characteristics," by which one vertical strokes the cents, these two crossed by one 8-shaped stroke the dime, and for the dollar he sign consisted of two vertical and two curved strokes. These were all arbitrary m

CHILDREN OF GRAND DURE LEOPOLD BALVATOR, OF AUSTRIA

We find all sorts of trades nowadays pursued by royal people and the noblesse, charming wife raise their own vegebut there is but one instance of royal truck gardening.

Leopold Salvator of Austria, nephew to are five charming children.

the pomp and circumstance of courts, and Archduchesses are dressed in blue- fully simple and sincere. jeans overalls, and are intently engaged in tending their small potato and cucum- and mend, and the boys have been taught ber patches in summer, and in winter they carpentering as well as gardening, so raise things under glass.

marketmen coming to the palace gardens, them healthy and wholesome and very and the little Imperial children bartering happy, and their great-uncle, the Emthe produce of their small gardens and peror of Austria, is especially fond of glasshouses. They have little tools and any peasant children, and are fine specimens of brown and robust youth.

The Grand Duke Leopold and his tables and use what they wish on the Imperial table, and they give to their This is in the family of the Grand Duke friends whatever they cannot use.

This royal vegetable gardening has the Emperor. Not only is the Grand Duke been going on but a year and a half, a truck gardener, but he is a devoted but it has proven such a success that husband and ideal father. The Grand next year the Grand Duke and his wife Duke married the daughter of Don are to cultivate a larger garden. While Carlos, the Spanish Pretender, and there at work this royal pair appear quite as any one else who is tilling the earth. The seven Imperial Highnesses have an They wear coarse clothes, and use regideal home in Tuscany, and the Grand ular garden implements. The Grand Duke and Duchess, taking no interest in Duchess has seen a good deal of sorrow in her life, and she is now enjoying her have taken to vegetable gardening for happiest days with her lovely children amusement. All the five little Archdukes about her in a home life that is delight-

She has taught her little girls to sew that these royal youngsters are very Everything they raise they sell, the much accomplished. Such things keep what they can do. He has partaken of watering pots, and they work as hard as their vegetables on several occasions, and has praised them for their skill as

### PHUNNYIDEASCOPE THE

By J. CARTER BEARD

TOHE Phunnyideascope is an improve- smaller conical hole in the third block kaleidoscope.

the phunnyideascope, whittle out three to project above it. blocks, one 8 inches long, 11/2 inches broad and 11/2 inches thick; another 4 inches long, 1% inches broad and % inch inches broad and 1% inches thick.

Make a round hole half an inch in diameter through the second block described. This hole must be one-quarter of an inch from one of the ends, and at equal distances from the two sides. Make a little conical hole about one-quarter of an inch deep in the corresponding part of the last block described.

With glue or nails fasten the narrower second block to the first; the end so fastened should be the one farthest from the round hole, and the distance from one of the ends of the larger piece of wood to where the other is secured to it ought to be 3% inches.

The foot of the stand is the third block. Fasten this to the shorter end of the 8-inch block so that there will be 13/2 inches between it and the narrower block that you have already fastened to the make a projection or shoulder to keep it 8-inch piece. This should bring the ends in place, and have the part that projects of the two last mentioned blocks flush from the other end of the hole cut down latter block will be opposite to and facing the larger hole in the block above it.

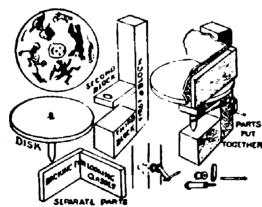

One must be 4% inches long, three-little strip of wood to the spool, and eighths of an inch thick, and 2% inches through a hole in the projecting end pass wide. The other is of the same dimen- a small round stick. This forms your sions, except that it is three-eighths of an inch longer than the first one. Fasten the edge of the shorter one to the face of the other (making the two at right in the second block so that its pointed angles to each other) in such a way that end will rest in the small hole in the the edges of both will be flush with the third block. Take a turn or two of string face of the other piece, and the two will or of elastic around the cylinder between be joined lengthwise together. This constitutes the backing for two pieces of it over the spool. It should be just long looking-glass. Get these as nearly the enough to be taut between the spool and shape and the size of the two pieces that the cylinder. Fasten one side of the make the backing as you can, and fasten them against the inner side of the back- to the upright 8-inch block half an inch ing with mucilage or with glue.

Cut out of a thin pine board or a

shingle, or the thin wood used to back from thick, stiff paper, with a square in mirrors and pictures, a disk six inches the center of each to fit over the center in diameter. Make a square aperture of the wooden disk. Paste funny men, about one quarter of an inch across. monkeys, dogs or pictures cut out of Whittle out a round stick 2% inches long comic papers upon these paper disks. and just big enough around to fit easily Slip one of these paper disks over the into the large hole in the second block. square peg in the middle of the wooden grand buke leopold salvator, of Austria and Cut one end to a point to fit into the disk, turn the crank and the show begins.

ment-and a great one-on the and the other end down to one half of an inch from the top into a square shape To make the stand that supports to fit the square opening in the disk and

Bore a hole through the sides of the 8-inch block just below where the second block is fastened, and introduce into thick, and the third 4 inches long, 13% it a cylinder of wood cut to fit so that it can be turned easily. On one end of this

with each other, and the little hole in the to fit tightly into the hole of a small spool. Put the cylinder into the hole made for it, and fasten the little spool to Make two other blocks of pine wood, the narrow end. Fasten one end of a windlass.

Put the wooden cylinder that forms the axis of your disk down through the hole the second and third blocks and then slip wooden backing of your looking-glasses above the cylinder.

Cut out any desired number of disks

Don't Miss Your Chance to earn a fine suit like this on page 118 last month. Send us names of nice boys between 5 and 17 years old. Many boys have sent us names. One evening's writing at home may earn you the suit. Don't delay—we may withdraw the offer. Send coupon with list. Write plainly in ink or typewriter on paper 820 in. Put State and County at the head of each shret. Arrange the Boy's names in full, alphabetically, with street and address for each name. Send at least 10 names of boys between 5 and 17 yrs. old. The five boys in the State sending the largest lists from their respective counties will each receive a soit from us through the nearest dealer. Send your list promptly. Address.

What with slack trade their seats he suddenly stretched up, and and sickness and -

again!" shricked the parrot vociferously, came his voice in a clear falsetto above "Hold your blather, will you?" angrily the subdued hum. "Rum hot! Rum hot!" demanded Bob Green, turning his bibuwhen yer spoke to-d'ye hear?"

"'And the stormy winds did blow,'" murmured the parrot, with a subdued manner. Then suddenly emitting a lifelike representation of the sharp drawing the disturbance subsided, turned to of a cork, he broke into a fit of seeming- peruse the review before him. ly derisive laughter, and blinked again at the boys.

have him, 'Rags.'"

of that size back to school."

say, 'Hullo, Peter!"

Approaching the cage, Harkness did as a little chuckle of pleasure.

it to his claw; and drawing a second cork victim. with the same startling unexpectedness, melody, and loudly demanded a rum hot.

In two more minutes the boys had completed their extravagant purchase and paying their first installment down, were marching gleefully back to school with Sparkes off into a helpless chortle. the parrot perched on Harkness's finger. occasionally, as though with a sense of its recent loss, calling crescendo for Bob Green.

Reaching school, listening merrily to Peter's sallies on route, they displayed a little more caution.

"We shall have to be careful," observed Harkness, "especially if he is so jolly noisy. I think we'd better stick him in the fourth-class room during tea, and afterwards we can smuggle him up into the dormitory, though I hope to goodness he won't want to talk in the night."

"Or draw corks." added "Rags."

Entering the school without attracting attention, they sought the classroom and, tying Peter by his legs to one of the desks, left him contentedly eating a banana as the first tea bell sounded.

It was rather unfortunate that five minutes later Mr. Timms, the fourth master, should enter the room in search of some review in his desk. Peering about through his everlasses in his short-sighted way, he falled, however, to notice the intruder, and securing the paper, hurried off at the second bell. leaving the door ajar behind him.

Watching silently from the distant desk, Peter studied the situation with a look of cunning. Dropping the skin of the demolished banana, he coolly proceeded with his beak to untie the cord that bound him, and flying to the ground.

walked forth on a journey of exploration. Ten minutes later, one of the servants, hurrying from the hall to the kitchen in the growing dusk of the evening, with a pile of plates in her hands, dropped them with a shrick of terror as a locomotive whistle sounded suddenly from her very feet, and a shrill voice shrieked, "Change

install. here for Worcester." Amid the startled of five screams and the clatter of the breaking each," pottery as she fled to the kitchen, a desaid Bob Green, risive screech of laughter seemed to folthe bird-fancier, low, mingled with cries, clearly audible "and the bird is in the dining hall, of someone calling for "Bob Green."

Exchanging a startled look, Harkness myself, there and his chum waited agitatedly as the ain't a better train- head master and one or two of his ased parrot in Amer- sistants hurried forth. Five minutes ica; and his lan- later, however, their fears were allayed, gwidge when he's though their bewilderment continued, by in form would make the news that Martha, the maid in question, appeared to have encountered some What'll ye have?" demand- prowling tramp endeavoring to make his ed the gray parrot in a clear way into the house, who had wilfully

Relieved by this news, though doubtful and ruffling his feathers with a crooning of its reliability, the two anxiously sort of chuckle, the bird blinked a waited for dismissal, and with its arrival solemn eye at the two boys, who gazed hurried eagerly to the classroom; but there their fears were abundantly con-"What d'ye think of that now?" asked firmed. The door stood open; the cord Bob Green triumphantly. that had tied Peter lay across the des "He's a beauty, Bob," declared Hark- but of the latter not a sign remained. that had tied Peter lay across the desk.

A search, as close as they dared make "But fifteen dollars!" He about the school, proved fruitless, notturned to his companion, a boy whose withstanding the aid of a score of willing plump face were a chronic smile of assistants who had been admitted to the humor and good nature, "What do you secret. This went on till just as the bell sounded for preparation young Dicken-"It's a heap of money," replied "Rags." son and Smallwood dashed up with the

Hurrying in with the groups of boys "He's dirt cheap," declared Bob Green, who were now entering, Harkness and craning his head on one side, fixed his "Rum hot, rum hot, rum hot. Same eye upon Harkness. "What'll ye have?"

"Order!" remanded Mr. Timms, rapping lous red face on the parrot. "And speak the desk loudly. "There appears to be an unusual amount of disorder this evening. Take your places at once."

He frowned angrily through his goldrimmed glasses for a moment; but as

A low, strained kind of murmur now filled the schoolroom, but not from study. "Ha. ha!" roared Harkness. "We must The usual scratching of pens and rustle of turning leaves were noticeable by "Where are we going to keep him?" their absence; and the furtive glance of asked the latter. "We can't take a cage every boy in the room was fixed by a species of fascination on the clock, where "Bless you, take him without a cage." the already popular Peter, the history said Bob Green. "He's as tame outside of whose purchase by Harkness and his as in. Here! Take this piece of sugar, chum was now public property, serenely Open the door, hold out yer finger; and perched, was peering to and fro with evident interest.

Occasionally a subdued titter almost he was bidden; and the parrot, stepping betrayed its owner, and Mr. Timms would forth, hopped lightly on his finger with glare above his glasser unable to detect the disturber; till Sparkes, a boy of slow "Pretty Peter! Pretty Pete!" he mur- understanding, but who, when once his mured softly. Then taking the sugar sense of humor was tickled, was overgently between his beak, he transferred mastered by his enjoyment of it, fell a

Staring up with open mouth and grinwhistled a couple of bars of a popular ning face, he suddenly caught the parrot's eve, and at the same moment the latter, stretching up its right claw after a fixed scrutiny, scratched the back of Its head in a manner so droll as to send

In another instant the outraged Mr. Timms had detected him. "Sparkes demanded, "what are you laughing at?" "Nothing, sir." spluttered Sparkes with

another uncontrollable cackle. "Then write me out a hundred times 'It is foolish to laugh at nothing," declared Mr. Timms. "And if I hear another sound I will double it."

A more guarded hush fell on the room at the penalty; but from the clock Peter appeared to watch the interlude with interest. Stretching his leg as the master once more resumed his reading, he ruffled his feathers with a preparatory yawn; and looking round, drew an imaginary cork with an ear-splitting effect that brought Mr. Timms up like a jack-in- ingly. the-box.

"Will the boy with a hottle bring it smothered laugh was heard at the demand, followed by a solemn hush.

Staring angrily around, Mr. Timms waited a moment.

For a second a deep and moving silence prevailed, broken faintly only by Peter a smile, "you will take him to Walsh to as he gaped carelessly; then leaning for- mind till morning, when you and Nicholward amid the expectant hush, he cocked son will return him to the bird man his head cunningly sidelong.

"Who killed Cock Robin?" he demanded in a clear, hollow voice.

Sparkes' explosive shrick of laughter, notwithstanding his recent hundred lines. could be heard loud above the roar which followed; and Mr. Timms sprang madly to his feet.

"Sparkes, come here!" he demanded. "It is you, sir, is it, who is causing all this turmoil?"

Sparkes rose in a frenzy of convulsive merriment and trepidation.

"I. sir? Please, sir, no, sir!" he stammered. "It—ha, ha!—um—haw, haw! er-he. he! It was the parrot, sir," and he pointed above the clock.

"The parrot?" repeated Mr. Timms descending from his desk, and blinking up at the clock. "Dear me, how did the bird get there? He must be caught at once. We cannot allow these absurd interruptions. Really, this is astonishing in the extreme."

"If I were to throw a book at him," volunteered Sparkes, "to frighten him off we might perhaps catch him."

"A sensible suggestion, Sparkes," replied Mr. Timms. "Meantime the remainder of you, should he fly down, will kindly endeavor to secure him."

"Yes, sir." came a gleeful chorus

It was an unfortunate command. The next moment Sparkes had smashed the clock face with his Latin grammar; and, screaming shrilly, the parrot flew down

As he did so the whole school dashed madly for him, knocking over books, papers and pens, and tumbling over each other in their wild pursuit. Mr. Timms' frantic cries of "Order!" were unheard in the pandemonium he himself had Twice the parrot, screaming loudly, flew down the room, a horde of cheering boys following with an enjoyment impossible to describe. An increased uproar followed as he sought a refuge on the cupboard. And a loud cheer arose as Cox and Truscott, climbing up by the shelves dislodged the bird, bringing down an avalanche of old copybooks and dust.

With this mishap the parrot, screeching furiously, again sought the clock. Then, as they turned, a sudden hush fell upon them at the sight of the head master himself gazing spellbound in the door-

"Mr. Timms!" he exclaimed. "I-I trust you have not all taken leave of your senses?"

"The whole thing got beyond my control in a moment," declared Mr. Timms apologetically. "I was helpless. I cannot explain except that—that"—he pointed to the parrot—"it is all owing

"Bob Green, Bob Green, Bob Green!" shricked the terrified Peter. "Who'killed Cock Robin-Bob Green."

"Silence" thundered the Doctor as a fresh shout followed. "Take your seats all of you.":

"Change here for Worcester!" vocif-erated the parrot. "What'll ye have? Rum hot. And the stormy winds did

"The bird must be caught," declared the Doctor emphatically." "What boy or boys have brought it here?"

"Please, sir, Nicholson and I bought it from Green, the bird fancier," replied Harkness. "Though we did not bring it here. We put it in the classroom till morning, but someone must have let it out during tea."

"Will it come to you, Harkness?" asked the head master gravely.

"I'll try, sir," said Harkness.

Approaching the clock, amid the breathless attention of the whole school, he held up his finger.

"Hullo, Peter!" he remarked softly.
"Pretty Peter!" At the same time taking a piece of lump sugar from his pocket he displayed it temptingly.

Eyeing him a moment the parrot craned his neck down,

"Pretty Peter." he remarked gutturally "Pretty Peter!" said Harkness sooth-

Hesitating a moment the parrot flew down on the neighboring desk, and walkinstantly to me?" he rapped forth; and a ing slowly towards him with an amusing sidelong gait, hopped lightly on his finger.

"Pretty Peter," said Harkness scratching his poli.

SOME MEMBERS OF THE FAMILY AS ONE OF OUR BOY ARTISTS SEES THEM

"Come! the boy with the bottle!" he "Pretty Peter," murmured the bird

"And now," said the Doctor with half making what monetary arrangement you can. By the bye, you may also, each of you, bring me a hundred lines tomorrow for making so grotesque and ridiculous a purchase."

'Yes, sir," replied Harkness with a breath of relief.

A moment later, at a nod from the Doctor, he was walking meekly forth, with the parrot on his finger; Peter's last words to the grinning school as he departed being a shrill and apparently anxious inquiry as to "Who killed Cock Robin?

# Now, Boys, For the Garden

By HUGO ERICHSEN

as it is one of the farm tasks that be improved. consider it beneath their dignity to preparation than it does for floriculture. "bother with garden truck." But city First of all, if it has never been tilled experience, and, hence, will be particu- the cultivators attached to a wheel-hoe. larly interested in the following observamay apply to country homes where the vegetable garden has been neglected, and infuse new courage, enthusiasm and determination into boys who have grown tired of fighting the weeds, for it is a never-ceasing battle from the beginning of spring to the close of the season. her gifts from the sluggard.

should form part of the education of every boy. It will not only bring him into close touch with nature and growing things, which is always desirable, but provide moderate exercise in the open his cheeks. In this sense gardening pays, decidedly. The financial gain is very small, but is in proportion to the effort expended. A few hours' work every day suffices to keep even a large garden in good order, and seeds are exceedingly cheap. A few cents will purchase hundreds of lettuce seeds, capable of producing as many plants.

You may say: "What's the use? Our are the very boy I am trying to reach. You will be surprised to learn what can be accomplished in a small-sized family garden, if it is cultivated systematically. Mr. John Elliott Morse, a gentleman of my acquaintance, for instance, raised enough vegetables on a space, eighteen by twenty five feet in size, that was feet wide, to supply a family of three adults and considerable "company" for an entire summer. In a garden forty seven by ninety five feet in size, Mr. Chas. H. Parker, of Burlington, N. J., produced \$108.33 worth of vegetables. enough to supply his family of ten perduring the season.

🖰 OUNTRY boys will scarcely require grow weeds will grow vegetables, and, as instruction in vegetable gardening, for the nature of the ground, that can

is generally assigned to them. For the purpose of raising vegetables, Adult grangers either lack the time or garden soil requires even more careful and village lads have no opportunity to before, it should be thoroughly dug over, acquire the requisite knowledge to grow rendering it as fine as possible by means vegetables successfully in the school of of hoe and rake, or, what is preferable,

I am assuming that the ground is of tions. Here and there, too, my remarks prime quality. If the garden consists of virgin soil that has not been worked before, it is a good plan to make a liberal application of unleached wood-ashes, which will render clay soil more porous and act as a binder to sandy loam.

It is a matter of dispute whether it is past fall, it will have to be fertilized, and Nature is generous, but she withholds for this purpose I should unhesitatingly recommend commercial fertilizers, which Gardening is an accomplishment that are more easily procured and less disagreeable to handle than manure. With Charles Barnard, I believe that manure should be confined to the farm. Every dealer in seeds handles commercial fertilizers, and if you will tell him what they air that will bring the glow of health to are wanted for and give him the size of your garden, he will determine the kind and quantity required.

It is a matter of dispute whether it is best to fertilize in the fall or spring. Judging by my experience, I should say that that largely depends upon the nature of the ground. With a clay soil it is probably safe to "top-dress" in autumn, as the earth will hold the fertilizer until it becomes available for the garden is so very small, it would be a nourishment of plants. In the case of waste of time to bother with it." You a sandy soil, on the other hand, it would nourishment of plants. In the case of be worse than useless to apply the fertilizer in the fall, for that kind of earth is porous and permits the valuable constituents, that are dissolved by the rain run through it like a sieve, until they are arrested by the subsoil at a lower level, where they are beyond the reach traversed by a brick walk two and a half of eager rootlets in search of food. The successful gardener is he who studies the requirements of his soil and feeds it much as he would an animal.

A question that will have to be deterwhole, rows are preferable to beds, besons with all the vegetables they required cause they can be more easily cultivated, need suitable tools. A double wheel-hoe, two systems may be combined, the beds

BOY GARDENERS AT WORK IN THE INDUSTRIAL PARK AT DAYTON, ONIO.

with attachments and weeder, is very being located in corners and along the convenient for this purpose, although not fence. indispensable. Among the necessary implements I should enumerate the hoe, spade, rake and trowel. A small wheelbarrow is also very useful, and may be made by any boy with mechanical ingenuity at a small expense. The procuring of a suitable wheel presents the greatest difficulty, which can generally should be necessary to purchase a wheel, the cost of the same will be only a trifle compared to the cost of a finished barrow. For weeding, nothing can surpass the human hand, intelligently directed. Weeding should be attended to after a rain, whenever possible, as the ground is soft at that time and the weed, root and all, may be easily removed. You may object to this by contending that it is disagreeable to work on the ground when the soil is wet. So it is, to some extent, but a boy really in love with gardening will not mind it, particularly when he follow his efforts.

Some lads may be deterred from gar-

As a hot-bed, to raise early vegetables, is impractical in a small garden, I would advise my boy friends to establish a nursery on a small scale behind the kitchen stove. A seed requires three things to become a plant-heat, light and moisture-and all of these are provided in the kitchen. When the plants he removed by a recourse to the attic and are up, it is a good plan to expose them the discovery of the remains of a small to sunlight on clear days and, later on, to child's cart or bicycle. But even if it place them on the back porch for a couple of hours every noon to accustom them to outdoor conditions and prepare them for transplantation. Among the vegetables that mature rather late and that it is, therefore, profitable to start lot of vegetables raised. The factory early are tomatoes and cauliflowers. But engaged an expert to give the boys admost of us also experience a craving for lettuce in the early spring and this will work. Everybody was surprised at the make a welcome addition to the list. It result, and, the news spreading throughmay be well to call attention to the fact that it is impossible to raise plants in a room in which gas is used. A bundle of laths is very convenient for making seed-boxes, two or three laths. Dayton, Ohio, than in any other town in considers the reward that is certain to joined by cleats, being used for the sides, the United States. and the bottom being constructed in a similar manner. TEN DAYS EARLIER THAN ANY OTHER SORT

# Peep o Day the Sensationally Early New Sweet Corn BOYS! Here is your chance to make money. Get an acre or a vacant lot and have a Sweet Corn Farm.

You will be surprised to find how many people in your neighborhood are really hungry for good sweet corn; and how gladly they will buy it from you.

It is not unusual to take several hundred dollars from

an acre of Peep o' Day Sweet ('orn. When once people eat the Peep o' Day variety they always want more; and your only trouble will be A Sweet Corn Farm starts you in a pleasant, honorable business for yourself. The boy who works for himself is learning the first great lessons of business success. This experience is werth more to a boy than the money—and you get the

\$265.00 in Prizes—\$200 for largest income, fields of one-quarter acre or over. \$50 for largest income, fields of less than one-quarter acre. \$15 for best letter on how to run Sweet Corn Farm.

Special Offer—Send 20 cents, silver or stamps, (with name of this magazine) for large packet of N. K. & ('o.'s "Peep o' Day" Sweet Corn (800 seeds; enough for 60 hills) and our pictured catalogue of NORTH-ERNGROWN SEEDS.

Coupon in each package which, with order from catalogue amounting to \$1 or over, gives FREE 10 large packets, one each of our choicest vegetable and flower seed specialties—the sorts which make up one-fifth of our total mail-order vegetable seed business. WE know how good these varieties are—we want YOU to know it too. So we make this special offer. It will not be repeated.

WRITE Northrup, King & Co. MINNEAPALIS, MINN.

and snow in the course of the winter, to farther south a garden is located, the later they may, of course, be undertaken. When you are ready to plant in the open air, draw a straight line by means of a string, attached to pegs at each end that are driven into the ground, and then insert your seed. Your rows should be at least a foot apart; if possible, a foot and a half. What to plant will be mined before actual gardening operations naturally determined by individual prefare undertaken is the manner in which erence, but, unless the space at your the garden is to be arranged. On the command is very large, you will have to exclude cabbages, potatoes, pumpkins, melons and sweet corn. Lettuce, radparticularly with that timesaver, the ishes, beans (when you plant them be To till the ground effectually, you will wheel-hoe; but in a large garden the sure to note that the eye is turned downward), carrots, cucumbers and beets are relished by most families and adapted to gardens of limited size. A dozen plants of rhubarb will provide all the luscious stalks a small family can consume and furnish a considerable quantity to be put up for the winter. Pens should be planted early—as soon as the frost is out of the ground. Let the neighbors laugh. if they will: unless the unexpected happens, you will have pens a week or two ahead of them. And if frost should destroy your plants, before you reap the fruit of your labor, your loss will not be very great. Parsley is also easy to raise and useful for flavoring soups and garnishing fish, etc.

> In my experience it is one of the greatest pleasures to raise vegetables in one's garden that it is impossible to buy of the grocer or at the market. Kale, also known as Borecole, Brussels Sprouts, Georgia Collards and Kohlrabi (intermediate between the cabbage and the turnip), are of this description and so easily cultivated that I may even safely commend them to a beginner. Kale and Collards are prepared like cabbage, the kohlrabi very much like the turnip, and the little buttons that grow in the leafaxils of the Brussels Sprouts like cauliflower.

> I have purposely omitted directions for the culture of the vegetables referred to. as these can be found in the catalogues of seedsmen and are given on every package of seeds. Send for several of the catalogues; to a prospective gardener they will prove as interesting as a story

### Boy Gardeners of Dayton, O.

One of the largest factories at Dayton. Ohio, has taken a paternal interest in the welfare of its workmen, including the boys who work in the factory or live in the vicinity. A large piece of ground was staked out for the especial benefit of the boys and converted into a garden. Each boy was given a plot of ground and a money prize was offered for the best vice, but the boys themselves did all the out the town, fathers and mothers of boys, as well as boys generally, became interested, and the result was that probably there are more boy gardeners in

When Writing Advertisers Mention The American Boy

country, invited Tom Daly, his city chum, to spend a few days with sure of a great good time, but a number and around them, then he would start to of things happened to them that the boys didn't plan on at all.

The short distance on the train was quickly passed, and when Tom got off at the station he saw Dave waiting for him a little way down the road. He was in a cart, and the colt that he was driving was going through some surprising antics. Dave tried to hold her with one hand, while he made ineffectual attempts

to grasp Tom with the other.
"Get in any way you can," he said, "she isn't broke very well yet, but by spring you'll see that I'll have the best little filly in the country. Broke her all myself, too, and in spots she can go a three minute gait right now."

Tom laughed.

time?

and by the time that he was through singing her praises, they were home.

It was a big log house with a lot of needed. Tom's especial delight was a huge fireplace in the front room. He knew there would be a big log burning. and Dave took him in there the next thing after he had been greeted by the family and the dogs.

"You may have your furnaces and steam heat if you want them," said Dave. "but give me the old fireplace, although father says on a real cold day he bakes on one side and freezes on the other, and when he wants to get done brown all around he goes out to the kitchen stove."

The next morning after breakfast Dave

took Tom to one side.

"Don't say anything," he whispered, "for the other kids will want to come. We'll go up the canon about a mile and see some deer that come down to the creek to drink. There are six of them and they are the prettiest things you ever saw.

The boys stole quietly out. The dogs came bounding joyfully after them, but at a few stern commands from Dave they went back, crestfallen. The boys broke into a run as soon as they were out of sight of the house. When they reached the creek they crawled beneath some underbrush, and none too soon, for in a moment they heard them coming. Six beautiful creatures, two large and four smaller ones came fearlessly down to the water. Hardly daring to breathe, the boys watched them. Suddenly the old one stamped his foot, rapidly wheeled and dashed up the side of the ravine. In an instant they had vanished like a

Dave stood up, bewildered.

"Now what in the world scared them like that?" he asked. "They couldn't have smelled us, for the wind is blowing toward us."

They listened, and in the underbrush down the stream they heard a crackling. "It must be some of the calves that have strayed here," said Dave, "We will the deer will come back."

They followed the sound and broke cinnamon bear.

Dave gave a blood-curdling yell. "Run for a tree," he shouted.

stopped to wrench his coat loose from a

The man looked surprised at this reception, and with his limited knowledge of English, and two boys talking to him at the same time, it wasn't easy for him to gather what it was all about. When he did, he threw back his head, shut his

"Him have fun," he said. "He know he scara you boys. Him ver smart bear."

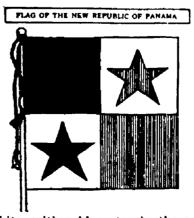

### Great Feats of Jumping Horses

The New York Sun, in a recent issue, tells us of great jumping feats that have been performed by horses. It mentions the leap of Black Bess, the tireless steed of the outlaw Dick Turpin, that with Turpin on her back cleared a toll gate of six feet ten inches high, on the top of which was a cheval-de-frice. tells us of great jumping feats that have It seemed hours to the boys that the been performed by horses. It mentions which was a cheval-de-frise.

More remarkable still is the leap known as "Lambert's leap," which took place I come up you have something different ment would have been objected to by feet high, and there is one case where, at on hand. Wonder what it will be next Tom, said that he believed he could be believed by the beauty to the best of th

### A Lively Flea

A very unique publication is the "Cali-fornia Flea," published by Ruy W. Har-den, corner Twelfth and Jackson streets, San Jose, California. The pages of the "Flea" are nearly as large as those of THE AMERICAN BOY, and the magazine is printed on a mimeograph, as the edilittle eyes and laughed. Then he put his tor has no press. He hopes, however, arm affectionately around the bear's soon to have a printing press. Where neck. printed on separate sheets, and then pasted in by hand. In fact, it is almost entirely a hand-made publication, and the editor and his associate, Jay Hanson, boys of about eighteen, certainly earn all they get for it. Indeed, they admit that the expense more than equals the

### To Get Capital

see the top of the windmill at home."

In a said. "O, if I had only let the dogs come with us."

He looked down at the bear. "I'm so hungry that I could eat you raw," he said.

Tom, to ease his position, settled himber of forty six feet, the actual height of this pockets. Then he drew one out and waved something triumphantly.

"It's my harmonica," he cried. "I forgot that I had it. Sometimes you can dolots with animals with missic. Perhaps I can scare him away," and Dave with unconscious sarcasm, that in a safer moment would have been objected to by Tom, said that he believed he could.

Tom started with "Whilstling Rufus" as "Lambert's leap," which took place a nearly one hundred and fifty years ago at Newcastle-on-Tyne. Cuthbert Lambert's mare took fright, and no reaching a bridge, the parapet of which was three and a half feet high, jumped off it, clearing a birting a distance of forty six feet, the actual height of the drop being thirty six feet. The rider was unhurt, but the mare died. Curiously enough, twice afterwards, in 1767 and 1771, a horse made this same leap, in one of lifty cents each. These shares were not instances of horses jumping six and rider being killed. There are a number of instances of horses jumping six as if his life depended upon it, and before he had played many notes a most surprising thing happened. The bear arose slowly on his hind legs and gravely bestowy on his hind legs and gravely bestown that he does not always and that he company after the plan of the Pennant Tublishing Company, which the publish and no reaching at Newcastle-on-Tyne. Cuthbert Lambert's leap," which the clear flow who wish to publish amateur papers, but does the right, and on reaching at Newcastle-on-Tyne. The pennant Publis

# ation Desired

other horses endeavored to make the leap, but without success. But a still more famous jump was made at Warwick in 1817, where the distance cleared was thirty nine feet. There is an instance of a horse jumping into a pit of a depth of twenty five feet and escaping uninjured. Another horse jumped on to the battlement of a bridge and then dropped twenty feet into about one foot of water without serious injury.

Irish horses are said to be adept jumpers. The Irish county fairs all make a specialty of performances by jumping horses. On one occasion the owner of a horse lay flat on the top of a five har gate while another person jumped the horse over him. On another occasion a rider jumped his horse into a pond over a wall six feet seven inches high and jumped him out of it again.

A jump of real daring was performed in 1870 by John Ryan on his mare Steal-away. The deer and hounds had got into a field around which was a stone wall

### Notes MR. BRESNAHAN has prepared a his-

Another Irishman rode a hunter over an iron spiked gate six feet six inches high. Another Irishman rode a hunter over an iron spiked gate six feet six inches high, while running with the hounds in 1832. A horse called Perfection jumped six walls six feet high, for a big wager. Jack Spring, a wonderful, though unmanageable horse that no one could ride, could jump six feet from a standstill.

American horses excel in high jumping. In 1831 Filemaker, ridden by Mme. Marantetic, cleared seven feet inheed, and it one six the could inches in Chicago. The present record stands at seven feet nine inches, and is to the credit of Heatherbloom, the jump taking place at lirvn Mawy Horse Show last fall. It is said that in a private trial Heatherbloom once cleared the first lower square, to the left, is blue; the first lower square, to the left, is blue; the first lower square, to the left, is another merit that some of the older analytic and effect. Ward Sachs, Towanda, Illinois, wins the prize for best list of answers to January Tangles received by January 20. Honorable mention is accorded the following for excellence of original contributions or answers, or both: Grace Haren, John F. Sawtell, John Coffman, I. Rose, Jo Mullins, C. Clyde Nickum, Sarah Gilles, Merlin Bisson, Alfred Lewis Nelson, Harry S. Carter, William A. Prescott, Wilburn H. Potter, Arthur Youell, Harold R. Norris, G. H. Stanbery, Earl Lyman, Joa Stage, James K. Neill, John V. Cramer, Harold H. Wilkins, Hugh Drury, Roy McCay, Dorian E. Clark, Edward P. Jackson, Carleton Hutchings, Ray Tully, Edward Langdon Fernald, Ralph Rugan, Lyle W. Lee, Howard S. Currier, Beverly Waugh Blake, harles Leslie Stewart, J. L. Gilbert, Leonard Steburg, William Felder Howell, Ralph H. Wirt, Herbert Keilar, Joseph Phillip Smith, M. H. Yoder, Litta Voclchert, Samuel R. Turrentine, William B. Kirk, Russell E. Perry, Ellsworth Morgan, S. Ward Seeley, J. Eustace Guest, Henry Israel.

Tanglers would do well to learn the destrability of thinking ahead so as to make their contributions sensonable. Dezens sent in puzzles especially applicable to February to reach us by January 20, at which time the Fobruary Tangles were already in type and printed, and we were working on March 20 will be considered for May or later, but cannot pogshly reach an earlier issue. Always figure at least two months in advance, sending in puzzles on Juns topics by April 20; on July topics by May 20, etc. Sensonableness of subject matter is considered in the awards and often secures the publication of non-winning puzzles.

We will announce in the best original Fourth

parzies. We will announce in the May Tangles our Grand Prize offer for the best original Fourth of July puzzle of any kind tillustrated puzzle preferred) received between May 1 and 20. Sind nothing for this special contest until after May 1, but get good and ready. A cush prize of two dollars will be given for the best list of answers to March Tangles received by March 20. A prize of a new book will be given for the best lot of original puzzles of any kind received by March 20.

Number 6

ILVER had been discovered in our neighborhood. There was no doubt of that. The only doubt was as to whether it was in a vein or a pocket. Some of us were very glad to have life and activity stirred into

the quiet of the respectable old place, and we bought and bonded lands, and explored and assayed in rude little furnaces, getting buttons of silver; and others of us were sorry to think of the stately town becoming like any mountain mining center.

But here it was; a mine with a deep shaft, and no one knew in how many directions the voin might ramify. Teams went down from the downfalls to the wharves, scattering bright dust along the road, and gangs of men were relieving gangs of men before daybreak, with lights in the front of their white caps. Yes, we were a mining town; and all the small burghs in our region were anxious to become mining towns also, and there was not a boulder along the way, nor a pile of rocks, nor an old mossy ledge cropping out of a pasture, that was not chipped and broken by the hammers of the silver seekers. And there were even those who said that there was gold in the business.

And so it is not a matter for surprise that Jerry Moss, worrying the top of the south field with his spade one April morning, happened to catch the glitter of something greener than any of the yet doubtful grass, across the stone wall, and at the edge of the big boulder that made part of the boundary of the Rudley farm.

Under ordinary circumstances, Jerry would not have looked twice. But just now were not his pockets full of chunks of broken rock and bits of shining, silver-bearing galena, some of it as finegrained as emery sand, and some in flakes like mica? Was he not as mad as any in the mania for growing rich all at once? And was he not full of dreams of what might be discovered on their farm, and of the fortune in store for the Moss family? But, search though he might in the intervals of the work allotted him, he had as yet seen no indication on their own farm of any precious ore. And now, straight before his eyes, on the Rudley lot-

He stepped carefully across the stone wall to the big houlder on the Rudley lot. He stooped and gazed at the spot glittering in the rain and sun. Yes, there it was-a large whitish pebble shining with incrustations here and there of vivid green. He remembered something like it in the cabinet of minerals at school, and lately he had seen one of the prospectors showing something similar down at the store, and calling it chloride of silver, and saying that was rich enough for him. And here it was on the Rudley lot, washed up and out by the heavy spring rains that had cleared off only last night. And where that was, there must he more. And on the Rudley lot. Oh, why not on the Moss farm!

If it were on the Moss farm he could bring the explorers and promoters to see it, and they would believe it the top of a vein, and buy out the farm at a big price. And as he thought of the possibility he saw the Moss family moved into town and living in a large white house with meen blinds, and a hav Window, and piazza, and with folding doors in the

parlor; and his mother would be wearing a black silk gown-how he would like to hear it rustle! It was music'in his ears as he thought of it. And grandma would have the great doctors attend to her blind eyes and make them see again, and old daddy should have ivory-headed canes and all the money he wanted to give away to the children he met, and Grace and Louisina should never pick another berry, and they should go to a good topping-off school and have what other girls have—he could see them closing their red silk parasols and going up the aisle of a church in gowns like white roses—they would go to the church with the painted windows-they would have kid gloves. And Tommy-well, there was lots of time for Tommy. As for himself, he would have the chance to study, to go to school, to college, to be a lawyer, to be President of the United States.

But, alas, the silver was not on the Moss farm. And he was just about to put the specimen back where he had found it and go and tell Rob Rudley of it, when all at once-what was the matter with putting that piece of chloride of silver over under the edge of a rock a little way off on the Moss farm? You couldn't call that stealing, could you—just a bit of rock? And, besides, findings were havings. And then if those prospecting or promoting people bought the farm on the strength of this, he would have money enough to buy a first-rate specimen and put it back just where he had found this, under the Rudley boulder; and then the Rudleys could sell their farm. As for the men who were to do the buying and selling, Jerry did not consider them; the transaction was becoming rather complicated in his mind. No, he said, he couldn't call it stealing; it was just borrowing for a little while. Borrowing a silver mine! To be sure, daddy would probably say borrowing without asking leave was stealing. Oh, come now, it was nothing of the sort! He, Jerry Moss, was nobody's thief. But he was going to take that rock and show it to daddy, anyway. And then, too, if he wanted to show it to Rob Rudley he would have to take it, for Rob was too busy down in the wood lot to come up. And then Jerry went back to his digging—he hated to dig.

It was a morning when the sky was like blue velvet, and full of high light; the swelling buds gave the trees a faint green veil; the saxifrage made the crannies of the rocks white; a soft southwest wind carried pleasant hints of the sweetness of willow plumes and of the springing grass. It was good to be alive on such a morning—but to be alive and dig! Jerry drew a long breath, and then went on with his work. "Well, if I've got to dig," said he, "I might as well dig!"

"That's right, Jerry," called his father, striding up in his long boots from the plowed field below. "You're working like a man. We can't plow up here with these rocks, but it's a good place for the raspberry canes. Spring to it!"

But after a half hour's work his treasure-trove was burning in Jerry's pocket, and he was just taking another look at it when a shadow fell before him, and he turned to see his grandfather on his two sticks. "Thought you'd be lonesome." said the old major, straightening himself. "Wal, you're doin' 'most the work of a man. I allus told your father you'd be his mainstay. There—I fetched ye a piece of sweet-flag to chew on. Guess you'll get this ready for the canes by mornin', way ye get on," and then daddy went down by the wall again.

Well; a boy must live up to what is expected of him, and Jerry thrust in his spade with fresh vigor, till again came the consciousness of that bit of mineral in his pocket. But no sooner was he resting on his spade to have a look at it again than he heard the voice of his sister Louisina singing at the foot of the slove, and knew she was coming with his dinner. The way of the transgressor is hard. He dropped the chloride of silver back again. It seemed

as if all the world were out on the track of that find

"I've brought you another piece of pie, too," said Louisina, although she didn't tell him it was her own piece. "I wonder if I can't help you set out the

"No," he said, shortly. "I don't want no help."

"But I've finished my stent, and I'd like to," she persisted.

There it was! He did wish --- But it was no use to be unpleasant. He seated himself on top of the stone wall and ate his dinner. Louisina hummed a tune; but Jerry was silent till there was no crumb left. "I say, Louisina," he said then, cautiously, 'wouldn't it be fine if we found silver on our land?"

"I don't know," said Louisina, biting a violet she had found.

"Don't know! When we could sell the place and move into town, and-

"That's just it. I do' know's I'd want to."

"You'd rather stay on here!"

"This place has belonged to our folks sence time begun."

"And you'd rather live here, like a last year's parsnip underground-"

"Yes. I guess so. Grandma would. Grandma'd never know where she was if she went away----"

"Grandma! Why, we could have her eyes fixed so't she'd see as fur as a hen-hawk!"

"I guess there ain't any fixin' for grandma's eyes. And she's happy now."

"Well, there's more folks in the world than grandma," he said, kicking a loose stone in the wall. "There's all the rest of us to consider."

"Daddy wouldn't be happy if grandma warn't. And none of us would be happy if they wasn't."

"Talk of young Ameriky!" said Jerry. "For my part I should think it was old Ameriky!"

"Ain't you 'shamed, Jerry Moss?"

"No, I ain't 'shamed'. A feller wants to make his folks rich an' comf't'ble, an' give 'em fine clothes an' schoolin', an' all that, an' on you come 'ith your cold water!"

Louisina laughed. "Well, when you find silver on this poor old farm you let me know," she cried.

Jerry had his hand in his pocket. He was ready to cry out, "I've found it now!" But Louisina jumped down from the fence, and gathered up the things and made off

"Well," said Jerry to himself, "if that's the way she feels about it—and she going with Rob Rudley that's the way he feels about it. too; so there's no harm done if I do what I'm a mind to with this thing!"

His father came up bringing the raspberry canes and a garden cord. "Draw the cord from the wall to the old stumps; that'll give you a straight line," said he. "Measure the others by that. I hate to see the rows crooked. It's dreffle slack. You've done well this morning—now keep the straight line!" And he went back to the plowing in the low field, and a brown thrasher in the thicket suddenly burst out singing.

Jerry could see his father as he went back and forth, tanned with the sun and grizzled with time and the weather, tall and unbending. He had worked for forty years and over and this was all there was of it. more work, and by and by, like daddy, two canes. He stopped a moment and felt of the pebble in his pocket. Just then the brown thrasher sang his strain again; and with the bird's music came back to him his father's words, "Keep the straight line."

There was one thing sure: this thing, if he should do it, wasn't any straight line.

When Jerry went down at last, his work done, he overtook Grace and Louisina, who had been getting dandelion greens to holl with a piece of pork for supper. He put his hand in his pocket and felt the fragment of ore, and whistled as he went along. No more dandelion greens, no more dried apple sauce in his, when, by and by, they could banquet on pickled pigs' feet, and scalloped oysters, and baker's bread, and guava jelly, and oranges. Nevertheless, at supper his portion of the hot biscuits and the dandelion greens disappeared as dew melts in the sun.

"We won't drink any more skim milk, we'll keep the cream for ourselves, when we've sold this farm," said he.

"Sold this farm!" said his father.

"Yes," he said. "For a silver mine."

silver mines!"

"Cash down?" said Jerry.

"My people was all born on this place," said his father, laying the thin slice of pork on his bizcuit. "My people was all born on this place. It's made of their dust. I'd as soon sell the burying lot. Why, I was born on this farm!"

"He was born on it," said grandma plaintively, feeling the way to her mouth with her spoon.

"So was 1," said Jerry. "But I guess if you sold the place for a fortune we could be born again somew'er's else an' be as well off as if we was."

"Sho'!" said his father. "Don't get that bee in your bonnet. The Moss people have allus hed to work fer all they've got. An' that's the on'y fit an' fair way," and he went for his pipe on the kitchen shelf. "I don't want to be no richer than my neighbors."

"Well, I do," said Jerry.

It was a mild evening, and Jerry went out after supper to sit on the doorstone with daddy.

"Daddy," said he, "do you feel the way he does? Wouldn't you like to be rich?"

"I do' kno'. What'd I du 'ith money?"

"Have a new carpet on grandma's room an' the best room," said Jerry, thinking it wise not to broach the matter of a new house altogether. "And a bow window. And put a piazza on. And send Tommy to a big school."

"Yes, I should like that," said daddy, pushing down the tobacco into his pipe. "And a stuffed chair for your grandma." And the old man sighed. "But there," he said sadly, "what's the use? There ain't no way. Here-here's something every mite as good as gold," and he gave Jerry a twig of spicy black birch to bite.

"I know a way," said Jerry, accepting the black birch, but not as a substitute. "I know a way to be rich in a jiffy."

"Son, there ain't no honest way to be rich in a jiffy. An' there ain't ever ben a Moss born that warn't honest. So there ain't no way for you. There's some things better'a money. It's better'n money to be livin' on a place the old Ingin chief sold

President of the United States can say as much. So!

presently, "to take a stone off'n somebody's land an' put it on yourn?"

"Ain't there ben suthin' said, ain't there a sort of commandment about not removin' your neighbor's landmark?"

"It ain't in the ten. An' there ain't no call for no more'n ten."

"Yes, there be. Guess you forgit the commandment the Lord give, 'Thou shalt love thy neighbor as thyself.' That's suthin' I often think of when I'm, in the woods an' swamps gatherin' my bark. I think—there's saspriller I'm a-pullin'; that'll make somebody feel a sight better; there's sassafrasmakes things tasty to 'em; there's peppermink—for somebody's colic; there's wintergreen, an' there ain't nothin' better for a number of ailments. And I'm glad all the time I'm a-gatherin' of 'em that I'm a-helpin', that I'm a-lovin' my neighbor. I guess movin' your neighbor's landmark ain't much like levin' him. No, son, I guess if you're a-hankerin' arter any stone that don't belong to you, you'd better let it be—as long as you're honest and a Moss."

Poor Jerry! He hung his head, and dropped his untasted black birch between his fingers. His grandfather's words were like a bell tolling in his ears. "As long as you're honest and a Moss." He almost wished he wasn't honest and a Moss. The frogs out on the edge of the marsh were clamoring sweet and shrill as a troop of whistles, and seemed to be singing over and over, "There ain't nothin' but honest blood in their veins." But there might have been money in their pockets! "There ain't never ben a Moss that wasn't honest." Well-here was one mighty near the other thing! His father came to the open door. "We'll get the corn in a week earlier 'n usual of this spell holds," he heard him say. "It's a pretty evening."

It might be all the pretty evenings it wanted to be! Inside the house his mother was mixing a batch of

"I guess not," said his father. "Not for twenty that ain't ever hid a deed wrote on it. There ain't a Louisina was putting them away, stopping every now and then to give a sort of caress to the little grand-Yes, the Mosses ain't no faculty for money, but, thank mother. "It's warm weather comin' sure enough," God, in their veins there ain't nothin' but honest said Louisina, "there's the little thin curls on your forehead that always come with warm weather. Just "Daddy, would you call it dishonest," Jerry asked like a baby's. They make you look so pretty, Granny. I do wish you could see yourself!"

"I do' kno's I want to, dear," said the little old woman. "I do' kno's I want to. I was pretty oncewell, sort o' pretty, an' now I guess 'twould give me a real shock to see myself. No; I ain't makin' no complaint. I'd be a wicked creetur if I did, with all you so good to me."

"Good to you!" said Grace.

"As if it wasn't a pleasure!" exclaimed Louisina.

"I'd like to know what a house would be 'thout a grandmother," said Tommy, balancing himself on one of her rockers.

"Why, I'd ruther have you to be good to, Grandma," said Louisina, "than have all the silver in the new mines they're talking of."

"Well," said grandma, "I thank the Lord I've got good grandchildren if I ain't got eyesight."

Jerry could hear her as the sweet plaintive voice piped on. She thanked the Lord she'd got good grandchildren. She didn't want to see if she could. A pretty evening! It would take more than vague grassy smells, this clear amber sky and the star looking out of it like an accusing spirit, to make it a pretty evening to him! He was angry with himself and with everyone else; and he called Tommy, who was enjoying himself and ought to be stopped, and rose and went to bed.

It was some hours later when the great moon, rising over the crest of the hill and the new raspberry canes there, saw a little figure running so swiftly that one could hardly have told if it were a boy or his shadow, climbing the stone wall, and dropping into a slight and lately rain-washed depression under a big boulder's edge a bit of something that had a curious green glitter in the ray.

"There!" said Jerry Moss, running back swiftly as a fox, clambering through the open pantry window and whipping into bed, "much good it's goin' to do me whether the silver's a vein or a pocket! But I to your forbears two hundred an' fifty years ago, an' bread, and Grace was washing the dishes, and guess I ain't goin' to be the fust to break the record!"

CHAPTER XII.

FROM THE GOLDEN GATE TO THE PEARL RIVER.

"I wonder what that dispatch can be about?" thought Rob as he sat in the comfortable ambulance, which, drawn by two big army mules and with its curtains rolled up, was used as a carriage by the officers of the post. "He was as excited as though war had been declared against somebody or other; but I haven't heard that we are likely to go to war with anyone. Perhaps it's Indians, though, and if so there's sure to be something about it in the paper.

Thus thinking. Rob beckoned to a passing newsboy and bought a copy of the "Oregonian." Diligently as he searched its columns, he could not find a word about Indians. Nor were there any war rumors; and he was more than ever puzzled until his eye lighted on the heading:

"Battery Z ordered to the Philippines."

Yes, that was it, and Rob began to feel very lonely as he read the brief announcement to the effect that Battery Z was to leave Vancouver Barracks at once for San Francisco where the transport Logan was already waiting to take it on board.

"That knocks my chance of spending a week or even a part of one at the barracks," he said to himself. "and I did want to so much, I don't suppose I ought to go over even for a night, because Captain Astley will be too busy to bother with me. It looks as if he had already forgotten me for I must have waited here an hour, and I shouldn't blame him if he had."

Just then Rob's somber reflections were interrupted by the cheery voice of Captain Astley, who sprang into the ambulance from the opposite side and ordered that it move on.

"Hello, Hinckley!" he cried, "I beg your pardon for leaving you so long, but I have been rushed breathless by most unexpected orders, that have completely upset all previously arranged plans."

"Then you really are going to Manila?" asked Rob. "How did you know? Oh! it's already in the paper, until late at night, he was as busy is it? Yes, and we've got to move out of here in a

hurry, tomorrow, if we can, or the next day at the latest. So I've been arranging about trains and a lot of things that had to be looked after on this side of the river. But, before I forget to mention it, how would you like to go along with us?"

"I!" cried Rob, too surprised to answer the question. "Yes, you. I wired to the Presidio for permission to take with me Robert Hinckley, our Chinese Instructor, and it is granted provided he pays his own bills. They will come to something less than two dollars per day during the voyage from San Francisco to Manila. From there it is only a couple of days run over to Hong Kong; and, by going with us, you can beat that Tacoma ship by at least a week. Besides you won't have any fare to pay between here and San Francisco. What do you think? Is it a go, and may we count on you as a fellow passenger aboard the good old Logan?"

"I should say you could!" cried Rob, even more excited than the captain himself. "I never heard of such a piece of undeserved good lu .. Of course I'll go with you and feel everlastingly obliged to you for the chance, besides. Only, I don't know how I ever can repay such kindness."

"Nonsense!" exclaimed the other. "I thought we finally had settled that question away back in Mon-

tana. But, here we are, and for the next few days you'll have enough to do to knock all thoughts of gratitude out of your head; for, I am going to appoint you my A. D. C. Perhaps you don't know what that is, so I'll tell you that an A. D. C. is a chap who, in active service like the present, has to work twenty five hours out of twenty four, and gets no thanks for anything he does. Do you want the job?"

"Yes," replied Rob, happily, "and I'd take it if it were twice as hard."

So our lad joined the army, and for the next two days, from early morning as a boy well co ! be; helping the captain pack, writing letters, running hither and thither with orders, and doing whatever was given him to do with a cheerful promptness that won for him the good will of all hands.

At the end of that time ne found himself in com pany with a number of officers, occupying the rear car of a long troop train in which was loaded Battery Z men, horses, guns, and all, headed southward up the broad Willamette valley and starting on their thirty six hour run towards the city of the Golden Gate. On the following day they skirted for hours the base of grand old Shasta, one of the mightlest and most beautiful of American mountains. Then they ran down the exquisite valley of the Sacramento, which they first saw as a brook, and at last crossed as a mighty river, pouring its turbid flood into San Pablo Bay. A little later, came San Francisco with the bustle and anxious excitement of a debarking. marching through the city, and re-embarking; this time on the great white transport that was to bear them away in the track of the setting sun across seven thousand miles of Pacific waters.

In all this time Rob, while fully intending to write to liatton concerning his adventures and change of plans, had not found a minute when it seemed possible to do so. Not until the Logan with her crowded passenger list including civil officers, military officers troops, government school teachers, and other employes, and her vast miscellaneous cargo of live stock. guns, ammunition, machinery, and stores of every description, had got so far out to sea that the Farallores were only a blur on the horizon behind her, did it occur to him that he had neglected his last opportunity for sending back a message until he should reach the distant Hawaiian Islands. Then he sat down and wrote a long letter that he was able to mail eight days later at Honolulu; but which did not reach Hatton until a full month from the date of his departure. In the meantime Mr. Hinckley had cabled to China that Rob would sail by the

Oriental from Tacoma on a certain date, and when row entrance between two of them threaded a torfinally he learned of his nephew's changed plans it did not seem worth while to cable again as the lad was already due to arrive at Hong Kong and could tell his own story.

Rob enjoyed every minute of his twenty four hours' stay in beautiful Honolulu. He was enchanted by its wealth of strange flowers, its tropical foliage, and by the many new fruits that he now tasted for the first time. He drove out to the Pali, the frightful mountain precipice five miles back from the city, over which, in the old savage days King Kamehameha I. drove to their death an army of his enemies. He experimented with surf riding on a slender board at Waikiki beach, ate Poi, which he didn't like and enjoyed Poha jam. He wanted to climb Diamond Head, and to visit the great sugar plantations of Ewa and Waialua. Also he would dearly Lave loved to sail to the island of Hawaii, 150 miles away, and gaze upon the mighty volcanoes of Kilauea and Mauna Loa; but there was not time and all these had to be left for another visit.

The next chance for going ashore came two weeks later when the Logan stopped for a few hours at the lonely but lovely island of Guam, destined a few years later to become a most important way station of the American Pacific cable. After Guam, came

Bay with Corregidor Island standing sentry at its entrance.

"I wonder what Corregidor means?" asked Rob of Captain Astley as they stood together gazing at this outpost from which the first warning gun had been fired when Dewey's fleet slipped through the gray of dawn into Manila Bay.

"Someone told me," replied the army man, "that in olden times every Spanish city was governed by a Regidor assisted by Councilmen, one from each division or ward, called Corregidors. So if we were to Americanize the name we would call it 'Alderman Island.' "

"Or 'City Father Island," laughed Rob.

It was intensely interesting to sail up that broad mountain-bordered expanse of water, and recall the stirring events of May day, 1898, when Dewey and his men did the same thing; only with the terrible difference that at every moment they were liable to run into a deadly nest of torpedoes. As they approached the head of the bay they saw Cavite on the right, then the shipping anchored in the roadstead; and then Manila itself lying on both sides of the sluggish Pasig, the old walled city on the right, and the more modern town on the left as they faced

At Manila, Rob sorrowfully parted with the comrade whom he first had met in far away Montana, and who, ever since, had been at once dear friend, guide, instructor and pupil; for a steamer on which he promptly engaged passage left for Hong Kong the day after the Logan's arrival.

During the month they had spent together, Captain Astley had so assiduously devoted himself to the study of Chinese, that now he possessed a fair working knowledge of the southern or Canton dialect: while every man in the Battery, thanks to Rob, could express himself with a certain fluency in pidgin (business) English. All of them were on hand to see their young instructor off, and, as the launch that was to carry him to his new steamer backed out from the crowded landing, their farewell cheers reminded him of Hatton, and he felt quite as lonely as he had on that first day of his eventful journey. Now, too, that he no longer had friends and regular duties to divert his mind, and with China only two days sail away, all his anxiety concerning his parents and went to his stateroom, came back with redoubled force. Would he find himself fatherless or would the dear face still be there with its smiling weclome? So impatient was he that the two days between Manila and Hong Kong seemed as long as any previous two weeks of his journey. and he found himself straining his eyes for a glimpse of the China coast, hours before there was any possibility of sighting it.

Finally a number of high rock-bound islands came again was got under way. into view. Then the ship, passing through a nar- An hour later Rob was

tuous, strongly fortified channel that opened into the broad, splendid harbor of Hang Kong. On the right was the recently acquired British territory and new settlement of Kowloon, with wharves, dry docks, godowns and barracks. On the left rose Hong Kong Island with the fine city of Victoria nestling at the base of a peak eighteen hundred feet high, and climbing its wooded slopes. The moment the ship dropped anchor amid a fleet of great merchant steamers and men of war flying the flags of all the maritime nations of the world, Rob signalled one of the innumerable sampans, "manned" by Chinese women, that swarmed alongside. He already had learned that a Pearl River steamer would leave for Canton within an hour; and so anxious was he to reach his destination which still lay some 200 miles beyond that city, that he was determined to go on by the very first conveyance. For this reason he had his trunk and himself taken by the sampan directly from one steamer to the other; and, in a short time, without having gone ashore at Hong Kong, he found himself again under way on board the sidewheeled Americanmodeled steamer Fatshan bound for Canton eighty miles distant.

As Rob sat on deck watching with fascinated interest the queer-looking junks with lofty poops, low p ws, and sails of matting, the sampans, Chinese

guard boats, and numberless other quaint craft slipping to and fro over these placid inland waters, with sails outlined against the dark background of the Tai-Mo mountains, a stranger sitting near him remarked:

"Beautiful, isn't it?"

"Yes," replied Rob, promptly. "I don't believe there can be a more fascinating river scene in all the world."

From this the two easily drifted into conversation; and, at length, the stranger, who proved to be a business man from Amoy, said:

"New to this part of the world, aren't you?"

"Yes," replied Rob, "it all is new five days more of uneventful sailing, and then Manila to me now, though I was born here; but my parents

took me away more than twelve years ago." "Indeed! May I ask where you were born?"

"Wu Hsing, up on the Si Kiang."

"You don't mean the place where the missionaries were killed the other day?"

"Missionaries killed!" repeated Rob, mechanically, and with blanching cheeks. "How were they killed? How many? What were their names?"

"Killed by a mob of natives as usual; but the city Taotai and fifteen of the ringleaders were executed yesterday in Canton; so everything is quiet up there now. Their names? Why I don't seem to remember; but all who were at the station were killed. Nobody escaped. Of course, none of your friends were there though, seeing that you moved away more'n twelve years ago."

"My father and mother were there," groaned poor Rob, and for him the light of life seemed to go out, with the setting sun, that just then sank from sight in the blood red waters of the Dragon's Mouth.

### CHAPTER XIII.

IN THE WORLD'S MOST MARVELOUS CITY.

Stunned by the terrible news he had just heard. Rob sat silent trying to think of all that it meant to him; while his new acquaintance, shocked at the unexpected result of his chance remark, tried in vain to console him. It might not be so bad as reported, he said, for such things always were exaggerated. Probably Rob would find that his parents had escaped and were safe in Canton. Perhaps the massacre only had extended to native christians, as often was the

case; or it was more than likely that the Hinckleys had been warned of the outbreak in time to leave Wu Hsing before it took

"They couldn't leave," answered Rob, "for my father was too ill to travel." Then, wishing to be alone with his great sorrow, the lad abruptly rose which he did not again leave that night.

As it was not advisable for the steamer to reach Canton before sunrise, she stopped about ten o'clock, and remained at anchor until daybreak, when she

awakened from a troubled dream of fighting, killing and burning, by such a confusion of yells and splashings and other strange sounds, that he rushed out on deck with the idea that his dream had become a reality. Once in the open, he gazed upon a scene unique and unparaileled. The steamer was slowly making her way against the swift current of a turbid river, along the front of the most marvelous city in all the world. She was moving amid a vast collection of floating craft, from fine, English built Chinese warships and foreign gunboats, down through junks of all sizes, stern wheel "kick boats" propelled by man power, gorgeous mandarin boats gay with fluttering flags, house boats, flower boats which are floating palaces in which men of wealth give expensive dinners, silk boats, rice boats, and produce barges from up the river; fishing boats, duck boats, long, slender paddling canoes known as snake boats, besides thousands of sampans and slipper boats, that ply for hire in any capacity, and on which a half million of people are born, live and die, in many cases without ever setting a foot on land.

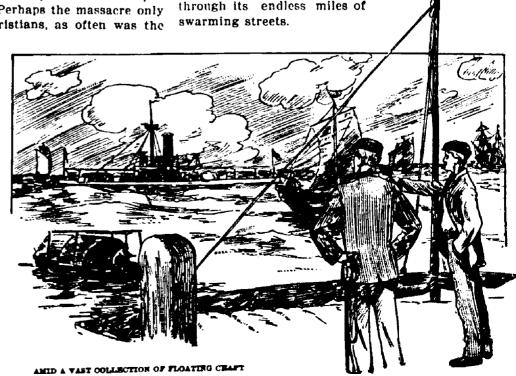

So poor are these sampan dwellers, and so greatly is the supply of their labor in excess of the demand for it, that they struggle with each other for the chance of making even a single "cash," which is valued at one-tenth of a penny. In the present instance, scores of sampans propelled by sweeps or sculling oars were racing towards the Fatshan, their occupants screaming, gesticulating, firing off crackers and beating gongs to attract the attention of her passengers. All these craft looked exactly alike, and were about twenty five feet long by eight feet wide. Each had a small open deck forward, on which a man, standing and facing the bow, rowed with a pair of sweeps. There was an arch-roofed house amidships, and aft of it a covered deck occupied by a woman who worked a long sculling oar, by means of which she both steered and propelled the light craft. Not one of these boats was painted, but all were colored alike with pungent smelling Ning-po varnish.

From every sampan peered round-faced, solemneyed children, boys and girls, all wearing pig tails. dressed alike and looking alike, except that the smaller boys generally had bladders, squares of cork or billets of light wood fastened to their shoulders to keep them afloat in case they fell overboard. The girls were held to be of so much less value that for them life preservers were not thought of. Whenever these children were more than four or five years old they helped, or rather attempted to help, their parents with the oars; while those of younger age took care of the babies.

In the rush towards the steamer of these queer looking and queerly manned craft, they were in constant collision, smashing recklessly into one another, apparently striving to overturn one another, or to push their rivals out of the way. If one succeeded in making fast, others would hold on to her, until the single, grass-plaited rope would break and all would be swept astern on the swift current, their crews screaming and shaking fists at one another as they went.

It was Bedlam and Babel, sea fights and water sports, commercial rivalry and insanity mixed into one grand helter-skelter of confusion, and yet, so far as the interested spectators could note, no one was drowned nor even hurt; though apparently no one would have cared a snap if everyone else had come to serious grief.

The Chinese passengers from the lower deck of the Fatshan swarmed into such sampans as succeeded in making fast; their queer looking Juggage, done up in matting, was pitched after them, and away they went as though each second was too precious to be wasted. Such of the foreign passengers as were tourists, or globe trotters, visiting Canton out of curiesity, were engaging guides to show them the sights of the wonderful city, and arranging for sedan chairs, in which they were to be borne, on

shoulders of coolies,

There are no wheeled vehicles in these granite paved thoroughfares, and no beasts of burden; for the broadest and most important street of Canton is but eight feet wide, while in most of them a tall man standing in the middle may touch the houses on either side with his extended finger tips. From these thread-like passages, packed with blue-clad, yellowvisaged humanity, and reeking with filth, open the narrow portals of shops whose contents would dazzle an Aladdin. Each dim doorway is barred against the entrance of demons by a tiny altar, from which ascends, never endingly, the incense of smoldering joss sticks, but once the uninviting entrance has been passed the visitor finds himself in another world.

The interior is scrupulously clean, and its perfumed atmosphere is that of quiet elegance. The visitor is met by smiling attendants clad in silken garments and shod with noiseless felt, who bow before him profoundly, at the same time cordially shaking their own hands in token of welcome. They invite him to be seated in wonderfully carved chairs lined with silken cushions and darkly lustrous with the polish of ages. Tiny tables of marvelous inlay are set before him, and from them he is invited to drink of amber-colored tea, served in egg-shell porcelain. Afterwards the hidden wealth of the establishment is brought forth, piece by piece, for his inspection, and it is intimated that these things are for sale, though he never is urged to purchase.

Or he is conducted from room to room lighted from interior courts and filled with the most exquisite specimens of human handiwork known to the world. Here are silk embroideries of a beauty, delicacy and texture not found elsewhere; exquisitely carved ivories; startling designs, boldly executed in lacquer, gold and silver, fade, crystal and precious stones. Here are feather work and brass work, priceless porcelains and cloisonne, softest crepes and gossamer linens, black-wood furniture, graved with the painstaking skill that workmen of the western world bestow only upon precious metals. All these things and an infinity of others equally desirable are passed in slow succession by the deft-handed attendants before the fascinated gaze of the foreign visitor, until he longs for the wealth of a Croesus; and only is withheld from purchasing to the full extent of his means by memory of the grim customs officials who surely await his homecoming.

From these places where things are sold, the sightseer in Canton is borne away to places where things are made, or to temples, pagodas and execution grounds. Perhaps he is permitted to enter the garden of some wealthy Mandarin and, merely by passing through an enclosing wall of buildings, finds himself transferred in a minute from the filth and squalor of the street with its swarms of jargon yelling coolieg and leprous beggars, dimly filtered light and overpowering smells, into a place of sunlight and clean air, a fairy land of trees and flowers, of singing birds. shaded walks and plashing waters, of quiet and coolness, strangely attractive architecture, of gratified senses and of restful luxury.

But none of these things was for Rob Hinckley, at least not on this occasion; for instead of being a sensation-seeking tourist, he merely was a sorrowstricken lad, friendless in a great, pitiless city, well nigh penniless, and desperately uncertain which way to move. He turned sick with apprehension as he gazed from one side of the steamer to the bund or landing place, where gangs of half-naked coolies grunted and sweated under their burdens of freight; or from the other to the yelling sampan crews ready to fight for a cent's worth of patronage. To him they resembled the myriad occupants of a gigantic ant hill, and appeared equally lacking in human sympathies.

Rob was faint from the exhaustion of his almost sleepless and supperless night, and at length, realizing his most pressing need, he sought breakfast in the saloon. From this he returned to the deck a half-hour later, refreshed and strengthened, but still as uncertain as ever regarding his next move. Then, all at once, his uncertainty vanished; for the very first object that caught his eye as he stepped outside was that which is most dear and most beautiful to all Americans, especially when seen in a foreign landthe flag of the Stars and Stripes. It was at some distance up the river, blowing out strong and free high above the only clump of trees in view, and beside it no other flag was visible.

In Canton, while most of the foreign nations there represented own their legation buildings, the United States is satisfied to lodge its representative in rented quarters. To offset this humiliation as far as lay in his power, the American Consul General had raised a noble flagstaff, so much taller than those of his neighbors that the starry banner flown from its top was the most conspicuous flag in all Canton. Now it waved a friendly greeting to poor Rob, filling him with renewed hope and bidding him come to it for aid in this time of trouble.

Nor did our lad hesitate to accept its invitation; but, noting the general direction to be taken, he ran down the gang plank and plunged boldly into the seething mass of blue-clad humanity thronging the narrow thoroughfares of China's greatest city A little later, guided by occasional glimpses of the flag as he went, he had gained a bridge spanning a canal

FOR OF SUCH IS THE KINGDOM OF HEAVEN"

that separates the city proper from the Shameen, a beautiful tree-shaded island on which stand the foreign legations, dwellings and business houses.

At the city end of this bridge was a barrier having two wrought iron gates, one large and one very small. As the latter stood hospitably open, Rob was about to pass through it, when the Chinese gate keeper hurriedly flung open the other, at the same time respectfully informing him that it was reserved for Europeans (all white foreigners in China are known as Europeans), while the little gate was for the passage of such natives as are allowed on the

The incident was trifling, but it wonderfully restored the self-confidence of our young American, and as he walked proudly through the big gate, which was closed with a slam behind him, he felt quite ready to face and defy the whole Chinese nation. Turning up a shaded and well kept walk, lined with substantial houses, each standing in its own grounds, he again sought for a glimpse of the flag, but in vain, for the foliage above which it waved was so thick as to hide it from below. In this dilemma, Rob approached a gentleman who stood at a front gate, in company with a group of Chinese, with the intention of inquiring his way to the American Consulate. As he drew near he overheard the gentleman, who looked like an American, say loudly, slowly, and very distinctly:

"I've told you over and over that I don't understand one word, and unless you speak English there is no use your trying to talk business with me. You wanchee catchee one talkee man, sabe?"

"Perhaps I can help you, sir," said Rob, stepping up at that minute. "I understand and speak some Chinese.'

THE WASHINGTON BUST PRESENTED BY FRANCE

This photograph shows the new and striking bust of Washington. in bronze, lately presented by the French nation to the United States, and unveiled at the National Capitol February 22.

"If you only can, and will, I shall be ever so much obliged," replied the American, "for I am quite sure these fellows have something important to communicate. But I am a newcomer here without a word of the lingo, and our interpreter has not yet put in an appearance this morning."

So Rob talked and interpreted, with the result that a few minutes later the situation in question was fully understood by both parties and the Chinese departed quite satisfied.

"If I only could talk it as you do," said the gentleman enviously. "Won't you step inside for a cup of tea?"

"No, thank you," replied Rob, "I only stopped to inquire the way to the American Consulate. I want to see the Consul General on most important busi-

"Then I am very sorry to say that he has gone to Hong Kong and will not return for a week."

"Oh!" cried Rob, "what shall I do? Perhaps you can tell me something about a reported massacre of missionaries at Wu Hsing. Did it really occur?"

"I believe it did, though that was before I came out, but I hope you hadn't any friends there."

"My father and mother were there."

"You poor fellow! That indeed is a bitter blow. May I ask your name?" "It is Hinckley."

"Not a son of Dr. Mason Hinckley?" inquired the other eagerly.

"Yes."

"Then you needn't worry any more, for Dr. Hinckley and his wife left for America just before the outbreak, and are a long way towards the land of safety by this time."

(To be continued.)

### Identified

A Duluth attorney recently went east to visit his old home, and the first Sunday he was there he attended church. After service he visited the Sunday school and saw many familiar faces among the pupils, although they had all grown considerably during the years he had been away.

At the request of the superintendent the visitor addressed the school, and in opening he asked if there were any present who remembered him-who hall ever seen him before.

The hand of a little fellow in the front row immediately went up. "I do—I do!" he said.

A satisfied smile crept over the face of the visitor He was glad that the children remembered him.

"Now, where was it you saw me before?" he asked the boy who had raised his hand.

"You was the clown in the circus last summer!" replied the youth, enthusiastically. "I'd never forget your face."-Duluth News-Tribune.

### Where He Got His Orders

The one who enjoys a laugh will enjoy this:

A raw recruit in the cavalry, named Murphy, was given one of the worst buckers in the whole troop to ride. He had never been on a horse in his life. and the drill was anything but a recreation to him, as the sequel will show.

"Now, my men," said the sergeant, addressing them, "no one is allowed to dismount without orders from a superior officer. Remember that."

Tim was no sooner in the saddle than he was hurled head over heels through the air, and came down so hard that the breath was almost knocked out of him.

"Murphy!" shouted the sergeant, when he discovered the man spread out on the ground, "you dismounted."

"I did."

"Did you have orders?"

"I aid."

"From headquarters, I suppose," with a sneer.

"No, from hindquarters."

### Dodge-Tag

All boys who have played "tag" will learn very easily how to play "dodge-tag," and will like this variation of the old favorite.

The most important thing to remember is that you must not run in a straight line farther than any given distance, or any distance equal to the length between so and so; whatever you desire it to be.

As the one who is "it" comes to "tag" you, you must dodge him.

After you have played for a little while you find yourself as supple as an eel. Just as you are going to be "tagged," and the one who is "it" is quite sure he has you this time, with a turn of the heel or too and a twist of the body, away you go and he is disappointed.

There are only two other rules to remember. No player can run "home" while he is being chased, and the player who is "it" must not tag the same person twice in succession.

# Just Between Gurselves

Well, I brought it on myself, boys. I told you to write me freely; and you did. You were not a bit bashful. You came on as they say in boxing, "good and plenty." Fat letters and thin ones; long ones and short; good, bad and indifferent; painstaking and careless; pencil written and pen; wise and foolish; kind and unkind; gentle and saucy; questioning, suggestive, advising, scolding, flattering. There are not many I would not gladly print here if I could. I thank you all. I shall be a better Editor for the advice, a prouder Editor for the commendation, which, by the way, almost drowns out in amount all else; and a more sympathetic and helpful Editor for your confidences.

Many of you have told me what you want in THE AMERICAN BOY. To give what you all want in THE AMERICAN BOY would mean a hundred pages a month. I have turned our pocketbook inside out and can't find the heart to do it, boys. Now you are wondering if my heart is in that pocketbook that I should look there for it. No, but a fellow's heart sometimes has to take counsel of his pocketbook. The heart says, Do it. The pocketbook says, Do it if you dare. So that a fellow with a heart has to keep his eye on his pocketbook or some day he'll find his stomach complaining that the heart has run away with everything and left it to go hungry. And we must eat—even we Editors.

One boy says, "Don't print advertisements; they take up room" Why, my boy, if it had not been for an advertisement somewhere, somehow, you never would have known of THE AMERICAN BOY and you wouldn't have found at least one friend—the Editor. That same pocketbook says that without advertisements THE AMERICAN BOY would not live a month. It's the advertiser that is really paying for your paper. No magazine or periodical could live, let alone flourish, on its subscription money. Many magazines give to their readers nearly twice what the readers give to them in the way of money value. It costs the modern periodical nearly every cent of the dollar, on the average, to get a dollar subscription, and what is there left to pay the cost of white paper, presses, printing, salaries, rent and then give the owners of the paper a little something to make them happy? No, my boy, advertisements are necessary. YOU want them. You know you do. You want to see the latest and best things in the market to wear, to eat, to earn money with, to play with. WE want them because without them THE AMERICAN BOY would cease to live, and that would be a calamity indeed.

Another boy says he sent in an essay and didn't win a prize. He thinks we are partial or not honest in making awards; so he stops his paper. We can see what kind of a man that boy is going to be—a quitter. I have seen that kind of a man in business; you have seen that kind of a boy in school and on the playground. He was never a success. He never will be. I would say to that boy, If at first you don't succeed, fail, fail again. Sometimes the very best thing for a boy, as for a man, is to fail. A boy or a man needs to be knocked down a few times in life to learn the great lesson of life, that achievement, success, the crown, comes through courage, struggle, persistence in the face of obstacles. That's why so many poor boys become great and so many rich boys become little. It's the strong winds, the beating rain, the freezing cold and burning heat that make the hardy tree on the mountain side. It's being able to get up when you're knocked down that marks a man, and not being never knocked down. If football is good for anything it is to teach a man to keep his temper, be patient, take a drubbing, a knockdown if necessary, and then ge up and win. I see you, my boy, in a football game. No, I don't. I cannot imagine a quitter chosen for such a game. Life is not far different from football. Hundreds of boys compete for our prizes. The Editor does not award

them. They are awarded by one who is not in his office; one who never sees our boys and knows none of them. Is it necessary for me to say it is done honestly?

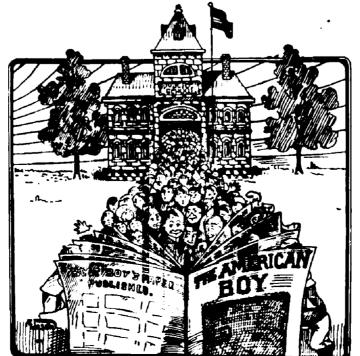

But is the failure to win a prize a total loss? Think! You studied. You thought. You wrote as carefully as you knew how. In the doing of this you became better and stronger. You came to know more than you did before of the subject. You got practice in thinking and in expressing your thoughts; then too you learned that some other boy did better than you did. Ah, that last was a great gain. You now know that you have something to reach after. Another boy knew more, thought better, wrote better than you did. Does that anger you? Does that cause you to throw away the pen? Does that engender mean thoughts of others? Then you have learned another thing—that you are weak, childish, and lack the backbone that should characterize American boys.

You have heard of great men whose boyhood attempts to be great were laughed at—great orators who when they were young were hissed—great reformers who were persecuted and ridiculed by their fellows—great statesmen, philanthropists, scientists, philosophers, inventors who at the beginning were sneered at on every hand. You have heard that they hore it all with patient, heroic souls, saying to themselves, "WAIT. MY time will come." You have read how it did come. Well, whether a boy is going to be a big or a little success in life, if he's to be a success at all, he must have this eternal grit that causes him to laugh at discouragements and failures, and learning the lesson, go at it again.

Another boy says he wishes I would say more for the encouragement of poor boys. Well, I feel very much as Senator Dolliver said in a recent talk in Plymouth Church, Brooklyn, "I am not wasting my sympathy on the children of the poor. What little sympathy I have I will give to the children of the rich. If you have one hundred thousand dollars to give to a boy to start him out in life he doesn't start. I suggest keeping that one hundred thousand dollars and that boy apart. It would be better for the boy and, as facts seem to prove, better for the one hundred thousand dollars. The real American type, with its background of poverty, discipline and hard work, was characteristic of every President of the United States since Washington."

The very things the poor boy has to fight against make the school that fits him for success, while the very things that the rich boy enjoys make the school that fits him for failure. Boys need to learn first of all how to do something and do it well. This almost guarantees success. This, every poor boy can accomplish. This, in most cases with the boy who has money, is an impossibility. There are exceptions, but money makes things easy and easy tasks do not toughen muscle, and tough muscle of mind and body do the world's great things.

One boy writes that boys generally are not interested in stamp and coin collecting and he asks, why not give that page to some thing every boy is interested in? Other boys select other departments and advise substitutions. Many boys of many minds! If you want to know how many-sided an American

boy is edit a paper for him. I will say to the boy who doesn't care for old stamps and coins that we receive twice as many letters from boys interested in this department as we do from those interested in any other. There was a time when we received more stamp and coin letters than of all other kinds combined. And so it goes. One boy wants stories of the plains. Another says, No, give us sea stories. Another likes travel and his boon companion wants nothing but "Injuns." One eats, sleeps, plays, studies, lives photography. Another, across the street from him, would not know a "negative" from a jack rabbit. One boy has a puzzle head, dreams unthinkable problems, and worships Uncle Tangler, while his brother thinks Uncle Tangler a first rate candidate for an idiot asylum. One boy thinks The Money Making and Saving Department a delusion and a snare and another writes me he has for the first time in his life begun to make and save money and help along at home by buying his own clothes and school books, and he thanks me for it. One boy thinks this page is jolly good and the fellow around the corner thinks I'm an old grandmother-while the fact is I am not, and never can be; but I haven't anything to say against grandmothers. Let us remember, boys, that this is a big world with all kinds of people in it and that every fellow wants his way and that every fellow can't have it-not even the

I get some very funny letters. A very anxious boy in Nebraska wants to know what we think about kissing games. Well, if the truth must be known. the game being a fair one and the right girl in it and not too many playing and not all wanting the same girl, I am in favor of it. I do not approve of those "catch as catch can" kissing games where everybody kisses everybody, whether he wants to or not and whether the girl be ugly or pretty, old or young, sweet or sour. I believe a boy ought to be a little choice about it. The game is at its best when there are just two in it and the lights are not too glaring bright. A boy can play a mighty good game of this kind with his mother. Some boys get fun out of it even with a sister, and the beauty of the game in these two cases is that you are kissing about the two best people you know. Some boys never try playing the game at home but go skylarking around for girls not half so pretty nor so sweet nor so good. The game as played at home has no danger in it. Such kisses always leave a good taste; you think about them long years after when you have forgotten other kisses that you handed out so cheap and so promiscuously. Some day you will be ashamed of the silly kissing of your nursery days. You will wish on the other hand, in years to come, that you had played that game oftener with that mother of yours and that sister who thinks, no matter what she may say when you tease her, that you are about the best thing that ever happened. Boys do many foolish things. They do want at times to kiss the girls. Bless me, who wouldn't? I do not know that they will follow my advice, but here goes. If I were under five I'd kiss all the pretty little baby girls I could find notwithstanding the germ theory. From that age on I would slope off rapidly till about ten when I would confine myself to the family—this might take in pretty second cousins. From ten on I would keep on kissing home folks and begin to save up until about eighteen to twenty when, by having been prudent and saving of my kisses, I would be able to find some one outside of the family whom I could kiss with a clear conscience and without having to be stingy about it.

Another funny question,—this by a boy in Michigan -is, how often ought a boy to take a bath? I really have no statistics that assist me in answering this question. Judging from my observations made when I was a boy, I should say about once a month; but judging from observations made in later years, from close inspection and study of my own boy, I should say, once a day, or oftener. A good rule is to bathe when dirty. A boy may almost always assume that it will not hurt him to bathe whenever he thinks of it; but for fear he may never think of it I should say that a good cold sponge bath from his hips up every morning and another bath, hot or cold, from his hips down every night will make a strong, clean boy and man of him. If he can't do it this often, let him do it as often as he can. He may need to wash his hands and face at noon, but that perhaps would be carrying the thing too far.

I have really enjoyed reading your letters, boys. I have learned all kinds of things about you and about myself and I really believe if we keep on we shall become acquainted. I hope you are as anxious for the acquaintance as I am.

Yours faithfully,

M-6 Sprague

# Three Yankee Boys In Ireland & BY THE

YEW TREE IN ONE OF THE CLOISTEIN

(Begun in November.)

When the boys awakened the next morning, it was with keen disappointment, for they looked out of the window upon a drizzling rain and a sloppy street.

"Never mind," said Professor Jack. "As the Irishman says, 'It never rains but it pours.' You must always be ready for

rain in Ireland. It is rain, rain, most of the year, and there you have an explanation for the perennial green of her valleys and hills—hence it is she is the Green, the Emerald Isle."

"Well, that may account for so much green, but what accounts for so much rain?" asked Hal.

"What accounts for the rain anywhere, you silly?" chipped in Ned, who was having a fierce struggle with a collar that wouldn't button. He had bought it only the day before and had declared it was as stiff as a board and had been told it was only good linen—Irish make, none of your thin, paper-like linen you get at home that will stand about one washing.

"You know what I mean," replied Hal. "I know what accounts for rain as well as you do."

"Then you don't know anything about it, for I don't," went on Ned.

"Then you'd better not lip in." retorted the other. Matters were growing serious and the Professor called out from the adjoining room, "Boys, what did I tell you about travelers keeping their tempers? To be sure it's a wet morning but that's no excuse for ill humor. Strange that people who will never lose their good humor at home, at once they go traveling forget their good manners. Now Bob's question was a perfectly natural one. Joe, you are dressed, get out your maps and tell us the latitude of Ireland."

- "It's between about 50 and 55," answered Joe.
- "Now, what is New York?"
- "Forty degrees."
- "Ottawa, in Canada?"
- "Forty five degrees."
- "What is Winnipeg?"
  "Fifty."

"Then the southern part of Ireland where we now are is north of Winnipeg in Manitoba, which we always think of as in the frozen north."

"Why, the southern point of Ireland," broke in Joe, studying the map, "is in the same latitude as the southern point of Hudson's Bay and the southern part of Labrador, and is way north of the tiptop point of Maine."

"You wouldn't have to travel so very far north," interrupted the Professor, "to be in the same latitude as the southern point of Greenland. Now answer me this: Why, as we are so far north, is Ireland almost tropical in its vegetation, with a temperature that even in January seldom falls below forty degrees and reminds you of some of our southern States at home: why, when Winnipeg and the Hudson Bay country are in the grip of arctic weather, is Ireland blooming like a rose garden?"

"Because Ireland is surrounded by water," suggested Ned.

"That will do for a little reason," said the Professor.

"Give it up," cried the boys after a minute's thought,

ought. "You have heard of the Gulf Stream?"

"Oh, of course," chimed in the boys in chorus. "We passed through it coming over. That was where those dense fogs were."

"True," replied the Professor. "You see that great current of warm water flows out of the Gulf of Mexico toward the north sweeping a little to the south and east of Maine and Nova Scotia; it warms the air about it and when this meets the cold air from Greenland it condenses and makes the dangerous fegs off our north const. Then this warm stream of water, miles in width, turns to the east carrying something of the balmy air of our southland directly against the rocky coasts of Ireland, Scotland and England. The cold air from the mountains and from the northern seas meet it, the warm air is condensed, resulting in fog. mist, "urm rain. Thus Ireland, England and the Lowlands of Scotland are

MUCKBORR ABBE

warmed, moistened and kept continually green. Ireland, as first meeting the oncoming Gulf Stream, enjoys its first favors, hence the Emerald Isle."

"If that's so, let her rain!" exclaimed Ned, "and I'm down stairs for breakfast. Wonder if we'll get any of those big strawberries again this morning. Hope we will."

"I wonder if we will ever get Ned filled up," remarked Joe, as a minute later they all followed Ned down to breakfast and found him putting strawberries where they would do the most good; with a speed and skill worthy of recording.

The distance from Cork to Killarney which our boys were about to traverse is by rail sixty eight miles and one can make it in about three hours, that is by way of Mallow Junction, which is the shortest way, but the least interesting. The most attractive route is that by way of Glengariff and Kenmare, crossing the mountain by coach. The Professor explained to the boys that the trip by the latter route in bad weather was dreary and uncomfortable, and advised that they take the shorter, all rail route, and the boys agreed. As it was but a three hours' ride they determined to go by afternoon train, in the hope that by that time the rain would cease. The morning was spent in writing letters and studying guide books and looking out of the window for signs of good weather. This was poor business for three active boys but, as the Professor said, "a rest now and then, even if an enforced one, is a good thing and nothing can be lost by it in the end."

When the time to start arrived they piled into a bus, on top of which their luggage was stowed, and soon were at the depot. Professor Jack bought four second class tickets, paying two dollars and eighty cents each, and then went to identify and stand watch over the baggage till he had a label pasted on it and saw it actually put away in the baggage car, for they don't check baggage in Ireland.

Seats in the second class compartments were plentiful and the boys had another laugh over the funny little engine and cars. In writing home that night Joe told his folks that if they could imagine a freight car just high enough for a man to stand up in, divided by two partitions into three compartments, with no doors between the compartments, and then in each one two benches having straight backs and each seating five people, so arranged that those on one side sat knees to knees with those on the other, and a long rack or shelf over each bench for small luggage, then they could get some idea of an Irish railway car.

The ludicrous toy whistle blew, the "guard" ran along outside the train slamming the compartment doors and they were off to the north toward Mallow Junction where the road branches east to Dublin and west to Killarney.

The ride proved to be of rather meagre interest, as the towns were few and far between and much the same in appearance, while the country presented a certain monotony of green which, though pleasing, lacked the variety which boys require. The boys did not fall to note, under the Professor's intelligent direction, whatever of special interest came in view. At many points they passed men and women working in peat beds and the sight and the Professor's explanation were interesting. "Peat," said he, "is nothing more than decayed vegetation."

"It looks like chunks of mud," remarked Ned.

"So it is, but it is vegetable mud. Mud that is hardened turf made up of decayed roots, stems, moss, leaves that have accumulated and hardened through hundreds of years. It is really one of the first stages of coal-making in the earth. There is very little coal in Ireland; peat takes its place. In some places the nest bogs are as much as forty feet deep. In the mountain districts it is thin, being little more than

COURT YARD OF THE ABBET

brown turf of, say, a foot in thickness. The great bog district in the south central part of Ireland embraces nearly three million acres. It is said that nearly one third of Ireland is bog land, showing that for hundreds of years—perhaps thousands—Ireland must have been covered by forests, which in the course of time were killed by the

growth of mosses and other peat producing plants.

What the boys saw from the car windows were Irish peasants, men and women, with spade-like cutters, digging out long, soggy blocks of peat, others tossing them up on the turf with a fork, while others with forks spread them for drying. These peat blocks, the professor said, were about five times the size of a brick and sold at about twenty for twelve cents.

The boys were interested too in the beautiful roads that at times ran for miles along the track of the iron horse, so hard and smooth they fairly glistened. Most of the way they were bordered by stone walls which were covered with flowering vines. Not less interesting were the little cottages, some of which were unkempt and squalid while others were neat and clean, with a coat of whitewash over them and rose bushes laden with bloom running riot all over their walls,

The sun broke through the clouds just as the train pulled in at the pretty little Killarney station. The boys wanted to stop at the pretentious Royal Victoria Hotel, just opposite the station, but Professor Jack said. "No" and boarded a bus that read on its hoor, "Lake Hotel."

"Killarney," explained the Professor, "is a mile and a half from the nearest lake, so we will not stop here but go on to a hotel which is immediately on one of the lakes. We are here especially to see the lakes, though Killarney itself is an interesting town, as you will see later."

After a few minutes' drive over a beautiful road, bordered by high stone walls and shaded by two lines of immense oaks nearly the whole way, the bus turned into the grounds of the Lake Hotel and drew up before the door. The inevitable full dress dignitaries and brass buttoned attendants were at the front to assign rooms, for it is not necessary in an Irish hotel to seek the office and register your name and address. Dinner was served in a dining roon looking out on Lough Leane and, this over, the Professor and the three boys strolled to the edge of the lake and admired its beauties. The sun had long since set but enough of day remained to indicate the outlines of the mountains that across the lake lifted their heads into the sky.

It was a quiet, lovely evening; the air was clear and pure after the rain, and the sky, water and fields seemed blended in perfect harmony of quiet color, so that Professor Jack called to mind what Thackeray had said when he came to write of the beauties of the Irish lakes. Laying down his pen, with which in vain he had striven to express his emotions, he cried, "Beautiful!" It was all he could say. Our three boys were not poets nor, to any alarming extent, sentimentalists, but they felt the spell of the time and place and were quiet, while the rich voice of their leader, as he sat upon a great rock on the point of a little headland, sang loud:

By Killarney's lakes and fells,
Em'rald Isles and winding bays,
Mountain paths and wood-land dells,
Mem'ry ever fondly strays;
Bounteous nature loves all lands,
Beauty wanders ev'ry where,
Foot-prints leaves on many strands,
But her home is surely there.
Angels fold their wings and rest
In the Eden of the west,
Beauty's home, Killarney,
Ever fair Killarney,

Returning to the hotel Professor Jack proposed that they go to hed, but Ned and Joe protested so vigorously that the Professor consented to their staying up a while.

Scarcely had the Professor and Hal gone to their room when Joe suggested to Ned that they two stroll back down the road to Killarney and visit the

village. The suggestion met with an immediate assent from Ned, who was always ready for a lark. The evening was a long one as always in this latitude, and when the two boys set off down the road the air was cool and delightful and laden with incense from a million blossoms in the fields beyond the walls that skirted the roadway. They passed many people on the way, some in jaunting cars with horses going at breakneck speed and laden with young people singing and shouting, others on foot, single or in pairs or groups, for the most part people of the village loitering along the beautiful highway, joking, gesciping, laughing, apparently care free.

BRICKEEN BRIDGE

A half hour brought the boys into the village, just as the street lights were being lighted. All the town seemed to be out, loitering in groups on the sidewalks, in the middle of the street, about the doorways which opened directly on the streets, apparently with nothing to do but talk away the time till the hour for bed. But there were no children on the street-just men and women. At every corner was a beggar-sometimes two or three, for the Killarney beggars are famous the world over; and most of them are impostors, it is said. Surely some of them were wretched enough looking.

Ned said he never saw so many policemen and so little need of them, for everybody seemed to be in a good humor and peaceful enough.

"Let's get acquainted with one of them and find out something," said Joe. Whereupon they accosted a fine looking young fellow in a neat fitting uniform who looked very soldierly, not forgetting to touch their caps, as they did so.

"Can you tell us where there's anything to see in Killarney? We are strangers."

"Sure, and there's moighty little to see here. There's the Cathedral and the Bishop's palace, a lunatic asylum out of town a little ways, and a nunnery where they teach girls-about four hundred of them-but you couldn't get in there for love or money. There's the fine house of the Earl of Kenmare, who owns most everything around here, but I don't suppose you know the Earl, do you? The lakes is the thing, and Muckross Abbey and Ross Castle, and the Gap of Dunloe. You'll be goin' there sure, if you've not already been."

"No, we just came to-night."

"Which hotel?"

"The Lake."

"You are far from home. You will be scart to go home alone. I hope you won't fleet the witches on the bridge.'

"What bridge?" asked Ned, drawing a quick breath.

"The bridge on the way to the lake. You crossed it a mile down the road. Many a Killarney boy wandering down that road at night with his colleen has disappeared with her at that bridge."

The boys remembered having crossed a small stone bridge on the way and loked over its wall into the little stream that ran innocently enough underneath.

"And is it true they did disappear?" asked Joe nervously.

"As true as my name's Mehan. Didn't my own cousin, a foine lad, go down that road one night to see his swatcheart at the lake, and niver came back?"

"Do you think there's any danger in our going back alone?"

"You niver know, I wouldn't risk it."

The two boys moved off slowly and then withdrew to the sidewalk for a conference. What should they lo? They must go back to the hotel. But those ::itches!

"Pshaw! it's all a joke!" exclaimed Ned bravely. 'Come on. We've seen all there is in this bloomin' town. I wouldn't have the old ramshackle place for a gift." Then the two started for the lake.

"Let's whistle, Ned," suggested Joe. "They say it keeps up your spirits."

"Yes, and let them witches know we are coming? I guess not," replied Ned.

Their feet beat a tattoo on the hard road, which was now dark and deserted. They grew less and less talkative till finally they found themselves walking at double quick speed and not saying a word. They must be near the bridge. They heard sounds of approaching steps and Ned grabbed hold of Joe's arm.

sought the stone wall and stood close together waiting the approach of the strange thing.

"You're scared," said Ned reproachfully.

"I'm not. I'm just being careful. Haven't you read that Tam O'Shanter story?"

"That wasn't in Ireland. It was in Scotland! and it's a poor time to be thinking about ghosts. You're foolish."

"Well, I'm doing just what you are doing. guess if I'm foolish you are."

The sound of the footsteps had ceased.

haven't had a good run since I left home."

"We can't stay here all night; come on, Ned." "Well, I'm ready. I've just been waiting for you," replied Ned. "Let's run," he suggested, after they had gone a few yards. "I feel like running. I

Then away they went like the wind; they reached the bridge and crossed it at breakneck speed, Ned in the rear and calling to Joe to hold on, to wait for him, to guit being a coward, but Joe didn't stop running, nor did Ned, till they saw the lights from the hotel shining through the trees and they both stood breathless and trembling before Professor Jack, who, guessing the trouble, laughed till his sides ached.

The next morning a coach from Killarney, with a dozen passengers from the hotel, stopped at the Lake Hotel and took in Professor Jack and the boys, two of the latter finding seats with the driver who was a typical Kerry Irishman-talkative and witty. He made you think of what Heine said of Ireland, "Her heart full of sun and her head full of flowery The coach was to make the circuit of the lakes. They would not be back till evening, so the hotel put up a luncheon for them to eat on the way-"a regular picnic," as Joe expressed it.

For some time the coach rolled smoothly along the superb roadway till it drew up before gate. A fee of a shilling each was here paid, the driver cracked his whip and the coach rolled into the grounds of a great estate bordering on the largest of the three lakes. The driver explained that the estate belonged to Lord Herbert, who was married to an American lady. That the noble lord had got into debt and the estate had been sold. "There was some talk," said the Professor, "of an American syndicate buying it, but it finally came into the possession of Lord Ardilaun who was the eldest son of Sir Benjamin Guinness, the Dublin brewer, now dead. Lord Ardilaun sold his share in the brewery for \$10,000,000 and invested a part of it in this beautiful property."

"Lough Leane, or the Lower Lake, as it is sometimes called, is five miles long and three miles w.de," said the driver, "and is mostly wather. But there are thirty islands. On the largest of them, Ross Island, ye :ee beyant there, is Ross Castle, which was the fortress of the O'Donoghues. You don't know them? Well nayther do I, but they once was great folks. There's O'Donoghues around here now but they is like their castle—mostly all ruins. Just beyant," he went on, "is Innisfallen. Tom Moore wrote about it. They say he did first rate. There's a ruin of an old abbev there on the island built by St. Finian, a leper. It's over a thousand years old but you can't prove it by me.'

"There was written in that abbey over six hundred years ago," added the Professor, "the renowned Annals of Innisfallen, a sort of Universal History, giving a history of the world to the time of St. Patrick.

"Some one has said," continued the Professor, "that Innisfallen is the most beautiful island in the King's dominions, if not in Europe. Tom Moore calls it 'Sweet Innisfallen.'

Now they came in view of the beautiful ruins of Muckross Abbey, which is on the Herbert estate, near the shore of the lakes. The coach stopped nearby and

"Wait! Let's see what that is." Together they all alighted. It was the first sight most of the party had had of one of the famous abbeys of the middle ages and interest was keen. An old gentleman who appeared to be a sort of official caretaker, quickly made his apearance and started in at once to point out the points of interest.

The Church was founded in 1440 and restored in 1602. In it are the tombs of the O'Sullivans, Mc-Carthys and O'Donoghues, ancient lords of the soil. In one of the cloisters has grown up a great yew tree whose trunk measuring thirteen feet around helps support the crumbling walls. "Whoever takes a leaf from this tree will die within a year," said

Ned had just plucked one to send home in a letter,

and his blocd ran cold.

The Professor was delighted with the evidences of ancient grandeur in splendid arches, columns and windows-the never failing wonder of tourists who are accustomed to thinking that beautiful architecture is of modern growth, but our boys were all the time having fun reading the inscriptions on the old tombstones in the adjoining ground. Here lay Irish kings, chiefs, priests and peasants. On the south and east sides lie the good, on the west the unbaptized children, soldiers, strangers; the north is the devil's side. It seems once to have been the custom to carve on the stores something to show the occupation of the deceased. The boys had a good laugh over one, on which was carved a very good picture of two cocks fighting, showing that the good man here interred made cock fighting his chief employment in life.

The half hour here was well spent. The ancient vine-covered abbey with its neighboring avenue of great trees, wherein the monks were wont in days gone to walk to and fro, held a fascination which even the boys could not resist, and, as the coach swung round a bend in the road, every occupant turned for a last fond look. They would see many ancient abbeys, cathedrals, palaces and castles, but none like lovely Muckross.

A few minutes more and they were on the shore of the Middle or Muckross Lake. Skirting the shore, they soon crossed Old Weir Bridge, above rushing waters, amid the densest growth of foliage, to little Dinish Island, where the coach halted before a cottage on the lake side, embowered in vines and every manner of flowering growth, and where, looking out over "The Meeting of the Waters," luncheon was caten and everyone was besieged by bootmen who offered their services for a row among the islands.

From Dinish Island they crossed the Brickeen Bridge, entered Camillian Wood and emerged later to find themselves on the road to which they had come and homeward bound. The driver played a good joke on the boys, and grownups too, at one point. Stopping his horses on the banks of a little lake, he announced its name to be Deaf Lake. "It's only three hundred yards wide," said he, "but you can't hear a word shouted from the other side." To prove it he ran around to the opposite side and appeared to call with all his might, making all kinds of funny faces. and not a sound could be heard. Then the Professor shouted, and Pat appeared to be listening intently with hands to his ears, but all the time shaking his head. It was a trick; Pat only pretended to shout. and he only appeared not to be hearing when the Professor shouted. It was wonderful till the trick was exposed, and then Pat got a good tip. They had not seen the upper lake, with its pretty islands. closely shut in by mountains, but in one proud, happy day they had seen the beauty of lake and sky and mountain, of groves of beech, elm, oak, pine. larches, and ivy clad ruins, and ferns and palms and fuchsia hedges, and tangles of glossy holly, and acres on acres of the beautiful arbutus with its leaves of rich glossy green and its waxen flesh like flowers that seem cradled in nests of verdure.

Three tired boys found their beds that night without a thought of running a footrace into or out of Killarney with witches in hot pursuit.

(To be continued.)

LOUGH LEAKS OR LOWER LASS

N the fifth of May, 1901, W. H. Liddlard, known throughout the west as "Rattlesnake Pete," left the Rosebud Indian reservation in South Dakota with a band of fifty Indians-forty bucks and ten squaws-with a few papooses thrown in for good measure. Eight of these Indians had been in the Custer fight, fourteen participated to the bittle of Wounded Knee, and the wife of Pa Zola was wounded six times in the latter engagement. They also had forty Indian ponies, mostly Pintos, and their destination was Glen Island, one of the big summer resorts on Long Island sound, located near New Rochelle, N. Y. Liddiard's contract with the Hon. John H Starin, the owner of the Island, called for fifty Indians and their mounts; that he construct a regular Indian village,

Copyright, 1980, F. A. Rinchart, Omaha

and that two performances were to be given daily during the summer.

"My Indians were nearly all green hands at the show business," said the old plainsman, "being genuine blanket" Indians. A few of them had been with me at the Indian Congress, held during the Trans-Mississippi Exposition in Omaha in 1898, but none had ever been east of the Missouri River.

"For hig chief I selected Hollow Horn Bear, a noted war chief of the Brule Stoux, who was known on the reservation as a regular 'kicker.' The oldest warrior in the bunch was 'Owns the Dog.' or The Dog is His, as the Indians call him. I had one fellow who was half Sioux and half Pawnee-the biggest clown you ever saw, and the best dancer I ever ran across.

"Nothing worthy of incident happened on our trip east, save that we falled to make close connections with the dining stations. This necessitated my feeding the Indians in the dining cars, which was rather rich for their blood and made my pocketbook look as if an entire train had passed over it with the brakes set. Once or twice, while the Indians were eating their meals, the Pullman passengers halted at the door, sized up the situation, and retired until the redskins had finished their meal and the waiters had a chance to fumigate and sweep the car.

"We reached Glen Island without aceldent of any kind, and the sight of the sea, with the waves dashing against the sides of the little vessel, which rocked and pitched like a cork in the water, was none of whom had ever seen such a large 'pond,' as they styled it.

"As we had two weeks to get things in shape before the Island opened for the season, we occupied our time in building our village and holding rehearsals for our performances. There was a splendid bathing beach at Glen Island, and as the help were in the water every day, I told the Indians they might bathe there whenever they felt like it. A few days later I was astonished to learn that none had been in swimming. As I knew how fond they were of bathing. I asked one day why they did not take advantage of the opportunity and clean up.

'Minne lela seecha,' answered John Hollow Horn Bear, meaning that the water was very bad.

"When I told him that the water was pure and good to bathe in, he took me to

RATTLESNAKE PETC

in the water and gathered a lot of floating sea weed. He quickly threw it back, declaring that the water was 'no good, and full of bugs.' I experienced some trouble in making them understand that the water was all right. Finally they ventured in, only to make a break for the shore every time a large wave came rolling in. On the third day after they commenced bathing. Cloud Eagle came after me in great haste, led me to the sea wall and pointed to the water.

"'See lela touka!' he cried, shivering as though he had a chill.

"It was only a small school of porinto the water, they went to the stables and turned the hose on each other.

so we loaded the Indians and the ponies wanted to go there again. on the boat and left the Island in a East River we ran very close to several war vessels, one of which was the Massprise at anything they saw. They usu-

drizzling-a wet, mean, soppy kind of a day for a parade. A platoon of police was drawn up on the dock, ready to head the parade, so we started for Broadway. After traveling quite a distance I looked back, to see now the Indians were com-

ing on, and found them strung out for certainly a novel sight to the red man, two miles. Riding back, to see what the trouble was, I found that the ponies, being barefoot, could not stand on the slippery asphalt pavement. The Indians had dismounted and were leading their ponies, but after awhile the animals got along all right, attracting about as much attention as anything that had gone up Broadway in many a day.

"Occasionally I would take the Indiana to the main land, to the town of New Rochelle, to do their trading, and while there had to watch them very closely to keep them from getting full of firewater. Once, while over there, some person gave old Hollow Horn Bear a bottle of whiskey, which he did not drink, however, until after we had returned to camp. About an hour after our return, I noticed that he was staggering a good deal, but said nothing to him. Pretty soon he came into my tent, and for an the edge of the bank, dipped his hand hour sat there without saying a word.

minutes cried as if his heart was break-

"'Tepee netow enokonce!" I commanded, which meant that he was to go to his own tent.

"About two hours later his son came to my tent and sat down. I finally asked what he wanted.

"'Captain Pete,' he said, 'my father want me come and see you. He know you are good man and good friend to Indian. He want me tell you he was not crying because he was drunk. He was crying because his brother has died.' "'Is that so-when did he die?' I inquired.

"'Oh, he die 'bout two year ago,' he answered.

"Fort Slocum, the army recruiting station, is on an Island close to Glen Island, and one day Colonel Woodruff, the commanding officer, invited me to bring the Indians over and see the soldiers at gun practice. After beeing shown around polses swimming near the shore, but that the post, we were taken on top of one settled the bathing business so far as the of the bombproofs. The Indians thought Indians were concerned. The bucks had the soldiers were being drilled with a bath every day, but instead of going empty guns, but presently when one of the big fellows was fired-you should have seen those redskins stampede! "We had arranged to have a mounted Every one of them was down at the dock parade in New York City on June first, long before I got there, and they never

The Indians were always the Indians, it being expressly underpleased with the steamboat rides, though stood that he was to leave his big guns they would not express the slightest sur- at home. The affair was extensively advertised, and on the day of the fight we ally sang all the time while on the boat, had to peel the bark off the trees, to and especially while it was in motion or make room for the large number of the whistly was blowing.

people who came to see it. The 'dough-"When we reached the pier it was still boys, as the Indians styled the soldiers, were under the command of Captain Bellew, and presented a fine appearance. They put up an interesting fight all CHAS. J. GODFREY, right, considering the fact that they were nearly all recruits, but my Indians were too much for them and the judger decided in our favor.

> "Perhaps it might be interesting to know what kind of food the Indians had. Right here I wish to say that the reason so many white men make failures with Indian shows, is because they do not know what to feed them. Handling a lot of Indians is just like taking care of children-you have to humor them a good deal, yet at the same time they must be given to understand that they are under strict discipline and are subject to the orders of the man in charge. I used to issue beef and bread every morning, one and a half pounds of meat to every Indian, big and little, with all the bread they wanted. Beef is the stuple food of a Northern Indian-he doesn't care a rap for pork or mutton. Every fifth day I used to issue groceries, such as coffee, tea, sugar, rice, dried fruit and piece of bacon. You can never give an Indian enough sugar to last him from one issue day to the next, for they eat it all the time and as long as the supply holds out. They would often come to me the next day after the issue, and tell me the sugar was all gone, and then beg for more. When they would misbehave, I would punish them by shutting off their sugar ration. They are pretty foxy, and sometimes would come between issue days and beg for a little more tea or coffee, or dried fruit. When I would ask what became of their ration, they would say they had been entertaining friends, or that the supply had run short. They would 'cache' it on me, and when they would return to the reservation each one would have groceries enough to last several months.

"An Indian does not care for fish-(Continued on page 177.)

### Save Money and Trouble

Professional and business men, students, travelers, mechanics, sportsmen, find in these goods perfect fit, style, convenience and economy. Made of fine cloth and finished in pure starch.

### No Washing or Ironing

When soiled, discard. We send by mail ten collars or five pairs of cuffs for 30c. Send &c in U. S. stamps for sample collar or pair of cuffs.

ington, one general events. officer of high rank alone advocated its abandonment. of successful adventures then pre-

vailing these successes were of course much magnified, and the adulation warm personal friend. Reed was absent Lee received filled him with egotism. The fact that his prognostics regarding Fort marked "official." Washington opened Washington turned out to be prophecies and read it, as his right was. With what so elated him that he began to fancy himself better than his chief. Lee was a man of excellent military mind, a trained soldier, and brave as a lion. But he was bombastic and opinionated, devoid of good judgment, restless at inaction, and not over careful of strict or prompt obedience. There were not a few in both and his duty as to permit even a hint camp and Congress to encourage his as- of what was most cleverly masked as a pirations, which were no less than to probability. Never was the wise and supplant Washington in the supreme command. With this end in view Lee took better evinced than by the way in which to writing letters. There is no better maxim of this: "Never make a black-guard of yourself on paper." In these letters, which he finally came to write even to one so close to Washington as his Adjutant-General, Reed. Lee did not actually sully his pen with blackguardism, but he did a far safer and more adroit thing. Never referring to his chief directly except in terms complimentary or cautious, he yet infused into his correspondence such plausible contrasts that none who read the letters hut felt their influence, even if not actually won over by them. Lee's continual allusions to the man of caution and him of action; to the general who chose to ask advice rather than seize responsibility; to him who was infirm and slow of purpose contrasted with him whose resolves were quickly taken, stoutly held, and strenuously acted upon; these all by clear innuendo were designed to place his own supposed merits in contrast with the demerits (as he imagined them) of his chief.

If history had not already read the se-

#### Doctor Did It

Put on 36 lbs. by Food.

Feed a physician back to health and he gains an experience that he can use to benefit others. For this reason Grape-Nuts food is daily recommended to patients by hundreds of physicians who cured themselves of stomach trouble. One doctor says:

Although a physician and trying to aid and assist my fellow beings to enjoy good health, it must be admitted I formerly did not enjoy the best of health myself. In January, 1899, I only weighed 119 pounds. At this time I was living in the Ohio valley and began to think I had about seen my best days. One day about three years ago I had an opportunity to try Grape-Nuts food for my breakfast. I liked it so well that I are three teaspoonfuls three times a day and have regularly used it up to the present time, and I now weigh 155, a gain of 36 pounds, and enjoy the best of health.

"Not only has Grape-Nuts made this wonderful change in me, but through it I have helped my friends, relatives and patients. The sustaining power of this food is simply wonderful.

"I have one patient who is a section hand on the C. & O. R. R., who eats nothing in the morning but four tablespoonfuls of Grape-Nuts and yet does his very hard work up to lunch time and enjoys the best of health and strength.

"I could name a great many cases like this and I still prescribe Grape-Nuts in my practice every day." Name given by Postum Co., Battle Creek, Mich.

Ask any physician about the scientific principles on which Grape-Nuts food is made. He'll tell you the principles are perfect.

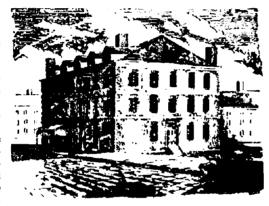

Then a ten days' trial proves that the ("all the good of the grains so treated that anyone can digest it all"). Shown

advisability of re- stance that now moved briskly, tossed to taining Fort Wash- and fro by the shuttle of quick following

How romantic, not to say, dramatic, was the unlooked for finding by Wash-This was ington himself, in one of these letters of General Lee, who had but sentiments akin to these. The letter fell recently arrived from the into Washington's hands because of south, where he had achieved Lee's having incautiously mixed up prisome successes. Amid the dearth vate matters with his official communications. It was addressed to Reed, Washington's Adjutant-General, and when the letter arrived, and as it was sentiments of sorrow and indignation he read, not so much what was written, as "between the lines," the evidence of Lee's chicanery and ambition, may be easily imagined. His indignation was for Lee, his sorrow for his friend, Reed, that he had so far forgotten his friendship consummate tact of a truly great mind

OLD CAPITOL, BALTIMORE

Washington met the incident. Reed was at some distance. Washington immediately wrote to him, inclosing Lec's letter, and sent an orderly across country to deliver it. Washington's letter was courteous in the extreme, he apologized for having inadvertently read what was so evidently intended for strictest privacy, called attention to the fact of the official nature of the communication, and was Reed's "obedient servant." Nothing more than that; but it was enough to send the hot bloog of shame not unmingled with regret to the cheek of the cung soldier, who had not indeed betrayed his chief, but dallied with his duty to him. This calm, quiet letter, and the subsequent conduct of Washington weakness, and to beg his commander's had been able to get his arrangements forgiveness. It is needless to say how quickly Washington's noble nature re-From the day of this conversation Reed's attachment to his chief never once wavered. Lee, however, continued his machinations, turning the heads of more than a few of the higher officers of the army. Among these were Mifflin and Gates, the latter by the way, not without ambitions of his own, and cherishing views of his own importance quite akin to those of his more outspoken associate.

It is in the highest degree probable that evils would have come of these jealousies, even if Washington had not been actually supplanted, had not the Supreme Power that governs for ultimate good alike the destinies of men and nations, at this juncture and when the plot was almost ripe, interfered to prevent its execution.

Lee had been stationed at a post on the Hudson River, with a very considerable body of troops. Philadelphia was now in danger; Washington needed those troops and he needed Lee, who, in spite of his duplicity, was a most able officer. But Lee dallied and delayed, made one excuse after another for not moving, and when at last he did move principles are carried out in the food it was tardily and with indifference. He was, in fact, contemplating a movement wholly independent of Washington, by in renewed physical strength and brain which he hoped to strike the British on the Delaware, achieve a victory, and thereby pave the way for his ultimate his power lasted, virtually a dictator.

trivial plea, and himself set out with a slender guard to reconnoiter the British position, undoubtedly with a view to an attack in force. He proceeded no farther than a little hamlet called Baskingridge, when he concluded to remain there over night. He did so, and slept soundly 'till eight o'clock the following day when his slumbers were rudely disturbed by the blast of a British trum. pet, followed by the peremptory demand from a British captain to surrender. It was "Hobson's choice" with Lee. With what grace he could he complied, and was hurried away by his captors to the British camp, not far off, and quite too near for such ill-advised junketing "in the presence of the enemy."

The blow this incident gave Lee's prestige does not, I imagine, require an esay to prove. At once, and by his own bombastic breath, he had blown down his ambitions like a card house. The most ardent of those in the army who had been engaged in intriguing for his benefit, were now quickest to turn against him. Subsequently Lee rejoined the army, but it was to find his aspirations ignored and himself more the object of pitying contempt than of the former popularity.

Winter had well advanced when Washington and his army reached and crossed the Delaware River. The retreat across New Jersey had been accomplished without any great disaster. But the British had not been idle. They also had arrived at the Delaware, and on Christmas eve the two armies lay confronting each other-Washington upon the west bank, and the British forces in detachments of varying size located at several noints from Trenton to Bordentown.

During Washington's progress across the state his headquarters were almost continually "in the saddle." For a while he was at Morristown, occupying temporarily a building near that in which later on he made his home for many months. His official letters are dated from a great number of localities; in order, after beginning the march from the Hudson, as follows: Hackensack, Aquackenock Bridge, Newark, Brunswick (New Brunswick on the Raritan), Princeton, Trenton, Trenton Falls, Delaware Falls, Newtown, Pluckemin, Morristown, Middlebrook, Pompton Plains, and Clove. On the eve of Christmas day an event occurred that for a time changed the entire aspect of the war, relieved Philadelphia from pressing danger, and transferred the seat of war back to the eastern part of New Jersey. This event was the sudden crossing of the Delaware by Washington with his entire army, and a sudden and most successful attack upon the garrison at Trenton. These troops were Hessians, under the command of the gallant, but careless and convivial Rahl. The night, as their custom had been in the fatherland, the troops devoted to drink and carousing, which was broken in upon by the Americans. A desperate struggle ensued, and Rahl fought most bravely up to the time he received his death wound. Almost the entire garrison became prisoners of war and were removed to Virginia for safe

keeping It is claimed by some historians that, in making his attack upon the eve of Christmas Washington had in mind the propensity of the Germans to indulge dissipation on such an occasion. If this could have been fully verified it would have added the material element of far-seeing sagacity to the merits of an exploit, as it stands ably conceived towards him, before many weeks had and most energetically and gallantly passed, completely unnerved Reed, and carried out. The facts seem to be, howlike the manly man he was, he took oc- ever, that Washington would have atcompleted in

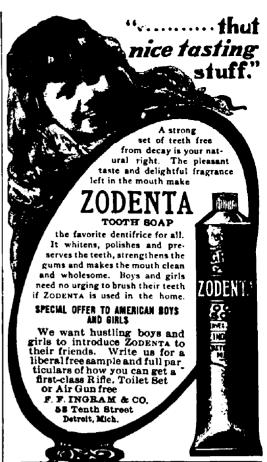

The affair of Trenton was the first consponded, forgiving heartily and entirely, siderable success of the war, and at once infused fresh vigor into its prosecution. A curious coincidence is to be noted.

The congress, in something like a panic lest the British should get to Philadel. phia before Washington, decided, that they were called upon to be prudent

It is but fair to Full and ample justice in a quite difburst of enthusiasm consequent upon rank of major general in the army of say that he was a brave man, and a not ferent fashion Washington met with at the United States.

To oppose the advance of the British Brandywine he fought well, and did more mention will be made in a succeeding whose departure had been so long an- from the south Washington immediately ticipated, at last set sail from the port gathered together all the regulars at his to reverse its ortunes. When, therefore, of New York. Its destination was kept command, and reinforced by a considersecret, though the Americans little able number from the state militia of Pennsylvania, marched through Philadel-A letter in the handwriting of General phia and set up his headquarters on the Brandywine River, there to await the was addressed to Burgoyne, who was at opposing forces. Martial events now followed in quick succession. The battle of the Brandywine (while awaiting which, and organizing his troops Washington's headquarters were located at a small village called, "Chadd's Ford"), followed, proving most disastrous to the Americans, so disastrous, in fact, that if Howe had followed up his advantage the entire army must have been routed, if not destroyed. As it was they succeeded in a few days in taking possession of Philadelphia, while Washington, encamped some distance from the city was totally unable to prevent it. The congress, in sore dismay, hastily adjourned to Lancaster. Pennsylvaria, and from there soon after to the town of York.

After a few days of rest and reorganizof a contemplated movement by the fleet ation for the troops, who sadly needed upon Boston. Rightly judging that this both, Washington advanced some miles was no less than a stratagem to divert near Philadelphia, esablishing his quart-

The battle of Germantown was the next event of importance. The British Philadelphia in the early part of August, preparations to evacuate Philadelphia, when the tables were completely turned extreme gallantry of a British officer that a junction between the forces of building, known as the "Chew" house, which he defended so obstinately as to give his comrades sufficient time to raily from the discomflure which they undoubteduy labored under. The incident of the Chew house illus-

trates the Hability all trained officers are Hable to: of holding fast to a military technicality, and disregarding, or not comprehending the force and effect of a military maxim. The army under Wash-River in Maryland, from which point they ington were in the full flush of success, the British were making ready to leave the city and some were even rapidly retreating on the Chester pike, when Washington encountered Musgraves's little force. The true course to have been pursued was to pass the Chew house by. preferably out of musketry range, and continue the hot pursuit. Washington had read "In the books" on the art of war that a pursuing army ought never to leave a fortified place in their rear. He hastily called a council of war. Curiously all the officers but one (adjutant. now Brigadier General Reed), advised that the Chew house must be taken before proceeding farther. The delay that The young Marie Motier, Marque de La relly, and in the end the Americans were driven from the field. They retreated and presented himself to Washington, that night upwards of twenty miles where they stopped, returning the next day to their former station at Whitemarsh. Several desultory engagements followed, all being in favor of the British, till in December the army withdrew entirely from the vicinity of Philadelphia, and went into winter quarters at Valley Forge.

On the twelfth of October, 1777, General Burgoyne surrendered his entire army to the Americans at Saratoga. Phillip Schuyler had been in command at the north, but had been removed and Horatio Gates substituted, but a short time previous to the battle. Thus the glory of this great victory inured solely to Gates. The enemies of Washington were not slow to take advantage of the popularity of this new claimant for preferment. As we have noted, even before coclous beyond anything our modest the battle of the Brandywine influences had been at work in the army to undermine Washington and supplant him in the chief command; these influences now commission of a major peneral. The took definite shape. General Mifflin, though he contrived to disguise his leadton, surfelted with similar bouquets of ership, and afterwards palllate his enapplications, referred the matter, did not deavors, was in reality, so far as can be rate the young Frenchman's military determined, the prime mover in the conspiracy (for it was no less than that), to self. In fact the war committee actually supersede Washington. Gates was the man selected for his position as commander in chief, mainly because the brilliant success of the northern army served youth really and ordently attached to the to contrast its leader with the loser at Brandywine and Cormantown. This conless (as the manner of the Latin race spiracy is known in history as the Conway Cabal. Thomas Conway was by effect," and esteemed his own merits at birth an Irishman, but had served in their very highest valuation. There is the French army, When the American an American word which better fits this Revolution began, thirsting for adventyoung man's character than its English ure, he resigned from the French army synonym. He was not perhaps "clever," and offered his services to the American He replied envoy at Paris. Slias Deane was a good at once to the committee of the congress natured man, having the good of his in writing, and in these words: "After country entirely at heart, but too prone my sacrifices. I have the right to ask to lend an ear to the pleas of strangers, two favors; one is to serve at my own and perhaps too much inclined to make expense; the other, to commence by serv- promises which proved incapable of fulfillment. WASHINGTO, 'S HEADQUARTERS, WHITEMARSH, PA.

endeavors to influence the congress, finding that all his efforts were likely to prove futile, he indited an impertinent letter to that body in which he intimated his intention to resign if his demands were not complied with. The congress, feeling their dignity injured, promptly took him at his word, and before the ink of his insolence was fairly dry he was legislated out of office. This, as may be imagined, was not at all to Conway's taste; but the deed was done, and there was no help for it. He however went about venting his spleen till some remarks he made chanced to displease General Cadwallader of the Pennsylvania militia. According to the barbarous code of etiquette in those days there was a duel and Conway received what was supposed to be his death wound. Thinking himself at the point of death the mercurial Irishman called for writing materials, and feeling the Irickings of conscience, wrote to Washington, as fol-

"Phila., 23d July, 1778.

"Sir-I find myself just able to hold the pen during a few minutes, and take this opportunity of expressing my sincere grief for having dene, written or said anything disrespectful to your excellency; my career will soon be over; therefore justice and truth prompt me to declare my last sentiments. You are in my eyes, the great and good man. May you long enjoy the love, veneration and esteem of these states whose liberties you have asserted by your virtues, I am,

with the greatest respect, etc., "THOMAS CONWAY."

Conway recovered and lived many years after, but he never again served in the army. History makes no mention of his chagrin in after life in thinking how much "humble pie" the immediate presence of death caused him to partake swers Harry A. Ackerburg, saying: of. Knowing his character from his actions better than his words there is little ing the day and shut up in a hutch at night" room to doubt that he felt regret, less at He owns sixteen young rabbits, which he al the conspiracy than at his repudiation time to run in an empty building.

The very name, "Valley Forge" has begoon after, congress made De Kalb a come synonymous with all that is major general, Conway burned with wretched in heroic suffering. But though the army suffered much, sometimes their enmity towards Washington arose from fare being reduced nearly to the famish. ing point and their clothing to tatters. there were periods of comparative comfort. The men were not ill housed, and not seldom during the course of the winter there would be for a time comparative plenty in the way of provisions, due mainly to the foraging parties, and some foray having had the luck to intercept supplies destined for the use of the British in Philadelphia, of fuel there was always enough. Indeed the misery of Valley Forge was not on the whole greater than that endured afterwards while the army was in cantonments at Morristown. The officers had now and then something like grim gayety, though It must have been most of the time grim indeed. Mrs. Washington, Lady Stirling, Mrs. Knox, and others, wives of the chief officers, were at the camp most of the winter, and did all that was possible to make the best of the gloomy surround. ings. The time was utilized by Washington mainly in having the troops instructed in tactics. Baron Steuben, a German officer of long experience, was the drill master, and by his instructions the efficiency and morale of the men were greatly increased.

A gleam of light, too, now appeared in the east: As a result of the great success of the battle of Saratoga, France resolved to aid the Americans in establishing their independence, a resolution due to the hope that thus a rival power to Britain might be created in the far west. On February 6th, 1778, a treaty of alliance was signed at Paris, tidings of which reached America early the following month, and caused boundless joy in the army. That winter the British Parliament passed what are known as the "Conciliatory Bills," and appointed a commission to proceed to America. The commissioners arrived at Philadelphia in June and did all in the. power to heal the differences. Their coming was, hovever, now too late; the Americans had a 'great and good ally." and refused to be propitiated by any conciliation Parliament could offer. Sir Henry Clinton had now replaced General Howe in command of the British forces; and on the 18th of June, Philadelphia having been evacuated, they set out on the march to New York. Washington immediately broke camp at Valley Forge and pursued them across New Jersey.

### Athletics at the World's Fair Written for The American Boy by James E. at St. Louis Sullivan, Chief of the Department of Physical Culture of the World's Fair thonal and individual team contest, which

TOHE AMERICAN BOY who has the good luck to be able to attend the Olympic Games that are scheduled to take place in St. Louis this year will in many years to come refer with great pleasure to the good luck that befell him, for from every point of view the Olympic Games premises to be the greatest kind of an education to our American youth. Not only will they be in a position to see the world's greatest athletes compete in all branches of sport, but they will likewise be given an opportunity to compete among themselves, win honors, and

at the same time secure one of the much ing. coveted Olympic trophies.

in the world.

expected that at least five thousand boys out the world will be given a chance to will be set aside; and the same for footwill strive for national honors. Already assurances have been received that teams will be sent from New York, Chicago, Boston, San Francisco and Los Angeles to compete at this meeting.

Aside from this national schoolboy meeting that has been scheduled, many other events of interest to schoolboys have been arranged. For the first time in the history of physical training this great factor in the welfare of society has been officially recognized by a World's Fair. The creating of the Department of Physical Culture, by Frederick J. V. Skiff, Director of Exhibits of the St. Louis Fair speaks volumes for his sagacity when one sees today the important position that physicial training occupies throughout the world. Aside from the competitive end of the Olympic Games there will be a great opportunity offered to promote the best interests of physical training by means of lectures, exhibits and class demonstration. It will be the alm of the authorities to give an adequate representation of the progress already accomplished. The work of the Department will be carried on under two great heads, the educational side represented by the world's Olympic lecture course which will constitute in effect a monster summer school. Under the head of class demonstration an effort will be made by the physical training committee to obtain a presentation of work in school gymnastics by classes of various grades of public and normal schools showing German, Swedish and other methods. School games as conducted in schools by grades, school games as practiced in the yards, and various games practiced in various gymnasiums in this and other countries, for persons of all ages, will be exploited. The boy who is fortunate enough to be able to spend his entire summer in St. Louis will see competitions the like of which has never before been attempted. A glunce through the programme shows conclusively that no sport

### How to Make Fly Tackle For Trout and Bass Fishing By J. Harrington Keene, Author of "Fly-Fishing and Fly-Making," "The Boys' Own Guide to Fishing," etc., etc.

TO MAKE A BROWN HACKLE FLY.

whiskers at the chin, as may be seen how this fly is tied. First the hook is without it. Then a peacock tail feather is taken and half'a dozen or more, according to the size of the hook, of the made a fly very like Fig. 13. fibres of the feathers (they are termed "herl") are laid on the shank of the hook opposite the barb (Fig. 9 A). They are tied here as shown with the slip half-hitch knot. Next the loose ends are snipped off at B and the long ends of the strands are taken between the right forefinger and thumb, holding them at C and are rolled with an even twist round the shank of the hook, over the short ends B and up to near the end of the shank of the hook as shown at A Fig. 10, tied, and the loose ends of feather cut off.

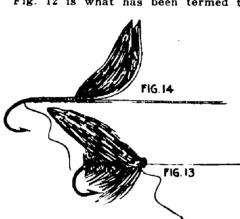

The next operation in the making of the Brown Hackle is the placing of the hackle from the neck of a brown rooster. which has been stroked back in the way directed and shown in Fig. 5. The nearer the learner can make the hackle look like Fig. 10, the more regular and neat by some who like the small neat head will his fly turn out. The expert fly-tier nas a knack of passing his right middle seen is laid on last, and this process finger nail from tip to butt of the hackle seems an easy and quick one. The pupil and thus turning the fly completely had better learn this movement perbackward as shown. This is not really necessary, however, and is a trade secret which cannot be explained on paper. gram.

Having secured the turned hackle and having the hook securely in the vise, stronger and more secure than the "laid take the wire pliers shown Fig. 1 E and of libre to just miss the barb of the keeps its place with great safety. hook (Fig. 11), for this is the proper FLIES FOR LAKE TROUT AND BASS. length.

#### HOW TO TIE A WINGED FLY.

In order to do this, the Brown Hackle is made with a space left of %-inch at the end of the shank of the hook. Two slips of white feather are then taken from two goose feathers (Fig. 6A), a right and a left side feather so that the two slips pair exactly as shown in Fig. 12. Then proceed as follows: Lay these two slips one on the other on the bench or table, pass the little hook (F Fig. 1) under them and with the right finger on top of the feathers lift them up lying flat and place them carefully on the forefinger of the left hand, then close down the thumb, and you have the two wings ready to place in position as shown The "Pennell" hackle is not bodied with in the drawing Fig. 12. Keep the thumb any of the materials named above, but and finger and the wings in a position is simply silk wound around the shank just on and above the shank and, taking of the hook, making the part where the the waxed thread on the right thumb body usually is slim and slender like a and forefinger, bring it up between the dragon fly. The famous old "Brown thumb and feather and down between Mackle"—which probably catches more the finger and feather on the other side. than any other fly-is, however, a step If you picture your left thumb and finger in advance and has a fuzzy body besides compressing the wings (Fig. 12 A) and the waxed silk coming down as shown to by reference to Fig. 10. Fig. 9 shows be drawn swiftly and firmly tight, and wound round twice or three times, and placed in the vise or tied on the snell tied in the way before described, the ends of the wings cut and the thread snipped close, you will find you have

This the loose thread out of the way and, method has the merit of being much on" wing, as it cannot slip or pull off, pinch them on the butt of the hackle at being tied down with the gut and shank B. Some use fingers only, but the pliers of the hook by a whipping which runs are more certain not to slip. Now wind down the shank from the head to the the hackle round three or four turns or bend of the hook. The wings are of more according to the fullness required course put on pointing the reverse way and tie it as shown at Fig. 11 with two to those shown in Fig. 12 and Fig. 13, half hitches of the sort shown in Fig 2 but when the body and hackle or legs a. Now cut off the tying thread and var- are put in place, the wings are turned nish the head of the fly at A (Fig. 11), back and tied down and the result is and your Brown Hackle is finished. Al- almost the same in both cases, except ways be sure the backle is of a length that the reversed wing lies better and

When the tyro has learned to tie the above flies with case and neatness, he The Brown Hackle with no wings as may proceed without difficulty to more above described and shown in Fig. 11, complex patterns. All the more gayly becomes a "Coachman"-fly-one of the dressed flies are based on the simple ones best of the winged flies-when it is pro- which have been described and one only

equally skilled with them. A brief sketch of how the large fly-hooks for big fish in the Great Lakes are made, will be sufficient at present for my young readers. I feel it right to let them see that the subject goes further than may be possible to them now, but it is good that they should become curious and enquiring and in later days the knowledge may be of vital benefit.

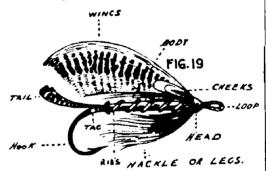

The hook for bass flies should be tied on a loop because the bass of large size is usually a most voracious fish and the leaping habit often breaks the rigid gut where the hook and snell are joined. The loop makes a hinge if engaged with another loop in the rod line. Fig. 15 shows the looped hook.

On these hooks with loops a very easily made and effective "grub" can be tied. and it will serve as a stepping stone to

higher things. Fig. 16 shows the hook with a tail of feather fibres and the first hackle in place at A.

Fig. 17 shows how the first hackle is wound and tinsel A and silk body B with tying silk C are disposed before going

Fig. 18 shows the "Moisic Grub" finished. The silk body has been wound round the hook and the tinsel (silver or gold) has been barred round each secwhich are separated by three hackles put on like the first one and

presenting a most enticing lure for the large trout or bass. The pupil has only to make this wingless "grub" to be ready to add the several wings, which are massed in Fig. 19.

#### Burning a Coin

Here is a little piece of parlor magic, very simple, easily performed, yet very mystifying. Take a piece of paper four inches one way by five inches the other. Put the coin-a cent will do-on the paper and fold the paper over it from the top to within one inch of the bottom Then fold the right hand side of the paper under the cent and the left hand side in the same way. Don't forget that these folds must be under the cent.

Then fold the bottom inch of the paper under the cent also, and it will seem that you have securely wrapped the cent up. whereas it will be in a sort of pocket. and will readily slip out into either of your hands at your pleasure.

Allow the spectators to feel the coin through the paper; then take the paper from your left hand into your right, and let the cent alip out into your left hand as you do so. This you must do dexterously, so that no one may see the act. Now burn the paper, and the cent will have disappeared.—Philadelphia Ledger.

## Che Great American Boy Army

FOR MANLINESS IN MUSCLE, MIND AND MORALS

Every Energetic American Boy Should Be a Member of "The Order of The American Boy"

Letter From Headquarters of The Order of The American Boy, Read Before Each Company at Its March

Detroit, March 1st, 1904. My Dear Captain and Brothers of the

Order:
I have not yet received many letters from your Secretaries as to how your Washington and Lincoln exercises were enjoyed, but from the reports to hand at this writing, I gather that there were many successful and enjoyable meetings, of course, you understand it is impossible to plan a program which will be just right for all the Companies of the Order, located as they are in all quarters of our country and holding different views as to what constitutes the best form of entertainment. The programs I send out each month are merely suggestive and you are not by any means re-

or our country and moning americal views as to what constitutes the best form of entertainment. The plograms I send out each month are merely suggestive and you are not by any means required to use them. Every Company is allowed to plan and carry out its own exercises, the only condition being that they do not offend good taste and good morals, and I an sure there is little danger of that. What The Order of The American Boy stands for is purity of mind and conduct and I trust that every Company and every member will ever be forward in defense of our motto, "Manilmess in muscle, mind and morals." It is the only way of building up a true and noble manhood.

Many inquiries have been received from Companies and members as to plans for a great meeting of the Order at the St. Louis. World's Exposition this year. Various difficulties have come in the way of my making any definite statement as to what we can or will do, but as it is not likely that any large number of our members will be going to St. Louis until after the schools close for vacation in June, I hope before then to make some arrangements whereby The Order of The American Boy will be known and recognized there as not the least of important factors in the upward and onward sweep of our great country. However, whether we are able to have a mass meeting of the Order or not, I hope all the members who can will pay a visit to St. Louis during the coming summer. The knowledge to be gained by having placed before one's eyes the newest and best evidences of the whole world's advance in schence, art, and mechanics will far outweigh the pecuniary expense of the trip. I am glad to announce that the fame of our Order is not confined to our own land. I have this month received a letter from the principal of a native school in Order to form a boys' scelety there along the lines of our Order. The letter stated that while the boys in their efforts along this and every worthy line.

As showing the increasing interest taken in our Order by hoys in mearly every state. I have

of having your charter neatly framed and of procuring one of the O. A. B. pensant: The pennant is made of the best materials and makes a beautiful ornament for any boy's room, and the price—

iffly cents--is but a trifle more than the actual cost of material and making.

I conclude this month's letter by asking that every Company that has not already that every Company that has not already done so, send in a photograph to head-quarters in order that it be reproduced in THE AMERICAN BOY. The photograph may be sent mounted or unmounted, but be clear and sharp so that a good reproduction may be had. With this letter you will receive a program for your March meeting, and trusting that harmony and good compadeship prethat harmony and good comradeship pre-valls in your Companies, and that you are laboring for the continued success

Yours for M. M. M. M. WM. C. SPRAGUE, President General.

#### Company News

RUFFALO BILL COMPANY, No. 21. Santa Rosa, Cal., according to a local paper, met at the home of Mrs. If A. Hahman and elected officers as follows: Paul A. Turner, Captain; Paul Lau. Secretary-Trensurer, and Charles Gould, Librarian. The Company holds very interesting meetings, CUPERTINO. COMPANY, No. 22. Cupertino, Cal., is getting along niedly, and the Captain will send us a picture of the members—TULARE COMPANY, No. 13, Tulare, Cal., seems to have a good time at its meetings. It has a whole house for a clubroom provided with a symmasium outfit. At their meeting in October, Iox Montgomery was elected Captain; Calvin Russell, Trensurer, and Josse Manock, Secretary. GODDARD COMPANY, No. 13, Goddard, Kansas, meets Wednesday evenings. It tepouts 312 in treasurer, soveral books in its library, four flags and a punching bag. It has twelve members. Diecater. Company No. 98 Research Captain: Calvin Russell. Treasurer, and Jesse Manock, Secretary GODDARD COMPANY, No. 13, Goddard, Kansas, meets Wednesday evenings. It as follows: Captain, Guy Bradley; Vice Captain, Kansas, meets Wednesday evenings. It as Gollows: Captain, Guy Bradley; Vice Captain, Edward Saxton: Secretary, W. A. Bertsch: Treasurer, Ralph P. Long. It sugnitions, four flags and a punching bag. It has twelve members. Y. judging from the long and think about it?—SANDBUR COMPANY, No.

### The Order of The American Boy

A NATIONAL NON-SECRET SOCIETY FOR AMERICAN BOYS Under the Auspices of "The American Boy"

Object:--The Outtivation of Manilness in Muscle, Mind and Morals.

The object more definitely stated: To promote mutual and helpful friendships among boys; to give wider circulation to high class boy literature; to cultivate in boys physical, mental and moral courage, and develop them along social, intellectual and moral lines; to cultivate purity of language and actions; to discourage idleness, and encourage honest sport and honest work; to cherish and emulate the examples of great and good men; to inculcate lessons of patriotism and love of country; to prepare boys for good citizenship; to cultivate love of country; to prepare boys for good citizenship; to cultivate reverence for the founders of our country, and to stimulate boys to all worthy endeavor.

Boys desiring to organize Companies may obtain a Pamphlet from us containing Directions. It is sent for a 2-cent stamp.

SALEM'S BEST COMPANY NO. 12, DAKOTA CITY, NEB.

Porto Rico asking for our pamphiet in order to form a boys' scalely there along the lines of our Order. The letter stated that while the boys of the school could not understand our language, yet they were eager to learn how to become American loys in spirit as well as in name. I am size our best wishes go with these boys in their efforts along this and every worthy line.

As showing the increasing interest taken in our Order by boys in nearly every state. I have to mention that while there were eleven new Companies organized in January, for the month of February there are twenty new Companies. It has niveteen members on its reported. I need not say that the increase is most gratifying as showing that American boys do appreciate high class, pure and inspiring literature, and are eager to hand themselves together for mutual helpfulness, instruction and healthful sport. Let me counsel you, boys, not to be selfish in your enjoyment of Company privileges and to hold yourselves abod from your fellows who are get other boys so interested that they will also want to bon your Company.

Companies should take a delight in furnishing and decorating their club rooms and meeting places, and along this "to mean of the hoys go interested that they will also want to bon your Company.

When sending in the application of a Company for membership in The Order of The American Boy, the sender must see that every member is a yearly subscriber to THE AMERICAN BOY, except in the case of two brothers, when only one of them need be a subscriber, but the extra badks will cost ten cents. The observance of this rule will savedelay at headquarters in sending charter, badges, stamps, etc.

### Causes For the Rus-The so-Japanese War Grandest

Written for The American Boy by Kyosui Inui, a Japanese Student of The University of Michigan

Offer Ever

Made.

Nothing attracts my attention more than beautiful girls, peaches in cream and the Russo-Japanese war. Let us, then, find some causes for the war.

In the Chino-Japanese war of 1894, China was badly crippled. Now then, the great avaricious Russian Bear, taking advantage of weakened China, broke into Manchuria, the territory of helpless China. In order to advance her own interests, Russia forced China to give her the right to build railroads leading down to Port Arthur (the best Chinese naval port) from Siberia (Asiatic territory of Russia; in order to stretch it out to her port (Vladivostok). This was the first step in her actual violence.

When Japan was entitled to take the Lioa-Tung Peninsula, which includes Port Arthur, as the reward of the Chino-Japanese war, Russia, asking the aid of France and Germany, interfered with her right and claimed that it would be a great disturbance of the peace in the far east. And only two and a half years afterward, she compelled China to rent to her the very same spot for ninety nine years. We, Japanese, would like to ask Russia if she will ever disturb the peace again. We should like to say that the blood of our brothers, who sacrificed their lives for the integrity of Korea. Oriental civilization and the wakening and markets, which were the "sick of China, cannot be wasted in vain.

Moreover, we fought with China for the integrity of Korea. But once more Koreans and their government, cut Korean forests recklessly, compelled Korea to give her naval ports, and urged

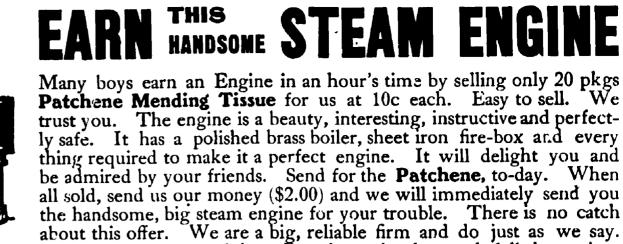

KYOSUI INUI

mit me to enumerate such serious actions and demands of Russia.

Lastly, in 1900, China again had trouble and saying, "Here is the chance," she thousands and thousands of soldiers, claiming that they were railroad guards. But, too had, these railroad guards levied

After the troubles with the Boxers passed without its accomplishment. The second was as the first. The third ended on the 30th of August, 1903. We expected that Russia would take all her soldiers away from Manchuria, or at least change, that he has an underhand swing. the soldiers' uniform into that of civilians. But she did worse than the worst, she increased her soldiers day by day, month after month. At the end of the third period these soldiers numbered as many as one hundred thousand. She broke her promise with China. She cheated Japan and the United States; nay, she cheated the whole world. What country would punish her? China could not, nor Korea. Germany did not dare, nor England. Who, then, would do it? Who were chivalrous enough to do it?

Not being satisfied with these violences toward China and Korea, Russia is devoting herself to keeping outsiders away from Manchuria. She refused Uncle Sam's counsel at Dainy. She has inparts and markets, the neighbor's ports petent operator.

#### Many boys earn an Engine in an hour's time by selling only 20 pkgs Patchene Mending Tissue for us at 10c each. Easy to sell. We trust you. The engine is a beauty, interesting, instructive and perfectly safe. It has a polished brass boiler, sheet iron fire-box and every thing required to make it a perfect engine. It will delight you and be admired by your friends. Send for the Patchene, to-day. When all sold, send us our money (\$2.00) and we will immediately send you

about this offer. We are a big, reliable firm and do just as we say. We treat our agents right. Premium circulars and full intructions sent with each lot of goods.

#### TESTIMONIAL.

man's" mouth, through which Japan and the United States wanted to give China the civilization of the twentieth century, Russia taking advantage of the ignorant the remedy to wake China up. Such were her policy and methods.

> Shall we say now: "We shall let you have just a little bite of China, a taste of Korea and a smell of Japan?" Or shall we say, "Go! Go away, you Russian Bear. Be satisfied with what you have, what our father commanded you to keep." Yes, we have a job. We have to sweep off the track for the opening of the Oriental civilization and drive the illnatured tenant out of Korea and Manchuria.

In conclusion, the great stake for which we are fighting is the preservation of the Chinese Empire, the re-establishment of Manchuria, the maintenance of Korea. the self-protection of ourselves and the cause of the commercial world at large

We cannot tell whether we shall succeed or not, but we only know so far that we have been more skillful to handle the war instruments of the twentieth century called warships and torpedoes. But we cannot make light of the Russiansbecause they have been very sure shooters on the water and on the ships (of their own).

Again, we cannot tell which will win. Let us see whether Russia will lick Japan. Ha! ha! ha!

But, American boys, the future heroes. do not forget that you are on our side; and we are on your side.

#### Some Great Plays

Joe Meginnity, the great professional ball player, tells in the Chicago Sunday American of some great baseball plays in which he took part. The worst play he ever made was when with the score her to make a Korean fleet composed of three to two against his nine, and three four Russian ships. Time does not per- men on bases in the last inning, he struck out. He says the boys of his would hardly look at him for two days afterwards, and that he literally "kicked with the Boxers. Now this huge abso- himself" for a week. He tells about a lute monarchy of slavs did not fail to timely hit that he made in a game in take advantage of China's confusion; 1890. The game had gone along to the twelfth inning and the score was one to marched thither (mainly to Manchuria) one. One of his nine was on third, and there were two out. He came up and whacked out a drive that brought in the winning run. He recalls when he texes for themselves in a neighbor's land, made a three-bagger in Baltimore with two men on bases and beat out the Boswere settled, Russia promised China that tons with "Cy" Young in the box, six to she would evacuate Manchuria in three five. Meginnity is a champion pitcher. different periods of time. The first period. He played five games in six days for the Brooklyns in 1890, and won them all, four of them being against the Pittsburgs. He says that he never has a lame arm, and he lays it to the fact

#### Telegrapher at Eleven Years

Robert T. Baird, aged cleven years, the son of Robert L. Baird, of Grovania, Ga., holds a unique place among the bright youths of Georgia.

He is a fast and accurate telegraph operator, and has already done regular work in Western Union offices. At one time he was in charge of the office at Vienna, Ga., as day operator.

Young Baird seems to have taken to the key by instinct. When only seven he could sit at the instrument and send hefore his father knew he was acquainted with the alphabet. At nine he could resisted on shutting up the Manchurian ceive and now he is considered a com-

### PUSHBALL AND HOW IT IS change ends, and the ball is next pushed-on by the team which was scored PLAYED

(With Illustrations by M. Fitzgerald.)

Outside Left

Pushball, which is just coming into Outside Left vogue, is exactly what its name implies. A team consists of eight players, four Inside Left of whom correspond to football forwards, There are goals, as in football, but without the crossbars. The players range Inside Left themselves on either side of the ball, which measures between five and six Pushing ball over goal line counts two feet and weighs about fifty six pounds, points. Pushing it over goal line and It is inflated with an ordinary rubber bladder, the case being made of stout tanned canvas with leather seams.

rules. It combines some of the good defend. qualities of football and tug-of-war; difthe teams endeavor to push their opponents towards the goal instead of pull- sitions they may elect. ing them over a central line.

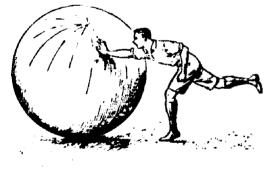

Kicking the ball is not penalised save by the ball itself, which frequently damages the toes of those who assault it in such fashion. An ill-considered charge, too, is likely to result in the player being hurled five or six yards away.

Hand dribbling is the most interesting and scientific part of the game, and it is by this means that the neatest scoring is done. It bears some resemblance to the scrimmage in Rugby, with the important difference that here the ball is above the players' heads instead of beneath their feet.

The players, by pushing the ball upwards with their hands, endeavor to turn it round. First one and then the other get the sphere to turn in the direction they desire, until one side manuges to give the ball a slight rotary motion, which causes it to bound over the heads and hands of the opposing team.

It is a most difficult thing to stop the heavy ball when once started, the onward rush of the great leathern sphere hurling the defending side in all directions. All that can be done now is to prevent a goal, and to force the ball to cross the line outside the post, which counts only two points,

There is plenty of hard work in the

game, and, with the exception of a brief interval between the four periods of ten minutes each, all are busy

The accompanying illustrations and plan of the field of play will help readers - especially those acquainted with the constitutes a push. positions for play of football to understand how the game is started.

But first we will give the rules governing the game

#### RULES

- 1. The game to be played in four intervals of three minutes each.
- 2. Elight players constitute a team.

PUTTING BY THE SCORE

3 The positions are:

TRAPPER JIM, by Edwyn Sandys. Our hair is sparser than it was years ago, and there is a tinge of gray among the brown of what remains, but during the time we have read this book, we have become again a boy with all a boy's delight in the life of outdoors. Trapper Jim combines a story redolent with the odors of forest, hill and stream, about boys—boys in years and boys in heart; for hoys of all ages who are real boys, with complete instructions on such subjects as trapping, fishing, shooting, rowing, swimdred subjects, with suggestions regarding hundreds of other things. The author understands and loves boys and is a most observant student of nature, and he has given the boys one of the best boys' books we have read in many years. The value of the book is greatly increased by the many pictures and drawings which are interspersed throughout its pages. 441 pages. Price \$1.50. The Macmillan Co.

#### Boys' Books Reviewed

THROUGH AN UNKNOWN ISLE, by Charles P. Chipman. The unknown isle is New Guinea, the largest island in the world, much of it being yet unexplored. The story tells of the yacht Mayflower, having on board the owner, Dr. Thornton, of San Francisco, his son Harrie, and the latter's friend, Leigh Wilbur, cruising among the islands of the western Pacific. A sudden squall with lightning sets fire to the yacht and the three named take to the yawl in which they drift about for days. Almost overcome by exhaustion and starvation the yawl is cast upon the coast of New Guinea and the occupants are made prisoners by a tribe of the natives. In a fight with a hostile tribe Dr. Thornton and his commonions exchange masters and are taken into the interior. At the home of their captors they are amazed to find that the queen is an English girl who had been captured when a child. Of the many adventures they have in making their escape along with the queen and finsl arrival in San Francisco, the boys can read for themselves. It is an enjoyable story. F. Gilbert Edge is the illustrator.

Tulliver and his sister Maggie and their adventures is taken from George Eliot's "The Mill on the Floss," which contains one of the best studies of child life in English literature. Mr. Knowles has eliminated the parts in the novel which might be less interesting to young people and gives a connected tale relating the varied and altogether delightful history of Tom and Maggie, keeping as near as possible to the language of the author. The young folk will find a mine of pleasant, entertaining reading. The little volume is nicely illustrated by Frank T. Merrill and others. 187 pages. Price 75 cents net. Dana Estes & Co. FRAPPER JIM, by Edwyn Sandys. Our hair

We offer a complete set of twelve handsome buttons covering every position in the field and including a captain's button, a button for the umpire and one for the mascot. They are very handsome, having a gold background and the figures are in colors, red sweater and stockings. A set of buttons will stimulate interest in your baseball club. can Boy who is the present or prospective owner of a camera, or takes a general interest in photography, is cordially invited to ask for information. Every query will receive a prompt reply in The Letter Box, or by mail if postage is enclosed. Criticism is welcomed, because it will help me to perfect this department. Suggestions will be given careful consideration. I want YOU to know that I am taking a real interest in my work and shall be glad to hear from you every month in the year. Do not be afraid of making your letters too long or asking too many questions.

THE EDITOR.

#### The Letter Box

The Letter Box

Lewis McAneney, Cando, N. D.: An ordinary camera is not adapted to the purpose of copying photographs. This work requires a special lens; a good rectilinear wide angle lens will do.—Allan Hovey, Hilton, N. Y.: Prints entered in our competitions may be mounted or unmounted.—A. F. Eckert, Milwaukee, Wis.: The negatives of portraits are improved by retouching, which is an art that even many professional photographers do not acquire. It is usually accomplished with lead pencil, water color, pastel, crayon, etc., which are applied to the film side of the negative. A good many photographs do not require retouching. It is manifestly absurd to retouching. It is manifestly absurd to retouch the portrait of a wrinkled old lady until the face in the finished photograph looks as smooth as a billiard ball.—Jonas Jonson, Kimberly, Minn.: Any good printing out paper will do for the purpose you mention.—Ernest Backus, Chicago, Ill.: We are pleased to note that you received twenty two inquiries from our readers in regard to your method of producing your prize-winning photograph, as it manifests a keen interest in this page. Your request that we inform your correspondents that the print in question was made with a Cycle Poco, double coated Standard Orthonon plate, stop No. 15, one-half second exposure, and Elkonogen and Hydrochinone developer, is hereby complied with.—William Bailey, Burnt Hills, N. Y.: Magle lantern sildes are so various and complicated that we cannot give you directions for making them. You will find a good description of an inexpensive portable enlarging apparatus in the 1904 American Annual of Photography, which is published by the Anthony & Scovill Co. of New York, and may be procured for your by any hookseller. Any bromide paper will do for wour gocket camera, the plate you mention has been used by the editor for many years and has proved itisfactory, but it should be developed with one of the formulae recommended by the manufacturers. When taking snap-shots, use a large stop only or none a

#### The Roll of Honor

History repeats itself with unfailing regularity in The Boy Photographer. Every month brings us so many good photographs that the choice of the prize winners is becoming more and more difficult. Among those worthy of henorable mention this month are: Courtney I. Winter, Washington, D. C.; R. A. Rogers, Gananoque, Ont.; Will Newett, Ishpeming, Mich.; Stuart C. Irby, Knoxville, Tenn.; Fred

A Heart-to-Heart Talk With My Boys

#### **Current Comments**

Current Comments

Robt. Fate, Jr., Lena, Ill.: Your picture would be improved by cutting off the lower third; there is too much foreground. Moreover, the figures are too small to reproduce satisfactorily.—Franklin H. Ellis, Burlington, N. J.: Your prints are very unequal as regards quality. "The Silvery Stream" is about right, but the "Bryn Mawr Gym" has been overexposed and the "Mountain Climber" underexposed.—Willie C. Lockett, Meridian, Tex.; Photo fairly good, but poorly mounted.—Bounds Horn, Parls, Mo.: Your lens apparently does not cover your plate, and development was not carried far enough to obtain required density and consequent detail.—Bruce A. Low, Brownwood, Tex.: Your photo would have been entitled to honorable mention if you had not committed the mistake of taking a black object against a dark background.—Osborne Nichols, Chatham, N. J.: Your contribution is praiseworthy, but the main object should have been placed in the center of the photograph—Arthur Rowbottom, Ludlow, Ky.: Your print is fairly good, but poorly mounted.—Harold Van Inwegen, Huguenot, N. Y.: Evidently your print remained in the toning-bath too long. Moreover, the subject is better adapted to bromide paper; try it.—Edgar B. Borland, Middletown, Pa.: Your print appears to have been underexposed. Trimming and mounting defective.—Guy A. Rule, Lancaster, Kas.: Print shows halation at corners and was improperly mounted.—E. G. Hager, Manchester, Okla.: Fore part of donkey larger than hind part, because animal was not taken on a plane. Print faded in tening-bath: should have been printed deeper and not toned so long.—J. Ross Pollock, Newton., Neb.: Your print gives promise of better work. Try, try again.—E. M. Howlett, Osh-kosh, Whis.: Print of castle shows pin-holes, which can be prevented by dusting your plates with came!s-shair brush hefore putting them into the plate-holder.—Hoyt G. Wilder, St. Faul, Neb. and D. Glison, Williamsport, Pa.: Your photos were evidently taken with a single achromatic lens which is not adapted to architec

#### How to Focus in Dark Interiors

It is a well-known fact that the exact focus on an object becomes more difficult as the illumination is lessened and the darker the object is, on account of the weak light of the applied instrument. An essential help when taking interiors is the application of an arti-

#### Yellow Fog

Yellow Fog
Yellow fog appears frequently if pyrogallic acid is used as a developer, particularly with underexposed or forced development. To avoid the same, put the negative, after development, but before fixing, in a bath consisting of six grams citric acid, twelve grams chrome-alum, to one liter of water; wash well, and fix as usual. If the yellow fog is not observed until after fixing, wet the negative, and pour some sulpho-hydrate of ammonlum over it, until the yellow fog has disappeared. The only disagreeable part of the latter manipulation is the bad odor of the liquid.—Camera News.

#### Painting Photographs

Painting Photographs

Painting photographs with a glossy surface, such as albumen or ordinary gelatino-chioride prints, is a matter of some difficulty; if water colors be used, the difficulty may be overcome by wetting the brush, instead of with water, with the following solution: Albumen, six drams; water and glycerine, one and one half drams each; ammonium carbonate, fifteen grains; ammonia, one drop. If oil colors are to be used, it is a good plan to coat the print with a mixture of gelatine and gum arabic thefore applying the colors. Many use weak fish glue solution also, preserved with formalin.—Camera News.

#### Pin-Holes in Negative.

These small transparent spots on your negatives are caused by dust on the plate at the time of exposure. Dusting the plates when you fill your holders will prevent some of them. The chief cause of pin-holes is a dirty camera interior. Moisten a rag with glycerine, let it hang in a warm place for a few hours to become evenly distributed, and then carefully wipe out the inside of your camera, going carefully into the corners and creases of the bellows.—Camera News.

THE READER Second Prize Photo, by E. M. Howlett, Oshkosh, Wis

#### Developing Gas-Light Papers

After development of a print, the dish should be thoroughly rinsed out, for although the developer may be of a kind which has the reputation of not staining, a little discoloration of the drainings which remain at the bottom of the dish will not be noticed in the dull light of the dark-room, and the next print is nearly certain to be stained in consequence, and it will be a stain not easy to remove.

#### Toning Blue-Prints

The following is said to be a practical manner of turning blue prints to a rich brown color: A piece of caustic soda about the size of a bean is dissolved in five ounces of water and the blue print immersed in it, on which is will take on an orange-yellow color. When and the blue print immersed in it, on which it will take on an orange-yellow color. When the blue has entirely left the print it should be washed thoroughly and immersed in a bath composed of eight ounces of water, in which has been dissolved a heaping teaspoonful of tannic acid. The prints in this bath will assume a brown color that may be carried to almost any tone, after which they must again be thoroughly washed and allowed to dry.

#### Fixing After Toning

It happens frequently that with separat-toning-baths, double tones are obtained after fixing, instead of one uniform tone. To im-prove this, wash well and tone anew with a bath of:

THE AMERICAN BOY offers twelve prizes of Two Dollars each for the best Amateur Photograph received during the twelve months in the year, one prize for each month, also a second prize each month, of one dollar, for the next best photograph, the competition to be based upon the originality of the subject and the perfection of the photograph. The contest is open to subscribers only. Photographs will be returned if stamps are sent for the purpose. All photographs entered in the contest and not prize winners will be subject to our use unless otherwise directed by the sender, and fifty cents will be paid for each photographs that may be used, the prize photographs in any event to be our own, without further payment than the payment of the prizes. Write on the back of the photograph its title, with a description of the picture, and the full name and address of the contestant, who in every case must be the artist who took the picture.

#### Pennsylvania's Young Organist

Harry L. Haag, at the age of sixteen years, bears upon his shoulders the honor of being, perhaps, the youngest church isters? organist in Pennsylvania, and probably in the Union. His talents, both in vocal sons turn out badly. Well, don't you beand instrumental music, have recently lieve it. There is a noted French scienwon for him election as organist of St. Barnabas Episcopal Church, of Reading.

The musical career of Master Haag began ten years ago, when he began taking plano lessons. He is now himself teaching a large class of students.

Ten years ago, too, he entered a leading

HARRY L. HAAG

choir in his town and soon became a soprano soloist of note. In 1902, he began to take instructions on the pipe organ and since that time he has served as regular or assistant organist at three of the leading churches of Reading, and at one church at Harrisburg.

Veteran musicians who have heard the young performer say that he has great abality and is fully competent to till the positions that have come to him so early in life.

#### Funeral of Watt, a Good Dog

Watt, a two year old St. Bernard dog, owned by Capt. John Swenson of Jersey City, was poisoned one day while his master was up the Hudson, says the New York Sun. The dog died next day, and Swenson, who had raised Watt from a pup until he tipped the scales at one hundred and seventy pounds, was grief stricken.

Watt was the official watch dog at the dry docks, and the employes were fond of him. They condoled with Captain Swenson, who gave them a half day off at his expense to attend Watt's funeral. The men knocked off on Friday afternoon and gathered around the coffin of the St. Bernard, a varnished pine box, six feet long and three feet deep. On the coffin cover was a copper plate with this inscription:

### Watt, a Good Dog. 2 Years Old.

Captain Swenson stood at the head of the coffin as chief mourner. An Italian ! clerical appearance, who, Swenson says, was a "real minister," - ead a chebter from the Bible, but aid not offer prayer. He got five dollars for his services. When the captain and his forty carpenters, caulkers and laborers had gazed for the last time on the remains of Watt, the cover was nalled down and the coffin was borne to the grave in the dock vard.

The procession was headed by a German band of four pieces, which played a ten-dollar dirge. Capt. Swenson delivered the eulogy at the grave. He said Watt was the best watchman he had ever han. No robber ever had dared to visit the yards while he was on duty, and if there were a "dog heaven" Watt would have a place of honor there.

When the grave had been filled, the employes went to their homes and enjoyed the rest of their unexpected holiday.

Watt was valued at five hundred dol-

#### Ministers' Boys

Are you the son of a minister or are some of your boy friends sons of min-

It is a common saying that ministers' tist who has studied into this subject, and he has a long list of names to prove that the sons of ministers make up the larger number of the world's great'men. Here, for instance, are some of the names:

Agassiz, Hallam, Jonathan Edwards, Whately, Parkham, Bancroft, the Wesleys, Beechers and Spurgeons, Cowper, Coleridge, Tennyson, Lowell, Holmes, Emerson, Charles Kingsley, Matthew Arnold, Dehn Stanley, Macaulay, Thackeray, Sir Christopher Wren, Sir Joshua Reynolds, Swift, Sterne, Hazlitt, Presidents Cleveland and Arthur, Peter Stuyvesant, Adoniram Judson, Timothy Dwight, Henry C. . . Fitz Greene Halleck, Morse the inventor, Justices Field and Brewer, United States Senator Dolliver of Iowa, and many others in the senate.

#### City or Country

of the City of New York, declares the chances of the city born boy are greater than those of the country born. "If you knew." said he, "about the life of the country boy, how he has to sleep in an unheated room in winter with the temperature degrees below zero and in the summer time work in the fields in the sun from ten to fourteen hours a day, you would probably see that the city boy has an immense advantage.

"They tell you that the hard work of the country boy makes him a splendid man physically. Of the country boys 1 knew full one-half are under the sod they plowed or are old men in the village streets and at the age of forty. I believe that the best man is developed through association and struggle, and not in the country solitude.

"The farmer's boy is caught in the endless circle where he raises corn to feed hors, more corn to feed more hogs to buy more land to raise more corn to feed more hoga.

"Of course the city-born may substitute stocks for crops in an endless chain of anxiety, but the city boy of New York has at hand the history of the world, as a lesson, and the voices of the greatest men within the reach of his ears rather than the cricket and the country night sounds. There are dirty streets and dark rooms in the city, but they are illuminated by ambition, and even these dirty streets are as dear in after years as the country is to the successful farmer's

#### A Record to Be Proud Of

An American farm boy, in New York An American farm boy, in New York State, several years ago had sufficient foresight to know an opportunity and sufficient energy to make the most of it. He saw there was money to be made in the handling of good seeds. Procuring a good variety of seed corn, he inserted an advertisement in a newspaper and thus began business. The returns from the advertisement being good, he branched out into seed polytoes. Sucthus began business. The returns from the advertisement being good, he branched out into seed potatoes. Succeeding with this he undertook other branches and with success. His business now approximates one hundred thousand dollars a year; most of it is in mail orders. He has received as many as two thousand five hundred orders in one day, his patrons residing in all countries of the globe. His business is all cash methods. At present to introduce the of the globe. His business is all cash in advance and he pays every bill the day it is received. He has built up his business largely by advertising.

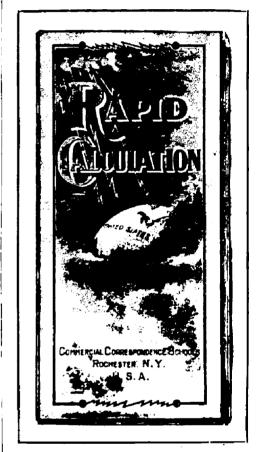

methods. At present to introduce the subject of Rapid Calculations this book is given away absolutely free. A postal

It Teaches You How to Handle Figures With Lightning Rapidity.

O te Thousand Copies Will Be Given Away to Those Who Apply First.

HIS book tells about marvelous methods of shortening calculations; methods that simplify the most difficult business problems and sometimes make it possible to do the work of an hour in the space of a minute. It is from the pen of a man who has devoted his life to the subject of rapid and accurate calculations. He is known throughout the United States as the foremost calculator of the day. The book contains many problems solved by rapid processes, with full explanations so that you can do the work yourself when you have read the explanation. Every man should calculate quickly and with ease. Every business man must calculate, and often a certain calculation President John II. Finley of The College must be made mentally and instantly if you would take care of your own interests. By our improved methods you see

results without effort. You multiply. add, subtract and divide fractions or card will bring it to your very door. ## How to Become Strong

PARTS-PART S I XEIGHT

LON'T ROLL UP WHEN YOU GO TO SLEEP. A ROY ISN'T A HEDGEHOG OR A PORCUPINE

N O DOUBT, you consider the time that other organs. So it continues to feed the you spend in the schoolroom as so brain with blood. much time lost, so far as bodily strength is concerned.

So it will be, if you make up your mind that way. But if you keep yourself braced up mentally and physically while you are in the classroom, you will be able to make it no small part of your physical training.

As has been said in these articles, muscolor strength is worth nothing without healthy organs behind it. The real value of muscular exercise is not to make muscular strength, desirable as it is; but to make strong heart and lungs, and to keep the liver, spleen and kidneys working actively to throw off the waste produets of the body.

This part of the work of becoming strong and healthy can be kept up thoroughly well in the schoolroom; and it will not interfere in the least with your studies, but, on the contrary, will belo you in them, because after a few days your head will be the clearer for it and your energy will be greater.

The schoolroom part of the work is extremely simple, and consists of only one thing. But simple as it is, it is one of the hardest things for the majority of hove to do, because it requires a steady attention until it becomes a habit.

It is merely to "sit straight."

TUNGS, STOMACH, FIVER, SPILEEN, KIDNEYS AND body with massed-up waste materials.

Every boy has been preached at about Every boy knows, in a general "bad for the chest," and will produce a rounded back. But few boys for men, make them feel tired and "loggy" and unable to do more than to drag through their work.

It is like everything else in the line of work. A person who begins a task wrong, who goes at it indolently and with a weary feeling, makes his work hard immediately, and it grows harder the longer he dawdles over it.

that he will sit down slouchily and limply to begin his work makes the work harder. by that very act. For an incorrect pos- trouble in after life, that may make you ture in sitting immediately affects the

your lungs, stomach, liver, that afflict human beings. squeeze spleen, kidneys, and even the heart, forc-

Now, since your body is like a great. swiftly working, never resting engine, self, even to persons who know nothing every time you impede the action of any at all about the human body. of these organs, even in the least, it is just as if an engineer were to let the ashes clog up the draughts of his fur-

the engine, is strong enough to fight you will feel. against the conditions longer than the

The brain, being called on for work, takes the blood as fast as it is sent to it, much as the roaring furnaces of a racing steamship or locomotive eat up the coal that is piled into them by busy stokers.

And just as more and more ashes are produced by those furnaces the more they are fed with coal, so more and more waste material is manufactured in the body the more the brain or any other laboring organ is fed with blood.

Now, if this waste material is manufactured during the course of physical exercise in the open air it is thrown of neys are being stimulated to do their best work and, in addition, the process of perspiration opens up a mass of extraapertures that provide exits for the surplus waste products.

But when you are sitting still in a room, with no part of the body doing active work except the brain, the "ashes" are hard to handle under the best circumstances, and if, in addition, you sit so carelessly as to hamper those stokers. the liver and kidneys, they cannot keep up with their labor.

How does a slouching position in sitting affect the vital organs?

The body is divided into two great hollow parts by a curtain of muscle. The upper part contains the heart and lungs, The lower part contains the stomach, liver, kidneys, spleen and the intestines.

The stomach lies over toward the left side of the abdomen and is half covered by the lower ribs. Drop into a sent so that your abdomen sinks in, and by that same motion you force those lower ribs downward and inward on top of it.

Now it requires at least two hours for the stomach to digest the most simple food and five hours for complex foods. Consequently, all the time while you are in the schoolroom your stomach is buslly grinding away. How much do you suppose that you help it by crushing it with your wrinkled abdomen and your contracted lower ribs?

Under the lowest ribs on the right side lies a firm, dark, red thing. It is the liver. Look at the boy photographed in the typical lazy sitting attitude and imagine for yourself what the effect must be on that organ which is one of the most important members of the human body. It carries off the waste products that are being sucked up by millions of ducts and poured into it in a steady stream. The liver transforms the matter into bile and feeds it into the intestines. Whatever you do to check that process means that you are poisoning the

"Bilious headache" is the least trouble that comes from it. Persist in hampering the liver and it will work until it is way, that sitting in a slouching way is sick itself. The "sicker" it gets the more will the waste poison the body, until at last it poisons the liver itself, just as the either) know that incorrect sitting will piled-up ashes on a ship, if they kept piling up, would finally smother the stokers under their own weight.

So, too, it is with the kidneys. They adhere so intimately to muscular structure of the body that a cramped position forces them at once into an unnatural location, where they work under great disadvantages.

So you not only make passing trouble A person who is so lazy or indifferent for yourself every day while you sit carelessly and lazily, but you may be laying the foundation for serious organic a sufferer from diseases such as liver and kidney disease, which are among the The moment you sit all huddled up you most painful and distressing ailments

The same boy who posed for the photoing them more or less out of position, and graph that shows the wrong way to sit crowding them so much that they cannot also posed for the picture showing the right way. The two pictures preach a sermon that should be convincing in it-

Sit erect, holding yourself up not by leaning against the back of the chair, but by means of your own backbone. A backbone is something to be proud of and to Your heart, which is the motor part of use. Use it. The more you do the better

Two short sentences will tell you all

there is to know about sitting properly. They are:

have any back at all. 2. Keep your chest out and your ap-

domen in.

If you observe these two short rules you cannot fail to sit right. And then your lungs will simply have to take in more air than they do under other circumstances. They can't help it.
That means fresh blood all the time.

Fresh blood means a sparkling brain. The free and uncramped organs in the lower part of the body will be able to do their share with a rush.

You can help this work even in your

Don't roll up when you go to sleep. A hoy isn't a hedgehog or a porcupine. "Hunching up" in bed has just the same effect on the organs that "hunching up" in a chair has, only they have not so much work to do while you sleep, and consequently the injury is not so great. But it doesn't do them any good.

Stretch out! Lie in bed extended as much as possible. Stretch so that you can feel your bones creak. Keep your chest free and let your abdomen have play so that nothing shall force any weight on any organ.

You wouldn't think of putting a. machine into a room so small that its wheels would strike the walls every time they moved: Well, have at least as much respect for your own machine as you would have for an iron and steel one. (To be continued.)

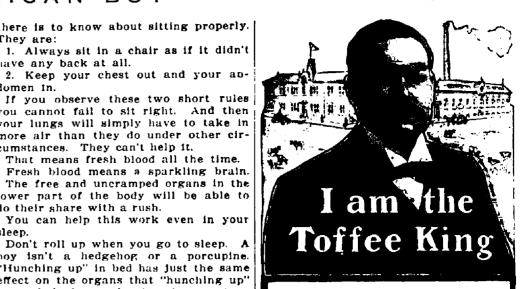

### Dickens and Children

With Dickens, the archereator of dream children, it, is again, as with Wordsworth. quickly, because stomach, liver and kid- always the lonely child, and with what a love did his great heart go out to the little beings his imagination has made immortal! What an almost divine pity he has for the fears and bewilderments and hardships of their dependent little lives, so at the mercy of grim elders, and the sport of all manner of heartless bullying forces! Poor David Copperfield and that dreadful new father-in-law of his with the black whiskers-how one's blood runs cold for him as Mr. Murdstone takes him into a room and sternly expounds to him, in ogreish words, the iron discipline to be expected for breaches of the law in that sepulchral household! Children are not beaten, nowadays, I am told. If not, the change is largely due to Dickens, who has certainly done much to mitigate the former severe lot of the child-in a regime where the father was little more to his children than the stern policeman and executioner of home, the dread Rhadamanthus in the best parlor, who must on no account be disturbed by childish laughter, and to offend whom was to invite swift and certain doom.

How much has Dickens done to mitigate the lot of the schoolboy by his savage satire of Dotheboy's Hall, and the lot of all poor boys whatsoever by the pleading figure of Oliver Twist! There are few strokes in literature so trenchant in their tragic laughter, so irresistibly comic in their shattering criticism of human nature, as that scene which has passed into the proverbs of the worldthe scene, of course, where poor little starved Oliver asks for more. astonishment on the face of the cook is positively Olympian in its humor. A charity boy ask for more! Why, the very walls of the institution rocked, and the earth quaked, at such a request, and the rumor of it passed like thunder from room to room, thi even the board of directors, then in session, must have heard it. Great heavens! "Oliver Twist has acked for more." Wichard Le Gallienne. it. Great heavens! "Oliver Twist has asked for more"—Richard Le Gallienne, in the February "Success."

ALWAYS HIT IN A CHAIR AS IF IT DIDN'T HAVE ANY BACK AT ALL. KEEP YOUR CHEST OUT AND YOUR ABDOMEN IN.

### When I Was In Love--

I found— as almost every other young man has found—that a box of candy went a great way towards making me popular with my best girl.

Most girls consider such a gift a "candid" expression of affection—a sweet token of regard. Most "boys" understand this pretty well.

Best girls are best reached by the best of candy, and that is now known to be

#### Mackintosh's Extra Cream Toffee

It is different from all other Toffees

It is different from all other Toffees because it is made of pure sugar and pure cream, blended by a process of my own. It has a distinct flavor not possessed by other Candies.

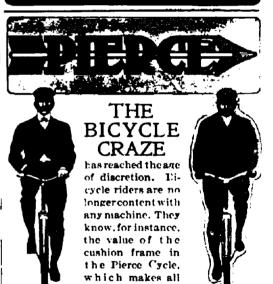

I have brought my Toffee from England because I know Americans appreciate good things—whether they be in love or not. That they will be in love with my Toffee when they once try it is a foregone conclusion.

I personally guarantee its perfect purity in materials, manufacture and handling. It is a healthy, wholesome sweetmeat that will create a demand for itself everywhere.

#### Mr. Yerkes' First Deal in Soap

Charles T. Yerkes, who is now busy successfully conducting a grocery store, supplying London with an adequate Charles and Russel Anspach started less rapid transit system, began his business than a year ago with 27 cents and today career, says Success, with a successful they operate a store of sufficient import- speculation that did not involve the outance to attract the traveling men from lay of a dollar. It was a Saturday afterthe wholesale houses. Their first store noon and he was strolling along a wharf was 4x4 feet in dimension. Their present in Philadelphia, when he came to a store

"How much am I offered for this box

The thirteen year old boy looked at the tending school but are taking their brand and saw that it was the same soap orders for goods in the morning and as that used in his home. He knew what making their deliveries after school, his mother paid for it at retail, and so During school hours their parents look he made a bid. The auctioneer smiled at him, cried the bid once, and said: age, began to study shorthand last June and "Sold to---what's your name, bub?"

"Charley Yerkes." "Sold to Charley Yerkes for -

Then another box was put up and bid in by the boy, and this was continued him. He had a deposit of five dollars in a savings bank, which had been there for some months. He showed the auctioneer his certificate of deposit, and said he would soon return and pay for the

He went to the grocer with whom his family traded, and asked him if he wanted to buy some soap. The grocer asked him how much he had and what it was worth. The lad replied that he had fifty boxes, and that he would sell the lot for a certain sum, naming an amount double that which the soap had cost him at the auction house. The deal was closed, and then the storekeeper asked the lad how he had come by it. When young Yerkes told him the man opened his eyes and said: "I had intended to go to that auction, but forgot it." The boy did not draw his five dollars from the bank, and thereafter it was his great pride to add to it. "It is country brought them butter and eggs. surprising," said he not long ago, in tell-Others later brought butter and eggs to ing the story of his first money-making the enterprising boys and they soon got effort, "how it grew from year to year. When I was twenty one years of age the money of which this was the foundation rapid-fire examination of witnesses. The patronage of the store increased amounted to several thousand dollars.

#### Found Gold in a Chicken Coop

Two boys, W. O. and C. P. Danielson, of Medford, Ore., in Murch, 1894, while cleaning out an old chicken house for a family by the name of Roberts, found buried under the surface seven thousand dollars in coin. The Roberts family claimed the money and the boys turned it over to them. Afterwards the boys brought a suit in court to recover the money on the ground that they had found it and were entitled to it, as against all the world except the owner. The Roberts family claimed that one of their number had berteal the money that the more than the suit of the same of th family claimed that one of their number had burled the money there and that in fact the money was not lost. The case is now before the Supreme Court of Oregon as to who is entitled to the money. The interesting information was developed in the trial that the Roberts family gave to each of the boys five cents, and expressed the hope that the Lord would bless them

"He came to us in a singular manner," scratching at our door. I opened it, and opened. in rushed a huge dog. He commenced pulling at my trousers, all the while down near the bank, where he at once looking wistfully up in my face. I was tient, running ahead, and often looking in getting at the lilies, and so a considback with a short bark, as if to encour-

"About a mile from the house we came to a spot where a man lay dead in the talking now to me and now to the butsnow. He was a stranger who had lost terflies. his way and been frozen to death in the storm. We discovered afterwards that he was from Boston and had been prospecting through our region. I procured assistance and had the body removed to our house, where the faithful dog continued to watch beside it until it was laid away forever. Then he attached himself to us in the most affectionate manner, and here he has been ever since.

'Brutus' was the name on his collar, and to that he answered eagerly. Our little boy was then two years old, and the great brute appeared to comprehend the child's helplessness as well as a human being could have done.

"The winter passed away, and as the weather became pleasant Arty would sometimes go toddling about out doors, though of course never very far from the house. One day a couple of horses belonging to a neighbor of ours, while attached to a heavy wagon, took fright and ran. They came in this direction, tearing on at full speed. Arty happened at the moment to be standing right in the wheel track, and when his mother discovered his danger, the team was almost upon him.

"She flew screaming from the door, but saw that she was too late, as the child was ten or twelve rods off. It was an awful moment; but just then Brutus came bounding to the spot. He had barely time to seize the little fellow in his big jaws, and leap with him out of the path, when the cruel hoofs and wheels went thundering by. Could hudone more than this?

I should hold such a four-footed guar- cry of terror, and a plaintive call of through the water with a prodigious dian above all price. But the panther 'mamma, mamma!' incident about which you have written summer is the nord and that ald lean. be the one you described.

The pond was a deep water sheet of that prize was my own little boy! several acres, lying about twenty rods. from the house, and the old tree, which I that I think could have bee, heard for gaining on his enemy, encumbered as had noticed in particular from its singular position and form, was a great towards the savage beast, which seemed gnarled oak, three or four feet in diam-startled and confused by such an unexeter, leaning from the bank in such a manner that a person could have ascended it with very little difficulty. The with those glaring eyes and finally trunk was short, and one huge branch sprang directly upon the trunk of the old extending from its fork, reached out oak, still holding Arty in his mouth.

is the pond, and that old oak is the very a great cat upon the long branch, which, Brutus all the while filling the air. our little basin, because on bright days it so reflects the sunshine. But I tell Annie we ought now to call it 'Panther Lake,' though that would be a rather even in my terror and confusion I realflerce name. I must confess."

'Yes; much too flerce for my liking." observed Mrs. Marston. "We shall let that old tree stand as a memorial of him from taking to the woods. For an what has occurred there; and yet at times I almost shudder when I look at it my mind; but should I run to the house from my window here, it makes me so to let him out, would not the savage realize that dreadful scene."

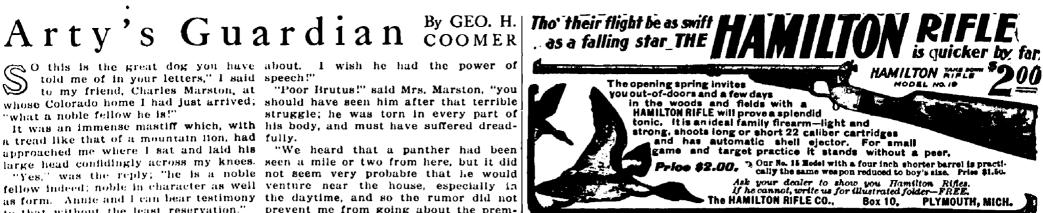

"One of these days it will fall into the with him? water of itself," said her husband; "it seems as if almost ready to do so now, the darling, stretching out his dear haby But meanwhile you shall hear the story hands for me to help him. If I hesitated which she was. Brutus was a part of it feet to assist me. too; and see how he pricks up his cars.

"Poor Brutus!" said Mrs. Marston, "you whose Colorado home I had just arrived; should have seen him after that terrible struggle; he was torn in every part of It was an immense mastiff which, with his body, and must have suffered dread-

"We heard that a panther had been large head confidingly across my knees, seen a mile or two from here, but it did "Yes," was the reply; "he is a noble not seem very probable that he would fellow indeed; noble in character as well venture near the house, especially in as form. seemed to me that he had not a piece ... whole skin as large as my hand. Yhe crawled up to Arty and licked his poface and laid his head upon the lit' baby breast.

"Charles came home in the eveninand early next morning he fished the body of the dead panther from the pos-Brutus had finished the common enems sure enough!

"You know the very largest dog is no and so we have always thought that was the water which decided the victor in favor of the noble creature that four so bravely for our child. Brutus is immensely powerful that he was prol "Looking back presently I saw that ably able to force the panther's here of the ferocious heast could not be used there as effectually as on the land.

"Such is our panther story, and I am glad you have come here to make the an quaintance of dear old Brutus, who already knows, just as well as you could tell him, that you are a lover of his kind

The brave dog looked as if he understood every word that had been said; and going up to Arty, he gave him a loving lap with his broad tongue, then once more came and laid his head across my It knees.

"Springing quickly up the bank, I saw me- I would like to have you point out a sight that even now it frightens me to quick, quick, good dog! Seek him, seek the spot where that took place. Yonder, think of. Before me stood a large, flerce him!" reature, with flaming eyes and waving ing tree by its bank, I should guess, must tail, apparently just ready to leap away ing. He had leaped through a windowwith the prize he had snatched up-and the very window you are now sitting at

> more than a mile, I rushed straight that enemy was with his living prey, perted act. He bounded a few feet, then stopped for a moment, looking about him

over the pool like a gigantic arm "He ran up the leaning body of the tree. You are right," said my friend; "that and upon reaching its fork went out like 'Sunny Lake' is the name we give as you can see from here, stretches so

far out over the pond. "It was plain that the fearful enemy could be nothing less than a panther; and ized that it was only my unlooked for presence between him and the thicket from which he had come which prevented instant the thought of Brutus crossed beast leap down and escape, taking Arty

"'Mamma, mamma!' called my poor lit-

The panther growled frightfully as I as if he knew what we were talking stepped from the fork out upon the large covered with blood and wounds.

man intelligence or human courage have sound as of some heavy animal, rushing bank, and looking around I saw the head with a springy motion over the grass; of a great dog pushing out into the pond. "It was a wonderful act," I said, "and and this was immediately followed by a while the strong paws were tearing force.

"'Brutus, Brutus!' I exclaimed; 'O,

"But the noble animal needed no urg---taking sash and all! And now, with "With outstretched arms and a scream every sweep of those broad paws, he was

"The two animals landed almost at the same moment on the opposite shore; and dropping his prize on the grass of the bank, the panther bounded flercely upon his pursuer.

"I flew, rather than ran, around the end of the lake, a distance, as you may see from here, of about forty rods; the yells of the panther and the hoarse growls of

"Arty lay on the ground so close beside them that he was every moment in danger of being trampled upon; and as I caught him to my heart, he had strength supposed to be a match for a pantle only to murmur once more that dear, piteous sound, 'mamma, mamma!'

"'Oh, mamma has got you, my darling!" I cried, as I fled, with him from the spot; 'mamma has got you!'

both combatants had rolled down into the under the surface, while the sharp claw water, where the battle was still continued, now one and now the other seeming to be uppermost.

Upon reaching the house my for was great at finding that my little one was, from Annie's own lips. She can tell it as to my course, it was but for an in- panther's teeth had been fastened mostly better than I can; for it was an adven- stant. The next moment I was climbing in his clothing, though of course he had ture all of which she saw, and part of the leaning trunk, using both hands and some bites which I knew must be painful. It was so much better than I had feared!

"After dusk Brutus came limbing home.

A Great

HENRY CLAY began his illustrious career as statesman, orator and lawyer by declaiming to the chickens and cattle in the barn. By mere determination and per-

sistent effort to learn the law he overcame lack of opportunities and obstacles that do not confront the young man of to-day. The ambitious youth who would achieve fame and fortune at the bar, in public affairs or business, but who cannot afford the time and money necessary to attend a law college, should

.earn Law at Home

through the Sprague Correspondence School of Law—the original. It brings to his home, by mail, the instruction and dri. of the college. Thousands of our students have passed the required state examinations, and have been admitted to the bar in every state. Others have applied this knowledge toward commercial pursuits, and through it have gained prominent positions. Send for our catalogue, which tells all about our three courses: Preparatory, Commercial and College Law Course. Also book of interesting letters from hundreds of our successful students. Liberal Terms—Special Offer now. Write to-day and et us help you.

Career

American Boy Lyceum.

solved, that an eight-hour working day should be used in the United States."

A debate between the seniors and juniors of the Yarmouth, Mc., High School occurred recently. The question: "Resolved, That the action of the United States government in regard to Panama was an injustice to the colombian republic." The seniors had the affirmative and won.

The debating club of the Academy, Litchfield, Me., has discussed the question: "Is immigration detrimental to the United States?"

#### The Oration

The timeliness of an oration adds much to its effect. Let some one thoroughly learn and effectively present the following patriotic selection at a meeting of the club as near the 19th of April as possible, and it will be one of the best features of the meeting.

#### The Minute-Man of The Revolution By GEORGE WILLIAM CURTIS.

the sunrise!

the sunrise!

By seven o'clock there were, perhaps, two hundred men in arms upon the hill. As the minute-men from the other towns arrived, they joined the force upon the rising ground near the North Bridge. By nine o'clock some five hundred men were assembled, and a consultation of officers and chief citizens was held. There was as yet no Declaration of Independence, no continental army. There was, indeed, a general feeling that a blow would soon be struck; but to mistake the time, the no continental army. There was, indeed, a general feeling that a blow would soon he struck; but to mistake the time, the place, the way, might be to sacrifice the great cause itself and to ruin America. But their conscience and their judgment assured them that the hour had come. Before them lay their homes. A guard of the king's troops opposed their entrance to their own village. Those troops were at that moment searching their homes, perhaps insulting their wives and children. Already they saw the smoke as of burning houses rising in the air, and they resolved to march into the town, and to fire upon the troops if they were opposed. All unconsciously every heart beat time to the music of the slave's epitaph in the graveyard that overhung the town:

"God wills us free; man wills us slaves. I will as God wills; God's will be done."
As they approached the bridge, a shot was fired by the British. A volley followed; and Isaac Davis, of Acton, making a way for his countrymen, like Arnold von Winkelried, fell dead, shot through the heart. By his side fell his friend and neighbor, Abner Hosmer, a youth of twenty two. Seeing them fall, Major Buttrick turned to his men, and, raising his hand, cried, "Fire, fellow soldiers, for God's sake, fire!" The cry rang along the line. The Americans fired. The Revolution began.

One of the British was killed, several

THE HOPKINS & ALLEN ARMS CO.,

The British column marched steadily on, while from trees, rocks, and fences, from houses, barns, and sneds, blazed the withering American fire. The hills echoed and flashed; the woods rang: the could be applied to a college ambiguity of

echoed and flashed; the woods rang; the road became an endless ambuscade of flame. The Americans seemed to the appailed British troops to drop from the clouds, to spring from earth. With every step the attack was deadlier, the danger more imminent.

Such was the opening battle of the Revolution—a conflict which, so far as we can see, saved civil liberty in two hemispheres, saved England as well as America, and whose magnificent results shine through the world as the beaconlight of free popular government. And who won this victory? The minute-men and militia, who in the history of our English race have always been the vanguard of freedom.

When I meet impudent children, and one does meet altogether too many such. it seems to me there ought to be a public One of the British was killed, several it seems to me there ought to be a public were wounded; and they retreated in officer whose duty it should be to spank confusion. Of the retreat from Concord —their parents.—Exchange.

## Norwich, Co in. Bridge, of the terrible march of the exhausted troops from this square to Boston, I have no time fitly to tell the tale. Almost as soon as it began, all Massachusetts was in motion. The landscape was alive with armod men. They swarmed through every woodpath and byway, across the pastures, and over the hills Air Rifle

HEAL"N. 10" SPORTING R

Question Resolved, That United States Senators should be elected by popular vote. Notes

Notes

(These should be grouped, and minor points subordinated under the more general and important. This calls for the same skill that a general shows in arranging his army.)

AFFIRMATIVE.—The people wish for this reform ("Public Opinion." Jan. 28, 1303). The legislatures of many states have asked for it ("Arena." Sept., 1894). Distrust in popular elections not well founded. Political "machines" ought to be distrusted. Lincoln's maxim about trusting the people has been proved true. Indirect elections are wrong in principle. Popular elections would improve the character and ability of the senate. The ablest senators have held offices to which they were elected by popular vote. Bribery would be more difficult. Long term of office is the chief reason for the conservative force of the senate. ("Am. Commonwealths," I., 112.) A minority party may get control of a state legislature. For arguments on affirmative read also "Atlantic Mo.," Aug., 1891; and "Public Opinion," Feb. 20 and 27, 1892, Jan. 28 and April 15, 1893; "Rev. of Rev.," April, 1903, and Feb., 1903.

NEGATIVE.—The present method of choosing senators was adopted unanimously and represents the wisdom of the founders of the Constitution. (Story on the Constitution). Senators represent the states, while the house represents the people. The senate works well. It has checked radical and dangerous legislation by the conservative force inherent in it. It has been copied by countries looking for the best scheme of government. The proposed change would lower the character of the senate. A nominating convention is not as respontible a body as the state legislature.

nominating convention is not as responthle a body as the state legislature. Senators would be less likely to be reelected. Read Senator Hoar's article in the "Forum," Nov., 1894; also "Public Opinion" for Feb. 27, 1892, and April 15,

#### What Clubs Are Doing

The regular meeting of the forum of the Michanic Arts High School, Springfield, Mass., discussed the question: "Hesoived, That electricity will supersede steam as a motive nower." The affirmative was defended by W. Hamilton, leader, F. A. Stimson and R. T. Boid. The negative, by W. H. Stanley, leader, H. Burr and P. P. Forgue. The debate was exceedingly interesting, both sides being well appresented. After an hour and a quarter of debate the judges rendered a decision for the exception. · kative.

Princeton's team, G. S. Hornblower, 1904, of New York city, T. R. Good, 1904, of Denver, and A. P. Scott, 1904, of Chicago, is the same team which won from Harvard last year, be debate will be held at Princeton, N. J., in the question, "Resolved, That the government of the United States was warranted in cognition of the republic of Panama." Yale has chosen the negative.

The Boys' Debating Club of Amherst, Mass., has just had the question, "Resolved, That the United States senators should be elected by popular vote. Henry Cody and A. Kimball apported the affirmative, William Cody and Cates the negative.

#### Recently Debated Questions

Resolved. That the chances for a position in life, for a young man, are better today than in the early days.

That voting should be made compulsory. That San Domingo should be annexed to the United States.

That Japan is justified in her action in the Mar with Russia.

A lyceum was held at Foxcraft Academy recently and a practice debate indulged in liv the members of the new debating society. The question under discussion was: "Re-

(Continued from page 185.)

tions, serve a practical apprenticeship at the work and have an opportunity to eventually obtain good salaries.

Modeling in clay may be followed to advantage by boy art students without regard to what branch of art work they wish to ultimately follow. A knowledge of modeling helps the artist in his drawing or painting, and in this age when sculpture is becoming more and more remunerative, it affords a stepping stone to a profitable line of work. Of late years, too, a most extensive field has been opened to young men who enter what are known as the arts of design. Essay on Louisiana Purchase: First prize to and qualify themselves to make designs

Will Cain, Kokomo, Ind.; second to Vernor Lovett, Coral, Mich. for carpets, wall papers, oil cloth, cretonnes, chintzes, furniture, book covers, stained glass windows, ornamental brass and wrought iron work and a host of other lines wherein there is a demand for manufactured products which are pleasing to the eye.

In New York and some of the other large cities of the country, there are special schools in which instruction is given in these arts of design. At the best of these schools the tuition fee does not exceed \$75 a year and there are scholarships and prizes, the students being also permitted to sell their designs 5 to manufacturing firms or other customers, the school allowing them to retain the entire proceeds instead of exacting any commission, although as a rule such 6, sales are made through the offices of the school to whom manufacturers are constantly applying for designs. In this way too, the work of pupils becomes known 7. and frequently enables them to secure permanent positions at high salaries immediately after completing the school course.

body affords by day or seeks repose in the open at night.

to be absolutely relied upon. It is taken from the saddle and spread in a circle open the ground, and within this circle the cowboy leads his horse and places imself. He is as safe from the rattlers if upon a housetop, for, whatever be The temptation, a snake will not crawlwer the insignificant barrier, even if usered.

It is supposed that the numerous short, eristling ends of the hairs, when encountered by the snake's body, are responthe for his refusal to cross. It is a First, however, that no snake will crawlwer a hair rope.

#### Advice to Young Ball Players

The trouble with young ball players and with pitchers especially, is their xiety to do too much at the start. If hey do not win their first game or two they are apt to lose heart, and a pitcher who is not game cannot hope to succeed. The players in the big leagues are sea-

paned and understand the game thoroughly They execute plays in an easy, graceful manner that is a revelation to most of the young fellows, and the lat-'er, unless they are cool and nervy, fight the ball in trying to duplicate the same blays, and generally with disastrous re-Fults.

A new pitcher may probably have some A new pitcher may probably have some France first acquired the vast Louisiana pet curve or drop which he has worked Territory by right of exploration and con-

successfully. Let him have his way, and he will want to toss his favorite curve to every batsman that steps to the plate. He may fool the players for a while, but when they get the hang of this curve it's all off with the youngster.

The first thing is to get command of the ball. Good control of the ball is essential to a pitcher's success. After he has learned to put them over or around the plate as you signal for him to do, the hardest part of a catcher's work is done.

If the pitcher insists upon using his pet curve too often, he must be broken of the habit. A pitcher who has several assortments of curves, and who knows how to use them, is the successful man.

If a youngster has a good curve or raised ball, the thing is to develop this curve until he masters it to perfection. Then he should be taught to change his pace; that is, use the same motion in delivering the ball, but change the curve. This will tend to puzzle the batsman, who may strike at a high, straight ball, expecting a curvo.

Young Art Students in harmony with the catcher. The man behind the bat is generally in a better position to know the weakness of certain players, and if the pitcher follows the catcher's instructions the chances are in many cases they will gain their point.

#### The Louisiana Purchase

First Prize Essay, by Will Cain, Kokomo, Ind.

The Hair Lariat

Why does the professional cowboy carry a hair lariat? Why does he go to all the bother of braiding a lariat of hair from the tails of horses and cattle; and why does he carry the lariat on the pommel of his gaddle, but wields one of rope? Everybody doesn't know.

The cowboy's home is the open prairie; his hed is principally the bare ground in summer and his only covering is the starry sky. Where he is compelled to be is also the haunt of the deadly rattle-snake, and he must have protection from these venomous reptiles when, wearied with a long ride after stampeded cattle, lie hobbles his horse and throws himself down in the shade, which the animal's body affords by day or seeks repose in all the proposed course. He also directed Livingston in the shade, which the animal's a defiant attitude toward the American in the statution of Independence, was elected President in 1801. During the first prize Essay, by Will Cain, Kokomo, Ind.

During the first president in 1801. lown in the shade, which the animal's couly affords by day or seeks repose in the open at night.

Well?

The hair lariat is the protection and is to be absolutely relied upon. It is taken from the saddle and spread in a circle then the ground, and within this circle.

Reas.

The impending coalition of England and Evance rendered a Euro-

The impending coalition of England and other nations against France rendered a European war imminent; Napoleon realized that Louislana would prove an element of weakness rather than of strength, as England, mistress of the seas, would wrest the possession from him. Consequently, he decided to sell the territory, and with the money thus obtained equip his armics for the coming conflict. On April 30, 1803, the bargain was consummated, and the Territory of Louislana passed into the possession of the United States. The purchase price was eleven million two hundred and fifty thousand dollars. Six per cent honds, nayable in fifteen years after date, were accepted. In addition, the United States assumed an indebtedness of three million seven hundred and fifty thousand dollars. From the vast territory thus acquired, the states of Louislana, Arkansas, Missouri. Iowa, Nebraska, Minnesota, the Dakotas, Montana, as well as the Indian Territory and parts of Kansas, Wyoming and Colorado were subsequently formed. A stroke of the pen had almost doubled the area of the United States, had added almost six hundred million acces, almost one million square miles, at a cost of only two and one-half cents per acce!

Thus the masterly statesmanship of Jefferson obviated probable disputes with France concerning the territory, eliminated its possible acquisition by England, and gave to the United States that magnificent country that sweeps, fertile and prosperous, from the American continent.

American continent.

Second Prize Essay, by Vernor Lovett, Coral, Mich

Always on the right side of a question of time—the **ELGIN** \$ 9 WATCH Every Elgin Watch is fully guatanteed. All jewelers have Elgin Watches. "Timemakers and Timekeepers," an illustrated history of the watch, sent free upon request to ELGIN NATIONAL WATCH CO., ELGIN, ILLINOIS.

quest. But few actions were taken toward colonization, and in 1763 we find, by the "Treaty of Paris," that she gave Louisiana to Spain. Then, in 1801, Napoleon Bonaparte compelled the Spanish government to cede the territory back to France. This time the French intended to take active possession, and Bernadot, equipped with an army of twenty thousand men, was ready to start for America and assert the authority of France in the new world. But, before he could start, hostilities broke out between England and France. How to hold a large territory across the ocean against the strong naval power of Great Britain and carry on an invasion of England, which he had planned, was more than even the great mind of Napoleon could master. So he decided that France had better realize what she could on the Louisiana Territory rather than keep it has a prize for the enemy to secure, which they would surely do if France retained it. Accordingly he offered to sell it to the United States ministers, Monroe and Livingston, for fifteen million dollars, and they, though having no authority to make such a purchase, took the responsibility upon themselves, and closed the bargain with Napoleon. Jefferson, when the matter was referred to him, saw the great advantage that this acquisition would be to the United States, and ratified the purchase in 1803.

By this act, Jefferson more than doubled the area of the United States. Before 1804

the purchase in 1803.

By this act, Jefferson more than doubled the area of the United States. Before 1804 the area was 827,844 square miles, after the purchase was made it was over 1,700,000. He added a vast and fertile area stretching from the Mississippi to the Rocky Mountains, from Canada to the Gulf of Mexico. Out of it have been carved the States of Arkansas, North Dakota, South Dakota, Iowa, Kansas, Louisiana, Missouri, Montana, Nebraska, Wyoming, and a great part of Colorado, Minnesota, Oklahoma, and the Indian Territory.

This year, 1904, people from all over the

sota, Oklahoma, and the Indian Territory.

This year, 1994, people from all over the United States, and representatives from nearly every nation on the globe will gather at St Louis, Misseuri, to celebrate the one hundredth anniversary of that great purchase, which extended the limits of the United States over nine hundred thousand square miles of land. The territory thus acquired contains some of the richest land in the world, has proven a source of great income to the government, and has provided homes for millions of people, who desired to live and thrive under that best of all flags, the "Stars and Stripes."

### Pole Vaulting

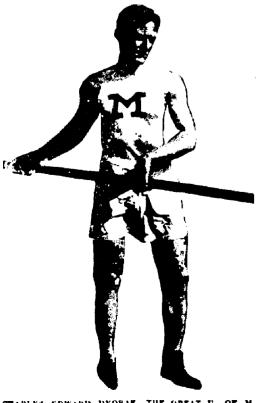

HEIGHT OF BAR 11 FT, 11 IN - ONE HALF INCH ABOVE WORLD'S RECORD.  $\rightarrow$  . RHIT AT ENDS OF BAB. 12 PT, 1 IN

highly specialized athletes of the present, then try the new style of vaulting. day. In a sense the true athlete is born and not made, but the true athlete who vaulting, it would be well to give a few ger," one who has kept hammering at a an even run, by which I mean that he single event until he has become proficient in it. So a boy who does not seem he is working to get his take-off he can to be built especially well for any certain line of athletics need not despair, tance the same every time and thus avoid but he should devote himself to one sport exclusively and in the end, even if he does not become a champion, he will not have worked in valu. When a mandevotes himself to one sport exclusively I do not mean to say that he should develop only those muscles which help him especially in that one line of sport; a highly specialized athlete must not only be well muscled for his particular event but he must be well built all over.

To be a pole vaulter one must be especially well built about the arms and shoulders and, though small in the legs as compared with the upper part of his body, he must have the ability to run at pretty fair speed. Then, also, the vaulter must have a certain amount of nerveand confidence in himself, as the ability to go up any considerable height depends on those qualities. Such qualities must exist in a man inherently and naturally, but the other qualities can be acquired.

To build up one's arms and shoulders the horizontal and parallel bars are very good, but as good an exercise as any and one which the boys in my day used to try continually, is walking on the hands. This exercise is good not only because it is a muscle builder but because it gets. one used to being upside down, a position that is absolutely necessary in order to such a position.

The old style of vaulting, which should be learned brot, is where the hands are kept apart. If the person is right-handed he should grasp the pole with the left hand about a foot below the level of the cross bar, with the back of the hand on

CHARLES EDWARD POLE VAULTER

70DERN business has demonstrated top; the right hand should be about the the value of specialization, and it length of the right arm above the left might truly be said that modern hand, with the back of the hand underathletics has demonstrated the neath. After the athlete learns how to falls one receives sometimes hurt very same fact, for the all-around athlete of pull himself up on the pole, to balance the past has no place in the ranks of the and to get away from the pole, he can

Before describing the new style of must have an even stride, so that when depend upon his stride to make the disthe troubles which I shall explain later on. To get an even stride the athlete should practice running a good deal, not for speed so much as for the evenness of his stride. The next step is to practice running with the pole; the pole should be carried as shown in the picture, with the spike end of the pole a little higher than shown. For the take-off this scheme is about as good as any: Put a mark on the ground, get some distance back and run so that the left foot strikes this mark; run for a distance of about fifty to seventy five feet at top speed; let some friend notice where your left foot strikes about the distance mentioned, and then measure the distance between the two marks; try it over again until you are able to get the same distance every time.

Now for the new style of vaulting. In this method the hands are placed in the same way on the pole as mentioned above, but just before the last stride the lower hand is slipped up to the upper or right hand, and when the pole is stuck in the ground the two hands are nearly together and the arms; ce raised straight over the head. By this means the power is placed at practically one point, where the heads are nearly joined. The run which has been already obtained must be reach any height. The picture shows so faid out that the second mark spoken of above strikes the place where the left foot lands in order to stic't the pole in the pit below the bar. Of course this distance is changeable according to the height of the bar, for the higher the bar the farther back the place where the left foot lands. The distance can be laid out for the lower heights and the mark moved back according to the increase in the height of the bar.

As to the height of the hands on the pole, I will say that this depends a great deal upon the strength of the athlete, for the stronger the athlete the lower he can place his hands on the pole. For beginners I should advise that the upper handbe placed about a foot or more above the level of the bar.

The run should be even and fast throughout, and especially so just before the pole is stuck in the ground; in fact, the speed at that point should be even faster, as the better speed you have there the easier it will be to get up. Inc minute the pole is stuck in the ground the jump should be made off the left foot; both feet being kicked up straight along the side, the right side, of the pole, When the pole is put in the ground the arms are right over the head and they are to be used for all they are worth; the advice is, pull, pull and keep pulling. The main trouble with the beginner is that he does not pull enough. The athlete must also remember to keep as close to the pole as possible.

ward. In the picture shown the final lift corn they raised,

Written for The American Boy is just about taking place. If it were By Charles Edward Dvorak not for that final lift the height would University of Michigan Athlete not be cleared. The body must be turned around just before clearing the bar so that the vaulter is facing it when he descends; the minute the bar is cleared the arms should be thrown up so that they will not knock down the bar. Then again, another difficulty arises if the run brings one too far under or too far away from the bar; this is caused by the run not being even. If one gets too far away from the bar the effect will be to cause one to reach out with the pole and therefore to chug up against it; if too far under the bar the effect is to cause one to swing under it; in both cases it is almost impossible to get up and then also the strain put upon the pole is so great that there is much danger of its breaking. The pole should be made of strong wood, the light poles put out by most manufacturers being too easily broken. With a strong pole one does not have to worry about the danger.

There are so many things to remember that it takes a long time before one can get everything in its proper place. Practice, continual practice, is what is required, so that one can get to vault almost mechanically, that is, that every part of the body does its work like the different parts of a machine. In fact the only thing that I distinctly remember after a vault is the run up to the time that I stick in the pole, then comes a blank, a moment of unconsciousness, as it were, then I realize that I am over the bar, dropping to the ground.

One cannot expect to do all this, to have vaulting come as second nature inside of a year or even two years. And in that year of apprenticeship one must stand a good many knocks, in fact, the much, but one must grin and bear them. The falls generally come from inability to get away from the pole after the height has been cleared. In order to clear a height one must often throw himdoes not specialize is not in the race directions about running and the take- self away from the pole, and in doing with a man who, though not really a off. In order to be proficient in vaulting so the balance is lost and the vaulter born athlete, is what is termed a "plug- the athlete must above all things have oftens turns over completely and lands on his back or shoulders or any which way. Bu, with all its dangers, pole vaulting is an exhibitanting sport, the nearest approach to flying of any field sport. A vault perfectly executed is a very graceful performance, so at least the spectators seem to think. To state its advantages I should say they are as follows: It is an all-around developer; it teaches a boy how to use his muscles: and it is a source of satisfaction to a boy to know that he has within him the power to boost himself up.

## Charleste Dvorak.

#### A Young Ranchman

Paul Davis is an Ivanhoe, Kansas, boy, and one of the youngest ranchmen in the entire west. He owns his own pony and during the time that he is not in school he successfully herds cattle. While Paul is enthusiastic in

his work upon the ranch he is equally enthusiastic over his duties in school, for he realizes that an education is at the bottom of success in all lines of work. Some boys unacquainted with the duties of a ranch might think it mere sport to ride a pony, all one's own. However, to do it as Paul loes and prove a real help in caring for herds of cattle is no small undertaking. It requires skill and experience.

#### What Three Farmer Boys Have Done

Three Missouri boys earned last summer \$4.154.52 by cultivating a patch of corn. They also earned the distinction of having a sample of their products selected as one of the features of the Missouri exhibit at the World's Fair. The boys are John, George and Joseph Christian, aged eighteen, sixteen and twelve years. They live at Tarkio, Mo. The first pull is upward, but with the The work that earned the money for the swing that was obtained from the jump, boys was done between May 1st and Nothe feet shoot above the head and you vember 1st. Mention The American Boy 🥕

### An American Boy in Washington City

The following story was written by James G. Card, an eighteen year old senior in the Central High School of Cleveland, for THE AMERICAN BOY. Young Card was sent to Washington by his fellows of the class in Civics of the Central High School to study the Government. He spent a week there and what he saw is best related by himself.

JAMES G. CARL Of the Central High School, Cleveland.

Our class in civics of about one hundred and fifty students was about to study national government. The possibillty of the scheme was broached of sending one of our number to Washingion to watch the proceedings of the various branches of government and bring back a report. The students were in favor of the proposition and bestowed upon me the honor of election to this mission. I believe this is the first time anything of the sort has been undertaken by the students of any high school.

I left Cleveland with a number of letters of introduction, furnished by my principal, which enabled me to secure favors, not granted to the general public, at the hands of congressmen and others.

My first step after arriving at the capital city was to make the necessary arrangements for seeing the President. Hon. T. E. Burton, Congressman from the Twenty-first district of my own State, spoke to the President and arranged for a time when I could meet him. It pleased me greatly to think that I was to have the opportunity of meeting the President in his home.

On the morning of my call, after speaking to some senators privately, the President stepped into a room where quite a number of people, together with myself, waited to see him. Mr. Burton introduced me, and the President, rushed with important business as he was, remembered my name in connection with the high school of Cleveland, and said, "Mr. Card. I am delighted to see you."

After inquiring as to some of the particulars of my mission, and how it came shout, and expressing his approval of the idea, he gave me a hearty shake of the hand and said. "I am very glad you called and should have regarded it as a loss if I had not met you." He passed on to others in the room, greeting every one in the most cordial manner.

ope-story structure, built at the west end gress. From this gainery one is able to of the White House proper, for office use, see and hear better than from any other. I noticed a few men sitting in the vesti- It is so situated that one is able to see bule as we passed through. I supposed the assembly as the speaker sees it. them to be reporters but was told that When any one rises to talk he is facing a report of the proceedings of Congress they were secret service men who are that way and what is said is easily undways on guard. They accompany the President on his daily rides and much egainst his wishes; but the presence of does a week pass that some crank does Many of them are harmless, but there is noty of the proceedings. The solemn atthe possibility of danger, and it must be ≃uarded against.

Through the influence of a newspaper orrespondent I was given the privilege of seeing some of the rooms of the White House that are not open to every one. I was impressed with the beauty and grandeur of the furnishings, although the house itself seems to be bardly fitting for the President of the United States.

About the most striking thing about the character of President Roosevelt, so or as I am able to judge from what I lave seen and heard of him, is the fidelity with which he adheres to the ethical side, in his treatment of public ques-tions. "A noteworthy feature of Roosetions. Alt's public utterances, whether speeches or documents, is his effective enunciation of strong basal principles so clearly "Spressed that the youngest student of surrent events can understand and the most experienced find food for profitable

reflection ' The Capitol is the point about which my busy week in Washington centered. I was impressed with the grandeur of the Capitol, with its grand corridors. stairways, paintings and statuary, but I was utterly carried away, so to speak, with the magnificence of the Congresional Library which stands close by, The building is of the Italian Renaissance

order of architecture; it has three stories with a dome and covers nearly three and one half acres of ground. Nearly two thousand windows render it the best lighted library in the world. My eyes feasted long on the beauty of the interior of this wonderful structure.

On visiting the two houses of Congress I realized the importance of the work of committees: how the hundreds of bills introduced are disposed of among the different standing committees, who even find it necessary to create sub-committees. As a rule the meetings of these committees are private but with help I gained admission to some of them and found them exceedingly interesting. I was present when the delegation from Philadelphia appeared before the committee on Rivers and Harbors, asking for the deepening of the channel of the Delaware River. It seemed strange to me to hear such subjects discussed, and to find how action one way or the other might affect the welfare of a whole community.

I was privileged to be present at a meeting of the Senate committee of the District of Columbia, the privilege being granted by its chairman. An informal discussion took place between the members and Mr. Jacob A. Riis, of New York. His object was to discuss the needs and conditions of the poor in Washington. Mr. Riis impressed me as being a great man. President Roosevelt has dubbed him "New York's most useful citizen."

My frequent visits to the House did not afford me the opportunity of sceing anything of very great importance before that body. One day I was informed that the House was in committee of the whole, giving consideration to the pension appropriation bill. To my surprise the members present did not debate the appropriation bill, but utilized the time for political discourses. I listened with interest to the various speeches and realized the necessity of being equipped for running debate. My attention was attracted to the marvelous work of the reporters, who dash from place to place and succeed in taking verbatim reports of the proceedings regardless of the confusion.

On entering the Senate I found myself surrounded by a different atmosphere. Rules that were utterly ignored in the House were strictly carried out here. The Senators were calm and sedate and seemed to be paying the closest attention. My interest was centered for a time on the judicial argument on the Cuban Reciprocity bill by Senator Bailey of Texas. I believe that to-day he is regarded as one of the foremost constitutional lawyers in Congress. I was par- mosphere was broken by the loud utterticularly impressed by his great desire the policy for them.

During another visit I heard Senator Spooner of Wisconsin. He is one of the most brilliant men in the Senate, and is the one generally chosen by the Republleans to close debate, or to give the who appeared for the railroads. His final argument on some important party measure.

I was permitted to occupy a scat in the He was receiving these people in a low Press Gallery in both houses of Conderstood.

ances of the great lawyers, who were at to have the Republicans be good and vir- that time defending the railroads in the tuous. He was even willing to dictate railway merger case of the Northern Securities Company. The solemn attitude of these grand old Justices impressed me. I had the pleasure of listening to the arguments presented by that great corporation attorney, George B. Young, statements seemed very convincing until Attorney General Knox arose to argue the question and broke down many of the seeming plausible statements. Mr. Knox is the shrewdest lawyer I have ever heard.

As I previously remarked, the intention of my trip was merely to bring back and the Supreme Court, and to visit the President. However, the grandeur of I seldom passed the Supreme Court the many buildings attracted me, and as much sight seeing as possible. Even at this season of the year Washington is a beautiful city, and I can get a pretty good idea how much more beautiful it must be in summer. I visited nearly all the important government buildings, and made a few suburban trips to the important places of historic interest.

How great a privilege it is for a boy to visit his nation's capital and see the machinery of government work I now realize, and I think it should be the desire of every American boy to make such a visit. It seems to me that a boy would do well to go to Washington before entering High School, if possible. He would then be able to take a much broader grasp of civies, history, and economics. But no real American boy can go there even for one week, as I have done, without going away with a greater feeling of patriotism, a stronger resolve to be a better citizen and to serve his country to the very best of his instincts and ability.

## The Boston High School Cadet Brigade WILLEY

N ANNIVERSARIES and some other the streets of old Boston a little army which from a military standpoint is one of the best drilled and best equipped in this country, yet not an officer or a private is over seventeen years just reached the age where they can

The metropolis of New England has good reason, however, to be proud of its Boston High School Cadet Brigade for its formation has been one of the most schools. The brigade is made up of students of the Central English High School, the Public Latin School, and the district high schools in such suburbs as Brighton, Dorchester, Roxbury, East and South Boston. Some of these institutions are located nearly ten miles from the centerof the city, yet on days when the brigade musters, the battalions attached to them "fall in line" and frequently march this distance in order to take part in the parade, field day or other exercises. A march of even five miles with guns and other for a man, and the fact that the suburban the organization. The cadet brigade is dates back nearly forty years-in 1863when it was decided by the school board to introduce what was called military gymnastics and drills. One of the most three regiments of infantry. Each reginoted American citizens-Edward Everett ment has an excellent military band and signed the petition to the school board drum corps which turns out with it on making such a request. One of the prin- all occasions. Each regiment is made up cival objects of the organization is thus of battalions from groups of institutions explained in the petition. "Believing nearest to them, one being composed that the hygienic effect of a thorough principally of the boys from the Central military training would prove it to be High School while the others might be not only the best system of physical ex- called the suburban regiments. As far

tles, invigorate their intellect and make their manner and render them competent at the age of sixteen or eighteen to enter the field as a private or officer of any old, and many of the young soldiers have regular military organization." Another reason for the forming of the brigade, however, was the fact that the riots in New York and Boston had aroused people in general to the necessity of military training as a part of a boy's "schooling."

The idea found such favor that a comvaluable features of its system of public mand was organized, originally made up of the boys of five schools and then enlarged as the years passed. Captain Hobart Moore, a veteran soldier, was appointed military instructor and from 1864 until his death in 1894 occupied this position. The high standard of the regiments is largely due to his ability, but it may be said that he has had a worthy successor in Colonel George H. Benyon, who has acted as military director since Captain Moore's death. Colonel Benyon is an authority on military tactics, an excellent disciplinarian, and has had exequipment is no small undertaking even tended experience as an assistant inspect - general of the state militia. It is companies frequently cover this distance doubtful if any of the boy soldiers of shows their interest and enthusiasm in America today rank higher in general efficiency than the Boston commands, not a new idea by any means. Its origin owing to the interest which their military director has manifested in them.

The present strength of the Cadet Briercise for the schools, but at the same as possible the system in vogue in the

regular army is followed in the formation of the regiments, and they are provided with the same grades of commissioned and noncommissioned officers. The colonels, majors and capt: ns are selected from boys w. o have shown special away up in Montana and pre 'ciency in military tactice as well as in their ritory left over to take in ordi ary studies. ## The "Jack Harkaway'' Series of Books

Ask your father if he ever read this remarkable series of books. No more fascinating stories of adventure were ever written.

For Boys

The books are handsomely bound in Linen Cloth, back and side stamped in ink and printed on excellent paper.

The scries is as follows:

- Jack Harkaway's School Days. Jack Harkaway After School Days
- Jack Harkaway Afloat and
- Achare. Jack Harkaway at Oxford.
- Part 1. Jack Harkaway at Oxford. Part 2.
- Jack 'Harkaway Among the
- Brigands. Part 1. Jack Harkaway Among the Brigands. Part 2.
- Jack Harkaway's Adventures Around the World.
- 9. Jack Harkaway in America and Cuba.
- 10. Jack Harkaway's Adventures in China.
- 11. Jack Harkaway's Adventures
- in Greece. Part 1. Jack Harkaway's Adventures
- in Greece. Part 2 Jack Harkaway's Adventures
- in Australia. 14. Jack Harkaway and His Boy
- Tinker. Part 1.
- Jack Harkaway and His Boy Tinker. Part 2.

If you are a subscriber to The American Boy we will send any one of the above books, postpaid, for every new \$1.00 yearly subscription you send us. On receipt of \$1.35 we will renew your own subscription and send any book you select, postpaid. The price of the books is 75c each, and will be sent, postpaid, on receipt of price.

## The Sprague Publishing Co.

DETROIT, 🔊 MICH.

We want a boy in every town to do a little work for us on Friday after school and on Saturdays. You can earn anywhere from 50 cents to \$2 00 a week and even more. We simply want you to take the agency for our two big weeklies. You write us that you want to start in and we will send you a bundle of papers which you can sell and keep two cents out of every nickel you take in.

We do not ask you to pay for unsold copies

We have 2300 boys selling c or papers every week and they are all making money. Our papers sell at sight,

You can make \$1 to \$2 every Saturday We send complete outfit free, consisting of report blanks, record book, envelopes, instructions and a letter telling you just what to do.

Our papers now have a circulation of over \$22000 copies a week. They sell at sight and any boy can make a nice sum each week. Write us and say you want to take the agency. It doesn't eact you a cint to start, we send everything free. You can commence as soon as you get the bundle of papers we send you. Write your name and postoffice scaless mainly.

Number 7

ILAS RANSOM tramped heavily upstairs dangling an empty pail. At a door on the second floor he paused to draw off his shoes, then tiptoed into a room where a little boy sat crouched over the stove.

"Is that you, father?" called a weak voice from another room. "I'm awake. Put your shoes on. Your feet'll get awful cold."

Setting the pail down beside the stove, Silas stepped to the dark doorway of the adjoining room.

"You couldn't get any?" asked the voice, that of a young girl.

"How did you know?"

"The pail sounded empty when you set it down," she replied. "Haven't they got any more?"

"They've got more'n they'll confess to havin'," he answered, angrily. "They won't let us have it. I offered twenty cents a pail; but they say they can't sell any more in pailfuls, 'cause they've only enough to fill their reg'lar customers' orders. We poor folks are payin' as much fer the coal as the rich folks are, but we do our own carryin', an' Saxton wants to git the pay fer haulin' the big orders. Are you awful cold, Phoebe?" he asked, bending over her.

"Not so very," she answered. "The bed's warm." But the hand he held was icy cold.

"It's hard; it's cruel hard," he cried, desperately. 'm able to pay fer the coal; but I can't get it, even to save my child's life. The doctor said you'd be all right now if you was only kep' from catchin' cold. But how am I to help it?"

"Isn't there any fire?" she asked.

He lifted a lid of the stove and looked in. The capacity of the grate had been diminished by laying a brick on either side to economize fuel. In the narrow space between the bricks was only a bed of white ashes crumbling away between the cooling bars. "Not a spark," he said, replacing the lid.

"I'll tell you what I've been thinkin', father," said the weak voice. "There's a lot of heat wasted in here. If you could carry me, with the bedclothes, into the other room and lay me on the lounge, we "ould shut the door and keep all the heat in there."

"You've got a long head, little woman," said her father: "I'll do it right off."

Stooping over her, he gathered bedclothes and mattress around her and lifted all together in his arms. Staggering across the room, he muttered:

"Whoever's to blame fer this sufferin', whether it's the owners or the miners, may God's-

A thin hand darted from the midst of the bundle and was laid over his lips.

"Don't curse 'em, father," she pleaded. "He's watchin' out fer 'em, an' He'll get even with 'em, fer

"How's that now?" he asked as he settled her on

"Fine!" she answered cheerily, but he heard the shiver in her voice, and taking his overcoat from a hook on the wall, he spread it over her.

"No, no, father," she cried excitedly, trying to push it off. "I'll not have it. You'd freeze to death in the factory tonight. You know you said it gets awful cold everywhere, 'cept the furnace room. You'd fall asleep with the cold. Folks always does when they're freezin'. Then what sort of a night watchman would you be? You'd lose your job!"

"But you'll catch cold an' have a relapse, Phoebe." he urged.

"Give me the carpet from under the table, then." "It's too dirty," he objected.

"Never mind," she insisted. "I shan't care. It's real thick. It'll be lovely and warm."

Reluctantly he dragged the square of rag carpet from the table and spread it over her, then turned to the boy, who was now leaning his back against the stove and sitting on his hands to warm them.

"'Most frozen stiff, Roger?" the father asked. "You'd better creep under the carpet beside Phoebe. You'll keep each other warm."

"Guess I'd better stay here," replied the boy, "fer I'm 'fraid I'd fall asleep an' forget sister's medicine.' "Well, turn in after you've given her the drops." said his father, putting on his overcoat and cap.

"Good night, kids," with his hand on the door latch. Then—with a sudden impulse of pity and tenderness he stepped back to lay his hand for a moment on Roger's head.

"You're a good little lad, Roger," he said.

Silas Ransom was a kind father to his motherless children, but sparing of caresses. The remembrance of that gentle hand on his head seemed to warm Roger and keep up his courage during the slow hours that must pass before he should be at liberty to creep into the shelter of the carpet coverlet. The room grew cold and colder as he watched the creeping hands of the clock. At last they marked nine, and he rose from his place on the hearth, his joints stiff, and hands shaking with cold so that the spoon rattled against the bottle as he poured the medicine. This duty performed, he lay down beside his sister and was soon asieep.

Phoebe's voice roused him, sounding close to his

"It's awful cold, Roger. Put on some coal."

"There isn't any coal, sister," he answered, sleepily. She was silent for a while and Roger fell asleep again, only to be awakened by the same pitiful wail:

"It's so cold—so cold! Go get some coal, Roger. Get a pail of coal.'

In vain he repeated his assurance that there was none to be had. She murmured over and over again: "It's so cold! Roger, go for some coal."

He tried to soothe her-to re son with her-not knowing that her mind was wandering. At last, unable longer to resist her moaning appeal, he answered:

"I'll try, sister. You jest lay still an' go to "her an' I'll try what I can do."

Poor little Roger! It was a desperate resolve he had taken.

He lit the lamp, found a sheet of paper and penciand sat down to write. It was evidently a toils me task he had undertaken; his fingers gripped the penciflercely and every muscle of his face worked as he shaped the words. When the page was almost covered with the laboriously-formed characters he rummaged awhile in the table drawer, found a folded letter, spread it before him and carefully copied a few words at the bottom of the page he had written. Then, from a tin box on the mantel shelf he took a dime, folded the paper around it and dropped it into

Stepping quietly across the room, he studied the pale face on the pillow. Phoebe was asleep. He removed the top of the stove, took out the bricks,

which were still warm, wrapped each in paper and slipped them into the bed at his sister's feet.

"They'll keep her warm till I come back, if I come," he said with a catch in his breath.

Phoebe stirred and began to mutter, "Get some coal, Roger," then dozed again.

The boy put on his overcoat and cap, blew out the light and left the room, closing the door very softly.

He groped his way down the dark stairway and out into the street. It was a rare thing for him to be abroad alone at night, and it had never happened at so late an hour. The adventure would have been terrifying, even without the dread of its consequences that hung darkly over him.

"I wonder what they'll do to me," he was thinking as he fled along the silent streets. "Will they give me more than a month on the Island?"

He met few people, and none paid any attention to the small figure flitting timidly along in the edge of the shadows. For his part, fear of all others was swallowed up in the overwhelming fear of one. As he neared the coal yard he halted in terror, for there it was, the dreaded shape! There was no mistaking the long coat, the helmet and the club of the police-

The policeman's face was surely turned that way. Roger believed he had been seen and—for a moment meditated flight. But the burly form slowly wheeled about and halted, facing in the other direction, while the trembling boy crept into an angle of the gateway. A few days before, as he stood there in line, waiting for his turn to buy a pailful of coal, he had amused himself by studying the manner in which the gate might be scaled. He used that knowledge now. Setting one toe in a crack, resting the other foot on a projecting bolt-head, up he went, nimble as a squirrel. and dropped on the farther side, then stood, paralyzed with fear, as his pail struck the gate and gave out a hollow sound that re-echoed through the place.

"I'm a goner now," he thought. But nothing happened. Peeping through a knot-hole, he saw the broad back of the representative of the law still turned toward him as he twirled his club and rocked leisurely back and forth on heels and toes over the curb. Clearly, the policeman had not heard anything.

Clutching the coal in handfuls and filling his pail with as little noise as possible, Roger hastened back to the gate, but paused a moment at the office, where he dropped something through the letter slit in the

Meanwhile the policeman at the corner was muttering disapprovingly:

"Dan Drogan'll be comin' along prisintly, to relaave me; an' if that kid doesn't git his load an' make himself scarce before Dan comes, I'll be obleeged to nab him. Dan hasn't the sintimints of a father, Dan hasn't. An' how should he, indade, bein' but a young bachelor?'

Softly Roger turned the great key and pushed the heavy gate back far enough to allow him to slip through, his heart all the while beating in his ears so loudly that he could scarcely have heard a steam whistle if it had blown a block away. It was impossible to walk very softly, weighted as he was with the overflowing pail. The policeman coughed nervously and twirled his club more rapidly than before. As the sound of the uneven footfalls died away down the street, he resumed his beat. Passing the gate of the coal yard, he found it open.

"Ah!" he exclaimed. "Someone's been breakin' in here, sure Till and there annyone widin. --- Sorra one," as he completed the circuit of the yard. "An' there's no evidince of burglary about the orfice," trying the door and looking in at the window. "I'll have to repoort the facts."

When relieved by Dan Drogan, Roundsman Canary reported at the station of his precinct that "at 1:45 c'clock he had found the gate of Saxton & Co.'s coal yard open, but had discovered no one on the prem-

When Roger brought his heavy cargo safely into port, the room was very cold, but there was still a little warmth in the bricks at Phoebe's feet.

Here was abundance of coal, now: but where was the kindling to start a fire? Of that he had not thought. Not a chip could be find. Even the woodbox had been burned. His eyes roamed around the room in search of something that might be utilized. Something in the corner arrested his glance for a moment; he looked away, as if not willing to consider

his gaze back to where it stood, his pride and delight, the handsomest express wagon on the block.

"It's that or the pail," he muttered, and drew the wagon out of the corner.

In feverish haste—as if fearing to give himself time to relent—he wrenched off a wheel. Seizing the poker, he pried out a spoke, and in an instant the wheel and its mate were but a handful of kindlings. The tailboard soon lay in splinters beside them, and he judged the quantity to be enough. A good fire was soon burning briskly in the stove and Roger rested from his work. He realized that he was very tired and very sleepy. He would sit a few minutes before the stove and get nicely warmed before he crept under Phoebe's carpet coverlet. How nice it was to have a good fire again! How pleased his father would be to find the room so comfortable! But how should he answer his father's questions as to how the coal had been got? Had the policeman seen him? Would they send him to the-

When Silas Ransom came home soon after seven o'clock, he stepped into a room filled with a genial warmth from the fire that glowed out between the bars of the stove, showing the figure of his little son huddled on the floor beside the wreck of his express wagon, his sleepy head resting on the pail of coal pailfuls, at ten cents a pail."

that suggestion. But the thing in the corner drew that stood beside him, while Phoebe's regular breathing, sounding from the dark corner, showed that she was sleeping comfortably.

When the clerk at Saxton's coal office opened the mail box that morning, he found under the letters a dingy-white paper wrapped about a dime. The clerk, spent ten minutes in deciphering the scrawled lines that covered the paper, then laid it on top of the pile of letters on Mr. Saxton's desk. This is what Mr. Saxton read:

Deer Mister saxtun. weave gotter haV sum coal. mi sisters or Ful sick. sheel dy if she gits cold. i doant wanter steel but I druther go to Prizzun than sea my sister frizzen. that potry jest comed. i dident make it fer a joke, cosse i feel orful bad. Mister saxtun pleese doant put me in Prizzun,

Hopin this finds you well I am

Yours respectully.

It took Mr. Saxton a long time to read the letter and his spectacles grew dim as he read. When he had finished, he smoothed the crumpled scrap of paper, folded it carefully and laid it in a pigeonhole of his desk.

"Mr. Davis," he called to the clerk, "I think we'll reserve five tons of that Scranton nut, to be sold in

for the Championship of Wharton.

A STORY OF THE GREAT HIGHSCHODE-FACTORY BALLGAME.

Wharton High School nine and the Gray Boys dawned bright and clear, and excitement ran at fever heat. Not in years had an event so aroused the sleepy old place, for the crack nine from the high school had held the championship so long, and had trounced so thoroughly every club organized in Wharton during the two seasons past, that baseball had been on the wane.

When it became known that Jack Waverly, just home from one of the minor colleges, where he had won great renown as catcher on the nine, had organized the Gray Boys from among the heterogeneous lot of factory hands, Wharton people laughed and prophested that the schoolboys would make quick work of them. But when, after two weeks of hard practice, the new nine defeated, in a hotly contested game, the crack nine from Mortimer, the county seat, eyes began to open, and Whartonites to wonder if their town was to be championed by a new nine thereafter.

"Those factory fellows are no slouches," remarked Hal Fenn, the popular though egotistical captain of the high school boys, "but we shall have no trouble whatever in defeating them. We put up a better game against the Mortimer nine the first of the season than these factory boys did Saturday. Oh, yes; we'll win all right!"

By two o'clock a vast concourse of people had congregated at the ball park, and it soon became evident that the winning club, which was to receive three fourths of the gate receipts, would be able to build its coveted gymnasium, and purchase the necessary supplies for the following season.

The appearance of the rival teams on the field was the signal for enthusiastic cheering, the tooting of horns, and the waving of the respective colors of the nines. The high school boys were their familiar blue uniforms, soiled with dirt from many a desperate clide; the boys from the factory wore dark gray suits, with the initials "G. B." in white on the breasts, and a more manly-looking lot of boys it would have been difficult to find.

Captains Fenn and Waverly shook hands warmly, and walked off together to consult with the umpire. When all was arranged to their satisfaction, the nines were sent to the field for a short preliminary practice, after which the game was called amid the wildest excitement.

Both nines played a fast game from the first, but soon there was a shaking of wise heads among the high school rooters, for none among them could question that the Gray Boys were proving themselves the superior team. Though this was gall and wormwood to Captain Fenn, he discreetly kept silent, for he saw that the umpire, a professor from the school, was favoring his team at every opportunity. This discovery did not hurt Captain Fenn's conscience in the least; he cared little how the game was won so long as suspicion did not revert to him.

Soon the Gray Boys realized the painful fact that they were playing not nine but ten men. Umpire Pung's decisions grew worse and worse, but as Captain Waverly had expressed himself as being satisfied

ANIE day of the great baseball game between the with the gentleman before the game began, and agreed to abide by what he said, there was nothing to be done but submit meekly to the rankest of decisions.

> The majority of the crowd, too, were against the boys in gray, and lost no opportunity to hoot them and cheer the team in blue.

> "It's because we are factory boys," said Dan Standish, bitterly. "The crowd is too aristocratic to sympathize with us."

> "There's one consolation, the game will soon be over," said Joe Rodney, looking the disgust he felt.

> "But isn't it a shame that the people give us so little encouragement?" cried Sam Tindal, wrathfully.

> "Never mind, boys," said Captain Jack, "The game isn't over; we're going to astonish this sleepy old town yet. If we can't get a ball where we want it, we must hit it where it comes."

> At the beginning of the fifth inning the score stood four to two in favor of the Gray Boys, but Umpire Pung, in his zeal to see his own nine come off the victor, rendered them such assistance through his decisions that they were able to secure one run in each of the three succeeding innings. The Gray Boys scored one in the first half of the seventh, when Ben James knocked the ball clear of the left field fence, making the only home run of the game. Thus, at the beginning of the ninth inning, the score stood five

> Burt Gaines, the first man up for the Gray Boys. sent a hot one down to short and made a pretty run for first, but the shortstop of the school nine sent the ball across the diamond like a shot, and he was forced to retire discomfited to the bench.

A PUG THAT IS THE PET OF THE NATIONAL SOLDIERS' HOME AT WASHINGTON, D. C.

The first man was out.

'Standish at the bat!" cried the scorer, and Dan seized his wagon-tongue and approached the plate.

"Line it out, old boy!" yelled a factory rooter from the grand-stand.

"Aw, he can't; he's cross-eyed!" was the gallant reply of a school sympathizer.

But Dad had grimly determined to do something for his country, and, catching a wide out-curve on the end of his long bat, he sent the ball flying into left field.

The fielder was playing well in, and the ball passed over his head. He immediately gave chase, but Dan was reposing safely on second when the ball was fielded in.

Van Clark took up the willow. Van was the weak est batter on the nine, but as he was a shortstop par excellence, it was not thought advisable to dismiss him from the team.

The high school pitcher knew Van's weakness, and allowed his lips to curl as he made ready to deliver the ball.

The ball crossed the plate and reposed snugly in the catcher's mit.

"One strike," said the umpire.

The second ball was not even a "corner-cutter." but the umpire, his eye open to anything that would benefit his team, called it a strike.

This decision was followed by a loud groan from the Grav Boys.

"That's the rankest yet," said Joe Rodney.

"Keep still, boys," said Jack; "it won't do any good to protest. The game will soon be over. Dan is on second, and if we can bring him in I'm sure that we will have the game secure."
"It's their last bats," said Ben James.

"True, but I think we can keep them from scoring. Why, they've only made three safe hits during the game. Dan has held them down fine. If we had had the practice they have, they simply wouldn't be in it-even with old Pung giving them decisions.

"It will be a big feather in our caps if we can win in spite of the umpire. It will make us champions of the town."

"Yes," said Jack, "and if we can once secure that title, I'll guarantee that we'll keep it. Last Saturday we defeated the Mortimer nine, and now, by defeating the high school boys, we'll have played the only team in Wharton that Il go up against us. We have it in our power to make a name for ourselves."
"Oh, what a beauty!" cried Art Adams, as Van.

after having two strikes and three balls called on him. lined the sphere out between first and second. "Sprint for home, Dan!" cried Captain Jack, as he

ran toward third base, where he had neglected to station a coach. Standish passed third and dashed for the plate amid

the hoots of the school rooters and the cheers of the factory boys.

The right fielder had secured the ball, which he sent home with all his might. But before it plunked in the catcher's mit Dan had reached the plate by a long slide.

"Safe!" cried the umpire, with evident reluctance The Gray Boys were one run ahead.

Jack Waverly advanced to the plate with a smile on his face, for he felt that now victory was assured. He batted out a single, sending Van to third, and stole second on the first pitched ball. He knew that the high school catcher would not dare line it down to second with Van playing well off third, ready to dash home if opportunity offered.

Art Adams, the next man at bat, played a waiting game, and received a base on balls.

With the bags full, excitement rose to a high pitch Ben James walked to the plate, a look of deter mination in his eyes. The first ball thrown was a beauty, and, striking it squarely with terrific force. Ben sent it spinning out to deep center.

"Run, boys, run!" yelled Dan Standish, who was coaching off third. "It's going over his head!"

The runners obeyed, but cautiously, as they saw the fielder sprinting swiftly toward the spot where the ball would drop. Then a roar came from the grand stand as the fielder leaped into the air, both handextended, and caught the ball.

Instantly the runners darted back toward the bases they had left, but Jack was not quick enough, and a hot throw to second put him out and retired the side This play was followed by renewed cheering and the waving of the school Mags.

The high school boys came in to bat, the Gray Boy. taking the field. Standish entered the pitcher's boy and Jack, donning the catcher's mask, took his placbehind the bat.

The schoolboys, flushed at the thought of the greaplay by which they had retired their opponents, werresolved to tie the score if they could not win the

But they had reckoned without Dan Standisl Never had the Gray Boys' pitcher been on his mettaas during the last half of that ninth inning.

The first man at bat secured a single, but the tw men following were struck out without having touchthe ball. The fourth man batted a high foul which Jack succeeded in catching by a quick dash, and the game was over.

Then the Gray Boys flung their caps into the acand howled, while the discomfitted crowd from th school left the grounds in disgust.

'Let's give three cheers for Professor Pung, th prince of umpires, who never renders an unfaidecision!" cried Joe Rodney, with fine sarcasm.

The cheers were given with a will, and with such irony that the professor did not even pause to bow his acknowledgments.

"They'll have to admit that we can play ball, as much as they hate to," said Art Adams, The game with the high school team opened the

eyes of the baseball cranks in Wharton, and the Gray Boys never wanted staunch sympathizers thereafter.

of the little millinery shop stood ajar, inviting in the mild air and warm sunshine.

The modest-looking establishment, the three or four elegant creations of silk, velvet and lace shown in the window, or the refined look

of the whole place conveyed no idea of prices charged, to the overgrown boy of fourteen standing outside and apparently lacking the courage to open the partly closed door and enter. He held in his hand a crumpled newspaper bundle, and stood listening to the merry voice softly singing a lively air.

As the song ended the boy summoned up courage and marched up to the counter with hesitating steps. Opening his bundle, he spread out its contents.

Little Miss Gray, the proprietor of the shop, sat behind the counter. She had a dimple in each cheek, and smiled encouragingly at the boy who stood awkwardly before her.

"It's my mother's bonnet, and I want you should fix it up as well as you can for twenty five cents. She says she can't come to our Christian Endeavor rally tomorrow night even if she should sit in the 'amen pews,' 'cause her bonnet is so shabby."

He displayed a rusty black straw with crumpled bows, a regular "back number bonnet."

"Do you think you can do anything with it?" he asked, anxiously watching her face as she turned the bonnet back and forth. "It's a surprise, you see. She didn't know I fetched it. Couldn't you fix it somehow?" he asked, entreatingly, as he heard her whisper as she stroked the old bonnet caressingly, "Poor little thing, how badly you have been treated."

"I'll try what I can do for you," she said aloud, choking back a sob, "if you can wait about half an hour. Can you wait that long?" she asked, smiling.

"Oh, yes, I'd wait longer than that," he replied. cheerily. "I'll pay you now," he volunteered. "I hope she can have her bonnet to be at the William Street Mission tomorrow night. You see, our class is to present a banner to the school and one of the boys is to make the speech, and mother wants to hear me-no, I mean him," he corrected instantly.

"Will you please sit down for a short while? I have some leisure moments just now." Saying which, she began to rip the tumbled bows from the bonnet and pinching the straw into shape here and there.

He eyed her with interest as she snipped deftly the shabby ribbon and pinned the bows again in place.

"You say a hoy is to make a presentation speech at your mission; he must be a good boy who has been chosen by his class for that honor. Is he?" she asked, ignoring the fact that he had betrayed himself. What's the boy's name?"

"The boy's name is Billy. I don't know if he is what you might call 'good.' He's just a big boy," he answered, wriggling his feet about and looking from the window with an embarrassed air.

"Is he the kind of boy who would save his money to have his mother's bonnet fixed for her?" Her dimples dimpled at him as she raised her eyes a

He shuffled his feet uneasily under the chair and unswered with a shy laugh: "Well, ma'am, it's just me."

"Oh," replied Miss Gray with pretended surprise. titing her lip to keep back a smile.

"Yes, ma'am, I am the boy who is to make the peech," he answered, much relieved that she should

"So your name is Billy. Billy what?" she asked.

"William Smith," he replied, a certain dignity oming into his manner. "Oh, ma'am, I'm so sorry," e exclaimed suddenly, as she arose and limped gross the room for a hox containing a modest pink ose she had decided to put upon the bonnet. "I did for know that you were lame." And his eyes filled with tears of real regret.

"Not too lame to be at the mission to hear the presentation speech," she answered, smilingly, while pinning on two tiny buds of pale pink as a finishing touch.

"My! but won't mother be pleased with her bonnot?" he said, a gratified look in his big blue eyes. "Thank you very much, but I fear my quarter is not pay enough for it," extending ten pennies and three five cent pieces. "I held a horse for a man this morning for the last five cents."

"It is ample pay, and I was only too glad to do it

for your mother; I think she must be a good

"She is that, ma'am. If you will be at the rally, maybe you will see her in her new bonnet."

"Thank you, I will be there."

Billy's cheery whistle could be heard as he walked rapidly up the street, enjoying in imagination his mother's surprise and his anticipated pleasure, while his grateful heart sang praises to the little milliner who had helped him so much.

Neither Billy nor Miss Gray knew that close beside the screen shielding the work counter from view sat a lady who had been an interested listener to most of their conversation. She was extremely wealthy, but her black dress and somber veil testified to recent sorrow. She had lost both husband and child, and her thoughts and feelings had been bitter and rebellious, forgetting that the helping to bear another's burden makes one's own the lighter. She went out from the little millinery shop determined to try to bring sunshine to some heart and to help someone having less of this world's goods than she She almost wished she was a milliner and could trim some poor body's old bonnet.

"Not what we give, but what we share, For the gift without the giver is bare. Who giveth himself with his alms feeds three-Himself, his hungering neighbor and Me!"

### Mighty Cure-All

Several gentlemen were talking one evening at the house of a friend, when one of them exclaimed, "Ah, depend upon it, a soft answer is a mighty cure-all."

At this stage of the conversation, a boy, who sat behind at a table studying his Latin grammar, began to listen, and repeated, as he thought, quite to himself, "A soft answer is a mighty cure-all." "Yes, that's it," cried the gentleman, starting, and turning round to see where the echo came from; "yes, that's it; don't you think so, my lad?" The boy blushed a little at finding himself so unexpectedly addressed. but answered, "I don't know as I understand you,

"Well, I'll explain, then," said the gentleman, wheeling round in his chair; "for it is a principle you

ought to understand and act upon; besides, it is the principle which is going to conquer the world." The boy looked more puzzled than ever, and thought he should like to know something that was equal to Alexander himself.

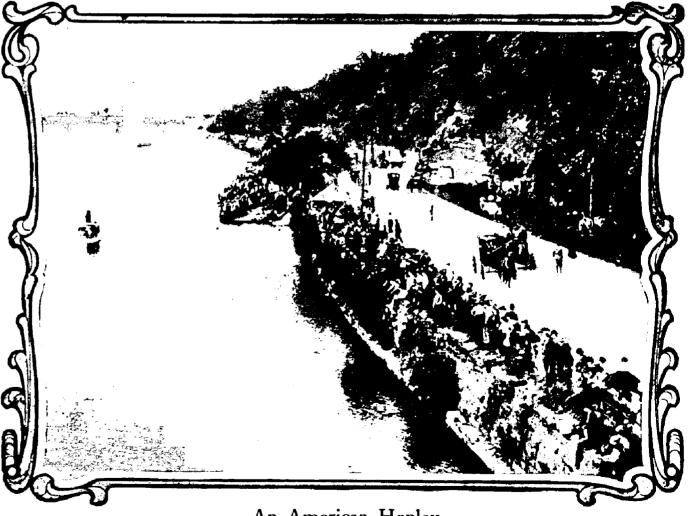

"I might as well explain," said he, "by telling you about the first time it conquered me. My father was an officer, and his notion was to settle everything by fighting; if a boy ever gave me a saucy word, it was, 'Fight 'em, Charley, fight 'em!'

"By and by I was sent to the famous and it so happened that my seat was next to a lad named Tom Tucker. When I found he lived in a small house behind the academy, I began to stfut a little and talk about what my father was; but as he was a capital scholar, very much thought of by the boys, besides being excellent at bat and ball, we were soon on pretty good terms, and so it went on for some time. After a while, some fellows of my stamp, and I with the rest, got into a difficulty with one of the ushers; and somehow or other, we got the notion that Tom Tucker was at the bottom of it.

"'Tom Tucker! who is he?' I cried, angrily. 'I'll let him know who I am;' and we rattled on, until we fairly talked ourselves into a parcel of wolves. The boys then set me on to go down to Tom Tucker's, and let him know what he had to expect. Swelling with rage, I bolted into his yard, where he was at work with Trip and his little sister. 'I'll teach you to talk about me in this way,' I thundered, marching up to him. He never winced, or seemed the least frightened, but stood still, looking at me as mute as a lamb. 'Tell me,' I cried, throwing down my books, doubling up my fist, and sliding up to him, 'tell me, or I'll'-kill you, I was going to say, for murder was in my heart. He stepped to one side, but answered firmly, yet mildly, 'Charles, you may strike me as much as you please; I tell you I shan't strike back again; fighting is a poor way to settle difficulties. I'm thinking, when you are Charles Everett, I'll talk with

"Oh, what an answer was that! how it cowed me down! so firm, and yet so mild. I felt there was no fun in having the fight all on one side. I was ashamed of myself, my temper, and everything about me. I longed to get out of his sight. I saw what a poor, foolish way my way of doing things was. I felt that Tom had completely got the better of me; that there was power in his principles superior to anything I had ever seen before; and from that hour Tom Tucker had an influence over me which nobouy ever had before or since; it has been for good, too. That, you see, is the power, the mighty moral power of a soft answer.

"I have been about the world a great deal since then, and I believe," said the gentleman, "that nearly all, if not all the bickerings, the quarrels, the disputes which arise among men, women, or children, in families, neighborhoods, churches, or even nations, can be cured by the mighty moral power of a soft answer; for the Scripture has it. 'A soft answer turneth away wrath.' Yes, yes, it is just so; it stops the leak in the beginning."-Bapt. Memorial, 1852.

An American Henley

Americans will no longer have to go to England to attend a Henley regatta. We have a Henley of our own now, on a river that is admirably suited for rowing meets, the historic Schuylkill. In many respects this Henley is far superior to that of England. The narrow little river near London, to which the rank and fashion of the United Kingdom flock during the regatta week, is weefully inadequate to furnish viewing accommodation to the spectators, and the crowded condition of the course during a race leaves scarcely room for the earsmen to sweep through. There is no such disadvantage on the American Henley. The width of the river is sufficient to provide accommodation for all the boats likely to be gathered there, and the magnificent heights along the course are natural grand stands on which hundreds of thousands may sit and watch the races without in the least overcrowding the vantage points.

The first American Henley Regatta, held during the past summer, was managed admirably. Young oarsmen from all the universities of the East competed. The victorious crew from Toronto, the famed Argonauts, won the Stewards' Cup, the most important of the trophies, but it is hoped that the next American Henley will see this trophy returned to the country to which it should belong.

The photograph shows the finish of one of the races on the American Henley. It gives an excellent idea of the splendid course provided by the stewards of the race. At the finish line there is a bridge from which many hundreds can s the most important part of each contest, while the river and the banks afford view points for almost any number of spectators.

CHAPTER XIV.

#### A TURN OF FORTUNE'S TIDE.

For a moment Rob's heart beat quick with joy, and his face became radiant. Then it changed again as he said, quietly:

"I think you must be mistaken, sir, for I received a cablegram in America that my father was too ill to travel, and longed to see me before he died. That is the reason I am now here."

"No," asserted the stranger, whose name, as Rob afterwards learned, was Bishop, "I am confident there can be no mistake, for I saw Dr. and Mrs. Mason Hinckley in Hong Kong. I was newly arrived and had gone with an acquaintance to arrange for a lot of stuff to be taken aboard the Canton boat. While we were there another boat of the same line came in from the upper Si Kiang. She had but two European passengers, a lady and her husband, who was so weak from illness that we assisted him to a carriage. My friend knew them slightly, and after they had gone he told me they were a missionary doctor and his wife from Wu Hsing, that their name was Hinckley, that the doctor had been critically ill, but had most unexpectedly rallied so that he was able to travel, and that they were to leave for the States on the China, which sailed that evening. All this was distinctly impressed on my mind by the news of the Wu Hsing outbreak, which came a week later, and I was glad to remember that two at least of the possible victims had escaped in time."

Rob listened breathlessly to these details, and when Mr. Bishop finished speaking he exclaimed:

"They are alive, then, and safe! If I only had known and stayed quietly where I was! Do you remember the date, sir, on which you saw them in Hong Kong?"

"Yes, it was the 10th of last month."

"The very day on which I was to have sailed from Tacoma, and they must have sent another cable after I left liatton. It's all right, though, and I am too glad to care about anything else."

"It is too bad that you have missed each other, and still are on opposite sides of the world; but I suppose you will follow them on the next homeward-bound steamer, and so rejoin them inside of another six weeks. I envy you, and only wish I had a prospect of again seeing the States within the same number

"I expect your chance is several times better than mine," laughed Rob, who for the moment was too light-hearted to give serious thought to his own awkward predicament. "I would go quick enough if I could; but I haven't the money even to pay my fare to Hong Kong. So it looks as if I'd have to stay here until I can earn the price of a ticket back to where I just came from. Do you happen to know anyone who could give me a job?"

"I can't say at this moment," replied Mr. Bishop, regarding the boy keenly as he spoke, "but I may think of someone. Where are you staying?"

"Nowhere. I only came on this morning's boat,

"Nowhere, I only came on the and my baggage still is on board."

"Then suppose you get it up here and stay with me for a day or two while you look around. I've a big house with plenty of room, and shall be glad of your company. Besides, I expect you can help me a good deal with my Chinese studies."

"All right, sir," assented Rob, promptly accepting this proposition, "and I'll be back inside of an hour."

With this our lad hurried away, saying to himselt as he went: "I believe I must be one of the luckiest fellows in the world, and only a little while ago I thought I was one of the most miserable. My biggest bit of luck, though, was having Jo come to live at Hatton and teach me Chinese, for that seems about the most valuable accomplishment a fellow can have out here. I do wonder what became of him."

Rob crossed the canal bridge, went out through the big gate, that promptly was opened at his approach, and turned down Heavenly Clouds street with the assured air of one who had resided in Canton all his life. Then he received a shock and at the same time proved himself to be one of the very newest of new arrivals in that crafty city of poverty-sharpened wits. On a bit of straw matting spread above the granite flagging of the narrow roadway lay a child three or four years old, apparently in the very grasp of death. Its eyes were closed, its pale features were distorted as though by a spasm, it was gasping for breath, and its hands were tightly clenched, while its poor little body was only partially hidden beneath a bit of ragged blue cloth. Beside the dying child knelt a mother, bending over it and rocking her body to and fro in an agony of grief, while tears streamed from her eyes. She, too, was clad in rags, and evidently was in the last extremity of poverty, since she had not even a kennel in which to conceal her dying child from the curious gaze of the swarming street. No one stopped to speak with her, or to offer her the slightest aid in this time of her sore distress, and as Rob with swelling heart gazed on this pitiful picture he said to himself that all Chinese were brutes and unworthy the name of human beings.

"Can't something be done for them?" he asked of a passerby and speaking in Chinese; but the man only laughed and hurried on without answering. Then Rob spoke to the woman herself, but her grief was too great to permit her to take heed, and she only

stroked the face of her dying child with gestures of despair. At this, feeling powerless to aid her by any other means, Rob drew a silver dollar from his pocket and gently laid it on the mat beside the little sufferer. Then he hurried away.

While he was within sight the woman did not alter her position, nor offer to pick up his gift. Only when he had disappeared, and the stealthy hand of a street urchin was about to close over the coveted coin, did she snatch it from the mat, spring to her feet, deal the would-be thief a stinging box on the ear, pick up her opium drugged child and serenely walk away, well satisfied with the success of her carefully planned tableau. When Rob returned that way he wondered what had become of the dying child who so had excited his sympathics, and it was only on the following day, when he again saw them at the same place going through the same performance, that he realized how he had been duped.

On that first morning he transferred his belongings from the steamer to the house of his newly-made friend, who told him that as there was nothing in particular for him to do just then he was free to go where he pleased. So he strolled to the river front of the Shameen, where from one of the tree-shaded benches placed at intervals along its length, he watched the wonderful life of the river with its swarming junks and sampans. After a while, attracted by a huge white and yellow nondescript appearing craft moored in the stream at some distance above where he sat, he walked in that direction for a closer view. He had proceeded but a few steps when he was more than ever puzzled to note that above the object of his curiosity floated an American flag while he could also see the grim muzzles of enormous guns protruding from various parts of its superstructure. It evidently was a ship of some kind and also a man-of-war; but to Rob's eyes it was of even stranger appearance than the closely packed acres of Chinese craft surrounding it. He finally decided that it must be a wreck, resting on the bottom of the river, since its deck appeared to be but a few inches above the turbid waters, and he wondered why

ENTERING THE SAMPAN, WAS SQULLED OUT TO THE PLOATING FORTHERS

its crew sauntering back and forth beneath the awnings did not exhibit more concern.

While Rob was thus puzzling, a young man wearing the uniform of an American naval officer walked briskly up to where he was standing and signalled a sampan.

"Can you tell me, sir," asked our lad, addressing this officer, "what American ship that is out there and how she got wrecked?"

"Wrecked!" repeated the other, "what do you mean by wrecked? She looks all right to me. Is anything the matter with the old packet?"

"Of course I don't know much about wrecks," replied Rob, a little nettled by the officer's tone, "but if a ship sunk to the bottom of a Chinese river nearly ten thousand miles from home isn't wrecked, then the word must mean something different from what I think it does."

"But she isn't sunk. She's floating all right and showing fully as much free board as she did when we brought her across the Pacific nearly two years ago. Monitors always look that way, you know."

"Monitor! Is she a monitor?" cried Rob, who never

"Monitor! Is she a monitor?" cried Rob, who never before had seen one of this peculiarly American type of warship.

"To be sure. She is the United States monitor Monterey, one of the finest of her class, and with the exception of her sister ship, the Monadnock, now at Shanghai, the most powerful fighting machine now afloat in Asiatic waters. Wouldn't you like to go aboard and take a look at her?"

Of course Rob gladly accepted this invitation, and, entering the sampan with Lieutenant Hibbard, was sculled out to the floating fortress, which always lies off Canton, providing a safe refuge for foreigners against a storm of wrath such as sometimes sweeps over that turbulent city. She is at the same time a most effective peace keeper, since the Chinese know as well as anyone that her powerful guns could within a few hours lay their metropolis in ruins.

The Monterey is famous as having been the first ship of her class to cross the Pacific to Manila, where she added such strength to Dewey's handful of warships as to render his position there impregnable.

On gaining her side, Rob found the rail to be quite

two feet above water, instead of only a few inches as he had supposed. He also found her to be of great breadth of beam, with wide sweeps of unencumbered deck both forward and aft. Safely below the water line he found roomy, well ventilated quarters for officers and crew, as well as ample engine, coal and ammunition spaces. He marvelled at her huge guns polished until they shone, mounted fore and aft, in steel turrets of a strength and construction to defy the most powerful of modern missiles. At the san... time these could be revolved at will by a mechanism so delicate as to be controlled by a finger. Rob took tiffin with the officers of the wardroom mess, whom he entertained with news from the States and from Manila; and when late in the afternoon he again was set on shore, he felt that his first day in Canton, in spite of its clouded beginning, had been one of the very happiest and most interesting days of his life.

That evening Mr. Bishop, whom our lad regarded at once as a friend and employer, found leisure for a long conversation with him, during which he said "As you probably know, one of the most valuable railway concessions in China, that for a line from this city to Hankow on the Yang Tse Kiang, nearly a thousand miles due north from here, has been granted to an American syndicate. Another concession for a line from Hankow to Pekin was granted a year earlier to the Belgians. These two railways meeting at the metropolis of Central China will form a grand trunk line extending nearly two thousand miles north and south through the very heart of the empire. The Belgians already are at work on the construction of their line, while the Americans have made their surveys and are ready to begin construction. I am an American engineer employed by the syndicate, and as a preliminary step to my further work I am about to undertake a journey of investigation from here to Hankow, and possibly to Pekin. My plans for this journey are so nearly completed that I could start tomorrow, but I have not as yet secured a satisfactory interpreter. Will you accept the position? The trip will be long and to a certain extent dangerous: but the pay will, I think, be sufficient to carry you from Shanghai to America after our journey is completed. What do you say? Are you ready to plunge into the heart of China and bury yourself from the world for the next two or three months, or do you prefer to remain here and look for some easier job?"

#### CHAPTER XV.

#### IN THE HEART OF UNKNOWN CHINA.

That Rob accepted Mr. Bishop's proposition goes without saying; for he was an American boy, and, as such, was filled to the brim with genuine-love of the adventure and excitement attending exploration in strange countries. Thus, two days after the offer was made, he found himself a very important member of an expedition setting forth from the great southern city of Canton and bound for the far north. Two months later a junk flying the American flag and having on board our travelers, drifted with the tawny flood of the mighty Yang-tse-Klang (Son of the Sea river) along the crowded water front of Hankow, a city of such commercial energy that it is known as the Chicago of China.

During the weeks that had elapsed since they left the last traces of western civilization at Canton, they had seen no white man, nor heard a word of English except such as they spoke to each other. They had traveled by sampan up the North River and the Wu Shin, across the province of Kwang Tung to the head of navigation at Ping-Shih. Here they had engaged coolies to transport their luggage, camp outfit, and provisions over the "carry" thirty miles long across the Nan-Ling mountains to Chen-Chow, a quaint, old. walled town, marking the head of navigation on the Yu-Tan river, a branch of the Sian Kiang, which, in turn, flows northward into the Yang-tse. There they had once more chartered a junk, and, always accompanied by a couple of slim, light draught, Chinese guard boats had sailed, poled, or drifted across the great inland province of Hu-nan, which is half again as large as the state of New York.

Although always using their boats as headquarter, and for the transportation of supplies, the two Americans had traveled most of the way by land on foot on pony back, or in sedan chairs borne by coolies. They had slept in temples, examination halls, tea hongs, (warehouses) in official yamens, and occasionally, but never when they could help it, in crowded vermin-infested taverns, always surrounded by throngs of excited spectators, who poked hole through the paper windows, or widened cracks in the floors of overhead rooms, to gratify their curiosity by peering at the ridiculous looking barbarians.

While crossing the Nan-ling mountains they had traversed a portion of one of China's great nation highways constructed thousands of years ago: ar apparently, never since repaired. Originally fiftee feet of its width was paved with large flat stonfour feet square, and from twelve to eighteen inche thick. Many of these stones had disappeared, to one could tell how, nor where to, leaving gapit and bottomless holes to entrap the unwary. maining blocks were deeply hollowed by the ba feet of millions of burden-hearing coolies, and scorwith wheelbarrow grooves. This great highway we formerly lined along its hundreds of miles of lengt with temples, tea houses, rest houses, and shops, besuch of these as have not disappeared are now ruins and serve only as haunts for highwayme levers and beggars.

In the remote past, the several states or provinof China, were independent kingdoms, waging wupon each other; and even to this day the inhabitants of each province regard the people of the adjoining as "foreigners." So they fortified themselves against each other, and our explorers were so fortunate as to come across one of these fortifications. It was a high and very thick wall of masonryhaving battlements, and massive gateways surmounted by a watchtower, built on a boundary lineacross the highway, where the latter occupied a narrow valley. The hills on either hand were low enough to be easy of ascent, but the impregnable wall reached only from side to side of the valley.

"What's the matter with walking around an end of it?" asked Rob, staring at this triumph of defensive architecture.

"Nothing at all, that I can see," replied the engineer; "only I suppose no Chinese ever would think of doing so.

Again the road led over a high arched bridge that once had crossed a stream; but the stream had altered its course and gone elsewhere, perhaps hundreds of years ago, since no trace even of its bed now remained. But because the road went over this bridge, the cargo coolies, grunting beneath their burdens, continued to toil up the steep ascent and down the other side, without ever a thought of making a new path around it.

'I won't climb over it at any rate," declared Rob. So he and the engineer walked around; their own coolies followed them like a flock of sheep, and those on the bridge stared in amazement at the barbarians who thus dared depart from established custom.

Although other American engineers had preceded our travelers through this country, the foreigner still was such a novelty, that they were viewed by thousands of people who never before had seen one, and who crowded about them in embarrassing throngs. At the same time they never were ill-treated nor even molested; for the Chinese unless roused to a blind fury by wrongs, real or fancied, are the most peaceable and courteous of people. To be sure our friends nearly always were spoken of and addressed as "Fan Kwei" (Foreign Devils), but this was because the natives never had heard foreigners called anything else.

To Mr. Bishop's surprise he discovered or rather Rob discovered for him, that many of the Hu-nan people instead of being opposed to the construction of a railway through their country, were desirous for its coming. Not on account of the facilities it would offer for travel and the transportation of their products, but because it was rumored far and wide that it would pay liberally for such graves as must be removed from its right of way. Formerly and even now, in certain districts the grave problem was one of the most serious encountered by the projectors of Chinese railways. Finally it was made a commercial proposition, and the railway companies agreed to pay for such graves as came within their lines, at a rate of eight taels, (about eleven dollars) each.

Now such of the Chinese as understand this arrangement are more than willing to thus turn their ancestors to profitable account.

As the dead are not collected in regularly established burying grounds, but are scattered about in fields, gardens, or wherever it is most convenient to place them, and as the entire country is thickly sown with these precious relics, no line can be so run as to avoid them. Consequently they must be bought up and removed. For some time, Rob could not account for the great anxiety shown by the natives to learn the exact location of the line. Finally, however, he discovered that those persons having graves known to be on the line, could raise money on them in advance; while such as had none, proposed to borrow or purchase a few ancestors at places so remote as to be beyond a possibility of disturbance, and rebury them in more profitable locations.

In the cities of Siang-tan and Chang-sha, both on waters navigable by large Yang-tse-Kiang junks, our travelers found shops equipped with foreign goods, notably with American flour, prints, and canned goods, though they did not meet an American or a European in either place. This discovery was of particular interest to Mr. Bishop, as the appearance in those remote places and under existing conditions of these goods promised a vast extension of similar trade upon completion of the railway he was about

Thus the entire trip had proved intensely interesting and its results were so highly satisfactory that as it drew to a close with their near approach to Hankow our explorers already were preparing for another from that point to Pekin.

Much as they had enjoyed their journey, however, they were not sorry to see the European buildings in the Mission compounds, and along the bund at Hankow, and it was good to hear their own speech once more. It also was good to sit down to in American table, eat home-cooked food, and, above all to sleep between sheets in American beds. But with all these things to be enjoyed, came two disappointments. Rob's lay in the entire absence of the letters that he had hoped to find awaiting him at this point. From Canton he had written both to his uncle and his parents at Hatton, requesting answers to be sent to Hankow; but the eagerly expected letters had not appeared. A quantity awaited Mr. Bishop, and in them lay his disappointment, for certain of these ontained news that rendered it necessary for him to eturn at once to Canton. Thus he must give up the

proposed overland journey to Pekin. "It is too bad!" he exclaimed. "There is so much want to find out about that Northern line, its contruction, the nature of the country it traverses, the feeling of the people regarding it, and a dozen other things. Now I must indefinitely postpone the trip and so remain in ignorance of many things most

important for me to know." "I wish I could go for you," suggested Rob.

"That is an idea worth considering!" exclaimed the engineer. "I don't see why you shouldn't collect the very information I want. You are pretty well broken into the work by this time. But would you dare travel another thousand miles through China alone, especially in view of the rumors of trouble that we have been hearing lately?

"Of course, I would," replied Rob scornfully; "I can't see but what it is just as safe to travel here as in any other country, especially when one knows the

The conversation on this subject was long and earnest, but at its conclusion, it had been decided that Rob Hinckley provided with ample funds, should travel as special commissioner of the American railway syndicate from Hankow to Pekin. From the latter city he would return by rail and sea to Hong Kong, where Mr. Bishop would meet him, and

receive his report.
"By that time," said the latter, "your pay surely will amount to enough to carry you to America, with a substantial surplus beside.'

The only condition made by our lad was that upon his arrival in Shanghai, Mr. Bishop should cable to the States for information concerning Rob's parents, and should transmit the same to Pekin, there to await the latter's arrival.

A couple of days later, the companions who had traveled so far and endured so much together, separated, the engineer to proceed by steamer down the Yang-tse-Kiang, and Rob so confident in his own resources as not to dream of dangers that he could not overcome, taking the train for the north over the short section of Belgian railway already constructed. It carried him to the border of the province of Honan. Across this province and to the Hoang-ho or Yellow river, he made his way successfully though not without encountering many difficulties during the following month. Then his real troubles began; for no sooner had he crossed the great river which, on account of its frequent devastating floods, is called "China's Sorrow," than he found himself on the edge of a flerce "Storm of wrath" that threatened to sweep over the entire empire.

An almost unprecedented drouth had prevailed over the whole vast plain of northern China for nearly three years. For two years there had been no crops, and now, the same dreadful condition was promised for the third. Everywhere were starving, desperate people, who, in their ignorance attributed their woes to the evil influence of foreigners, and especially to the missionaries who sought to overthrow the gods of the country.

The priests taught that the angry gods thus were punishing the unbelief of the people, and that prosperity never would return to their land until every foreigner was driven from it. So it happened, that the inhabitants of three provinces were rising against missionaries and railway builders; robbing and killing all who did not fly in time;

CLAPPING INTO THE

> burning and destroying their property as well as that of all native converts to the new religion. At the same time, they were making pilgrimages to the shrines of their own gods, and imploring them to once more send the life-giving rains,

Rob had heard rumors of these things, but believing them to be exaggerated had refused to turn back. So he pushed doggedly ahead ever nearing the storm center. Finally late one day as he aphed a walled town in which he honed lodging for the night, he, suddenly, found himself beset by a mob of frantic rain dancers who rushed upon him from a sacred grove by the roadside. The slender escort of soldiers that had thus far accompanied our lad, instantly took to their heels, leaving him alone to face the hundreds of yelling demons, who firmly believed that, if they could take his life, the act would be pleasing to their insulted gods.

#### CHAPTER XVI.

#### "FISTS OF RIGHTEOUS HARMONY."

The people of China have suffered much at the hands of foreigners, and in their ignorance of everything beyond their own line of vision, imagine many grievances that really do not exist. Once China was the foremost nation of the earth, in arts, literature, commerce, and all that goes to the making of what we call civilization. She invented, used, and forgot a thousand things that the western world is only now discovering. She was sufficient unto herself, and desired only to be let alone.

But the western nations would not let her alone. They insisted upon forcing their unwelcome trade into the country, and moreover, upon conducting it themselves according to their own ideas. When she resisted their demands they took possession of her seaports, destroyed her forts, and warships, placed their own steamers, protected by gunboats on her rivers, monopolized her coasting trade, and even appropriated as their own, large slices of her territory.

Thus, while England holds the island of Hong

ways of the people, and their language as well as I Kong, together with two hundred square miles of the opposite mainland, Shanghai and Wei-hai-Wei, besides controlling the trade of the great Yang-tse valley, Russia on the north, has seized Manchuria. Germany occupies the province of Shang-tung, Portugal has for three hundred years been established at Macao, and France, the chief aggressor, already in possession of Anam and Tonquin, is making insidious, but certain progress northward through Yu-nan with covetous eyes cast in the direction of Canton, where she already has gained a foothold. Japan owns the great Chinese island of Formosa, and only awaits a favorable opportunity for seizing the opposite mainland province of Fu-kien, while even Italy has laid claim to a Chinese port and "Sphere of Influence.'

> All these foreign nations, together with Americans and Belgians, are building or are proposing to build, railways in China, and all of them with the further additions of Canada and Sweden, are overrunning the bewildered country with missionaries of clashing denominations, each of which teaches that it only is right while all the others are wrong. of these foreign teachers even go so far as to interfere with local governments, taking upon themselves the office of magistrate, administering the laws according to their own interpretation and always in favor of their own converts, at the same time demanding to be accorded all outward forms of respect due only to Mandarins.

> On the other hand the great mass of Chinese, groping in the darkness of the middle ages, burdened by densest ignorance, steeped in superstition, robbed by their rulers to the extreme of poverty and forced to unceasing toil from long before daylight until long after dark, every day of the week, throughout every year of their joyless lives, are taught by their priests and by others of their own race to whom they look for guidance, that all their sorrows including floods, famines, and plagues, are caused by the foreigners who are spreading over their country with the ultimate intention of seizing it and subjecting its people to their own barbarous customs. They are told that these same foreigners sweep the rain clouds from one portion of the sky to cause drouths, and gather them at another to produce devastating floods. and that they poison wells to bring on plagues. They are made to believe that the Foreign Devils collect Chinese children in asylums, homes, and hospitals for the sole purpose of extracting their eyes. to be used in enchantments; that every railway

sleeper and the foundation of every Christian edifice is laid upon living human bodies; and a thousand other tales equally terrifying.

To remedy these evils, the people are invited to form themselves into associations and thus gain strength for the destruction of the hated Foreign Devils, or at least to drive them back into the sea, whence they came. For the benefit of those who can read, pamphlets setting forth these views are written, printed by the million and distributed throughout the land; while the minds of the more ignorant are inflamed by pictured posters illustrating the horrors perpetrated by foreigners and broadcast in every direction.

To these invitations a Chinese readily responds; for there is nothing in which be more greatly delights than to belong to an association of any kind or for any purpose. Thus these societies for the exclusion of foreigners have sprung up like mushrooms, especially in those coast provinces where foreign influences are most noticeable; and strongest of them all is the great I-Ho-Chuan or "Fists of Righteous Harmony' Society, sometimes called "The Great

Sword Society," but known to the world at large as "Boxers," a name first used by the missonary correspondent of a foreign journal. The motto of this society as borne on its banners is "Protect the Empire; Exterminate Foreigners."

During the initiation of its members they fall into trances, and believe that while in this state the spirits of departed heroes enter their bodies. After that they are pronounced invulnerable to sword or bullet, and are declared to be possessed of a magic charm that no enemy may withstand.

In 1898 the Boxer movement was checked by the sudden declaration of China's young Emperor Kuang Hsu in favor of sweeping reforms based upon western ideas. These he proceeded to carry out with unsuspected energy, deposing corrupt officials in all parts of the empire, and replacing them with others who had been educated abroad. He issued edicts intended to revolutionize the army, the navy, the timehonored, but senseless methods of literary examination, and the manner of collecting taxes: which, if obeyed, would place his people upon the upward path of progress so recently and so successfully trodden by Japan. There is no doubt that the Emperor was sincere in his avowed determination to lift his distressed country from the depths to which it was sunk; and had he remained in power the awful Boxer uprising of two years later never would have taken place. But his enemies were too strong, and after a few months of praiseworthy effort, the young reformer was overthrown by a nowerful palace clique headed by his great aunt. Tsi An, and composed of the high officials whom he had removed from office. They forced him to sign a decree announcing his own abdication of the throne, and once more the Empress Dowager, China's worst enemy, assumed the reins of power.

At once all reform decrees were repealed, the old order of things was restored, and hatred of foreigners was preached more loudly, and more bitterly than ever. A new life was infused into the Boxer movement which, from that moment spread like wildfire over the northern provinces until in the summer of 1900 it reached its height. During that dreadful summer mission stations everywhere were looted and destroyed, while their unfortunate occupants were driven out to be killed or cast into loathsome prisons, from which death was their only release. Christian converts were massacred by scores and hundreds, railroad property was destroyed and railroad employees suffered the fate of the missionaries. A rumor to the effect that all foreigners, including members of legations, had been driven from Pekin. generally was believed; as was another stating that every foreign resident of Tien Tsin had been killed. Above all it was understood that the Empress Dowager was in full sympathy with the movement to rid her kingdom of foreigners, and would render every assistance in her power to those engaged in the effort.

Such was the condition of affairs in North China when in the early summer of 1900 the young American Rob Hinckley on a peaceful mission to Pekin, suddenly found himself deserted and alone in the presence of a mob of crazed fanatics intent upon taking his life. Our lad did not know why they wished to kill him; for, since leaving the Yang-tse river he had found an ever-increasing difficulty in comprehending the dialect spoken by the common people, until at length it had become wholly incomprehensible. Thus he knew almost nothing of the Boxer movement, nor of the awful state of affairs existing in the country between him and Pekin.

He, however, instantly recognized the danger of his present position, and clapping spurs to the jaded pony he was riding, he dashed away in the direction of the nearest city gate, with the mob in full cry at his heels. The distance was short, and Rob was within fifty feet of the outer gate with a good lead of his pursuers, when all at once it occurred to him that he was about to jump from the frying pan into the fire; since once within the city walls, his enemies could close all exits and hunt him down at their leisure. With this, he pulled his pony so sharply to one side that the animal already exhausted to the point of dropping, stumbled and fell, flinging Rob to earth over his head. As the lad scrambled to his feet, he was amazed to hear in English a shout of:

'Keep on to the gate! It's your only chance!"

Although he could see no one in that direction, the voice seemed to come from the gateway itself, and as his madly yelling pursuers now were close upon and darted forward on his original course.

A few minutes earlier, a young Chinese, clad in the uniform of an officer of Imperial Troops, stood at a narrow loophole in the watchtower above the city gate gazing listlessly outward over a vast expanse of flat, parched, uninteresting country. He had

THEN A SIMULTANEOUS EXCLAMATION, "ROB BINKLEY" "CHINESE JOE"

carelessly noted the approach from afar of Rob's little party, whom he supposed to be ordinary native travelers, and had only been aroused from his apathy by the yells of the rain dancers, as they raised the cry of "Death to the Foreign Devil!"

"They must be mistaken," thought the officer, "for there can't be any foreigners left in this part of the country." He watched Rob's flight with evergrowing interest; and was about to descend from the tower so as to meet him at the gate, when the

him, Rob accepted this advice so strangely given, young American attempted to change his pony's Then the watcher uttered the surprising course. call that again altered Rob's determination; and, in another moment was springing down the flight of stone steps leading to the outer gateway. As he reached it, Rob had just entered, and was starting across the barbican, towards the inner gate.

'Stop!" shouted the young Chinese. "Come here. quick, and help me!"

Rob hesitated only the fraction of a second and then did as he was bidden. The Chinese already was straining at one of the two, massive, iron-bound doors of the gateway; and, in another moment Rob was adding every ounce of his own strength to the effort. It yielded slowly, and its hinges creaked rustily as it swung heavily into place,

"Now the other, quick!" exclaimed the stranger, and, with an effort that nearly started blood from their swelling veins, the two young fellows closed the great valve in the very faces of the frantic outside mob that flung themselves bodily against it mad with baffled rage. They could not open it; for a stout iron bolt had dropped into place as the gate was closed. and nothing short of a cannonade could now force an

"Follow me!" said the Chinese huskily, and panting from his recent exertion, at the same time turning up the narrow stairway leading to the watchtower, and Rob obeyed.

The latter was full of perplexity at finding in this out-of-the-way place a Chinese who not only spoke English, but apparently was willing to endanger him self to rescue a foreigner from a mob. So quick had been all their movements since he darted through the gateway that he had not yet obtained a view of his rescuer's face, and, of course, had not been able to question him.

In the tower, at the top of the stairway, he found his strange companion taking a quick view of the raging mob below. As he stepped to his side the young Chinese turned and stared him full in the eyes. For a moment they regarded each other in amazed silence. Then a simultaneous exclamation burst from their lips.

"Rob Hinckley!"

"Chinese Jo!

(To be continued.)

## Horse Sense and False Motions By H. G.

"The boy has horse sense. I never knew him to spend a dollar foolishly in his life."

This terse statement, somewhat unusual in its simplicity, constituted the whole of a letter of recommendation once given by a man well known in the public life of Michigan as an introduction for a boy who was seeking a bank position in one of the larger cities of the state. On the strength of that latter and of the boy's modest but manly demeanor the bank people gave the young applicant the place. though a number of prior applications had been made.

"Horse sense" is a homely term enough, but it contains the description of perhaps the most valuable qualification for life which a young fellow may possess. Not only is common sense a prerequisite to success in business, but in every possible undertaking. It is but another name for good judgment, and it embraces a multitude of virtues.

Common sense teaches a boy or a man to apply his powers to best advantage. It teaches him to conserve his energy and that economy of time is as essential to progress as saving money is to a bank account. It takes a man or boy out of ruts and at the same time it nips false and exaggerated notions and curbs visionary dreams.

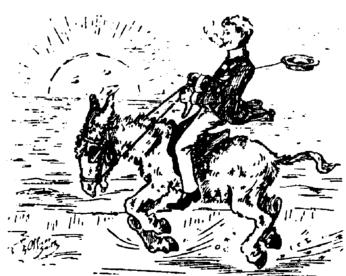

Common sense teaches the young worker not to make false motions. Have you ever seen printers at work at a case setting type? There are two distinct classes of compositors. To one belongs the man who simply and quietly picks up type and places it in the stick, directly, with an even, quiet gait, which is swift because never a moment is wasted. To the other belongs the man who uses false motions. I have seen a compositor who habitually made three distinct motions in transferring a piece of type from the case to his stick: the reach, the return and a showy, perhaps graceful, but utterly useless little circle or downward swing of the hand just before the type is placed against the rule. It looks pretty to the novice, but in the course of a day it wastes thousands of precious instants. Three motions instead of two-they require a third more time, a third more effort, a third more expenditure of energy. Therefore a third less work is accomplished in a given time by the man who uses that third motion than by the man who does not. That third motion is not necessary. It is a matter of habit, usually cultivated deliberately, too.

It is just so in every bit of work a man or boy may have to do. The swift men are not the showy men, usually. The chopper whose pile of chips at the end of the day is largest is the chopper who strikes straight, direct, well-aimed blows at his mark every time and keeps it up. The young clerk who gets through the most waybills in the freight office in the day is the one who has no false motions to make. The operator who produces the most and the cleanest copy from the typewriter, is not the one who swings his wrist to the greatest height, or bangs his carriage with the greatest vigor. Any boy knows that the baseball player who holds batting records is not the

one who knocks long, beautiful, skyscraping flies, away up into the blue and far out over the field-for the outfielders to gather lovingly in. No, the successful batter is the man who hits straight, sharp liners, or hot grounders in the right spots, very commonplace appearing, but very base-winning, and hits them every time he goes to bat.

So it is in business. The boy who wins is the boy without false motions—the boy who does what he does directly, decisively, and keeps up the pace, though It may not appear to the observer to be a very swift one. The old story of the hare and the tortoise is just as true to-day as it was in Aesop's time.

Misdirected energy has cost many a man the fruits

of his talents. False motions dissipate your force divide your power, destroy your effectiveness. You need every ounce of your energy. See that you direct it rightly. Cultivate horse sense-it can be cultivated. When you undertake a thing think about it:

Two of them!

#### Why Grant Never Swore

While sitting with him at the camp-fire late one night, after every one else had gone to bed. I said to him: "General, it seems singular that you have gone through all the tumble of army service and frontier life, and have never been provoked into swearing. I have never heard you utter an oath or use an imprecation."

"Well, somehow or other, I never learned to swear," he replied. "When a boy I seemed to have an aversion to it, and when I became a man I saw the folly of it. I have always noticed, too, that swearing helps to arouse a man's anger; and when a man flies into a passion, his adversary who keeps cool always gets the better of him. In fact, I never could see the use of swearing. I think it is the case with many people who swear excessively that it is a mere habit, and that they do not mean to be profane; but, to say the least, it is a great waste of time."-Michigan Christian Advocate.

look on all sides of it; strip it of all glamour and give it honest inspection. This isn't wasting time; it is simply knowing your ground as any wise general does when he plans a campaign. Then decide and do what you decide to do, with all your force and all your resources. Don't show off. Don't try to make people think you are something which you are not. and don't even be anxious to have them give you credit for all that you are. Be a man and do good, complete, thorough work, always and everywhere. People will not be long in seeing your real worth. and you may be sure that people are watching you oftener than you have any idea they are. It's much more effective when you have said nothing of your powers in any direction and have made no uncalledfor attempt to exhibit them, to have your friends or acquaintances find out for themselves what you can accomplish or have attained.

Be sensible. Don't display yourself or your ablities. Keep a reserve in power and in knowledge Don't let your efforts be like fireworks which are the more effective the more they spread. Concentrate them and then-"saw wood."

#### A Clever Way to Catch Bears

The inhabitants of California in the days of Mexi can rule had a unique way of capturing the black bears that infested the foothills near the coast.

Bruin is naturally a vegetarian, but when he can get a piece of fresh meat he devours it greedily The Mexicans knew this, and prepared their trap thus:

An oak tree was found with two horizontal limbs one above the other. On the lower limb a piece of fresh meat was nailed. From the limb above a rope was suspended, at the end of which a heavy rock waattached, the rock hanging some inches above and inside of the meat.

At night Mr. Bear would come prowling arounand, smelling the meat, he would quickly climb up the tree and walk out on the limb to which it wa nailed. Then, in order to reach the appetizing mor sel, he would have to shove aside the stone with hi nose. Before the meat could be torn off, the stonwould swing back, hitting Bruin a hard blow.

This was enough to arouse his temper, so he would hit back with his paw. But the stone did not mind. it only swung out and came back with a harder whack. Then Bruin would get "real mad" and begin boxing the rock until it would fetch him a blow hard enough to knock him out of the tree. Underneath there would be a deep hole to catch him, and the fall would so disable him as to leave him completely a the mercy of the Mexicans next morning.

FOR TEN NAMES-A piece of the hull of the Porcupit the last remnant of the fleet that won Perry's victory, wi he yours if you send us the names and addresses of ten boys who are not AMERICAN BOY subscribers.

## Just Between Gurselves

There is one thing uppermost in my mind, boys, as the time comes for another talk with you, and that is

## American Boy Day At the St. Louis Exposition, Inly 5th

I have said something about this in my letter to the Companies of the Order of the American Boy which you will find in this number, and I ask you to turn to the O. A. B. page and read the letter.

But something more needs to be said. Since writing that letter I have found that it will be impossible to get the big Festival Hall for both July 5th and 6th, though at the time my letter was written to the Companies it seemed to be settled that we could have both days. We shall have, therefore, one day as American Boy Day and that day July 5th.

#### The Program

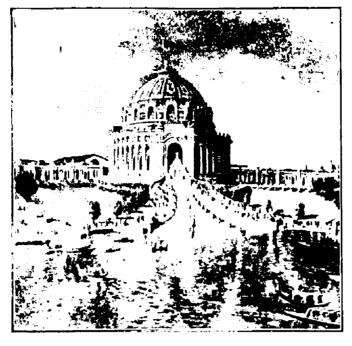

The program for the day has been put into my charge and the Exposition management look to me to make the day worthy of the name; I in turn look to you boys, without whose aid the day cannot be made a success.

Now, as to the nature of the program little can be said at this writing for I have just fairly started on the matter, having only a few days ago received the final word from the Exposition people. It has occurred to me that we might have two sessions-one in the morning and the other in the afternoon, giving the morning to boys of the Order of the American Boy who number over 10,000, in companies, and 5,000 not belonging to companies, and the afternoon to boys generally. The Exposition people have given us for the morning a convention hall seating 1.000 people, and for the afternoon the great Festival Hall, shown in the picture, which seats 3,000 people and occupies the most central and conspicuous place on the Exposition grounds, where all the great meetings of the Exposition will take place. This much only can I say about the programs for morning and afternoon: They will be made for boys and the performers generally will be boys-boy orators, boy debaters, boy musicians, with perhaps a few short addresses from men and women who know boys when they see them and know how to talk to them. You boys can help me much in building this program by making suggestions of things to do and people to do them. We want the best boy talent we can get for these programs and your help is needed in finding out where it is.

#### The Date Just Right

The first thing, of course, for every one of you to do is to make up your mind to go to the Exposition and go at a time that will permit you to enjoy the great Independence Day celebration of July 4th and the great AMERICAN BOY DAY that follows. You will, of course, consult your parents about this and suggest to them the great advantage to you in your being able to meet with so many hundreds of loyal American boys in two great gatherings, where you can get the inspiration and encouragement from seeing great things done by boys. And then, too, you will want to see the great Fourth of July celebrated at the Exposition. When I was a boy I attended the Centennial Exposition at Philadelphia; that was 28 years ago. About the only thing I distinctly remember of those days is the immense gathering on the grounds the night of Pennsylvania day-the greatest lay at the exposition, and the singing of "My Country. 'Tis of Thee" by a half a million men and women as they stood waiting in the darkness for the display of fireworks which was being delayed by some unforeseen occurrence. I remember the awe that fell tuon me and the flood of patriotic emotion that wept over me at the time. It was something I could ot have afforded to miss at any price. So the boy tho has the chance to enjoy the patriotic, soulthring celebrations of Independence Day and Amerair Boy day (July 4 and July 5) at St. Louis this year will remember them forever as great occasions in his life.

Your parents may think July a hot month in St. Louis. Well, we may al! make up our minds that whenever we go, unless it be in May or October or November, that it is going to be warm in St. Louis. Few, comparatively, will care to go when the Exposition is new and crude and the most of us will hestate about going at or near the close when everything is shopworn and all the life has gone out of it. From June 1 till October 1 will be the favorite season and between these dates there can be little choice in St. Louis in the matter of weather. July first to tenth will be as satisfactory from the standpoint of comfort as any period that is available to boys.

FERTIVAL HALL, AT THE CENTER OF THE EXPORITION GROUNDS. WHERE AMERICAN BOY DAY WILL BE CELEBRATED

School, as we all know, dismisses for the summer vacation late in June, and reconvenes early in September, so that the schoolboys of the country who wish to keep their school records intact will be confined, in the choice of time, to July and August, and will probably wish to go as soon after school dismisses as possible. In fact July 5th is just the time, all things considered, for boys, and I congratulate myself and you that we have obtained this day as our own.

#### The Athletic Program

I learn, too, from Mr. James E. Sullivan, Superintendent of the Physical Culture Department of the Exposition, that athletic contests will be arranged to take place July 4, 5 and 6th for elementary and high school boys, which boys are invited to enter. I hope that some of the American boys to whom I am talking may carry back home Public School Championship medals won at St. Louis for excellence in some department of athletics. Let me know if you wish to enter any one of the contests.

#### A Great Croud

Now, as I said in March, I am talking, I truly believe, to a quarter of a million boys. This is true if two and one-third boys read each copy of our paper, on the average. But let me be modest and say that the average is not over one and one-half; then I am talking to 165,000 boys. Now if only one in every 100 of you join with me to make American Boy Day a big success, I shall meet and shake hands personally with 1.650 of you, and, if you permit it, will say a word to you then about the splendid privilege we enjoy in being American boys. If 1,650 of you go to St. Louis when I do, fully four-fifths of you will go with parents or friends and then the question arises where will we find a hall big enough for us all. If more than one out of 100 comes—say two out of 100 -then somebody will have to stay out-doors, and that will not be the boys, I assure you.

### Now to Work

Well, boys, what are the things for us to do?

- 1. I must get a big indexed register at once, and as fast as I get the names of boys who agree to go to St. Louis for July 5th, I will put them down in the register with their addresses.
- 2. You boys will at once get to work with your parents and friends and endeavor
- to induce them to let you go with the crowd, if you are going at all. I know every boy whose pocketbook will let him is going, for a week at St. Louis will be worth a trip to Europe, a year's schooling, or a month of Fourth-of-Julys to any boy.
- 3. Talk up July 5th to your boy friends and, whether or not they are readers of the AMERICAN BOY, have them, if they are going at this time, send me their names and addresses, for I may have some notice to give them by mail from time to time.
- 4. Write me as often as you think of anything that will assist in making the program for American Boy Day the best possible. There are boy orators, boy poets, boy debaters, boy pianists, boy violinists, boy singers, boy quar-

tettes, clubs, orchestras, who can arrange to be at the Exposition at this time and lend their services to help make American Boy Day a success. Let me hear from them and about them.

5. I want to hear 3,000 boy voices joining in "America" and in the "Star Spangled Banner," led by a good band. Let us arrange to sing these songs and perhaps others. The words will be printed on the programs that will be distributed at the time, so that if there are boys so careless as not to have learned them by heart, they may sing them from the program.

#### Our Exposition Poet and Two Big Prizes

6. We want an American Boy poet for that day; one who will read his own poem from the rostrum. Who will be the one? It is not every boy who thinks he can do it worthily, who really can. But every boy can try. My associate publishers of THE AMERICAN BOY have authorized me to offer to the boy under twenty one years of age who sends me between now and June 20th the best poem of his own composing, of not less than ten stanzas, on the subject The American Boy (not our paper, of course, but the boy) a prize of twenty-five dollars. I am to be the judge of the poems submitted, and if I think that no poem offered is worthy of the subject or the occasion I am to reject them all. But you may be sure I shall try to find a worthy one. I shall ask the fortunate boy who wins this prize to read it at our great meeting in Festival Hall July 5th. The twenty five dollars will go a long ways toward enabling him to

As a further inducement to verse writers we offer \$10 to any boy under twenty one years of age who sends to us before June 20th four verses on the American Boy (not our publication) that may be sung to the tune "America," provided we accept it as being good enough to be printed and sung at our great gathering on July 5th.

- 7. Special instructions will be sent by mail to captains, and members of Companies of the Order of the American Boy regarding representatives, badges, banners, programs, etc., but right here let me urge every member of the order to put on his thinking cap, get a new pen, and write me whatever occurs to him concerning this great enterprise.
- 8. Attachments for American Boy badges will be sent every boy who proposes to go to St. Louis for July 5, so that every American boy may know every other on trains, in the city, or on the grounds, and it is hoped that this badge, which will not be sent until about the middle of June, will be all the introduction a boy will need among his fellows.

I am sure you will pardon me for taking up the whole page with talk on this subject when you doubtless expected me to answer some of the questions you have asked me. Nothing ought to interest you more than this great enterprise, for it is yours as well as ours.

In taking up this matter for you in answer to many letters urging me to undertake it. I feel that I am assuming a big responsibility and that it will take a large amount of my time, energy and thought, but if five—four—three—yes, if one thousand of you meet me in St. Louis at Festival Hall the fifth of July I know I shall feel amply repaid in looking into your earnest, intelligent faces and grasping your hands in fraternal greeting. Now, boys, for my sake, and for your own, hurrah for American Boy Day, and above all, "Get on the mark. Get set," and when the word is given, "GO."

Yours sincerely,

M-6 Sprague

The Louisiana Purchase practically included all or nearly all of Louisiana, Arkansas, Indian and Oklahoma Territories, Missouri, Kansas, Iowa. Nebraska, Minnesota, North and South Dakota, and Montana, part of Colorado, and virtually all of Wyoming, Idaho. Oregon and Washington—seventeen States and Territories in all, covering an area of almost 1,200,000 square miles, or nearly two-fifths of the total area, 3,025,500 square miles, of the United States. The price paid was \$15,000,000. Later treaties were required to settle some of the boundaries.—From the Ladies' Home Journal.

## The Fate of Old Abe, The War Eagle

While the capitol building at Madison, Wis., was burning on the twenty seventh of February last, boys and girls, as well as men and women, wandered about the capitol park exclaiming: "Oh, it is too had they can't get poor Old Abe out!" "Oh, why can't they save poor Old Abe?"

Perhaps there are few boys who do not know something of the history of Old Abe, the war eagle of Company C, of the Eighth Wisconsin Regiment. Boys who read THE AMERICAN BOY will remember the story of the war eagle as printed in the August, 1902, number in connection with a large picture of the famous bird. It will do no harm, however, to review the story.

In the spring of 1861 Old Abe was an eaglet in a great untidy nest in a tree among the Wisconsin forests. An Indian -Chlef Sky, of the Chippewasdiscovered his home on the banks of the Flambeau river, and capturing him sold him for a bushel of corn. The purchaser in turn sold him for five dollars, and in the Autumn of 1861 he came into the possession of Company C, of the Eighth Wisconsins, which was just then departing for the war. The soldiers named the bird Old Abe, in honor of President Lincoln. They made for him a perch in the form of a shield shaped like a heart, which, embellished with the stars and stripes, was mounted upon a staff and borne aloft beside the regimental flag which it was the glory of this company to carry. The bearing of Old Abe at the head of the regiment called forth such wild enthusiasm that before leaving Wisconsin Company C was offered \$200 for him. When the Company reached St. Louis the amount was raised to \$500, but the soldiers refused to sell.

Old Abe seemed to realize the importance of his position and conducted himself like a soldier. No soldier was braver In battle than was he. Though he was a target for many shots and although the Confederate General Price once said, "I would rather capture the Wisconsin eagle than a whole brigade," still the soldier bird was never wounded or taken prisoner. He was a constant source of inspiration to the men. When the battle raged most flercely, then it was that Old Abe appeared to be in his element, for, flapping his wings in the midst of the furious storm, he held his head erect, faced the flying bullets and screamed his deflance.

Old Abe seemed always to know when there was danger in the night, and his note of warning more than once saved times he was full of fun. On one occa-

sion he snatched a chicken from a frying pan and whirled off like a rocket with his prize, amid the cheers of the soldiers would often visit the tents, overturning buckets of water, tearing clothing and committing all kinds of pranks. He never forgot an injury done him. One day he endured the insults heaped upon him by a negro boy who persisted in tormenting him; thereupon he attacked the lad savagely and drove him out of the camp, and was never afterward Known to be friendly to the colored race.

One day he discovered a cup of peach brandy which he promptly appropriated to his own use, and the soldiers saw the humiliating spectacle of their proude eagle staggering like a drunken man, but the soldiers from threatened danger. At humiliating spectacle of their proud

that was the only time he so misbehaved. After the war was over Old Abe came into the possession of the State of Wis-The Captain of Company C, on presenting the bird to the Governor, said, Old Abe has been a good soldier, never flinching in battle nor on the march." Although his fighting days were over, he did not cease to hold a conspicuous place in the public eye. He was carried about in processions and parades and made an object of interest at fairs, reunions and conventions without number, sometimes appearing in a carriage or riding majestically on a cannon, or borne by his keeper on the old familiar perch, and everywhere greeted with cheers. He was one of the popular features of the Centennial Exposition in Philadelphia, and in the winter of 1878-9 he was a conspicuous figure at the old South Church Fair at Boston. Among his visitors there were a number of blind children, who longed to touch his plumage, as they could not see him. His keeper, willing to gratify the wish, placed his arm around the eagle's neck and head, thus protecting them from his sharp beak, while they tenderly stroked his glossy feathers.

Once while attending a state fair a dominick cock was given him for his dinner and the crowd watched to see him devour his prey, but, strange to say, the eagle regarded the young fowl with favor and spared his life, the pair dwelling together in harmony until the close of the fair, when the cock was liberated.

When at home in Madison Old Abeoccupied a room in the basement of the State House, but he frequently visited Lake Monona for a plunge bath, and was often seen in the capitol park mounted upon an old cannon. In the spring of 1881 Old Abe died in the arms of his sorrowing keeper. The first thought was to bury him with military honors in the capitol city cemetery, where lie hunureds of soldier dead, but it was finally decided to have him mounted and kept in the war museum of the State House. and the execuations of the cook. He Here the mortal remains of the brave old soldler for years occupied a prominent position, still winning the attention of old and young, until a few weeks ago the cruel flames reduced what was once "Old Abe-The War Eagle." to a handful of ashes; but the memory of the hero-bird will live long in the hearts of the boys and girls of our united republic.

#### Save Money and Trouble

Professional and business men, students, travelers, mechanics, sportsmen, find in these goods perfect fit, style, convenience and economy. Made of fine cloth and finished in pure starch.

## How I Broke the Record and Some Points to spurt for about a mindred yards at the string. He should cultivate the long.

About Running Melvin Sheppard, of the Brown Preparatory a second better than the record which

MELVIN BHEPPARD

utes 3% seconds, which is two-fifths of mile. He should see to it that he is able baseball captain of his day,

Melvin Sheppard, of the Brown Preparatory School of Philadelphia, smashed two national indoor interscholastic records February 27th in New York City, running a mile in 4 minutes 341-5 seconds, and cutting 114-5 seconds from the time made two years ago by II. Secon, of St. Paul's School, New York. He also won in the half mile run in the record which in the star runner at Yale. At the end of the race I was one hundred yards ahead of my leading competitor. Twenty five minutes 354 seconds.

Sheppard is a big youth whose wonderful ability as a runner marks him as the coming figure of prominence in the athletic world.—The Editor.

In training for the mile he should pay more attention to the stride and must the star runner at Yale. At the end of the race I was one hundred yards ahead of my leading competitor. Twenty five minutes later I took my place for the mile and must neglect the breathing, because a mile the star runner at Yale. At the end of the race I was one hundred yards ahead of my leading competitor. Twenty five minutes later I took my place for the mile and must neglect the breathing, because a mile the star runner at Yale. At the end of the race I was one hundred yards ahead of my leading competitor. Twenty five curivate a large lung capacity he should minutes later I took my place for the mile and the of the run two miles for a while, paying particular attention to his wind. When he coming figure of prominence in the athletic boy of Philadelphia, to keep in the lead for the mile. In training for the mile has heretofore been held by Parsons, now more attention to the stride and must the star runner at Yale. At the end of the run to neglect the breathing, because a mile the star runner at Yale. At the end of the stride and must mile for the mile a long run for a young athlete. To curivate a large lung capacity he should for the mile at least of the race I was also put ticular attention to his wind. When he coming the paying particular attention to the stride and must make the star runner at Yale. At the en 4 minutes 341-5 seconds. After I found mile to keep the muscles in shape. that I had the field beaten I did not runas fast as I might have run. After the race I was very much surprised to hear the announcer call out the time I had made. I was more surprised even than the spectators to learn that I had not only beaten my competitors, but had beaten the record.

> The Philadelphia Ledger said that I finished the mile with a sprinting pace, running on past the tape for nearly thirty yards before I slackened speed. A New York paper, speaking of the race, said that on the finish I gave the spectators as pretty a piece of quarter mile sprinting as it could be anyone's good fortune to witness and that the wonderful part of my feat was that I had not "turned a hair."

My advice to the young athlete in training for the half mile is to try and cultivate a long even stride that will enable him to get over the greatest distance possible with the least expenditure of energy. I would caution him, however, against overstriding, for that is very exhausting. To cultivate the stride let him start out running over the course very slowly at first and paying very close attention to how he strides. Let him On February 27th I went over to New keep on his toes while trying to develop York to run in the half mile and the a long and even pace. The half mile gait mile races of the National Interscholastic is very fast, and to get the best results Games. When we started on the half mile he must develop staying qualities, as it race I had the outside. At the sound of is a fast run from first to last. If the the pistol I made a spurt which soon put runner is not just qualified for the full me in the lead and up close to the line, half mile let him train for a longer dis-From the moment I took the lead I was tance, say one thousand yards, for a few never headed and won easily at 2 min- days, and then drop back to the half

to spurt for about a hundred yards at even stride, going as fast as he can with-Written For The American Boy out taxing his energy, and just before By Melvin Sheppard finishing get well up on his toes and spurt for about one hundred yards.

In training for the mile he should pay boy of Philadelphia, to keep in the lead for the mile. In training for the mile I for six of the ten laps in the mile, then, would begin about eight days before the seeing him slacken pace somewhat. I meet and keep at it every day, excepting spurted ahead until I had passed him the day before the meet, and on that day and won the race, by about one lap, in I would go out and jog for about half a

#### Veteran Baseball Players

George Van Haltren is the oldest base-George Van Haltren is the oldest base-ball player in active service today, with the exception of Jimmie Ryan. Jim O'Rourke and Jim McGuire. Van Haltren joined the Chicagos under Anson nearly eighteen years ago. He will this year play on the Pacific coast. O'Rourke will catch for the Bridgeport, Conn., team. His own son has recently joined that team. Jim McGuire has been playing in the big leagues eighteen years as catcher. team. Jim McGuire has been playing in the big lengues eighteen years as catcher. He played with Detroit last year. Farrell of the Bostons is starting in on his seventeenth year. Jimmie Ryan, last year with the Washingtons, is another old timer. He joined Anson at Chicago as pitcher and is still a great player. Detroit boys will be glad to know what has become of the great Detroit team that captured the pennant in 1887. Bennett, its famous catcher, lost both legs in a railroad accident, and runs a cigar store in Detroit. Ganzel, Baldwin, Getzein and Richardson have dropped out of sight. Dan Brouthers, at one time the hest hitter in the world, runs a hotel at Wappingers Falls, N. Y. Fred Dunlap, one of the best second basemen that ever one of the best second basemen that ever played ball, is dead. Little Jack Rowe the little shortstop, keeps a livery stable in Buffalo. "Deacon" White has retired, well off. Sam Thompson left off playing ball four years ago and is living in Michigan. Hanlon is manager of the Brook-

Many boys would like to know what Many boys would like to know what has become of Anson, in his time the greatest ball player in the world. His finish was with the New Yorks in 1896. The New Yorks kept him only twenty days, and he then opened a billiard room in Chicago. Anson was perhaps the star basoball captain of his day.

### How to Become Strong

PARTS-PART SEVEN EIGHT

BUNCHED OVER FORWARD BECAUSE HE IS TOO LAZY TO WALK

ATCH a person walk and you can well. tell whether or not he is strong and healthy. Not one out of ten athletes walks correctly. He can't. A top-heavy locomotive or ship would wobble just the same way when it moves. Yet lots of boys, and men, too, are rather proud of walking stiffly when they have of walking, begun to lay on muscle. Some of them Now, if at tread heavily like a truck horse. Others walk so flatly that their legs bow outwards. Others stalk instead of walking.

Look at any athletic field when the contestants appear on the ground, and observe how few of them really walk so that it is pleasing to look at them. Good boxers and fencers generally walk pretty

#### Has a Say

The School Principal Talks About Food. The Principal of a High School in a

flourishing California city says:

"For 23 years I worked in the school with only short summer vacations. I formed the habit of eating rapidly, mas-ticated poorly, which coupled with my odentary work led to indigestion, liver trouble, lame back and rheumatism.

shoes.

Do you think that you can walk? Just
step out smartly and, before your pro-truding foot strikes the ground, check
it and hold it in the air. Now, unless rouble, lame back and rheumatism

"Upon consulting physicians some doped me with drugs, while others preseribed dicting, and sometimes I got temporary relief, other times not. For 12 years I struggled along with this handleap to my work, seldom laid up but often a burden to myself with lameness and rheumatic pains,

Two years ago I met an old friend, a physician, who noticed at once my outof-health condition and who prescribed for me an exclusive diet of Grape-Nuts, milk and fruit.

"I followed his instructions, and in two months I felt like a new man, with no more headaches, rheumatism or liver crouble, and from that time to this Grape-Note has been my main food for morning and evening meals; am stronger and bealthler than I have been for years. without a trace of the old troubles.

"Judging from my present vigorous physical and mental state, I tell my peotele Methuselah may yet have to take mond place among the old men, for I feel like I will live a great many more

To all this remarkable change in health I am indebted to my wise friend and Grape-Nuts, and I hope the Postum Co. will continue to manufacture this life and health-giving food for several enturies yet, until I move to a world where indigestion is unknown." Name given by Postum Co., Battle Creek, Mich. Ask any physician what he knows

about Grape-Nuts. Those who have tried it know things.

There's a reason."

Look in each package for the famous little book, "The Road to Wellville."

SHOULDERS BRACED BACKWARD IN A MANNER BOTH HARMPUL AND RIDICULOUS

But dumb-bell shovers, trapeze gymnasts, Indian-club swingers, tug-ofwar men and almost all other athletes who develop their upper bodies incline to a walk as if they were bandy-legged. They put their feet down firmly enough too firmly, in fact. They plod instead

Now, if athletes walk in this ugly, waddling fashion, what can be expected of the mass of persons who pay no attention at all to their muscles?

Look around you on the street and see them-men, women and children-going Only about one in a hundred may be said to walk at all. The other ninetynine shuffle, slide, drag, plod, roll, waddle, teeter, mince, prance—but they don't walk!

It is laziness that makes boys shuffle as they walk so that you can hear the soles of their feet scrape the ground with each step. It is laziness that makes them wear their heels down at one side more than the other. It is laziness that makes them knock holes into the toes of their

it and hold it in the air. Now, unless your body stops instantly and smoothly and retains its balance without jerks or lurches, you may make up your mind that you can't walk.

Some boys swing up smartly enough from their toes and swing their feet well. But their bodies sway with each step as if they were poised on spiral springs like a jack-in-the-box. They don't know how to walk, although they imagine that they are walking heautifully. It is true that the forward and upward impetus in walking must be given by the toes. But their springiness and the springiness of the legs must not be like that of a limber hellspring that keeps on bobbing and wabbling long after it has been pulled. The leg and toe muscles must have the combined springiness and steadiness that you find in a iness and steadiness that you find in a fine carriage spring, which lifts the wagon over obstacles, but doesn't wagon of hounce it.

With each step the ball of the toe must give an upward impetus as well as a for-ward one. But the body must not bounce. give an upward impetus as well as a forward one. But the body must not bounce. That upward force must be taken by the knee, which bends just enough to take it and carry the foot clear of the ground. The foot must not be lifted higher than just enough to clear the ground. The toes should point almost straight in front, turning outward more and more as the body is propelled forward, until, at the moment the toe swings the body along the foot is well turned outward, but only for an instant. "Springing" the hody forward expresses it exactly. The toe should not throw the weight forward, but merely spring it shead, keeping it in full control all the time.

A person who is walking correctly in this way has his body in such perfect command that only an overwhelming force can throw him. It is hardly possible for him to trip so badly that he will fall forward. His knees would immediately take up part of the shock and the feet, being free instead of being dragged, will step forward to overcome the fall.

It is queer, but true, that many persons

It is queer, but true, that many persons

think more about the position of their upper bodies when they walk than they do about their legs. The poor legs have to learn to walk almost without the help of the brain. Every other person who thinks about his upper body is most anxious about the position of his shoulders. And what does he do as a rule? He pulls his shoulder blades back until, instead of being straight and graceful, he is actually deformed. He has forced his chest out, it is true; but he has also forced his lungs together in the back. By the same action he has thrown his arms entirely out of balance, so that they hang down almost behind his body instead of being carried at ease along his sides. think more about the position of their along his sides.

along his sides.

The way to walk straight is not to think of the shoulders at all. Hang your arms loosely at your sides and hold yourself erect by moderate tension of the back and abdominal muscles and the muscles of the neck. Then your shoulders will have to hang right.

Don't "throw out" your chest. The chest that it inflated managers has the statement of th

Don't "throw out" your chest. The chest that is inflated properly by deep breathing is bound to be thrown out, and thrown out not like that of a stuffed figure, but naturally, because it can't help it.

ingure, but naturally, because it can't help it.

Don't walk with a stiff neck. Hold your head erect the way an animal does. Watch a deer. Its neck is always in motion, yet it is always held beautifully. Your head, poised on a stiffly-held neck, is no good for either balancing or looking around you. Poised confidently on strong but pliant neck muscles it becomes what a head should be.

Many classes of men who do much walking, such as Indians, guides and trappers, walk with their bodies inclined forward a little bit. But they don't round their shoulders or stoop their heads. They incline forward from the hips. This throws their weight a little ahead, and gives the leg muscles the chance to exert all their power in the best direction. But the upper body is never bent by these men. It simply is held forward from the hips at a very slight, harely perceptible, angle.

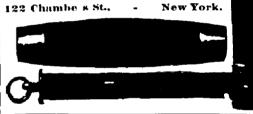

Even if correct poise in walking had nothing to do with other forms of athletics it would be invaluable in itself. The man who walks right is going to keep his organs—heart, kidneys, liver and lungs—in splendid form. But, besides all this, it helps wonderfully in all outdoor sports.

#### SWEDISH HUNTING KNIFE

Indispensable in camp—always useful in a boat. Keen mough to skin a deer—strong enough to split lightwood—big enough to dig a rain-trench. A camping kit in itself. 324 inch genuine Swedish forged steel blade. Itade for aportamen who want a finely-tempered knife for all round work. Folds when not in use, but cannot close down on your hand. Seat postpaid for 75 cents. We have catalogues of camp outfits or yachting supplies. Tell us which you want.

The Ambassador who represents the united nations, Austria and Hungary, write or telegraph to the ruler of the Washington when his father was stavery young man was only eighteen years of age when he joined one of the famous hussar regiments of his nation, but he tired of military life and decided to become a statesman. With him is another young man Herr Rubido-Zichy who is tories at Port Arthur and writes: "I known among lovers of sport as a very send you under a different cover two known among lovers of sport as a very skillful automobile driver.

At the office of Italy's representative one may find a trio of young men, usually "I had several physicians, nearly all of the great number of Italians who reside keen interest in the land of the Stars and Stripes because his mother was ap American woman. Glulio Montagna is a native of Rome of which city his parents style-here is his answer: are old residents and Ricardo Borghetti. the third of this group, was also born and brought up in the land of sunshine. The ambassadors of Great Britain and

Russia have some young men in their service and so likewise have a number of the men who act as agents at Washington for our sister republics of Cen-

young men from the nations to the south of Mexico. Most of these young men who engage in this diplomatic work as a training for statesmanship receive salaries ranging from one hundred dollars to two hundred dollars a month. They must be well educated for it is necessary for them to speak English as well as their own language.

#### Napoleon as a Model

The President of the National Association of Life Underwriters counsels young insurance agents to "read a good life of Napoleon." It is by an odd paradox that a man whose principles were most inimical to the security of life should be made to serve as a model for such a profession.

It is because the companies want "men who are aggressive" that President Ward makes this recommendation. be ever bold!" A biography of Danton might be included among the "books that have helped me." Follow this with a life of Socrates, who was skilled in "making the worse appear the better reason," add Machiavelli and Talleyrand, and the education of the young underwriter would acquire a finishing touch of persuasive-

In reading the life of Napoleon let him not overlook one of his St. Helena sayings: "Impossible is the adjective of fools." This is a maxim furnishing a sound foundation for any success.-New York World.

The editor of a youths' paper in Japan. by name I, Fukugawa, of Tokio, Japan, sends us pictures of Japan's naval vicseries of popular pictures of our naval victories at Port Arthur. Of course they are for children and have scarcely any claim on art, yet they are expressive of our joy. Accept these as a token of good news from a juvenile paper of a youthful onvulsions, from which the only relief Uncle Sam has many matters to adjust nation to his esteemed elder brother and the glorious country which is the opener and sympathizer of that nation.

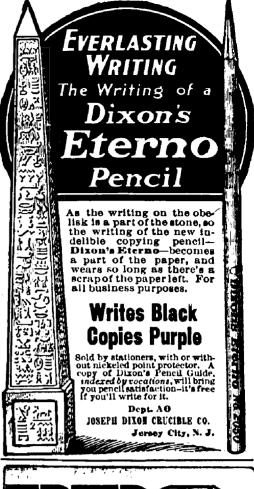

> Frank T. Bullen, whose "Cruise of the Cachalot" received the highest praise from so good an authority as Rudyard Kipling, was asked for the source of his

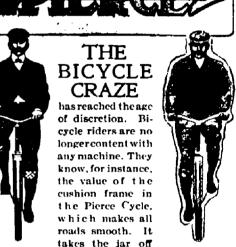

> "The source of my style is the Bible. I began reading that earlier than I can remember. I have lived 45 years, 15 of which I spent at sea, climbing up from cabin boy to chief mate, and I have read the Bible through from cover to cover 25 times. You cannot quote the first half of any verse of which I cannot give you the other half. Nothing has taken hold of my heart and soul like the Bible."

GRORGE R. HOWE

ID I yell?" asked Artic indignantly. "I guess you'd yell if a milk adder stung you with his tail,—the way he did me."

"Milk adders can't sting with the tall, can they, Mr. Howe?" asked little Phil Richardson, the smallest boy of the "Boys' Natural History Club." Small as he is, Phil is president of the club, and none of the twenty-four youngsters knows more than Phil about "specimens.

"No," said Mr. Howe. "The milk adder has nothing in his tail with which to sting. That is a popular error that needs rorrection.'

"But there is a horn in the tail of mine," said Artic. "I will show it to you

mine," said Artie. "I will show it to you if you don't believe it."
"Oh," said Mr. Howe. "I saw that 'horn' the day you caught him. That is a freak instance. You know I have told you about abnormal specimens. There may have been some injury to the adder's tall that caused it to harden. It is analogous to hard horny places in the palms of a laborer's hands. We are always glad to get the freaks, as I have said to you. They help to explain, possibly, how new species develop."
"I must have hit my toe hard against that place in his tail," said Artie a little crestfallen.

"I must have hit my toe hard against that place in his tail," said Artie a little crestfallen.

The boys refrained from laughing at Artie. They remembered how many errors they had themselves committed since the day when first they became members of the Natural History Club.

"I made a mistake almost as bad as that," said George. "It was about the crimson ramblers. I thought I saw the lady bugs eating the leaves. There were some growing by our porch that were all killed out, and when I saw the lady bugs on Mr. Howe's vine I ran right off to tell him how they had eaten ours all up and now were after his."

"When, Ia fact," said Mr. Howe, "the lady bugs saved its life. It often happens that benefactors get misunderstood. It was an aphid that ate the leaves. The lady bugs eat the aphids, and that was wiy my rambler was full of fine blossoms while George's died."

"We didn't know things of this kind until we became naturalists, did we, boys?" remarked Artie, rather proudly.

And this was true. In this small village of twenty five hundred people, where I listened to this kind of dialogue for several days, there are fifty eight young scientists. Their leader and teacher is one of the hitherto unknown and yet quite remarkable men of the day. Mr. George Robley Howe, of Norway, Maine, an enthusiast in his study of boys and in his liking for them, is, in fact, helping these lifty eight boys to have the hest time of their lives.

In having the best time of their lives best time of their lives.

In having the best time of their lives

nature and the woods and fields are in some ways better than either. Yet not a boy in the village of Norway knew any-thing of importance about the woods and boy in the village of Norway knew anything of importance about the woods and fields and hills and streams round about them. They could not tell the names of the birds beyond the sparrow, the robin and the woodpecker. Perhaps some of them knew the kingfisher that perched on the old dam and dived into the mill pond after his prey. As for the flowers, they could remember daisies and "May-ilowers" and buttercups,—not many more. Every bug was merely a bug, and they never had thought how many kinds there were or what their names or habits were. Moths and butterflies were all alike to them. The stones were either pebbles for throwing, or "Isinglass" which you can "see through." And Mr. Howe said, "People tell the boys half truths enough, and show them shams enough, but I believe that boys can be improved in mind and morals by being taught the great, beautiful truths of nature;" so he began. Never before had any inhabitant of beautiful truths of nature;" so he began. Never before had any inhabitant of

bost time of their lives. In having the best time of their lives they are also learning so much that Professor Sidney I. Smith of Yale says they boat his college classes in natural history "all out of sight." First there were the nine boys to begin with. The-nine-boys-to-begin with have been having this good time for almost six years. They were intended they have seen boys, like other boys, when Mr. Howe took up the idea that he might make them good for something. You begin-with" what wonderful things to have a good time. He just plays over a few old dry games, and doesn't really know how to white Mountain range, forming the have a good time. He just plays over a few old dry games, and then he has bothing to do but play them over again, lerchaps there is a little skating and coasting in the winter, and some irregular base ball in the summer.

But Mr. Howe got tired of seeing so aimless and vulgar and without any noble thoughts in their minds, or any high ambitions for the future. He said to himself, "thelieve I can change all that."

Now this Mr. Howe is a most remarkable character. He believes that a village is a most amount of tour-maines are lodged. This is the most of birds, and recognize them, too, when many how and some remarkable character. He believes that a village is a most page for twenty miles, and then hitself when the minds of the state for a day in search of specimens, that little village found out what wonters they they tide off for a day in search of specimens, and always come home filled up with iterally rod on miracles whenever they market help and always come home filled up with market little village street. Mr. Howe began to show to "the-nine-boys-box for specimens, and always come home filled up with market little village street. Mr. Howe began to show to "the-nine-boys-box for specimens, and heard. They are each provided with a blanket, hammer, knife, haversack, cup-there will be a banked against the winter, and the collection of photographs on these variations in which variations, and th coasting in the winter, and some irregular base ball in the summer.

But Mr. Howe got tired of seeing so many hoys going to waste, growing up aimless and vulgar and without any noble thoughts in their minds, or any high ambitions for the future. He said to himself, "I believe I can change all that."

Now this Mr. Howe is a most remarkable character. He believes that a village is just as good a place as a city, and that

finished are large, brilliant and very

finished are large, brilliant and very valuable.

Then in the little streams that run through the hills and meadows of the county Mr. Howe discovered that there were valuable pearl shells. The collection that he showed me, taken from these streams, is probably worth five thousand dollars, and is undoubtedly the largest collection of fresh water pearls in New England, if not in the country. Generations of boys have grown up and grown old among these fine hills and streams, never suspecting what treasures they contain. Yet these boys in about five years have collected and classified many hundred valuable specimens of stones, pearls, plants, insects, serpents, some of them so rare that they could not be duplicated in the largest museums of the United States, and some of them actually unknown hitherto to science, so that they have, in fact, made valuable contributions to science. They have specimens of the wingless mountain grasshopper (Pezzotetter manca), for instance. The only known specimen of the Samia Columbia species of moth was found in Norway, and is now in the Yale museum. A second specimen found by the boys was accidentally destroyed.

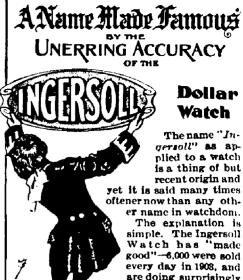

Mr. George Noyes, a gentleman who

species of moth was found in Norway, and is now in the Yale museum. A second specimen found by the boys was accidentally destroyed.

Mr. George Noyes, a gentleman who from the first has assisted Mr. Howe, a scholarly and persevering scientist, teacher of drawing to the whole group, unearthed within the limits of the viliage itself eight Indian skeletons, the bones of which certain workmen had mistaken for the bones of a horse or cow. On one of these he found Indian beads that may be five hundred years old. Mr. Howe himself secured in Pleasant Mountain, which is in another county, a Siberian amethyst, the value of which at the time he had not learned. It was said to Tiffany's agent for about \$150. This stone was included in the great Tiffany collection at the Paris Exposition, and afterward bought by Plerpont Morgan. It is now valued at about \$5,000. The mineral called Berylonite is found in this county, and not elsewhere. About every boy has specimens of this rare stone.

It is not safe to make sweeping statements about the facts of natural history to Mr. Howe and his boys. A noted scientist asserted in one of his books that no instance of a double monstrosity bred in the wild state had ever been known. But these Norway scientists found and established just such a case. It was a myrtle warbler with two heads and bodies, and it was demonstrated that he must have migrated at least once. Here is the demonstration of an absolutely new fact for science. In short, these boys and their teacher have proved that science can be learned systematically by ordinary village boys, and that at the same time the boys themselves can be transformed into enthusiastic and useful individuals. Collecting specimens is fun for boys when it is directed with the enthusiasm displayed by Mr. Howe. Often these

Collecting specimens is fun for boys when it is directed with the enthusiasm displayed by Mr. Howe. Often these boys are found in the fields and meadows before sunrise, hunting bugs, spiders, moths and plants. They take trips into the hills sometimes for twenty miles, and

Dollar Watch

The name "Ingersoll" as applied to a watch is a thing of but recent origin and yet it is said many times oftener now than any other name in watchdon. The explanation is

simple. The Ingersoll Watch has "made good"—6,000 were sold every day in 1903, and are doing surprisingly satisfactory service as practical time-keepers. Guaranteed,

boys, however, all of whom have their own private collections, and they are as careful and proud of them as is any curator in the land. Some of them, when Mr. Howe began with them, were little barefort fellows, whose only accomplishment was swearing or cutting up pranks in the village. In all the history of these Norway boys since Mr. Howe began with them, he has never had to drop a boy out of his clubs, and not one of them has ever given up the pleasant work. Think, if you please, of fifty eight boys, every one of them sticking to this work for years! And they speak the hard tatin names now as if they were merely the primer,—at least, the older ones do. They can tell you the kingdoms, families, divisions, groups, orders genera and species to which their specimens belong. More than that, they have beautiful piates which they have drawn, of specimens in the various departments of science that they study. And to crown it all they make their own apparatus,—blow pipe instruments, crysboys, however, all of whom have their own private collections, and they are as careful and proud of them as is any curator in the land. Some of them, when Mr. Howe began with them, were little barefort fellows, whose only accomplishand to crown it all they make their own apparatus,—blow pipe instruments, crystal models, accessories of the microscope,

in the village.

The boys have very few set lessons to learn, and Mr. Howe does but a surprisingly small amount of formal lecturing to them. You would guess on such a showing that they would be rather lawiess and disorderly in their work and play. But in that you would be wrong. On their trips each of the "nine-to-beginwith" boys has assigned to him four of the younger lads. Each of these nine boys is a specialist in some branch. One, for instance, is a herpatologist, which means that he makes a specialty of all kinds of snakes, lizards and the like. Another studies cryptogamic botany, and the ruinecals, another batrachians, that its frogs, toads and the like, and so on. These nine boys form the faculty, so to

and teaching the great truths of nature.

Mr. Howe calls himself the psychologist of the faculty. His ultimate task is to train the minds of the boys, improve their characters, and direct their energies to useful careers. He has associated with him Professor Sidney Smith, whose interest in them is accentuated by the fact that he is a native of Norway. He has given the boys a microscope valued at \$500. Then there are various other gentlemen who act as a kind of advisory faculty, some of them living in Norway and assisting in the teaching. Besides Mr. Noyes, the master in drawing, there is a mathematician to the society; a bacteriologist in the person of Freeland Howe, Jr., of the Harrisburg Laboratory, and a brother to Mr. Howe; a physicist, a chemist, a physiologist, an astronomer and a meteorologist. In all these branches the boys, but especially the nine older

a chemist, a physiologist, an astronomer and a meteorologist. In all these branches the boys, but especially the nine older boys, get general instruction. Thus little by little the movement is developing into a boys' university of science.

It takes a long time for the people of a country village to wake up to the things going on in their midst. Gradually the more thoughtful people of Norway, and still more those who look on from surrounding regions, have become aware that a movement is going on in the little village that is certain to regenerate the entire town in the coming years. These boys will soon be men. But long before they are men the results of their work must begin to be felt.

The girls have caught the fever also. Miss Hortense Gregg, imbibing the inspiration herself, first became an enthusiantic collector, and at length organized a

#### Boy Artisans and Mechanics

HARRY WOODRUFF, Delaware Academy. Delhi, N. Y., sends an article on "How To Make a Toboggan." Harry is twelve years of age. Now the Editor of THE AMERICAN BOY makes it a rule not to accept articles of this kind from boys in that he cannot be sure without trying to make the things described, whether the directions are accurate and complete. This is the safest plan to pursue, inasmuch as many boys follow the directions given and where the directions are defective much trouble ensues.—HENRY T. KIRKPAT-RICK, Paris, Tex., has four small motors, These nine boys form the faculty, so to beak. They are Mr. Howe's helpers in beaching the successive groups of hows at they are added from year to year. Already there is a group of little ones from the faculty of nine years old who are under that the fishery Club in a few years. This faculty of nine is now called the Schiev Smith Society of Science. Between this society and the Boys of the youngest that average about ten years of age. Those of the Society for Scientific Research. The boys of the youngest that are from twelve to fourteen. The oldest of the original nine is about sixelect. These older boys have already determined to devote their lives to scientific pursuits. They expect to make themselves useful, and hope to make themselves really great men, studying the society. They call each other by tricity.

# Che Great American Boy Army

FOR MANLINESS IN MUSCLE, MIND AND MORALS

Every Energetic American Boy Should Be a Member of "The Order of The American Boy"

Letter From Headquarters of The Order of The American Boy, Read Before Each Company at Its April Meeting.

Detroit, April 1, 1994. My Dear Captains and Brothers of the

Order:
I begin this letter with considerable personal satisfaction, because the obliga-tion I am under to do everything that can be done to make THE AMERICAN BOY a magazine that shall stimulate and can be done to make THE AMERICAN BOY a magazine that shall stimulate and inspire American boys to do things worthy of the spirit and the traditions of their great country seems in a fair way to become fulfilled. In this belief I do not stand alone, the multitude of letters daily received giving ample, glowing testimony to the fact that THE AMERICAN BOY has touched the true chord in boy natures and that all that is best and truest there is rising in response. There are higher heights, however, to be reached, and there will be no resting until our (yours as well as ours) magazine is made a telling influence in the life of every American boy.

Again I have to notice an increase in the number of new companies organized, thirty this month as against twenty last month. I need hardly say that this showing is most gratifying.

thirty this month as against twenty last month. I need hardly say that this showing is most gratifying.

In connection with the reporting of new Companies and the publishing of Company News let me explain that these items cannot be inserted in THE AMER-ICAN ROY within less than two months after the reports are received.

Many Companies have asked me to say how large a Company ought to be. Now, at first thought, I should say, the larger the Company the better, because there is strength in numbers. There are advantages, however, in there being two or more Companies in a town rather than one large one. For example, a baseball game, a football match, a debate is gone into with greater zest and spirit where the contestants belong to different Companies than if all are members of the same Company. So, I think, where one Company becomes unduly large it should be divided. Where this is done judiciously and in a spirit of fairness each will do better work and increase in numbers because of their more extended influence.

The contents of three letters I have

will do better work and increase in numbers because of their more extended influence.

The contents of three letters I have received this month have set me thinking. Our Order was never intended to teach selfishness; on the contrary, although not expressly so stated, the O. A. B. was organized partly to inculcate the very opposite. Each of these letters I speak of teid of a boy who was lame, or sick, or too poor to become a subscriber to THE AMERICAN ROY, but the writers thought highly of the boy in each case interest and wished that he could be enrolled as a member of their own Companies. How could it be done? Each of these letters contained also a report of Company doings, and each reported a considerable sum of money in its treasury, national June 301 \$25.00 in the bank. Now, I said to myself, what better way of glving pleasure to those lame, sick, or poor boys, and of giving genuine satisfaction to every member of the Company itself, than by expending a portion of the Company Amateur funds for a year's subscription to THE AMERICAN ROY for them, thus admitting them as members of the Company with a share in all Company privileges and pleasures. I do not think I need to say anything further on this subject.

Another matter to which I wish to direct the attention of members is the fact that each month I am receiving many hundreds of letters asking information on the countless subjects of which only boys can conceive. Every one of them contain a postage stamp for reply. Now, you can easily see that the postage required for replying to these letters each month Is a heavy Item of expense and it is hardly fair that head-quarters should bear it. Will the members therefore whose letters rounters.

expense and it is hardly fair that head-quarters should bear it. Will the mem-bers, therefore, whose letters require a personal reply hereafter inclose a stamped addressed envelope?

The last item of my letter this month will. I fancy, prove the most interesting. It is this: I have at last succeeded in convincing the St. Louis World's Fair authorities that the O. A. B. deserves recognition and they have granted to us the use of a great hall on the Exposition grounds in which to celebrate AMER-ICAN BOY DAY, or rather DAYS, for we shall have two. I am making out our program for two days of enloyment in everything in which boys take delight. This will require some time, but full announcement of the meetings, entertainments, athletic contests and the many other good things which we will have will be made in our June number. See last item of my letter this month

PROTO BY B & PATTERSON CLUB HOUSE OF B. W. CAMPBELL CO. NO. 34, HOME CITY, OHIO.

## The Order of The American Boy

A NATIONAL NON-SECRET SOCIETY FOR AMERICAN BOYS Under the Auspices of "The American Boy"

#### Object:--The Cultivation of Manliness in Muscle, Mind and Morals.

The object more definitely stated: To promote mutual and helpful friendships among boys; to give wider circulation to high class boy literature; to cultivate in boys physical, mental and moral courage, and develop them along social, intellectual and moral lines; to cultivate purity of language and actions; to discourage idleness, and encourage honest sport and honest work; to cherish and emulate the examples of great and good men; to inculcate lessons of patriotism and love of country; to prepare boys for good citizenship; to cultivate reverence for the founders of our country, and to stimulate boys to all morthy endeavor worthy endeavor.

Boys desiring to organize Companies may obtain a Pamphlet from us containing Directions. It is sent for a 2-cent stamp.

HERMAN PLAIT, SPI'T

SPEEDY BADGERS COMPANY NO. 23, PLUM CITY, WIS.

President General.

P. S.—Our O. A. B. pennants ought to be in every Company clubroom and in every member's own room. They are very handsome in appearance and are made of best material. The price is just a trifle above actual cost—56 cents.

#### Company News

also what I say on another page under "Just Between Ourselves." I want every boy to write, making suggestions.

The dates fixed upon for AMERICAN BO JAYS at the great St. Loms Exposition are July 5th and 6th. It will be of interest to boys and their friends to know what other things of special interest will take place at the Exposition on or about these dates. Of course, July 1th will be a great celebration, it being Independence bay. June 28th to July 1st the International Educational Congress meets, June 28th to July 1st the International Educational Congress meets, June 29th and 30th Interscholastic Athletic Championship Contests, July 1st and 2nd Turners' International Contests, July 1th, the Amateur Athletic Union all-around Championships, July 5th to 7th Lacrosse Games, July 8th and 9th Swimming and Water Polo Championships. At this time there will be in attendance at the Exposition the Educational Gard of Wisconsin, the Columbus Rillies of Columbus (Chio) with their band, and the Louisiana State University Cadets, numbering three hundred and seventy five, with their band.

Now, you can get to work. Talk up July 5th and 6th at St. Louis everywhere you go and with everyone you meet, and let us have the greatest gathering of American boys our country has ever witnessed.

Yours for M. M. M. M.

AM interested in boys, and since I have been over here in America I have been especially interested in the American Boy. He has great prospects, I believe, if he keeps well and healthy and clean in body and mind.

The country depends upon you boys, for I believe, as your philosopher Emerson said, that "America" is another name for "Opportunity," and when Age retires your great men to quieter fields of activity you will be looked to, to carry on the affairs of State and business. Believe me when I say I wish you every success.

I am the Toffee King of England, and am introducing into America my famous "Mack intosh's Extra Cream Toffee."

I want every boy and girl to try it.

It is absolutely pure and has lots of butter, cream and sugar in it, as well as other good things.

I believe it is conducive to good health; hence the reason I want you to try it.

Don't buy the cheap and highly colored candies, but buy something that you know is pure and nutritious—buy Toffee.

If your confectioner does not keep it write my American Importers enclosing 10 cents in stamps or silver, and they will gladly send you a large free sample package; or they will send you, express paid, a large 4-pound family can for \$1.60.

getting into mischief

## IMMIGRANTS TAUGHT TO BE-COME REAL AMERICANS

IMMIGRANTS STUDYING THE CONSTITUTION OF THE UNITED STATES

tiges of permitting Europe's hordes to to commit it to memory a line at a time. carnett patriots has established the first plaining the full meaning of each word good. Americans, through, a series, of liberty as any American child. black board lessons. There would seem to be no more earnest seeker after this work. It is almost a new experience to kind of knowledge than the immigrant, those who have taught in American pubfor the school, opened at 218 South lie schools to find such whole-hearted Fourth street, Philadelphia, in three reaching after knowledge as the immirooms of fair size, has already scores grant scholars with the bearded faces more pupils than can be accompdated.

school hungering for knowledge. Hun- reader is as anxious to solve the mystery dreds have been curofled and the rooms of the printed pages as any learned are nightly crowded to their limit. The scholar who delves into the hidden teachers, volunteers from the city's edu- secrets of musty manuscripts for light cational staff, assisted by a few earnest on the lost pages of ancient history. It immigrant lifted to a higher plane, giveteaching who could not speak several

women, boys and girls who attend the school, few of them having been in the will be true Americans. country longer than six months, and scarcely any knowing more than enough English to make themselves understood in that Linguage. As for reading or writing the language of their new coun- FOUR BOYS ON THE MISSISSIPPL or the try, that was not for a moment to be expected. It was therefore necessary to begin the work of teaching these aliens the constitution of their new country by making them familiar with the alphabet, then progressing to simple words of one syllable and so on to the higher heights of learning, where it would be possible for them to understand the meaning of the written law of the land.

The school is divided into three classes. In one room about a hundred grown up men and women, with a sprinkling of hove and girls, can be found each night SIX GIRLS, by Fanny Belle Irving. We are wrestling with the mysteries of orthogtaphy. It is strange to see these elderly scholars knitting their brows over such problems as the spelling of the word "girl," the correct pronunciation of d-a-g, or the proper sound to give to the first letter of the personal pronoun "we,". In the record room the scholars who can spell simple words of one syllable correctly are gathered for easy reading lessons. Grown men with the untidy beard of the typical immigrant sit side by side with bright-eved boys and girls, all equalin their ignorance of what any American child could teach them, but all in deadly earnest and determined to learn. In the third room are the advanced scholars to whom it is found possible to teach the constitution of the United States a wordat a time. Among the immigrants who have been attricted to the school are some who had more educational advantages in the old country than the majority. It was found, when the pupils were classified at the opening of the school, that some could read and write English a little, having been what is known as "wealthy" in their home village and able to attend some local establishment of learning where foreign languages were taught. These are in a class by themselves. With the clauses

Leaving others to continue the verbal of the Constitution written on the blackwar over the advantages or disadvan- board, these advanced scholars are able descend on our shores, a little band of the teacher carefully and patiently exof a number of schools soon to be opened until in time they will know as much where immigrants may learn to become about this framework of the national

The teachers are enthusiastic over their and the care-lined features display. The immigrants, chiefly itussian, with There is no frivolity anywhere. their sons and daughters, have come to middle-aged man who pores over his first workers who wish to see the ignorant may seem comical to the well educated onlooker to listen to a youthful teacher their services free. All are accomplished leading an elderly woman who probably linguists, for it was found impossible to has sons older than he through the mazy permit any to undertake the work of labyrinths of the alphabet. But the scholars fall to see any humorous side to languages, for the reason that a perfect it. They are there to learn how to speak Babel of tongues is spoken by the men, and read and write English to the end that they may be fitted to master the Constitution of their adopted country and become thoroughly conversant with its

When the teachers have plloted a sufficient number of scholars through the school course it is intended to open other schools, placing some of the graduates from the central school to teach their countrymen what they have learned. In this way the work will be spread over the city, or in that section of it where the immigrants settle, and in time, when similar schools have been established in other cities, as is intended, the stigmaof ignorance will be removed from the immigrant, and it will be no longer necessary to wait for the second generation before a family from the Old World

#### Boys' Books Reviewed

cruise of the 'Greased Lightning," by Frank E. Kellogg. This is the record of a hunting trip up the Mississippl by four boys in the houseboat "Greased Lightning." There is plenty of fun and joility with shooting, trapping and boating, and many good points edification of the young are given. The only adverse criticism we have to make is as to the rather too free quent use of slang. "Gee" and similar expressions could have been eliminated with advantage. W. Herbert Dunton is responsible for the fine illustrations 319 pages. Price \$1.00. The Saalfield Publishing Co.

fully persuaded of the wisdom of the publishers in placing this book again before the public. While it might not be considnothing idealistic, or fanciful, about the six country village in Virginia.

girls, they are real, true-hearted, honest, loving lassies who have faults and foibles like the rest of their sex, but who have a mother and a home which surrounds them with such an atmosphere of peace and happiness that their bright future is in a great measure assured. The author, a niece of Washington Irving, wrote this book over twenty years ago, and it immediately became a warm favorite, and we confidently predict an equal or greater measure of success for the present venture. Mr. Learned's Illustrations do much to enhance the value of the text. 456 pages. Price \$1.25. Dana Estes & Co.

ROBIN HOOD, HIS BOOK, by Eva March Tappan. This will prove a mine of story wealth for the young folks, when they ask mamma for just another story at bedtime. Robin Hood and his merry men are, perhaps, not so well known to the boys and girls of America as they are to their English cousins, but the fascinating personality of the English outlaw and the adventures of himself and the wearers of the Lincoln green in Sherwood forest as humorously and quaintly told by the author, will prove equally delightful reading on this side of the Atlantic. Poem and legend have been used to make up a book that will appeal as much to the old as the young. The fullpage color pictures and the other illustrations are by Miss Charlotte Harding and fit in charmingly with the text. The make up of the book is also worthy of praise, 267 pages of large, clear type. Price \$1.50 net. Little, Brown & Co.

BEARS I HAVE MET-AND OTHERS, by Allen Kelly. The stories contained in the twenty two chapters of this book were, says the author, "accumulated and written during a quarter of a century of intermittent wanderings and hunting on the Pacific slope." Mr. Kelly has loved the woods and forests and speaks of Bruin in a tone of respect and sympathy. The stories are mostly the author's own experiences and are written in no vein of exaggeration, but with a modest pride and simplicity that at once gains the reader's attention. There is sufficient excitement, deadly tussies and hair-breadth escapes as well as plenty of humorous adventures to satisfy any boy. The many fine illustrations which adorn the pages are by Ernest Thompson Seton, W. H. Loomis, Homer Davenport, Walt Mc-Dougall and other eminent artists. The cover page consists of a picture of Monarch, the largest bear in captivity, by Mr. Thompson Scion. 209 pages. Drexel Bid-

#### A Promising Young Orator

Grover C. Aker of Blair, Neb., is a boy possessed of considerable talent as an orator. He excels in clearness of thought and effectivemess of delivery. In 1903 he represented Blair High School in a joint debate with Omaha

GROVER C. AKER

and several other Nebraska cities, held at Fremont, and received first prize. In a debating contest held at Blair, March 7th he won the Patterson prize of \$10,00, taking the affirmative of the following: "Resolved, that the negro should not have the right of suffrage." He is sixteen years of age and a sophomore in his school, standing high in his classes. He is also first sergeant in a company of cadets to which he belongs and takes an active part ered a boy's book, we advise the boys to in all high school doings. Prior to his parents read it it will do them good. There is moving to Blair, four years ago, he lived in a

#### The Letter Box

Harold Williams, Eric, Pa.: The date when usefulness of films expires is stamped upon each package; if they prove defective before expiration of that date, they may be exchanged.—E. G. Barber: Probably you do not wash your plates long enough. When developer deteriorates, it should be thrown away. I invariably use a fresh developer for otherwise they are commendable.-W. B. snap-shots.-Fred C. Schmelz, Rodney, Ont.: So far as I know, there is no such platinum solution as that to which you refer. Alexander Black's "Photography, Indoors and Out" will undoubtedly commend itself to you and can be procured through any bookseller .-Charles C. Gillam, Morganton, N. C.: There are a great many good small cameras on the market. Our advertising columns will help you to make a choice.-Jos. E. Baker, San Francisco, Cal.: The quality of a negative does it matters little whether a plate or a film has print is best of the three and quite commendbeen employed, as long as exposure and development have been correct. The only way in which a negative can be made from a print is to copy the latter; for this purpose, however, a special lens is required.-V. W. H., Laconia, N. H.: You can enter as many photographs in a contest as you please. As regards detail would say that your lens appears to be all right; you probably do not carry development far enough. One of the most difficult things to learn in the "black art" is when ject duly selected, a moment is taken when to stop development.

#### Honorable Mention

The following submitted prints that were decidedly above the average and are, therefore, entitled to the distinction which the above caption implies: Raymond Beardsley, Point View, Ks.; Tracy Porter-Rudd, Norwich, Conn.; John Reschlau, Honesdale, Pa. Goehring, Key West, Fla.

#### **Current Comments**

A. M. Akers, Cleveland, O.: Photo of boys is praiseworthy, but care should have been taken on a plane.—H. H. Campbell, Martinsburg. Pa.: Negative appears to be all right, but print is poor. Printing out paper will probably produce better results. Try it.—C. E. Anderson: Your photos are interesting, but lack detail. Moreover, figures are too small to be reproduced.-H. B. McVicker, Lisbon, O.: Your photo, of "No. 6" is meritorious, but the view of the St. Joe river is bad, either the negative is defective or it was underexposed.-John Roeschlau, Honesdale, Pa.: Your print shows lack of detail or overexposure. Horizon should never be placed in center of picture, as it spoils composition and detracts from the pictorial effect. Same re-

"If at first you don't succeed, try, try again," is an old maxim which may be applied to photography. Soldiers who throw their guns into the cornfield at the first sight of the enemy never win battles. Remember this, if you feel disgruntled over some criticism of the undersigned or because no attention whatsoever was pald to your prints. In the latter event you may rest assured that your photographs were either hopelessly bad or ineligible because of paper or subject. We cannot reproduce blue-prints, hence they are ruled out. As regards choice of subject, let us merely refer to railroad trains, for example. Photographs of them are so nearly allike that they cease to be interesting. But, outside of this, nothing stands in the way of the success of contestants for the prizes except their own lack of skill, a drawback that may be overcome by practice and study. A good camera is, of course, indispensable. Somebody said: "Everything is in the lens!" That is not wholly true. The man behind the camera counts. But a good photographer to holly true. The man behind the camera counts. But a good photographer cannot do first-class work with a poor camera. If your apparatus is all right, there is no reason why you should not succeed. If you have failed in the past, keep hammering and note impore mingham, Sandy Hill, N. Y. Remove part of your foreground by trimming and note impore more foreground by trimming and note impore more foreground by trimming and note impore more fored. L Detwiler, Scottdale, Pa.:

Only one of your prints—that entitled "Resting by the Cool Water"—is finished correctly; the rest look "fiat," which may be due to the negative of method of printing. "The Early Birds" has a faded look, as though that been in the toning-bath too long.—Willie has a faded look, as though the rest look "fiat," which may be due to the rest look "fiat," which may be due to the rest look "fiat," which may be due to the rest look "fiat," which may be due to the rest look "fiat," which may be due to the rest look "fiat," which ma marks apply to sepia velox print of J. J. Cunningham, Sandy Hill, N. Y. Remove part of interesting, but would be better adapted to an agricultural periodical than to our magazine.-Wm. Regan, Bath, S. D.: Your print shows lack of detail, either due to the quality of your negative or improper printing; I am unable to tell which.-C. D. Pedley, North Rush, N. Y.: Your "Stone Church" is too high up on the print; in consequence part of the top is cut off and the shadow of the cross only is visible instead of the cross itself. Less foreground would have been desirable.—Theo. E. Rein, Chicago, Ill.: The whites in your prints are chalky, which is particularly true of "Carpenters." I believe you will obtain better results with printing out paper. Try it.-Wm. H. Cowan, Astoria, L. I.: "A Heated Discussion" is a misnomer; otherwise the print deserves commendation.—H. J. Kleppinger, Beatrice, Neb.: Your night photograph was very interesting to the editor, as he was the first to take a picture of that kind in Detroit many, many years ago. A very fine effect is produced by the reflections of the lights on the pavements on rainy nights, or, rather, after the rain has ceased. In order to produce satisfactory results a long exposure must be given; in some instances as long as an hour. When street cars pass, the shutter should be closed until they are by, else a streak of light may appear on the plate.— Peter C. Whyte, Carbondale, Pa.: Development does not seem to have been carried far enough in your negatives, which would account for lack of contrast in your prints; they are not "sharp" enough.—Clair Robin-son, Sheridan, Ill.: Your "Admiration" is a very pretty picture and might have won first prize if it had not been defective in quality. Underdevelopment seems to be responsible for your non-success.-I. G. Francisco, Yonkers, N. Y.: Your photographs are out of focus; Cousins, Danville, Va.: Your "Partners" was toned improperly. Request a professional photographer to show you a properly toned print.—L. E. Foster, Beverly, Mass.: Lack of detail is a fatal defect in your landscape view .-- Archie H. Read, Oakland, Cal.: Your Just Kids" is interesting and not had, but it would be better adapted to a larger camera.—John E. Booth, Burlington, Vt.: "Out Photo by Mrs. E. E. TRUMBULL, PLAITSBURG, N. Y. for a Good Time" did not remain in the toning bath long enough and "Prudence and Imnot depend upon its character, that is to say, pudence" was toned too long. Your bromide

#### Moonlight Effects

"T. K.," writing on this subject in the Photographic News, advises those seeking to photograph with the effect of moonlight to select a day on which the sun is obscured at intervals by masses of well-formed cumulus clouds. Then, if at the seashore and the subthe sun has become hidden and the water is the shadows, and the length of time thus reous exposure is made, looking straight into the direction of the sun. Development must be for high lights, leaving the shadows to take care of themselves. He says: "The great secret in producing 'moonlight' views is to avoid excessive development, thus getting too much detail, which will utterly destroy the result aimed at. Therefore, the clouds only should be fairly well brought out, while the darker portions should be represented by almost clear glass." Printing from such nega-

tives should be carried much farther than for carried well into the purplish black tones; a greenish color is also extremely attractive for some subjects.

Answering a query by one of our subscribers, we reprint from The Silver Sunbeam Duncan's process of printing on ivory, which is as fol-

PRINTING ON IVORY - COLLODIO-CHLO-RIDE PROCESS.

Very much depends upon the ivory having a smooth or polished surface. There are various methods of obtaining this. A nice surface can be obtained by rubbing the ivory with a piece of wash leather, occasionally dipped in putty powder. When polished, immerse the ivory in a thin solution of spirit varnish, and dry gently over a gas stove or before the fire. Any kind of varnish will do that is white and clear. Then prepare the following:

Loaf sugar % dram.
Water 1 ounce.
Coat one side of the varnished ivory (the polished side) by pouring collodion fashion, or with a camel's-hair brush. The gelatine solution should be strained through fine muslin or filtered through cotton wool until very clear. When dry, coat with collodio-chloride of silver in the dark-room; dry, and print deep; wash, either under the tap or in a flat dish. Any old toning-bath will do to tone the Fix in a weak solution of hypo,

Very beautiful pictures can be obtained by

#### Architectural Photography

A full exposure in the case of interiors must always be given, varying with the light, from a minute or two to half or three quarters of an hour; half-an-hour with a commercial plate or ordinary sensitiveness, and a small stop, being an average exposure in one of our cathedrals, and to guard against an accident by the camera slipting during the same, it is well to tip the feet of the tripod with cork or india rubber, and also to tie the legs to

Bear in mind the golden rule to expose for alive with dancing ripples, and an instantane—quired may be agreeably whiled away in a case exposure is made, looking straight into the stroil outside the building, selecting various points of view for the exterior, for which bright sunlight coming across the picture will be indispensable, while for interior work diffused light is to be preferred.

> The development of these negatives must be executed with extreme patience and care; first of all the backing must be removed from the plates with a rag moistened in turpentine, if black varidsh has been used; then a developer containing at first a minimum proportion of pyro, applied in the usual way, being careful at first of the accelerating solution, so manipulating the plate that a considerable portion of the detail is visible before a great amount of density is obtained, thus guarding against chalkiness of the high-lights, a fault that is most likely to occur.

> The same plan of development should be pursued when monumental effigies, sculpture, etc., etc., have been photographed, so that every gradation of light and shade may be kept, and still transparency of the shadows remain.-W. B. Allison in Junior Photosrapher.

THE AMERICAN BOY offers twelve prizes of Two Dollars each for the best Amateur Photograph received during the twelve months in the year, one prize for each month, also a second prize each month, of one dollar, for the next best photograph, the conjection to be based upon the originality of the subject and the perfection of the photograph. The contest is open to subscribers only. Photographs will be returned if stamps are sent for the purpose. All photographs entered in the contest and not prize winners will be subject to our use unless otherwise directed by the sender, and fifty cents will be paid for each photograph that may be used, the prize photographs in any event to be our own, without further payment than the payment of the prizes. Write on the back of the photograph its title, with a description of the picture, and the full name and address of the contestant, who in every case must be the artist who took the picture.

## Boys in The Home and School Best

#### Of Far-Reaching Influence

In the November, 1903, number of THE AMERICAN BOY appeared an item regarding two lowa boys. After several months these boys received a letter from a Jap written in Tokio, Japan, together with a copy of a Japanese paper in which the article and its accompanying Illustration appeared. The writer of the letter says: The article we consider is a timely one for our own country and one that will prove a good lesson for our young men." The paper published at Cedar Falls, Ia., where the boys live, prints the Jap's letter entire, and a Cedar Falls reader sends us the clipping and

halling from the other side of the world, while the mother had seated herself in The boys whose names appear in THE one near the door. His bright face AMERICAN BOY.

#### The Morning

Daniel Webster used to say, "I know the morning, and I love it." He lived in the country at that time, and loved to rise early to see the dawn, and the sunrise, and the landscape, smiling in the fresh day spring.

But it isn't every American Boy that can enjoy that. Many city boys, fenced in with narrow streets, and high houses, see no dawn, no sunrise; and, for a landscape, have store-fronts and factories, and chimneys; and, for bird-songs, the rattle of milk wagons, and the rumble of street cars. With them it's a jump out of bed, and a bite of breakfast, and then away to the factory, the store, or office or school.

And then it must be said that many of and a sniff of its fresh air, if so many of the young man while the mother relast night's hours had not been spent on the street, or in the show, or even in some nice party. It's the late hours that drink, when he pulled the shade, every shut out the sunrise. Heavy eyes at 5 morning. There is where the country boy has the advantage. He can't help knowing the morning, and love it. For, while every little act of devotion and love will milking cows, or feeding fowls, or driv- some day be a treasured memory.-Naing the cattle to pasture, the morning tional Magazine. is flooding him with its fresh glory. He has only to lift up his eyes and look around, to behold a landscape that might make a painter's fingers itch!

But some city boys might get acquainted with the morning and learn to love it. And here is the prescription: Get to bed at 9 p. m. Up again at 4 or 5 a. m. (See the Almanac.) Then spin away on wheel or car a few miles into the suburbs. Then back to breakfast, work, or study. How that would freshen and brighten the boy, body and mind It would set him up for a whole day.

#### Mother and Son

On the Boston express the other day I witnessed a scene which I wish I could describe as it impressed me. It was the "four o'clock express," and an elderly woman, evidently a foreigner, stepped on the train, with that peculiar, squarerigged, canvas covered, broad valise so much used in Europe. Directly behind her was a sturdy young man, who carried the remainder of her luggage on his shoulder. He, too, was evidently a foreigner, whose dress and appearance indicated that he was thoroughly acclimated, and was now a prosperous adopted American citizen. With a peculiar motion, the little woman shrank from taking a seat in the coach among the finely dressed people. Although I did not understand the conversation. I heard her

writes that the boys' parents are delight- inquiry as to whether they were to go ed at receiving the Japanese paper and "first class." The son-for I had gotten letter and all think it quite strange to that far in conclusions-went toward the have this article appear in a publication center of the car to select a good seat, AMERICAN BOY get a very wide dis- beamed as he ushered that little, stooped tribution of their names and fame. It is mother to the seat as tenderly as if she worth while to do something great and were his bride. What happiness was rehave it mentioned in the pages of THE flected in those faces! They were seated in front of me, with their luggage carefully stowed away overhead and underneath. Her hands were brown and rough; her little bonnet was very simple; her gray hair was smoothed down in front, and was twisted into a picturesque Norwegian knot behind; her features were irregular, her face wrinkled, her large nose sharp, and she had no upper teeth-and yet, I pledge you, I never saw a more beautiful face when, after the son was seated, this little woman turned and stroked the hair of her son as only a mother can, regardless of the curious eyes in the coach; and then, unable longer to repress the joy of a mother's heart she kissed him. Such tenderness in those eyes, glistening with tears-she was with nor hoy again' The heads came just above the top of the seat, and how close they were together, as they talked and talked over the past. What memories of the old home were awakened in the heart counted, as only a mother can, those things which he was most arxious to know about When he brought her act was devotion. If I could only ima. m. can't take in the glories of the press upon sons and daughters the price-

#### Tufts College ELMER H. CAPEN, D. LL. WOULD YOU BE $\mathbf{A}$ B O Y ? What A Sailor Man Has to Say About It

By Albert Sonnichsen, Author of "Deep Sea Vagabonds

by running away from home to months of privations and humiliations. sea. In the present day the small boy's running will cease at the gangway of the first ship he attempts to board.

open arms and make him cabin boy or midshipman at once.

There was once a boy who ran away arrived in New York with \$4 in his enough to warrant a skipper in risking pocket. He intended to walk along the trouble with the law in shipping minors docks, inspect the vessels, choose the one that suited his eye best, and then offer his services to the skipper as a general all 'round sailor boy, such as Marryatt and Clark Russell have described.

He carried out his plans even to inspecting the ships. Here is his real experlence:

"A large, four-masted ship caught my eye. The brass about her was very clean. The cabin looked so smart, with little lace curtains in the window, that I thought I would like to be cabin boy there, where my surroundings would be so pleasant.

"I went up the gangway and stood on the poop. A big man in blue pajamas and loose slippers was pacing up and down, smoking a pipe tike some kind old grandfather. He looked so nice that I went up to him at once. "'Well, what is it, boy?' he said pleas-

antly.

"Td like to ship with you as cabin

boy,' I replied boldly.

"First the big man looked astonished, then he laughed uproariously.

"Why, ye little nipper,' he shouted at last, 'git home to your ma and learn a decent trade. We don't take boys to sea.'

"In spite of my mortification, I went around to other ships. On some I couldn't see the captain set all."

"Bottoal Flayers

Most of the accidents that happen on the football field could be easily avoided known professional footballer.

To hegin with he goes on, most of the sprains and strains which comprise the majority of injuries are due almost entirely to the want of condition of the players.

Football is not a strain.

see the captain at all. Sometimes those I did see were kind; others were stern. and ordered me ashore at once, and some were astonished, but all seemed much amused, and asked me what books I had been reading, and whether I did not hope to be a pirate some day.

"At last one old skipr seriously.
"'I don't want a boy myself," he said,

'but I'll put you into the way of a job.' "So he gave me a note to a shipping

master. This was at the end of three days, when I had only two dollars left. It took me that time to learn that captains rarely engage the boys themselves, and then only when sent by the owners.

"The shipping masters, also called the boarding masters, are what might be called ashore employment agents for sailors. They agree to furnish men to ships and ships to men for certain pay.

"I went to one of these men, and he looked me over.

"'Have you ever been to sea before? he asked.

"I could only shake my head. "Then you're no use to me,' he said

briefly, and turned away. "I saw a dozen shipping and boarding

masters that day, but their answer invariably was: 'Green boys ain't wanted.'

"Some few told me to call again; they thought if I did so every day they might eventually ship me.

"On the fourth day, by the advice of a kindly disposed sailor. I visited the Sailors' Home on Cherry street. After much difficulty, I managed to see the superintendent, but he received me like the rest. "'No green boys wanted.'

"By this time I had to find temporary employment ashore, so I washed dishes in a sailors' boarding house for my board and bed, and a prospective chance of shipping the first time the master Canton, Ohio. heard of a ship that needed a boy.

"Day after day, when I had finished my work, I haunted the shipping office, the Sailors' Home, the Seaman's Reading Rooms, etc., but the days passed, and no captain wanted a green boy.

"At last a chance came. A boarding master to whom I had made my face familiar saw me one day.

"'Are you still hunting a ship?' he shouted.

"'I nodded.

"Then meet me at ten in the British Consul's office. An English ship signs on and she may want a green boy."

"I was on hand, and my delight was great when the skipper really wanted a boy.

"'I'll take you,' he said as the shipping master presented me. 'Come aboard tomorrow with your dunnage, and, let's see, how old are you?'

"'Fifteen,' I replied.

"Well, you'll have to bring your father with you, and have him give his written consent. I am not going to run chances of getting into trouble by shipping minors.

"I lost that chance. Of course, I couldn't produce my father's consent, and the captain wouldn't take me under any other conditions."

This boy finally did get employment as N the olden times of privateers and mess boy on an English tramp steamer. pirates, sailors began their careers but not until he had suffered three

That a boy cannot run away to sea is more especially true here than in any of the first ship he attempts to board. other country. Most American seamen The captain will not receive him with have begun their careers in the Cape Cod fisheries; at least the American merchant marine is so well recruited from there that demand for entirely green from his home in an interior state and boys is small. It is certainly not great without the consent of their parents.

English ships rarely ship boys here, for the reason that their boys go aboard in England and remain until the vessel returns.

English ships often carry apprentices. who are boys whose parents pay a premium to the owners that they may stay four years aboard that company's vessels to learn seamanship. When owners can bright and her paintwork was nice and get boys on such terms it is not likely they will pay for services,

On the whole it is easier for boys to find employment on steamers as mess stewards, or, to be more plain, as waiters to the officers. But there is nothing to learn of seamanship here. It is not really "going to sea" to do that.

Thus it may be seen that the boy who wishes to go to sea would better get the consent of his parents. Without that, his chances of finding employment are small indeed. And this applies to every Amerlean port.

#### For Football Players

Football is not a child's game which anyone can take up, no matter how lazy a life he has been leading, and no loy should attempt to play in matches withundergoing a careful preliminary training.

training.

Another thing that few young players know much about is the art of falling properly. A boy who has presence of mind to draw himself up as much like a ball as possible when he finds himself being tumbled over will escape many injuries.

Lastly, injuries to the nose and face can easily be obviated in most cases by keeping the head down when running, and not holding it up for any stray elbow or head to come full into the face.

## How to Trap Moles---A Money-Making back may be turned to that particular trap, but you hear a wh-a-a-a-n-ng as the spring shoots the harpoon down. Sport For Boys By J. Olivier Curwood When you pull up the trap you will find the mole neatly impaled. The trap may

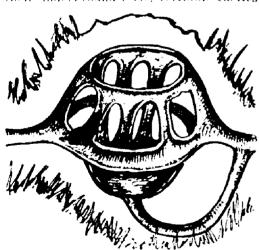

HOW TO SET THE HARPOON TRAP

ROM the beginning of May until late that the boy trapper requires for a good autumn this year boys throughout season's work although nearly the whole of America will ably bring better results. be offered one of the liveliest methods of making money that they have ever enjoyed. Within the last year or two a new fashion has sprung up in big cities all over the world-the wearing of moleskin coats, muffs and boas, and so great has the demand for the pelts of these little burrowers become that furriers everywhere are now offering boys from ten to thirty cents apiece for them. in one week recently a number of these furriers advanced \$160,000 to agents for the purchase of moles that have not yet been caught.

Especially to American boys does this big demand open up a new and enticing field of sport. Almost every boy, whether he lives in a town or in the country, is quite familiar with moles. These little animals are so common that they are a nulsance; they have long been regarded as a pest owing to the injury they do to plants, grass, small trees and growing grain. Unlike other fur-bearing animals, they live in cities as well as on farms, and it is not an unusual sight to see mole traps set on well-kept lawns, or in the paths between flower beds.

But notwithstanding the fact that they are probably more numerous than rats in almost every community, those boys who set out to trap them this spring and summer will have need of all their cunning and skill. Most boys know how hard it is to catch a rat, but it is twice as difficult to capture a mole. These little animals seem to possess a reasoning power that is almost human. They build their underground forts, veritable castles

SECTIONAL VIEW OF A MOLL'S "CASTEL," AS ECULT IN HARD SOIL

under the sod, where they may defy their enemies in the form of serpents, cats, dor, and wild animals. From the home of every mole there leads away a network of underground trails, through any one of which he may travel to safety two or three hundred feet away. I knew a man they go foraging. A dozen different who trapped all last summer for a mole routes lead out into the fields, and one that was ruining his lawn, and even then after another they scamper out. Many he failed to eatch him. On the other hand. I know of a young farmer lad who where there are no traps. But some of raught nearly a hundred during the sea- them are sure to go to their doom. Imcon, and who sold them all for a good agine a hig one scurrying up this high-

before he can successfully trap them, dealy he comes to the place where the traps. Regular mole traps of a good blockaded by soft earth. Without a quality can be bought for fifty cents moment's hesitation the mole dives into each, and two or three of these are all it, and hits against the trigger. Your

Armed with these, the trapper should leave for the meadows and fields before the sun is up in the morning. It may be that, the day before, he ran across the hunting ground of a mole, and where there is one mole there are pretty certain to be a dozen. If a trapping place is not already located, every square rod of ground should be closely examined. In all probability it will not be long before the trapper's sharp eyes discover a little ridge winding along over the field. This ridge is where the mole's back has pushed up the sod or loose soil in making his runway. Now the common mistake of nearly all mole hunters is to set a trap on the first runway found. Instead of this a wide circle should be made by the trapper, and perhaps a dozen more of these little ridges will be found, all converging toward a common center. Now the boy should follow one of these runways toward that center, and pretty soon he will come to the place where all of the mole's highways seem to join, or are lost, in a space about as big as a house. Somewhere in that space is the astle wherein there may be dwelling a dozen of the little burrowers

The trapper has now fairly trailed the little animals to their den, and is ready to set his traps. Imagine a great, thick steel hairpin two feet in height, and you will have a good idea of the framework of a mole trap. Suspended directly in the center of this pin is a small, fine-pronged harpoon, which is worked by a powerful spring. This harpoon should not be "cocked" before the trap Is set, however, as it might be accidentally discharged and impale the hand of the trapper. First dig a good-sized hole across the mole's so that the little round which he travels is exposed. Then on each side of the runway force the pin solldly down into the earth, so that the harpoon hangs directly over the tunnel. At the base of the pin is what is called a trigger, which should lay directly in the path of the mole. After the trap is arranged in this way the loose dirt should be filled in where the hole was dug, of course filling up the ends of the mole's runway. Now you may safely seize the handle of the harpoon and pull it up until the powerful spring clicks, which means that the little spear is ready for action. A trap can be set in this way in about a minute, and in the same way all the traps in the possession of the trapper should be placed over the different runways. Then you may sit down and very quietly awalt results.

Meanwhile the moleawakes in his castle chamber, where he has been sleeping the night away with his numerous family. Without doubt every member of that family is hungry, and every morning of them will probably leave by ways way, his sensitive little nose anxious to So a boy must know the ways of moles get out into the fields after worms. Sud-He must also have the right kind of trap is set, and he finds his runway is

be set again in this same runway, and before you go in to breakfast your three traps may have caught half a dozen of the valuable little animals.

Of course, if a boy has no money with which to buy traps, there are other ways in which moles may be captured. Nearly every country boy knows how to "snare" rabbits. The method of catching moles in this way is exactly the same. A green stick that will bend without breaking. and which has a good deal of spring to it, is about all that is necessary. To one end of this should be tied a piece of fine piano wire with a noose in the end of it. Then the other end of the stick must be forced deep down in the ground, so that when bent the noose will hang over the runway. A hole is dug as before, and the sapling is bent down until the noose is in such a position that the mole could not pass on his runway without putting his head into it. On each side of the runway a stake is driven into the ground, and to these two stakes is tied a stout string. This string is now caught in a notch cut into the end of the bent sapling, and of course holds it down. When the mole comes along he plunges into the loose dirt and runs into the noose. His struggles to force his way through force the sapling back a little, the string slips out of the notch, and the mole is suddenly holsted up into the air with a force that soon strangles him. This homemade trap is of great value, for a couple of boys who set out to make a business of catching moles can easily have half a hundred of them without much exertion.

After a warm rain, especially early in the morning, moles are easy prey. Then they leave their regular runways and forage about the fields, always keeping an inch or so under the loose soil or sod. As the animals burrow their way along in their search for worms, the earth raises over their backs in little ridges, and these moving furrows are easily disernible to any boy with ordinarily sharp eyes. Just as a muskrat hunter shoots at the head of the white path made by these animals in the moonlight, so must the mole hunter descend swiftly upon the head of the moving ridge, and strike it a heavy blow with the flat of a spade or a paddle-shaped board. If his aim is true the mole is stunned or killed. But if he misses, even by a hair's breadth. the little burrower shoots down into the soft earth, and has a good chance of

The mole is a little barrel-shaped animal, not more than five or six inches in length, and he cannot be skinned like larger for animals. His beautiful silky gray coat is so delicate that extreme care must be taken in preserving it. The trapper should first make a slit up the middle of the stomach from the tail to the base of the lower jaw. Then the skin should be worked off sidewise, the skin should be worked off sidewise, the legs being pulled out of their pockets of fur, as it were. The skin should then be stretched, but not enough to tear it, and the stretched but not enough to tear it, write for the stretched but not enough to tear it, and the stretched but not enough to tear it, and the stretched but not enough to tear it, and the stretched but not enough to tear it, and the stretched but not enough to tear it, and the stretched but not enough to tear it. So the stretched but not enough to tear it. The

SETTING A SNABE IN A MOLE'S RUNWAY

its edges tacked down on a shingle or a board, where it will cure just as any other skin.

When it comes time to sell the furs late in the fall, it is a good practice to write to a number of furriers in large cities. preferably New York or Chicago, telling them what you have, and asking them to make you an offer. This will insure you against being cheated by dishonest furriers, and besides will show you where your best market is.

## Boy Money Makers and Money Savers

GYMNASIUM IN A CHICAGO DEPARTMENT STORE

interesting illustrations of this might be shown. For instance, in the city of Dayton, Ohio, one of the largest factories stands in the center of what is called an Industrial Park, the grounds surrounding it being laid out with lawns which are adorned with flower beds, trees and shrubbery so that the view from the factory windows is one which pleases the eye. On the edge of this industrial park the factory owners built houses for their employes. Someone thought the boys had not been provided for, and a piece of ground was staked out for their special benefit. One part of it was set off for a baseball ground and other sports, while the other was converted into a garden, a baseball ground and other sports, while the other was converted into a garden, which is, perhaps, the only one of the kind in the United States. Each boy was given a plat and informed that he could have vegetable seeds of any kind to plant in it. The one who raised the best vegetables and the one who raised the most vegetables. vegetables were to receive prizes in money. In fact, two sets of three prizes money. In fact, two sets of three prizes each were to be given so that the boys who came out second and third in the contest would also be rewarded. The young gardeners were as much interested in the scheme as in the baseball ground and went to work with a will. The factory owners engaged an expert to give them advice, but the boys did all of the work from "spading up" the gardens to gathering the "crop." In the morning before the whistle blew, at the noon hour, and at night they worked with spade, shovel and hoe. When the harvest was gathered the first year it was so large and the quality so good, considering it was the first produced by the gardeners, that everybody in the place was surprised.

The news of what the boys were doing the state of the usual hondays, time is afforded to make recreation park a busy resort.

A Boy's Profit From Poultry

A New York boy of fifteen, in a recent issue of The Farmers' Gazette, tells how during the last twelve months he went to the High School for forty weeks and kept poultry during his spare time, with a profit at the end of the year of \$154.02.

He gives the following as the monthly record of his flock of ninety five hens:

Net

January \$21.28 \$ 8.81 \$ 12.47 \$ 15.96

The news of what the boys were doing soon spread throughout the town and not only fathers and mothers, but many other people came frequently to see how they were getting on. Most of those who did not receive prizes turned their produce into pin money as they had no

D. J. LAMBERT, Pub., Apponaug, B. L.

NTHE autumn of 1878, between four and five hundred Cheyenne Indians escaped from their reservation in Indian Territory, and, separating into bands, began a spirited attack on the settlers of Western Kansas.

It was the intention of the Indians to return to their old range in Nebraska, from which the government had removed them. Rid of all military restraint, they improved their opportunity to slaughter and plunder as their savage desires prompted.

On the bank of the North Fork, in one of the north-western counties of Kansas, stood the small shanty of a settler.

A patch of sod, corn and pumpkins was the only ground under cultivation, which showed that the owners had not been there long.

That cabin and claim belonged to Peter Mowder, a widower, who, with his only child, a looy of iffteen, had come from Now Jersey, settling a fertile piece of land on North Fork in the early part of the spring. Jim Mowder, as the boy was called, was a rogged, good-natured youth. the spring. Jim Mowder, as the boy was called, was a rugged, good-natured youth, who was never happier than when driving his father's oxen to the old breaking

It was noon at the shanty, and the boy was preparing his own dinner. This was no unusual task for Jim, for since his mother's death, three years before, be had added the duties of housekeeping to his work outside the house. He had not half finished his meal when a loud voice outside shouted: "Hello!"

Hastening to the door he found a man,

comprehending clearly at first.

"Yes, the Indians; they've broken loose on our border and are killing people and burning buildings right and left. Where's

Before the elder boy could answer there was a few or the clear boy could answer there. your father?

"He went to town this morning with up the creek.

"He went to town this morning with the oxen and wagon."
Then he'll hear of the Indian attacks, for the towns have been warned, and are preparing to defend themselves and to offer what aid they can to the settlers. But you, Jim, aren't you afraid?"

"Well, I guess I am, Mr. Bevins, though I never saw an Indian in my life. But I've heard and read enough about them. Do you think I'm in any danger here on the stone wall with no little enriosity.

go and warn them "
"That's right. After warning them, tell
them to leave at once for Windy Center,
and you must go along. Perhaps I may overtake vou.

Septimed with his father's weapons and ammunition, Jim leaped upon the pony's back and man and boy prepared themselves for their perilous missions. "God speed you, Jim, and save you, too," were the man's fervent parting words. "The same to you, sir." answered the boy, turning northward, while Mr. Bevins rode swiftly away toward the west. It was fully five miles to Elm Creek; and all over the vast, intervening prairie, between his own lonely little home and that stream, not a settler's cabin was to

that stream, not a settler's cabin was to But Mr. Bevins and himself had been

butting twice over on Ellm Creek, and had passed the isolated dugout; therefore, Jim knew the location very well.

The pony was fresh, and the youth was not long in reaching the dugout.

not long in reaching the dugout.

A how about his own age sat on a stump some fifty feet from the dugout's entrance, and gazed in wonder at Jim.

It was evident that he was puzzled to understand why the young horseman, equipped in such a warlike manner, had haited before him.

"Do you folks live here?" asked Jim.

"Yes," returned the lad, still eyeing his questioner curiously.

"Where's your father?"

"Gone to Windy Center for a doctor."

"Who's sick?"

"My mother. She's got chills and fever.

"Who's sick"
"My mother. She's got chills and fever.
My sister's watching her," and he glanced
over his shoulder toward the dugout.
"Then you folks don't know the Indians

are coming?

are coming?"
"The Indians! What Indians?"
"The Cheyennes. They've got away from the Territory and are coming this way, killing everybody and burning all the cabins. I was sent to warn you. You must start to Windy Center right away. We have no time to waste, for the redskins will soon be here."
"Mother ain't able to leave her bed," replied the little fellow, with a troubled countenance. "We can't go"
"How long has your father been gone?" asked Jim.

skins do come to Elm Creek, as they're pretty apt to do."

While the boy explained the Cheyenne

raid to his sister and cautioned her to be as calm as possible for the sick mother's sake. Jim concealed the pony in a dense wild-plum thicket, where he hoped it would escape the keen eyes of their dusky foes.

Then the youths went to work in earn-

est, and soon had prepared a thick stone wall, five feet high, which completely barricaded the entrance to the dugout. Several holes wore left, through which their guns would have good play on the onemy if they were attacked in their heatily constructed fort.

hastily constructed fort.

A space of a foot and a half gave the boys room to move about back of their

riding a pony and leading another, halted before the shanty.

"Hello, Jim" greeted the man, who was a neighboring cattleman, "the Cheyennes are coming!"

"The Cheyennes?" repeated Jim, not conversionally clearly at thest.

was a sound of coming horsemen dashing

Each stationed himself at one of the openings left in the wall, and waited with breathless expectancy.

A few minutes later a band of eight Indians rode up and, halting at some distance from the dugout, surveyed the stone wall with no little coriosity.

"Make every shot tell if they attack us."

two of them are coming back for the dead brave. Blaze away!
The boy obeyed, and another Indian fell to the ground, while his companion took to his heels and joined the braves

who were awaiting their return.

Presently the boys saw a solitary Indian ride away from his fellows, and speed like the wind toward the west.

"What is the meaning of that?"

"I don't understand those people very well," replied Jim, "but I'm afraid he has been sent to bring a new force to help attack us."

Jim's supposition proved correct. In

Jim's supposition proved correct. In about a half-hour the brave came back with twelve more of his fellows.

"We won't give up tilt we have to," remarked Jim, with white but resolute

face.
"No, we won't!" agreed the other.
"Here they come! Watch well," cried

The Indians made two spirited rushes at the little fort, but were glad to retire before the hot fire of the young defend-

Inside the dugout a young girl was bravely trying to subdue her own wild fears and to reassure a sick and terrified

The Indians made a third stubborn attack, but the open space before the dugout furnished them no chance whatever to creep up on the defenders. With many a wound, the braves were again driven back.

"They're gaing! We've which a third in the control of the contr

They're going! We've whipped them!"

"They're going! We've whipped them!" cried Jim, delighted beyond measure over the success of their defence.

The Cheyennes could be seen rapidly withdrawing, and leaving their dead behind them. Far out on the prairie, a party of horsemen had suddenly appeared. They were riding as swiftly as their animals could travel to the dugout. As they drew near, each boy made out the form of his own father. Mr. Bevins, too, was in the party.

the form of his own father. Mr. Bevins, too, was in the party.
Of course, the lads were greeted as real heroes, and duly praised for their gallant defence of the dugout and its inmates.
In Windy Center, Jim's father had heard of the Indian raid, and borrowing a horse, he had started with a party to rescue his boy, if they were in time. On their way they had met the man from the dugout. As they were talking with him, Mr. Bevins rode up, informing the nxious father that Jim had gone to warn the people at the dugout.

the people at the digout.

In a short time they were riding thither. Long before they swept over the prairie hill they could hear the firing of the guns, and guessed what it meant.

Dashing forward, the men were in time
to see the Indians retreating across the

The dugout was well guarded for a day and a half, when it was found safe to re-move the sick woman to Windy Center, where Jim Mowder was pronounced a

The soldiers finally subdued the Chey-

ennes, and the settlers again entered into peaceful possession of their claims.

Jim Mowder and the dugout youth are the best of friends, and both are now intelligent farmers where the Cheyennes once warred.

"NOW IS YOUR CHANCE," SAID JIM

"How long has your father been gone?" asked Jim.
"He started only a little while before you rode up."
"And it's seven long miles to Windy Center," said Jim thoughtfully.
"Hello" exclaimed the other hoy, gazing across the praisric. "What's that over there?"

Jim Mowder looked in the direction indicated by his companion, and saw great columns of smoke in the western horizon.

"You finished him!" cried the dugout by to Jim.
"You finished him!" cried the dugout by to Jim.
"Yes; but now is your chance. See!"

"Yes; but now is your chance. See!"

"You finished him!" cried the dugout contains two samples of verse, a short story, a sketch of Charles H. Russell, Eastern Manuscript Manuscript Field." In which amateur editors are taken to take for they drew up as if for consultation.
"You finished him!" cried the dugout by to Jim.
"You finished him!" cried the dugout they drew up as if for consultation.
"You finished him!" cried the dugout by to Jim.
"Yes; but now is your chance. See!"

Complete description with drawings for safe boat 14 ft. long. Fasily made. Sent for 10c by DRAPER PUB. CO., 77A Kilby Street. Boston

JEWELL JUVENILE DRUM CORPS, MARIETTA, OHIO

Colonel Charles Jesse Jones, known as "Buffalo" Jones, Game Warden of the Yellowstone National Park, gives in the New York Times some very interesting particulars with reference to animals that talk. His first exploit in hunting, he says, was the capture of a fox squirrel but he held on and achieved the capture. think. "The coyote," he says, "possesses the largest range of signals for use afield. Many people think animals learn everything from their mothers, but, on the instance, when young lions follow a trail, they from the very beginning plant their feet in the prints left by their predeces-I have seen young cubs whose

mother was killed before their eyes were open follow a dog, planting their feet in the dog's footprints."

Speaking of the National Park, he says there are twenty to thirty thousand elk in the park and that they are daily decreasing in number on account of the fact that they are confined to range fact that they are confined to ranges that are too high.

Colonel Jones is known to every hunter

of hig game from one end of the country to the other, and is a personal friend of President Roosevelt. His record in the

MOOSE.

Challenge—Long call, almost a rear, followed by shorter call and concluding with a scarcely audible grunt.
Danger—Single, sustained whistle.

ELK. Challenge - Single, sustained squeal, somewhat resembling the squeal of an angry horse,

#### Examples of Animal Language Exercises For Baseball Pitchers and Others

Mathewson, the star pitcher of the Giants of New York, gives some advice to would be baseball pitchers in The New York Telegraph. He says one can practice with the baseball or any other kind with his bare hands when he was about of a ball or stone. It is better for the eight years old. The squirrel bit him, arm if the pitcher has something to throw and an object at which to throw. He then determined to become a hunter, but If you have not this you can go and when hardly in his teens started out through the same motion as if you had, killing buffalo at fifty cents a head, and can even do it at home in the privacy Later on he made up his mind to raise as of your bedroom. Stand erect, he says, many buffaloes as he had killed. He with your hands at the sides. Swing thinks animals have an ability to talk them at full length in front of the body. with one another far greater than we Then, if you have a ball, take it in both hands-if you have not, place the hands together as if you had. Raise the arms high above the head, at the same time swinging the body from the hips to the contrary, there is not a beast or bird right, if you are right-handed, to the left that is not born knowing a great deal if you are left-handed. Drop your hands that it does not have to be taught. For far back and down until they are at the nape of your neck. Then bring the left leg up high and swing it across your right until you are facing in the opposite direction from which you started. Let go the left hand, straighten out the right and thrust it forward in the act of throwing, at the same time fetching the whole body with the throw, dragging the right toe along the ground. When you release the ball your right foot ought to be well forward of the left.

The advantages of this as an exercise are that the upward and backward movement of the arms open the chest and President Roosevelt. His record in the work of preserving the buffalo is known to all students of wild outdoor life.

The following are examples of animal language as described by Colonel Jones:

You will find that doing this several times will test your wind. Always breathe through the nose. The mouth as never intended as a medium of inhalation.

h flation.

A good thing to keep the knees from becoming stiff, something they will do, is to stand on one foot and taking the other by the toes, fetch it up until the heel touches the thigh. Do this several times before you go to bed, and again when you get up in the morning. Also keep the knees stiff, and, without bending them touch the floor with your fingers.

Another way to stretch the muscles is to "chin" yourself. This is pulling yourself up by the hands on a bar until your chin may touch it. You don't need a bar, however. The top of a door will do. Jump, catch it and pull yourself up as high as you can. This will stretch all the muscles of the body. Even once is enough to make you relish your breakenough to make you relish your break-fast.

TWO VIEWS OF A BOY-MADE SCENIC RAILWAY

#### Richard Fontana and His Scenic Railway

Richard G. Fontana, a twelve year old San Francisco boy, planned and built a scenic railway beginning his work May let last and completing it September 15th. The track is one hundred and fifty four helpers and together they cleared feet long and two feet wide, and starts from the inside of a barn and runs down a slight grade until it reaches a trestle forty feet long and eight feet high. Along the middle of the trestle run cogs, which, with the brake on the car, enables the driver to stop the car at any point and prevent its slipping back. The car is children and five cents for grown people.

Broncho Riders of the Plains we feet long and two feet wide and weighs one hundred and fifty pounds. The car is pulled up the track by a rope and windlass. The boy had four helpers and together they cleared twenty dollars in the way of fares paid for rides, the larger part of which they a slight grade until it reaches a trestle for grown people.

Broncho Riders of the Plains are fast discarding boots for moccasins, for the reason that they last longer than boots, are light and easy on the feet, cool in summer and warm in winter. We have the genuine article, made by the Sioux Indians, from \$1 to \$5 per pair. We also furnish bows and arrows, war clubs, war bonnets, ghost shirts, watch fobs, belts, buckskin suits, buckskin gauntlets, lariats, papooses on boards, cance stick pins, etc. Raise the latchstring if you don't see what you want.

#### WITH THE BOYS

#### A Young Cartoonist

The subject of this little sketch, Alfred Eugene Jason, is one of these typical American boys American boys whose kind is constantly on the increase. Though thoroughly artistic in temperament, richly endowed by nature with "the beautiful touch," he has, nevertheless, struggled hard to

leges have answered the unique advertisement and have given young Jason orders for illustrating their periodicals. These he is now busily engaged in filling, watching and studying the lives and pranks of the students about him for new and apt material.

#### Two Busy Business Boys

Arthur E. Ridley, Cambridge, Mass., is a genius as a mechanic as is evinced by many useful household devices in and about his being that are traceable to his ingenuity and skill. In the back yard of his home is a trolley road, two hundred and fifty feet in length. Every time the boy sees a piece of

ARTHUR AND EDGAR RIDLEY

machinery he goes home and tinkers away until he produces its duplicate, in a rough form, of course, yet with a marvelous degree of accuracy. Arthur has a younger brother, Edgar, who is now a little over thirteen years old. He graduated from the Harvard Grammar School with the highest honors at the age of twelve and a half. Recently the two brothers carned by hard work twenty dollars which they invested in a second hand printing press, then they built a room, twelve by eight in dimensions, in which they flitted up a print shop. Unassisted, they have mastered the art of stlcking type, and they are now flooded with orders. Their cards read "Riddley Brothers, Joh Printers." "Punctuality" is their watch-word. Typical American boys are these, with brain, industry and character. For such there is always success.—Geo. W. DVys

#### The American Boy Legion of Honor Roll

ROBERT H. FULTON, Washington, Pa., age fifteen, captain of the first year baseball team in his school. Received the highest grades in each study for the term of school ending last Christmas. Has not missed a day at day school or Sabbath school in three years.

CLARE SWAN, Wayne, Neb., seventh grade in school, age thirteen. Has never been tardy during the seven years of his school life.

ALFRED PFITSCH, Baltimore, Md., school No. 95, eighth grade. An almost unparalleled record for regular attendance at school as well as at Sunday school. A boy of fine principles.

MILAN WHITMAN, Lodi, O., not tardy at school for six years past.

HALFORD L. HOSKINS, six years in school without missing a day or being tardy, excepting on one occasion.

J. CONRAD SEEGERS, Easton, Pa., excellence in deportment and general scholarship, Has never been tardy at school.

#### Amateur Journalists

W. GRENVILLE HORSCH, Newburyport, Mass., owns a 3x5 Excelsior Press and five fonts of type. He prints "The Spica." Number 7, volume 1. of which is before us. He started printing the paper last October with rubber type and now has fifty subscribers. The copy before us contains eight pages, 2½x 4¼ inches, and, considering the experience the publisher has had, the work is well done. "The Speck," a little four-page sheet, 2x2½ inches, is published monthly by J. Gibson Logue, Williamsport, Pa. The March number is before us, in which the editor says "I am starting at the bottom". The editorial and typographical appearance of the miniature paper would seem to indicate that he is a long way from the bottom already.

#### Boys in Games and Sports

T J REARDON, Clinton, Mass, suggests that the boys of the O. A. R. all over the country form a baseball association and that country form a basebull association and that the baseball teams of the various companies compete with one another. That would bevery nice if the companies were near enough to one another in location so that they could visit without too much expense. As it is, however, we fear that they are too far apart for a successful organization.—"PUZZLED READER" asks us a question about checkers. He wants to know if the king has to jump if he has at the same time a chance to move to an unoccupied square. Our understanding of the rules of checkers is that the player is compelled to jump where an opportunity is offered —WILSON SUMMERS, JR., Brooks Station, Ky., wants to know of some form of exercise for the lower arm, that is, between the elbow and the wrist. Can any of our boys suggest a form of exercise that has proved satisfactory? satisfactory?

#### Bright Lads of Virginia

Dright Lads of Virginia

Dressler B and Krielle F Dietrich, the former cight and the latter seven years of age, are two bright boys living at Petersburg. Va These boys know what it is to work hard and to become experts even at their tender years in a calling requiring brain, muscle and nerve. The father of the boys during the past year has been sawing lumber in a large Virginia forest. Dressler has become an expert engineer, running the saw carriage for us much as two weeks in succession while his father was turning the logs for him. Krielle has had no less responsibility than that of the superintendency of the saw-mill work during his father scale at sixty seven pounds and neither one seems to be able to get ahead of the other in this particular.

Joseph Philip Smith., R. F. D. 1, Morgan, Minn., wins the prize for best original puzzles received by March 20.
Homorable mention is accorded the following for excellence of original contributions or answers, or both: George H. Stanbery, Everett J. Holmes, Frank M. Field, C. A. Roscoe, Edward Langdon Fernald, Joseph M. Heinen, Warren P. Smith, Will H. Floyd, Sarah Gilles, Grace Haren, Irene Rose, Walter T. Horton, Ward Sachs, Frank E. Dunn, Sherman W. Reardon, Paul Kelley, Lenniel C. Cook, Warren E. Hall, George Barber, Vattel Elbert Daniel, Burke Lincoln Bigwood, John A. Hanna, Clarence N. Freyman, Wilfred S. Baler, Monton L. Mitchell, A. Ralph Ennes, W. F. Holley, Sam L. Cox, Thomas DeWind, S. Ward Seeley, Fred Spangler, John Raymond Stark, George C. Ogle, Lester Shields, A. Swanson, Others are invited to try again, F. H. Halley's neatch puzzles are very ingenious, no doubt, but are not sufficiently lucid, by the explanation given, to be understood by us.

GRAND PRIZE OFFER: Four Henty books will be given as one prize for the best Fourth of July puzzle of any kind, illustrated puzzle preferred, received by May 20. The prize winner will be permitted to make his own selection of the four volumes from the forty three listed in the February AMERICAN BOY. Announcement of the award will appear in the July 1880.

An interesting new book will be given for the best list of answers to the May Tangles received by May 20.

## Some Points on Paper-Chases Englishman

be found generally sufficient, and it will of course be very advantageous for the hares to have arranged their plan of campaign, and to have thoroughly reconnoitred their proposed course before the day of action. This will prevent any halting or uncertainty, or, worse still, any falling out or disputings by the way and will also false information is most unfair and unfair and un-This will prevent any haiting or uncertainty, or, worse still, any falling out or All bribing of country folk to give disputings by the way, and will also ensure their not being landed in any unforeseen difficulties, such as being alike to make a bona fide run—all friend-land un in a quagmire or imprisoned in ly offers of a ride in any shape to be stornly declined. the bend of a river. At the same time a pocket compass is always a useful adjunct, and prevents the chance of losing one's way.

the fleetest runners in the school, but should have plenty of pluck and resource, and be of about equal strength in the matter of running and jumping powers.

cover, ten minutes, or less, will be a liberal start, and they should begin to lay the scent at a prearranged point. The paper should be torn up fine, and spar-ingly strewn. Many an excellent run has been prematurely cut short by a too lavish expenditure of the scent.

lavish expenditure of the scent.

The costume donned should be as light as possible—ordinary knickerbockers, a single vest, and canvas shoes. All else is of the nature of impedimenta.

A word as to the scent-bags. Wide, bulging sacks, pillow, cases, et id genus omne, should be discarded. A long, narrow calico bag should be made to suit the runner's height, with noose to draw the mouth tight; the ends of the bottom of the bag should be tightly sewn on the left shoulder; the bag should then be slung across the back—held by a loose strap if necessary—and come under the right arm. The paper will thus easily shake down as required, and the weight will be as little irksome as possible. One of these bags for each hare, if tightly packed with paper, will be found to provide enough scent for a course of the proposed length.

It is an invertible rule that the bares was highly the trail is lost, the huntsman should stick in his flag at the place where the scent was last seen; then let the scent was last in the pack. The scent had circle round it till the scent was last in the pack. The sc proposed length.

It is an invariable rule that the hares may not cross the scent; they may of course lay a false track and double, but it is of questionable advantage.

In some schools it is the custom that, if one hare is fagged before the other, the fresher of the two may lay a single roundabout trail, and agree to meet his fellow-hare at a certain point, to which the latter may take a short cut-laying no scent of course meanwhile-and so regain his wind. It seems, however, fairer on the whole to have a fixed rule that the hares may not part company at all.

Each hare probably has his own favorite dodges. If there is a cantankerous tarmer in the neighborhood who objects to having his territory invaded, the hares probably know it, and rush swiftly across the farmyard, scattering a perfect shower of scent as they go; they get off scottree, but he sure that a host of bucolies, armed with sticks or pitchforks, will be in readiness to greet the hounds if they attempt to follow the same course. Such pranks as these, however, are apt to bring discredit on those concerned, and to lead to the suppression of the game altogether. Still more to be deprecated, of course. is the doing of any wanton injury to

fences or farm property.

An intimate knowledge of the geography of a neighborhood is always useful. I remember, when I was at school, a certain very dirty and repulsive ditch, just too wide to leap, and deep and slimy enough to make it exceedingly unpleasant to plunge through. At a certain point there was a sunk wooden plank about six inches under the surface. The

DISTANCE of about eight miles will hares, who had discovered the existence

ly offers of a ride in any shape to be sternly declined.

The hares should endeavor to enliven the hunt by giving as much variety to the course as possible; a dead-level monotonous road route is very depress-

monotonous road road the short, the hares should have plenty of pluck and resource, and be of about equal strength in the matter of running and jumping powers.

If the country presents a fairly good cover, ten minutes, or less, will be a liberal start, and they should begin to lay cover the start and they should begin to lay the second point. The monotonous road road these ing.

If the paper runs short, the hares should throw down their bags to mark the spot, and make straight for home; if they take refuge or hide and come in after the hounds, of course they are knowledge of the shortest cuts will be early should begin to lay the second point. The

very helpful.

Not much need be said about the hounds. It is essential to have a really good master of the hounds, or chief huntsman, who can keep well to the fore the whole way. It is advisable also to have a whipper-in to rally the pack.

Directly the trait is lost, the huntsman about the that is his statements.

aginty, endurance and judgment. May my readers experience this pleasure; and when their school days are over may their memory revert, as mine often does, with satisfaction, to the happy recollections and mingled associations of many a good run!

It is a wonderful sight to see polar bears, sea lions, tigers, seals, leopards, hyenas, giraffes, elephants, zebras, camels and scores of other animals, each in its habitat, all peaceful and contented, and literally carrying out the parable of the lion and the lamb lying down together.

When one tires of this there is the great theater, where a continuous performance goes on daily, though care is taken that no animal appears twice the same day. All under the orchestra circle and beneath the seats are the dens for the heasts, while passages lead from this and the outdoor panorama to afford the easy access of the animals to the stage.

But the most fun of all is to be found on the riding track which is outside the theatre, for here one may ride and drive elephants, camels, dromedaries, llamas, ostriches, and if one wishes to be very stylish can actually hire a zebra tandem or the stunning antelope turnout where the animals follow each other sedately. All this is an experience that no zoo in the land can offer, and it shows what an animal trainer can accomplish with kind-

ALL, the attractions at the ton-flood, where real water washes on a ness and perseverance, for these animals World's Fair probably the most real beach, or to pay a visit to the are never beaten. furn sed with bit and bridle and a queer
king of saddle is strapped to their backs,
boys and girls scated on this monster
shell can guide the animals in any direction. The tortoises at the Fair were
trained especially for this before they
left the old country, but seem to have no
perference as regards, nationality and preference as regards nationality and preference as regards nationality and take just as kindly to an American boy for a driver as to his German cousin. It is a slow ride, for a tortoise creeps, but a tumble means nothing more than a sprowl from a height that cannot injure and the tortoise is so sure-footed no danger is possible. Of all unique methods of riding in the world this is the oddest, and a trip on a tortoise's back is worth going a long way to enjoy, for it worth, and a trip on a tortose's back is worth going a long way to enjoy, for it seems like a fairy tale or one of Aesop's fables. Pays could be spent on this Pike seeing the wonderful sights which are a taste of a trip around the world such as seldom comes into the life of the every-

#### Results of March Contests

PEN AND INK CONTEST

Three hundred and forty-two pictures were sent in during the month of March in answer to the offer of prizes for pen and ink comic pictures by boys under eighteen, which was published in the March number. A large proportion of these pictures could not enter because either they were in colors or in some ink other than black, or were not intended to be funny, or in some other particular did not meet the terms of the offer. All pictures sent in with postage stamps and requests for

ink other than black, or were not intended to be funny, or in some other particular did not meet the terms of the offer. All pictures sent in with postage stamps and requests for return have been returned to the boys who sent them, and the others have been destroyed. Strangely enough over fifty of these pictures were pictures of tramps. We have given the first prize to John Marini, New Kensington, Pa., for his picture, "Dot Leetle Sherman Pand," and the second prize to Harlowe D. Nicolls, Keeseville, N. Y.

Honorable mention is due Owear E. Hodberg, Willmar, Minn; Frank E. Hoyt, Thomastown, Conn.; Karl Lohse, Brooklyn, N. Y.; A. G. Quandt, Hartford, Conn.; F. Hoertz, Brooklyn, N. Y.; Percy R. Hartman, Lancaster, Pa.; Ralph B. Fuller, Richmond, Mich.; Ralph L. Baldwin, Nyack, N. Y.; Lynn Todin, Hilshoro, Hi.; Blake Battles, Wellington, O.; Arthur Outman, Westfield, Pa.; Jas. Copen, Parkersburg, W. Va., Harry Schell, Harrisburg, Pa.; A. Tarnoski, Chicago, Ill.; D. M. Femberton, Clinton, Mich.; Win, Burton, Chicago, Ill.; Walter Legg, Lancaster, Pa.; John W. Knecht, Grand Rapids, Mich.; Clyde Stewart, Augusta, Me.; David Nieman, St. Paul, Minn; Archie J. Strait, Wolcott, N. Y.; I. Dillenback, Cobleskill, N. Y., and several pictures which have no name upon them. PHOTOGRAPHS.

## HOW TO HANDLE A RIFLE

By CAPTAIN JACK O'CONNELL, a Noted Professional Shot

(It is not generally agreed as to the extent to which a boy should be allowed to handle firearms. There are persons who insist that a boy should be taught at an early age how to handle firearms, and there are others who would keep weapons out of his hands altogether. There can be no question but that if a boy is to handle them at all he should know how to handle them right. The most dangerous weapon is the weapon in the hands of one who does not know how to use it wenty-two callber (short), as annunition for it can be procured cheaply. I with these considerations in view and knowing that thousands of our boys are handling rifles and shotguns, we have obtained from Captain Jack O'Connell the following article. Captain O'Connell has had a most interesting history. He was for twenty one years on the plains and often when a boy slept under the same blanket with Buffalo Bill's "Wild West" attractions. He is also well acquainted with President Roosevelt. He at one time met with a strious accident in a cattle stampede, being on that occasion 36 hours in the saddle, the cattle cunning one hundred and sixty lake an iron target with a one-inch hole in its center for a bull's eve and

CAPTAIN JACK O'CONNELL

miles before the stamped- was checked. From miles before the stamp de was checked. From the effect of this he is practically a deaf mute. Captain O'council shoots in over sixty different positions and can stand on his head and do better work than most men can in the natural position. The following are Captain O'Connell's words written for THE AMERICAN 1994—Editor.)

The use of the rifle takes a boy out of doors and traits eye, ear and hand to work in harmony. Rifleshooting as a sport is rapidly gaining in favor. For many years soldiers were equipped with rifles which they seldom used except for show drill. In time, however, it dawned upon the people that to use rifles effectively in war, soldiers must learn to use them in times of peace. As a result, rifle practice is now the most important part of a soldier's training.

Any boy of ordinary intelligence may become an expert in handling a rifle Most boys think there is some mystery about so-called tricks of the professional

fair, but a reliable gun of reputable make. I would then advise that the youngster remove the "sights" that come on his gun as they are worthless for quick, accurate shooting, and that he buy a "Lyman rear sight," which has the appearance of a ring or hoop, when aiming, and with which almost instantaneous aim may be taken with great accuracy; also put on an ivory bead front sight. Make an iron target with a one-inch hole in its center for a bull's eye and paint it white. Fix it so that it may swing like a clock pendulum, then you are ready for business. In shooting at the swinging target do not follow its motion from side to side when aiming.

are ready for business. In shooting at the swinging target do not follow its motion from side to side when airning, but throw up your gun quickly and try and catch it anywhere as it swings. When you have learned to hit the bull's eye with a fair degree of regularity, the distance from thirty feet at which you begin should be increased to sixty feet by gradual steps, ten feet at a time. Be sure you have mastered the swinging target before you try more difficult shots. In aiming at tin cans, blocks of wood or objects thrown into the air always aim under the object as it falls. No teacher can tell you just how to hold the rifle in this sort of practice. First use large objects thrown into the air and as you improve use the smaller. It may be many moons before you can toss up a brick yourself, cut it in two and also smash both pieces before they touch the ground, or pump six to ten holes through a tomato can at one toss up or hit as shot." To become a crack shot, you must be able to throw up your gun, aim and fire without a thought. The fellow who hesitates and dawdles would be what is known as a polking shot, and a poor marksman. Do not be ambitious to be a world's champion. Many of the so-called "world's champion, Many of the so-called "world's champion," astonish you with rifle shells loaded with shot. Shooting glass balls from the back of a gailoping horse is very much of a humbing as the glass balls from the back of a galloping horse is very much of a humbig as the cartridges are usually loaded with shot horse is very much of a humbug as the cartridges are usually loaded with shot and the trick is comparatively easy. No man can perform the feed with real bullets often enough to make it interesting. It is with rifle shooting, as with everything else, one must have confidence in himself. One has off days in rifle shooting and on such days it is seless to sputter and get disgusted with yourself or your gun. Keep everlastingly at it and you will be surprised to see how soon you can aim and fire and with almost absolute certainty bit anything you want to hit no matter how small it is or how swift it moves. Io not, I pray you, practice on and murder harmless birds and animals that have as much right to live as you have.

Now if the writer has done anything to show boys that quick, accurate rifle shooting is within their reach he will have accomplished his object.

Capt Jak Geomec

## W. FRANK McCLURE

The purpose of this article is not to encourage any reader of THE AMERI-CAN BOY to attempt the training of a bull, for there is no domestic animal that is so difficult and dangerous to handle or to teach. The bull's stupidity and his natural ugliness are so well known and so marked that he is seldom levied upon to learn anything. An exception to this rule however, is to be found at Grand Repids. Mich. King Bill, part Durham and part Jersey, is owned by L. P. Suntin, and what King Bill has been taught is little short of remarkable.

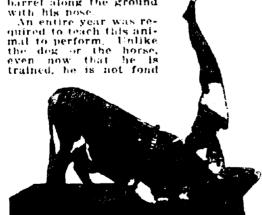

In one of the accompanying photographs the bull is seen standing with all four feet upon a small box. This is regarded as his most difficult feat, for the

four feet upon a small hox. This is regarded as his most difficult feat, for the top of the hox is but six by eight inches in dimension. To teach him this act required patient and painstaking training, and King Bill was not in the best humor either while he was learning. To manage him required something of the heroism of a wild animal trainer.

The animal's most sensational performance is the shooting of a revolver. The revolver is mounted upon a slanting polithe foot of which passes through a hole in an overturned tub. Mounting the tub with his front feet, King Bill pulls the trigger with his mouth. A loud report and a volume of smoke ensues, neither of which the bull seems to mind

which the bull seems to mind.
After kneeling, King Bill proceeds to with upon his knees, which he does very creditably to say the least. Then with his head and neck resting on the ground.

he allows his moster to stand with his feet in the air, his head resting upon the bull's shoulders and his hands grasping his hornes. To is, too, is well illustrated in another photograph. King Bill will also sit down squarely on his haunches like a dog or cat, or will roll a barrel along the ground.

of performing and is still inclined to be ugly. King Bill is a handsome looking animal, five years old and weighing fourteen hundred pounds. Each year he learns some new feats, and it is not improbable that his future accomplishments will exceed even those of the masiwill exceed even those of the past.

## SAVAGE RIFLES ettimi me A GLANCE at the SAVAGE 22 CALIBER REPEATING RIFLE will convince you that it is different from any other gan you ever saw. CHAPTER XVII.

#### LEAPING INTO UNKNOWN BLACKNESS.

To the friends who had been so mysteriously separated many months earlier, and on the other side of the world, their reunion at this place and under such conditions was bewildering and incredible. They scarcely could believe the evidence of their own eyes. The last time Rob had seen Jo, the latter had been shorn of his queue, while now his hair again hung in a long braid. For a moment they stood, each clasping the other's hand, after the fashion of the west, and staring without speech. There was so much to be said that they could say nothing. Then they were aroused to a sense of imimminent danger by the sounds of ascending voices, and hurrying footsteps on the stone stairway. Evidently the present was no time for explanations.

"Quick, Rob! Go up and hide," whispered Jo, pointing as he spoke to a wide ladder, leading into the darkness of an upper loft. "Stay there till I come, or I cannot save you."

Even as he spoke, Jo turned to the stairway as though about to descend, while Rob sprang to the ladder.

A Chinese soldier was so close at hand that he would have gained the room and caught sight of the fugitive, had not the young officer arrested his progress with the stern inquiry:

"What is going on below? Are you all mad or drunk with the juice of poppies? Cannot I meditate in peace, without being disturbed by the howlings of you swine? How dare you come up here without orders? Answer me, dog, and son of generations of dogs, before I cause you to be beaten with a hundred blows!"

The terrified soldier who held a petty office corresponding to that of corporal of the guard, recoiled from the presence of his angry superior; who, if he chose could have him beaten even to death, and, kotowing until his forehead touched the stones, answered:

"Know, your Honorable Excellency, that the outer gate has been closed without knowledge of any in the guard house, and beyond it, many persons furious with anger are clamoring for admittance. It is a mystery; and before opening the gate I came up nere for a look at the outsiders to make certain that they are not enemies."

"Closed, pig! How can it be that the gate is closed without orders from me, the keeper of the gate? This thing must be examined into!" cried the young officer with every appearance of extreme anger. "Let it be opened without delay. But first come with me and look at these outside howlers. It may be even as your stupidity suggests, that they are men from Chang Chow, who ever have been unfriendly to this

city because of its greater prosperity." This was said to give the soldier an opportunity for seeing that no other person was in the room,

which fact he would report to his comrades. As they examined the furious crowd besieging the gate, Jo exclaimed, even more angrily than before:

"These be no Chang Chow men; but our friends and own people. They are the dancers, who, together with the good priests pray constantly for rain, and who went out to the shrine of the holy Rain-god but an hour ago. Ah! but you shall smartly suffer for closing the gate of their own city against them. Hasten and open it again, if you would have the setting sun behold your worthless head still upon your wretched shoulders."

Thus saying, the young officer spurned the trembling soldier with his foot, and followed him down the stairway. In another moment the great gate was opened to the torrent of frantic humanity that rushed in, demanding to know what had become of the For- Now put on these felt

eign Devil whom they had seen enter only a few minutes before, and where the soldiers had hidden him. Also why they had closed the gate in the very faces of his pursuers.

"Give him up to us!" shrieked the priests, "that we may kill him, for doubtless it is he who keeps away the blessed rain."

The denials of the guard that they even had seen any foreigner or that they had closed the gate were so little heeded by the clamorous throng that it might have gone hard with them, had not Jo secured a hearing by firing a shot from his revolver, a weapon that he alone, of all those present, possessed.

"The guard has not seen the Foreign Devil, or surely they would have arrested him," he cried in the awed silence that followed his shot. "Nor did they close the gate; for they would not dare without my orders, and I gave none. Nor could one man, not even a Foreign Devil close the gates unaided since it often has been tried and they have proved too heavy. Only by magic must he have blinded the eyes of the soldiers so that they did not see him pass into the city. But your priests have magic as well as the foreigners, and by means of it he may be discovered. Let us then again close the gate that he may not escape and search for him in every quarter of the city. When he is found let his head promptly be cut off before he has time to use his magic. Thus shall the city be purified, and the wrath of the Rain-god appeased. Protect the Empire; Exterminate Foreigners!"

With this rallying cry of the Great Swords, Jo led the way across the enclosed space, separating the inner from the outer gates, past the guard house, where his soldiers spent their waking hours in gambling with long slim Chinese cards, and piles of beans, and on into the narrow streets of the city. There he was so active in the search that was maintained until stopped by darkness, that he gained a notable reputation as a hater of foreigners. Thus by his prompt action were Rob's enemies so completely thrown off his track that not once was his real hiding place ap-

proached or even suspected. In the meantime he, intensely wearied by hours of confinement in that hot dusty loft, grew vastly impatient of inaction. He was hungry and parched with thirst, no sound penetrated his prison, nor any ray of light. He had no idea of the passage of time, and imagined it to be much later in the night than it really was, when he was startled by a sharp "Hist" that seemed to come from the top of the ladder.

Too wary to answer it, he only listened with senses alert for something further. Then came a whispered "Rob" and he knew that his only friend in that part of the world was at hand.

"Crawl here on your hands and knees," whispered Jo. "Don't let your boots touch the floor, for the guards below are wideawake and listening to every sound. That's right. boots. Leave your own behind, and follow me without a word.'

Rob obeyed these instructions in all but one thing. His boots were of heavy English leather lacing high on his ankles, and had been procured in Hankow. They were very comfortable as well as durable, and he could not bear the thought of exchanging them for cloth shoes with felt soles, especially in view of the amount of walking ahead of him if he made good his escape. So, though he put on the pair provided by Jo, he tied the others about his neck, and thus equipped noiselessly followed his friend down the ladder to the room below. From this room a narrow doorway opened on the broad parapet of the city wall. Towards this door they were making their cautious way, when suddenly the hastily tied strings of Rob's heavy boots gave way, and they fell to the stone floor with a clatter that awoke the echoes.

Our lad uttered an exclamation of dismay as he groped about the floor to recover his lost treasures; but it was drowned in a tumult of shouts from below. At the same time a scuffling of feet on the stairway proved that the alarmed guard were on their way to investigate.

"Never mind anything!" Come on quick, for your

But Rob, having found one boot was determined to have the other, for which he still was feeling over a wide area of floor space. At length his fingers touched it; but as he triumphantly rose to his feet, a dark heavily breathing form, brandishing some sort of a weapon confronted him. The next instant he had sent the over zealous guard reeling backward with a swinging blow from the heavy boot just recovered, that took him full in the face. With a yell of combined pain and fright, the soldier pitched down the narrow stairway, carrying with him the comrades who were close at his heels. Before the confused heap could disentangle itself our lads had fled through the doorway and were speeding like shadows along the top of the lofty wall.

As they ran they heard behind them a shrill screaming and furious beating of gongs. Then, from the tall drum tower in the center of the city came a deep booming sound that could be heard for miles. The great drum that only sounded in times of public peril, was arousing the citizens and sending them swarming from their houses. Torches appeared, not only in the streets; but on the wall behind our flying lads. Then to Rob's dismay others began to gleam in front of them. To be sure these still were a long distance away, but they gave certain evidence that flight in that direction must come to a speedy end.

"What is the use of running any farther?" asked

Rob, "we'll only fall in with that torchlight procession all the sooner. Seems to me we might as well stop where we are, and see about getting off this perch."

"There's only one place to get down," answered Jo, "and it still is ahead of us. Run faster! We've got to reach it first."

So the fugitives put on an added burst of speed; though, to Rob it seemed that they were only rushing directly into the arms of the advancing torch

Suddenly Jo exclaimed, breathlessly, "Here's the place," and then to Rob's horror he took a flying leap off the parapet into the gulf of impenetrable blackness lying on the outer side of the wall.

For a moment the young American turned sick with the thought that, despairing of ultimate escape, his comrade had chosen death by suicide and now lay lifeless at the foot of the lofty battlement.

Then came the familiar voice from some unknown depth and calling him to follow.

"Jump, Rob!" it cried; "you'll land all right the same as I have."

Even with this assurance, our lad hesitated to leap into the blackness. He knew that the wall was at least fifty feet high. There was no moat at its bot tom filled with water into which one might launch himself with safety. "Nor is there any pile of feather beds, that I know of," he thought, grimly.

From both sides, lines of torches were steadily advancing, while up from the city rose a tumult of angry voices. Only in the outside blackness that already had engulfed his friend was there the slightest promise of escape.

"I suppose there's nothing else to be done." he muttered, setting his teeth and bracing himself for the effort. "So here goes!"

With this he sprang out into space and instantly vanished.

When a minute later the advancing lines of torch bearers came together at that very point, they were bewildered and frightened by the disappearance of those whom they had believed to be so surely within their grasp.

Certainly the magic of the Foreign Devils was stronger than their priests had led them to believe.

#### CHAPTER XVIII.

#### A SUPPER OF SACRED EELS.

The great plain of Northern China is composed of alluvial matter extending to an unknown depth, reddish yellow in color, and possessed of wonderful fertility. When wet it packs closely; and later, under the influence of a hot sun, it bakes like clay. During the seasons of drouth it pulverizes to an almost impalpable dust, that is blown by flerce winds into ridges and heaps, like snow drifts. These are piled high against obstructing walls, so that sometimes buildings standing in exposed situations are completely buried beneath them. Such a drift of fine sand had formed in an angle of the city wall, along which our lads fled; and Chinese Jo, knowing of it, had selected this as a point for escape.

Thus, when Rob with many misgivings leaped into unknown blackness, he had not dropped more than twenty feet when he struck a steep slope of soft material, down which he slid with great velocity, amid a smother of choking dust. The next thing he knew, Jo was pulling him to his feet and bidding him make haste to get away before their mode of escape should be discovered by the torch bearers, who now swarmed on the wall above them. So the lads ran, with Jo acting as guide, across cropless fields, climbing over useless dykes, and stumbling through dry ditches, until a black mass dimly outlined against the sky rose before them. As they drew near this resolved itself into a clump of trees, which, from experience already gained in China, Rob knew must be a sacred grove. It was, in fact, the very grove from which the frantic rain dancers had streamed in pursuit of him a few hours earlier. Now it was silent and deserted, even the ancient temple of the Raingod standing in its centre being empty of priests or

Finding the door of this temple open, and hearing no sound from within, the fugitives made a cautious entry into the sacred precincts. Here their attention was attracted by a faint glow coming from a heap of embers on an altar that stood before a gigantic image of the Rain-god himself.

While endeavoring to get a closer view of the idol, Rob stumbled and pitched forward, thrusting his outstretched hands into an invisible but shallow tank of water. He uttered a yell of affright as he withdrew and sprang back. "It's a nest of snakes!" he cried, "slimy, wriggling snakes."

there was no sound, save of a slight splashing in the, as vet, unseen water,

"If there were any priests here, your racket certainly would have aroused them," he said. "But as nobody seems to be stirring, I expect we've got the place to ourselves. Close the door, while I make a farther that night. light so that we can see where we are."

lasted but a moment, it served to show some half to find. burned candles standing behind the altar, one of which Jo lighted from the expiring flame.

By this faint light the lads discovered a number of crude figures of men and beasts ranged on either side of the Rain-god, while a pool of water glittered at their feet. In this squirmed a score or more of eels, emblems of the god, among which Rob had thrust his arms.

"There are your snakes," laughed the young Chinese, "and with them plenty of water to drink if you are thirsty."

"Goodness knows, I'm thirsty enough, and stuffed full of dust besides; but I wouldn't drink that water. with those things in it, not if I were dying of thirst."

"I would, then," replied Jo, who was too thoroughly Chinese to be fastidious, and to prove his words he scooped a handful of the water to his lips.

"It isn't very good water," he acknowledged, "but perhaps we can find some that is better where this came from."

A short search revealed a well just back of the temple, and from it, by means of a section of hollow bamboo attached to a long cord, they drew a plentiful supply of water that was much purer than that in the tank, and was not visibly contaminated by eels, snakes, or any other unpleasant creatures.

"My! what a blessed thing water is," exclaimed Rob after a long pull at the bamboo bucket. I don't wonder that the people of a burned-up country like this pray to a Rain-god. Now if only we had something to eat we'd be well fixed to move on."

"That's easy," replied Jo, reaching into the tank and drawing forth a large squirming eel as he spoke. "Eat a snake!" cried Rob, in a disgusted tone, "not much, I won't."

Jo smiled as he cut off the eel's head and proceeded to skin its still wriggling body, which he divided into short sections. Wrapping each of these in green bamboo leaves that he procured from a clump of the giant grass growing beside the well, he buried them in the hot sand of the altar and raked over them a lot of glowing coals.

While he did this, Rob, with the aid of a lighted candle, was examining the strange figures that occupied the interior of the temple. All at once, from somewhere behind the great idol, he called out: "Look here, Jo! He's hollow."

Going to see what was meant, the young Chinese found his friend holding the candle above his head and pointing to a small door standing slightly ajar, in the back of the image. It was so perfectly fitted that had it been closed no trace of an opening could have been discovered.

Climbing to the place, they easily opened the door, and through the aperture thus disclosed crawled into the very body of the Rain-god. They found themselves in a space large enough for them to stand up or lie in at full length, but occupied by a confused litter of garments, masks, charms, banners, and other paraphernalia of the priestly trade.

"It is the biggest kind of a find," said Jo, evidently much excited over this discovery, "and it gives me an idea; but I must eat before explaining, so let us go to tiffin."

The cooked eel, which Rob still insisted was nothing more nor less than snake, looked and smelled so good that the latter's desperate hunger finally persuaded him to taste a morsel. Then he took another, "Hush!" admonished Jo, listening intently; but and a few minutes later, gazing thoughtfully at a small heap of well-cleaned bones, he asked Jo if he didn't think they might cook a few more eels while they were about it. An hour later he declared that he had eaten one of the best meals of his life, but was altogether too weary to think of traveling any

ing altar embers and blew into a blaze. Though this this temple was as safe a place as they were likely

So, while he removed all traces of their presence, Rob arranged the priestly vestments they had found inside the Rain-god into a sort of bed. Lying on this, each of the lads gave the other an account of his adventures since they had parted in far-away America. Rob's story we know, as we do that of Jo up to the time of his commitment to prison in New York. charged with being a Chinese laundry worker who illegally had entered the United States."

"I was kept there two weeks," he now said, "and treated worse than a dog all the time. They would not allow me to write or telegraph to you, or any of my friends, and finally carried me off at night, in a prison van, together with a dozen coolies gathered from different parts of the country, who hated me because I had cut off my queue. After that we traveled handcuffed together, two and two, in a crowded immigrant car to San Francisco, where we were locked up in a filthy shed until a steamer was ready to sail. On our journey we got very little to eat, but what we had was fairly good. The food given us in the shed was bad, but what we got on the steamer, where we were put in the hold, without being allowed to go on deck during the whole voyage, simply was rotten.

"The ship was under contract to deliver us at Shanghai, but when she anchored off Woo Sung, and they began to transfer us into a launch, that would take us to the city, fourteen miles farther up the river, we were in such a horrible condition that the other passengers objected to having us on board. So we were set ashore at Woo Sung and told we might walk the rest of the way.

"I was so sick and weak that after we had walked a few miles I gave out and laid down by the roadside. There I suppose I should have frozen to death, for it was bitter cold winter weather, if a farmer had not found me and taken me to his house. My father afterwards made him a rich man for it. He fed, clothed and kept me until I could get word to some friends in Shanghai, after which, of course, I was all

"Finding that my father had been transferred to Pao-Ting-fu, between here and Pekin you know, I went there, and when he heard how I had been treated he was so angry that he swore he'd do everything in his power to drive foreigners out of China. He did drive a good many from his own district. especially railroad people; but when the Great Swords began killing them, he drew the line and said that was going too far. One day a Boxer army came along with a lot of missionaries whom they proposed to burn to death in the city temple. My father told them they must give up their prisoners to him; and when they refused he ordered out his own soldiers, killed a lot of Boxers, rescued the missionaries, and sent them, under guard, to the coast. For that he was recalled to Pekin and Mandarin Ting Yuan was put in his place. Last week that man turned over fifteen missionaries, some of them women and little children, to be tortured and put to death by the Boxers of Pao-Ting-fu."

"But, what were you doing all this time?" asked Rob, his face paling at thought of these horrors.

"I had obtained a commission as captain of Imperial Troops, and was sent down here, where I have been ever since."

"You haven't seen any missionaries killed, have you?" demanded Rob anxiously.

"No, and I don't think I should have, without trying to save them, in spite of the way I was treated in America. But I received orders from Pekin only yesterday not to oppose the Boxers in any way, no natter what they did. I was up in that watchtower wondering what I ought to do if any missionaries should come this way, when I saw the rain dancers chasing you. Of course, I didn't recognize you, but the moment I discovered you were a foreigner I knew that I couldn't stand by and see you killed without making an effort to prevent it."

"Didn't you know who I was until we stood together on the watchtower?" asked Rob curiously.

"No. I had not time for a good look at you until that moment. Even then I couldn't at first believe it really was you, it seemed so utterly impossible that you could be in China."

"What do you propose to do now?"

"Stay with you until I get you to a place of safety." "But you will lose your position in the army if you leave your post."

"Yes."

"And perhaps be shot as a deserter?"

"Quite so."

"Aren't you almost certain to be killed if you are found in company with a foreigner, whom you are aiding to escape?"

"Yes."

"And you are willing to risk your life, besides throwing away your career, for the sake of one of the very people who treated you so shamefully when you were in America?"

"It is a saying of the ancients," replied Jo, "that Jo readily agreed that they should spend a few friendship shines among the brightest jewels in the From the floor the speaker gathered a few bits of hours where they were, as he wanted time to think ring of life. Also that life without friendship is as a unburned joss paper, that he laid on the faintly glow- out a plan of escape, and believed that for the present barren fruit tree; and that for a true friendship life

itself is not too high a price to pay. Therefore, may I not risk, and gladly, a life of little value, to save that of one who, though he is of a people who illtreated me, is also the best friend I have in all the world. Did he not, even when we were strangers, fight to save me from abuse? And can I do less for him, now that we are friends? So it is foolish for you to ask questions, since it is assured that until I can leave you in a place of safety your enemies are my enemies-your friends are my friends, and wherever you go, there I go also."

"Then," said Rob, who was greatly affected by these words, "let us stay right where we are until morning, for I want to think over all you have told me."

After this the lads did not talk any more, but a few minutes later were sound as eep inside the very Rain-god to which one of them would have been sacrificed had he been caught in that vicinity a few hours earlier.

#### CHAPTER XIX.

#### A SURPRISING EXHIBITION OF THE RAIN-GOD'S ANGER.

Mongorians, including Chinese, Japanese and Koreans, can get along with less sleep than any other of the world's people; and Jo, in spite of having traveled and learned to speak English, still was a true Mongolian. Therefore, he awoke quite refreshed after two hours of sleep, and, moving with the utmost caution so not to arouse Rob, he left their strange hiding place, carefully closing and fastening its door behind him. Then he swiftly made his way back to the city, where he skirted its wall to the farther side and forced an entrance through a now dry culvert or water gate. After showing himself at the several guard houses, that if necessary he might be able to prove his presence in the city that night, he went to his own quarters, where he made preparations for a journey. He ordered a horse to be brought, saddled and ready for travel; and sent for his lieutenant, a man who, though older than he, was possessed of so little influence as still to be under the orders of his funior.

To this officer Jo turned over command of the guard, telling him that he considered the escape of the Foreign Devil, who had eluded them by exercise of magic arts, to be an event of such grave importance that he was about to report it in person at Pao-Ting-fu, and possibly to Pekin itself. The young captain named these places in order to throw possible pursuit off the scent, for he had decided to carry Rob in exactly the opposite direction, or back over the way he had come to Hankow. Having thus arranged affairs to his satisfaction, he set forth at sunrise, riding by way of the very gate through which Rob had made so hasty an entrance the day before.

Jo was ready to leave the city a full hour earlier than this, and wanted to do so; but even greater authority than his would be insufficient to open the gates of any Chinese city before sunrise, and so he was forced to await that hour.

Once in the open, he rode with all speed, hoping to reach the temple of the Rain-god before any worshippers should appear and while Rob still slept. In this, however, he was disappointed: for, though he reached the temple in advance of the priests who served it, and who, having joined in the pursuit of the foreigner, had been forced to spend the night in the city, he was dismayed to find a certain number of worshippers kotowing and burning inceuse before the great image. These were wretched farmers from the nearby country, who, having no work to do in their burned-up fields, and with death from starva tion staring them in the face, had come in desperation to the only source they knew of from which aid might be asked.

Another company of those who reached the place at the same time with Jo were provided with firecrackers, with which they proposed to arouse the god's attention if he should happen to be asleep. A bunch of these were exploded as soon as they entered the temple, and, to their awed delight, the efficacy of this proceeding was immediately apparent; for the image of the Rain-god trembled, and a muffled sound came from its interior. Evidently the god who alone was powerful in this emergency had been asleep, but now was awaking to the gravity of the situation. With heads in the dust, the worshippers humbly bowed before his image and implored his aid. Loudest of them all was the young officer who had forced a way to the very front of the assemblage.

His prayer was in Chinese of the Mandarin dialect. which no one present, except he, understood. Strange as it was to the cars of his fellow worshippers, it also contained words of another tongue still stranger that their ignorance did not permit them to recognize. Thus Jo was able to call out, under guise of a prayer and undetected:

"It's all right, Rob. I am here, and we are safe so long as you keep quiet."

At this point someone at the back of the temple uttered a loud cry, at which all the bowed heads were raised. Jo looked up with the others, and, to his dismay, saw the great right arm of the god slowly lifting as though to impose silence upon those who

clamor. At this phenomenon the superstitious spectators gazed in breathless suspense, and when the arm suddenly dropped back into its former position they sprang to their fect.

They were not so much frightened as they were awed, for, in China, it often has happened that the gods have entered certain of their own earthly images and, by well understood movements or sounds, have caused these to express their will to the people. It was reported that the very image of the Rain-god now under observation had been thus favored, and, upon previous occasions of grave importance, had made certain motions of the arms and head that only the priests could interpret. So the people now awaited in terrified but eager expectation.

Nor were they disappointed, for no sooner had the arm dropped than the head of the image, which was big enough to hold a man, was seen to be in motion. It certainly was bending forward and assuming an attitude benign, but so terrifying that the awestricken spectators instinctively pressed backward. As they gazed with dilated eyes and quaking souls, the great head was bowed farther and farther forward until suddenly, with a convulsive movement, it was seen to part from its supporting shoulders and leap into the air.

The crash with which the vast mass of painted and gilded clay struck the stone pavement, where it was shattered into a thousand fragments, was echoed by shrieks of terror as the terrified beholders of this dire calamity plunged in headlong flight from the temple. Never before in all the annals of priesthood had been recorded a manifestation of godly anger so frightful and so unmistakable. From this time on that particular temple of the Rain-god was a place accursed and to be shunned; for if, after this warning, any person should enter it, he would be crushed to death beneath the body of the idol, which surely would fall on him.

So the people fled, spreading far and wide the dreadful news; and only one among them dared return to the temple and brave the Rain-god's anger. This one, of course, was Jo, who, startled and alarmed by what had taken place, had fled with the others.

## Boys of Naples A Series by Min-

No. 1 The Garbage Gatherer

The hoy garbage gath rer of Naples gathers garbage from the streets for the tertilization of the farms. The city leaves its streets in the lower quarters to be cleaned by whoever has a mind for the task. This boy comes in from the country with his father or his sister, and a cart hitched to a poor, skinny horse, or a sad little donkey. They fill the cart with manure from the street and drive it home. Sometimes the boy will have for sale two sacks of greens or vegetables on a donkey; and when he empties a sack, he will fill it donkey; and when he empties a sack, he will fill with garbage, so that the purchaser has the agreeal with garbage, so that the purchaser has the agreeable spectacle of seeing the sack on one side filled with vegetables, and that on the other filled with manure. Often, however, he is a city boy, who gathers garbage to sell to the farmers. His price is two cents a basket, and if he sells two such baskets a day, he is doing fairly well. Five cents a day is as much as he expects. He spends two cents for maccaroni, one for bread, and the other two go for either eighrettes or a place to sleep. In summer he sleeps in the street. The streets in the lower quarters at night will be found thickly strewn with men and how sleeping on the ground. In strewn with men and boys sleeping on the ground. In winter, if he can afford it, he pays for a place on the floor of a tightly-packed room. He is often seen sleeping in the doorways, or on the steps of the great old

persisted in annoying him with their unwelcome But he had paused while still within the shelter of the grove, and, flinging himself to the ground for concealment, had allowed the others to pass on without him. When all had disappeared, he arose and returned to the temple. As he re-entered its dustclouded doorway, he was confronted by a spectacle at once so amazing and so absurd that for an instant he gazed at it in dismay. Then he burst into almost uncontrollable laughter.

> The image of the Rain-god already had acquired a new head, disheveled and dust-covered, to be sure, but one endewed with speech as well as with motion, and which, when Jo first saw it, was violently cough-

> "I say, Jo Lee," called out a husky voice from this new feature of the giant image, "I think it was a mean trick to go off and leave me shut up in that beastly place. I mighty near smothered in there, and I don't suppose I ever would have got out if an earthquake or something hadn't happened. It almost shook down the whole house, and it knocked the roof off as it was, nearly burying me in falling plaster besides.

> "It isn't a house," explained Jo, laughing hysterically, in spite of his habitual Chinese self-control. "It's the image of a god. Don't you remember crawling into it last night? I don't know how its head happened to tumble off, but I expect you did it yourself. And now you have managed to give it a new one, a hundred times more useful, but not half so good looking. I never in all my life saw anything so funny; and if you only could see yourself, you'd laugh, too.

> "Maybe I would," replied Rob with a tone of injured dignity; "but if you were as battered and choked as I am, you wouldn't laugh. I know that much. Of course I remember now all about this thing being a god, only I was so confused when I wone up that I forgot where I was. I only knew that there had been an explosion of some kind, and that I should smother if I didn't get out. I could see a little light above, and tried to climb to it by some ropes that I found dangling. Two of them gave way slowly, while the third was so rotten that it gave way mighty sudden. Then came the earthquake, and an avalanche of mud that nearly buried me; but I managed somehow to climb on top of it, and here I am. Now I want to get down and out, for I don't like the place."

"All right. Drop down inside and I will open the door.'

Accepting this advice, Rob withdrew the head that had looked so absurdly small on top of that great image, and in another minute slid out of the open doorway far below, in company with a quantity of dusty debris.

"Whew!" he gasped, "that was a sure enough dust bath. Now let us get outside and into an atmosphere that isn't quite as thick with mud."

"Wouldn't you rather remain in here and live than go out and meet a certain death?" asked Jo quietly. "Of course; but, even so, we can't always stay shut up in this old rat trap.'

'No, but it will be safer to leave at night, and also we have much to do before we shall be ready."
"Have we?" asked Rob; "what, for instance?"

"It is my plan that you should travel as a priest under a vow of silence until we reach Hankow, while I go as your servant. If it is agreed, then must your head be shaved in priestly fashion, your skin must be stained a darker color, and we must obtain garments suitable."

"That's all right so far as the priest business is concerned, if you think I can act the character; but you are away off when you talk about going to Hankow, for I am not bound in that direction. You see, I have just come from there and am on my way to Pekin.

"But the road to Pekin is filled with danger."

"So is the road to Hankow. I ought to know, for I have just come over it, and I am certain from the posters I saw displayed in every town that Honan is a Boxer province by this time. Besides, Hankow is twice as far away as Pekin."

"It is reported that all foreigners in Pekin have been killed.'

"Including members of the legations

"So it is said."

"Well, then, the report can't be true. In the first place, the foreign ministers would have called in troops of their own countries for protection upon the first intimation of danger. In the second place, to kill a foreign minister is to declare war against that minister's country, and I don't believe that even the Chinese government is so foolish as to declare war against the whole world. At the same time, if there is to be any fighting I want to be where I can see it. or at least know about it, which is another reason for going to Pekin. Besides, I must go there, for it is in Pekin that I am to get news of my mother and father. Only think I don't even know for certain if they are alive. If you didn't know that about your family, wouldn't you want to go where you could find out?'

Jo admitted that he would.

"By the way," continued Rob, "sr aking of families, thought you had a wife. Where is she? Are you going to take her with us to Pekin? Wasn't she awfully glad to see you when you got back from America?

For the second time that day the young Chinese laughed.

'Yes," replied he. "I have a wife. I think she is in Canton, for that is where my father left her when he came north. No, I am not going to take her to Pekin, No, she was not glad to see me when I came back from America, for she has not yet seen me.

"If I had only known your wife was in Canton and where to find her, I should have called," said Rob

The idea this presented was so absurd that Jolaughed again as at a good joke, for in China no man ever calls on the wife of another,

(To be continued.)

ICHARD HILTON was just sixteen years old.

He had spent almost all his life. was a very earnest student, but was also a very active, energetic young man, full of life and vigor and possessed of an extraordinary amount of tact and common sense. He had never made any money but was very anxious to do so. He would like to earn one hundred dollars and do it in the shortest possible time.

His home was in Centre City, and recently a great manufacturing establishment for making chemical fire extinguishers had located there. The concern was known as the Centre City Chemical Engine Company.

One day he chanced to be talking to one of his friends in the hearing of the superintendent of the company of his desire to make some money. Quite a number of very handsome chemical engines had been turned out recently, and the promoters of the enterprise were very anxious to place some of them on the market. Accordingly when the superintendent overheard the remarks of Dick Hilton, as he was familiarly known among his companions, and observed his high spirit and energy, it occurred to him that he might be a suitable person to whom to offer an agency for selling their machines. Accordingly Dick was called into the office and had a consultation with the superintendent and some members of the firm, which resulted in his being appointed to the agency with the suggestion that he endeavor first to make a sale of one of the machines to the town of Barryville, a little borough some

twenty miles distant. The commission upon this sale would amount to one hundred dollars.

Dick embraced the opportunity, and taking all the printed matter and illustrations that could be had from the company, he went down to Barryville and interviewed the members of the Town Council. He presented the subject well and succeeded in interesting every member of the council. Dwelling at some length upon the dangers of fire and the lack of facilities for the prevention of great loss of property and even of life in the event of a conflagration, he described the situation with such interest and vividness that it almost appeared that they were in imminent danger of being swept off the face of the earth by the first fire that should appear among them.

While he had won the members of the council and the burgesses to his cause, it was found, in order to make such a purchase, it would be necessary to submit the question to a vote of all the people, and this could only be brought about by calling a general election.

The youthful salesman found himself against what appeared to be a solid wall, but Dick Hilton was not the boy to be blocked in his. It was certainly a most magnificent piece of machinplans by any such opposition. If there is a solid wall, he will scale that wall, or dig through it, or go under it, or in some way get to the other side of it.

He inquired what was necessary to secure a call for a general election and was informed that it would be necessary to secure the signatures of a large number of the voters demanding an election. At once he proceeded to draw up a suitable petition and began a systematic canvass, presenting the plan of purchasing the chemical engine, and pointing out the personal interest which every voter should have in introducing such an element of safety to the life and property of the borough.

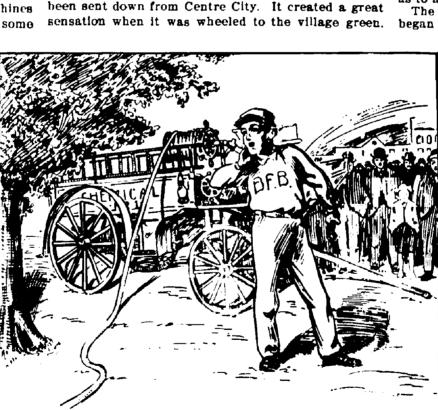

Dick's engaging personality went a good ways in securing signatures. He had what he thought was a good cause and his plans were carefully laid and his arguments well presented. He secured a great number of signatures and awakened a great deal of interest in the Centre City Chemical Engine Company and their fire extinguishers. It was only a question of time when he would have secured the signature of every voter in Barryville, but the members of the council told him that he had received sufficient signatures, and that as such an interest had been created in the machine, an election was only a matter of form and he could consider the machine as actually sold, but that in order to conform to the letter of the law an election must be held. Meanwhile they deemed it only just and right that an

exhibition should be given of the practical value or the machine in actually putting out a fire.

Dick readily acquiesced in this plan and said as the election would take place on Monday, that he would have the machine brought down from Centre City on Friday and the exhibition would be given on the village green on Saturday evening.

The news of the coming exhibition spread like wildfire throughout Barryville and the surrounding country. Dick entered into the plan with all his accustomed vigor and spirit. He secured four telegraph poles and set them in the centre of the village green, right in front of the Burns Hotel. He had the holes dug and the telegraph poles set so they would stand twenty feet apart. Then from a neighboring sawmill he secured twenty-foot boards and nailed them at intervals on the telegraph poles until he had reached the top.

Meanwhile he had enlisted the co-operation of a number of boys of the town, of near his own age and having the same energetic spirit. They gathered up all the old boxes and barrels that could be found anywhere in Barryville, saturated them with kerosene oil and coal tar and piled them up within the limits of the quadrangular space enclosed by the telegraph poles. They secured enough material to build the pile as high, if not a little higher, than any house in the village. Meanwhile the chemical engine had been sent down from Centre City. It created a great

ery, fully nickel-plated, shining like silver. The wheels were magnificently decorated and painted with brilliant stripes of red. All the afternoon of Friday and all day Saturday it was kept on the village green and had its beauty and merits pointed out by a man who had been sent down from the factory.

-Grant-

Meanwhile Dick Hilton had organized eight boys, representing the leading families of the town, into a fire brigade. He drilled them very carefully and gave them minute instructions as to how they were to handle the machine. He adopted a uniform for the brigade consisting of a cap and white flannel shirt with the letters B. F. B. in red across the breast. The boys certainly looked handsome and they entered with boyish exuberance into the occasion. They were certainly well trained and were able to execute their part in a first-rate manner.

When the train came in from Centre City on Saturday evening, it brought the superintendent of the Chemical Engine Company, who was going to personally direct the putting out of the fire upon the village green. As the time for the exhibition drew near, crowds of people began to assemble. news of the exhibition had spread to the neighboring towns and every road leading into Barryville was lined with farmers, teamsters and others coming to witness the exhibition. All the people gathered around the village green, some of them climbing upon fences, others upon house tops, and the carriage sheds next to the Rurns Hotel were covered with people, while the wagons under the shed were filled with spectators. Besides these, a great mass of people

crowded around the great pile of barrels and boxes. The excitement was intense; the air seemed full of it, and every heart throb seemed to add to the intensity of the interest which was awakened.

It had been arranged that, in order that the semblance of a regular fire should be represented, the chemical engine should be stationed at about onefourth of a mile distant on a neighboring hill. A match was to be applied to the pile by the chief burgess. At the same instant a cornetist was to blow a blast upon his horn, which should be the signal for the ringing of the Presbyterian church bell.

That there might be no doubt in the minds of all the people assembled as to the difficulty in extinguishing the fire, it was decided at the last moment that they should pour on an additional amount of kerosene oil and saturate the pile with an additional half barrel of tar. When this was accomplished, everything being ready, and the crowd of people standing around pressing closer and closer, and the excitement growing so intense as to be almost beyond endurance, at the word of the superintendent of the Chemical Works, the chief burgess applied the match.

The result was electrical, almost magical. The boys had so thoroughly done their work of saturating with oil and tar as the pile was constructed, and the additional supply, added at the last moment, had rendered the whole mass so inflammable in every part. that the entire pile of saturated boxes and barrels, in less than the twinkling of an eye, was an entire mass of flames. It ignited so quickly and burned so flercely that the whiskers of the chief burgess were singed and his eyebrows entirely burned away. The heat was so intense that the whole mass of people was forced to fall back instantly with such speed and force as to almost crush large numbers who were behind.

The blast on the horn was blown, the church hell began to ring, the pent-up feelings of the crowd burst forth in a terrific shout. The Barryville Fire

Brigade on the top of the hill started to the rescue with the chemical engine, ringing the bell with tremendous fury at every step. What with the ringing of the engine bell, the shouts of the boys, the continuous clanging of the church bell, the cries of the crowd and the deafening roar and crackling of the flames, it seemed as if pandemonium was let

The Barryville Fire Brigade brought up on the village green in grand display. They had performed their part well. Dick Hilton took his place on the side of the engine and passed out the hose to the superintendent of the company. He pointed the nozzle at the great roaring mass of flames and shouted to Dick to turn on the acid. Dick answered back in thunderous tones, which were heard above the roar of the flames, the ringing of the bell and the shouting of the people, "I have turned it on.'

The superintendent cried again, this time in an irriated, angry tone, to see that the acid was turned on.

Dick made a closer examination and found that he was right in saying that it was turned on. He could hear the movement of the acid and a deep, rumbling sound, and was presently almost knocked to the earth by a sudden lurching and plunging of the machine, which was followed almost instantly by a terrific boom. The cylinder head on the

opposite side from where Dick stood had blown out, carrying with it the sulphuric acid and the gas which had been stored up there for extinguishing the fire. It was discharged upon the people who were in range

Right after this explosion the people were so startled as to be hushed into silence, and nothing was heard save the ominous roar and crackling of the flames. The silence on the part of the people was presently broken by someone standing up on the fence in the distance, who cried, "We'll take a dozen of those machines!

By this time the heat was so lutense that neighboring property was in danger. Twice the cornice on the Burns Hotel had taken fire. All the horses and wagons under the hotel sheds were hastily removed, but not in time, however, to prevent some bundles of hay from taking fire which a farmer had brought in his wagon for feeding his horse. An attempt was made to extinguish the burning hay as the horse was backed out into the street, but before this could be done the horse took fright and started on the run up the road. The sound of voices behind him and the roar of the flames and the crackling of the burning straw in the wagon filled the horse with an overwhelming and terrible fright.

He had not gone far when he er tered a drove of cattle. They, in turn, seeing the horse coming with such terrific fury, eyes glaring, nostrils dilated and a cloud of smoke and fire just behind him, were seized with a tremendous fright. They ran along the road ahead of the horse, their combined tread being sufficient to shake the ground.

Some half mile distant a child was in front of a house, and hearing the tremendous sound of hoofs and looking down the street and seeing the flaming light, ran in and shouted to his mother that the new-fangled fire eater was coming up the road. Of course there were no men present, being all down on the village green, so the whole family betook themselves to the second story, and from that safe retreat witnessed the procession go past in a tremendous

cloud of dust, smoke and fire.

Meanwhile the fire raged on the village green. The sheds adjoining the Burns Hotel had taken fire, and all the people not being able to get off on the side of the fire, were obliged to jump into the creek which flowed along the back side of the sheds. They almost fell over each other in their efforts to escape, taking to the water like frogs and rats. All had thus made their escape except Morg Burns, the proprietor of the Burns Hotel, and Ike Manley. Morg Burns weighed three hundred and fifty pounds. He had a very genial disposition, which made his position as hotel keeper very dangerous to the young men of Barryville. Ike Manley was a young man who some three years before was a very brilliant student, looking forward to a possible theological career, but he had succumbed to the nameless and unaccountable charm of this hotel keeper and yielded himself to a possible latent taste for stimulants. These two men had taken favored positions upon the wagon shed, intending to have a good view of all the proceedings. They were now the last ones upon the burning sheds, which threatened every moment to collapse. The flames were creeping nearer every moment and the heat getting more intense. The cries and entreaties of Morg Burns were most pitiful and pathetic. The people shouted to him to take to the water, but he hesitated to jump; but just at that moment the boards upon which they were standing gave way and Morg Burns plunged over, head first, into the water. Ike Manley still stood upon the burning sheds, his form outlined against the blackness of the night by the lurid flames which were leaping around him. The people shouted hoarsely to him, "Save yourself—jump into the water," and then the entire structure collapsed and I' backward among the burning timbers.

At the same instant a great shout went up saying that the Burns Hotel was on fire from cellar to garret. And so it was. The fire demons seemed to reel and shrick through every apartment. At times they appeared to laugh in a very madness of revelry and to drink up the materials of the building with the abandoned recklessness of the drunka s thirst. The fire did not cease until every vestige of the hotel had been swept from existence.

Ike Manley was rescued and after a long illness finally recovered, gave up his bad habits and became a flaming evangel.

Dick Hilton remained until almost morning, fighting the progress of the flames with the assembled

citizens, and finally succeeded in staying their progress. Fortunately a big rain storm came on toward morning, which helped to extinguish the flames.

Appalled at what had taken place, and regretting the loss of the one hundred dollars which he had the chance to make and which had seemed almost within his grasp, Dick endeavored to get the chemical engine over to the railroad station, which was some half mile distant, but he was obliged to leave it stuck fast in the mud when only half way there. He stood on the station platform at four o'clock in the morning, ready to take the express for Centre City. A man came up to him and said that he was an engineer on one of the local freight trains, and that he had worked with great energy in order to bank his fires and attend the exhibition on the village green. He said he had hurried home to change his clothes, fearing that he would not get there in time. It happened that he was just in line with the sulphuric acid when the head of the engine blew out, and his fine suit of clothes was entirely spoiled. As he told the story to Dick, he unconsciously extended his hands and looked down at himself in a helpless sort of way, remarking, "I guess, after all, I was on time."

As for Dick—well, Dick did not get the one hundred dollars, but he received five hundred dollars' worth of experience, and it proved to be worth even more

in his subsequent career.

#### RIDING THE BUCKING BRONCOS OF THE SEA

UT a thirty-knot destroyer into a rough sea," says Sir William White, "and the limit of speed she can make is what she can bear-what the people on her can bear."

Traveling at a thirty-knot speed is going at the rate of a little over thirty-four miles an hour. You can travel at that speed in a railway train with comfort-in fact, it is about the speed of the ordinary train. But imagine a runaway horse dragging your carriage over a rough country road at thirty-four miles an hour and you get an idea of what it means to go thirty knots an hour in a torpedo hoat. Good for the digestion maybe, but rough on the nerves; and if anything gives way, disaster complete and overwhelming.

Not only young officers, but young men for the crew are needed on board a torpedo boat-men in whom age and experience has not tamed the dash and daring which the boat itself typifies, and whose young bodies can adapt themselves to quickly

varying conditions.

These things apply to peace as much as to war. There is always "something doing" on a torpedo boat, and, with the exception of the pregnant moment when the boat steams to torpedo a man-of-war-a moment which, by its very greatness, raises men above all physical considerations if they are of the proper sort for torpedo work-the conditions in peace are as hazardous and trying as in time of war. That is, of course, if the boat is on active sea service, though in peaceful times, boats not being kept at sea for such long stretches as in war, the mental and physical strain is not apt to be so continuous.

On a torpedo boat officers and men suffer alike. The sea is no respecter of persons, and tosses the lieutenant and the apprentice boy about and keeps them awake with absolute impartiality. The officers and men of the torpedo boat fiotilla employed on the Cuban coast during the Spanish war suffered greatly from inability to sleep in the long spells when the nervous little craft were kept scooting about amid the blockading squadron, or running on their frequent errands from the fleet to Key West. The crews used to arrive at Key West half dead for want of sleep, and as soon as the boat was alongside all hands made for their bunks.

A man who has had much service on a torpedo boat said to the writer:

"It is not only sleep with which you have to play catch as catch can on board a torpedo boat, but you have to play tag with your food as well. If there was anything like a sea on, we never used to think of sitting down to table, but took such food as we could get in one hand and ate it while we held on with the other.

"A great part of the time cooking was next to impossible, and cold canned stuff, or what was left over of the stuff which had been cooked in port, had to suffice us, and we grabbed that as we could and when we could.

"The cook always, or almost always, used to make coffee for us, though how he managed it was a mystery, for, though he used to lash the coffee pot to the top of the stove and tie down the lid, the pitching and the rolling of the boat in a heavy seaway would spill a large portion of the contents of the pot out through the spout.

"Then cookey would put a cork in the mouth of the spout, and when the boiling coffee generated steam enough the 11d would blow off, or the cork would fly out. Altogether, it was only by the exercise of indefatigable energy and skill of the sort which ought to have been recognized in General Orders, that finally enough coffee would be manufactured to give each man a

"We used to get an outfit of crockery about every time we came into port during the Spanish war, and smash it up the first

day out, probably. If not the first day, then a little later.

'When Schley's fleet arrived at Clenfuegos, the Dupont, to which I was attached, was lying there and was ordered back to Key West. Being homeward bound and the weather being fair, we determined to have breakfast sitting down to table. The cook managed to cook a proper meal, and what remained of the forecastle outfit of mess gear was placed on the table and in it the breakfast.

"But the sea was rising and a storm blowing up, and just as we were ready to sit down the boat gave a vicious lurch and sent mess gear and breakfast flying about as if they had been shot out of a

"Later there came a great crash from the wardroom, where the officers had been try-

not see the gold lace on their uniforms for fried eggs when the officers disentangled themselves from the wreck of their break-fast table and came on deck."

"What was the most exciting moment you ever had on board a torpedo boat?" was asked of a sailor who has spent much time in this sort of craft.

"I guess," he said, "it was once, not long ago, when I was in the McKee. We had been down to Ncw London and were on our way back to Newport under both boilers. The McKee is a little boat, only 99 feet long on the waterline, and her speed is a little short of twenty knots.

"We began to make heavy weather of it as soon as we got outside the Sound, and the way we pitched into it was a caution. When off Block Island there suddenly when on Block Island there studenty heaved up before us a great wave like a solid wall of water, and the McKee, instead of rising to it, plunged right into it, completely burying her deck under solid green water. I say completely, but her stern did water, and the say of the stick up above the surface a little—all the rest of her shot under water. It seemed as if she was bound straight for the bottom at a twenty-knot speed.

"She hung a moment—it seemed ages—and then, quivering and shaking with her tremendous struggle for life, she slowly poked her nose up into the daylight onc more. Her nose went up, her stern went down, and she shot out of the sea like a

great fish leaping from the deep.
"It is a marvel that her plates were not crushed in by the tremendous strain. It was a taste of submarine navigation exceedingly trying to the nerves of the crew

Another torpedo boat sailor told this story:

"I think the most exciting trip I ever ing along on her stern and now made was at the beginning of the Spanish be trying to travel on her nose.

ing the same thing, and-well, you could war. We were lying in Key West in a torpedo boat having an official speed of 281/2 The fleet was at Dry Tortugas, one knots. "One night we received a dispatch from

Washington with instructions to take it to the fleet as fast as steam would carry us. Congress had passed the joint resolution which opened the war, and the fleet was wanted at once at Key West.

"Off we started through the night and ran the one hundred miles at a speed which I do not think the boat ever exceeded. even on her trial trip. The course lay over the open waters of the gulf—waters lumpy and 'jolty'—but we tore along at a speed which strained both ourselves and the torpedo boat. The excitement of the race against time and a knowledge of the stirring news we bore all added to the effect of the occasion, but we did not feel the strain at all then. We felt as buoyant as the boat under us, and the rushing flight over the midnight waters seemed to proceed from our party rills rether than from ceed from our own wills rather than from ne efforts of the engines.
"Having delivered our dispatch and hav-

ing been delayed some time at the flagship, we started back at the same high speed at which we had come. A storm had blown up in the meanwhile and into the teeth of it we plunged, never letting up in our rush for an instant, but just flying, now half out of the water and now plunging deep into it, until it seemed as if we were not coming up again. It was important that we should be back in Key West with the It least possible delay, and we were

"On that 200-mile round trip there was neither eating, sleeping nor scarcely talking-nothing but feeding the boilers and hanging on as the boat slipped along, first on one side and then the other, now waltzing along on her stern and now seeming to

Enter, unceremoniously, Mrs. Bairke: "Beggin' pardon, but me neighbor, Mrs. Jiggins-which she's your washlady, too-told me as how you was wantin' some pretty children to put into your paintin', so I've made so bold as to bring

along my Maud Hemma, Herbert and the baby!"

# A Yankee Boy Who Became The People's Champion A Brief Review of The Remarkable Career of The Late Ex-Governor Pingree, of Michigan

By HUGO ERICHSEN

HE Memorial Day dedication of a Pingree monument at Detroit calls renewed attention to the public life of an uncompromising foe of monopoly, whose unrelenting battle against oppression and rascality in every form endeared him to the people he served. The portrait of Hazen S. Pingree occupies the place of honor in many an humble home in Michigan, and if his memory is enshrined in the hearts of the grateful people of a large state to-day, it is not only because of what he did, but because of what he shared with the immortal Lincoln—the love of folk who are compelled to toil for a living.

To the average American boy Mr. Pingree's career should be of particular interest, because it shows the possibilities that lie before a penniless lad. He did not attain a position of wealth and power by mere chance, but because he had industry and frugality, and chose common sense as his guiding-star.

Even after fame and fortune had come to him he was never ashamed to acknowledge that he sprang from the common people and that he was a shoemaker by trade. To readers of THE AMERICAN BOY I trust this short account of his life will prove an inspiration, for, after all, the old adage that every man is the architect of his own fortune still holds good.

Hazen S. Pingree was born at Denmark, Me., on the thirtieth day of August, 1840, the fourth

child (in a family of nine) of Jasper and Adeline (Bryant) Pingree. His first American ancestor, Moses Pingree, emigrated from England in 1640 and settled at Ipswich, Mass., where his descendants continued to reside until 1776. But in that year Parson Pingree transferred the family home to Denmark in Maine.

Jasper Pingree was a farmer, who found it increasingly difficult to wrest a living for himself and family from the barren soil of New England. He allowed his son to remain at home and get such schooling as the village afforded, until Hazen was fourteen years old; after that the boy had to fend for himself.

As indicative of the boy's character, it is related that a poor farmer near Denmark was taken ill with a fever, due to drinking impure water, and was unable to take care of his crops. Hazen got all of the boys of the neighborhood together and told them

what a fine idea it would be to hoe the farmer's corn during the night. so that he wouldn't know who did it. He worked up their enthusiasm, after the manner of Tom Sawyer, until they stole out of the village one moonlit night and accomplished the task before daybreak. You may imagine the surprise of the family

when they became aware of what had happened! In 1856, we find Hazen in a cotton factory at Saco in his native state. Four years later, he entered a shoe factory at Hopkinton, Mass., where he learned the trade of cutter. In 1862, at the outbreak of the War of the Rebellion, he enlisted as a private in Company F. First Massachusetts regiment of heavy artillery, with which he went to the front. The regiment was assigned to the Army of the Potomac, and took part in the second battle of Bull Run and the engagements at Fredericksburg Road, Harris Farm, Spottsylvania Court House, Cold Harbor, North Ann and South Ann. On May 25, 1864, he was captured by Mosby's men and sent as a prisoner to Lynchburg.

MUDOLF SCHWARZ, SCULPTOR OF THE PINGREE MONUMENT AT DETROIT

THE NEW PINGREE MONUMENT AT DETROIT

Va. Later, he was transferred to Andersonville, N. C., where he endured the horrors of the stockade for five months, until he was removed to Millen, Ga., to be exchanged. He rejoined his regiment before Petersburg in November and took part in the battles of Boydton Road, Sailor's Creek, Farmville and Appomattox Court House. At Appomattox he accidentally became an eye-witness of Lee's surrender. Shortly after being mustered out of service in August, 1865, he went to Detroit, Michigan.

Mr. Pingree was always proud of his record as a soldier and the most conspicuous ornaments of his library consisted of war trophies, including the musket carried by his great-grandfather in the War of the Revolution, the gun shouldered by his grand-father in the War of 1812, and the rifle toted by himself during the Civil War. Thus the guns that had helped to create the Union reposed, side by side, with one that had served in its defense.

At first, it appears, the young shoemaker worked at his trade, but in 1866, conjointly with Mr. C. H. Smith, he embarked in the shoe business as an employer. The two were associated in business for over a decade; they never entered into a written partnership agreement, but conducted business on a verbal understanding only; yet they had no differences. The firm had but eight hands at the start and a capital of only \$1,360. Contrast this with the seven hundred employes and the million dollars capital of the Pingree Shoe Company of the present day! During the following years Pingree led a matter-offact life and devoted his best efforts to the advancement of his business, which extended rapidly. His success in this respect was so marked, that it commanded the admiration of local merchants and manufacturers and soon raised him and his partner to the first rank in the business world.

On February 28, 1872, Mr. Pingree was married to Miss Frances A. Gilbert, of Mt. Clemens, Mich. Of the three children that came to bless their home, in the course of years, two, a daughter and a son, are still alive. Mrs. Pingree also survives her husband.

Although always a staunch Republican, Mr. Pingree did not enter active politics until October 25, 1889, and then quite against his inclination. At that time the City of Detroit was admitted to be Democratic by about four thousand votes. At a meeting of the Republican State Central Committee, on the date given, various leading Republicans proposed for the mayoralty nomination declined, giving lack of time or the state of their health as an excuse for refusing to be guillotined, as defeat seemed certain. Finally

the choice centered upon Mr. Pingree. A committee that waited upon him at his factory had difficulty in inducing him to "run," but finally he reluctantly consented. He was promptly nominated at the Republican City Convention, on which occasion he made his first political speech. At the end of a brief but aggressive campaign, he was elected by a majority of 2,308. Entering the mayor's office on the first of January, 1890, he began a political career that was only to end with the decade. The very first thing he did was to apply business principles to the conduct of his office, one evidence of which is still in

existence. I refer to the voluminous scrapbooks in which every newspaper — or magazine — clipping relating to himself, the mayoralty, or the Detroit City Government was carefully preserved. The file was indexed so that no difficulty was experienced in finding information when it was wanted.

In carrying out needed reforms, Mr Pingree did not hesitate to oppose members of his own party, when he considered them in the wrong. Naturally this made him many enemies. Some of the very persons who had helped to bring about his election, denounced him when they realized the fact that he would not serve their selfish ends. But for every "friend" he lost in these circles, he gained a thousand among the masses and soon received the support and encouragement of the vast body of the people. Though he had little regard for professional politicians, he created a new set of them unintentionally, many of whom proved unworthy of the trust reposed in them. This is the most serious mistake he made during the period of his office-holding, and it is safe to assert that his administration would have been even more effective than it was, if he had been surrounded by unselfish counselors. But, as a "ward-heeler" puts it: "Practical politics and unselfishness don't jibe." Mr. Pingree's belief in equal rights for all and special privileges for none was not shared by all of his lieuten-

At the end of his first term, it was the consensus of public opinion that he would not get another. But he was triumphantly re-elected by the people, although he had to contend with opposition in his own party. Altogether he served four terms as mayor of the City of

the Straits. His administration is credited with many reforms and improvements. The cost of paving and sewer building was greatly reduced and better material and work secured. Through his efforts rapid transit was introduced when the Detroit City Railway was sold to a new company. To reduce the price of gas, he brought suit against the gas company in his own name and forced the matter to an issue.

The year 1894 was a momentous one in his career as mayor. As the common council was in sympathy with his policy, he had no trouble in obtaining a franchise for the Detroit Railway, with 3-cent fares. He had combatted what he considered the unjustifiable pretensions of the local street railway company for years and this was his trump card, as it established effective competition. At about the san Supreme Court affirmed the mayor's right to veto the proceedings of the school board, as a direct outcome of a scandal in that body. In the early summer of this year Mayor Pingree's plan of utilizing vacant city lots by assigning them to the poor for potatopatches gave him national prominence and spread his name and fame throughout the civilized world.

In 1896, after previous failure. Mr. Pingree triumphed in the state campaign and was elected Governor of Michigan by a majority of 66,000 over all others, being re-elected two years later by a plurality of 75,097. His administration of this high office was greatly handicapped by a legislature that was adverse to his views and had been elected for the purpose of thwarting his plans. Despite this opposition, however, he compelled the lawmakers to adopt a more equitable system of taxing corporations. As Michigan's war governor, he was solicitous about the

MR. PINGREE'S SCRAP BOOM

welfare of the soldier boys of '98 and made three or four trips to the camps in the South to look after their comfort.

Soon after his retirement from office, his health failed and he decided to take a trip to South Africa. He departed from Detroit in February, 1901. In the following summer, the people of the city were griefstricken on receipt of the news that the ex-governor had been taken very ill, on his way home, at London. England, where he died on the eighteenth of June. His remains were conveyed to this country by the liner "Zeeland" and received at New York by a deputation of Detroit citizens. After lying in state for several days at the Detroit City Hall, this champion of the people was buried with military honors and accorded a public funeral, the like of which had never before been witnessed in the City of the Straits.

Before the body of the dead statesman was brought back to Detroit, a commission for the erection of a Pingree monument had been organized, with Mr. Carl E. Schmidt, as chairman, and Wm. H. McGregor, as secretary and treasurer. The public responded liberally to an appeal for contributions. The sum of \$12,685 was collected, of which \$10,827 was expended

MR. PINGREE'S LIBRARY, FROWING ANCESTRAL FIREARMS, SWORDS, ETC.

for the monument and incidentals. The remainder is to be invested in a bond, to provide a perpetual fund for the floral decoration of the monument.

Rudolf Schwarz, of Indianapolis, was chosen as the sculptor of the monument as a result of a competition. Mr. Schwarz was born at Vienna, Austria, June thirteenth, 1865, and is a graduate of the art academy of his native city. In 1888, he moved to Berlin. where he entered the studio of Bruno Schmitz, well-known in the United States as the designer of the Indiana Soldiers' Monument. In 1898, this gentleman sent the young sculptor to Indianapolis to execute some of the details of the monument. When this work was completed, Schwarz won a competition for the colossal soldier-figures and fountain groups that form a part of the Indiana Soldiers' Monument and decided to remain in Hoosierdom. This task occupied him for two years, after which he designed the Pingree statuc.

## Famous Guides of Forest and Stream

HERE are numbered by hundreds in this country boys who gladly admit that the "best times" which they have ever experienced in their as professional guides. The wilderness guides are the "leather stockings" of the present day. Their ranks are gradually being thinned because with the advance of modern industrial progress and the of modern industrial progress and the disappearance of the forests their occupation is gone, but a number of these experts in woodcraft may yet be found in the Adirondacks or Great North Woods and in the lake-dotted wilderness Maine.

derness An experienced guide can teach a boy derness adually of camp life—hatchets and knives. The average guide prefers for all-around use what he terms a "double-barreled pocketaxe." It is different from the ordinary hatchet chiefly in that it is light and has a double blade—one thick stunt edge and a double blade—one thick stunt edge and one fine, keen edge. Strangely enough, the best guides prefer a strong double-bladed pocket knife to the "bowies" and "hunting knives." which they say may fit in with descriptions in a dime novel, but are not the best things for actual use in the weeds. in the woods

in size. These with your change of dothing ought not to weigh more than shelters from brush and boughs. Equally ing as it is. Not only are there many dishest that cannot be secured in any hotout eight pounds."

An experienced guide can teach a boy any things about those indispensables of camp life—hatchets and knives. The two range guide prefers for all-around use that he terms a "double-barreled pocket-tack." It is different from the ordinary and the terms a "double-barreled pocket-tack." It is different from the ordinary and the terms a "double-barreled pocket-tack thefly in that it is light and has a double blade—one thick stunt edge and the best guides prefer a strong double-barreled pocket knife to the "bowies" and he best guides prefer a strong double-bladed pocket knife to the "bowies" and the heart guide, it must be explained, should not be considered a servant. He usually the heart guide not only knows how the spend in the woods, and are not the best things for actual use in the woods.

The expert guide not only knows how the shelters from brush and boughs. Equally ing as it is. Not only are there many dishes that cannot be secured in any hotel, but fish and game are cooked in a many torsonal game are cooked in a many torsonal game are cooked in a many boys imagine, particularly if it be raining and the fuel is wet. Most of the guides are, almost tell, but fish and game are cooked in a many torsonal guides are, almost tell, but fish and game are cooked in a many torsonal game are cooked in a many torsonal guides are, almost tell, but fish and game are cooked the witch many to the exception, spiendid, whole-souled fellows, kindly and generous to a fault. Many of these woodsmen who spend so much of they wilderness are naturally very quiet and uncommunicative, but it will repay any boy hunter or camper to draw them out for if the guide can be induced to talk he will be indorsed by any torsonal guides a

A LONG LAKE GUIDE AND HIS DOGS

In the old days the hunter and the In the old days the hunter and the trapper pursued his vocation because it meant bread and butter for himself and family. The present day guide also turns his knowledge of woodlore to account in earning a living, but he does it in a different way, namely, by piloting men and boys who hunt and fish for pure love of the sport, to the best gunning grounds and the choicest trout streams. The man who makes a business streams. The man who makes a business of guiding usually does nothing else from one end of the year to the other, and not only is he a dead shot, but he knows the forest as the Indian used to

knows the forest as the Indian used to know it in the old days.

A guide may serve a single hunter or fisherman or he may pilot a whole party. Much of the work that falls to the lot of these men is in the introduction of boys to the mysteries of the woods. Many a man who in his younger days has enjoyed the free open-air life of the forest and the sport with rod and gun later sends his sons to his old camping ground and puts them under the care of the old guide who years before gave him his own first insight into life "in the open." Thus I'resident Roosevelt when a weak, sickly boy was sent every summer into the boy was sent every summer into the heart of the Maine woods for weeks of out-door life and now he sends his own sons, Theodore and Kermit, to spend each vacation with the veteran proved himself such a splendid companion

The ideal guide must know everything that there is to know about camping and that there is to know about camping and hunting and fishing, following trails, and, in short, the whole range of woodcraft, for very often the lad or lads who go with him have not had very much if any experience in roughing it in a real wilderness, where getting lost is no joke and where in recent years men who have lost their way have died of hunger and exposure while seeking to find their way to civilization. The veteran mide invariably advises his how charges to "go variably advises his boy charges to "go light," that is, to cary just as little as possible in the way of clothing, camp equipage, etc.

To a lad who inquired what clothing he would need for a camping and hunting trip a man who has been a guide in the Adirondacks for fully fifty years recently said: "If I were you I would not wear coarse woolen clothing, but a suit of cashmere of medium thickness. Two thick woolen shirts you will need and for foot-wear I would suggest light boots or mocwear I would suggest light hoots or moc-casins. Don't get long-legged hoots with heavy soles, for they will surely tire you out on a long tramp through the woods. We will not carry a tent, but will sleep in the open, and so you will need a soft, warm blanket bag, open at the ends and just long enough to cover you, and it

A HERMIT'S WILD FRIENDS, or Eighteen

Years in the Woods, by Walter A. Mason. As a relief from ill-health in various forms, Mr. Mason was advised to try life in the pine Mason was advised to try life in the pine woods with nature for his physician. The result was a most gratifying success. During his eighteen years of voluntary hermit life, ho came into close contact with many of the denihis eighteen years of voluntary hermit life, ho came into close contact with many of the denizens of the forest both in feather and fur, and he gives his observations of his "wild friends" in this volume. The student of nature will here find wealth of interest and information, and the boys will be delighted with the stories of experiences among these "friends." Satan, the raccoon; Wabbles, the wounded song-sparrow; Bismarck, the red squirrel; the white-footed mouse, Mr. and Mrs. Chewink, the mole, sloat, crow, coot and countless others with their habits and peculiarities, as well as the clearm of life by forest and stream are depicted so graphically and lovingly by the author that "nature's cure" will take on new meaning and relegate doctors' bills and doctors' pills into innocuous desuctude. Nearly 60 illustrations, partly by the author from his own observations, and party by Louis Agassiz Fuertes and other artists, will increase the enjoyment of the reader in this most fascinating book. The author is no beginner in literature, as for years, above the pen name of "Hermit," he has contributed to many of the foremost magazines. 304 pages on fine paper and large, clear type. Price \$1.50. Dana, Estes & Co.

THE STORY OF THE THIRTEEN COLONIES.

THE STORY OF THE THIRTEEN COLONIES. THE STORY OF THE THIRTEEN COLONIES. by II. A. Guerber. One of the Eelectic School Readings. This is an elementary text-book of history put in a form that will please, interest and instruct the young reader, and free from that dryness and dullness which is so distasteful. The book begins with a description of the aboriginal inhabitants long before Columbus landed and ends with Washington's farewell. The story is told in simple language easily understood by boys and girls of say ten years of age. There are four good maps, many apt illustrations and a copious index. 342 pages. Price 65 cents. American Book Co.

pages. Price 65 cents. American Book Co.

THE TRUE CITIZEN, How to Become One, by W. F. Markwick, D. D., and W. A. Smith, A. B., Ansonia City Schools. Thoughtful boys, boys who have the determination to be good men and good citizens, will find in this little volume every inspiration. Its 39 chapters are under four heads: The Child, The Youth, The Man, The Citizen; and each chapter presents a special theme. Among these themes are: Observation, Obedience, Candor, Affection, Cheerfulness, Industry, Ambition, Concentration, Self-Control. There are a number of other features, such as memory gems, etc., which will be of assistance. For the class-room the teacher will find this book useful, and the boys who read it will develop a high type of citizenship which will work for their own benefit as well as of the nation. 259 pages. Price 60 cents. American Book Co.

THREE HUNDRED THINGS A BRIGHT GIRL. CAN DO, by Lella Elizabeth Kelley. The girl who cannot find in this book what she wants in the way of employment, fun and general usefulness must be hard to please indeed. A glance through its contents tells us of games and experts both in and out of deeps, embrying ginnee through its contents tells us of games and sports both in and out of doors, embruidery, sewing, cooking, pyrography, puzzle, candy making home decoration, physical culture, methods of entertaining friends, etc., etc., a veritable Golconda of helpfulness. The girl or girl's mother who has not a copy of this book in the bookcase will lack a great deal of useful information and instruction on many things of importance to the physical and mental wellbeing of the girl. The many illustrations will be found of great hencilt. 626 pages Price \$1.20. Dana Estes & Co.

Price \$1.20. Dana Estes & Co.

A WOMAN WHO WENT TO ALASKA, by Maw Kellogg Sullivan. This is the history of the author's own experiences in the "Prozen North." Fired by the stories of suddenly acquired wealth, she determined to journey to Alaska in the hope of making her fortune. If she did not succeed in finding riches, she at least has written an interesting and readable book. The story of her adventures, of places and people, is related with much humor, and it also shows her to be a keen and discriminating observer as well as an ardent lover of nature. The book we think, will find many renders. James H. Earle & Co.

HOME MECHANICS FOR AMATEURS, by George M. Hopkins. The former work of Mr.

"Experimental Science," such a favorable reception that another work along the same lines was in demand. The author was an expert mechanic and this book author was an expert mechanic and this book is largely the record of his experiments performed in his of workshop at his home. A valuable and important feature to the young amateur in conniction with the many experiments here described is that no expensive or complicated machinery or tools are required. Some mechanical ingenuity, a lathe and a few tools will bring forth the desired results. The book is divided into seven parts: Wood-working, How to make Household Ornaments, Metal-working, Model Engines and Bollers, Meteorology, Telescopes and Microscopes and Electricity. Each part gives full instructions as to the making and working of the many things coming under its designation. To our numerous readers who want to know how to do and nake things we heartly recommend this book as being thoroughly practical. The many illustrations will be found of benefit. 370 pages. Price \$1.50. Munn & Company.

PIONEER SPANIARDS IN NORTH AMERICA, by William Henry Johnson. As a fitting companion to the history of North America received into the schools, this book will be warmly welcomed by the older pupils and teachers. The subsequent history of those who followed the fortunes and shared in the discoveries of Columbus must be of great interest. The names of America Vespueci, Champlain, Halboa, Ponce De Leon, De la Casas, Cortes, De Soto, ought to be familiar to every high school boy, while the part that Spain and Spaniards played in the conquest and colonization of the Carlibrean Islands and in North America is of seconding historical interest. The aboriginal peoples, the Aztecs and Mexicans, their habits, religion and acquirements in the arts, are all placed most vividly and stirringly before the reader. It is a book which ought to be in the library of every teacher and student of our country's history. The illustrations, maps and index will be found of great service to the reader, 381 pages. Price \$1.20 net. I little, Brown & Co.

THE WINNER, by Everett T. Tomlinson. Mr. Tomlinson's reputation as a writer of school and college life is such that anything from his pen is sure to be of interest. After having enjoyed the reading of this book we are puzzled as to whom the title of the book refers. as it is equally applicable to Mr. Whitney, the principal of the Sterling High School, or Will Phelps, the pupil. They are both conquerors. It is a clean, healthy, wholesome book and the characters are described with a sympathetic

affectionate pen. The lessons of the book are conveyed so unobtrusively that the young reader will be impressed unconsciously while enjoying the fun and frolic, the games and debates so ably described. We can heartly recommend this latest and best effort of Mr. Tomilinson's to our boys. The dozen illustrations are finely drawn. 308 pages. Price \$1.00 net. American Baptist Publication Society.

American Baptist Publication Society.
WITH THOMAS IN TENNESSEE, by Edward Robins. This book contains the further adventures of the boy George Knight, whom we met when reviewing Mr. Robins' previous work. "Chasing an Iron Horse." By command of President Lincoln, George is promoted to be able to Major-General Thomas, "The Rock of Chickamauga." It is of the utmost importance to ascertain the position and strength of the Confederate forces and Captain Carton and George are deputed to get the information. Their adventures are sufficiently exciting to keep the sleeplest boy awake. Also his capture while skating and the in idents during his imprisonment, with his final escape to the Union army, are told in a most interesting way, and the information which the young reader vill receive regarding many happenings of our great Civil War form not the least part of the book's value. The illustrations are good and apt. 318 pages. Price \$1.00 net. George W. Jacobs & Co. good and spt. 318 pages. Price \$1.00 net George W. Jacobs & Co.

George W. Jacobs & Co.

WEE MACGREEGOR, by J. J. Bell. It surely showed considerable courage on the part of American publishers to place this book before the reading American public, notwithstan-ling the success it met with in the country of its birth. Yet the outcome has more than justified the venture and Wee Macgreegor's eternal "Whit wey?" has almost become a classic. The little fellow with his questions, his affectionate ways and "greengary" has simply squirmed himself into the hearts of his countless admirers, while his father, who pets and spoils him, his mother, who seedds and adores him, his little sister, "Wee Jeanle," who looks up at him admiringly, and "Granpaw Purdle," who thinks he is "a rale smart laddle," have found hosts of friends by that teach of nature which makes all the world kin. There is lovely found hosts of friends by that teach of nature which makes all the world kin. There is lovableness and tenderness in the hook, and there is that humor also which makes us laugh while the tear of human sympathy dims the eye While we regret that lack of space forbids us dilating on the charm and fose nation of this little volume, we hope we have said enough to induce every one of our readers to obtain a copy of it. With the copous glossary at the beginning, the Scottish diabet med hot be a stumbling block to it full enjoyment [17] pages. Price \$1.00. Harper & Brothers.

GUIDS HOUSE AT CAMP DEERLANDS AND GROUP OF GUIDES

SINCINNATI was desolate. and were fed by the hand of charity, while the merciless waters raced up to the garrets, over the chimney tops. Along the lowlands little white villages just awaking from their winter sleep were pounced upon and were now scattered down the lands.

detail maps, is a little meadow stream year of the floods-where the widow of Dalsy, a beautiful lass of sixteen, a capital shot and a fearless rider; Bogardus, a lisping lad of four, and Baby Boo, then declared by that worshiping family, to be the most beautiful and most wonderful baby that ever was.

Daisy had one possession that she loved next to Baby Boo, and that was Black Bett, a Kentucky thoroughbred, the chief remnant of a fortune.

Daisy, sitting her beautiful, restless animal like some ancient queen, had gone some five miles up to the Ohio River and with thousands of others was watching the rising waters, ant-like, carry Thornville away. The watchers had seen every house go out of the doomed village one by one save the big frame hotel, and now it had trembled and screeched and swung half way round, then paused as if it were some live monster as yet undecided. And there it is to this day, torn out in birthplace of stories of ghosts and the home of thousands of bats.

The rains far up the river poured and poured as if they were never to cease and the river was rising, always rising. "Did you get the warnin' las' night,

Daisy?" asked Squire Ramsey "Warning?" queried the girl.

"Heavins' an' lightnin', girl! the water is up to the top of Willets levee, seventy feet this very minit bove low water mark. See them government people there gettin' telegrams by that clump o' trees? They got a cannon and if the water keeps on a risin' and she is goin' to break over, boom she goes. That means the hull o' Honey Creek valley will be ten feet under water. I jus' come from there and the weather agent says in fifteen minits it's one way or another."

There was a whirl, the mud splashed in the squire's face, and Daisy and Black the highlands-and safety.

that—a race with death. The older inwere tossed headlong into the revolving miles above Washington City, on the No.999, Regulation U.S. Army Shelter Tents
These Tents are made in two parts, of light canvas, give the almost boundless turmoil of the vel-

Thou- low waters of the Ohlo racing on with sands of stricken people were impetuous force. In that glance she saw crowded into the public buildings a house whirl over, then some huge trees that were floating majestically in the waters catch on some obstruction below. through the once busy streets, first into rise up out of the seething flood like cellars, then through the parlor windows, mighty rods of wrath to scourge the runaway river.

Three milestones were passed. Black Bett was covered with the foam of ardor, not exhaustion, and with blazing eyes and flaring nostrils she was speeding like Honey Creek, as you will see by your a spent cannon ball. At any moment the terrified girl expected to hear the roar murmuring rather placidly along not far of the distant gun. On with long, tired from Cincinnati. There is, however, a strides the faithful thoroughbred goes little cataract at the Appleton cottage and Daisy, lifting herself in her saddle, under some great sycamores-I mean sees her little brother, Bogardus, sitting there was a cottage there in the awful in the doorway with his pet kitten in his She gave a sweep of her arm Appleton lived happily with her family toward the river and pointed to Honey Creek bridge. There was some indefinable terror in the motion, in the foamcovered animal, in the white face of Daisy.

"Mother! mother!" he screamed, "here comth Daithy an' Bett theared to death. The world ith comin' to an end." One glance from the mother as Dalsy pointed to the Ohio River and then to Honey Creek bridge, and she understood. As the quivering mare plows up to the little cottage gate, Old Ned, the faithful plow horse, is saddled and already there.

Daisy glanced at her watch; beautiful Bett had made the five miles in eleven

"River will break over Willett's leves in a minute-water will be ten feet over whole valley, Honey Creek bridge," she panted. "Give me Boo, you and Bogarrie take Ned—cannon fired when the levee tears out—whip, Bogarrie, whip!" And some places, crushed and broken, the the little boy laid the whip with all his little strength on Old Ned's tough hide.

Old Ned's running days, if he ever had any, were over and he went on quite a stiff little gallop. "Here, mother, you hold Thomath and I will whip with bofe hanth. We will dwown sure if Old Ned don't get in better likth than thith. I geth he'd 'bout lief dwown ath to gallop." Old Ned under the exciting circumstances got up a most commendable rate of speed.

When about three-fourths of the distance was covered, they heard the cannon thundering through the hills and valleys. It was the voice of warning and death. Then Daisy and her mother heard a little voice:

"Oh, God, thave mother, Daithy and Baby Boo—an' if it aint athkin' too mutch, me and Thomath." It was a prayer that was answered.

When the cannon's echoes died away Bett were shooting like an arrow down they heard a faint rumbling, then a the road to home, five miles away. One closer, rushing, tearing sound that broke mile farther was Honey Creek bridge, into a thunderous roar. Nearer and the battlefield or unfed in the hospital louder swelled the thousand different or camp. Kentucky never had such a race as noises; crash after crash, and great trees

ruin behind them lick the horses' heels.

High and safe on the farther side, the little boy laid his small red finger on the kitten's nose and said:

"I prayed fo' you, too, Thomath, but it wath nip an' skwatch to thave the whole

"Meow! meow! said Thomas, like an

#### Miss Clara Barton, One of The World's Greatest Women

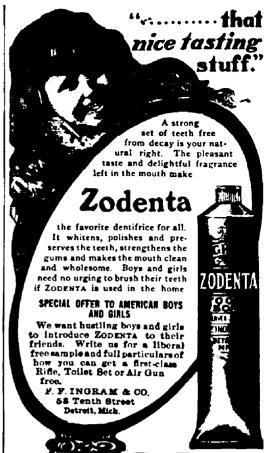

Every American boy should know of the work of Miss Clara Barton, of the Red Cross Society. Miss Barton was born in New England, and began teaching school at the age of thirteen. A few years later she took the first Government department position ever given to a woman by the United States. When the Civil War broke out she dropped her department work and went to the field. When the war was over she was sent to Andersonville for the purpose of identifying the dead and laying out the First National Cemetery. After several years she went to Europe and there came in contact with the Red Cross work. The Red Cross Society had been founded some time before in Geneva, Switzerland. A treaty was proposed, known as "The Treaty of Geneva," which provided that all wounded and sick soldiers, all nurses and surgeons attending them, all hospitals, and supplies for their consumption, should be held neutral and sacred by fighting armies. This treaty was pre-sented to the United States, but, strange to say, she refused to sign it. After five years' work Miss Barton succeeded in getting the signature of the United States.

While in Europe in 1870 the Franco-Prussian war broke out, and Miss Barton at once took a leading part in caring for the sick and wounded, working in Paris all through the winter of the great siege. Her reputation had become world wide. and when she returned to the United States she bore the decorations of the Iron Cross of Prussia, bestowed by the Emperor, and the Gold Cross of Remembrance from the Grand Duke of Baden.

The Red Cross is now a world-wide society, and in the present war neither Jap nor Russian will be uncared for on

Miss Barton's headquarters are ten habitants tell it yet to their children. mass. The ravening roar filled the skies. Potomac, where is also the home of the She glanced backward once and her Daisy looked back and her heart almost great institution of which she is the Daisy looked back and her heart almost great institution of which she is the white face grew more ashen as she saw stopped beating as she saw a huge, foam- head, in a cluster of white buildings suring wave some ten feet high just behind mounted by the Red Cross flag. No them, its front filled with the spectral American woman possesses so many arms of rails and broken limbs and even tokens of the regard and esteem of the large trunks of trees striking, tumbling world as does Miss Clara Barton, includ-

## How to Become Strong

PARTS-PART EIGHT EIGHT

athletic feats are more spectacular than over the head. Athletic instructors ob-

READY TO LIFT THE DUMB-BELL

heavy dumb-bells or other weights. They are right.

It is a fine thing to have the strength that will enable one to wield great weights with ease; but it is a very bad and dangerous thing to misuse the body by forcing it to work itself stiff, stale and clumsy by doing too much heavyweight work.

There is another danger in lifting heavy weights. It is in the fact that, at a certain point in the lift, the weight is in such a position that the least slip will throw its burden off from the muscles and on the unmuscled part of the body, such as the soft abdomen. It is this that causes ruptures and strains of the back and sides that often cripple a person for life. Quite a light weight can hurt the lifter terribly if he lets it get away from his muscles and throws its "heft" suddenly on the soft organs or the soft tissues surrounding them. That moment some or all of those soft tissues and weaker muscles, not intended by nature to do heavy work, will burst under the strain. On the other hand, an enormous weight can be lifted by the athlete who has mastered the science of concentrating all his muscular forces and guarding his body by his braced muscles in such a way that the weight is supported by muscle at every stage of the work.

Learn first that dumb-bell shoving requires a combination of the things mentioned in the first line of this article.

Learn, secondly, to appreciate what a heavy weight really means when it gets away from you. You need not let a heavy weight get away from you to find out. Take a light dumb-bell that you can handle with ease and certainty, and

#### Clever Doctor Cured a 20 Years Trouble Without Any Medicine.

A wise Indiana physician cured 20 years stomach disease without any medicine as his patient tells:

"I had stomach trouble for 20 years, tried allopathic medicines, patent medicines and all the simple remedies suggested by my friends, but grew worse all the time.

"Finally a doctor who is the most prominent physician in this part of the State told me medicine would do me no good only irritating my stomach and making it worse—that I must look to diet and quit drinking coffee.

"I cried out in alarm, 'Quit drinking Coffee!' why. 'What will I drink?'

"Try Postum,' said the doctor, 'I drink it and you will like it when it is made according to directions, with cream, for it is delicious and has none of the bad effects coffee has."

"Well, that was two years ago and I am still drinking Postum. My stomach is right again and I know doctor hit the nail on the head when he decided coffee was the cause of all my trouble. I only wish I had quit it years ago and drank smash up-in other words, he may rup-Postum in its place." Name given by Postum Co., Battle Creek, Mich.

Never too late to mend. Ten days trial of Postum in place of coffee works wonders. There's a reason.

Look in each pkg. for the famous little book, "The Road to Wellville."

CIENCE, strength and "knack" or after you lift it at arm's length over 'trick" all play a part in lifting your head, let your extended arm slant heavy weights, and especially out from your body and see how irresistdumb-bells. ibly even the light weight will pull your With the exception of trapeze acts, few levers downward. Then learn to appreathletic feats are more spectacular than clate what it is merely to pick up a the feat of lifting extraordinary weights heavy weight. With your legs and abdomen well braced, stoop over a fifty or ject to it, and many of them refuse con- sixty pound dumb-bell and lift at it with sistently to let their pupils work with one hand. Do not try to raise it. Simply try to "heft" it. Unless you have worked at heavy weights, you will find that, long before your body and arm muscles get a chance to lift, the bell will have rolled or pulled its way from out your clenched fingers. Your finger and hand muscles, then, are not strong enough even to raise it from the floor. Now you should be ready to begin to learn real dumb-bell lifting:

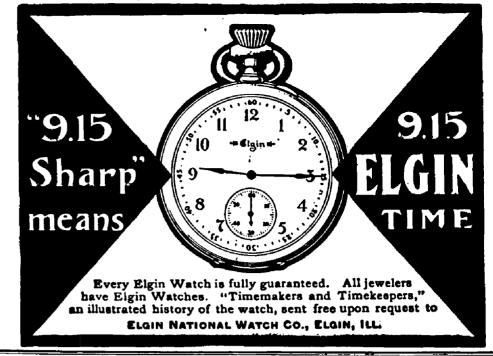

Stand over a five or ten pound bell, according to your strength. Spring your body up and down from your toes to get the muscles of the calf and inner thigh working properly. Set your jaws and stiffen up the muscles of your abdomen and back. Now stoop, without relaxing a single tendon or ligament. Get your hand firmly around the bell. Then, with a combined pull of back, thighs, loins, calves, abdomen and upper and lower arm, lift the bell, steadily and without a jerk, to the waist line. As you straighten up with it apply the muscle force to the aid of the biceps muscle, which must now lift the bell up toward the shoulder. As it mounts toward the shoulder the body should bend away from it and work under the weight so

"UP SHE GOES," AND THE DUMB-BELL SHOVER MUST BE READY TO "STAND FROM UNDER"

under the weight as it is possible to get. Here is where the trick comes in. If you are pushing with your right hand, for instance, you lean over sideways toward the left. You can help yourself by resting your left hand on your thigh or knee as you bend your left leg. Now the moment your right arm has elevated the weight to the shoulder you can get your body under it, when almost all the strain is taken up and the only difficulty is in keeping the dumb-bell straight up in the air. As long as you can do that your arm has little more to do except to hold the weight perpendicular. At this juncture keep your eye on the bell and don't let it wiggle or wobble or sway from the exact perpendicular. The heavier it is the more important is this point.

If a man is lifting a one hundred and fifty or two hundred pound weight, the least swaying to one side or the other will send it crashing down, and it is at that moment that he is in grave danger from two things. One is that the immense weight may topple on his own head or neck and shoulders and fracture his skull, break his neck or even his spine. The other is that, as the weight falls, his body may act just like a hoisting engine with a runaway load, and ture himself or even burst his heart. Therefore, as you work your body to get underneath the uplifted weight you must keep an eye on the latter constantly. When you are well under it and all is clear you can raise your body slowly from the knees up until you stand

entirely erect with the weight held straight overhead.

In lifting weights no spectators should be permitted to stand within fifteen or twenty feet of the athlete in any direction. If it is being done on a gymnasium floor, heavy mattresses should lie in front of him.

It is hardly possible for the average athlete to lower any extraordinarily heavy weight slowly. He must throw it from him or let it fall. Consequently there must be plenty of free open space around him.

from it and work under the weight so that it shall be in the best position for an upward lift or push, that is, as nearly

We have been asked for the name of the boy, who posed for the photographs in the "How to Become Strong" articles. These photographs were posed for by Harold W. Jennys, winner of two gold medals at the West Side Branch of the Y. M. C. A., New York. One medal was for gymnastic ability in 1902, and one for leadership ability in 1902, and one for leadership ability in 1903. Out of a possible 700 points Jennys made 658.2, meaning that he attended every session of the class twice each week, from October 1 to May 1, leading a squad of boys in gymnastics, and teaching them how to do things.

#### It Pays To Study And Work Hard

B. L. Winchell, who has been elected President of the Chicago, Rock Island and Pacific Railroad, when a boy received but a scanty schooling. He was country bred and during his spare moments devoted himself to self-improvement. Just as soon as he was old enough he went to work in the machine shops of the C., B. & Q. Railroad until by study he had fitted himself to enter as a clerk, the office of the superintendent of machinery, which he did at the age of sixteen. He continued his studies and his efforts to perfect himself until in 1880, at the age of twenty-two, he was made Assistant General Passenger Agent of a railroad and soon thereafter General Passenger Agent. Thus he crept up from position to position until now he is, at the age of forty-six, at the head of one of the greatest railroads of the United States.

Do not forget July 5th, American Boy Day at the St. Louis Exposition. Be sure to go.

During this period the battle of Monmouth was fought (June 28th), whose interest, so far as it personally affected Washington, and his military home life, lies in his flerce and

after held command. While at White Plains nothing of importance occurred. Before going into winter quarters with the army Washington made a tour of observation to the north, stopping at various places in the Highlands of the Hudson, chiefly at West Point and Fishkill. December 1st the army took position at Middlebrook, N. J., where it remained in huts during the Washington's headquarters were nominally here; but much of the time he was at Philadelphia, in consultation with members of the congress, and in preparations for the campaign of the following year.

flery rebuke of Lee, who was again with

the Americans, with the ultimate result

that Lee left the army and never there-

The year 1779, apart from Wayne's capture of Stony Point, was quite uneventful at the north, the seat of war having heen transferred to Georgia and the Carolinas. In June Washington made another journey to West Point and the defenses of the upper Hudson. He remained in that vicinity till winter, when he again took up his residence in New Jersey, this time a comparatively permanent one, at the Ford house at Morristown.

The troops at first suffered severely, as they were obliged to live in tents. In February, however, buts were erected, which made far more comfortable habitations. Mrs. Washington and a number of other ladies enlivened the camp with their presence, and from time to time there were modest entertainments and some approach to galety. At this period the great depreciation of the American with it.

Another difficulty enhanced the dangers of the situation. Some of the states were good enough (or wise enough) to their contingents, to remedy the injustice of their depreciated pay, either by making payments in specie or in goods, rations or clothing, or in sufficient paper to make the Continental forces. up the deficit. Other states were nigremedy the injustice. Naturally it was not conducive to "good order and military discipline" that in adjacent quarters men of the several state lines of troops should have treatment so diverse.

The "legal tender" act of the congress gave rise, as all similar legislation does, to gross advantages being taken by the unscrupulous. While Washington was at Morristown a citizen of the neighborhood was assiduous in his attentions, but

Vernon, marked with his name, and a letter of thanks for her kindness during his occupancy of the Ford mansion. It is needless to say that this spoon was (and still is) cherished as of inestimable value in the Ford family.

The winter of 1779-80 found the fortunes of the young confederacy at their lowest ebb; the spring brought with it better cheer and greater hopes. The French fleet under Rochambeau, arrived on the coast, bringing a considerable force to the assistance of the colonies. After leaving Morristown in June, Washington made his headquarters among the Highland hills of the Hudson in the Valley of the Ramapo, back of West Point. While here he was summoned to an interview with the French officers at Hartford, He left West Point September 18th, and while he was absent the famous treason of Benedict Arnold took place.

No general in the Revolutionary army had shown more bravery, and few more skill than Arnold. It was to him chiefly that the great victory of Saratoga was due, and there he received a wound which incapacitated him for a long time

WHARTON HOUSE," WASHINGTON'S HEADQUARTERS. FISHKILL, N. Y.

tain this great highway unimpeded, and to protect the extensive depots of stores that West Point was so essential. Had it fallen, as it came so near to doing, into the hands of the British, a blow supremacy from which it is difficult to see how recovery could have been accomplished.

In his desperate straits Arnold con-In his desperate straits Arnold con-ceived the idea of having the defenses of so much censure been heaped upon him mander to some secluded spot where he West Point assigned to his command, in order that he might have at his disposal sufficient goods of military value to enable him to strike a bargain with the British general. It was not difficult for Arnold to procure the assignment. His wound, received at Saratoga, served as admirable excuse for a request to be ordered to the command of the fortress, rather, as his temperament would have otherwise inclined, to service in the field. and it was given him without difficulty. Washington left West Point September 18th for the east without a misgiving, and indeed probably congratulating himself that so important a post had so skillful and devoted a commander; he returned to the post, by way of Fishkill, September 24th, to discover the treason, its ill-success, the flight of Arnold, and, more to be deplored than any other event of all this unhappy series, the capture of the young, brave, but destined to be ill-fated Andre.

Andre, gay, light-hearted and happy, despité the lingering pangs of an early ideal of a professional soldier. A genial society man when no danger threatened, brave even to rashness in times of peril, he was always ready for any adventure, howsoever difficult and dangerous, that promised advantage to the interests of his king and country. A correspondence, begun by Arnold, with Sir Henry Clinton. was continued with Andre. This was conducted under assumed names, and the letters invariably couched in commercial language. It was soon understood at British headquarters who the American was "with goods to dispose of;" but it was impossible by means of writing to arrange the terms of delivery. This could be done only at a personal interview. which took place at the house of a loyalist named Hett Smith, and, unfortunately for Andre, this house, not far from Haverstraw, was within the American lines. Andre met Arnold by appointment at a point on the shore of the river beyond the American posts. The interview took place after midnight, and day was near before the final arrangements had been made. Arnold proposed that they should retire to Smith's house, where the negotiations could continue, and that Andre should return to the Vulture, a vessel upon which he had ascended the river, the following night. In an unfortunate moment Andre yielded. and, more unfortunate still, suffered Arnold to wrap over the full British uniform which he wore a long cloak. They

#### What The King Eats What's Fit for Him.

housekeeper and mother relates an in- sad fate of the young Andre appeals teresting incident that occurred not long strongly. The prison house I: now used ago. She says:

"I can with all truthfulness say that Grape-Nuts is the most beneficial of all cereal foods in my family, young as well outing. The inscription over the door: as old. It is food and medicine both to us. A few mornings ago at breakfast past, and the scenes once so influential my little boy said:

"Mama, does the King eat Grape-Nuts every morning?"

"I smiled and told him I did not know. but that I thought Grape-Nuts certainly made a delicious dish, fit for a King." (It's a fact that the King of England and the German Emperor both eat Grape-Nuts).

"I find that by the constant use of Grape-Nuts not only as a morning cereal but also in puddings, salads, etc., made after the delicious recipes found in the little book in each package it is proving to be a great nerve food for me, besides having completely cured a long standing case of indigestion." Name given by Postum Co., Battle Creek, Mich.

There is no doubt Grape-Nuts is the most scientific food in the world.

Ten days trial of this proper food in steady, stronger nerves, sharper brain and the power to "go" longer and farther and accomplish more. There's a reason. Look in each pkg. for the famous little

book, "The Road to Wellville."

set out on horseback for Smith's house, and there the plot to deliver West Point for a price was fully consummated. Andre, eager as le was to effect so desirable an object, all the time a prey to gloomy forebodings lest his presence, inadvertent though it was, should be discovered within the lines of the American army. These forebodings proved too well founded. In the course of the following day the Vulture, having been fired upon, withdrew down the river. Andre, in a fever of anxiety, to get back to his own lines, was furnished with a pass by Arnold, and guided by Smith set out on horseback for New York. The pitiful story of all that followed is well known, camp; but tradition tells of an attempt and furnishes one of the most deplorable pages of history: Andre was captured on the highroad near Tarrytown, taken to the quarters of the officer in quarters building was the property of a command of the outposts, then to West Point, and ultimately to Tappan, on the a spacious stone mansion, situated alwould have been struck at American opposite side of the Hudson, where he was tried by a court martial, condemned, conspirators probably found the house and immediately afterwards hanged as a

For no act of Washington's life has for permitting the death of Major Andre. The claim made by the British, (and the sole defense of Andre, himself), was that having come into the American lines under the orders of Arnold then an officer of the American army and competent to act as such. Andre should have been entitled to ample protection; that was not his fault, but misfortune, that when too late to withdraw he found himself within the line of sentinels. That he afterwards disguised himself was sought to be palliated by the same plea, the orders of Arnold.

Posterity has long since done Washington full justice in this miserable affair, and it is now universally admitted among at least military jurists, that under the brutal and bloody code of wir he was justified. His was no sudden decree, ordering, without form of trial, and solely that he had been caught "red handed." a common spy to the gibbet; but soberly, seriously, dispassionately, and spoke French fluently. These inclby the carefully considered verdict of a high military tribunal, Andre was conand unfortunate love affair, was the beau domned. His own frank, fearless admissions, and his one plea, were found to

WASHINGTON'S HEADQUARTERS, RAMAPO, N. Y.

be all that was required to convict. Washington had no alternative except the exercise of a mercy to one which might have proved (so doubtless Washington believed) far from merciful to many. To those who would still blame him there needs for answer only a hand with index finger pointing to the brutal and bloody code of war under which soldiers risk their lives, and by which their lives are taken.

Many of the structures connected with this episode of the Revolution are yet standing: Joshua Hett Smith's house, between Haverstraw and Stony Point; th Beverly Robinson house at Garrison's on the east bank of the river, where both Washington and Arnold had their headat Tappan, and the stone building in which Andre was confined, and from which he went forth to his heroic death; these all remain, and are yearly visited the strangers to whom quarters: the headquarters of the army A Mass, lady who has been through these all remain, and are yearly visited the mill with the trials of the usual by innumerable strangers, to whom the as an inn, and is much frequented by parties from New York, for whom it is quite near enough for a day's pleasant outing. The inscription over the door: "Old 76 House," recalls the days long past, and the scenes once so influential upon the life of the country. One of the finest tributes to Andre's memory was a spirited poem by an American, N. P. Willis: I can recall but one stanza:

"I can give up the fame

I burned to win:

All but the spotless name

"The same time to the window), stood a squad of continental grenadiers, each with a content of continental grenadiers, each with a content of conten

Immediately after Arnold's defection large additions were made to the garrison at West Point. General Greene was placed in command, and Washington made his residence at the house of Beverly Robinson, afterwards, in December, moving to New Windsor, where he remained till the following summer.

This winter there was no suffering among the troops, and much social gayety among the officers. The stress of war was still in the far south, whither now General Greene was sent to relieve place of improper food will show in Gates, whose mismanagement of affairs especially as he had been brought to the steady, stronger nerves, sharper brain somewhat tarnished the distinction he gallows by his own daughter, whose wedhad acquired by Burgoyne's surrender. No military event of signal importance has been chronicled by history as having taken place at or near the northern

WASHINGTON'S HEADQUARTERS, TAPPAN, N. Y.

to capture the person of Washington, which is perhaps worthy of being made part of these homely annals. The headvenerable merchant, Mr. Ellison, and was most directly upon the river's brink. The too well guarded to hope for success in the way of surprise, so they resolved to might be seized, his outcries stifled, and hurried off down the river. Fortune seemed to favor the enterprise, as they chanced to discover in the person of one Ettrick, an Englishman by birth, an ally suited to their purposes, the better that he had the reputation of being a good citizen, and of enjoying the favor of Washington. Ettrick was a widower with one daughter, a young and very lovely girl, who, though in a comparatively humble station in life, had many friends among the aristocratic colonists of the vicinity, especially the Clintons Cadwalladers. Such a tradition would of course be quite unfinished unless some sort of romance added the charm of love to the dash of bravado. This was found in a rivalry existing for her hand between a young continental captain, and an agent of the const irators. The latter, it is said, though an American by birth had been educated in Europe dents happened while the French alliance was comparatively recent, and quite naturally any one of that nationality would be heartily welcomed to camp society, the more that he was handsome, cultivated and entertaining, and bore upon his person corroboration of his claims to high birth and wealth. He managed somehow to procure an entree into society, and having met Miss Ettrick, paid diligent court to her, to the great disgust of the American captain. The Frenchman (to call him so), while courtfrenchman (to call him so), while courting the young woman most assiduously did so at first solely to further his and his comrades purposes. His attentions soon procured him the entree to Ettrick's house, and in time the opportunity he sought. With great caution, and the liberal use of those arts with which men of this soer soem always (at least in eral use of those arts with which men of this sort seem always (at least in romance), to be gifted, he sounded the father as to his eal feelings and finding that Ettrick was at heart a loyalist he at last told how his own sympathies lay and the purpose that had brought him to New Windsor. To this tale Ettrick gave due heed and soon was enlisted in carnest in the plot to kidnap the chief. Bit by hit the plan to do this was shaped. A certain moonless night was chosen, a A certain moonless night was chosen, a night when all circumstances conspired to lull suspicion; the Frenchman's coad-jutors were to be in waiting with a swift barge, muffled oars and a stout crew; Washington was to be summoned to the Fitrick house on some plausible excuse.

fitrick house on some plausible excuse, id once there it was expected that the rest would be easy enough.

Everything worked admirably to further these plans; there came the opportunity, the pretext, the British barge, and the general, attended by one aide only. All was propitious, and at a fixed time the Frenchman gave a shrill whistle at the door of Ettrick's house, whereat the door of Ettrick's house, where-upon up the hill came and into the dwelling half a dozen stalwart loyalists, while Ettrick, turning to Washington upon

the "surface indications" showed. Imagine (herefore the astonishment, chagrin at I consternation of these plotters when Washington coolly replied to Ettrick: "I beg pardon, I am not your prisoner; but you are mine," pointing at the same time to the open door, where (and at each window), stood a squad of continuetal grandiagn each with a

Now comes another thrill, and a quandary: Ettrick's daughter was a revolutionist to the heart, and despised revolutionist to the heart, and despised a loyalist. It was she to whom the captain was indebted for information that furnished so happy a catastrophe. Nefarious young woman; she had probably listened at key holes; simple young woman; she did not realize till too late that in informing she had betrayed her father. father

Thus it stands: The Frenchman doomed as a spy. Ettrick as a trairor. With Washington's habit of strict and impartial justice I fall to see how a gibbet was averted for Mr. Ettrick. In such a romantic narrative all the proprieties would be violated by hanging the father. ding to the continental captain must of course quickly follow. That is the quandary: How did Ettrick escape the

## The Story of Arthur F. Duffey's Triumphs Over Old World Champions Told by Himself

THE START OF THE 100-YARD RACE IN THE INTERCOLLEGIATE CHAMPIONSERS OF 1902, IN WHICE DUFFEY BROKE THE RECORD IN 9.8-5 SECONDS. IS THE ONE JUST IN LINE WITH THE TELEGRAPH POLE. A PICTURE SHOWING THE CLOSE OF THIS RACE WILL APPEAR IN OUR JULY NUMBER

ABT year, in satisfy the requeste of the demonstration did not cause for every denoted by the second of the control of the con

title to the championship trophy. We were all a trifle nervous and as we anxiously dug our holes I could but think anxiously dug our holes I could but think of my record race just a year previous, and firmly resolved that I would do my utmost to equal the same figures. The final proved to be a magnificent race. All left the mark with that characteristic precision of trained athletes, and as we traversed half the distance I could observe that I had the race in hand, though my competitors fought every inch of the way and made one final effort to overtake me, but it proved unsuccessful. Then it was that I determined to revisit England, for I felt sure, after defending my title in my native land, that under favorable circumstances I could cope with any of the foreign runners, whom I had already met and defeated.

circumstances I could cope with any of the foreign runners, whom I had already met and defeated.

Previous to my embarkation I was invited by the New York Athletic Club to make a special attempt to lower my existing record for seventy five yards. I accepted this cordial invitation, but as I was not in the best condition my showing was most unsatisfactory, for the best I could do was yards slower than the record. All present at the games could not help remarking that my sprinting had fallen off considerably, and emphasized the fact that my running abroad would not be up to my usual standard. I likewise began to believe the many assertions which I could not help hearing, but as all arrangements had been made for sailing, and as I had already promised the various athletic associations throughout the United Kingdom that I would be present at their sports. I prepared myself for the voyage and sailed from New York, June 17th, on the steamship Germanic.

The voyage from New York to Liverpool was a delightful one. With a clear sky above and a jolly crowd on board, amid the fluttering of handkerohiefs and the cheers of the loyal Georgetown alumniand the few dear friends who came down to see me away, the huge liner slipped majestically through the water. But here

help to vary the humdrum of an ocean

At last the coast of Ireland was descried and we slowly entered Queenstown har-bor. Words will not describe the beauty

ARTHUR F. DUFFRY, GRORGETOWN UNIVERSITY HOLDER WORLD'S RECORD 50 YARDS AND 100 YARDS RUN. WINNER ENGLISH CHAMPIONSHIP 1900, 1901, 1902, 1903

Though my mind was entirely taken up with my coming race. I could not help laughing at the many accents of the English dialects. Luckily I had no trouble in disposing of my competitors in my heat, and after being introduced to the Mayor and Mayoress and other distinguished guests, we were allowed a few minutes' rest before the final. At last we were called out, and as I came upon the track, looking down the course I was much surprised to see many ladies and gentlemen at the tape, all gathering closer that they might the better see the final bursts of speed.

and gentlemen at the tape, all gathering closer that they might the better see the final bursts of speed.

Gradually the crowd's wild enthusiasm sank as the report of the starter's pistol announced that the race was on. Immediately I crowded on full steam, but to my chagrin I observed that my antagonists were not to be shaken, but hung on with that buildog tenacity so characteristic of the Englishman. Then we all ran neck and neck until the last few yards, when I managed in some unforescen manner to forge ahead at the "worsted." My victory was a most popular one, and the cordial manner in which it was received was most gratifying; for, in view of the fact that I had finished my sea voyage only the day before, but few expected me to win. That evening I was invited by the Charitable Committee, under whose auspices the games were held, to be present at a banquet tendered to the Mayor and other distinguished personages. I accepted the invitation, and after listening to many interesting speeches I was presented with a beautif

personages. I accepted the invitation and after listening to many interesting speeches, I was presented with a beautiful gold timeplece as a remembrance of my afternoon's victory.

The remainder of the week I spent as a guest of Mr. Brommage. secretary of the Amateur Board of Control, a typical old English gentleman, and the hospitable manner in which I was entertained will be long cherished by me. By degrees the people in the town learned that I was visiting with Mr. Brommage, and as the Wolverhampton School was to hold its annual sports, open only to the students, on the following Wednesday, I was invited by
